MR. V. Nanjappa, Textile Commissioner and Chairman of the All-India Handloom Board, did well to emphasise, in the course of his address at the first meeting of the reconstituted Board held in the City last week, that the State Governments must "do everything in their power to ensure increased production of cloth." The production performance of the industry has not been quite encouraging. Despite all the active measures of encouragement and support extended by the State—through loans and grants, tax relief and reservation of markets in certain lines of production—the industry could not produce more than 1,541 million yards of cloth during the calendar year 1956. This quantity, though it was higher by 68 million yards as compared with the previous year, fell considerably short of the target of 1,700 million yards set in the first Five-year Plan. By way of contrast, it may be mentioned that the mill sector achieved in the same year an all-time record output of 5,306 million yards (as against the target of 4,700 million yards), notwithstanding the series of stresses and strains to which it was subjected on account of the unhelpful official measures.

The low level of output in the handloom sector must be attributed to the fact that the very structure of the industry is defective. Since it is highly labour-intensive in character, not only is productivity in the industry at a low ebb but production also is uneconomic. If the production of handloom cloth is, therefore, to be augmented, it is imperative that the production operations must be mechanised. Otherwise, the industry will not be economic and the persons depending on it will continue to be at the mercy of subsidy from the State even for living on a hand-to-mouth basis. As this journal has ere now pointed out, the real, permanent solution to the present ills of the handloom industry lies in the introduction of powerlooms. It is highly regrettable that vigorous opposition to this measure has been voiced by organised handloom interests in some States, especially Madras and Andhra. It is even more regrettable that the opposition has found support at the hands of some Governments, such as Andhra, who have decided not to introduce powerlooms in the handloom sector.

Too Large An Allocation

Viewed thus, it will not be an exaggeration if it is said that the reliance placed on the handloom sector to meet a substantial part of the increased consumption requirements of cloth during the second Plan period is beset with dangerous consequences. Out of the 1,700 million yards of additional production necessary to give a *per capita* consumption of 18.5 yards—this is undoubtedly a very conservative estimate—after allowing 1,000 million yards for export, as much as 1,000 million yards are allocated to the handloom sector. This is certainly too large an allocation to be successfully fulfilled by the handloom sector. Mr. Nanjappa declared that the handloom industry would have to increase its production by at least 300 million yards during 1957-58, if the target of production was to be achieved. After the question as to whether this target can be reached, there is the question whether the handloom products will be produced at a price which suits the pockets of the common man. It must, indeed, be said to the credit of the Handloom Board that it has, in its third annual report, called upon the handloom industry to think in terms not of continuing to depend upon assistance which was introduced in the nature of expediency but of becoming strong enough to stand on its own feet. For it says:

"There is hardly any need to mention that organising a cottage industry like the handloom industry, which is a widely dispersed industry, on proper lines is itself a difficult task. The fact that this industry has a million looms within the co-operative fold in a little over 8,000 primary weavers' co-operative societies in the country is certainly no small achievement. At the same time, that by itself should not lead to complacency on the part of the authorities. It has to be admitted that a substantial number of these looms is only nominally under the co-operative fold; they do not work for the societies as such. Emphasis must hereafter be laid on making every one of these looms work for the societies, or, in other words, on giving full-time work all the year round for each one of these looms. The demand for cloth in the country has increased in the recent past and is expected to increase further. This means that the overall cloth production has to be stepped up to meet the increasing demand."

The Handloom Board has further stressed that the future role of the handloom industry must naturally depend largely upon the success with which it would attain the target set for it in the second Plan. It observes: "The consumption of cloth in the country has been increasing and it is necessary to keep a close watch over the production of cloth from all sectors in order to ensure that the consumer is not faced suddenly with problems of shortage or scarcity. As far as the mill sector is concerned, accurate statistics of production and sales are being collected by Government. But so far as the handloom industry, which is the next important sector for cloth production, is concerned, there are hardly any reliable statistics and Government have had always to depend upon estimates. Planning on the basis of mere estimates would be unscientific and might lead to undesirable results. A start must, therefore, be made with the collection of accurate statistical information regarding production and sales of handloom cloth by the handloom industry. The earlier this start is made, the better."

Financial Assistance

The Board has discussed the problem of Central Government's assistance to the handloom industry in respect of the latter's need for working capital. It agrees that working capital required for commercial or quasi-commercial operations is business finance which has to be obtained from institutional financing agencies. It may be noted here that the Committee appointed to consider the question of credit facilities for handlooms recommended that, with the co-operation of the Government, the Reserve Bank and the co-operative banks, it should be possible for weavers' co-operative societies to draw from the institutional financing agencies their entire requirements of working capital for production and marketing at very reasonable rates of interest and the societies should do so at an early date. Following this recommendation, the Government of India informed the States that the weavers' co-operative societies should draw working capital for production and marketing of handloom cloth from the Reserve Bank with effect from 1st April 1957. While on this issue, the Handloom Board says: "The inconvenience caused by having to change over from one system of finance to another could be readily understood, but there could hardly be any difference of opinion that it would be in the interest of the handloom industry, from the long-term point of view, to adjust itself to this change-over without delay, instead of depending upon a system which was introduced as a purely short-term arrangement."

In his address, Mr. Nanjappa mentioned that, from the commencement of the Cess Fund schemes in September 1953 till March 1957, the Government of India had sanctioned Rs. 17.5 crores for the development of the handloom industry, of which the State Governments had spent nearly Rs. 15.0 crores. Exports during 1956 aggregated 60 million yards, representing an increase of 4 million yards over the previous year. Stating that there was considerable scope for increasing export to foreign countries, Mr. Nanjappa disclosed that the Government had decided to set up an Export Promotion Committee to advise it on the steps to be taken from time to time for augmenting exports of handloom fabrics.

At the Board's meeting last week, a Standing Committee of nine members was constituted for recommending schemes of State Governments for sanction by the Centre. The Board considered the question of accumulation of handloom cloth in certain centres *vis-a-vis* the increased production of handloom cloth under the second Five-year Plan. The view was generally held that, whereas there should be no slackening of efforts towards increasing the production of cloth according to targets, the causes leading to accumulations must be examined and remedial measures taken expeditiously. The principal cause towards accumulation appeared to be the absence of satisfactory arrangements for linking production with consumer demand, and the members expressed the view that the pattern of production should be altered in order to meet the changing demands of the consumer.

TAX ON RAYON GOODS

As readers are aware, the Union Finance Ministry is working out a scheme which seeks to replace the sales tax on cotton textiles (and also sugar and tobacco) levied by the Governments of the various States by a Union surcharge on excise duty at the source of production. The rayon weaving industry wants this scheme to be made applicable to rayon fabrics also. Speaking on the occasion of a tea party given to Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, the other day by the Silk and Art Silk Mills Association Ltd., Bombay, Mr. D. N. Shroff, the President, warned that any discrimination shown to rayon fabrics would adversely affect the industry and might even cripple it. Urging the Government to include these fabrics in the proposed levy of Union excise duty, he pointed out that such inclusion would mean an additional incentive to the dealers, thereby leading to increased production and addition to Government revenues. In support of this conclusion, he said:

"As far as rayon fabrics are concerned, it is a buyers' market. Now it will be still more difficult for producers to market their goods, since the traders will be disinclined to deal in such textiles as may entail a complicated procedure, since these traders deal in 90 per cent. of cotton fabrics and about 10 per cent. of rayon fabrics, and no business man will be willing to undergo such considerable hardship for the poor returns that are available to rayon fabrics dealers on their turnover. Already, the dealers in rayon fabrics suffer from a considerable handicap at present, since they are not in a position to buy in advance goods in bulk quantity in anticipation of the orders from their various out-of-town constituents, as the sales tax has to be borne initially by them, resulting in a considerable blocking up of capital."

Alluding to the above plea, Mr. M. C. Shah could not hold out any hope as to the future course of action that the Government would be taking, although he stated that, personally, the industry had a good case and its demand was justified. He, however, made it clear that his Ministry was not concerned with the subject of sales tax, as it was a subject for the States. In this connection, he observed: "If, however, the States refer this matter to the Central Government and are willing for the inclusion of this commodity along with cotton textiles, the Centre will have no difficulty in including this commodity along with cotton textiles. But, as you know, the States are very jealous of their rights, especially with regard to sales tax, and they would not like even the Central Government to touch upon a subject which is within their purview under the Constitution. It is rather a difficult task, but I can assure you that I am with you that this should be included in cotton textiles. Yours, I feel, is a just demand. You have a strong case and, if you succeed in creating public opinion in your favour, you might succeed and there will be some hope."

PHŒNIX MILLS

On the occasion of the Golden Jubilee celebrations of the Phœnix Mills Ltd., Bombay, held recently, the management could certainly regard the progress of the Company over the last 50 years with considerable satisfaction. So marked has been the progress made by the Company during these five decades since its inception in 1905 that the Mill today ranks as one of the leading textile manufacturing units of India. It now produces fine and superfine yarn of the highest counts, as against yarns of 20 counts only spun in the beginning. It also weaves a variety of quality fabrics. It may be noted here that the Mill has its own fully equipped dye-house and a printing department. The quantitative progress of the Company since 1905, as reviewed by Mr. Ramniwas R. Ruia, Chairman of the Company, may be summed up as follows:

The Mill was first started as a purely spinning unit with 36,956 spindles, mostly mule. It was converted, in 1913, into a composite unit by the addition of 504 looms. Both the spindles and the looms were progressively increased by stages and today the Mill has 69,208 spindles and 1,190 looms. The quality and the variety of products have also undergone a change for the better. The Company originally started with a paid-up capital of Rs. 8 lakhs. The paid-up capital now is Rs. 48 lakhs, as a result of the issue of Rs. 40 lakhs worth of bonus shares to the shareholders. The block account, which was Rs. 16.69 lakhs in the year 1905, now stands at the impressive figure of Rs. 155.86 lakhs. All this, it is gratifying to be told, has been achieved without recourse to shareholders. To the end of 1955, the Company had distributed Rs. 140.1 lakhs to shareholders as dividends and paid Rs. 206.12 lakhs as taxes, Rs. 85.02 lakhs as excise duty and about Rs. 30 lakhs as municipal taxes.

The foregoing account bears testimony to what Mr. Ramniwas Ruia characterised as foresight and zeal of the men who have been responsible for its management from time to time. While congratulating the Company on its notable progress in the past, we wish it every success in the future.

LANCASHIRE'S REACTION TO FREE TRADE AREA SCHEME

TEXTILE EXPORTS DECLINE

From Our Special Correspondent

MANCHESTER, *2nd April*

MANCHESTER LETTER

THE Government has taken "altogether too lightly" the question of safeguards for British industry in its support for a European free trade area, according to Mr. Fred Wood, President of the Master Spinners' Federation. "In their eagerness for their new liberalism, they have practically swept aside the need for any safeguards except those in respect of balance of payment difficulties," he told the annual meeting of the Federation. He added: "The Government may be riding a horse which has many good points, but at present the horse shows signs of running away with his rider."

Mr. Wood said the Federation, representing owners of 400 Lancashire spinning mills, still retained an open mind on the proposed free trade area. Opinion in the industry tended to be coloured by whether one was at the fashion and speciality end of the trade or producing coarse and medium goods.

But they were still entitled to ask the Government whether, while acting according to their conception of what was in the national interest, they had considered sufficiently the need for safeguards against unfair competition, maintaining basic and strategic industries, and avoiding the dissipation of invested capital and acquired skill.

There was also the need for ensuring that changes which had to be made were not so abrupt as to be brutal in their effects on large sections of the population. Mr. Wood urged the importance of a cautious approach to a European free trade scheme. Every industry was entitled to consideration, particularly if it was showing itself forward-looking.

Cloth Exports

Lancashire dropped from third to fourth place in the table of the world's major exporters of cotton cloth in 1956. Japan took first place, with exports aggregating 1,262 million square yards followed by India with 740 million yards, the cotton Board announced in its quarterly statistical review. The United States, which shipped abroad 520 million yards of cloth, took over as the third most important exporting cotton textile industry from the United Kingdom, whose exports fell to 474 million yards, as compared with 555 million yards in 1955.

Almost all the main Western European textile industries expanded output of cotton yarn last year but Lancashire's output fell below the 1955 total. Total world production reached a new record of 2½ per cent. greater than the 1955 figure.

Reviewing the position in Lancashire, the report said the daily rate of cotton, spun rayon and mixture yarn production in February was the best for almost two years. Output of spun rayon yarn continued at a high level, due to the new trade in coarse yarns for tufted carpets. The weaving section of the industry had been more badly hit by the labour shortage than any other section and the daily rate of output in January was less than in all but two months of 1956.

"Since the beginning of December there has been a marked slackening in the rate at which new orders have been received by the producing sections of the British cotton industry and order books have shown a general tendency to shorten," said the report. It added: "Clearly, many merchants had anticipated their requirements in the previous flurry of buying. However, the vast majority of mills are fully occupied in working all the orders they received in that period."

Pending Claims

Contrary to some expectations, the trade unions in the spinning and weaving industries have postponed their approach to the employers for higher wages. The facts of the case to be presented are to be studied by a small sub-committee before further action is taken.

Coupled with the proposed claim is a suggestion that a definite move should be made to obtain some form of compensation for operatives who become redundant when mills close down through the contraction of the industry. This has been a subject for discussion among the unions ever since amalgamations became prevalent soon after the war, and the call for financial assistance for the workers involved has been gathering momentum as the number of idle mills has increased.

This supplementary demand may well be responsible for the unions' uncharacteristic delay in submitting their demands for higher earnings. To draw up a suitable scheme to provide compensation will require much skill and attention to detail if it is to have the slightest chance of consideration by the employers.

Earnings Up Again

Six months ago when the Ministry of Labour published returns showing earnings and hours worked at the end of April last year the wage advance of 5 per cent. conceded in the cotton industry had not actually come into operation. As a result the current statistics, covering October 1956 indicate a sharp advance in earnings.

The survey covers the wage rates of more than 7,000,000 workers in manufacturing industries and in October last the average pay packet for the first time exceeded £10 a week with adult men receiving £11 17*s.* 11*d.* and women £6 3*s.* 2*d.* The increase during the six months was 3*s.* a week on average but it is significant that the average level of weekly earnings for all workers had risen by 94 per cent. between April 1947 and October 1956.

Compared with the average general rise during the six months under review, the improvement in the position of textile operatives was very marked, as the following table shows:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
Cotton Spinning	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
October, 1955 ..	191 8	117 5	118 9	96 5	141 7

April, 1956 ..	196 7	104 5	126 0	94 1	147 11
October, 1956 ..	206 8	112 7	133 3	99 1	156 1
Total Cotton					
October, 1955 ..	192 7	111 8	121 9	95 2	143 8
April, 1956 ..	195 3	112 7	122 6	95 6	145 0
October, 1956 ..	205 10	121 7	129 7	101 3	153 5
Rayon Weaving					
October, 1955 ..	206 9	97 5	128 5	88 1	156 11
April, 1956 ..	212 3	102 1	130 0	99 4	159 6
October, 1956 ..	219 3	104 10	134 3	95 11	165 5
Textile Finishing					
October, 1955 ..	208 4	101 2	109 6	79 5	174 3
April, 1956 ..	209 8	102 5	110 10	80 10	175 10
October, 1956 ..	220 1	107 3	114 11	83 6	183 8

Adult male operatives in the cotton spinning and weaving industries have thus secured a £10 a week average for the first time, while the payment for juveniles continues substantially higher than the rates ruling in many other trades. Women workers still retain a satisfactory level of earnings but the advantage they once held in relation to other industries is not as pronounced as it was a few years ago.

Indicative of the better trading conditions encountered in Lancashire towards the end of last year is the fact that average hours worked in cotton mills in October was 43.9 compared with 43.6 in April. In spinning, the average was 44 hours and in weaving 43.8, while in textile finishing an average of 48.2 hours were worked per week.

Two-shift Working

Declaring that considerable changes are necessary in the cotton and associated textile trades to meet the new conditions, Mr. S. S. Hammersley, Chairman of Cotton and Rayon Spinners, Ltd., the Royton group, says in his statement sent out with the accounts that the industry will have to plan for more than single-shift working on modern machinery.

He adds that the proposal for a Free Trade Area in Europe constitutes a challenge Britain cannot afford to ignore. If, in face of this challenge, the industry refuses to adopt two-shift working, then, he warns, redundant capacity and uneconomical working in every section of the industry will drive down profits and in time lead to our virtual extinction. Mr. Hammersley continues: "We can refuse to participate in the European market, thus being driven to clamouring for more and more protection for the home market and a reliance on Commonwealth markets—every one of which desires to develop its own textile industry—everyone of which offers opportunities which are progressively diminishing. I am confident Lancashire will not take this defeatist attitude."

Problems of Change

On the domestic policy for the Lancashire textile industry, Mr. Hammersley writes: "Two changes are necessary. An altered outlook in the use of modern machinery and a more flexible organisation of the industry itself. Though

COTTON IN THE E.C.A.F.E. REGION

TREND OF PRODUCTION AND EXPORTS

AGRICULTURAL production in the E.C.A.F.E. region in the 1955-56 crop year, according to the Survey of the Economic Commission for Asia and the Far East, was at a record level, exceeding the pre-war average by nearly 20 per cent. But unfortunately this increase has not been shared by cotton, one of the chief commercial crops of the region and a major foreign exchange earner. In the E.C.A.F.E. countries, exclusive of mainland China, according to the Survey, the 1955-56 season brought an apparently temporary break in the upward trend in production of raw cotton, a further increase in consumption and a reversal of the downward trend in exports. In mainland China, however, raw cotton production in 1955-56 was estimated at 1,518,000 tons, which was 42.5 per cent. above the 1954-55 crop.

The decrease in production was, according to the Survey, due to heavy flood and insect damage to the Indian crop which, in spite of an 8 per cent. increase in planted area, declined by 14 per cent. to 3.8 million bales (of 478 lbs.). Contrary to early reports, output in Pakistan continued its upward trend with a further gain of 9 per cent. over the 1954-55 crop, to 1,425,000 bales. The combined crop of the two countries decreased by 9 per cent. from 5,735,000 bales in the 1954-55 season to 5,225,000 bales in 1955-56. The plans of both countries, however, envisaged a further expansion in cotton production.

In 1955-56, consumption of raw cotton increased in India, Japan and Pakistan. In Japan, contrary to earlier expectations, total consumption in 1955-56, at 2,322,000 bales, was only slightly below the post-war peak of 1953-54. A new peak, at 4,260,000 bales, was reached in India. In Pakistan, raw cotton consumption continued the uninterrupted increase noticeable since Partition; at 800,000 bales, it was nearly tenfold the 1948-49 figure and equal to 56 per cent. of the total cotton production of the country.

Exports Up

The downward trend in exports of raw cotton from India and Pakistan, which had persisted since 1952-53, was reversed in 1955-56. The increase was especially notable in India, which exported its surplus of short-staple varieties. Total 1955-56 exports from India, at 540,000 bales, were two and a half times the 1954-55 exports and constituted a new post-war high. India's imports, chiefly from African countries producing long-staple cotton, increased slightly, from 492,000 bales in 1954-55 to 500,000 bales in 1955-56. Sizable imports of raw cotton from the United States into India were expected as a result of the agreement concluded in August 1956 with the United States under its Public Law 480, according to which 500,000 bales (480 pounds net) of United States surplus cotton were to be imported against rupee payments during the ensuing three years, with a minimum annual import of 100,000 bales. In Pakistan, the increase in raw cotton exports was about 12 per cent. over the previous year, the total being 726,000 bales. Japan the main customer, took 36.8 per cent., mainland China, which ranked second, took 17.5 per cent. The combined share of E.C.A.F.E. countries was 61.5 per cent., about the same as in the two preceding seasons. The heavy exports from India were made possible by rather large stocks in the beginning of the season—about 2.42 million bales—following a favourable crop and a small volume of exports in 1954-55. With high exports and high domestic consumption in the 1955-56 season, the initial stocks of the 1956-57 season were about half a million bales smaller. In Pakistan, the initial stocks of the 1956-57 season, at 165,000 bales, were at their lowest initial level since 1951-52.

Price Trend

Cotton prices were depressed early in the 1955-56 season by the announcement of the United States plan to release for export, from January 1956, one million bales of short-staple cotton owned by the Commodity Credit Corporation, and later by the announcement that all types of cotton owned by the agency would be sold competitively in world markets, beginning 1st August 1956. In Karachi, points out the Survey, the price (including the export tax) of 289F Punjab SGF reached a seasonal low of 29.99 U.S. cents a pound in October and, after rallying by May 1956 to about 34 cents, slipped back after announcement of the new United States export policy to about 32 cents. The decline continued during the 1956-57 season until mid-October, when prices below 27 cents were registered. The year ended, however, on a rising note, and in mid-December the price stood at 32.72 cents.

Regarding the current season the Survey observes that precise estimates of the 1956-57 crop are not available. However, the new crop in India was earlier expected to be about 15 per cent. and that of Pakistan about 8 per cent. above the 1955-56 season. Since the initial stocks were rather low in both countries and some increase in domestic raw cotton consumption was possible in both, supplies for export appeared likely to be smaller than in the 1955-56 season.

ALL-INDIA THIRD ESTIMATE OF COTTON

The all-India third estimate of cotton for the current (1956-57) season, released by the Directorate of Economics and Statistics, Union Ministry of Agriculture, puts area and production at 18,084,000 acres and 4,084,000 bales (of 392 lbs. each), as compared with the adjusted third estimate of 17,553,000 acres and 3,382,000 bales respectively for the previous season. This represents an increase of 531,000 acres or three per cent. in area and 702,000 bales or 20.8 per cent. in production over the 1955-56 season. Production of cotton seed is estimated at 1,429,000 tons during the current season, as against the corresponding adjusted estimate of 1,184,000 tons for 1955-56, an increase of 245,000 tons or 20.7 per cent.

This estimate, it may be noted, does not cover the entire area sown to cotton during the season. Past experience has shown that the area reported in the third estimate forms roughly 85 per cent. of the acreage finally reported. The following table gives the details of the estimate in terms of trade description and staple length:

	Area ('000 acres)		Production ('000 bales of 392 lbs.)	
	1956-57 (3rd estimate)	1955-56 (adjusted 3rd estimate)	1956-57 (3rd estimate)	1955-56 (adjusted 3rd estimate)
By Trade Description—

The increase in acreage during the current year has been reported mainly by Bombay and to a lesser extent by Punjab, Andhra Pradesh, Madras, Assam and Kerala and has been attributed to favourable weather conditions at the time of sowing during the current year, as compared with the previous year. The increase in acreage has, however, been offset to some extent by decreases recorded mainly in Madhya Pradesh, Mysore and Rajasthan, due to diversion of some area under cotton crop to wheat and other *rabi* crops. Increase in production has been reported by almost all the cotton-growing States except Bihar and Mysore, the rise being marked in the case of Bombay, Madhya Pradesh and Punjab. This has been attributed partly to increase in acreage and partly to favourable weather conditions during the growing period.

As regards the different varieties of cotton, the increase in production has occurred mainly in Americans, Jarilla, Broach-Vijay and Surti-Suyog and a decline in Malvi and Oomras. The increase in production has been largely shared by medium- and long-staple cotton.

DODGE

with Jet-fin styling

The Dodge with its new FORWARD LOOK and incorporating new features takes you to new standards of performance. Look at these features:

★ New 12-volt electrical system gives quicker, easier starting, longer spark plug life, plenty of current
★ Maximum vision with new horizon windshield wrapped around top and bottom
★ New safety door latch for passenger protection
★ Redesigned sealed beam headlights extend zone of lighting on left side by 80 feet
★ Independent hand brake provides real emergency brake function
★ Safety-rim wheels, tubeless tyres and many other features

New Pep with Increased Horsepower
The 6-cylinder engine is of proved dependability and economy.

Upswept fin tails give the impression of speed to every line of the car

(Sd.) E. FINOT,
Manager for India.

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National d'Escompte de Paris, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949 read with the provisions to Sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books, and proper returns adequate for the purpose of our audit have been received from the Calcutta Branch;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the State of the affairs of the Indian Branches of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

BOMBAY, 29th March, 1957.

GOVERNMENT PREPARED TO ALLOW LARGER SUGAR EXPORTS

RENEWED EFFORTS AT MAXIMISING OUTPUT

A NOTABLE pronouncement which Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, made in his inaugural address at the twenty-fourth annual meeting of the Indian Sugar Mills Association, held at New Delhi on Friday last week, was that the Government was prepared to allow larger exports of sugar on suitable offers. The Government, he said, had for the time being agreed to permit exports of a little more than 100,000 tons, but there was no rigidity about any figure. And he added that efforts were being made to maximise production of sugar, so that larger quantities might be made available for export.

The Government of India's willingness to permit further exports of sugar will be widely welcomed for two reasons. First, it will help the sugar factories to tide over, to some extent at least, the difficult problem of finding godown space and finance for stocking large quantities of sugar. The supply position of sugar is very comfortable, the quantity actually available in the current season being estimated at as much as 2.6 million tons (inclusive of the previous season's carry-over) which is nearly 500,000 tons more than what is expected to be required to meet the domestic needs in full. Secondly, exports of sugar will earn for the country the much-needed foreign exchange. As Mr. S. S. Kanoria, President of the Association, stated in his speech, if we can export 300,000 tons of sugar annually, we can earn foreign exchange to the tune of about Rs. 24 crores per annum. On this basis, the total yield of foreign exchange during the second Five-year Plan period may be estimated at nearly Rs. 100 crores, which represents 6.6 per cent. of the anticipated foreign exchange deficit of Rs. 1,500 crores.

While the need for building up an export market for sugar is thus of much significance, the question arises as to whether Indian sugar can be sold competitively in world markets. It is no doubt true that, in view of its geographical position, India, as Mr. Kanoria said, is in a much better position than any other sugar-exporting country; the net imports of neighbouring countries, which may be considered as our natural markets, are about 1.2 million tons per annum. It is also true that the world price of sugar has gone up of late. Nevertheless, the fact remains that the cost of producing sugar in India is high in all conscience, thanks to the heavy incidence of taxation—Central and State—which comes to over 25 per cent. of the price of sugar. If, therefore, the Government is really anxious to earn foreign exchange through sugar exports, it must unhesitatingly come forward with a downward revision in taxes.

Instead of appreciating the need for tax relief, the Union Food and Agriculture Minister warned the domestic consumers that they should be prepared to pay more for their quota of sugar. Justifying his stand, he observed: "Losses suffered by most of the surplus countries in the world in exporting sugar to other countries at competitive prices are made by suitably raising prices for internal consumption. . . . I think we will have to work out a scheme on some similar lines." This approach of Mr. Jain is, to say the least, not only irrational but also highly unjustified. As it is, the price of sugar, as already stated, is high in all conscience. The domestic consumer has nursed the sugar industry for 18 years during which it enjoyed tariff protection by making a heavy sacrifice in the form of payment of high prices for their requirements of sugar. Viewed thus and considering that sugar is an essential item of consumption, it is, indeed, deplorable on the part of Mr. Jain to come forward with a proposal asking the consumer to pay a higher price for sugar. The chief factor which has weighed with the Minister in pleading for a higher sugar price seems to be not so much the need for facilitating the export trade as the consideration that the revenues to the exchequer will be augmented, especially since the present excise duty on sugar is proposed to be replaced by a Central sales tax.

If, however, Mr. Jain is not prepared to sacrifice to any extent the Centre's share of tax on sugar, he could at least prevail upon the Governments of the States to refund, as Mr. Kanoria rightly urged, the cane cess on that part of the sugar output which is exported. It is certainly regrettable that the Government of Uttar Pradesh which had once agreed to such a refund has since changed its mind. Mr. Kanoria also wanted the co-operation of railways in the shape of special rates for carrying sugar intended for export to the ports, as was the practice at one time. It is to be hoped that this plea will receive the attention it deserves.

In the course of his address, the President of the Indian Sugar Mills Association criticised the way in which the Government of India was implementing the development programme for the sugar industry. He pointed out, for instance, that sufficient preference has not been given to expansion of existing units over establishment of new factories, that more capacity had been licensed in the South than in the North and that the expansion programme had not been related to the sugarcane development scheme in various States.

Mr. Jain, however, dismissed these remarks as incorrect. Substantiating his contention, he made the following observations:

"Almost all the applications received for expansions were accepted. It was only in a few cases that such applications had to be rejected and those were cases of factories which had applied for further expansions without completing the installations, licences for which had been previously granted to them. In certain other cases, applications for expansions were received too late. It has never been the intention of the Government to license the additional capacity on a regional basis. The interest of the country as a whole has to be kept in view and licences have been issued for installing new factories after taking into consideration all the relevant factors, including suitability of sites, availability of sugarcane and the economics of production. The number of applications received from the Northern States, particularly U.P. and Bihar, where the number of sugar factories is already large, was very few. The increase in production of sugarcane under the second Plan is to be achieved almost entirely by increasing the yields per acre, and not by increasing the area under cane. As regards the question of maximisation of sugar production by bringing 18 idle factories into production, an expert committee appointed to examine in detail the case of each one of them found that the plants of 14 of them were small and not capable of expansion or economic working."

The Food and Agriculture Minister gave the assurance that all possible measures to bring into production the additional capacity of one million tons licensed recently would be adopted. In this connection, he disclosed that, of the 57 licences issued for the setting up of new factories, eight had already come into production and another ten would have gone into production this year but for the Suez crisis which delayed the arrival of machinery. According to him, in spite of the difficult foreign exchange position, the requirements of the sugar industry are being given special consideration in the import of machinery, as also in allocation of steel and cement. Twenty new factories may be in a position to start operation next year and the remaining during the subsequent two years. Arrangements are being made to develop the manufacture of machinery for sugar industry in collaboration with foreign firms. Incidentally, the Minister regretted that the progress of expansion in the existing factories had not been up to his expectation. Out of 69 licences granted, it is only in about 20 cases that expansion has been carried out and that too only partially in some cases.

Proceeding, Mr. Jain expressed satisfaction that the co-operative form of organisation in the sugar industry had shown a degree of success; of the 38 units licensed so far, five had gone into production and six others were under construction. He disclosed, in this connection, that it was proposed to set up a national federation of co-operative sugar factories to give the necessary assistance in the formation of these societies, procurement of site and machinery, raising of finances, and supply of technical advice.

(Concluded from next column)

ply the industry's requirements as far as possible. He looked forward to the day when transport would definitely cease to be a bottleneck. He also assured the colliery owners that any discrimination between the two sectors was not consistent with the present policy of the Government, which was looking up to the private sector for production of nothing less than 75 per cent. of the total coal requirements for the second Plan.

RAISING COAL OUTPUT

TRANSPORT BOTTLENECK MAIN HANDICAP

THE private sector of the coal industry is assigned the task of reaching a target of 45 million tons per annum at the end of the second Five-year Plan. This represents an increase of 10 million tons over the annual output at the end of the first Plan period, as against an additional output of 12 million tons per annum to be achieved by the public sector by 1960-61. The relatively smaller allocation of the target to the private sector does not mean that it is less capable or equipped than the collieries in the public sector. In fact, the plans submitted by the private collieries made it clear that they are in a position to increase their output by no less than 30 million tons by the end of the second Plan period. They are as anxious as the Government itself to deliver the goods.

The private collieries are not asking for any financial assistance from the Government to discharge their responsibilities. All that they want, as Mr. D. Samanta, President of the Indian Colliery Owners' Association, submitted in the course of his comprehensive address at the annual general meeting of the Association held a few days ago, are better facilities and more congenial atmosphere for carrying out their development plans without undue interference. They ask for a greater appreciation of their difficulties and a sympathetic and co-operative attitude on the part of the authorities. They are handicapped by the inadequacy of transport and shortage of iron, steel, cement and machinery. The position in respect of transport, as the colliery owners themselves admit, has improved considerably, as witness the movement of as much as 35 million tons of coal during 1956, for the first time in the history of the industry. The daily average loadings in 1956 amounted to 4.250 wagons, an increase of 200 wagons over 1955, but they are still far behind the collieries' requirements, which are estimated at 4,860 wagons per day for 1957-58 and about 6,800 wagons in 1960-61. The collieries also complain that the Government's policy in respect of granting adequate siding accommodation for them is disappointing and unhelpful. According to them, not even 10 miles of track in the entire coalfields of West Bengal and Bihar will be required to be laid down, if the collieries' requests for sidings and loading accommodation are granted most liberally. It is true that the shortage of rails and other materials stands in the way of providing necessary sidings, but the colliery owners are not convinced of this argument, as they feel that in view of the importance of coal movement priority should be given to this problem.

Another factor which, according to the colliery owners, is likely to affect the movement of coal is the introduction of the five-hour daylight loading system with effect from 1st December 1956 which means a reduction of one hour in coal loading hours. This reduction is not going to change the situation materially, but what the collieries are worried about is its effect on lower despatch and higher cost of loading which will be detrimental to the overall economy of the coal industry. It is pointed out that, under the existing arrangements, wagons move only for 4½ hours and an effort to improve transportation can, therefore, be made in the direction of reducing the idle hours of the wagons in transit.

It is also alleged by the colliery owners that in the matter of wagon allocations for transport, the railways show a discrimination in favour of State-owned collieries. Whatever wagons are available from the pool for daily loading of coal, it is stated, go first to meet the full requirements of the State collieries and the balance of allotments fall short of the actual requirements of the private collieries. In respect of granting siding facilities, the State-owned collieries are said to enjoy the most preferential treatment.

It is not that the Government has no confidence in the private sector's ability to fulfil the target fixed for it and is not appreciative of the difficulties facing the private sector. In fact, the other day, the Coal Controller, when he addressed the Indian Colliery Owners' Association at Dhanbad, admitted that some of the difficulties were real and substantial, such as, for instance, the shortage of steel, cement and imported machinery. Some such shortages were bound to be there at times and the industry, he said, should be prepared to face them. He, however, assured the industry that the Government would always be prepared to sup-

TEA CONSIGNED TO LONDON AUCTIONS

PAKISTAN FIXES CEILING

THE decision of the Pakistan Government to restrict the consignment of tea from that country for direct sale in London auctions during the current season has had no effect on tea prices in London, where quality teas with colour and strength continue to attract inquiries, and plainer, end-of-season, teas fetch lower prices. This was because the Pakistan Government's order does not mean any cut on the total quantity of tea that will be available from that country to consumers in the U.K. The Pakistan Government has fixed the limit on the quantity so consigned at 4.5 million lbs. This restriction will be effective for one year ending 31st March 1958, after which date it will be reviewed, if necessary. There will, however, be no restriction on export of tea against letters of credit to any destination.

The placing of a limit on exports on a consignment basis to London is intended to encourage the sale of tea through Chittagong auctions, in order to stabilise prices at reasonable levels, thus attracting foreign buyers to Pakistan's main tea auction centre. The other benefits that are expected to be derived from this restriction are a reduction in retail price of tea, which is the common man's beverage in Pakistan, and a reduction in the loss of foreign exchange incurred on consignments of large quantities of tea to the London market by way of brokerage, warehousing and handling charges in London.

The restriction will reduce to 30 per cent. the amount of Pakistan tea sold at the London auctions, which in 1956 amounted to 15 million lbs., out of the total exports to the U.K. from Chittagong amounting to 19.43 million lbs. during the year. In 1955, the total exports aggregated no more than 9.06 million lbs. in 1954. Season-wise exports also show a similar trend. Thus, during the period April 1956 to February 1957, Pakistan's exports to the U.K. amounted to 21.4 million lbs., having recovered from 8.7 million lbs. in the corresponding period of 1955-56. They, however, fall short of the exports (22.4 million lbs.) in the 11 months ended February 1955.

The rise in exports far exceeds the increase in Pakistan's tea crop, which during 1956 aggregated 54.4 million lbs., as compared with 52.5 million lbs. in 1955 and 54.6 million lbs. in 1954. It is perhaps this encouraging trend in exports that has lured Pakistan to give some attention to develop Chittagong as an export auction centre and thus earn some foreign exchange for the country. Pakistan's decision provides, however, another example of the trend among some producing countries to build up their own domestic auction centres, the previous instance being provided by India. Tea auctions in Chittagong began in 1949 and the quantity of tea sold there has been rising, though it is much less than that sold in London, Calcutta and Colombo.

Pakistan's anxiety to develop a centre within its frontiers as an international market is understandable, just as India was keen on gradually selling all its exportable teas in Calcutta and Cochin. If India's experiment in this direction provides any guidance, it is doubtful whether Pakistan will succeed in its laudable attempt. It will be recalled that the Government of India fixed in July 1955 a limit of 140 million lbs. on the quantity of tea which might be consigned from North India to London for auction at that centre. It did not, however, fix any ceiling in respect of South Indian tea, because the Government was satisfied that the actual consignments were not likely to exceed the previous level of 23 million lbs.—a quantity well below 25 per cent. of the South Indian crop. This decision followed the recommendation of the Tea Auction Committee (Ghoshal Committee) that there should be a gradual reduction of the quantity of tea consigned to auctions in London. The limit fixed by the Government was, however, a slight modification of that recommended by the Committee. The Committee had recommended that the quantity so consigned in 1955-56 should not exceed 30 per cent. of the season's crop and 25 per cent. of the crop in 1956-57. It had also recommended that the position should thereafter be reviewed to see whether a further reduction to 20 per cent. could be made. The Committee felt that within five years the whole of India's tea crop should be sold in India itself. The Government of India did not think it necessary or desirable to fix a ceiling on a percentage basis. It, therefore, fixed a ceiling for 1955-56 of 140 million lbs. in respect of North Indian tea. As the South Indian exports to London auctions were much less than the ceiling recommended by the Committee and as they were not expected to exceed 25 per cent. of the crop, the Government did not fix any ceiling for South Indian tea. The strange part of the whole episode was that, within eight months after its decision, the Government had to withdraw this ceiling.

One of the difficulties in the way of developing Calcutta as an international auction centre was the absence of any effective arrangement for storing and financing of surplus production. The difficulties are all the greater now, in the context of the acute stringency in the money market and shortage of building materials to erect warehouses. Against this background, the success of Pakistan's latest decision will be watched with interest, particularly when its crop is just one-tenth of Indian production. Though the ceiling fixed by Pakistan is less than one-tenth of its output, it remains to be seen whether traders in London will take the trouble of turning to Chittagong for this small additional quantity, which they can get easily from other producing countries.

PLANTATIONS IN KERALA

The worst fears of the investors in Kerala plantation shares have been confirmed by the Communist Chief Minister of Kerala, Mr. E. M. S. Namboodiripad, with his announcement at his first Press Conference after assumption of office last week, that the State Government would take the earliest opportunity to initiate discussions with the Central Government on the nationalisation of foreign-owned plantations in the State. He added that the issue might be taken up at the next meeting of the National Development Council.

In reply to a question about compensation to be paid, the Chief Minister said that the Government had not calculated what exactly the compensation would be. He quoted the opinion of eminent economists that the Government could derive more resources than what it would have to pay by way of actual compensation. Replying to another question whether the Government would not have to pay compensation in foreign currency if the foreign-owned plantations were taken up, the Chief Minister said that the Government could pay compensation in rupees and he cited the instance of what Col. Nasser did in regard to compensation to the owners of the Suez Canal.

Mr. Namboodiripad expected that the Central Government would agree to the proposal. If it was found that there was a case for nationalisation on economic merits, as it applied to the economy of Kerala, he was confident that any reasonable man would agree to it. He added that he would request the Centre to consider it as a case specifically for the development of Kerala. He was sure that when the case was argued in this manner, even those who rejected the resolution for nationalisation of the tea industry in the Lok Sabha would be convinced and would agree to the proposal. If the Centre does not agree, the State Government cannot go against its direction. It can do nothing, as the Chief Minister himself admitted, except recording its strong protest. There is, therefore, some hope for investors that the Central Government will not go against its own decision.

(Concluded from next column)

that India can preserve its competitive position. Mr. Jalan did well to draw attention to the importance to the export trade of assured supplies of goods and stability of prices. At the same time, he took care to warn against any complacency by saying that India was entering a period in which its combative strength was to be severely tested. As an instance, he pointed out that Pakistan's jute industry had grown from a mushroom to a very respectable size. Its exports of jute manufactures in 1956 aggregated 80,000 tons, an increase of about 50 per cent. over the previous year, and roughly equal to 10 per cent. of India's total exports.

An idea of the efforts made by Pakistan to expand its jute industry can be had from the fact that so far 11 jute mills with 6,500 looms have been established and 1,250 more looms are being established. The total investments in these mills aggregate Rs. 18.50 crores, of which the share of the Pakistan Industrial Development Corporation is Rs. 5.96 crores, the balance having been contributed by private investors. Production during 1956 was valued at over Rs. 18 crores, of which goods worth about Rs. 10 crores were exported. Besides expanding mills in its own country, the Pakistan Government is said to be interested in establishing mills in foreign countries also. During 1956, the Government invested through the P.I.D.C. a sum of Rs. 1.14 crores in jute mills in Egypt, Iraq and Turkey.

SHIPMENTS OF JUTE GOODS PICK UP

OVERSEAS DEMAND LIKELY TO RISE

THE jute goods markets have been ruling fairly steady in recent weeks, with a moderate rise in prices of all varieties, thus reversing the earlier trend noted since the close of 1956. This reversal does not provide any indication whether the rise is only a temporary phase or will be sustained in the coming months. For the current prices are well below those seen at the close of 1956, as will be noted from the following table:

	Latest as on 6-4-1957	A week ago	End of February, 1957	End of December, 1956
B. Twills—	Rs.	Rs.	Rs.	Rs.
Ready	112.00	110.69	107.62	119.75
April-June	112.75	111.87	108.75	120.75
Hessian 40" × 10 oz.—				
Ready	41.00	40.69	40.44	46.37
April-June	41.44	41.19	40.25	44.25

The slight recovery is said to be due to reports that business for shipment has been on a fair scale, though a part of it is to be attributed to speculative activity also. It is stated that there have been large enquiries from the U.K., North America and the Argentine for hessian, and export business is being done in heavy sacking also. There seems to be a change in the market's earlier estimate of the demand for gunnies. It is now generally expected that the consumer demand for gunnies during 1957 will not fall below that of 1956 and, at the current rate of mill production, the stocks with mills at the end of the year are expected to be even down to a modest level. The sizable decline in stocks at the end of February from 103,200 tons to 97,600 tons paved the way for this change in the market's sentiment, notwithstanding the fact that the February-end stocks were higher than those at the end of December last and substantially more than those at the close of February 1956. The figures of shipments for the month of March, which show an encouraging trend, have further strengthened the market's expectations. The following are the figures of shipments (including coastal shipments) relating to manufactured goods from the Port of Calcutta—gross figures based on shipping bills presented:

(In tons)

	Bags	Cloth	Total
Hessian			
1st to 31st March, 1957 ..	3,030.3	32,415.7	35,446.0
1st to 28th February, 1957 ..	2,054.4	27,761.0	29,815.4
1st to 31st January, 1957 ..	5,755.6	33,439.7	39,195.3
Sacking			
1st to 31st March, 1957 ..	40,095.4	5,412.2	45,507.6
1st to 28th February, 1957 ..	27,004.9	3,433.4	30,438.3
1st to 31st January, 1957 ..	29,052.1	229.5	31,376.6

The overseas buyers have evidently been attracted by the low prices touched in February and booked substantial orders. It is expected that some of the important overseas customers of India, whose purchases in 1956 were less than those made in the previous year, will step up their purchases during the current year. Thus, the Argentine's imports of jute goods from India showed a disappointing drop. This was possibly due to the fact that large stocks had been built up previously and were utilised during the year. There is, however, some prospect of a larger offtake from that country during the current year, with the return of trade there to private hands. Shipments to Australia, the biggest customer for Indian heavy goods, which had been marked down last year, are also expected to improve this year. Shipments to the U.S., no doubt, rose from 180,000 tons in 1955 to 195,800 tons in 1956. The increase in internal consumption there did not match with the higher offtake, but the general trend of consumption showed an upward trend. This has given rise to hopes that it will be maintained in 1957. Consumption of hessian in February this year, at 62 million yards, showed a substantial decline, as is usually the case in that month, but the closing stocks at the end of the month (including those afloat) were very low at 166 million yards, as against 267 million yards a month ago and 245 million yards a year ago. This also provides an indication that the offtake of hessian from India may be higher this year. Reliance is also placed on consumption in India itself, with the expected rise in agricultural production and cement output.

The realisation of these hopes lies, as Mr. N. K. Jalan, Chairman of the Calcutta Jute Fabrics Shippers Association, pointed out the other day, in the mills getting jute at lower prices and the stabilisation of prices of finished goods at the current levels, so

DEVELOPMENT OF INTERMEDIATE AND MINOR PORTS

SECOND PLAN ALLOCATION QUITE INADEQUATE

WHILE it is true that the development and expansion of ports, which are vital links in the effective and efficient working of transport both by sea and land, have to be related to the general improvement of industry and trade in the country, their planning and construction should precede the anticipated developments in the different sectors of the economy. In view of the large development and production plans envisaged under the Second Plan the need for expansion of port capacity can hardly be overemphasised. The Government is, however, not unaware of the overriding importance of the development of port and harbour facilities. But its efforts in this direction in the past have not been commensurate with the requirements. This is particularly true in the case of intermediate and minor ports, although it cannot be denied that major ports, namely, Calcutta, Bombay, Madras, Cochin, Visakhapatnam and Kandla have been receiving increasing attention.

There are at present about 226 minor ports in the country—that is, ports with an annual cargo tonnage below 100,000 tons but not less than 1,500 tons—of which 150 are working ports. Ports having a capacity of below 1,500 tons are sub-ports. Intermediate ports which handle 100,000 tons of cargo a year, number about 18. The normal tendency of the Government before attainment of independence was towards overconcentration of the export and import traffic of the country, mainly concentrated in the major ports. Other ports along the coastline suffered age-long neglect. In the post-independence period also, intermediate and minor ports did not receive the attention they deserved. The Estimate Committee, in its recent report on Intermediate and Minor Ports, has pointed out that considering that these ports handle about one-sixth of the traffic handled by all major ports taken together, they have not received adequate attention in the First Plan. In actual figures, schemes included in the First Plan for rehabilitation, modernisation and expansion of facilities at the major ports were estimated to cost about Rs. 61 crores, whereas the development schemes planned for execution at the minor and intermediate ports were estimated to cost only Rs. 2.4 crores. While final figures regarding the amount actually incurred are not available, provisional figures suggest that only 40 per cent. of the planned expenditure for development of minor and intermediate ports could be incurred during the First Plan period.

Allocation of Funds

In the Second Plan also, the funds earmarked for the development of minor ports, including intermediate and sub-ports, are only Rs. 5 crores, as compared with Rs. 81 crores for the major ports. The former are, therefore, only 1/16th of the latter despite the fact that the amount of traffic handled by the minor and intermediate ports is about one-sixth of that by the major ports. This proportionate allocation of funds, according to the Committee, is partly due to a general unhealthy tendency towards overconcentration. It also points out that the schemes for the development of minor ports, as formulated by the maritime State Governments, were curtailed on the basis of the recommendation of the Officer on Special Duty whose contention in certain cases was that no work should be undertaken until increase in trade was well established. This, according to the Committee, is an unhealthy doctrine and quotes with approval the observation of the Ports (Technical) Committee, 1946, that the planning and construction of ports should precede the anticipated development and need of transport.

The broad objective of port development is to secure additional capacity required to meet expansion in seaborne trade arising out of the developments planned in the various sectors of the economy. Since there is great scope for expanding the capacity of many of the intermediate and minor ports, increased attention devoted to them will pay rich dividends in the form of enhanced cargo-handling capacity, at comparatively smaller capital outlay. The Committee, therefore, recommends that the Ministry of Transport should convene a high level conference of representatives of the maritime States to review the schemes for the development of minor ports. If the funds required exceed Rs. 5 crores, as they are quite likely to, some adjustment might be made from the funds earmarked for the major ports. Further, the Committee reiterates its earlier suggestion that the recommendation made at the second meeting of the National Harbour Board to create a Port Development Fund by levying a surcharge of one anna per ton on all goods imported or exported through all ports be implemented.

Some of the important problems faced by the minor ports requiring urgent solution on a planned basis are siltation of ports and entrance bars, survey of ports, navigational aids, communication between ships and ports, embarking and disembarking arrangements, cargo-handling facilities, suitable road or rail connections, etc. The Committee suggests that while drawing up development plans, local interests, including steamer companies, should be consulted.

Intermediate Ports

As regards intermediate ports, that is, ports which handle or have handled in the past 100,000 tons or more of cargo per year or are otherwise important, which number about 18, the Committee suggests that their development should be taken over by the Centre. It is common knowledge that at least three of the major ports, namely, Calcutta, Bombay, and Madras are working under heavy pressure. Hold ups to ships and cargo are quite a frequent occurrence. One day's hold up of a ship, according to the Committee, means a loss of approximately Rs. 5,000 to Rs. 8,000 and hence the annual loss on this account would probably run into several crores. Proper development of intermediate ports and intelligent and well planned rationalisation of traffic between major ports would therefore be in the interest of the major ports themselves, not to speak of the country as a whole. In the expanding economy of the country, the demand for additional port facilities is bound to increase. The Committee suggests, therefore, that it would be advisable to plan steps for converting some of the important intermediate ports into major ports and that such a programme may be included in the third Five-year Plan.

Congestion of traffic through the major ports has of late been a frequent occurrence. This has been mainly due to the following factor: (1) bunching of ship arrivals, labour troubles, limitation in rail and road transport for movement of goods to and from ports, inadequate berthing, handling and stacking facilities.

Even with the various measures already taken, periodical congestions continue to occur. The country, thus, faces a paradoxical situation wherein some of the major ports suffer congestions resulting in hold up to ships and cargoes, whereas the port capacity of some other ports like Cochin, Kandla, Bhavnagar, Okha, etc., is not fully utilised. The Committee has, therefore, come to the conclusion that the Ministry of Transport has not yet given much serious thought to the diversion of traffic from the congested major ports to the intermediate and minor ports which can easily handle the traffic with a little increase in the existing facilities or even by providing a few additional facilities. The Committee, therefore, recommends that the Ministry should give top priority to the rationalisation of traffic among different major, intermediate and minor ports and take concrete measures for diversion of traffic to ports which can easily handle them.

If the development and maintenance of minor ports have not received adequate attention in the past, it is partly due to the lack of well-knit port organisation and partly due to the limited resources of the maritime State Governments. As the question of developing ports all along the coastline and the rationalisation of import and export traffic is essentially a national problem, the Committee suggests that the feasibility of transferring the subject of "minor ports" from the "concurrent" List to "Union" List should be carefully examined in consultation with the maritime State Governments. Pending the examination of this issue, the Committee recommends that the development of the 18 intermediate ports should be taken over by the Centre. The State Governments may continue to manage these ports on behalf of the Centre on agency basis. As this will take some time, the pattern of port administration followed by Madras State might be adopted by other State Governments with suitable modifications.

Some of the other important recommendations of the Committee are: (1) Port Advisory Committees should be constituted at each of the 18 intermediate ports with proper representation to local interests. (2) The feasibility of forming Port Trusts on the same lines as at Tuticorin and Mangalore at the important intermediate ports should be examined. (3) Handling and Shipping Fees Committees and Conservancy Boards should be provided at the intermediate and important minor ports. (4) The question of standardisation of port dues should be finalised soon. The Committee has also recommended that the entire coastline of India should be divided into a suitable number of zones and each zone should be placed under the jurisdiction of a major or intermediate port for the purpose of maintenance and development of minor ports in each zone.

WORLD IRRIGATION CONFERENCE

Six hundred delegates from about 45 nations, including India, will gather at San Francisco next month to exchange technical information on irrigation and drainage. The occasion will be the third congress of the International Commission on Irrigation and Drainage which will open its four-day meeting on 1st May. Following the sessions, the delegates will tour many great American irrigation projects. Among the members of the Commission, which has its headquarters in Delhi, are Egypt, India, Iran, Iraq, Pakistan, Syria, the Sudan and Ceylon. The Executive Secondary of the organisation is Stephen H. Poe, Technical Information Officer of the U.S. Bureau of Reclamation's Engineering Centre in the State of Colorado.

The Congress will gain access to many technical papers, some 2,700 pounds of them, dealing with economic use of fresh water, lining of irrigation canals and ditches, treatment of saline water and soil and alkaline soils, the merits of sprinklers as opposed to ditch irrigation and many other aspects of the problem confronting engineers who are attempting to increase the area of food-producing lands. Among the new techniques to be described to the delegates are the use of scientific devices to purify brackish waters, to prevent excessive evaporation, and to "seed" clouds in order to induce rainfall.

NATIONAL INSTRUMENTS FACTORY

India is marching slowly but steadily towards self-sufficiency in regard to the manufacture of precision instruments required by industry, the scientific research institutes and other agencies. The National Instruments Factory, Jadavpur, near Calcutta, is playing a notable part in meeting the requirements. The factory produces a wide range of about 250 complicated and precision instruments required for engineering, scientific and industrial purposes. Among these are barometers, microscopes, excise apparatus, hydrometers, monometers,

NEW PRODUCTS AND PROCESSES

Temperature Control

AUTOMATION and electronics are combined in a new system by which temperatures are maintained in office buildings and other enclosed areas at desired levels in all-year round "climate control." This system has been developed by the Minneapolis-Honeywell Regulator Company, U.S.A. Control panels are maintained in central locations known as Supervisory Data Centres, which provide for 24-hour monitoring of indoor building temperatures, and the instantaneous automatic adjustment of remotely placed control equipment to maintain a constant temperature level. The controls are exercised by a complicated thermostatic network. At the present time, there are 125 such Data Centres in 57 cities of the United States, according to Minneapolis-Honeywell, and additional ones are being established all the time. They are found in banks, insurance companies, hotels, shopping centres and administrative buildings. The use of a central automatic, electronic control system results in substantial savings in maintenance costs, it is claimed. With existing methods of control, large staffs have to be employed to check and operate control systems. Where Data Centres have been installed, these manpower costs are greatly reduced, it is reported. The systems can also be used at the stage of construction of a building, to calculate influences, both external and internal, that affect the temperature conditions. Another extension of the same principle makes possible the recording of data. Data on the automatic equipment performance can be automatically typewritten on log sheets, for cost analysis by a building manager or engineer.

Coloured Radar

A coloured radar system that makes it easier for the operator to pick out a ship on his screen during stormy weather and heavy seas has been invented in the United States. The advantage of the new system over conventional radar sets is that it employs a colour identification process for picking out targets from the surrounding environment. The system's inventor, David E. Sunstein of Cynwyd, Pennsylvania, points out that all too often it is difficult for a radar operator to get a clear and sharp picture. This is particularly true, he says, in choppy seas where a ship appears on the radar screen to blend in with the water. Under such circumstances, Mr. Sunstein says, the operator often readjusts his set without remedying the situation. The coloured radar system employs the principle that signals reflected from a ship ordinarily are of greater amplitude than those reflected from land masses or the sea. Sunstein's system permits the signals to pass through a cathode ray tube equipped with a fluorescent screen which, under electron bombardment, emits light of a preselected colour. The signals then are passed through a second screen. The operator then sees the target in one colour and the surrounding environment in another colour.

Gold Plating Molybdenum

Scientists of the Batelle Institute, London, carrying out research into the development of techniques for utilising molybdenum and its alloys in turbine blades have discovered a way of overcoming the problems created by the fact that the molybdenum underneath ordinary protective plated coatings of nickel and chromium still comes into contact with the air. After plating the molybdenum specimens with one layer of chromium the scientists plated a thin layer of gold on to the chromium. The chromium and gold plated specimen was then plated with additional layers of nickel and chromium. When the molybdenum which had been treated in this fashion was exposed to high temperatures it was found that the gold had formed a layer that effectively retained the molybdenum, and prevented it from reaching the air through the super-imposed additional layers of nickel and chromium. As a result, it is claimed, this technique of gold plating molybdenum can be used to modify ordinary nickel and chromium plating techniques, thus enabling molybdenum parts to be successfully protected by plating processes for high temperature operation.

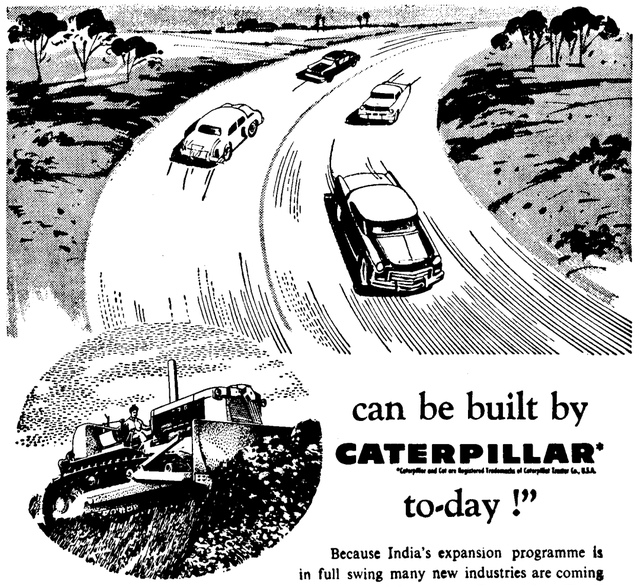
Alloy for Electric Motors

A new high strength high temperature resistant copper alloy has been developed in Britain for use in the construction of electric motors. The new material was originally developed for use in the construction of commutators for electric motors which would have to operate at the unusually high temperature of 500 degrees Fahrenheit, or more. It is, however, expected that it will prove useful in a number of other industrial applications. The alloy, which contains about 0.25 per cent. of zirconium, is said to be easy to produce and handle. Indeed, it was for this reason that the scientists carrying out the research which led to the production of the new copper alloy, preferred the zirconium-copper alloy to an alternative chromium-copper alloy, severe difficulties of production and handling being experienced with the latter. The electrical conductivity of the new material is said to be over 90 per cent. of that of the copper standard.

Speeding Up X-rays

A new high-speed automatically-controlled system for processing industrial and medical X-ray films has been developed and will shortly be available. The system is said to be capable of completely processing ordinary used X-ray films and delivering the dried films ready for inspection in only six minutes. This compares with the time of about 45 minutes, or more, which it takes to process the used film by normal methods. In the system the film need only be placed in one end of the processing unit whence it emerges, about six feet away, at the other end of the unit six minutes later, fully prepared for examination and filing.

"Our highways of to-morrow ...



can be built by CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* Paving the way to India's progress

ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

CHAIRMAN'S SPEECH AT TWENTIETH ORDINARY GENERAL MEETING

MR. N. D. HARRIS ON FUTURE OF CHEMICAL INDUSTRY

ADDRESSING the shareholders of the Alkali and Chemical Corporation of India, Ltd. at their Twentieth Ordinary General Meeting held in Calcutta on 28th March 1957, Mr. N. D. Harris, Chairman of the Company, gave a brief account of the Company's plans for manufacture of Polythene. Referring to the proposed issue of new capital to finance a part of the cost of the project, he expressed the hope that the management would be able to maintain a reasonable dividend even on the higher capital. In this connection, Mr. Harris struck an optimistic note on the future of the chemical industry in India and disclosed that the Company had in mind plans for further extension of its activities.

The following is the full text of Mr. Harris's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the year ended 30th September 1956 have been in your hands for some time and, with your permission, I propose to take them as read.

Accounts

"I am pleased to report that the year records further increases in production and sales. The net profit for the year, after providing for depreciation, amounts to Rs. 29,80,327. The total profit available including the balance from the previous year of Rs. 1,19,168 is Rs. 30,99,495, compared with Rs. 22,93,168 for 1954-55. A sum of Rs. 13,64,000 has been transferred to dividend equalisation reserve, and I shall refer to this unusually large transfer later. After this allocation and the others referred to in the Directors' report and the payment of the preference dividend, a dividend of 8 per cent., free of income-tax, is recommended on the ordinary shares. If you agree to this, a balance of Rs. 92,495 will be left to be carried forward.

"I referred at the last general meeting to our plans for the manufacture of Polythene at Rishra, and I am glad to say that we have received a licence from Government to proceed with this project. In fact, substantial progress has already been made on the site. As I told you, Imperial Chemical Industries Ltd., London, your technical advisers, have agreed to supply their process and continuing 'know-how' on very favourable terms. Polythene was discovered by I.C.I. Ltd., who now manufacture large quantities in the United Kingdom and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of Polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

Uses of Polythene

"The process will be that used by I.C.I. in the manufacture of the well-known 'Alkathene' brand of Polythene. The use of 'Alkathene' in India has been developed by I.C.I. (India) Private Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of Polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

"The project will involve a total investment of about Rs. 4 crores, which it was decided to raise by a substantial share issue at par and by borrowing. All ordinary shareholders have now received the circular letter dated 4th March which gave advance notice of the new issue of shares in the proportion of four new 'A' ordinary shares for one old ordinary share held. Shareholders will have the right to renounce and they will shortly receive a letter describing the procedure. The rights are saleable on the stock market as recently announced by the Calcutta Stock Exchange Committee.

"I referred previously to the large allocation of Rs. 13,64,000 to the dividend equalisation reserve. Your Directors made this reserve in the knowledge that, although the Polythene project should ultimately prove profitable, capital invested during the construction period will earn no return. It is hoped, however, with the help of the dividend equalisation reserve to maintain a reasonable dividend, even on the higher capital.

"Some of you may wonder why we have had to issue a different class of ordinary shares. The reason is that we hope this part of the capital of the Company will qualify for relief under section 56(A) of the Indian Income-tax Act, and that dividends received by companies on these shares will be exempt from super-tax.

"Our principal shareholder, I.C.I. (India) Private Ltd., will take up their new 'A' shares to the extent of Rs. 1,75,30,720 and it should be noted that this represents a substantial additional British investment in India by Imperial Chemical Industries, London, through I.C.I. (India) Private Ltd.

"I.C.I. (India) Private Ltd. are also agreeable to buy any 'A' shares not taken up or disposed of by shareholders.

Record Sales and Production

"I shall now give you a brief review of our activities. The year has been a record one for both sales and production. Demand for our products continues to increase and generally still exceeds our capacity which is being expanded in most of our products.

"Production of chlorine and caustic soda was 21 per cent. higher than in the previous year, and you will be interested to know that we consumed 30 per cent. of our total production of chlorine in the manufacture of other products. As there is still an unsatisfied demand we have applied to the Government for permission to increase this section of the plant.

"Production and sales of hydrochloric acid were about 10 per cent. higher and plant to double the capacity has already been installed.

"The plants for the production and formulation for our 'Gammexane' Benzene Hexachloride (B.H.C.) products also had a successful year, and extensions were completed during the year. An interesting development in this sphere was the first large purchase by the Government of B.H.C. water dispersible powder for use in their national malaria programme. It is expected that substantial supplies will be taken by the Government during the next few years.

Paints

"Our 'Duco' and 'Dulux' paints and our range of allied products continue to be very popular. The plant extensions referred to at the last general meeting were almost completed during the year, although some delay was caused by the blocking of the Suez Canal. It is now apparent that, although these extensions will increase our capacity considerably, they will still be inadequate to meet demand and your Directors are now considering further extensions. The increasing demand for metal pretreatment products, produced and marketed under the name of A.C.P., resulted in your Directors installing a plant for their manufacture.

"As I said earlier, a start has been made on the Polythene project; the site is being developed and construction has begun. Every effort is being made to ensure that this plant goes into production in the shortest possible time.

"Last year, I was happy to pay a tribute to the technical and sales staff of our Selling Agents, I.C.I. (India) Private Ltd. They have again earned our special thanks as they have matched with record sales, the record productions achieved at Rishra. Considerable competition was faced, particularly in the sale of paints and 'Gammexane' products which they were successful in meeting. I look forward with confidence to similar co-operation in marketing our 'Alkathene' brand of Polythene when this factory goes into production.

Potential Market for Chemicals

"The chemical industry in India is relatively in its infancy, and your Directors are aware that there is an immense potential market for chemicals for India's growing industrialisation. We hope to be in the forefront of this industry and have continuously in mind plans for further extension.

"I do not intend to enter the worn-out, controversy concerning the roles of the public and private sectors in industry, because I believe that both can function side by side, and the efficient working of both is essential to the success of India's plans. Certain spheres of industrialisation are not appropriate to private enterprise which, however, can be justly proud of its achievements to date and of its plans for the future. While I think that the Government really takes the same view of private enterprise's important role, nevertheless, some recent legislation and decisions in the fields of labour and taxation are not easily reconcilable with it.

"One hopes that labour tribunals are doing a real service to the country, but one wonders whether those who sit on them really understand the long-term implications of their awards. The Government is becoming a large employer of industrial labour, and I believe there will result a better appreciation of the private employer's point of view: also that in both the public and private sectors yardsticks to be used in wage rates, allowances, bonus, etc., will not widely differ.

"In the field of taxation, it is well known that the burden of corporate tax—and that in India is amongst the heaviest in the world—the recent legislation requiring the deposit with the Government of a part of profits, the penal tax on dividends, the heavy personal tax on management personnel have all contributed to the growing feeling of uncertainty and unrest.

"One of India's greatest needs today is industrial capital, and the developments I have referred to above must inevitably deter the investment of capital from abroad.

Labour Relations

"A special word of commendation is due to our staff and workers for the excellent results achieved during the year and, I am sure, you will wish me to convey to them our sincere thanks. Our relations with them remained good throughout the year. We are endeavouring to introduce new and improved terms of service at the factory, based upon a scientific appraisement of the value of each job. Unfortunately, due to difficulties arising as a result of our having two unions in the factory, we have so far been unable to reach an agreement which will enable us to introduce these new terms, but we hope that the current year will produce a solution to this problem.

"Your Board is alive to the need for trained management and technical personnel and have followed a progressive recruitment policy. A number of young Indians have received training in I.C.I. and other factories in the U.K. and more will be going when the Polythene plant is nearing completion. Indian engineering recruits are receiving practical training in workshops and factories in and around Calcutta and a 'school' for fitters and *mistries* is in operation at Rishra.

"The Directors retiring by rotation are Sir Birendra Nath Mookerjee, Sir Bijoy Prosad Singh Roy and Mr. P. M. G. Hutton and I have great pleasure in recommending their re-election.

"The auditors, Messrs. Lovelock and Lewes, also retire and you are requested to reappoint them for the ensuing year at a fee of Rs. 7,500 which is the same as that of last year."

INDIAN SUGAR MILLS ASSOCIATION

MR. S. S. KANORIA'S ADDRESS AT TWENTY-FOURTH ANNUAL MEETING

ACHIEVEMENTS OF SUGAR INDUSTRY REMARKABLE

THE achievements of the sugar industry in the past five years were impressively surveyed by Mr. S. S. Kanoria, Chairman of the Indian Sugar Mills Association, in the course of his address at the Twenty-fourth Annual General Meeting of the Association, held at New Delhi on Friday, 5th April 1957. Characterising the performance on the production front as being remarkable, Mr. Kanoria declared that it was a foretaste of what the industry was capable of achieving. He expressed his confidence that the output target set in the second Five-year Plan was well within the capacity of the industry. He referred, in particular, to the emergence of India as an exporter of sugar which, he said, was "a development of the highest significance." Touching on the advantages of exports, he expressed the hope that the foundations laid in the course of the year would support a rising volume of exports in the coming years.

Following are extracts from Mr. Kanoria's speech at the meeting:

"It is a matter of legitimate pride to us that the sugar industry has given such an outstanding account of itself during the first Five-year Plan and thereafter. Production in 1955-56, the last year of the first Plan, amounted to 1.86 million tons of sugar, thus exceeding even the revised target of 1.80 million tons. This represents an increase of 86 per cent. over the pre-Plan average production of one million tons, as compared with 33 per cent. in iron and steel, 40 per cent. in cotton textiles, 78 per cent. in cement, 12 per cent. in jute and 58 per cent. in paper. In the White Paper on the Central Budget for 1957-58, it has been observed that sugar was the one notable case of a substantial increase in production among the established industries. It compares the remarkable achievement of the sugar industry, of increasing production in one year by 20.7 per cent., to the much smaller increase, during the same period, of 9.8 per cent. in cement, 4.2 per cent. in finished steel, 3.7 per cent. in mill-made cloth, 2.3 per cent. in cotton yarn, 6.4 per cent. in jute textiles, 4.7 per cent. in tanned hides, 2½ per cent. in coal and no increase in tea.

"I believe that this impressive performance is only a foretaste of what the industry is capable of achieving. Under the second Five-year Plan, the target of sugar production has been fixed at 2.25 million tons, an increase of 0.45 million tons from the last target of 1.8 million tons. There can be no doubt that this target is well within the capacity of the industry to achieve. In setting it, the planners appear to have been guided more by the expected increase in demand within the country than by the capacity of the industry for rapid expansion. But the emergence of India as an exporter of sugar introduces an entirely new element into the situation. I am glad that the possibility and importance of sugar exports, which have been long overdue, have now been realised.

Sugar Exports

"I am convinced that the emergence of India as a substantial exporter of sugar is a development of the highest significance, both for the sugar industry, as well as for the nation as a whole. It is my earnest hope that the foundations we have laid in the course of this year will support a rising volume of exports in coming years. The advantages that planned development of sugar exports can confer on producers, consumers, the Government and the country as a whole are numerous. Exports could act as a safety valve for regulating an even flow of supplies to the home market at stable prices. Again, exports would enable a much more rapid expansion of the industry than would otherwise be possible, thus helping the movement towards industrialisation, which the second Five-year Plan stresses so much. Apart from providing investment opportunities and employment, this would materially benefit several lakhs of cane growers. As for the fear that sugar exports would lead to scarcity and a rise in prices, I think recent experience has proved how baseless this fear is. In spite of the export of one lakh tons now going on, sugar prices continue to be low.

"I think the contribution which sugar exports can make to relieve the foreign exchange shortage is generally underestimated. Over a five-year period, I feel sugar worth about Rs. 75 to Rs. 100 crores may be exported. Surely, this is not an insignificant sum. If by sugar exports we could pay for the foreign exchange requirements of one or two steel plants in five years, I consider it will be a remarkable achievement and a great step towards the successful implementation of our Five-year Plan.

"I think that we can confidently expect to capture a substantial portion of the international sugar market, if a well planned scheme for developing sugar exports is devised and implemented. I am aware that the present world price of sugar is abnormally high and is not likely to last. But even if prices decline, they are likely to stabilise at higher levels than before, and I am sure we can continue to export sugar at the expense of 4 to 6 annas per maund on our total production. This is a very small amount and would not mean any rise in internal prices. In this connection, you would recall that, to initiate exports, this season, the industry had at one stage volunteered to contribute 4 annas per maund on the entire production of the season 1955-56. But, in this connection, I must clearly mention that all States, particularly the U.P. and Bihar, should refund the cane cess on that part of the sugar output which is exported. At one time, the Government of U.P. agreed to such a refund, but changed their mind when the world price of sugar rose and exports at a profit became possible. This sudden decision to go back on an earlier promise is difficult to understand or justify, since the profits earned on sugar exports are pooled in a separate fund and do not accrue to the manufacturers or traders. It seems to me to reflect a deplorable lack of foresight and of awareness of the crucial importance of earning foreign exchange and I sincerely hope that they will reconsider the matter. We shall also need the co-operation of railways through the grant of special rates for carrying sugar intended for export to the ports, as was the practice at one time.

Exports by I.S.M.A.

"Before I turn from this matter of sugar exports, I would like to thank the Government of India for having entrusted our Association with the business of exporting sugar. We feel that we have discharged this great responsibility with credit and have already sold about 80,000 tons of Indian sugar to a number of countries as follows:

Sales upto 31st March 1957	Tons
East Africa	28,350
Persian Gulf and Red Sea Ports	21,600
Malaya	13,750
Ceylon	8,250
Burma	6,000
United Kingdom	1,000
Total ...	78,950

"Out of the above, some quantities have already been shipped and we have been particularly careful about quality and believe that we have established sound and cordial relations with our foreign customers. You are aware that we are not making any profit on this business. The entire profit, which is presently estimated at about Rs. 20 lakhs, is being credited to a special fund to be utilised for meeting losses on exports as necessity arises. This excludes a sum of Rs. 40 lakhs which should have come by way of rebate of cane cess. We are particularly gratified that our efforts have been appreciated by the Government and thank the Minister for Food and Agriculture for having stated in Parliament that the Indian Sugar Mills Association was conducting the business of sugar exports efficiently and as a non-profit-making organisation.

Internal Consumption

"Expansion of production follows as a natural corollary from expansion of exports. But quite apart from increasing production in order to meet the needs of the export market, there is an enormous scope for increasing output for home consumption. We know that, by world standards, our *per capita* consumption of sugar is extremely low and it is certain that, as incomes and living standards increase, this gap will be narrowed. Furthermore, the regional consumption pattern within the country is marked by wide inequalities as is evident from the following:

Statewise consumption of sugar per capita *during the season* 1955-56

	Lbs.		Lbs.
Saurashtra	34.66	Mysore	9.63
Bombay	25.05	Uttar Pradesh	8.46
Punjab	22.50	Bihar	6.96
West Bengal	21.14	Hyderabad	6.24
Madhya Bharat	14.38	Madras	5.50
Assam	10.05	Orissa	3.36
Madhya Pradesh	9.87	Other States including Andhra	19.15
Rajasthan	9.81		

"We may be sure that, in course of time, the low consumption areas like Orissa, Madras, Hyderabad and Bihar will tend to rise to the level of others such as Saurashtra and Bombay. This will involve a substantial increase in overall internal demand and will provide opportunity for an equally great increase in production.

Production and Licensing Policy

"It seems to me, then, that the most urgent problem facing the industry is that of expanding production. We have to extend output, both to meet a rising internal demand and in order to provide for exports. I believe that a very substantial increase in production is possible, provided the maximum use is made of the available resources. I may also sound here a note of caution. Our hopes regarding exports of sugar and earning foreign exchange may be completely belied, if effective steps are not taken to maximise production.

"I regret to have to say that the present licensing policy of the Government leaves much to be desired and licences have been granted without proper consideration as to the allocation of capacity between the existing and the new factories or regions. Expansion of existing factories can be carried out more cheaply, more quickly and with less foreign exchange than will be needed for the setting up of new factories. Already, the average Indian sugar factory is small, compared to those in other countries. An increase in size and reduction in the number of factories will bring substantial reduction in costs. In Australia, in recent times, the number of factories was reduced from 166 to 34 which are now producing the entire output of about 1.2 million tons of sugar. As against this, a very large number of new factories have been licensed here. Progress made so far in regard to the utilisation of the additional capacity so far licensed, is satisfactory. The 69 factories which were allowed expansion have already taken the necessary steps for increasing their capacity, except for 12 factories which were granted expansion licences, only in December 1956. Out of the new factories, only four went into production last season, including two mills shifted, and 14 were due to start this season but were delayed due to late arrivals of machinery. Orders for machinery are reported to have been placed for another 22 new factories for establishment during the season 1957-58, but this again is uncertain. In respect of the remaining 17 units, progress has been slow and a few of the licences might eventually have to be cancelled. Recently, difficulties have been faced in securing licences for importing machineries for expansion.

"I earnestly hope that, at least in future, if any further capacity is to be licensed, the claims for expansion of existing units will be given priority over setting up of new units. In any case, I would strongly urge that factories should be allowed to expand freely upto a capacity of 2,000 to 2,500 tons if cane is available, which should now be considered an economic size.

"A study of the regional distribution of increased cane cultivation and sugar production programmes shows that, in some areas, the additional capacity is quite inadequate to utilise the expected increase in cane supplies. In others, licences have been granted for sugar production where no provision has been made for increase in cane supplies. This has resulted in strange anomalies. In West U.P., for instance, the grower has been required to restrict cane cultivation, because the industry is not capable of absorbing the entire supply. This is an extraordinary situation, at a time when the industry is in the process of rapid growth.

"Even from the point of view of regional self-sufficiency, the grant of licences for additional capacity appears to have been overdone. In the Southern zone, comprising the old States of Andhra, Hyderabad, Mysore, Madras, Travancore-Cochin and Orissa, consumption in 1955-56 was approximately 3,24,000 tons and has been estimated to rise to 3,79,000 tons by 1960-61. Actual production in this area in 1955-56 was 2,54,000 tons. Additional capacity licensed for this area is 3 lakh tons, which means that there will be a surplus of 1,75,000 tons by 1960-61. Therefore, the licensing of 3 lakh tons additional capacity, most of it in the form of new factories, seems unwarranted, especially in view of shortage of foreign exchange for imports of machinery and the need for expansion in other areas.

"I would like to suggest that a very substantial increase in production could be accomplished by bringing the existing idle factories into production. There is also a great possibility of increase in sugar production this year by converting *gur* into sugar. This will improve the present low prices of *gur* and also provide us with more sugar to export and earn valuable foreign exchange. For this purpose, suitable concessions by way of rebate in excise duty should be immediately announced. Another avenue of stepping up production which seems to me to hold great possibilities is the duration of the season.

East U.P. and Bihar Factories

"Factories in Eastern U.P. and Bihar have been operating for some time under severe drawbacks. They suffer from overcrowding, shortage of cane supplies, uneconomic crushing period and low recovery. Factories in East U.P. are also realising lower prices for their sugar, being away from the markets. The situation is precarious and is rapidly deteriorating. I am sorry to say that, in some ways, Government action has tended to aggravate the situation. The action of the Cane Department in U.P. in some cases has amounted to taking advantage of the weak cane position of such factories to compel them to pay a premium on the cane price. Another instance of the unhelpful attitude of the Government to the problems of this area is the unwillingness to accede to the suggestion put forward by this Association, speaking for the entire industry, that factories in East U.P. should be given a 10 per cent. lead in quota releases over other areas. This does not involve any increase in the overall release. It is only a redistribution of the quantity released among the different areas to compensate the Eastern U.P. factories for the disadvantages they are suffering under the present quota release system. I am rather pained at the Government's unsympathetic attitude on this question.

"I believe that it is necessary to shift 10 to 12 factories out of this region immediately so that the remaining ones would have adequate supplies of cane for a full crushing season and opportunities for expansion.

Cane Development

"It is hardly necessary for me to stress the dependence of the sugar industry on adequate supplies of high quality cane. At present, the position in this important matter of raw material is far from satisfactory. The low sucrose content of the cane supplied to the factories makes for low recovery and high cost of production. If better quality cane enabled us to increase recovery by half or one per cent., that would mean 5 or 10 per cent. additional sugar.

"I believe that there are great possibilities of increasing recovery by a judicious choice of the sowing season and the use of early, mid and late ripening varieties of cane, together with a system of harvesting on the basis of maturity of cane. This would provide a continuous supply of cane for crushing over a much longer period than the present duration of the crushing season. I feel it is now time we began to think in terms of longer crushing season for the maximum utilisation of our resources. Unfortunately, the cane departments of the State Governments have not paid adequate attention to this matter. In fact, the Cane Rules in U.P. and Bihar do not permit harvesting on the basis of maturity on the plea of equitable supplies of cane.

"The Cane Departments of State Governments have recently been doing some good work, but, as now constituted, they are entirely inadequate to tackle the gigantic problem. The officials of these departments are overwhelmed with routine work and, in any case, I feel it is too much to expect from them the vision, imagination and dynamism which are required. With about 28 crore maunds of cane supplied annually to factories and probably another 50 crores converted into *gur* in U.P. alone, the problems of cane development are of a magnitude and complexity that call for attention at a higher level than they now receive. They are worthy of consideration by a special Minister.

"I have yet one more suggestion to make on this subject. I feel that the money now being spent on cane development does not produce the maximum possible results. There will, I am sure, be great improvement, if the expenditure of these funds were to be channelled through the factories, which, after all, are most immediately and intimately interested in adequate and high quality cane supplies. The factory could be made the nucleus of cane development in its area and all the money allotted by the State and Central Governments for cane development in factory zones could be spent through the Cane Development Council of each factory, where growers, management and Government are represented.

Cane Price

"My final point with regard to sugarcane is a plea for stability of cane prices. Frequent changes in these prices have a disruptive effect not only on cultivators' incomes but on the quantity of cane grown and that offered to factories and used for *gur*, production costs and prices of sugar. It is because of this desire for stability that the Association advised the Government to maintain the minimum prices of sugarcane unchanged for the 1957-58 season, in spite of the fact that cane prices were higher than those of other food crops.

Modernisation

"The need for rehabilitation and modernisation of plant and machinery has already been recognised by the Planning Commission who have estimated the amount required for this purpose at Rs. 50 crores. I venture to urge upon the Food Minister to use his good offices so that the National Industrial Development Corporation should extend the same financial assistance for this purpose to the sugar industry, as it already does to the jute and cotton textile industries.

Sugar Prices and Costs

"Another matter to which I think it necessary to invite your attention is that of internal sugar prices. What I wish to emphasise is that, contrary to common belief, Indian consumers are very much better off in this respect than their counterparts in other countries. I give below some figures of retail prices of sugar in different countries of the world, compiled by the International Sugar Council:

Retail price of sugar in different countries on 1st January 1956.

Country	*Per pound*	*Per seer*
	d.	Rs. a. p.
Yugoslavia	18.6	2 2 1
Italy	15.7	1 12 9
Japan	14.8	1 11 1
Greece	14.6	1 10 9
Sudan	12.5	1 6 6
France	12.3	1 6 4
Germany (F.R.)	12.2	1 6 3
Indonesia	10.5	1 3 3
Formosa	9.9	1 2 1
U.S.A.	9.0	1 0 1
United Kingdom	8.5	0 15 7
Canada	7.8	0 14 4
Philippines	7.5	0 13 9
Australia	7.2	0 13 2
Malaya	7.2	0 13 2
India	6.9	0 12 8
Cuba	5.8	0 10 7

"According to them, the Indian consumer pays less for sugar than those of most other countries. For instance, consumers here pay less than in the U.S.A., France, the Federal Republic of Germany, Japan, Malaya and the Philippines. They pay even less than consumers in the leading sugar-producing countries of the world such as the United Kingdom, Australia and Indonesia. This will come as a surprise to many who do not realise that the chief sugar-exporting countries of the world deliberately keep prices for home consumers high so that sugar may be exported and sold in the world market at cheap prices. Those who form their impressions on the low prices at which other sugars are sold in the world market are usually not aware of the other side of the picture, that such cheap sugar is not for the home consumers in those countries but only for export.

"What is even more remarkable is that, while the number of wholesale prices has been steadily rising, sugar prices have remained at a depressed level, despite increase in taxation and rising production costs. This can be substantiated by the following figures of price indices published by the Reserve Bank:

Commodity food articles	*March* 1955	*March* 1956	*Variation 2 over 1*
Rice	415	518	+ 24.8
Wheat ...	435	532	+ 22.3
Jowar ...	102	225	+120.5
Bajra ...	223	237	+ 6.3

"The White Paper on the Budget for 1957-58 also comments on this stability of sugar prices at a time of inflationary pressure. I hope that these facts will effectively dispel the wrong notions about the sugar industry.

"I am acutely conscious of the fact that the system of private enterprise, of which we are a part, is at the cross-roads. Whether it will take the road leading downwards to decline and extinction or upwards to higher levels of national prosperity, depends largely on us. I, for one, look to the future with faith; faith in the capacity of our leaders, both political and economic, to help this country to accomplish successfully its great mission of planned economic development through democratic institutions."

ENGINEERING

(*Concluded from page* 732)

etc. Besides, the factory undertakes repairs of aircraft and other precision instruments. The standard of quality and prices of the products compare favourably with those imported from abroad.

The factory had its origin in the Mathematical Instruments Office, founded in 1830 for the maintenance and repair of precision instruments required in the Survey of India. The two world wars afforded an opportunity for the transformation of the Mathematical Instruments Office from a mere repair shop to a full-fledged instruments manufacturing institution. The range and number of instruments produced have considerably increased since then and the sale of manufactured products has also been progressively expanding. Total sales aggregated Rs. 21.56 lakhs in 1954-55 and after declining to Rs. 13.99 lakhs in 1955-56, it again rose to Rs. 18.75 lakhs in the first ten months of 1956-57.

The services of the factory are now availed of by the various Government departments using technical and scientific instruments. Neighbouring countries like Afghanistan and Burma also take advantage of the factory. The factory also gives training for two years to 10 graduate apprentices and 10 diploma holders in instrument technology. It has on its schedule during the Second Plan period, schemes for the manufacture of new instruments and apparatus such as optical and ophthalmic glasses, special microscopes for engineering and geological use, etc. The factory is also expected to take up the production of pressure and vacuum gauges.

CHAMBAL AND LAKKAVALI PROJECTS

The Committee on Plan Projects of the Planning Commission has appointed a five-member team with Mr. N. V. Gadgil, M.P., as Chairman, to study the Chambal and Lakkavali (Bhadra) Irrigation Projects. The study team will be assisted by a consultative committee of senior engineers who, after visits to the Projects concerned, will formulate the outline of a plan for the evaluation of the projects.

The team will, among other things, study all aspects of the projects having a bearing on economy and efficiency with special reference to utilisation of trained personnel and materials, utilisation of machinery and equipment, construction, plant layout, and adequacy of original estimates and designs as evidenced from actual construction of the project. It will also examine the phasing of the construction with a view to studying whether timely utilisation of benefits accruing from the project has been ensured, whether it is possible to accelerate accrual of benefits, and if benefits could be increased by rephasing the project at this stage. The team will assess the progress made in construction, the reasons for shortfall, if any, and suggest measures for improvement in the future. It will also examine the possibility of decreasing dependence upon imported materials and equipment.

LOCOMOTIVE PRODUCTION

The Chittaranjan Locomotive Works set up another record of production when the 500th locomotive rolled out of the factory on 25th March. The "WG" locomotive, produced by the factory, is one of the heaviest types of broad-gauge freight locomotives and weighs about 174 tons in working order and has a horse-power of 1,300 at 35-45 miles per hour. Production in the shops commenced on 26th January 1950 and the first locomotive, assembled out of imported components, was turned out on 1st November 1950. In 1950, three locomotives were produced. In 1951, 16, in 1952, 30, in 1953, 54, in 1954, 86, in 1955, 123, and in 1956, 150 'WG' locomotives were turned out and at present the shops are manufacturing 14 'WG' locomotives per month.

The workshop was set up for a target production of 120 average size locomotives per year which figure was reached as early as May 1954 and since then the Chittaranjan Locomotive Works is setting new records almost every month and thus contributing towards India's self-sufficiency in motive power requirements.

SOME PROVISIONS OF FINANCE ACT NO. III OF 1956 REVIEWED

HARMFUL EFFECTS OF COMPULSORY DEPOSIT SCHEME

By S. S. Jhunjhunwala

THE last month of 1956 witnessed the placing of Finance Act No. III of 1956 on the Indian statute book and so far as taxes on income are concerned it put an early end to the wishful thinking of the business man that in consideration of his financial assistance in the coming elections he would be spared the burden of increase in taxation for 1957-58 at least. It was a departure from the normal practice to lay down the provisions for the next financial year about four months in advance and that too, not in full. For, so far as rates of income-tax for all assessees and super-tax for non-companies are concerned the same has been left open. The object of the Act is mildly and cleverly worded. It is meant "further to amend the Indian Income Tax Act 1922, for the purpose of imposing a tax on capital gains and for certain other purposes and to prescribe the rate of super-tax on companies for the Financial year 1957-58."

Capital Gains

The imposition of tax on capital gains is among the important features of the law. In fact, it is a revival of this tax which was in force for a period of two years from 1st April, 1946 to 31st March 1948. But the revival is with certain modifications, one of which is the inclusion within its ambit of gains arising out of compulsory acquisition of capital assets. Compulsory acquisition, as a matter of course, will be by governmental bodies and in most of the cases there is no likelihood of any gains arising to the person concerned. But if there happens to be such gain, the Government will have henceforth its share in it. This is an indirect way of making compulsory acquisition for the Government cheaper to some extent.

The tax will be chargeable on gains arising from the sale, exchange, relinquishment or transfer of a capital asset effected after the 31st March 1956. Any distribution of capital assets on partition of a Hindu undivided family or under a deed of gift, bequest or will has been rightly excluded from this tax. Similar exclusion (with certain conditions) is there for the transfer of capital assets by a company to a subsidiary company the whole of the share capital of which is held by the parent company or by the nominees thereof. A very important concession given to the taxpayer is that of giving him an option of substituting the fair market value of the asset as on the 1st January 1954. in place of its actual original cost to him, if the asset has been acquired before that date. Thus, all capital appreciation prior to 1954 has been excluded from this tax.

A considerate provision has also been inserted for certain exemptions in cases where a person disposes of a property used as a dwelling house by himself or any of his parents for two years prior to the date of disposition and subsequently within one year from such date he purchases a new property for his own residence. In all fairness this exemption merited extension to the cases where such new property is acquired for the residence of any of the parents of the assessee or where the property instead of being purchased is constructed. There is also a provision for carry forward and set off of capital losses against capital gains in future and ignoring such gains or losses as may be below a prescribed minimum limit.

The rate of income-tax applicable to capital gains will be the rate applicable to the total income of the assessee (from all sources other than capital gains) plus one-third of the amount of capital gains. Thus, if a person has a total income of Rs. 30,000 and besides, he also earns capital gains to the extent of Rs. 21,000 he will be required to pay tax on this Rs. 21,000 at the average rate applicable to an income of Rs. 37,000 under the relevant Finance Act. This special manner of computation of rate of tax may be deemed to be fair and reasonable by all concerned.

The super-tax on companies has been increased in the following ways:

(*a*) Section 23A companies have now to pay additional super-tax of six annas in the rupee of undistributed profits within the meaning of Section 23A in place of four annas in the rupee.

(*b*) Those companies which do not fulfil the two conditions of being public companies within the meaning of Section 23A and having income below Rs. 25,000 have now to pay higher rate of super-tax on dividends declared in excess of 6 per cent. of the paid-up capital. As compared with the assessment year 1956-57, the rate registers an increase of one anna in the rupee on that part of the dividend which exceeds 10 per cent. but not 18 per cent. of the paid-up capital, and for the part of the dividends exceeding 18 per cent., the rise in the rate of super-tax is to the extent of three annas in the rupee.

The writer had occasion to consider this particular type of super-tax in his article published in *Commerce* dated 17th November 1956, and there is no use dealing with the same elaborately again. In a nutshell, it has the effect of cutting Section 23A companies both ways, whether they declare dividends or not. Furthermore, it creates complications in the computation of tax and makes the task of the ill-equipped Income-tax Department further difficult. If the Treasury is keen on having money it may be more convenient to have it by making a slight flat rate increase in the income-tax rate of all companies and do away with the distinction between private and public companies in this respect.

Compulsory Deposit

This innovation of the ingenious Finance Minister is covered by the general words "for certain other purposes" in the objects clause of the Act. Yet, in fact, it is the most far-reaching of the changes introduced by this new piece of legislation. It lays down that a company will not be entitled to the deduction of depreciation allowance, development rebate and obsolescence allowance from its total income for tax purposes unless it deposits with the Central Government, by the 30th June of the relevant assessment year:

(1) Such percentage, not exceeding twenty-five, as may from time to time be notified by the Central Government, of the accumulated profits and reserves of the company as at the end of the year preceding the previous year, to the extent to which such profits and reserves are not represented by the fixed assets of the company, plus (2) such percentage not exceeding seventy-five, as may from time to time be notified by the Central Government, of the amount by which the sum of the following amounts, namely,

(*a*) the total income of the company for the year in question as reduced by the amount of income-tax and super-tax payable in respect thereof, and by the dividends, if any, declared during the year, and

(*b*) the sum of the allowances under the heads of depreciation and development rebate, exceeds the sum of Rs. 1 lakh.

The Central Government is also empowered to make rules providing the manner in which the aforesaid deposit may be made, the time when and the manner in which refunds of any such deposit shall be made whether with or without interest, and in particular, the refund at any time of any such deposit or part thereof where the refund is claimed for carrying out any such proposal connected with the business of the company as is approved by the Central Government.

On a point of principle it should be deemed to be unfair to make the allowance of a legitimate deduction contingent upon the payment of a comparatively substantial amount of deposit with the Government. But monetary exigencies appear to make one abandon principles—be one a common man or Government. Moreover, at present, the Government is able to cloak many a thing on the plea of five-year plans. Taking then for granted that the money thus collected by the Government will be usefully disimbursed for the good aims of the Plan, we are still left with the task of examining the merits of the particular method adopted to which we now turn.

The first target of attack is the accumulated profits and reserves of the company, (1) as at the end of the year preceding the year in reference, and (2) to the extent to which such profits and reserves are not represented by the fixed assets of the company. A company's accumulated profits and reserves may be represented by usually the following items: (*a*) fixed assets, (*b*) advances, (*c*) stores, stock-in-trade and other current requirements, (*d*) loans and investments in other concerns, and (*e*) cash in hand and banks. The exclusion of accumulated reserves to the extent of their representation by fixed assets alone is justifiable only by shutting one's eyes to the practical reality that in the course of business it is as difficult to convert its non-fixed assets into hard cash as is the case with fixed assets. While taking such decisions there is no use relying over the dictionary meanings of the words "fixed," "current," "liquid," etc. The person who runs the show knows the difficulty in providing cash money out of so-called liquid assets. So far as loans to and investments in other concerns are concerned, it should not be forgotten that these accommodations are mutual and, secondly, these other concerns also after all provide employment to people. The tapping of these resources required for actual working is bound to act as a clog upon the company. One would not grudge—rather one would appreciate it—if the Government adopts a practical standard of determining the amount of *idle moneys* and collects the same in full, not to say of a percentage only, and utilises the same for the Five-year Plan with a fair return to the person concerned.

The second target is the amount by which the sum of the development rebate and depreciation allowance and the balance of the company's income that may remain after payment of tax and dividend exceeds Rs. 1 lakh. The choice of these allowances appears to rest on the basis that these are notional deductions—that is, these deductions are allowed to be made out of the total income although the assessee has not spent these amounts in cash. On a closer scrutiny it will appear that although it may be said to be true so far as development rebate is concerned, the depreciation allowances of varying rates reflect the actual wear and tear of the assessee's buildings, plant and machinery, etc., during the year. This depreciation of assets is always carefully taken into account by the business houses and steps are regularly taken for replacements, additions or alterations in the machinery and plant section. By laying its hand on this resource the Government will again hinder the normal working of the unit. In fact, it is the development rebate which, as its name denotes, is a concession to the assessee by way of a fillip to expansion of industrial units. If the Government is at all so keen, it may think of limiting this rebate in some other way but there, too, it should reckon the adverse effect it may have on the object of introduction of this concession. In fact, when all are unanimous regarding the need for maximum possible expansion of industries in India it becomes very difficult to see any wisdom in the Finance Minister subjecting industrial units alone to these new hardships.

Section 23A

An important aspect of the matter to which attention does not seem to have been drawn is that if a section 23A company is not able to make the deposit it will not only be disqualified from getting these allowances and thus made to pay tax on the same, but the Income-tax Department will hold that the provisions of section 23A apply to this part of the computed income as well and charge the additional rate of super-tax of six annas in the rupee to the prescribed extent. All this will result in the financial starvation of these industrial units. And the result of financial starvation is too well known to need any telling.

One big lacunæ—I dare presume that it is unintentional and will be remedied at its earliest—in this scheme is that if a company finds it difficult to make the whole payment and is willing to make a part deposit there is no provision for granting of the development rebate, etc., to the proportionate extent.

The Finance Minister has been good enough to assure speedy refunds for approved purposes. Its fulfilment remains to be seen. And, further, it is difficult to avoid the feeling that this scheme of compulsory deposits and refunds is based on the misapprehension that the working in the private sector is similar to that of the Government. Here, there is neither red-tapism, nor any endless flow of conferences. In private business houses there is a continuous process of quick decisions followed by action. The daily routine and improvement and extension plans are almost intermixed and executed day to day. They are not used to making out a plan and depositing the money after a few months in June with the Government, then applying for its refund and if the refund happens to come by some piece of good luck and hard efforts, then to use the same. If the Government so desires, it will have to accustom itself to this crippling waste of time and money, but then it is quite possible that this master stroke of planned economy will do more harm than good to its own cause.

THE HIND BANK LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

GENTLEMEN,

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1956.

	Rs.	a.	p.
The Profit and Loss Account after deduction of all working expenses shows a profit of	12,10,668	0	3
to which must be added the amount brought forward from previous account	1,66,277	15	9
Total .. Rs.	13,76,946	0	0
which the Directors have disposed of as follows:—			
Provision made for taxation	4,50,000	0	0
Amount transferred to Reserve Fund	3,75,000	0	0
Bonus to Staff	90,000	0	0
Balance	4,61,946	0	0
Total .. Rs.	13,76,946	0	0

Out of the balance of Rs. 4,61,946-0-0 the Directors recommend to the shareholders payment of Dividend at Rs. 3 per share free of Income-tax which absorbs Rs. 3,00,000-0-0 leaving Rs. 1,61,946-0-0 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved are satisfactory. The investment policy of the Bank during the year 1956 continued to be the same. About 86 per cent. of the Bank's investments are held in Government of India and State Government Bonds of which 92 per cent. mature within the next 8 years. The Bank's Investments in the Balance Sheet stand at below market value as at 31st December, 1956.

Under Section 78 of the Companies Act, 1956, the amount of premium Rs. 3,75,000-0-0 received at Rs. 5 per share against issue of 75,000 shares in the year 1944 which was lying in Reserve Fund Account has been transferred to the Share Premium Account and shown separately in the Balance Sheet.

Under the provisions of the Articles of Association of the Company Shri K. P. Goenka, Shri B. Kumar Birla and Shri B. V. Jacob retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the constituents for their support in the growth of the institution and also to the members of the Local Advisory Committees at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

Dated, CALCUTTA, the 13th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL— 2,00,000 Shares of Rs. 100 each	2,00,00,000	0	0

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of The Hind Bank Limited, as at 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated branch returns audited by Statutory or Local Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1949. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CALCUTTA, the 13th March, 1957.

AUTOMATION AND ATOMIC POWER

THEIR IMPACT ON LABOUR

THE labour and social implications of automation and other technological developments, including the industrial uses of atomic energy, have been analysed by the Director-General of the International Labour Organisation, Mr. David A. Morse, in a report to be discussed by Government, worker and employer delegates of 77 nations at the 40th session of the International Labour Conference at Geneva during June 1957. The report traces the progress of revolutionary technological changes in the world over the past few years. The impact on employment, skill, education and training, job satisfaction, labour mobility, wages and hours of work, industrial safety and social security are among the problems examined. Mr. Morse has also discussed the planning of technological changes within undertakings and the meaning of these developments for labour-management co-operation. Finally, he has outlined a number of guiding principles which could be of help in putting modern technology effectively to the service of mankind.

Mr. Morse points out that automation is only one form of technological change and it must be kept in proper perspective as one of many developments gradually altering the nature and structure of industry and commerce. He stresses that, "ever since the Second World War—which itself gave a great impetus to technological innovation—new machinery, new methods, new products and new processes have been making their way into the world's economy." According to him, while definitions of "automation" vary, three fundamental developments account for nearly everything that is commonly regarded as falling under the heading of automation. The first, continuous automatic production or integration, is often called "Detroit automation" in honour of the city where it got its start. The second is often termed feed-back technology, based on the use of built-in automatic devices which compare the way work is being done with the way which it is supposed to be done and make automatically any adjustments in the work process that may be necessary. The third is best known as computer technology, resting primarily on new developments in electrical engineering and covering the use of general and special purpose computing machines capable of recording and storing information (usually in the form of numbers) and of performing both simple and complex mathematical operations on such data. Full automation is the result of the flowing together of these three streams of technological progress.

What is New in Automation ?

Clearly, says Mr. Morse, automation is not new. What is new behind automation is the new way of thinking about production processes, including the possibility of envisaging a large and complex yet fully automatic factory in which a computer integrates and controls the separate automatic production lines. As an American observer has pointed out, the fact that today an imaginative scientist can improvise, in principle, mechanisms capable of carrying out almost any task is of revolutionary significance. Mr. Morse says: "It is this threat that lies behind the fear that we have created an uncontrollable force imperilling our society and even that we are in danger of being destroyed by our own creations." Another new element in automation is related to its potential in quickening the rate of change in industry. Finally, perhaps the most significant novel features of automation is that it makes it possible to do many things and to produce many goods and services which were simply not feasible in the past.

Mr. Morse refers next to the development of the peaceful uses of nuclear energy, which, in his opinion, has been even more spectacular in many ways. Only five years ago, there were many serious technical problems still to be overcome, and it was said that years would elapse before nuclear energy could compete with energy from coal and other conventional sources and that its practical use in industry could not be expected to materialise for two or three decades. Yet, by 1954, a nuclear energy plant was supplying power to industry and agriculture in one region of the U.S.S.R.; in 1955 a town in the United States was for a short period fully supplied with electricity from a similar source; and in 1956 two nuclear energy plants went into operation in France and the United Kingdom.

There is, Mr. Morse says, a close link between atomic energy and automation. But for the development of certain types of automation, the construction of nuclear reactors would not have been possible; in turn, radio-isotopes make possible many of the feed-back devices which are the essential element in one type of automation. Canada, the United Kingdom, the United States and the U.S.S.R. have all become large exporters of isotopes. A radio-isotope costing $250 can do the work of $25,000 worth of radium in testing the strength of metals. Oil, paper, plastics, rubber and other industries were also using isotopes. Since, in nearly every case, the use of radio-isotopes is cheaper, less time-consuming and more efficient than earlier methods, and since in many cases they render services which were completely impossible before, the annual saving to the industries of the world is incalculable. All these various developments and the many others pouring into the main stream of technological change in industry are transforming the whole productive process and creating new opportunities and problems in the labour and social field.

It is widely recognised that the key to the labour and social impact of automation and other technological innovations is the rate of speed at which they are introduced and at which they spread from one undertaking, industry and area to another and from one part of the world to another. To quote Mr. Morse: "If, as many have emphasised, the changes of the last 50 years had been compressed into the space of five years, there would have been economic and social chaos. If the changes resulting from automation, the use of atomic energy and other recent innovations were to take place within the same limited period of five years, there would be grounds for grave concern." While it is important to try to assess the rate of speed at which technological changes are occurring and are likely to occur in the world economy, it should be frankly admitted, says Mr. Morse, "that, at the moment, we have no real means of knowing how fast the changes will come and how far they will go."

Will Automation be Gradual?

Few have challenged the assumption that automation and other developments will be gradual, Mr. Morse observes. "Nor would I do so. Yet in the interests of caution, it might be noted that, only a few years ago, automation and atomic energy were both commonly regarded as practical problems for the next decade, not for this one. Things have happened far faster than most qualified observers in both fields expected." The need, he emphasises, is to study what is happening, to try to anticipate the impact in the social field, and to plan ahead to meet without confusion any problems that may arise.

In the considered opinion of Mr. Morse, there are certain clear-cut advantages of automation to industry. Some of these are financial. Of these, the most important is the reduction of direct labour costs. Other advantages are technical. Of these, the most important is probably the fact that automation makes it possible to produce better quality goods and to work with constant precision and within narrower specifications. He observes: "Because of these financial and technical advantages to industry, and leaving aside any social advantages which might also play a part in managerial decisions, many experts anticipate that industry will be forced into more and more automation at a faster and faster pace." Mr. Morse questions the wisdom of assuming that automation would affect certain types of industries while others would be less likely to feel its impact. "Competition among firms and other pressures for industrial efficiency oblige more and more undertakings to introduce automation. Also, the more that is learned about automatic devices, the more uses are devised for them."

Structure and Location of Industry

Both automation and the use of atomic energy affect the structure and location of industry. Automation will affect the shape and size and location of plants. With atomic energy and automation together, the employer will be more free to locate his plant and this would be likely to disrupt some communities and give new life to others. To quote Mr. Morse: "It may be that these changes will have international implications and will create shifts in the international location of industry. It has been pointed out that the new technology demands a world market and will exert tremendous pressure against artificial trade barriers. At the same time, economic development in industrially less developed areas may be accelerated. In any case, it seems likely that there will be changes in the division of labour between countries, particularly perhaps between small and large countries and between countries producing mainly primary products and those producing mainly manufactured products... My prediction would be that both automation and the industrial application of atomic energy will go further and faster in the less developed countries than we would now anticipate." At the same time, the new methods are likely to accentuate some of the problems of transition to industrialisation, particularly in countries with chronic underemployment and heavy population pressure. It is the human problems involved in this transition which require special attention, as modern technology invades the less developed countries. In this connection, Mr. Morse remarks: "So long as improvements are introduced against a background of high levels of economic activity and a continuing rate of economic expansion, the maintenance of the general level of employment is not likely to be a serious problem provided the occupational shifts required to adjust to the changes can be made."

Trend of Opinion

The Director-General of the I.L.O. points out that on the whole, the trend of opinion among employers and trade unions as to the employment situation is optimistic but cautious. Nevertheless, and more particularly in trade union circles, there is an evident fear that things will not go on for ever as they are: that a saturation point may be reached. He observes:

"These apprehensions are real and widespread. The only way in which they can be countered is by concentrating on the facts—in each country, in each industry, in each undertaking, by giving sustained attention to the changing employment situation, and by careful planning not only to promote full employment and economic growth but also to foster the social policies which must underlie and accompany such growth. Technological progress holds out great savings in labour: let us not be afraid to admit this. These savings may be taken in the form of (1) higher output (either in the same industry or in other parts of the economy), (2) shorter hours, (3) unemployment; or a combination of the three. The problem, to my mind, is to arrive at a satisfactory combination of the first two and to avoid the third. For many countries, the main danger of unemployment may arise not from too rapid but from too slow progress in automation and other technological developments."

Pattern of Skill

Mr. Morse has devoted three chapters to skill changes and the resultant impact on education and training of young and adult workers. "A look at the world today suggests that a redefinition of skill is long overdue," he says. "Do the classical concepts of unskilled, semi-skilled and skilled workers, largely taken from a static, medieval society of guilds, really correspond to the needs of the dynamic, fast-changing industrial society of today? Will the nineteenth century concept of salary-earning office employees and wage-earning factory workers make sense in the automated factory of tomorrow? The skill of one technological era is dead and the skill of a new era is just emerging."

Mr. Morse devotes special attention to the problem of equipping youth for the factories and offices of tomorrow. "As technological advance continues, illiteracy must be wiped out altogether. But modern industry demands more than this." Youth would probably need better and longer basic schooling. A greater percentage of the population would need to complete university or equivalent education. There will have to be a particular upsurge in higher technological education, and much more co-ordination of education and training channels at all levels. Vocational training facilities would have to be expanded, but, more important, functionally reoriented. Re-training of adult workers, including supervisors, needed more imagination as well as more attention from employers and workers.

Planning Changes Within Plants

Technological changes require many adjustments within the plant and from its labour force. Mr. Morse considers that the fear of change is natural, and makes the following observations:

"It is my experience that, today, there is no need to regard industrial disturbance and social unrest as an inevitable consequence of technological changeovers. The essentials of wise policy seem to me to be clear: careful advance planning on the part of management, with full consideration of the human problems of technological changeovers; full prior consultation of the workers and their representatives before plans are finalised; careful tim-

MONEY
ITS NATURE AND MANAGEMENT
By B. T. Thakur

How can India guard against diminution in the purchasing power of money? What is deficit financing? What are the functions of Central Banks and the conditions for their healthy existence? What is the purpose of the Reserve Bank of India? These and other questions facing India today are dealt with clearly and comprehensively.

This book is the expanded version of Prof. Benoy Sarkar Memorial Lectures delivered by Mr. Thakur at the Calcutta University in 1956.

Here is a book which will be useful not only to economists, bankers, administrators and politicians, but also to intelligent readers and students.

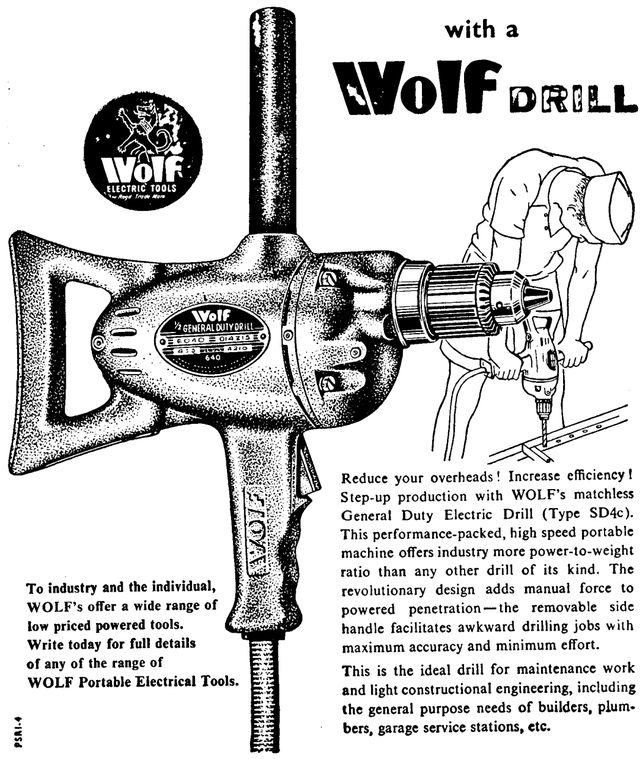
More power to the pound!
with a
WOLF DRILL



Reduce your overheads! Increase efficiency! Step-up production with WOLF's matchless General Duty Electric Drill (Type SD4c). This performance-packed, high speed portable machine offers industry more power-to-weight ratio than any other drill of its kind. The revolutionary design adds manual force to powered penetration—the removable side handle facilitates awkward drilling jobs with maximum accuracy and minimum effort.

This is the ideal drill for maintenance work and light constructional engineering, including the general purpose needs of builders, plumbers, garage service stations, etc.

To industry and the individual, WOLF's offer a wide range of low priced powered tools. Write today for full details of any of the range of WOLF Portable Electrical Tools.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

MR. C. BLAKER'S REVIEW OF ECONOMIC CONDITIONS IN ASIAN COUNTRIES

WARNING AGAINST OVER-INVESTMENT OF GOVERNMENT FUNDS ABROAD

THE Annual General Meeting of the Hongkong and Shanghai Banking Corporation was held in Hong Kong on 15th March 1957. In the course of his customary statement to the shareholders, Mr. C. Blaker, M.C., E.D., Chairman of the Corporation, made a review of the political and economic conditions in the Asian countries in which the Corporation was represented. On the whole, he found the past year a satisfactory one for these countries and, notwithstanding setbacks, it was marked by general political stability with growing economic expansion.

Inaugurating the proceedings of the meeting, Mr. Blaker said:

"LADIES AND GENTLEMEN,

"The hour for which this meeting was called having now passed, I will call upon the Chief Manager to read the notice convening the meeting."

The notice convening the meeting having been read by the Chief Manager, Mr. Michael W. Turner, and the Auditors' report by a representative of the auditors, the Chairman continued:

"LADIES AND GENTLEMEN,

"As you will see from the accounts before you, the profit for the year amounts to $20,635,421, which represents a small increase over last year's figure. In accordance with our normal practice this profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for all realised losses, the depreciation in value of our investments and all known doubtful debts and contingencies.

"It is proposed that a sum of $4 million should again be written off Bank premises and, after allowing for this transfer and the interim dividend of £2 per share, the Directors recommend the payment of a final dividend of £3 per share leaving a balance of just over $11 million to be carried forward to next year.

"Turning to our balance-sheet, it will be seen that the total of our liabilities has remained virtually unchanged; a small increase in current, deposit and other accounts having been offset by a slight decrease in the total of acceptances on behalf of customers. In this connection arrangements were completed during the year for the establishment of a separate trust to administer the staff retirement scheme and the funds of this scheme, which were previously included among the current, deposit and other accounts, were transferred to the trust during the year.

Increase in Advances

"On the assets side of the balance-sheet, the main changes are increases of $144 million in advances to customers and other accounts and of $39 million in trade bills discounted. As a result of the larger facilities granted to our constituents, the total of cash, call money and Government Treasury Bills has decreased by just over $105 million. Investments have also fallen by $66 million, due partly to the drop in the market value of British Government securities, but also as a result of sales of investments, which were mainly in connection with the transfer of the funds of the staff retirement scheme to the separate trust to which I have already referred.

"The investment in an associated company, which is a new item in the balance-sheet, represents our one-third interest in Bowmaker (C.A.) (Private) Limited in which we are equal shareholders with Bowmaker Limited and Tozer, Kemsley and Millbourn Limited. This Company was incorporated on 29th May 1956 to trade in Central Africa, including the Rhodesias and Nyasaland, but for the present it will be mainly concerned with the granting of hire-purchase facilities in these territories.

"These are the main changes in our balance-sheet, but I should like to say a little more about the rise in advances and trade bills which, as you have seen, has resulted in a drop in the total of cash, call money and Government Treasury Bills. This rise is to a large extent due to the growing industrial and commercial expansion in South-East Asia, but that is not the only reason. It was not until the end of 1955 that the credit squeeze in the United Kingdom began to make itself felt in the Eastern territories in which we operate, but during 1956 the shortage of credit to a greater or lesser degree became a matter of increasing concern to merchants and bankers alike. This was aggravated in our case by the fact that some concerns which had previously obtained a large part of their finance in London now turned to us, while on the other side, depositors took advantage of the high rates obtainable in the United Kingdom to transfer some of their funds there.

"Governments also were not slow to follow suit and as a result the banking system in a number of territories was deprived of substantial sums at a time when the demand for advances, mainly for productive purposes, was very active. Even from a purely revenue-producing angle I wonder whether this action was wise. Has not the lure of higher interest rates caused them to lose sight of the increased revenue that would have accrued to them through taxation had the funds been available for local development? For the future growth of these territories an over-investment of Government funds abroad must result in a slowing down of the pace, as this deprives the banking system of what is almost its life-blood.

Not a Pleasant Task

"I am afraid that, as a result of the increasing demand for credit, the standing of the borrower and the security offered are not the only considerations which have to be taken into account by our managers when approached for new facilities. The necessity to turn away business, which at other times would be most suitable, has, I am afraid, been forced on bankers in many parts of the world and we could hardly expect to escape. Nevertheless, it is not a pleasant task and I hope that many of you in this room will realise—to quote a saying from our schooldays—'that it hurts me more than it hurts you.' In the interests of depositors and shareholders alike it would be most imprudent not to maintain a suitable degree of liquidity and, spread as our activities are over so many territories, this liquidity should, in our opinion, be higher than may be considered necessary by bankers whose interests are mainly confined to one single country. At 31st December 1956, the ratio of the Bank's readily realisable assets to its total liabilities, was just under 45 per cent. and, while your Directors are satisfied that this is a safe margin, the drop over the last few years is a reminder that our ability to finance the capital and current requirements of our customers and friends must of necessity have some limitation.

"The printed statement which is in your hands deals, as usual, with the political and economic situation in the Asian countries in which we are represented. We have tried in this statement to pick out the main developments which we thought would be of interest to shareholders, but with the increasing activity that is taking place in all these territories, a great deal must of necessity be left out. On the whole, the year was one of steady progress with an improvement in trade and your Directors are very satisfied with the results, which would have been even better if it were not for a series of unfortunate losses which we suffered in Calcutta.

"Since the time of the formation of the Bank the shareholders have been liable, in the event of the Bank being dissolved, for the full amount of the notes issued by the Bank; and have also been liable to contribute to the Bank's debts to the extent of the nominal value of each share. At that time such a liability was a usual condition for the establishment of a new bank in the Colonies in order to afford protection to the holders of notes and to the depositors. The growth of banks since these days has made such a protection unnecessary and recently in a number of instances arrangements have been made to do away with such a liability. In our case an amendment of the Ordinance is necessary and we have recently made representations to the Government that this should be done. In fact, although there is provision for a small fiduciary issue of under $7 million, the note issue is fully covered by Certificates of Indebtedness and approved securities, while the depositors are protected by the very substantial reserves which have been built up.

"I should like to take this opportunity of expressing our thanks to the Chief Manager, the Branch Managers and all our staff for their loyalty and efficient service to the Bank during the year.

"Ladies and gentlemen, the report and statement of accounts having been in your hands for the required period I will now formally propose their adoption as presented.

"After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask."

The resolution having been seconded, the report and accounts were adopted.

Chairman's Statement

The following is the Chairman's statement circulated at the meeting:

"When our annual review was prepared last year there seemed hope that we could look forward to a slow, but gradual, improvement in international relations. True, many problems remained unsolved, but a degree of stabilisation appeared to have been reached, sufficient at least to prevent any major disturbances from breaking out. The de-Stalinisation policy gave evidence of a change of emphasis, if not a change of heart, in Russia and the benefit of co-existence was the theme of many of her leaders' speeches, while the rest of the world seemed quiet. Unfortunately, these hopes were not realised and, at one time during the year, the world seemed very near to the calamity of a global war with all the destruction of life and treasure which such a catastrophe would have caused in this thermo-nuclear age. Dissension in Eastern Europe, due to dissatisfaction with living conditions caused to a large extent by the over-concentration of resources in the production of heavy industry, resulted in reforms in Poland and an armed uprising in Hungary; and in the Middle East the nationalisation of the Suez Canal by the Egyptian Government, coupled with their deteriorating relations with the State of Israel, set in train a series of events the results of which cannot yet be foreseen. Indeed, we have to go back many years to find an issue which raised so much controversy in the United Kingdom and elsewhere as the intervention of the British and French forces in the fighting between Israel and Egypt, and the passions raised by that intervention have not yet died down. On the whole, little pleasure can be found in looking back on the events of the past year. Some of the legacies, which will be with us for some time to come, are the damage which has been done to Anglo-American relations, the closing of the Suez Canal and the difficulties which the shortage of oil has caused to the economies of Western Europe; but there are many others. There is, however, a little comfort to be gained from the fact that shattering though some of the incidents were, causing as they did misery to many helpless people, the disturbances were to a great extent localised, and the fear of starting a world conflagration seemed to prevent action reaching the point of no return.

Industrial Production Higher

"Economically, industrial production continued to increase, although at a slower speed than in 1955, and a growing intensification of the restriction of credit began to make itself felt. In the United Kingdom, the first six months showed a steady improvement in the gold and dollar reserves—evidence that the deflationary measures imposed were proving successful—but from July onwards external factors began to come into play and economic conditions were dominated by events in the Middle East which culminated in a loss of nearly £100 million in the sterling area reserves during November. Steps taken in December to mobilise all available resources seem to have been successful in stopping this drain and the technical position of sterling has since been greatly improved, thus enabling the inherent strength of the economy to reassert itself. The stability of a currency is not, however, decided by technical considerations—important though these are in the case of sterling, in which currency such a large part of world trade is financed—and, while the short-term outlook is reassuring, it is only by a steady and substantial increase in the reserves that a permanent solution can be found. If it has done nothing else, the Suez crisis has clearly shown that the United Kingdom has been endeavouring to undertake larger responsibilities than the economy can bear. The present size of the armed forces is a case in point and recent announcements show that a determined effort is now being made to tackle this problem and this should do more than anything else to reduce the level of Government expenditure, the need for which has been stressed from so many platforms.

Free Trade Area

"Since the war, there has been considerable support for the proposal that some form of integration of the economies of Western Europe should be evolved, which, by the pooling of resources, would enable this area, with its large internal market, to compete on more equal terms with the United States and with the growing economic strength of Russia. Such an area would be immeasurably strengthened by the addition of the United Kingdom, but the difficulty of combining her Commonwealth obligations with the membership of a European union has always in the past proved a stumbling block. Opinion in the United Kingdom has, however, changed and in a recent White Paper the Government recommended to the Organisation for European Economic Co-operation that, subject to reservations on agriculture, general approval be given to the creation of a 'European Industrial Free Trade Area' which would associate with the European common market composed of France, Western Germany, Italy and the Benelux countries. At a meeting held in Paris shortly after the issue of this White Paper, seventeen Western European nations agreed to enter into the necessary negotiations and Mr. Thorneycroft was appointed chief co-ordinator. In this proposed free trade area tariffs and quotas, against imports from countries within the area, will be abolished progressively over a period of years, but each country will be permitted to retain its own individual tariffs against the outside world as opposed to the common market where there will be a standardised tariff with non-members. Although a number of differences have still to be ironed out a great step forward has been taken towards the setting up of this free trade area which, if it comes into being, will be one of the most encouraging developments in world trade that has been evolved since the war.

"Another important event, which took place in the United Kingdom during the year, was the formal opening by Her Majesty the Queen, in October, of the world's first large-scale nuclear power station at Calder Hall. This project is a considerable achievement which not only marks the beginning of the generation on a large-scale of electricity from the atom but may also result in the development of an export market with tremendous possibilities. Already there are reports that the Japanese are showing interest in the purchase of a power reactor of the British Calder Hall type.

Too Speedy Industrialisation

"In Asia, the international situation has remained quiet and although, as I pointed out last year, a number of problems remain unsolved, there were no developments, apart from several internal incidents, which disturbed the peace of the area. The disruption of shipping through the Suez Canal delayed and increased the cost of many of their imports from Western Europe, but so far this has not caused any undue strain on the economies of the various countries, while on the short view at least, Japan has benefited. In many of our annual reviews since the war the importance of agriculture has been stressed and we have tried to point out the dangers of a too speedy move towards industrialisation: but the desire to bring about an increase in the standards of living of the people has caused Governments to draw up plans which, if successful (and some of them so far have been fairly successful), will result in an extremely rapid enlargement of industrial resources. The increase of consumer demand which a large capital investment is bound to create and which precedes—often by some considerable time—the wealth generated by that investment, presses mostly heavily, moreover, on food prices and it is for this reason that the improvement in agricultural production at such a time is so necessary. As the report by the Council for Technical Co-operation in South and South-East Asia 1955-56 puts it, 'food is the basic sector of production' and this is borne out by a study of conditions in various countries where it is usually found that a favourable harvest is the best tonic for their general economic health. Recent events in Eastern Europe have shown that, even where the whole economy of a country is ruthlessly planned to the accumulation of fixed capital, there is a limit to the extent to which industrialisation can be pushed forward unless agriculture keeps pace. Unfortunately, during the year under review, agricultural production did not show any marked increase in Asia and while not in any way overlooking the part that weather conditions can play, particularly sudden natural disasters such as floods, one is left with the feeling that in many countries insufficient resources are being allocated to the agricultural sector. These remarks of mine will, I hope, not be misunderstood. The need for rapid industrialisation in this day and age cannot be questioned and enlightened self-interest alone would lead us to give this movement every encouragement: but this does not get away from the fact that under conditions which exist in most of Asia, with growing populations, the increase in industrial development should not move at such a high speed that the production of basic foodstuffs and other necessities of life is unable to keep pace.

Aid for Under-developed Countries

"The Colombo Plan continued to play a large part in furthering development in South-East Asia and it is encouraging to see how mutual aid has increased, particularly in the provision of training facilities. The Consultative Committee in its report, published after its annual meeting in Wellington in December, stresses the desirability of flexibility in development programmes, the importance of providing 'sufficient opportunities for productively employing the ever-increasing human resources of the area' and the need to maintain a proper balance between consumption and investment. The Committee also expressed the hope that 'increased opportunities may develop for drawing on foreign private investment.' This is certainly true and I trust that a suitable climate will be created to encourage this investment. United Nations agencies continued to play their part, while aid has been provided by the United States of America on a generous scale through various channels. The International Bank for Reconstruction and Development also made substantial loans including one of U.S. $75 million to the Tata Iron and Steel Company Limited of India, which is the largest loan for an industrial project so far made by that Bank; and its offspring, the International Finance Corporation, came into being in July and announced its intention of concentrating upon investment in less developed countries in association with private investors. The International Bank has proved itself one of the most successful international organisations set up since the war and I hope that, with the experience of its parent at its disposal, the International Finance Corporation will be able to make a useful and increasing contribution towards the economic development of its members in the private sector in which it will specialise. In our own small way we are doing our part and we have interests in two development corporations, one in India and the other in Ceylon, while consideration is being given to the setting up of a similar organisation in the Federation of Malaya. These corporations are intended to grant finance on a rather longer term basis than banks normally provide.

Hong Kong

"Hong Kong has been fortunate in recent years in avoiding any serious internal disturbances and for this a great deal of the credit is due to our efficient police force. Unfortunately, in October an incident, which started as a comparatively minor dispute in one of the resettlement areas, was exploited by criminals and gangster members of the Triad Societies to develop into the most serious riots the Colony has experienced since the war. The Governor, in a memorandum to the Secretary of State for the Colonies, stated that 'there is no evidence whatsoever to suggest that the riots in Kowloon were planned beforehand. On the contrary, all the indications are that they started spontaneously' and he went on to show that the crowded resettlement blocks, which it was necessary to build in urban areas in order to enable the inhabitants to be housed near their work, 'explains the dryness of the timber which was waiting to be ignited by any suitable spark.'

"The continuing rise in the population due to the large influx from China and the natural increase—excess of births over deaths—influences every sector of the community's life and it compelled the Government in September to reintroduce the quota system for Chinese entering the Colony. That this move was inevitable was borne out by the fact that during the six and half months when these restrictions were lifted there were over fifty thousand immigrants and this, if allowed to continue, coupled with the natural increase of about seventy-five thousand persons, would have imposed a strain on the Colony's resources which it would be quite unable to bear. The interim report of the Special Committee on Housing in Hong Kong, which I mentioned last year, estimates that even to prevent living standards from deteriorating it will be necessary to build 'the equivalent of one new town, not much smaller than York, each year' which gives some idea of the magnitude of the task. This problem was dealt with at considerable length by the Governor in his recent speech in the Legislative Council and the progress so far made in resettlement and in the construction of new housing generally is, I think, remarkable. It is nevertheless not enough. Hong Kong has prided herself since the war on what has been achieved by her own efforts and I hope that we shall be able to continue to be self-reliant for our normal development, but the task of resettlement is something quite different. The time is rapidly approaching—if it is not already here—when assistance from some outside agency will become essential and the riots emphasised how urgent this problem is. It is, therefore, all the more encouraging that the Executive Committee of the United Nations Refugee Fund recently agreed to ask the General Assembly to consider the problem.

"When we look at the year as a whole, however, we find that once again there has been an improvement in practically every field of economic endeavour as some of the figures I shall give will show. The Tai Lam Chung reservoir project was inaugurated this month by Lady Patricia Lennox-Boyd; progress on the airport is reported to be up to schedule; a development plan has been announced for the Hung Hom district of Kowloon; and building activity continues to be seen in every part of the Colony. The proposal to construct a tunnel or a bridge across the harbour has been the subject of a considerable amount of discussion during the year, but the Government has decided that the cost of either of these projects is not at present justified.

"The competition which the United Kingdom cotton industry is facing from imports of piecegoods from India and Hong Kong has been the subject of numerous statements in the Press and questions in the House of Commons. Led by Sir Cuthbert Clegg, a delegation from the industry visited both India and Hong Kong at the beginning of this year to discuss this problem. It was proposed that the local industry should voluntarily agree to limitation of exports of cotton cloth to the United Kingdom at an agreed figure and this suggestion is being examined. Even if certain sections of the industry are willing to co-operate, however, there seems little chance of bringing the garment-making industry into the scheme. This is very much of the cottage type of industry with no organised form of association and this makes any limitation unworkable. In view of the publicity that has been given to the competition from Hong Kong it is, I think, worthy of mention that the spinning industry here comprises just over three hundred thousand spindles, while in the United Kingdom there are reported to be something in the region of twenty-five million spindles in active operation.

Hong Kong's Trade

"Hong Kong's trade in 1956 increased by 24 per cent. in value, while volume rose by 12 per cent. Exports showed a greater improvement than imports with Indonesia moving into first place, while exports to Japan and Thailand were substantially higher. The increase in imports was fairly well spread with Japan and China making the most progress. Imports from China at just over $1,000 million were the highest since the war and, although the trend continued for exports to that country to be lower, the drop was not so severe as in 1955.

"Exports of Hong Kong products increased by 7 per cent. and comprised about a quarter of the Colony's total exports. The United Kingdom continued to be our best customer for local products, but total exports to that country are still only 60 per cent. of our imports from there, a point which some people in the United Kingdom seem to overlook. These figures illustrate the importance to Hong Kong of her local industries which continue to play a growing part in the Colony's economy. No less than 488 new factories were registered during the year, as opposed to 372 in 1955.

"Business on the Stock Exchange showed a fall of about one-third compared with 1955, but

the market was in a much more healthy state and the boom seemed to have spent itself. Land values continued to rise, although the number of properties that changed hands was considerably lower with buyers becoming more selective in their purchases.

"The Bank clearing figures for the year increased by 16 per cent. to around the equivalent of £950 million which has only been exceeded once before, in the year 1951.

Finances of Hong Kong

"Once again the Financial Secretary, Mr. A. G. Clarke, in his speech in the Legislative Council when he presented the Budget, was able to report a very satisfactory state of affairs. A surplus of just under H.K.$15 million is expected for the current year as revenue on what he describes as 'luxury taxation' has been particularly buoyant, while expenditure is again below the estimate. For the financial year 1957-58 a deficit of H.K.$54 million is estimated, but shareholders, who have followed the trend of the Colony's finances and observed how conservative these estimates seem to be, will perhaps feel, as I do, that this gives no cause for alarm. It is interesting that the Government is considering dealing with capital items in a separate budget as an amount of H.K.$150 million in next year's estimates represents this type of expenditure. The airport and Tai Lam Chung reservoir comprise 40 per cent. of this amount. There is also an allocation for the preliminary work on a new reservoir which is to be built on Lantao Island and this will take about six years to complete. For the first time since the war details are given of the assets held by the Government against their liability for the Certificates of Indebtedness held by us and the two other note-issuing banks as security for our respective note issues. These assets on 31st December 1955 were 108 per cent. of the liability with 37 per cent. in the form of cash, money at call or short notice.

China

"Conditions in China are a matter of considerable interest to all the countries in South-East Asia and nowhere is this more so than here in Hong Kong. Unfortunately, information until recently has been scanty and reliance has had to be placed to a large extent on official publications and on impressions of returning visitors whose movements have in some cases been limited: but lately there has been a welcome increase both in the number of visitors permitted to enter the country and in the extent of their travel when there which is enabling us in Hong Kong to hear eye-witness accounts of what is happening. There has also been a certain amount of criticism from China's own leaders, which has shown up where some of the weaknesses lie, and statistical information has been considerably improved. In fact, a great deal of literature is available; but the achievements of the present administration are still so much a subject of controversy that much of this takes a partisan view, giving credit or awarding blame according to the ideology of the writer. In spite of these qualifications on any opinion which is formed, there seems no doubt whatever that the progress in industrial development that has been made in the last few years is substantial and that the first stages of the welding of farms into collective units have been, to a large extent, completed. To what degree this has reflected the wishes of the people, or how lasting the collective pattern will be, is difficult to estimate, but the speed with which this has been brought about must have exceeded expectations.

"The construction of new railways has also been particularly impressive and it is claimed that over 2,500 miles have already been completed. One of the most ambitious of these projects is the line linking Lanchow with the Soviet network some 1,700 miles away. This has already passed the oilfields of Yumen. It may be more difficult to get these new lines into full operation, as there are reports of breakdowns and a lack of maintenance on existing railways, but this does not in any way diminish the credit due for what has already been achieved.

"The first National Congress of the Chinese Communist Party since the Yenan Congress in 1945 was held in Peking in September. At this meeting progress in the First Five-year Plan was discussed and many errors were admitted by the official spokesmen. These covered the setting of higher targets for capital projects than the production of building materials warranted, the neglect of industry along the coast (it was pointed out that this area still produced over 60 per cent. of China's consumer goods), and too low a wage structure. In considering the Second Five-year Plan Mr. Chou En Lai stated that it was their policy to build 'with heavy industry as its core' a comprehensive industrial system within three five-year plans. Special emphasis would be given to the metallurgical industry and it was hoped to raise, the national income by 50 per cent. by 1962. This was, however, before the disturbances in Eastern Europe; and since that time there is evidence that the lesson of these events, coupled with a less satisfactory agricultural output than was expected, has resulted in the targets of the plan being revised. It is significant also that free enterprise has been given greater scope in minor industries and handicrafts and a free market has been permitted in many items in daily use, both of which seem likely to benefit the consumer. During the year certain other relaxations have been made such as the campaign to employ 'intellectuals' without too much enquiry into their political activities and the permission for the circulation of text books published in the West. These are all signs that some of their original plans require modification but it would, I think, be a great mistake to assume that any real change has occurred in the basic policy of the regime, which is to increase the industrialisation of the country at as rapid a pace as the economy will bear. It seems likely, however, that the trend in Eastern Europe of diverting production towards consumer goods may slow up, or even halt, deliveries of heavy industrial equipment to China, and this may necessitate some adjustment. No doubt, Mr. Chou En Lai's interruption of his Asian tour to visit these countries was not only concerned with political matters.

"Trade with China continues to be restricted by the embargo, but it was announced in the House of Commons in May that more use would be made 'of the exceptions procedure to permit reasonable exports in appropriate cases to China of goods which are not on the Soviet lists.' While this move is welcome as far as it goes, it has not proved so helpful as it was hoped, due to the absence of precise lists and the delay in dealing with applications.

"An exhibition of China produce and manufactures was held in Canton from November to January and was visited by many Hong Kong merchants. The lay-out was excellent and not only showed the wide range of products, which we all here know so well, but also included examples of what their new industries are turning out. Many of these items were for export and there is plenty of evidence, here in Hong Kong, of the increase in the range of goods available from China.

Japan

"In Japan, the year was marked by steadily increasing economic expansion with continuing instability on the political scene. The index of industrial production in November was higher by over 25 per cent. compared with the figure for the previous year, but internally this does not seem as yet to have caused serious overstrain. While the cost of metals and machinery rose and there were bottlenecks in both transportation and electric power the prices of basic cloth and foodstuffs remained steady but in January the consumer goods index moved up sharply. Unless this is temporary it may be a sign that demand is beginning to press where it can do most harm. Interest rates continued high, but bank advances have steadily increased, resulting in a rise in the level of borrowing from the Bank of Japan.

"Shipbuilding, in particular, has been extremely prosperous and, aided by their early delivery dates, the industry has taken advantage of the world demand for shipping, particularly tankers, and Japan last year turned out 1,746,000 tons of shipping, double the previous year's total. Output of textiles also increased and exports have been rising which has not been welcomed by the competing industries in the importing countries, particularly in the United States of America. As a result of protests from that country the Japanese have agreed to a voluntary limitation of textile exports to 235 million square yards per annum. An interesting innovation to encourage exports has been the floating fair of Japanese machinery which is moving round various ports in South-East Asia. This fair is housed on board a freighter which will spend a few days in each city.

"The demands of industry caused a higher level of imports, mainly of raw materials, but, helped by another good rice crop and a world demand for her exports, it was still found possible to maintain a favourable balance of payments. As usual, this was mainly due to invisible items as payments for exports and imports were almost in balance at U.S.$2,400 million, but the foreign exchange surplus was just under U.S.$300 million as opposed to U.S.$500 million in 1955.

"In spite of Japan's favourable overall balance, her holdings of sterling have shown a considerable drop during the year and negotiations, which have been in progress in London since October, have recently concluded with the signing of a new trade agreement. It seems that the delay in reaching this agreement was caused by the different approach of the two Governments. Japan considered the drop in her sterling holdings as justification for requesting increased imports by the sterling area of her goods; but the United Kingdom argued that, as sterling could now be used for many types of payment outside the sterling area, balanced trade with individual countries was a relic of bilateralism and was now out of date. For the same reason the United Kingdom does not want to enter into a new payments agreement.

Budget

"The budget which has recently been presented in the Diet shows increased expenditure of around Yen 100 billions. In view of the favourable conditions enjoyed by industry, it is proposed to reduce personal income-tax, but it is anticipated that this will be more than covered by higher revenue from other taxes.

"When we turn from a survey of economic conditions and look at the political picture, the outlook is not so promising. The emergence of the two-party system, which I mentioned last year, has not brought with it any feeling of party cohesion and politics are still bedevilled by the rivalry of numerous factions. This party strife did nothing to improve the Japanese prospects in their negotiations with Russia where the dissensions and rivalry of the various political groups at home weakened a hand which was never particularly strong. The Japanese also found, as others have found before them, that the Russians were hard bargainers and the talks, which in the summer were resumed in Moscow, seemed for a long time to be making little progress. Finally, in October, an agreement was signed and, in December, at a ceremony in Tokyo, the ratification instruments were exchanged and the restoration of diplomatic relations became an accomplished fact. A few days later Japan was elected the eightieth member of the United Nations. This entry into the international organisation has given great satisfaction to the Japanese and has, to a large extent, tempered their disappointment over the failure to obtain satisfaction over their territorial claims. In this connection it seems unlikely that any progress will be made over the return of the Southern Kuriles and while the islands of the Habomai group and Shikotan are to be returned on the signing of the Peace Treaty, there is no indication as to when this will be. In the minds of many Japanese, a reappraisal of future relations with China seems to be the next step, but a settlement of this problem is likely to require a high degree of diplomatic skill.

"While these events were taking place, the Liberal-Democratic Party was endeavouring to find a new leader as Mr. Hatoyama had announced his intention of retiring. The personal rivalry between the various leaders made agreement difficult and it was not until a second ballot that Mr. Tanzan Ishibashi was elected and later formed a government. This Government was short-lived as Mr. Ishibashi was obliged to resign due to ill health. Mr. Kishi became the new Prime Minister, but continued to retain the portfolio of Foreign Affairs, while the Cabinet was practically unchanged. Recent developments unfortunately have not provided any evidence that the members of the party have buried their quarrels and the factional affiliations still seem as strong as ever. Although so far the political instability has not had a damaging effect on the country's economy, there are many problems both in the domestic and international fields requiring attention which is unlikely to be given as long as the present dissensions remain.

The Philippines

"The year 1956 was, on the whole, a good one for the Philippines. The political situation remained unchanged and President Magsaysay personally continued to enjoy the support of the majority of the nation, although this does not extend to all members of the administration. There was general satisfaction that the country became a member of the Security Council and that Governor Miguel Cuaderno of the Central Bank was elected Chairman of the Board of Governors of both the International Monetary Fund and the International Bank.

"Economically, there was general prosperity and, from such statistics as are available at the time of writing, it appears that activity in most sectors was at a higher level than in 1955. Exports were larger which was mainly due to increases in shipments to Europe and Asia as trade with the traditional market of the United States showed a slight fall. Due to curtailment of licences imports were on the whole lower, particularly consumer goods, but there was an increase in the purchases of machinery. As a result, the foreign exchange reserves showed a slight increase, but this was still dependent to a large extent on United States Government expenditure. The expansion of the economy, coupled with the reduction in the imports of consumer goods, had its effect on prices which tended to rise while a considerable increase in the supply of money gave warning of the inflationary dangers ahead. These were referred to by the President in his State of the Nation Address in which he stated that 'we will continue to adjust our foreign exchange allocations to the demand for essential consumer goods without impairing the requirements of high priority projects.' To achieve this balance will not be easy and the President dismissed suggestions that the time was ripe for the removal of economic controls. On the contrary, he recommended that Congress reconsider the 'No Dollar Import Law' which permitted a considerable amount of barter trade, as this measure was being abused. The suggestion that the peso should be devalued has been heard again from many quarters, but this proposal is strongly opposed by the Governor of the Central Bank who does not feel that it would be in the best interests of the country.

"The agreement covering reparations was made with Japan during the year which provides for the supply of capital goods to a total of U.S.$500 million over a period of twenty years. Detailed implementation of this agreement seems to be making little headway and the Philippines are anxious to terminate the trade agreement with Japan and substitute payment on a cash basis. Although relations with the the United States continued to be friendly, little progress seems to be being made over the revision of the military bases agreement.

Vietnam

"Although many of the difficulties facing the Republic of Vietnam, which I mentioned last year, still remain, considerable progress has, in fact, been made. The war against the sects has been brought to a successful conclusion, a large number of the refugees have been effectively resettled and the area under law and order is being rapidly enlarged.

"The new constitution has been drawn up and although this gives the President of the Republic very strong veto powers, for a time at least, in a country which has suffered from so much dissension, such powers are probably necessary. Steps are being taken, although possibly not fast enough, to introduce land reform. This will restrict the area of land suitable for growing rice which may be held by one individual. These are all considerable achievements, but the economic situation still gives cause for concern. Production of rice is still very low, in spite of efforts to develop hitherto unproductive areas and to replant rice fields abandoned during the hostilities, and exports of rice were not found possible in 1956. These have since been resumed on a small scale, but the price may make any large increase difficult. Little progress has been made in industrial development and inflation has become a serious threat, in spite of the large amount of American aid. The recent reorganisation of the import trade, by reducing the number of those engaged in it and the fixing of profit margins, at both wholesale and retail level, is aimed at lowering prices, but this can only have a limited effect. Moreover, the decision that all Chinese born in Vietnam would henceforth be Vietnamese nationals and that non-Vietnamese nationals would be prohibited from participation in the retail trade has had a damaging effect on the confidence of the Chinese who are particularly interested in this trade. For a long-term solution to their economic difficulties it would seem to be necessary to press ahead with increasing the area under rice cultivation and the setting up of secondary industries; but the most immediate problem is to bring down the cost of living.

Cambodia

"Prince Sihanouk continues to retain the confidence of the people and to wield considerable influence whether he has been in office or out of it. Strict neutrality is the declared policy of the country and the two-year capital investment plan is being largely financed by aid from abroad. Rice exports, which were banned early in the year, are to be resumed as this year's harvest is reported to be excellent. Progress is being made in the construction of the road to Kompong Som and when this is opened it will enable this new port to serve the capital.

Thailand

"The cautious optimism I expressed last year regarding the future of Thailand appeared to be borne out by events in 1956. There were signs of more political stability and the differences between rival personalities, which had in the past hampered the administration, seemed to be less marked. Unfortunately, the elections which were held at the end of last month, resulted in a certain amount of unrest and it was necessary to declare a state of emergency. These disturbances seem to have been brought under control, but the fact that they occurred shows that 'caution' is necessary in any appraisal of events in this country. Economic conditions were satisfactory and the operation of the Stabilisation Fund ironed out excessive fluctuations in exchange rates while the over-stocked condition of the consumer goods markets showed considerable improvement. The balance of trade, however, was slightly adverse during most of the year as imports continued at a high level, which had a beneficial effect on the revenue. This was considerably higher than expected and resulted in income exceeding ordinary expenditure in the revised estimates for 1956, while a small surplus is estimated for 1957. Capital expenditure will remain at about the same level and the overall shortfall will as usual be financed by loans and American aid. This aid is most beneficial to the economy of the country enabling deficit financing to be avoided, and has kept the cost of living and money supply comparatively stable; while a large appropriation is being used in the construction of strategic roads which will be of great commercial value. Shipments of rice, which earlier were lagging behind the level of 1955, increased during the last two months, due to reductions in export premiums, which enabled the total for the year to be some 13,000 tons more than for the previous year. Rubber exports were a little higher and estimated figures for both production and exports of tin indicate an increase of some 15 per cent. As can be seen, Thailand seems to be in a very happy position which should continue during the current year provided there is no further internal disturbance.

Federation of Malaya

"The Alliance Government has now been in office for over a year and steady progress has been made, both in the conduct of the day-to-day administration and in the movement towards full independence, while many of the changes agreed upon at the Constitutional Conference in London last year have already been brought into force. The Chief Minister, Tengku Abdul Rahman, who also holds the portfolio of Internal Defence and Security, became Chairman of the Emergency Operations Council and in July the Federation Armed Forces Council was inaugurated and has already set about the establishment of a self-contained local force. A Constitutional Commission was appointed early in the year under the chairmanship of Lord Reid and toured the country receiving recommendations from various interested bodies. Their report has recently been published, but it is not possible to do more than touch on it here. A strong central government with a common nationality for the whole of the Federation and 'a measure of autonomy' for the States and Settlements are among the recommendations. Provision is made for a constitutional Head of State for the Federation and for the Settlements becoming States in the new Federation. The need for safeguarding the special position of the Malays has been recognised and the qualifications for citizenship follow the proposals of the main parties.

"At a further meeting between the Governments of the United Kingdom and the Federation of Malaya, held in London over the end of the year, negotiations were satisfactorily concluded on the terms of the defence agreement 'under which Her Majesty's Government will undertake to assist the Federation Government in the external defence of its territory and in the training and development of its own armed forces, while the Federation Government will confer on Her Majesty's Government the right to maintain in the Federation the forces, including a Commonwealth strategic reserve, necessary for the fulfilment of Commonwealth and international obligations.'

"As a result of this preparatory work the scene is now set for the transference of power on 31st August and the Federation of Malaya will then take its place as a self-governing member of the Commonwealth. On the whole, their future prospects look favourable. The Alliance Government retains the support of the majority of the population and the economic outlook seems bright with a continuing world demand for their primary products. The Emergency continues as a dark cloud on the horizon as, although much success has been achieved, the terrorists remain active and the cost continues to be a heavy drain. Other problems spring to mind, such as the adjustment of racial interests and the relations between the Federation and Singapore, but the present Government has built up a considerable store of goodwill which should, provided tolerance is shown on all sides, enable them to get off to a good start.

"The present position of the finances of the Federation was dealt with clearly and concisely by Colonel H. S. Lee, the Minister of Finance, when he introduced his first budget. The estimates showed a prospective deficit of M.$145 million for 1957 which would reduce the realisable general revenue balance to M.$136 million by the end of that year. This was considered to be below the safety margin and, for this reason, changes in direct and indirect taxation were brought into force. Briefly, these covered increases in income-tax in the higher income brackets, new taxation affecting motor cars, the raising of certain import duties and an excise duty on locally grown tobacco. This increased revenue was expected to reduce the deficit to M.$110 million. The estimates for capital projects already approved show that a little over M.$200 million will be required in 1957 with not far short of M.$400 million thereafter. This finance is being provided at present by advances from the treasury, but a funding operation will require to be undertaken sooner or later. Many other schemes for development are in course of preparation and it was in the light of this heavy expenditure that the financial discussions were held in London concurrently with those on defence which I mentioned above. It was agreed that the United Kingdom Government would provide some financial assistance towards the continued cost of the Emergency and would help in the expansion of the armed forces. These arrangements, although perhaps on a smaller scale than was hoped for, should assist the Federation in their development plans and, before leaving London, Tengku Abdul Rahman stated that 'every encouragement would be given for the flow of foreign capital to Malaya to help the country's economic development.' This is a very welcome statement as foreign capital investment and, what is perhaps more important, the technical assistance which is likely to come with it, will be essential to the Federation for many years to come.

Tin and Rubber

"In the first six months of the year the price of both these commodities moved gradually downwards, but this trend was halted in July due to developments in the Middle East. For the rest of the year there were considerable fluctuations with a sharp increase in both prices during November and December. This rise has, however, not been maintained.

"The International Tin Agreement came into force on 1st July 1956 and contributions have already been made by members, all of them so far in cash. At the meeting in December of the International Tin Council it was agreed to review the present floor and ceiling prices and a report is expected to be submitted to the next meeting which will be held this month. While the introduction of this scheme should, on the whole, have a stabilising influence, to operate efficiently the buffer stock should hold both cash and tin but, as the manager of the buffer stock is not permitted to buy until the price is below £720 per ton, there is little prospect of acquiring any tin at the present time. From 31st January 1957 the buying of tin by the United States Government for stockpile purposes ceased and the smelter in Texas was sold to a private concern.

"Tin production in Malaya increased by a little over one thousand tons compared with 1955, while exports were the highest since 1950.

"The rubber replanting scheme, which is so vital for the future of the industry, is making progress although the smallholders are moving slower than the estates. This is understandable as to quote from the Federation of Malaya Annual Report for 1955 'to the smallholder, lacking mechanical aids, the task of replanting calls for hard and sustained physical labour' and considerable publicity with sufficient inducements is necessary to encourage the smallholder to undertake this work. Production was slightly

below the high level of 1955 and exports at 983,000 tons showed a drop of about 1 per cent.

Singapore

"The conference to decide the future constitution for Singapore was held in London in April but, in spite of three weeks of negotiation, it was found impossible to reach agreement. The main issue on which the discussions foundered was the extent of the powers to be retained by the British Government to enable them to discharge their responsibilities for external affairs and defence. After his return, Mr. Marshall resigned in June and Mr. Lim Yew Hock became Chief Minister. His task seemed a far from enviable one, as there was considerable disappointment over the failure to reach agreement in London, although in many quarters there was a feeling of relief that a period of quiet on the political scene seemed likely. In September, the Chief Minister obtained a unanimous vote of confidence in the Legislative Assembly, which greatly strengthened his position and enabled him to take stronger measures to stamp out subversive activities. One of these was an order dissolving the Chinese Middle Schools Students Union. For some time past many of the pupils in these schools had become extremely unruly and neither their teachers nor their parents seemed to have any authority over them and evidence was obtained which showed the extent of Communist infiltration in the union. The determined stand taken by the Government, unfortunately, resulted in serious riots, but no further disturbances have taken place since and there is every indication that the power of the Communists in the union has been severely weakened, if not entirely broken. This is an important achievement and particularly significant when it is remembered that over half the population is under twenty-one years of age. On the whole, the position in Singapore at the end of the year seemed more stable than it had been for some time and, with the added authority which this improvement gave him, Mr. Lim Yew Hock paid a visit to London to discuss the agenda for the resumption of the constitutional talks this month. Although it is always dangerous to prophesy, there seems ground for hope that this time he will not come back empty-handed.

"The estimates for 1957 showed a deficit of M$36 million, but new taxation similar to the Federation's reduced this figure to under M.$20 million. On the whole, this is not an unsatisfactory state of affairs, but the calls for capital development are heavy and are expected to amount to M.$750 million for the period 1958 to 1962, of which projects totalling M.$570 million are considered essential. To meet this heavy expenditure it is intended to increase revenue over the next three years to yield at least an additional M.$50 million and to mobilise local capital resources to the full. A Bill was introduced imposing a tax 'at wholesale level on any luxury goods which it may be decided to tax in the future.' This proposal has been severely criticised as likely to endanger Singapore's free port status and the Bill has been referred to a Select Committee. The necessity to maintain a suitable climate for investment, in the face of mounting expenditure for social services, is the difficult problem which faces Singapore's Government and a suitable balance will not be easy to find.

Malaya

"It has always been the practice in these statements to include comments on developments in the Federation of Malaya and Singapore under the same heading but, with the recent constitutional changes, this seems no longer suitable and this year I have tried as far as possible to separate them. Geography and their complementary economies, are facts which cannot be ignored, whatever the political differences may be, and it is no more easy for us to draw a line between the two territories in our summary of events than it is for one territory to ignore the effects on the other of the policy they adopt. Before I leave this peninsula, therefore, I wish to touch on a few matters of general interest to the area as a whole.

"One of the recommendations of the International Bank Mission was the establishment of a central bank and last year the two Governments requested Mr. Watson of the Bank of England and Sir Sydney Caine to make an examination of the present position and to submit a report on what form that central bank should take. Under their terms of reference they were required, among other things, to advise on the desirability of separate central banks as opposed to one for both territories. This question is linked with that of the currency for the two territories, the Governments of Sarawak, North Borneo and the State of Brunei having decided to adopt a currency of their own, and the report favours the continuance of one currency, which pre-supposes a joint central bank. This is a conclusion with which we agree, but the efficient working of a joint central bank would only be possible—to quote from the report—'if the two Governments co-ordinated their policies in the fiscal, monetary and economic fields.' Other recommendations cover the retention of the sterling link and the desirability of banking legislation.

"The importance of the provision of low cost housing as a deterrent to Communism is as great in Malaya as it is elsewhere and I am glad to be able to report that the Malaya Borneo Building Society, formerly Federal and Colonial Building Society Limited, for which, as I mentioned two years ago, we are providing finance, has made considerable progress. Already this society has assisted many families throughout Malaya to purchase their own homes and its activities are being extended to Borneo.

"Plans for the gradual Malayanisation of the public services have been approved in both territories. There has been a considerable amount of ill-informed discussion on this subject and it is satisfactory that the schemes adopted have avoided the danger of too much haste and that the retiring officials have been treated fairly.

"The Malayan trade figures showed a favourable balance of M.$13 million, as against M.$335 million in 1955. This considerable reduction was mainly due to the large increase in imports, while the level of exports was about the same. The total value of external trade was higher than in any other year except 1951.

"The above are a few of the many important developments that have taken place in Malaya during the last year and on the whole, in this part of the world, we can look back on 1956 with a considerable degree of satisfaction. The end of one chapter is in sight and we shall soon be turning to the next. What this chapter will contain we cannot yet tell, but the events which it will record will cover the early developments of these two territories under their own elected rulers. It appears that the transfer will take place peacefully with little rancour on either side and as long as merdeka is regarded as a challenge to progress and not as an end in itself the new chapter should make pleasant reading.

North Borneo

"We now turn to Borneo, a country which is blessed with considerable natural resources, but which is lacking in both capital and labour. Here also there is the urge to move forward in expanding the economy and over the last three years M.$53 million have been invested in development. Half of this was obtained from revenue with the balance from loans and external aid. Labour has also shown a welcome increase as a result of immigrants from Indonesia, but arrivals under the recent agreement with the Philippines have been disappointing. The importance of communications at the present stage of development needs no elaboration and, although progress has been made, the lack of trained personnel has resulted, as in so much else, in the pace being slower than it might be. These difficulties can in time be overcome and there is no doubt that over the last year there has been a feeling of greater confidence in the future.

"Trade has improved and the totals of both imports and exports seem likely to be higher than in 1955. Rubber still continues to be the mainstay, but the timber industry showed an increase in the volume of exports of about 24 per cent. and this industry is generally on a more stable basis. The decision that Labuan should revert to its pre-war free port status became effective from 1st September. For many years Harrisons and Crosfield have acted as our agents in Labuan and this has been a satisfactory arrangement to our mutual benefit. In view of the change of status of this port, however, your Directors considered that the time had come to open our own office which commenced business at the beginning of this year. Due to its geographical position Labuan has considerable future possibilities, but a great deal remains to be done and I do not expect a rapid development.

Brunei

"Progress continues to be made in the carrying out of the five-year development plan and this State remains in a very happy financial position. The surplus for 1957 is estimated to be M.$75 million, a slight increase over last year. The construction of the road from the capital to the oilfields at Seria is well under way and should be of considerable benefit to the State and the industry on which so much depends. A start has been made in drilling for oil offshore.

Indonesia

"Events in Indonesia have recently been changing with such rapidity that it is extremely difficult in a review of this nature to be entirely up to date. The elections held at the beginning of the year resulted in the formation of a coalition government under Mr. Sastroamidjojo with ministers mainly drawn from three parties but with others being represented. This Government suffered from the stress inherent in all coalitions and the rivalries of personalities and the groups they represent dominated the political scene. In the background there was the army—another factor to be reckoned with—which had interposed before and which it was felt might do so again. It is against this background that the numerous incidents reported in the Press must be viewed. The position at the moment seems confused with the revolts in Sumatra, which started in December, still continuing and the future of the present Government uncertain. Dr. Hatta, the Vice-President, has already resigned and the influential Masjumi Party withdrawn from the Government. This places a great responsibility on the President who is actively engaged in attempting to find a solution.

"The economic situation has naturally suffered as a result of this instability and the reduction of the statutory gold and foreign exchange reserves from 20 per cent. to 15 per cent. was announced last month. A similar reduction was made for three months in 1956 when assistance was obtained from the International Monetary Fund. The deteriorating position of Government finance can be seen from the advances obtained from the Bank Indonesia which have risen to over 7,000 million rupiahs, while notes in circulation have also increased. This state of affairs is unlikely to improve as long as the present dissension continues with the difficulty of collecting revenue in the disturbed areas. It seems, therefore, that a return to economic health must await a settlement of the political differences and the restoration of law and order throughout the islands.

India

"India, in recent years, has built up for herself a position of considerable influence in world affairs and this is particularly so in Asia where many of the smaller countries look to her for leadership and watch with anxious eyes to see how her industrial development is proceeding—a development they are all trying to emulate to a greater or lesser degree. In particular, her declared policy of neutrality is one which many others wish to follow and, although the dispute over Kashmir has soured relations with her near neighbour, and may, as a result of recent events, lower her own prestige, the interest in her progress is unlikely to be much diminished. The second Five-year Plan has, in particular, attracted considerable attention with its emphasis on heavy industry. In India this is considered vital to enable her to improve, or perhaps only to maintain, the standard of living of her growing population and all reports indicate that the Government is determined to achieve the targets even if this is not found possible within the stipulated period. China, as we have seen, is also moving in the same direction, although under a very different form of government, but with the same emphasis on speed. Whether either will be successful in this rapid move towards industrialisation, the future alone can show, but the success of one over the other would be viewed by many as a triumph for that form of government. The determination of India to retain her parliamentary institutions can be seen from the elections recently held—a massive piece of organisation—in which it is estimated that 200 million people have had an opportunity to vote at 200,000 polling booths. Success in her economic aspirations would strengthen such institutions not only in India but in many other countries as well, and these aspirations are at the moment centred round the second Five-year Plan.

"This plan has been the subject of much comment and criticism both in India and abroad and fears have been expressed that the dangers of inflation have not been sufficiently guarded against. Many doubt whether large enough resources have been allocated to raise the level of production of food and cloth to meet the increase in the supply of money, which the deficit financing will cause, while the adequacy of the transport system and port facilities is questioned. The estimate of the foreign exchange requirements of the Plan is considered to be unduly optimistic and this has already resulted in a more general realisation of the necessity to attract foreign investment, but is the present treatment of the private sector the way to achieve this? These are some of the criticisms levelled at the Plan and recent developments show that there is a good deal of substance in them.

Drop in Sterling Balances

"During 1956, sterling balances dropped by about £150 million, the wholesale price index rose by 13 per cent., while the cost of living went up by about 10 per cent. These were danger signals that could not be ignored and an interim budget was introduced in November. This imposed a tax on capital gains, increased super-tax on dividends and gave the Government control over the reserve funds of companies to insure that they are put to uses which promote industrial development in accordance with the Plan. Customs duties were also raised. To protect the external balances sever cuts were made in imports, particularly consumer goods, and a ceiling was fixed on foreign exchange expenditure for the next six months. New projects in both the public and private sectors, which involve expenditure in foreign exchange, were postponed if no commitment had been made.

"These and other measures, which there is not space to mention here, should have their effect, but it remains to be seen whether they will be sufficient to halt inflation and reduce the drain on the foreign exchange reserves without any major adjustment of the Plan. Meanwhile, the International Bank is considering making loans for a number of projects and a survey of transportation is being carried out by a mission from that Bank, while arrangements have been made to purchase U.S.$200 million from the International Monetary Fund.

"These difficulties, which it is only proper I should mention, do not detract in any way from the considerable progress that has already been made or the magnitude of what is being attempted. Recently, for example, the Hirakud dam was opened which is claimed to be the longest in the world. This dam, mainly the work of Indian engineers, extends for about three miles with dykes on the flank to a total of thirteen miles. For the future it is hoped to increase steel production during the period of the Plan by four million tons a year which will mean doubling the capacity of two existing plants and building three new ones. Construction of heavy machinery is also planned and a mission from the United Kingdom has recently visited the country to advise on what is required.

"These are only a few of the many interesting developments that are taking place, but before I leave India there are two matters of interest to our offices there which I should like to mention. The first is the Reserve Bank of India (Amendment) Act 1956 which gives that bank power to vary the cash reserves which Scheduled banks are required to maintain with it. The second is the Banking Companies (Amendment) Act 1956, which, *inter alia*, requires the appointment of managers of banks to be approved by the Reserve Bank of India. Although I understand that the powers given under both these measures are only intended to be held in reserve, they are nonetheless disturbing. Circumstances change and policies with them and a very recent example of this is the State Trading Corporation. This was set up to carry on trade with the Communist countries, where a government organisation was considered advantageous, but the Corporation is now competing to quite a large extent in imports from other countries which were formerly handled by the private sector.

Burma

"In Burma, the elections in April resulted in the expected victory for the Government party, although the size of the opposition vote was greater than expected. The Government was faced with a considerable number of problems, of which the most important was to establish and maintain law and order, and it is disappointing that very little progress seems to have been made in stamping out insurgency. Economically, the misgivings I expressed last year regarding the success of the disposal of rice under barter agreements were unfortunately proving only too well founded; and the failure to maintain a level distribution of commodities was evidence of the weakness of the administrative machine. There has been some improvement since then as rice shipments, on which so much depends, have increased, which combined with continued restriction of imports has resulted in the foreign exchange reserves rising by about 25 per cent. Unfortunately, there has been a disturbing increase in the cost of living which rose sharply by 20 per cent. in the first six months of the year but has since come back to about 10 per cent. higher at the end of the year. In an effort to improve the distribution of essential goods five import corporations, with capital subscribed jointly by the Government and the public, were set up towards the end of the year. Four of these corporations will be issued with import licences for general consumer goods, while the fifth will concentrate on the requirements of industry. Capital expenditure was considerably reduced during the year and was limited to carrying out projects which were already started and it was estimated that the deficit would be only half of what was originally expected, while a small surplus is hoped for in the coming financial year. A long-term loan of U.S.$25 million was recently made by the United States of America which will be used in various ways, ranging from the establishment of a medical centre to the expansion of the local airline and funds obtained from the International

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(THE LIABILITY OF MEMBERS IS LIMITED TO THE EXTENT AND IN MANNER PRESCRIBED IN CHAPTER 70 OF THE LAWS OF HONG KONG)

BALANCE SHEET AT 31st DECEMBER, 1956

Notes:—1. Confirmed Credits, Guarantees and Endorsements amount to H.K. $582,971,778 (H.K. $611,475,070) in addition to which there are commitments in respect of outstanding Forward Exchange Contracts.

2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1956. The Sterling equivalents of the figures shown in the above Balance Sheet have been converted at the rate of H.K. $1 = 1/3*d*.

3. Investments having a market value of H.K. $34,677,504 are deposited with The Crown Agents to cover the liability in respect of the Authorised Note Issue to the extent of H.K. $23,333,333.

MICHAEL W. TURNER, *Chief Manager.* J. A. H. SAUNDERS, *Chief Accountant.* C. BLAKER, J. A. BLACKWOOD, H. D. M. BARTON, *Directors.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act 1948 in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1956, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

HONG KONG, *25th February*, 1957. PEAT, MARWICK, MITCHELL & CO. / LOWE, BINGHAM & MATTHEWS *Chartered Accountants, Auditors.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1956

1955 Hong Kong Dollars		Hong Kong Dollars	1955 Hong Kong Dollars		Hong Kong Dollars
$ 6,467,368	Interim Dividend of £2 per Share, paid 13th August, 1956, £400,000 at 1/2-13/16	$ 6,481,013	$ 10,215,256	Balance brought forward from 31st December, 1955	$ 10,606,689
	Appropriations recommended by the Directors:			Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which provision for diminution in value of assets has been made	
4,000,000	Amount to be written off Bank Premises $ 4,000,000		20,580,320		20,635,421
9,721,519	Final Dividend of $3 per Share, £600,000 at 1/2-13/16 9,721,519				
		13,721,519			
10,606,689	Balance carried forward to next year	11,039,578			
$ 30,795,576		$ 31,242,110	$ 30,795,576		$ 31,242,110

Special Administrative Expenses, including Chief Manager's emoluments, Directors' Fees and London Committee Fees amounted to H.K. $964,015 (H.K. $1,045,918).

Bank will assist in the rehabilitation of the port of Rangoon and the railways. On the whole, Burma seems to have overcome the difficulties caused by the fall in the price of rice since the end of 1953 and the over-ambitious development projects which were planned in the anticipation of a high price continuing. An improvement in internal security and a reduction in the cost of living are two important problems that still remain.

"During the year, a number of discussions took place with China regarding the line of the frontier between the two countries. This has been a subject of dispute for many years as the exact line of demarcation has never been settled. A joint statement issued in December indicated that no decision had been reached, although it seems likely that the Chinese will withdraw from the Wa States in return for the secession of three villages in the Kachin States.

Ceylon

"The general elections held in April resulted in a sweeping victory for the People's United Front and Mr. Bandaranaike became Prime Minister of a Government which was pledged to institute a Ceylonese Republic and adopt a socialist programme including nationalisation of certain industries. So far the Government has proceeded slowly and no very drastic steps have yet been taken. Discussions on the British bases were held during the year and in the House of Commons in December it was announced that 'the United Kingdom Government will hand over the bases of Trincomalee and Katunayake to Ceylon in 1957 on a date to be agreed between the two Governments.' At the end of the year the People's United Front suffered a defeat in the Colombo Municipal elections and last month Mr. Dudley Senanayake, who has considerable popular following, announced his return to active political life. These developments can be construed as a sign of a swing back to the United National Party, although it is true to say that the People's United Front have relied to a great extent for their support on the rural areas. The Official Language Bill was passed in July prescribing Sinhala as the official language of Ceylon and this has resulted in considerable dissension among the Tamil community. In this controversy I hope that the recent remarks made by the Indian Prime Minister on the importance of the English language are not being overlooked.

"The favourable balance of trade has shown a considerable reduction over the record surplus obtained last year, but external assets were little changed at the end of the year from 1955. A further agreement with China to supply rubber in exchange for rice was signed in December and Ceylon will continue to receive a price above the average monthly Singapore market price, although the premium is a little lower.

"The budget presented in July brought only minor changes in taxation comprising rises affecting those in the higher income brackets and a small increase in company rates of taxation. It appears that the development programme I referred to last year has not been found acceptable to the present Government and a National Planning Council has been formed to prepare a new overall plan for economic development. This will inevitably result in delay as it is not so much in the planning that the weakness lies as in the lack of technical personnel to carry out the tasks. It was stated in June by the Auditor General that two-thirds of the funds put up by Commonwealth countries under the Colombo Plan remain unused which seems to bear out this contention.

"On the whole, the emergence of a Government with such different views from the previous one has resulted in a period of reflection with so far little change.

General

"As usual, I have tried to give shareholders a brief review of the political and economic conditions in the Asian countries in which we are represented. This can of necessity only touch on the main developments in these large areas, in many of which considerable changes are taking place. On the whole, this has been a satisfactory year and, notwithstanding setbacks, has been marked by general political stability with growing economic expansion.

"Before I close I should like to devote a little space to our offices outside these areas and to our subsidiaries.

"Sterling is still the medium for the finance of a large part of Eastern trade and for this reason our office in London plays an important part in all our activities. Business there continues to increase and a further enlargement of our premises is becoming necessary. This we shall do by taking over the second floor of our building when the present lease expires.

"New York office has naturally benefited from the increasing use of United States dollars in world trade since the war and has greatly extended its operations in recent years.

"Our office in France was transferred from Lyons to Paris in 1953 at the time when the economy of Indo-China relied to a large extent on trade with France. This is no longer the case and with the dwindling of the traditional business, which had been previously handled, it was necessary to explore other avenues. In this I am glad to say we have been quite successful and I hope that this office will continue to build up satisfactory connections on its own.

"Germany's increasing trade has been reflected in the turnover of our Hamburg office which continues to prove a most valuable link for our offices in the East.

"To turn to our subsidiaries, the Hongkong and Shanghai Banking Corporation of California has made a good beginning and I hope that it will be able very shortly to contribute to the profits of the Bank as a whole. The possibilities in the west coast of America are so extensive that the Directors have decided to open also in Los Angeles and permission to do this has recently been obtained from the American authorities.

"The three Trustee Companies in Hong Kong, London and Singapore continue to expand. These companies are all now self-supporting, but apart from this, I am sure, the service they are able to give indirectly increases the business of the Bank.

"I hope that these brief comments on some of the Bank's activities, which have not usually been mentioned in these annual statements, will be of interest to shareholders. While the main function of the Bank will continue, I trust, to be the financing of Eastern trade, your Directors will not be slow in taking advantage of promising openings elsewhere."

PROTECTION TO ELECTRIC BRASS LAMP HOLDERS INDUSTRY

GOVERNMENT AGREES TO DISCONTINUE

THE view that the domestic electric brass lamp holders industry is no longer in need of protection, and that, therefore, the protection the industry has been enjoying since 1950 need not be continued beyond 31st December 1957, has been expressed by the Tariff Commission in its Report submitted to the Government in December last at the conclusion of its inquiry into the question. The Commission has found that, during the past seven years, the indigenous industry has made considerable progress both in respect of quantity and quality of production, though the prejudice against indigenous products still continues, and that the fair ex-factory price of the domestic product, including the allowance for the prejudice, is not significantly higher than the landed cost ex-customs duty of the imported product. The Commission is also of the view that the chief difficulty of the units arising from lack of adequate finance and absence of standardisation of the product can be got over through the existing import controls. Further, it has held that since no insuperable difficulties exist for the manufacture of insulators in this country, licences for import of insulators should not be issued except in special circumstances and for limited quantities. The Government has accepted these recommendations and is expected to keep the relevant suggestions of the Commission in view in formulating the import policy.

Protection to the electric brass lamp holders industry was first granted in 1950 in pursuance of the recommendations of the Tariff Board, the rate of duty being 36 per cent. *ad valorem* standard and 24 per cent. *ad valorem* preferential. A second inquiry recommended its continuance till the end of 1956, while, through *ad hoc* extension, it was further prolonged till the end of 1957. At the same time, the rate of duty was also enhanced by the Finance Acts, once in 1951 and again in 1954, the current rate being 60 per cent. *ad valorem* standard and 50 per cent. *ad valorem* preferential.

Scope of Inquiry

The scope of inquiry of the Commission was confined to brass lamp holders other than miniature lamp holders adapted for use in automobiles. The aspects of the industry examined by the Commission, include implementation of the Tariff Commission's recommendations of 1954, progress of the industry during the period of protection and its present position, and comparison of the fair ex-works price of its product with the landed cost of the imported product. The Commission has found that non-availability of brass sheets in strip form and of uniform thickness in the country came in the way of the implementation of the previous Commission's recommendation that the small units should avoid using brass sheets which do not conform to specifications. In regard to the manufacture of brass tubes, rods, etc., in the country, the Commission was informed by the Development Wing that they were at present available in the country. Further, in the case of production of insulators in the country, it has been found that it involves not so much of research problems as of standardisation of lamp holders so as to restrict the number of insulators to a few designs and sizes. Progress in the field of evolving standard specifications for brass lamp holders was hampered by the impending change-over to the metric system. The recommendations relating to the assistance of small units in West Bengal, on the other hand, could not be implemented owing to the handicaps circumscribing the units. It was pointed out to the Commission, in this connection, that the inability of the small units to buy the minimum of one wagon-load of brass sheets at a time has proved an obstacle to adequate and regular supply of raw material from the Indian Copper Corporation. As regards the question of improving the quality of their products, the Government of West Bengal is said to be preparing to introduce a scheme for quality marking of the products of cottage and small-scale units. The success of the scheme is, however, said to depend largely on the recognition by the Director-General of Supplies and Disposals of the quality marking stamp of the Government.

There were as at the end of September 1956 14 units in the industry, employing 413 workers, with an aggregate annual rated capacity of 6 million pieces on a single-shift basis. The capital employed in the industry was valued at Rs. 16.32 lakhs. Production was estimated at 3.5 million pieces in 1955 and at 2.849 million pieces in the period January-September 1956. As against this the number of units in 1951 was only 8, while the production stood at 0.5 million pieces. A characteristic feature of the growth of the industry during this period was the frequent changes in the number of units, caused by high birth and casualty rates, though the impact of such changes on the position of the industry was limited since five large units commanded a capacity of as much as 3 million pieces.

Demand

The domestic demand for brass lamp holders which was arrived at by adding imports to domestic production was estimated by the previous Commission at 1,449,000 pieces per annum, on an average, between 1951 and 1953. Further, the Commission anticipated an annual increase of 5 per cent. in consumption, and, accordingly, the demand in 1954 and 1955 was estimated respectively at 3.321 million pieces and 3.852 million pieces. Of this, imports were of the order of 896,000 in 1954 and 351,000 in 1955. Thus, the Commission found that while the generation of electricity recorded an increase of 67 per cent. during the first Plan, consumption has gone up by 125 per cent. Since the generation of electricity is expected to increase by 100 per cent. in the second Plan period, the Commission has estimated that the demand will double itself in the next five years; in other words, it would be 80 lakhs in 1959, as against 40 lakhs in 1956.

Another significant feature of the industry noted by the Commission is that, by and large, no complaints have been made by the industry either in respect of the supply or prices of raw materials required by the industry. These are, brass sheets, brass pipes, wires and rods and porcelain insulators. It has found, however, that many of the alleged shortcomings are due to the absence of standard specifications and the variety of sizes and designs of lamp holders and their components. The Commission has recommended, therefore, that the formulation of standards for electric brass lamp holders and their components should be completed without delay.

Fair Ex-Works Price

The most important factor of the industry, on an examination of which the Commission has recommended the discontinuance of protection, is fair ex-works price of the product. This price is largely based on the cost of the raw materials which alone account for 65 to 80 per cent. of the ex-works price of the product. The Commission has taken the Guru Nanak Electro-Mechanical Works as the representative unit for arriving at the ex-works price. It has not regarded another important unit, namely, Kersons Manufacturing Company of India Ltd., as representative, for this firm has elected to use expensive foreign raw materials in preference to cheaper indigenous raw materials and manufacture special quality products at higher prices. The Commission has calculated the weighted average of the fair ex-works price of brass lamp holders, including allowance for prejudice, of the representative unit to be Rs. 79.05 per gross. On the other hand, the landed cost, including excise duty of Rs. 45 per gross, of the imported product is calculated at Rs. 123.00 per gross, or Rs. 77.10, excluding excise duty. This indicates that the rate of duty required to protect the indigenous product from similar imports is only 2.55 per cent. Consequently, the Commission has come to the conclusion that the domestic industry is no longer in need of protection beyond December 1957. It has expressed the view that the rated capacity of the industry and the growth in production in the last few years has been rapid enough to justify the hope that no shortage in the articles manufactured by the industry will develop in the years ahead.

An Indian standard specification for ethylene dichloride, technical, has just been published by the Indian Standards Institution.

The standard prescribes the requirements and methods of sampling and test for ethylene dichloride, technical. The material is suitable for use in the paint industry and also as an insecticide (fumigant preparations). The standard includes the methods for the determination of specific gravity, distillation range, residue on evaporation, acidity and free chlorine.

STORES PURCHASE COMMITTEE RECOMMENDATIONS

MAJORITY OF THEM ACCEPTED

THE Government of India has now announced its acceptance of most of the recommendations of the Stores Purchase Committee which submitted its report in March 1955. The Government hopes that with the implementation of these recommendations, there will be substantial improvement in the working of the Central Purchase Organisation not only in regard to service to indentors but also in mitigating the hardships faced by suppliers.

One of the more notable of the recommendations accepted by the Government is that the Central Purchase Organisation (C.P.O.) should not only continue but should be expanded with the progressive transfer of procurement of specialised stores at present purchased by departments themselves as and when the organisation becomes effectively equipped to handle larger purchases. The Government has also accepted the view that the C.P.O. should not be burdened with purchases where the advantages of central purchasing are not significant. In respect, however, of the Committee's recommendation for constituting a High-powered Purchase and Development Board to control and co-ordinate Government's purchase activities, with particular reference to the development of industries, the Government has formed for the same purpose an Advisory Committee, under the chairmanship of the Secretary of the Ministry of Works, Housing and Supply, composed of the Director-General of Supply and Disposals, the Head of the Development Wing of the Ministry of Heavy Industries and representatives of the Ministries of Defence, Railways, Communications and Finance.

Indigenous Production

Some of the other important recommendations accepted by the Government are designed to encourage indigenous production of stores, at present imported. Some of the methods recommended are: (a) Adoption of special purchase procedures, (b) price preference to indigenous products over imported stores, (c) preference to products of cottage and small-scale industries, including reservation of certain classes of stores for this sector, (d) relaxation of standards, having regard to technical limitations in indigenous production.

Besides, the Government has also agreed that there should be a common list of registered suppliers for all Government purchasing authorities making substantial purchases. Some of the recommendations laid down the procedure to be followed, and conditions to be satisfied by the suppliers for being included in the list. The more important of those conditions are: (a) The technical capacity, financial resources and reliability should be examined before registering a firm. Registration should not take more than three months. (b) The firm should accept the general conditions of contract. The registration should be deemed provisional until the supplier executes at least one order satisfactorily. Moreover, the Government has agreed to afford special facilities for registration of cottage and small-scale industries.

A number of recommendations are designed to ensure expeditious payment to suppliers and to simplify and streamline the purchase procedure. Some of the other important recommendations may be mentioned here: (1) A progress wing should be set up in the Directorate-General of Supplies and Disposals to ensure timely supplies of controlled raw materials to contractors; the progress wing should actively process all such contracts. (2) Payment of final bills to the supplier should be ensured within 90 days from the date of despatch of stores. If a consignee fails to send a report in respect of stores even after the matter has been reported to his higher authorities, payment should be authorised on an indemnity bond. (3) In contracts for supply and/or erection of plant and machinery, the balance 20 per cent. bills should normally be paid in two instalments within eight months of the receipt of stores. (4) The existing facility for 80/90 per cent. payment of bills for outstanding supplies should be extended to contracts where the consignee is located in the same station as the supplier. (5) The previous system of inspection of and payment for stores during the grace period of 21 days after the due date of delivery should be restored; in such cases the inspection officer should be authorised to grant extension for delivery and no liquidated damages should be levied. (6) Accounts offices should ordinarily ensure payment within one week of the receipt of suppliers' bills where bills are received with complete documentation; defective bills should be returned promptly indicating the nature of all objections. (7) A branch of the Government Test House should be opened in Bombay.

Already some improvement in the sphere of stores purchase is reported to have been made with the implementation of some of the recommendations. It is realised that there is room for further improvement.

INDUSTRIAL PRODUCTION IN 1956

During the year 1956, industrial production continued to show substantial expansion, the index (1951=100) having gone up from 122.1 in 1955 to an estimated 134.7 in 1956. The improvement was shared by both capital and consumer goods industries. A significant feature of the expansion, however, was that the newer industries, in both categories, fared better than the old established ones.

Among the major industries which have mostly shared in the increase, mention must be made of steel, cement, diesel engines, automobiles, tyres, electric motors, sulphuric acid, bleaching power and liquid chlorine. In the case of steel the production has gone up from 1.24 million tons in 1955 to 1.33 million tons in 1956, or an increase of 4.2 per cent. Further, with the completion of the first phase of the expansion programme of the Tata Iron and Steel Company in a few months, a small but significant increase is expected. In the case of cement, again, the output increased from 4.5 million tons in 1955 to 4.9 million tons in 1956, or an increase of nearly 9 per cent. The rates of expansion registered in some of the other spheres were 16.8 per cent. in the production of diesel engines, of 32.5 per cent. in the case of power-driven pumps, and of 41.8 per cent. in electric motors. Among consumer goods, the output of radio receivers went up by 85.5 per cent., of bicycles by 34.4 per cent., mill-made cotton cloth by 3.7 per cent. and cotton yarn by 2.3 per cent. Sugar was, again, one of the established industries which registered a substantial expansion, namely, 20.7 per cent. It is noteworthy that, during the year, a number of new products like important dyes and drugs, certain types of tools and a number of automobile components were made in the country for the first time.

According to a report of the Ministry of Heavy Industries for 1956, the quickened pace of industrial expansion in 1956 is evidenced by the larger number of applications received for licences for setting up new undertakings or for the expansion of existing units. During the year under review, 250 licences were granted for the establishment of new undertakings and 468 for substantial expansions, as against 164 and 319 respectively, in the previous year. A further indication is provided by the imports of producer goods the value of which rose from Rs. 232 crores during the first six months of 1955-56 to Rs. 327 crores in the corresponding period of 1956-57. This is also a reflection of the special emphasis that is being laid on the development of machinery industry in the country in the second Five-year Plan.

It is also noteworthy that the National Industrial Development Corporation has completed its project study for a heavy foundry forge, which is regarded as the first requisite of the heavy machinery industry. The Government is expected to take a final decision on the project in the next few months. Among the other projects which have been studied and formulated by the Corporation, mention must be made of the manufacture of intermediaries for dyestuffs, the manufacture of newsprint from bagasse, the setting up of a new aluminium plant, and the production of cinematographic and X-ray films.

FORECAST FOR AGHANI LAC CROP

The yield of the *Aghanic* (*Kusmi*) lac crop in India for the year 1956 is estimated at 64,000 maunds as compared with 61,000 maunds in 1955 and a normal production of 90,000 maunds. The yield of this crop is below normal mainly because of shortage of broodlac at the time of infection.

The yield of *Baisakhi* lac crop this year is expected to be 6,75,000 maunds as compared with 6,83,000 maunds and 8,13,000 maunds in 1956 and 1955, respectively. The normal yield based on the average production of 10 years preceding 1956 is 7,40,000 maunds. The crop has suffered some damage in Palamau district of Bihar State and in western parts of Madhya Pradesh due to hailstorm. In Ranchi and Purulia districts, the crop is reported to have progressed satisfactorily.

TESTING QUALITY OF INDIAN WOODS

The Forest Research Institute (Timber Mechanics Branch), Dehra Dun, has brought out an Indian Forest Record on weights and specific gravities of Indian woods. The record provides interesting facts regarding different kinds of woods found in India. This country grows over 2,000 wood species out of which about 400 or more are of commercial importance as they produce useful timber. The weights of these woods vary greatly. For instance, *Moringa* weighs 19 lbs. only per cubic foot. It is so light that it can be used for floating heavy bodies. On the other hand, *Soymida febrifuga* is 71 to 72 lbs. per cubic foot. It is so heavy that even the seasoned timber sinks in water.

The weight or the specific gravity of any timber gives a rough idea of its strengh properties. The weight or specific gravity changes with changes in the moisture content of the wood and have, therefore, to be determined with reference to specified moisture contents. Exhaustive tables of reference are included in this book, containing weights and specific gravities of different woods under different seasoning conditions and temperatures. Average weights and the maximum and minimum observed values for 300 consignments of wood species have been given. All causes of variations have been taken into consideration in deriving these average weights. These tables can serve for reference in testing the various woods found in different parts of India.

MANCHESTER LETTER

(*Concluded from page 725*)

it seems inescapable that Lancashire will not be able to meet the competition which lies ahead unless our productive machinery is working for more than one shift, and although the new agreement on double-shift working with the Cardroom Amalgamation recognises this conclusion, we are met with the argument "What is the good of urging two-shift working when there is a shortage of operatives for one-shift working?" This is a short-sighted attitude.

He adds: "If improved methods, improved conditions and improved machinery make it easier to look after 500 spindles now compared with 250 a few years ago, it is against the interest of the spinners, as of the whole industry, if their remuneration is based on the number of spindles they oversee. Decrease the work load; increase the productivity; lower the cost. This is the only way to deal with growing competition. By proper job evaluation and by the recognition that it is machines, and not men, which would do the work, it is possible with the existing labour force to provide the man-power that two-shift working requires, and at the same time earn increased wages through increased productivity." The problem, according to him, is capable of solution on the lines of a common realisation that there are too many people looking after too few machines, and by the industry as a whole gradually working towards automation.—*All Rights Reserved.*

Achilles' heel

The wonder hero of the Trojan War, Achilles, was invulnerable–except at the heels.

In these days of power propulsion, 'wheels' rather than 'heels' are the symbol of speed. And when they say that our Plan for prosperity rides on the railway wheels, it is not mere rhetoric. The wheels must not be allowed to clog if the Plan is to succeed.

Indian Railways' 2,50,000 wagons must work their wheels faster and harder to carry more goods.

EASTERN RAILWAY

BINNY MILLS MAINTAIN DIVIDENDS

BANGALORE WOOLLEN'S PROFIT MOUNTS UP—BUCKINGHAM'S PROFIT LOWER

THE Directors of the Buckingham and Carnatic Company, Ltd., and the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., both under the management of Messrs. Binny & Co. (Madras) Ltd., Madras, have decided to maintain the dividend on the ordinary shares of the Companies for the year ended 31st December 1956 at the same levels as those paid for the previous year, namely, 10 per cent. and 30 per cent. respectively. This is the fourth year in succession for which the above dividend of Buckingham is being repeated after having been raised from 4 per cent. paid for 1952. Bangalore Woollen is keeping the distribution unchanged for the third year in succession after having stepped it up from 25 per cent. paid for 1953.

The dividends have been maintained, despite the fact that the earnings of the two Companies have varied sizably from those for 1955. Thus, the gross profit of the Buckingham, which had risen from Rs. 1.19 crores to Rs. 1.43 crores in the previous year, the highest earned by the Company since 1948, has dropped to Rs. 1.35 crores in the year under review. The gross profit of the Bangalore Woollen, which had dwindled from Rs. 94.25 lakhs earned in 1954 to Rs. 80.78 lakhs in the following year, has again gone up, to Rs. 94.86 lakhs, thus creating a new record in the history of the Company. Such variations in profit for 1956 have occurred notwithstanding the increase in production of both the Companies. The profits would have been more encouraging but for the reduction in selling prices of cotton fabrics, which was effected by the Companies to reduce the burden on consumers as a result of the additional excise duty on cloth and to maintain, if not stimulate, their sales in overseas markets.

The net profits of both the Companies, however, show an increase, Buckingham's profit improving from Rs. 62.66 lakhs to Rs. 69.82 lakhs, despite the substantial increase in the provision for depreciation, to stand at the highest level in the history of the Company. Bangalore Woollen's profit has gone up from Rs. 36.10 lakhs to Rs. 39.86 lakhs, at which level it is less than that (of Rs. 45.50 lakhs) for 1954.

The following comparative table, presenting the salient features of the Buckingham and Carnatic's results for the past four years gives a graphic idea of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	9,36.68	9,00.78	8,44.09	8,56.07
Other income	13.96	8.88	6.19	5.04
Stocks of process and finished goods	1,14.48	96.60	87.71	84.53
Raw materials and stores consumed	4,72.92	4,71.11	4,43.05	4,34.89
Expenses	3,00.39	2,93.07	2,91.30	2,90.74
Gross profit	1,35.21	1,43.55	1,19.12	1,24.59
Managing Agents' commission	9.42	11.29	9.92	9.77
Provision for—				
Depreciation	40.97	30.60	19.90	17.89
Taxation	15.00	39.00	37.50	37.25
Net profit	69.82	62.66	51.79	59.68
Provisions no longer required written back	5.03	..	..	..
Profit on sale of machinery	1.82	..	..	..
To reserves and other funds	36.00	23.00	12.07	20.53
,, Bonus to employees	21.33	20.52	20.12	19.58
Dividends—				
7½ per cent. cum. preference	1.60	1.60	1.60	1.60
Ordinary	17.85	17.85	17.85	17.85
	(10%)	(10%)	(10%)	(10%)
Carry forward	2.28	2.34	2.69	2.53

The improvement in production of the mills is reflected in the substantial rise in sale proceeds by Rs. 35.90 lakhs. But the benefit derived from increased production has been more than offset by increased costs as indicated by the rise in expenses, which have shot up by Rs. 67.32 lakhs, and a reduction in selling prices, mentioned above. The Directors state in their report that the dearness allowance to the workpeople alone was about Rs. 12 lakhs higher than the previous year and expenditure on fuel oil increased by Rs. 3.20 lakhs, due to the additional excise duty introduced in February 1956. The amount set aside for depreciation has been considerably increased to cover the charge on capital expenditure on buildings and machinery brought into use during the year and represents the approximate income-tax claim for normal and shift allowances only. The expected relief from taxation on this account has resulted in a cut in the provision for taxation from Rs. 39 lakhs to Rs. 15 lakhs. The net profit has been supplemented by a sum of Rs. 5.03 lakhs, being the provisions no longer required, and by Rs. 1.82 lakhs, being the profit on sale of machinery.

An allocation of Rs. 5 lakhs has been made to the debenture redemption fund, as against Rs. 9 lakhs in the previous year. The allocation to the general reserve is higher at Rs. 11 lakhs, as against Rs. 10 lakhs made a year ago. The Company has introduced a short-term gratuity scheme for the benefit of workpeople who will be retiring on reaching the age of 55 during the next five years; following the recent arbitration award. This account has been credited with an initial amount of Rs. 20 lakhs and this is expected to cover the liability on this account as at 31st December 1956. The provisions of section 23A of the Indian Income-tax Act did not apply to the Company at any time during 1956, while it was applicable in respect of the previous two years. The dividends declared for 1954 and 1955, however, complied with the provisions of that section in that they exceeded 60 per cent. of the assessable income less tax thereon.

An impressive financial position is disclosed by the balance-sheet as at 31st December 1956. Against a paid-up capital of Rs. 199.78 lakhs, the reserves and surplus aggregate Rs. 280.01 lakhs. Of these reserves, general reserve accounts for Rs. 62 lakhs, dividend equalisation for Rs. 10 lakhs, taxation reserve for Rs. 6 lakhs, fire and accident insurance reserve for Rs. 20 lakhs, reserve for raw materials fluctuation for Rs. 48.71 lakhs, stores reserve for Rs. 20 lakhs, provision for increased replacement costs of buildings and machinery for Rs. 108 lakhs and debenture redemption fund for Rs. 3.02 lakhs. The outstanding liability on debenture stock is Rs. 78 lakhs. The debenture stock redeemed during the year amounted to Rs. 8.50 lakhs, bringing the total value of stocks redeemed so far to Rs. 22 lakhs. As in previous years, a corresponding sum has been transferred from the debenture redemption fund to the reserve for increased replacement costs of buildings and machinery. The latter reserve has also been strengthened by the transfer of Rs. 35.50 lakhs from the provision for taxation being the estimated relief obtained through the operation of the allowance for development rebate, initial and extra normal depreciation for 1954 and 1955. The provision for taxation stands at Rs. 49.74 lakhs. The current liabilities aggregate Rs. 179 lakhs and special liabilities Rs. 12.17 lakhs. There has been an addition of Rs. 28.76 lakhs to the gross block during the year, bringing the total value to Rs. 669.42 lakhs. This has been written down to a book value of Rs. 272.39 lakhs. Capital works in progress amount to Rs. 49.88 lakhs. The current assets aggregate Rs. 465.53 lakhs and investments held against special liabilities Rs. 10.91 lakhs.

Bangalore Woollen

The following comparative table provides an idea of the Bangalore Woollen's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	5,33.80	4,81.94	4,72.25	4,32.29
Process and finished stocks	71.74	60.15	55.84	48.43
Expenses (including raw materials consumed)	4,52.58	4,04.66	3,86.72	3,75.45
Gross profit	94.86	80.78	94.25	63.16
Agents' commission	7.65	6.26	7.19	4.62
Provision for—				
Depreciation	17.60	18.17	16.30	12.92
Taxation	29.75	20.25	25.25	15.50
Net profit	39.86	36.10	45.50	30.12
Provisions no longer required written back	3.32	..	..	..
To reserves and other funds	18.75	12.75	20.45	9.62
,, Bonus to employees	11.48	10.90	12.50	10.10
Dividends—				
6 per cent. cum. preference	0.36	0.36	0.36	0.36
Ordinary	12.15	12.15	12.15	10.12
	(30%)	(30%)	(30%)	(25%)
Carry forward	2.83	2.39	2.45	2.40

It will be noted that the provision for taxation has been raised from Rs. 20.25 lakhs to Rs. 29.75 lakhs, but that for depreciation has been slightly reduced from Rs. 18.17 lakhs to Rs. 17.60 lakhs. In addition to this provision, the Directors have made an additional allocation of Rs. 4 lakhs out of the net profit for depreciation based on replacement costs. The Directors have raised the allocation to the general reserve from Rs. 9 lakhs to Rs. 11 lakhs, while maintaining the contribution to officers' retiring fund the workpeople's housing fund at Rs. 75,000 and Rs. 3 lakhs, respectively.

According to section 23A of the Indian Income-tax Act, as amended by the Indian Finance Act, 1955, the Company has to pay for the year a higher dividend than that declared. But it has not done so and it has decided to make an application to the Commissioner of Income-tax, Bangalore, at the appropriate time, seeking exemption from such extra payment, on the lines of a similar application made for the calendar year 1954, that "having regard to the Company's requirements that are necessary and advisable for the maintenance and development of the business, it would be unreasonable to pay a larger dividend than that already declared." The Company, it will be recalled, was successful in getting exemption from the application of section 23A in respect of 1954, but it complied with the provisions of that section the following year. The Directors feel that an application for exemption regarding 1956 will be necessary for reasons stated already.

Commenting on the Company's working during the period under review the Directors, in their latest report, observe thus:

"Production and sales showed satisfactory increases when compared with the previous year and improved demand for woollen and cotswool fabrics enabled the Company to make much greater use of its installed capacity in these sections. Your Directors are pleased to report that after several years of losses, the woollen section has made a modest contribution to the Company's profits. Profit margins in the cotton section were slightly lower than in the previous year, as price reductions were made in order to offset increases in excise duties and to stimulate the Company's export trade. Further progress has been made with the programme for the replacement of old machinery and plans are now under active consideration for the installation of new plant which will improve both efficiency and production. Considerable finance will be required to meet the cost of these developments and your Directors have borne this in mind in making their proposals for appropriations from profits for the year."

The balance-sheet of the Company as at 31st December 1956 reflects a sound financial position. Its paid-up capital of Rs. 46.50 lakhs is supplemented by reserves and surplus aggregating Rs. 252.99 lakhs. Of these reserves, the general reserve alone accounts for Rs. 116 lakhs. Dividend equalisation reserve amounts to Rs. 11 lakhs, fire and accident insurance reserve Rs. 12 lakhs, reserve for taxation Rs. 20 lakhs, reconstruction reserve Rs. 33.89 lakhs, raw materials fluctuation reserve Rs. 23.27 lakhs, stores reserve Rs. 4 lakhs, and additional reserve for depreciation based on replacement costs Rs. 30 lakhs. The provision for taxation stands at Rs. 7.75 lakhs. The current liabilities amount to Rs. 74.92 lakhs. The gross block of the value of Rs. 339.77 lakhs, including an addition of Rs. 13.20 lakhs during the year, stands depreciated at Rs. 79.07 lakhs. The capital works in progress amount to Rs. 12.09 lakhs. The current assets aggregate Rs. 290.99 lakhs and cover the current liabilities and provision for taxation by a very wide margin.

The Directors have, since the close of the year, capitalised a sum of Rs. 81 lakhs out of the general reserve and issued two ordinary shares for each ordinary share held. The sanction for this bonus issue was obtained by the Company early in 1956.

The Rs. 100 fully paid-up shares of Buckingham are being currently quoted at Rs. 174 *cum-div.* and those of Bangalore Woollen at Rs. 575 *cum-div.* On an *ex-div.* basis, the yields on the shares work out to 5.95 per cent. per annum and 5.40 per cent. per annum, free of income-tax, respectively.

GOKAK MILLS' PROFIT LOWER

A shrinkage in profit accompanied by a lowering of dividend distribution are the main features of the financial results of the Gokak Mills Ltd. (Managing Agents: Messrs. Forbes Forbes Campbell & Co., Private Ltd., Bombay) for the year ended 31st December 1956. The gross profit for the year under review has fallen by Rs. 3 lakhs to Rs. 21.24 lakhs. It may be mentioned here that the previous year's gross profit, at Rs. 24.24 lakhs, was the highest earned by the Company since 1948. Although the profit for 1956 is lower, it still constitutes the second best in the last eight years. The net profit also stands lower at Rs. 8.94 lakhs as against Rs. 10.52 lakhs a year ago and Rs. 6.48 lakhs for 1954.

The fall in profit has adversely affected the distribution of dividend, in that it has been pruned to 13 per cent. from 15 per cent., thus restoring it back to the level paid for 1954. For the years 1952 and 1953, it will be recalled, a dividend of 17 per cent. per annum was paid on the then capital (Rs. 39.05 lakhs) of the Company. In the following year, that is 1954, the capital was increased to Rs. 48.81 lakhs by capitalisation of a part of the reserves and a dividend of 13 per cent. was made on the higher capital for 1954, which represents a negligible cut from the previous year's distribution.

The allocation to the reserves has similarly been cut from Rs. 3.20 lakhs to Rs. 2.35 lakhs. The reserve account has, therefore, been provided with only Rs. 1.25 lakhs, as against Rs. 2 lakhs, and the development reserve account with Rs. 1.10 lakhs, as against Rs. 1.20 lakhs in the previous year.

The following comparative table will give some idea about the Company's progress during the past three years.

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sales of yarn and waste	2,46.67	2,32.35	1,89.84	1,73.79
Closing stocks of finished goods	29.00	24.49	28.77	16.60
Cotton and staple fibre consumed	1,63.96	1,42.26	1,33.65	1,05.58
Expenses	66.53	61.78	52.23	45.75
Gross profit	21.24	24.24	16.40	18.15
Managing Agents' commission	2.10	2.52	1.77	1.79
Depreciation	4.50	4.00	3.15	3.50
Taxation	5.70	7.20	5.00	6.25
Net profit	8.94	10.52	6.48	6.61
Post-war refund of E.P.T.	..	..	..	0.21
To reserves	2.35	3.20	0.51	0.23
,, staff gratuity	0.30	0.22	0.11	0.13
Dividend	6.34	7.32	6.34	6.64
	(13%)	(15%)	(13%)	(17½)
Carry forward	0.08	0.14	0.37	0.85

Sales of yarn and waste have improved by more than Rs. 14 lakhs and stocks by Rs. 14.51 lakhs; but these have been more than offset by the sharp rise of Rs. 21 lakhs in the consumption of cotton and staple fibre and of Rs. 4.75 lakhs in expenses, with the result that the gross profit has shrunk, as stated at the outset.

The Company's paid-up capital stands at Rs. 48.81 lakhs, in ordinary shares of Rs. 100 each. The reserves and surplus aggregate Rs. 37.68 lakhs. The provision for taxation amounts to Rs. 6.15 lakhs and the current liabilities are no more than Rs. 25.54 lakhs. The gross block amounting to Rs. 103.45 lakhs, including additions during the year of Rs. 10.52 lakhs, has been written down to Rs. 33 lakhs. Buildings and machinery under erection (at cost) are of the order of Rs. 6.29 lakhs. The current assets aggregate Rs. 78.89 lakhs, the bulk of which, amounting to Rs. 56.37 lakhs, represent stock-in-trade. Stores and spares aggregate Rs. 7.52 lakhs and debts, deposits and advances Rs. 12.54 lakhs. The current assets cover the current liabilities and provision for taxation by a very substantial margin.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 206 *cum-div.* On an *ex-div.* basis, the 13 per cent. dividend for the year works out a yield of 6.73 per cent. per annum, free of income-tax.

COMPANY BALANCE-SHEET

The Government of India has decided that, in the preparation of balance-sheets under the new Company Law, it would be "sufficient compliance" with the Act, if corresponding figures for each "group lead" of items for the immediately preceding financial year is given instead of figures for each of the items, as required by the Act. It is stated that the Government reconsidered the question of furnishing "corresponding figures" for the previous year for all the items, in the light of difficulties brought to its notice by certain companies and the views of the accountancy profession in this regard and has come to this decision.

Communicating this decision to the Federation of Indian Chambers of Commerce and Industry, the Government says that as far as possible, in every balance-sheet prepared in accordance with Schedule VI of the Companies Act, 1956, the corresponding figures for the immediately preceding financial year for all the items in the balance-sheet and the profit and loss account should be given. "However, if the company finds it difficult to give the corresponding figures for the immediately preceding year for each of the items shown in the balance-sheet and profit and loss account, the Government would deem it sufficient compliance with the provisions of section 211 (1) and (2) of the Companies Act, if the corresponding figure is given for each 'group lead' as a whole (with suitable explanatory note), instead of for each item."

The intention of displaying the figures relating to the previous year, it is explained, is to facilitate the comparative study of the items in the balance-sheet and the profit and loss account, so that the significance of the figures for the current year can be readily understood and appreciated. It is necessary that a beginning should be made with the commencement of the Act (April 1, 1956), although complete corresponding figures will become available only for the next financial year, it is stated.

The Government, in its communication to the Federation, also says that, while displaying the figures for the previous year, care should be taken to ensure that all the items in the audited balance-sheet and the profit and loss accounts are fully incorporated in the current year's balance-sheet and profit and loss account as corresponding figures for the previous year.

ALKALI AND CHEMICAL

In the circular letter to shareholders of 4th March, in the provisional allotment letter of 3rd April and in the Chairman's speech at the annual general meeting on 28th March, the Alkali and Chemical Corporation of India Ltd. expressed the hope that the shares of the Company would qualify for relief under section 56A of the Indian Income-tax Act and that dividends received by companies holding these shares would be exempt from super-tax. The Company has now received a letter from the Government of India confirming that, in fact, the new shares will qualify for exemption under section 56A.

Points From The Chair

Checking Rising Costs

"WE are far from complacent about this upward trend in costs, which seems to be fairly general among household necessities, or near-necessities, into which class our products fall. In a community, embracing so many people, with very low incomes, our products run the risk of being too highly priced, whether for the consumers' good or our own, and we should greatly like to make reductions, with all the stimulus they would give to increases in consumption. Unfortunately, the prerequisites are lacking. We are vitally interested, for instance, in Government's second Plan target of more than 7½ million tons of oilseeds, representing a 30 per cent. increase in production. That oilseeds, and particularly groundnuts, should be freely available at moderate prices is of prime importance to our business, to say nothing of its significance for export and foreign exchange purposes, but we cannot yet detect any great progress being made towards hitting the target. Transport is another vital sphere where unrestricted availability at moderate prices is essential, but at present its inadequacy is constantly giving rise to costly delays and, on the top of that, freight rates are tending to increase. These are but two indications of what, I have said, is an internal trend."

A. J. C. HOSKYNS-ABRAHALL,
Hindustan Lever Limited.

Tribunal Award

"Under the terms of the settlement, two of our estates with preponderant tea acreage will pay wage increases representing an increase of 20 per cent. upon the pre-Award wage and the remaining three estates with preponderant coffee acreage will pay wage increases representing an increase of nearly 9 per cent. over the pre-Award wage. In addition to this, provident fund benefits at 8¼ per cent. of wages will be payable. Compared with the enormity of the Award, this is, of course, a merciful deliverance. By any other standard, it is a stern impost which, according to my estimate, will add Rs. 3½ lakhs to our wage bill. However, the decline of discipline and morale as a result of these five-year-old proceedings, will now, I trust, be arrested and with the return of more normal working conditions, we may hope to recover in increased productivity some part of this cost."

W. W. KILGOUR,
Ouchterlony Valley Estates (1938) Ltd.

Plantation Enquiry Commission Report

"Recently the report of the Plantation Enquiry Commission on Coffee was received, and I must say that this is an utterly disappointing document, and shows an entire lack of understanding of the economics of an agricultural enterprise, and those of a fruit crop in particular. I do not propose here to comment in any detail on the report, as this will be done to Government by the various producers' association, who have bigger staffs to devote to the study and analysis of the material used, the conclusions arrived at, and the suggestions made. I would, however, like to say that in my opinion several of the recommendations made are quite impracticable. There is one point on which I must comment, and that is on the Commission's remarks regarding replanting. According to the report, a considerable part of the acreage of most estates is in need of replanting. In arriving at this conclusion, the Commission seem to have totally ignored the yearly planting of supplies which has been done by the better run estates for many years. In the case of this Company, the number of supplies planted in the period from 1951 to 1956 was, after leaving a generous margin for failures through disease and other causes, equivalent to approximately 29 per cent. of the existing mature acreage. Were the conclusion arrived at by the Commission correct, one would expect crops over the past few years to be steadily decreasing whereas, in fact, exactly the opposite is the case. A very exacting examination of the figures produced, and recommendations made, in the report is, therefore, essential before any further action is taken on it."

J. N. A. HOBBS,
Kumergode Estates Ltd.

Meeting Credit Demands

"I am afraid that, as a result of the increasing demand for credit, the standing of the borrower and the security offered are not the only considerations which have to be taken into account by our managers when approached for new facilities. The necessity to turn away business, which at other times would be most suitable, has, I am afraid, been forced on bankers in many parts of the world and we could hardly expect to escape. Nevertheless, it is not a pleasant task and I hope that many of you in this room will realise—to quote a saying from our school days—"that it hurts me more than it hurts you.' In the interests of depositors and shareholders alike, it would be most imprudent not to maintain a suitable degree of liquidity and, spread as our activities are over so many territories, this liquidity should, in our opinion, be higher than may be considered necessary by bankers whose interests are mainly confined to one single country. At 31st December 1956, the ratio of the Bank's readily realisable assets to its total liabilities, was just under 45 per cent. and, while your Directors are satisfied that this is a safe margin, the drop over the last few years is a reminder that our ability to finance the capital and current requirements of our customers and friends must of necessity have some limitation."

THE HON. CEDRIC BLAKER,
Hongkong and Shanghai Banking Corporation, Hong Kong.

COMPANY MEETINGS AND DIVIDENDS

CHITAVALSAH JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 15th April 1957. Dividend: As. 10 per share. Transfer books remain closed from 1st to 15th April 1957, both days inclusive.

EMPIRE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 15th April 1957. Dividend: As. 8 per share. Transfer books remain closed from 1st to 15th April 1957, both days inclusive.

Notices

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE 31st Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House," 57-B, Free School Street, Calcutta, on Monday the 29th day of April 1957, at 12-15 p.m., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare Dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which numbers 6 and 9 will be proposed as special resolutions:

5. "That Mr. John Luckham be and is hereby appointed a Director and Managing Director of the Company upon the terms and subject to the conditions contained in the letter dated the 31st December, 1956, addressed to him by Mr. T. E. Peppercorn as the agent of the Company duly authorised in that behalf."
6. (*As a special resolution*): "That consent be and is hereby accorded to Sardar Hardit Singh Malik holding and continuing, with effect from the 1st January, 1957, to hold an office or place of profit under the Company, namely, as a salaried official on the terms and conditions of a letter dated the 30th day of January, 1957, issued by the Company and addressed to him."
7. "That Sardar Hardit Singh Malik be and is hereby appointed a Director of the Company."
8. "That the remuneration payable to Mr. P. N. Haksar, a Director of the Company, be increased with effect from the 1st March, 1956, from a salary of Rs. 2,900 per mensem to Rs. 3,200 per mensem with the corresponding increases in dearness allowance, bonus (if any) and the contribution by the Company to the Provident Fund."
9. (*As a special resolution*): "That the Articles of Association of the Company be amended in the manner following, that is to say:—

(i) In Article 1 the definition of a "Managing Director" shall be deleted and the following shall be substituted therefor:—

"The Managing Director" and "the Deputy Managing Director" means the Managing Director and the Deputy Managing Director, respectively, appointed as such and holding office for the time being under the Company."

(ii) In Article 116 after the words "Managing Director" insert the words "Deputy Managing Director."

(iii) Article 121 shall be deleted and the following new Article substituted therefor:—

"121. At each Annual General Meeting (called "Ordinary Meeting" in these Articles) of the Company one-third of such of the Directors for the time being as are liable to retire by rotation, or if their number is not three or a multiple of three, then the number nearest to one-third shall retire from office."

(iv) Articles 131 and 132 shall be deleted and the following new Article shall be substituted therefor:—

"The Directors may appoint any person to act as alternate Director for a Director during the absence of the latter for a period of not less than three months from the State in which meetings of the Directors are ordinarily held and such appointment shall have effect and such appointee, whilst he holds office as an alternate Director, shall be entitled to notice of meetings of the Directors and to attend and vote thereat accordingly; but he shall not require any qualification and shall *ipso facto* vacate office if and when the absent Director returns to the State in which meetings of the Directors are ordinarily held or the absent Director vacates office as a Director."

(v) In Article 140 after the words "time appointed for holding the same, the" insert the word "seniormost."

(vi) Articles 133 to 137 and the marginal notes shall be deleted and the following new Articles and the marginal notes substituted therefor:—

"133. *Business of Company to be carried on by Managing Directors and Deputy Managing Directors.*—The business of the Company shall be carried on by the Managing Director and Deputy Managing Director or Managing Directors and Deputy Managing Directors if and when appointed who shall subject to the superintendence control and direction of the Directors and the provisions of Article 135 be entitled to exercise the general and specific powers conferred by these Articles on the Directors collectively.

"134. *Power to appoint Managing Directors and Deputy Managing Directors.*—Subject to the provisions of Sections 316 and 317 of the Companies Act, 1956, the Directors may from time to time appoint one or more Directors to be the Managing Director or Managing Directors or the Deputy Managing Director or Deputy Managing Directors of the Company either for a fixed term or without any limitation as to the period for which he or they is or are to hold such office and may from time to time (subject to the provisions of any contract between him or them and the Company) remove or dismiss him or them from office and appoint another or others in his or their place or places.

"135. *Powers and duties of Managing Directors.*—Subject to the provisions of the Companies Act, 1956, and in particular to the prohibitions and restrictions contained in Section 292 thereof the Directors may from time to time entrust to and confer upon any Managing Director or any Deputy Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit and may confer such powers for such time and to be exercised for such objects and purposes and upon such terms and conditions and with such restrictions as they think fit; and they may confer such powers either collaterally with or to the exclusion of and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke withdraw alter or vary all or any of such powers.

"136. *Managing Director and Deputy Managing Director exempt from retirement by rotation, etc.*—Subject to Section 255 of the Companies Act, 1956, a Managing Director or a Deputy Managing Director may be appointed on terms that he shall not while he continues to hold that office be subject to retirement by rotation within the meaning of Article 121 but (subject to the provisions of any contract between him and the Company) each Managing Director and Deputy Managing Director shall be subject to the same provisions as to resignation and removal as the other Directors of the Company and he shall *ipso facto* and immediately cease to be a Managing Director or Deputy Managing Director if he ceases to hold the office of Director from any cause.

If at any time the total number of Managing Directors and Deputy Managing Directors not subject to retirement by rotation is more than one-third of the total number of Directors the Managing Director or the Managing Directors shall not retire and the Deputy Managing Directors who shall not retire shall be determined by and in accordance with their respective seniorities so that those who have been longest in office as Directors since their last election shall retire from office and in the case of those with seniority from the same day the Deputy Managing Directors to retire shall (unless they otherwise agree among themselves) be determined by lot.

"137. *Remuneration of Managing Director or Deputy Managing Director.*—Each Managing Director and Deputy Managing Director shall be deemed to be a salaried official of the Company for the purposes of Article 113 and each shall subject to the provisions of Sections 309, 310 and 311 of the Companies Act, 1956, receive such remuneration as may from time to time be fixed by the Company in General Meeting."

10. "That each of Messrs. A. W. Gillespie, F. G. W. Jackson and P. N. Haksar, Directors of the Company, be and are hereby appointed a Deputy Managing Director of the Company upon the terms and conditions presently governing their employment and that each will continue to be entitled to remuneration presently paid or authorised to be paid."

Dated the third day of April, 1957.

By Order of the Board,

P. B. SEN GUPTA,
Secretary.

DUNLOP HOUSE,
57B, FREE SCHOOL STREET,
CALCUTTA.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the Meeting. A Debenture Stockholder as such is also not entitled to attend the Meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 15th April, 1957, to 5th May, 1957, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 15th April, 1957.

DALMIA CEMENT (BHARAT) LIMITED

Registered Office:

DALMIAPURAM (MADRAS STATE)

NOTICE

THE TIME FOR SENDING ACCEPTANCES against the Letters of Right in connection with the fresh issue of capital by the Company has been extended till 30th April, 1957. Acceptances which are not duly received on or before the said date will not be considered.

By Order of the Board of Directors,

For DALMIA CEMENT (BHARAT) LIMITED,
For HARI BROTHERS PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

Dated 25th March, 1957.

THE MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the shareholders of the above Company will be held at the Registered Office, Mafatlal House, Back Bay Reclamation, Bombay, on Thursday the 9th May, 1957, at 5 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1956.
2. To sanction declaration of Dividends on 1st Preference, 2nd Preference and Ordinary Shares and Bonus Dividend on Ordinary Shares.
3. To elect a Director in place of Shri Yogindra N. Mafatlal who retires by rotation, but being eligible, offers himself for re-election under Article 134 of the Articles of Association.
4. To elect a Director in place of Shri Natverlal Bhikhabhai who retires by rotation, but being eligible, offers himself for re-election under Article 134 of the Articles of Association.
5. To elect a Director in place of Shri Laxmanprasad D. Vasa who retires by rotation, but being eligible, offers himself for re-election under Article 134 of the Articles of Association.
6. To appoint Auditors for the current year and to fix their remuneration.

Notice is further given that the following business will be transacted as Special Business in this meeting:—

7. To consider and if thought fit to pass the following as an Ordinary Resolution, with or without any modifications:—

Ordinary Resolution No. 1

"RESOLVED that the Books, Registers, Minute Books and Documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, be kept open to inspection by the persons entitled thereto, to the extent, in the manner and on payment of the requisite fees, if any, at the Registered Office of the Company on any working day between the hours of 2-30 p.m. to 4-30 p.m. and on Saturdays between 11 a.m. to 1 p.m. PROVIDED, however, that the Register required to be maintained under Section 307 of the Act, shall be open to the inspection by any Member, as aforesaid, during the period prescribed by clause (*a*) of sub-section (5) of Section 307 of the said Act."

8. To consider and if thought fit to pass the following as an Ordinary Resolution with or without any modifications:—

Ordinary Resolution No. 2

"RESOLVED that in accordance with the provisions of Section 359 of the Companies Act, 1956, the Company, being satisfied that the insurance premia or other charges made by The Jayabharat Insurance Co., Ltd., for insurance in respect of the Company's property assets and goods are at rates of tariff which are not less favourable to the Company than the market rates or are otherwise reasonable, the Company hereby authorises Messrs. Pransukhlal & Co., Private Ltd., an Associate of Messrs. Navinchandra Purshotamdas & Co., Ltd., the Managing Agents of the Company, to retain all commission and other remuneration already earned or to be earned by them at any time hereafter, as the Principal Agents of Messrs. ANNEXURE TO THE NOTICE

(Explanatory Statement as required by Section 173 of the Companies Act, 1956)

To,

THE SHAREHOLDERS
OF THE STANDARD MILLS CO., LTD.

In conformity with the Companies Act, 1956, the following Explanatory Statement as required by Section 173 of the aforesaid Act sets out all material facts relating to the Special business mentioned in the Notice dated 18th March, 1957.

In Respect of Item No. 8 of the Notice:

The Company has rented from Messrs. Mafatlal Gagalbhai & Co. Private, Ltd., a portion of their building known as Mafatlal House in Back Bay Reclamation, as a monthly tenant at a monthly rent of Rs. 1,736 from 1st January, 1956. The said Messrs. Mafatlal Gagalbhai & Co. Private, Ltd., are an Associate of Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. The said premises are suitable for the Company's office and will be required by the Company for a long time even after 1st March, 1958, when the said contract will terminate under Section 361 of the Companies Act, 1956. As the said Mafatlal Gagalbhai & Co. Private, Ltd., are an Associate of the Managing Agents, the said contract requires to be approved under Section 360 of the Act by the Company in General Meeting by a Special Resolution. It is desirable that the Directors be authorised to continue occupation of the said premises after 1st March, 1958, when the said contract will terminate under Section 361 of the Companies Act, 1956, on such terms and for such period as the Directors may deem fit and also to take such additional accommodation in the said premises either before or after 1st March, 1958, for such period and on such terms as they may deem proper.

The following Directors of your Company are partners in Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, and they are also Directors and Members of Mafatlal Gagalbhai & Co. Private, Ltd., and hold shares in the said Company as set out below against their respective names and as such they are interested in the said contract of tenancy:—

1. Shri Arvind N. Mafatlal—Holds 1,158 Ordinary Shares and 5,250 Preference Shares.
2. Shri Yogindra N. Mafatlal—Holds 1,308 Ordinary Shares and 5,250 Preference Shares.
3. Shri Rasesh N. Mafatlal—Holds 1,458 Ordinary Shares and 5,250 Preference Shares.

Shri Hemant B. Mafatlal is a partner in Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. He is also a Director and Member of Mafatlal Gagalbhai & Co. Private, Ltd., and holds 3,650 Ordinary Shares and 1,480 Preference Shares in the said Company and as such he is also interested in the said contract of tenancy.

In Respect of Item No. 9 of the Notice:

The Company has made arrangements with the Sassoon Spinning and Weaving Co., Ltd., an Associate of Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, for supply of air-conditioning facilities to an area of 3,174 sq. feet of the Company's office premises in Mafatlal House, Back Bay Reclamation, Bombay, as from 1st January, 1956, at the rate of Rs. 794 per month, and as such the said arrangement requires to be approved by the Company in General Meeting by a Special Resolution under Section 360 of the Companies Act, 1956. The said arrangement will terminate on 1st March, 1958, under Section 361 of the Companies Act, 1956. It is desirable that the Directors be authorised to continue the said arrangement after 1st March, 1958, for such period and on such terms as the Directors may deem fit and also to take such further air-conditioning facilities in respect of the Company's office premises either before or after 1st March, 1958, for such period and on such terms as the Directors may deem proper.

The following first four Directors of your Company are interested in the said arrangement inasmuch as they are Directors and Members of the Sassoon Spinning and Weaving Co. Ltd., and holds shares in the said Company as set out below against their respective names, the fifth one is only a Member in the said Sassoon Spinning and Weaving Co., Ltd:

1. Shri Arvind N. Mafatlal—Holds 550 shares.
2. Shri Yogindra N. Mafatlal—Holds 550 shares.
3. Shri Kaushikprasad Chandulal—Holds 550 shares.
4. Shri Jayantilal D. Vasa—Holds 3,000 shares.
5. Shri Chimanlal B. Parikh—Being Member holds 100 shares.

Shri Hemant B. Mafatlal is a partner in the firm of Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. He is also a Director and Member of the said Sassoon Spinning and Weaving Co., Ltd., holding 50 shares therein and as such he is also interested in the said arrangement.

In Respect of Item No. 10 of the Notice:

Shri Krishnalal Ratilal Sitwala, who is a relative of Shri Hemant B. Mafatlal, a partner in Messrs. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, and who is in the employ of the Company as a Part-time Spinning Consultant on a monthly salary of Rs. 200, and as such, the approval of the Company in General Meeting under Section 360 of the Companies Act, 1956, is necessary.

By Order of the Board,
For THE STANDARD MILLS CO., LTD.,
MAFATLAL GAGALBHAI & SONS,
Managing Agents.

THE SASSOON SPINNING AND WEAVING COMPANY, LIMITED

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of Industrial Investment Trust Ltd. will be held at the Registered Office of the Company, 61, Apollo Street, Fort, Bombay, on Tuesday the 7th May 1957, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1956.

(2) To declare a Dividend.

(3) To confirm the appointment of Mr. D. G. Moore as a Director of the Company.

(4) To appoint a Director in place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him."

(5) To appoint a Director in place of Mr. Jal H. Mehta who retires by rotation, in accordance with the Articles of Association of the Company, and being eligible offers himself for re-election.

(6) To appoint Auditors for the current year and to fix their remuneration.

(7) To consider and if thought fit, to pass the following resolution:

"RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150 to 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspections by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the registered office of the Company between the hours of 12 noon to 2 p.m. (S.T.) on all working days except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company, provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members of holders of debentures of the Company, if any, as aforesaid between the times above mentioned during the period prescribed by sub-section 5(a) of Section 307."

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from MONDAY the 22nd APRIL 1957 to SATURDAY the 11th MAY 1957, both days inclusive.

By Order of the Board,

PREMCHAND ROYCHAND & SONS,
Secretaries.

BOMBAY, *2nd April*, 1957.

To the shareholders of Industrial Investment Trust Ltd. and in particular to:—
Richard Austein Leigh, Esq., P. C. Francis Mascarenhas, Esq., Noorul Hasan Qadri, Esq., Kishenchand Verma, Esq., and Mrs. Edith Dawn Kingham.

Explanatory Statement as required under Section 173 of the Companies Act, 1956

1. *Item No. 4 of the Notice*:

Shri Maneklal Premchand who retires by rotation and is eligible for re-appointment has attained the age of 67 years he having been born on 7th September, 1889, and hence he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from some members notifying their intention to move the resolution as set out in the said item. Shri Maneklal Premchand joined the Board of Directors of the Company in 1936. He has wide and varied experience and during his association with the Company as Chairman and Director he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

2. *Item No. 7 of the Notice*:—

Under the Companies Act, 1956, various registers are to be kept open for inspection of the persons entitled thereto such as contract Registers, Share Registers, Minutes of the General Meetings and the Act provides that such registers shall be kept open for such inspection during business hours subject to reasonable restrictions as the Company may impose so that not less than two hours in each day are allowed for inspection. It is proposed to keep the registers, etc., open for inspection of the persons entitled thereto between the hours of 12 noon and 2 p.m. (S.T.) on all working days.

Notes:—(a) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(b) The dividend when declared will be made payable at the Bank of India Ltd., Bombay, on and after the 20th day of May 1957. The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 11th day of May 1957.

Change of address, if any, should be notified to the Company immediately.

By Order of the Board,

PREMCHAND ROYCHAND & SONS,
Secretaries.

BOMBAY, *2nd April*, 1957.

THE WESTERN INDIA MATCH COMPANY, LIMITED

3. To elect a Director in the place of Sir Rahimtoola M. Chinoy, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by section 281 of the Companies Act 1956 has been received by the Company:

"RESOLVED that Sir Rahimtoola M. Chinoy who has attained the age of 75 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."

4. To elect a Director in the place of Mr. Dinshaw D. Romer, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution as a Special Resolution, of which special notice as required by sections 261 and 281 of the Companies Act 1956 has been received by the Company:

"RESOLVED that Mr. Dinshaw D. Romer who has attained the age of 82 years and who is an associate of the Managing Agents of this Company, and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."

5. To appoint Auditors for the ensuing year and to fix their remuneration.
6. To consider and if thought fit to pass the following resolution as a Special Resolution:

"RESOLVED that the Company hereby sanctions the borrowing of an aggregate sum of Rs. 60 lakhs on Cash Credit account from the Bank of India Ltd. and the Central Bank of India Ltd. (to the extent of Rs. 30 lakhs from each Bank) and as security for the said borrowing the Directors be and they are hereby authorised to hypothecate and charge all the movable property and assets of whatsoever nature (exclusive of uncalled capital) of the Company so as to create a floating security and charge on all such property and assets and to execute all such documents as may be required by the said Banks in connection therewith."

The Transfer Books of the Company will be closed from the 22nd day of April 1957 to the 10th day of May 1957 both days inclusive.

By Order of the Board,

A. HYDARI,
Executive Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, 2*nd April* 1957.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta, on and after the 14th day of May 1957 to those shareholders whose names stand on the Register on the 10th day of May 1957 and warrants will be posted in due course to each shareholder at his registered address.

Explanatory Statement issued under Section 173 of the Companies Act 1956 in connection with the items of special business to be transacted at the Thirty-fourth Annual General Meeting to be held on the 8th day of May 1957.

As required by section 173 of the Companies Act 1956 the following explanatory statement is issued with the Notice of the Thirty-fourth Annual General Meeting of the Company and sets out all material facts relevant to items 3, 4 and 6 in the Notice.

Item 3: Your Director Sir Rahimtoola M. Chinoy is retiring by rotation. He has attained the age of 75 years and as such he cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years prescribed under section 280 of the Companies Act 1956 shall not apply to him. As required by section 281 of the Act a special notice has been received by the Company proposing that Sir Rahimtoola M. Chinoy be re-appointed a Director of the Company and that the age limit of 65 years prescribed under section 280 of the Act shall not apply to him.

Sir Rahimtoola M. Chinoy is a business man of great and varied experience. He has been a Director of your Company for nearly 20 years and has rendered valuable services to the Company. It is in the interests of the Company that he should be re-appointed a Director.

Item 4: Your Director Mr. Dinshaw D. Romer is retiring by rotation. He has attained the age of 82 years. He cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years laid down by section 280 of the Companies Act 1956 shall not apply to him. Furthermore, since Mr. Romer is an associate of your Managing Agents, the Swedish Match Company, being a Director of the Assam Match Company Ltd., which is a subsidiary Company of your Managing Agents, and since your Managing Agents are authorised to appoint a Director or Directors on the Board of your Company, Mr. Romer's re-appointment also requires a Special Resolution under section 261 of the Act. Special notice as required by sections 261 and 281 of the Act has been received by the Company proposing that Mr. Dinshaw D. Romer be re-appointed a Director of the Company and that the age limit of 65 years shall not apply to him.

Mr. Romer is a well-known Solicitor and Director of several companies. Having been associated with your Board for the last 18 years, he has rendered valuable services and it is in the interests of the Company that he should be re-appointed a Director.

Item 6: In September 1938 your Company arranged to obtain Cash Credit loans from the Bank of India Ltd. and the Central Bank of India Ltd. to the extent of Rs. 10 lakhs from each of the said Banks against hypothecation of all the movable property and assets (exclusive of uncalled capital) of the Company. Thereafter the Cash Credit arrangement with the Banks was being utilised as and when necessary. For some years however this Credit has not been utilised, but it has been kept alive in case of need. Now it has become necessary to increase our Cash Credit particularly because of the expenses to be incurred in connection with the establishment of the Company's new paper mill. The aforesaid Banks have agreed to grant a total Cash Credit loan of Rs. 60 lakhs (inclusive of the aforesaid earlier loan of Rs. 20 lakhs) against the same security, namely, hypothecation and charge of all the movable property and assets of whatsoever nature (exclusive of uncalled capital) of the Company. Each of the aforesaid Banks will grant Cash Credit to the extent of Rs. 30 lakhs. The terms on which the loan is offered by the Banks are fair and reasonable. Your Directors therefore recommend to the shareholders to sanction the necessary borrowing. Shareholders' sanction is required under Article 67 of the Company's Articles of Association.

The following Directors are interested in item No. 6:

Sir Cowasjee Jehangir as a Director and shareholder of the Bank of India Ltd.

Mr. Dinshaw D. Romer as a Director and shareholder of the Central Bank of India Ltd.

Sir Chunilal V. Mehta and Mr. Maneklal Premchand as shareholders of both the Bank of India Ltd. and the Central Bank of India Ltd.

By Order of the Board,
A. HYDARI,
Executive Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, *2nd April* 1957.

THE CENTURY SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE Sixtieth Annual General Meeting of the Shareholders will be held at the registered office of the Company at Industry House, 159 Churchgate Reclamation, Bombay, on Wednesday the 15th May 1957, at 4-30 p.m. (S.T.), for transaction of the following business:

1. To adopt the Directors' Report, the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1956.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in place of Shri Ramnath A. Podar who retires from office by rotation, but being eligible, offers himself for re-election.
4. To appoint a director in place of Shri Maneklal Premchand who has attained the age of 67 years and who retires from office by rotation, but being otherwise eligible, offers himself for re-election; and to consider and if thought fit to pass the following Resolution of which special notice under Section 281 of the Companies Act 1956 has been received by the Company:

   RESOLVED that pursuant to the provisions of Section 281 and other relevant provisions, if any, of the Companies Act 1956, Shri Maneklal Premchand who has attained the age of 67 years and who retires from office by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit prescribed for Directors under Section 280 of the said Act shall not apply to him.
5. To appoint Auditors for the current year and fix their remuneration.
6. To consider and if thought fit to pass the following Resolution as Ordinary Resolution:

   RESOLVED that the Registers, books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act 1956 and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 159, 161, 163, 193, 196, 301 to 304, 307, 356 to 360, 362, 372 and 347 and Schedule VIII of the said Act, be kept open for such inspection by the persons entitled thereto to the extent and in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company between the hours of 11-30 a.m. and 1-30 p.m. on any working day except when the Registers and books are closed under the provisions of the said Act or the Articles of Association of the Company. Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members and by holders of debentures, if any, of the Company, as aforesaid between the hours abovementioned during the period prescribed by sub-section 5(a) of Section 307 of the Act.

By Order of the Board,
MAGANLAL H. GANDHI,
Chief Executive.

BOMBAY, *5th April* 1957.

N.B.—The Transfer Books of the Company will be closed from Monday the 22nd April 1957 to Tuesday the 14th May 1957, both days inclusive.

The dividend when sanctioned will be made payable at the United Commercial Bank Ltd., Churchgate Reclamation Branch, Bombay 1, on or after 22nd May 1957, to those shareholders whose names stand on the register on 22nd April 1957, to whom dividend warrants will be posted.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

ANNEXURE TO THE NOTICE

Explanatory Statement as Required Under Section 173 of the Companies Act 1956.

Item No. 4 of the Notice:

Shri Maneklal Premchand, who has attained the age of 67 years, retires by rotation but is otherwise eligible for re-appointment and he offers himself for re-election. A special notice under section 281 of the Companies Act, 1956, has been received by the Company from a shareholder of his intention to move the Resolution as set out in the said item. Shri Maneklal Premchand joined the Board of Directors in February 1952, and is a businessman and financier of wide and varied experience, and during the period of his association with the Company he has rendered valuable service to the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed as Director.

Item No. 6 of the Notice:

Under the various sections of the Companies Act, 1956, referred to in item No. 6, it has been provided that as regards inspection of the registers, books and documents to be maintained under the said sections by the persons entitled thereto, the Company in General Meeting may impose reasonable restrictions so that such registers, books and documents shall, not less than two hours in each day, during business hours, be open for inspection. The restrictions sought to be imposed by the said resolution are reasonable and desirable from the administrative point of view.

By Order of the Board,
MAGANLAL H. GANDHI,
Chief Executive.

BOMBAY, *5th April* 1957.

THE DURBHANGA SUGAR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-fifth Ordinary General Meeting, being the Annual General Meeting of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat on the 30th day of April, 1957, at 10.30 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Accounts for the year ended the 31st August, 1956, and Balance Sheet and Report of the Auditors thereon.

(2) To declare a Dividend.

(3) To elect a Director in place of the retiring Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

As Special Business:

(5) To consider the payment of extra remuneration to the Directors for the year ended the 31st August, 1956.

(6) To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

By Order of the Directors,
W. F. MALDEN,
Secretary.

LOHAT,
DISTRICT DARBHANGA,
26th February, 1957.

Note:—1. A member of the Company who is entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

2. Special notice received in connection with Item No. 5 above is available for inspection by members at the Registered Office of the Company on any working day between the hours of 9.00 a.m. to 12.00 noon.

3. The Share Transfer Books of the Company will be closed from the 14th April to the 30th April, 1957, both days inclusive.

4. Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 30th April, 1957.

Explanatory Statement in Accordance With Section 173 of the Companies Act, 1956,

With Regard to Item No. 5 of the Agenda

Under Article 93 (which was in force upto the 31st August, 1956) of the Articles of Association of the Company the Directors are entitled to such extra remuneration as the Company in General Meeting may sanction. By virtue of provision of Section 309(8), Section 309 would apply to this Company only from the 1st September, 1956. Special Notice to move a Resolution has been lodged with the Company and it has been proposed therein that an amount of Rs. 32,000 be paid to the Directors as extra remuneration for the year ended the 31st August, 1956.

ACUTE STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, *10th April*

The short-term money market continued to display stringent conditions during the week under review also. While the pressure of demand for bank credit was felt on a greater scale, there was extreme paucity of funds in the market. The difficulty of banks in getting as much funds as possible from the market was further aggravated by the second and final call made by the Tata Iron and Steel Company, Ltd. on its new issue involving a sum of about Rs. 4 crores, closely following the recent issue of new shares by the Indian Iron and Steel Company, Ltd., for which the shareholders have to find nearly Rs. 11 crores before 15th April. The new issue by Shree Gopal Paper Mills which was opened for public subscription today has placed further strain on the money market.

There was, however, no change in interest rates. Inter-bank call money rate was maintained at 3½ per cent. House money at call was done at 4 to 4½ per cent. and short-term deposits for one to six months were also offered 4 to 4½ per cent. per annum.

For the second week in succession, there has been an expansion in notes in circulation. The Reserve Bank's statement for the week ended 5th April 1957 discloses a rise of Rs. 37.48 crores in note circulation, following the increase of Rs. 8.30 crores noted in the previous week. Notes held in the Banking Department are lower by Rs. 3.88 crores, so that the rise in total notes issued is of the order of Rs. 33.59 crores. This is covered by an increase of Rs. 30 crores in rupee securities and of Rs. 3.59 crores in rupee coin. There has been no change in foreign securities, but balances held abroad (in the Banking Department) show a fall of Rs. 1.49 crores. Deposits of the Central Government have declined by Rs. 3.97 crores and those of other Governments by Rs. 24.04 crores. Deposits of banks have, on the other hand, gone up further by Rs. 2.23 crores. Loans and advances to Governments are up by Rs. 8 crores, while other loans and advances show a precipitous fall of Rs. 21.83 crores, of which advances to banks against usance bills alone account for Rs. 13.21 crores. Fresh borrowing by banks against usance bills during the week were of the order of Rs. 2.38 crores, while repayments of maturing bills amount to as much as Rs. 15.59 crores. Treasury bills purchased and discounted are up by Rs. 12.26 crores.

The outstanding feature disclosed by the Schedule banks' statement for the week ended 29th March 1957 is a substantial rise of Rs. 14.66 crores in banks' deposits, accompanied by an increase of over Rs. 5.5 crores, in their borrowings. Such a large expansion in resources has been utilised to increase their advances by more than Rs. 15 crores. Demand deposits have risen by Rs. 8.14 crores to cross the Rs. 700-crore mark and stand at Rs. 700.23 crores. Time deposits are also up by Rs. 6.52 crores. Borrowings from the Reserve Bank are up by Rs. 5.57 crores. On the assets side, advances have jumped by Rs. 10.54 crores and bills purchased and discounted by Rs. 4.67 crores. Cash balances have shrunk by Rs. 42 lakhs and money at call and short notice by Rs. 2.21 crores, while balances with other banks are up by Rs. 1.61 crores.

The Gilt-edged market was lifeless without any signs of activity. There were sellers at quoted rates all round, but in the absence of any buyers, the volume of business was extremely poor. 3 per cent. 1986 Conversion Loan was a shade better at Rs. 74.30. 3 per cent. 1970-75 was dull at Rs. 87.30 and 3 per cent. 1966-68 at Rs. 92.25. 3 per cent. 1964 was held at Rs. 94.45. 3 per cent. 1963-65 had sellers at Rs. 94.20. 3 per cent. 1959-61 was stagnant at Rs. 97.75. 3½ per cent. 1962 was neglected at Rs. 97.80 and 3½ per cent. 1961 at Rs. 99.45, while 3½ per cent. 1964 shaded off by nP 0.05 to Rs. 98.40. 3½ per cent. 1965 was unchanged at Rs. 98.25, while 3½ per cent. 1967 softened from Rs. 98.50 to Rs. 98.45.

The rupee ruled steady in terms of the U.S. dollar during the week. After rising from Rs. 480 to Rs. 480.25 per $100, banks' selling rate of ready U.S. dollars declined to Rs. 480 per $100. Similarly, the buying rate closed at Rs. 476.50, after moving up to Rs. 477 per $100. This is in consonance with the steadiness of sterling abroad. Thus, in New York, spot sterling gained from $2.78⅜-2.78⅝ to $2.78.13/16 to 2.78.15/16 and three months' forward from $2.78-2.78⅛ to $2.78.1/16-2.78.3/16. Transferable sterling gathered strength from 276.10-2.76.20 cents to 276.50-276.60 cents.

HIDES STEADY

(From Our Own Correspondent)

MADRAS, *8th April*

Shipment business with the U.K. in E.I. tanned cow hides was restricted, because Madras prices remained one to two pence over U.K. dressers' ideas. Sellers were going slow with booking fresh business, since inquiries were mostly for medium weights. Prices in the local market remained unchanged, and might give way on light weights if U.K. demand was less during this week. Top marks buff calf were sold occasionally at 90d. for run and buff calf, at 62d. for run and combined with thirds at 50d. Buff hides were not looked at by shippers and had to be sold for inland trade. There were several inquiries for superior tannages in goat skins and attractive prices were paid by importers on the Continent, leaving the U.K. to trail behind. Prices of sheep skins were steady to quiet.

Shipment during March 1957 were: To the U.K.: 2,394 bales tanned cow hides, 283 tanned cow calf, 8 tanned buff hides, 559 tanned buff calf, 960 tanned goat and 488 tanned sheep. To the Continent: 5 tanned cow, 5 tanned cow calf, 2 tanned buff calf, 996 tanned goat and 102 tanned sheep.

BULLION MOVES NARROWLY

(From Our Own Correspondent)

BOMBAY, *10th April*

The bullion market had only four sessions during the week under review. The market remained closed on Monday, 8th April, on account of *Ram Navami*, and today to mourn the death of a leading broker. During this short week, both silver and gold were featureless with fluctuations confined to a narrow range. The undertone was, however, fairly steady.

Though the silver section was influenced by reports of heavy import duty having been paid for import of Tibetan coins, the feeling that it would take some time before the coins find their way to the market, coupled with good offtake in the ready section, checked any recession in prices.

Good demand for gold in the ready section sustained the sentiment in the yellow metal, which otherwise would have been depressed by arrivals of unauthorised gold. In fact, bears were a little active in the forward section, particularly in the next settlement, as indicated by the carry forward charge of As. 2 against them yesterday, as against As. 2 in their favour early in the week.

Forward silver (13th April settlement) receded from Rs. 179 to Rs. 178-2 early in the week, but soon gained ground to close yesterday at Rs. 179-2. The next settlement (14th May), official business in which commenced on the 3rd inst., dipped from Rs. 179-11 to Rs. 178-13, before recovering to Rs. 179-11.

Ready silver closed at Rs. 179-2, after reacting from Rs. 178-10 to Rs. 177-12. The floating stocks of silver are reported to be 1,000 bars. The daily average offtake was 15 bars.

Forward gold (11th April settlement) was marked down from Rs. 105-5 to Rs. 104-8, but it soon hardened to Rs. 105-13 at the close. The next settlement (12th May) shed from Rs. 105-7 to Rs. 104-9 before recovering to Rs. 105-11.

Ready gold gained from Rs. 105-5 to Rs. 106. The floating stocks are estimated at 25,000 tolas. The daily average arrivals were 4,000 tolas, while the average offtake was higher at 5,000 tolas per day.

New York silver price was unchanged at 91¾c., while London silver was marked down. Spot silver dipped from 80d. to 79¾d. before gaining partially to 79¾d. Forward silver closed at 79¾d. after moving down from 79¾d. to 79¼d. Gold was erratic, moving between 250s. 7½d. and 250s. 5½d. On balance, it showed a loss of 4½d., at 250s. 5½d.

The following comparative table shows the trend of market during the week under review:

	9-4-1957	Highest	Lowest	3-4-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	106 0	106 3	104 8	105 5

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *9th April*

Although activity was meagre, base metals ruled steady during the week under review. This was due to the better advices received from foreign markets. From Rs. 176, electrolytic copper advanced to Rs. 180. The stock position was good, and the increase in the number of enquiries was due to the anxiety of consumers to cover their requirements for the next few months. With the commencement of the financial years, manufacturers anticipated substantial Government orders. On the London Metal Exchange, the price improved by £5 per ton, and in New York also an upward movement was in evidence. The increase in price, despite the fact that copper production was running in excess of demand, was due to reports that American producers were re-adjusting their rate of production in order not to give way for a slump. In Calcutta, copper scrap was unchanged at Rs. 175, while fire-refined ready copper rose from Rs. 175 to Rs. 178. Tin, at one time, rose from Rs. 519 to Rs. 521, but since buyers were silent prices declined to Rs. 515, which was a few points below the replacement cost. Following a temporary shortage for the ready metal, electrolytic zinc was at one time as high as Rs. 79, as against the opening rate of Rs. 77. At this stage, reports of fresh arrivals were received, and the rate soon sagged to Rs. 77.50. Virgin lead remained unchanged at Rs. 77.50.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, *8th April*

Linseed prices remained more or less unchanged during the week, and the undertone of the market was quiet. Arrivals were very poor, and, despite fair demand from crushers, turnover was small. The oil section was inactive, owing to lower price-indications from overseas, and shippers were very reserved.

The latest available quotations are: Ready Rs. 21.62 and April-May Rs. 20.75 per maund.

BEARISH TREND IN COTTON FUTURES ARRESTED

(From Our Own Correspondent)

BOMBAY, *10th April*

After continuing to depict a bearish trend in the first two sessions of the week under review, the cotton futures market staged a recovery on the 6th inst. which persisted practically till the close today. The earlier bearish trend was due to renewed fears of Government action in respect of requisition of cotton stocks, and the doubling of the margin rates. The favourable survey results of the 4th inst. was another unhelpful factor. Total tenders till that date aggregated 1,000 bales. But there was a feeling in certain quarters that, owing to the shortage of Vijay and Sarti styles, tenders against the Vijay April contract would not be as large as had been anticipated earlier. On Saturday, influenced by reports of steadily declining crop ideas and increasing mill consumption, the bulls entered the market and lifted the values. A large part of the initial losses was recovered. In fact, Vijay April delivery was Rs. 3 higher.

M.G. Jarilla May opened the week at Rs. 704.50 and declined to Rs. 691 the next day, on heavy selling by local bulls and upcountry interests. It, however, firmed up in the subsequent sessions, following good buying support and touched Rs. 709 today before closing lower at Rs. 703.50. M.G. Vijay April commenced trading a rupee lower at Rs. 852 and shed Rs. 12 to Rs. 840 the following day. The bull support forthcoming thereafter pushed the contract to a high of Rs. 858 today. The closing rate was lower by Rs. 2. Vijay June followed the same trend. After declining from Rs. 825 to Rs. 814, it rallied to Rs. 831 today before closing at Rs. 828.50. The following is the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	10-4-57	*High*	*Low*	3-4-57
Jarilla (May) ...	703.50	709	691	705
Vijay (April) ...	856	858	840	853
Vijay (June) ...	828.50	831	814	829.50

At its meeting held yesterday, the Cotton Advisory Board is reported to have recommended several measures for dealing with the current situation. These include tightening up of the restriction on cotton with particular reference to stocks, relaxation of import restrictions, and conclusion of barter deals.

While details regarding the requisition of cotton stocks are still not known, it is believed that the authorities may insist on all stocks, sold or unsold, with the mills or with the trade, being notified to the Textile Commissioner. It appears that the mills have been strongly warned against precipitating a scramble for cotton, lest the authorities should be forced to introduce the quota system.

In the spot section, values were more or less maintained. There was sustained mill demand, as it was feared that, if the Government were to requisition cotton and then allocate them to the mills, the latter might not get the variety of their choice. Jarilla, Jayadhar, Vijay, Laxmi and Wagad were particularly sought after. In order to facilitate import of Egyptian cotton, the mill requirements of this cotton are being assessed. When the actual quantity needed is known, it will be communicated to the Government. An agreement with Sudan more or less on the same lines as the Indo-Egyptian deal is reported to be under contemplation. Suggestions have also been made to the authorities to permit import of lower grades American cotton. The following are the latest available spot rates from Sewri (in rupees per candy of 784 lbs.):

Bengal *Deshi* 740; Berar Jarilla 815; Khandesh 825; Vijay 945; Oomra *Deshi* 775; Moglai 760.

The Karachi cotton futures market ruled easy during the week. Reports that the U.S. Senate had passed a Bill permitting barter deals in cotton with communist countries induced some selling and values tended to look down. N.T.R.G. May receded from Rs. 81-14 to Rs. 81-6. May delivery shed As. 7 to Rs. 83-1. The spot section, however, ruled distinctly firm. There was persistent shipment demand for *Deshi* styles, the prices of which registered a marked advance. Punjab *Deshi*, for instance, rallied Rs. 4-12 to Rs. 83-4. Sind *Deshi* improved from Rs. 87 to Rs. 89. The following are the latest available spot quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 85-10; S.G. 89-2; 4F Punjab Roller 87-10; S.G. 91-10; 289F N.T. Roller 86-10; 289F N.T. Sind S.G. 95-6; 289F Punjab Roller 91-2; S.G. 101-2.

A distinctly easy trend was depicted by the Alexandria cotton futures market during the major part of the week under review. The easiness was due to the reported decision of the U.S. to release 300,000 bales of long-staple cotton (which are at present stockpiled for national emergencies) in world markets. Even reports that the Egyptian Government had announced grant of export subsidies on sales made during April in specified currencies failed to have any significant effect on the market. Karnak May and July contracts fell from 113.35 tallaris and 113.85 tallaris to 111.00 tallaris and 111.60 tallaris, respectively, on the 6th inst. Towards the close of the week, however, recovery was in evidence and the loss was more than made up. In the spot section, premiums for higher grades Karnak and Menoufi were firm, while those for lower grades and other varieties continued to be easy. The following are the latest available rates—in tallaris per lb.—from Alexandria:

Karnak: May 112.90; July 113.70. *Ashmouni*: April 80.80; June 79.85; August 79.80.

The apprehension of cotton traders in Egypt is that the release of stocks of U.S. long-staple cotton for sale in world markets would knock the bottom off the Egyptian cotton prices. They also fear that Britain, France, Japan, etc., which are normally large-scale customers of Egyptian cotton, would be tempted to go in for cheaper priced Ame-

rican cotton. The political antipathy against Egypt, it is felt, would only induce these countries to switch over their purchases to U.S.A. as early as possible. The U.S. authorities, however, have assured that, in disposing of the surplus stock, they will be so careful as not to wreck the economies of other cotton-producing countries. The justification given by the U.S. for this step is that internal production of that quality cotton, which used to be the monopoly of Egypt, has of late been progressively rising and that this has made liquidation of stocks necessary. Further, it is held that Egyptian prices have been fluctuating so frequently as to inconvenience U.S. buyers.

Cotton futures values at Liverpool registered some improvement during the week on trade buying, mill fixation and commission house support. The volume of business, however, was limited. The market would have ruled firm but for easier offers from American shippers and reports of lower C.C.C. sales. Some quarters were also inclined to think that the C.C.C. would not be able to maintain the 27.47 cent price realised at the previous sales, although C.C.C. prices announced towards the close of the week were higher. Since the local prices were closely related to the C.C.C.'s selling prices, there was a general tendency for the trade to await the outcome of C.C.C. sales.

In the ready cotton section, though inquiries were spread over a wider range of growths, actual deals put through continued to be small. Some business was reported in American, Turkish, Russian and East African styles. The Government of India's decision to suspend exports of Indian cotton had very little effect on the market. Mills in the U.K. continued to prefer short-staple American cotton to Indian varieties, due to higher prices for the latter. Buyers of Sudan cotton were somewhat perturbed over the action of the Egyptian Government in granting export subsidies in specified currencies on sales of Egyptian cotton made during April. It was anticipated that the Sudan Gezira Board would be forced to make reductions in their reserve prices to meet the competition from Egypt. The following are the latest available rates—in pence per lb.—from Liverpool:

American One Inch Staple Contract: May-June 26.45; July-August 26.47; October-November 26.37; December-January 26.30. *American Cotton Mixed Growth Contract*: May-June 26.63; July-August 26.55; October-November 26.43; December-January 26.36. *Sudan*: May-June 42.85; July-August 41.70.

The New York cotton futures market put on a dull appearance during the week with prices moving narrowly. Advices from textile and spot markets were not encouraging, and traders were mostly inclined to await fresh developments. There were only some routine trade buying and short covering which were not sufficient to meet the light hedge and profit-taking sales. The Senate's approval of the Bill to allow barter of surplus U.S. farm commodities to Communist countries failed to have any perceptible immediate effect on the market.

The C.C.C. has announced a further sale against bids submitted on the 2nd inst. of 300,102 bales of cotton to shippers, thus bringing the total sales under the current export programme to 7,282,156 bales. Average price accepted for 1" Middling cotton was 27.58 cents a lb. It has also announced the sale of 873,315 bales of cotton for export during the next season's shipping period, bringing the total sales under this category to 1,013,810 bales. It was reported that the Secretary of Agriculture indicated that there were good chances of the 1957 cotton price supports being raised before the new season commenced on the 1st of August this year. Such action will be taken if the official estimates on which the interim and minimum loan rate already announced require important alteration. The loan rate will be raised if the estimated supply is too high and estimated disappearance too low. According to the United States Department of Agriculture, disappearance in the current season will aggregate 15,800,000 bales, made up of 8,750,000 bales of domestic consumption and 7,050,000 bales exports. The estimated disappearance is 4.4 million bales more than that of the preceding season. The carryover at the end of this season is estimated at about 12 million bales, about 2½ million bales less than that at its beginning.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	9-4-57	3-4-57	26-3-57
Spot	35.45	35.45	35.45
May	35.15	35.20	35.17
July	34.66	34.67	34.70
October	33.70	33.56	33.36

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *10th April*

The easy conditions noted in the yarn market last week persisted during the week under review also. Business put through was very much limited, owing to continued stringency in money market and poor offtake by consuming centres. Rayon yarns were particularly dull, notwithstanding reports of revival of demand in the fabrics markets. Traders were somewhat inclined to feel that the supply position in respect of yarn might improve as a result of the move of some indigenous producers to manufacture yarns of 100 bright, 120 dull cones, etc. Staple fibre yarns lacked support. 2/40 varieties encountered selling on reports that the handloom and powerloom weavers were finding it unremunerative to sell cloth woven from these varieties and were switching over purchases to inferior counts. Cotton yarns also lacked support, thanks to unhelpful advices from centres like Surat and Malegaon.

In the rayon yarn section, spot 120 Italy receded by an anna to Rs. 3-15. 120 Japan were quoted an anna lower at Rs. 4-4. 150 Japan lost 3 pies to Rs. 4-0-6. 150 Italy was done at Rs. 3-11, as against Rs. 3-10-6. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade and 150 Bt. cones 1st grade lost three pies each to Rs. 3-10-9 and Rs. 3-5, respectively. Rayon yarns 120 dull cones Snia for April delivery, however, met with good buying support induced by expectations of enlarged buying enquiries from consuming centres in the coming weeks and advanced by Rs. 4 to Rs. 803. Similarly, June delivery was marked up by Rs. 6 to Rs. 818; 150 bright cones April delivery were fully maintained at Rs. 623.

Staple fibre yarns (40x2) June delivery came in for heavy selling and dropped Rs. 7 to Rs. 620. April delivery fell by Rs. 4 to Rs. 617. Spot 40x2 Citys declined by 6 pies to Rs. 3-3-9. New Greats lost a similar amount to Rs. 3-2-9. Centurys and Kohinoors lost 3 pies each to Rs. 3-4-3 and Rs. 3-4-9, respectively. Among foreign yarns (80x2), Fujis fell by 18 pies to Rs. 5-3-6. Paramounts shed 6 pies to Rs. 5-3-6.

In the cotton yarn section, twenty counts Moderns and Maduras shed an anna each to Rs. 18-15 and Rs. 19-6, respectively. Gokaks, however, had some enquiries and put on As. 2 to Rs. 18-12. Ten counts Podars and Moderns were both neglected, the former at Rs. 14-12 and the latter at Rs. 15. Thirty counts Indus were quiet at Rs. 22, as also Edwards at Rs. 21-12. Among 80s, Mahendras declined As. 4 to Rs. 73. Moderns changed hands at Rs. 76-4, same as last week. Finlays were on offer at Rs. 81-8. Sixty counts Moderns slipped by As. 4 to Rs. 61-4. Finlays were dull at Rs. 61 and Raghuvamshis at Rs. 58. Forty counts Moderns, on the other hand, evoked some support and hardened by As. 8 to Rs. 28. Minaxis rose by an anna to Rs. 27-6. Gokaks were unchanged at Rs. 27.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	10-4-1957	3-4-1957
	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—		
120 Dull Cones Snia April	803 0	799 0
150 Bt. Cones April	623 0	623 0
120 Japan (per lb.)	4 3	4 4
150 Japan (per lb.)	4 0½	4 0½
120 Italy (per lb.)	3 15	4 0
150 Italy (per lb.)	3 11	3 10½
***Staple fibre yarn* (per case of 200 lbs.)—**		
40 x 2 April	617 0	621 0
40 x 2 June	620 0	627 0
40 x 2 New Great (per lb.)	3 2½	3 3½
40 x 2 Century (per lb.)	3 4½	3 4½
40 x 2 City (per lb.)	3 3½	3 4½

40s Gokak	27 0	27 0
60s Raghuvamshi	58 0	58 0
80s Modern	76 4	76 4

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *10th April*

Barring castorseeds which were firm the oilseeds market ruled distinctly easy during the week under review. Groundnuts displayed easiness as a result of bull liquidation induced by fresh arrivals in the market in the wake of poor enquiries for seeds and oil. Linseed encountered some selling, thanks to continued slack demand for oil from overseas interests. Cottonseed also encountered selling on account of selling pressure from upcountry centres where stocks were reported to have increased. The castorseed section, however, maintained the previous week's firmness on rumours of export prospects, though it reacted on 6th, following offerings by local speculators. During the week, new futures contracts, namely, August 1957 in groundnut and September 1957 in linseed, castorseed and cotton seed were opened.

Groundnut May contract opened the week at Rs. 172.00 and gradually declined to Rs. 163.00 on the 6th inst. Subsequently, it improved on bear covering to Rs. 170.75 today, before closing lower at Rs. 168.75. Over the week, it lost Rs. 2.62. Much interest was not evinced in the new (August) contract. It opened on the 9th inst. at Rs. 172.00 and finished today at Rs. 171.62. Spot Bold F.A.Q. shed 25 nP. to Rs. 34.00. Groundnut oil ex-mill was lower by 6 nP. at Rs. 18.75.

Castorseed May contract commenced firm at Rs. 174.25 on the 4th inst. and moved up to Rs. 175.50 the same day. During the following days, it receded to a low of Rs. 171.00 on the 9th inst. before finishing today at a high of Rs. 177.50. It, however, finished lower at Rs. 175.75, thus gaining Rs. 3.50 over the week. Business in September contract commenced at Rs. 175.00 on the 9th inst. The contract forged ahead to Rs. 180.50 today, before closing 25 nP. lower. Spot Madras rose by 50 nP. to Rs. 34.75. Oil B.S.S., too, put on 31 nP. to Rs. 21.50.

Linseed May (futures) contract opened at Rs. 29.31 and moved between that level and Rs. 28.75, touched on the 6th inst. It finished today at Rs. 29.00, having lost 31 nP. over the week. September contract was quoted at Rs. 29.69 at the close today. Spot Bold declined by 38 nP. to Rs. 28.62. Linseed oil ready was done at Rs. 15.75, as against Rs. 16.

Cottonseed May contract slided down from the opening high of Rs. 107.50 to Rs. 104.50 on the 6th inst. It climbed up again to Rs. 107.75 today, though it finished lower at Rs. 106.75, having thus lost 75 nP. over the week. September contract, however, moved up from Rs. 107.00 at the commencement on 9th inst. to Rs. 109.00 at the close today.

Among others, *kardi* seed Bold shed 50 nP. to Rs. 21.25. *Niger* seed Madras was quoted at Rs. 27.75, as against Rs. 29.25 last week.

A quota of 2,500 tons of linseed oilcake will be released for export outside India during the period April-June 1957, or till the ceiling is reached, whichever is earlier.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	10-4-1957	3-4-1957	27-3-1957
	Rs. nP.	Rs. nP.	Rs. nP.
Groundnuts—			
May 1957 ..	168.75	171 6	172 8
Khandesh Quality Ready (per cwt.)	34.75	35 0	35 4
April-May	34.00	34 6	34 7
Linseed—

SUGAR MOVES UP

(From Our Own Correspondent)

BOMBAY, *10th April*

The sugar market ruled firm during the week under review. The firmness was aided principally by expectations of a rise in sugar prices which stemmed from the speeches of both the Union Food Minister and the President of the Indian Sugar Mills Association at the recent meeting of the Association. Reports of increasing consumption of sugar—at an annual rate of over 1.9 million tons—and satisfactory movement also imparted strength to the market. There was, therefore, good buying support and sugar prices moved up.

Arrivals of sugar into the market during the week aggregated about 15,600 bags, as against 12,000 bags in the previous week.

Spot medium grain sugar advanced from Rs. 89-Rs. 91 to Rs. 90-Rs. 93 per bag, inclusive of sales tax. Small grain put on a rupee to Rs. 89. Large grain rose by a like amount to Rs. 94-Rs. 98.

Vaisakh delivery contract for 'C' grade sugar, which had receded early in the week from Rs. 91-14 to Rs. 91-7, spurted under hectic bear-covering to Rs. 92-1. It was, however, taken down today to Rs. 91-13 as a result of hedging sales by spot houses.

DUST TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, *9th April*

Easy conditions characterised last week's internal sales with the price giving way by as much as 12 naye paise towards the close. Such a trend did not come off actually as a surprise to stockists and traders; for, with the decline in quality, a feature associated with the end of the season, buyers were disinclined to enter into commitments. The new season's teas are expected to reach the market one month earlier than usual.

Crop reports indicate the likelihood of a bigger outturn, with the result that common teas are likely to present the same problem as at the end of last year, namely, that of heavy stocks.

Exporters also paid little attention. Stocks in the United Kingdom as at the end of March, at 133 million lbs., were higher by 5 million lbs., as compared with the previous week, and represented consumption for about four months. This was the cause for the easier trend in the auctions held in Mincing Lane on 3rd April, and this report also affected local sentiment. Despite the prevalence of fair demand in the Colombo auctions held on 2nd April, prices moved down, because of the meagre interest shown by Great Britain. However, the United States and South Africa were reported to have operated keenly, but this support was not large enough to reverse the easy trend.

The Government of India has permitted the Tea Board to make an interim release of tea export quota for 1957-58 to the extent of 50 per cent. of the crop basis of tea estates. The export quota allotment of tea will be made later on. This announcement is timely as, with the new season in the offing, traders would have to make several arrangements before beginning operations. Trade circles have also noted the Karachi announcement, which reveals Pakistan's intention to restrict considerably shipments of tea for participation in London auctions and thus to attract foreign buyers to the Chittagong auctions.

Dusts offered during the sales held on Wednesday last amounted to 22,511 chests. All teas excepting those lots suitable for export opened easier by 6 naye paise and, as the sales progressed, the decline became pronounced and at the close it was 12 naye paise per lb. The plainer liquoring C.T.C. Assams were at one time as low as by 20 naye paise per lb. However, there were a few lots possessing bright liquors which met with keen competition at firm rates. At the opening, clean black fannings were firm, but joined the general trend subsequently. The quotations were: best Assam C.T.C. Rs. 2.75, medium Assam C.T.C. Re. 1.94 to Rs. 2.00, medium Assam grainy dust Re. 1.70, and medium Dooars Re. 1.58 to Re. 1.62.

Leaf grades on the catalogue amounted to 5,028 packages. There was strong general demand, but prices were irregular.

The current season's last export sales were held yesterday, when offerings aggregated 54,633 chests. Activity was more on account of internal buying rather than of export. Prices for the stylish whole leaf grades and clean black brokens were about firm, while all other kinds lost by 10 naye paise to 20 naye paise per lb. No quotations were given in view of the lack of representative selections.

There were buyers for new season's export quota at 23 naye paise per lb., but sellers had earlier demanded 24 naye paise. From 13 naye paise, special export quota moved down to 10 naye paise, while shipping licence was sold at 9 naye paise and 8 naye paise per lb.

TEA PRICES RECEDE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *4th April*

Approximately 1,500,000 lbs. were on offer in Sale No. 7, which was held on Tuesday, 2nd April. Quality continued to show a seasonal decline and there were one or two invoices of rush production on offer. For the first time the auction was conducted in rupees and naye paise. The continued drop in prices both in London and Colombo made a fall in Cochin inevitable and this proved to be the case. There was a fairly good general demand, but at much lower rates. Low mediums and mediums declined irregularly 20 to 30 nP per lb. Fannings grades met with a rather better enquiry at the drop in price. Best liquoring teas were irregular, but generally considerably easier and can be quoted 40 to 60 nP below last prices. Whole leaf teas were in much less demand and prices were easier for these types also. The following are the quotations:—

	1957 Rs.	1956 Rs.
Plain B.P.	1.55	1.50
Low medium B.O.P. ...	1.70	1.81
Medium B.O.P.	1.85	2.12
Good B.O.P.	2.05	3.13 to 3.25
Well made black leaf O.P.	2.25	2.53

The average price realised in Sale No. 7 was Re. 1.92 per lb. as against Rs. 2.14 in the previous sale and Rs. 2.48 per lb. in the corresponding sale of 1956.

London Market—Sale of 1st April 1957.—Good liquoring Assams firm. Others 1d. to 2d. lower.

Sale of 2nd April 1957.—South India declined 2d. to 3d.

Colombo Market—Sale of 1st April 1957.—Quality plain highgrowns considerably lower. Medium down 15c. to 20c. but good demand at drop. Gulf types strong demand dearer.

Sale of 2nd April 1957.—Off grades fair demand appreciably lower.

Calcutta Market.—No export sale this week. The last sale of the season will be held on Monday, 8th April.

Internal.—22,500 dust. Good general demand. Market opened 6 nP easier, but weakened as sale progressed to 12 nP. Strongest feature Middle East types about steady. Fibrous and plain liquoring C.T.Cs weakest feature upto 20 nP easier. 5,100 leaf. Good general demand at irregular rates.

Export Duty.—The rate of export duty on tea to be levied during the month of April has been given by Government as nP 37.50. The price of tea was given as Rs. 2.74, as compared with Rs. 3.38 for March.

Export Quota.—Special licence is quoted at 12 nP, whilst there are sellers of 1957-58 export quota at 25 nP.

Forthcoming Auctions.—Sale No. 8 will be held on Tuesday, 16th April.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale H.*—400,000 lbs. Good general demand, but prices irregularly 5 nP to 10 nP easier all round, except highgrowns which are up to 25 nP.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *9th April*

Following good support, prices of jute goods improved during the week under review. Fears of shortage in raw jute were circulating and, although support of mills was limited to smaller quantities, prices, towards the close of the week, tended to move upwards fractionally. During the week, there were again rains and there are prospects of their recurrence. These rains are indeed welcome, as they help cultivators considerably in the preparation of the ground for sowing, and in actual sowing too. With these rains, the prospects of an early crop has also become brighter, and this was a factor restraining the uptrend in raw jute prices during the week.

During the week, more business in jute goods was done for export, and traders anticipate that the trend would continue. Shippers evinced interest in heavy sacking and export business in this construction soon followed. Buyers on behalf of the Argentine transacted some business in hessian. Hessian stocks in Argentina were believed to be poor, as that country lifted from India an unusually lower quantity in 1956. It was, therefore, anticipated that purchases by the Argentine during this year would be substantial, and the trade placed the estimate at 60,000 to 70,000 tons. The United States and Great Britain also purchased hessian during the week, and although burlap consumption in America in the month of February was disappointing, it was believed that such decline would not continue. America continues to exhibit a high level of economic activity, and burlap promoters there are sparing no efforts in popularising this packaging material. Australia has been an important consumer of Indian sacking goods, and although bulk handling methods have gained a hold in that country, traders expected that the cheapness of sacking bags would induce an increase in consumption there.

Indian jute goods have also found new markets in the last one decade, the U.S.S.R. and Communist China being two important countries among them. During last year, Russia was often reported to be aiming at higher purchases from India. These reports, Mr. N. K. Jalan asserted, while presiding over the annual meeting of the Calcutta Jute Fabrics Shippers Association here last week, were the main cause for the jute mills to agree to the Government of India's suggestion to increase output. However, big Russian orders were not just coming, and in the whole of 1956 Russia lifted only 10,000 tons. Another important point—important as far as the trade is concerned—disclosed by Mr. Jalan was that in the last year India itself was the industry's second best customer. Domestic consumption is bound to increase further, and all things considered, the trade can look forward to transact more business during this year. However, whether, such a turn of events would enable mills to increase their profit margin cannot be said, since variations in calculations of the industry can be caused by vagaries of the weather on the jute crop.

Early in the week, speculators showed considerable interest in both hessian and sacking goods, as they anticipated more business from overseas buyers. Following this, ready B. twills, on Thursday, rose from Rs. 111.00 to Rs. 112.00 on the previous day, and ready hessian 40" 10 oz. from Rs. 40.87 to Rs. 41.00. At this stage, some genuine business was done and on Friday and Saturday the rates were well maintained. Yesterday, there was fair activity, and rates recorded further gains. B. twills were fully steady at Rs. 112.25, and hessian 40" 10 oz. at Rs. 41.12. The eight oz. hessian was priced at Rs. 33.75 f.a.s.

Raw jute market was steady. Mills showed some interest. Sellers were, however, reserved. The latest quotations for the 1956-57 crop for April-May delivery for the different varieties are given below:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	37.50	34.50
Northern	37.00	34.00
Indian:		
Northern	31.00	28.50

FOODGRAINS ADVANCE

(From Our Own Correspondent)

HAPUR, *8th April*

Steady to firm conditions were witnessed in the foodgrains market during the week, thanks to paucity of local stocks and delayed arrivals of new crop in the market following continued adverse cloudy weather. Fair-price shops ensured supplies to a large section of consumers at reasonable prices and thus relieved the open market from considerable demand, thereby preventing an abnormal rise in prices. Wheat prices flared up during the week, recording an advance of Re. 1 to Rs. 16-12 per maund for average quality and to Rs. 18 for farm produce. Local stock was now very small. Harvesting of wheat is taking place in west U.P. also (it has nearly finished in east U.P.), but arrivals of new crop are being delayed, due to cloudy weather and rains. Demand for wheat has also appeared from the nearby districts. Rice also registered grains during the week on firm advices from the main producing centres. The latest prices as on Monday were: *Basmati* Rs. 24 to Rs. 28, *Manipuri* Rs. 21-12; coarse quality Rs. 17 per maund.

Shortage of local stocks, coupled with good consumer demand and fall in arrivals of new crop gram from Madhya Bharat during the week, accounted for gains in gram prices here. Barley and *bejhar*, however, recorded a slight fall during the week, due to pressure of new crop arrivals—at an average of 75 maunds daily. *Jowar* scored gains, as a result of fresh demand for seeds in the face of poor local stocks. The week-end prevailing prices were: gram Punjabi Rs. 13-12; barley Rs. 10; *bejhar* Rs. 9-12; *jowar* Rs. 13 to Rs. 14-8; *guwar* Rs. 11 per maund.

New peas arrivals have increased to an average of 1,500 to 2,000 maunds daily and the *dara* quality reaching the market is definitely superior. Outside buying enquiry for peas was slack and *dal* grinders were the main purchasers. Prices registered a fall during the week. *Arhar* and other grams were also subdued in line with peas. The prevailing prices as on Monday were: *Peas dara* Rs. 9-12 to Rs. 10-8; farm quality Rs. 11; *arhar* Rs. 12; *urd* Rs. 18 to Rs. 20; *moong* Punjabi Rs. 14 and *masoor* Rs. 13 to Rs. 15 per maund.

After recording a fall in the earlier part of the week on bear pressure influenced by depressed conditions in the spot section, pulses futures recorded some advance in the later sessions due to profit-taking purchases. The latest quotations as on Monday were: Peas *jeth* Rs. 10-0-1½; peas farm *jeth* Rs. 10-8-9; *arhar jeth* Rs. 11-2-3; *urd baisakh* Rs. 18-10.

SUGAR BEARISH

(From Our Own Correspondent)

HAPUR, *8th April*

The sugar market ruled bearish during the week, owing to slack outside buying enquiry. Despatches to the consuming centres of Gujerat, Saurashtra, the Punjab and Delhi were mostly under previous commitments. The official all-India final estimate of sugar puts the current year's production at 2,021,000 tons, which is an increase of about 8.5 per cent. as compared with last year. This factor also accounted for depressed conditions in ready sugar prices. The announcement by the Union Food Minister that the Government would be willing to allow more export, besides 100,000 tons allowed so far, failed to cheer the market.

The latest prevailing prices of mill delivery of sugar as on Monday are: Jaswant Rs. 28-10; Simbhauli Rs. 28-12; Mowana Rs. 28 to Rs. 29; Daurala Rs. 30; Amroha Rs. 28-4; Bijnore Rs. 28-3; Mansoorpur Rs. 28-10 to Rs. 30-4; Rampur Rs. 31; retail Rs. 30-10 per maund.

The *khandsari* market ruled depressed on increasing stocks and poor outside support. Cane available to *khandsari* producers in the non-mill areas costs about As. 14 per maund, as against the mill-gate delivery price at Re. 1-7 per maund and non-gate delivery price at Re. 1-5 per maund. Prices of *khandsari* are Rs. 18 to Rs. 23-8 per maund.

Ready *gur* was mostly subdued during the week, as demand from consuming centres was dormant. Arrivals were lower, the average being 500 maunds daily and local stock was put at 97,000 maunds, as against 71,000 maunds a year before. Sowings of cane for the next season is still in full swing. The prevailing prices of *gur* are Rs. 9-12 to Rs. 10 per maund.

Gur futures declined during the week in line with prices in the ready section *baisakh* was today quoted at Rs. 9-11, as against the week's opening of Rs. 9-13-3. *Asar* and *fagun* delivery contracts were quoted at Rs. 10-4-3 and Rs. 10-0-9, respectively.

THE ALUMINIUM INDUSTRIES LIMITED, KUNDARA

(Incorporated in Travancore with Limited Liability)

We are glad to announce that the recent issue of 400,000 Ordinary Shares of Rs. 10/- each at par has been oversubscribed. Allotment letters are under preparation and will be posted to the applicants in due course.

SESHASAYEE BROTHERS (TRAVANCORE) PRIVATE LIMITED,
Managing Agents.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up or share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIV. No. 2406 BOMBAY, 20th APRIL 1957 PRICE: Re. 1·50

EXPORT PROMOTION

A REALISTIC appraisal of India's foreign trade situation will reveal that, even if there is no cause for alarm, it is particularly vital that exports must be promoted. It is true that the gap in balance of payments which has recently manifested itself is a factor that was not entirely unforeseen. In retrospect, this might afford some comfort. But that does not lessen the difficulty of finding a solution. The fact is that there should not be any further delay in coming to grips with our export problems. Perhaps it might even help if the war-time slogan "Produce or perish" were altered into "Export or perish," in order to inculcate a sense of urgency in quarters which are responsible for India's export trade.

A look at the country's export and import figures, however, does not reveal that there is any unexpected development in the situation. During the period April to November 1956, India's imports aggregated Rs. 522.2 crores and exports Rs. 374.4 crores, as against Rs. 401.8 crores and Rs. 384.5 crores in the corresponding period of 1955. When these figures are compared with the target for 1956-57, set under the second Five-year Plan, namely, Rs. 573 crores for exports and Rs. 783 crores for imports, it will be seen that, while the annual rate of imports in the April-November 1956 period has hit the target, the similar rate for exports is only slightly below the target. The gap, as the Union Minister for Trade, Mr. D. P. Karmarkar, in the course of his recent address at the annual meeting of the Indian Council of Foreign Trade, held in New Delhi, pointed out, is not an "index of some economic ailment by which we have suddenly been assailed." A large proportion of imports consists of essential items such as steel, plant and machinery which the country needs in order to implement the programmes under the second Five-year Plan. The existence of the gap need not cause any great alarm. It would, of course, be tragic if it bred complacency. What is needed is that the gap should be narrowed further through a discriminating reduction in imports and a vigorous drive for more exports. Import cuts, as is now well known, have already been imposed. Perhaps, they might yield—rather, save—Rs. 30 crores each half-year. But one must remember that this saving is made at a very heavy cost and at least, in some points of the economy, will lead to the accentuation of the inflationary pressure. In any case, considering the fact that foreign exchange reserves have been depleted to low levels and import cuts are at best only a negative way of dealing with the situation, it is of the utmost importance that more positive methods of promoting exports must be energetically adopted.

An analysis of India's export trade reveals the need for geographical diversification—only two countries account for nearly 50 per cent. of India's exports—as well as for quantitative diversification—only three commodities, tea, jute goods and textiles, account for 50 per cent. of our export earnings. The Government is not unaware of the importance of export promotion. [illegible] of the purely organisational point of view, to a reasonable measures include the setting up Commissi[illegible]motion councils and participation in it is believe[illegible] Government has set up such councils, by for[illegible] commodities, including cotton textiles, silk and rayon textiles, tobacco, mica, cashewnuts, pepper, engineering goods, leather and leather products. It is proposed to set up councils for chemicals and allied products, sports goods and Indian films. Apart from these councils, there are the commodity boards such as the Tea Board, the Coffee Board, the Coir Board, the All-India Handicrafts Board and the Small-scale Industries Board which, besides other activities, are all engaged in promoting exports of [illegible] con-

goods with which they are concerned. India's membership of the G.A.T.T. has secured for its commerce most-favoured-nation treatment in the countries which account for nearly 80 per cent. of the world trade.

On the fiscal front, the Government has adopted measures which enable exporters to claim refund in respect of duties and excises which may have been collected in respect of certain identifiable components of the goods they seek to export. There is scope for extending the list of goods for which these facilities are available and also for simplifying the procedure for the grant of refund of duties. Mr. Karmarkar himself admitted that the present position was not entirely satisfactory. It is gratifying to note that he has also given the assurance that the matter was receiving the Government's attention and it would soon effect improvement in this procedure in the near future.

The Government has also decided to institute the export credit insurance scheme. Mr. Karmarkar revealed that the Government would soon set up an Export Risks Insurance Corporation with its headquarters in Bombay. This is a bold experiment the value of which cannot be overemphasised. The details of the risks which the Corporation will cover will be awaited with interest. It may be recalled that the Export Credit Guarantee Committee recommended that the Corporation should cover risks relating to import control in the buying country, war risks, transfer of payment risks, and risks relating to the insolvency or default of the buyer and expenses incurred in market services not fully recouped by sales made in that country. It further recommended that, in order to make the exporter himself take some responsibility for prudent trading, only a certain proportion of the risks should be covered by the Corporation. Thus, it set a limit of 80 per cent. in respect of commercial risks, 85 per cent. in respect of political risks and 50 per cent. in respect of promotional expenses. If exporters take full advantage of the facilities offered by the Corporation—we hope they will do so—it will give a great fillip to export trade. A notable advantage which the corporation could derive through participation in the scheme is that the banks will be induced to give financial aid to exporters who have covered their export risks under this scheme. This will, at least to a limited extent, solve the problem of finding export finance.

There are three aspects of export promotion which deserve continuous attention—quality, prices and personal effort. Unless the quality of our goods is maintained and improved, other countries are bound to steal a march over India. Here is a sphere in which exporters and manufacturers have jointly to assume responsibility. The exporter is the domestic manufacturer's ambassador abroad; he should not only interpret the changing requirements of the foreign buyer to his domestic principal but also see that there is no want of correspondence between the samples he sends and the goods he ships. A rigorous form of control over quality of goods should be enforced. In this connection, Mr. Karmarkar said: "While Government could impose standards for compulsory adherence, they have thus far taken the view that quality control should be imposed on itself by the trade." It is to be hoped that both the manufacturers and the exporters will justify this confidence, for, as Mr. Karmarkar warned, in the event of their failure, the Government will not "hesitate" to introduce compulsion.

There is next the question of prices. Clearly, constant vigilance over production costs is the price which a nation has to pay for continuous expansion in its export trade. Here, it is the Government, not the manufacturer, that has a special responsibility. For most manufacturers, the room for manœuvre in respect of production costs is strictly limited. This is because of high taxation, the inflexible wage bill (imposed by labour awards) and regulations which virtually prevent retrenchment of surplus labour. In some industries, notably textiles, there are the additional disadvantages arising from prohibition of employment of modern machinery and fixation of ceilings on production. A gradual, if not immediate, relaxation of these restrictions is indicated in the interests of export promotion.

Finally, there is the value of personal effort. Perhaps, it is not as widely realised as it should be that the manufacturer and the exporter, or their representatives, should seek to establish personal contacts with buyers abroad, and also make an on-the-spot study of their requir

RICE ECONOMY

BEING the staple food of millions of people in large and thickly populated regions of the world, rice is a commodity which has a great significance in the life and the livelihood pattern of large masses of people. For many a peasant in diverse parts of the world and in Asian countries in particular, prosperity means easy availability of rice. To the peasant, life is one continuous and almost traditional cultivation of paddy. A good crop year for him means a year of great affluence and a year in which the crop fails is one of unrelieved gloom. Paddy is not merely a commodity on which he lives but one around which all his life revolves. Clearly, from the point of view of the source of livelihood for millions of people, rice is certainly the most important of international commodities. In this connection, an inestimable service which the U.N. Food and Agricultural Organisation has been rendering for some time past is to publish a series of commodity reports of which rice is one. The latest report on this commodity covers, as usual, wide and varied ground, relating to the production of and trade in rice, and also reviews the prospects for this commodity.

The world production of rice (excluding the output in Russia) increased from 188.3 million tons in terms of paddy in 1954 to 199.2 million tons in 1955; the 1934-38 average was 151.2 million tons. Asia, as is well known, is still the world's largest rice bowl and accounted for 106.2 million tons in 1955, as compared with 99.7 million tons in the previous year. This figure, however, excludes the output in mainland China, North Korea and North Vietnam; in mainland China, production is estimated at 75.2 million tons in 1955, as against 70.9 million tons in 1954 and 50.5 million tons in 1934-38 (average). South America is the next largest rice-growing region, though its share in world output is much smaller than Asia's. In 1955, it produced 5.2 million tons, as against 5.1 million tons in 1954. African production, however, improved from 3.8 million tons to 4.2 million tons and the European output was practically unchanged at 1.7 million tons. In North America, production declined from 3.6 to 3.2 million tons, thanks to the sharp reduction in acreage in the U.S. The decline in output in this region would have been far greater but for the fact that yields improved greatly.

Much significant progress in improving the per-hectare yield of rice has been achieved in recent years. This is to be attributed to the wider diffusion of the knowledge of superior agricultural practices and to the fact that the use of fertilisers by the world's farmers is growing rapidly. Nevertheless, the world per-hectare average has not improved significantly since pre-war years. In 1955, it was thus about 15.6 quintals, as against 15.4 quintals in pre-war years. But it was larger than in 1954 when the per-hectare yield was 14.9 quintals. This, however, is the broad world picture. It conceals both bright and very dark spots. The countries with very high per-hectare yields (in quintals) are: Egypt 51.9, Spain 59.5, Italy 51.0, France 41.4, U.S. 32.9, Japan 48.1. The countries which, though they are large producers of rice, show relatively small per-hectare yields, are: India 12.8, Burma 14.8, Thailand 14.3, Pakistan 13.4, Brazil 16.4.

There is certainly great scope for improving the yield of rice per hectare in many parts of the world. In India, the subject has lately attracted considerable attention. The movement towards the wider adoption of Japanese agricultural methods has been gaining ground, thanks to the great success which has marked its introduction in the last two years. The area under this method of cultivation increased from 400,000 acres in 1952-53 to 1.3 million acres in 1953-54 and further to 2.1 million acres in 1955-56. The gain in the production of paddy, as a result of the adoption of this method, is very impressive, being on an average as much as 17.3 maunds of paddy or 11.56 maunds of rice per acre. The Government has, therefore, set a target of 4 million acres to be brought under Japanese method of cultivation by the end of 1960-61. The additional production expected from this acreage is about 2 million tons of paddy or 1.33 million tons of rice.

A notable feature of the international trade in rice is that only a small proportion of the world production of rice enters such trade. In recent years, this proportion, it has been computed, is about 4 per cent. (including China); it is expected to be somewhat higher in 1956. These low figures are, however, only world averages. They do not bring out the fact that many countries are dependent for a rather large proportion of their foreign exchange earnings on exports of rice. Thus, in 1956, Burma exported 48 per cent. of its rice output. The relevant percentages for other countries are: 78 for Australia, 55 for Italy, 27 for Egypt, 59 for the U.S. and 23 for Thailand. An outstanding feature of 1956 has been the great increase in the requirements of importing countries and the consequent expansion in international trade. World imports of rice in 1955 aggregated 5.1 million tons, as against 4.6 million tons in 1954 and 9.7 million tons in 1934-38 (average).

The F.A.O. report distinguishes five categories of importing countries: "(*a*) those whose own production of rice increased; (*b*) those whose own production of rice remained almost unchanged; (*c*) those whose own production fell; (*d*) those who grew very little or no rice; (*e*) those who in other years have been net exporters." In group (*a*), Japan produced in 1955 about 2½ million tons more of milled rice than in 1954. Nevertheless, Japan was still importing rice in 1956. India's supplies were about 1 million tons (milled rice) higher than in the previous year, but it made large purchases from Burma, China and the United States. Ceylon harvested about 13 per cent. more, but as consumption rose, imports for 1956 did not appear to be falling. The French territories in Western and Equatorial Africa grew about 10 per cent. more rice in 1955 than in 1954, but imports in 1956 were not less than the 1955 level of about 120,000 tons, including brokens. In group (*b*), imports into Malaya in 1955 and 1956 were at approximately the same rate, which may be regarded as normal. The increase during 1955 over 1954, it is stated, is explained by the reduction in imports in the latter year, due to an exceptionally large carry-over of stocks from 1953. The Philippines showed signs of increasing its purchases from abroad.

Indonesia is the most important example of a country in group (*e*). Apart from a fall in its own production of rice, there was also a heavy fall in its maize crop. As a result, imports have been rising considerably. Cuba, with lower production, showed some indication of an increase in imports from the United States. A marked rise in purchases by European countries—group (*d*)—which grow no rice of their own, or only very little, was a feature of 1955. This rise continued in 1956, the main factor being, on this occasion, the purchase by Eastern Europe. Most of the rise in imports into Western Europe in 1955, according to the F.A.O. report, was due to the availability in Asia of poorer kinds of rice at prices which made these supplies attractive for animal feeding. Less of this rice was available in 1956 and this year's shipments to Western Europe are expected to be lower than those of 1955. On the other hand, the purchases of rice by East European countries, under bilateral clearing agreements, mainly with Burma, but also with Egypt, have continued to grow. A part has been shipped to Viet-Minh; some rice has been diverted to Pakistan for famine relief, while other smaller lots are said to have been resold to Western Europe and West Africa.

In recent years, Pakistan, among group (*e*) countries, has been a net exporter of rice, in some years on quite a substantial scale. Thus, in 1955, Pakistan ranked as the fourth or fifth highest among exporters. When the crop harvested towards the end of 1955 suffered badly from floods and insect damage, and there was consequently a deficiency of about 700,000 tons of home-grown milled rice in 1956 in East Pakistan, where the shortage made itself felt acutely, exports from W. Pakistan to foreign countries were prohibited, although some shipments continued to be made in execution of old contracts, and about 70,000 tons were shipped from West to East Pakistan. The Government was compelled to buy rice from abroad, mainly in the U.S. under special aid arrangements. So far 610,000 tons of imports, it is understood, have been arranged for 1956 and early in 1957.

As regards price trend, the F.A.O. report points out that there was a widespread fall in rice prices in 1954-55, though no such general movement was noticeable in 1956. Some prices, it is stated, have continued to recede, but others have risen and there have been quite marked divergencies between movements in different countries. It may be noted here that the index number of rice prices in India (base August 1939=100) rose from 449 in the beginning of 1956 to 609 in November 1956, though it now stands somewhat lower, the latest available index number being 607 for February 1957. In order to regulate prices, the Government has now decided to build buffer stocks of rice. During the period of the second Plan, reserves of foodgrains to the tune of 2 million tons will be built up, consisting of one million tons of wheat and one million tons of paddy. The Indo-Burma rice agreement envisages purchase of two million tons of rice from Burma, spread over a period of five years, commencing from 1st June 1956; in 1957, Burma is expected to supply 500,000 tons of rice, the U.S. 200,000 tons and China 60,000 tons.

Since rice is among the chief agricultural crops on which farmers depend, the governments of many countries have thought it fit to give some assurance of price stability to the peasants in their countries. Commenting on this trend, the F.A.O. report says: "Prices to rice farmers were kept steady in a number of countries by Government intervention which tended to provide a floor price, though in some cases it was also intended to fix an upper limit by fixed prices." In the U.S., the official minimum support rate was slightly lower for the 1955 crop at an average of $102.73 per metric ton than for 1954 (at U.S. $108.47) and the support price was lowered further for the 1956 crop to $100.75 per metric ton. In this country too, there has been much discussion on the value and importance of fixing minimum prices for not only rice but also other agricultural commodities. The Conference of State Ministers of Agriculture, held at New Delhi in December last, recognised the "importance of minimum prices as an inducement to the farmer" and strongly recommended that the Government of India should take "early steps for fixing minimum prices of at least principal agricultural crops."

In the last two years, the importance of inter-governmental consultations in matters relating to rice has won considerable recognition. In response to the recommendation of the third special meeting on the economic aspects of the rice industry, held at Bangkok in September 1955, the F.A.O. Committee on Commodity Problems established a consultative sub-committee on the economic aspects of rice. The sub-committee was asked to provide a forum for consultation on the economic aspects of rice, paying particular attention to trade matters and to any special difficulties which exist or are likely to arise in the international trade in rice. The first session of the sub-committee was held at Rome in October last and was attended by representatives and observers of 22 countries, including India. It examined the world rice situation and discussed the means of facilitating the flow of the international trade in rice, measures for the expansion of consumption and methods for reducing instability in the world trade in rice.

What is the outlook for rice in 1957? The F.A.O. furnishes some provisional answer to this question on the basis of the information available at the time of writing the report. Since South-East Asia is an important producer of rice, political conditions in this region are an important factor in determining the outlook for rice. The report finds that there has not been any diminution in internal security over wide areas, such as affected rice cultivation in some previous years. Cambodia and Viet Nam are likely to resume exports in 1957. The fresh supplies from South-East Asian region may, therefore, be expected to be in 1957 at least as large as in 1956. On the other hand, exportable stocks from former crops have been depleted to 50 per cent. of last year's levels. Nevertheless, there are still appreciable stocks available for shipment in 1957. In the U.S., which in recent years has been one of the leading exporters of rice, the acreage under rice has been cut by 13 per cent. The Soil Bank programme, it is believed, will reduce the 1957 acreage and output. Among Mediterranean countries, Italy and Spain have been trying to restrict or even reduce production, while Egypt is greatly expanding the acreage under rice. China, the world's largest grower of rice, remains an unknown factor in world trade. Great efforts are being made to grow more rice. But there are also more mouths to feed.

World supplies from stocks and new crops available for fresh purchases by importers in 1957 are thus not likely to exceed those avail[able] in 1956; there is some likelihood of the[m] smaller. On the other hand, importers [may] make fewer fresh purchases in 1957 [as] since their crop prospects are thoug[ht] The F.A.O. report, therefore, reaches the conc[lu]sion that "supply of and demand for rice in int[er]national trade may well be fairly balanced [in] 1957." It notes that uncommitted stocks in e[x]porting countries are down to low levels. B[ut] as against this factor must be set down the i[n]crease in reserve stocks in 1956 in some impor[t]ing countries. The obvious inference is tha[t] other things being equal, rice prices this ye[ar] should be able to maintain a steady trend.

RISE IN EQUITIES SUSTAINED

COTTON FUTURES—BURDEN OF DEPOSIT LIABILITY ON COMPANIES

WEDNESDAY, 5 P.M.

THE share market presents a brighter, though not quite a cheerful, appearance. There have been further gains in equity values, but the recovery is slow, as is only to be expected, considering the bad state in which the market found itself two weeks ago. Nevertheless, the gains in the last twelve days have been quite encouraging, despite the fact that there has been no encouraging news since the recovery started. This is because the market had been oversold and probably the bears found that there was no scope for carrying on their raid. Despite this recovery, it is stated that the oversold position is yet to be corrected to a considerable extent.

MARKET GOSSIP

The recovery is also said to be partly due to reports that the Life Insurance Corporation may extend its support to industrial shares, if the recent suggestion that the Corporation should invest up to 25 per cent. of its investible funds in shares and debentures, as against the present level of about 16 per cent., is accepted. This will no doubt mean sizable support to the market, but it is stated that there is no prospect of such a change in the Corporation's investment policy. Further, if the present trend in the market persists and if a certain measure of confidence is restored to the market, then there will be no necessity for support from the Corporation. With only four weeks to go for the Central Budget to be presented, the market has necessarily to be on the cautious side.

The Finance Minister's discussions in Bombay have been a closely-guarded secret and no indications are available about the outcome of his talks. However, the markets have derived some comfort from the fact that there have been no depressing pronouncements from the Finance Minister, as he did not accept any public engagements this time. There is, nevertheless, widespread expectation that something will be done by the authorities to relax the stringency in the money market, if not for anything else, at least to assure the success of the Government's borrowing programme.

The Prime Minister's assurance to the business men gathered at New Delhi last week-end that the private sector will have not only a very important but a respected place in the context of the broad policies followed by the Government has no doubt been noted with interest, but it has not brought any widespread cheer to the market. This is because, as Mr. Nehru indicated, the public sector will continue to occupy a dominant place and the next two or three years are likely to be a difficult period for the country. He was, however, confident that the difficulties could be overcome by the joint effort of the Government and all sections of the people. This inevitably means that there should be close co-ordination between the Government and the private sector in all development plans.

The policy followed by the Government has, unfortunately, been one which does not bring this co-ordination. By pursuing such a policy, the Government is losing the valuable assistance and services of experienced and tried business men. The latest instance of such a tendency is provided by the resignation of Mr. C. H. Bhabha from the Board of the Eastern Shipping Corporation, of which he was the Chairman. Mr. Bhabha is said to have resigned on the issue of the ownership and control of the Corporation. The Corporation, it will be recalled, was set up in 1950 and its issued and subscribed capital of Rs. 5.5 crores was till last month shared by the Government to the tune of Rs. 4.07 crores and the Scindia Steam Navigation Company to the extent of Rs. 1.43 crore. Last month, the Government acquired all the shares held by Scindias and the Corporation became wholly state-owned. Such acquisition and control by the State is opposed by Mr. Bhabha, as he is of the view that the interests of shipping will be best served, so far as this country is concerned, by joint State and private ownership of new corporations and that total control by the State marks a departure from the policy he himself had pronounced as Commerce Minister. In the context of such diversions from the accepted policies, how can the Government expect wholehearted co-operation from the public?

• • • •

The much-feared, though long-anticipated, action has now been taken. The forward section of the cotton market was closed today in response to a reported directive from the Forward Markets Commission to the E.I.C.A. At the time of writing, it is believed that the closure is temporary. Perhaps, by tomorrow, more light will be thrown on the Commission's attitude towards forward trading. It is also presumed that discussions and consultations will be held before further measures are taken. At the time of the closure of the market—at 12-47 p.m., to be precise—Jarilla May was quoted at Rs. 754, Vijay April at Rs. 915 and Vijay June at Rs. 838. The magnitude of the rise in these prices will be evident from the fact that only a month ago, Jarilla May was quoted at Rs. 685½, Vijay April at Rs. 868 and Vijay June at Rs. 825½. The rapid rise has been attributed to the tight statistical position in cotton and to a good demand by the mills. At the meeting of the Cotton Advisory Board, which was held last week, the general consensus of opinion was that the rise in prices was due to the scaling down of the commercial crop estimate which is now estimated at 4.9 million bales, as against 5.5 million bales earlier, to the shortage of tenderable varieties of cotton generally and to a reduction in the production of the much-sought-after Vijay and Surti cottons. Perhaps, the absence of any reference to speculation, as such, in the Board's appraisal of the cotton price situation lent a fillip to the upward trend in cotton. Be that as it may, the prices of cotton, it is now recognised, have reached unduly high levels. Mills, it is reported, are paying even prices above ceilings for certain varieties in upcountry centres. It remains to be seen how the authorities are going to reverse this upward trend in prices. But one thing is clear. Whatever might be the virtue or the efficacy of temporary expedients in the shape of requisitioning stocks or administering shock treatment to the forward market, the real solution lies only in augmenting the overall supply of cotton. In the short run, this can be done, as the Cotton Advisory Board itself has recognised (*vide* cotton market report this week) only through imports of cotton and, in the long run, through vigorous and sustained efforts at increased production of cotton in the country.

• • • •

Of all the recent fiscal measures introduced by the Union Finance Minister, the one which has caused the greatest concern to the business community is that relating to compulsory deposit of corporate reserves, inasmuch as it is, in the first instance, ambiguous in many respects and, secondly, it is bound to have far-reaching repercussions on corporate finances. Briefly, under the deposit scheme, every joint-stock company is under obligation—on pain of forfeiting its claim to depreciation and development rebate—to deposit with the Government (1) up to 25 per cent. of its accumulated depreciation and other reserves "not represented by fixed assets"; and (2) up to 75 per cent. of the balance—in excess of Rs. 1 lakh—of its annual profits before deducting depreciation but after deducting tax and dividends. It has created not a little confusion even among financial experts who are not all agreed about the manner of determining the amount of deposit liability of companies. The Union Finance Minister has given assurances to the effect that the rigour of the measure would be softened considerably by the rules framed for administering this provision.

The draft rules which have been published this week for purposes of eliciting public opinion do not appear to be complete in themselves, as they cover only the deposits required to be made by companies out of their current profits and do not refer to the deposits to be made out of the accumulated reserves of companies. In fact, the latter part of the provision is more controversial and wide differences of opinion are held as to whether, in computing the amount of reserves "not represented by fixed assets," the paid-up capital of companies should be ignored or regarded as representing the corresponding amount of fixed assets. Even the rules regarding deposits out of current profits are not clear as to the method of computing the amount of deposit. It should thus be obvious that the aggregate liability of the corporate sector would depend upon the nature of the rules framed under the Act.

In this context, the study of 410 companies in five industries—cotton textiles 282, sugar 93, iron and steel 2, cement 13, paper 20—made from the point of view of the impact of the deposit scheme on corporate finance and published in the *Economic Trends*, the journal of the Association of Indian Trade and Industry, acquires a new significance. This painstaking piece of research, which is obviously the first of its kind, brings into bold relief the inhibiting effect of the scheme on the fortunes of joint-stock enterprises in this country. The companies selected for analysis represent 70 to 100 per cent. of the installed capacity in each of these industries; their total paid-up capital is Rs. 175 crores, gross block Rs. 425 crores and the value of their output Rs. 650 crores. On the basis of its analysis of the financial position of these companies, as revealed in their accounts for 1954-55, the study has reached the conclusion that the aggregate liability of the 410 companies under the scheme, on account of both the accumulated reserves as well as reserves from current year's profits, would fluctuate between Rs. 53 crores and Rs. 8 crores, according as the rules framed by the Government are strict or liberal.

It would, of course, be difficult to hazard any guess about the deposit liability of the entire corporate sector. Judging from the results of the survey of these 410 companies, it is evident that the burden is bound to be very large. The Government has not indicated how much it hopes to mobilise under the scheme. But unofficial estimates place the figure in the vicinity of Rs. 100 crores. In any case, irrespective of whether the rules framed under the scheme are liberal or not, the aggregate liability of the companies, as the study points out, would be "large enough to complicate the ways and means position of the corporate sector and enhance considerably the prevailing financial stringency in the money market." It must be pointed out here that not all companies have sufficient liquid assets to discharge their liabilities under the scheme. This means that the companies would have to lean more heavily on the banking structure in order to raise the finance they need under the scheme. The study, therefore, rightly warns that the "load on the banking system would be heavy and, unless something is done to lighten the burden on the money market, a financial crisis would ensue." In order to minimise the hardships that are inherent in the scheme, it suggests that the methods of applying the scheme should be as liberal as possible. Thus, the paid-up capital should be exempted, loans and debentures should be allowed to be set off against deposit liability and reserves used as working capital should be excluded from the deposit scheme. It also suggests that a method of staggered payments should be introduced in order to reduce the peak load on the banking system. Further, prompt and liberal withdrawals should be allowed for both fixed and working capital purposes.

The study disputes the view that the scheme is intended to utilise idle resources or to prevent misuse of corporate funds for purposes of speculation and cornering of the shares of other concerns. The "idle resources" argument has no validity in the context of the general financial stringency. Nor has the "misuse of corporate funds" argument any such validity in view of the fact that there are adequate provisions under the Companies Act, the Capital Issues Control Act and other laws which leave hardly any scope for undesirable types of interlocking activity. It is, therefore, difficult to avoid the impression that the Government has brought forward this measure in order to tap a new source of revenue and this is being done at the expense of the private sector. But since the development of the private sector is as important for national progress as that of the State sector, it is, as the study points out, imperative that the scheme should not be allowed to continue for long but be dropped at the earliest possible opportunity.

LONDON LETTER

ASSIGNMENT WITH INFLATION?

From Our Own Correspondent

LONDON, 13*th April*

BY the time the Chancellor of the Exchequer had finished his survey of the national income and expenditure for the financial year just beginning, he had astonished everyone by actually increasing last year's surplus of £290 million. The buoyant revenue is going to be £228 million more and expenditure £41 million less—a surplus of no less than £560 million. Against this, his distribution of gifts of £100 million does not seem unduly generous. On the other hand, below-the-line expenditure, that is, capital sums and loans, are going to cost a net £587 million, so there is a theoretical deficit of £127 million. But it can be expected that this will be far more than offset by national savings. At first blush, the Chancellor appeared to have made a break away from tradition in the way in which he distributed his cake and at least his side of the House left in an extremely happy mood. Purchase tax on domestic articles took a quarter of the distributed relief. The abolition of the tax on British companies operating overseas took another quarter, reductions in entertainment tax, the "Suez" petrol tax and small concessions to old people took another quarter, and the last and controversial quarter went to reduce the excessive taxation on the top incomes which are earned by something like 220,000 people in this country. That is what the incentive budget comes to and it is now being said that Mr. Thorneycroft has simply steered a middle way between his party and the pound sterling.

How has this disillusionment, after what looked like the first breath of fresh air let into the budget for years, come about? It is because of the realisation that mere concessions to top incomes leave undealt with two basic problems, first, that of incentives to the enormously important technicians' class in the middle income ranges—it is this class that is providing a large bulk of the deplored emigration from the United Kingdom—and, secondly, the problem of increasing investment. It is for omitting to do anything about this last that the Chancellor will be held most guilty. His only concession was to increase the tax-free investment allowance on the construction of new ships and the approval with which this move has been received in the City and generally has shown how quickly it was realised that here the Chancellor was on the right lines.

Why did the Chancellor then disappoint the Federation of British Industries, the National Association of Manufacturers and those who looked to see some real incentive given to increased investment? He was afraid that anything he did to increase investment would increase imports and, therefore, weaken the pound. He played for short-term safety instead of long-term salvation.

But Mr. Thorneycroft's dilemma is a very serious one. If it is true that it is impossible to increase investment without setting off another round of inflation, then the country is, indeed, in a parlous state. Of course, the Chancellor had to take into account the strength of the Trade Unions, as proved by the recent settlements of the shipbuilding and engineering strikes. Perhaps he regarded these as a warning that the risks of doing anything which might raise prices and lead to another round of wage demands were too great. On the other hand, he is committed not to use physical controls to direct spending into the desired investment channels, although his appointment of a new committee into money and finance suggests that he is by no means satisfied that monetary controls alone are effective. His critics are able to say that this is an inflationary budget, since it increases spending power without making sure of increasing savings. And, all in all, the consensus of opinion appears to be that the Chancellor has only touched the fringe of the problem of incentives and has missed an opportunity to show courage on the main issues.—*All Rights Reserved.*

EQUITIES RULE STEADY

MODERATE GAINS OVER THE WEEK

(From Our Own Correspondents)

BOMBAY, 17*th April*

EQUITIES staged a further recovery during the week under review, on short-covering and renewed buying. The improvement was helped mainly by technical considerations; there were a few other factors also which strengthened the market's sentiment. The Prime Minister's speech at the annual meeting of the All-India Manufacturers' Organisation assuring the private sector of the industry that it had necessarily to have a very important and respected place in the context of the broad policies that the Government pursued was noted with interest, but the response was one of cautious optimism. Reports of good offtake in the cloth markets and renewed expectations of easier money market conditions also aided sentiment. The recovery was, however, cautious in view of the Budget uncertainties and there was profit-taking at higher levels. However, leading counters scored moderate gains over the week.

In the steel section, Tata Ordinaries advanced from Rs. 168.00 to Rs. 172.25, but relapsed to close at Rs. 171.00. The new shares moved between Rs. 118 and Rs. 120 and closed at Rs. 119. Indian Irons hardened from Rs. 19.45 to Rs. 20.45, the highest level seen during the last four weeks. Profit-taking, however, pruned a part of the gain and the shares finished the week at Rs. 20.15.

The recovery in textiles was led by Centurys which attracted good buying on reports that the Company was concentrating its attention on production of goods for export markets and the shares rallied from Rs. 448.50 to Rs. 464.00. Bombay Dyeings crept up from Rs. 548.00 to Rs. 558.50 before closing at Rs. 557.50. Central Indias gathered Re. 1.50 to Rs. 115.00, Finlays Re. 1 to Rs. 206. Gokaks remained steady, being done at the close at Rs. 192 *ex-div.*, as against Rs. 205 *cum-div.* a week ago. Indu Ordinaries were dull at Rs. 10.30 and Indore Malwas at Rs. 137. Khataus were steady at Rs. 180.50. Kohinoors gathered strength from Rs. 314 to Rs. 318. New Greats advanced from Rs. 225 to Rs. 230 before finishing at Rs. 228. Morarjees moved up by Rs. 10 to Rs. 220. Shree Niwas Cottons gained Rs. 4 to Rs. 178, while Simplex shaded off from Rs. 174.50 to Rs. 173. Standards were marked up by a rupee to Rs. 448. Svadeshis were featureless at Rs. 217.25, as also Tata Mills at Rs. 47.75. Swans shed Rs. 5 to Rs. 400.

Bank shares attracted some attention and modest gains were recorded over the week. Barodas were done up to Rs. 99, a gain of Re. 1.50 over the week. Centrals picked up 25 nP to Rs. 48.75 and their new shares Re. 1.50 to Rs. 52.50. Bank of Indias gained Rs. 2 to Rs. 134. Union Banks were a shade better at Rs. 7.15, while United Commercials were maintained at Rs. 56.50.

Scattered business was put through in insurance shares at slightly higher rates. New Indias changed hands 75 nP higher at Rs. 39, Jupiters 50 nP better at Rs. 7 and British India Generals 20 nP higher at Rs. 13.45.

Divergent trends were noted in the electricity section. Ahmedabad Electrics were a shade better at Rs. 93.50, while Bombay Suburbans shed Rs. 4 to Rs. 106. Poona Electrics were done Rs. 2 lower at Rs. 128. Surat Electrics gathered a rupee to Rs. 107.50, as also Tata Hydros to Rs. 121.50. Tata Powers looked up by Re. 1.25 to Rs. 1,195, but their new shares lost Rs. 10 to Rs. 1,160.00. Andhra Valleys were marked down from Rs. 1,187.50 to Rs. 1,185.

The miscellaneous section generally showed a better tendency, although the variations were confined to a small range in most counters. In the sugar group, Belapurs were somewhat erratic. After rallying from Rs. 225.50 to Rs. 229.00, they slipped back to Rs. 226.00. Phaltans gathered over the week Re. 1 to Rs. 135. Bhopals were unchanged at Rs. 17.50, while Walchandnagar Industries were conspicuous with a rise from Rs. 267.50 *cum-div* to Rs. 253.00 *ex-div.* (div. Rs. 21 per share). Cement shares were featureless. Associated Cements moved up from Rs. 158.25 to Rs. 160.75, before reacting to Rs. 159.25. Digvijays were done Re. 1 lower at Rs. 142. Orissa Cements gained 20 nP to Rs. 13.20 and Jaipur Udyogs 25 nP to Rs. 12.

In the engineering and mining group, Alcocks attracted buying and scored a gain of Rs. 7.50 to Rs. 263.75. Tata Locomotives recovered from Rs. 138.25 to Rs. 141.50, but finished a shade lower at Rs. 141.00. Premier Constructions improved by Re. 1.50 to Rs. 164.00. Larsen and Toubros gained by 25 nP to Rs. 15.00. Shivrajpurs were a shade better at Rs. 91.25. Indian Coppers were done at Rs. 3.32 *ex-div.* (div. 9 nP) as against Rs. 3.28 *cum-div.*, while B.B. Petrols were unchanged at Rs. 2.54.

Shipping shares were fairly steady. Scindias improved from Rs. 19.00 to Rs. 19.40, but receded to Rs. 18.90 at the close. Great Eastern Shippings rose by 35 nP to Rs. 18.35. Premier Automobiles were quiet at Rs. 87, while Hindustan Motors were a shade better at Rs. 7.30. United Motors were put through Re. 1.50 lower at Rs. 23.

In the miscellaneous group, Bombay Burmahs improved, but the recovery was slow. After going up from Rs. 572.00 to Rs. 588.00, the share slipped back to Rs. 575.50. The closing was, however, done at Rs. 581.00. British India Corporations looked up from Rs. 7.10 to Rs. 7.40. National Rayons appreciated from Rs. 225.00 to Rs. 228.50. Gwalior Rayons were marked down by 60 nP to Rs. 12.40. Killick Industries closed Re. 1 higher at Rs. 157. Hindustan Levers had business 10 nP lower at Rs. 18.60. Tata Chemicals were unchanged at Rs. 16.10, while Tata Oils dropped 25 nP. to Rs. 42.50. Wimcos were a shade better at Rs. 169.50.

Madras Stock Exchange

MADRAS, 16*th April*

In contrast to the bearish trend noted on the Madras Stock Exchange in the past two weeks, a slightly improved tone was in evidence during the week under review. Although there was no fresh encouraging development, operators were somewhat inclined to buy in expectation of inflation gathering momentum in the coming years following large-scale deficit financing. There was also some professional support at lower levels to which the shares had receded in the past fortnight. Firm advices from Bombay and Calcutta too imparted some strength. Turnover, of course, continued to be restricted, but prices generally tended to move up.

Among tea shares in the planting section, Neelamalais advanced by 25 nP to Rs. 6.15. Ouchterlonys gained a like amount to Rs. 5.05. Chembras put on 10 nP to Rs. 3.85. Blue Mountains were fully steady at Rs. 4, Devasholas at Rs. 21.25 and Nilgiri Teas at Rs. 10.25. Nelliampathys, however, had sellers and eased by 13 nP to Rs. 3.07. Talayar Teas declined by 61 nP to Rs. 10.70. Among coffee shares, Balmadies gathered 5 nP to Rs. 3.30. In the rubber group, Midlands improved by 25 nP to Rs. 17.75. Cochin Malabars were favoured 6 nP higher at Rs. 3.12. Pullangodes picked up 6 nP to Rs. 2.50. Thirumbadis increased by 7 nP to Rs. 1.85. Vaikundams and T.R. & T's were firm, the former at Rs. 30.25 and the latter at Rs. 9.25. Travancore Rubbers, however came in for selling and lost 25 nP to Rs. 19.75. Rajagiris fell by 75 nP to Rs. 19.25.

In the textile section, Ranga Vilas met with good buying enquiries and rallied Rs. 6.75 to Rs. 88.75. Rajalakshmis were pushed up by Rs. 5.50 to Rs. 138.50. Coimbatore Spinnings improved by Rs. 4.25 to Rs. 88.25. Lakshmis advanced by Rs. 5 to Rs. 135. Buckinghams spurted by Rs. 2 to Rs. 176. Janardanas were a rupee higher at Rs. 94. Loyals increased by Rs. 1.50 to Rs. 50.75. Travancore Rayons put on 30 nP to Rs. 13.90. Maduras gathered 25 nP to Rs. 42. Trichinopolys rose by 12 nP to Rs. 13.12. Pankajas were fully maintained at Rs. 70 as also Radhakrishnas at Rs. 275. Vasantas at Rs. 308 and Kotharis at Rs. 14.75. Coimbatore Cottons, on the other hand, fell by Rs. 10 to Rs. 340. Bangalore Woollens dropped Rs. 5.25 to Rs. 557. Metturs receded by Rs. 3 to Rs. 407.

In the miscellaneous section, India Cements advanced by Re. 1.50 to Rs. 26. Andhra Cements improved by 60 nP to Rs. 12.85. Mettur Chemicals increased by 25 nP to Rs. 9.25. Rallis put on a like amount to Rs. 30.25. F.A.C.Ts gathered 12 nP to Rs. 5.62. Mysore Chemicals and Fertilisers were firm at Rs. 7.91. India Steel Rollings, however, eased by 25 nP to Rs. 11.

In the sugar group, E.I.Ds receded by 17 nP to Rs. 26.25. Travancores declined by 12 nP to Rs. 11. Mysores were neglected at Rs. 37.50 and Indias at Rs. 15.85.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting, the payment of the following dividends to the shareholders for the year ended 31st December 1956:—

Rs. 5 per share free of income-tax on Preference shares.

Rs. 12 per share and a bonus of Rs. 2 per share without deduction of income-tax on Ordinary shares.

For and on behalf of,
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April* 1957.

THE TATA MILLS LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting, the payment of a dividend on Ordinary Shares at Rs. 3 per share and a bonus of 50 nP per share without deduction of income-tax, to the shareholders for the year ended 31st December 1956.

For and on behalf of,
THE TATA MILLS LIMITED,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April* 1957.

DEPOSITS OUT OF COMPANIES' PROFITS

DRAFT RULES PUBLISHED

DRAFT rules regarding the deposits required to be made out of current profits by companies has been published in a *Gazette Extraordinary* issued by the Government of India on the 16th inst. The rules have been framed under the amendment to the Income-tax Act passed in December last as part of the Finance No. III Act of 1956, which came into force on 1st April 1957. These rules are called "Income-tax Allowances (Current Profits Deposits) Rules, 1957." They apply to companies incorporated in India and to those incorporated outside India, but doing business in this country. The draft rules have been gazetted in order to elicit comments before they are finalised.

Under the Act, a company has to deposit with the Central Government a percentage of its current profits by which the statutory surplus exceeds a lakh of rupees. The statutory surplus consists of: (*a*) the total income of the company for the previous year, as reduced by the amount of income-tax and super-tax payable in respect thereof and by the dividends, if any, declared during the previous year, *plus* (*b*) the sum of the depreciation allowances and development rebates. The deposit shall be made by the company on or before 30th June following the previous year in which the profits were made. In the case of a company whose previous year ends after 31st December and before 1st May, the deposit must be made within six months of the end of the previous year. The money must be deposited with the Reserve Bank of India, including agencies doing business on its behalf.

Government Securities

Within 15 days of making a deposit, a company must furnish—to the Income-tax Officer a statement showing the basis on which it computed the amount of the deposit and a receipt from the bank for the amount deposited by it. If a company so desires, it may, in lieu of a money deposit, deposit with the Bank, Government securities of the requisite market value. Such securities will be held in the Bank's custody, but no interest will be payable on these securities. However, the interest due on the securities according to the terms of the issue will be realised and paid by the Bank after deducting the usual collection charges. All money deposits will carry simple interest at a rate which will be notified by the Central Government for each financial year. Interest will be allowed from the day commencing next after the date on which the deposit is actually made, and will be computed on the basis of daily balances and paid by the Bank as on 31st March and 30th December.

The draft rules also provide for the computation of current profits deposits of companies incorporated outside India but doing business in this country. The dividends declared by such companies during any previous year will be those actually declared by them in respect of their business in India. That proportion of the dividends declared at the registered office of the company as the profit and gains of its Indian business bear to the total profits and gains out of which the dividends are declared will be taken into account for computing the deposit amount.

Exemptions Under the Act

Where any portion of the profits and gains of the company is not included in its total income, because such portion has been exempt from tax under any provision of the Act, the amount of the dividends declared during the previous year will, for purposes of determining the current profits deposits, be such proportion thereof as the total income of the company for the previous year bears to its total profits and gains for that year reduced by such allowances as may be admissible under the Act which have not been taken into account by the company in its profits and loss account for that year. Where an assessment by the authorities of the deposit to be made under the Act is in excess of the amounts actually deposited, the difference must be deposited within 30 days of being asked to do so by the Income-tax Officer. In addition, interest calculated at 6 per cent. on the excess amount will have to be deposited. If a company fails to make these deposits within the prescribed period, it will be considered not to have made any deposits as required under the Act. The consequences will be that the depreciation allowances and the development rebate, otherwise admissible to the company will be added to the income. The Income-tax Officer will, thereupon, inform the Board of Referees (appointed under the Act) which will order refund of the amount already deposited by the company for that year.

Notwithstanding that some amount has been deposited by the company and it has been directed to make a further deposit, the Income-tax Officer may make such adjustments in the assessment of the company for the relevant year as is necessary under the provisions of section 10 of the Act, as if no deposits had been made on the due date. But the collection of tax attributable to such adjustments will be deferred by the Income-tax Officer for the period given for the payment of the additional deposits. If this deposit is made within the period allowed, the assessment will be rectified, deleting the adjustments made.

Reduced Income

Where the total income of a company determined by the Income-tax Officer for the assessment made by him under the Act is finally reduced as a result of any other proceedings under the Act, and the deposit originally made by the company exceeds the amount of the current deposits calculated with reference to the reduced total income, and deposit

NEWS IN BRIEF

THE Geological Survey of India has estimated that a reserve of 49 million tons of coal is present in the South Karanpura coalfields in Bihar.

The Central Geological Department has traced deposits of several minerals such as barytes, bauxite, coal, lignite and gypsum in the State of Jammu and Kashmir.

The Union Government has sanctioned a loan of Rs. 4.08 crores to Bihar to cover the expenditure on the Kosi project during 1956-57. This brings the total loan sanctioned so far by it for the project to Rs. 7.04 crores.

The Ford Foundation spent more than $16 million in India during the period October 1951 to September 1956. The bulk of the expenditure was accounted for by rural development, education, vocational training, industries and business management.

The Government of India has sanctioned loans of Rs. 40 lakhs and Rs. 250 lakhs to Rajasthan and Madhya Pradesh States, respectively, for the Chambal project. This brings the total amount of loans sanctioned for this purpose to Rajasthan to Rs. 227 lakhs and to Madhya Pradesh to Rs. 455 lakhs.

The Union Government has accepted the recommendations of the Sub-committee of the Coal Transport Advisory Committee for giving top priority to proposals for increasing siding and loading accommodation to collieries in order to enable them to move their increased output more expeditiously.

The President has given his assent to the Bombay Tenancy and Agricultural Lands (Amendment) Bill, 1957. The Bill replaces an ordinance promulgated by the Government of Bombay to remove doubts regarding interpretation of certain sections of the Bombay Tenancy and Agricultural Lands (Amendment) Act, 1955.

The Government of India has decided, in consultation with the Board of Trustees of the Coal Mines Provident Fund, to grant interest to the subscribers of the Fund on their accumulations at the rate of 3¾ per cent. during 1957-58. The rate of interest for 1956-57 was 3¾ per cent. Accumulations in the Fund up to January 1957 exceeded Rs. 8 crores.

The State Trading Corporation of India will route the exports of iron and manganese ores of Mysore to Japan, Poland and other destinations *via* Cochin next month. The diversion of exports from Madras to Cochin will considerably augment the employment potential of this port. The development of Cochin as a major harbour is expected to enable it to handle an additional million tons annually.

The Andhra Government has introduced a Bill in the State Assembly which is designed to consolidate and amend the laws relating to the levy of a general tax on the sale or purchase of goods in the State. It follows the Government's decision to adopt a unified system of taxation of sales and purchases throughout the State in the place of the present varying enactments prevailing in the former Andhra State and Telengana.

The housing shortage in India, according to a U.N. report to the Economic and Social Council, is so great that, by 1961, in urban areas alone it may be about 5.3 million units, or a shortage of twice as many units as in 1951, and that despite the fact that about 1.5 million houses have been built during the first Plan period. The U.N. report estimates that the cost of a minimum dwelling unit in India is equivalent to $1,000. For India, the indications are that perhaps only five per cent. of the rural householders and 12 per cent. of the urban population will be able to pay this amount.

The Export Promotion Committee appointed by the Government of India to recommend measures to stimulate India's exports will undertake a three-week tour of the country shortly. During its tour, the Committee will meet commercial and industrial associations and discuss with them matters relating to the promotion of exports. The Committee has been asked to report on the nature of fiscal and other concessions to be granted for promoting exports, the nature and extent of credit facilities required for export trade, and the lines on which the export promotion bodies should function. It will also recommend measures for transport facilities and simplification of commercial transactions.

The Railway Board has planned a major expansion of the railway wagon-building industry to raise its present installed capacity by about 80 per cent. As the wagon-building industries are now located in Calcutta and Kanpur, the new manufacturing units will be at Delhi, Rajasthan, U.P., Saurashtra, Madras, Bihar and Bombay. The present installed capacity of 20,000 wagons a year is proposed to be increased by 16,000 wagons a year. Sixteen new Indian firms have been selected by the Board to raise output. The Board is also making efforts to manufacture in India special types of wagons which are now being imported.

The Government of India has set up a committee, with Mr. A. C. Mitra, Chief Engineer, Irrigation, U.P., as Chairman, to make an assessment of the flood problem in the country and to give authoritative advice on the measures that should be taken to tackle it. The Committee will analyse the factors responsible for the succession of heavy floods in the Ganga and the Brahmaputra basins in recent years and indicate, in a general way, after an examination of the hydrological and other relevant data available, the lines on which the flood problem in various areas should be tackled. It will also report on how work should be carried out in future in regard to the construction of projects as well as the collection of data for the formulation of long-term schemes. Besides, it will lay down the principles for the fixation of priorities in the construction of flood protection works and will examine specific flood problems of an important nature in States like Andhra, Orissa and Punjab, and suggest ways for solving them.

* * * *

From Abroad

U.S. imports in January, valued at $1,118.5 million, were the highest on record. The January volume showed an increase of about six per cent. over the December figure of $1,051.3 million and about four per cent. over the January 1956 figure of $1,073.3 million.

The United Nations has announced that the cost of clearing the Suez Canal is around $10.8 million, a little more than half of the most conservative previous estimate. The advances already made by a number of countries are said to be sufficient to cover the entire cost.

As a result of the operations carried out in the south of Iran by a consortium of international oil companies, Iran's oil revenues in 1956 amounted to £54.3 million. Crude oil production exceeded the amount guaranteed in the 1954 agreement between Iran and the consortium by 9.8 per cent. Output of crude oil aggregated 25.9 million tons, as against 15.8 million tons in 1955.

The Rio Grande Railway, which has been seeking to develop an atomic-powered locomotive, has been successful in using coal irradiated with atomic energy as diesel fuel. Finely-ground coal had been treated with waste products from atomic reactors mixed with oil and burned as fuel. The impact of the radiation is to reduce the coal to a dust so fine that it floats in air like smoke. When mixed with oil, it increases the energy-content as diesel fuel.

Personal income in the United States in February last, according to the U.S. Department of Commerce, rose to a record annual rate of $336,700 million. This was an increase of $19,600 million over the same month a year ago. The term personal income embraces wages and salaries, the net income of proprietorships and partnerships, dividends and interest, net rents received by landlords and other types of individual income.

Data on national employment in the U.S. reveal that, for the first time in U.S. history, production workers are outnumbered by persons in the other occupations. The total number of factory workers, farmers, miners and construction workers was smaller than the aggregate of retail clerks, Government workers, salesmen, stock brokers, auto mechanics, laundry workers, domestic servants and all others in service enterprises. The shift in the employment pattern, U.S. economists point out, reflects the sharp rise in productivity, due to better machines and methods, that has occurred in the past 10 years. Since then, the output of production workers has risen about 45 per cent.

The American Petroleum Institute reports the nation's known reserves of crude oil and natural gas liquids at a record high of 36,336 million barrels at the end of 1956. This is 886 million barrels more than reported reserves on 31st December 1955. Natural gas reserves at the past year-end were reported at 237 million cubic feet by the American Gas Association, some 14 million above the 223 million reserves reported one year earlier. Production of crude oil and natural gas liquids last year amounted to 2,899 million barrels, 158 million above the record set in 1955. Natural gas output was 10,908,790 million cubic feet, up 790,000 million. This was the largest gain reported for any year.

The Communist countries account for almost one-third of the world's mid-1955 population of 2,691 million, according to the U.N. *Year Book* for 1955. The population of the Soviet Union in mid-1955 is estimated at 200.2 million, Communist China at 582.6 million, Poland at 27.2 million, Rumania at 17.4 million, East Germany at 16.7 million, Czechoslovakia at 13 million, Hungary at 9.8 million, Bulgaria at 7.5 million and Albania at 1.3 million. The Communist countries produced about 30 per cent. of the world coal and 22 per cent. of its steel.

PERSONAL

MRS. Vijayalakshmi Pandit, India's High Commissioner in the U.K., has arrived in India for consultations with the Government of India.

Mr. Kadri Ressen, former Turkish Ambassador to Jordan, has been appointed Turkey's Ambassador to India.

Mr. A. C. H. Graafland, Consul attached to the Netherlands Consulate-General in Bombay, is leaving India shortly after ten years of service in Bombay. He was acting Consul-General on several occasions.

Dr. Clement Alberto Rezzonico, Swiss Minister in India, has been appointed his country's Ambassador to India, consequent upon the decision of the Federal Council of Switzerland to raise its Legation here to Embassy level.

Mr. S. N. Haji has been re-elected Chairman of the All-India Manufacturers' Organisation for the year 1957. The other office-bearers elected are: Vice-Chairmen: Messrs. M. L. Tannan (Bombay), F. R. Moos (Bombay), S. K. Sen (West Bengal), K. N. Modi (Delhi) and V. Seshasaye (Madras). Honorary Treasurer: Mr. P. B. Advani. Joint Hon. Secretaries: Messrs. J. V. Patel, Pranlal Patel and G. G. Morarji.

Mr. B. N. Adarkar, India's Executive Director-designate of the International Monetary Fund, left Bombay for London on Saturday last to participate in the Commonwealth consultations on the European common market treaty which commenced in London on the 15th inst. Thereafter, he will go to Geneva to attend the meetings of the inter-sessional Committee of the General Agreements on Tariffs and Trade which is due to commence there on the 24th inst.

"COMMERCE" 1932

FORM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 23*rd April*

Indian Textile Industry

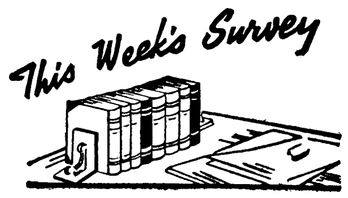
It appears from certain Bombay papers that Indian commercial circles there do not like the special reference to Imperial Preference in the terms of reference to the Tariff Board which has been requested to make an enquiry into the question of protection to the cotton mill industry. The grievance is that the Government of India has already committed itself to the principle of Imperial Preference in advance of the decisions to be reached at the Imperial Economic Conference at Ottawa. The terms of reference to the Tariff Board run thus: (1) whether the claim of the Indian cotton textile industry to protection has been established; (2) if claim is found to be established, in what form protection should be given and to what extent; (3) if it is proposed that protection should be given by means of import duties; (*a*) whether the same rate of protection is required against the competition of goods manufactured in the United Kingdom as against competition of goods manufactured elsewhere and (b) what rates of duty are recommended in respect of (i) cotton piecegoods, (ii) piecegoods made wholly or partly of artificial silk and (iii) cotton twist and yarn according as they are manufactured (*a*) in the United Kingdom, (*b*) elsewhere.

In making its recommendations, the Tariff Board will take all relevant considerations into account, including that stated in part (B) of the resolution adopted by the Legislative Assembly, on the 16th of February 1932. In particular, the Tariff Board has been requested to consider how its recommendations will affect the handloom weaving industry.

The combined steel output of the Soviet Union, China and four East European countries rose by 160 per cent. between 1937 and 1955, as against a corresponding rise of 86 per cent. in the rest of the world.

The Political and Economic Planning (P.E.P.) of Britain, an independent, non-party organisation, has forecast that the current substantial emigration of Britons is likely to continue in the immediate future. In a report on Britain and Commonwealth migration, the P.E.P. says that, between the end of the war and 1955, more than 1.2 million Britons emigrated primarily to Australia, Canada and New Zealand. But immigration, particularly from Europe and the Irish Republic as well as British West Indies, India and Pakistan, went a long way towards reducing the numerical loss resulting from emigration. The immigrants had not made up the loss of skilled man-power in important industries and occupations.

The Federation of West German Industries has pointed out that the payment terms fixed by the Indian Government for imports of investment goods at the end of January are unbearable and cannot be accepted by German exporters. The Indian regulations provides that import licences for investment goods will be issued only if contracts provide for the payment of 20 per cent. in not less than seven years after arrival. The present credit facilities only allow West German exporters to accept terms of a maximum of five years. Meanwhile, the West German Foreign Office has promised to ask the Indian Government to leave the credit terms in pending contracts, as they were fixed when the contracts were concluded. These contracts have a value of about 150 million marks.



FOREIGN EXCHANGE

THE appeal of the Prime Minister, Mr. Jawaharlal Nehru, made while inaugurating the seventeenth annual conference of the All-India Manufacturers' Organisation (A.-I.M.O.), held at New Delhi on Saturday last, that the public should make available to the Government gold ornaments and other jewellery, in order to solve the country's foreign exchange position, clearly underlines the magnitude of the problem involved. The weakest link in the second Five-year Plan is that relating to foreign exchange. Indeed, the most intractable of the economic issues, as we have pointed out on more than one occasion, is the gap in foreign exchange resources over the Plan period; the gap is now estimated to be of the order of as much as Rs. 1,500 crores. Unless energetic steps are taken from now alone to fill this gap, the implementation of the series of schemes included in the Plan is bound to be affected adversely. Such is especially so with regard to schemes in the private sector which has already made elaborate arrangements for expansion and establishment of new lines of manufacture. The A.-I.M.O. has, therefore, special reason to support Mr. Nehru's appeal. The main resolution which the Organisation adopted in this connection may be summed up thus:

> A mechanism may be evolved by which gold and silver, in the form of either bullion or ornaments, held by the people as unproductive investments or as personal jewellery, can be made available to the Government for purchase. The gold thus secured can be used for further reserve against expanding note issue for the issue of gold certificates convertible after a period of 10 years bearing an attractive rate of interest, and for the purpose of augmenting the foreign exchange position by way of either sale to obtain foreign currency or depositing with the International Monetary Fund to enable the Government to obtain further loans.

While the above suggestion is commendable, the question arises as to whether much reliance can be placed on this source of finding resource to fill the foreign exchange deficit. For it is common knowledge that a wide section of the country's population attaches great sentimental value to its holdings of gold and silver, though it fully realises that the holdings are unproductive. Even assuming that a large part of the holdings can, in fact, be garnered by the State, such will constitute only a trickle, considering the huge deficit that remains to be covered. The real, effective solution to the problem lies elsewhere. As Mr. S. N. Haji, Chairman of the A.-I.M.O., very aptly urged, every endeavour should be made (1) to curtail drastically all avoidable imports; (2) to increase earnings from invisibles which have shown a tendency to improve in recent years; (3) to obtain foreign aid and foreign capital in large measure through either grants and loans or equity capital; and (4) to augment exports by immediately adopting effective and remedial measures as are found necessary.

The last-mentioned course deserves to be specially stressed in the present context of the establishment of a buyers' market the world over. The competitive capacity of several of India's export products has suffered a distinct setback of late, thanks to heavy tax imposts, high wage bill, and irrational policies of the State based on ideological considerations. So long as the competitive capacity of goods remains low, the country cannot meet successfully the growing international competition. The Export Promotion Committee appointed by the Government of India will do well to take note of this factor and put forward concrete proposals designed not only to remove the various handicaps confronting trade but also to give encouragement for stimulating exports.

In the course of his address, Mr. Haji drew pointed attention to the shortage of capital resources which are needed to meet the rising investment requirements. In its anxiety to net in, through more and more taxes, as much revenue as possible to the exchequer, the Government has deprived the private sector of a considerable portion of funds available with it. Surely, the Government, as Mr. Murarji J. Vaidya, a leading industrialist of Bombay, rightly declared while moving the main resolution of the A.-I.M.O., ought to realise that, like the public sector, the private sector is also in need of more resources for fulfilling the Plan targets assigned to it. Needless to say here that the main source of capital for the private sector consists of savings effected by itself. Emphasising this point, Mr. Haji called upon the Government to enable the industry to plough more resources back into production channels by providing "adequate and deserved" relief in corporate and personal taxation. This is, indeed, a just plea which must be recognised by the Government. The Government itself has acknowledged, in the White Paper on the Budget for 1957-58, that the increase in the net indebtedness of the private sector to banks "indicates"—to quote the Paper—"the inadequacy of corporate savings for financing the programme in the private sector." The problem of finding resources and easing the tight monetary conditions in the private sector can be solved, as the main resolution of the A.-I.M.O. rightly suggested, by removing penal taxation measures and by evolving new techniques for tapping small savings, especially in the rural areas, including issuance of bearer bonds payable after 10 or 15 years. The resolution also rightly made two other suggestions. First, diversion of savings to unproductive channels or for speculative purposes should be discouraged by higher taxation. Secondly, wages and wage increases must be correlated to norms of production.

INDO-U.S. ECONOMIC COLLABORATION

Ever since India's attainment of independence, the U.S. has been taking an increasing interest in the economic endeavours of the former, and has always been willing to extend a helpful hand. This attitude of the U.S. cannot be termed as being inspired only by considerations of enlightened self-interest. It is, equally, an offspring of the belief that there is, between the two countries, a wide area of agreement on fundamental purposes and objectives. And it is precisely this aspect of Indo-U.S. relations that holds out the promise of greater economic collaboration between the two countries in future.

Discussing the scope for larger U.S. assistance to India, Mr. Ellsworth Bunker, U.S. Ambassador, observed the other day at Madras that there was one economic tie which he considered most important in terms of India's continuing growth and development, namely, American private investment. It is true that in comparison with investments in other countries, the participation of American private capital in India's economic development has been small. At present, American private investment in India aggregates about $190 million. U.S. assistance to India has been largely on the governmental level, and U.S. Government aid since August 1947 aggregated $826 million. It may be observed in this connection that there has of late been a growing antipathy in U.S. against enhanced foreign aid commitments which has been reflected in the increasing number of votes cast in the Senate against foreign aid appropriations. From this point of view, if American economic assistance could be extended through non-governmental channels, in the shape of, say, private investments, it would be less subject to political criticism.

As regards the bogey of foreign capital invasion raised in some quarters, Mr. Bunker has some pertinent remarks to offer. Citing instances from American economic history, he said that the experience of the U.S. in this respect had been exactly the contrary. The phenomenal expansion of the U.S. in the latter half of the nineteenth and early years of the present century had been stimulated by European capital. American railways, coal mines, steel mills, etc., enjoyed the benefit of British, French and Dutch capital. Foreigners invested their money on exactly the same terms as their American counterparts, received the same consideration and advantages and, in the process, made an effective contribution to the industrial growth of the U.S.

Mr. Bunker did not say how best India could attract American capital as he would leave it to the Government of India to work out its own technique for attracting foreign investors. But he believed that the introduction of American manufacturing techniques and management practices could be of as great value to India as American capital because he was convinced that sharing of the experience and knowledge gained in the organisation of production and its distribution could be a significant factor in accelerating India's economic growth. Referring to the possibility of greater co-operation between the two countries, Mr. Bunker said that the assistance which the U.S. was giving was only one facet of economic relations. The trade between the U.S. and India, he added, was growing in amount and importance. For instance, one-third of India's manganese, three-quarters of its jute, 30 per cent. of its mica, 70 per cent. of its shellac, half of its pepper and more than a third of its tea exports currently go to the U.S.

Exhorting the business community to adjust itself to the changing circumstances, Mr. Bunker said that although, due to the lower rate of capital formation in India, the Government was called upon to undertake a greater part in economic life there was in India, as well as in the U.S., a large area which fell to private enterprise to develop. But it would remain there only if business men recognise and accept their responsibilities. These go much beyond the mere making of profits for the shareholders. They also include the realisation of the fact that the widest possible distribution of the products of industry at the lowest price rather than charging all that the traffic will bear, will make for conditions of sound and permanent prosperity.

A BANKING PLAN

Never before in the economic history of India had the banking system been asked to play so vital a role as the one they are asked to play today. The country stands on the threshold of a new era of planned economic development, having launched upon a giant programme of raising the living standards of the people. The banking system should fall in line with the programme by ensuring the creation of the necessary developmental climate for both the expansion and the consolidation of the banking structure. This view was forcefully brought out by Dr. N. N. Law, Chairman of the United Bank of India Ltd., in his speech at the annual meeting of the Bank held at Calcutta the other day. The banks, Dr. Law declared, must bring in the untapped resources as grist to the economic mill and "so aid the avoidance of an excessive and frustrating tax level by assisting the Government in getting larger funds through borrowings." How this objective can be achieved has been indicated by Mr. B. K. Dutt, Managing Director of the United Bank of India, in a study entitled "Necessity for a Banking Plan—A Tentative Study" prepared at the request of the Indian Banks Association.

The objective of a banking plan, Mr. Dutt observes, and rightly so, needs to be geared to a programme of collecting resources now tending to disappear in unorganised segments of the economy. This could be brought about through a two-pronged programme of rapid extension of banking facilities—by opening offices at the rate of 1,000 per annum in new places and by strengthening the existing ones, where necessary, and bringing into existence smaller unit banks set up regionally. The other salient features of the Plan as suggested by Mr. Dutt are: Arrangements for strengthening to soundness all the reporting banks, with State help (formation of a Rehabilitation Finance Corporation may be considered in this behalf); ensuring quick credit maturity of all the banks through insurance of deposits (formation of a Deposit Insurance Corporation may be considered in this connection); organisation of issue houses, consortium for Government and private marketable obligations, and unit trusts for industrial obligations; formation of bank-owned organisations for medium and long-term financing; strengthening the Indian Banks Association with a view to undertaking continuous study, investigation and research on the problems confronting banks of all description and its transformation into an All-India Banks Association; a development pact with the bank employees, at national level, so that pursuit of the Plan may not be interrupted and all disputes are settled by arbitration.

Here is a framework which can serve as the basis for formulating a workable plan for setting the banking industry on a more solid and sound footing. The framework, it is, of course, made clear, is intended only to raise discussion; it will require closer examination and further investigation. It is to be hoped that the banking community as a whole and the leading banks, in particular, will view the plan in the light of the changing economic climate in the country and also give it the consideration which its author's painstaking efforts merit.

Philips Light has brightened many a home, brought peace and contentment to many a happy family. Its soothing, glare-free illumination eases frayed nerves, and rests tired eyes, softens the shadows and makes the living room a veritable haven from the rush and flurry of everyday existence.

Change over to Philips inside-coated Argenta, or Philips 'TL' Fluorescent Lamps today and you, too, can enjoy the sweet repose of an evening with your family.

DOUBTS OF BUSINESS MEN SET AT REST

MR. NEHRU'S ADDRESS AT A.-I.M.O. MEETING

From Our Own Correspondent

NEW DELHI, 15*th April*

THE All-India Manufacturers' Organisation, claiming a direct membership of nearly 4,000 factories, held its annual conference here last week-end. For the second year in succession, the session has had the honour of being inaugurated by the Prime Minister of India, Mr. Nehru set at rest the doubts of the assembled business men by affirming that "the private sector has necessarily to have not only a very important place but a respected place in the context of the broad policies that we pursue." The A.-I.M.O., which is, by and large, composed of medium and small business men and which believes that, "in an expanding economy like ours, there is ample scope for both large-scale and small-scale industries to co-exist and develop further," should have felt cheered by the Prime Minister's reference to the remarkable progress made by small industries in the Punjab since independence. (According to Mr. Nehru, 26,000 small enterprises had grown up in the Punjab in the last few years with a relatively small capital but with a great deal of energy and enterprise.) The Prime Minister's speech was most notable for its exhortation to people to sell their gold or jewellery to the Government. He did not, of course, mean to suggest that every woman should sell away all the jewellery she possessed; what he wanted was that this should be done on a fairly wide scale so that it could "generate a certain atmosphere of partnership in meeting difficulties."

DELHI LETTER

This idea of tapping the country's resources in gold was always canvassed by some publicists, but it was not politically countenanced till the Prime Minister himself set the ball rolling the other day. And the assembled business men of the A.-I.M.O., which favours the determined implementation of the second Plan without scaling down its targeted outlays or extending its period and which expects that the necessary resources will be provided, have just given a further impetus to the idea. The A.-I.M.O.'s support to what looks like an emerging movement is contained in a resolution adopted yesterday. This resolution suggests a series of measures to make larger finance available for the private and public sectors.

The A.-I.M.O. certainly deserves credit for promptly concretising the Prime Minister's suggestion. That the Finance Ministry will soon examine the merits of the suggested measures may be taken for granted. So far so good. But any spectacular success in this direction may have to be discounted for obvious reasons.

Other Measures

The A.-I.M.O.'s key resolution on resources is even more notable for the other measures it suggests. In the first instance, it pleads for the removal of penal taxation measures in order to enable industrial units in the private sector to plough back more resources into productive channels; for greater collaboration between the Government and the people in public corporations by associating the people in the equity capital and direction of public enterprises, excluding the four industries which are the exclusive monopoly of the Central Government; for evolving new techniques for tapping small savings, especially in the rural areas, which should include, among others, issuing of bearer bonds payable after 10-15 years, with low rates of interest but with a right to participate in drawing tax-free prizes; for obtaining foreign aid and foreign capital in a larger measure than hitherto and removing, in this connection, the obstacles which hinder the flow of such aid or capital, such as existence of double taxation or absence of Treaty of Friendship, Commerce and Navigation; for granting relief to Indian concerns operating abroad from taxation on the lines recently given in the United Kingdom; and for discouraging, by means of higher taxation, diversion of savings to unproductive channels as in investment of gold and silver or for speculative purposes.

Together with the suggestions for achieving greater equilibrium in the country's balance of payments position, these constitute an impressive volume of what may be taken by Government as helpful and constructive advice by a considerable section of Indian business. Carried away by its own real or fancied optimism in the matter of resources, the A.-I.M.O. has proceeded to plead for increasing the available supply of agricultural and industrial products by fixing higher targets and endeavouring to achieve the same by higher productivity on land and in existing industrial units and by extending the area under cultivation and by extending the existing industrial units, as also by the establishment of new units of production. The A.-I.M.O. has obviously not examined the implications, in terms of larger investment outlay, of this general plea. To plead for higher physical targets in respect of agriculture and industry in the second Plan period is to plead for a larger overall investment outlay in the public and private sectors.

Not Bright

This view of a section of Indian business is opposed to the view of another section which holds that, in the light of its reappraisal of resources, the revised public sector outlay of Rs. 5,250 crores (including Rs. 1,000 crores of new development expenditure) would have to be cut back to Rs. 3,750 crores for the second five-year period or phased over a seven-year period at an average annual rate of Rs. 750 crores, if the investment target of the private sector is not to be drastically cut down. This latter view cannot be ignored for the second year public sector outlay of the second Plan, it is now learned, will have a shortfall of about Rs. 115 crores. If the public sector outlay in the first two years of the Plan would be only Rs. 1,500 crores, the chances for an outlay of Rs. 3,750 crores in the remaining three years of the Plan are not excessively bright.

There is no reason to believe that the suggestions thrown out by the A.-I.M.O. will enable the Government to make up the entire estimated gap in resources. Even if the resources gap comes to be filled, it may be only at the expense of the private sector. Perhaps the A.-I.M.O. may welcome the fulfilment of the public sector investment target in the hope that it will also involve the development of small industries in the private sector. Here is discernible a conflict of views arising, perhaps, from a conflict of interests between the bigger and the smaller sections of Indian business. This probably explains why the All-India Manufacturers' Organisation is anxious to extend to Government even greater co-operation than the Federation of Indian Chambers of Commerce and Industry was willing to do in its recent annual conference in the Capital. Sections of business men now appear to think that the "socialist pattern" visualises a small-holder economy in both agriculture and industry. One wonders if the "war of nerves" to which the private sector has been subjected in recent years is just beginning to pay dividends to the Government.—*All Rights Reserved.*

(Concluded from next column)

charge to members and non-members alike, and, apart from the value of the advice given, it has had a useful effect in building up goodwill.

Two final examples will show the variety of the society's operations. Its insurance department enables members to insure their buildings, machinery and livestock against mishap of all sorts, while the veterinary shop sells every kind of medicine likely to be required by livestock. The chemist in charge is not a qualified veterinary surgeon and cannot, therefore, give treatment, but his visits have given many farmers a better understanding of how to look after their livestock. He also makes up his own mixtures much more cheaply than many proprietary brands, and these benefits, coupled with the fact that members can draw a bonus on all veterinary purchases, are the main advantages which the shop has brought.

A WAGON EVERY 20 SECONDS

India's largest railway marshalling yard at Moghalsarai (near Banaras) last month set up a record of operating performance which has never before been achieved in its long history. During March, an average of 2,082 wagons was despatched daily to a multitude of destinations on the Northern, Central and Western Railway, marking a 17 per cent. increase over the performance in March last year and a 24 per cent. increase over March 1955. In the opposite direction, to the Eastern Railway, an average of 2,101 wagons left Moghalsarai daily during March, an increase of nearly 20 per cent. over the daily average for March last year. During the last 11 days of March, an average of one wagon left Moghalsarai every 20 seconds. This process continued all round the clock.

CO-OPERATION ON LAND IN BRITAIN

HOW THE MOVEMENT HELPS FARMERS

By J. A. B. Hamilton

THE multi-purpose farmers' co-operative societies in Britain can supply farmers with feeding stuffs, fertilisers, equipment and much else, and purchase their eggs, poultry and grain; in fact, the largest societies are able to supply practically everything required on the farm. Nothing of the kind was foreseen when the farmers' co-operative movement started in the latter part of the last century. It started with a few small societies for the purchase of feeding stuffs and fertilisers. Their primary object was to protect the farmer against the excessive prices charged by merchants, but, instead of separate organisations being formed for each purpose, as has happened in most other countries, these societies gradually began to purchase first one essential for the farmers' needs, then another. Thus the multi-purpose society came into existence.

The movement made no great headway until after the end of World War II, but, since then, it has been going ahead fast. The effect has always been to bring down prices—known to be higher in parts of the country where no society exists. It thus benefits all farmers in the locality, whether they are members or not, while members derive the further benefit of sharing the profits in the form of a bonus on the amount of business done.

A large society may have a turnover of anything from £2,000,000 to £8,000,000, of which about three-quarters will come from farm requisites. The members will number from 3,000 to 10,000, but, with the tolerance which seems inherent in the British character, the society will also do a large business with non-members. On the whole, it will be strongest in areas where most of the farms are medium-sized or small.

Typical Society

Let us take a typical large society, with some 20 depots serving an area of about 4,000 square miles. Each depot holds large stocks of animal foods, but much of this goes in lorry-loads direct from the mill to the member's farm. The society has several mills for grinding its own mixtures, but it also sells those manufactured by outside firms, as some farmers prefer these. Each branch has a sundries department, which sells rakes, brooms, wire-netting, binder twine, gumboots, paint, troughs, ladders, poultry-houses, to mention only a few items. These are delivered in the society's lorries along with the feeding stuffs. Members may visit the depot and give their orders personally, or telephone if they are in a hurry. More often, they will order from the travelling salesman who calls once a fortnight. Most members will buy the bulk of their requirements from the society, but they often like to deal with a private merchant as well, in order to encourage competition.

The machinery department is organised in a separate series of branches which undertake all kinds of repairs, either in the workshop or out on the farm. The society maintains a building department which undertakes all kinds of farm repairs and installations such as laying water-pipes or fitting up the buildings with electricity. Other services include spreading lime and spraying of crops against pests and weeds. For farmers who prefer to do their own spraying, the society supplies both the outfit and the liquid. Another department sells tractor fuels—petrol, paraffin and diesel oil. The society does this as agent to one of the large distributors who have found that their sales to farmers have nearly doubled since they deputed the business to the society. For one thing, the society gives much prompter deliveries than any rival distributor, and a farmer who runs short knows that he need only telephone to be sure of a further supply within 24 hours at most. All goods and services, as well as sales to this society qualify for members' bonus which for some years has been at the rate of eightpence in the £—nearly 3½ per cent.

The society maintains a buying department which will purchase grain from members, often for sale to other members, especially in the case of barley. The egg packing station handles about 50,000,000 eggs a year—most of the eggs in the district. To help farmers with egg and poultry production, a full-time expert is maintained who visits farms to advise on housing, feeds, hygiene, laying strains, incubation and all poultry problems. The service is available without

the Airline of Switzerland

SWISSAIR

inaugurates regular flights across the Indian Skies

EASTBOUND to Bangkok, Manila and Tokyo

WESTBOUND to the Middle East, Switzerland, all of Europe, the USA and South America.

The Swiss Cross – the traditional symbol of peaceful Switzerland, a country of world – wide precision industry fame, will be cruising Far Eastern skies.

With more than 35 years of experience in air service, Swissair is world famous for its expertly trained crews, its traditional Swiss courtesy, its thoroughness and for the utmost comfort offered on its luxury four – engined Douglas DC6B airliners.

Swiss precision and hospitality is now available in India for your World travels.

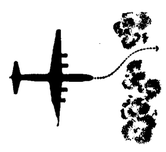
Westbound from Bombay every Saturday evening, arriving in Geneva and Zurich Sunday morning. Additional departure, from Calcutta every Tuesday evening, beginning July 8.

Eastbound from Bombay every Wednesday evening, arriving in Tokyo Thursday evening, via Bangkok and Manila. Additional departure from Calcutta every Saturday evening, arriving in Tokyo Sunday evening via Bangkok and Hong Kong, beginning July 5.

THE ONLY BOMBAY-BANGKOK NON-STOP FLIGHT!

Consult your Travel Agency for further details, or

Swiss Air Transport Co. Ltd.
Hotel Ambassador, Bombay.
Phone: 241554



The most modern equipment and the experience of a generation in international air travel guarantee that your Swissair flight will be an unforgettable experience. *For your added comfort all planes are equipped with RCA airborne radar.*

Full length sleeper-seats at no extra charge in First Class, large reclining seats in Tourist Class. Pressurized cabins, air-conditioned for travel through all weather conditions and climates.

The famous hospitality of Swiss hotels is reflected in Swissair's service. Delicious meals free of charge, free drinks in First Class–all served by cabin attendants whose only concern is to make your flight as agreeable as possible.

SWISS QUALITY WORLDWIDE SWISSAIR

LOWEST "PER CAPITA" NATIONAL PRODUCT IN ASIA

THREE COUNTRIES SHARE 55 P.C. OF TOTAL

TWENTY-SIX countries in Asia, Africa and Latin America, constituting about 62 per cent. of the total population of 55 countries covered by a United Nations Study, together share only 15 per cent. of the total "net national product" of the 55 countries. The *per capita* national product in these underdeveloped countries varies between $50 (in Burma) and $230 (in Brazil). At the other extreme, there are three countries, namely, the United States, Canada and Switzerland, the population of which forms only about 13.5 per cent., while their aggregate net national product constitutes no less than 54.7 per cent., of the total of the 55 countries. This is one of the striking conclusions that can be drawn from the *Statistical Papers on Per Capita National Product of Fifty-five Countries*, 1952-54, prepared by the Statistical Office of the United Nations. The study contains estimates of the average annual *per capita* product of 55 countries for the period 1952-54, expressed in United States dollars.

In this study, the concept called "net national product" is employed in the place of the concept "national income" which was employed in its report published in 1950. The net national product is defined "as the value at factor lost of the product, after deduction of provisions for the consumption of fixed capital, attributable to the factors of production supplied by the normal residents of a given country." It is, according to the report, identically equal to the national income which is defined as the sum of the incomes accruing to factors of production supplied by normal residents of the given country before deduction of direct taxation. Though the results arrived at through either method are the same, the difference lies in that they are taken to measure two different aspects of economic activity—the former, production; the latter, income. The study, however, does not include estimates for the U.S.S.R. and other countries where the concept "net material product" is used in a sense different from the one employed in the study.

Not Indicative of Welfare Levels

The report also points out that the estimates presented in the study are rough approximation of levels of *per capita* national production but are not indicative of levels of welfare. This is so, for, to quote the report:

"The monetary value of a nation's output of goods and services does not reflect the efforts, strains, etc., that accompany production or certain undesirable consequences of it. Differences in climate, terrain and natural resources may also result in different degrees of satisfaction of the basic needs of societies producing the same amount of poduct. Apart from economic factors, differences in tastes may also explain in part differences in price relationships of the same or similar goods and services produced in two countries. Furthermore, the boundary of production as defined for national income purposes may exclude from the estimates activities which may well enhance a society's welfare but, at the same time, may include activities which do not necessarily contribute to its well-being."

The report cautions, however, that the estimates suffer from certain short-comings. One of them is that the estimates of *per capita* product of some of the countries—about six—are not official ones, but are based on those prepared by experts on behalf of Governments concerned or by international organisations. Further, the existence of a substantial non-monetised economy in less developed countries poses problems in estimating their national product. Still another limitation is imposed upon international comparisons of national product estimates by the difference in the concepts used for the purpose from country to country. An important feature of the estimates, however, is that the estimates generally represent averages for the three-year period, 1952-54, in order to reflect more accurately the level of product.

The total population of the countries covered by the present study was 1,325,684,000 as at the middle of 1953, while their total estimated net national product at factor cost was $590,120 million. The average *per capita* works out to $445. Certain striking features emerge from this study. The *per capita* net national product of 36 of the 55 countries is less than that of the average of $445; while that of only 19 exceeds that level. Moreover, the countries, numbering eight, the *per capita* net national product of which ranges between $750 and $1,000, sharing between themselves about 6.1 per cent. of the population of the 55 countries, account for no less than 11.6 per cent. of the total net national product. Further, 11.8 per cent. of the total net national product is contributed by six countries, the *per capita* net national product of which varied between $500 and $749, with 9.4 per cent. of the total population. Furthermore, 12 more countries with nearly the same proportion of population share between themselves 6.9 per cent. of the total net national product. Their *per capita* net national product, however, varies between $250 and $499. In other words, 29 countries, the *per capita* net national product of which is $250 and above, account for 85 per cent. of the net national product, while their population constitutes only 38.2 per cent. of the total population of the 55 countries.

The following table gives the figures for population, net national product at factor cost and *per capita* product for some of the important countries covered by the study.

Name of the country	Population mid-year 1953 (thousands)	Net national product at factor cost (million U.S. dollars)	*Per capita* product (U.S. dollars)
Africa—			
Egypt	22,062	2,650	120
Union of South Africa ..	13,153	3,950	300
America—			
Argentina	18,393	8,460	460
Brazil	55,772	12,830	230
Canada	14,781	19,360	1,310
Chile	6,437	2,320	360
Mexico	28,056	6,170	220
United States	159,643	298,530	1,870
Asia			
Burma	19,045	950	50
Ceylon	8,155	890	110
India	372,000	22,320	60
Israel	1,650	770	470
Japan	86,700	16,470	190
Pakistan	79,330	5,550	70
Philippines	21,039	3,150	150
Europe—			
Belgium	8,778	7,020	800
France	42,860	31,720	740
Germany (Western) ..	48,994	24,990	510
Italy	47,551	14,740	310
Sweden	7,171	6,810	950
Switzerland	4,877	4,930	1,010
United Kingdom	50,611	39,480	780
Oceania—			
Australia	8,815	8,400	950
New Zealand	2,047	2,050	1,000

It is also noteworthy that the 14 countries the *per capita* net national product of which ranged between $500 and $1,000 are, with the exception of three, namely, New Zealand, Australia and Venezuela, West European countries. A further interesting feature is that three Asian countries, namely, Israel, Malaya and the Lebanon, fall in the category of those with a *per capita* net national product varying from $250 to $499, which is mostly dominated by the countries of South America. In the last group, the countries of Asia and Africa dominate, their *per capita* net national product generally being less than $100, with the exception of a few countries such as Turkey (210) Japan, the Philippines, Egypt and Ceylon. The *per capita* product of those countries of Central and South America which come under this group varies between $120 and $230.

(Concluded from next column)

of £18 million in investment in Government securities, of which British Government securities (at £326.05 million) account for £16.06 million. The market value of the latter is £317.93 million, but this difference is left uncovered, as in the previous year, because all securities are redeemable at fixed dates, the majority within 10 years, when any depreciation will be recovered.

The working of the Indian branches of the Bank during the year ended 31st October 1956 has been more encouraging, in that the profit has staged a further rise of Rs. 7.22 lakhs to Rs. 28.64 lakhs, thus maintaining the upward trend for the second year in succession. With this rise, the Bank has been able more than to make good the decline in profit suffered in 1954 from Rs. 26.56 lakhs to Rs. 16.39 lakhs.

The Bank's income from interest and discount has increased by Rs. 16.25 lakhs to Rs. 157.06 lakhs, and that from commission and exchange by Rs. 9.22 lakhs to Rs. 48.02 lakhs. Offsetting these are the rise of Rs. 8.53 lakhs (to Rs. 57.65 lakhs) in interest paid and of Rs. 9.90 lakhs (to Rs. 113.05 lakhs) in expenses.

The variations in the main items of the balance-sheet are well brought out in the table above. They show a sharp rise of Rs. 10.80 crores in advances, accompanied by a fall of Rs. 1.76 crores in deposits. This has been met by stepping up the borrowings from other banks, which have gone up over the year by Rs. 5.46 crores, by a reduction of Rs. 7.08 crores in investments and of Rs. 1.33 crores in cash balances.

LLOYDS BANK'S PROFIT RISES FURTHER

DIVIDEND STEPPED UP

THE performance of Lloyds Bank Ltd. (Chairman: Sir Oliver Franks, London) during the year ended 31st December 1956 has been quite encouraging, despite the credit squeeze, the higher rate of interest paid on deposits and a further rise in operational costs. The profit, which had been maintaining an upward trend since 1946, has staged a further rise of £219,354 to £2,541,793, the highest level reached since 1929. The Bank has, however, been able to offset these higher outgo by larger earnings, thanks to the expansion in business and the higher money rates in force throughout the year.

With the undistributed surplus of £558,006 brought in from 1955, the profit available for appropriation is £3,099,799, as against £2,638,996 in the previous year. Out of this, the Directors have set aside £500,000 each (same as in the previous year) to the general reserve and the reserve for future contingencies. An interim dividend of 6 per cent. (less income-tax) on the 14,372,956 'A' shares of £5 each, £1 5s. paid-up and 2½ per cent. (less income-tax) on £1,437,296 'B' stock, same as in 1955, was paid in August, absorbing £619,834. The final dividend of 7 per cent. (less income-tax) is on the reorganised capital of £18,565,070, made up of 18,565,070 shares of £1 each fully paid, following the conversion and amalgamation of 'A' shares and 'B' stock into one class of shares. This represents an increase of one per cent. from that paid for 1955 on the old 'A' shares and is in conformity with the intention expressed by the Directors at the time of reorganisation of capital. The final distribution takes up £747,244, as against £640,495, leaving a slightly larger surplus of £712,060 to be carried forward.

The following comparative table brings out the salient features of the Bank's balance-sheets and those of its Indian branches as at the close of the last four years:

(In thousands of £'s sterling)

	As on 31st December			
	1956	1955	1954	1953
Capital	18,565	19,403	15,810	15,810
Reserve fund	17,500	15,000	17,000	16,500
Undistributed surplus ..	712	558	517	555
Deposits	1,197,144	1,190,146	1,244,306	1,203,039

The reorganisation of the capital structure carried out during the year has resulted in a reduction of capital, consequent on the writing down of 'B' stock by £838,425, and this sum is kept as a part of the reserve fund. At the same time, a sum of £1.16 million was transferred from the contingency reserve to the general reserve. These two transfers together with the allocation of £500,000 from the year's profit, account for the increase of £2.5 million in the published reserves. The Bank's deposits (including contingency accounts) have gone up by £7 million, notwithstanding the withdrawal of £1.16 million from the contingency accounts, but this increase has only fractionally made good the decline of £54 million noted in 1955.

Following the rise of £6.92 million made in the previous year, loans and advances have staged a further increase of £28.77 million in the year under review. The slight reduction in bills is mainly due to the fall of £4.65 million (to £9.13 million) in holdings of British bills of exchange. This has been nearly made good by the increase of £2.63 million (to £228.34 million) in British Government Treasury bills and of £1.30 million (to £4.66 million) in Dominion, Colonial and foreign bills. The sizable increase of £28.77 million in advances, as against a rise of only £7 million in deposits, has been met by a reduction

INDIAN BANK'S PROFIT MORE THAN DOUBLES

BUSINESS EXPANDS SIZABLY

THE working results of banks in India for the year 1956 have generally been encouraging and the profits, in many cases, have recorded a sharp rise over those for the previous year. Few banks have, however, had the distinction of seeing their profits doubled. The results of working of the Indian Bank Ltd. (Secretary: Mr. D. P. Parthasarathy, Madras), provide one such rare instance; its profit for the year under review has jumped from Rs. 20.28 lakhs to as much as Rs. 45.71 lakhs, representing an increase of over 125 per cent. It has, thus, set up a fresh record in the history of the Bank, exceeding the previous high of Rs. 23.45 lakhs established in 1946 by no less than Rs. 22.26 lakhs. Such an impressive performance has been rendered possible, despite the higher expenses, by the sizable expansion in the Bank's turnover, although this, as in the case of many other banks, has meant a strain on its lendable resources.

The allocation to the reserves has been raised from Rs. 7.13 lakhs to Rs. 10.75 lakhs by stepping up the transfer to the reserve fund under section 17 of the Banking Companies Act, 1949, from Rs. 3.50 lakhs to Rs. 10 lakhs, while cutting the provision for sinking fund from Rs. 2.63 lakhs to Rs. 75,000. No amount has been set aside to the reserve fund other than under section 17 of the Act, which had received Rs. 1 lakh last year. In addition to the large allocations to the reserves, the Directors have created a special gratuity fund with a provision of Rs. 1.50 lakhs. The distribution to the shareholders has also been raised to 13 per cent. from 12 per cent. paid for the previous six years, by increasing the bonus part of it from 2 per cent. to 3 per cent. It will also be noted that the enhanced dividend is on a higher capital raised during the year by making further calls on the Bank's partly paid-up shares.

The progress of the Bank in recent years is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

Cash	11.9	11.2	14.4	13.4

The gross income of the Bank has gone up by Rs. 58.05 lakhs to Rs. 204.33 lakhs and the bulk of this rise has been contributed by commission and exchange which have gone up by Rs. 38.97 lakhs. The increase in income from interest and discount is no doubt encouraging, but it is less than half of the rise in commission and exchange. There has also been a sharp rise of Rs. 19.39 lakhs in interest paid and of Rs. 13.29 lakhs in expenses, but the increase in outgo under these two items has only partially wiped out the rise in income.

The paid-up capital of the Bank (less calls unpaid) shows an increase of Rs. 3.96 lakhs, consequent on the calls of Rs. 10 per share made on 20,000 shares of Rs. 90 paid-up each and 28,000 shares of Rs. 65 paid-up each, making them fully paid-up and Rs. 75 paid-up, respectively, and bringing the total fully paid-up shares to 44,000 of Rs. 100 each. Of these, calls of Rs. 5 each made towards the close of the year do not rank for dividend in respect of the year under review. The calls unpaid amount to Rs. 1.17 lakhs. The deposits show an increase of Rs. 3.12 crores, as against Rs. 4.59 crores, thus maintaining the upward trend noted since 1949. A break-up of the deposits shows that seasonal and short-term deposit have gone up by Rs. 1.74 crores and savings bank deposits by Rs. 83 lakhs, the rise in other classes of deposits being relatively small. The increase in total deposits has been further supplemented by substantial borrowings from other banks which have gone up by no less than Rs. 1.63 crores.

The increase in resources is not, however, sufficient to cover the rise in advances, which are up by Rs. 6.15 crores, almost the whole of which is accounted for by loans, cash credits and overdrafts. Such a sharp increase in advances has necessitated a reduction in investments by Rs. 1.16 crores.

CANARA IND. AND BKG. SYNDICATE

SHARP RISE IN PROFIT

THE Canara Industrial and Banking Syndicate Ltd. (Managing Director: Dr. T. M. A. Pai, Udipi) has had a successful period of working during the year ended 31st December 1956. The progress made by the Bank in earlier years has not only been maintained but further improved, which has enabled the Bank to strengthen its position. Its profit, which had crept up by Rs. 3.52 lakhs in 1952 to Rs. 5.96 lakhs in 1955, has advanced sharply to Rs. 8.95 lakhs in the year under review, thus establishing a fresh record in the Bank's history. In consonance with the impressive rise in profit, the Directors have strengthened the reserves by adding Rs. 3.25 lakhs to the various reserves, as against Rs. 1.50 lakhs transferred a year ago, and raised the distribution to the ordinary shareholders from 12½ per cent. to 15 per cent. by stepping up the bonus part of it from 2½ per cent. to 5 per cent. It will be recalled that last year the distribution was raised from 9 per cent. to 12½ per cent. by increasing the dividend part of it from 9 to 10 per cent. and paying an additional cash bonus of 2½ per cent.

The following table presents the salient features of the Bank's profit and loss account and balance-sheet for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

Cash	11.6	12.3	14.0	15.3

With the sum of Rs. 3 lakhs added from the year's profit, the Bank's reserves have been considerably strengthened in the last few years. There has also been a progressive rise in the Bank's deposits and during the year under review alone they have grown by Rs. 1.79 crores, thus more than doubling themselves in the last four years. The Bank has been able, according to the Chairman, whose speech at the annual general meeting is published elsewhere in this issue, to build up its deposits during the year, "without an undue increase in interest rates." This has been done by tapping a larger number of sources. The fixed deposits as at the end of the year are higher by Rs. 1.17 crores, savings bank deposits by Rs. 36 lakhs and current and contingency accounts by Rs. 25 lakhs.

Consequent on this expansion in deposits, the Bank has been able to reduce its borrowings from other banks by Rs. 28.56 lakhs and to utilise more of its funds to raise its advances by Rs. 1.18 lakhs and at the same time strengthen its liquid assets. The ratio of advances to deposits has gone up only slightly, with a corresponding fall in that of liquid assets to deposits.

PUNJAB NATIONAL KEEPS UP PROGRESS

SMART INCREASE IN EARNINGS

THE audited accounts of the Punjab National Bank Ltd. (General Manager: A. M. Walker, Delhi) for the year ended 31st December 1956 disclose an impressive progress in its working. There has been considerable expansion in the turnover of business, as witness the increase of about Rs. 28 crores in the balance-sheet total, accompanied by a rise of over Rs. 77 lakhs in income. The upward trend in profit noted in the previous three years has gathered considerable momentum during the year under review with a jump from Rs. 64.41 lakhs to Rs. 87.85 lakhs, a record in the Bank's history, which exceeds the previous high of Rs. 70.23 lakhs touched in 1947.

A substantial part of the increase in profit has been absorbed by the provision for taxation, for which a sum of Rs. 27.50 lakhs has been set aside, as against Rs. 11 lakhs in the previous year, while the allocation to the various reserves has been slightly pruned from Rs. 29 lakhs to Rs. 27.50 lakhs. The entire sum set aside out of the profit for 1956 goes to the statutory reserve fund, while that allocated last year was made up of Rs. 5 lakhs transferred to the reserve fund and of Rs. 24 lakhs to the contingency reserve. The dividend has been stepped up from 14 per cent. to 16 per cent., following the increases made in the previous four years.

The following comparative table gives an idea of the Bank's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	4,01.62	3,43.20	2,75.64	2,45.29

Investments	48,30.10	45,64.58	35,37.50	36,14.27
Cash (including money at call and short notice)	12,39.24	9,28.12	11,26.23	7,47.49
Balance-sheet total	141,03.20	112,88.79	91,16.27	79,78.22
Ratio to deposits of—	%	%	%	%
Advances	51.6	46.6	42.8	39.1
Investments	45.4	50.6	46.8	55.3
Cash	11.6	10.3	14.9	11.4

The impressive rise in the Bank's income during the year is due, in no small measure, to the increase of Rs. 58.42 lakhs in interest and discount earned and of Rs. 19.76 lakhs in commission and exchange. It will, however, be noted from the table that rise in income from interest and discount during 1956 is less than that noted in the previous year. Similarly, the pace of increase in outgo by way of interest paid and expenses has also slowed down a bit during the year under review, resulting in a sharper rise in profit as noted above.

The salient features of the balance-sheets given in the table above indicate that the Bank's business has grown sizably in many directions. Despite the keen competition among banks to attract deposits, the Bank has been able to raise its deposits by no less than Rs. 16.26 crores, of which the share of fixed deposits alone (at Rs. 48.07 crores) is Rs. 8.21 crores. Savings bank deposits have gone up by Rs. 4.57 crores to Rs. 28.12 crores and current accounts, contingency accounts, etc., by Rs. 3.51 crores to Rs. 29.81 crores. Notwithstanding the increase in deposits, the Bank's borrowings from other banks show an increase of Rs. 1.07 crores. As against the expansion of Rs. 17.33 crores in deposits and borrowings, the rise in advances is only Rs. 12.84 lakhs, of which loans, cash credits and overdrafts account for Rs. 11.71 crores and bills purchased and discounted for Rs. 1.13 crores, with the result that the Bank has been able to keep the ratio of advances well below the general average for all Scheduled banks and at the same time strengthen its liquid assets considerably, as witness the rise of Rs. 2.66 crores in investments and of Rs. 3.11 crores in cash balances.

FREE WORLD COTTON PRODUCTION IN CURRENT SEASON

SIZABLE REDUCTION ANTICIPATED

ALTHOUGH the cotton situation in many countries remains problematic, the global situation, according to the latest *Monthly Review* of the International Cotton Advisory Committee, Washington, appears to be more promising than for several seasons past. This improved outlook, according to the *Review*, may be attributed to three factors. First, the increment to the carry-over stock at the beginning of the current season was the smallest ever recorded since 1951. Secondly, free world consumption has been steadily increasing and is presently expected to set a new record this season, aggregating about 29.3 million bales (of 478 lbs.). Thirdly, cotton production, estimated at 29.0 million bales, is somewhat lower than what was expected earlier in the season and represents a decline of nearly 2 million bales from the 1955-56 level. Total supply during the season, that is, production plus stock, is placed at 51 million bales and disappearance is expected to aggregate 30 million bales, leaving a balance of 21 million bales to be carried over to the next season.

It may be mentioned that the United States and Mexico were mainly responsible for the decline in output, their respective shares in the reduction being 1.5 million bales and 500,000 bales. Acreage controls in the former and credit restrictions in the latter were instrumental in bringing down production. Acreage and production are also lower in Brazil, Egypt and Pakistan. India, Sudan and Syria are the only countries where cotton plantings have registered an increase. While record crops are expected in the latter two countries, in India earlier crop ideas have been scaled down considerably.

Output in the U.S.

In the U.S., cotton ginned up to mid-January aggregated 13.1 million bales and total supply, that is, production plus carryover is estimated at over 27 million bales. The supply of Middling and higher grades this season is about 14 per cent. larger and strict Low Middling and lower White grades about 5 per cent. lower than a year earlier. The sharpest increases in the staple supply were in cotton of staple length 31/32" to 1.1/32". Crop prospects outside the U.S. this season have deteriorated in recent months due mainly to adverse weather in India and also, to a certain extent, in Brazil. Aggregate production in the free world outside the U.S. in the current season is expected to aggregate 15.9 million bales, as compared with last season's 16.2 million bales. The trend towards increased acreage in several of the major cotton-growing countries has been reversed and total acreage in the free world outside the U.S. is expected to be a million acres less than last season. The following table gives the estimated acreage, yield and production figures for the various countries of the free world, along with those of the communist countries.

Country	Acreage (1,000 acres)		Production (1,000 bales)	
	1955-56	1956-57	1955-56	1956-57
United States	16,928	15,051	14,080	13,150
Other free world countries	47,171	46,279	16,180	15,900
Of which:				
Mexico	2,575	2,040	2,240	1,740
India	20,230	21,000	3,880	4,200
Pakistan	3,537	3,384	1,425	1,320
Turkey	1,547	1,532	600	600
Syria	615	675	410	457
Egypt	1,885	1,716	1,541	1,470
Sudan	598	765	440	545

Others	6,806	6,753	2,425	2,488
Total Free World	64,099	61,930	30,860	29,050
U.S.S.R.	5,100	5,100	5,300	5,800
China	10,000	10,500	3,300	3,500
E. Europe	495	495	122	140
Total Communist Countries	15,595	16,095	8,722	9,440
Total World	79,694	78,025	39,582	38,490

Country-wise, the second official estimate of the 1956-57 cotton acreage in Pakistan is 3,384,000 acres which is about 4 per cent. below the previous season's figure. Yields have reportedly been affected by flood and pests in some areas. The latest official estimate places output at 1,320,000 bales (of 478 lbs.) about 100,000 bales lower than last season's final outturn. In India, as is well known, yields in several cotton-growing areas have been considerably affected by adverse weather and the earlier expectation of a markedly better crop this season aggregating 5.4 million bales (of 400 lbs.) have been found to need drastic revisions. Current crop estimates centre round 4.9 million bales.

In the Middle East, aggregate production is expected to equal last season's level. In Egypt, however, output of cotton this season is expected to be lower, by 70,000 bales, than the previous season. The third official estimate places the season's crop at 1,470,000 bales, comprising 425,000 bales of Karnak, 165,000 bales of Menoufi (including Giza 45), 257,000 bales of Giza 30 (including Giza 47 and Dendara), 566,000 bales of Ashmouni and 57,000 bales of other varieties. This compares with the aggregate 1955-56 output of 1,541,000 bales.

In Other Countries

Acreage, yield and production in Turkey are expected to show little variation. Favourable weather condition has resulted in an increase in cropped area in Syria and production is expected to aggregate 450,000 bales, about 10 per cent. higher than last season and an all-time record. No change in production is anticipated in Iran and Iraq. The Sudan, one of the leading producers of long-staple cotton, is expected to harvest an excellent crop this season. Acreage has been expanded by about 28 per cent., yield is expected to be high and quality excellent. Preliminary estimates of production are as high as 545,000 bales, as against only 440,000 bales last season.

Due to extensive insect damage and reduced acreage in Sao Paulo variety, production in Brazil is bound to register some reduction from last season's level of 1.7 million bales. Although there was water scarcity in Peru earlier this season, crop prospects have brightened with the improvement in weather conditions. Acreage remains almost unchanged and output is expected to be at least maintained at last season's 450,000 bales. Although average sown to cotton is higher in Argentina, due to the earlier drought, it is doubtful if a proportionate increase in output will materialise.

Coming Season

With only four months left for the commencement of the 1957-58 season, attention is now focussed on production prospects for the coming season. According to the *Review*, a factor of vital importance in this connection is the Soil Bank programme in the United States. This programme was not enacted until late in May 1956 and, therefore, had only a minor effect on production this season. Also, much of the land put into the Soil Bank was in Texas and would have been abandoned anyway due to drought. Next season, however, the effect should be much greater. Growers have appeared generally more receptive to the programme as a result of the prolonged drought in the south-western sections of the cotton belt, but more recently there has been rain in these areas. Most observers of the situation have felt that the number of acres taken out of production may not be as high as provided for by the Department of Agriculture. Nevertheless, till 1st March, which was the deadline for putting cotton land into the Soil Bank, 2.3 million acres had been committed and there was a strong possibility that this total would grow to 3.0 million acres by the time all applications had been processed. Compared to last season's cultivated acreage, the acreage already committed ranges from 25 per cent. or higher in the south-eastern States, to 13 per cent. in Mississippi, 10 per cent. in Texas, and 6 per cent. in California. At present, observes the *Review*, it appears unlikely that the Soil Bank could cause a reduction of more than 2.0 million bales.

In Mexico, it was previously thought that drought and shortage of irrigation water would seriously limit cotton production in some areas next season. Heavy rains in Matamoros, Reynosa, Nuevo Leon, Coahuila and other northern areas in mid-February, however, have improved the production outlook, and planting restrictions on cotton have been relaxed recently.

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Bill Collection—Letters of Credit—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

* * * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

(Incorporated in Travancore-Cochin with Limited Liability).

Head Office: PALAI, TRAVANCORE

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

COTTON INDUSTRY AND GOVERNMENT'S FINANCIAL POLICY

REACTIONS TO RESTRICTIVE TRADE PRACTICES ACT

From Our Special Correspondent

MANCHESTER, *9th April*

PRODUCTION of raw cotton in Commonwealth cotton fields last year reached the record total of 1,279,000 bales—50,000 bales more than the previous best, Lord Derby, President of the British Cotton Growing Association, told the annual meeting in Manchester. Larger crops could reasonably be anticipated in the next few years, he said. In his absence through illness, Lord Derby's remarks were read by Mr. Richard Brooks, Chairman of the Association. "For the last three years, raw cotton production had averaged 1,250,000 bales—40 per cent. more than the pre-war best. There is no purpose in asking Governments to make larger crops available unless buildings and machinery are provided so that the crops can be processed efficiently and expeditiously," said Lord Derby. "Larger crops can reasonably be anticipated in the next few years. Accordingly, in the countries where the main or sole responsibility of ginning, baling, etc., falls on the Association, considerable further capital expenditure will in all probability have to be undertaken."

MANCHESTER LETTER

Strikes Hit Textiles?

A warning that sales of textile goods may be adversely affected as a result of the engineering and shipbuilding strikes in Britain was given by Sir John Grey, Chairman of John Grey Ltd., the Burnley weaving firm, at the annual meeting. It had been estimated, he said, that spending power had been reduced by £25,000,000 by the strikes. "This has a rapid effect on purchases of consumer goods such as textiles," he continued. "In this age when people mortgage their future by indulging in extensive hire purchase arrangements, the effect of sudden unemployment on the family income causes a much more rapid depreciation in spending power than in times gone by."

Dealing with the imports of large quantities of cotton goods from the Far East, Sir John declared that, instead of Britain sending delegations abroad, we should invite representatives of foreign textile-producing countries to come here to discuss the position. "I have spent many years of my life in dealing with the relationship between India and ourselves and other countries from the other angle," he said. "We used to be frustrated in sending our goods to their countries and we had to send out delegations to try and convince them that we were doing nothing against their interests. Now, I think we should be receiving delegations from these countries which are seeking to continue the enormous advantages they have gained."

The week on which Budget day falls presents an annual problem. It can be hoped that Mr. Thorneycroft, as Chancellor of the Exchequer, will meet with less disapproval in Lancashire than Mr. Thorneycroft, as President of the Board of Trade, encountered during his term of office. Each year, the economic survey drawn up by the Government prior to the Budget provides the background to the scene which unfolds when the Chancellor introduces his financial proposals. Merely to record the continued decline in output of textiles is of little value to an industry which is fully conversant with the statistics relating to its production, employment and overseas trade. Even the slightly more encouraging prospects, added as a "sweetener," come as no surprise to Lancashire traders, who are kept fully up to date with developments from many sources.

The Government itself can claim little, if any, credit for its efforts on Lancashire's behalf over the past 12 months. Despite a variety of claims for attention, the approaches made to Westminster have met with an invariable refusal to act on behalf of textile interests. More and more traders believe that those who advocate "do-it-yourself" are on the right track.

Common Market

The latest example of the Government's inability to size up the attitude of the rank and file in industry centres around the controversial issue of the European common market. Individual spokesmen, some of whom are leaders in the official textile trade associations, have given lip service to the plan, but opposition among the membership of the organisations is strong, if not always vocal. It is difficult to assess the full strength of the antagonism to this vital development but it covers a very wide cross-section of the industry.

At the same time, there is clear evidence that the Government intends to support the scheme and it would be unrealistic to assume that it will not come into operation at some later date. Advance warning of its introduction has been given and those firms with foresight must be making their plans accordingly, however much they feel the liberalisation of trade may react against their interests.

Trade Agreements

It is not surprising that little has been heard of the progress made in dealing with the 1,200 or more agreements which have been registered under the Restrictive Trade Practices Act. The amount of work facing those responsible for investigating these systems which private industry has built up to protect itself over the years must be extremely formidable. As was generally forecast when legislation was introduced, it will take time to sift those schemes which need adjustment or abolition from those which gain approval.

The cotton industry itself is split in twain on the subject—those sections which have failed to secure unanimity on the subject being generally antagonistic to those which have maintained a firm front in the face of opposition. Mr. Fred Bottomley, Chairman of the Cotton Yarn Doublers' Association, referred to the considerable amount of work done by the organisation in connection with the registration of the agreement in this branch, when he addressed the annual meeting. "It is right that the Government should seek to satisfy itself that the public is not held to ransom as a result of collective price-fixing," he said, "but I do not think anyone could level such a charge at our scheme." Voicing the opinion of those sections of the industry which subscribe to these arrangements, Mr. Bottomley contended that the overall effect of the abolition of price regulation would merely transfer the profits from the millowners to their customers and the retailers, leaving prices to the public unchanged. Like many a textile producer, he feels that the share of the final price taken at the retail end is out of all proportion to the margin enjoyed by the firm which has a vast amount of money invested in buildings and machinery.

Productivity Courses

While the highly important function of the Cotton Board as a mouthpiece and channel of communication on behalf of the industry has received due attention, its other assets should not be forgotten at this time when the structure of the organisation and the future of the chairmanship are under keen discussion. Over the years, valuable facilities of several kinds have been put at the disposal of the trade and there would be general regret, if they were withdrawn now. One of the Board's early post-war successes was in stimulating interest at mill level in the modern practices of redeployment, work-study and the newly-found panacea—automation. The courses held at the Productivity Centre have enabled hundreds of students of all grades to secure tuition in the most up-to-date methods of scientific management.

A significant development at the end of last year was the agreement in the spinning section establishing new and improved wage structures, designed to pave the way for lower costs through the greater use of work-study. At the beginning of 1956, courses aimed at training management accountants were introduced by the Cotton Board. Now they have been reorganised in the light of the experience gained and a new series of instruction has been drawn up catering for weavers, spinners and the special needs of the small manufacturing unit. The sessions, lasting for four or five days, will deal with budgetary control of labour, material and overhead expenses. The setting up of production targets for costing purposes and forward planning will be considered and ideas for guiding output into more profitable channels will be suggested.—*All Rights Reserved.*

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited, give in the prescribed manner the information required of banking companies by the Companies Act, 1948, and on the basis therein authorised give, subject to Note I and to the corresponding note on the accounts of The National Bank of Scotland Limited, a true and fair view of (*a*) the state of the Bank's affairs as at 31st December 1956 and of its profit, ascertained as indicated in the accounts, for the year ended on that date and (*b*) the state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts of the Bank are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October 1956 and the accounts of the subsidiaries are made up to 1st November and 30th September 1956 respectively.

CALCUTTA, 27th March 1957.

PRICE WATERHOUSE & CO., Chartered Accountants.

J. A. BROUGH & E. S. TIBBETTS, Chief Managers (Eastern Branches)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1956 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1956 with the books and accounts as kept at the Chief Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211 (1), (2) and (5) and Section 227 (5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Manager's (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the nine Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1956 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1956.

PRICE WATERHOUSE & CO., Chartered Accountants.

CALCUTTA, 27th March 1957.

OIL CONSUMPTION RAPIDLY MOUNTING

PROBLEM OF TANKER-SHIPPING

[The world of shipping is going tanker-minded of late. A recent striking tendency among a number of countries is to build giant tankers, called super-tankers, to transport goods and commodities. The importance of these tankers is especially great in a commodity like oil, the world consumption of which has been mounting rapidly. In view of this importance, the following article on tanker shipping and oil supplies, contained in the latest issue of Index, *the Svenska Handelsbanken Monthly Economic Review, will be read with interest.*—ED.]

OWING to the Suez crisis, the problem of tanker shipping capacity has come to the fore with dramatic suddenness. The necessity of taking the long route round the Cape has resulted in a substantially increased demand for tonnage. True, the United States has made available a number of tankers from her reserve fleet and a number of shipping companies have put back into service ships they had laid up as outmoded, but this has not appreciably relieved the shortage of tonnage. Tanker freight rates have soared in recent months and far outstripped the earlier peak quotations during the Korean War. The prices for new and second-hand tanker tonnage have also registered fresh peaks. The shipbuilding industry throughout the world is enjoying an unprecedented boom. Orders have accumulated on such a scale that only a few big yards can accept new orders for delivery before 1960.

At the time of the outbreak of the First World War, the world's tanker fleet comprised no more than a few hundred vessels with an aggregate cargo capacity of barely 2 million tons d.w., corresponding to 3 per cent. of the world's total merchant fleet. A quarter of a century later, in 1939, the tanker fleet had grown to 16.6 million tons d.w. and corresponded at the time to 17 per cent. of the world's total mercantile marine. Today it comprises nearly 3,600 vessels with a combined carrying capacity of about 45 million tons d.w. Thus the tanker fleet is today over 2½ times as large as it was before the Second World War, and its share of the world's total merchant tonnage has grown to close on 30 per cent. The tanker fleet's carrying capacity has gone up still more rapidly, owing to the improved speed and efficiency of the vessels. A newly built tanker has probably nearly 50 per cent. greater capacity than a vessel of equal size built before the war.

The fact that there has nevertheless been a shortage of tanker tonnage is attributable to the rapidly mounting consumption of oil. Moreover, the production of oil has shifted to regions lying further away from the important consumption centres. World output and consumption of crude oil has risen from about 100 million tons in 1920 to, in round figures, 800 million tons per annum at the present time. Since pre-war days alone, the extraction of oil has been almost tripled, but over half of the world production is consumed by the oil-producing countries themselves. Of the approximately 350 million tons that enter world trade, the greater part is shipped by sea. Reckoned in tons, oil nowadays represents no less than 45 per cent. of seaborne international trade, as against 14 per cent. at the beginning of the 1930s.

The United States is now, as formerly, both the leading producer and the leading consumer of oil. Her oil production increased from 164 million tons in 1938 to 335 million tons in 1955. During the last few decades, however, the importance of the Middle East as the world's source of oil has risen rapidly. In 1955, the output of oil in that region was 163 million tons, which compared with 1938 implies a tenfold increase. The consequence has been that the share of the Middle East in the world's oil production rose from 6 per cent. in 1938 to 21 per cent. in 1955, while at the same time the United States' share fell from 63 per cent. to 44 per cent. Since two-thirds of the world's known oil resources are estimated to lie in the Middle East, it is expected that the importance of that region as a source of oil will continue to increase.

Shifts in the localisation of production have, of course, affected international trade in oil. While the share of the Middle East in Europe's oil imports has gone up from a pre-war 20 per cent. to 80 per cent., the share of American oil has declined correspondingly. The shift has contributed to the increase in the demand for tonnage. The bulk of the Middle East oil comes from the Persian Gulf. The distance by sea from there to Great Britain, for instance, via the Suez Canal, is about 6,500 nautical miles, or about 1,700 nautical miles longer than the voyage from the Mexican Gulf to Britain and 2,300 nautical miles longer than from Venezuela to Britain.

There are many indications that the demand for tanker tonnage will continue to increase even after the reopening of the Suez Canal to traffic and the re-employment of the now cut-off pipelines.

The world's energy requirements are rapidly rising. The importance of coal as a source of energy will in all probability decline. Atomic power is hardly likely to bring about any radical change in the energy-supply situation within the next 10 years. Accordingly, it can be assumed that the world's oil requirements will rise by at least 70 per cent. in the next 10 years. In particular, Western Europe's oil consumption will probably rise sharply. Reckoned per head of the population, it is still only one-ninth of the consumption in the United States.

On the other hand, the expansion of the tanker fleet may also be expected to continue. According to *Lloyd's Register*, at the end of December 1956, there were 249 tankers aggregating 5.2 million tons d.w. under construction in the world's shipyards. At the same date, the stock of tanker orders in hand reached a new record level, estimated at 20—25 million tons d.w. Notwithstanding the shortage of steel and labour, it is likely that deliveries can be increased during the next few years. It is estimated that 4.5 million tons d.w. will be delivered this year, as compared with 4.0 million tons d.w. in 1956. The vessels due to be added to the world's tanker fleet up to 1960 are expected to correspond to nearly 50 per cent. of the present tonnage. If, moreover, the increasing efficiency is taken into account, the additional tonnage may be estimated to be equivalent to about 60 per cent. of the existing tanker fleet.

In spite of this, international shipping circles regard the present plans for expansion as inadequate. It is presumed, therefore, that a considerable volume of new orders will be placed within the next few years. It has been reported, for example, that the American Government contemplate building about 300 tankers in the 60,000-ton d.w. class. This would add 18 million tons d.w. to the world total. For the moment, there is a private American shipbuilding programme involving 30 tankers of between 29,000 and 100,000 tons.

A noteworthy feature of the development is the growing interest in ever larger types of vessel. The tendency towards bigger ships has been noticeable for some time, though as yet the number of "super-tankers" is relatively limited. Only 20 tankers with a capacity of 38,000 tons d.w. or more are in service at present. However, in the middle of 1956, there were under construction or on order 108 vessels of the size class in question, 12 of them being of 50,000—100,000 tons d.w.

The big vessels have both advantages and disadvantages. Building costs reckoned per ton become far lower, as do also the operating costs. On the other hand, the field of utility of the really big vessels is fairly limited. There are at present only a few ports in the world capable of accommodating super-tankers of 80,000 tons. In Europe, probably only 3-4 ports could do so without difficulty. An expansion of port facilities and the deepening of entrance fairways would require huge capital investments and take a long time. Finally, there are only a very small number of yards that can build and repair such large vessels. Consequently, the opinion that tankers should not exceed 60,000 tons d.w. is rapidly gaining ground.

SUGAR INDUSTRY AND POWER ALCOHOL MANUFACTURE

GREAT SCOPE FOR AUGMENTING INDUSTRIAL USES ENVISAGED

ANYONE who has cared to follow the developments in the white sugar industry in India since its birth twenty-five years ago will fully admit that the industry has all along been suffering from a rigid cost structure, thanks to heavy load of taxes, high prices of sugarcane and other materials, and heavy transport charges. Indeed, it is one of the industries which have been nursed at a great sacrifice by the consumer. Notwithstanding the long period of protection enjoyed by the industry, prices of sugar continue to be high in all conscience. One of the most effective means of lowering the level of prices lies in the successful utilisation of the several by-products of the industry, other means being reduction in the price of cane and downward revision in taxes—Central and State. The most important of these by-products is molasses, the primary raw material in the manufacture of power (absolute or dehydrated) and industrial (rectified and denatured spirit) alcohol.

For every ton of sugar produced, the sugar factories can get Rs. 2.70 by way of sale of the resultant molasses to the alcohol distilleries on the basis of the officially depressed price of about Rs. 6.75 per ton. On this basis and taking the average yield of molasses at 40 per cent., the total revenue that will accrue to the sugar industry, if the 90 per cent. of its molasses output is fully utilised for the manufacture of alcohol, will be Rs. 50 lakhs. This will be no less than Rs. 2 crores, and even more, if a proper price is fixed by the State Governments for this commodity. Apart from assisting the sugar mills to sell economically the surplus molasses produced by them, the development of power alcohol industry is imperative, considering that power alcohol serves as a vital indigenous source of motor fuel and has even greater importance as a raw material for manufacturing a variety of chemical products, including plastics like polyethylene, cellulose acetate and polyvinyl chloride, several esters, some solvents like butanol, ether and acetone, synthetic rubber and several important organic chemicals. It may be interesting to note here that power alcohol finds use in alcohol lamps, anti-freeze for automobile radiators, bronzing liquids, cleaning fabrics, glass, etc., in disinfectants, dyes, enamels, etching, for scientific purposes, inks, lacquers, oil-refining, paints, varnishes, perfumes, soap, soldering fluxes, waterproofing compounds and the like.

Planned Expansion

The vital role which the power alcohol industry plays in the country's economy thus was impressively brought out by Mr. Manubhai Shah, Minister for Heavy Industries, Government of India, in the course of his address at the thirteenth annual meeting of the All-India Distillers' Association, held at New Delhi recently. Mr. Shah declared that the alcohol industry was of great national importance and its development had been accorded a high priority in the second Five-year Plan. The Plan, it may be recalled, envisages a marked expansion in output of alcohol from 15.6 million gallons in 1955-56 to 30.0 million gallons (18.0 million gallons of power alcohol and 12.0 million gallons of industrial alcohol). For achieving this target, the rated capacity required is estimated at 36.0 million gallons, a rise of 8.90 million gallons as compared with 1955-56.

The production target is well within the reach of fulfilment, inasmuch as the alcohol industry will be assured of adequate supplies of molasses. On the basis of the modest target of 2.25 million tons of sugar annually fixed in the second Plan, the total quantity of molasses that will be available may be estimated at over 900,000 tons. The whole of this quantity can be utilised to produce about 50 million gallons of alcohol in the next three of four years. Mr. Shah did well to emphasise this and made an "earnest appeal" to all the alcohol distillery owners and industrialists to come forward fully to utilise the additional production of molasses—wherever possible—by the installation of new factories for the total utilisation of the local molasses, or adding new distilleries attached to new sugar factories, so that the entire quantity of molasses can be put to its most suitable use, namely, production of power and industrial alcohol. To quote him:

"Molasses are a valuable by-product of the sugar industry and we can, therefore, ill afford to lose or waste such a product. As a result of this effort, India can well look forward to being the country with perhaps the highest production of fermentation alcohol in the whole world in the coming decade." Looking to the present production of 15 million gallons of alcohol, it should be the endeavour of all those engaged in this industry to strive for a threefold increase from the present level of production of power and industrial alcohol, that is, to reach the target of 45 million gallons by 1960-61. Thus, apart from the greater utilisation of existing capacity, considerable additional capacity of the order of 15 to 20 million gallons per year may have to be established in the near future and I have no doubt that, with the co-operation of your Association and the enterprising people in the country, this would be possible of achievement."

The aforesaid observations of Mr. Shah assume special significance, especially considering the huge idle capacity of the alcohol industry. The aggregate output of alcohol during 1956 was not more than 14.4 million gallons (10.2 million gallons power alcohol and 4.2 million gallons industrial alcohol), which represents a bare 50 per cent. of the actual installed capacity of 29.4 million gallons (15 million gallons power and 14.4 million gallons industrial). The substantial gap between installed capacity and actual output must be attributed to three disquieting factors, namely, lack of adequate and regular supplies of raw material, transport difficulties and inadequate offtake of the finished product.

Vexatious Controls

It is, however, not so much these factors as the innumerable vexatious controls over the disposal of molasses and alcohol exercised by the State Governments in pursuance of the object of making prohibition a success that have really been hampering the progress of the alcohol industry. Unless these restrictions are released, the alcohol distilleries will continue to be confronted with the difficulty of securing regular and adequate supplies of molasses from the sugar factories. And the huge stocks of molasses accumulating with the mills will persist as a standing problem to the mills.

If the alcohol industry is to be set on a sound and solid footing, it is imperative that the abovementioned handicaps should be removed. Equally imperative is the need for augmenting consumption of alcohol. Stressing this need, the Minister for Heavy Industries stated that, as the country was committed to a policy of prohibition, the present level of consumption of alcoholic beverages was likely to decrease in the coming years. He said: "The consumption of potable spirits is naturally very small (4 to 5 million gallons) in terms of the total alcohol that can be produced in the country. We have, therefore, concentrated on the utilisation of alcohol as motor fuel by admixture with petrol in the proportion of 20 per cent. This has made it possible to absorb more than 10 million gallons of alcohol per year, particularly in parts of Northern India. While this is a very creditable achievement, we should try to utilise alcohol for better industrial and productive uses. No doubt 20 per cent. of the total petrol consumed in the country could be replaced by power alcohol amounting to about 50 million gallons of power alcohol per year. However, this cannot be considered its best utilisation."

Scope for Raising Consumption

In this connection, Mr. Shah revealed that the Government had made a careful assessment of the scope for raising consumption and had several proposals under consideration for setting up industries based on industrial alcohol. With the setting up of these industries, the consumption of industrial alcohol is expected to go up from the present level of 4 million gallons per annum to 30-35 million gallons by 1960-61. The Minister informed the meeting that discussions for establishing a 20,000-ton synthetic rubber plant in Uttar Pradesh, which can consume 10 to 12 million gallons of alcohol every year, will be finalised soon. According to him, this unit will come into operation at an early date. Two factories for the production of polyethylene also have been licensed. These will require three to four million gallons of alcohol per year. The expansion of the manufacture of acetate rayon will need four to five million gallons, and substantial quantities will be required for the production of acetic acid, ether, acetone, D.D.T., etc. There is more scope for production of acetic acid, acetate rayons and other allied products throughout the country. At the same time, it may be necessary to continue the use of power alcohol as motor spirit to the extent of 10 to 15 million gallons annually for several years to come. This will have to continue as a stop-gap arrangement to cover any lack of balance between the production of and demand for alcohol in other industries in the country.

Price Must Be Low

While the importance attached by the Government to the need for increasing consumption of alcohol is welcome, the actual progress in this direction will depend on the price at which alcohol, whether as motor spirit or as an industrial raw material, is made available. Unless the price is sufficiently low, it will not, as Mr. Manubhai Shah rightly remarked, be an economic substitute for other raw materials, like petroleum refinery gases, in the manufacture of important products such a synthetic rubber and polyethylene. A reduction in the price can be brought about largely by lowering the cost of production, as suggested by Mr. Shah, through improvements in the manufacturing process. Alluding to this subject, the President of the All-India Distilleries Association pointed to the difficulty experienced by some distilleries situated at a distance from sugar factories and to the differences in the ex-sugar factory prices for molasses; power alcohol is at present paid for at a uniform rate. This point was admitted by Mr. Shah as a valid one. He revealed that the Alcohol Committee had examined the issue in considerable detail and recommended a price of alcohol based on a reasonable cost of production, taking into account a fair return on investment to the producer and the incidence of the average freight on molasses incurred by different units. Mr. Shah did not, however, disclose the reaction of the Government to the recommendation; he merely said: "We may hope that this question will be satisfactorily solved at an early date."

In the course of his speech, the President of the Association urged the Government to constitute a development council for the alcohol industry. Referring to this plea, the Minister revealed that the Alcohol Committee had also recommended the formation of such a Council for fermentation industries. He assured the Association that the recommendation would receive the "most sympathetic consideration from the Government and we will soon have some representative body to look after the development of the fermentation industries in the country."

AUTOMOBILE PRODUCTS OF INDIA LIMITED

CONSIDERABLE EXPANSION IN ACTIVITY: STEADY DEMAND FOR LAMBRETTAS

MR. M. A. CHIDAMBARAM REVIEWS COMPANY'S PROGRESS

ADDRESSING the seventh Annual General Meeting of Automobile Products of India Ltd., held at Bhandup, Bombay, on Wednesday, 17th April 1957, the Chairman, Mr. M. A. Chidambaram, pointed out that the Company's effort to extend its activity had met with considerable success and all the schemes were progressing on sound lines. He indicated that there was a steady and rising demand for the Lambretta motor scooter. He also felt confident of the Company being able to implement the manufacturing programme it had submitted to the Government; in fact, the Company was now ahead of the schedules.

The following is the text of Mr. Chidambaram's speech:

"It gives me great pleasure to welcome you all to the seventh annual general meeting of the shareholders of the Company. The report and balance-sheet for the year ending 31st July 1956 have been in your hands for some time and with your permission, I shall take them as read.

Rise in Net Profit

"During the year under review, your Company earned a net profit of Rs. 4,73,393-1-5. After adding the previous year's profit of Rs. 91,112-9-3 and excess provision for taxation written back of Rs. 89,681-4-0, a sum of Rs. 6,54,186-14-8 has been carried forward as profit in the current year. Out of this amount, the Directors have transferred a sum of Rs. 90,000 to development reserve and have proposed to pay the balance of the arrears of dividend on preference shares for the years 1953, 1954 and 1955. It is also proposed to pay dividend on preference shares for the year which has ended on 31st July 1956. Thus, no preference dividend would be in arrears. This would absorb a sum of Rs. 5,60,000 and a sum of Rs. 4,186-14-8 will be carried forward as balance in the profit and loss account. I hope hereafter it will be possible for the Company not only to continue payment of dividend on preference shares, but also to resume payment of dividend to the ordinary shareholder.

"Your Company's effort to extend its activity has met with considerable success and all the schemes are progressing on sound lines. I shall now give you a resume of the various activities in which your Company is engaged.

Brake Lining Plant

"The machinery was received towards the end of 1955 and was installed and trial operations commenced towards the close of the financial year. Normal production was established from the beginning of the new financial year and as regards quality, the product has been found comparable in every respect with the American product. Selling arrangements have been concluded with Messrs. Firestone Tyre and Rubber Company of India Private Ltd., and our experience in the few months indicates that we will have a rising volume of demand and a substantial share of the market.

Lambrettas

"I have indicated in my speech last year that the marketing and distribution of the Lambretta motor scooter had been supported by a well planned advertising and sales promotion programme. This helped us to establish a steady and rising demand for the vehicle, which has now been recognised in India as a very economical and reliable form of transport for the individual, for the small trader and for the large commercial and industrial concerns. We had indicated to the Government that we would proceed to implement our phased manufacture once we establish a steady demand for the new product in the country, at any rate not later than the end of the first year. Orders have been placed through our Associates in Milan for all the machine tools, jigs, small, standard and special tools to implement the first phase of our approved manufacturing programme. Shipments of the above machine tools, etc., have started and all the equipment will be in India in good time. We have also concluded an arrangement with Messrs. Kirloskar Oil Engines Limited to manufacture the engine and transmission unit on a five-year phased programme period. By this arrangement, a considerable responsibility, which should have normally rested on the Company, has been shared with Messrs. Kirloskar Oil Engines Limited which is a well-known firm with considerable experience in the manufacture of engines, machine tools and other similar products. This arrangement has the Government's concurrence.

Meadows Diesel Engines

"The assembly line and test house capable of assembling and testing 20 engines per day have been installed during the year. We have been negotiating with two primary manufacturers of commercial vehicles for fitment of Meadows 330 engines as original equipment. One of them have accepted the engine and vehicles fitted with our engines are currently under test with the other. Agreements will be entered into with the primary manufacturers as soon as the tests are over and the engines approved by them. As the Meadows is a recognised engine and is fitted as original equipment on such well-known vehicles as Guy, Scammel and other vehicles in the U.K., we believe that the tests will be only a matter of formality since the engine is already a proven one.

"Our Director, Mr. P. Matthen, was deputed along with our Chief Planning Engineer, to order the required machinery for the first and second year manufacturing programmes. Orders for machinery for a value of about Rs. 26 lakhs have been placed in consultation with our Associates and we have already received about 40 per cent. of the machinery, which is in course of erection. I am glad to inform you that 19 out of 95 components to be produced in the first year are under manufacture. Your Company is confident of implementing to schedule the phased manufacturing programme it has submitted to Government. In fact, we are currently ahead of schedule.

Borg and Beck Clutches and Lockheed Brake Systems

"During the visit to the U.K. of Mr. Matthen, orders were placed for machinery for manufacturing Borg and Beck clutches. This machinery is expected to be received in the course of the next few months. Meantime, we have started assembly of Borg and Beck clutches out of C.K.D. components. Manufacture of rubber parts in the Lockheed brake system was established and samples have already been approved by our Associates in the U.K. The machine tools for the master cylinders, wheel cylinders, hose sleeves, etc., will be received in Bombay before the end of this year.

Building Programme

"It has been decided to expand the main factory building on the northern side to secure covered accommodation of about 20,000 sq. ft. to install the machinery and plant that will be arriving. The building is expected to cost about Rs. 2 lakhs and is expected to be completed before the next monsoon. It will also be necessary to erect warehouses at the service parts building to secure further accommodation of 30,000 sq. ft. The construction of this building, which has been sanctioned by the authorities, will be taken up only next year.

Finance

"As stated in my speech at the last annual general meeting, we obtained a loan of Rs. 12½ lakhs initially from the Industrial Finance Corporation of India to cover the brake lining plant. This was reduced to Rs. 9 lakhs to cover the actual cost of the brake lining plant and a second application was submitted to them for a further loan of Rs. 26 lakhs to cover the requirements of the other programmes. The Corporation has been pleased to grant a further loan of Rs. 21 lakhs, making in all Rs. 30 lakhs, and we have drawn Rs. 20 lakhs out of this loan so far. As indicated last year, our annual turnover will go up to Rs. 3 crores and it will, therefore, be very necessary for your Company to augment its liquid resources by another Rs. 25 lakhs to meet the needs of working funds. Our turnover has increased from about Rs. 77 lakhs in 1954-55 to about Rs. 134 lakhs in the year under review and on the basis of current sale volume, will be well over Rs. 2 crores in the year which will close on 31st July 1957. In order to maintain the progress of the Company, it will be very necessary to bring in the additional capital at an early date. A proposal to issue second preference shares for Rs. 5 lakhs in payment of the arrears of preference dividend has already been submitted to you and has elicited favourable response from many of the shareholders, for which I am grateful to them. It is proposed to approach the existing shareholders and the public shortly for a further capital of Rs. 20 lakhs.

Tariff Commission's Report on the Automobile Industry

"By a resolution dated 6th August 1955, the Government of India, Ministry of Commerce and Industry, had asked the Tariff Commission to inquire into and recommend the fair ex-works and selling prices of the automobiles under indigenous development. The Commission took the opportunity to make a comprehensive review of the industry since the time of its first report in 1953. Your Company submitted a memorandum to the Tariff Commission and appeared before the Commission at the public inquiry. We were also invited to a private hearing at which the programmes of the Company were discussed. We are grateful to the Chairman and the members of the Tariff Commission for the patient hearing they gave us and for the sympathetic consideration of our representation.

"The Commission submitted its report on 6th October 1956. It has estimated that the annual demand for motor vehicles is likely to increase by 1960-61 to 40,000 commercial vehicles and out of this demand about 70 to 80 per cent. is expected to be for the diesel-driven type. The Commission has also observed that for the effective implementation of the second Five-year Plan, the number of additional commercial vehicles required would be much higher, provided the various factors hampering the demand were removed. It has also recommended that priority should be given for the manufacture of commercial vehicles rather than passenger cars and out of the commercial vehicles, the maximum demand would be for diesel vehicles and every effort should be made to meet this demand and that additional capacity required for commercial vehicles should be installed in the existing units rather than new ones.

Commercial Vehicle

"These recommendations of the Commission were accepted in principle by the Government. The Commission has also emphasised the importance to establish within as short a time as possible the complete manufacture of the engine, transmission, rear axle, suspension and chassis members. The recommendations of the Tariff Commission should go a long way in establishing the complete manufacture of the commercial vehicle in India within the second Five-year Plan period.

"I would like to take this opportunity of tendering our grateful thanks to the Ministry of Commerce and Industry and the Development Wing (Auto), Government of India, whose help, co-operation and advice have been invaluable.

"Our thanks are also due to Mr. P. Matthen, his executives and all members of the staff and factory workers for the wholehearted efforts that they have put in for the expansion of the activities of the Company.

"In conclusion, I earnestly hope that the Company will maintain its progress, and will become a leading manufacturer in the automobile industry."

NATIONALISATION OF FOREIGN-OWNED PLANTATIONS IN KERALA

ECONOMICS OF THE PROPOSAL ANALYSED

By A Special Correspondent

WITH the reorganisation of States, Kerala became the largest plantation State in India. Its northernmost district lying well within 10 degrees of the Equator and with a rainfall varying from about 40" to 140" and suitable areas for planting at varying elevations up to 7,000 ft., Kerala provides the ideal home for a large variety of agricultural crops that are most efficiently grown on a plantation scale.

There are 97,500 acres under tea, 198,000 acres under rubber, 43,000 acres under coffee, over 40,000 acres under cardamom, nearly 200,000 acres under pepper, about 11,000 acres under orange, over 1,200,000 acres under coconut, 87,000 acres under arecanut, 30,000 acres under lemongrass and nearly 200,000 acres under cashew. The size of holdings under these various crops begins to diminish from the eastern ranges towards the coast. The zonal distribution of the different crops and certain historical features have contributed to the development of the different crops, some on a plantation basis and others as peasant crops. It is easy enough to see why lemongrass, cashew, coconut, arecanut and pepper did not develop on a plantation scale in India or in Kerala where these crops are practically concentrated. For one thing, there was not the experience or large-scale exploitation or management tradition in agriculture in Kerala. By the time the superiority of such plantation type development became familiar to the people, pressure of population had so risen as to prevent anyone acquiring sufficient land except under prohibitive prices.

Despite the heavy dependence on coconut and arecanut cultivation in Kerala, these two crops are very heavily protected. The import of arecanut is controlled and there is a duty of over Re. 1 per lb. on the imported nuts, probably the heaviest duty to be levied on any agricultural produce. The all-in protection on imported coconuts amounts to 72 per cent. of the value at the source. Pepper has traditionally been a catch crop of subsidiary importance on homesteads till recently and its recent prominence was entirely due to a temporary post-war shortage. Before the war, pepper was hardly a commodity of export. Cashew has been grown in Kerala for nearly 400 years as a boundary plant where the farmer could not plant anything else. Lemongrass is not an extensive crop and is raised by farmers who take advantage of a short crop in certain years. While they all contribute to the State's general economy, the crops that have reached the status of industrial assets are tea, coffee and rubber. The area under orange and cardamom is insignificant and holdings are too small to attract political attention. It is tea, coffee and rubber that have drawn political attention for three substantial reasons, namely, (1) the element of foreign ownership and management, (2) the size of the holdings and (3) the political importance of the large number of regularly employed workers.

During the past ten years a continuous struggle for hegemony over the workers has been waged by all the political parties. During this period, nationalisation of plantations has been one of the most frequently announced objectives of the communist party. This was subsequently modified to cover only the foreign-owned plantations and Mr. A. K. Gopalan's resolution in the Lok Sabha, which was rejected two weeks ago, was in keeping with the party's developing idea on the subject.

During the last 17 years, foreign interests in planting have been disposing of their holdings. There remains only one single proprietary non-Indian rubber property in the whole State. Although non-Indian managing agency firms manage a number of properties, the shareholdings in the companies are predominantly Indian. For some years, the non-Indian interests in rubber companies have been steadily falling. There are no foreign holdings in Kerala's coffee industry which is largely confined to the Wynaad. Out of a total area of over 199,000 acres under rubber, foreign ownership with sterling capital is less than 20,000 acres. Tea companies with sterling capital own about 66,000 acres. At current market value they may be worth anything from Rs. 23 to Rs. 28 crores. From just over 85,000 acres the State currently receives an income in terms of gross sales value of nearly Rs. 12 crores. From this the Central and State Government derives an income of Rs. 2½ crores, which excludes *panchayat*, municipal, professional, personal income-tax, education cess, land cess and other local levies. So, even if the foreign-owned plantations in the State can be taken over with the Centre's consent, that part of the income which the State might obtain, in addition to what it is now getting, would be the annual profits distributed by the companies. Without allocations to reserves of all kinds the total annual profit has varied between Rs. 40 lakhs and just over Rs. 1 crore during the past six years. It is this sum that the Communist Government may conceivably obtain after forcing the retirement of the present owners and paying them a fair compensation. If compensation is to be made without injury to the reputation of the country in its dealings with foreign business interests, the amount required would be of such a magnitude that if the State Government were to float a loan for the purpose, the annual interest payment alone would come to Rs. 1 crore.

Plantation being an agricultural industry, its great success lies in the managerial sphere. The planters are demonstrably the country's most efficient and successful farmers and their success rests upon competent soil and plant management. With nationalisation there would be an abrupt exodus of this class of personnel and the resultant disquietude might have its repercussions on yields and production costs. What appears to be highly profitable ventures might be a burden on the State. It is, of course, possible to obtain a certain measure of ideological satisfaction from nationalisation and it would conceivably be sustained so long as the people do not know the truth and dare not ask questions. But, with the Communist rule confined to Kerala, with an alert and informed opposition, with a vigilant Centre and with the State's heavy dependence on Union finances, the truth will be too widely known. With plantations under private management just across the border and the previous record of the companies, it would be extremely difficult to cover up the deficiencies of State management of the properties taken over.

All these considerations are irrespective of the attitude of the Centre in the matter. By insisting on discriminatory nationalisation the Communists would have struck a blow against the Centre's policy of attracting foreign investments and would embarrass it no end, as the proposal in its extreme presentation might do as much damage to confidence as if the take-over had been accomplished. The Communists may well have proceeded on the reasoning that, since it was one of the main planks of their election campaign, they cannot very well remain quiet. In an attempt to be responsible rulers without losing face in public, they might as well stand firm on the question until the Centre takes the responsibility for turning it down. This would, of course, have two effects probably not considered by the party's leadership. One is that the managements, threatened with dispossession would be plagued by uncertainties regarding their future so that they will not be able to plan for the industry's future. Secondly, the Communists would confirm, despite the initial impressions created by the party's spokesmen, the suspicion that they are after all politicians enough to stake the State's best interests for the party's cheap popularity.

(*Concluded from next column*)

Exports of raw jute from East Pakistan during the first seven months of the current season commencing from July 1956 aggregated 2.95 million bales, as compared with 3.28 million bales in the corresponding period of the 1955-56 season. Shipments to overseas countries, however, rose from 2.27 million bales to 2.58 million bales, while exports to India declined from 1.01 million bales to 0.37 million bales.

The East Pakistan Government is takng strict measures to enforce the ban on production of *mesta*. Primary Licensing Assistants and other officers of the Jute Directorate have been warned, following reports of *mesta* cultivation in Kustia and Jessore districts, that they will be held responsible for any *mesta* grown in their jurisdiction.

STOCKS OF JUTE GOODS SHADE HIGHER

SHARP FALL IN SACKING

THE figures of shipments of jute goods during the month of March 1957, published in these columns last week, showed that the demand for both hessian and sacking during last month was heavy. It would also be noted therefrom that the increase in shipments of hessian during the month was not however, sufficient to make good the decline in the previous month. Shipments of sackings were, on the other hand, substantially higher, as compared with the small recession noted in February. This trend in shipments is not fully reflected in the month-end stocks of manufactured goods with mills. The total stocks at the end of March show only a slight increase from 97,400 tons to 97,700 tons. This indicates that the production during March, on account of the longer working period, must have been higher.

The rise in stocks is negligible and provides no cause for anxiety to mills. Even this small increase is mainly accounted for by hessian stocks, which have gone up from 25,200 tons to 29,800 tons, and stocks of "other manufactures" which have increased from 10,600 tons to 11,400 tons. The increase of 5,400 tons in these two items has, however, been offset to a substantial extent by the fall in stocks of sacking from 61,600 tons to 56,500 tons.

This is the third month in succession for which hessian stocks show a rise, having gone up from 19,700 tons at the end of December 1956. Thus, the cumulative increase during the three months is 10,100 tons, with the result that the stocks at the end of March are only 1,000 tons behind the previous high of 30,800 tons seen at the close of October 1956 and 500 tons below those a year ago. Evidently, the output of hessian during March must have been particularly large.

The downward trend in stocks of sacking noted in February has been maintained in the month under review also. The aggregate fall of 11,200 tons in the last two months has brought the sackings down to the lowest level since March 1956, when they aggregated 55,200 tons. The overall position in respect of stocks of all manufactured goods is, no doubt, much better than that noted a few months ago, thanks to the reduction in output of sacking, partly due to the diversion of some looms from production of sacking to hessian. It remains to be seen whether the recent heavy demand for sacking, as indicated by the shipment figures for March, will induce the mills to switch back again to production of sacking.

While the demand for jute goods during the current year is expected to be maintained, if not increased, the mills are anxious to ensure a stable price level for their goods. This can be done only by having an adequate supply of raw jute at lower prices. The prospects for raw jute supply during the current year are not yet very clear, in view of the uncertainty about the weather. Efforts are, nevertheless, not being spared to attain self-sufficiency in raw jute. It was only in January last that a conference on promotion of jute production was convened in New Delhi and several recommendations were made for increasing raw jute production. The progress made since then was again reviewed at a conference of the Development Commissioners, Directors of Agriculture and Secretaries of the State Agriculture Departments of West Bengal, Bihar, Assam and Orissa, held this week in Calcutta, under the chairmanship of Dr. M. S. Randhawa, Vice-Chairman, Indian Council of Agricultural Research. The sub-committee appointed by the Delhi Conference to go into the question of self-sufficiency in jute also held its second session this week and met the representatives of the various jute interests in Calcutta for exchange of views. The outcome of these deliberations is not known at the time of writing.

Meanwhile, the Pakistan Government has placed raw jute under O.G.L. for purposes of export with effect from the 3rd inst. It has, however, been laid down that no exporter can ship habi jabi jute, if the quantity so exported together with the quantity exported earlier by him since 1st July 1956 exceeds 2 per cent. of the total quantity of his long jute exports from that date up to his latest export of habi jabi jute. Exporters are also required to give certain information to the Jute Board before registering their sales with the State Bank.

A CHLORIDE & EXIDE PRODUCT

PROGRESS OF ROAD DEVELOPMENT

NAGPUR PLAN TARGETS TO BE ACHIEVED BY 1960-61

A WELL developed transport system, designed to serve the needs of industrial development, is vital to the success of the Second Plan. Railways at present handle the major portion of the traffic in the country, but it is common knowledge that even if all the expansion programmes included in the Second Plan are completed according to schedule, the enlarged capacity will still be short of actual requirement. This fact serves to underline the need for developing other modes of transport, especially roads, coastal shipping and inland waterways, with a view to supplementing the railways. The various means of transport should also be effectively co-ordinated and the entire system should be integrated with programmes of industrial development, particularly of major industries.

The annual report of the Ministry of Transport on the progress of road development during the year 1956-57 is, therefore, of particular interest. An important achievement of the year, says the report, was the enactment of the Motor Vehicles (Amendment) Act, 1956, which contained important provisions relating to the establishment of an Inter-State Transport Commission for the development, co-ordination and regulation of road transport services on inter-State routes. Due to abnormal increase in the intensity and volume of traffic, however, the progress in respect of improvement and upgrading of road surface has not been commensurate with actual needs. At the beginning of the First Plan India had about 98,000 miles of metalled roads and nearly 151,000 miles of unmetalled roads. During the Plan period about 24,000 miles of metalled roads and about 44,000 miles of unmetalled roads were added to the road system of the country, bringing the total mileage to about 122,000 miles of metalled and 195,000 miles of unmetalled roads at the end of the period.

It is estimated that under the programmes formulated for the Second Plan period, about 22,000 miles of metalled roads and about 40,000 miles of unmetalled roads would be constructed. This is expected to raise the road mileage of the country to 144,000 miles of metalled and 235,000 miles of unmetalled roads. It may be observed that the Nagpur Plan of post-war development laid down as far back as 1943 a target of 123,000 miles of metalled and 208,000 miles of unmetalled roads. Thus if the programmes of road development under the Second Plan are implemented, the Nagpur Plan targets in terms of mileage and of surfaced and unsurfaced roads would be achieved. The total expenditure on road development from 1943 up to the end of the First Plan is estimated at about Rs. 232 crores. Under the Second Plan, a provision of Rs. 247 crores has been made for road development.

National Highways

The National Highways Bill, 1956, providing for the declaration of certain highways to be national highways and for matters connected therewith, was passed by Parliament in August 1956. Under this measure, the highways which were provisionally accepted by the Central Government as suitable for inclusion in a system of national highways generally with effect from the 1st April 1947 were declared as national highways. At the beginning of the Second Plan, the total actual length of national highways was 12,900. A provision of Rs. 55 crores has been included in the Plan for the further development of these highways. The total cost of the development programme proposed to be taken up will be about Rs. 87.5 crores but the actual expenditure during the Plan period will be restricted to Rs. 55 crores and the balance carried over to the Third Plan.

The programme contemplates work being taken up on the construction of 1,300 miles of missing links, by-passes and diversions and 114 major bridges, the improvement of 4,000 miles of existing sections of national highways and the widening of 3,300 miles of the improved sections to two-lane carriageway. The actual physical targets aimed at for the Second Plan period are the construction of 900 miles of missing links and 60 major bridges, the improvement of 4,000 miles of existing sections of national highways, and the widening of 1,500 miles of the improved sections to two-lane carriageway. All missing road links in the national highways system are expected to be constructed by the end of the Second Plan period. A sum of Rs. 10 crores is expected to be spent on the development of national highways during 1956-57. In physical terms, the targets aimed at consist of the construction of about 150 miles of missing links and 7 major bridges, the improvement of about 800 miles of existing sections, and the widening of about 300 miles of improved sections to two-lane carriageways. An important event of the year in the history of the development of National Highways is the opening of the western tube of the new Banihal Tunnel, connecting Kashmir to the rest of the country, to limited traffic on the 22nd December 1956. This has made all-weather road communication possible for the first time between the Kashmir Valley and the rest of India throughout the year. The remaining work on the construction of the tunnel is in progress.

Under the programme of financial assistance to the States for the development of roads of economic or inter-State importance, initiated under the First Plan, sixty-nine works, estimated to cost Rs. 2.28 crores, were sanctioned for execution in the various States from 1st January 1956 up to 31st January 1957. Upto 1st December 1956 sixty-six miles of new roads have been constructed and 647 miles of existing roads improved under this programme.

Central Road Fund

The role of the Central Road Fund in the development of the road system has also greatly increased recently. Till 1950-51, more than 20 years since the creation of the Fund, schemes of a total cost of Rs. 20 crores had been approved and an expenditure of about Rs. 17 crores incurred on these schemes. Compared with this, during the First Plan period itself, schemes of a total cost of Rs. 28 crores were approved and an expenditure of Rs. 16 crores on the execution of the approved schemes incurred out of the Fund. During the year under review, the Central Designs Office of the Roads Wing, Ministry of Transport, continued to issue, through the medium of the various committees of the Indian Roads Congress, different types of standards suitable for adoption on roads and bridges in various parts of the country.

Technical officers of the Roads Wing continued to assist the Indian Roads Congress in coordinating the road research activities of the various road research laboratories in India, give technical advice to several administrations on various problems such as layout of roads, road junctions, siting petrol filling stations and location of underground utilities, and participate in the activities of institutions and societies like the Indian Standards Institution, the Council of Scientific and Industrial Research and the Central Road Research Institute, etc. A broad study of the subject of development of rural road communication had also been undertaken by the Road Wing of the Ministry of Transport. The study was intended to cover primarily the questions of integration of the various programmes of rural road development included in the Second Plan, the adequacy or otherwise of the standards adopted for rural roads, and the extent to which the provision made in the Plan would help to achieve the broad targets set in the Nagpur Plan.

The Consulting Engineer (of the Road Wing) had been rendering the necessary technical advice to the Ministry of Heavy Industries in matters relating to the establishment of an indigenous road roller industry in India. Two factories for the manufacture of diesel and steam road rollers had been licensed, out of which one factory had already started producing diesel road rollers. The indigenous steam road roller is expected to be in the market towards the end of the year 1957. The Consulting Engineer also advises the Chief Controller of Imports, whenever requested, on the grant of licences for the import of road rollers or its component parts from abroad. Stone crushers and granulators are expected to be produced in this country by about the middle of this year. Advice and assistance continued to be given by the Consulting Engineer to the Public Works Department of States and the C.P.W.D. in the selection of the right type of machinery and equipment required for roadworks and in their procurement, operation and maintenance. The essential road statistics were brought upto date as far as possible towards the end of 1956 and the relevant information incorporated in a pamphlet called *Road Facts in India* 1956.

TRANSPORT IN EUROPE

NEED FOR MAKING RAILWAYS MORE EFFICIENT

THE structure and the level of transport rates influence not only production costs but also the degree of concentration of the population and, consequently, the future structure of a country. The development of motor transport and to a lesser extent of air transport, according to the *Economic Survey of Europe in* 1956, published by the U.N. Economic Commission for Europe, has already modified the general way of life and will continue to do so.

Reviewing the patterns of transport in East and West Europe, the *Survey* notes that, over the last quarter of a century, the volume of goods traffic in Europe increased about three and a half times, but the relation between the rate of growth of transport and the rate of growth of production varies greatly between countries. It is particularly large where economic development has concentrated on extraction of coal and minerals and on steel production. It is smaller where the production of finished products has developed most. A striking contrast exists between West and East European countries in the distribution of their increases among various means of transport. In the U.S.S.R., 90 per cent. of the increase has been accounted for by the railways, while in West Europe two-thirds at least have gone to road transport. As a result, the problems of East and West European countries are quite different. In the former, the demands on railways are heavy. In the latter, railways compete with road transport particularly in carriage of commodities for which high rates are charged.

In Italy and Denmark, where transport of fuels and minerals is of small importance, road transport accounts for two-thirds of total goods transport; in the United Kingdom, the figure is, 40 per cent. and in the other West European countries between one-third and one-fourth. By contrast, in the East European countries as well as in Turkey and Yugoslavia, road transport is still in its infancy. The average haul of the railways is enormous in the U.S.S.R. —757 kilometres (1.6093 kilometre=1 mile). Everywhere else, it is much less, varying between 263 kilometres in Italy and 117 kilometres in the United Kingdom and even dropping below that in some other countries. The average haul greatly increased in Western Europe from 1930 to 1950, but, because much medium-distance transport has been transferred to the road, the average haul has since then remained about the same or has even slightly decreased.

Investment

West European countries, except for the United Kingdom where investments are smaller, have spent in the last few years 5 per cent. of their gross national product on gross investment in transport. Of this, it is noteworthy that road investments have taken a share 3 to 10 times larger than that of railway investments. In sharp contrast, in East European countries, the percentage of gross transport investments in relation to the gross national product is smaller because of the low level of investments on roads and on vehicles. In the U.S.S.R., 60 per cent. of the investment in transport went to the railways.

In 1954, even the most heavily motorised countries of Europe had only just reached the level of motorisation of the United States in the early 'twenties. Traffic density remains relatively light in France and Sweden where the road network is well developed in relation to population density, although those counrties have the largest number of vehicles per head in Europe. Although the United Kingdom, of all European countries, has the most serious traffic problems to face, expenditures there over the last few years on the construction or maintenance of roads is by far the smallest, both per vehicle and as a percentage of the national income. While most West European countries spend 200 to 250 dollars per vehicle per year for this purpose, the United Kingdom spent less than 85 dollars per year per vehicle between 1950 and 1955.

Traffic density is heavy in Western Germany, Belgium, the Netherlands and especially in the United Kingdom. In those countries, the population density is 10 to 15 times that of the United States and road traffic problems will be difficult to solve in the future and will necessitate considerable investments.

The gross investment in railways in Western Europe consists only of renewals and modernisation. Many West European railways have an operating deficit. Sweden, Switzerland and the

NEW PRODUCTS AND PROCESSES

Mineral Supplements for Animal Rations

INTENSIVE investigations for determining the mineral requirements of Indian milch cattle fed on various types of feeds and fodders at the Indian Veterinary Research Institute, Izatnagar, Indian Agricultural Research Institute, New Delhi and National Dairy Research Institute, Bangalore, have led to the development of a typical mineral mixture containing common salt, bonemeal, dicalcium phosphate, chalk, yellow oxide of iron, potassium iodide, sodium carbonate, sodium thiosulphate, cobalt chloride, copper sulphate and manganese sulphate in requisite proportions. Bonemeal used in this composition is sterilised so as to contain no harmful microorganism. Calcium and phosphorous contents of the mixture are over 20 per cent. and 10 per cent. respectively and care is taken to keep flourine at less than 0.1 per cent. 1 oz. of this mixture may be given daily to growing animals and 2 ozs. to lactating animals. If the daily milk yield is more than 10 lbs. an additional 1 oz. of the mixture may be given for every extra 2 lbs. of milk. In areas where paddy straw forms the chief source of roughage, manganese sulphate should be omitted, as paddy contains abnormally high quantities of this element. The requirements of calcium on a paddy straw ration is however, ccmparatively high and in such areas in addition to the manganese free mineral mixture, an equal amount of calcium carbonate should be fed to the animal. According to the 1951 census India has a cattle population of 29 million cows and buffaloes in milk and 58 million of young stock from both the species. Assuming that even 25 per cent. of these animals are likely to benefit from mineral supplements and granting a daily intake of 2 ozs. per head for milch stock and 1 oz. for young stock, the annual requirements of the mineral mixture will be 3 lakh tons. Method of production, it is claimed, is simple and no costly machines are required. Parties interested in undertaking the commercial development of the process may contact National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi 1.

Cold Welding of Metals

A laboratory of the U.S.S.R. Electric Welding Equipment Research Institute of Leningrad has developed a method of cold welding of aluminium with copper. The welding is done by a pneumohydraulic installation with a device for transferring the energy of air compressed to 5 atmospheres to presses operating under a pressure of 50 tons. Heterogenous metals are welded together quickly and firmly. Three hundred seams per hour can be made with this installation. At a recent seminar at the Leningrad Technical Propaganda Centre Leningrad welders were acquainted with this new method of welding. I. Baranov, a scientific worker of the institute, told about the physical laws upon which the new method is based and the prospects of its application in a number of industries. He demonstrated several parts joined by cold welding. This simple method is of especial importance for electrical engineering and instrument building, where heterogeneous metals badly yielding to ordinary electrical welding often have to be joined together. It is planned to build several such installations at the institute's experimental shop. The staff of the laboratory help in introducing the new method in firms of Leningrad, Vilnius, Zaporozhye and other cities.

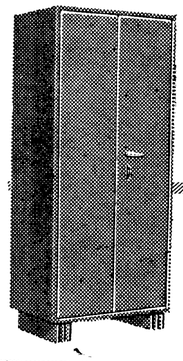
Atom Product for Cancer Treatment

A Philadelphia cancer specialist reported recently that he is convinced that rays from radioactive cobalt, a peaceful product of atomic energy, are more beneficial than conventional X-rays in treating cancer. Dr. Stanley P. Reimann and his associates, of the Institute for Cancer Research and Lankenau Hospital Research Institute, were among the first physicians in the United States to obtain a so-called cobalt bomb, a teaspoonful of metal made radioactive by bombarding it with neutrons in an atomic reactor. In the treatment of cancer, it is used as a radiation source 12 times more powerful than the conventional, 250,000 electron volt X-ray machines. Its energy equivalent, Dr. Reimann said, would be that obtainable from a $30 million block of radium. But there just hasn't been that much radium processed since radium's discovery in 1898, Dr. Reimann pointed out. Patients under treatment at the Philadelphia institute are given treatments lasting 8 to 10 minutes each as the ray-emitting capsule of radioactive cobalt is rotated around the body, its radiations focussed through the tumour. One circumstance, the fact that the cobalt therapy is now being used chiefly on patients with far-advanced cancers, makes it difficult to make comparisons with benefits from ordinary X-rays. Dr. Reimann further noted that cancer benefits are appraised most reliably only after a five-year interval, and the cobalt has been used for only about 2½ years.

Automatic Wire Rod Mill

The Soviet industry, it is claimed, is being equipped, with highly efficient mechanised automatic rolling mills with a speed of rolling considerably exceeding that of the existing mills. The construction of the first such mill is being completed now at Krivorozhstal Plant in the Ukraine. It will turn out wire rods with a diameter of 5 to 10 millimetres. The new mill, is one of the most efficient and powerful mills in the country. All processes in it—from feeding blanks into the heating furnace to wrapping and loading the finished product are mechanised and are performed automatically. The rolling is done simultaneously in four threads at a speed of 28 to 32 metres per second. Last year the same plant put into operation the Soviet Union's best rolling mill "250," which turns out 450,000 tons of light sections annually. It is serviced by 450 workers. The wire rod rolling mill has a per-worker capacity which is two times greater than that of the light-sections rolling mill. Serviced by only 250 workers, it will turn out 500,000 tons of wire rods annually.

Live in new comfort with Khira fine steel furniture!



YOU get undreamed-of value from Khira steel furniture. Its good-looks, comfort, strength and utility make it ideal for home and office. It costs little to buy — is easy to keep clean ... and lasts almost forever!

KEY FACTORS IN DETERMINING ECONOMIC GROWTH—I

ROLE OF PUBLIC SECTOR

By M. C. Munshi

WITH the advance in the technique of economic planning, the theory of the process of economic growth has assumed new and added significance. Indeed, not only are the factors that accelerate this process distinguished from those that retard economic development but in contrasting the developed economies from the underdeveloped, the *pre-conditions* of development in the public and the private sectors—such as leadership at all levels and the desire for progress—are increasingly emphasised. It was on these lines that the opening chapters of the first Five-year Plan, while dealing with the problems of development—the social and economic implications of planning—dwelt on "the determinants of economic development." They thus emphasised the key role of the rate of capital formation in the attainment of higher productivity and in expanding the levels of income and employment. They also add that the larger the stock of capital, the greater tends to be the productivity of labour though, in a general way, of course, productivity depends on other things also such as technical efficiency and the attitude to work of labour that handles the available equipment.

In more concrete terms they then confined themselves to the lines of macro-economic analysis, to relationships, long-term and short-term, income, saving, investment and employment. On these lines, they obviously proceed to stress the key role of capital formation in the expansion of levels of income and employment. Coupled with the stress on this key factor is another conclusion—equally inevitable (theoretically inescapable)—regarding the initiative that the State must take for bringing about innovation and entrepreneurial change, more especially, in an underdeveloped economy, and, therefore, a rapidly rising share of the public sector in the investment of the community's savings. No student of economic theory could possibly come to any other conclusion. In the following paragraphs let us, however, examine their implications in terms of the objectives of our *democratic planning* and *the mixed economy* that we envisage through our industrial policy.

There is an intrinsic reason for this examination; for, as against the purely macro-economic analysis, the first Five-year Plan said, "Basically, development involves securing higher productivity all round and this is a function of the degree of technological advance the community is able to make"—and they add, significantly, "the problem is not merely of adopting and applying the processes and techniques developed elsewhere but of developing new techniques specially suited to local conditions."

Second Five-year Plan

Before we take up these issues let us complete this approach by a brief reference to the second Five-year Plan. Reverting to the key factors of development they begin by stating that "in a sense these skills and know-how (for transforming the resources of nature) are more important than even capital formation proper and that in an underdeveloped economy the resources of nature, not being quite fully known, new techniques of utilising them have to be developed. Recalling the determinants of economic development from the first Plan, they add that the rate of economic development would depend upon (*a*) the rate of growth of population, (b) the proportion of the current income of the community devoted to capital formation and (c) the return by way of additional output on the investments undertaken. In brief, these parameters that have been worked out for the next few decades, "in terms of certain assumptions," are (*a*) 2.5 per cent. per annum; (b) capital output ratio 2.3 : 1 and (c) rate of saving rising from 7 to 11 per cent. of the national income.

Mixed Objectives

It is, however, a perusal of the subsequent paragraphs dealing with the approach to the second Plan in terms of its objectives and techniques, that are bound to raise great difficulties. The broad objectives and techniques of the Plan are now fairly well known; but let us recall the emphasis they seem to lay on "the socialist pattern of society" in their objectives and in interpreting the Industrial Policy statement of last April. For instance, the elasticity of the phrase "socialist pattern of society" must be distinguished from, if not contrasted with, the rigidities implied in any specific brand of socialism. Otherwise, even as early as 1892, Lord Salisbury said in Parliament that they were all socialists then. Mere use of the phrase 'socialism' means very little in terms of the theory of economic policy. It is not merely the elasticity of the language in these paras that is impressive, but the manner in which this phrase seems almost to replace the older one of "mixed economy." It is this elasticity of such phrases again that enables them to emphasise the significance of social gain in place of private profit or the rise in income and employment and reduction in inequality on the one hand, and the social purpose in all agencies of social economic relationship as well as equality of opportunity for the small man. For, the latter are the objectives of any welfare State and are also sought to be stressed even in the achievements of the American economy in the decade following the passage of the Employment Act (1946).

Little Repetition

Indeed, in these paras we find an emphasis not only on the heavy responsibilities and the dominant role by the State but also on the private sector where "conditions have to be created in which there is full scope for private initiative and enterprise either on an individual or co-operative basis." It may incidentally be noted that, in the second Plan, there is little repetition of the almost touching faith in co-operative endeavour that was shown in the first Plan. In the first Five-year Plan, we read "the distinction between the public and the private sectors, it will be observed, is one of relative emphasis; private enterprise should have a public purpose and there is no such a thing, under the present conditions, as completely unregulated and free private enterprise, etc., etc."; the second Plan says that "private enterprise, free pricing, private management, are all devices to further what are truly social ends; they could only be justified in terms of social results." Are we hearing the echos of "people's capitalism" to which the United States Press of late has been directing our attention?

It will be seen that, while the phrase "mixed economy" seems to have been replaced by a socialist pattern of society, scope is to be provided for simultaneous expansion of the public as well as the private sector in a growing and increasingly diversified economy. The democratic approach, too, is not to be lost sight of, for, they also stress that the public sector should not result in the centralisation of decision-making or exercise of authority, and "in the broad framework, rules of the game have to be observed." What has one to conclude from these paragraphs: Do we march from precedent to precedent towards State (or some specific brand of) socialism or have we "to secure economic advance along democratic and egalitarian lines"? Let us be clear that it is in the light of this assertion that the objectives of a sizable increase in income, rapid industrialisation, expansion of employment and reduction of inequalities have to be dealt with.

One finds the same elasticity of expression not merely in the statement of the Plan objectives but also in their amplifications of the Industrial Policy Statement of last April. Ordinarily one would expect that while this statement of policy could be in general terms, the framework of the Plan would seek more concretised expression of the socialist pattern of society; for, the framework has to seek to translate this policy into workable propositions and targets for attainment during the Plan period. Let us recall that in the case of the first Plan a programme and targets of production for 42 industries in the private sector were worked out. The second Plan does speak of the necessity of "a great deal of dovetailing" between the private and the public sectors, especially, in Schedule B industries listed in the Policy Statement. It stresses that the private sector has to be given the opportunity and facilities to function effectively within its field but the *modus operandi* is presumably left to the departments and changing Ministries concerned.

There are several issues of both great theoretical as well as practical import that arise out of the foregoing exposition of economic growth made by the Planning Commission: (1) The significance of the rate of capital formation as a determinant of economic growth and the limitations of national income analysis; (2) the key role of the State and, therefore, the importance of the *modus operandi* by which it has to perform the innovator entrepreneurial functions; and (3) the *raison d'etre* of mixed economy and of democratic planning. That these are germane questions will be realised, if we remember that the second Plan itself seeks to go behind the "monetary veil" and to relate physical with financial planning. Indeed they themselves speak of the integration between the physical and financial resources and the consistency to be obtained between various sectoral developments so as "to secure an integration of policy and experience at each stage."

Rate of Capital Formation

We have already seen that after making a fleeting reference to all-round productivity of our economy, the plans confine themselves to national income analysis and income projection on the lines of macro-economic analysis. It is no doubt true that this capital formation is not only a key factor of economic advance but is also the most objectively measurable quantitative factor in this analysis. What needs, however, to be remembered is that all that the macro-dynamic analysis does is to attempt to insert long-term factors of advance into a short-term context based on the aforesaid interrelationship through computation and projections of national income. But this technique also involves assumptions regarding institutional growth and social framework. For instance, capital formation as a determinant of economic growth implies a long-term process, i.e., (1) creation of saving, (2) mobilisation and canalising of savings, and (3) investment of savings that should result in the creation of goods and services. It will be readily seen that this process involves not merely measurable (estimatable) factors such as current size or level of income and propensity to consume but also—crucially—entrepreneurial enterprise and ability of the community. It is also to be remembered that capital is created in the process of development and that this means that development is not just a function of the creation of capital. While the aggregates of income projections give useful summaries it is the process which they reflect that makes for advance. Indeed we can see even from the brief references to the Five-year Plans, that we have so far made that the basic elements of advance are not merely the changes in the quantitative economic aggregates but innovation, changes in patterns of behaviour or institutional changes—and other kinds of qualitative changes—for which the orthodox economist turns to the neighbouring sciences. What is intended to be stressed here is not the easy assertion that economic growth is "a complex problem," bringing in sociology, psychology, etc., but in a non-Schumpeterian world this economic growth—through determinants—is a problem of making changes in the existing factor-combination in order to make for new or improved techniques of production.

Let us put this theoretical problem in another way. Taking the model of a dynamic economy such as that of R. F. Harrod, the marginal efficiency of capital may move into a long run position which together with the consumption function may prevent the attainment of full employment in a capitalistic society; and so the State's intervention is inevitable in order to maintain a given rate of growth. Thus in advanced economies there is a natural rate of advance and a warranted rate of growth, the balance between the two is sought to be maintained by the State. The determination of the natural rate of growth and the divergence between the warranted rate and the natural rate (i.e., the tendency of the national product to diverge from the estimated one under warranted growth) are two distinct problems. In other words, the rate of capital formation in an underdeveloped economy is "not merely to adjust smoothly to given parameters of growth but to increase in some appropriate manner the rate of growth." It will be readily agreed that, while estimating the marginal efficiency of capital and the accelerator effects, our problem is to determine this natural rate of growth and not so much to rectify the divergences. It is certainly not known how the Plan has integrated the financial and physical planning in arriving at the rates of growth they have estimated.

DIRECTORS' 110th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1956

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1956.

The transactions for the year under report have resulted in a profit of Rs. 90,20,272-7-8 (including Rs. 2,35,108-2-3 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:—

		Rs.	a.	p.
1.	Transferred to Income-tax Provision	27,50,000	0	0
2.	Transferred to Reserve Fund (Statutory)	27,50,000	0	0
3.	Transferred to Bonus to Staff Account	13,00,000	0	0
4.	Transferred to Charity Account	1,00,000	0	0
5.	Transferred to Gratuity to Staff Account	1,00,000	0	0
6.	Ad-interim Dividend at Rs. 2 per share free of Income-tax paid	7,00,000	0	0
	Total .. Rs.	77,00,000	0	0

The Directors recommend that the balance of Rs. 13,20,272-7-8 be disposed of as follows:—

	Rs.	a.	p.
(a) Dividend at Rs. 2 per share free of income-tax making the total at 16 per cent. per annum	7,00,000	0	0
(b) Carry forward to the next year's account	6,20,272	7	8

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,
S. P. JAIN,
Chairman.

12th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956

Previous Year Rs.	CAPITAL AND LIABILITIES	Amount Rs.	a.	p.	Total Rs.	a.	p.
	1. Capital—						
1,00,00,000	AUTHORISED CAPITAL—8,00,000 Shares of Rs. 25 each				2,00,00,000	0	0
87,50,000	ISSUED, SUBSCRIBED AND PAID-UP CAPITAL—3,50,000 Shares of Rs. 25 each				87,50,000	0	0
	2. Reserve Fund and Other Reserves—						
55,00,000	(i) Reserve Fund as on 1st January, 1956	60,00,000	0	0

NEW PUBLICATIONS

The Story of the Integration of Indian States. By V. P. Menon. Published by Orient Longmans Ltd., Nicol Road, Ballard Estate, Bombay, 1. Pages 494. Price: Rs. 25.

THIS is the first of the twin publications planned and completed by the author, Mr. Menon, who has surveyed the political changes that took place in India culminating in the establishment of the Republic of India in 1950. How competent Mr. Menon is to handle this task has already been mentioned earlier in these columns while reviewing the other volume, *The Transfer of Power*. As a distinguished member of the Political Department of the Government of India for over 30 years, he had full access to the day-to-day constitutional development of India but as the right-hand man of the late Sardar Vallabhbhai Patel, he played a vital part in the integration of the Indian States into the Indian Union. It is true what the Sardar planned, Mr. Menon executed. It must also be admitted that Mr. Menon played a substantial part in his master's plans. Hence the publication contains an authentic account of events which took place in 1947 and 1948 leading to the consolidation of the Indian Union, a fusion of the 555 pricipalities—a miracle of modern times.

It is a matter of history that the Indian continent, though one geographical entity, never enjoyed political homogeneity. "Not even in the palmiest days of the Hindu and Moghul empires, did the entire country come under one political umbrella." The British administration succeeded in promoting enduring political consolidation but it destroyed it by partitioning the country into Pakistan and India while withdrawing in 1947. British paramountcy was paramount until 1947 from the days of Queen Victoria's proclamation in 1858. The Indian Empire consisted of British India spread over three-fifths of India and Indian India under the rule of Indian princes covering two-fifths of the country. These Indian States effectively served as the "bulwarks" of British rule in India. Their rulers were guaranteed their position not only against external aggression but also against internal revolution. Therefore, they became faithful allies of the British. What was anathema to the British administration was also also anathema to the Indian States.

When the British administration transferred power in 1947 to the people of India, the British Parliament declared that its paramountcy over the Indian States lapsed, instead of transferring it to the successor Government. At one stroke of the pen two-fifths of India under Indian princes became "independent." But they could not progress without the assistance and co-operation of the Indian Union. Their subjects, numbering 86.5 millions, elected to be guided by the Union leaders. A few wise princes, who looked ahead, signed the Instrument of Accession with the Indian Union and paved the way for grouping and regrouping and the final integration with the Union. It was a co-operative effort as described by Mr. Menon. But the secret of integration was the desire of the people of the States (State subjects as they were then called) to carry on the administration of the States themselves in the wake of autonomy enjoyed by the neighbouring districts of the Indian Union. When the British Government transferred power to the people, the Indian princes could not have autocratic and unrepresentative administration in their areas. If the princes had not yielded, they would have been wiped out of the picture by their own people as there was no longer the guarantee against internal revolution. The British power had gone and the Congress administration would not have given them any assistance to put down the popular demand for responsible government. A majority of princes righty agreed to merge their areas with the Union when their privy purse, status, succession and other parapharnalia were guaranteed by the Indian National Congress.

Mr. Menon with his characteristic grasp of political affairs narrates the gradual evolution that took place, stage by stage in every State or group of States. His chapter on Jammu and Kashmir State is worth reading in view of the controversy now going on between Pakistan and India and the world attention diverted to it. Mr. Menon's version confirms one's belief that the automatic lapse of paramountcy announced by the British Government proved a blessing in disguise. If, on the other hand, paramountcy had been transferred to Free India with all the obligations of the British Government under various treaties, engagements and *sanads*, the successor Government would not have been able to solve the problem so quickly. The lapse of paramountcy enabled the Union Government to start with a clean state unhampered by objections. The Congress leaders were able to prevent any balkanisation of India because they had the support of the "State subjects." What the Union lost by the partition of British India and the creation of Pakistan, an area of 364,737 sq. miles and a population of 81.5 millions, was recouped by the merger of the Indian States which brought to the Union an additional area of 500,000 sq. miles with a population of 87.5 millions.

Mr. Menon has done ample justice to the task undertaken. One should say that the narrative is superb in many respects. One, however, feels that the author would have done well to publish some of the correspondence which passed between the Government and the princes, for these documents have great historical value.—*N. Salivateeswaran.*

F.B.I. Register of British Manufacturers, 1957. 29th Edition. Published for the Federation of British Industries by Kelly's Directories Ltd., and Iliffe and Sons Ltd., Dorset House, Stamford Street, London, S.E. 1. Price: 42 sh. (post free).

An important factor which helps to promote a country's foreign trade is the proper dissemination of knowledge about the varied manufactures and products among the overseas buyers. Viewed thus, the Federation of British industries has done a monumental work in bringing out a register of British manufacturers, the twenty-ninth edition of which has now been published. The Register covers a substantial cross-section of British industry, listing the products and services of over 7,000 member firms under more than 5,400 alphabetical headings. Besides the inclusion of the classified Buyers' Guide, the Register contains seven sections which give addresses of companies and firms, and other valuable information about trade associations, proprietary names, trade marks, etc. For those who are not fully conversant with British product terms, the French, German and Spanish glossaries, contained in the Register offer much needed and useful information. Every product term used in the main Buyers' Guide is properly translated and numbered for easy reference between the English headings and their translations in the glossaries.

"Nanthis" Directory of India Manufacturers, Exporters, Importers and Who's Who (1956-57). Published by the Export India Journal, Post Box 401, Madras-5. Price: Rs. 10.

"Nanthi's" Directory of India contains useful information on trade and business in India. It touches on several aspects of commerce, indicating the sources of production of food and cash crops, minerals, etc., within the country and listing the internal as well as overseas trade, manufactures, world markets, insurance companies. banks and the like.

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., as at 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the unaudited returns of the Bank's Branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

NEW DELHI, 11th March, 1957.

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

(To be Submitted to the Shareholders at the Fiftieth Annual General Meeting to be held at the Registered Office of the Company, "Indian Bank Buildings," North Beach Road, Madras, on Saturday the 20th April 1957, at 11 a.m.)

DIRECTORS' NINETY-NINTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1956. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 45,70,651-11-3 and together with the sum of Rs. 1,45,139-11-1 carried from the previous year's account, makes a total of Rs. 47,15,791-6-4.

3. Out of this sum, the Directors have made the following interim appropriations :—

	Rs.	a.	p.
An *ad interim* dividend at the rate of 5 per cent. and a Bonus of 1½ per cent. (both free of Income-tax) was paid which absorbed	3,91,300	0	0
The Directors now recommend that the following further appropriations may be made :—			
To pay a final dividend of 5 per cent. and a Bonus of 1½ per cent. (both free of Income-tax) thereby making the dividend and bonus for the year amount to 13 per cent.	4,06,000	0	0
To provision for Taxes	18,50,000	0	0
To transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949	10,00,000	0	0
To transfer to Sinking Fund	75,000	0	0
To transfer to Special Gratuity Fund	1,50,000	0	0
To transfer to Bank's Buildings account	80,000	0	0
To carry forward	8,13,491	6	4
Total .. Rs.	47,15,791	6	4

4. The Bank rate remained unchanged at 3½ per cent. during the year under report.

5. Offices of the Bank were opened during the year at Anakapalle, Badagara, Cuddalore (N. T.), Kodambakkam (Madras City), Kurnool, Palni, Tellicherry and Vilakuthoon (Madura).

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank read with Section 256 of the Companies Act, 1956, four Directors, Messrs. L. Alagusundaram Chettiar, K. Balasubramania Iyer, P. V. Rm. Kulandayan Chettiar and Rao Saheb E. M. Muthappa Chettiar retire this year by rotation and they, being eligible, offer themselves for re-election.

TAXES WHICH SOVIET PEOPLE PAY

LEVY ON AGRICULTURAL INCOME

A NOTEWORTHY feature of the Soviet Budget is the very small proportion—less than a twelfth—of its revenue derived from taxes levelled on the public. In the current budget, which is quite typical, the people will pay only 48,400 million rubles out of a total revenue of 590,000 million rubles. In return, they benefit to the tune of 147,000 million rubles to be spent on education, free health services and social insurance.

This wide discrepancy is possible because the chief source of funds for the Soviet budget are profits of State enterprises.

The main tax paid by the town population is known as "income-tax." This tax is collected from industrial and office workers employed in State and co-operative enterprises, from artisans, craftsmen, writers, artists, actors, lawyers and other gainfully employed persons, as well as from people other than peasants, living in the countryside.

Income-tax is progressive, the smaller the income the smaller the tax. If monthly wages amount, for example, to 260 rubles a month or less—as in the case, for instance, of office cleaners doing only a few hours' work a day—no tax is levied. If they total 400 rubles, income-tax takes 4½ per cent. At 700 rubles, the income-tax rate rises to 6.6 per cent., and at 1,000 rubles to 8.2 per cent. If earnings exceed 1,000 rubles a month, income-tax is levied at 8.2 per cent. on the first 1,000 rubles, and at the rate of 13 per cent. on all over that figure. A taxpayer maintaining a family of four or more enjoys a 30 per cent. reduction in taxation.

Incomes of writers, painters and other art workers are assessed for tax payment at the same rate as those of industrial and office-workers. Artisans and craftsmen belonging to producers' co-operatives pay similar income-taxes, but the rate is increased by 10 per cent. Higher taxation of these groups is economically justified by the fact that in addition to regular wages they receive extra remuneration in the shape of a share of profits of the co-operative.

People who earn their livelihood from agriculture pay an agricultural tax. The incomes of peasants in the Soviet Union come from two sources. They receive the major part from the collective enterprise in which the common income is distributed among the members according to the work done by each of them. Besides participating in collective enterprise, every member of a collective farm has land for his or her personal use—a house, a garden, an orchard and livestock. The income received by the collective farmers from the collective farms consists of both cash and produce. No taxes are imposed on these, since tax is collected from the total income of the collective farm before distribution.

Income from the produce of their own land was taxed up to 1953 by an agricultural tax on the same principle as income-tax. In 1953, a major reform of the agricultural tax was effected. The total sum of the tax was reduced to two-fifths, and the system of calculating the tax was simplified. The agricultural tax is now imposed only in proportion to the size of the plot of land for personal use. This system of taxation encourages the collective farmers to cultivate their plots in the most rational way: to raise the most valuable orchard and garden crops, to increase the number of their cattle and raise their productivity. An average rate of agricultural tax has been established for every constituent republic, calculated in rubles per 100 square metres (100 sq. metres are approximately 120 sq. yds.). In the Russian Federation (R.S.F.S.R.), for example, the average rate has been fixed at 8½ rubles a year per 100 sq. metres.

Proceeding from this average tax rate, each republic has the right to fix varying tax rates for individual regions depending on local conditions—yield of agricultural crops, availability of markets and the size of the incomes obtained.

This system allows the differences in the level of income from land in every area to be taken into account when tax rates are fixed. Men of 60 or over and women of 55 or over are completely exempted from agricultural taxes if there are no wage earners in their families. Also exempt from the tax are teachers of rural schools, agronomists, livestock and other specialists employed in the countryside.

Families with one or more members disabled are either completely exempted from the tax or pay only half the normal rate. In addition to the two chief taxes, income and agricultural, there is a *special tax* in the Soviet Union levied on single men and women and people with small families. This tax is imposed on men aged 20 to 50 and on women aged 20 to 45 if they are childless or if they have one child or two children.

For industrial and office workers and other gainfully employed persons (with the exception of peasants) this tax has been fixed at the rate of six per cent. of earnings if there are no children, one per cent. if there is one child, and one-half per cent. if there are two children.

Mothers with more than three children are granted a monthly allowance from the State. In addition, they get large grants on the birth of the third and every additional child. Besides these general State taxes and duties there are certain local taxes in the U.S.S.R., revenue from which goes to the budgets of cities and villages. City residents pay taxes on the use of land belonging to the State and on certain property belonging to them personally.

People owning houses in cities or rural localities pay a yearly tax on the buildings at the rate of one per cent. of the cost of construction of the building. Taxes are paid by owners of cars, motor cycles or bicycles who live in towns. Taxes on the very popular Moskvich and Pobeda cars range from 0.68 per cent. of the cost of the car in small towns up to 1.2 per cent. in large cities and capitals of republics.

City and rural Soviets have no right to introduce taxes other than those sanctioned by general State laws.

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December, 1956 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in Malaya and with certified returns from Malayan Branches and report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and behalf were necessary for the purpose of our audit;

(b) Such information and explanations have been found to be satisfactory;

(c) The returns received from the branches have been found adequate for the purpose of our audit;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required;

(f) In our opinion, (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1956;

(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreemen with the books of account and returns.

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

CHAIRMAN, DR. T. M. A. PAI'S SPEECH AT ANNUAL GENERAL MEETING

BANKS SHOULD BE PREPARED FOR VOLUNTARY RESTRICTION OF CREDIT

THE view that banks would have to be prepared for voluntary restriction of credit facilities and canalise them towards a healthier economy was expressed by Dr. T. M. A. Pai, Chairman of the Canara Industrial and Banking Syndicate Ltd., in the course of his address at the Thirty-first Annual General Meeting of the Bank held in Udipi on 16th March 1957. The following is the full text of Dr. Pai's speech:

"GENTLEMEN,

"It is with deep regret I have to report to you the passing away of our Founder Director Sri Upendra Ananth Pai. It was to his vision and courage we owe the founding of this institution and he looked after it for several years in various capacities. He was a friend and guide of the institution and we miss him very much today. The Directors have decided to commemorate his memory suitably.

"I am glad that I could report to you on a successful year of working so far as your Bank is concerned. The improvement has been all round, adding to the strength and continued stability of the institution. With the calls coming in, the paid-up capital of the Bank improved from Rs. 26,75,668 as on 31st December 1955 to Rs. 27,80,579 as on 31st December 1956 and with the transfer of Rs. 3 lakhs from the current year's profit to the reserve fund, the reserves improved from Rs. 15 lakhs to Rs. 18 lakhs. Thus, as against the paid-up capital and reserves of Rs. 41,41,568 on 31st December 1955, the corresponding figure of paid-up capital and reserves stood at Rs. 45,80,579 on 31st December 1956. During the year the shares of the Bank were listed on the Madras Stock Exchange.

Deposits Rise

"There has been a progressive rise in deposits from Rs. 6,67,03,420 to Rs. 8,46,17,907 during the year. With the stringency in the money market and interest rates improving generally, it is gratifying to note that your Directors could get these results without an undue increase in the interest rates. There was also an improvement of about 20,000 deposit accounts.

"The Bank has been carrying on its business mainly in rented premises, but your Directors have been able to purchase a good building in the Bombay Fort area for an attractive price, so that our difficulty of restricted space for our Bombay office will not be there any longer from this year. The Directors also have gone ahead with the scheme of putting up our own building at Mangalore. Your Directors propose to constitute a separate building reserve fund and transfer Rs. 25,000 from the current year's profit to it.

"With the improvement in advances for finance of trade and movement of goods, there has been a slight reduction in investment in Government securities and cash in hand and with bankers expressed as a percentage of the total deposits. The investments in Government securities improved from Rs. 3,06,74,166 to Rs. 3,41,06,873, while the cash in hand and with bankers rose from Rs. 81,96,417 to Rs. 98,25,552.

"The total advances of the Bank stood at 58 per cent. of the total deposit liabilities, out of which 82 per cent. was fully secured and the number of loan accounts increased from 64,418 to 68,199. The bills for collection and acceptances and endorsements for customers improved from Rs. 55,85,026 to Rs. 75,24,877. Thus, our total resources stood on 31st December 1956 at Rs. 10,64,10,312 with over 240,010 customers.

"As against the gross income of Rs. 38,51,487 in 1955 (with previous year's brought forward) the Bank had a gross earning of Rs. 49,38,581 and the net profit increased from Rs. 6,04,532 to Rs. 9,14,030.

Economic Progress

"The satisfactory economic progress of the country under the first Five-year Plan and the new problems that are now coming up continuously require to be solved. New targets have got to be reached both under agriculture and industry and employment. Added expenditure has to be incurred to keep up the momentum of the development that is already under its way. All these have partly contributed also to the inflationary forces. The need for finding adequate resources to finance the second Five-year Plan, while at the same time preventing inflation getting out of hand as a result of the heavy governmental expenditure, the need for providing jobs, while at the same time restricting the expenditure on consumption, the need for improving agricultural income in order to provide incentives for growing more food and raw materials being counterbalanced by curbing of expenditure and the need to resist wages and salary increases in order to prevent the overall increase in the prices, are issues conflicting enough by themselves; but the nation and the Governments have to face these issues squarely as they are inevitable in the transitional period. Appreciation of these issues by a larger number of people and the realisation on the part of the people in the country that the huge capital and other expenditure contemplated by the Government could come only out of the sacrifices that different groups and sectors in the national economy are prepared to make, will go a long way in creating conditions of stability. Unless the nation is prepared for harder work, these burdens can never be lightened.

Much to Accomplish

"There is so much to attempt and so much to accomplish, that what has been achieved seems very little by comparison. But it is significant that never before has the country made such great progress in the development of its resources both under agriculture and industry. It is heartening to see the country progressing along right lines and a determined people, with patriotism and broader outlook, being prepared to take up these burdens of sacrifice can surely win the battle against poverty. These economic conditions have had their inevitable repercussions on the banking structure. It must be said to the credit of the Central Banking authority and the Government that some of these problems have been tackled by them with courage and imagination. Banks will have to be prepared for voluntary restriction of credit facilities and canalise them towards a healthier economy. While each banking unit must be happy over the progress it has made, it does not matter how much each of them has relatively improved compared with the other banking units. They will be serving the country and its economy only by tapping the resources which do not find their way to the banking system at present rather than diversion of funds from one banking unit to another. Instead of competition and offer of higher rates of interest for deposits, if greater effort could be made in making the people banking minded and induce them to part with their savings, a greater measure of national service could have been rendered.

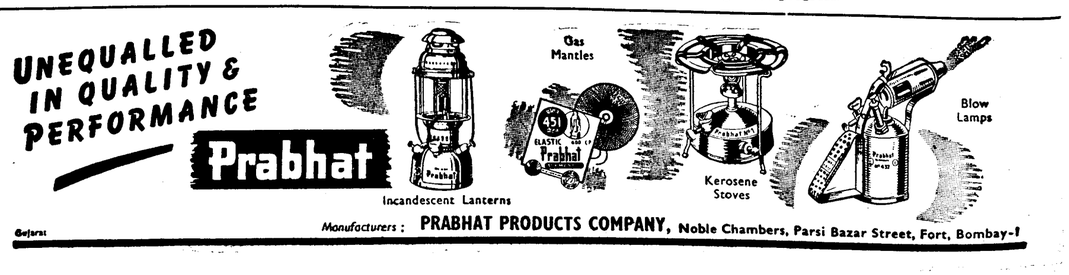
"Last year, the banks contributed liberally and with a patriotic zeal towards the Central and State loans. Because of this, the loans were easily got subscribed. Not only direct contributions were made, but smaller people also were induced to go in for these investments by banks creating suitable facilities. Unfortunately, the capital depreciation that was allowed to take place subsequently to the closing of these issues, I am afraid, ought not to have been allowed particularly when there is a heavier borrowing programme during the second Five-year period and the need to cultivate the habit of investing in Government securities should have been deliberately fostered and developed in the investing public. A greater stability to the security market could be imparted only by a larger number of people being induced to hold on to the securities rather than the securities getting concentrated in the hands of a few investing institutions.

"While the Government have their own ideas about credit being made available to agriculture and industry at economic rates of interest, the red-tapism involved in this process and the ultimate rate at which this money is lent to the people in the villages make the utility of these schemes look very unreal. While the Governments have hastened with legislation to put curbs on moneylending and shutting off of avenues of credit facilities in the rural parts, the vacuum has not been filled up as rapidly as it should have been. Unless credit is made available with imagination, it will take a longer time for the people to get the real benefits. Until the co-operative institutions are able to take all these responsibilities and the State Bank takes up the real burden, there is no reason why the agency of the Scheduled banks should not be permitted to take up this responsibility. If only the conflict of ideologies could be reduced, much of the avoidable difficulties facing the people could be reduced.

Warehousing

"I am happy that the question of warehousing has at last received the attention of the Government and the Central Warehousing Corporation (under the Agricultural Produce—Development and Warehousing Act) has been brought into existence with the main function of setting up a chain of 100 warehouses during the second Five-year Plan and also promoting State Warehousing Corporations, which, in their turn, will establish about 250 warehouses at important centres within each State. This will help in removing one of the serious handicaps so far as credit facilities being made available to the villagers and also help the banks to encourage these advances without any risk. I am glad that my suggestion that the Government should have given sufficient attention to the training of technical personnel taking into consideration the contemplated development plans has received the attention, however belated it be. If only this decision had been taken five years ago, most of the problems that are now facing us could have been got over. The lack of will to get things done within the minimum possible time and the lack of requisite resilience on the part of the administrative machinery still act as bottlenecks to our progress. I have no doubt, this will receive the attention of the authorities.

"In conclusion, I thank all the staff members for the honest work that they have put in and the depositors and borrowers for their continued patronage and the shareholders for the keen interest they have taken in the progress of the institution. The progress of the Bank during the current year has been a new landmark and I trust will enable the Bank to march towards greater progress."



Plan for Progress

Industry in India

Steel biting  into the earth, metal and concrete taking shape as buildings, and giant machines roaring into action are today changing the pattern of India's economy through dynamic industrialisation.  Over Rs. 1,000 crores will be spent on the expansion of industries during the Second  Five Year Plan. This intensive development programme will increase the national income,  create more employment and bring the benefits of modern living to India's millions. 

Proud to play a part in this mighty adventure of building a new India, Textile Machinery Corporation Limited, pioneer in many fields of engineering, supplies industry, railways and river valley projects with a wide range of equipment.

ASIAN COUNTRIES REPORT RISE IN INDUSTRIAL OUTPUT

INCREASED IMPORTS OF CAPITAL GOODS

DURING the year 1956, the region covered by the Economic Commission for Asia and the Far East witnessed and accelerated growth of industrial production, as compared with the previous two years—an 8 per cent. gain in 1955 over 1954, being followed by a further gain of nearly 15 per cent. in the first half of 1956, which was much higher than the rate of growth in agricultural production, and than even the rate for the whole world. The latest Survey of the E.C.A.F.E., points out, however, that the rate of increase, though striking, will be misleading unless the low industrial base from which the growth is measured is borne in mind. Rough estimates for the region, based on preliminary data, indicate that during the year under review steel production increased by 19 per cent., cement by 18 per cent., pig iron, chemical fertilisers and paper by 15 per cent., cotton cloth by 14 per cent., electric power by 12 per cent., cotton yarn by 11 per cent., coal by 8 per cent., and crude petroleum by 6 per cent., as compared with 1955. Further, final returns for the foreign trade of the region for the whole year are expected to show an element of adverse effect in the form of higher import prices and reduced growth of import and export volume following the closure of the Suez Canal in the fourth quarter. It is noteworthy, however, that in the first nine months of the year exports of the countries of the region, excluding mainland China, were 6 per cent. higher by value —and much higher in terms of volume—as compared with the corresponding period of 1955. As against this, the value of imports rose by no less than 20 per cent., because of higher import prices and a substantially larger inflow of capital goods for developmental purposes. An important feature of the trade, consequently, was that the terms of trade worsened for most countries as the trade gap widened.

Some of the countries which shared in the expansion in industrial production were China (mainland and Taiwan), India, Japan, Indonesia, Ceylon, Malaya, Pakistan and Hong Kong. In China, for instance, industrial production, excluding handicrafts, was reported to have risen by 25 per cent. during the year, as compared with 1955. But its annual rate of increase declined from about 32 per cent. in 1953 to about 17 per cent. in 1954, and to about 8 per cent. in 1955. A number of major industrial products, including iron and steel, but not electricity, coal, crude petroleum, ammonium sulphate, cotton cloth and sugar, were reported to have shared in the increase. In India, the rate of expansion was as much as 15 per cent. during the first nine months of the year as compared with 1955. The increase was shared by both basic and consumer industries. A noteworthy development was the manufacture for the first time of a number of items, such as penicillin, D.D.T., newsprint, plastics. sheet glass and others. The industrial output in Japan and the Philippines for the first half of 1956 was about 12 per cent. higher, as compared with the corresponding period of 1955.

Major Industrial Items

Substantial increases were recorded in a number of major industrial items. The total generation of electricity in the region, excluding a few countries, increased by an estimated 12.4 per cent. in 1956 as compared with 1955. The total installed generating capacity as at the end of the year was estimated to be about 22 million kw. Production of iron and steel, which is mostly concentrated in China, India and Japan, is reported to have increased significantly—by about 15 per cent. in respect of pig iron, and 19 per cent. in the case of crude steel—to 12.6 million tons in the case of pig iron and 16.7 million tons in the case of steel. Further, a beginning had been made in a number of countries, including Burma, South Korea, Pakistan, the Philippines, Singapore and Thailand. Cement production in 11 of the countries of the region rose from 15.3 million tons in 1952 to 22.1 million tons in 1955, and further to an estimated 26.1 million tons in 1956. This increase was attributed to rapidly rising demand for development purposes. Chemical fertilizers, about three-fifths of which are nitrogenous, have been produced in increasing quantities in Japan, China and India. The total production for the three countries rose from 6 million tons in 1955 to an estimated 6.9 million tons in 1956. Of this total, Japan contributed 83.6 per cent., China 9.9 per cent. (7.1 per cent. on the mainland and 2.8 per cent. in Taiwan), and India 6.5 per cent. Further, in order to meet increasing demands, measures were being taken to expand output. Among the countries where new fertiliser factories were under construction, mention must be made of South Korea and Pakistan. In the case of the cotton textile industry which is extensively developed in China. Hong Kong, India, Japan and Pakistan, the output of cotton yarn and cloth increased from 2,099,000 tons in 1955 to 2,353,000 tons in 1956 in respect of yarn, and from 11,904 million metres to 13,674 million metres in respect of cloth.

Characteristic Feature

A characteristic feature of the industrial development of this region, however, is that manufacturing in most countries is still largely concerned with processing agricultural and mineral raw materials, and is commonly carried on by hand, cottage and small-scale industries. Further, a number of considerations enter into the choice of new industries for development, chief among them, according to the E.C.A.F.E. Survey, being the availability of raw materials, need for self-sufficiency and foreign exchange, provision of employment and extent of the market. A common factor among the countries generally is that, though development plans differ in emphasis, they frequently call for the establishment of basic industries. An important feature noted by the Survey in the sphere of foreign trade of this region is that there has been a steady decline in the imports of consumer goods and raw materials needed for consumer goods. The share of these imports in the total was 71 per cent. in 1954, 69 per cent. in 1955 and 44 per cent. in the first half of 1956. As against this, the proportion of imports of capital goods and materials needed for their production to the total increased during the same period from 29 to 36 per cent.

During the year under review, the share of trade within the region in total trade remained at about one-third for both exports and imports. What is significant, however, is the marked rise—from 2.8 per cent. to 4.8 per cent.—in the region's relatively small imports from the centrally planned economies of Europe and mainland China. The share of its exports to these countries, however, declined from 5.1 per cent. to 3.1 per cent.

An important trend that is likely to influence the trade within the area in the near future is Japan's export policy. A Japanese business and Government drive to expand trade and investment in South-East Asia is stated to be under way. Various measures are being envisaged in this connection, such as providing increased technical assistance, increased subsidies to various technical co-operation and investment associations, and the like. Further, Japan is also reported to be planning a more than $100 million each way trade with China this year in anticipation of U.S. relaxation of embargo, lists governing the non-communist world's trade with China. These plans are likely to take concrete shape at the forthcoming meeting of the Japanese industrialists and traders with the Peking authorities.

MONEY

ITS NATURE AND MANAGEMENT

By B. T. Thakur

How can India guard against diminution in the purchasing power of money? What is deficit financing? What are the functions of Central Banks and the conditions for their healthy existence? What is the purpose of the Reserve Bank of India? These and other questions facing India today are dealt with clearly and comprehensively.

This book is the expanded version of Prof. Benoy Sarkar Memorial Lectures delivered by Mr. Thakur at the Calcutta University in 1956.

Here is a book which will be useful not only to economists, bankers, administrators and politicians, but also to intelligent readers and students. **Rs. 9/8 -**

ORIENT LONGMANS

AREA UNDER RABI CEREALS

The all-India first estimate of *rabi* cereals (wheat and barley) puts the current year's area at 38,772,000 acres, as against the corresponding adjusted estimates of 36,015,000 acres for 1955-56. This represents an increase of 2,757,000 acres or 7.7 per cent. in area under the said cereals, as compared with last year.

A significant feature is that the increase in acreage has been shared by almost all the States, particularly Andhra Pradesh, Madhya Pradesh, Rajasthan and Delhi. It is also noteworthy that an important contributory factor has been the favourable weather conditions at the time of sowing.

The present estimates, it is stated, generally cover the period upto the end of December 1956. Till then, the condition of the standing crops of these cereals were reported to be generally satisfactory, except in some parts of Chhindwara district in M.P. Moreover, the estimates do not cover the entire area sown to *rabi* cereals. Past experience has revealed that the area at the first estimate stage forms roughly 90 per cent. of the area under wheat and 95 per cent. of the area under barley finally reported.

It will be recalled that the first estimate of *kharif* cereals has already been announced. The overall position of *kharif* and *rabi* cereals for 1956-57, at the first estimate stage, is as under:

Area (thousand acres)

	1956-57 (First Estimate)	1955-56 (Adjusted First Estimate)	Increase (+) or decl. (2) over col. (3)	
			Absolute	Per cent.
(1)	(2)	(3)	(4)	(5)
Kharif Cereals .. (Rice, Jowar, bajra, maize, ragi and small millets)	140,070	139,802	(+) 268	(+) 0.2
Rabi Cereals .. (Wheat and barley)	38,772	36,015	(+)2,757	(+) 7.7
Total ..	178,842	175,817	(+) 3,025	(+) 1.7

As will be seen from the table, the first estimate for all cereals reveals an increase of 3,025,000 acres or 1.7 per cent. in 1956-57 as compared with 1955-56. As regards wheat alone, the present estimates puts the acreage at 30,502,000 acres, as against the corresponding adjusted first estimate of 27,756,000 acres for 1955-56. In the case of barley, the corresponding figures for 1956-57 and 1955-56 are 8,270,000 and 8,259,000 acres, respectively.

DEMAND FOR CEMENT

The total demand for cement in the country has risen from 2.6 million tons per annum during 1949-51 to 10.0 million tons per annum in 1956-57. In 1947, soon after Partition, the number of cement factories in India was 18, with an installed capacity of over 2.1 million tons. At present, their number is 28, with an installed capacity of 4.9 million tons. The target for cement production at the end of the second Plan is 12.0 million tons, twice that of the existing capacity. The actual production of cement in India was 2.6 million tons in 1950-51, 3.5 million tons in 1952-53, and 4.6 million tons in 1955-56.

The total investment in the cement industry up to 1950-51 was Rs. 29 crores. Rs. 15 crores were invested in new units and expansion by April 1955. The projected growth in this industry by 1961 will involve a capital expenditure of more than Rs. 75 crores. The bulk of the expansion of cement industry in India has been in the private sector, although the Government has now entered the field with three Government-operated factories, one each in U.P., Bombay and Mysore. As against 33,000 persons employed at the commencement of the first Plan, the present strength of the labour force in cement factories is about 40,000. It was estimated that about 75,000 persons will be employed in the industry by 1960-61.

MANUFACTURE OF FOUNTAIN PEN INK

The Small Industries Organisation has just announced preparation of a scheme for the manufacture of fountain pen ink (blue-black) for the guidance of small industrialists. The scheme has been explained elaborately in a booklet issued by the Organisation. It gives the basic data on the requirements of machinery and equipment, raw materials, capital investment and manufacturing cost.

The production of fountain pen ink in India in 1955 was 7,43,000 dozen of 2-oz. phials, as compared with 533,600 dozen similar phials in 1953. Despite this increase, fountain pen ink is still being imported. The demand for the ink is expected to increase further in view of the expansion in literacy and in the number of fountain pens. Besides, possibilities of export are also wide.

ADVERSE TRADE BALANCE IN JANUARY

During January this year, provisional figures for foreign trade of India by all routes—sea, air and land—on private and Government accounts indicate that the total value of exports, including re-exports, of merchandise and gold fell short of imports by Rs. 23.49 crores. This was, however, exclusive of the value of certain consignments of Government stores awaiting adjustment. The details are as under:

Merchandise, excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim, and Bhutan. *Exports* Rs. 54.98 crores; *re-exports* Rs. 30 lakhs. *Imports*: Rs. 78.76 crores. Total trade: Rs. 134.04 crores.

THE UNITED BANK OF INDIA LIMITED

DR. N. N. LAW COMMENDS THE NECESSITY OF A BANKING PLAN

SPEECH AT ANNUAL GENERAL MEETING

ADDRESSING the shareholders of the United Bank of India Ltd. at their Annual General Meeting held in Calcutta on 15th April 1957, Dr. N. N. Law, Chairman of the Bank, reviewed at length the various aspects of the monetary and banking trend during the year 1956. In this connection, he pointed out that the growing financial needs of the private sector could be met by banks, without much leaning on the Central Bank of the country, through territorial and functional development of banking which would go a long way in increasing the resources of banks.

The following are the relevant extracts from Dr. Law's speech:

"GENTLEMEN,

"Copies of the accounts for the past year have been in your hands for some time, and I hope you all share our pleasure in that the results depict another year of progress. The year's achievements have generally followed the pattern of most of the larger banks. The deposits of the Bank at Rs. 33.9 crores were higher by Rs. 2.6 crores, i.e., 8.4 per cent. over the previous year's figure. This should be deemed to be very satisfactory considering that the average rise in deposits of Scheduled banks for the year was 7.8 per cent. Although our advances were correspondingly higher by Rs. 2.3 crores, the increased revenue from this source was more or less absorbed by higher interest charges, as also salaries and allowances, resulting in a smaller rise in net profits.

Rising Trend of Interest Rate

"Despite further increase in money supply, the year under review witnessed persistent tight money conditions. A large portion of the increase in money supply was in spheres beyond the reach of the organised banking system and the increase in bank deposits was disproportionately small compared to the increase in money supply. While this was the position in regard to banks' resources, the demand on them for accommodation increased substantially, reflecting quickened pace of the economy. This resulted in severe competition on the part of banks for a shift in deposits from one bank to another, and the rate of interest for call and short-term deposits was forced up to a new high level. I would refer you to my observations made in this regard in my speech last year where I suggested that banks should make fuller use of existing associate facilities for making concerted efforts to combat the growing *malaise* of the increasing rate of interest on deposits. Although we still hold to that view it is difficult for us to keep up a sustained resistance to a tendency which we feel not to be in our best interests.

"Very high rates of interest offered by most of the larger banks of the country have not attracted proportionately higher deposits to the banking system. That is an indication that deposits are not interest-sensitive to the extent they are supposed to be. If, instead of diverting the spending power, by those who have it, in the direction of payment of interest, the amount was spent in extending the banking organisation, better results could possibly have been obtained and the foundation laid for ensuring a systematically rising trend in deposits. The point is a pertinent one, because tight money condition and high interest charges threaten to be a permanent feature, if the present pattern continues in a developing economy.

Bill Market Scheme

"With regard to the Bill Market scheme, only a few banks, including ours, are in a position to utilise the facility. The aggregate amount availed of by banks is rather small, compared to what the Reserve Bank is inclined to permit. It is, of course, for the banks to decide how far they will go. But I would like to mention here that, if the intention of the 'scheme' is to provide funds to the trade and commerce and make it available at all levels, non-inclusion of a large number of banks in this facility limits the scope of its functioning. Since the bill against which such advances may be allowed would arise out of genuine commercial transactions, attempts should be made to bring in more of the banks, in so far as they otherwise qualify, within the purview of the scheme. Indeed, the recommendation of the Shroff Committee was for inclusion of at least all the Scheduled banks within the same scheme.

Bank Rate

"Coming back to the monetary situation which is considered paradoxical, in that we have stringency of money concurrently with a rising trend in prices in certain sectors of the economy, I feel that the question of the Reserve Bank's lending rate deserves more attention. It is not the money market alone which has got to be viewed in the determination of an appropriate monetary policy. In the context of an expanding economy, a higher Bank rate, if anything, only hardens the cost structure and acts against developing a climate for investment or a favourable trend for export and also adds to the problems of resources. Therefore, stringency in the money maket, under conditions of rapid economic development, demands graduated flow of less costly funds to the money market. This is not to deny the need for ensuring that such a flow does not lead to conditions of credit inflation. But such tendencies when they persist in raising their ugly head, could be curbed by the application of qualitative control by the central bank of the country. In an economy serviced by a banking system limited in its scope both territorially and functionally, the controls would, in any case, be less effective. I, therefore, think that whatever may have been the circumstances leading to the raising of the Bank rate, the issue demands re-examination.

Centralisation of Economic Power

"The past year marked the initiation of the second Five-year Plan. Although the size of the Plan is about double that of the first Plan, it is a national duty on the part of every person and institution to ensure success and that too within the time schedule. It is also true that taxation measures, at least for some time to come, will have to be broadbased and intensive, if the resources are to be obtained consistently with the social objectives. But, on the other hand, it is the duty of the Government to see that every economically active individual and organisation contributing to the Plan's fulfilment can retain a part of the resulting benefits, so that they may continue with greater vigour and encouragement to make progressively better contributions. The wholehearted participation of all the sectors of economy, including the enterprise and risk capital, is vital and necessary for the success of the Plan. If persistent attempts are, however, made towards more and more centralisation of economic powers in the hands of the State and if the extensive measures of direct taxation are pushed to such a level as will substantially discourage the existing enterprise in the private sector, the success of the Plan will suffer from substantial limitation dissuading the *entrepreneurs* from being adventurous enough to think in terms of taking upon themselves progressively larger risk of enterprise. The capital market is not in that mood.

State Sector's Requirements

"The requirements of the State sector should very largely be met by borrowing, and the borrowing programme should be so geared as will make the need for various fiscal measures less urgent or necessary. But, left to the Government alone, such a programme is unlikely to produce a balanced result. In this regard, the banking community can make its special contribution to the success of the Plan by ensuring that the necessary developmental climate has been created both for expansion and consolidation of the banking structure. I say, with all seriousness and with emphasis, that this co-operative atmosphere must be brought about among banks, so that they can bring in the untapped resources as grist to the economic mill and so aid the avoidance of an excessive and frustrating tax level by assisting the Government in getting larger funds through borrowings. The need for resources in the private sector is growing apace, which has to be met without much leaning on the Central Bank of the country. The growing needs are again varied in pattern. With these in view, your Managing Director, at the request of the Indian Banks Association, has tried to draw the attention of the banking community to the need for a 'Banking Plan' for the territorial and functional development of banking, in a brochure entitled *Necessity for a Banking Plan—a Tentative Study*. I am glad to mention that the outlines given therein have so far been favourably received as a basis for discussion.

Two-pronged Programme

"At the end of 1955 there were only 1,670 places which have been covered by the offices of the commercial banks; of these, only 646 places were served by major banks including the State Bank of India. It is also obvious that the needs of the common man in smaller places cannot be suitably met by specialised central organisations or by larger all-India banks. It has, therefore, been further suggested in the said Plan that this be taken care of through a two-pronged programme of quick extension of banking facilities by opening new offices at the rate of 1,000 per year in new places and by strengthening the existing ones, where necessary, and bringing into existence smaller unit banks set up regionally. Such unit banks may be organised and developed either as independent units or as subsidiaries to the larger banks. The Union Finance Minister himself has also expressed the hope that a large number of banks will grow in the country to accelerate the rehabilitation of the unemployed. It has also been suggested that the relics of past failures should be removed quickly in a planned way and, in due course, positive indemnity to individual depositors will have to be arranged, if deposit banking in the country is to grow as far as the economic and social requirements demand, and that India, in this respect, should take a lesson from banking experience in the U.S.A. and draw up her schemes for insurance of bank deposit and 'rehabilitation' of smaller banks.

Rehabilitation of Small Banks

"Necessity of rehabilitation of the small banks is further emphasised by the fact that, whereas the major banks of the country were at the end of the year 1955 serving only about 215,000 customers by providing advances, the rest of the banks were serving about 1,200,000 customers. It is not the aggregate quantum of money advanced, but the number of places and customers serviced, that is important. Indeed, we are aware of a number of smaller banks in the South and elsewhere in the country which are rendering useful service by helping medium and small business and industries in their respective regions. The position with regard to employment and rehabilitation of the people can largely be improved by helping development of the medium and small industries through proper and careful financing and here the necessity of rehabilitation and new growth of smaller unit banks is so acutely felt. In this regard, I would further suggest a statutory ceiling for the rate of interest that the major banks, including ours, may offer for deposits as a measure of assistance in the growth and development of the smaller banks till they assume necessary credit maturity and immunity from neglect due to smallness in size through insurance of bank deposits.

Subsidiaries

"So long as such regional banking organisations do not come into existence independently in large numbers, it is our view that it should be the duty of the larger banks to sponsor subsidiaries in different regions to be converted into independent units in due course. It has also been suggested in the said plan that the large banks, in addition to opening new offices, should play their role in the regional development of banking by assisting the existing smaller banks in so far as that can be done with safety, in conjunction with the suggested Government-sponsored organisations. We are of the view that a workable plan should be drawn up on the basis of the proposals made. Such a plan would go a long way in substantially increasing the flow of new resources into the banking system and this will in the ultimate analysis, apart from helping the lower-income-group economy in general, benefit the banks in the country, including this and other larger banks. It has been suggested that if the banking system is to evolve such a plan and work it out effectively, it may be useful to organise various associations amongst banks both on the basis of regions as well as on

INDIAN ALUMINIUM COMPANY EARNS RECORD PROFIT

EXPANSION PROGRAMME PROCEEDING TO SCHEDULE

THE year ended 31st December 1956 has turned out to be the most successful one, in respect of both sales and earnings, for the Indian Aluminium Company, Ltd. (Managing Director: Mr. E. S. Greenwood, Calcutta). The sales and earnings for the year have not only recorded a sharp rise over those of the previous year but have created record levels in the history of the Company. Shipments of the Company's own products reached a high of 7,064 tons, having gone up from 6,617 tons in 1955, and, in terms of value, the sale of its products increased by 20 per cent., that is, from Rs. 2.89 crores to Rs. 3.45 crores. The gross profit, which had improved from Rs. 13.41 lakhs to Rs. 48.64 lakhs in 1955, has made a further sharp advance to a record high of Rs. 65.58 lakhs during the year under review. The net profit also stands higher at Rs. 35.79 lakhs, as against Rs. 27.09 lakhs earned in the previous year. Viewed against the background of a net loss of Rs. 11.65 lakhs suffered as recently as in 1953 and of Rs. 4.18 lakhs in 1954, the progress of the Company during the last two years has indeed been very remarkable and provides hope that the future is now laid on solid foundations.

No amount has been added to the reserves, in spite of the higher earnings, while in the previous year a sum of Rs. 10 lakhs had been transferred to fixed assets replacements reserve. This is presumably due to the substantially larger amount that has been set aside for payment of ordinary dividend. It may be noted that the rate of dividend has been raised by only one per cent. to 10 per cent. but this is on a higher capital of Rs. 201.10 lakhs, raised during the year by the issue of new capital amounting to Rs. 41.10 lakhs. In addition, the Directors have set aside a sum of Rs. 10.05 lakhs for payment of a dividend of 5 per cent. to the purchasers of convertible stocks issued in February 1957 on the assumption that the entire stock will have been converted into ordinary shares and will, in accordance with the Deed Poll dated 17th December 1956, rank *pari passu* with the existing ordinary shares.

Factors Responsible

Several factors were cumulatively responsible for the outstanding achievement of the Company during the year. The fabricating operations received a further impetus from favourable market conditions, and although a decline in strip mill orders and a temporary shortage of metal affected operations at Belur, the total output of rolled products was higher at 6,636 tons as compared with 6,010 tons in 1955. There was also an increase of 50 per cent. in the production capacity of aluminium paste in the Company's plant at Kalwa. Again, in November 1956, the extrusion plant at Alupuram switched on to double-shift operation as a result of progress attained in developing operating technique and a widening of its sales outlets. Other facilities for continuous casting of rolling ingots and extrusion billets located near the smelter came into operation early in the year.

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

Carry forward	7.97	4.18	3.49	9.15

* Includes a provision of Rs. 10.05 lakhs made on the assumption that the entire convertible loan stock will have been converted into ordinary shares.

The second factor was the wider use of aluminium in various relatively new applications, particularly in the field of transportation, thanks to persistent market development efforts, aided by continuous improvement in the fabrication of medium and high strength alloy products. The Company's competitive position in the world aluminium industry has been improved by the fact that in recent months the Tariff Commission's estimated price for the Company's ingot production has been less than the landed cost without duty of imported ingot. However, the Company had to import a larger quantity of aluminium ingot at steadily increasing prices during the year, to offset the fall in production in its Alupuram smelter due to failure of power supply for one month and a labour strike lasting nearly two months. Bauxite mining and alumina production operations were conducted successfully with a view to reducing the imports which will be necessary when the Hirakud smelter comes into operation.

The comparative table given at the foot of the previous column provides an idea of the Company's progress in recent years.

Of the sale proceeds for the year under review, the Company's own products account for Rs. 345 lakhs, representing an increase of 20 per cent. over the year, and agency and distributor products for Rs. 80 lakhs, as compared with Rs. 77 lakhs in 1955. During the year, there was a decline in the Company's shipments of circles, but this was made good by a considerable increase in the shipments of other important products like flat and corrugated sheet, aluminium paste, etc.

New Issues

In January 1956, each of the ordinary shares of the Company of Rs. 100 was split into 10 shares of Rs. 10 each. In October last, a further issue of 411,000 ordinary shares of Rs. 10 each was made to the existing shareholders at a premium of Rs. 2-8 each, raising the paid-up ordinary capital from Rs. 160 lakhs to Rs. 201.10 lakhs. Since the close of the year, the issue of Rs. 268.13 lakhs of 5 per cent. convertible loan stock at par was successfully completed and allotment made in March 1957. The two issues together have provided about Rs. 3.2 crores to meet a part of the cost of the Company's current expansion programme (including additional working capital), estimated at Rs. 8.65 crores. The balance is proposed to be met out of bank loans, undistributed earnings and depreciation reserves. The Company's reserves and surplus as on 31st December 1956 aggregate Rs. 64.54 lakhs. The gross block of Rs. 460.51 lakhs, including an addition of Rs. 45.53 lakhs during the year, has been written down to Rs. 283.61 lakhs. The current assets amount to Rs. 281.92 lakhs, as against current liabilities aggregating Rs. 259.89 lakhs, including a provision for taxation of Rs. 7 lakhs.

The first stage of the Company's current expansion programme comprising the establishment of a new aluminium reduction plant of 10,000 tons annual production capacity at Hirakud in Orissa, and a relatively small expansion of the existing alumina plant at Muri to a production capacity of 18,000 tons of alumina per annum, is expected to be completed by the end of 1958. Thereafter, further expansion of the Muri alumina plant to 30,000 tons capacity will be taken in hand. This is expected to be completed by 1961. The whole programme, when completed, would enable the Company to produce 15,000 tons of aluminium per annum. Though the aluminium reduction plant at Hirakud will, in the first stage, have an annual installed capacity of 10,000 tons of ingot production, it is being designed to permit easy future expansion to a capacity of 20,000 tons or more per annum. At the same time, the Directors are making a continuous study of the availability of financial resources to enable them to carry out as early as possible the expansion of the Hirakud smelter to 20,000 tons capacity. The present phase of expansion programme is proceeding to schedule.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted on the Calcutta Stock Exchange at Rs. 12.50 *ex-div.* On this basis, the dividend for 1956 provides a yield of 8 per cent. per annum.

SHIVRAJPUR SYNDICATE'S BUMPER PROFIT

DIVIDEND LEVEL MAINTAINED

THE working results of the Shivrajpur Syndicate Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) for the year ended 30th November 1956 have been encouraging, in that the profit has recorded a smart increase over the year from Rs. 36.98 lakhs to Rs. 50.52 lakhs, thus more than making good the setback suffered in 1954-55. What is more noteworthy is that the profit has recorded such a rise, despite the fall in the Company's output during the year. This is because of the substantial increase in shipments and sales, thanks to the satisfactory supply of wagons for movement of ores.

The net profit is only slightly higher, having gone up from Rs. 17.14 lakhs to Rs. 18.78 lakhs. This is due to the larger provisions for depreciation at Rs. 4.50 lakhs, as against Rs. 3.60 lakhs, and taxation at Rs. 21.50 lakhs as against Rs. 12.25 lakhs. The Managing Agents' remuneration has also gone up from Rs. 3.99 lakhs to Rs. 5.74 lakhs. The dividend has been maintained at 80 per cent., made up of a dividend at the rate of Rs. 5 per share of Rs. 10 and a bonus of Rs. 3 per share, free of income-tax. This is the fourth year in succession for which the distribution is being maintained at this level, after having been raised from 70 per cent. paid for 1951-52 by stepping up the bonus part of it from 20 per cent. to 30 per cent.

The allocation to the various reserves has been raised from Rs. 11.45 lakhs to Rs. 13.30 lakhs. Of these, the mine development and prospecting reserve gets Rs. 7 lakhs, having been doubled from Rs. 3.50 lakhs, while the transfer to the general reserve has been pruned from Rs. 5 lakhs to Rs. 1 lakh. The allocation to the dividend equalisation reserve has, however, been maintained at Rs. 1.50 lakhs.

The following comparative table gives an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 30th November			
	1956	1955	1954	1953
Sale proceeds of ore	1,63.08	115.23	1,18.53	1,48.21

As already pointed out, the Company's output declined from 91,427 tons to 83,238 tons, the fall being due to the opencast workings nearing exhaustion. It is, however, expected that this drop in output from the opencast workings will be made good by higher production which will result, when the underground development schemes now in hand are completed. As a result of the satisfactory supply of wagons, the total shipments and sales rose from 82,332 tons to 117,482 tons. Commenting on the trading conditions during the year, the Directors observe, in their report for the year, as follows:

"As reported last year, forward contracts had been concluded for delivery extending into the financial year 1956-57, the total outstanding commitments being 123,684 tons at the close of the year under review. The Government decided to reimpose an export duty on manganese ore with effect from 3rd September 1956 on a sliding scale, payable in the case of the Company's sales by the buyers. In June 1956, the Government of India introduced a new export policy with the object of canalising a certain proportion of the export of ores through the State Trading Corporation. Quotas for export of manganese ore and for rail transport to the extent of 73,650 tons valid up to end June 1957 were issued by the Chief Controller of Exports, Bombay. Although these quotas do not fully cover the Company's outstanding commitments, nevertheless, as the result of recent discussions with the authorities in Delhi, it is expected that the granting of future annual quotas and the canalising of certain contracts will enable the Company to meet its outstanding obligations by the end of 1958."

CANARA BANK LIMITED

MR. A. DAMODAR PAI'S SPEECH AT ANNUAL MEETING

THE Fifty-first Annual General Meeting of the Canara Bank Ltd. was held in Mangalore on 18th February 1957. Addressing the shareholders on the occasion, Mr. A. Damodar Pai, Chairman of the Bank, struck a note of warning that a rate-war among banks would prove harmful in the long run. He desired that some action would have to be taken by the Reserve Bank and the Government to create healthier conditions in the money market.

The following is the full text of Mr. Pai's speech delivered on the occasion:

"To us in the Canara Bank, 1956 has been a particularly significant year, having been our Golden Jubilee year. The celebration of the Golden Jubilee at various branches on different occasions was utilised by your Directors and staff to express gratitude to the numerous patrons and well-wishers who have helped to build up your Bank. I am very happy to report the increased interest shown by all sections of the people in the services rendered by the Bank. Thanks to the large clientele, your Bank today occupies the first place among the banks incorporated in the new State of Mysore. I am aware that this happy position has added to our responsibilities, but, with your support, we shall play our part well in building up the economy of the State and the country.

"During 1956, in continuation of the trend of the two previous years, the deposits of Scheduled banks continued to rise, though the rate of increase was not as marked as in the previous year. While in 1955 the total deposits of Scheduled banks showed an increase of Rs. 90 crores, the increase in 1956 was just over Rs. 80 crores. During the year, your Bank showed an increase of Rs. 2.37 crores, as against Rs. 3 crores the previous year. Unlike in the previous year, the increase under demand deposits of your Bank was more marked than under time deposits.

"The increase in deposit rates noticed last year continued throughout the year 1956. There is now more or less a race among banks for accepting call money at rates higher than the Reserve Bank rate. Available funds move from one bank to another at the offer of higher rates. While healthy competition is no doubt essential, there can be little doubt that a rate-war among the banks will in the long run prove harmful. Some action will have to be taken by the Reserve Bank and the Government to create healthier conditions in the money market and to foster the establishment of a convention among banks as a healthy curb on rising rates.

"There was heavy demand for funds throughout the year due to larger imports and higher production in the country. Bank advances were at a high level throughout the year and the traditional ratio of advances to deposits was hardly ever maintained. While your Bank also was obliged to operate at a higher level of advances, the ratio was not permitted to shoot up too high. The balance-sheet shows advances were at 52.3 per cent. of deposits, as against 65 to 70 per cent. for Scheduled banks as a whole. This was more or less the pattern throughout the year, which operated more for liquidity than for higher profits.

"Our investments in Government and Trustee securities are higher by Rs. 1.24 crores which is slightly more than 50 per cent. of the increase under deposits. It should be a matter of satisfaction for you to know that your Bank has participated to a great extent in our Governments' borrowing programmes for their development schemes. Despite the unprecedented weakness in market for Gilt-edged securities, our holdings are still within market value.

"The foreign department of the Bank continued to make good progress, despite the effect of the uncertainty in the international situation on our foreign trade. The services of the foreign department at Madras, opened in the previous year, are appreciated and are being availed of in increasing measure by exporters and importers in the South.

"The times ahead of us are full of difficulties, but are also full of opportunities to serve and possibilities for growth to those who dare with full knowledge of their strength and weakness coupled with complete humility. With your good wishes and co-operation, and with the support of members of the staff who are our partners in this enterprise, we hope to play our part well in the coming years."

Points From The Chair

Smaller Unit Banks

"NECESSITY of 'rehabilitation' of the small banks is further emphasised by the facts that, whereas the major banks of the country were, at the end of the year 1955, serving only about 2,15,000 customers by providing advances, the rest of the banks were serving about 12 lakhs customers. It is not the aggregate quantum of money advanced but the number of places and customers serviced that is important. Indeed, we are aware of a number of smaller banks in the South and elsewhere in the country which are rendering useful service by helping medium and small business and industries in their respective regions. The position with regard to employment and rehabilitation of the people can largely be improved by helping development of the medium and small industries through proper and careful financing and here the necessity of 'rehabilitation' and 'new growth' of smaller unit banks is so acutely felt. In this regard, I would further suggest a statutory ceiling for the rate of interest that the major banks, including ours, may offer for deposits, as a measure of assistance in the growth and development of the smaller banks till they assume necessary credit maturity and immunity from neglect due to smallness in size through 'insurance of bank deposits.'"

DR. N. N. LAW,
United Bank of India Ltd.

Coal Production

"The fact remains, however, that the coal industry in both sectors has undertaken the vast commitment of providing the country with 60 million tons of coal at the end of five years, of which one year has already gone without an appreciable increase in production owing, as I have already pointed out, to the Government's shilly-shallying methods. Can we reach the target in the four remaining years? I can speak only for the private sector. It has received the green signal rather late. But that is a minor matter compared with the other handicaps under which it has to operate. For example, new mines have been declared out of bounds for the private sector. While collieries are expected to go all out for production, it seems hardly a logical decision to ask them to confine their operations within a restricted area. The idea seems to be gradually to narrow the scope of the private sector and widen that of the public in pursuit of the policy of establishment of a socialistic pattern of society."

NARENDRA SINGH SINGHI,
Indian Mining Federation

Credit Facilities

"Banks will have to be prepared for voluntary restriction of credit facilities and canalise them towards a healthier economy. While each banking unit must be happy over the progress it has made, it does not matter how much each of them has relatively improved compared with the other banking units. They will be serving the country and its economy only by tapping the resources which do not find their way to the banking system at present rather than diversion of funds from one banking unit to another. Instead of competition and offer of higher rates of interest for deposits, if greater effort could be made in making the people bank-minded and induce them to part with their savings, a greater measure of national service could have been rendered."

DR. T. M. A. PAI,
The Canara Industrial and Banking Syndicate, Ltd.

Problems of Jute Industry

"Considering the long-term interests of the industry, the real answer to the problem seems to lie in lower prices for raw jute, with finished goods prices stabilised at their present low levels, thus preserving our competitive advantage and assisting the growth of the national economy through higher earnings from increased exports. Mention of our competitive position leads me on naturally to a reference to our most formidable competitor, namely, Pakistan. We have seen the Pakistan jute industry mushroom to a very respectable size and we are obviously entering a period in which our combative strength is to be severely tested. Last year, Pakistan's exports of jute manufactures totalled 80,000 tons, an increase of about 50 per cent. on the previous year and roughly one-tenth of India's total exports of gunnies."

N. K. JALAN,
Calcutta Jute Fabrics Shippers Association

Supply of Cotton

"This has not been an easy year for cotton. Not only has the Indian crop fallen short of expectations, but continued changes in Government's policy regarding imported cotton have made planned purchasing most difficult. It goes without saying that it is very difficult to maintain a consistent quality of cloth or yarn in the face of such conditions. I sincerely hope, therefore, that the Government will stabilise its programme for imported cotton at least from year to year so that mills may budget in confidence for each 12-month period. The cost of Egyptian and Sudan cotton has, of course, risen considerably as a result of the Middle East crisis. It is to be hoped that the time is not far off when these better quality cottons are available once more to Indian mills at a price which they can afford to pay."

K. G. MILNE,
Kohinoor Mills Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

MODERN MILLS LTD. Annual General Meeting, Bombay, 24th April 1957. Dividend: Rs. 8.00 (includes bonus of Rs. 3.00) per share, payable on and after 29th April 1957.

Notices

WAVERLEY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 78th Annual General Meeting of the Members of Waverley Jute Mills Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 8th day of May, 1957, at 4 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend on the Preference Shares.
3. To appoint Directors in place of Messrs. R. G. Edwards and A. N. Sil, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

   (i) "That Mr. R. G. Edwards be and is hereby appointed a Director of the Company liable to retirement by rotation."

   (ii) "That Mr. A. N. Sil be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special notice dated 10th April 1957, of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. R. G. Edwards and A. N. Sil are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of a Subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 175, 179 and 180 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:—

   (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

   82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

   (b) Article 87 shall be deleted and the following new Article substituted therefor:

   87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

   (c) In Article 121, line 1, the word "Ordinary" shall be deleted and the words "Annual General" substituted therefor.

   (d) Article 175 shall be deleted and the following new Article substituted therefor:

   175. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 218 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

   (e) In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

   (f) In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 22nd April, 1957, to 8th May, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *12th April*, 1957.

Note.—Payment of the proposed dividends, if declared, will be made on or after 15th May, 1957, only to those members whose names are registered in the Books of the Company as holders of the Preference Shares on 8th May, 1957, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in Respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of Auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December, 1956, it is proposed that the Accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for a period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 161.

NELLIMARLA JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 34th Annual General Meeting of the Members of NELLIMARLA JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 7th day of May, 1957, at 2-45 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. T. K. Basu, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. T. K. Basu be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice dated 10th April 1957, of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. T. K. Basu is an "Associate" of the Managing Agents within the meaning of the Act by reason of his being a Director of a subsidiary of the Managing Agents' Company and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd April to 7th May, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

MARSHALL SONS AND COMPANY RAISES DIVIDEND

SETBACK IN RESULTS OF MCLEOD GROUP JUTE MILLS

Marshall, Sons and Co. (India) Ltd.

THE directors of the above Company [Managing Agents: Marshalls (Direction) Private Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th June 1956.

The trading account shows a profit of Rs. 5,19,244 (Rs. 5,61,081). After adding the profit on sale of furniture and motor vehicles Rs. 8,107 (Rs. 3,521) and dividend from John Fowler (India) Private Ltd. Rs. 12,500 (Rs. 6,250) there is a total of Rs. 5,39,851 (Rs. 5,70,852). From this amount is deducted general depreciation Rs. 1,17,488 (Rs. 1,03,067), adjustments in respect of previous years Rs. 33,893 (Rs. 70,657) and provision for taxation Rs. 1,90,000 (Rs. 2,00,000) leaving a net profit of Rs. 1,98,470 (Rs. 1,76,406). Adding to this the amount brought from the previous year of Rs. 1,12,618 (Rs. 93,713) there is available for disposal a sum of Rs. 3,11,089 (Rs. 2,70,118 after providing Rs. 20,000 for bad and doubtful debts). It is recommended that this balance be disposed of as follows:

Payment of a dividend of 20 (15) per cent. free of Indian income-tax amounting to Rs. 2,10,000 (Rs. 1,57,500) and leaving a balance of Rs. 1,01,089 (Rs. 1,12,618) to be carried forward.

The Company's trading again shows an improvement. Sales for the year in question showed an increase, being Rs. 2,56,02,270 as against Rs. 2,12,35,000 during the preceding year. The trading profit, however, shows a decrease, due to keenly competitive market conditions which necessitated a reduction in the margins of profit realisable. The directors feel justified, however, in recommending a dividend of 20 per cent. free of tax.

The increase in expenditure can readily be explained, firstly, because of the new manner in which accounts have to be rendered, whereby the gross income has to be shown on some items, instead of the net profits, as has been done in the past, and secondly, there is a considerable increase in the interest on overdraft owing to the heavy trading.

It is with pleasure that the directors report the satisfactory co-operation with the Britannia Engineering Co., Ltd., in the working of the Marshall/Britannia Agreement for the indigenous manufacture of tea machinery, and their continued endeavour to meet the Tea Industry's demands for tea machinery.

The directors also report a further joint undertaking with the Britannia Engineering Co., Ltd. for the indigenous manufacture of steam road-rollers. It is hoped that these will soon be available so that they can be offered for sale to fill an important demand in the mofussil areas for a reliable, simple, road-roller to assist the Government of India in their road development undertaking.

It will be of interest to know that the Marshall Electric Motors, which are being indigenously manufactured for the Company, are in very great demand, and every endeavour is being made to step up production as much as possible.

With the curtailment of imports, the directors have found it essential to explore every avenue leading to sources of indigenous manufacture of the various items of machinery with which they have been so long associated. To this end the Company has undertaken, and has received a licence from the Government of India for the indigenous manufacture of *Baxter Stonebreakers*.

The directors, although confronted with considerable cuts in imports, look forward with confidence to the continued well-being of the Company by actively forwarding the Government of India's policy of becoming self-sufficient through the indigenous manufacture of a number of items of machinery required during their second Five-year Plan and thereafter.

Accounts in brief are as under:—

Alexandra Jute Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1956.

The profit for the half-year, after providing for depreciation Rs. 78,225 (Rs. 1,18,000) and taxation Rs. 1,30,000 (Rs. 2,00,000), amounted to Rs. 1,68,242 (Rs. 2,29,971) to which was added dividends forfeited Rs. 636 (Rs. 10) and credit balance brought forward from the previous half-year of Rs. 1,38,329 (Rs. 94,086) making a total of Rs. 3,07,207 (Rs. 3,24,067). This amount the directors distributed as follows:—

To dividend on 9,000 preference shares at 7 per cent. per annum for the half-year ended 30th June 1956, or Rs. 3-8 per share Rs. 31,500 (Rs. 31,500) and to dividend on 6,000 ordinary shares at 10 (10) per cent. per annum for the half-year ended 30th June 1956, or Rs. 5 (Rs. 5) per share Rs. 30,000 (Rs. 30,000) leaving to be carried forward Rs. 2,45,707 (Rs. 2,02,567).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market price.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, Mills worked 48 hours per week with 12½ per cent. of the total looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956 and to 5 per cent. from 20th February 1956. Since the close of the period the Industry sealed 2½ per cent. of the total looms from 16th July 1956 and a further 5 per cent. on 17th September 1956, again making a total of 12½ per cent. of the total looms sealed. Due to the purchase of loom hours these mills worked 96 hours per week on a double shift basis working 272 looms on each shift.

Trading conditions throughout the half-year continued to be difficult, and with the increase in production due to unsealing of looms prices fell rapidly and at no time was it possible to transact business simultaneously in raw jute and goods at a profit.

Mills were on strike from 15th October 1956, to 22nd December 1956, due to the refusal of workers in the Weaving Department to work one weaver to two looms although this procedure had been in force for a considerable period.

Proposed Change in the Company's Accounting Period.—Subject to the passing of the Special Resolution to be proposed at the forthcoming Annual General Meeting amending the Articles of Association of the Company, the directors have decided to close the Company's accounts annually on 31st December. The next accounts will, therefore, be in respect of the half-year ended 31st December 1956, and, thereafter, annual accounts made up to the 31st December, in each year will be issued.

Accounts in brief were as under:—

Chitavalsah Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The profit for the half-year, after making adjustments and providing for depreciation Rs. 85,173 (Rs. 1,00,000) and taxation Rs. 3,35,000 (Rs. 2,92,000), amounted to Rs. 3,62,905 (Rs. 3,75,447) to which must be added the unclaimed dividends forfeited Rs. 2,534 (Rs. 364), bad debts recovered Rs. 1,397 (Rs. 1,622) and the credit balance brought forward from the previous half-year of Rs. 1,32,949 (Rs. 1,52,253) making a total of Rs. 4,99,785 (Rs. 5,49,434 including Rs. 19,749 being adjustments and E.P.T. Post-war Refund). Bonus paid to workers in respect of previous period absorbed Rs. 92,820 leaving a total of Rs. 4,06,965 (Rs. 5,49,434). The directors have transferred to reserve for machinery renewals Rs. 1,00,000 (Rs. 1,75,000) leaving an available balance of Rs. 3,06,965 (Rs. 3,74,434). This amount the directors distributed as follows:—

To dividend on 5,000 preference shares at 7 per cent. per annum for the half-year ended 30th June 1956, or Rs. 3-8 per share Rs. 17,500 (Rs. 17,500) and to dividend on 3,01,500 ordinary shares at 12½ per cent. per annum for the half-year ended 30th June 1956, or As. 10 (As. 12) per share Rs. 1,88,438 (Rs. 2,26,125) leaving to be carried forward Rs. 1,01,027 (Rs. 1,30,809).

Jute stocks are shown at or under cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market rates.

The mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. Trading conditions were fair during the period under review. Labour relations were satisfactory during the period.

At a General Meeting of the Company held on 14th January 1957, and subject to the approval of the Central Government, McLeod & Co., Ltd., were re-appointed the managing agents of the Company for a fresh term of 10 years commencing from 15th January 1957. Pending receipt of such approval, they have signed the balance-sheet as at 30th June 1956, and the profit and loss account for the half-year ended 30th June 1956, as managing agents of the Company.

Accounts in brief were as under:

Empire Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The profit for the half-year after providing for depreciation Rs. 1,04,900 (Rs. 1,60,000), and taxation Rs. 77,000 (Rs. 1,02,000), amounted to Rs. 1,00,831 (Rs. 1,42,114) to which must be added the credit balance brought forward from the previous half-year of Rs. 78,204 (Rs. 1,32,960), unclaimed dividend forfeited Rs. 2,197 (Rs. 2,300) and overprovision of liability in respect of previous period written back Rs. 5,259. (E.P.T. Post-war Refund Rs. 14,298) making a total of Rs. 1,86,491 (Rs. 2,91,672). This amount the directors distributed as follows:—

To dividend on 10,000 preference shares at 7 per cent. per annum for the half-year ended 30th June 1956, or Rs. 3-8 per share Rs. 35,000 (Rs. 35,000) and to dividend on 1,50,000 ordinary shares at 10 (15) per cent. per annum for the half-year ended 30th June 1956, or As. 8 (As. 12) per share Rs. 75,000 (Rs. 1,12,500) leaving to be carried forward Rs. 76,491 (Rs. 1,43,894).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956 and to 5 per cent. from 20th February 1956. Since the close of the period the Industry sealed 2½ per cent. of the total looms from 16th July 1956 and a further 5 per cent. on 17th September 1956, again making a total of 12½ per cent. of the total looms sealed.

At a General Meeting of the Company held on 14th January 1957, and subject to the approval of the Central Government, McLeod & Co., Ltd., were re-appointed the Managing Agents of the Company for a fresh term of 10 years commencing from 15th January, 1957. Pending receipt of such approval, they have signed the balance sheet as at 30th June 1956, and the profit and loss account for the half-year ended 30th June 1956, as Managing Agents of the Company.

Kelvin Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The profit for the half-year, after providing for depreciation Rs. 2,69,025 (Rs. 2,93,000) and taxation Rs. 90,000 (Rs. 2,50,000), amounted to Rs. 1,09,946 (Rs. 3,11,370) to which was added the unclaimed dividends forfeited Rs. 10,536 (Rs. 5,991) and credit balance brought forward from the previous half-year of Rs. 1,10,851 (Rs. 1,70,687) making a total of Rs. 2,31,333 (Rs. 4,98,176 including E.P.T. Post-war Refund Rs. 10,111 and Rs. 17 being unclaimed deposits written back). This amount the directors distributed as follows:

To dividend on 10,000 preference shares at 7 per cent. per annum for the half-year ended 30th June 1956, or Rs. 3-8 per share absorbing Rs. 35,000 (Rs. 35,000) and to dividend on 21,000 ordinary shares at 10 (20) per cent. per annum for the half-year ended 30th June 1956, or Rs. 5 (Rs. 10) per share absorbing Rs. 1,05,000 (Rs. 2,10,000) leaving to be carried forward Rs. 91,333 (Rs. 1,52,856).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956, and to 5 per cent. from 20th February 1956. Since the close of the period the Industry sealed 2½ per cent. of the total looms from 16th July 1956, and a further 5 per cent. on 17th September 1956, again making a total of 12½ per cent. of the total looms sealed.

Trading conditions throughout the half-year continued to be difficult, and with the increase in production due to unsealing of looms prices fell rapidly and at no time was it possible to transact business simultaneously in raw jute and goods at a profit. Labour relations have been satisfactory.

Shree Krishna Gyanoday Sugar Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar, Bihar) submitted the audited accounts of the Company for the year ended 31st July 1956.

The year's working after providing all overheads and interest charges shows a surplus of Rs. 14,68,502 (Rs. 18,66,708). Out of this provision has been made for depreciation Rs. 5,33,115 (Rs. 5,67,137) leaving a sum of Rs. 8,35,387 (Rs. 12,99,571). To this is added balance brought forward from last year of Rs. 34,046 (Rs. 5,475) making a total of Rs. 9,19,433 (Rs. 11,05,046 after paying an interim dividend of Re. 1 per share absorbing Rs. 2,00,000). This amount the directors recommend to be appropriated as follows:—

Payment of dividend (free of income-tax) for the year ended 31st July 1956, to the shareholders as on 30th April 1957:— On 6,000 'A' class preference shares at Rs. 6 (Rs. 6) per share Rs. 36,000 (Rs. 36,000), on 12,000 'B' class preference shares at Rs. 5 (Rs. 5) per share Rs. 60,000 (Rs. 60,000) on 3,99,115 (2,00,000) ordinary shares on amount paid up at Re. 1 (As. 12 per share final) per share, i.e., 10 (total of 17½ per cent.) per cent. Rs. 3,97,052 (Rs. 1,50,000), to provision for taxation Rs. 4,10,000 (Rs. 7,25,000) and the balance of Rs. 16,381 (Rs. 34,046 after setting aside Rs. 1,00,000 to general reserve) be carried forward.

During the year under review the Sugar Factories at Hathwa and Lauriya crushed 35,74,870 (32,51,972) mds. and 38,97,662 (27,39,217) mds. sugarcane and produced 3,59,307.5 (3,29,406.3) mds. and 3,89,316.23 (2,89,619.7) mds. sugar respectively. The cane crushed at Lauriya is the highest recorded so far in the factory. The sugar recovery during the season 1955-56 was 10.051 (10.13) per cent. at Hathwa and 9.99 (10.57) per cent. at Lauriya. The crush during the current year is also expected to be satisfactory.

The Company also undertook working of the Sugar Factory at Gururu owned by Messrs. Gaya Sugar Mills Ltd. (In Liquidation) after obtaining the same on lease for the crushing season 1955-56. The lease has, however, been renewed till end of September 1958, and the Company is also working the factory during the current crushing season for production of sugar by cane.

The production of distillery products during the year under review has been the highest at 9,96,748 (7,61,720) bulk gallons. This has been mainly due to improved supply of molasses and coal and better offtake of power alcohol and spirits. The Distillery is working satisfactorily during the current year as well, except for occasional stoppages due to non-supply of coal which might adversely affect the production slightly. The prospects for the current year continue to be satisfactory.

Accounts in brief were as under:—

Hind Mills Ltd.

The directors of the above Company (Agents: Hind Agents Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th June 1956.

During the year after meeting all working expenses and after making provision for depreciation in the accounts, the Company made a profit of Rs. 14,59,633 (Rs. 5,63,139). To this was added Rs. 14,940 (Rs. 1,801) brought forward from previous year's account, thus making a total of Rs. 14,74,573 (Rs. 5,64,940). The directors disposed of this sum as follows:—

To provision for taxation Rs. 4,50,000 (Rs. 1,50,000), to development reserve Rs. 4,00,000 (*nil*), to general reserve fund Rs. 2,00,000 (Rs. 1,00,000), to payment of dividends, free of income-tax at 5 per cent. on 20,000 preference shares of Rs. 100 each, for the year ended 30th June 1956 Rs. 1,00,000 (Rs. 1,00,000) and at 6 (4) per cent. on 5,00,000 ordinary shares of Rs. 10 each, for the year ended 30th June 1956 Rs. 3,00,000 (Rs. 2,00,000). The directors have carried forward to next year's accounts the balance of Rs. 24,573 (Rs. 14,940).

The directors consider the working results of the Company during the year under report as satisfactory. But the prospects for the coming year do not appear to be bright as the incidence of higher excise duty and the various restrictive measures taken by Government to prevent accumulation of stocks and to bring down prices have unduly depressed the market.

Accounts in brief were as under:—

		Cash ...	64,595
Rs.	2,07,37,422	Rs.	2,07,37,422

Hooghly Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The Company's profit for the half-year after the inclusion of Rs. 24,959 (Rs. 22,062) brought forward and Rs. 20,000 (*nil*) provision for taxation no longer required, is Rs. 2,02,657 (Rs. 1,82,310) and after making provision for taxation Rs. 75,000 (Rs 75,000) there remains a balance of Rs. 1,27,657 (Rs. 1,07,310). Out of this sum, the directors have placed to general reserve Rs. 28,893 (*nil*) and dividend equalisation reserve Rs. 25,000 (*nil*). An interim dividend paid on 6th February 1957 at 15 per cent. per annum, without any deduction for income-tax paid by the Company absorbed Rs. 45,000 (*nil*). They now recommend payment of a final dividend at 2½ per cent. per annum, without any deduction for income-tax paid by the Company absorbing Rs. 7,500 (Rs. 75,000) leaving to be carried forward Rs. 21,264 (Rs. 32,310).

Trading Conditions.—The production of the Mill was maintained at a high level, due to the keen demand for the Company's products throughout the half-year.

Accounts in brief were as under:—

Rs.	21,36,352	Rs.	21,36,352

Calcutta Hydraulic Press Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June 1956.

After providing Rs. 3,244 (Rs. 23,311) for depreciation, the results show a loss of Rs. 25,619 (loss of Rs. 85,479). The profit of Rs 96,486 on investments sold in previous year, as reduced by the loss of Rs. 2,279 on sale of investments in the year under review, has been transferred to reserve for depreciation of investments. The excess provision for tax in previous years amounting to Rs. 5,000 has been transferred to taxation reserve. After bringing in a debit balance of Rs. 85,479 from the last account, and Rs. 2,92,552 from block realisation account, providing Rs. 9,500 for taxation, and taking credit for Rs. 46,805 profit on the sale of stores, there is a balance of Rs. 3,64,066 at the debit of profit and loss account. The directors have transferred Rs. 3,85,000 from reserve, leaving a credit balance of Rs. 20,934 (Rs. 85,479) to be carried forward.

After a number of unsuccessful years, shareholders were informed by the directors' report dated 19th October 1955, that baling had ceased with effect from 1st July 1955. It became apparent during the year that there was little prospect of the recommencement of profitable baling operations and accordingly steps were taken to dispose of the idle presses and ancillary equipment. These sales were completed during the year and the lease in respect of the Press House surrendered on 31st January 1956.

Accounts in brief were as under:—

ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

PROCEEDINGS OF THE TWENTIETH ORDINARY GENERAL MEETING

THE Twentieth Ordinary General Meeting of the members of the Alkali and Chemical Corporation of India Limited was held at the registered office of the Company, 34, Chowringhee Road, Calcutta, on Thursday, 28th March 1957, at 3-30 p.m.

Mr. N. D. Harris, the Chairman, presided.

Mr. M. Cariapa, representing the Secretaries, Imperial Chemical Industries (India) Private Ltd., having read the notice convening the meeting and the Auditors' report, the minutes of the ninteenth ordinary general meeting held on 7th March 1956, the minutes of an extraordinary general meeting held on 2nd April 1956 at 3-30 p.m. and the minutes of a general meeting held on 28th September 1956 at 3-30 p.m. were laid on the table having been already signed.

After the Chairman had delivered his speech, which has already been reported in *Commerce* dated 13th April 1957 (*vide* page 734), two shareholders, Messrs. A. V. Seth and K. L. Mukerji, raised the following points: About the proposed share issue, they said that, since the Company had been formed, it had paid a low rate of average dividend, whereas the market prices of the ordinary shares had ranged as high as Rs. 60 and averaged about Rs. 30. Good profits were made by the Company in 1956, but nevertheless a dividend of 8 per cent. only was paid, a large transfer having been made to dividend equalisation reserve; it was contended that this was unfair to shareholders. In addition, shareholders were faced with a 4 : 1 rights issue, the new shares having to be paid for over five months. This it was suggested was unfair on small investors who, in the present tight money market conditions, were unable to raise the extra money in the time. At the same time, this rights issue had brought the market price down by nearly 100 per cent. The new shares, it was believed, would not receive a dividend for several years. They would only start to rank for dividend from 1st October 1957 and dividends would probably then be payable at even lower rates than now.

Mr. Harris replied that the market price of shares was, he understood, determined by other factors as well as by the rate of dividend declared. For some years past now, A.C.C.I. Ltd. had declared a reasonably good rate of dividend. It was in order to safeguard the interests of shareholders and to endeavour to ensure that a satisfactory dividend should continue on the larger capital which the Company would shortly have, that a substantial transfer had been made to the dividend equalisation reserve. The terms of the present Polythene issue had been decided by the Board only after very careful thought and after taking the best advice available. To help shareholders, agreement of the Stock Exchange Committee had been obtained for official dealings to take place in renunciation letters, thus enabling shareholders who did not wish to take up the new shares, to have a market for the sale of their rights. The term over which calls were to be collected has been made as long as was practicable, but the Stock Exchange disliked shares which were partly paid for a long period, owing to the difficulties involved in dealings, and it was in the shareholders' own interest that a market should be created for the fully paid shares as soon as possible. The new shares would start to rank for dividend from the 1st October 1957, that is, five months after application money had been paid and immediately after the final call. From the above date, they would participate both in profits made by the old capital and in the substantial sums which have already been set aside to the dividend equalisation reserve. For the prospects of future dividends, shareholders were advised to consult recent published accounts.

In regard to accounts, the above shareholders pointed out that selling commission totalling to Rs. 22,61,430 had been paid on a turnover of Rs. 1,88,30,913. This rate of commission was compared with the rate of commission paid by Indian Iron and Steel. Why was the commission not based on profits instead of on sales? It was noticed that technical fees were paid in addition to selling commission. Was Directors' remuneration by way of a commission or fees? What benefit was received by the Company for the fee paid for loan guarantee?

In reply, Mr. Harris pointed out that I.C.I. (India) Private Ltd. were Selling Agents for A.C.C.I. Ltd., and not Managing Agents and that they could not be compared with the Managing Agents of Indian Iron and Steel. Whereas a managing agency commission is paid by reference to profits, selling commission is paid by reference to turnover and its amount must depend on the nature of the products and the difficulties and costs in selling them. Products requiring a high degree of technical sales service demand an expensive sales force and necessitate a high rate of selling commission. Paints and B.H.C. formulations are examples of such products and they are in no way analogous to bulk sales of iron or steel.

The technical charges paid to I.C.I. (India) Private Ltd. are quite separate from the selling commission and refer to the technical help given in running the plant by arrangement with I.C.I. (India) Private Ltd., technical advice received in this way costing the Company much less than would the appointment of a separate technical staff. Directors' remuneration is by way of monthly fees. No commission is paid. By paying I.C.I. (India) Private Ltd., for guaranteeing their bank loan, A.C.C.I. Ltd. are charged a lower rate of interest. This saving is shared equally with the guarantors.

The above two shareholders asked whether tenders were called for for the construction of the Polythene plant. I.C.I. being a monopoly, they were, it was suggested, able to make any charge they might wish to A.C.C.I. Ltd.

Mr. Harris replied that I.C.I. Ltd. providing the technical "know-how" and design work for the erection of the Polythene plant. The contract was, it was understood, put out by them to tender and the Company accepted Simon-Carves' quotation on the counsel of their technical advisers.

Is A.C.C.I. Ltd. a company to which the provisions of section 23A of the Indian Income-tax Act apply, asked the shareholders.

The provisions of section 23A of the Act did not this year affect the Company, though they might in future years, was the reply.

The report and accounts was adopted. Sir Birendra Nath Mookerjee, Sir Bijoy Prosad Singh Roy and Mr. P. M. G. Hutton were reappointed Directors. The Auditors, Messrs. Lovelock and Lewes, were reappointed.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-FIRST ANNUAL GENERAL MEETING of the Shareholders of THE SVADESHI MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Monday, the 20th May 1957, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1956, and the audited Balance Sheet as at 31st December 1956.

(2) To declare Dividends.

(3) To appoint a Director in place of Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for re-appointment.

(4) To appoint a Director in place of Mr. K. M. D. Thackersey who retires by rotation and is eligible for re-appointment.

(5), (6), (7) To consider and, if thought fit, to pass three resolutions arising from the coming into force of the Companies Act, 1956, full particulars of which are stated in the Notice which will be duly posted to all shareholders.

(8) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April*, 1957.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) The Transfer Books of the Company were closed from Monday, the 11th March to Tuesday, the 9th April 1957, both days inclusive.

(3) If dividends on shares, as recommended by the Directors, are passed at the meeting, the payments will be made on and after Tuesday, the 21st May 1957, to those shareholders whose names are on the Register of the Company on the 9th April, 1957.

THE TATA MILLS LIMITED

NOTICE

THE FORTY-FIFTH ANNUAL GENERAL MEETING of the Shareholders of THE TATA MILLS LIMITED will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Wednesday the 22nd May 1957, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1956, and the audited Balance Sheet as at 31st December 1956.

(2) To declare a Dividend.

(3) To appoint a Director in place of Mr. N. M. Amersey, who retires by rotation and is eligible for re-appointment.

(4), (5), (6) To consider and, if thought fit, to pass three resolutions arising from the coming into force of the Companies Act, 1956, full particulars of which are stated in the Notice which will be duly posted to all shareholders.

(7) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 11*th April*, 1957.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) The Transfer Books of the Company were closed from Monday, the 11th March to Tuesday, the 9th April 1957, both days inclusive.

(3) If dividend on shares, as recommended by the Directors, is passed at the meeting, the payment will be made on and after Thursday, the 23rd May 1957, to those shareholders whose names are on the Register of the Company on the 9th April, 1957.

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 31st March, 1957.

Payment will be made on 1st May, 1957 to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

By Order of the Board,
J. H. G. WHITFIELD.
Acting Secretary.

CALCUTTA—1, 10*th April*, 1957.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, 16*th April*

The seasonal pressure of demand for funds showed no signs of relaxation during the week under review, with the result that the stringency in the short-term money market persisted for yet another week. Though the supply of funds to banks improved, as witness the sharp rise in their deposits during the two weeks ended 5th April, such were utilised to reduce the banks' borrowings from the Reserve Bank substantially. The persistent demand for funds kept the money rates at the previous week's high levels. Inter-bank call money rate was unchanged at 3½ per cent. and house money at call and short-term deposits for one to six months were done 4½ per cent. and a higher rate of 4¾ per cent. was paid for large sums.

As we go to Press a day earlier, the customary analysis of the Reserve Bank's statement for the week ended 12th April 1957 has been held over.

The Scheduled banks' statement for the week ended 5th April 1957 shows a further rise of as much as Rs. 17.81 crores in demand deposits and of Rs. 7.03 crores in time deposits, bringing the aggregate increase in total deposits (net) during the last two weeks to Rs. 39.50 crores. Borrowings from the Reserve Bank stand reduced by Rs. 21.20 crores. Advances show a fall of Rs. 5.58 crores, while bills purchased and discounted are up by Rs. 6.31 crores. Cash balances have been strengthened by Rs. 12.73 crores and money at call and short notice by Rs. 1.48 crores.

The Gilt-edged market continued to be dull. Barring a few small inquiries here and there, very little attention was paid to most of the securities and the volume of business was extremely small. 3 per cent. 1986 Conversion Loan was sagnant at Rs. 74.30. 3 per cent. 1970-75 was placed at Rs. 87.20 *ex*-voucher, as against Rs. 87.30 *cum*-voucher a week ago. 3 per cent. 1966-68 finished 10 nP lower at Rs. 92-15. 3 per cent. 1964 was unchanged at Rs. 94.45, 3 per cent. 1963-65 at Rs. 94.20 and 3 per cent. 1959-61 at Rs. 97.75. 2½ per cent. 1961 hardened slightly from Rs. 99.45 to Rs. 99.50, while 3½ per cent. 1964 kept its own at Rs. 98.40 despite the proximity of interest payment. 3½ per cent. 1965 and 3½ per cent. 1967 were dull at Rs. 98.25 and Rs. 98.45, respectively.

TEA DUSTS RECEDE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 11*th April*

Approximately 400,000 lbs. were on offer in dust sale 'H' which was held on Tuesday, 9th April. From the outset there was a good general demand at slightly lower rates. Common and low medium dusts were irregularly 5 to 10 nP easier, but medium types, and, in particular, clean black dusts, were firm. Best liquoring dusts met with a quieter tone and prices were up to 25 nP lower.

The average price realised in dust sale 'H' is Re. 1.88 per lb., as against Re. 1-14-6 in sale 'G' and Re. 1.92 per lb. in the corresponding sale of 1956.

London Market—Sale of 8th April 1957.—Improved demand. Best qualities 1d. to 2d. dearer non-descript sorts irregularly easier. Plain firm to dearer.

Sale of 9th April 1957.—Best stronger. Others irregular, following quality.

Colombo Market—sale of 8th April 1957.—Good demand. Medium and highgrown brokens 5c. to 10c. dearer, corresponding fannings 15c. to 20c. lower. Gulf types declined 5c. to 10c. Other lowgrowns firm.

Sale of 9th April 1957.—Stalky broken mixeds and grainy dusts lower. Others good demand firm to dearer.

Calcutta Market—Export.—Last export sale of season again tended easier by 10 to 20 nP. Fannings of all types weakest feature.

Internal.—Approximately 16,500 packages. Met a good general demand at 6 to 10 nP easier. Middle East types strongest feature and sold at about valuation and sometimes dearer. Weakest feature C.T.C. which declined 10 to 20 nP. Leaf prices irregular but generally dearer.

Export Quota.—Business has been done at the following figures. Transferable special rights 12 nP. Shipping licence 9 nP and new seasons quota at 23 nP.

Forthcoming Auctions.—Dust Sale I will be held on Tuesday, 23rd April.

The South Indian crop for March 1957 is estimated at 11.88 million lbs., as against 9.06 million lbs. (actual) for March 1956. This brings the total output for the first three months of 1957 to 27.31 million lbs., as compared with 22.80 million lbs. (actual) for Jan.-March 1956.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 14*th April*

During the week under review, the hides and skins market was steady. New arrivals of wet salted cow and buff were quite considerable. The offtake was prompt, the main purchasers being the local tanners headed by Messrs. Cooper Allens. The Madras dealers were lukewarm during the week. The country tanners made substantial purchases of inferior grade cow.

The latest available quotations are: Wet salted cow 1st grade Rs. 300, 2nd grade Rs. 240 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 2 lb. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 325 to Rs. 350 and 2nd grade Rs. 300 per 100 pieces; sheep Rs. 300 to Rs. 225 per 100 pieces.

SILVER ERRATIC

(From Our Own Correspondent)

BOMBAY, 16*th April*

Trading in the bullion market during the week under review was dominated by silver which presented an irregular trend. Gold on the other hand, was featureless. The white metal showed a hardening tendency in the earlier half of the week, which lifted the prices to levels not seen in the previous six weeks, thanks to the good offtake in the ready section and rumours about the possibility of restriction on import of silver. Subsequently, however, a reaction set in on nervous bull liquidation induced by fears of imminent arrivals of Tibetan coins. The decision of the Directors of the Bullion Association to commence trading in June contract well ahead of the usual time also affected sentiment.

Gold moved within a narrow range, but the undertone was well maintained, thanks to the good demand in the ready section. A rise in prices was, however, checked by the reactionary trend in silver during the last two days.

Silver forward (April settlement) advanced from Rs. 179-2 to Rs. 181-15 before reacting to Rs. 180-3 when the settlement ran out. The May settlement gained from Rs. 179-11 to Rs. 182-10, but gave way to close at Rs. 181-1.

Ready silver crept up from Rs. 179-2 to Rs. 182-2, before receding to Rs. 180-9. The floating stocks of silver are reported to be 1,100 bars. The daily average offtake was 15 bars.

Forward gold (April settlement) moved between Rs. 105-13 and Rs. 105-3, but finished at Rs. 105-11 when the settlement ran out. The May settlement gained from Rs. 105-11 to Rs. 105-15, but softened to Rs. 105-10 at the close today.

Ready gold picked up from Rs. 106 to Rs. 106-4, but soon reacted to close at Rs. 105-14. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 4,000 tolas and the average offtake also was of the same order.

Silver price in New York was maintained at 91¾c and there was no change in London prices as well, at 79*7d.* for spot and 79*8d.* for forward. Gold dipped from 250*s.* 5*1d.* to 250*s.* 3*1d.* but gained back to 250*s.* 4*2d.*

The following comparative table shows the trend of market during the week under review:

	16-4-1957	Highest	Lowest	9-4-1957

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 16*th April*

The firm trend noted in the sugar market last week abated this week. In fact, the market ruled distinctly bearish, thanks to anxious selling in bulk by several U.P. mills. Arrivals of sugar into the market were also large, being 18,500 bags, as against 15,600 bags a week before and 12,000 bags two weeks before. Operators were generally inclined to reduce their commitments and, buyers being somewhat reserved, prices of sugar staged a retreat.

Medium grain dropped Rs. 2 to Rs. 89-Rs. 91 per bag, inclusive of sales tax. Small grain fell by a rupee to Rs. 88. Large grain receded from Rs. 94-Rs. 98 to Rs. 93-Rs. 98.

Vaisakh delivery contract for 'C' grade sugar was subjected to hedge sales by spot houses and declined by As. 6 to Rs. 91-10.

KIPS UNCHANGED

(From Our Own Correspondent)

MADRAS, 15*th April*

Kip prices remained unchanged during the week. Stocks in the market were slightly more than usual and shippers were active in their day-to-day arrivals of F.A.Q. standards were in demand at unchanged prices, but not declined

Inquiries for buff calf and grest in buff calf, as U.K. importers felt that the optimum prices enough. U.S. buyers showed no call for buff but only at 5 per cent required by shippers. Unchanged in the E.I. tanned hides for shipment prices were firm while those

COTTON FUTURES BUOYANT

(From Our Own Correspondent)

BOMBAY, 16*th April*

After opening the week on an easy note, the cotton futures market registered strident advances in prices during the subsequent sessions. The initial easiness was partly due to the Textile Commissioner's directive asking traders to furnish him with information relating to the quantities and descriptions of cotton stocks held by them before the 12th inst. The bearish impact, however, proved shortlived. On Saturday, the market picked up considerable strength, thanks to statistical position of cotton, persistently increasing mill consumption and shortage of tenderable cotton, particularly Vijay and Surti styles. These factors let loose a buying spree which could not be curbed even by fears of Government intervention in the cotton trade at any moment. For, a section of the trade was inclined to believe that the Government might not resort to any drastic step such as closing of futures trading altogether, but would only try to augment supply by liberalising imports. Nor had the Cotton Advisory Board's recommendation that imports of American cotton of stapling 13/16" and above instead of 1-1/16" and above should be permitted any effect on the market. Consequently, cotton futures registered an impressive rally. The upward trend persisted till the close today.

M.G. Jarilla May opened the week at Rs. 698, as against the previous close of Rs. 700. Under the impetus of large buying orders and on extensive short covering by Akola interests, the contract spurted to touch a high of Rs. 731.50 yesterday. Opening at Rs. 737 today, the contract firmed up on consistent bull support and continued buying by Akola interests, to touch the week's highest level of Rs. 749 before closing at Rs. 737.50. The net gain over the six-day period was Rs. 34.50. M.G. Vijay commenced the week at Rs. 852, as against Rs. 856 last week-end, and moved up steadily to touch a high of Rs. 918 today. The closing rate was, however, lower at Rs. 903. The net advance was thus Rs. 47.00. Vijay June followed the same pattern. Opening lower at Rs. 824, the contract met with good buying support which took it to a high of Rs. 873 today. But the closing quotation was lower at Rs. 862. The net gain was Rs. 36.50. The following is the trend of prices in the cotton futures section during the week:

(In rupees per candy of 784 lbs.)

	16-4-57	*High*	*Low*	10-4-57
Jarilla (May) ...	737.50	749.00	697.50	703.50
Vijay (April ...	903.00	918.00	851.00	856.00
Vijay (June) ...	862.00	873.00	822.00	828.50

In the spot section, values ruled fully steady. Scarcity of cotton was increasingly felt. Good quality cotton was particularly sought after. A section of the cotton trade is inclined to think that if the present tendency were to persist, introduction of mill quotas and strict control of distribution would be resorted to. The Textile Commissioner's notification relating to the declaration of stocks by the 12th inst. is not unexpected. Trade circles are expecting the issue of another directive requiring the grading and surveying of stocks for staple as well as prohibiting mills from keeping more than three months' stock with them.

Following the recommendation of the Cotton Advisory Board that larger imports should be permitted, prospects of getting more U.S. cotton have considerably brightened. Besides suggesting liberalisation of dollar cotton import the Board is reported to have recommended imports of 50,000 bales of cotton stapling 1-1/32" and above and 25,000 bales of staple length 1-3/16" from soft currency areas. It has also suggested that the floor and ceiling prices of cotton for the 1957-58 season should be announced as early as possible and that the basic floor price should be raised by Rs. 50 per candy so as to provide an incentive to the cultivator to grow more cotton. The following are the latest available spot rates—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 740; Berar Jarilla 815; Khandesh 825; Vijay 945; Oomra *Deshi* 775; Moglai 765.

The easy trend noted on the Karachi market last week gathered further momentum during the week under review, thanks to renewed fears of competition from U.S. cotton in world markets, especially in the Communist countries. Even reports that the Government of India was contemplating removal of restrictions on imports of sterling area cotton failed to have any effect on the market. Good spot advices also failed to exert any influence. Export sales from the commencement of the season aggregated 550,000 bales, of which 270,000 bales were sold to Japan, Hongkong and China. Jarilla very dropped Re. 1-12 to Rs. 81-15. The July rate are the latest available spot rates—in folds per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 89; Punjab *Deshi* 82-12; L.S.S. Punjab R.G. 83-14; S.G. 92-14; 289 F.R.G. 88-6; S.G. 97.6.

Values in the Alexandria cotton futures market registered a decline during the week under review. Overseas inquiries were practically *nil* and domestic spinner demand continued to be slack. Spot lots of lower grades were neglected. Higher grades Karnak and Menoufi, however, met with some demand. The following are the latest available rates —in tallaris per lb.—from Alexandria:

Karnak: May 112.20; July 112.95. *Ashmouni*: April 78.50; June 78.45.

The Egyptian Government is reported to be much worried about the steep fall in exports of cotton in the current season. Since almost 90 per cent. of the country's foreign exchange earnings is accounted for by cotton, a fall in its exports, it is felt, is sure to result in a corresponding drop in foreign exchange earnings. Although Communist countries have been Egypt's best customers in recent times, it is feared in certain quart-

ers that the demand from these countries may not remain at the same level for long. A series of discount rates and the recently instituted export subsidy point to the anxiety of the Government to accelerate exports of cotton.

Dull conditions prevailed in the Liverpool cotton futures market during the week. Values eased on a sizable volume of hedge selling which was absorbed only to a limited extent by commission house support and trade buying based on expectations of higher American C.C.C. sales prices in the future. Both the American and the American type contracts tended to look down. Sudan contract was also neglected in the absence of buying support. The latest available rates—in pence per lb.—from Liverpool are as follows:

American One Inch Staple Contract: May-June 26.40; July-August 26.34; October-November 26.24; December-January 26.17. *American Cotton Mixed Growth Contract*: May-June 26.53; July-August 26.44; October-November 26.30; December-January 26.23. *Sudan*: May-June 42.85; July-August 41.70.

The New York cotton futures market put on a cheerful appearance during the week. Fairly good buying support induced by prospects of higher loan rate for the 1957 crop and optimism over possible official action in relaxing the Government's cotton export programme were the chief influencing factors. The gain would have been more marked but for the selling towards the close induced by uncertainty among a section of the trade regarding possible changes in Government cotton export programme and reports of favourable weather in cotton tracts.

It is reported that the International Co-operation Administration has issued to Yugoslavia an authorisation covering 30,000 of U.S. cotton.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 16*th April*

Buoyant conditions prevailed in the oilseeds market during the week under review. The bullish sentiment, manifested in the castorseed futures section in the past two weeks, touched a feverish pitch under the spell of favourable export prospects followed by speculative buying, although the spot section was dull on reports of heavy stocks in the town. Brisk activity was also in evidence in the linseed section, thanks to revival of enquiries for linseed oil. Scattered buying, induced by enquiries from crushers and firmness of exportable oils imparted considerable strength to the groundnut section which registered handsome gains. In sympathy with the general trend and on firm advices from the cotton market, cottonseed prices recorded an improvement. The general undertone of the market was distinctly firm.

Groundnut May contract opened the week at Rs. 168.50 and crept up to Rs. 168.85 before closing the same day at Rs. 168.62. In the subsequent sessions, the trend was steadily upward; and the contract touched the high of Rs. 172.32 today, before finishing slightly lower at Rs. 171.50. Over the week the contract thus put on Rs. 2.75. August contract commenced at Rs. 171.75, and touched the lowest of the week at Rs. 171.12 the same day. The persistent speculative buying in the rest of the week pushed the contract to Rs. 176.37 today. It was, however, finishing slightly lower at Rs. 175.50, at the close. The gain over the week was Rs. 3.88. Spot Bold F.A.Q. improved by 25 nP to Rs. 34.25. Coramandel was marked up by the same amount to Rs. 35.00. Groundnut oil ex-mill was quoted higher by 25 nP at Rs. 19.00.

Castorseed May contract opened firm at Rs. 175.75 and on speculative buying rose the next day to Rs. 178.50. It, however, retreated on profit-taking to Rs. 176.75 at the close the same day. Today, it touched a new high of Rs. 181.00, before closing lower at Rs. 180.75, having thus gained Rs. 3.25 over the week. September contract commenced at Rs. 179.25 and spurted to Rs. 186.25 today, though at the close it was lower at Rs. 185.75. The net advance over the week was Rs. 6.50. In the spot section, Madras was quoted today at Rs. 34.62 which was nominally lower, Oil E.S.S. however, rose by 25 nP to Rs. 21.75.

Linseed May opened the week at Rs. 29.00 and advanced slowly, with fluctuations confined to narrow limits, to Rs. 30.75 today. The closing quotation at Rs. 30.62 today represented a gain of Rs. 1.62 over the week. September contract, which was commenced at Rs. 29.81 reflected more or less the same trend. It reached the peak of Rs. 31.75 today before finishing at Rs. 31.62. Spot bold ready moved up by Re. 1 to Rs. 29.62. Linseed oil ready was quoted at Rs. 16.87, as against Rs. 15.75 last week.

Marked gains were recorded in the cottonseed futures section. May contract opened at Rs. 106.75 and advanced to Rs. 112.50 today, thanks to speculative support. The contract's closing rate today at Rs. 111.00 represents a gain of Rs. 4.25 over the week. September contract which displayed a similar trend, made the same amount of gain. It moved from Rs. 109.00 at the start to Rs. 115.25 today, before closing at Rs. 113.75.

Among others, nigerseed Madras was higher by 25 nP at Rs. 28.00. Kardiseed Bold ready, however, was done lower at Rs. 21.12, as against Rs. 21.25.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

YARNS LISTLESS

(From Our Own Correspondent)

BOMBAY, 16*th April*

Barring rayon yarns which were fully steady, the yarn market continued to depict an easy trend. Staple fibre yarns encountered persistent selling, thanks to considerable slackness in demand from consuming centres. Cotton yarns failed to elicit any support, owing to poor offtake by handloom weavers who were reported to be experiencing much difficulty as a result of heavy accumulation of cloth. Rayon yarns, however, ruled, as already stated, fully steady. The steadiness was aided by firm advices from fabrics markets which reported good offtake. There would have been a marked rise in prices but for reports of increasing stocks with importers, dealers and consumers and fall in inquiries from quarters which had been granted sufficient licences to import direct.

Rayon yarns (120 dull cones Snia) for April delivery were marked up by Rs. 6 to Rs. 809. June delivery advanced by Rs. 4 to Rs. 822; 150 bright cones April delivery hardened by Rs. 2 higher at Rs. 625. 150 Japan had good support and advanced by 18 pies to Rs. 4-2. 120 Italy was firm at Rs. 3-15, as also 150 Italy at Rs. 3-11. 120 Japan, however, declined by half an anna to Rs. 4-2-6. Among indigenous yarns, National Rayons 150 Bt. Cones 1st grade was fully maintained at Rs. 3-5, 120 Bt. Cones 1st grade picked up three pies to Rs. 3-11.

Staple fibre yarn (40×2) for June delivery came in for selling and declined by Rs. 2 to Rs. 618. April delivery was neglected at Rs. 617. Spot 40×2 Citys receded by three pies to Rs. 3-3-6. Kohinoors lost a similar amount to Rs. 3-4-6. Centurys were a shade lower at Rs. 3-4. New Greats were, however, done higher at Rs. 3-3, as against Rs. 3-2-9. Among foreign yarns, both (80×2) Paramounts and (80×2) Fujis improved from Rs. 5-3-6 to Rs. 5-5.

In the cotton yarn section, ten counts Podars and Moderns receded by As. 2 each to Rs. 14-10 and Rs. 14-14, respectively. Twentys Moderns shed an anna to Rs. 18-14. Maduras changed hands at Rs. 19-6, same as last week. Gokaks were on offer at Rs. 18-12. Thirty counts Edwards fell by As. 4 to Rs. 21-8. Indus decreased by As. 2 to Rs. 21-14. Among forty counts, Moderns dropped As. 4 to Rs. 27-12. Minaxis were stagnant at Rs. 27-6. Sixty counts Raghuvamshis eased by As. 12 to Rs. 57-4. Moderns were quiet at Rs. 61-4 and Finlays at Rs. 61. Among eighty counts, Mahendras, Moderns and Finlays were all unchanged at Rs. 73, Rs. 76-4 and Rs. 81-8, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	16-4-1957	10-4-1957

JUTE GOODS MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 16*th April*

Although fair business was done in jute goods for export, prices were marked down after being higher earlier during the week under review. Contrary to earlier expectations, a slight increase in the overall stock of finished products held with mills as at the end of March was announced early in the week, and this naturally caused some disappointment in the market. The overall increase was only 300 tons. The stock of sacking cloth and bags at 56,500 tons recorded a welcome decline of 5,100 tons, which was, however, not reflected in the overall stock, inasmuch as hessian increased from 25,200 tons to 29,800 tons and miscellaneous constructions from 10,600 tons to 11,400 tons. There was nothing unusual in the increase in the hessian figure, since, at this time of the year, hessian shipments are affected. The figure relating to sacking goods is more than satisfactory, as it represents production of less than a month and is the lowest since March 1956. Market circles, therefore, consider the stock figures as healthy from the standpoint of trade as well as industry. In fact, shipments, including coastal shipments, during the month of March were higher than in the previous month. Hessian shipped had aggregated 35,400 tons and sacking goods 45,500 tons, representing an increase of 5,600 tons and 15,100 tons, respectively. These satisfactory shipment figures in the face of the almost unchanged nature of the overall stock leads to the presumption that purchases for consumption within the Calcutta industrial belt and for despatch upcountry by rail and other surface transport must have been lower in March than in February.

Production during March was higher at 84,700 tons, as against 80,200 tons in the previous month. Hessian at 36,000 tons was more by just 1,000 tons, miscellaneous goods were unchanged at 5,600 tons, and sacking goods at 43,100 tons were more by 3,500 tons. These figures indicated that the readjustment in production in the light of demand for particular constructions has been successful. However, the shift from hessian to sacking must continue for some time more. The overall higher production was attributed to the increased number of working hours in March. It was noted that the total availability of goods in March was 182,100 tons, consisting of February-end stocks of 97,400 tons and March production of 84,700 tons. Deducting the March-end stocks of 97,700 tons, demand in the month was of the order of 84,400 tons which, market circles cheerfully noted, was equivalent to a month's production. Such an analysis prevented prices of goods from falling and encouraged speculative elements to hold on to their stocks. That explained for the mid-week rise in prices even after publication of the stock figures.

The week under review opened with the publication of details of finished goods' stocks with mills as at the end of March. Although the stock position was almost unchanged, this was considered disappointing, as against the earlier expectations of a decline in view of the encouraging shipment figures. Such disappointment was reflected by ready B. twills falling to Rs. 111.37 from Rs. 112.12 and ready hessian 40" 10 oz. to Rs. 41.00 from Rs. 41.12. The rather higher decline in heavy goods followed selling pressure on weaker speculative elements. However, steadiness soon returned to the market and speculators turned as buyers on Wednesday, although there was little genuine buying. B. twills recovered fractionally to Rs. 111.62, hessian 40" 10 oz. remaining unchanged at Rs. 41.00. At this stage, genuine support was available, as buyers on behalf of overseas markets become active on the apprehension that the upward movement would continue. In the active buying that followed, sellers became reserved, with B. twills scoring to Rs. 112.25 and hessian 40" 10 oz. to Rs. 41.37. This was on Thursday. The trend was reversed on Friday when prices fell, as offers by speculators failed to meet with response in certain cases. Thus, B. twills gave way to Rs. 111.25, but hessian 40" 10 oz. was better at Rs. 41.44. Covering business was a feature on Saturday last and contributed to a further fractional rise in prices. B. twills were priced at Rs. 111.37 and 40" 10 oz. hessian at Rs. 41.25. Yesterday, however, sentiment was affected, as speculators turned sellers for substantial quantities. B. twills declined to Rs. 111.00 and ready 40" 10 oz. hessian to Rs. 41.12.

Mills showed little interest in raw jute. But prices of most varieties rose by 50 nP. During the week, there was little rain in the jute districts. Sowing has thus been delayed in several areas and, even in the low-lying areas where sowing had been completed, the plants were on the danger of being affected, if the unfavourable weather conditions continued. The latest quotations are:

TEA EASY

(From Our Own Correspondent)

CALCUTTA, 16*th April*

Poor support was accorded to last week's sales for internal consumption. The number of chests containing dust on offer was 16,614. C.T.C. Assams declined by as much as 6 to 10 nP. Even the brighter liquoring lots from C.T.C. Assams did not attract any great attention of buyers. Clean orthodox Assams possessing bright liquors and teas from all districts with black leaf appearance were easy but were sometimes in demand. All other teas on offer, namely, from Cachar, Assam and the Dooars gave way by 6 to 10 nP per lb. The quotations were: Best C.T.C. Rs. 2.60 to Rs. 2.70, medium C.T.C. Re. 1.80 to Re. 1.90, medium Assam grainy dust Re. 1.65 to Re. 1.70, and medium Dooars Re. 1.50 to Re. 1.60.

ENGINEERING

(Concluded from page 792)

three Benelux countries are the only ones where the railways seem to have a comfortable margin of revenue over operating costs to cover renewals and other investments. In many countries, passenger traffic appears to be subsidised by goods traffic, or to be the principal or only cause of the deficits when they occur. It seems likely, observes the *Survey*, that the development of private motor vehicles will reduce passenger traffic on a great number of railway lines in Western Europe, if not immediately, then in the next 20 or 30 years. Already receipts for many passenger services do not cover the direct cost of the services. The profitability of new investments for passenger traffic other than on the main lines is therefore doubtful; even on the principal lines amortisation of investments specific to passenger traffic will have to be rapid.

As regards goods traffic, the transport of solid fuels by rail is bound to decrease even if the total consumption of coal increases, because the proportion of coal consumed at the mine will increase. Technical progress will reduce the cost of gas and electricity transport and power stations using other sources of energy (notably atomic energy) will be built close to the large consuming centres.

In order to meet the competition from road traffic in Western Europe, it is essential the *Survey* points out, that the railways reduce their costs. Since labour represents 50 to 60 per cent. of operating expenses, the question of the productivity of labour is crucial. The majority of railway personnel works at the stations or shunting operations, the areas where the improvement of the productivity of personnel would be most profitable. To achieve this end, discontinuance, partial or total, of lines and stations and reduction of services are indispensable. The *Survey* estimates that the loss in traffic which these measures entail for the railways is no doubt smaller than that which would be brought about by the maintenance of too high costs. The railway administrations, it is suggested, should have a general authorisation to discontinue uneconomical services, while bearing in mind, of course, the plans for economic development and acting in close collaboration with the representatives responsible for the Government's regional policy.

COMPANY AFFAIRS

(Concluded from page 804)

The balance-sheet of the Company as on 30th November 1956 discloses a sound financial position. Its paid-up capital is only Rs. 7 lakhs, against which the reserves and surplus aggregate Rs. 56.59 lakhs, excluding workmen's compensation, staff welfare and retiring gratuity reserves amounting to Rs. 13.75 lakhs. The provision for taxation stands at Rs. 19.01 lakhs and current liabilities amount to Rs. 38.66 lakhs. The gross block of Rs. 56.73 lakhs stands written down to Rs. 32.28 lakhs. Additions to the gross block during the year were of the order of Rs. 13.46 lakhs and capital work in progress accounts for Rs. 4.38 lakhs. The current assets aggregate Rs. 98.37 lakhs of which the cash balances alone are to the tune of Rs. 19.54 lakhs. The current assets cover the current liabilities and provision for taxation by a wide margin.

It will be observed that the Company's paid-up capital is extremely small compared to its block account and the Directors had, therefore, sought the permission of the Controller of Capital Issues to raise the capital to Rs. 21 lakhs, by capitalising a sum of Rs. 14 lakhs from the reserves and issue two shares for every one held. The sanction has been obtained, but the Directors have not finally decided to carry out their earlier proposal, presumably because of the levy of bonus tax in April 1956 and the prospect of enhancement of this tax.

With regard to the future prospects of the Company, the Directors state that, with the advent of State trading, it is not possible to make any accurate forecasts. However, they anticipate that, if as a result of recent negotiations in Delhi, the Syndicate are permitted to sell 50 per cent. of production direct, while the remainder is purchased by the State Trading Corporation at a reasonable return to the Company, the future need not be viewed with despondency.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 90.25 *cum-div.* On an *ex-div.* basis, the latest distribution provides a yield of 9.72 per cent. per annum, free of income-tax.

THE UNITED BANK OF INDIA LIMITED

(Concluded from page 803)

the basis of size linked to a federation of all such associations. As it is, the Indian Banks Association has a membership of only 39, whereas the total number of banking companies in the country is over 470. It is, therefore, felt necessary that if a bold plan like the one suggested is to succeed, participation of all the banks in the country should be ensured. Such Associations and the Federation may also be found useful by the Reserve Bank of India in the matter of formulation of policies and its financial operations.

No Prosperity Through Isolation

"In the matter of formulating a plan as envisaged in the brochure, proposals have been made for holding, under the auspices of the Indian Banks Association, a convention of all banks with a view to sponsoring the idea of forming a 'Banking Expansion Commission' and to appoint a 'Standing Plan Committee' of the Convention to maintain liaison with the proposed 'Banking Expansion Commission'. I fervently hope that the banking community, as a whole, and the leading banks, in particular, will be able to see that the interest of their own institutions lies in the growth of the banking system as a whole and not in the attempts to acquire prosperity in isolation. I trust, therefore, that they will fully co-operate and contribute towards the formulation and working of a plan."

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up or share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must starve and toil and gain but scanty fare."
William Blake

VOL. XCIV. No. 2407 BOMBAY, 27th APRIL 1957 PRICE: Re. 1.50

THE NEW CABINET

THE formation of a cabinet, a unique institution in all parliamentary democracies, is undoubtedly one of the most difficult of the tasks which face the leader of the victorious political party. The cabinet has to work as a team; it must jointly face the electorate and parliament and must take joint responsibility for the government's measures. It certainly takes time to build up parliamentary traditions of joint cabinet responsibility. Considering that the parliamentary system of government cannot boast of a hoary past in this country, it is perhaps something of a marvel that the Cabinets at the Centre and in the States have worked so remarkably well. It is true that, at the Centre, there have been quite a few resignations in the brief period of its history. And on each occasion, Mr. Nehru has himself testified to the fact that he sincerely regretted the loss of an able colleague. There is, however, some comfort in the thought that the resignations were prompted by high considerations of policy rather than merely personal differences. Although a section of the Press and even of the public is never tired of highlighting the real or fancied differences of opinion among Ministers, it must be said to the credit of the Congress Government that it has, by and large, functioned as a team and held itself tenaciously together. It is of the utmost importance that this spirit of cohesion should continue to inspire the Government in the next few years which, because of the many constructive tasks ahead of the country, are bound to prove more difficult than the recent past. There is reason to hope that the new Cabinet at the Centre, announced last week, will continue to give a good account of itself as its immediate predecessor.

For one thing, it is largely composed of men who have been the right hand of Mr. Nehru. The point that it contains no new faces has been made in a few quarters. Apart from Mr. S. K. Patil, the Cabinet consists of no new member. In a way, this might turn out to be an advantage in that Mr. Nehru will have so much less "personal" problems. Further, it is a party Cabinet in the sense that no non-Congress member of Parliament has been included. It may, however, be deplored that a few more younger members were not chosen to join the Cabinet. The average age of the Cabinet, it has been computed, is over 59 years. To a student of current affairs, it may seem odd that some Ministers are well beyond the age at which company directors are deemed unfit to undertake the less onerous task of joint-stock administration. Some Ministers are well past 60 or are perilously near it. It must, of course, be admitted that this is by no means old age when it is compared with the average age of the cabinets of some of the older parliamentary democracies. But, if one takes into account the climatic considerations, the low average expectation of life among Indians, and the fact that in a country of India's continental size mobility makes heavy demands on physical endurance, there is valid ground for training younger men for ministerial tasks. Fortunately, the ranks of Ministers of State and Deputy Ministers contain some very able young men. However, in the long run, it is not the age of Ministers that matters. What really matters is that the Ministers should bring to bear upon their tasks a clear and realistic, as distinguished from a purely political mind, for they should then be able to leave behind a record of genuine national progress.

The new Government—rather, the old Government in its new form—has utilised the opportunity presented by the formation of the new Cabinet to reorganise the various Ministries. Appropriately enough, the Ministry of Production—this Ministry was something of an anomaly, for almost every Ministry is concerned with production of one kind or another—has been abolished and its work distributed among the Ministries of Commerce and Industry, Transport and Communications, and Steel, Mines and Fuel. The Ministry of Natural Resources and Scientific Research, too, has been abolished and its work will hereafter be shared by the Ministry of Education and Scientific Research and that of Steel, Mines and Fuel. The Ministries of Commerce and Consumer Industries and Heavy Industries have been incorporated into a new Ministry known as Ministry of Commerce and Industry. The new Ministry will have three departments—the Department of Commerce and Light Industries, the Department of Chemical and Pharmaceutical Industries and the Department of Heavy Industries. The Department of Commerce and Light Industries will handle all subjects handled at present in the Ministry of Commerce and Consumer Industries and will also be responsible for the National Instruments Factory, the *Khadi* and Village Industries Board, the Handicrafts Board and the Silk Board. The Department of Chemical and Pharmaceutical Industries will deal with fertilisers, caustic soda, soda ash and other chemicals, including the D.D.T. factory, pharmaceutical and penicillin plants, fine chemicals and salt. The Ministries of Food and Agriculture have been combined into the Ministry of Food and Agriculture.

Besides the Ministry of Railways, there will be a new Ministry, to be known as Ministry of Transport and Communications, which will have three departments—the Department of Transport, the Department of Communications and the Department of Civil Aviation. The Transport Department will handle ports, shipping, road and water transport and tourism, while the Department of Communications will be responsible for posts and telegraphs, wireless, telephones and metereology and the Department of Civil Aviation for internal and external airlines. Obviously, frequent consultations between the Ministry of Railways and that of Transport and Communications will be needed in the interest of coordination of transport which, in the context of the admitted deficiency of all means of transport and communications, has necessarily to be viewed as a single problem.

Among the new Ministries, the Ministry of Steel, Mines and Fuel will become an increasingly important limb of the Government. This Ministry will have three departments, one each in charge of iron and steel, of mines and of fuel. The Iron and Steel Department will take over charge of the three Government-owned steel plants and will be generally responsible for steel production in the country, including the administration of iron and steel control. The Department of Mining will include all mines and mining, Indian Bureau of Mines and the Indian School of Mines and Applied Geology. The fuels, including coal, lignite, oil and gas, will be the special responsibility of the Department of Fuel. Considering that nearly every aspect of the work of this new Ministry is going to mark a new line of development in the country, one may wonder whether it was wise to group all of them under one Ministry. Perhaps it would have been better, if the Iron and Steel Ministry had been allowed to continue the somewhat special status which it formerly enjoyed, at least until the three steel plants went into production.

The scheme of reorganisation of Ministries envisages considerable expansion in the work of the old Ministry of Education, now termed the Ministry of Education and Scientific Research. It will have three departments—the Department of Education, the Department of Scientific Research and Technical Education, and the Department of Fine Arts and Physical Culture. The Department of Education will deal with general education, the scheme of primary, pre-primary, elementary and basic education, development of Hindi and various schemes of scholarships and other activities. The Department of Scientific Research and Technical Education has a wide and varied range of responsible functions. These include the Council of Scientific and Industrial Research, the Geological Survey of India, the Botanical Survey of India, technical and scientific education, the Indian Institute of Science, all polytechnics and other technical institutions, including the Indian Institute of Technology at Karaghpur. It will disburse grants to technical and scientific institutions and technical scholarships. Under this Department will function the All-India Council of Technical Education and its boards and committees. Since, in the next few years, technical education and training has necessarily to assume greater and greater importance, the way in which this Department discharges its functions has more than a merely departmental significance. There is a danger that, since it is the Education Ministry, and not the more technical Commerce and Industry Ministry, that will be responsible for scientific research and technical education, such education and research may turn out to be more academic than practical. Clearly, the necessary liaison between the Education Ministry, on the one hand, and the Commerce and Industry Ministry and the other Ministries, on the other, will have to be maintained. This will ensure that a proper balance between fundamental and applied research is maintained and that the technical training facilities of the right type will be speedily augmented and the much-feared shortage of trained personnel made up without avoidable delay. It is to be hoped that the Department will not be starved of funds needed for the expansion of its activities.

Insurance

INSURANCE ORDINANCE

IT is a pity that the Government is frequently compelled to issue ordinances, the latest instance being the ordinance designed to set right matters relating to the Life Insurance Corporation. The ordinance is a sequel to a judgment of Mr. Justice K. T. Desai of the Bombay High Court who held that section 11 of the Life Insurance Corporation Act 1956 did not empower the authorities to alter the terms and conditions of service of the employees. The case arose out of a petition filed by several employees of the Corporation protesting against the scheme of rationalisation of the employees' pay scales which was brought into effect on 10th September 1956.

In his judgment, Mr. Justice Desai discussed two important issues—the status of the Corporation as a successor to the insurance companies which it took over and the scope of section 11 of the Life Insurance Corporation Act. The petitioners contended that, since the Corporation had taken over the business of the former private insurance companies, the awards which had governed the employees and the employers in the pre-nationalisation period were also binding upon the Corporation under section 18 of the Industrial Disputes Act. Mr. Justice Desai discussed the question whether the establishments taken over by the Corporation retained their individual character and existence or had been so integrated and merged in the Corporation that they could be said to have ceased to exist. While counsel for the employees insisted that the Corporation, by virtue of section 18 of the Industrial Disputes Act, was bound by the awards and settlements arrived at between the companies and their employees, it was contended by the Corporation that it had not retained the former insurance offices in "separate identifiable form" and that it was not a "conglomeration of various units but one single unit formed for the purpose of carrying on life insurance business in India and outside India." After discussing this question, Mr. Justice Desai held:

> "It is the scheme of the Industrial Disputes Act that any awards or settlements arrived at thereunder would bind not merely the then employers but their successors, and would bind not merely the then employees but future employees too. This binding nature of the settlements and awards continues only so long as it can be said that the establishment continues. With the extinction of the establishment, the binding nature of the settlements and awards would cease. In my view, the awards and settlements have ceased to bind the Corporation under section 18(c) of the Industrial Disputes Act."

This aspect of the judgment has an obvious significance for the future of labour. It is clear that, in the event of the nationalisation of an industry, any institution, which might be formed by the Government for purposes of carrying on the business of the various units comprising that industry, will not be bound by the awards given by industrial courts in respect of the different units in the days prior to the date of nationalisation.

The other point which arose for consideration was section 11 of the Life Insurance Corporation Act. Briefly, this section states that an employee of a life insurance office taken over by the Corporation shall continue to hold his position on the same terms and conditions of service under which he was formerly working. Section 11(2), however, makes it clear that the Central Government may, in the interests of the Corporation and its policyholders, alter the terms of the service of the employees as to their remuneration. After discussing the scope of this section, Mr. Justice Desai held, in effect, that the powers of the Central Government under this section were confined to alteration of the terms as to remuneration only and did not extend to alteration in other terms and conditions of service. Accordingly, the Judge held that the orders prescribing the uniform pay scales and conditions of service were bad in law.

It has been pointed out on behalf of the Corporation that it would have still been possible to issue fresh orders in regard to pay scales, but without making any alterations in the conditions of service as existed under the previous insurers. This would, however, have meant that different employees of the Corporation who formerly belonged to different offices would be governed by different terms and conditions of service in respect of hours of work, holidays and leave. In order to prevent such a disturbance to the working of the Corporation, the Government has now issued an ordinance amending section 11(2) of the Act. The new section is:

> "Where the Central Government is satisfied that, for the purpose of securing uniformity in the scales of remuneration and the other terms and conditions of service applicable to employees of insurers, whose controlled business has been transferred to and vested in the Corporation it is necessary so to do, or that, in the interests of the Corporation and its policyholders a reduction in the remuneration payable to employees or any class of them is called for, the Central Government may from time to time, notwithstanding anything contained in sub-section (1) or in the Industrial Disputes Act, 1947, or in any other law for the time being in force, or in any award, settlement or agreement for the time being in force, alter (whether by way of reduction or otherwise) the remuneration and the other terms and conditions of service to such extent and in such manner as it thinks fit; and if the alteration is not acceptable to any employee, the Corporation may terminate his employment by giving him compensation equivalent to three months' remuneration, unless the contract service with such employee provides for a shorter notice of termination.
>
> "The compensation payable to an employee under this sub-section shall be in addition to, and shall not affect, any pension, gratuity, provident fund money or any other benefit, to which the employee may be entitled under his contract of service.
>
> "Any order altering the remuneration and the other terms and conditions of service of the employees referred to in sub-section (2) of section 11 of the Principal Act made or purporting to have been made under that sub-section before the commencement of this Ordinance by the Central Government for any of the purposes specified in that sub-section as amended by this Ordinance shall, notwithstanding anything contained in any judgment, decree or order of any court, be deemed to have been made under that sub-section as amended by this Ordinance as if this Ordinance were in force on the date on and from which the order was intended to take effect and the order shall continue in force and have effect accordingly."

As things have now turned out, the legal victory of illusory value to the petitioners has ended in the promulgation of an ordinance which has placed the powers of the Central Government above legal reproach. The obvious lesson that could be learnt from this episode in the brief history of the Corporation is that it is not through legal battles that the employees can hope to better their lot; nor can the authorities hope to retain the goodwill of the staff through ordinances. What is necessary is that both sides should learn to let their recent past bury itself and bend their energies to finding a settlement of all outstanding issues. A somewhat intractable issue is that of bonus. On behalf of the Corporation, it has been contended that Government-sponsored institutions cannot grant bonus, in view of the fact that they are not profit-making bodies. The authorities have, however, recognised the validity of the employees' contention that they have for long regarded bonus as part of their salary and that an abrupt withdrawal of this payment would mean keen disappointment. The authorities, it is learnt, would like to make up for the loss of bonus by increased amenities. They have already put into effect a free insurance scheme. Perhaps this does not compensate the loss of the bonus in full. A new approach is called for in respect of bonus and other issues in order to reach a settlement which will leave the Corporation free to concentrate on its most essential function—increase of life insurance business.

MEDIUM-TERM CREDIT

THE proposal for setting up an institution, to be known as the Re-finance Corporation, for purposes of meeting the medium-term credit requirements of industrial units is a welcome experiment in the history of banking in this country. Although there are now several institutions for meeting the long-term credit needs of industry, there is no institution meant exclusively for medium-term credit. The need for such an institution is certainly great. Many banks, it is now common knowledge, have on their books a sizable volume of advances to clients which, though technically returnable at short notice, are periodically renewed so that they are virtually medium-term loans. This, however, is at best a make-shift arrangement. Besides, in the context of the continuing monetary stringency, such loans must mean additional hardship to the banks. As Mr. G. D. Birla, Chairman of the United Commercial Bank Ltd., in the course of his speech at the recent annual meeting of the Bank, pointed out, "with the ratio of advances to deposits well over 70 per cent. and in individual cases topping even the 80 per cent. mark, it is clear that the commercial banks now lack the credit base to carry the load of medium-term finance to industry." Of the total deposits, those that are repayable on demand constitute 60 per cent. and those repayable within three to six months some 30 per cent., while deposits which have a year to run represent a bare 10 per cent.

The broad details of the Corporation are now available. It will commence functioning with an ordinary share capital of Rs. 12.5 crores to be subscribed by the Reserve Bank of India (Rs. 5 crores), the State Bank of India (Rs. 2.5 crores), the Life Insurance Corporation of India (Rs. 2.5 crores) and the other banks (Rs. 2.5 crores). The other banks, it is stated, are Central Bank of India, Punjab National Bank, Bank of India, Bank of Baroda, National Bank of India, United Commercial Bank, Lloyds Bank, Allahabad Bank, Chartered Bank, Indian Bank, United Bank, Mercantile Bank of India, Dena Bank and State Bank of Hyderabad. The Government of India will place with the proposed Corporation the American counterpart funds of Rs. 26 crores as an interest-bearing loan for 30 years. The total funds available to the Corporation will thus be Rs. 38.5 crores. Loans under this scheme will be for periods between three and seven years. They will be given to medium-sized industrial units, so that no single industrial concern will have total resources in excess of Rs. 2.5 crores; the maximum amount of loan to any one borrower will not exceed Rs. 50 lakhs. Each of the participating banks, it is stated, will be allocated a quota from the total funds of Rs. 38.5 crores. Within this quota, the banks may offer certain types of loans to the Corporation for discount; the minimum limit of the quota will be Rs. 1 crore and the maximum Rs. 3 crores. If the Corporation charges 5 per cent., the banks under the scheme will be entitled to charge about 6.5 per cent. on loans given to industrial concerns. Lending banks will, however, assume the full credit risk on loans submitted to the Corporation for discount.

While the scheme is certainly intended to fill a genuine gap in the country's credit structure, there are some obvious difficulties in the way of implementing it. In the first place, the banks have to take the entire responsibility for the creditworthiness of the clients to whom they give medium-term loans. This is a risk which they may find it difficult to take. After all, medium-term advances represent a new field in which their experience is strictly limited. From this point of view, it may be wondered whether the Government itself should not relieve the banks of at least a part of the risk involved, considering that the banks are now being asked to underwrite risks which are somewhat repugnant to traditional banking practice. Secondly, it is to be feared that the margin of 1.5 per cent. envisaged for the bankers under the scheme may prove too small for the risks involved in administering the system of medium-term credits. Thirdly, the banks, as Mr. Birla stressed, do not now possess a satisfactory base for purposes of a successful experiment in this sphere. A wider incursion in the field of medium-term loans to industry, he stressed, would require the previous development of long-term deposits from the public. He added that, if Indian banks could successfully issue bonds with a maturity of three to six years, a base for medium-term credit to industry would have been established. There is no such base now and the proposed Corporation is also unwilling to shoulder the risk involved in medium-term advances. This is not a situation which is calculated to advance the cause of the scheme. Finally, it cannot be too often reiterated that any scheme of medium-term credits will depend for its success on the adoption by the Government of appropriate fiscal and economic policies which are designed both to encourage industrial units to borrow for purposes of expansion and to enable them to repay the loans promptly enough. Efforts should be continually made to overcome these difficulties, if this well-meant experiment is to become a real success and make a significant contribution to industrial finance.

CURB ON CREDIT FOR SPECULATION

U.S. LEND-LEASE SILVER—MARGIN ON COTTON—COMPULSORY DEPOSITS

THURSDAY, 5 P.M.

MARKET GOSSIP

WITH only three weeks to go for the budget to be presented to the new Parliament, the share markets have begun to show hesitancy. Though the budget fears have not yet been reflected in prices, operators seem to be reluctant to follow the upward movement noted in the previous two weeks. Except the general expectation that the budget proposals are bound to contain heavy tax measures, there are no indications to show the shape of the budget to come. One thing, however, is certain; that is, the cotton mill industry has to continue to shoulder the burden of heavy excise duties. This has been categorically reiterated again by the Union Minister for Commerce and Industry, Mr. Morarji Desai, in the course of his talks on Friday last with the members of the Committee of the Millowners' Association, Bombay, on the current problems of the textile industry.

The hopes of getting relief on this account in the May budget having been ruled out, textile mills have to bow to the inevitable. The only way open to them for getting their stocks of cloth reduced is to cut the prices and thus offer an inducement to consumers. This would mean a drastic fall in their profits for the current year. On top of this, the high prices of cotton would mean a further increase in production costs. In the circumstances, it will not be surprising if some textile mills look for other activities to supplement their income. In this connection, it is noteworthy that the Standard Mill of the Mafatlal Group has plans for diversifying its activities. The Company has been granted licence to establish a cement factory in Saurashtra and has obtained a certificate of approval for acquiring prospecting licences and mining leases in respect of many minerals in the Bombay State. This Company has no doubt the financial resources to undertake such ventures, but there are very few units which are in a position to do so.

• • • •

Equities on the kerb last night received a jolt from the reported circular of the Reserve Bank of India to banks advising them to desist from making advances for the purpose of cornering shares by parties who are intent upon acquiring control over companies. The banks have been asked to scrutinise applications for loans, so that bank credit may not be exploited for speculative purposes. The market's initial reaction is due to a misinterpretation of the contents of the Reserve Bank's circular. It was felt that advances against shares would not be available from banks. On second thoughts, however, the market seems to have realised the implications of the circular, as witness the higher opening in today's official trading. It is wondered by some as to what could have been the provocation for the Reserve Bank to issue this circular. This is not the first time that the Reserve Bank has issued such a directive. It probably wants to draw the attention of banks to the need for conserving bank finances to the maximum extent possible for genuine requirements of trade and industry, in view of the present acute monetary stringency. The Reserve Bank is understood to have emphasised that financial resources of banks should be harnessed to productive ends, instead of being made available to parties who pledge shares of companies with banks and obtain funds which, in turn, are used for unproductive and speculative purposes. While warning banks not to encourage such parties, the Reserve Bank is said to have stated that it has no objection to banks advancing loans against shares to those undertakings which utilise such loans for productive purposes.

A development of interest to the silver section of the bullion market is the Government of India's decision to return to the U.S. in full the silver borrowed from the latter during the last war under the lend-lease agreement. During the war, the U.S. Government had lend-leased to India 226 million fine ounces of silver to be returned five years after the duration of the emergency. Following the partition, the liability was shared between India and Pakistan, India's share being 172 million ounces. The quantity has to be returned before 30th April 1957. The difficulty in the way of India returning this silver all these years was that it does not have sufficient quantity of silver. It has only a large amount of quaternary coins as a result of demonetisation of silver coins, from which the silver content has to be extracted. It is estimated by Messrs. Handy and Harman that the Indian Government has on hand a stock of silver amounting to 300 million ounces in the form of the demonetised coins. All these years America was reluctant to accept these quaternary coins and India's refining capacity was too inadequate to undertake the refining of these coins. The refining capacity has no doubt been enlarged now, but the nature of the quaternary alloy presents considerable difficulties in refining the coins. It will take quite a number of years before India refines all the coins. In view of these problems, there had been expectations in the market that the Government of India would enter the market to buy silver in order to return it to the U.S.

All these speculations have now been set at rest with the decision of the U.S. Government to accept these quaternary coins and undertake their refining at their own cost. It will at the same time retain all the metals recovered in the refining process. It has been agreed that India would ship 50 million ounces of silver of the requisite fineness in the form of bars and the balance of 122 million ounces in the form of quaternary coins. The first instalment of the shipment of 50 million ounces was made yesterday, when about 3 million ounces was embarked on an American liner.

The possibility of the Government buying silver from the market having thus been ruled out, attention is now diverted to guessing how much silver the Government of India will have after the lend-lease silver is returned. As already stated, the Government is said to have a stock of 300 million ounces from the demonetised coins, besides some quantity of *Hali Sicca* coins and the Government of India quaternary coins still with the public. As at the end of March 1956, the circulation of *Hali Sicca* currency amounted to Rs. 3.49 crores in Indian rupees and that of Government of India quaternary coins aggregated Rs. 52 crores. In the circumstances, the market is somewhat worried that the Government might come forward to sell a part of its silver stocks in order to meet its development expenditure.

The latest move of the Government to effect a further drastic upward revision in margin deposits on transactions put through in Jarilla cotton May contract above Rs. 700 per candy of 784 lbs. signifies the grim determination of the authorities to nip in the bud any speculative tendency in the cotton futures market. Only on Thursday last, the deposits were doubled when forward trading was resumed after a day's closure. Yesterday, the Forward Markets Commission directed the Board of the East India Cotton Association to replace the slab system of fixing the deposit according to the price of cotton—Rs. 100, Rs. 140 and Rs. 200 per candy, if the quotation is higher than Rs. 700, Rs. 725 and Rs. 750, respectively—by a flat rate of Rs. 400 per candy (Rs. 200 per bale) whenever the Jarilla May contract rises above Rs. 700. The revised margin deposit is to be effective from 1st May. Evidently, the Commission has found that the doubling of the margins has not had the desired effect on the price trend. There was, of course, a sharp break in values, following the rise in deposits, Jarilla May dropping as much as Rs. 16 to Rs. 738 on the 18th inst. But, the contract firmed up again to Rs. 747, thanks to considerable short-covering and scarcity of offers. The Commission seems to think that a further increase in deposits at a time when credit conditions continue to be stringent would induce liquidation of holdings by speculative interests before 1st May, that is, when the revised margin comes into effect. It looks as though the Commission is right in thinking so. The Jarilla May contract has come down from Rs. 747 yesterday to Rs. 708 today, a fall of Rs. 39. The authorities are somewhat inclined to feel that the rate of Rs. 700 is the reasonable price, though the ceiling is fixed higher at Rs. 754. Naturally, they do not favour any business above Rs. 700. This objective is likely to be fulfilled, considering that there are not many who can pay as much as Rs. 20,000 for every 50 candies. Be that as it may, the recent increased official intervention in the cotton trade has evoked bitter protest at the hands of a section of traders. As a mark of protest, four members of the Board of the E.I.C.A., it is believed, have tendered their resignation.

• • • •

After a lapse of four months since the passage of the Finance (No. 3) Bill of 1956 by Parliament, which sought to amend section 10 of the Indian Income-tax Act, 1922, the Government of India has published the long-promised draft rules relating to the compulsory deposits to be made in respect of current profits under sub-section 2B of the section. The one anomalous feature of these rules is that they have been published two weeks after the relevant provisions of the Act themselves came into force, that is, on 1st April 1957. It is, no doubt, to be welcomed that the Government has asked for public comment before finalising the rules, but the time limit fixed therefor is too short. If those in charge of the enforcement of the Act themselves take so much time to publish the draft rules relating to the Act, which has caused much confusion among those affected by it, it may well be imagined how much time the public would take to understand the rules and give an opinion thereon. Even assuming that public comments are received within the end of the month, it will take two or three weeks, if not more, for the Government to finalise the rules. The period left after the finalisation of the rules for companies to make the deposit is too inadequate to arrange for the necessary finance, particularly for those companies whose "previous year" ended on or before 31st December last, for they have to make the deposit before 30th June next.

The most notable feature of these rules is that they relate only to current profits of companies and not to their accumulated reserves. If this welcome omission is to be taken as the Government's intention not to disurb companies' disposition which might have been made out of the accumulated reserves, it is surely a gesture on its part. For, in the case of many companies which have vast accumulated reserves, as a result of following a conservative policy in the matter of distribution of dividends, such resources have been locked up in rehabilitation and expansion programmes undertaken in recent years and in stocks of manufactured goods and raw materials. Representations have been made by industrial concerns to the effect that the companies which have already utilised their reserves for approved purposes should be exempted from the provisions of this part of sub-section 2B of Section 10 of the Indian Income-tax Act. The Government has presumably seen the weight of this contention and is willing to concede the demand. There is, however, no clear indication in the published rules of the Government's anxiety to give relief to companies in respect of accumulated reserves and there is, therefore, a certain amount of uncertainty about the enforcement of this part of the provisions. The Government will do well to clarify its intention in this regard, instead of leaving the public guessing. As the law has already been passed, it cannot be made infructuous by reason of the fact that the relevant rules have not been published. The Government should, if its intention is to keep in abeyance the law relating to "accumulated reserve deposits," announce that the percentage of deposits to be made by companies in respect of accumulated reserves is *nil*, as the Government has power to fix any percentage up to a maximum of 25.

Five categories of companies have been exempted from the deposit scheme and, in the case of others, the deposit to be made out of current profits is fixed at 50 per cent. of the amount by which the statutory surplus exceeds Rs. 1 lakh. In fixing this percentage at 50, instead of the maximum of 75 prescribed under the Act, the Government has no doubt given some relief to companies and this is in consonance with the Finance Minister's statement made subsequent to the passing of the Act that it was the Government's intention not to fix the percentage at over 50 in the first instance.

Another welcome feature of the rules is that companies have been given the discretion to make the deposits in the form of securities, instead of cash, the securities being valued at market value. This would mean that many companies need not have to strain their cash resources or to borrow from banks for the purpose of making the deposits, but only to make over their investments in Government securities to the Reserve Bank. Even this is not so easy as it appears to be, if these investments had already been pledged with banks for borrowings made. The valuation of securities at market rates for the purpose of deposits would mean that companies have to deposit a larger amount of securities than would be necessary, if they are taken at par value, in view of the heavy discount at which they stand now. The companies would not even mind this, if there is any guarantee against further depreciation in values of securities. It is not clear from the draft rules whether the securities so deposited will be revalued periodically according to the market value. For instance, if the market value goes down some time after the securities have been deposited, will the companies be asked to deposit further securities, or if it goes up, will the companies be given back the securities found in excess as a result of the revaluation? It must also be noted that there is no specific provision for refund of deposits (cash or securities) made by companies, if as a result of assessment by the Income-tax authorities they were found in excess of the assessed figure.

The list of "approved purposes" mentions only two definite purposes, namely, capital expenditure and repayment of borrowing against fixed assets, and leaves the other approved purposes to the discretion of the Commissioner of Income-tax or the Board of Referees. The Government is anxious that the deposits should be utilised for genuine purposes only and this can be ensured by giving the list of all possible "approved purposes" in the rules itself. The approved purposes must include working capital also.

The draft rules lay down that companies have to make the deposits on their own computation and to await the assessment of the Income-tax authorities. Usually, the assessment takes two or three years and in such cases, if the deposits already made by companies fall short of the deposits due on the basis of the assessment, the penal interest of 6 per cent. to be paid for such a long period will mean undue hardship to companies for no fault of theirs. While the Government has fixed the penal interest at 6 per cent., no rate of interest payable on the actual deposit made has been prescribed. The rate of interest will be notified by the Government for each financial year. Companies have no doubt the option to challenge the assessment made by the Income-tax authorities and if, as a result of the proceedings taken under the Income-tax Act, the assessment is reduced, the rules (*vide* rule 15) prescribe that the excess of deposits made over the amount so reduced will be refunded to companies. There is, however, no provision for refund of the excess interest paid. The Government has not specifically mentioned about it, presumably because there is already a provision under section 18A of the Income-tax Act for the refund of excess tax paid and the excess interest paid. Anyway, it is better to make the position clear by introducing a specific rule.

By reason of his close association with industrial enterprises and rich experience as an administrator, the observations of Dr. Ramaswami Mudaliar on current economic issues do naturally evoke widespread interest. Addressing the annual meeting of the Industrial Credit and Investment Corporation of India, Ltd., held this week in Bombay, Dr. Ramaswami Mudaliar, after referring to the fact that everybody realised that both the public and private sectors should function in a complementary manner, expressed the view that "proper development of industries in the private sector would lead to a snowball effect gathering more and more momentum by the utilisation of resources saved so as to make further industrialisation possible, whereas there is not the same result or even

SHARE MARKET QUIET

UPWARD TREND HALTED

(From Our Own Correspondents)

BOMBAY, *25th April*

THE share market presented an erratically lower trend during the week under review. The upward movement noted in the previous two weeks was not sustained in the face of heavy bull liquidation in leading counters. The series of holidays, fears of heavy deliveries in the last settlement and the Commerce Minister's statement that there would be no reduction of excise duty on cloth, brought down values sizably. Yesterday, however, there was a smart recovery on replacement buying at lower levels and short-covering. Today, again, sentiment was affected a little as a result of the misinterpretation of the Reserve Bank's circular to banks advising them to desist from making advances for the purpose of cornering shares. This was interpreted initially to mean that banks would discontinue advances against shares. On second thoughts, it was realised that genuine advances against shares would not be affected. Consequently, there was a recovery at the close. On balance, equities suffered minor losses over the week.

In the steel section, Tata Ordinaries suffered a setback from Rs. 171 to Rs. 165.75. After staging a recovery to Rs. 169.50, the shares drifted lower to Rs. 168 at the close. Tata Steel (new) were unchanged at Rs. 119. Indian Irons softened from Rs. 20.15 to Rs. 19.60, but regained to touch a high of Rs 20.30. The closing was, however, done lower at Rs. 20.05.

Textiles were affected earlier in the week by the Commerce Minister's statement that there would be no reduction of excise duty on cloth, but the closing prices were well above the lowest levels touched. Bombay Dyeings were marked down from Rs. 557.50 to Rs. 550.50, before smartly recovering to Rs. 559. The closing was done at Rs. 556.50. Centurys came down to a low of Rs. 453.50 from the previous week's closing of Rs. 464, but finished better at Rs. 466.50. Kohinoors gained over the week Re. 1 to Rs. 319, the highest and lowest levels touched being Rs. 321 and Rs. 313.50, respectively. Central Indias shed a rupee to Rs. 114. Finlays dropped Rs. 5 to Rs. 301, Gokaks 75 nP to Rs. 191.25 and Indu Ordinaries 20 nP to Rs. 10.10. Indore Malwas changed hands Re. 1 lower at Rs. 136. Edward Textiles were, however, marked up by Rs. 2.50 to Rs. 252.50. New Greats were unchanged at Rs. 228, but New City Mills had business at Rs. 133.75, a fall of Rs. 15.65 over the week. Podar Mills moved down by a rupee to Rs. 164, while Shree Niwas Cottons were maintained on balance at Rs. 178. Simplex moved between Rs. 173 and Rs. 171 before finishing at Rs. 172. Standards drifted lower by Rs. 4 to Rs. 444, Svadeshis by Rs. 3 to Rs. 214.25 and Tata Mills by 25 nP to Rs. 47.50. Vishnu Cottons were done lower at Rs. 125 *ex-div.* (div. Rs. 5.50), as against Rs. 140 *cum-div.* last week.

Bank shares fared better on investment enquiry. Barodas were picked up 50 nP higher at Rs. 99.50. Central Banks gained Rs. 2 to Rs. 50.75 and their new shares Rs. 1.25 to Rs. 53.75. Bank of Indias provided an exception with a drop of Re. 1 to Rs. 133. Union Banks were up by 10 nP at Rs. 7.25. United Commercials were done at Rs. 53 *ex-div.* (div. Rs. 3.50), as against Rs. 56.50 *cum-div.* a week ago.

Very little activity was noted in the insurance section. New Indias changed hands 75 nP higher at Rs. 39.75. British India Generals were lower by 20 nP at Rs. 13.25.

Business in electricity shares was restricted, but the undertone was steady on enquiries for select counters. Ahmedabad Electrics were taken up 25 nP higher at Rs. 93.75, as also Bombay Suburbans at Rs. 106.25. Surat Electrics picked up 75 nP to Rs. 107.75. Tata Hydros were a fraction lower at Rs. 121. Tata Powers improved by Rs. 12.50 to Rs. 1,207.50, while Andhra Valleys were unchanged at Rs. 1,185.

In the miscellaneous section, sugar shares emerged better, despite the generally lower trend, on reports that the Government of India was considering a proposal to give excise duty concession for encouraging production of sugar from *gur*. Belapurs dipped earlier from Rs. 226 to Rs. 224, but rallied to close at Rs. 229. Phaltans gained 75 nP to Rs. 135.25, while Walchandnagars were marked down from Rs. 253 to Rs. 248.75. Associated Cements were taken down from Rs. 159.25 to Rs. 157.75 before gaining to Rs. 160. Their coupons were done Rs. 2 higher at Rs. 58. Digvijays hardened by Rs. 2.50 to Rs. 144.50. Orissa Cements improved by 24 nP to Rs. 13.44. Engineering and mining shares followed the general pattern, the notable exception being provided by Tata Locomotives. On rumours that the Company might declare an interim for the current year, in view of the encouraging performance, Tata Locomotives rose sharpiy to Rs. 146.25 from Rs. 138.25, to which level they had been marked down on Tuesday from Rs. 141 at the close of the previous week. Alcock Ashdowns fell by Rs. 6.25 to Rs. 257.50. Premier Constructions stood a rupee higher at Rs. 165. Larsen and Toubros were unchanged at Rs. 15. Shivrajpurs were lower by 75 nP at Rs. 90.50 and Indian Coppers by 4 nP at Rs. 3.28, as also B.B. Petrols at Rs. 2.50.

In the shipping and automobile group, Scindias fluctuated between Rs. 18.80 and Rs. 18.40 before closing 40 nP lower at Rs. 18.50. Great Easterns were done 25 nP lower at Rs. 18.10. Premier Automobiles fared well with a rise of Re. 1.50 to Rs. 88.50, while Hindustan Motors shed 5 nP to Rs. 7.25.

Bombay Burmahs (old) suffered a retreat from Rs. 581 to Rs. 560.50 before recouping to Rs. 565.50 at the close. Their partly paid-ups lost Rs. 5.75 to Rs. 211.25. British India Corporations were quiet at Rs. 7.30. National Rayons gave way from Rs. 228.50 to Rs. 226.50 and Gwalior Rayons lost 15 nP to Rs. 12.25. Hindustan Levers were a steady feature with a rise of 45 nP to Rs. 19.05. Tata Chemicals were maintained at Rs. 16.10 and Tata Oils at Rs. 42.50. Wimcos improved by Re. 1.50 to Rs. 171.

* * * *

Calcutta Stock Exchange

CALCUTTA, *24th April*

After depicting a slightly better trend following expectations of increased support from the Life Insurance Corporation, the Calcutta Stock Exchange turned lethargic on Thursday, when it closed for the Easter holidays and the week-end. The market reopened yesterday, cheerfulness being hardly perceptible. Some support was forthcoming, in view of the low levels which quotations had touched. But the support was extremely cautious, and as such could not reverse the falling trend. This change in sentiment for the worse was due to expectations of increased levies in the forthcoming budget, and note was taken of a New Delhi report which said that the Railway Budget would disclose a general upward revision in freights, threatening to claim from trade and industry a 20 per cent. increase in revenue from goods traffic. Another cause for the setting in of dullness was the publication of the draft rules under which joint-stock companies should deposit a portion of the reserves with the Government. Although these rules are as wide as possible, it was thought that their actual enforcement would affect the normal working of companies. Stock market circles entertained the fear that the deposit scheme was likely to lead managements of companies to follow a more cautious dividend policy, in view of the relationship of dividends to the cash position.

The announcement of the decision to close the Standard Jute Company on account of continued uneconomic working chilled operators' enthusiasm for jute shares, despite better prospects of jute goods exports and better statistical position of stocks of finished products with mills. Howrahs fell from Rs. 15.87 to Rs. 15.25, and Nationals from Rs. 20.50 to Rs. 20.10. Orients were as low as *Rs. 103, as against Rs. 111 previously*, while Anglo-Indias, on fresh support, were taken to Rs. 134 from Rs. 132. After being lower at Rs. 11.87, New Centrals regained to Rs. 12.06, Indias changing hands at Rs. 123, as against Rs. 121.

Coals were, for a time, noted for steadiness, but turned quiet subsequently. Thus, Burrakurs, after realising Rs. 21.65, closed at Rs. 21.00. From Rs. 16.25, Pench Valleys were driven back to Rs. 14.87, while Bengals were a shade better at Rs. 216. The announcement of an increase in the stowing subsidy for collieries did not cause any change in sentiment, as this was considered too poor. The statement that the price and cost structure of the coal industry would be closely studied did not also cause any cheer.

Engineering scrips were subjected to profit-taking. Indian Irons opened at Rs. 19.96 and, after improving to 20.09, sagged to Rs. 19.69. Kumardhubis were fractionally lower at Rs. 9.50. Jessop & Cos. gave way to the opening rate of Rs. 25.37, after being higher at Rs. 26.25. On the other hand, fresh support was accorded to Braithwaite & Cos. which at Rs. 25.00 added 12 nP. India Galvanisings were pushed back to Rs. 19 from Rs. 19.12, Guest Keens being unchanged at Rs. 25.50.

Madras Stock Exchange

MADRAS, *23rd April*

The Madras Stock Exchange presented a quiet trend during the week under review. Investment buying was at a low ebb, thanks to lack of any encouraging development. Although the draft rules regarding compulsory deposits out of companies' current profits are less rigorous than expected, they were still considered to be quite harsh, affecting firms having low reserves. The categorical declaration by the Union Commerce and Industry Minister that the Government would not reduce excise duty on cloth also chilled the enthusiasm of operators. Advices from Bombay and Calcutta, too, were not inspiring. Transactions put through were, as a consequence, greatly restricted and values of several counters tended to look down.

Among tea shares in the planting section, Blue Mountains declined by 25 nP to Rs. 3.75, Kalasas by 20 nP to Rs. 13.80. Waterfalls and United Nilgiris decreased by 13 nP each to Rs. 4.20 and Rs. 17.62, respectively. Neelamalais lost 5 nP to Rs. 6.10. Kil Kotagiris receded by 25 nP to Rs. 5.95. Talayar Teas were neglected at Rs. 10.70, Haileyburias at Rs. 22.50, Chandramalais at Rs. 3.90 and Devasholas at Rs. 21.25. Balanoors, however, advanced by 25 nP to Rs. 18.75 and Parksides by the same amount to Rs. 15.50. Peermades moved up by 75 nP to Rs. 27.25. Twyfords gathered 5 nP to Rs. 17.55. Among coffee shares, Consolidated Coffees slumped by Rs. 1.10 to Rs. 22.20. Coffee Lands were lower by 35 nP at Rs. 25.40. Mysore Coffees shed 9 nP to Rs. 3.00 and Sheveroys 6 nP to Rs. 2.04. In the rubber group, Cochin Malabars dropped 52 nP to Rs. 7.60. Be Bes eased by 15 nP to Rs. 4.60. Kailas lost a like amount at Rs. 4.95. Rajagiris and Mercaras both shed 25 nP to Rs. 19.00 and Rs. 8.25, respectively. T.R. & T's receded by 13 nP to Rs. 9.12. Pullangodes decreased by 10 nP to Rs. 2.40.

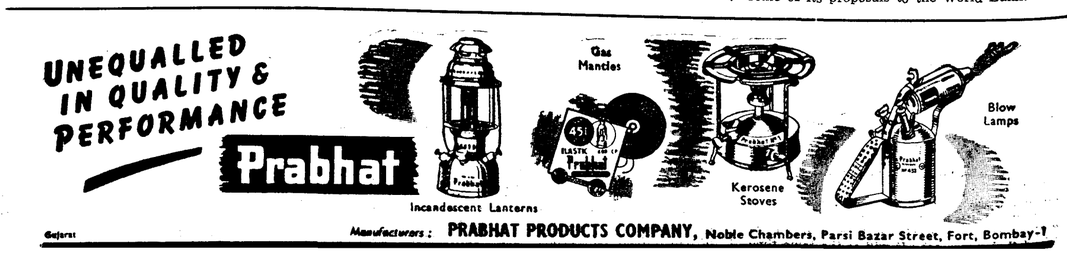
In the textile section, Ranga Vilas dropped Rs. 2.25 to Rs. 86.50. Rajalakshmis and Metturs both declined by Rs. 1.50 to Rs. 137.00 and Rs. 406.00, respectively. Gnanambikais slumped by Rs. 5 to Rs. 155.00. Janardanas, Loyals and Maduras shed 50 nP each to Rs. 93.50, Rs. 50.25 and Rs. 41.50, respectively. Lakshmis had good support and rallied Rs. 5 to Rs. 140.00. Coimbatore Pioneers were marked up by Rs. 5 to Rs. 270.00. Coimbatore Spinnings firmed up by Rs. 1.75 to Rs. 88.00.

In the miscellaneous section, Mysore Tobaccos and Mysore Papers shed 25 nP each, the former to Rs. 14.75 and the latter to Rs. 15.75. F.A.C.Ts receded by 32 nP to Rs. 5.30. Aluminium Industries were lower by 15 nP at Rs. 13.75. Spencers eased by 10 nP to Rs. 16.15. Singarenis were neglected at Rs. 10.50, Sen-Raleighs at Rs. 12.62 and Rallis at Rs. 30.25.

(Concluded from previous page)

the same incentive in public enterprises promoted by the State." A very high level of taxation, he rightly held, may produce more money to the State but will have an "atrophying" effect on private savings and thus on the development of industries in the private sector. Proceeding, he observed that there seemed to be a realisation on the part of the authorities that their taxation policy had seriously crippled the resources of Indian capital. He added: "The change in the policy of the Government regarding the extent to which foreign collaboration in the capital structure of a company can be promoted is a recognition of the shortage both of Indian capital and of foreign exchange." He felt that this more flexible attitude of the Government towards foreign capital was a welcome sign.

As regards the activities of the Corporation, the Chairman defended the Corporation against certain criticisms which have been made against its working. He stressed that the Corporation was not a purely lending company concerned mainly with the security offered against its loans. It had done a substantial amount of underwriting of shares and had invested in the share capital of a number of companies. He pointed out that this activity implied a very close consideration of the proposals which came up before the Corporation. He admitted that certain risks had necessarily to be taken in all ventures, but these risks must be carefully calculated risks and not risks incurred blindly. As regards the alleged failure of the Corporation to make use of the $10 million credit granted to it by the World Bank, Dr. Ramaswami Mudaliar revealed that in the early stages, so long as industrialists could get their foreign currency needs in the normal way, they were not willing to take loans in foreign currency from the Corporation. Subsequently, since the situation had altered as a result of the shortage of foreign exchange, the Corporation had received a number of enquiries for loans in foreign currency. He added that the Corporation in the coming months would present some of its proposals to the World Bank.



NEWS IN BRIEF

THE first session of the new Lok Sabha will commence on 10th May next.

A new railway marshalling yard is to be built at Tughlakabad, near Delhi, at a cost of Rs. 1 crore. At present, all goods traffic has to pass through either the main yard at Delhi or the New Delhi marshalling yards, causing heavy congestion. The proposed new yard is expected to relieve the pressure to a great extent.

The Government of India has decided to set up a Central Mechanical and Engineering Research Institute at Kalyani at an estimated cost of Rs. 50 lakhs. The project will be implemented in collaboration with the Government of West Bengal. The proposed Institute will carry out fundamental and applied research in mechanical engineering relating to industries.

The Secretary for Economic Affairs in the Union Ministry of Finance, Mr. B. K. Nehru, will shortly undertake a mission to Europe and the United States for negotiating imports against credit. He will discuss India's foreign exchange position and explore the possibility of securing credits from foreign industrialists and financiers, including the World Bank.

As a result of the decision (in principle) taken by the Calcutta Maritime Board which is composed of shipowners, seafarers, and the Joint Secretaries of the National Union of Seamen of India, the wages of the Calcutta seamen will be raised to the level prevailing in Bombay. About 20,000 seamen are to be benefited by this to the extent of Rs. 25 each, on an average, per month.

A special rebate of three naye paise per rupee will be granted on all the retail sales of handloom cloth during the Handloom Week 5th to 11th May. This is in addition to the rebate now being granted at the rate of 12 naye paise per rupee in Bombay State and 9 naye paise per rupee in all other States. A special rebate of 9 naye paise will also be granted on such sales where the present rate of rebate is 6 naye paise only.

For the development of sheep and wool production in India, 396 extension centres will be set up by 31st March 1959 at a total cost of Rs. 150 lakhs. It is also planned to establish, in 1957-58, three wool-utilisation centres—one each in Uttar Pradesh, Bombay and Rajasthan. A similar number of sheep breeding farms will be opened in the States of Bombay, Himachal Pradesh and Madhya Pradesh.

A general agreement has been reached by the representatives of the Union Government and the Assam Oil Company over the formation of a rupee company to exploit the newly found oil at Nahorkatiya in Assam. Earlier. disagreement over the financing of the pipeline and the price of crude oil was resolved by the common acceptance of some general principles in respect of both. The agreement is subject to ratification by the Government of India and the Board of Directors of the Company.

The Government of India has decided to allow the holders of 10-year Treasury Savings Deposit Certificates to pledge them with Scheduled banks and co-operative banks and societies for the purpose of securing advance against them. At present, these Certificates can be transferred for the purpose of being deposited as security only to a gazetted Government officer and executive officer of a local authority in his official capacity or the Reserve Bank of India. The new facility will come into effect from 1st May and is intended to help holders of Certificates to avoid their premature encashment.

The Railway Freight Structure Inquiry Committee is reported to have favoured the introduction of a new pattern of freights designed to discourage short-distance traffic and to encourage booking for long distances. With this end in view, the Committee is understood to have suggested a sliding scale of freights beginning with 3.6 pies per maund per mile for distances below 25 miles and ending with half a pie per maund per mile for distances beyon 1,200 miles. While the result of this rationalisation will be a general increase in existing freights, there will be some relief in the case of traffic moving over any distance ranging from 300 to 500 miles. This revision of rates is expected to result in a 20 per cent. increase in freight revenue.

The Standing Committee of Technical Experts on the Neyveli Lignite project has completed its studies on the various alternative possibilities in connection with the fertiliser part of the project. The studies involved investigation of various production possibilities, including production of complex fertilisers and other fertilisers, containing two principal plant nutrients. In view, however, of the satisfactory results from a large number of demonstration trials with urea as the fertiliser, the production of only this fertiliser has been decided upon at Neyveli. For one thing, urea is preferred by the agriculturists. It can also be produced and delivered cheap and it has satisfactory keeping qualities. The proposed fertiliser unit at Neyveli is, therefore, being planned and designed for the production of urea of the order of 70,000 tons of nitrogenous content per annum by the total recycle process. When it goes into production, it is expected to be one of the largest urea plants in the world.

The Government of India has been sanctioned a Ford Foundation grant of $1.5 million for the training of 200 Indian engineers in the management and production methods of the United States steel industry. The training, which will begin in September and take one year, will be conducted by the nation's eight largest steel companies. Academic instruction will be provided by co-operating technological institutes in the vicinity of the plants to which the trainees are assigned. The Carnegie Institute of Technology will serve as the administrator of the programme in this country and as liaison between the educational institutions and the steel companies. The Foundation grant will meet the trainees' living expenses in the United States and academic fees connected with their institute studies. The steel companies will assume the costs of instruction and training in their plants. The Government of India will pay the trainees' international travel expenses and the costs of preliminary training in India.

From Abroad

A Conference of Commonwealth Prime Ministers will open in London on 26th June next.

The French Government is expected to announce shortly details of a cut of 250,000 million francs in Government military and civil spending in order to meet the country's economic difficulties.

President Eisenhower has signed a Bill permitting Britain to postpone up to seven payments of annual interest and principal on loans and its lend-lease account received from the U.S. Government. The Bill had earlier been passed by both the Houses of the Congress.

The new cotton mills with a total of 800,000 spindles and 20,000 looms are scheduled to go into operation in China this year, according to the Chinese Ministry of Textiles Industry. Altogether, 40 mills with a total of 1,620,000 spindles and about 40,000 looms will be completed by December 1957, under China's first Five-year Plan.

The Planning Board of Pakistan has submitted to the National Economic Council an approved draft of Pakistan's Five-year Plan with reduced estimates. The draft allows for an investment of Rs. 1,080 crores in the private and public sectors, as compared with the original estimate of Rs. 1,160 crores. The estimated increase in national income over the Plan period of 1955-60 has been lowered from 20 to 15 per cent.

Personal income in the U.S. during March rose to a record annual rate of $337,500 million. The rate level was $1,000 million over the preceding month. Personal income—a major indicator of the economy—includes wages and salaries, the net income of proprietorships, as well as dividends and interest, net rents received by landlords, and other types of individual income.

Soviet engineers have drafted a plan to reverse the flow of several northward flowing rivers in European Russia in order to produce immense quantities of electric power and irrigate millions of acres of steppe and semi-desert land. About 800 million cubic yards of earth, it is estimated, will have to be moved for the purpose, which are ten times as much as those moved for the building of the Suez Canal.

The United Auto Workers Union plans to institute a pilot centre at Detroit for retired workers. Experience gained in operating the centre will be used in planning future centres designed to meet the needs of the elderly workers in American industrial communities. The new centre will provide retired workers of this area with recreational and social activities, and will offer them guidance on financial, health, and housing problems.

The Soviet Government intends to double the production of the Magnitogorsk Iron and Steel Works, the nation's biggest producer of ferrous metals, by 1965. The expansion programme envisages an increase in the number of coking batteries from 10 to 16 and of open hearth furnaces from 28 to 37, addition of two more blast furnaces, and automation of many ore concentration and coking processes.

The 1956 economic aid programme cost the United States $4,900 million in goods, services and cash. This figure, according to the U.S. Department of Commerce, marked an advance of 8 per cent. over the 1955 figure of $4,547 million. Deliveries to Western Europe aggregated more than $1,900 million, to Latin American countries $218 million, and to Asian countries $1,900 million. The U.S. also sold $1,100 million in farm products to friendly nations. Of this amount $519 million in foreign currencies were used during the year on projects agreed upon by the recipients and the U.S.

PERSONAL

DR. S. Radhakrishnan has been re-elected Vice-President of India.

Mr. A. S. Rao, until recently Legal Adviser to the Textile Commissioner, Government of India, Bombay, has been appointed a whole-time Member of the Forward Markets Commission.

Mr. Shantilal Mangaldas and Mr. Chandulal Vardhman have been elected President and Vice-President, respectively, of the Saurashtra Millowners' Association for the year 1957-58.

Mr. K. L. Dhandhania has been elected President of the Bharat Chamber of Commerce, Calcutta, for the year 1957. Mr. B. P. Poddar and Mr. R. K. Kanoria have been elected senior Vice-President and junior Vice-President, respectively.

Mr. A. H. Milnes, Technical Director of Messrs. Cook and Company (Manchester) Ltd., the well-known manufacturers of ring travellers, rings, vacuum card stripping and pneumatic conveying equipment, testing machinery, etc., arrived in Bombay on the 18th inst. and intends to visit the principal textile centres and as many mills as possible during his stay in India. Mr. Milnes has been responsible for the development of many of the Company's products and is the author of two standard publications on statistics as applied to the textile industry. He may be contacted through W. H. Brady & Co., Ltd., Bombay.

Mr. Jawaharlal Nehru assumed office as the Prime Minister and Minister of External Affairs and also in-charge of the Department of Atomic Energy on the 17th inst. The other members of the Cabinet are: Maulana Abul Kalam Azad, Education and Scientific Research; Messrs. Govind Ballabh Pant, Home Affairs; Morarji R. Desai, Commerce and Industry; Jagjivan Ram, Railways; Gulzarilal Nanda, Labour and Employment and Planning; T. T. Krishnamachari, Finance; Lal Bahadur Shastri, Transport and Communications; Sardar Swaran Singh, Steel, Mines and Fuel; Messrs. K. C. Reddy, Works, Housing and Supply; Ajit Prasad Jain, Food and Agriculture; V. K. Krishna Menon, Defence; S. K. Patil, Irrigation and Power. The Ministers of State are: Mr. S. N. Sinha, Parliamentary Affairs; Dr. B. V. Keskar, Information and Broadcasting; Mr. D. P. Karmarkar, Health; Dr. P. S. Deshmukh, Food and Agriculture; Messrs. K. D. Malaviya, Mines and Oil; Mehr Chand Khanna, Rehabilitation; Nityanand Kanungo, Commerce; Raj Bahadur, Transport and Communications; B. N. Datar, Home Affairs; Manubhai Shah, Industries; S. K. Dey, Community Development; Dr. K. L. Shrimali, Education and Scientific Research; Messrs. A. K. Sen, Law; Humayun Kabir, Transport and Communications. The Deputy Ministers are: Sardar S. S. Majithia, Defence; Messrs. Abid Ali, Labour; Anil Kumar Chanda, External Affairs; M. V. Krishnappa, Food and Agriculture; Jai Sukh Lal Hathi, Irrigation and Power; Satish Chandra, Commerce and Industry; Shyam Nandan Mishra, Planning; Bali Ram Bhagat, Finance; Shah Nawaz Khan, Railways; Dr. Mono Mohan Das, Education and Scientific Research; Mrs. Lakshmi N. Menon, External Affairs; Mrs. Violet Alva, Home Affairs.

MAY 25th to JUNE 10th

Welcome to the

53rd

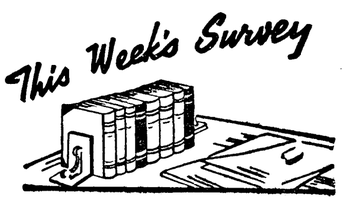
PARIS International Trade Fair

FOIRE DE PARIS

LAST YEAR 13,000 exhibitors and over 3,800,000 visitors!

For information, apply to the COMMERCIAL COUNSELLOR, FRENCH EMBASSY, New Delhi 2; 63, Cornwallis Road

FRENCH TRADE COMMISSIONERS:
Bombay 1: – 'Adelphi', 3 Queen's Road.
Calcutta 16: – 12 Park Mansions, Park Street.
Madras: – 'Paradise Buildings', 36 Mount Road.



PUBLIC AND PRIVATE SECTORS

THERE is no exaggeration whatever in the statement of Mr. K. M. Munshi, Governor of Uttar Pradesh, made while presiding over the function organised in Bombay last week to felicitate Mr. G. D. Birla on the conferment of *Padma Vibhushan*, that, in honouring Mr. Birla, the Government of India has honoured the Indian business community itself. For Mr. Birla symbolises in himself the best traditions of this community. The House of Birlas is known not merely for its farsighted endeavours in the sphere of trade and industry but for its unflinching devotion to the cause of freedom even at a time when its supporters had not yet been successful in their struggle. The services of Mr. Birla, who is one of the leading lights of the house which bears his name, are both wide in range and manifold in character. Besides making significant contributions to trade, industry and banking, Mr. Birla has founded large trusts which, as Mr. Munshi aptly described, "are a source of pride to the country and which have benefited hundreds and hundreds of people in different spheres of activities." Mr. Birla belongs to the class of industrialists who are known for their enlightened interest and progressive outlook. A clear indication of this is provided by the observations of Mr. Birla, in the course of his reply to the felicitations extended to him. Pointing, in particular, to the undue emphasis on the public and private sectors, he said:

"It was a bad day when these words, private sector and public sector, were coined. Even before, there did exist the so-called public sector—the railways, telegraphs and so on and so forth. And there was the private sector too. Even today, in the United States and other countries, there is the so-called public sector and the private sector. But nobody talks about it. I do not know why we started talking of public and private sectors. To me, there is no such thing as public and private sectors. It is a national sector in which we are all called upon to play our part. The business community has got enterprise. They work. They like to create not for the purpose of earning money—it is a second habit—but because they must work. They cannot live without work. And, therefore, they will continue to create."

This is a neat summing up of the vexed controversy relating to the two sections. Mr. Birla's words, though addressed primarily to business men, apply with greater force to the Governments, Central and State. It is a pity that the Governments, in their anxiety to do too much in too short a period, should have imposed all sorts of restrictions on the more creative private enterprise. If, however, Mr. Birla called upon the business community to be patient with the Government, it is because there is, as he himself put it, no alternative to such an attitude. He did well to urge his listeners that business men should not be down-hearted. He averred that what was called private sector was going to play a very important part. Quoting approvingly the Prime Minister, in this connection, Mr. Birla remarked: "I have no doubt that we are going to occupy a respected place." It is to be hoped that this observation will come true; those at the helm of affairs in the Governments should so revise their attitude towards private enterprise as to enable it to function more efficiently and with speed in the task of building a new India.

FINANCE FOR TEA INDUSTRY

Mr. Morarji Desai's address at the Conference of representatives of tea producers and bankers, held in Calcutta on the 12th inst., to discuss the ways and means of meeting the financial requirements of the tea industry for both long-term and short-term purposes, emphasises the Government's anxiety to assist those units of the industry which are experiencing serious difficulty in raising money for normal working as well as development. Institutional financing of the tea industry takes various forms and involves a large number of Scheduled banks and finance corporations operating in the tea-growing areas. The main problem appears to be that, although finance on a large scale has been made available to the industry in the past, the conditions under which it has been given have been far from easy, and, in many instances, have been characterised as hard and exacting. It seems that, unless the rules and conditions are relaxed, many units of the tea industry requiring assistance cannot avail themselves of the facility from a large number of institutions which are capable of giving the assistance.

The Government's initiative in convening the conference, follows presumably the recommendations of the Plantation Inquiry Commission on the subject. In Chapter X of the report dealing with finance for the tea industry, the Commission examined the matter in some detail. Short-term or seasonal finance is needed by the tea industry for meeting working costs of the estate and factory for the production and marketing of tea, while long-term finance is needed for expenditure of a capital nature, such as extensive replanting, extension of cultivation, improvement of factory and machinery, labour housing and various amenities to workers prescribed by legislation. The normal sources of finance for these purposes are the estates' own resources like reserves built out of retained profits, advances or loans from managing agents, commercial banks, brokers and others. The Commission estimated the yearly average working capital requirements of the North Indian tea industry at Rs. 1,290 per acre and those of South India at Rs. 727 per acre. The working capital requirement of the Indian section of the industry is estimated at Rs. 22.8 crores. The rate of interest charged by commercial banks ranges between 4 and 9 per cent. Some banks are also charging a commission of ½ to 1 per cent. on gross sales. Brokers lending money to the estates charge interest at the rate of 4 to 5 per cent. The Plantation Inquiry Commission considered that the levy by some of the banks of a charge on gross sales, in addition to interest, was not justified and recommended that the Reserve Bank should use their good offices with banks and, if necessary, use its legal powers to see that the levy was discontinued.

The Commission also recommended that the financial difficulties of the Indian section of the industry could only be removed by the State Bank providing sufficient finance. Once short-term finance was available from the State Bank, the industry would not have to draw on its reserves for working capital which could then be made available for long-term capital expenditure. It was urged by the Commission that the Industrial Finance Corporation and the various State Finance Corporations should meet the need for long-term finance. One particular difficulty of the smaller Indian-owned gardens in raising money from commercial banks on hypothecation of the crop, the Commission pointed out, was that these banks also wanted the gardens to deposit their title deeds to garden property as a collateral security. This prevented the gardens from raising money from any other sources, whatever the emergency may be, so long as the earlier borrowings had not been repaid.

At the Calcutta conference in which representatives of producers' associations, State Finance Corporations, the State Bank and the Reserve Bank, the Scheduled banks and the brokers took part, the Hon. Minister for Commerce and Industry, Mr. Morarji Desai, in the course of his speech, classified the needs of the industry under the heads of: (1) working capital requirements, (2) block capital requirements, (3) money required for implementing statutory requirements, and (4) money for liquidation of past debts.

It is understood that some representatives of the tea industry pointed out that the industry's difficulties in the way of getting finance would not be so great, if it was allowed some relief from the heavy burdens that it carried at present. In addition, it was mentioned that the provisions of the Finance Act 3 of 1956, requiring companies to leave a large part of their depreciation allowances and reserves with Government, was effectively preventing tea companies from utilising their own resources for either working capital or development. Generally speaking, the larger growers would not be in need of external finance if their resources, built up over a long period, were not depleted by the above-said means. A point specially stressed at the conference was that the real difficulties of the tea growers were at present obscured by the fact that the provisions of the Plantations Labour Act had not been implemented. Lack of building materials and transport difficulties had compelled the growers to delay the implementation, but when implementation was in full swing even large units in the industry might suffer from want of finance.

It is stated that the practice of charging a commission on sales is not general, but is confined to a small number of banks which justify the levy on the ground that they perform a number of services free of charge to the borrowing gardens. As regards deposit of title deeds and production of guarantors, it appears that banks generally start advancing money to gardens even before the crop is harvested and long before it is marketed and, in consequence, banks wish to be covered adequately for the amounts advanced. The Calcutta conference appears to have discussed the possibility of various banks "sharing" the title deeds of individual gardens in such manner that it should be possible for more than one bank to advance money to a garden under particular circumstances.

There appears to be a feeling that the Industrial Finance Corporation and the State Finance Corporations can render greater service to tea gardens than they are doing at present. Some of the State Corporations have advanced large sums to tea gardens, but the majority of them cannot go further, unless their rules are suitably relaxed. They require that as much as 75 per cent. of the advance should be capitalised and only the remainder used for working expenses. The conference decided that a working group should be appointed to go further into the question of finance for the tea industry.

FOREIGN EXCHANGE

One of the much-discussed topics today is the problem of foreign exchange. Appropriately, a great deal of discussion is centered on import controls, export promotion, creation of suitable climate for attracting foreign capital and so on. It is not, therefore, surprising that these issues found a prominent place in the address delivered by Mr. K. P. Goenka, President of the Indian Chamber of Commerce, at the annual meeting of the Chamber, held this week at Calcutta. Mr. Goenka rightly stressed the fact that the deficit contemplated in the balance of payments position following the large-scale imports of capital goods would not lead to any serious weakening of the economy of the country, for the goods imported would raise the country's productive strength. He also emphasised that the country could not think of lowering the targets under the Plan, for it would mean slowing down of the pace of development which was undesirable in view of the fast-growing population. This obviously means finding other methods of meeting foreign exchange expenditure involved in importing the capital goods essential for development. A method suggested by Government is the deferred payment basis. Various quarters have expressed doubts about the practicability of this solution. Mr. Goenka also doubted if the foreign countries which were the suppliers of these goods to this country would be willing to meet the conditions stipulated by the Government, especially in view of the increasing need for capital goods in various parts of the world. Though there is some force in this view, it cannot be denied that there has been some evidence of willingness among a few capital goods exporting countries to consider favourably these conditions, more especially because of the fact that India provides a large and growing market, a stable Government and comparatively stable economy; these are by far the most powerful factors in India's favour. Be that as it may, Mr. Goenka rightly pleaded that the Government should consider some method by which industrialists would be assured of foreign exchange to the extent of their commitments at the rates prevailing now. For, it would involve a big liability on the purchases of capital goods if they did not know how much capital they should provide in terms of their long-term commitments. Further, according to Mr. Goenka, the increase in cost of capital goods under the deferred payment scheme might be as much as 25 per cent.

As regards the import policy of the Government, Mr. Goenka said that a number of items coming under unessential categories were still being imported. Turning to export promotion, he stated that it was a question of making the country's export industries more competitive in international markets. This, he rightly emphasised, depended on factors such as cost structure, public relations work by Indian business men in foreign countries, transport facilities, and not the least important, adequate port and shipping facilities. Indeed, there is much that the Government and the private industries can do in all these directions, so as to raise Indian exports to foreign countries.

AMERICAN LETTER

BRISK BUSINESS DESPITE SOFT SPOTS

EVERYBODY IS FOR CUT IN SPENDING

From Our Special Correspondent

NEW YORK, *17th April*

BUSINESS in the United States remains brisk, despite some soft spots. Employment increased by 667,000 last month to nearly 63.9 million persons. This was a new high for March. Unemployment fell. The overall figures, just as national statistics, generally, can be misleading, of course, so far as individual segments of the economy are concerned. The apparel business is far from satisfactory, for example. Spending for new plants and equipment may be nearing a peak now, owing to previous commitments, but it is likely to slacken. Demand for loans is smaller than last year and there are signs that the stringency of money is easing. Some rates have declined already. Home building, hurt by tight money, shows signs of some slight pick-up. The automobile industry is going along at an even pace. Indications are that the industry may produce this year somewhere between 6.2 million and 6.3 million cars, instead of 6.5 million in 1956. Such a slight reduction would be no calamity.

Thus, complaints are really few. Yet, there still remains an air of disenchantment. It is prevalent at this time of the year anyway when Federal and State taxes are due in the United States. Beyond that, a feeling of disappointment is evident as regards both domestic and international affairs.

While tax cuts have been made by Governments overseas, notably in the United Kingdom, no such gesture has come out of Washington. The revolt about the proposed Budget for the next fiscal year is continuing. It has not been explained publicly and to the satisfaction of the taxpayers that such huge outlays are necessary.

The Middle East situation is another bone of contention. While the Suez Canal has been reopened, terms of the so-called settlement are regarded highly unsatisfactory. President Nasser of Egypt has won nearly on all points over the United States and the United Nations. The Arab-Israel relationship is as tense as it was before. Events in Jordan are not reassuring either, except as a possible offset to Egyptian aggressiveness which keeps maritime insurance rates high in that part of the world.

East-West Relations

There is also no improvement in East-West relations, as was indicated the other day by Soviet protests over the minute supervision of Russian steamers going through the Panama Canal. Propaganda from the Kremlin always tries to draw a parallel between the Suez and Panama waterways. In this connection, it is always ignored that whatever property rights the United States holds at the Central American Isthmus were acquired legally by purchase.

Conviction is growing that the Suez Canal is losing more and more of its economic importance as time passes. Once new pipelines are completed, the waterway's significance, so far as the delivery of oil is concerned, will have shrunk considerably. It will mean a reduced income for Egypt which seized the canal for both political and economic reasons. Other sources of income of that magnitude will be difficult to find for the Cairo Government. It is the same old question of necessity which is the mother of invention. When certain raw materials became scarce at the outset of the war, substitutes were found and new industries were created. To cite one example, the importance of raw rubber has diminished greatly. The Suez Canal is headed for the same fate.

Growing Population

Long-term economic considerations in the United States, just like in India, are based, essentially, on a growing population. It is now above 170 million here and it is expected to cross the 200-million mark by 1967. That would be a rise of one-sixth. If living standards continue to go up one-eighth in the next decade as they have in the past, it would mean a 30 per cent. boost, over the next 10 years, in the annual demand of American consumers for goods and services of all kinds. This accounts for nearly two-thirds of all demand for goods, both private and public. Therefore, it represents a powerful influence in the economy. Higher standards of living are more often than not predicted upon machines and gadgets which become costlier every year as they become more complicated and more efficient.

The widely publicised efforts by the Congress to achieve a reduction of Government expenditures have not been too successful this year. Nearly one-third of all the proposed cuts represent just reductions in estimates. If these should turn out to be too low, supplemental appropriations will, no doubt, be voted. Moreover, the Senate still has to vote on all the cuts made by the House of Representatives and it has been in the habit of raising the figures of the House. One of the comic-opera sidelights of the current U.S. preoccupation to do something about Federal spending was the withholding by Congress of appropriations for the post office. Postmaster General Summerfied, therefore, ordered all post offices throughout the U.S. closed Saturday and Sunday. It caused outcries of indignation and demands for an investigation.

Despicable Business

It shows the general confused state of mind. Everybody is for reduction of spending, but, if this is detrimental to a person, groups or everybody, then it is regarded as despicable business. A similar psychology is apparent when hearings on tariffs are held. Nearly everyone is for reduction, even the elimination of duties, but when it comes to touching his own protective tariff wall, it is a different story. I suppose this is human nature.

The various forces pull in various directions at the same time. It has created strain—strain between Democrats and Republicans and strain between the White House and many members of the Republican Party. One bone of contention is that Britain and other European nations will cut their defences at the expense of the U.S. This is defended by the Administration spokesmen as a necessity in the overall scheme of world tranquillity.

In this connection, it may be noted that the report of Vice-President Richard M. Nixon, made after the return from his recent trip, suggests an overhaul of U.S. representation and missions in Africa. He recommended that officials of the highest possible competence and stability should be assigned to the African area. Mr. Nixon considers the dark Continent so important that he proposes the creation within the Department of State of a Bureau for African Affairs. Economic and technical assistance is urged not only by the U.S. but by other nations as well. Communist domination is not an imminent danger, he said, although it was admitted that the Kremlin is sending top men into the African area. They are versed in the fields of diplomacy, intrigue and subversion, he said.—*All Rights Reserved.*

Foreign Governments paid $700 million in debts to the U.S. Government last year but still owed more than $11,500 at the year end. The year 1956, according to the Department of Commerce, was the third consecutive year in which foreign countries reduced their debts to the U.S. The total outstanding as on 31st December last was $11,652 million, about two-thirds of this being owed by three countries, namely, Britain, France and West Germany. About $500 million represented payments on principal amounts and $191 million constituted interest payments. The latter fell below those of the preceding two years, because Britain was permitted to waive or defer payment of $82 million due for payment on 31st December 1956.

A BUSINESSLIKE APPROACH TO INDIA'S ECONOMIC PROBLEMS

GOVERNMENT DECIDES TO HOLD INQUIRY INTO COST STRUCTURE OF COAL

From Our Own Correspondent

NEW DELHI, 23rd *April*

DELHI LETTER

THE kind of mixed economy that is being developed in India has just come in for praise from the U.S. Ambassador, Mr. Ellsworth Bunker. With his 34 years' experience as a business executive, Mr. Bunker, it is refreshing to find, is bringing to bear a businesslike approach to the economic problems of this country. His latest speech at the Indian Junior Chamber of Commerce here is indicative of the line of thinking of the businessman-diplomat and perhaps of the U.S. State Department.

Quoting Edmund Burke at the outset, Mr. Bunker said that "the State ought not to be considered as nothing better than a partnership agreement—to be taken up for a little temporary interest and to be dissolved by the fancy of the partners." From this partnership, he said, has developed the economic and political society in the United States. In describing the essential characteristics of this society, the American Ambassador referred to the crucial role played by the State in laying down the rules of the competitive incentive system and in stimulating private investment through pioneering public expenditure on projects in which the immediate return would have been too low to attract private capital. All this, however, is within the framework of the American belief "that, wherever private capital finds the incentive to invest, the job will be done more economically and more efficiently than by the Government, and, therefore, at a lower cost to the consumer." To these developments should be added, Mr. Bunker continued, the effect of redistributive taxation which "may already be counted as one of the great social revolutions of history" brought about by democratic means. To quote him: "At the same time, there has evolved a steadily growing sense of social responsibility on the part of business and industry—a belief that ownership carries social obligations and that the managers of business are trustees not only for the owners but for society as a whole."

Mr. Ellsworth Bunker's narration of the essential characteristics of the American economic system was, by no means, wholly original. Its significance lay in that it prefaced his description of the characteristics common to both India and the United States. "Both our countries," he said, "are rich in material resources. America is a great mass market. India potentially is a much larger one. In both countries, private investment has a major role to play." While the Government played a large role in the mixed economy of the United States, economic development in India, he maintained, would require greater Government participation than in his country, because the rate of capital formation here was relatively lower than in his. This understanding attitude on the part of the American envoy towards the compulsions of the Indian economy is so agreeably different from that of the original stand of the World Bank chief that it looks as though a better understanding of the central objectives of the second Plan is coming about in the only country which can see us through the current foreign exchange crisis.

Coal Prices

At a Press conference last week, Mr. K. C. Reddy, Minister for Works, Housing and Supply, revealed that the Government of India had decided on a comprehensive inquiry into the cost structure of coal through a committee or through the Tariff Commission. Referring to the departmental inquiries since 1947, he said that the stage had now arrived for a thorough probe. But he hastened to add that an inquiry should not be taken to mean that there would necessarily be an increase in prices. This cautious remark cannot, of course, be taken seriously, in view of the Minister's reference to the increased costs in collieries in the public sector. What is true of the public sector is even more true of the private sector, and private collieries have repeatedly urged a review of the price policy with a view particularly to including in the coal prices a special element providing financial resources for ploughing back into the industry. They have also represented that production costs have risen on account of the higher wage bill resulting from the Tribunal's award. In the circumstances, the Minister's observation that the industry by and large has a fair return on the capital invested would need to be substantiated by the proposed inquiry.

The Minister also touched on other questions relating to the coal industry. First, the idea of a pooled price for coal would be pursued only when the reports of the committees on railway and sea freights had been received. Secondly, legislation was being planned for implementing, subject to some minor modifications, the recommendations of the Committee on Amalgamation of Collieries. Thirdly, a Bill to provide for acquisition of unworked coal-bearing areas would be introduced in the new session of Parliament. Fourthly, the Coal Board had liberalised the procedure for assessment of stowing costs in coal mines and for grant of stowing subsidy to collieries. Here the Minister referred to the Board's decisions which apply to all stowing done after 1st April 1955. These decisions are: (1) Depreciation will be calculated at revised rates on the original value of plant on the straight line method; (2) to meet the increased cost of stores, the allowance for repairs and renewals will be increased by 54 per cent. of the scheduled rates in the case of plant and machinery installed before 1st April 1950; (3) aerial ropeway will be treated as direct expenditure according to a revised formula; (4) the allowance to cover depreciation of stowing pipes will be increased to meet the increased costs of such pipes.

Indo-German Trade

The negotiations between the West German Trade Mission and the Government have just led to the revision of the Indo-German Trade Agreement of 1955. The revision is in respect of schedules of Indian exports. Some of the items of exports have been removed from the "quota" list and placed in the "liberal" list. At the same time, the quotas of items subject to quantitative restrictions have been increased. The export quotas for items like twine, ropes, cordage, handmade laces, cotton blankets, knotted carpets, carpets of jute, and tanned and finished leather will be valid upto 30th September next after which they will figure in the "liberal" list. All this would mean higher imports of Indian goods by West Germany which has thus undertaken to enable India to redress, as far as possible, its adverse balance of trade with that country. The adverse balance may be further redressed by the possible bulk export of coal, iron ore and manganese ore by the State Trading Corporation through a long-term agreement. As was expected, the West German Mission has not committed itself on the question of supply of capital goods in terms of our deferred payment scheme. Otherwise, the West German trade parleys with the Government of India have justified the hope that the existing trade and economic relations between the two countries would be greatly strengthened.—*All Rights Reserved.*

THE ECONOMIC SURVEY

EFFECT OF SUEZ CANAL CLOSURE ANALYSED

From Our Own Correspondent

LONDON, 20th *April*

LONDON LETTER

A LINE in the British Government's 1957 *Economic Survey*, published at the time of the Budget, reads "the outlook for much of world trade is at the moment clouded by the blocking of the Suez Canal. About one-eighth of the total tonnage of cargo in world seaborne external trade normally passes through the canal...". And the *Survey* goes on: "Provided there is no prolonged delay in bringing the Canal into full use, a renewed upturn in European production . . . may be expected." The general tenor of the analysis would lead a casual reader to assume that the resumption of traffic through the Canal was a matter of reasonably urgent importance to the United Kingdom. The Government must also have been largely of that opinion themselves when their deliberations led to the strongest possible rumours that petrol would be derationed over the time of the national holidays this Easter. For it was understood that derationing was unlikely to take place unless supplies through the Canal were assured. Moreover, in his Budget, the Chancellor removed the shilling special tax on petrol imposed at the time that rationing was introduced, and which the Government had declared would be taken off as soon as petrol was derationed.

And yet in the event rationing has been maintained. Not so far as it can be ascertained because of any shortage in the internal stock position, but because the Government have not yet made up their minds over their attitude towards using the Canal. It is, of course, obvious that the intransigeance of the Arab countries towards Israel means that the Middle East must remain a trouble spot for some time. But the Government's hesitations spring less from that than from their own irritation at the terms that Colonel Nasser is imposing. France and Britain are together in this matter, but most other user nations have already agreed to pay Canal dues to Egypt and a good many British shipowners have now accepted the inevitable and are doing the same, having transferred their flags to other countries of registration!

At present, the non-usage of the Canal is not only costing a maintenance of petrol rationing in this country but is imposing a charge on the national import bill of the order of £3 million a week.

The Right Attitude

There is a growing view here that the right attitude towards the Canal is to make the best job of the present situation that one can, and accept with a brave countenance that Colonel Nasser is at the moment having things his own way. At the same time, measures such as the building of giant tankers and overland pipelines should continue in order to ensure no long-term dependence on the Canal. But, in the long run, there is also the additional factor that the user countries will be able to negotiate more sensible arrangements than have been imposed at present.

Apart from the petrol situation, the effects of which the Government do not consider to have been as serious as might have been (the total inflow of supplies is about 90 per cent. of normal), the Government are now apparently complacent about the effects of the closure of the Canal on the economy. The *Survey*, indeed, makes no mention at all of the weekly cost on the import bill as the result of higher freights. Instead, it concentrates on the time-honoured theme of the need to build up a current surplus to finance the United Kingdom's long-term investment and to strengthen the country's position as an international banker. "Our prospects", says the *Survey*, "depend mainly on our success in the expansion of exports . . . internally, high savings and all possible restraint in Government expenditure should create a situation favourable to the export effort and help us to avoid any undue increase in the level of imports when expansion is resumed." And on this note of hope the *Survey* concludes.—*All Rights Reserved.*

WORLD BANK AND DEVELOPMENT ASSISTANCE

GROWING ACCEPTANCE OF PROJECT APPROACH WELCOMED

DURING the short span of its existence since the commencement of its loan operations 10 years ago, the International Bank for Reconstruction and Development has made commendable progress. The annual rate of its development lending has increased steadily from $28 million in 1948 to $292 million in 1952 to $406 million in 1955 and further to $507 million in 1956. So far, the Bank has made 166 loans representing a gross total of over $3 billion in five continents. The membership of the countries and territories of the Bank stands now at 60. This high rate of lending has been helped on an increasing scale by releases by member-countries of their 18 per cent. capital subscriptions. Recently, the Bank has also made additional borrowings to meet its commitments. A noteworthy feature which testifies to the sound practices of its working is that not a single default in payment has been reported. Further, by the second half of 1956, the net income of the Bank was running at a rate 20 per cent. higher than a year before. The level of reserves stood as high as $254 million.

These were some of the highlights of the working of the Bank in the fiscal year ended June 1956 and in the following seven months which are to be found in an address by Mr. Eugene Black, President of the Bank, before the 23rd Session of the Economic and Social Council of the United Nations held in New York on the 18th instant. Among some of the more important of the loans given by the Bank during the period under review, mention must be made of the largest loan of $80 million for the execution of a power project on Zambesi River in the Federation of Rhodesia and Nyasaland. Moreover, six loans—all of them in Latin America—were granted to extend and repair road networks. Loans to industry included those to the Tata Iron and Steel Company and the Indian Iron and Steel Company in India, amounting to $95 million. A notable item in the list was the loan of $75 million granted to Iran to help build up its staff of engineers and other experts under Iran's Seven-year Plan Organisation.

Loans Sold

It is interesting to note that the Bank was able to sell, despite the keen competition for finance, substantial portions of its loans without its guarantee. The gross total of funds raised in this way rose to $300 million by the end of 1956. The Bank was also successful in sponsoring further joint operations in which other investors have participated. The period under review was also noteworthy for the birth of two new institutions, namely, the International Finance Corporation and the Economic Development Institution, in the establishment of which the Bank had taken part. The former came into existence in July 1956 and has now 49 member-countries and a total subscribed capital of $91 million. The latter, which concluded its second six-month course of study, is intended to relieve the shortage of administrators skilled in the handling of economic affairs.

Mr. Black also referred to the conditions to be satisfied by a country desirous of borrowing loans for development. First, it should estimate the size of the public investment programme it can afford and assign priorities for projects within the programme. Though the Bank does not ask for the details of the Plan, it seeks for "some indication that the Government is looking ahead, not just tackling problems and projects haphazardly, as they come along." Secondly, the Bank makes loans normally for specified development projects. In evaluating a loan application, therefore, the Bank considers not just the specifics of the project but the many competing claims on the nation's resources as well. For example, the Bank regards with a critical eye any project which alone will absorb an overwhelming proportion of the available capital, foreign exchange earnings and technical skills in a given country, for it throws the entire development programme off balance for many years. A third requirement to be satisfied by the country is the provision of sound management and organisation for the execution of development projects. The Bank asks only that essential standards of public administration be observed. Explaining this point, Mr. Black observed:

"The power projects and road systems, the ports and railway networks that are being built in the less developed countries today are big enough and complicated enough to require modern organisation and management. The mayor of a big city or a cabinet minister in charge of a big government department has much too much to do already without being saddled with the day-to-day administration of public service projects. In fact, one of the most important reasons for encouraging independent, professional management of public projects is to free senior officials for the more important decisions of policy which are their first duty."

Financial Stability

There is another category of problems which the Bank has to face in deciding whether or not to make a loan. One of them is the financial stability of the country. Mr. Black observed in this connection:

"Here we encounter our most difficult problems. For example, to withhold loan capital from a government which, to us, appears unwilling or unable to deal effectively with inflation is assuming a lot of very unwelcome responsibility. Yet, clearly, any use of the Bank's resources which would stimulate further a dangerous inflationary trend would be irresponsible. We have to consider the additional inflationary effects of large investment projects which we help to finance, but which normally require a substantial investment of local funds as well. In effect, we are faced here with another kind of management problem. The men who make monetary and fiscal policies in the government and the men who run the institutions, public and private, which determine the price of capital, are all responsible for keeping inflation within bounds. While there are no set rules for doing these jobs, there are well-established guidelines. If they are ignored, development may be greatly distorted, and any loans the World Bank might make would largely fail of their purpose."

In the course of his address, Mr. Black also alluded to certain encouraging developments during the period under review. It is the tendency among certain member-Governments with bilateral assistance programmes of their own to consider favourably the adoption of the kind of approach which the Bank is trying to follow. Mr. Black felt, however, that the assistance, whether administered in a bilateral or multilateral way, should be effectively focussed on the development programme and soundly administered. Proceeding, the President of the Bank remarked:

"I welcome the wide recognition that the promotion of development is a major objective of the free world and that its attainment requires assistance beyond that which can be provided on a sound banking basis. I welcome the growing realisation that development assistance, to be effective, must be disentangled from competing and conflicting political and economic objectives of a short-term nature. I welcome the growing appreciation that to achieve concrete results assistance must be assured on a continuing basis over a significant period of time and must be administered on the basis of objective and businesslike criteria. And I welcome the growing acceptance of the project approach in development assistance, for it is by concentrating on specific projects that the real lessons of development can be learned and the real rewards of development assistance reaped."

Grants and Loans

Welcoming the present trend towards substituting loans for grants as a primary device in administering development assistance, Mr. Black pointed out that grants, though advantageous in certain respects, had their disadvantages, as compared with loans. In the case of grants, according to him, the donor-donee relationship might create an atmosphere of inequality and dependence which would impair the ability of nations to work together. It was also difficult to maintain standards of effective administration. In contrast, loans were apt to lend themselves more readily to businesslike administration. There were, however, certain limitations to the substitution of loans for grants. Explaining this point of view, Mr. Black said:

"If the loans are such as to increase substantially the fixed foreign exchange obligations of the borrowing countries; this technique will only weaken their credit standing and thus dry up other sources of capital. And if this should be done on a scale which led to defaults or debt adjustments, it would poison relations between borrower and lender and disrupt the whole development process. And I would warn, too, that these dangers are not avoided by casting the additional foreign exchange burden in the form of loans with token interest rates and unduly long periods of repayment. Such loans would tend to undermine the respect for contract obligations which are the basis for all international investment."

These dangers, nevertheless, could be avoided, according to him, through a "properly conceived" system of loans repayable in the currency of the borrower. It means that the loans are administered on a businesslike basis, which impose a clear and unambiguous obligation to repay in local currency and which are made on terms appropriate to the type of project being financed. Further, the proceeds of such local currency may be made ultimately transferable, but only to the extent and in a manner which would not affect the country's then existing foreign exchange obligations.

Mr. Black was of the view that the lending operations of the Bank derived significant support from the aid that was being advanced to underdeveloped countries on a bilateral basis in the form of both grants and local currency loans, and that they were essential for the further expansion of the activities of the Bank. He felt, however, that, if any substantial part of that assistance were to be given in loans involving foreign exchange burden on the recipient countries, the activities of the World Bank, and even more, the participation of private capital in international lending would be adversely affected.

ROLE OF HUNDIS

The view that there was justification in the complaint that absence of uniformity in the customs and usages governing *hundis* in different places was causing much disruption and inconvenience in the *hundi* business, and that the Bombay Shroffs' Association should address itself in right earnest to the task of rectifying this defect was expressed by Mr. Jayantilal Shah in the course of his presidential address to the extraordinary general meeting of the Bombay Shroffs' Association held on 20th April.

At the outset Mr. Shah pointed out that the Association was the successor to the Bombay Shroffs' Association Ltd., which was voluntarily wound-up on account of heavy incidence of income-tax, and as such, the new Association was virtually the same as the old one, established in 1910 but without its limited liability character.

Referring at some length to the proposal put forward by the Law Commission for withdrawing the protection afforded to the use of *hundis* by the saving clause to section 1 of the Negotiable Instruments Act, Mr. Shah recalled the memorandum the Association had submitted to the Commission and the discussion they had with the latter. In the course of these, he said, the Association had stated unequivocally that the *hundi* fulfilled an essential function in the credit system of the country, especially in areas where banking was not well developed. Moreover, the *hundi*, along with the cheque and the bill of exchange, comprised the total supply of credit in the country, and as such, the removal of the *hundi* would create a void which could not be easily filled.

The deputation, he said, further pointed that Sharafi Associations provided service to its members in the matter of noting and protesting of dishonoured *hundis* at nominal cost, whereas if the protection of the Saving Clause was withdrawn, the shroffs and merchants would have to incur very heavy charges for the same service from the notaries public.

ANDHRA BANK'S PROFIT NEARLY DOUBLED

DIVIDEND STEPPED UP

THE audited accounts of the Andhra Bank Ltd. (General Manager: Mr. E. Ramachendramurti, Masulipatnam) for the year ended 31st December 1956 make encouraging reading, inasmuch as the Bank has been more than able to make good the setback in earnings suffered in the previous year and to establish a fresh record in its history. Thus, the profit, which had dropped from Rs. 5.37 lakhs to Rs. 4.28 lakhs in 1955, has nearly doubled itself to a new high of Rs. 8.46 lakhs in the year under review. This has been in no small measure due to the expansion in resources, despite the higher interest rates on deposits and borrowings, and the profitable utilisation of these larger resources.

Consequent on the sharp rise in profit, the provision for taxation has also been raised from Rs. 1.40 lakhs to Rs. 3.45 lakhs and the allocation to the reserves from Rs. 86,000 to Rs. 2.26 lakhs. The transfer to the reserves is made up of a sum of Rs. 1.76 lakhs to the statutory reserve and Rs. 50,000 to the investment reserve. The distribution to the shareholders has also been stepped up from 6½ per cent. to 8 per cent., thus more than making good the cut made last year from 7½ per cent. paid for 1954.

The progress of the Bank during the past three years is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount	44.45	32.73	31.98	25.45
Commission and exchange	8.35	6.78	6.10	5.70
Interest paid	23.41	18.68	16.09	12.41
Expenses	21.25	17.25	16.33	15.00
Depreciation	0.62	0.39	0.27	0.25
Profit	8.46	4.28	5.37	4.12
Provision for taxation	3.45	1.40	2.30	1.65
To reserves	2.26	0.86	1.10	0.85
Dividend	2.75	2.06	1.87	1.62
Carry forward	(8%) 0.12	(6¼%) 0.12	(7½%) 0.16	(6½%) 0.07

	As on 31st December			
	1956	1955	1954	1953
Capital	34.41	33.47	25.00	25.00
Reserves	16.63	14.37	13.51	12.41
Deposits	9,26.18	8,31.95	6,52.94	5,39.86
Borrowings from other banks	60.45	..	..	..
Advances	6,13.13	4,42.30	3,16.25	3,01.97
Investments	3,17.79	2,83.80	1,88.69	1,90.79
Cash	1,30.29	1,64.24	1,97.13	97.34
Acceptances, endorsements, etc.	13.21	5.97	0.14	0.08
Balance-sheet total	11,84.13	10,03.72	8,17.55	6,82.73
Ratio to deposits of—	%	%	%	%
Advances	66.2	53.2	48.4	55.9
Investments	27.5*	34.1	28.9	35.3
Cash	14.1	19.7	30.2	17.6

* After taking into account the investments earmarked against borrowing from other banks.

The gross income of the Bank for the year under review amounts to Rs. 53.74 lakhs, an increase of Rs. 13.14 lakhs over the year. The bulk of this rise is accounted for by interest and discount earned which have gone up by Rs. 11.73 lakhs. Commission and exchange are up by only Rs. 1.57 lakhs. As against these, the outgo by way of interest paid has risen by Rs. 4.73 lakhs and expenses by Rs. 4 lakhs. Of the latter, salaries and allowances and provident fund account for Rs. 2.84 lakhs.

The increase in the capital of the Bank is due to the payment of the unpaid amount to the extent of Rs. 94,000 on the fresh call of Rs. 20 per share made in 1955 on the Rs. 50 paid-up shares, making them Rs. 70 paid-up per share. The deposits have gone up by Rs. 94 lakhs and this expansion does not compare well with that of Rs. 1.79 crores noted in 1955, thus reflecting the difficulty experienced by banks in securing deposits. A break-up analysis of the deposits shows that fixed deposits have risen by Rs. 46 lakhs to Rs. 4.34 crores, saving bank deposits by Rs. 33 lakhs to Rs. 2.76 crores and current accounts, contingency accounts, etc., by Rs. 15 lakhs to Rs. 2.16 crores.

The upward trend in advances noted for some years past has been maintained in the year under review also with a rise of Rs. 1.71 crores, which compares well with the aggregate increase of Rs. 1.70 crores in the previous three years. Of this rise, loans, cash credit and overdrafts account for Rs. 1.63 crores and bills purchased and discounted for about Rs. 8 lakhs. Reflecting the keen demand for bank finance is the sharp rise in ratio of advances to deposits from 53.2 per cent. to 66.2 per cent., but this ratio is very much less than that noted in a few other Scheduled banks. Though this has resulted in a fall in liquidity ratio, it is well above the general average of all Scheduled banks.

ENCOURAGING RESULTS OF GRINDLAYS BANK

PROFIT FURTHER MARKED UP

A FURTHER improvement in earnings, in consonance with the general trend of bank results, is disclosed by the audited accounts of the Indian branches of Grindlays Bank Ltd. (Chief Manager: Mr. D. D. Watters) for the year ended 31st December 1956. The profit, which had gone up to Rs. 1.66 lakhs in 1955 after a successive recession from Rs. 13.14 lakhs in 1951 to Rs. 1.12 lakhs in 1954, has maintained the upward trend with a further advance to Rs. 3.82 lakhs in the year under review. Despite this improvement, the profit for 1956 still lags behind that of Rs. 4.51 lakhs earned in 1953. After providing Rs. 65,000 (as against *nil* last year) for taxation and bringing in the previous year's surplus, a sum of Rs. 4 lakhs has been remitted to head office.

The Bank's progress during the past three years is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount	34.28	34.10	30.15	34.89
Commission and exchange	33.90	28.72	25.98	27.27
Interest paid	10.93	9.28	7.77	8.44
Expenses	53.23	51.78	47.23	48.24
Depreciation	0.23	0.13	0.06	0.99
Profit	3.82	1.66	1.12	4.51
Provision for taxation	0.65	..	..	..
Remittance to H. O.	4.00	1.62	4.83	..
Carry forward	..	0.83	0.80	4.51

	As on 31st December			
	1956	1955	1954	1953
Capital*	20.84	20.89	20.33	21.05
Deposits	10,60.80	10,07.51	9,88.63	9,52.15
Borrowings from other banks	..	79.00	3.00	..
Bills for collection	1,09.13	1,13.21	78.58	1,19.40
Acceptances	2,47.65	1,86.93	1,63.83	1,65.14
Advances	7,09.97	6,03.71	4,66.70	6,48.91
Investments	1,99.14	2,06.01	3,56.46	3,09.12
Cash (including money at call)	2,47.45	3,08.24	1,85.94	1,36.91
Balance-sheet total	16,22.75	14,43.41	12,98.19	13,91.43
Ratio to deposits of—	%	%	%	%
Advances	66.9	60.0	47.2	68.1
Investments	18.7	20.4	39.1	32.5
Cash	23.4	30.5	18.8	14.4

* Deposit with the Reserve Bank of India.

The upward trend in deposits noted in the previous two years has been well maintained in the year under review also with a rise of Rs. 53 lakhs. As against this, the increase in advances is of the order of Rs. 1.06 crores, which has pushed up the credit ratio to the highest level in the last three years. Almost the entire increase in advances is accounted for by loans, cash credits and overdrafts which have gone up from Rs. 4.57 crores to Rs. 5.61 crores. Bills purchased and discounted have risen from Rs. 1.46 crores to Rs. 1.48 crores. The relatively larger increase in advances has resulted in a further reduction in liquid assets but this is inevitable in the context of the keen demand for bank credit with no corresponding expansion in supply of funds to banks.

OUTSTANDING PROGRESS

31st December, 1956

Deposits Exceed ..Rs. 106 Crores

Working Funds Exceed ..Rs. 141 Crores

The P. N. B. secured about 20% of the additional deposits of all scheduled banks in the country during 1956

SIXTYONE YEARS STRONG IN SERVICE

A. M. WALKER—General Manager

UNITED BANK OF INDIA KEEPS UP PROGRESS

ADVANCES AT A RECORD LEVEL

THE working results of the United Bank of India Ltd. (Managing Director: Mr. B. K Dutt, Calcutta) for the year ended 31st December 1956 show that the past year has been one of further progress, for the Bank, though the pace of advance has been less marked than in the previous year. The balance-sheet total shows a rise of only Rs. 1.78 crores, as against an increase of Rs. 5.18 crores noted at the end of 1955, and the profit has advanced by no more than Rs. 97,000, as compared with Rs. 1.56 lakhs in the previous year. This is not, however, a peculiar feature of this Bank alone and is due to factors beyond the control of the management.

This is the third year in succession for which the Bank's profit has maintained the upward trend, having recovered to Rs. 15.58 lakhs from Rs. 12.07 lakhs, to which level it had dropped in 1953 from Rs. 21.01 lakhs earned in 1951. The dividend has been maintained at 3 per cent. per annum, a rate which it had been paying from 1950 onwards, the year of its formation by the amalgamation of four banks. The dividend has been repeated only after raising the provision for taxation from Rs. 3.50 lakhs to Rs. 4.40 lakhs and the allocation to the statutory reserve fund from Rs. 2.95 lakhs to Rs. 3.15 lakhs.

The steady progress made by the Bank in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount	1,19.46	1,02.44	94.88	92.12
Commission and exchange	32.51	29.29	28.46	22.01
Other income	12.26	11.70	11.15	13.14
Interest paid	41.35	33.13	29.55	26.37
Expenses	1,02.81	91.14	87.02	84.98
Depreciation and repairs	4.49	4.55	3.98	3.84
Profit	15.58	14.61	13.05	12.07
Taxation	4.40	3.50	2.46	1.72
To reserves	3.15	2.95	2.61	2.42
Dividend	8.00	7.99	7.99	7.97
	(3%)	(3%)	(3%)	(3%)
Carry forward	1.73	1.70	1.63	1.54

	As on 31st December			
	1956	1955	1954	1953
Capital	2,66.56	2,66.56	2,66.36	2,66.36
Reserves	74.10	70.95	68.00	1,04.00
Deposits	33,91.00	31,26.71	30,47.79	26,93.33
Borrowings from other banks	1,02.52	1,90.84	..	..
Bills for collection	3,42.22	3,32.43	2,24.74	1,89.75
Acceptances, endorsements, etc.	1,69.47	1,37.56	73.38	74.57
Advances	20,17.85	18,13.42	13,86.83	13,34.02
Investments	13,91.20	14,41.46	14,60.83	13,34.18
Cash (including money at call)	4,25.99	4,02.74	5,22.27	4,00.78
Balance-sheet total	45,18.00	43,40.19	38,22.35	34,72.66
Ratio to deposits of—	%	%	%	%
Advances	59.5	58.0	45.5	49.5
Investments	38.0*	40.0*	47.9	49.5
Cash	12.6	12.9	17.1	14.9

* After taking into account the investments earmarked against borrowing from other banks.

The sizable increase of Rs. 17.02 lakhs in interest and discount earned accounts for the bulk of the rise in gross income. Commission and exchange have gone up by Rs. 3.22 lakhs. The increase in earnings from these sources has almost been offset by the rise of Rs. 8.22 lakhs in interest paid and of Rs. 11.67 lakhs in expenses. Of the latter, salaries and allowances and provident fund alone account for a rise of Rs. 10.31 lakhs.

The Bank's deposits as at the close of the year show an increase of Rs. 2.64 crores, as against a rise of only Rs. 79 lakhs noted at the end of 1954. Moreover, the increase, representing 8.4 per cent. over the year, compares well with the average rise of 7.8 per cent. in the case of all Scheduled banks. The Bank's fixed deposits and cash certificates have gone up by Rs. 20 lakhs to Rs. 5.84 crores, savings bank deposits by Rs. 1.32 crores to Rs. 13.68 crores and current and contingency accounts by Rs 1.12 crores to Rs. 14.30 crores. The bulk of the expansion in deposits has been utilised to meet the rising demand for bank credit, as witness the increase of Rs. 2.04 crores in advances to a new high of Rs. 20.18 crores. It is noteworthy that the Bank's advances outside India, that is, in Pakistan, have grown from Rs. 1.59 crores to Rs. 2.24 crores. That the Bank's business in Pakistan has expanded is also evident from the increase in bills for collection payable outside India from Rs. 58 lakhs to Rs. 74 lakhs, while those payable in India have fallen from Rs. 3.24 crores to Rs. 2.69 crores. Despite the sharp rise in advances, the Bank's liquidity ratio is maintained at a comfortable level.

INDUSTRIAL CREDIT & INVESTMENT CORP. OF INDIA, LTD.

SIR A. RAMASWAMI MUDALIAR'S ADDRESS AT ANNUAL MEETING

CONTINUING SERIES OF SHOCKS TO INVESTING PUBLIC MUST BE AVOIDED

THE need for avoiding a continuing series of shocks to the investing public was reiterated by Sir A. Ramaswami Mudaliar, Chairman, Industrial Credit and Investment Corporation of India, Limited, in the course of his address at the Second Annual General Meeting of the Company held at Bombay on Monday, 22nd April 1957. Sir Ramaswami declared that, if the establishment of new industries and the expansion and modernisation of old ones in the private sector were to be successfully undertaken, it was necessary that all interested in the economic and social progress of the country should avoid a continuing series of shocks to the investing public. Anyone conversant with the establishment of industries in the private sector, he pointed out, would realise that the very high level of taxation has had a dampening effect on such enterprises. He emphasised that proper development of industries in the private sector would lead to a snowball effect gathering more and more momentum by the utilisation of resources saved so as to make further industrialisation possible, whereas there was not the same result, or even the same incentive, in public enterprises promoted by the State.

The following is the full text of Sir Ramaswami Mudaliar's speech at the meeting:

"GENTLEMEN,

"I welcome you to this the second annual general meeting of the shareholders of this Company. The Directors' report and the audited accounts have been in your hands for some time and, with your permission, I shall take them as read.

"Before we proceed to the consideration of the accounts and the adoption of the Directors' report, I should like to make a few observations of a general character.

"From the Directors' report, it will be seen that, at the end of 1956, your Company had agreed to give assistance in respect of 24 projects and others were under examination. The total of assistance authorised has now reached over Rs. 8 crores in respect of 28 projects. For the reasons brought out in the report, the present total of our actual investments is, of course, substantially less.

Criticisms Not Justified

"You will be aware that there has been some criticism in certain quarters regarding our activities. We have been accused of being too slow and too cautious in our lending and investing policy. Your Directors have had these criticisms very much in mind and from time to time have reviewed past activities to see whether these criticisms were justified. They reached the conclusion that they were not. When a company such as ours is started from scratch, it inevitably takes some considerable time to get organised and to gain experience. The record of other companies doing similar business both in India and elsewhere is very much the same as ours in their earlier stages. We set out to do something wider in scope than has ever been attempted in India. We are not a purely lending company concerned mainly with the security offered against our loans. We have done a substantial amount of underwriting of shares and have, indeed, invested in the share capital of a number of companies, an activity which requires very close consideration of the proposals advanced. At our inception, there was a great urge to move forward as rapidly as possible with the development of industries in the private sector and it is only natural that those concerned with these plans, both in Government and outside it, should wish to see our activities expand as rapidly as possible.

"You will, of course, realise that your Board of Directors are not only the custodians of the shareholders' funds but have also entrusted to them a substantial amount by way of loan from Government which has to be repaid in due course. The aims and objects of your Company have been clearly defined and it is realised that these cannot be achieved by being over-cautious. Certain risks have necessarily to be taken in all such ventures, but these risks must be carefully calculated risks and not risks incurred blindly.

"The detailed investigation involved in examining fully all aspects of a project presented to the Company before the Directors are asked to take a decision has also been the subject of criticism on the part of some industrialists who thought that, because they had investigated matters to their satisfaction, there was no need for further scrutiny on the part of your management and technical advisers and ultimately by the Board. I believe this is not a correct appreciation of the responsibility which we have in coming to a decision.

World Bank Credit

"There has also been recently some criticism that we have so far failed to make use of the $10 million of credit granted to us by the International Bank for Reconstruction and Development—the World Bank, as it is commonly known. I have always been of the opinion that this source must be availed of at the earliest possible opportunity and, in fact, the talks that some of the promoters of this Company had with the officials of the World Bank at the highest level gave us the optimistic hope that further credits will be forthcoming from the World Bank once this amount was fully availed of. The fact, however, remained that, so long as industrialists and promoters of schemes presented to us were in a position to get their foreign currency needs in the normal way, they were not willing to take loans in foreign currency from us. In fact, there was no application before the Board for foreign currency facilities and, the resources of local currency not having been exhausted, there was no need to turn to the World Bank and utilise the line of credit open to us.

"The situation has now altered as the result of shortage of foreign exchange. Since the announcement by Government of the new policy regarding the provision of exchange for imports of capital goods, we have received a number of enquiries for loans in foreign currency and we expect to present some of these proposals to the World Bank in the coming months.

Private Sector

"Your Company has been established to promote the development of industries in the private sector and I feel it would not be inappropriate, if I were shortly to refer to the position which the private sector occupies today in the economy of the country and what its future is likely to be. The position of and the prospects for industrial development in the private sector has undergone substantial change since 1954 when the establishment of your Company was decided upon. In my speech at the last annual meeting, I stated it will be evident to everyone that, if the establishment of new industries and the expansion and modernisation of old ones in the private sector is to be successfully undertaken, it is necessary that all interested in the economic and social progress of the country should avoid a continuing series of shocks to the investing public. I referred to a feeling of uncertainty among the investing public caused by a series of measures that had been adopted. Anyone conversant with the establishment of industries in the private sector would realise that the very high level of taxation has had a dampening effect on such enterprises. The budgets of 1955 and 1956 and the supplementary budget have raised rates of income-tax, corporation tax and super-tax, have imposed dividend, bonus issue and capital gains taxes and have introduced the much debated deposit scheme covering both past and current profits. It has also been freely stated that more rigorous measures of taxation are in the offing and may be introduced in the coming budget.

"Observations about the effects of high taxation on enterprise have been answered by reference to the substantial amount of development which is currently taking place in the private sector. I would like, however, to point out that the current development in the private sector represents in the main the consummation of earlier plans.

Industrialisation

"Both the Government and the public realise that it is absolutely necessary, if the standard of living of the people should be raised, that greater industrialisation should take place in the country, that funds should be available for such industrialisation whether in the public or the private sector and that both sectors should function in a complementary manner, if the purpose which Government has in view has to be fulfilled. I hold the view, however unorthodox it may be, that proper development of industries in the private sector would lead to a snowball effect gathering more and more momentum by the utilisation of resources saved so as to make further industrialisation possible, whereas there is not the same result or even the same incentive in public enterprises promoted by the State. A very high level of taxation which may produce more money to the State partly for promoting social amenities and partly for investing in public enterprise will have an atrophying effect on private savings and thus on the development of industries in the private sector. There seems to be a realisation on the part of the authorities that their taxation policy has seriously crippled the resources of Indian capital. The change in the policy of the Government regarding the extent to which foreign collaboration in the capital structure of a company can be permitted is a recognition of the shortage both of Indian capital and of foreign exchange. This more flexible attitude of Government towards foreign capital is a welcome sign, which will be appreciated by all who are interested in the industrial development of the country.

"I do not want to elaborate any further on the many aspects of industrialisation in the private sector with which we are mainly concerned. The chairmen of various industrial companies have made observations on the present situation and I venture to think that some at least of these gentlemen have done so not merely with a view to criticising Government policy or questioning the accepted social pattern of society but have done so with the genuine desire of bringing to the notice of the Government the considerations which they believe may jeopardise the very objectives of the Government.

Net Income

"Turning now to our own accounts, you will see that, after meeting the heavy demands of income-tax which require over Rs. 15 lakhs out of our net income of nearly Rs. 37 lakhs, we have for disposal, including the balance of Rs. 7 lakhs and odd brought forward from last year, a total of Rs. 28.81 lakhs. From this your Directors have appropriated Rs. 5 lakhs to general reserve, making, with the Rs. 5 lakhs provided last year, a total of Rs. 10 lakhs. A dividend at the rate of 3½ per cent. free of income-tax for the year is recommended, absorbing Rs. 17½ lakhs, and leaving a little over Rs. 6 lakhs to be carried forward to next year.

"In recommending this first dividend, your Directors have had in mind that many of those who invested in our shares have looked for an early return and I would remind you that this dividend represents a gross return of over 4½ per cent. on the share capital. I need not repeat what I said last year about the necessity of building up a substantial reserve. As our profits grow, we must constantly bear this need in mind. However careful we may be, we shall not always succeed in avoiding losses, for which due provision must be made.

Position Remains Very Liquid

"Our position remains very liquid, but, provided the projects we have agreed to assist by way of rupee loans or investments are not held up as the result of the shortage of foreign exchange, the figures at the end of the current year are likely to show a very different picture and we shall be continuing our thoughts, to which reference is made in the Directors' report, of the means by which our rupee resources can be augmented when the need arises.

Prospects

"You will see that we have adopted the unusual course of giving full details of invest-

TREND OF TEXTILE OUTPUT UPWARD

TWO MAJOR GROUPS IN RAYON TRADE TO MERGE THEIR INTERESTS

From A Special Correspondent

MANCHESTER, 16*th April*

THE most significant development in Britain's textile industry this week has been the decision of the two major groups in the rayon trade to merge their interests. The Directors of Courtaulds Ltd. and British Celanese have announced a plan for collaboration and financial amalgamation, giving as one of their reasons for the move the threat arising from the projected European Common Market.

MANCHESTER LETTER

Although rumours of such an amalgamation between these large combines have been circulated from time to time in the past, it is no exaggeration to say that the decision taken is quite as important to British textiles as the combination of the Morris and Austin organisations was to the motor industry. The main difference between these examples is that, whereas other large groups remained in existence in the car trade, the merger of the rayon producing giants creates a virtual monopoly which cannot be challenged. In the huge field of man-made fibres, the two companies now directly concerned have an overwhelming interest.

The Best Policy

By coupling the new venture in Europe with the decision to amalgamate, these leaders in the rayon trade have caused speculation as to whether their collaboration will provide a pattern for others to follow. In the post-war years, it has not always been a case of the large combines swallowing smaller units, although a good deal of this has been done in the textile trades. Big groups which have found competition between themselves embarrassing have sometimes decided that co-operation is the best policy, whether through an open financial link or merely by unofficial association. Recent moves to restrict the freedom of individual firms and industries which make their own protective arrangements may have the effect over the next few years of causing a further trend towards amalgamation.

Faced with the prospects of ever-growing empires controlled by a few large groups the position of the small firm is by no means easy. The contraction of textiles, not only in the amount of machinery at work but in the number of firms in operation, seems likely to continue apace. The latest development may sow seeds which will be reaped in the years to come by a steadily decreasing number of companies whose individual size will increase in accordance with their capacity for absorbing smaller firms capable of fitting into their organisation.

Production of Lancashire-made yarn and cloth during February showed an expansion and employment in the mills continued the upward trend evident during the past few months. A noticeable feature was the fact that output this year in all sections was higher than in the comparable period of 1956, despite the intervening labour losses. Single yarn production averaged 18,250,000 lbs. weekly, as against 17,540,000 lbs. a week in January and 17,480,000 lbs. weekly in February 1956. The improvement was shared throughout the range of yarns, whether of cotton or man-made fibres. Similar gains were secured in cloth output, which averaged 48,310,000 linear yards a week, as against 45,460,000 yards in January and 44,930,000 yards a week in February 1956. In this instance, however, cotton cloth made the most progress, as output of mixtures and man-made fibres was slightly below last year's level.

The low point in the number of operatives in spinning and weaving on the books of employers is now shown to have been reached at the end of October when the available manpower had declined to little more than 243,000. In subsequent months, recruitment has steadily exceeded wastage and the labour force at the end of February had reached 245,740, equal to the figure at the end of July last year. The current total, however, is still almost 10,000 below the number of employees on the books 12 months ago. The chief decline has been in weaving, where the mills have lost 7,500 workers, the drop in those available for single spinning being 1,350.

Compared with a year ago, fewer spindles are at work, the number running in February being 21,700,000, as against 22,100,000 in 1956. The proportion in running mills, however, has increased from 74 per cent. to 77 per cent. In weaving, the number of looms running in February was 237,000, as against 244,000 in the same month last year and an average of 229,000 during the whole of 1956.

Overall Manufacture

The Chairman of the Domestic Section of the Overall Manufacturers' Association of Great Britain, speaking at the annual meeting in Manchester, said that the United Kingdom had nothing to fear from Continental craftsmanship in the manufacture of housewives' overalls in the event of a European Common Market. It was certain, however, that the country would be flooded with new types of materials and manufacturers would have to be bold enough to create new and contemporary designs to meet the challenge.

At the annual meeting of the full Association, the Chairman, Mr. Norman Hey, of Leeds, called for an earlier Budget to help remove some of the uncertainties of trade at this time of the year. Trade tended to become stagnant and it would be a great help not only to the overall trade but to several others if the Budget could be brought forward to January before the spring trade got under way.

Among the many reports of British textile companies which are presented annually, the survey of current events drawn up by Mr. James Ewing, Chairman of the Bradford Dyers' Association, is one of the most keenly scanned. Not only does he comment in detail on the ever-widening activities of the group itself, but he provides an excellent summary of conditions in the textile industries as a whole.

In his speech this year, Mr. Ewing raised several important points to which the trade will have to give consideration in the months ahead. On the future of the Cotton Board, for example, he questioned whether, under its present charter, the Board was the right type of organisation for present-day requirements. Like many others, he feels it essential that there should be a forum to represent the trade, but considers that the Wool Textile Delegation is an example more in keeping with current conditions.

Firms in the finishing branches were among the first to take steps to deal with redundant capacity and their experience has led them to definite views on the subject. The two alternatives under present circumstances were clearly set out by Mr. Ewing. On the one hand, there could be an orderly contraction by means of a trade scheme to purchase excess plant, as was practised in the spinning and finishing branches before the war, or the jungle law of "healthy bankruptcy" could prevail. The second system, said Mr. Ewing, was too slow and too expensive while a trade scheme could make provision for both employer and operative.

Surplus Dyeing Capacity

Turning from suggestions to facts, Mr. Ewing gave details of the contraction in textile dyeing in the five years between 1951 and 1956. Output of cotton dyed cloth, he said, had fallen by 23 per cent. and continuous filament rayon cloth had declined by 7 per cent. In mixtures of cotton and rayon there had been a fall of 21 per cent. The only improvement had occurred in production of dyed spun-rayon fabrics, the increase being 8 per cent. Total output of dyed material showed a drop of 17 per cent. from 1,092 million yards in 1951 to 910 million yards in 1956. The decrease was almost entirely due to the fall in exports.

Against this output of 910 million yards last year, the Cotton Board has lately estimated the capacity of the piece dyeing industry at about 1,160 million yards, an excess of estimated capacity over production of 27 per cent. Mr. Ewing commented: "An industry carrying the surplus capacity which these assessments suggest is disadvantageously placed in competition with countries working on a three-shift basis with low labour costs. This progressively deteriorating situation should be a challenge to the whole industry to equate supply with demand in a compact and efficient group."

As in other sections, the larger combines in the finishing trade are making their own arrangements to reduce capacity in line with current demand. Uneconomic units have been closed and, in the case of the Bradford Dyers' Association, diversification of the activities of the company is being increasingly carried out. Bonded fabric production has been established in conjunction with a large European associate. But it is not only in the sphere of textiles that these groups are expanding. Control has been obtained over firms engaged in structural engineering, air conditioning and dust extraction and civil engineering. Another new interest is in the transport of liquids in bulk.—*All Rights Reserved.*

Head Office: **UDIPI, S. India.**

THIRTY-FIRST ANNUAL REPORT OF THE DIRECTORS TO THE SHAREHOLDERS

The Directors submit the results of the working of the Syndicate for the year ending 31st December, 1956, duly audited:

	Rs.	a.	p.
The Net Profits as per Profit and Loss Account	8,95,199	9	3
ADD—Brought forward from last year's account	18,830	15	6
Rs.	9,14,030	8	9

After the appropriations in the Balance Sheet of Rs. 2,00,000 to the Statutory Reserve Fund under Section 17 of the Banking Companies Act and Rs. 1,00,000 to the Contingent Reserve Fund, the Directors recommend the following appropriations:

	Rs.	a.	p.
To pay a dividend at 10 per cent. and bonus at 5 per cent. per annum (Tax-free) on 'A' and 'C' Class Ordinary Shares, which will require Rs. 86,812-15-11 and dividend at 6 per cent. per annum (Tax-free) on 6 per cent. Cumulative Preference shares and 5 per cent. per annum (Tax-free) on 5 per cent. Cumulative Preference shares, which will absorb Rs. 1,10,541-7-5	1,97,354	7	4
To provision for Taxation	3,00,000	0	0
To provision for Bonus to Staff	75,000	0	0
To Premises Reserve Fund	25,000	0	0
To carry forward to next year's account	16,676	1	5

During the year, Branches of the Bank have been opened at Uravakonda, Gulbarga and Hyderabad. All the Branches of the Bank have progressed well and increased their clientele and their utility to the public. The Bank has continued to serve the small accounts as earnestly as the bigger ones. The policy of encouraging small advances through suitable and convenient schemes to serve the middle class constituents is being continued and the banking service is extended to a larger section of the public.

The solid and unstinted support of the staff under their General Manager and the increasing goodwill and co-operation of the Shareholders and the rapidly growing clientele of the Syndicate will enable us to reach yet another landmark in the history of the Bank during the current year.

(By authority of the Board),

(Sd.) T. M. A. PAI,
Chairman.

UDIPI, 31st January, 1957.

(viii) Maximum total amount of advances including temporary advances granted during the year to the Companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of Private Companies, as members	2,64,625	3	6
(ix) Due from Banking Companies	93,074	13	10

(Continued on next page)

STATISTICAL POSITION OF COTTON TIGHT

LIBERALISATION OF IMPORTS NECESSARY

WITH the recent spurt in cotton prices and the introduction of a series of measures designed to control the price trend, attention has naturally been focussed on the supply position of cotton during the current season. At present, crop ideas centre round 4.9 million bales, as against 5.4 million bales estimated in the beginning of the season. Reduced crop estimate in the face of the continuing upward trend in mill consumption induced extensive buying by mills and trade interests which have pushed up cotton prices to high levels. There is also a scramble for Broach Vijay as there is widespread apprehension of extremely scarce supplies of this variety, based on the continuous scaling down of earlier estimates for this variety. Broach Vijay, it may be pointed out, has been the bread-and-butter cotton of Indian mills on which they mainly depend for maintaining their standard mixings. The shortage of supplies of Broach Vijay and the keen demand for it had their effect on cotton prices not only in the local market but throughout the country. The situation has been aggravated further by reports of poor yields of Westerns and, to some extent, of cotton grown in the Tinnevelli Karungani tracts.

At its meeting held on the 9th inst., the Cotton Advisory Board held that the rise in the prices of Indian cotton in the current season was due to the scaling down of the commercial crop estimate, shortage of tenderable cotton generally, and reduction in the output of Vijay and Surti cottons, the two most popular varieties. The Board rightly pointed out that, in a country like India where weather conditions affected the ultimate yield to a large extent, it was necessary to aim at a carryover of not less than six months' estimated consumption of mills; to be on the safe side, the carryover to be aimed at should be 2.5 million bales. The Board put forward suggestions for augmenting supply of cotton. One such suggestion was that, since there was likely to be a shortage of cotton of staple length of 13/16"-1.1/16", imports of American cotton of stapling 13/16" and above should be permitted, instead of 1.1/16" and above as at present. Another suggestion was that 50,000 bales of cotton of staple length 1.1/32" and above and 25,000 bales of stapling 13/16" and above should be permitted to be imported from soft currency areas immediately. The position should be reviewed later and, if considered necessary, a further 50,000-75,000 bales should be licensed, subject to such staple length stipulations as may be considered essential.

Presumably acting on the recommendation of the Board, the Government of India announced on the 18th inst. its decision to license import of 50,000 bales of East African cotton in the staple range of 1.1/32" to 13/16". The quota was exhausted within three days after the announcement. A further quota of 20,000 bales of cotton over 1.3/16" staple from soft currency areas was announced on the 22nd inst. Cottons coming under this staple length stipulation are all Karnak and Menoufi, all grades of Sudan Gezira 'S' variety and all grades down to G6L in the 'L' variety and private estate Sudans down to grade 4. Mill and trade interests are also awaiting liberalisation of imports of American cotton. Surely, all these measures will go a long way towards relieving the tight statistical position of cotton.

A reference may be made to the supply and distribution pattern of cotton in the current season. Carryover with mills and trade at the beginning of the current season was 2.15 million bales, comprising 1.93 million bales of Indian and 0.22 million bales of foreign cotton. The season's commercial crop is expected to be about 4.95 million bales. On this basis and assuming that imports during the season will be of the order of 607,000 bales, the total visible supply will work out to 7.70 million bales. As regards distribution, mill consumption during the first six months ended February last aggregated 2,616,711 bales, comprising 2,324,414 bales of Indian and 292,297 bales of foreign cotton. If this trend were to continue in the remaining months, the total consumption during the entire season might reach 5.2 million—4.6 million bales of Indian and 600,000 bales of foreign cotton. Out of the season's estimated crop of 4.95 million bales, about 300,000 bales are covered under export commitments. It will thus be seen that the supply actually available out of the current season's crop—that is, 4.65 million bales—will be just sufficient to cover the mill requirements of Indian cotton. In view of the tight supply position and the Government's ban on exports, shipments of Indian cotton abroad will be small. Assuming that it will be of the order of 300,000 bales, total disappearance would be 5.5 million bales, including 600,000 bales of foreign cotton. The end-season stocks with mills and the trade will, therefore, come to 2.2 million bales, comprising about 2 million bales Indian cotton and the balance foreign. The following table gives the estimated supply and distribution position for the season.

Supply and Distribution of Cotton in 1956-57

(In thousand bales of 400 lbs. each)

	Indian	Foreign	Total
Supply—			
Carry over with mills and trade on 31-8-1956	1,930	220	2,150
Estimated commercial crop during the season	4,950	..	4,950
Estimated imports	..	607	607
Total supply	6,880	827	7,707
Distribution—			
Estimated mill consumption during the season	4,600	600	5,200
Exports	300	..	300
Total distribution	4,900	600	5,500
End season stock with trade and mills	1,980	227	2,207

From the foregoing account it will be clear that the cotton supply position is none too happy. The only feasible, effective solution to the problem, therefore, lies in the further liberalisation of imports. This, of course, involves payment of foreign exchange. It must, however, be conceded that by allowing adequate imports of foreign cotton, the Government will, as we pointed out on an earlier occasion, be enabling the mills to maintain a high level of textile output which is vitally needed from the point of view of both employment and export of cotton manufactures, one of the staple earners of foreign exchange. The long-term solution, of course, lies in stepping up production through renewed efforts so that the target of 6.5 million bales of cotton set in the second Five-year Plan may be fulfilled successfully in time.

INDUSTRIAL CREDIT & INVESTMENT CORPORATION OF INDIA, LTD.

(*Concluded from page* 836)

ments actually made and loans actually disbursed. The reasons for this change are set out in the Directors' report. It seemed undesirable to confine ourselves to the minimum requirements of the Companies Act, since this would have given an unbalanced view of our activities. Before I pass to the normal business, I should say something about our prospects. Given reasonable opportunities and reasonable operating conditions, I see no reason why this Company should not continue to expand on the sound basis which I believe we have established but much will depend on Government policies and the availability of foreign exchange in the provision of which we shall, with the help of the World Bank, play our part.

"Before concluding, I have to inform you that two senior officers have been appointed in the course of the year, Mr. Parekh who has been appointed Deputy General Manager and Mr. Johnson who has been appointed Technical Adviser. The addition of these two officers has somewhat strengthened the administrative organisation of the Company, but I am bound to state that we still need additional senior officers, if the work of the Company is to proceed in the way desired by the General Manager and your Board.

"I would like to thank the officers and staff of the Company who have done hard and strenuous work during the year under review. The nature and extent of that work is not reflected by the number of applications which the Board has ultimately sanctioned but by the number of applications received and examined. In respect of many of these, constant advice has been sought and freely given; several are undergoing further scrutiny before final consideration by the Board. I would like to pay special tribute to the General Manager and the Deputy General Manager who have both devoted themselves with great earnestness to the onerous duties that they have to discharge."

AUDITOR'S REPORT

I beg to report that I have audited the above Balance Sheet of the Canara Industrial and Banking Syndicate, Limited, as at 31st December, 1956, and also the above Profit and Loss Account of the Bank for the year ended that date with the Books and Accounts and certified Returns from the Branches and that I have visited some major branches of the Bank during the year and have examined the books of account and cash and securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purposes of the audit.
(b) Such information and explanations have been found to be satisfactory.
(c) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank.
(d) The Returns received from the Branches have been found adequate for the purposes of my audit.
(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the Books of Account and the Returns.
(f) In my opinion and to the best of my information and according to the explanations given to me the said accounts give the information required by the Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December, 1956.
(g) In my opinion proper books of account as required by law have been kept by the Bank so far as appears from my examination of those books.

SUGARCANE DEVELOPMENT

NEED FOR INTENSIFIED CULTIVATION

A DISQUIETING trend in the Indian sugar economy has all along been the none too happy position on the sugarcane front. Not only does per-acre yield of cane continue to be very low but the quality also has not shown any improvement. In fact, there has been some setback in the yield of cane of late. The all-India average yield of sugarcane during the last year of the first Five-year Plan—that is, 1955-56—was not more than 12.99 tons, as against 13.33 tons in the base year (1950-51). It may be noted here that, over the Plan period, while the total area sown to sugarcane increased by 5.7 per cent.—from 4.21 million acres in 1950-51 to 4.45 million acres in 1955-56—the actual yield rose by just 3 per cent.—from 56.16 million tons to 57.75 million tons. Similarly, the average recovery of sugar in cane was as low as 9.84 per cent., which compared unfavourably with nearly 10 per cent. five years before. It must, of course, be admitted that notable progress has been made in areas, mainly factory zones, covered under the intensive sugarcane development schemes.

The setback on the sugarcane front thus is certainly unfortunate. As readers are aware, sugarcane constitutes the mainstay of income to quite a large section of the agricultural population and it is the principal raw material in the manufacture of such essential items of consumption as white sugar, *gur* and *khandsari*. It is, therefore, imperative that any scheme of cane development should have as its main objective the need for ensuring the cultivator a good return, on the one hand, and the white sugar producing factories adequate supplies of quality cane at an economic cost, on the other.

Viewed thus and considering the large programme of expansion of sugar industry now being implemented under the second Five-year Plan, the importance of a vigorous campaign for intensified development of cane cannot be stressed too strongly. The Indian Central Sugarcane Committee has done well, indeed, fully to recognise this aspect. In its latest annual report published recently, the Committee points out, for instance, that greater attention is required to be paid to the carrying of the results of sugarcane research to the doors of the cane growers than is being done hitherto. The area under sugarcane development will also have to be enlarged so as to cover the entire sugarcane acreage in the country. Apart from the development work, which will continue to receive attention under the various essential items, the problem of improvement in road communication in sugar factory areas will receive special attention. It is proposed to increase the acre-yields of sugarcane substantially and to raise the quality of sugarcane under the second Plan, so that the sugarcane grower gets a good return, the factories receive their full crushing quotas of quality cane and, at the same time, the surplus land is released for food crops. Incidentally, it may be noted that the production target for sugarcane in the second Plan is fixed at 78.00 million tons, as against the actual output of 57.75 million tons in 1955-56.

The annual report of the Sugarcane Committee contains a review of the progress achieved in the implementation of the cane development schemes during 1955-56. The review reveals that, in this year, 51 different schemes continued to run at the various sugarcane research stations and sub-stations and at selected sugarcane development centres in the various important sugarcane-producing States. An area of 800.000 acres was covered under the intensive sugarcane development schemes mainly in the factory zones, as against 625,000 acres in the previous year. The average yield of sugarcane per acre in the intensively development areas increased by about 50 per cent. in Bihar, the Punjab and Madras, 25 per cent. in Uttar Pradesh, and 40 per cent. in West Bengal and Andhra, as compared with the yields prevailing at the time of the commencement of the sugarcane development schemes in 1948-49. A significant step in the direction of raising the acre-yield of sugarcane was taken during the year 1954-55 when it was decided to start a campaign for the intensive manuring of sugarcane crop in the factory zones of the three States of Uttar Pradesh, Bihar and the Punjab to cover an area of 220,000 acres. A total area of 179,000 acres was treated with 216,000 maunds of ammonium sulphate during the year. The acre-yields improved by 25.6 per cent. in U.P., 37.0 per cent. in Bihar and 19.7 per cent. in the Punjab.

Judging by the success of this campaign, it was decided to cover an area of about 935,000 acres during the year 1955-56 in all the important sugarcane-producing States in the country. An area of 806,000 acres was covered under this campaign in the States of U.P., Bihar, Punjab, P.E.P.S.U., Madhya Bharat, Bombay, Hyderabad, Madras, Mysore and Andhra and an increase of about 25 per cent. in production over the previous year has been recorded. The target for 1956-57 covers an area of 1.5 million acres and a provision of 1.7 million maunds of ammonium sulphate and necessary loans for the purpose have been made.

The Government of India continued to give an annual normal grant of Rs. 8 lakhs for the sugarcane research schemes and the administration of the Committee during 1955-56. Out of this grant, an amount of Rs. 6.27 lakhs was paid as subsidy for the sugarcane research schemes, an amount of Rs. 1.62 lakhs was spent on the administration of the Committee, and a sum of Rs. 68,000 on the Biennial Conference, *Ad hoc* Expert Sub-committee, publication of journal and grant to the International Society of Sugarcane Technologists.

INQUIRY TO BE HELD ON COAL PRICES

PRODUCTION MINISTER ON POSITION OF PRIVATE SECTOR

THE Government of India has decided to institute a comprehensive inquiry into the cost structure of the coal industry. The inquiry will be conducted by a committee or by the Tariff Commission, the decision in respect of which will be announced shortly. Disclosing this in the course of a Press conference held last week, the Union Minister for Production, Mr. K. C. Reddy, explained the Government's basic policy in respect of fixing coal prices. For some time past, the coal industry has been urging the Government for an upward revision of coal prices, on account of the increased costs of production. The industry has also been asking for the inclusion of a 'special element' in the revised prices to provide financial resources for expansion and development of the industry.

The fixation of coal prices is a somewhat complicated matter on account of the differences in the level of working costs as between individual collieries and in the various regions. The industry has, however, been urging an interim increase in prices to meet the increased costs on account of the recent award of the Appellate Tribunal which granted additional concessions to workers. Having received no favourable response from the Government, the collieries have been compelled to appeal to the Supreme Court against the Tribunal's award. The Government is now unwilling to consider the grant of an interim increase until the judgment of the Supreme Court is pronounced.

Explaining the Government's price policy, Mr. K. C. Reddy said that it had, *inter alia*, been guided by the consideration that the industry must have a fair return on the capital invested. The prices had been reviewed from time to time and the information that had been available to the Government, Mr. Reddy declared, indicated that the industry by and large had had a fair return on the capital invested. However, arising out of the Award of the Appellate Tribunal the question of coal prices was under review. No final decision could be taken until the judgment of the Supreme Court was pronounced on the subject.

As the Production Minister himself admitted at the Press conference, the most important need in the national interest is increased production of coal at an economic price. Although the private collieries submitted plans early in 1956 for an additional production of 30 million tons per annum during the second Five-year Plan, the Government fixed the target for the private sector at only 10 million tons per annum, out of a total of 22 million tons, the balance being left to the public sector. These allocations were arrived at, Mr. Reddy declared, after discussion with the private sector of the industry and a realistic appraisal of the potentialities of the two sectors within the broad framework of the Industrial Policy Resolution of 30th April 1956. In pursuance of this resolution, all new units, save where their establishment in the private sector had already been approved, will be set up only by the State. "This does not, however, preclude," Mr. Reddy explained, "the expansion of existing privately-owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require."

The expansion of the private collieries even within the framework of the Government's industrial policy is being hampered by the shortage of materials like iron, steel and cement, and railway wagons. There is a general complaint that a discrimination is being made in favour of State collieries in respect of allotment of these. Denying that there had been any such discrimination, Mr. Reddy said:

"Admittedly there is a general shortage of iron, steel and cement and neither the public nor the private sectors have been getting all that they need. Except for one quarter, when a larger amount of cement was given for the coal washery set up at Bokaro and Kargali, the available supplies have been equitably distributed. As regards the allotment of wagons, the State collieries at one time were owned by the railways and their entire output is consumed almost wholly by the railways. Loco coal has the highest priority and the private sector supplying loco coal enjoys the same priority. The difficulty experienced is mainly due to the increase in the transport facilities not being able to keep pace, in spite of best efforts, with the increase in demand."

The Production Minister added that the transport position had been steadily improving and in support of his contention he quoted the following daily average loading figures for the last three years:

(No. of wagons)

Year	All fields	West Bengal-Bihar
1954	3,948	3,206
1955	4,045	3,262
1956	4,246	3,405

Emphasising that the Government was doing its utmost to increase the transport availabilities, the Minister said that the position, which was constantly under review, had continued to improve steadily. As a result of this improvement, he added, the collieries had been able to increase their production and reduce the pit-head stocks appreciably during 1956. The stocks declined from 3.6 million tons at the end of 1955 to 2.7 million tons at the close of 1956.

Mr. Reddy also indicated the possibility of the control on coal production and distribution being revised. Thus, he said:

"The present position regarding coal is that the production and transport capacities cannot meet the full demand and, therefore, some kind of control over production and distribution including price control has become necessary. The problems arising out of the control are constantly under review and, if it becomes necessary to make any departure from the existing system, the Government will take appropriate measures in the matter."

Referring to the problems of the industry in respect of coal mining machinery and requirements of sand for stowing, Mr. K. C. Reddy said that these were constantly under review and the Production Ministry and the Government as a whole were doing everything possible to give such reasonable help as was necessary in the matter. An assessment had recently been made of the requirements of imported coal-mining machinery for the private sector and the matter was under further examination. As regards sand for stowing, Mr. Reddy declared, a Committee had gone into the matter of availability of sand and the Coal Board had set up Technical Committees to study in detail the arrangements required for the supply of sand.

Replying to questions on import of coal-mining equipment and manufacture thereof within the country, the Minister said that negotiations with the Russians were now in progress both for the purchase of coal-mining equipment for immediate use in the public sector and for Soviet collaboration in setting up a plant for the manufacture of coal-mining machinery. While the Government had received quotations from more than one country for coal-mining equipment, the terms of the U.S.S.R. were attractive. Russia would be able to effect deliveries in 1958 and had agreed to deferred payment. The purchase of machinery would be in the course of normal Indo-Russian trade, while the project for setting up a plant to manufacture coal-mining equipment, if it went through, would be financed from Russian offer of a Rs. 60-crore credit.

Referring to amalgamation of small collieries, Mr. Reddy said:

"The examination of the report of the Committee on Amalgamation of Collieries is in the concluding stages. Consultations have also taken place between the State Governments of West Bengal and Bihar. Steps are being taken to implement the recommendations of the Committee which are broadly acceptable, subject to a few minor modifications in matters of detail. The necessary legislation, details of which are under further discussion, will be promoted as early as possible."

The Minister added that the legislation for acquisition of unworked coal-bearing areas was ready last December, but could not be introduced in Parliament on account of pressure of other official business and also for want of time. Legislation would be introduced in the first session of the new Parliament in May 1957.

STOWING COSTS IN COAL MINES

The Coal Board has liberalised the procedure for assessment of stowing costs in coal mines and for grant of stowing subsidy to collieries. This follows the representations made by the coal industry. The Board's decisions have been arrived at after discussions between the Board's technical officers and the representatives of the colliery companies carrying out large-scale stowing.

The Board's decisions, which will be effective in respect of all stowing done after 1st April 1955, are: (i) Depreciation will be calculated at revised rates on the original value of plant on the straight line method; (ii) to meet the increased cost of stores, the allowance for repairs and renewals will be increased by 54 per cent. of the scheduled rates in the case of plant and machinery installed before 1st April 1950; (iii) aerial ropeway rope will be treated as direct expenditure according to a revised formula; and (iv) the allowance to cover depreciation of stowing pipes will be increased to meet the increased costs of such pipes. The Board has also decided that, out of 94 cases of sanctioned assistance during 1956-57, 65 will be eligible for increased assistance at 85 per cent. of the cost subject to a maximum of Rs. 1-8 per ton (against the ordinary

ENLARGING RAW JUTE PRODUCTION

GOVERNMENT OF INDIA TO SET UP SUPERVISORY BODY

THE Government of India has decided to set up a central supervisory body with the Jute Controller as Chairman to review periodically the progress made in jute production towards achieving the target of 5.54 million bales fixed for the second Five-year Plan. This was announced by Dr. M. S. Randhawa, Vice-Chairman, Indian Council of Agricultural Research, at the conclusion of the high-level conference held in Calcutta last week. This conference of the Development Commissioners, Directors of Agriculture and Secretaries of the State Agriculture Departments of West Bengal, Bihar, Assam and Orissa, Chairman of the I.J.M.A., Jute Controller and the Economic and Statistical Adviser to the Government of India, held on the 18th inst. under the chairmanship of Dr. Randhawa, reviewed the progress made in the implementation of the recommendations of the conference on promotion of jute production held in New Delhi on 12th January last. The conference was preceded by the second meeting, on the 15th, of the Sub-committee appointed by the Delhi Conference to go into the question of self-sufficiency in jute. The Sub-committee also met representatives of various jute interests on the 16th and 17th inst. for exchange of views.

The Government's decision to set up a supervisory body has been taken in view of the national importance of achieving self-sufficiency in jute. Similar bodies will also be set up at the State level in the jute-growing States. The central supervisory body will consist of: The Jute Controller (Chairman), representatives of the Planning Commission and the Indian Jute Mills Association, Directors of Agriculture of West Bengal, Assam, Bihar, Orissa and U.P., Chief Jute Development Officer, Director of Railway Movements, Calcutta, and Secretary of the Indian Central Jute Committee.

Initiating the discussion, Dr. Randhawa asked representatives of the States to treat the problem of jute production in India on an emergency footing in view of the difficult foreign exchange position. The conference also decided to speed up the distribution of fertilisers to jute growers by opening more depots, so that the fertilisers could reach them in about six to eight weeks from now.

The two-day meeting of the Sub-committee on Jute Promotion held on the 16th and 17th inst. with the jute interests, under the chairmanship of Dr. S. R. Sen, Economic and Statistical Adviser, Government of India, discussed the long and short-term aspects of problems likely to arise from the increased target (from 5 million to 5.54 million bales) for the second Plan period and had full exchange of views on the basis of assumptions behind the revised target. The discussion centred, from the long-term view, on ways of phasing the jute development programme in a proper order of priorities, so that difficulties cropping up in the wake of unplanned production could, as far as practicable, be avoided.

Useful data that would be needed in the formulation and phasing of the jute development programme over the next few years were obtained in the course of discussions. The data related to the specific requirements of the industry for various qualities of jute, their availability within the country, possibilities of augmenting supplies of each variety in an appropriate order of priorities, and concentration of the intensive methods of cultivation in areas best suited to the production of high quality jute from the standpoint of climate, soil, retting water and transport facilities. It was felt that difficulties in the way of obviating India's present dependence on Pakistan for the minimum quantity of high grade fibre used in the manufacture of bright hessian were not insurmountable and there was good prospect, given incentive and expert advice, of raising the same grade of jute in the required quantity from selected tracts in India.

The policy governing the acreage to be planted with *mesta* in relation to the total estimated demand for raw material of the jute industry in 1960-61 was also considered.

The jute trade and industry were asked to employ their upcountry agencies in supplementing the efforts of the Government to propagate the efficacy of the use of fertilisers.

While the measures taken to raise the output of jute and thus make the working of jute mills more economic are commendable, the difficulties of jute mills, in the meantime, are said to have been aggravated and the small units, in particular, have been hard hit by the high raw material prices which bear no relation to prices of manufactured goods, and by the higher labour and other costs. As a result, some of the small units are being closed one after another. During the last two months, two jute mills, Luxmi Jute Mills and Victoria Jute Products, have been closed on account of heavy losses. Following this, the Standard Jute Company, Ltd., under the management of Messrs. Bird & Co., Ltd., has decided to close down with effect from 4th May. The mill is said to have suffered heavy losses aggregating Rs. 14 lakhs, including depreciation provision, during the last 18 months.

According to estimates made recently, units representing 57 per cent. of the Indian jute industry suffered losses aggregating Rs. 1.75 crores during the six months ended October 1956. Conditions have shown very little improvement since then. Under conditions prevailing at present in the industry, the Standard Jute Company is considered an uneconomic unit, having only about 650 looms, of which 12½ per cent. remain sealed in accordance with the I.J.M.A. Working Time Agreement. The closure of the Mill will not, however, affect the total production of the industry, as its loom hours will be "sold" to the Kinnison Jute Company, Ltd., and will be worked by the latter.

JUTE GOODS OUTPUT RISES

A rise of 4,500 tons in output of jute goods is disclosed by the production statistics of the I.J.M.A. for the month of March 1957. The total production has gone up from 80,200 tons to 84,700 tons, thus reversing, to a large extent, the declining trend noted in the previous month when the output dropped from 88,800 tons to 80,200 tons. Notwithstanding the rise, last month's production falls short of that in the corresponding month of 1956 by 14,600 tons, as will be seen from the following table:

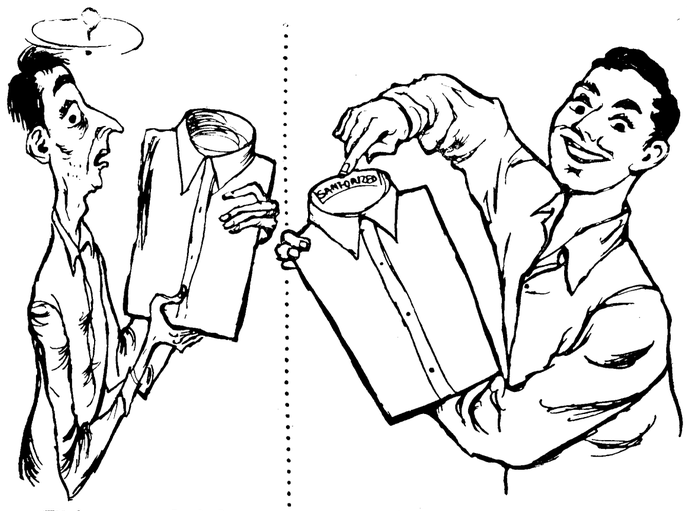
Jute Goods Production

(In tons)

	March, 1957	February, 1957	January, 1957	March, 1956
Hessian	36,000	35,000	38,800	34,800
Sacking	43,100	39,600	43,500	57,900
Others	5,600	5,600	6,500	6,700
Total ..	84,700	80,200	88,800	99,300

The increase in production is shared by hessian, which has gone up by 1,000 tons, and sacking which accounts for a rise of 3,500 tons. It is noteworthy that the proportion of sacking to total production has gone up and that of hessian has declined for the first time after a lapse of a few months. This indicates that the mills must have switched back again some of their looms to production of sacking in view of the recent demand for this variety of goods.

The rise in production during March is due to the longer working period, the number of hours worked being 200.5, as against 192 in February. On the basis of the above production figures, the consumption of raw jute by mills during March aggregated 494,600 bales, as against 467,600 bales in the previous month and 576,900 bales in the corresponding month of 1956. This brings the total consumption during the first nine months of the current season to 4.50 million bales, as against 4.66 million bales in the corresponding period of 1955-56. The total production of jute goods during this period amounted to 771,000 tons, as against 800,500 tons in the nine months ended March 1956.



This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The 'Sanforized' trade mark inspires such confidence that people all over the world pick 'Sanforized' trade marked fabrics —knowing they bear this assurance: *This garment will not shrink out of fit— even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them 'Sanforized' labelled cloth

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2

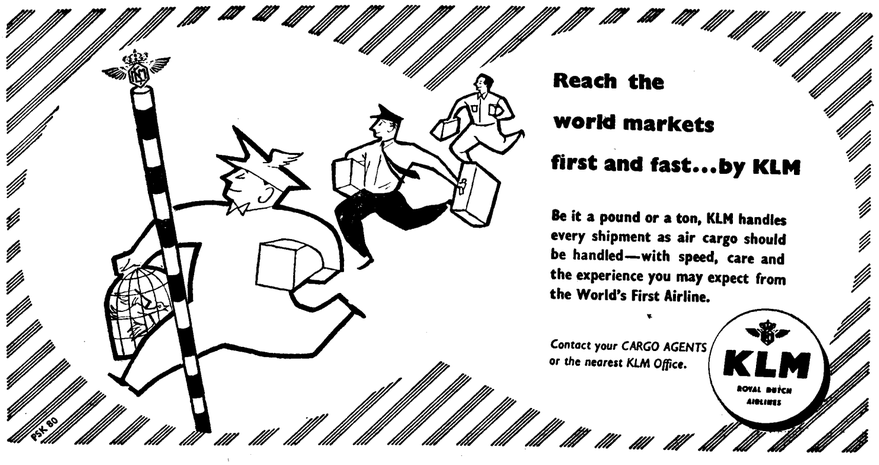
Plan for Progress

Transport and Travel

A network of steel rails girdling the country, ribbons of tarmac stretching over the land, and invisible paths traced across the skies are today breaking the barriers of vast distances in India to meet the needs of her developing economy. Thousands of millions of passengers and millions of tons of freight are carried every year by rail, road and air. During the Second Five Year Plan will be built 18,000 miles of surfaced roads and eight aerodromes and gliderdromes, and 2,258 locomotives and 1,18,611 coaches and wagons will be put into commission. Textile Machinery Corporation Limited, is proud to play its part in this mighty effort to strengthen the economic life lines of the nation. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

TEXMACO *geared to our better tomorrows*

TMC-15



EXPANSION OF RAILWAYS' TRAFFIC CAPACITY

SHORTAGE OF STEEL AND CEMENT MAJOR OBSTACLE

WITH the increased emphasis placed on industrial development in the second Plan, the problem of developing the railways in order to cope with the increasing transport requirements assumes a sense of unusual urgency. It is indeed heartening to realise that the Government of India and those who are directly in charge of running the railways are fully aware of the need. The railway authorities could not have chosen a more opportune moment to highlight the past performance and the task ahead of the railways than the Railway Week recently celebrated. In a series of 14 articles top executives of Indian railways have attempted to bring into focus the position, programmes and problems of this vital artery of the country's economy. Of particular interest is an article by Mr. P. C. Mukerjee, Chairman of the Railway Board, which lists the work undertaken in 1956-57, the first year of the second Plan. In addition to giving a factual account of programmes already under way and those that are planned, this article enables one to assess how far the entire railway system is geared to the tasks assigned to it in the second Plan.

During the first Plan period a total expenditure of Rs. 423.73 crores, inclusive of Rs. 140 crores from the general revenues, was incurred in respect of railway development. The railways acquired, during the period, 1,586 locomotives, 61,254 wagons and 4,758 coaches, raising their total holdings to 9,172 locomotives, 235,198 wagons and 23,158 coaches at the end of the Plan period.

Second Plan

The objectives of the second Plan in respect of railways are (1) to provide sufficient capacity to carry the increased output of heavy industries like coal, steel, cement, and other commodities, (2) to rehabilitate track, bridges, and rolling stock in order to maintain them in satisfactory working condition, (3) to achieve self-sufficiency, as far as possible, in railway equipments through enhanced indigenous manufacture of these items. The second Plan allocations for railway development are of the order of Rs. 1,125 crores, which covers the following: (1) construction of about 842 miles of new railway lines mainly to serve the requirements of coal and steel industries; (2) the renewal of about 8,000 miles of existing track which has been delayed due to shortage of rails and sleepers; (3) doubling of about 1,607 miles of track where the existing single line is already working to capacity and cannot carry the increased traffic which it will be called upon to do; (4) the conversion of about 265 miles of metre-gauge into broad-gauge and (5) the electrification of about 1,343 route miles of existing railway lines where density of traffic is such that steam traction cannot possibly carry all the traffic offered. Funds will be made available from three sources. They are Rs. 750 crores from the general revenues, Rs. 225 crores from railway revenues by way of current appropriations to the depreciation fund at the rate of Rs. 45 crores per year and a further sum of Rs. 150 crores from railway revenues. The rolling stock that is proposed to be purchased during the second Plan period include 2,364 locomotives, 11,575 units of coaching stocks and 107.247 wagons.

In 1956-57, the base year of the second Plan, provision for an expenditure of Rs. 318 crores was made for the annual works programme. The items included in the programme were rolling stocks, workshop, plant and machinery, track renewals, bridges, line capacity works, electrification, new lines, staff quarters and staff welfare, railway users' amenities, etc. The budget provision for the programme amounted to Rs. 193 crores comprising Rs. 88 crores for rolling stock and Rs. 105 crores for other works. Severe handicaps in the shape of shortage of steel and cement, aggravated all the more by the Suez crisis, was a major obstacle to progress. In spite of this the railways are expected to have spent Rs. 178 crores during the past year. Actual deliveries of locomotives, coaching stocks (in units) and wagons (in units) were of the order of 516, 1,167 and 27,132 respectively. Total deliveries till the end of March 1957 are expected to have been 624 wagons, 1,406 coaching stock and 31,759 wagons.

During the same year, a total of 2,800 miles of surveys were approved. The work in the field is under way on about 2,000 miles. Three new lines were opened to traffic during the year. These were the 37-mile metre-gauge Ernakulam-Kottayam line on the Southern Railway, the 24-mile Champa-Korba broad-gauge line on the South Eastern Railway, and the 26-mile Fatehpur-Churu metre-gauge line on the Western Railway. In addition, the seven-mile line from Gandhidham to the new Kandla Port was opened for goods traffic only. Work is in progress on about 556 miles of new railway lines, the important ones among them being Rourkela-Dumaro, Bhilai-Dhalli-Rajhara, Etah-Burhan, Indore-Dewas-Ujjain, etc.

Projects Under Execution

Work is under way on the Rohtak-Gohanna section of the Northern Railway. Also progressing is the conversion of the Reniguntа-Gudur metre-gauge section of the Southern Railway into broad-gauge, a total of 52 miles, at an estimated cost of Rs. 2 crores. It is expected that the work will be completed and opened to broad-gauge traffic during the course of the year. A few of the important sections where doubling work is in progress are Delhi-Mathura, Saharanpur-Moradabad, Kanpur-Allahabad, Delhi-Rewari, Arkonam-Jalarpet, Bezwada, Gudur, Mancharpur-Rourkela, Rajkarswan-Barajamda, and Rourkela-Durg.

Electrification of the Howrah-Bandel main line and Sherophuli-Tarakeswar sections of the Eastern Railway is progressing and it is planned that the first electric train will run in this area this year. A large number of workshops and loco sheds are being expanded and modernised to meet the maintenance requirements of the increased holdings of rolling stock. As many as 67 goods yards are being remodelled including major remodelling of marshalling yards at Moghalsarai, Ondal, Tatanagar. Work on providing modern marshalling yards at Bhilai and Rourkela is progressing. Fifty-two new crossing stations are being opened to increase the line capacity. At about 100 stations the length of existing loops is being increased and additional loops are also being provided.

Self-sufficiency in respect of stores and equipment has been one of the major objectives of railway development programmes. Acting on the recommendation of the Railway Equipment Committee a nucleus Development Cell has been established. One of the major steps taken by the cell was to augment the wagon-building and underframe manufacturing capacity in the country from 20,000 wagons and 300 underframes per annum to about 36,000 wagons and 1,700 underframes per annum. Issue of licences has been recommended in favour of some of the prospective firms capable of undertaking the work. Orders for a number of rolling stock components as well as electrical signalling items have also been placed during the year.

Locomotive production at Chittaranjan increased during the year to 14 WG locomotive per month. An aggregate of 156 steam locomotives were manufactured during 1956-57. This brought the total production since the establishment of the factory to 504 WG locomotives. The monthly outturn of unfurnished coaches at the Integral Coach Factory, Perambur, has been stepped up to 10 per month. The question of opening a similar factory for the metre-gauge coaches is under consideration. A workshop for the manufacture of spare parts for locomotives and to carry out the major reconditioning of machine tools is being set up. Funds have been allotted for these two units in the second Plan.

Volume of Traffic

As a result of these measures, goods traffic recorded an increase in the past year. Till November 1956, goods traffic had increased by about 10.1 per cent. over that of the corresponding period of the previous year. Total goods traffic carried during the period aggregated 66.96 million tons, of which 52.65 million tons were accounted for by broad-gauge and 14.30 million tons by metre-gauge, as compared with 58.35 and 15.38 million tons carried by broad- and metre-gauges during the corresponding period of the previous year. During 1955-56 total tonnage of goods moved on the Indian railways was about 114 million tons which is expected to have increased to 125 million tons during 1956-57. The second Plan proposals provide for the lifting of a total of at least 161 million tons of goods by the end of 1960-61. In order to cope with the increasing demands on railways attention is concentrated on improving operational efficiency by better utilisation of wagons through running block trains and express goods services, reducing the time taken for loading and unloading of wagons, round the clock working in important transhipment yards, etc.

An important point worth mentioning in this connection is that expansion of line capacity and rolling stock goes hand in hand with programmes for increased passenger amenities and a better deal for railway employees. The railways employ more than a million workers and the latter's dependents, on the basis of an average family of five members, aggregate about four million. Thus almost one out of every 70 inhabitants of the country derives direct benefit from the railways. In 1947, after partition, the number of quarters available for railway men was about 270,000. At the end of the first Plan it stood at 336,168 of which 41,000 were built during the Plan period itself. During the second Plan it is estimated that on the basis of the present allotment between 60,000 and 66,000 staff quarters will be built.

THE MERCANTILE BANK OF INDIA LIMITED

(INCORPORATED IN ENGLAND)
(Liability of Shareholders Limited)

Authorised Capital	£3,000,000

ELECTRIC SMELTING

An electric smelting furnace for ferro-manganese, which is claimed to be the first of its kind in India, was set up at the Electro Metallurgical Works Private Ltd., Dandeli. The furnace has a capacity of about 10,000 tons per year and it has been designed and supplied by the Norwegian firm, Elektrokemisk A/S, Oslo, Norway. For a generation, this Norwegian company has been known to the electro-metallurgical world as designers and suppliers of equipment for electric smelting. The firm was founded in 1904 by a team of young and enthusiastic engineers for the purpose of utilising the vast amount of unharnessed water-power which hurled down from the Norwegian mountains. During the following years, the Norwegian production of nitrogen for fertilising purposes —today the biggest export product within the chemical industry in Norway—was founded under the auspices of this firm. Later, Elektrokemisk took up the production of ferro-alloys and other metallurgical products based on hydro-electric power. During World War I, when lack of imported pre-baked electrodes hampered the production, the firm's engineers started making electrodes in their own way. The result was the self-baking, continuous electrode, an invention which has since gained fame for itself all over the world under the name of the Soederberg electrode.

In view of the important role which inland waterways have to play in India's transport system, the second Plan makes a provison of about Rs. 3 crores to be spent on development of inland waterways and transport. There are at present about 5,500 miles of navigable waterways, the most important of them being the Ganga, Brahmaputra and their tributaries, the Godavari and Krishna and the backwaters and canals of Kerala, the Buckingham Canal and the Mahanadi canals in Orissa. The schemes included in the second Plan are the Upper Ganga Pilot Project, the Assam Feeder River Project, the Assam Ferry Project, wireless telephone facilities for inland water transport operators in Assam, installation of automatic beacons to facilitate night navigation, arrangements for regular and continuous survey of waterways, purchase of boats for clearing snags, purchase of dredgers for river conservancy and development of ports especially Pandu, Gauhati, Dhubri, Karimganj, Patna, Manihari, Varanasi.

NEW PRODUCTS AND PROCESSES

Waterway Pollution

THE possibility that bacteria may play a part in solving—as well as creating—the widespread problem of acid pollution of waterways is under study by Ohio State, U.S.A., University engineers. The investigations have been concentrated in coal mining areas where streams appear to be particularly vulnerable to acid pollution because of the nature of mining operations and the presence of all necessary components for acid formation—coal, shale, slate and the coal mine waste material called gob, in addition to the requisite air and water.

The nine-man team has done preliminary field work to locate mines sealed under the Federal Mine-Seal programme, conducted field studies on sealing and flooding of mines and damming of water from mine-fed streams, and conducted laboratory tests on the role of micro-organisms in acid formation. That bacteria have a role in acid formation appears likely, since the organisms are consistently found at the point of formation. An interim report, which suggests a number of possible methods for correcting pollution conditions—such as exclusion of one of the necessary components by flooding or pumping; reclaiming or dilution of acid; or treatment of the stream by chemicals—also indicates that treatment with micro-organisms is a possibility.

Based on preliminary work with bacteria, the report states that "it may be possible to obtain a group of organisms which are able to stabilise water treatment processes." Simultaneous research is also being conducted on the use of gob as an aggregate for making lightweight concrete. Gob piles contain quantities of natural materials, such as carbon and sulphur, necessary for acid formation and, since they are exposed to outside air and surface water, it is believed much acid pollution originates with these piles.

Chlorophyll Batteries

Chlorophyll solar batteries may be made in the future as the result of a recent research discovery. The research has demonstrated that the chlorophyll-containing units, called chloroplasts, which occur in plants, behave under some circumstances like semi-conductors—the basic materials from which transistor crystal valves are made. When a dried layer of these units is exposed to heat, the chloroplasts absorb the heat and convert the energy of the heat into light which they then radiate, just like silicon, germanium and other semi-conductor crystals do under similar circumstances. The experiments also showed that the electrical resistance of the chloroplasts was likewise affected in the same way as that of conventional materials. Green plants are, therefore, it seems, converting solar energy into electrical energy, just like a solar battery. The plants, it is thought, use the electricity they gain in this way to stimulate the chemical changes by which they convert carbon dioxide into sugar. The practical industrial applications of this new discovery must lie in the future, but they can be expected to be many, since the discovery means, the scientists responsible for the research believe, that a new and exceptionally abundant source of semi-conductor material should be made available to industry.

Radar Mapping

A novel Radar Restitutor, which promises to inaugurate a new era in the use of radar for accurate mapping and charting, has been developed. The device overcomes the many distortions and inaccuracies in photographs of radar displays which make them unsuitable for measuring distances between different points on the ground. The chief distortion is due to the fact that radar records the distance between radar station and an object. For airborne radar sets, this means that the slant distance is recorded while, for mapping purposes, it is necessary to know the ground distance between the aircraft radar and the ground object. Another source of error is that an airborne radar is in continual motion while the radar display does not take this motion into consideration. The Restitutor is designed to compute these and several additional distortions automatically and produce a new photograph on which the ground object is positioned at corrected co-ordinates. The Restitutor-produced photographs are then used in the compilation of maps.

New Banking Machine

A new bank machine, designed automatically to handle the processing of cheques and deposits, one of the major paperwork problems of modern banking, has just been introduced in the U.S. and Canada by Burroughs Corporation. The machine's three major components—master unit, sorting unit and listing unit—are cable connected, permitting it to be used with maximum flexibility for present operations while allowing addition of other automatic operations as they are developed. One operator seated at the master unit keyboard can tabulate hundreds of documents such as deposit slips and cheques each hour while the machine automatically endorses the cheques, sorts them to any one of 27 compartments for routing to other banks or departments and produces a running list of deposits and withdrawals and separate lists of each of the 27 distributions.

New Elastic Plastics

A range of new elastic plastic materials may be developed with the aid of a new chemical compound which is currently being developed. Experiments have shown that when the compound, called beta-chloropropionitrile, is used in the processing of mixtures of ethylene-based plastic compounds a number of interesting new elastomer materials are created. The compound can also be used in the manufacture of other types of plastics and in a number of other types of chemical reactions of industrial importance.

CAUSES OF FOREIGN EXCHANGE SCARCITY

EXTERNAL RATE OF RUPEE IS A DRAG ON INDIA'S EXPORTS

By B. R. Shenoy

DIRECTOR, UNIVERSITY SCHOOL OF SOCIAL SCIENCES, GUJARAT UNIVERSITY, AHMEDABAD

THE pre-war (1938-39) currency reserves of India (Rs. 118 crores) represented 63 per cent. of the currency notes in circulation (Rs. 189 crores). With the mounting of the war-time rupee expenditure of the U.K. and the Allies, which was met by currency expansion against equivalent sterling credited to the Reserve Bank of India, the reserve ratio shot up. At the close of 1945-46, the reserves (Rs. 1,769 crores including gold) represented 145 per cent. of the note circulation (Rs. 1,219 crores). In about a decade thereafter the order of our sterling balances problem has been reversed, from one of super-abundance to one of scarcity bordering on crisis. With the natural emergence of import surpluses (and payments deficits) to meet the repressed demand for imports, there was a decline in the reserves after the close of the war. The division of assets with Pakistan in 1948-49 caused a big drop in them to Rs. 984 crores from Rs. 1,572 crores in the preceding year. Heavy (overall) payments deficits in 1949-50 and 1951-52 and a moderate deficit in 1954-55, coupled with an expansion in the note circulation, brought down the reserve ratio to 54 per cent. at the close of the first Plan period (31st March 1956).

The deterioration was rapid thereafter. The reserves fell even during the second half of the financial year when our current account payments are usually in surplus. During 1956-57 (excluding the last week for which statistics are not available at the time of writing). The loss of reserves (including the recent loan from the I.M.F.) was Rs. 304 crores, or about 53 per cent. more than the net loss (Rs. 198 crores) during the eight years following the partition of assets. The second Plan provides for a draft on the reserves of Rs. 200 crores over the five years of the Plan.

Gold Revalued

As the reserves were pressing ominously towards the legal minimum ratio of 40 per cent., on 6th October 1956, by the Reserve Bank of India (Amendment) Act, 1956, gold in the reserves was revalued from Rs. 21-3-10 per tola (the 1927 parity price) to Rs. 62-8-0 per tola (the September 1949 parity). On 5th October 1956, the reserve ratio was 45 per cent. and the surplus reserves Rs. 78 crores. The amending Act also abandoned the outmoded system of relating the minimum reserves to the note circulation and prescribed, following the French system prior to 1928, a fixed minimum reserve of Rs. 515 crores, of which Rs. 115 crores should be in gold. In emergencies, the foreign exchange part of the reserves may be reduced to Rs. 300 crores. The irreducible amount of the reserves was, thus, Rs. 415 crores. The amendment raised the surplus reserves, as on 12th October 1956, to Rs. 303 crores. The pressure on reserves having persisted, early in February 1957, the Government borrowed from the I.M.F. Rs. 61 crores ($127.5 million) and arranged for a standby credit of Rs. 35 crores ($72.5 million). Notwithstanding the amount of the loan as on 22nd March 1957 the surplus reserves had fallen to Rs. 241 crores. If the reserves should be depleted at the 1956-57 rate, this may not last longer than another 9½ months.

Activity of Saving

Contrary to the prevailing belief in India, payments difficulties are not an essential concomitant of economic development. Intractable payments deficits need not arise if investments are limited to total savings comprising current domestic savings, drafts on currency reserves (past savings), and imported savings (foreign aid). The activity of saving will make available the requisite foreign exchange, if need be, through increased exports or reduced imports.

This is well illustrated by our first Plan experience. Assuming an average rate of savings of 6 per cent. of the aggregate national income (Rs. 50,300 crores), total savings of the first Plan period may be placed at Rs. 3,000 crores. Adding to this foreign aid (Rs. 204 crores) and drafts on the reserves (Rs. 138 crores), and deducting from it the use of savings in the purchase of smuggled and domestically mined gold (estimated at a total of Rs. 190 crores), the net available investment resources (Rs. 3,152 crores) may be said to have approximated to the estimated first Plan investment (Rs. 3,100 crores). The current account deficit of the period was about Rs. 30 crores.

The position would be different if part of economic development was financed by created money. By adding to the money incomes of the community it would enhance domestic consumption. As, however, the national product and the stream of goods flowing into the market will not have risen, enhanced consumption would take place at the expense of exports or through increased imports. In either case, the payments position would deteriorate, as reduced exports would diminish the supply of foreign exchange and increased imports would add to the demand for it. Persistent payments difficulties are automatic reflex phenomena of continued domestic inflation.

The prevailing foreign exchange crisis is attributable to this factor principally. During 1956-57 the Government's (capital account) disbursements have exceeded the national savings placed at its disposal, through revenue surpluses, market loans subscribed from the current savings of the public, small savings, and miscellaneous capital account receipts. This excess, financed through created Reserve Bank money, is measured by the sum (Rs. 266 crores) of the overall budget deficit (Rs. 216 crores) plus subscriptions of the banking system (including the Reserve Bank) to permanent debt (estimated at Rs. 50 crores). The resulting expansion of money was largely cancelled by its conversion into foreign exchange at the Reserve Bank (payment deficits of Rs. 304 crores) and, allowing for errors and omissions, the amount of the money supply with the public (as at the close of February 1957) rose by about Rs. 78 crores (about 3.6 per cent.) to Rs. 2,262 crores. The general index of prices, however, rose by about 11 per cent., during the same interval, to 422. The disproportionate rise in prices suggests flagging national product and an increase in the velocity of circulation of money.

Inflation

True to expectations, the inflationary expansion of incomes in 1956-57 ate into exports and added to the pressure for imports. During the first four years of the first Plan, the index of the volume of Indian exports (1952-53=100) was at 100-102. It rose to 115 in 1955-56. The first eight months of 1956-57 saw the index decline to 106, the monthly average of the corresponding period of the preceding year being 112. Except for 1951-52, when it was at an inordinately high level (146), the import index during the first Plan period was generally below the index of exports. During the first eight months of 1956-57 it shot up to 135, the index of the corresponding period of the preceding year being 106.

Part of the payments difficulties was due to the increased flow of smuggled gold. Gold was now available with comparative ease in the free markets of London and Brussels at the parity price of U.S. $35 per ounce. Formerly, it commanded premiums in terms of U.S. dollars, and dollars to pay for them had to be acquired (mostly) at premium prices. This, coupled with the rise in the rupee price of gold, enhanced the profits of gold smuggling from about Rs. 30 per tola in 1954-55 to over Rs. 40 per tola since March 1956.

To these factors may be added the "leads" and "lags" in payments, inevitable in times of exchange crises. Those who have payments to make abroad rush to do so for fear that the lean supplies of foreign exchange may cause a rise in its price (devaluation) and those who have foreign exchange owing to them would be in no great haste to accelerate the pace of payment as they would gain in the event of devaluation. This would accentuate the immediate payments difficulty. Mention may also be made of the decline in agricultural production in 1955-56, which reduced exports or increased the need for imports, and the closure of the Suez Canal, which added to our freight bill.

The remedial measures, outlined in the Budget White Paper of March 1957, to the problem of foreign exchange scarcity comprise, in the fiscal and monetary spheres, additional taxation, selective credit restriction, and an increase in the cost of certain types of Reserve Bank accommodation. These steps will be supported by releases of foodgrains from Government stocks, fair-price foodgrain shops, larger foodgrain imports from Burma and the U.S.A., a stepping up of the second Plan targets of production of foodgrains and certain other agricultural produce, and increased production of cotton textiles. In the foreign exchange field, remedial action includes the use of I.M.F. resources, increased foreign aid, a further tightening of travel restrictions, reduced imports in the import programme of January-June 1957, and promotion of exports by the adoption of certain administrative and fiscal measures.

Most of these measures are little more than palliatives. Once overinvestment has put expansionary funds into circulation, increased taxation and credit restriction are ill-suited to correct their inflationary consequences. The amount of the revenues (excluding the increase in excise duties) expected in a full year from the supplementary tax proposals of December 1956 is estimated at Rs. 16 crores. This is chicken-feed in face of the proposed budget deficit of Rs. 365 crores in 1957-58. Even if a substantial stepping up of tax collections were practical, it would make no difference to the inflationary situation.

Credit Policy

In a poor economy in which increased incomes would be first directed to the purchase of foodgrains and other essential consumer goods, it would be an uphill task to attempt to hold down their prices when money incomes and general prices were on the uptrend. To the extent a policy of selective credit control may achieve this, it would be a case of selective penalising of the production of, and trade in, essential supplies. If such credit policy was persisted in, even as during the regime of selective price control, under pressure of reduced profits, resources would be shifted away from the production of foodgrains and other essential supplies and their output would suffer. This will aggravate the payments problem as we would, then, have to import increasing quantities of foodgrains from overseas.

To step up the output and imports of foodgrains and other consumer goods would be to work at cross purposes. It would divert resources (including foreign exchange) away from capital formation and would retard the pace of economic development. While a rise in the general level of our consumption was, doubtless, a pressing necessity, an inflationary rise in money incomes through overinvestment was not the best method of achieving it.

A tightening of restrictions on imports and payments, whilst inflation fattened consumption demand, would cause a further corrosion of exports. Potential exports would be diverted into home consumption or production for exports would be switched over into production for home consumption. Our own experience well illustrates this. Notwithstanding an estimated increase of about 18 per cent. in our national income during the first Plan period, the index (106) of the volume of Indian exports (1952-53=100) during the first eight months of 1956-57, when payments deficits born of inflation had led to stricter import restrictions, was below the index in the pre-Plan year (117). As we shall presently see, this factor had caused post-war Indian exports to remain below their pre-war norm.

Cessation of further inflation may not be sufficient remedy to our payments problem as it was also attributable, in part, to the overvaluation of the rupee at the current exchange rate of 18*d.* per Re. 1 As at the second quarter of 1956, relatively to 1937, money supply in India had risen to over seven times. The corresponding rise in the U.K. was 3½ times. During the same interval, the cost of living in India had risen to over three times and in the U.K. to 2.5 times. This suggests a revision of the exchange rate, which had remained unchanged in terms of sterling since before the war.

Exports

Industrial production in India, as at the second quarter of 1956, relatively to pre-war, had risen by 100 per cent. and agricultural production by about 20 per cent. During the same interval industrial production had risen by 52 per cent. in the U.K. This suggests that in both countries the national product had risen significantly above the pre-war level. Nevertheless,

T. KONDO,
Manager.

We have audited the foregoing Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at the 31st day of December, 1956, and also the foregoing Profit and Loss Account of the Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;

(c) The Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the note appearing thereon, gives a true and fair view of the state of the affairs of the Bombay Branch of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the loss of the Branch for the year ended upon that date.

A. F. FERGUSON & CO.,
Chartered Accountants.

BOMBAY, 28th March, 1957.

THE UNITED COMMERCIAL BANK, LIMITED

MR. G. D. BIRLA'S STATEMENT

CONDITIONS FOR REVIVING REAL SAVINGS AND ENCOURAGING CAPITAL FORMATION URGED

THE creation of conditions for reviving real savings and encouraging domestic capital formation was urged by Mr. G. D. Birla, Chairman of the United Commercial Bank, Limited, in the course of his statement circulated to the shareholders at the Fourteenth Ordinary General Meeting of the Bank held at Calcutta on Thursday, 18th April 1957. Mr. Birla pointed to the "very stringent" conditions in the money market and said that bank deposits had not registered a growth commensurate with the growth of economy. He wanted the problem of medium-term credit to be tackled urgently. In his opinion, the idea that the commercial banks should grant medium-term loans ranging from five to seven years out of deposits conflicted with the principles of sound banking. Mr. Birla also touched on the question of external finance required for the second Five-year Plan and emphasised the importance of foreign investment. He observed that the country must welcome this investment, improve the climate for it and make the investor feel that the opportunities for profitable utilisation of capital here compare favourably with those available anywhere else in the world.

The following is the full text of Mr. Birla's statement:

"GENTLEMEN,

"The balance-sheet and profit and loss account for the year ended 31st December 1956 have been in your hands for some time and they bear testimony to the brisk activity of the Bank's business in the past year.

Rise in Profits

"We have been able to show the substantially increased profit of Rs. 56,51,658-8-9 in respect of last year's working. This result is naturally a matter of considerable gratification to the Board, as it would be to you, and the Directors would like to see that it is maintained, and if possible, improved upon. It is, however, necessary, in view of the uncertainties of the monetary outlook and of trade, to sound a note of caution. The resources of banks are not expanding as fast as we would wish, with the result that competition for deposits is very keen, and the rate of interest allowed on deposits has risen. But the rise in the rate of interest charged on advances is not adequate to offset the higher cost of deposit money. Borrowings from the Reserve Bank of India are progressively costing more. Operating costs, of which salaries are the largest item, continue to rise. In these conditions, the maintenance of future profits at the higher level now attained is dependent on increase in business, greater volume of deposits and prevention of rise in working expenses through the achievement of greater efficiency.

"Shareholders will observe that we have considered it prudent in these circumstances to utilise a substantial part of our additional profit to increase our allocation to the reserve fund which now stands at Rs. 1.15 crores. At the same time, we have been mindful of the shareholders and the staff in that we have increased the dividend payable to shareholders and the bonus disbursed to staff.

The Balance-sheet

"*Deposits.*—Turning now to the main features of the balance-sheet, you will notice that the total of current, savings and fixed deposits and other accounts at the end of 1956 stood at Rs. 52.15 crores, as compared with Rs. 47.69 crores at the end of 1955. The increase in deposits of Rs. 4.46 crores represents a rise of 9.3 per cent. in 1956, as against 17.9 per cent. in 1955 and compares with the rise of 7.8 per cent. in the deposits of Scheduled banks as a whole for the year 1956.

"*Cash.*—Cash on hand and with banks was Rs. 7.51 crores and represented 14.4 per cent. of our deposit liabilities.

"*Investments.*—The investments of the Bank in Government and other approved securities stood at Rs. 19.43 crores, which is a reduction of Rs. 2.74 crores from our holding at the end of 1955. In that year, we invested in Government securities the bulk of our increase in deposits, but we have now corrected that position and have effected a more even spread over advances and bills. The cash resources and unencumbered investments, together amounting in the aggregate to Rs. 22.03 crores, give a ratio of 42.2 per cent. to total deposits.

"In view of the bill market scheme of the Reserve Bank of India, our liquid assets are not confined merely to cash and Government securities but also include eligible bills which augment our liquidity.

"*Bills.*—The amount of bills discounted and purchased increased during the year from Rs. 9.74 crores to Rs. 15.92 crores. A good percentage of these are sight bills which are continually falling due, while usance bills are available as collateral for advances from the Reserve Bank of India. You will be gratified to note that this self-liquidating asset forms 30.5 per cent. of the deposits of the Bank.

"*Liquidity Ratio.*—The total of our liquid assets—cash on hand and with banks, unencumbered investments and bills—represents 66 per cent. of our deposit liabilities, which you will agree is a very satisfactory liquidity ratio.

"*Advances.*—Our advances have risen from Rs. 17.85 crores to Rs. 22.54 crores and they form 43.2 per cent. of our deposits. We have endeavoured to meet all legitimate demands of our customers for increased accommodation and, for this purpose, have freely drawn upon the facilities available with the Reserve Bank of India for advances against bills and Government securities.

"*Foreign Exchange Business.*—The foreign exchange business of our Indian and overseas branches has shown a gratifying expansion. Owing to the increase in its activity, our London branch was moved to more spacious premises at No. 12, Nicholas Lane, E.C. 4.

"The credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr. S. T. Sadasivan, and his able deputies and assistants, to whom I take this opportunity to record the thanks of myself and of the Board of Directors. I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results. I also look forward to greater co-operation from them in the current year and the years to come.

Bank Rate

"The official bank rate of the Reserve Bank of India remained unchanged at 3½ per cent., but the cost to commercial banks of borrowing from the central banking institution has been progressively increased. In the first place, the rate of interest chargeable to commercial banks for loans against usance promissory notes under the bill market scheme was put up in two stages from 3 per cent. to 3½ per cent. and the concession that the Reserve Bank of India would bear half the stamp duty on usance promissory notes was withdrawn. Early this year, the stamp duty on bills of exchange and usance promissory notes was raised tenfold to two annas per cent. for three months or part thereof. This has enhanced the cost of borrowing against usance bills by a minimum of half per cent. and, when allowance is made for the fluctuations in the debit balances of customers over a period and of the bank's borrowings against bills, the rise in the real cost is very much more than half per cent. per annum. At the same time, the Reserve Bank rate for advances to Scheduled banks against Government securities was put up to 4 per cent. For all practical purposes, therefore, the bank rate has effectively been raised from 3½ per cent. to 4 per cent. The working of the bill market scheme would, however, be much facilitated, if the Government were to annul the recent enhancement of the stamp duties on bills of exchange and usance promissory notes, leaving it to the Reserve Bank to charge the same rate of interest to Scheduled banks for loans against bills as against Government securities.

"While money rates in India are hardening, there is a retreat from dear money in other international money markets. The Bank of England rate has gone down from 5½ per cent. to 5 per cent., while open market rates in London are more akin to a still lower Bank rate. The Bank rate in West Germany has been brought down in two successive stages from 5½ per cent. to 4½ per cent.

Monetary Conditions

"For the past six months, conditions in the money market have been very stringent and the demand for funds has continued unabated. Short- and long-term factors have been at work in creating these conditions. Among the short-term factors may be mentioned the deflationary effects of adverse balance of payments caused by excessive imports. Imports of machinery have imposed a heavy drain on bank finance and import of iron and steel, which has been exceptionally heavy, has been a new factor in the demand for funds. There has been a basic alteration in the pattern of bank advances, the seasonal character of which has been largely blurred on account of financial requirements of industry being spread evenly throughout the year. Secondly, inventories of trading, manufacturing and engineering companies stood at a very high level. The long-term trend has been the rising demand for money from industries to meet the increased needs of a developing economy. The resources of commercial banks have not risen proportionately to the increased demand. There has been a further tightening of money during the conventional busy season as a result of the requirements of crop finance and of the sugar industry being superimposed on the more stable pattern of industrial demand.

"The problem for the monetary authorities is, therefore, how to meet the legitimate demands for accommodation, while, at the same time, keep inflation in check during a period of substantial development expenditure under the second Five-year Plan.

"It is gratifying to note that the Finance Ministry and the Reserve Bank of India have taken measures to remedy the situation in good time and liberalised the bill market scheme so as to make Central Bank credit freely available to Scheduled banks for the legitimate purposes of credit expansion during the current busy season. Another welcome step is the change in the policy of the Reserve Bank as regards open market operations in Government securities. The sale by banks of Government securities during the busy season was a normal method of providing themselves with funds during periods of stringency, but the Reserve Bank discontinued buying securities since the middle of 1951 save in exceptional cases and banks had, therefore, to put themselves in funds by borrowing from the Reserve Bank. During the current busy season, the Reserve Bank has changed its policy and has bought securities freely from banks. The only unsatisfactory feature is that bank deposits have not registered a growth commensurate with the growth of economy. Conditions have to be created under which there may be a revival of real savings and encouragement to domestic capital formation.

Medium-term Credit

"The problem of medium-term credit has to be tackled urgently. What should be the organisation or institution that should disburse medium-term credit to private industry and how should the large resources required for the purpose be raised? There is already an appreciable element of medium-term financing included in the advances of Scheduled banks and their investments. There is an increase in investments by banks in ordinary and preference shares of industrial companies and in their debentures. The banks have also subscribed to the capital of institutions like the Industrial Finance Corporation, Industrial Credit and Investment Corporation of India and State Finance Corporations, which have been organised to extend long-term credit to industry. Advances have been made by banks against stocks and other approved securities, but, in reality, the money so raised has been utilised for the purpose of expansion of block.

"With the ratio of advances to deposits well over 70 per cent. and, in individual cases, topping even the 80 per cent. mark, it is clear that commercial banks now lack the credit base to carry the load of medium-term finance to industry. 60 per cent. of bank deposits is repayable on demand, another 30 per cent. is probably repayable within three to six months and a bare 10 per cent. of deposits has a year to run. The idea that commercial banks should grant medium-term loans ranging from five to seven years out of the resources of this nature conflicts with principles of sound banking. Whether medium-term financing should be the responsibility of special institutions or whether commercial banks should undertake this additional responsibility, and if the latter is considered the better course, to what extent the well established rules of practice of commercial banks should, at the present stage of development of banking, be modified and what protection should be given in the event of the loans getting frozen, are all matters which have to be carefully enquired into. Banks may legitimately employ a part of their capital and resources not represented by fixed assets in such loans and this they have already done.

"A wider incursion in the field of medium-term loans to industry would require the previous development of long-term deposits from the public. Swiss banks are known to have raised funds through the issue of bonds with a maturity of three to six years and, if Indian banks could issue such bonds successfully, a base for medium-term credit to industry would have been established. In Switzerland, the stamp duty on such bonds is a nominal 1.2 per mille per annum, whereas by virtue of the recent Finance Act, the stamp duty in India has been stepped up to one per cent. If on the analogy of the debentures issued by the Industrial Finance Corporation of India and the Co-operative Central Land Mortgage Banks, the bonds to be issued by commercial banks are exempted from stamp duty, and the interest thereon is made payable after deduction of income-tax at source, as in the case of Government securities, the ground would be well prepared for an interesting experiment.

U.S. Funds

"Such an experiment would, however, take a long time to produce results, whereas the medium-term credit needs of industry are urgent. In view of this, the U.S.A. funds arising from the sale of wheat which are earmarked for assistance to the private sector of industry, could well be handed over to the commercial banks and utilised for medium-term loans to existing industries for the purpose of expansion, such loans to be repaid out of subsequent earnings of the borrowing companies.

"Finance for starting new industries and permanent capital required by existing industries should be left to be raised by issue of new capital to the public through the normal channels and it is here that the Stock Exchange comes into the picture. The Stock Exchange does not create or destroy the prosperity of the country. But it does act as the barometer of the conditions obtaining in industry and, as such, the present low level of activity in the Stock Exchange clearly indicates how confidence in the stability of industry has been shaken among the investors, and how impossible it is for companies, now, to raise any new capital. It is, therefore, necessary to bring about an amelioration in the condition of the middle classes and a revival of the confidence of investors in order that companies might be able to raise new capital through the customary channels.

Success of First Five-year Plan

"The execution of the first Five-year Plan has been acclaimed as a success on all hands and the targets of development and production have been fully achieved and in some cases surpassed. In the field of agricultural production, the output of foodgrains rose from about 54 million tons to 65 million tons; cotton from 2.9 million bales to 4.9 million bales; jute from 3.3 million bales to 4 million bales; oilseeds from 5.1 million tons to 5.5 million tons. In the field of industrial manufactures, the production of cotton textiles increased from 4,618 million yards to 6,850 million yards; sugar from 1.1 million tons to 1.7 million tons; paper from 114 thousand tons to 200 thousand tons; cement from 2.7 million tons to 4.3 million tons; fertilisers from 46 thousand tons to 380 thousand tons and automobiles from 16,500 units to 25,000 units. The first Plan was a modest one which did not strain the available resources. The total investment was very roughly Rs. 3,100 crores, of which the investment in the private sector accounted for a little more than half the total. The net borrowing from the central banking institution, which is the extent of deficit financing, was only Rs. 250 crores. As a result of the financial operations during the first Plan period and the economic development during the period, bank deposits went up from Rs. 882 crores to Rs. 1,042 crores and the currency notes in circulation from Rs. 1,247 crores to Rs. 1,467 crores. Thus, the total money supply during the first Plan period increased by Rs. 380 crores.

"Another factor to be noticed during the execution of the first Plan is the very substantial contribution made by the private sector for the success of the Plan. In the first Plan period, though the overall investments by the public and the private sector were about equal, the investment outlay in the large and medium industries by the public sector was Rs. 148 crores, as compared with Rs. 340 crores by the private sector. The private sector was able to mobilise the resources required and contributed in such a spectacular manner to the rise of industrial production during the first Plan period.

Wide Scope for Private Enterprise

"Turning to the second Five-year Plan, the industrial development by the public sector in the field of large and medium industries and minerals envisages an investment of the order of Rs. 700 crores, whereas the investment allocated to the private sector is Rs. 575 crores over new projects and Rs. 150 crores on replacement and modernisation. It will thus be seen that, from the financial point of view, the private sector is invited to play as important a part as the public sector in the field of industrial development. In this connection, it should be borne in mind that the bulk of the investment in the public sector relates to the three steel projects, heavy electrical machinery, machine tools and fertilisers, all of which, in any case, could not be developed by private enterprise without a very substantial backing from the Government. The wide range of industries awaiting development and expansion on a big scale in the private sector are the iron and steel, ferro-manganese, refractories, aluminium, cables, heavy and light engineering industries, automobiles, railway wagons and rolling stock, casting, industrial machinery, bicycles, motors, transformers, chemicals, industrial explosives, dyestuffs, rayon, sugar, cement, plastics, paper and a host of medium-sized industries too numerous to mention. It is, therefore, on the private sector that the responsibility of normal expansion of industries is placed and the private sector has, therefore, plenty of scope for its initiative and resourcefulness. There is, therefore, no need to emphasise the demarcation between the public and private sectors or to harp upon any imaginary conflict between the two.

Foreign Exchange Gap

"We are, however, faced with the most serious problems when we turn to examine the resources available to both the public and the private sectors for the execution of the various tasks allotted to them. In my speech last year, I drew your attention to the seriousness of the inadequacy of foreign exchange resources to carry through the Plan. I then estimated that the foreign exchange required would be anything between Rs. 1,600 and Rs. 2,000 crores and that, even on the basis of the lower figure, there would be a deficit of Rs. 800 crores to be found. This gap has turned out to be wider than anticipated. But if I had foreseen serious difficulties in respect of foreign exchange, I admit I had not expected similar difficulties in the availability of internal capital which has now suddenly become so scarce. Even if we had adequate external finance, without its rupee counterpart, obviously, no industry could be built up. Internal finance has, at present, become so dear that even the best industrial scrips are selling on 8 to 10 per cent. yield basis. With the interest rates so high, who would invest his savings in a new venture with all its concomitant uncertainties? If none, then how is the Plan to be implemented? The external and the internal finances are the two main rocks on which the Plan may wreck and, therefore, we cannot afford to ignore the danger.

Voluntary Savings

"The plain truth of the matter is that the resources for the Plan can come only from savings, whether forced or voluntary. Forced savings can be effected through direct and indirect taxation and such measures as compulsory deposit of reserves. Voluntary savings emerge from the profits of companies and personal savings, and it is these that form the sources of funds for capital investment in new companies in the private sector. With individual taxation at a very high level, there is very little money with the private investor to subscribe to new issues, and the middle class investor, who formed the backbone of every flotation of capital in the past, has ceased to exist. Since the advent of independence, we have looked after the rural and industrial areas very well, but have neglected the middle class, a fact which is perhaps reflected in the recent elections. We must henceforward lay greater emphasis on the prosperity of the urban area—the cities—if the middle classes are to be rehabilitated and reconstituted as a source of support for industrial flotations.

"As regards corporate savings, there has unfortunately been a sudden change in the pattern of industrial profits in recent months. The jute industry is in a bad way and had a record of disastrous losses during 1956. The textile industry, which was doing well a few months back and was expanding production enormously, is now finding it difficult to sell its products. I venture to hope that this is only a passing phase. If not, it is a real danger to production. Tea prices have gone down and the profits of tea companies and the foreign exchange earnings arising out of the export of tea have declined. The coal industry has its own special problems. It is only cement, steel, paper, engineering and a few other miscellaneous industries which are really enjoying prosperous conditions. I do not mean to say that there is anything in the nature of an industrial crisis brewing, but I certainly feel that the present net earnings of industry are not conducive to large-scale investments and quick expansion of production.

"The Finance Minister has rightly remarked in some of his speeches that he was not against earnings but that he desired these earnings to be utilised for the benefit of society. This objective is undoubtedly one which will find echo from every quarter, but, rather than have the earnings put to good use through compulsion, it would be better to achieve the desired result through methods of persuasion.

"The experience in all democracies has been that, without a friendly climate and expectation of reward, there has been no industrial expansion either in the private or in the public sector. Even the public sector can only thrive upon profits. It appears to me that, for development of internal finance, the first and foremost action that we have to take is to revive confidence and create conditions conducive to the greater earning by industrial concerns to be ploughed back for expansion schemes.

Private Foreign Investment

"As for external finance, the search for foreign credits and extended terms of payment goes on and may afford some relief and so also the borrowing from the International Monetary Fund and the World Bank. The time has now, however, come to revise our attitude towards the private foreign investment, which, if freely encouraged, could go a long way to solve our problem of the exchange gap. History teaches us that all backward countries have been built up with the help of foreign capital, and we cannot afford to ignore the lessons of history. We must appreciate the fact that we can build up India quickly only through the help of foreign capital and, since we are an independent nation, I do not see why we should be afraid of it. I feel, therefore, that not only should we allow foreign investment without any restriction but we should welcome it, improve the climate for it and make the investor feel that the opportunities for profitable utilisation of capital here compare favourably with those available anywhere else in the world. Sometime ago, the Finance Minister stated that he was not against foreign capital but that it had to make peace with Indian capitalists. I hope Indian industrialists will not take a narrow view of the situation, but, in the higher interests of the country, make it absolutely clear that they welcome foreign capital.

"I have tried to deal at some length with the question of internal and external finance required for the second Five-year Plan and have also suggested measures which may lead to the establishment of a better atmosphere. I am sure the Hon'ble Finance Minister is already aware of these considerations. Mr. T. T. Krishnamachari is no novice in the field of finance. As Minister for Commerce and Industry, he gave a great fillip to production and left the Ministry with a brilliant record of achievement. He may, therefore, be trusted to apply his talents to the financial problems of the second Five-year Plan and achieve greater success in his new sphere of responsibility. The Commerce Ministry is now presided over by an equally able Minister, but like the Finance Minister, he is also faced with great problems. I am, however, confident that he would solve the difficulties in such a way that production and trade expand during his stewardship. With these two key portfolios in the hands of such distinguished Ministers, I look to the future with faith and optimism."

THE ANDHRA BANK, LIMITED

ESTABLISHED: 1923

Head Office: **MASULIPATNAM**

The Report of the Board of Directors to be presented to the Shareholders at the 33rd Annual General Meeting to be held at the Registered Office of the Bank, Cantonment Road, Masulipatnam, on Saturday the 4th May, 1957 at 3 p.m.

The Directors have the pleasure to submit to the Shareholders the audited Balance Sheet of the Bank as at and the Profit and Loss Account for the year ended 31st December, 1956, and the Auditors' Report thereon. The net profit of the Bank for the year 1956, after payment of 24 months' substantive salary as bonus to staff and after making necessary provision for contingencies, amounts to Rs. 8,45,793-7-0 and including a sum of Rs. 12,374-15-6 brought forward from the previous year's account, the total amount available for appropriation comes to Rs. 8,58,168-6-6. Out of this the following interim appropriations were made by your Directors:

	Rs.	a.	p.
Interim dividend for the half-year ended 30th June, 1956, at the rate of 7½ per cent. per annum free of income-tax	1,29,972	4	0
Transfer to Statutory Reserve under Section 17 of the Banking Companies Act, 1949 ..	1,76,000	0	0
Transfer to Investment Reserve	50,000	0	0
Transfer to provision for Taxes	3,45,000	0	0
Your Directors now propose:—			
To pay a final dividend for the half-year ended 31st December, 1956, @ 8½ per cent. per annum free of income-tax making a total of 8 per cent. per annum free of income-tax for the year 1956, which will absorb	1,45,200	0	0
To carry forward to the next year's account	11,996	2	6
Total .. Rs.	8,58,168	6	6

The official rate of the Reserve Bank of India remained at 3½ per cent. per annum during the year.

Demand for bank finance was very keen throughout the year.

A Branch at Hyderabad, Capital of Andhra Pradesh, and two Sub-Offices at Tadepalligudem and Anaparti were opened during the year.

Sri Dantu Suryarao, one of your Directors, resigned in October, 1956, owing to failing health and in the vacancy Sri Dantu Bhaskararao has been co-opted. The Directors have learnt with profound sorrow of the demise of Sri Dantu Suryarao on 25th March, 1957.

Messrs. K. S. Datt, B.Sc., R. Satyanarayanamurty and B. Venkateswarlu, Directors, retire by rotation and from the next bonfest in office, Sri S. R. Y. Sivarama Prasad Bahadur has volunteered to retire. The retiring Directors are eligible for re-election.

You are requested to appoint Auditors to hold office until the conclusion of the next Annual General Meeting and to fix their remuneration. Messrs. Brahmayya & Co., and Ch. V. Lakshmaiah & Co., the retiring Auditors, offer themselves for re-appointment.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR,
Chairman.

29th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956

TECHNICAL AND HUMAN FACTORS IN ECONOMIC DEVELOPMENT

RESPECT FOR DIGNITY OF INDIVIDUAL ESSENTIAL

By W. S. Woytinsky

THE modern economic system rests on a combination of technical, social, political and psychological premises. It would not have reached the present level of efficiency, if our science, technology, socio-political organisation and, above all, modern man, were not what they are. The factors that have moulded our modern economy are so interwoven that it is difficult to disentangle them and assess the significance of each of them separately. The concept of productivity illustrates this point. When trade union economists talk of the "rising productivity of labour," this term has a definite connotation, suggesting that labour is to be credited with the growth of the economic system. On the other hand, when production engineers and business economists describe rising productivity as the mainspring of economic progress, they think primarily of technical factors in economic growth. Productivity experts of the United States missions abroad, like all technicians, are sometimes inclined to overemphasise the technical aspect of the programme and thus fail to arouse enthusiasm for it in the ranks of organised labour.

Perhaps, it is as impossible to assess the respective parts played by human and technical factors in economic progress in modern industrially developed nations as to assess the respective roles of a mountain climber's two legs in reaching the top of a 20,000-foot (6,000-metre) peak. He cannot credit each leg with having brought him to an elevation of 10,000 feet (3,000 metres). The question of the role of the two groups of factors in economic growth becomes real and of practical importance, however, when a newly developing area considers plans for rapid industrialisation and must allocate its limited resources among different projects designed to promote its economic growth.

Let us consider the practical question faced by nations engaged in ambitious plans of industrialisation. The Governments of such nations are aware that a mechanised economy demands special skills which their people do not possess. They are eager to send their young men abroad for technical training, they invite foreign technicians to visit them, and they establish training centres for all technical skills. One occasionally hears criticism of these programmes. Some trainees from underdeveloped areas, after having acquired needed skills abroad, decide not to return home. Others return, but find it difficult to go back to the traditional ways of life of their countrymen. Some of them may become frustrated and alienated from their own people. Some come back with grudges against the countries in which they have been trained. Similarly, the work of foreign technicians in newly developing areas does not always meet all expectations. Lack of mutual understanding between them and their hosts is commonplace and, without such understanding, their special skills may be of little use in the new environment. Local training centres also are not always effective. Some suffer from lack of proper equipment, others from inadequate management and unrealistic programmes.

All in all, however, exchanges of persons and training projects are among the most successful ventures in the technical assistance programmes of the United Nations and the United States, and the Colombo Plan within the British Commonwealth. People of the developing areas have proved themselves able to absorb the technical skills of the modern industrially developed nations. The British experiment with large-scale peanut plantations in tropical Africa has shown that bushmen from the jungle can drive a bulldozer after two or three weeks' training. Records of the training of workers of the Middle East, the highlands of South America, and South East Asia are equally telling.

There is little doubt that individual technical skills are not hereditary and do not require long preliminary education. Most of them can be readily transferred without long apprenticeship and cultural conditioning of the trainees. Indeed, the characteristic of most operations in a modern factory is their simplicity. It takes much time to learn how to maintain motors and to repair them, but, as our automobile age shows, a man or woman can easily be shown how to operate a motor until it breaks down.

In general, modern plants do not require more technical skill of the operatives than primitive handcrafts. My wife and I have seen Indian brocade weavers at work and watched most intricate designs, like miniature paintings

AUDITORS' REPORT.

We have examined the Balance Sheet of the Andhra Bank Limited, as at 31st December, 1956, and the Profit and Loss Account of the Bank for the financial year ended on that date, with the books of account of the Head Office and Branches.

We report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

(b) Such information and explanations have been found to be satisfactory;

(c) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(d) Proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;

(e) In our opinion proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books;

(f) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the Books of Account of the Head Office and Branches;

(g) In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of affairs of the Bank as at the end of the financial year and the Profit and Loss Account gives a true and fair view of the profit of the Bank for the financial year.

on ivory, emerge under their deft fingers. There are few jobs in a modern factory which require more precision and concentration than certain types of work on a handloom! People who can master such intricate work can be taught any other manual skill. Thus, innate disposition and differences in cultural background do not bar people in newly developing areas from attaining technical skills required in mechanised mass production.

With some reservations, this statement also applies to professions which require considerable scientific preparation such as medicine, architecture and engineering. In modern, economically developed nations, a person enters such professions after 15 or 20 years of general and special education combined with strenuous competition and strict selection. Of course, this process cannot be replaced by quick training courses, but there is no evidence that young men in newly developing areas who are subjected to the same type of education, training and selection will not become technicians of the same stature as those in prosperous modern nations. The intelligentsia of India illustrate this point.

To sum up, in so far as individual skills are concerned, nothing keeps the newly developing areas from rising to the level of modern industrialised nations.

Modern Technology

The same situation exists with respect to the technical factors in economic progress. Modern technology is highly transferable. Airfields with all their modern electronic devices can be established in deep jungles, in the heart of a desert or on an inaccessible plateau surrounded by glaciers. Modern hydro-electric power stations can be built on the Nile, on the slopes of the Himalayas and among the precipices of the Andes almost as readily as on the St. Lawrence River. Most efficient, ultra-modern oil refineries have been erected not in the leading industrial areas but in the wilderness, close to the richest oilfields. The question of logistics is only a matter of cost and time. Wherever modern industrial installations are built, they follow the same international blueprints. The same firms are building them in all corners of the world. A photographer taking a picture of such installations in a newly developing area finds it difficult to indicate the *couleur locale* unless he can induce a few nationals in local garb to pose in the picture.

The new means of transportation—the motor and the airplane—have tremendously increased transferability of modern technology. In the nineteenth century, factories were tied to railroads, harbours and waterways. Today they can be established anywhere.

The increasing transferability of modern technology has been combined with far-reaching changes in the attitude of people. In the past, even in the nineteenth century, industrially developed nations tried to preserve their exclusive position as workshops of the world. The world economy was organised as a pyramid, with production of raw materials spread widely over our planet and the processing concentrated in the hands of half a dozen leading nations. This pattern of world economy, which found its expression in the system of colonial empires, has been swept away by technological and political developments in the past four decades.

With the end of the colonial era, the old international division of labour has also come to an end, The drive toward industrialisation stirs former colonial and semi-colonial areas, and their former masters have given up any attempt to stop this movement. Contrary to their traditional policy, they support the efforts of the emerging countries to establish a more or less self-sufficient economy, and their new policy has found expression in the Technical Assistance Programmes mentioned earlier. This policy, whatever its motives, tends in the long run to liquidate the old vertical organisation of the world economy, to abolish the rigid division of labour between industrial and agricultural areas, and to establish a wider geographical distribution of industrial production.

To the extent that modern industrial nations are willing to support the drive of underdeveloped areas toward economic independence and industrialisation, they can do so only by stimulating the technical and human factors favourable to economic progress in these areas. Such a policy requires planning and assessment of the relative significance of each single factor, by itself and in combination with other factors.

Current economic planning in areas engaged in the programme of rapid industrialisation is based essentially on the idea of accelerating capital formation and directing investment toward strategic industries. Allocation of investments is the main issue in India's Five-year Plan. The same idea predominates in national programmes in the Colombo Plan. This does not exclude the strong interest of the planners in such problems as education and health services, social welfare or resettlement and rehabilitation of refugees, but these and similar issues are dwarfed for them by their main goal, which is the development of the productive forces of the nation by investment of funds in its industrial plant, in the broad sense of the term. The reasoning of the planners runs as follows:

Poor as our economy is now, it has valuable unutilised natural and human resources. It needs more mines and factories to develop its natural resources and provide jobs for the unemployed. This goal demands capital outlays. Domestic private capital formation is insufficient, however, and the people who have money are reluctant to invest it in the nation's industry. It is, therefore, up to the Government to accelerate capital formation by taxation, credit operations, foreign loans and—if possible—foreign grants. It must direct the available funds to productive projects, even if this requires, temporarily, a regime of austerity for the people and delays some social reforms and social welfare measures.

The planners are ready to meet the objections of those who demand that more attention be given to the problems of immediate human interest and, first of all, to education. Surely, the country needs more schools, they say. But compulsory education is very expensive. In contrast to industrial projects that require initial capital outlay but promise to add to national income in the future, each new school is a new source of future expenses. A poor country cannot afford a precipitous expansion of its school system. First, it must strengthen its economic structure by establishing new sources of income. Later it will have time to think of such projects as the eradication of illiteracy and improvement of educational and health standards.

This reasoning would be defensible only if substantial industrial progress and increase in national income were possible without sweeping changes in the psychological and social climate of a country, or if industrial progress could be effected without raising the educational and health standards of the masses of the people. Lack of adequate attention to these human factors in the economic growth is the weakest point in many plans for rapid industrialisation.

Other Regrettable Errors

A close examination reveals other regrettable errors in some of these plans. Their immediate objectives are often determined on the basis of political, military and psychological motives, regional pressures and the whim or insistence of political leaders particularly interested in one or another type of projects. Injection of the argument of national prestige into the plans of industrialisation can be most harmful. Cement and brick factories, textile mills, production of small tools, sugar, candles, paper, soap, and caustic soda tanneries, paint, varnish and glass factories and production of other consumer goods are not spectacular enough for some enthusiastic planners. True industrialisation, they maintain, must begin with automobile and aircraft factories, production of heavy machinery and electronic devices, nuclear reactors and steel rolling mills.

Assessment of high priority to steel rolling mills is defensible in a country that has iron ore, coal and manganese and yet imports large quantities of iron and steel for its railroads, highways, buildings and other industries, as in India. But public opinion may demand a steel rolling mill in an area that has no raw materials that go into production of steel and is not ready to develop machine industries. Usually, after a long discussion, the Government rejects or postpones the obviously extravagant projects but occasionally a totally absurd plan may be approved by a well-intentioned Government that lacks experience in economic matters.

The contention that a Government can accelerate the industrialisation of a country by purely mechanical means, spending tax money and borrowed funds on purchase of new factories introduces an element of unreality into economic planning. Economic and industrial progress ceases to be considered as a component part of historical evolution. Experience of other nations is tossed out of the window, supplanted by new home-baked theories, some of them of doubtful validity. One such fallacious theory is, in my opinion, the contention that industrialisation of an underdeveloped area should start with the development of heavy industries and manufacture of capital goods.

Except for Great Britain, which led the rest of the world in industrialisation, all nations that later reached a high level of economic development have faced the problem of priorities of different branches of production at one time or another. Their common goal has been to accelerate their economic growth. Because of the difference in historical and geographic conditions, they developed various patterns of economic policy, but there are some common features in what they have done to foster their infant industries. I believe that their experience has firmly established three principles: (1) Industrial progress requires political security, adequate means of transportation, an aggressive and imaginative managerial class, continuously rising purchasing power of the people, a flexible and mobile labour force, and competent technicians. (2) The basis of industrial progress is processing domestic raw materials for domestic consumption. (3) The Government can accelerate the progress of industrialisation by encouraging import of capital goods and discouraging import of certain types of consumer goods.

I do not mention here the need for adequate capital formation and investment because these are manifestations of industrial development rather than its controlling factors or premises. In brief, I believe that sound principles of policy of rapid industrialisation were established as long ago as the time of Alexander Hamilton in the United States and Friedrich List in Germany. Whether we like or dislike these two names and all that is associated with them, their ideas on the policy of industrialisation have been vindicated by history.

A Strange Twist

Lack of interest in the lessons of history explains a strange twist in the thinking of economic planners in newly developing areas. Some of them believe that economic planning was invented in the U.S.S.R., the first country that consciously adopted rapid industrialisation as its goal. There is no doubt that the Russian Five-year Plans are largely responsible for the economic philosophy that has spread widely in newly developing areas.

According to this philosophy, development of consumer goods industries does not lead to rapid industrialisation and is incompatible with the idea of a planned economy. A country must start with building of factories for producing machinery to equip, later, other factories which will turn out consumer goods. A corollary of this theory is that increase in consumption and development of the domestic market must be discouraged in the early phase of industrialisation and the people must be called upon to sacrifice their welfare to the new deities: Industrialisation and Heavy Industry. There is more mysticism than logic and commonsense in this cult of the Iron Calf. The results of the Russian economic experiment have not been very encouraging, and there is no evidence that it can be duplicated by a free nation.

Over-emphasis on Heavy Industry

Apart from these considerations, overemphasis on heavy industry and disregard for human needs and the human factor in economic growth are more likely to slow down the economic progress than to accelerate it. Indeed, this approach undermines progress in education, weakens private initiative, and turns the attention of the Government from its most urgent tasks toward projects of minor value for the people. It is shortsighted to sacrifice the present generation to doubtful speculations about the remote future.

Furthermore, if a country begins industrialisation by building factories for making machines for industries which are not yet established, the chances are that it will turn out industrial equipment that is inferior in quality and more expensive than better equipment available on world markets. Contrary to Hamilton's and List's plans, which tended to provide their countries with the best and most modern equipment money could buy, the Governments that follow the new policy are likely to cripple their infant industries by saddling them with overpriced second-rate machinery which may become obsolete before it can be put into operation.

It seems to me that the philosophy that heavy industries are the foundation of industrialisation has been accepted by newly developing countries without due attention to the nature of economic growth. That philosophy

NOTE.—In accordance with the usual practice of the Bank, interest accrued on Investments but not due on 31st December, 1955 and 1956, amounting to Rs. 1,50,470-7-9 and Rs. 1,96,260-8-2 (gross) respectively, has not been taken into account as at those dates.

(Sd.) D. D. WATTERS,
Chief Manager.

We have audited the foregoing Balance Sheet of the Indian Branches of Grindlays Bank Limited, as at the 31st Day of December, 1956, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the returns of Calcutta (Canren Lane Branch) audited by other Auditors, and the unaudited returns of Calcutta (Brabourne Road), Madras, Delhi, New Delhi and Simla Branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;

(c) The Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

BOMBAY, 28th March, 1957.

KEY FACTORS IN DETERMINING ECONOMIC GROWTH—II

IMPORTANCE OF DEMOCRATIC PLANNING

By M. C. Munshi

IT is quite common for economists to come to the conclusion that for initiating *change*, in an underdeveloped economy, the State must be the principal agency. Granting this key role of the State, let us ask ourselves some pertinent questions: What are the methods by which the States will play this role of entrepreneurial innovator? Are the existing methods found satisfactory? Or have they, in their operation, shown great bottlenecks? Have we developed objective methods of judging their performance? What are the consequences on the working of the Plan if these public enterprises in the organised industrial sector do not deliver the goods?

It is true that very little is yet said of these matters in the literature on economic growth or on the technique of economic planning. But the significance of these issues will be realised when we remember that even before the first Plan was launched, we had an important public sector which accounted for about 48 per cent. of employment in the organised industry. The rapidly mounting emphasis that has, since then, been placed on this sector must bring questions of its working to the fore in terms of its ability to deliver the goods. The U.N. Experts Group's Report on Measures for the Economic Development of Underdeveloped Countries obliquely raised such questions. They speak of appropriate legislative and administrative action though they confine themselves to "border-line functions" of State initiative. "When new development is confined to public enterprise, its speed will be determined by the rate at which Governments can mobilise their capital, skill and enterprise and its efficiency will be determined by what Governments can manage to attain.... Every country must decide for itself where it wishes to draw the limits of the public sector."

After the advent of freedom—especially after April 1948—we have been evolving a certain pattern of our public sector: (1) Enterprises owned and managed on departmental lines, (2) statutory corporations and (3) public corporations. Briefly, the objectives of this approach to public ownership are in terms of (1) public accountability, (2) planning against unemployment, (3) opportunity for promotion by ability, (4) extension of industrial democracy, and (5) replacing private gain by service and responsibility to the community. Space would forbid us from discussing the many issues that the management and accountability of these forms undoubtedly raise. But it must be emphasised that while many countries have, in the last 30 or 40 years, favoured "public corporations" "as the best of both worlds" their implications are yet slowly unfolding themselves and the various forms of ownership and control are yet in an experimental stage. They may be clothed with the powers of Government (as President Roosevelt said) but they have not yet shown to be possessed of the flexibility and initiative of private enterprise. Further, it cannot be said that this failure is due to want of appropriate administrative or legislative action or—as is often asserted in our country—to want of requisite personnel.

Let us realise that the working of these various forms has raised vital questions of (1) degree of parliamentary control, (2) internal management of authority, (3) protection of the consumer and the taxpayer, (4) training of business leadership, and (5) criteria of judging their performance. On questions of political and administrative organisation there is a volume of growing debate even in our country. For instance, a recent trend of criticism against such corporations is that they have tried to by-pass the authority of the Government with regard to details of scrutiny and audit and the Estimates Committee and the Public Accounts Committee have been helpless in this respect. Let us, however, focus our attention on some structural issues. (1) Has it not been found that freedom from financial control and freedom from political control are more closely associated than was generally assumed? (2) Is it to be assumed that under public enterprise (including *nationalised industries*) if the profit motive is eliminated, does it also mean that the incentive to exploitation too has vanished? (3) The profit motive may be replaced by service but does this not also mean that the principal criterion of efficient management is avoidance in many cases and minimisation, in some, of loss? (4) What is the principle of "disinterestedness"? (5) Are prices to be fixed on the basis of marginal cost or on average cost? Further, when we talk of business principles in the public corporations we must remember that, in the latter, there is the ever-present danger of overcapitalisation. The problem is not one of merely safeguarding the national interests without encroaching upon the administrative independence of the organisations and usurping their managerial responsibility, but of evolving objective criteria for judging their performance.

These problems are not peculiar to our country and are increasingly clamouring for solution elsewhere too. Let us, therefore, recognise the limitations to the public sector implied in them. In fact, Great Britain has of late been showing hesitation in pushing forward the existing methods of public control. There is need for a similar realisation in our country. It is necessary to devise satisfactory methods of their managerial accountability and performance and not depend on the emotional fervour of State socialism. This will mean not merely planning "from above" but planning "from below" as well—such as material budgeting, financial and manpower balances and productivity targets. Briefly, this means that a good part of the management technique of private business must be imbibed by the "public business." There is in our country an inadequate appreciation of the organisational changes which the industry in the private sector, especially that in advanced countries, has been undergoing such as the increasing impersonalisation of management decisions, the equity-holder losing his functions.

This brings us to the third proposition that we have raised, namely, democratic planning. It has often been asserted—and rightly—that our plans are essays in democratic planning. It is true that the opening chapters of the second Five-year Plan do not repeat the first Plan's emphasis on the democratic character of our planning and speaks increasingly of the sanctions or regulatory devices for a comprehensive plan. But, as we have already seen, the basic objective still remains that of "securing economic advance along democratic and egalitarian lines." There is also an awareness that there is an immeasurable advantage in democratic planning over the comparatively more cohesive totalitarian planning. The second Plan does assert that expansion of the public sector should not mean centralisation of decision and of authority. This should enable us to avoid the almost fatal mistake of totalitarian planning in that "the fortunes of a whole trade or area should not depend on the foresight of a single centre of decision." Mistakes may be committed but democratic planning implies that once a mistake has been discovered the planning authorities would not keep on hoping against hope, that the tide would somehow turn in their favour so that they could then avoid the more arduous course of rectifying the error.

We have thus reached three main conclusions in the foregoing paragraphs. We have not belittled the importance of rate of capital formation—indeed, "it can be safely said that humanity's material welfare depends more on a proper comprehension, on as wide a scale as possible, of the role of capital formation and the conditions of securing it as quickly and humanely as possible than on any other factor." But the rate of savings and their transformation into capital are brought about by a rise in productivity in the economy or the sectors concerned. Really speaking, this is not so unorthodox a view as the economic theorist might appear to take. Indeed, in a recent publication, entitled "Capital Formation and Economic Growth," Simon Kuznets argues that the proportion of income saved does not necessarily rise with the real income per head. We may also add that our contention is also strengthened by the recent trends in the U.K.

Secondly, economic growth is not a mere mechanistic sequence of favouring investment into any one sector and watching its expansion through the gadget of the accelerator effect. Co-ordinating financial with physical planning really implies that you also make for efficient uses of your resources. It would then seem imperative that the criteria for measuring the performance of the expanding sectors must be laid down. Not a few of these have to be borrowed from the private sector.

Thirdly, if democratic values are to be retained and if the great experiments on which we have launched are to be tenaciously pursued for realising lasting results, let us avoid concentration of economic power—and its consequences in any shape or form.

(Concluded)

AUDITORS' REPORT.

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited under Section 228 of the Companies Act, 1956, by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

CALCUTTA, 7th March, 1957.

WIDE SCOPE FOR EXPANSION OF PLASTICS INDUSTRY

QUALITY OF PRODUCTS SHOULD BE RAISED

THE view was expressed by Mr. Morarji Desai, Minister for Commerce and Industry, in the course of his address to the Tenth All-India Plastics Manufacturers' Conference held in Bombay on 19th inst., that the plastic industry had a great future if it was run on right lines. One of the foremost requisites for the successful functioning of the industry, according to him, was to keep abreast of modern developments. A second one was augmenting of exports, which declined from Rs. 16 lakhs in 1953-54 to Rs. 7 lakhs last year. The Minister rightly pointed out that the raising of the competitive power of the industry through production of standard goods and reduction of costs would go a long way in improving the export prospects.

Plastic products, as is well known, find wide application in a number of industries, such as engineering, building, chemical, electrical, telephone, radio, transport, textiles, medicine and a host of others. Despite this capacity for wide application, which is sometimes much greater than that of the products of natural resins because of a number of special characteristics enjoyed by synthetic resins, the *per capita* consumption of plastics in India is very low as compared with certain advanced countries. To cite only a few examples, their *per capita* consumption in India is as low as 0.06 lb., as against 2.066 lbs. in Japan, 12.04 lbs. in the U.K., and 20.33 lbs. in the U.S.A. This shows the great scope there is for the expansion of the industry. Indeed, the industry has made considerable progress during the last eight years, though it was almost non-existent before the war. In the moulding branch of the industry, there were in 1955-56 more than 80 firms, concentrated mainly in Bombay and Calcutta, as against 40 in 1948. Of these, about 40 are on the active list of the Development Wing of the Ministry of Commerce and Industry. These firms possess 187 compression moulding presses with a capacity of about 12,600 tons, 244 injection moulding machines with a capacity of about 685 oz. and 47 extruders of sizes ranging from 1" to 4½". Production of moulded items, computed by the Development Wing, is as under:

Plastic Moulding

(000 gross)

1952	... ...	1,544.1
1953	... ...	1,357.2
1954	... ...	1,302.0
1955	... ...	2,516.4
1956	(estimated)	3,700.0

Plastics Items

Further, the production of various plastics items has also increased considerably. The production figures of certain important items for 1954 and 1955 are given in the table* below:

Item	Annual capacity	Production 1954	Production 1955
Laminated sheets (in tons) ..	450	99	140.3
Spectacle frames (in million pieces) ..	1.80	0.7	0.7†
Tooth brushes (in million pieces) ..	24	3.7	4.6†
Fountain pens (in million pieces) ..	Variable	5	6
Plastic buttons (in million gross)	1.43	0.95	1.3
P.V.C. cables and wires (in million yards).	8.6	4.23	10.87
Leather cloth (in million yards) ..	5	1.3	2.62
Polythene film and lay flat tubings (in tons, single shift)	234	366.3	381.8
Bakelite electrical accessories (in gross)..	..	38,462	50,453†

* These figures are taken from the table given by Mr. B. D. Garvare, in his article in the *Times of India*, dated 19th instant.

† Provisional figures.

As can be seen from the table, some of the items which have witnessed substantial increase in production are laminated sheets, tooth brushes, fountain pens, P.V.C. cables and wires, and leather cloth. An important feature of the development during the last few years is the commencement of production of certain items such as phenolic laminates and polythene film and lay flat tubings, production of P.V.C. unsupported sheets and film by calendering process.

An important feature with respect to the raw materials of the industry is that, with the exception of phenol formaldehyde moulding powder, production of which in the country is fairly large, all others are largely imported to meet the internal demand. The table below gives the figures, computed by the Planning Commission, for the current demand and the estimated demand by the end of the second Plan for some of the important raw materials.

(In tons)

Item	Estimated demand for 1955-56	Estimated demand for 1960-61
Phenol formaldehyde moulding powder ..	800	1,200
Urea formaldehyde moulding powder ..	300	500
Cellulose acetate and cellulose acetate butyrate moulding powders and sheets ..	400	800
Nitro cellulose, industrial (for celluloid, leather cloth and laquers)	250	600
Polystyrene	2,500	3,500
P.V.C. resins/compounds	400	N.A.
P.V.C. sheets	400	N.A.
Polythene moulding powder	600	3,500

N.A.=Not available.

In the case of phenol formaldehyde moulding powder, the existing capacity in the country is estimated at about 1,180 tons. In 1955, the production was estimated at 715 tons. A noteworthy development in the field of raw materials is that a plant is being installed in Bombay by Messrs. Polychem Limited for the manufacture of polystyrene in collaboration with Messrs. Dow Chemicals Co. of U.S.A. The plant, the capacity of which is 6 million lbs. per annum, is expected to go into production shortly. Further, Imperial Chemical Industries (India) Private Ltd. and the National Carbon Company have also plans for the manufacture of the same product. The total capacity of the two plants will be of the order of 5,100 tons. Other raw materials for the production of which in the country plans are afoot are urea formaldehyde moulding powder, cellulose acetate moulding powder and P.V.C. compositions from imported acetate flakes and P.V.C. resins.

Targets for Second Plan

Having regard to the programmes already under implementation or consideration, and with a view to meeting fully from domestic production the demand for moulding powders as soon as possible, the second Plan has put the targets for capacity to be attained by 1960-61 at 12,810 tons per annum, as against 1,180 tons in 1955-56. During the same period, the production is also expected to increase from 725 tons to 10,600 tons.

It will be recalled that certain sections of the plastics industry have been enjoying tariff protection since 1950, though, in pursuance of the recommendations of the Tariff Commission submitted last year, protection was discontinued to electrical accessories as from 1st January 1957. The Commission recommended, among other things, that formaldehyde moulding powder and buttons should continue to enjoy protection till the end of December 1959 at the existing rates of duty. Besides, the Commission also recommended that the manufacturers of phenol formaldehyde moulding powder having a minimum annual production of 200 tons would continue to enjoy "drawback" of customs duty in respect of the three raw materials. The Government has also allowed "drawback" of customs duty in respect of three other moulding powders, namely, polystyrene, cellulose acetate and cellulose acetate butyrate moulding powders to enable the manufacturers to reduce the price of their products and to compete successfully in foreign markets. These factors, in addition to the generally restrictive import policy in force at present, should not only enable the industry to attain the targets fixed for the Plan in time, but also to reduce imports and augment exports, considerably. During the last six years, it may be noted, imports of some of the plastic raw materials and manufactures increased significantly. In the case of synthetic resins and moulding powders, the value of imports rose from Rs. 113.74 lakhs in 1950-51 to Rs. 231.4 lakhs in 1955-56. During the same period, imports of semi-fabricated plastic materials went up from Rs. 46.67 lakhs to Rs. 96 lakhs and those of finished plastic goods (not classified elsewhere) climbed up from Rs. 1.06 lakhs to Rs. 4.36 lakhs. On the other hand, the exports witnessed a decline from a value of Rs. 15.98 lakhs in 1953-54 to Rs. 7.62 lakhs in 1955-56.

Certain Handicaps

The industry, however, suffers from certain handicaps, the most serious of which is the backwardness of the country in the production of chemical raw materials for the industry. Some difficulties are of a temporary nature and arise chiefly from import controls and administrative procedures. It is pointed out, for instance, that the reduction of the quota to established importers to 15 per cent. for imports of polystyrene moulding powder, the termination of granting of actual users' licence, and the unsatisfactory functioning of the machinery for the settlement of "drawbacks" of customs duty, to mention a few, have been causing much hardship to the industry. These difficulties demand the urgent attention of the Government. Nevertheless, what is of utmost importance to the industry and to the country is the promotion of exports. It is encouraging to note that the Export Promotion Council, established in 1955, has done some useful work. Among the activities the Council engaged itself in 1956-57, mention must be made of (1) publication of an illustrated brochure of the products manufactured by members of the Council; (2) publication of a Directory of Manufacturers and Exporters of Indian Plastic goods; (3) surveying of certain foreign markets with a view to assessing market requirements and obtaining other relevant information, and (4) examination of the question of standardisation of plastics manufactures as to quality and packing so as to issue certification mark in respect of Indian-made plastics. Of these, special importance attaches to the findings of the delegation sent out to the East African countries. The delegation found, perhaps much to its surprise in certain respects, that very often the goods received by the traders abroad did not conform to the samples submitted by the suppliers, that the importers abroad are not fully aware of the range of products available in India, that the goods imported by them arrived in poor packing, and that the commission promised to local agents had not been paid promptly and regularly.

These, to say the least, are very serious shortcomings, and in the nature of things, affect adversely the trading position of India. It is, however, gratifying to note that the delegation has assured the importers abroad that the defects would be rectified soon. Viewed in this light, there is special significance in Mr. Morarji Desai's appeal the other day to the industry to improve the competitive position of the industry. He admitted the need for modernising the industry and equipment, but pointed out, pertinently, that it could be done only gradually in view of the present shortage of foreign exchange. He also stressed the need for co-operation between the producers of raw materials for the industry and the processors in the interests of maintaining the progress of the industry. But progress of the industry also depends on research work, and Mr. Ramnath A. Podar pleaded rightly for Government help in that regard.

ALL-INDIA FIRST ESTIMATE OF POTATOES

The all-India first estimate of potatoes for 1956-57 puts the current year's area at 573,000 acres as against the corresponding adjusted estimate of 560,000 acres for 1955-56. This shows an increase of 13,000 acres or 2.3 per cent. in area during the current year, as compared to last year.

The increase in acreage during the current year has been shared by Bombay, West Bengal, Punjab, Madhya Pradesh, Madras and Mysore States, and has been attributed generally to favourable climatic conditions at the time of sowing. This increase has, however, been offset to some extent by decreases recorded in Uttar Pradesh, Bihar and Rajasthan. It may be noted that the estimate covers the period up to the end of December 1956.

SATISFACTORY RESULTS OF E.I.D. & S.

FINAL DIVIDEND SKIPPED OVER DUE TO HEAVY TAX INCIDENCE

THE audited accounts of the East India Distilleries and Sugar Factories Ltd. and its subsidiaries (Managing Director: Mr. G. N. Noel-Tod, Madras) for the year ended 30th September 1956, provide a typical instance of the stifling effect of the present level of corporate taxation on companies, as a result of which the Directors have been unable to recommend the payment of a final dividend on the reorganised capital of the Company. The Directors paid a first interim dividend of 5 per cent. for the year under review, followed by a second interim distribution of 10 per cent. on the consolidated ordinary capital of £549,950 (549,950 shares of £1 each), while in the previous year they had paid an interim dividend of 5 per cent. on the then 'A' share capital of £80,000 (100,000 shares of 16s. each) and 'B' capital of £300,000 (300,000 shares of £1 each). They also paid a final dividend of 5 per cent. on the 'A' capital and also made a provision for payment of a final dividend of 10 per cent. and a special additional distribution of 5 per cent. on the increased 'B' capital of £400,000 which would have resulted from the issue of £100,000 of the 'B' capital to the ordinary shareholders of Parry & Co., Ltd. The Directors have, however, expressed their inability to recommend any final distribution on the reorganised capital for the year 1955-56, in view of the greater inroads made by taxation into the profits of the year under review. The incidence of the additional taxation, as a result of the introduction of tax on bonus shares, the increase in super-tax on dividends and the withdrawal of rebate of income-tax on undistributed profit, works out to £66,223.

The accounts for the year under review are not comparable with those of the previous year, inasmuch as they include the results of working of the E.I.D. & S. during the 12 months ended 30th September 1956 and those of its subsidiaries during the nine months ended 30th September 1956, while those of the previous year relate to the working of the holding company alone. This is consequent upon the acquisition of the ordinary capital of Parry & Co., Ltd., as a result of which Parry & Co., Ltd., and its two subsidiaries became subsidiaries of the E.I.D. & S. on 26th February 1956. As at the date of the balance-sheet, 1,100 ordinary shares of Rs. 2 each in Parrys had not been acquired by virtue of the fact that applications had been made to the Court under section 153B of the Indian Companies Act, 1913. These applications were subsequently disposed of and the whole of the ordinary share capital of Parrys came to be held by the E.I.D. & S.

There are, however, enough indications in the accounts to show that the holding company, namely, E.I.D. & S., has had a satisfactory year of working, despite the slight setback in production of sugar, and its profit has been maintained nearly at the previous year's level. The gross profit of the group for the year amounts to £599,772, as against £359,726 of the holding company alone for 1954-55. The net profit, after providing for depreciation and taxation, is £220,707, of which the share of the holding company alone is £187,559, which compares with £187,707 earned by it in the previous year. Of this profit of £220,707, the proportion of profit of subsidiary companies attributable to outside shareholders' interest is £8,475 and that earned by the subsidiaries prior to acquisition by the holding company is £12,077.

After bringing in the surplus of the previous year, the profit available for appropriation is £256,654, out of which a sum of £4,500 has been set aside to the capital reserve and £100,000 to the general reserve. The dividend on 7 per cent. preference capital absorbs £14,000 and that on ordinary capital £82,493, leaving a surplus of £55,661. A sum of £3,788, being the over-provision for final and additional special dividends on the 'B' share capital for 1954-55 has been written back. The Company had intended to issue £100,000 of the 'B' share capital to the holders of ordinary shares in Parry & Co., Ltd., but the additional 'B' shares capital subsequently issued on this account amounted to only £74,950 and the excess provision for dividends on this additional capital has now been written back.

The Company's crushing of sugarcane during the season 1955-56 amounted to 349,247 tons yielding 29,575 tons of sugar, having declined from the record level of 368,989 tons of cane crushed in the previous season producing 32,272 tons of sugar. The recovery of sugar has also declined from 8.75 per cent. to 8.47 per cent. due chiefly to the deterioration in the quality of one variety of sugarcane, which was seriously affected by disease. Although the excise duty on sugar remained unchanged at Rs. 112-8 per ton, higher prices were realised from sugar sales during the year. This resulted in the payment of a small bonus at the rate of Re. 0-2-6 per ton of cane to the ryots in accordance with the S.I.S.M.A. formula.

As regards the other sections of the holding Company's business, the new distillery at Nellikuppam was in full production for the whole year and sales of spirit were maintained at the same level as in the previous year. Turnover in carbonic acid gas reached a record level of 2,297,600 lbs., bringing in a substantial improvement in the profitability of this department. The production of sulphuric acid, however, was at a lower level and amounted to only 8,000 tons. Consequent on the doubling in capacity of the newly introduced sulphate of alumina plant, sales of this product showed a marked improvement. The Government of India's move to discourage the use of Epsom salt in the tanning industry has led to a fall in the sales of this commodity. The reorganisation of the pottery has helped the Company to substantially increase the profitability of this department. Emphasis on the production of sanitaryware is being maintained and the prospects for this industry appear to be very bright, in view of the introduction of the rural development scheme under the second Five-year Plan.

During the nine-month period ended 30th September 1956 sales of fertiliser mixtures by Parry & Co., Ltd., increased by 30 per cent. over the corresponding period of the previous year. Sales of superphosphate also recorded an increase of 25 per cent. It is significant that these increases have been achieved in the face of difficulties caused by the hold-up of raw materials and movement of finished products due to transport difficulties. A new development associated with this department is the construction of a pesticide formulation plant at Ranipet which produces formulations of all the commonly used pesticides. The chemical imports department of Parry & Co., Ltd., handled 52,700 tons of phosphates and sulphur during the period under review. There was considerable improvement in the business of the engineering department of Parry & Co., Ltd., both for imported and indigenously manufactured products. The monthly level of turnover in the pharmaceutical department was approximately 25 per cent. higher than the figures for the previous year. Likewise, turnover in the general sales department of Parry & Co., Ltd., increased by 18 per cent. and profits by more than 25 per cent.

The consolidated balance-sheet as at 30th September 1956 shows the paid-up capital of the Company at £749,950 of which £200,000 are in 7 per cent. cumulative preference shares of £1 each and the balance in ordinary shares of £1 each. Against this, the reserves and surplus aggregate £1,208,915. This is inclusive of a reserve for future taxation of £159,468. There is a 4½ per cent. debenture liability on account of Parry & Co., Ltd., to the tune of £21,621. The current liabilities amount to £3,234,636 including a provision for taxation at £295,916. The gross block of £1,757,928, including additions during the year amounting to £77,001, has been written down to a book value of £933,253. The current assets aggregate £4,281,869 and cover the current liabilities and provision for taxation by a very wide margin.

The £1 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 26.50. On the basis of the year's dividend, the shares offer a yield of 7.54 per cent. per annum, free of income-tax.

BOMBAY DYEING AND MFG. CO., LTD.

The Bombay Dyeing and Manufacturing Company, Ltd., is likely to be exempted from payment of compulsory deposits, in view of the expansion programme which is being carried on now. This was disclosed by Mr. Neville N. Wadia, Chairman of the Company, in the course of his replies to questions at the annual general meeting held last week. On the basis of last year's earnings, the Company would, in normal circumstances, have to pay about Rs. 27 lakhs by way of compulsory deposits. On the accumulated reserves and current profits, the Company's liability by way of compulsory deposits would have aggregated Rs. 1.25 crores, but the Chairman, as stated above, expressed the hope that the Company might be exempted from making this deposit.

The move to split up the high denomination shares of Rs. 250 each into 10 shares of Rs. 25 each was justified by the Chairman on the ground that even persons of modest means might be able to participate in the concern. He explained that high denomination shares were not in vogue either in Britain or in the U.S. and assured the shareholders that the unit of trading would be fixed in such a way that the scheme worked smoothly and efficiently.

The policy of the Company in regard to conservation of resources came in for much criticism. One of the shareholders drew attention to the experience of the Imperial Bank shareholders which, he said, should serve as a warning to company managements to take a more liberal attitude in the matter of capitalisation of reserves. While defending the Company's policy, Mr. Wadia admitted that the Company was well in a position to capitalise at least Rs. 50 lakhs by giving one bonus share for every five shares, but the tax liability on this account would be about Rs. 6.25 lakhs. This amount, he said, could be more profitably used for the expansion programme of the Company which ultimately would result in better returns for the Company. Some of the shareholders desired that the Company should issue bonus shares even if it had to pay the tax. The Chairman replied that no useful purpose would be served in applying for sanction to issue bonus shares, when so many applications were pending with the Government. He added that the Government's policy in regard to bonus issues being uncertain, they could as well await the May budget when a clear idea of policy would be available. As regards the plea for higher dividends, Mr. Wadia was against change in dividend with every fluctuation in profit. It was better to follow a steady dividend policy.

The stocks of cloth lying with the Company at present were not abnormal and sales in the local market had been made up to September next. Exports of the Company's cloth were steadily increasing and amounted to over 50 million yards or 59 per cent. of the total output in 1956, as against 42 million yards, or 47 per cent. in 1955. Export prices realised were better than those available in the home market. The Chairman indicated that the export outlook for the Company was very hopeful, especially to Australia, the annual exports of the Company's cloth to this country being of the order of 25 million yards. He was confident that this would be maintained. The Company suffered least on account of either unsold stocks or the incidence of higher excise duty, in view of its larger exports. The incidence of excise duty on sales in internal markets was Rs. 31.75 lakhs in 1956.

Greater productivity was expected to accrue from the installation of automatic looms in the Company's mills. The double shift at Spring Mills will have a labour complement of 5,200 as against 3,307 for one shift. Machinery was being regularly shipped from overseas but on account of the Suez trouble, the Company was experiencing some unavoidable delay in receiving them. The working of National Peroxide, which resumed production by the end of February, had been satisfactory in view of the fact that all imports had been stopped by the Government.

DUNLOP RUBBER SHOWS BETTER RESULTS

DIVIDEND MAINTAINED

AN appreciable improvement in sales and earnings is disclosed by the audited accounts of the Dunlop Rubber Company (India) Ltd. (Managing Director: Mr. John Luckham, Calcutta) for the year ended 31st December 1956. The sale proceeds have gone up by Rs. 1.88 crores or 12½ per cent. over those for the previous year, and gross profit, before providing for depreciation and taxation, has risen by Rs. 13.75 lakhs to Rs. 133.28 lakhs. The increase in profit is in refreshing contrast to the fall of Rs. 7.35 lakhs suffered in 1955. The rise in the profit during the year under review has thus more than made good the setback in the previous year. It will be interesting to note that the year's profit had been surpassed only once, that was in 1951 when the profit had touched a record total of Rs. 146.54 lakhs.

The net profit has increased by only Rs. 5.70 lakhs; that is, from Rs. 49.40 lakhs to Rs. 55.10 lakhs. The relatively lower improvement in net profit is due to the higher provisions for depreciation and taxation, the former having risen from Rs. 27.51 lakhs to Rs. 30.54 lakhs and the latter from Rs. 42.32 lakhs to Rs. 47.34 lakhs. The provision for taxation includes Rs. 2.80 lakhs, representing the super-tax on ordinary dividend in excess of six per cent. In accordance with the Company's policy of ploughing back substantial sums year after year, the Directors have transferred this year also a sum of Rs. 26 lakhs to the general reserve in order to provide the resources necessary for the expansion of the business and this represents an increase of Rs. 4 lakhs over that provided a year ago. The dividend on ordinary shares has been maintained at 15 per cent. for the sixth year in succession.

The progress of the Company during the past three years can be judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	16,99.60	15,11.60	13,70.34	12,57.95
Other income	4.28	3.45	3.26	4.90
Manufacturing, selling and other expenses	15,64.11	13,80.03	12,40.22	11,41.90
Debenture interest ..	6.50	6.50	6.50	6.50
Gross profit	1,33.28	1,19.53	1,26.88	1,20.96
Provision for—				
Bad debts	0.30	0.30	0.30	0.30
Depreciation	30.54	27.51	30.20	27.78
Taxation	47.34	42.32	37.75	37.50
Net profit	55.10	49.40	58.63	55.38
To reserves	26.00	22.00	30.00	24.00
Dividends—				
6% preference (tax-free) ..	1.80	1.80	1.80	1.80
6% 2nd preference (less tax).	1.77	1.77	1.77	1.77
Ordinary	24.00	24.00	24.00	24.00
	(15%)	(15%)	(15%)	(15%)
Carry forward	13.25	11.72	11.89	10.83

The sale proceeds show, as already stated, an increase of Rs. 1.88 crores, in spite of reductions in the selling prices, made towards the close of 1955, and larger expenses indicate that the productions must have been higher. The lower selling prices, coupled with higher costs, have lowered the profit margin of the Company in relation to its turnover. This will be clear from the following comparative figures taken from the Directors' report:

(Per cent.)

	1956	1955	1954	1953
Before taxation ...	6.0	6.4	7.0	7.4
After taxation ...	3.2	3.6	4.3	4.6

The paid-up capital of the Company as at 31st December 1956 remains unchanged at Rs. 230 lakhs, supplemented by reserves and surplus aggregating Rs. 354.11 lakhs. This is inclusive of a special depreciation reserve of Rs. 113.86 lakhs, being the provision for excess depreciation made on buildings and plant in post-war years at rates in excess of normal rates. The 5 per cent. debenture-stock is unchanged at Rs. 130 lakhs. Against this, there is a debenture-stock redemption fund of Rs. 24.66 lakhs. Including additions during the year amountng to Rs. 42.22 lakhs, the gross block aggregates Rs. 555.02 lakhs. This has been written down to a book value of Rs. 306.30 lakhs. The current assets amount to Rs. 712.17 lakhs, of which stock inventories (at cost or market value) alone account for Rs. 455.47 lakhs and cash balances for Rs. 9.68 lakhs, and exceed the current liabilities and provision for taxation, at Rs. 329.02 lakhs, by a substantial margin of Rs. 383.15 lakhs. Of the current liabilities, loans from bank, unsecured loans and usance promissory notes deposited with bank account for Rs. 191.78 lakhs, having gone up by Rs. 77.71 lakhs. This increase reflects to some extent the larger working capital represented in stocks and debtors. Stock inventories show a rise of Rs. 63.84 lakhs, of which raw materials account for Rs. 47.75 lakhs and finished goods for Rs. 16.84 lakhs. There is also an increase of Rs. 28.79 lakhs in debtors, reflecting the expansion in turnover.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 24 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 6.25 per cent. per annum, free of income-tax.

EXEMPTIONS FROM COMPULSORY DEPOSITS

The Central Government has fixed the percentage for computing deposits to be made by a company with reference to the amount by which the statutory surplus exceeds Rs. 1 lakh. These deposits relate to the assessment to income-tax of any company for the year commencing on the first day of April 1957. No deposits will be required to be made in the cases where: (1) a company in which not less than 40 per cent. of the share capital is held by the Central Government or by any State Government or Governments, or partly by the Central Government and partly by one or more State Governments; (2) a company incorporated under any special Act of Parliament; (3) a banking company as defined in the Banking Companies Act, 1949 (10 of 1949); (4) a company, being an insurer as defined in the Insurance Act, 1948 (4 of 1938); and (5) a company engaged in the generation or supply of electricity.

In the case of all other companies, the figure fixed for computing the deposit to be made is 50 per cent. A notification to this effect has been published in a *Gazette Extraordinary* dated 16th April 1957.

Any comments on the draft rules published which may be received by the Ministry of Finance (Department of Revenue) by the end of April 1957 will be taken into consideration before the rules are finalised.

COMPANY MEETINGS AND DIVIDENDS

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, Madras, 30th April 1957. Dividend: 15 per cent. (5 per cent. first interim dividend plus 10 per cent. second interim dividend).

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Lohat, District Darbhanga, 30th April 1957. Dividend: Rs. 2.00 per share. Transfer books remain closed from 14th to 30th April 1957, both days inclusive.

SOUTH KARANPURA COAL CO., LTD. Annual General Meeting, Calcutta, 1st May 1957. Dividend: Re. 0.35 per share. Transfer books remain closed from 17th April to 1st May 1957, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 6th May 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 22nd April to 6th May 1957, both days inclusive.

INDUSTRIAL INVESTMENT LTD. Annual General Meeting, Bombay, 7th May 1957. Dividend: Rs. 5.00 per share, payable on and after 20th May 1957. Transfer books remain closed from 22nd April to 11th May 1957, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 7th May 1957. Dividend: Re. 0.50 per share. Transfer books remain closed from 22nd April to 7th May 1957, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 8th May 1957. Dividend: Rs. 11.00 per share (includes bonus of Re. 1.00 per share), payable on and after 14th May 1957. Transfer books remain closed from 22nd April to 10th May 1957, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 8th May 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 22nd April to 8th May 1957, both days inclusive.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 9th May 1957. Dividend: Rs. 18.00 (includes bonus also) per share, payable on 13th May 1957. Transfer books remain closed from 22nd April to 9th May 1957, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 10th May 1957. Dividend: Rs. 22.50 (includes bonus of Rs. 2.50) per share, payable from 13th May 1957. Transfer books remain closed from 22nd April to 10th May 1957, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 10th May 1957. Dividend: Rs. 2.00 per share, payable on 13th May 1957. Transfer books remain closed from 22nd April to 10th May 1957, both days inclusive.

CAWNPORE SUGAR WORKS LTD. Annual General Meeting, Kanpur, U.P., 13th May 1957. Dividend: Re. 0.75 per share. Transfer books will remain closed from 29th April to 13th May 1957, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th May 1957. Dividend: Rs. 22.00 per share, payable on and after 22nd May 1957. Transfer books remain closed from 22nd April to 14th May 1957, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 20th May, 1957. Dividend: Re. 0.50 (5 per cent.) per share. Transfer books will remain closed from 4th to 20th May 1957, both days inclusive.

SVADESHI MILLS LTD. Annual General Meeting, Bombay, 20th May 1957. Dividend: Rs. 14.00 per share (includes bonus of Rs. 2.00 per share), payable on and after 21st May 1957.

TATA MILLS LTD. Annual General Meeting, Bombay, 22nd May 1957. Dividend: Rs. 3.50 per share (includes bonus of 50 nP per share), payable on and after 23rd May 1957.

Points From The Chair

Chemical Industry

"THE chemical industry in India is relatively in its infancy, and your Directors are aware that there is an immense potential market for chemicals for India's growing industrialisation. We hope to be in the forefront of this industry and have continuously in mind for further extension. I do not intend to enter the worn-out controversy concerning the roles of the public and private sectors in industry, because I believe that both can function side by side, and the efficient working of both is essential to the success of India's plans. Certain spheres of industrialisation are not appropriate to private enterprise which, however, can be justly proud of its achievements to date and of its plans for the future. While I think that Government really take the same view of private enterprise's important role, nevertheless some recent legislation and decisions in the fields of labour and taxation are not easily reconcilable with it."

N. D. HARRIS,
Alkali and Chemical Corporation of India, Ltd.

Plan Targets

"For effectively reaching the Plan targets, Plan estimates indicate an investment of about Rs. 5,300 crores in the public sector alone covering the Central and State Governments. But the need for reappraisal of the position is becoming more apparent as the strains and stresses of the very first year of the Plan are beginning to be felt. There are enough indications to show that the present scheme of development is too ambitious to be carried out successfully without serious damage to the economy of the country. Further, if an additional Rs. 2,400 crores are needed in the private sector, the Plan will mean double the expenditure of the First Five-year Plan. It will be wisdom, therefore, that the Plan should not leave out of sight the resources available for it and should not also be allowed to dominate the economy to the point of breaking it. It is the view of many of our leading economists and industrialists that a re-examination of the resources is vitally necessary. The increase in the rate of investment in the Plan projects should also be in proportion to the rate of increase in consumption. But an underdeveloped economy can never keep pace with the rate of increase of investment which is out of proportion to its capacity for consumption."

M. A. M. MUTHIAH CHETTIAR
Indian Bank Ltd.

Bank Rate

"The official Bank rate of the Reserve Bank of India remained unchanged at 3½ per cent. but the cost to commercial banks of borrowing from the central banking institution has been progressively increased. In the first place, the rate of interest chargeable to commercial banks for loans against usance promissory notes under the bill market scheme was put up in two stages from 3 per cent. to 3½ per cent. and the concession that the Reserve Bank of India would bear half the stamp duty on usance promissory notes was withdrawn. Early this year, the stamp duty on bills of exchange and usance promissory notes was raised tenfold to two annas per cent. for three months or part thereof. This has enhanced the cost of borrowing against usance bills by a minimum of half per cent. and, when allowance is made for the fluctuations in the debit balances of customers over a period and of the Bank's borrowings against bills the rise in the real cost is very much more than half per cent. per annum. At the same time, the Reserve Bank rate for advances to Scheduled banks against Government securities was put upto 4 per cent. For all practical purposes, therefore, the Bank rate has effectively been raised from 3½ per cent. to 4 per cent. The working of the bill market scheme would, however, be much facilitated, if the Government were to annul the recent enhancement of the stamp duties on bills of exchange and usance promissory notes, leaving it to the Reserve Bank to charge the same rate of interest to Scheduled banks for loans against bills as against Government securities."

G. D. BIRLA,
United Commercial Bank Ltd.

Effect of High Taxation

"Both the Government and the public realise that it is absolutely necessary, if the standard of living of the people should be raised, that greater industrialisation should take place in the country, that funds should be available for such industrialisation whether in the public or the private sector and that both sectors should function in a complementary manner, if the purpose which Government has in view has to be fulfilled. I hold the view, however unorthodox it may be, that proper development of industries in the private sector would lead to a snowball effect gathering more and more momentum by the utilisation of resources saved so as to make further industrialisation possible, whereas there is not the same result or even the same incentive in public enterprises promoted by the State. A very high level of taxation which may produce more money to the State partly for promoting social amenities and partly for investing in public enterprise will have an atrophying effect on private savings and thus on the development of industries in the private sector."

SIR A. RAMASWAMI MUDALIAR,
Industrial Credit and Investment Corporation

STANDARD MILLS' PROFIT HIGHER

CAWNPORE SUGAR MAINTAINS DIVIDEND

Standard Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mafatlal Gagalbhai & Sons, Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show that profit for the year after deducting depreciation of Rs. 28,10,063 (Rs. 17,27,971); deducting managing agents' commission and remuneration of Rs. 10,26,477 (Rs. 4,38,326) and providing Rs. 35,15,000 (Rs. 10,00,000) for taxation amounts to Rs. 47,99,772 (Rs. 28,87,581) to which is added balance brought forward from last year of Rs. 12,833 (Rs. 17,128) making a total of Rs. 48,12,605 (Rs. 29,04,709). From this amount the directors have appropriated to:—

Rehabilitation and development reserve Rs. 17,35,073 (*nil*), development rebate reserve Rs. 7,10,973 (*nil*), payment of proposed dividend of Rs. 4 per share, free of income-tax, on 6,000 4 per cent. cumulative redeemable 1st preference shares Rs. 24,000 (Rs. 24,000), payment of proposed dividend of Rs. 4 per share, free of income-tax, on 6,000 4 per cent. cumulative redeemable 2nd preference shares Rs. 24,000 (Rs. 24,000), payment of proposed dividend of Rs. 20 (Rs. 20) per share free of income-tax on 87,800 ordinary shares Rs. 17,56,000 (Rs. 17,56,000) and payment of proposed bonus of Rs. 2½ (*nil*) per share free of income-tax on 87,800 ordinary shares Rs. 2,19,500 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 2,93,059 (Rs. 12,833 after placing Rs. 10,87,876 to special depreciation reserve).

The scheme of modernisation of the Mills was continued during the year under report. It will be observed that a sum of Rs. 1,76,202 has been spent on construction of new buildings and a sum of Rs. 26,84,364 has been spent on installation of new machinery during the year. Machinery amounting to Rs. 3,93,193 is under installation. The machinery installed has been working satisfactorily.

The Company has been granted a Certificate of approval for acquiring prospecting licences and mining leases in respect of many minerals in the State of Bombay. The Company has already obtained a licence from the Government of India for establishing a Cement Factory in Saurashtra. All steps are being taken to carry on the prospecting work and results are keenly awaited.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	99,80,000	Block ...	1,15,80,064
Reserves ...	2,50,82,705	Machinery awaiting installation	3,93,193
Provision for taxation ...	43,95,083	Stock-in-trade	96,57,050
Liabilities ...	74,02,458	Stores and spare parts	27,13,254
Profit and loss account ...	2,93,059	Other assets	22,273
		Debts, deposits and advances ...	62,70,987
		Investments	5,56,805
		Cash ...	1,59,59,679
Rs.	4,71,53,305	Rs.	4,71,53,305

Cawnpore Sugar Works, Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur) submit the audited accounts of the Company for the year ended 31st October 1956.

The results for the year, after providing for all charges including provisions for taxation and depreciation, and adjustments, and having written back earlier provisions no longer required, show a surplus of Rs. 6,64,968 (Rs. 8,07,327). From this amount has been deducted the amount transferred to rehabilitation reserve Rs. 3,50,000 (Rs. 4,00,000) leaving a balance of Rs. 3,14,969 (Rs. 3,27,327 after providing Rs. 80,000 for contingencies reserve). To this has been added the carry forward from the previous year of Rs. 82,023 (Rs. 59,696) leaving at credit of profit and loss account Rs. 3,96,991 (Rs. 3,87,023). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum, free of income-tax, for the year ended 31st October, 1956 Rs. 80,000 (Rs. 80,000), in payment of a dividend on the ordinary shares of As. 12 (As. 12) per share, free of income-tax, for the year ended 31st October 1956 Rs. 2,25,000 (Rs. 2,25,000) and carry forward Rs. 91,991 (Rs. 82,023).

A cane price attractive to the growers and reasonable climatic conditions allowed the Company's factories to increase the total cane crushed during the cane crushing season 1955-56. In the case of Marhowrah Factory, the quantity of cane crushed was 39,04,304 (32,62,453) maunds with an extraction of 9.89 (10.21) per cent. While the cane crop has increased considerably over the previous season there has been a diminution in the yield following the longer crushing period. In the case of Gauri Factory, there was a slight decrease in the cane crushed over the previous year to 22,40,830 (24,14,693) maunds but this was more than compensated for by an increased yield to 11.23 (10.68) per cent. which is one of the highest yields recorded in Northern India. Marhowrah Factory started crushing on the 4th November 1955 and finished on the 2nd May 1956, while Gauri Factory started crushing on the 5th December 1955 and finished on the 9th April 1956.

The high cane price continued at Re. 1-7 per maund at the Factory gate and Re. 1-5 per maund at out-stations, has been responsible for an increase in the quantity of cane grown and tendered to sugar factories for crushing, with the result that the total sugar produced in India reached the all-time record of 18.5 lakh tons. This high production of sugar tended to reduce market prices, particularly in U.P. and Bihar where despatches over the N.E. Rly. were in the first six months of the year somewhat disappointing. The high production has also been the reason for a considerable carry over of stocks of sugar from last season into the current season.

Reference was made in the last directors' report to plans to expand the sugar interests of the Company, and two additional factories have been added, namely, Padrauna Factory and Kathkuiyan Factory, both in the Deoria District of U.P., and within a few miles of the Company's existing Gauri Factory. During the season under review the Company, at the request of the Authorised Controller, assisted in the operation of the Factories until their sale to the Cawnpore Sugar Works, Ltd., was confirmed.

The operation of these two factories by the Company in the season under review did, however, place a strain on the Company's working capital. While expenses were not fully recovered during the season under review it is expected that the newly acquired factories will prove valuable assets in future.

The Cawnpore Distillery has now closed down for economic reasons and all labour has been paid off. Meanwhile the plant and machinery is being transferred to the Marhowrah Distillery to increase the production at that unit. The Marhowrah Distillery continued to work at a modest profit but with the added capacity of the Cawnpore equipment, that profit should increase.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	2,26,78,242	Rs.	2,26,78,242

Braithwaite and Co. (India) Ltd.

The directors of the above Company (Secretary: Mr. Y. S. Tayal, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

After providing for depreciation and sundry charges the trading profit for the year amounted to Rs. 30,48,096 (Rs. 27,02,716). The higher rate of taxation imposed on Companies by the Finance Act (3) 1956 necessitates a provision for taxation of Rs. 15,70,000 (Rs. 13,00,000) resulting in a net profit of Rs. 14,78,096 against Rs. 14,02,716 in 1955. After bringing into account Rs. 3,579 (*nil*) being post-war refund of excess profits tax, Rs. 7,00,000 being excess provision for sales tax no longer required, Rs. 5,59,761 (Rs. 2,09,750) being balance brought forward from last year's accounts and after charging Rs. 2,12,242 for super tax payable on the issue of bonus shares, the balance available for appropriation is Rs. 25,29,194 (Rs. 16,12,466). On the results of the year's trading the directors have paid an increased dividend of Rs. 2 per share (Rs. 1-12-0 in 1955) absorbing Rs. 11,31,958 (Rs. 12,02,705) and transferred Rs. 11,97,937 (*nil*) to general reserve, leaving Rs. 1,99,299 to be carried forward.

By resolution passed by the Company in General Meeting held on 18th December 1956, the Company's shares were restored to their original value of Rs. 10. It is a matter of great satisfaction to the directors that the prudent policy followed by the Company has made this possible. The Company's Order Book is in a healthy condition and in the opinion of directors, prospects remain good.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,59,790	Block ...	51,44,314
Reserves ...	58,54,991	Stock and stores ...	10,02,902
Provision for taxation ...	13,84,637	Contracts-in-progress ...	1,07,33,875
Liabilities ...	78,62,812	Erection plant etc. ...	2,74,027
Profit and loss account ...	1,99,299	Debts, deposits and advances ...	9,39,425
		Investments	18,77,933
		Cash ...	9,89,053
Rs.	2,09,61,529	Rs.	2,09,61,529

South Karanpura Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st August, 1956.

This is the first annual closing of the Company's accounts. These accounts have been drawn up in conformity with the Companies Act, 1956.

Raisings and despatches.—168,281 tons of coal were raised and 181,663 tons were despatched compared with 172,969 tons raised and 177,801 tons despatched in the preceding period.

The earlier part of the year covered a period of change from open cast working to underground mining at the Company's West Sirka properties.

The usual difficult wagon supply period in the first half of the year was followed by a few months of excellent movement resulting a very heavy reduction in stocks. The directors report that good transport conditions continue.

Labour Awards.—It would be premature to advise firmly on the likely outcome of the All-India Industrial Tribunal (Colliery Disputes) and its effect on the operation of the mines since the Award itself has been the subject of an Appeal which again is for hearing in the Supreme Court.

Electric Power.—As stated in the directors' report a year ago the power connection with the D.V.C. was completed. The directors are glad to report that this has resulted in reducing power costs considerably.

The profit and loss account after providing for all charges and making provision of Rs. 1,05,443 (Rs. 57,650) for depreciation shows a profit of Rs. 73,600. From this amount is deducted the balance brought forward from the previous year Rs. 51,533 leaving a balance of Rs. 22,067, to which is added refund of excess tax paid Rs. 60,190 making a total of Rs. 82,257. The amount transferred to development rebate reserve absorbs Rs. 600 and amount transferred to general reserve Rs. 10,000 leaving a balance available of Rs. 71,657. The directors propose to dispose of this as follows:—

By payment of a dividend at the rate of 3½ per cent. per annum without any deduction for income-tax payable by the Company Rs. 61,250 and by carrying forward Rs. 10,407.

In the half-year ended 31st August 1948, the directors decided to revalue the fixed assets of the Company to a figure corresponding more closely to market values at the time by the addition of the sum of Rs. 3,13,000 and to create a reserve of similar amount named capital reserve which would be used specifically for the purpose of making adjustments in the future value of the fixed assets.

The directors therefore feel that it is necessary to calculate depreciation on actual cost only and that, if a lower valuation of the fixed assets of the Company is called for in the future, a suitable adjustment may be made by utilising the above reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Block ...	22,79,233
Reserves ...	10,89,693	Stock-in-trade	12,920
Liabilities ...	10,72,055	Stores and spare parts etc. ...	1,72,132
Profit and loss account ...	10,407	Debts, deposits and advances ...	14,32,862
		Investments	6,183
		Cash ...	18,825
Rs.	39,22,155	Rs.	39,22,155

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1956.

As envisaged when making the report for the half-year ended 31st December 1955, and as indicated in the schedule forming part of the report now under review, development is such that expenditure on capital account is becoming exceedingly heavy, making it imperative that additional capital be raised and this is under consideration. As an interim measure, it is proposed to set aside Rs. 1,05,000 to general reserve.

The following table gives the units of electricity sold and the revenue earned for the last six half-years:

Half-year ended	*Units sold*	*Revenue*
31st December 1953 ...	11,071,085	16,24,041
30th June 1954	11,233,253	14,49,894
31st December 1954 ...	11,582,601	16,21,616
30th June 1955	13,298,217	15,79,101
31st December 1955 ...	14,635,884	20,05,122
30th June 1956	15,908,508	18,97,015

After providing for all charges, and placing Rs. 22,012 (Rs. 20,844) to statutory contingencies reserve, Rs. 58,400 (Rs. 58,400) to reserve for redemption of debentures, Rs. 6,000 (*nil*) to reserve for bad and doubtful debts and Rs. 1,05,000 (Rs. 21,000) to general reserve, there remains a balance of Rs. 1,24,992 (Rs. 1,46,767) including Rs. 38,507 (Rs. 38,780) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed as follows:—

Payment of a dividend at the rate of 10 (12½) per cent. per annum free of income-tax for the half-year Rs. 85,000 (Rs. 1,06,250) and carrying forward to next half-year Rs. 39,992 (Rs. 40,517).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,00,000	Block ...	52,49,631
Debentures ...	12,00,000	Capital work-in-progress	35,10,930
Reserves ...	30,55,969	Stores and spares ...	10,12,687
Provision for taxation ...	4,13,232	Other assets	601
Liabilities ...	66,36,687	Debts, deposits and advances ...	13,77,594
Profit and loss account ...	39,992	Investments	2,38,160
		Cash ...	16,11,613
		Miscellaneous expenditure	44,664
Rs.	1,30,45,880	Rs.	1,30,45,880

NEW PUBLICATIONS

Indian Railway Finance. By Dr. V. V. Ramanadham. Published by Atma Ram and Sons, Kashmere Gate, Delhi 6. Pages 184. Price: Rs. 7-8.

BESIDES being an important means of carrying goods and transporting people and a substantial contributor to the general revenues, the Indian railways provide employment for over a million people. It is, therefore, a vital sector of the economy exerting decisive influence on the trade and commerce of the country. The railways naturally offer a wide field for inquiry and fruitful investigation. Unfortunately, academic interest in this vitally important subject is less than what it really deserves. The scanty literature available on it consists mostly of official reports or reports of *ad hoc* committees appointed from time to time. Any addition to the literature on railways is therefore welcome.

Until the commencement of the present century railways had been a drain on Government's revenues. The railways were a losing concern mainly because of the perfunctory and unbusinesslike methods adopted in running it. Signs of financial health were visible since then, thanks to the change in railway policy and operational methods and in the last 50 years it has grown into a valuable national asset, more than paying for itself. In the book under review Dr. Ramanadham examines the pattern of railway finance since 1900. The author who is a Reader in Commerce in Andhra University, has already had to his credit a few other books on the economics of transport. The book under review is the elaboration and further development of the thesis prepared by the author and approved by the Andhra University for the Ph.D. degree in 1949.

The book is divided into three parts. The first is devoted to an analysis of the secular and cyclical changes in the railway economy and an attempt is made to relate them to the general business conditions which obtained during the period. The second part is taken up with a study of the cost behaviour of railways in times of business boom and depression. Owing to the fixity of cost and also because capital investments are lumpy, the probability of losses is more certain during depression than gains during boom. Maintenance work and replenishment of stock are generally neglected during both periods, the difficulty being financial during depression and physical during boom periods. In this connection, the author points out the need for a long-term expenditure policy for railways in order to carry out maintenance and replacement programmes.

In the third part, which indeed is the kernel of the book, the author analyses railway profits and its relationship with railway rates. The main emphasis is laid on the rate level rather than on the rate structure as the former is considered more fundamental. During the course of the illuminating discussion on profit-rate relationship it is argued that regulation of profits is a necessary prerequisite of regulation of rates as the magnitude of the former is an index of the reasonableness of the latter. The author also examines critically the Separation Convention of 1924 and its revised version of 1949 and compares them with the system of profit regulation prevalent in Britain and U.S.A.

Of more immediate interest is the discussion of some of the present problems contained in the last chapter. The author makes some very pertinent observation on the zonal regrouping of railways and the freight pool. He holds that although the objectives of regrouping, namely, the attainment of the optimum size in respect of operation, finance, and policy are sound, they have not been realised in India to any significant extent. He also makes certain practical suggestions for achieving these objectives. Regarding the freight pool it is argued that it can at best offer a negative stimulus to the development of backward areas by removing their disadvantages from the point of view of transport. Development of backward areas can be achieved only through more positive governmental measures, though it is not denied that freight pool in respect of coal and building materials would create a favourable background for development. It is better, observes the author, to keep the question of development of underdeveloped regions, separate from the freight pool and make out a case for or against freight pool on its own merits.

The author has brought to bear upon the subject an analytical mind sufficiently trained in the discipline of modern economic analysis. The motivations of the author being academic, the conclusions are unbiased. The value of the book is considerably enhanced by numerous statistical tables, graphs and charts added on to the text.

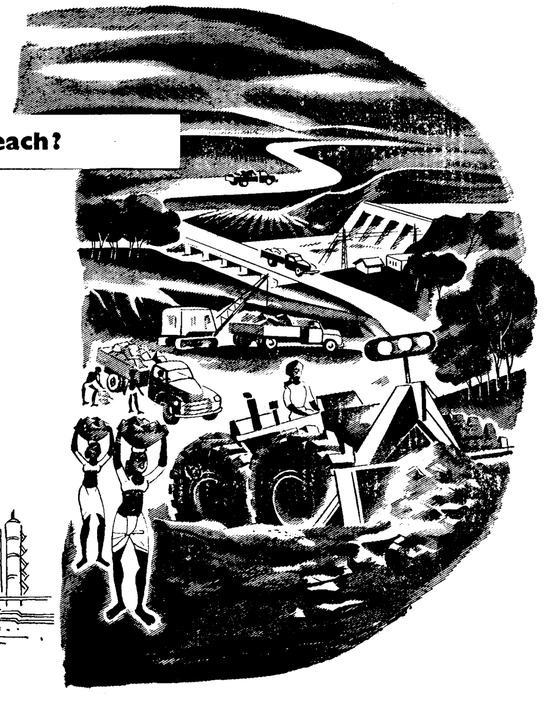
Yojana. Edited by Kushwant Singh. Published by the Director, Publications Division, Ministry of Information and Broadcasting, Government of India, Delhi 8. Price: 10 Naye Paise.

As the success of the Five-year Plans depends so much upon the co-operation of the people it is imperative that the latter should be made aware of the tremendous significance of the Plan to their individual and community life with a view to eliciting their sincere and purposeful participation. Much of the publicity work undertaken in this respect in the past had been of a haphazard or perfunctory nature, though there is no denying that a large volume of posters, folders and booklets had been printed and distributed at nominal price. *Yojana*, under notice, is the first and only journal designed specifically to cater to the need for publicity for the Plan. Its aim is "to carry the message of the Plan and an understanding of its aims and values to villages throughout the country and to the workers, official and non-official, in the different fields of national life." *Yojana* will embrace not only developments in the economic field, but will cover the endeavours of the people in the educational, social and cultural fields as well. Presently issued as a fortnightly in English and Hindi, it will, in due course, be converted into a weekly and published in all the major regional languages. It is heartening to know that, though sponsored by the Planning Commission, *Yojana* will in no way be restricted to expressing the views of the Government.

While wishing *Yojana* all success, one would like to suggest that the articles and features appearing therein should continue to be non-technical and presented in a manner which will appeal to the common man for whom it is primarily intended. If this can be ensured the journal is bound to have an increasingly wider readership.

Labour in Ancient India. By K. M. Saran. Published by Vora & Co., Publishers, Ltd., Bombay 2. Pages 106. Price: Rs. 5.

The literature on the economic conditions in ancient India is still meagre and is even more meagre than the literature on ancient India's political conditions. We would, therefore, welcome the attempt made by Mr. K. M. Saran in his book *Labour in Ancient India* wherein he has brought to bear upon the subject much scholarship. The author has examined the social structure and occupations in ancient India, technical and vocational training as well as the regulation of industrial relations. He has drawn much of his material from the Upanishads, Smritis and in particular from Kautilya's Arthasastra. The chief difficulty in a work of this kind is to find out which of the rules and regulations recommended for adoption by the ancient writers were actually observed in practice. Be that as it may, it is interesting to note that Kautilya recommended the withholding of a week's wages from any worker who did not perform his work or did it carelessly. The book is a notable addition to the admittedly small library of books on ancient Indian economy. It carries a select bibliography which a research student will find useful.



how far can a road reach?

It can reach right into the future . . . it can break down isolation . . . it can gain access to the inaccessible . . . it can bring economic uplift. But no modern road can reach far without oil! Oil to power construction equipment; bitumen to surface the road; fuels and lubricants for buses, trucks and cars. The Caltex Refinery, nearing completion at Visakhapatnam, will play a vital role in transport development by supplying India with Caltex quality petroleum products. It is a tribute to free enterprise.

OIL is the Lifestream of Progress

SLIGHT RELAXATION IN MONETARY STRINGENCY

(From Our Own Correspondent)

BOMBAY, *24th April*

The short-term money market showed signs of slight relaxation in the stringency during the week under review. This was not, however, due to any enlargement in floating funds in the market or to any falling off of demand for bank credit. The banks were not very keen borrowers in the market either. No doubt, some funds were placed by the Insurance Corporation, but a larger share of banks' requirements was presumably met by their sale of securities to the Reserve Bank, if the increase of about Rs. 20 crores in the Reserve Bank's investment portfolio during the week ended 19th April and a fall of Rs. 1.23 crores in Scheduled banks' investments in the preceding week provide any indication. If that is so, it will be further reflected in the Scheduled banks' statement for the week ended 19th April. Banks have also been able to reduce their borrowings from the Reserve Bank and the State Bank of India.

The aforesaid conditions were more fully reflected in the inter-bank call money rate, which was more commonly quoted at 3¼ per cent., as against 3½ per cent. in the previous week. House money at call was placed at 4 to 4¼ per cent. and short-term deposits for 1 to 6 months at 4¼ to 4½ per cent., the higher rate being offered for large amounts.

The Reserve Bank's statement for the week ended 19th April 1957 disclose a shrinkage of Rs. 5.31 crores in notes in circulation, in contrast to the successive increase noted in the previous three weeks aggregating Rs. 56.62 crores. Notes held in the Banking Department are up by Rs. 5.76 crores and the small increase in total notes issued is covered by a corresponding rise in rupee coin. In the Banking Department, the deposits of the Central Government have declined by Rs. 2.19 crores, following the decrease of Rs. 10.97 crores in the previous two weeks. Deposits of other Governments and banks have gone up by Rs. 4.01 crores and Rs. 2.06 crores, respectively. With the latest increase, the deposits of banks have risen by Rs. 20.79 crores in the last four weeks. Balances held abroad are lower by Rs. 4.37 crores, bringing the aggregate fall in foreign assets during the last five weeks to Rs. 30.39 crores. Loans and advances to Governments are also lower by Rs. 9.57 crores and other loans and advances by Rs. 5.60 crores, of which outstanding borrowings by Scheduled banks against usance bills account for Rs. 1.88 crores. Fresh borrowings by banks against these bills during the week amount to Rs. 7.92 crores, while repayments aggregate Rs. 9.80 crores. Investments show a sharp rise of Rs. 19.99 crores, while Government Treasury bills purchased and discounted have declined by Rs. 8.39 crores.

A fractional decline in demand deposits of banks is disclosed by the Scheduled banks' statement for the week ended 12th April 1957, while time deposits show a further increase of Rs. 7.17 crores. Borrowings from the Reserve Bank have been reduced by Rs. 1.02 crores and those from the State Bank by Rs. 2.07 crores. Advances show only a fractional rise, while bills purchased and discounted are up by Rs. 3.66 crores. Investments stand reduced by Rs. 1.23 crores while cash balances have increased by Rs. 1.28 crores.

The Gilt-edged market remained featureless for yet another week, but the undertone remained steady, thanks to small enquiries for select issues. State loans were devoid of support and a decline in prices was noted in a few issues. 3 per cent. 1986 Conversion Loan picked up 10 nP to Rs. 74.40 on some outside enquiries. 3 per cent. 1970-75 was unchanged at Rs. 87.20, 3 per cent. 1966-68 at Rs. 92.15, 3 per cent. 1964 at Rs. 94.45 and 3 per cent. 1963-65 at Rs. 94.20. 3½ per cent. 1962 was dull at Rs. 97.80, as also 3½ per cent. 1961 at Rs. 99.50. 3½ per cent. 1964 was placed at Rs. 98.30 ex-voucher, as against Rs. 98.40 *cum*-voucher a week ago, 3½ per cent. 1965 and 3½ per cent. 1967 improved by 5 nP to Rs. 98.30 and Rs. 98.50, respectively. Among State loans, 4 per cent. Bombay 1967 shed 15 nP to Rs. 99.35 and Madras 1968 10 nP to Rs. 97.85. 4 per cent. Andhra 1967 dropped 30 nP to Rs. 97.50 and 1968 5 nP to Rs. 97.75.

In the foreign exchange section, rupee ruled steady in terms of the U.S. dollar, banks selling rate for ready dollars declining from Rs. 480 to Rs. 479.75 per $100. Their buying rate was maintained at Rs. 476.50 per $100. This is in consonance with the slight improvement in sterling abroad. Thus, in New York, spot sterling gained from $2.78¾—2.78¾ to $2.78¾—2.79, three months' forward from $2.77-15/16—2.78-1/16 to $2.78-1/16—2.78-3/16 and transferable sterling from 276.15—276.25 cents to 276.40—276.50 cents.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, *22nd April*

Very firm conditions prevailed in the linseed market throughout the week and there was a continuous advance in prices, although actual turnover was disappointing. The main feature was scarcity of supplies. Ready goods were virtually unobtainable, and sellers for forward delivery were very reserved. The expected emergence of new season's supplies was frustrated by the apparent intention of upcountry merchants to withhold stocks to the limit of economic feasibility. The hope of a better demand for oil from abroad spurred local buyers on to increased activity at increasing prices, but without any corresponding enthusiasm from overseas buyers.

The latest quotations are: Ready Rs. 23 and April-May Rs. 22-12 per maund.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *24th April*

The bullion market ruled steady during the week under review, with fluctuations confined to a narrow range. The most outstanding event of the week under review was the announcement on Monday, the 22nd inst., by the Government of India of its decision to return to the U.S. Government the silver given by the latter under lend-lease arrangement during the last war. Of the total quantity of 226 million ozs. given then, India's share following partition was 172 million ozs. The Government of India made arrangements to ship today 50 million ozs. in the form of bars. The balance of 122 million ozs. will be returned in the form of quaternary alloy coins, which the U.S. Government will refine and keep all the metals recovered in the process. The U.S. Government will bear the costs of handling, transportation and refining.

The significance of this announcement to the silver market was that it set at rest all speculation about the Government coming to the market to buy silver for returning the lend-lease metal to the U.S., in case the latter declined to accept the quaternary coins. This bearish news, coupled with the reports that heavy duties had been paid in the last few days for import of Tibetan coins, would have upset the silver section but for the speculative support induced by the good offtake in the ready section.

Gold was listless, on account of reports that there had been a persistent inflow of unauthorised metal, but prices did not show any recession on account of the steady demand in the ready section.

Forward silver (14th May settlement) relapsed early in the week from Rs. 181-1 to Rs. 180-1, but good demand, despite the influx of Tibetan coins, lifted prices to Rs. 181-13. There was, however, again a slight setback to Rs. 181-4 at the close today. Business in June settlement commenced on the 17th inst., at Rs. 180-8 and, after a recession to Rs. 180-1, moved up to Rs. 181-11. The closing was done at Rs. 181-6.

Ready silver finished at Rs. 181-4, after moving down to a low of Rs. 179-9. The floating stocks are placed at 1,200 bars. The daily average offtake was about 20 bars.

Gold for forward delivery (13th May) fluctuated between Rs. 105-12 and Rs. 105-3, but closed As. 2 lower over the week at Rs. 105-8. The next settlement, in which business commenced yesterday, was done between Rs. 105-10 and Rs. 105-5.

Ready gold slipped back from Rs. 105-14 to Rs. 105-9. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas and the offtake was also of the same order.

In New York silver held its own at 91.3/8c. London silver, however, gained from 79.7/8d. to 80d. for spot and from 79¾d. to 79¾d. for forward. Gold fluctuated between 250s. 4d. and 250s. 3¼d.

The following comparative table shows the trend of market during the week under review:

	24-4-1957	Highest	Lowest	16-4-1957

TEA EASY

(From Our Own Correspondent)

CALCUTTA, *23rd April*

Easy conditions were again in evidence during last week's sale in tea for internal consumption, when the number of chests containing dusts on offer was 18,921. A strong feature, however, was medium C.T.C.s having bright liquors and a clean leaf appearance which were sold at higher rates. Buyers also devoted good attention to black leafy teas from all districts suitable for export. Orthodox Assams possessing useful liquors also declined, but the fall was not as big as 4 nP to 8 nP noted in the prices of the balance of teas on offer. The quotations were: Best Assam C.T.C.—not quotable, the quantity on offer being insufficient; medium Assam C.T.C. Re. 1.75 to Re. 1.85; medium Assam grainy dust Re. 1.65 to Re. 1.70; and medium Dooars Re. 1.50 to Re. 1.60.

There was no leaf sale.

Special export licence was offered at 17 nP per lb. However, buyers' term was only 15 nP per lb. The new season's quota was wanted at 24 nP with no sellers. Shipping licence changed hands at 13 nP, but, earlier, sellers had demanded 15 nP per lb.

Tea trade circles noted that there had been a further increase in the U.K. stocks. For the week ended 13th inst., there were 143.68 million lbs., as against 140.37 million lbs. in the previous week. During the sales in London on the 16th inst., buyers showed interest in good quality teas such as good coloury medium teas of Ceylon and good liquoring and coloury descriptions from the south of India. Poor quality and light liquoring kinds were marked down. At the auctions held in Colombo on the 15th inst., there was active demand for all teas on offer, excepting medium grown brokens.

COTTON FUTURES RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, *24th April*

The cotton futures market presented a distinctly bearish trend in the first four sessions but picked up strength on Monday. The earlier bearish tone followed the official closing of the market for a day on the 17th inst. by the Forward Markets Commission, doubling of margins on transactions put through at rates higher than sub-ceilings and downward revision in the ceiling rates for Jarilla and Vijay cottons from Rs. 820 and Rs. 970 to Rs. 754 and Rs. 878 per candy, respectively. These developments, coupled with the F.M.C's warning to traders in Akola not to indulge in speculative and illegal trading in cotton, adversely affected the sentiment of operators. The categorical declaration by the Union Commerce and Industry Minister that the Government would not reduce excise duty on mill cloth and the official decision to permit import of 70,000 bales of sterling area cotton with immediate affect also acted as a damper. There was, therefore, a wave of selling on Thursday and prices suffered a sharp break. The market ruled listless on the subsequent two days but picked up strength on Monday, as stated at the outset, when renewed buying by leading bulls led to a recovery in values. The recovery persisted practically till the close today. A large part of the earlier losses was made up and today's closing rates were near those prevailing eight days ago. In fact, Jarilla May contract was higher by Rs. 9.50.

M.G. Jarilla May opened the week at Rs. 756, as against the previous close of Rs. 737.50, and advanced to Rs. 759 on the same day. When trading was suspended on the same day at 12.47 p.m., the contract was quoted at Rs. 754. It sharply declined on nervous liquidation to Rs. 730 on the following day. After moving narrowly on Monday, it elicited fresh buying support yesterday and improved to Rs. 747 at which rate it closed today. Vijay April fell from Rs. 915 to Rs. 890 on Monday, on account of persistent selling. It, however, recovered on fresh support to Rs. 902 today before closing lower at Rs. 900. Vijay June also followed more or less the same pattern. After moving down from Rs. 862 to Rs. 847 on Monday, the contract firmed up to Rs. 859.50 today. The following is the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	24-4-57	*High*	*Low*	16-4-57
Jarilla (May) ...	747	759	730	737.50
Vijay (April) ...	900	915	890	903.00
Vijay (June) ...	859.50	882	847	862.00

The fixation of revised ceiling on the basis of rates prevailing at the time of suspension of trading is generally considered to be equitable and not arbitrary; but certain quarters feel that the Forward Markets Commission is not justified in reducing the ceiling drastically. There were rumours that many Directors of the East India Cotton Association Board had resigned as a protest against increased Government intervention.

The E.I.C.A. would appear to have urged the F.M.C. to permit trading in new contracts, Jarilla July and Vijay August, as it is thought that this will reduce the pressure on the current contracts. The Commission, however, does not seem to have seen eye to eye with the E.I.C.A. on this point as, in its opinion, it is not sure that the new contracts will not behave as erratically as the current ones, especially since the supply of tenderable cotton is extremely scarce. It has, therefore, refused to permit trading in the new contracts. In the reported view of the Commission, the by-laws under which the hedge contracts are functioning at present were framed in expectation of a larger cotton crop this year. In view of the sharp turnround in the supply position these by-laws require considerable modification. It is not considered expedient and advisable to revise the by-laws in the middle of the season.

Meanwhile, interest of cotton traders is focussed on the fixation of room rates on the 26th inst. Tenders against Vijay April till the 22nd inst. aggregated 6,350 bales.

The developments in the futures section had its natural reaction in the spot section. Following suspension of futures trading and downward revision in ceilings, spot values declined by about Rs. 10 per candy the next day. But owing to continued scarcity of quality cotton, prices again firmed up. Rumours were current that the Government may take drastic measures to arrest the inflationary trend in the spot section also, as has been done in the case of futures.

The Joint Chief Controller of Imports announced on the 18th inst. that licences for the import of 50,000 bales of East African cotton of staple length 1-1/32" to 1-3/16" would be issued with immediate effect. Following the announcement, there was a virtual scramble for securing import licences by leading Ahmedabad and Bombay mills and the quota was exhausted within three days. An additional quota of 20,000 bales of cotton of stapling 1-3/16" from soft currency areas was announced on Monday. This quota is also expected to be exhausted soon. Indian mills consider East African varieties to be the cheapest of all sterling area cotton. U.S. growths are, of course, cheaper; but mills in this country which are accustomed to using East African cotton would appear to be prepared to pay a slightly higher price for it.

The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 730; Berar Jarilla 815; Khandesh 825; Vijay 745; Oomra *Deshi* 780; Moglai 765.

In contrast to the easy trend noted last week, the Karachi cotton market ruled fully steady during the week under review. Fears of U.S. competition would appear to have been allayed by pros-

pects of better demand for Pakistan cotton from Japan and China, following the ban on exports of Indian cotton. Sentiment was also favourably affected by rumours that a Chinese charter had been arranged for the shipment of 25,000 bales of Pakistan cotton to China next month. Some buying support ensued as a consequence and prices of cotton were held firm. N.T.R.G. May improved by an anna to Rs. 79-7. July delivery put on As. 3 to Rs. 81-15. In the spot section, *Deshi* styles registered a decline. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 87; Punjab *Deshi* 81; 4 **F** Punjab Roller 82-7; S.G. 86-15; L.S.S. Punjab Roller 84-15; S.G. 88-15; N.T. Roller 83-15; S.G. 81-7; 289 **F** Punjab Roller 87-15; S.G. 96-7.

Limited turnover with narrow price movements characterised trading in the Alexandria cotton futures market this week. For there was continued slackness in demand. Karnak May registered a decline, while the July position advanced slightly. Ashmouni April delivery closed a shade higher, but June delivery was easy. Spot premiums did not show any significant change and the volume of business continued to be small. Export sales from the commencement of the season till the end of March were 507,239 bales (of 730 lbs.), as compared with 792,362 bales in the same period last season. Actual shipment up to 27th March last aggregated 343,764, as against 576,943 bales in the corresponding period of the previous season.

In its fourth and final estimate, the Egyptian Ministry of Agriculture has placed the current season's cotton crop (excluding scarto) at 7,061,000 kantars, as against the last season's outturn of 7,253,000 kantars. Trade circles are expecting the Government's permission to commence trading in new crop months towards the end of the month. The latest available rates—in tallaris per lb.—from Alexandria are given below:

Karnak: May 112.35; July 112.60. *Ashmouni*: April 79.00; June 78.00; August 78.20.

The Sudan Gezira Board has suspended new crop sales by auctions, as the bidding at the recent auctions were very slow. The Board has decided that cotton should henceforward be sold by tenders, the highest bidder being given the cotton. Sales by tender commenced on the 18th inst. It is reported that the Sudan Government is seriously considering measures to dispose of its cotton, following the Egyptian Government's recent decision to give a discount in prices for cotton exported.

Values in the Liverpool cotton futures market registered an improvement, due mainly to commission house buying and short-covering. Distant deliveries, however, were easy on account of hedge selling. American interests were also sellers in distants. In view of the uncertainty generated by the Sudan Government's decision to substitute sales by auctions by sales by tenders, Sudan cotton contracts were neglected. The latest available quotations—in pence per lb.—from Liverpool are as under:

American One Inch Staple Contract: May-June 26.50; July-August 26.34; October-November 26.19; December-January 26.14. *American Cotton Mixed Growth Contract*: May-June 26.65; July-August 26.47; October-November 26.26; December-January 26.20. *Sudan*: May-June 42.57; July-August 41.60.

The New York cotton futures market depicted a fully steady trend during the week. Local and New Orleans selling was absorbed by short-covering and commission house buying, induced by reports of unwanted rains in the cotton tracts, especially Texas and Oklahoma. Turnover was, however, limited, in view of the prevailing uncertainty over the possible course of cotton policy. A section of the trade believes that, as the futures market has been dislocated to a considerable extent by the operation of the double-price system, the authorities will consider the feasibility of restoring the system of single-price trading. In fact, a return to the single-price system has been strongly urged by certain influential quarters.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	21-4-57	15-4-57	9-4-57
Spot	35.40	35.45	35.45
May	35.27	35.21	35.15
July	34.85	34.68	34.66
October	33.60	33.68	33.70

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 24th *April*

Dull conditions prevailed in the yarn market during the week under review. In the absence of any encouraging development and thanks to absence of enquiries from consuming centres, transactions put through were very much limited, with values moving narrowly. Rayon yarns were subjected to selling, induced by expectations of large arrivals of yarn at lower cost from the Continent, following the resumption of traffic through the Suez Canal. Cotton yarns lacked support. There were reports that some of the up-country mills which were financially weak were inclined to dispose of their stocks at reduced prices. The fibre yarn section ruled quiet, notwithstanding hopes of revival of demand from Punjab, Surat, Bhagalpur and other important consuming centres.

Snia rayon yarn (120 dull cones) for April delivery encountered selling and, fell by Rs. 2 to **Rs. 807**. June position was neglected at Rs. 822. **150 Bright** cones for April delivery was unchanged **at Rs. 625**. Spot 150 Italy receded by 27 nP to **Rs. 3.67**. 120 Japan lost 7 nP to Rs. 4.09. 150 Japan eased by 3 nP to Rs. 4.09. 120 Italy, however, elicited some support and gained 6 nP to Rs. 4.00. Among indigenous yarns, National Rayons 120 Bright cones 1st grade was done at Rs. 3.70 and 150 Bright cones 1st grade at Rs. 3.32.

Staple fibre yarns (40×2) for June delivery dropped Rs. 2 to Rs. 616. April delivery fell by Rs. 5 to Rs. 612. Spot 40×2 Centurys were quiet at Rs. 3.25. Kohinoors and New Greats, however, had some enquiries and increased by 4 nP each to Rs. 3.32 and Rs. 3.23, respectively. Citys were a fraction better at Rs. 3.23. Among foreign yarns (80×2), Fujis were dull at Rs. 5.31, while Paramounts put on 3 nP to Rs. 5.34.

In the cotton yarn section, ten counts Podars and Moderns were quiet at Rs. 14.62 and Rs. 14.87, respectively. Twenty counts Gokaks and Moderns remained unchanged, the former at Rs. 18.75 and the latter at Rs. 18.87. Maduras declined by 12 nP to Rs. 19.25. Thirty counts Edwards were neglected at Rs. 21.50. Indus receded by 12 nP to Rs. 21.75. Forty counts Moderns were unchanged at Rs. 27.75. Minaxis, on the other hand, hardened by 88 nP to Rs. 28.25, on special enquiries. Among 60s, Finlays remained stagnant at Rs. 61.00, but Raghuvanshis improved by 75 nP to Rs. 58.00 and Moderns by 25 nP to Rs. 61.50. Eighty counts Mahendras were on offer at Rs. 73.00. Finlays changed hands at Rs. 81.50, same as last week. Moderns shed 25 nP to Rs. 76.00.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	24-1-1957	16-4-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Dull Cones Snia April	807.00	809.00
150 Bt. Cones April	625.00	625.00
120 Japan (per lb.)	4.09	4.16
150 Japan (per lb.)	4.09	4.12
120 Italy (per lb.)	4.00	3.94
150 Italy (per lb.)	3.67	3.94
Staple fibre yarn **(per case of 200 lbs.)—**		
40×2 April	612.00	617.00
40×2 June	616.00	618.00
40×2 New Great (per lb.)	3.23	3.19
40×2 Century (per lb.)	3.25	3.25
40×2 City (per lb.)	3.23	3.22
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.62	14.62
20s Madura	19.25	19.37
30s Edward	21.50	21.50
40s Gokak	..	27.00
60s Raghuvanshi	58.00	57.25
80s Modern	76.00	76.25

OILSEEDS MOVE UP FURTHER

(From Our Own Correspondent)

BOMBAY, 24th *April*

The oilseeds market continued to rule buoyant during the week under review, with values touching new high levels. Hopes of fresh support from export houses following bear covering and replacement buying kept up the sentiment in the castor section, despite frequent profit-taking and fears of interference by the Forward Markets Commission to keep down prices. Hectic replacement buying and bear covering imparted strength to the groundnut section. Notwithstanding the earlier dullness caused by the Forward Market Commission's directive to suspend trading in cotton and the apprehensions of alteration in the margin system in order to check the rising trend, the cottonseed section staged a further rise in prices, thanks to support from upcountry centres. The undertone of the market was firm.

Groundnut May contract opened at **Rs. 172.25** and, after an initial decline to Rs. 170.37, advanced to Rs. 175.75 on 23rd. This level was more or less maintained on the 23rd inst. and today. At the close, however, it was a shade easy at Rs. 174.50. The net gain over the week was Rs. 3. August contract commenced at Rs. 176.35 and steadily increased with minor fluctuations to Rs. 180.25 today, before finishing at Rs. 179.50. The contract put on Rs. 4 over the week. Spot Bold F.A.Q. was higher by 50 nP at Rs. 34.75. Groundnut oil ex-mill was done at Rs. 19.62, as against Rs. 19.

Castorseed May contract opened at Rs. 180.75 on the 17th inst. and, after fluctuating between Rs. 178.00 and Rs. 184.75, closed at Rs. 173.25 today, the net increase over the week being thus Rs. 2.50. September contract commenced at Rs. 186.00. It fluctuated between Rs. 183.25 and Rs. 190.75, but was done lower at Rs. 189.25 at the close today. Spot Madras rose up by Rs. 1.38 to Rs. 36.00. Oil B.S.S. was in demand at Rs. 22.12, as against Rs. 21.75.

Linseed May contract declined from the opening level of Rs 31.00 to Rs. 30.31 on the following day. Subsequently, however, it increased steadily to Rs. 31.62 today before finishing at Rs. 31.12. September contract rose from Rs. 32.12 to Rs. 32.57 but closed easy at Rs. 32.31. Over the week, the two contracts put on 50 nP and 61 nP, respectively. Spot Bold was higher by 38 nP at Rs. 31.00. Linseed oil ready was done at Rs. 17.00, that is, 13 nP higher as compared with the last week-end rate.

Opening steady at Rs. 113.00 and Rs. 115.25, respectively, cottonseed May and September contracts remained slightly dull during the first three days. In the following days, however, they made a slow but steady advance. May contract was quoted at Rs. 116.50 today before closing at Rs. 114.25 and September contract touched the peak of Rs. 119.00 before finishing at Rs. 117.50. Thus, over the week, May position put on Rs. 4.25 and September delivery Rs. 3.75.

Among others, *kardi* seed Bold ready was higher by 38 nP at Rs. 21.50. June-July was quoted at Rs. 22.25. *Niger* seed Madras remained firm at Rs. 28.00.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	24-4-1957	16-4-1957	10-4-1957
	Rs.	Rs.	Rs.
Groundnuts—			
May 1957	174.50	171.50	168.75
Khandesh Quality Ready (per cwt.)	35.37	35.00	34.75
June-July	35.37	..	..
Linseed—			
May 1957	31.12	30.62	29.00
Bold Ready (per cwt.)	31.00	29.62	28.62

Ready	17.00	16.87	15.75

SUGAR RISES

(From Our Own Correspondent)

BOMBAY, 24th *April*

Despite some slackness in consumer demand, the sugar market ruled firm during the week under review. Ex-mill quotations for sugar were fully maintained. Arrivals of sugar into the market were smaller than those in the previous week, being 16,700 bags, as against 18,500 bags. There would have been a distinct rise in sugar prices but for the cautious attitude of traders who were awaiting the announcement of the usual monthly release of sugar for sale in free market. The traders were also not inclined much to have large fresh purchases on the eve of the budget.

Spot small grain sugar improved by a rupee to Rs. 89 per bag, inclusive of sales tax. Medium grain put on a like amount to Rs. 90-Rs. 92. Large grain was firm at Rs. 93-Rs. 98.

Vaisakh delivery contract for 'C' grade sugar, which had receded from Rs. 91-12 to Rs. 91-4 on bear-hammering and hedge selling, recovered subsequently to Rs. 91-8 today.

JUTE GOODS LOOK UP

(From Our Own Correspondent)

CALCUTTA, 23rd *April*

The week under review, intercepted by the Easter holidays, was noted for steadiness in the jute goods and fibre markets. Stockists of jute goods cheered the New York report which revealed that burlap consumption in the United States in the month of March was as high as 73 million yards. However, this higher figure caused no surprise. For, when the February consumption figure was announced as being as low as 62 million yards, such decline was believed to be a usual feature for that part of the year. With the measures that the promoters of burlap have been taking for popularising jute goods in the U.S., market circles are hopeful that 1957 would record higher export of hessian to that country. The consumption figure for March has only aided this expectation. It was, however, noticed that the month of April had not begun well as regards export of jute goods. For, between the 1st and 10th inst., sacking exported was only 6,915 tons and hessian 8,582 tons, as against 19,839 tons and 17,299 tons, respectively, in the corresponding period in March.

News of importance during the week under review was the decision to close the Standard Jute Mill (Managing Agents: Messrs. Bird & Co. Private Ltd.). The cause is the uneconomic nature of working of the mill and the extreme improbability of a change for the better in this trend. In the last year and a half, a loss of as much as Rs. 14 lakhs has been incurred. The mill possesses 650 looms, consisting of 283 sacking looms and 367 hessian looms. In accordance with the I.J.M.A. working time agreement, 12.5 per cent. of these looms is sealed. The mill, will cease working as from next month, but the Kinnison Jute Company will work the loom hours and will provide employment to as many workers of the Standard Jute Mill as possible. Labour troubles have already started in the Standard factory, following the announcement of the management's decision. It will be remembered that two mills have already closed down on account of uneconomic working. At the same time, the jute mill industry is not sparing any attempts to modernise their plants and machinery, and this has led to a reduction in labour strength from 325,000 to 260,000. However, the higher price for raw jute and the increased labour costs have been standing factors which militate attempts of mills at better working.

Early in the week under review, ready B. twills were steady at Rs. 111.12 and ready hessian 40" 10 oz. at Rs. 41.25. Fair business was being done, and in sacking sentiment received a fillip on news of a fresh tender from Burma. It was known that a trade delegation from Burma would visit India next month to purchase cotton textiles. It was thought likely that the delegation would get itself interested in jute goods also. As the news of higher consumption figure for the month of March in the United States was received, ready hessian 40" 10 oz. touched Rs. 41.44 by Thursday, since when the market has remained closed for Easter holidays and the week-end. Yesterday, there was a further rise to Rs. 41.75, with the 8 oz. being steadily quoted at Rs. 34 f.a.s. Ready B. twills sympathised with the higher trend in hessian and rose to Rs. 111.37 by Thursday and to Rs. 112.00 yesterday.

The raw jute market was fully steady and quotations for most varieties rose further by 50 nP. Mills were in the market and purchased some quantity. Lack of rains continued to make stockists reserved. The latest quotations for the 1956-57 crop, April-May delivery, are:

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
District	38.60	35.50
Northern	38.00	35.00

Bimli f.a.q.	Rs. 23.50	

BLACK PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 23rd *April*

Prices of Malabar black pepper were firmly held during the week, with fluctuations narrow, in view of the absence of selling pressure at all the terminal markets and reserved buying policy of the U.S.A. Spot in New York was quoted at $0.27 with grinders' interest developing. Afloat and shipments by named steamers for Malabar Black were reported done at prices ranging from $0.25½ to $0.26. Alleppey was quoting Rs. 600, while garbled at Cochin changed hands from Rs. 101 to Rs. 102½. Calicut also improved to Rs. 620 and Rs. 640, according to quality.

A section of traders and growers is bullishly inclined, as shipments to Russia and other East European countries upto the end of May are likely to be about 4,000 tons. The total export from November to April to all destinations is also expected to reach a high figure of about 9,000 tons. In the context of the above, any aggressive demand from the U.S.A. in future is sure to push up the prices. But the rise is likely to be slow, as Malabar has to face competition from Sarawak and Lampong during the coming months. Bulls as such are fearing in trying their hands at rigging up prices, because Sarawak and Lampong may undersell them during their harvesting seasons which begin in May in case of Sarawak and in August in case of Lampong.

Much, however, depends on the size of new crop Sarawak and Lampong. It also remains to be seen how the Indian growers will react when prices of Malabar reach a figure beyond Rs. 600, as stocks with growers in the interior are estimated differently both by bulls and bears according to their views.

Business in the local market is very much restricted, as outsiders are watching the development on the expansion of new arrivals in Singapore from Sarawak. Singapore is reported quiet at round about Str. $71 for black, while white is said to be firm, in view of shortage of stock.

In the A.S.T.A. section, May-June changed hands from $0.25½ to $0.26, while July-September was done from $0.25 to $0.25½. In the delivery section, the market failed to look up, in view of the accumulation of stock and unsatisfactory local demand.

Today's nominal quotations are: Ready delivery Rs. 81 per Bengal maund; May Rs. 550-Rs. 555, June Rs. 560-Rs. 565 and July Rs. 568-Rs. 573 per candy of 5¼ cwts.

BASE METALS FULLY STEADY

(From Our Own Correspondent)

CALCUTTA, 23rd *April*

A fair amount of business in base metals was put through during the week under review, and thus prices were fully steady. From Rs. 182, electrolytic copper was pushed up to Rs. 185, sagging subsequently to Rs. 183. Stocks with importers were fair, and this was no surprise. For copper imports in the three months to March last were substantially higher at 5,336 tons. During the week, the Government also lent its support to the market, in that there was an inquiry for a fair tonnage. Activity in tin was on a better scale, and the quotation at Rs. 516 marked a gain of Rs. 4, although the rate was still below the replacement cost. Electrolytic zinc opened at Rs. 76 and on good demand rose to Rs. 77.50. This was due to the prevalence of good demand, and the consequent decline in stocks. However, there were fresh arrivals during the week. Virgin lead was fractionally better at Rs. 79, after having opened at Rs. 78.75.

TRADING IN KIPS SMALL

(From Our Own Correspondent)

MADRAS, 22nd *April*

Trading in kips with the U.K. was small due partly to the pre-holiday (Easter) period and partly to refusal by shippers to accommodate buyers over prices. There was a gap of ¼d. to 1d. between Madras and London, and sellers were holding firm to their prices, because arrivals met with ready clearance. Premium marks cow hides were in good demand, at unchanged to ½d. up. There were spotty inquiries for top class cow calf run at 90d. and buff calf run at 63d.

Importers on the Continent were freely buying goat skins 8/9 lbs. run (premium marks) at 14s. 3d. to 14s. 6d. and 11/12 lbs. at 3d. less. Prices in raw centres increased, due to competitive buying by tanners.

In the next London tanned skins public auctions, which ommence on 6th May next, 58,000 tanned goat skins and 48,000 sheep skins will be offered for sale.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 22nd *April*

Easier trend marked trading in ready grains during the week in west U.P., due to increased arrivals of new crop into the markets. The State Government is worried about the food situation in the hilly districts, which are chronically deficient in foodgrains, the situation having been aggravated on account of failure of crops and other abnormal conditions. The Central Government has been requested for further allocation of wheat to tide over the emergency. Acute food shortage has also been reported in some parts of Bihar, where the Government has decided to continue sales though fair-price shops even after 1st May and the Centre has promised all help to that State.

Wheat prices at Hapur declined further by about Rs. 2 to Rs. 14 per maund for average *dara* quality and to Rs. 15-4 for farm quality. Local arrivals were higher, the average being 1,500 maunds daily, but as yet there was no stock-building, due to consumer demand. Local stock was nil, as against 3 *khaties* a year before. Pressure of sales on fair-price shops subsided and they are to be closed by the end of the month. Harvesting of *rabi* crops has finished and arrivals into the market will increase soon. Rice prices recorded modest gains towards the week-end, due to increasing seasonal consumer demand. *Basmati* was done at Rs. 24 to Rs. 28, *Mainpuri* at Rs. 22-12 and coarse at Rs. 17 per maund.

Although new gram arrivals had not yet begun, gram prices registered a fall of Re. 1-8 per maund during the week on easy Punjab advices, where pressure of new arrivals was being felt in the market. Barley and *bejhar* prices, however, ruled quiet, as arrivals were still small at 100 maunds daily and consumer demand was increasing, as maize and *bajra* had ceased to attract consumers. *Jowar* prices were steady, due to good demand for seed. The prevailing prices were (in Rs. per maund). Gram 11-6 to 11-12; barley 10-4; *bejhar* 10; *jowar white* 14-8; *brown* 13; *guwar* 11.4.

Despite increased daily arrivals to 4,000 maunds, ready peas prices continued steady, due to brisk buying inquiry from North Bihar and Assam. Total arrivals of peas from the beginning of the season were estimated at 35,000 maunds, the corresponding figure last year being 20,000 maunds. *Arhar* arrivals will still take about a month and prices have continued unchanged. Prices of other pulses were also quiet to be quoted in the week-end at: (in Rs. per maund): Peas *dara* green 10-12; farm 11-8; cape 12-8; *arhar* 12; *urd* 18 to 20; *moong* 14-8 to 16; and *masoor* 14-4 to 16.

Pulses future recorded sharp gains during mid-session on continued bull support, but the latest quotations were lower than the highest due to profit-taking at highest levels. The latest quotations were: Peas *jeth* Rs. 10-7-7½; peas farm *jeth* Rs. 10-12-3; *arhar jeth* Rs. 11-8-9; *urd baisakh* Rs. 18-13.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 22nd *April*

Sugar prices continued to rule steady during the week, despite reports of increased production in the country. Export prospects provided the main fillip. The general sentiment was buoyed up by the recent pronouncement of the Union Food Minister that increasing sugar export should be an important objective and that the Government would give every encouragement to that end. Good support was coming from the consuming centres of Punjab, Delhi, Rajasthan, Gujerat and Saurashtra. The factories in west U.P. are still crushing with their maximum capacity, as supplies of cane are adequate and the season is expected to last till mid-May.

The latest mill delivery prices of sugar are: Jaswant Rs. 28-10; Simbhauli Rs. 28-12; Mawana Rs. 28-4 to Rs. 29-4; Daurala Rs. 28-8 to Rs. 29-12; Amroha Rs. 29-4; Bijnore Rs. 28-3; Mansoorpur Rs. 28-10 to Rs. 30-4; Rampur Rs. 30-8; retail Rs. 30-10.

The *khandsari* prices improved during the week on expectations of good demand in the near future. Prices ranged between Rs. 20 and Rs. 26 per maund, according to quality.

Ready *gur* prices improved during the week fractionally, as arrivals were fast dwindling and were about 100 maunds today. Demand from consuming centres was not very brisk and local stock was put at about 100,000 maunds. Total arrivals from the beginning of the season were put at 453,000 maunds and prevailing prices were Rs. 11-4 per maund. Future *gur* prices, after early bull support influenced by expectations that the sugar factories would buy *gur* for conversion into sugar, declined towards the week-end, as such conversion was not considered by a section of the trade as economical for the factories. The latest prevailing prices were: *Gur baisakh* Rs.10-4-1½, *asar* Rs. 11-0-9 and *fagun* Rs. 10-8, as against Rs. 10-11-9, Rs. 11-7-6 and Rs. 10-9-6, respectively, during mid-session.

CAUSES OF FOREIGN EXCHANGE SCARCITY

(Concluded from page 846)

the post-war volume of Indian exports contrasts with that of the U.K. The index (1948-49=100) of the volume of Indian exports in 1954-55 was 115 as against 175 in 1937-38. Adjusting the latter figure, which related to undivided India, on a population basis, the index of the pre-war volume exports of what is today Indian Union territory may be placed at 152. Our exports in 1954-55 were, then, 75 per cent. of the exports in 1937-38, and the annual average (110) for the post-war period ending 1954-55 72 per cent. The index rose somewhat in 1955-56, but it declined close to the 1954-55 level during the first eight months of 1956-57. The U.K. exports as at the second quarter of 1956 were at 177 per cent. of the 1937 level, and the annual average for the post-war period ending 1954 was 134 per cent.

On the other hand, the annual average (110) of post-war Indian imports for the seven years ending 1954-55 was about 97 per cent. of the estimated volume of imports in 1937-38 notwithstanding severe import restrictions. Thereafter, with the progress of inflationary demand for consumption, the index moved up. It was about 19 per cent. above the pre-war level during the first eight months of 1956-57. In the U.K., where import restrictions had been considerably liberalised since 1954, the index of the volume of imports in the second quarter of 1956 was about 104 per cent. of the index in 1937, the annual average for the six years ending 1955 being about the same as before the war.

This suggests that the prevailing exchange rate of the rupee is not an equilibrium rate. It is acting as a drag on our exports. And it so favours imports that it is not possible to defend the external payments position of the country without rigorous import and exchange restrictions.

Overvaluation of the rupee is also indicated by the vast gap, which exists, between the internal and the external prices of gold, the international yardstick of values. This gap arose and grew as domestic inflation drove up the rupee price of gold and the intrinsic value of the rupee fell, while the exchange rate of the rupee in terms of gold (and the U.S. dollar) remained unchanged. The devaluation of the rupee in September 1949 (which raised the parity price of gold to Rs. 62.50 from Rs. 42.59 per tola) reduced the gap from about Rs. 72 per tola to about Rs. 52 per tola. Since then, the gap has fluctuated (mainly) with the state of domestic inflation. At the prevailing price of around Rs. 106 per tola, the price differential is about Rs. 43.50.

With our reserves near rockbottom, we have now next to no escape from devaluation, though it may be possible briefly to defer this step if the I.M.F. should be willing to extend a further loan of $227.5 million (Rs. 108 crores), the balance of our drawing rights. But to do so would be a ruthless waste of resources. To draw upon other loan funds to defend an artificial exchange rate would be to divert valuable foreign exchange away from capital formation to the detriment of the pace of economic development. Being a deep-rooted *malaise*, it cannot be cured by respite measures.

Devaluation alone was not enough to meet the crisis. If overinvestment continued, the rupee would be soon overvalued again at the new rate. Post-war experience had shown more conclusively than ever before that for a lasting solution to persistent payments difficulties devaluation must be preceded and followed by a pruning of investment to match the available domestic savings and such amounts of foreign aid as may be forthcoming, a restriction of money supply to the needs of output, and a prevention of the wage rates from becoming incompatible with the level of production and the requirements of development. Let us not vainly attempt to write a new set of economic laws and add to human suffering.—*All Rights Reserved.*

TENDER NOTICE

TENDERS ARE HEREBY INVITED BY THE Director of Industries, Colombo, for the establishment of a Cane Sugar Factory at Kantalai, Ceylon. Tenders should reach Colombo before 9.30 a.m. on 19th June, 1957. Further particulars available with the Ceylon Trade Commissioner, Ceylon House, Bruce Street, Bombay-1.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend on first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

† Less income-tax. a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments M—Managed by the Board of Directors. (c) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (e) For seven months ended 31st March 1957. (f) New Central Jute Mills.—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December

Notices

PRESIDENCY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 72nd Annual General Meeting of the Members of Presidency Jute Mills Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday the 21st day of May, 1957, at 3-30 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint Directors in place of Mr. N. B. Elias and Dr. S. C. Law, the Directors retiring by rotation at the Meeting who, being eligible, offer themselves for re-appointment.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:—

(a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

(b) Article 87 shall be deleted and the following new Article substituted therefor:

87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

(c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(d) Article 176 shall be deleted and the following new Article substituted therefor:

176. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

(e) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(f) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 7th to 21st May, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & Co., LTD.,

A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *24th April*, 1957.

Note: Payment of the proposed dividend, if declared, will be made on or after 4th June, 1957, only to those members whose names are registered in the Books of the Company on 21st May, 1957, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in Respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of Auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December, 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to the 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 162.

THE HIND BANK LIMITED

Head Office: **CALCUTTA**

Chairman:
Mr. K. P. GOENKA

General Manager:
S. D. PARDIWALLA

Paid-up Capital - - Rs. 50,00,000
Reserve Fund - - Rs. 26,00,000

7-MAY 1957

BANKS AND INDUSTRIAL FINANCE

LAST week, we referred to the setting up of a new institution for financing the medium-term capital requirements of our industrial establishments. We also referred to the fact that banks would normally be averse to granting medium-term credit on their own since, such a policy would be repugnant to the accepted canons of commercial banking. While this remains generally true in many parts of the world, it is interesting to note that banks in Europe are found breaking new ground in the field of industrial finance. This trend, though not statistically, is at least qualitatively significant. It shows that the banks, without abandoning their traditional role as suppliers of short-term credit, are not unwilling to shoulder the responsibility for slightly longer-term credit. Some light on this trend has been thrown by the Report of the European Productivity Agency of the Organisation for European Economic Co-operation, entitled "The Supply of Capital Funds for Industrial Development in Europe." The Report, which has been prepared by Lord Piercy in collaboration with national consultants in different countries, publishes the findings of the agency which studied conditions in the European capital market in the years 1952, 1953 and 1954.

There are, of course, several constituent parts of the capital market which include direct private lenders and investors, commercial banks, specialised banking institutions, stock exchanges, other institutional sources of capital such as savings banks, investment trusts, insurance companies, pension funds and building societies, public authorities, public and private channels for investment of foreign resources. An important change which has come over the capital market in Europe is the relatively important role played by the small saver. The far-reaching distribution of disposable incomes, according to the Report, has tilted the bulk of personal earnings heavily towards the lower income group. Although this group has hardly any personal saving for direct investment in industrial securities, its savings take the form of small deposits with the various saving institutions, life insurance policies, pension funds, shares in building and co-operative societies. Through many of these channels, the savings of great numbers of persons and households flow into institutions and reach the capital market through them. There are, as is well known, many specialised institutions which engage themselves in the grant of capital to industrial undertakings. What is perhaps less well known is that the ordinary commercial banks themselves do not view with disfavour a slight departure into the realm of medium-term financing.

It can be argued, as the Report points out, that the distinction between provision of credit and provision of capital is illusory, though this is not the position taken by practical bankers. After all, one of the commercial banks' essential functions is to supplement their customers' working capital by lending them the additional funds needed for financing stocks, work-in-progress, debtor accounts and exports until the proceeds of sales are collected. Since stocks and work-in-progress are elements in capital formation, it is clear that the banks do in practice provide their customers with capital year after year and, in spite of the conventional views on the short-term character of bank credit throughout the normal life of industrial firms, much of their working capital is their bankers' money.

A consideration which has influenced the European banks in the decision to undertake medium-term financing is that the ratio of time deposits to total deposits seems now to be higher in many countries than formerly, thanks to the fact that considerable amounts of institutional moneys and enhanced business reserves are left with the banks for fixed periods of up to two or three years and even longer. The concern of Governments about depositors' interest and the measures taken in the recent past to protect them, it is suggested, may well have led many people to expect that the authorities will act without delay if an emergency comes again and that their action will be effective. The other consideration is that the banks find that there is a hard core of deposits which is unlikely to be drawn upon. In this connection, the Report observes:

"It is probable, though hard to prove statistically, that, for psychological as well as structural reasons, there is a hard core of bank deposits which is not likely to be severely affected by a sudden rush into liquidity. Relying on this assumption, and also on their own resources in capital and reserves, and on the extensive facilities for 'mobilising' assets through the central banks, some commercial banks seem to consider as justified the use of part of their deposits for long-term loans to industry. They have been, and still are, urged to do so by business people and by writers on finance and investment. There is a distinct trend of opinion in that direction, especially in favour of assisting with capital industrial firms with no access to the capital market. Any extensive development in this sense would in effect be reversing the continental banking reforms of the 1930's.

"A safer and convenient method of using the commercial banks' resources to the proposed end is to form specialised, technically well-equipped institutions whose share capital is jointly held by the banks, and to supply them with sufficient loan capital for long-term investment. One advantage of this course is that it defines the extent of the banks' engagement. It is essential that the loan capital provided should be really earmarked for long-term lending and not withdrawable whenever the shareholding banks have liquidity troubles. A technically safer solution is for any such specialised institutions to raise their operating funds by issue of bonds and debentures, instead of relying on bank advances. This might still leave to the banks the function of supplying the basic capital."

The Report describes the changes in banking practice which have taken place in different European countries in recent years. So far as the U.K. is concerned, it notes that liquidity has always been their leading feature. In daily practice, however, there are exceptions to textbook principles. It is thus pointed out that overdraft accounts which ought to show a credit balance from time to time do not invariably behave in this way. There are cases where a customer's expanding business requires capital outlay which would eventually be repaid out of an issue of shares or debentures or simply out of two or three years' profits. "These and other like situations," it is stated, "lead without doubt to a certain proportion of lock-up business in a market where competition between banks is very keen indeed." In an indirect manner, the banks, of course, provide long-term capital resources by means of their contribution to specialised credit institutions such as the Industrial and Commercial Finance Corporation.

In France, the four largest deposit banks were nationalised in 1945, as also the Bank of France itself. Apart from the nationalised banks, two important deposit banks as well as 22 banks of local importance and 68 small deposit banks continue to work as private institutions. In spite of statutory restrictions, many of the French banks, it is stated, do not limit their transactions to short-term lending and many of them exercise a considerable influence on the management of the firms financed by them. The French *Banques de'affaires* have traditionally specialised in providing long-term finance either by acquiring shares in industrial and commercial companies and ultimately selling the shares to the public or by preparing and underwriting issues of debentures on such companies. In Germany, early after the currency reform of 1948, when many of West Germany's mills and factories were "little more than heaps or ruins," the banks had to provide extensive medium-term credits for the restoration of industrial buildings and equipment. In this, they had the firm support of the Bank Deutscher Laender. According to the Report, the view is held in German banking and financial circles that, within the structure of demand deposits and short-term deposits, there is a substantial hard core which is not liable to be withdrawn on a large scale and can, therefore, be used for medium-term and even longer loans to industry.

Among other European countries, the banking practices in Sweden deserve special notice. Neither official control nor their own lending policy, it is stated, has prevented the deposit banks in Sweden from making rather long-term loans to industrial units. This is more or less

true of Austria also where there has been a tradition of close association between banks and industry. Austrian banks take an active part in issues of securities on capital market. All applications for admission of new issues to the stock exchanges have to be submitted through a bank which is usually required by the Stock Exchange Board to take up 5 to 10 per cent. of every issue in order to ensure normal trading conditions for the securities issued. In Belgium, however, the contribution of commercial banks to the provision of medium- and long-term finance to industry is strictly limited, although for nearly 50 years up to 1940 that country's industrial expansion was mainly financed by the banks. In Italy, too, the position is virtually the same. The earlier period of intimate contact between banks and industry has been followed by the institution of governmental restrictions on banks' advances for long-term purposes. Today the main activity of deposit banks in industrial financing has been confined to short-term loan finance and discounts.

Summing up the general study of the problem of banks' activities in relation to the capital requirements of industrial concerns, the Report observes that not only the deposits have been rising in every country but the proportion of time deposits to demand deposits is higher than in the pre-war period. Further, the bankers seem to feel that the deposits are less subject to mass withdrawal than they were in the 1930's. This fact is held to justify a policy of very substantial provision of industrial finance by the banking system. Again, significant results have been achieved by setting up specialised institutions for long-term lending to industry from resources provided by the commercial banks. Finally, the Report avers that it would "be no overstatement to say that the banking systems are fairly generally expected to do more for financing the capital formation of industry than orthodox views on deposit banking would allow." It adds: "It might be advisable to concentrate on devising newer techniques for solving the problems involved than to go on fighting a rearguard action against the trend of developments." It deserves examination as to how far these developments could be adapted to the Indian context through cautious modification, rather than thoughtless abandonment, of the conservative traditions in banking practice.

RETRENCHMENT COMPENSATION

THE Ordinance designed to give the Life Insurance Corporation powers to alter the remuneration and service conditions of its employees has now been followed by another ordinance providing for compensation to workers who are retrenched by an employer upon closure of his business. It is difficult not to notice the contrast in principle between the two ordinances, although both of them seek to get over judicial decisions. The 'insurance' Ordinance improves the status of the State-sponsored Insurance Corporation as an employer, while the 'retrenchment compensation' Ordinance hits the private employer. The new Ordinance is a sequel to the judgment of the Constitution Bench of the Supreme Court which held, in November last, in a case arising out of the closure of the Barsi Light Railway Company, Ltd., and Shree Dinesh Mills Ltd., Baroda, that the workmen would not be entitled to retrenchment compensation under section 25F of the Industrial Disputes Act, if their services had been terminated by the employer on a real and *bona fide* closure of business or where the services of all workmen had been terminated by the employer on the business being taken over by another employer.

Mr. Justice S. K. Das, who delivered the judgment of the Court, said that retrenchment meant discharge of surplus workmen in an existing or continuing business. It had acquired no special meaning so as to include discharge of workmen on *bona fide* closure of business, though a number of labour appellate tribunals had awarded compensation to workmen on closure of business as an equitable relief for a variety of reasons. It was reasonable to assume, His Lordship said, that in enacting section 25F, the Legislature had standardised the payment of compensation to workmen retrenched in the normal or ordinary sense in an existing industry or continuing industry. The Legislature had also done away with the perplexing variety of factors for determining the appropriate relief in such cases by adopting the simple yardstick of the length of service of the retrenched workmen. Since this judgment was delivered, it would appear that a number of undertakings, particularly in Ahmedabad, Kanpur and West Bengal, have closed down or put up notices of closure for one reason or another.

The new Ordinance, which is intended to provide relief to the workers affected, comes into force with effect from 1st December 1956. It provides:

> (1) Where a concern is closed down, a workman shall be entitled to retrenchment compensation and notice of retrenchment as provided in section 25F. But if the closure is on account of unavoidable circumstances beyond the control of an employer, the amount of compensation will be limited to three months' average pay. (2) In the case of construction works (buildings, bridges, dams, etc.) no compensation is payable if the work is completed within two years. If the work is not completed within two years, retrenchment compensation will be payable on the usual scale, but the first two years of the workman's service will be excluded. (3) In a case of transfer of ownership, retrenchment compensation will not be payable if the conditions mentioned in section 25F safeguarding the previous service and terms and conditions of work are fulfilled. Otherwise, compensation will become payable.

By its too frequent resort to ordinances, the Government has succeeded in creating an impression that it is too impatient to adopt the normal procedure for legislation. To make a law a *fait accompli* and then get Parliament to pass it is certainly repugnant to the spirit of democratic procedure. Again, it reflects no great credit on the Government that it should frequently set at naught the judgments of the courts. Further, so far as the new Ordinance is concerned, some important principles are involved. As Mr. Homi Mody, President of the Employers' Federation of India, has pointed out, industrial undertakings "do not wantonly stop running; such a step involves heavy losses not only to the *entrepreneur* but a large body of shareholders, most of them of small means." He adds: "In such a situation, it is difficult to appreciate the justice of singling out for compensation just one section out of all those affected by the closure." It would certainly have been better if the change, contemplated by the Ordinance, had followed a Parliamentary debate. However, an unintended effect of the Ordinance will be that those who seek to set up new ventures on a more or less experimental basis will be partially deterred by the consideration that they will also have to provide for retrenchment compensation in the event of failure of their experiments. To this extent, it is bound to affect adversely the incentive for starting new industrial units with relatively less certain chances of success.

FREE ENTERPRISE

IN this country, the case for free enterprise has never received the support it deserves. There are historical reasons for this unintended, rather than studied, neglect. Those who are engaged in free enterprise were for a long time closely associated with the freedom movement. And they perhaps thought that when freedom came their case would not go by default. Events have proved that they were mistaken. In the post-independence era, free enterprise has been under heavy fire. In this long-drawn engagement, truth has been the main casualty, reported missing. A couple of words have been hurled at free enterprise without discrimination. "Profit" has been confused with "profiteering" and "business man" has become a synonym for "exploiter." It is in this climate that socialist ideas began to grow. The result is that the area of economic freedom has begun to shrink rapidly. But there are men, who feel that, if this trend were not averted, it might mean a diminution of the democratic content of our Constitution. It is hardly surprising that this particular view figured somewhat prominently in the deliberations of the first convention of the Forum of Free Enterprise, held in Bombay last week.

The basic, though not the only, criticism made by the two principal speakers at the convention—Mr. M. A. Sreenivasan and Mr. A. D. Shroff—was that the assumption of excessive powers by the State would gradually whittle down the freedom of the individual. This is a fear which is not confined only to a few thoughtful men in this country. This fear has been expressed in many parts of the free world. Thus, John Jewkes of the University of Manchester, in his book, *Ordeal by Planning*, which is perhaps the most closely reasoned exposition of the case for free enterprise ever made anywhere, has warned business men in his country that they would be unwise to ignore the criticisms which were falling upon them thick and fast. He feels that, if a business man "keeps quiet" in the face of all this criticism, he does so at the "peril of his own existence and that of the free economy." He has urged them to think as to why the type of economic freedom which finds room for them has positive advantages over a centrally planned economy, understand thoroughly the nature of the free economy and take time and trouble to rebut misrepresentations of it. After pointing out the fact that the ownership of the means of production was not necessarily an instrument of exploitation—there was slavery before machines made their appearance—he has explained how the loss of economic freedom, especially the freedom to own private property, would ultimately spell grave danger to the democratic way of life. Emphasising that, as private property diminished in importance as a result of penal taxation and other measures adopted by the State, there would be fewer and fewer people who would have the independence to criticise fearlessly the Government's policy without risking their livelihood and the security of their family, he has observed that business men operating in what is left of the free economy know only too well that there are innumerable ways in which outspoken critics of official muddles can be penalised. Again, discussing the sociological impact of the abolition of private ownership, he has said:

> "The abolition of private ownership of the means of production would constitute the abolition of the institution of property itself, and that, in turn, would involve the destruction of all forms of freedom.... It would wipe out the merchant. It would impose cramping restrictions on those who are temperamentally attracted by the task of taking risks, organising or innovating. It would restrict all choice of occupation except that approved by the State. It would deprive people of the right to save except under conditions which make them more completely subservient to the State. And, by preventing the creation of a class with a measure of financial independence, it would enfeeble the expression of unpopular minority views which represent the salt and savour of any society and so often constitute, in one generation, what comes to be accepted as the wisdom of the following."

Many people in this country hold erroneously, though obviously sincerely, the view that the concentration of economic power in the hands of individuals or groups of individuals is wrong for the country, whereas it is a great blessing if such power is concentrated in the State. They seldom realise that, while groups of individuals could be easily controlled by the State, there is nothing that could deter a proliferating bureaucracy, an inevitable accompaniment of State capitalism, from arrogating to itself more authority than is good for the country. Mr. Sreenivasan rightly thought that the Forum should show how, "with the well tried and familiar weapons that every democratic State now keeps in its armoury—in the shape of graduated income-taxes, monetary controls and legislative checks on anti-social tendencies—huge accumulations of power, economic or other, are utterly impossible except with the State itself." He added that the Forum must also point out how the "heavy and increasing economic armament and harness that our own State is piling up month after month may lead to an unhealthy concentration of economic power in the hands of the State and ultimately to the destruction of individual liberty." Mr. Shroff gave expression to a similar sentiment when he emphasised that excessive regulation and control of the economy cannot but lead to a gradual diminution in the democratic way of life. He felt that business men in general had already been seized with a fear complex; this had been a demoralising factor noticeable in the life of this country. He added: "With a due sense of responsibility, I can say that, during my recent travels to various parts of the country, I have come across thousands of people who feel strongly on the issue of free enterprise but acknowledge their helplessness in expressing their minds because of the fear of inviting official wrath."

This fear is bound to grow more and more intense and also permeate larger and larger sections of population, as the economy becomes subject to greater and still greater regimentation. A whole complex of economic apprehensions will most certainly be generated with all its debilitating effect on the national economy. It is time those whose responsibility it is to express as well as guide public opinion realised that even economic prosperity is too dearly won—if it could be won at all—at the expense of liberal values which make democracy so attractively beneficient a system of government.

PRE-BUDGET CAUTION IN SHARES

SUGAR EXPORTS—WORLD BANK'S NEW ISSUE PLAN

WEDNESDAY, 5 P.M.

THE share markets have entered the pre-budget dull phase. Nobody is inclined to speculate on the budget proposals and enter into commitments either way. The undertone is remarkably steady, a rather unusual feature two weeks before the presentation of the Central Budget. It is customary for operators to reduce their holdings to the barest minimum in order to be prepared for the worst and equities would consequently show a downward trend. But this is not the case now; there has been no selling pressure, evidently on account of the fact that prices are already at very low levels. It may not be an exaggeration to say that the various ministerial pronouncements made at the last budget session and subsequently have already led the public to expect, if not reconcile itself to, heavy tax burdens. The public has now got some idea of the possible tax measures that may be introduced; they have provoked sufficient discussion in the Press and on the platform. It is, however, too much to expect that the Union Finance Minister would exhaust the list at one stroke. It will not, therefore, be surprising if the tax measures do not turn out to be as rigorous as is generally feared.

MARKET GOSSIP

It is perhaps this feeling that is keeping up the morale of the market which has not experienced further landslide on the eve of the budget. There is a view that the Government may adopt a conciliatory attitude towards the private sector. The recent pronouncement of the Prime Minister at the A.I.M.O. meeting is cited in this connection. There is also a widespread belief that the Plan period may be judiciously extended. It is generally assumed that exemption will be given to companies from making compulsory deposits out of their accumulated reserves, though an official pronouncement to that effect is yet to be made. These considerations, together with the latest reduction of export duty on tea to 25 nP per lb. with effect from today, that is, below the minimum of 37½ nP per lb. under the slab system of duty introduced in April 1956, provide the basis for a somewhat optimistic outlook. It remains to be seen whether all this encouraging reading of the situation will be borne out by events.

A notable feature of the trading on the Stock Exchange during the last two weeks has been the growing enquiries for leading preference shares and debentures, some of which have gained some ground, though the tendency is not on a pronounced scale. Thus, Indian Irons 5 per cent. tax-free preferences have been bid up to Rs. 100-8 *ex-div.*, as against Rs. 102 *cum-div.* a week ago and Rs. 101 a fortnight ago. Tata Steel first preferences (6 per cent. taxable) have gone up from Rs. 153.25 to Rs. 155 and 7½ per cent. taxable second preferences from Rs. 114.75 to Rs. 117.50. Business has also been reported in preference issues of Stanvac, Tata Hydro group and Mahindra, though at lower rates in the case of some of them. Some of the equities in the cash section, such as banks and electrics, have also attracted enquiries and the gain in prices, though not marked, is notable in the context of the general dullness.

* * * *

There is growing feeling that the Government is after all amenable to reason and is willing to redress at least some of the public grievances. This feeling has gained further ground with the Government's recent decision to publish the draft rules regarding compulsory deposits for eliciting public opinion, although the time given for it is inadequate. The hardships that are likely to be caused to companies by this compulsory deposit system have been brought home to the Government which has duly considered these representations. The non-publication of the rules regarding deposits out of the accumulated reserves is taken as an indication of the Government's desire not to enforce this part of the provision in deference to public opinion. Nevertheless, the draft rules require clarification and modification in many respects. A careful study of the issues which need such clarification and modification has been made by Mr. G. P. Kapadia, Vice-President of the Indian Merchants' Chamber and a well-known authority on taxation.

Mr. Kapadia suggests, in the course of a note prepared on the subject, that to the list of exempted categories of companies, a few additions should be made, namely, (*a*) companies entitled to exemption under section 15c; (*b*) companies whose assessable income is *nil* or *minus;* (*c*) companies registered under section 25 of the Companies Act 1956; and (*d*) companies which have borrowings and have no extraneous investment or surplus cash and companies where the extraneous investments and surplus cash are less than the borrowed amounts. The ground on which the claim for exemption of the first three of these categories is based is that, for the purpose of computing the deposits in these three cases, the amount of depreciation which is allowable for arriving at assessable income will be added, so that a notional surplus will be created and the companies asked to make a deposit out of that surplus, although for income-tax purposes their income may be *nil* or *minus*. In respect of the fourth category, it is suggested that in cases where a company in this group has extraneous investments or cash surpluses, the same should be initially deducted from the borrowings and if the net result shows a net borrowing, it should be exempted from making a deposit.

The list of approved purposes for the utilisation of the deposits has been drawn with the object of preventing the use of companies' funds for an extraneous purpose not related to the business of the companies concerned. In this connection, Mr. Kapadia suggests that amounts utilised in the lay out for the stock-in-trade, stores and other outstandings and advances for the business and trade items should be treated as made for approved purposes. Similarly, a company might require a substantial amount, in accordance with its own past record, by way of cash resources and to that extent, cash resources should be considered as required for the purposes of business and not as surplus cash. In other words, Mr. Kapadia points out, it is only the lay out during the particular year in extraneous investments and for surplus cash that may be considered for the purposes of deposit, while the remainder should, *ipso facto*, be treated as laid out for an approved purpose. As an instance in point we may take the case of a sugar factory. The sugar companies are not free to release its stocks of sugar and get their cash back. The stocks are subject to Government releases and the companies' funds are necessarily locked up in business. The funds thus utilised should, therefore, be considered as made for approved purpose.

Another notable suggestion made by Mr. Kapadia in regard to approved purposes is in respect of companies which are desirous of utilising their large cash balances or bank surpluses for purposes of expanding their activities in other industrial spheres for the fulfilment of the second Five-year Plan. He suggests that cases of specified industries wherein such surpluses are to be laid out should be treated as approved purposes. Clearly, if this suggestion were not accepted, the compulsory deposit scheme would only serve to prevent industrialists from contributing to the success of the Plan.

* * * *

It is learned that the Central Government is contemplating to allow a further export of 100,000 tons of sugar, in addition to the 100,000 tons now permitted. The whole of the permitted quantity is reported to have already been sold in the foreign markets, although full shipments have not been effected. The latest export deal struck in sugar is around £69 10*s.* per ton (c.i.f.). Among the countries which have bought Indian sugar lately are Zanzibar, Burma, Ceylon and Persian Gulf ports. Overseas enquiries for Indian sugar continue to be quite encouraging, and the proposed additional quota may be expected to be utilised in the not-too-distant future. Much, of course, depends on the availability of adequate shipping space and the removal of transport bottleneck which at present is said to be hampering movement of sugar from factories in North India to the ports.

* * * *

The one question which is exercising the minds of planners and the Government most is how to bridge the yawning gap between the resources actually available and those required for implementing successfully the second Five-year Plan. Mr. T. T. Krishnamachari, Union Finance Minister, has categorically declared that there would be no whittling down of the Plan and that the Government would endeavour to bring all ingenuity at its disposal to bear upon the problem of raising resources. It remains to be seen what success attends these endeavours. It must, however, be emphasised that the Government would have to think of a new way of meeting development expenditure, especially when the scope for additional taxation is greatly restricted. In this context, the introduction of a novel "pay-when-you-please" feature into the recent capital issues of the World Bank deserves to be examined. As regards the 4½ per cent. $100-million stock marketed in the U.S. recently, the Bank has announced that, in addition to offering bonds for regular delivery, it will extend to certain institutional investors the privilege of making delayed payments giving them a selection of delivery dates between the beginning of August next and 1st February 1960. Although details of how the arrangement will operate have not been explained, it is gathered that the institutional investors to whom the facility is being extended will be permitted to defer payment for the whole of the stock they agree to take up to dates falling within the aforesaid 2½-year period which they and the Bank find convenient. The new arrangement, according to the Bank, is designed "to serve the dual purpose of co-ordinating its own borrowing with disbursements and of making it possible for purchasers to arrange their own payments to suit their own projected cash positions." This explanation has evoked some interesting remarks by "Lombard," the noted columnist of the *Financial Times*, London. He observes:

> "So far as achieving the first of these objectives is concerned, the Bank's plan has no great advantage over the practice of fixing an extended call period for stock issues. But it is not difficult to see that, from the institutional investor's viewpoint, it represents a considerable advance on that arrangement. For instance, an insurance concern that is fully extended at the moment might be unable to take up any portion of the World Bank's issue, if it had to pay only 10 per cent of the money involved immediately, even though it was aware that it would be able to cover this and the whole of the rest of the price of the bonds by the middle of next year. But, under the Bank's "pay-when-you-please" scheme, it would be in a position to become a subscriber. The Bank's innovation has another important advantage for institutional investors. It means that they can arrange to engage at current rates of interests funds that are not immediately available but which they know will be accruing later. For example, an insurance concern that took the view that the trend of interests rates during the next few years was likely to be downward could, by taking advantage of the World Bank's offer, make sure of securing the current rate of interest over a relatively lengthy period of time—the issue of stock being made in the U.S. this month (April) is repayable between 1967 and 1977—on premium income that it knows will be coming forward for investment as far as two years ahead."
>
> "Lombard," however, hastens to add that the advantages referred to above are not all on the lender's side. For he says that, by borrowing money in this way, those seeking finance for banking capital development can protect themselves against the backwash of a rise in interest rates. They should also be able, he adds, to count upon getting wider support for their issues than if they followed more conventional procedures. It is for this reason that "Lombard" expects that the World Bank's example will be followed by others who are planning to tap the world money markets for large development finance.

* * * *

If there is one economic malady which has afflicted nearly all parts of the world in recent years, it is the shortage of capital. In some countries, the disease may be found in a malignant form and in some others it may be of a somewhat milder variety. Nevertheless, in most parts of the world it does exist. This has, therefore called for very strenuous efforts on the part of the authorities who are all seized of the urgency of finding a remedy. Elsewhere in this issue (*vide* Leader page) we have made a reference to the report of the European Productivity Agency of the Organisation for European Economic Co-operation, entitled *The Supply of Capital Funds for Industrial Development in Europe*. We have indicated there how the European banks are making some attempt at providing long-term funds for industrial units. Apart from the commercial banks, there are several specialised institutions and also other agencies which make available long-term capital to industry. One of the important means of capital formation is for the industrial establishments to retain a part of the profits they have made. The Report describes this method, namely, the retention and accumulation of profits by companies, by the word 'self-financing.' It would appear that, in the U.K. and a few other countries, a major proportion of the total savings is represented by the retained profits of business units. In many countries, self-financing is now believed to be much more important than before the war.

Many reasons have been given to explain this development. In the first place, in family concerns and small businesses, it is the prudential consideration—anxiety for the future and the like—that has been responsible for retaining a large part of the profits they make. Secondly, inflation itself has been at the root of self-financing. Thus, large retentions generally arise out of large profits and these in turn arise out of inflation. Thirdly, there has been a new tendency on the part of the large companies to accomplish the main part of their investment programmes out of their own resources. Finally, political considerations in certain countries have played a part in reducing distribution of profits. Thus, in England, the differentiation in the rate of profits tax (on company profits) as between distributed and undistributed profits has been a factor which has led to the expansion of self-financing.

Self-financing is not, however, an unmixed blessing. It is true that this method of accumulating capital has been rendered necessary because of the difficulty of obtaining capital in the open-market and also because of certain fiscal considerations. But some of the consultants in different countries, who helped to draw up the Report, observe that self-financing is a method which itself restricts capital. In this connection, the Report observes:

> "It is, of course, obvious that the funds retained by one company are not available (and are not meant to be available) for the investment purposes of other companies, and although such funds, deposited with the banks, may enable the latter to increase their lending to other firms, still the funds are mostly withheld from the public capital market. This may be a factor in the shortage of external capital available for new ventures and rapidly expanding companies. The general point is that there is no certainty that retained funds will be used for investment, still less that current priorities for new investment will be satisfactorily met by this road. This is viewed by some of the consultants as one of the reasons for a certain shortage of risk capital."

A notable view on self-financing is that of Dr. Rittershausen of Germany who contends that by socially more desirable price policies or by reasonably full distributions, society would benefit, on the one hand, by general cheapness and by a better flow of investible funds to the capital market on the other. It would appear that the American consultants also came to the conclusion that self-financing though it has been a major factor in the country's expansion, is one of the most potent causes of the "depressed role of risk equity" in the total supply of capital. Again, although self-financing has contributed to the plethora of liquid internal resources the consultants describe these resources as "nominalistic rather than realistic" capital formation.

EQUITIES RULE DULL

VOLUME OF BUSINESS LOW

(From Our Own Correspondents)

BOMBAY, 1st *May*

LETHARGIC conditions prevailed on the Stock Exchange during the week under review. In the absence of any trading incentive and as a pre-budget caution, equities moved narrowly and the volume of business was also low. A notable feature was, however, the lack of selling pressure, which kept the sentiment remarkably steady. The slight improvement in the conditions of the money market, the expectations of larger credit facilities on a medium-term basis and fair-sized enquiries for some cash scrips and leading preference issues helped the sentiment very much, though operators in the forward section were reluctant to enter into fresh commitments. On balance, equities over a wide front scored minor gains.

In the steel section, Tata ordinaries moved within a range of Re. 1.50, that is between Rs. 168.75 and Rs. 167.25, before closing at Rs. 168.50, as against the previous week's close of Rs. 168. Tata Steels (new) were well favoured and they staged a rise of Rs. 2 over the week to Rs. 121. Indian Irons were steady, the sentiment having been helped by reports that the response to the Company's rights issue was very good. The shares closed at Rs. 20, as against Rs. 20.15 a week ago.

Small gains were noted in many counters of the textile section. Bombay Dyeings crept up from Rs. 556.50 to Rs. 559 before being placed at Rs. 528 *ex-div.* on Monday last. Subsequently, they appreciated to Rs. 543 *ex-div.* at the close today. Centurys were conspicuous with an advance from Rs. 456.50 to Rs. 463. Kohinoors were somewhat erratic, moving between Rs. 318 and Rs. 320, before finishing at Rs. 321, a gain of Rs. 2 over the week. Central Indias showed a rise of Re. 1 at Rs. 115, while Gokaks shed Re. 1 to Rs. 190.25. Indu Ordinaries were maintained at Rs. 10.10. Indore Malwas were up by Re. 1 at Rs. 137, as also New Greats at Rs. 229. New City Mills were stagnant at Rs. 133.75. Khataus were placed at Rs. 177 *ex-div.*, as against Rs. 180.50 *cum-div.* a week ago. New Kaiser-I-Hinds shed Rs. 1.75 to Rs. 102. Shree Nivas were unchanged at Rs. 178, while Simplex were dull at Rs. 171.50. Standards were lower by Re. 1 at Rs. 443. Svadeshis gained Rs. 1.25 to Rs. 215.50. Tata Mills were held at Rs. 47.50.

Bank shares attracted some enquiries and business was done at slightly better rates in some counters. Barodas gained Re. 1.50 to Rs. 101. Centrals had business at Rs. 50.75 and their new shares at Rs. 53.30. Bank of Indias changed hands 50 nP lower at Rs. 132.50, while Punjab Nationals were done Re. 1 higher at Rs. 52.50. United Commercials hardened by 50 nP to Rs. 53.50.

The insurance section was dull, but fractional rises were noted in select counters. Thus, New Indias crossed the Rs. 40-mark after a lapse of over three weeks and touched Rs. 40.25 before finishing at Rs. 40. British India Generals gained 20 nP to Rs. 13.45.

Electricity shares also depicted a better trend, on investment enquiries. Tata Hydros were marked up by 50 nP to Rs. 121.50 and their new shares by Re. 1.75 to Rs. 117.25. Tata Powers moved up Rs. 6.25 to Rs. 1,213.75 and Andhra Valleys by Rs. 22.50 to Rs. 1,207.50. Ahmedabad Electrics were done up to Rs. 94, but closed lower at Rs. 93.50. Bombay Suburbans improved by Re. 1.25 to Rs. 107.50. Surat Electrics appreciated from Rs. 107.75 to Rs. 108.25. Poona Electrics were done at Rs. 123 *ex-div.*, as against Rs. 128 *cum-div.* Amalgamated Electrics were a shade better at Rs. 10.40.

The miscellaneous section followed the general pattern of the market and changes recorded over the week were fractional. Belapurs moved between Rs. 228.50 and Rs. 230 before closing at Rs. 229, with no change over the week. Phaltans were a shade dull at Rs. 135.50, while Walchandnagars improved by Re. 1.25 to Rs. 250. Cement shares were featureless. A.C.Cs moved up from Rs. 160 to Rs. 161, but gave way to Rs. 160. Their coupons were picked up Re. 1 higher at Rs. 59. Digvijays shed 25 nP to Rs. 144.25. Orissa Cements softened from Rs. 13.44 to Rs. 13.35, but Jaipur Udyogs were stagnant at Rs. 12. In the engineering and mining group, Alcocks were a steady feature at Rs. 257.50. Tata Locomotives jumped from Rs. 146.25 to Rs. 147.50, but relapsed to Rs. 145.25 before gaining ground again to Rs. 146 at the close. Premier Constructions shed 75 nP to Rs. 164.25. Larsen and Toubros were done 25 nP higher at Rs. 15.25. Shivrajpur Syndicates were better by 50 nP at Rs. 91 and Indian Coppers were steady at Rs. 3.30. B.B. Petrols were done 4 nP lower at Rs. 2.46.

Scindias were featureless, but steady, moving between Rs. 18.50 and Rs. 18.20. The closing was done at Rs. 18.50, with no change over the week. Great Eastern Shippings picked up 10 nP to Rs. 18.20. In the automobile group, Premier Automobiles were marked up by 25 nP to Rs. 88.75, while Hindustan Motors shed 10 nP to Rs. 7.15.

In the miscellaneous group, Bombay Burmahs improved from Rs. 565.50 to Rs. 569 early in the week. After a mild relapse to Rs. 564, they gained to Rs. 567 at the close. British India Corporations shed 35 nP to Rs. 6.95. National Rayons gained from Rs. 226.50 to Rs. 227.25 before closing at Rs. 226.50. Tata Chemicals were dull at Rs. 16.15, but Tata Oils changed hands 75 nP higher at Rs. 43.25. Wimcos were done Re. 1 lower at Rs. 170. Hindustan Levers were steady at Rs. 19.10.

* * * *

Madras Stock Exchange

MADRAS, 30*th April*

The Madras Stock Exchange depicted a distinctly easy trend during the week under review. Fears of fresh tax imposts in the forthcoming budget to be presented in Parliament in about a fortnight's time from now chilled the enthusiasm of operators. Reports from Kerala suggesting that the State Government would go ahead with its programme of nationalising foreign-owned plantations and that plantation labourers there were urging upward revision in wages also acted as a damper. Operators were, therefore, inclined to reduce their holdings and, buyers being greatly reserved, equities suffered a setback in prices. Even reports of better crop harvests in several tea, coffee and rubber estates and the encouraging prospects of medium-sized industries getting credit facilities from the proposed Re-finance Corporation failed to have any effect on the market.

Among tea shares in the planting section, Devasholas dropped a rupee to Rs. 20.25. Nilgiri Teas fell by a similar amount to Rs. 9. Neelamalais receded by 20 nP to Rs. 5.90. Talayar Teas declined by 15 nP to Rs. 10.55. Blue Mountains lost 8 nP to Rs. 3.67. Chembras shed 5 nP to Rs. 3.87. Ouchterlonys, however, evoked some support and gathered 5 nP to Rs. 4.95. Among coffee shares, Balmadies were neglected at Rs. 3.35. In the rubber group, Travancore Rubbers slumped by a rupee to Rs. 18.75. Rajagiris eased by 25 nP to Rs. 18.75. Pullangodes declined by 20 nP to Rs. 2.20. T.R. & Ts were a shade lower at Rs. 9.10. Cochin Malabars decreased by 10 nP to Rs. 7.50. Midlands were quiet at Rs. 16.75 and Nelliampathys at Rs. 3. Vaikundams, on the other hand, hardened by 25 nP to Rs. 30.50.

In the textile section, Buckinghams were quoted at Rs. 169 *ex-div.* as against Rs. 176 *cum-div.* last week. Coimbatore Cottons receded by Rs. 10 to Rs. 330. Metturs fell by Rs. 4 to Rs. 402. Rayalasesmas lost a like amount to Rs. 135. Lakshmis and Janardanas shed Rs. 2 each, the former to Rs. 138 and the latter to Rs. 91.50. Coimbatore Spinnings receded by Rs. 1.50 to Rs. 86.50. Saradas by Rs. 2 to Rs. 97 and Loyals by 75 nP to Rs. 49.50. Kotharis and Rajalakshmis shed 50 nP each to Rs. 14.25 and Rs. 136.50, respectively. Travancore Rayons eased by 10 nP to Rs. 13.60. Palani Andavars were quiet at Rs. 147. Pankajas at Rs. 70, Premiers at Rs. 185 and Radhakrishnas at Rs. 275. Ranga Vilas, however, put on 50 nP to Rs. 87. Cambodias picked up 18 nP to Rs. 12.18.

In the sugar group, Travancores were marked down by Re. 1.40 to Rs. 10.50. Indias dipped by 60 nP to Rs. 15.25. Mysores eased by 25 nP to Rs. 37.25. E.I.D's however, rose by 10 nP to Rs. 26.60.

In the miscellaneous sections, India Cements shed 10 nP to Rs. 26.65. F.A.C.Ts eased by 5 nP to Rs. 5.25 and Mysore Papers a like amount to Rs. 15.70. Mettur Chemicals were quiet at Rs. 9.40, Mysore Chemicals and Fertilisers at Rs. 7.91, Indian Steel Rollings at Rs. 11 and Andhra Cements at Rs. 13. Dalmia Cements, however, were quoted 25 nP higher at Rs. 11.62.

WORKING OF COMPANY LAW IN BOMBAY

Two public limited companies with a total authorised capital of Rs. 202.00 lakhs, 38 private limited companies with a total authorised capital of Rs. 296.80 lakhs and one guarantee company were registered with the Registrar of Companies, Bombay, during the first quarter of 1957. Included in these are two giant concerns with authorised capital of Rs. 100 lakhs or more.

During the same period, 16 private companies with a total paid-up capital of Rs. 3,07,965; 9 public companies with paid-up capital of Rs. 8,81,075 and one association not for profit and one guarantee company, were struck off the Register of Companies under section 560 of the Act. Six public limited companies with a paid-up capital of Rs. 14,75,894 and 20 private limited companies with a paid-up capital of Rs. 14,14,766 were reported to have gone into liquidation. Five public limited companies having a paid-up capital of Rs. 42,22,295 and 9 private limited companies with a total paid-up capital of Rs. 17,00,500 were reported to have been finally dissolved.

Eleven cases were filed against companies, their directors and other officers of the companies during the quarter under review, out of which three cases were for not filing the annual returns as required under section 32 of the Indian Companies Act, 1913 (Section 159 of the Companies Act, 1956). Six cases were filed for not filing copies of balance sheet and for not circulating the same to the members of companies, etc., and two cases under section 91B and 54A of the Indian Companies Act, 1913, respectively. Altogether, six cases resulted in conviction during the quarter. Two directors were fined Rs. 75 each in a case for not filing the summary of share capital and list of members as required by section 32 of the Indian Companies Act, 1913 (section 159 of the Companies Act, 1956). The liquidator of a company in voluntary liquidation was fined Rs. 250 in five cases for not filing the annual statement of accounts as per section 244 of the Indian Companies Act, 1913 (section 551 of the Companies Act, 1956).

AUGMENTING EXPORT OF TEA AND COFFEE

U.P.A.S.I.'S MEMORANDUM

THE United Planters' Association of Southern India has presented a memorandum to the Export Promotion Committee on the question of the steps that would be necessary to secure an increase in the exports of plantation crops from India. The following are extracts from the memorandum:

"Among the important plantation crops produced in South India, tea, coffee, cardamom and pepper have valuable export markets. The Indian tea crop amounts to about 655 million lbs. annually, the largest produced by any country. About 450 million lbs. are exported, leaving 200 million lbs. for internal consumption. Tea stands at the top of the list of commodities capable of earning increased foreign exchange. Earnings from the export of tea during the period 1956-61 have been estimated in the second Five-year Plan at Rs. 635 crores. By comparison, the expected earnings from jute (India's second best export earner) and cotton manufactures (third best export earner) are placed at Rs. 610 crores and Rs. 375 crores, respectively.

"The question of the extent to which exports can be pushed up depends on a variety of factors, the most important of which is the ability of Indian tea to compete with tea of other countries in respect to quality and price. Our export trade in tea is experiencing stiff competition, not only from established competitors like Ceylon and Indonesia but also from newcomers like Africa, which not many years ago imported tea from abroad. At the present moment African tea is available in the London market at a price at least a shilling below Indian tea. Time and again, the tea industry has proposed measures designed to assist the competitive strength of Indian tea, but the Government appears to be reluctant to accept any of them. The matter has been allowed to drift far too long that our competitors have gained an advantage, and at the present moment it is extremely doubtful, if even a reduction in the rate of export duty or export cess is going to help us very much. If export promotion is really the aim, no time should be lost in arousing a national consciousness among the producers and exporters on the need for stepping up exports of all commodities and tea, in particular. Piecemeal efforts carried out in a half-hearted fashion cannot help at all. Measures like participating in international fairs and exhibitions, seeking information from our Trade Commissioners regarding the condition of the tea market in various countries, urging producers here to improve the standard of production and packing are no doubt helpful, but these do not by any means bring about a visible rise in the export level.

Suggested Measures

"The following measures are suggested as being practicable and necessary in the effort to secure an increase in the exports of tea from India. The suggestions in themselves indicate some of the impediments which now stand in the way of export promotion and which should be removed if we have to achieve the object in view:—

"1. Producers and exporters should be advised of the reasons for seeking an increase of the export levels, their co-operation should be sought, and they should be promised reasonable and practical assistance in solving their export problems.

"2. An attempt should be made to see that export business is attractive. Certain Governments have provided special incentives to the export trade, such as tax refunds and export subsidies. It is stated that some years ago a Government-appointed Committee made a suggestion that the Government of India should grant a refund of income-tax on the basis of a small percentage of profits earned from exports as an inducement to export, but so far this has not been implemented.

"3. The present system of levy of export duty on Indian tea makes no distinction between good quality and bad quality teas. More than 50 per cent. of teas produced in India are common teas which have to face increasing competition from other producing countries under conditions of world overproduction. This is the appropriate time either for abolishing the duty in its entirety or for considering a suitable revision in the system of levy and the revision should be such that teas facing increasing world competition get the maximum possible relief.

"4. Considering the fact that a part of the present 'export cess' of Rs. 4 per 100 pounds on export teas is being utilised for tea promotional activities abroad, it is perhaps not right to ask for its abolition. But this levy at present covers all the expenditure of the Tea Board apart from that covered by licence fees. This includes expenditure on internal propaganda, research and labour welfare. To this extent the cess is a definite disincentive to export and there is a strong case for the extension of the cess to all teas with a reduction in the rate, so that internal consumption will bear a fair share of the cost of the measures designed to assist the industry as a whole.

"5. We have not yet devised a foolproof method of regulating the price of tea export quota. When the price of export quota rises abnormally, as it has so often happened in the past, it constitutes a grave threat to the competitive position of Indian tea. The quota system itself is vexatious and is an important factor in limiting India's revenues from the tea export trade and has no effect on supplies of tea for internal consumption. Its abolition, coupled with the abolition, or substantial reduction, in the rate of export duty, will considerably help to raise the export level.

NEWS IN BRIEF

OVER 54,000 tenements were built by State Governments, private enterprises and corporations under the subsidised industrial housing during the year ended 31st March 1957.

Two food laboratories, one at Raipur and the other at Jabalpur, will be set up by the Government of Madhya Pradesh during the second Plan period in order to detect adulteration of food, edible oils, etc.

The Governments of India and the U.S. signed at New Delhi on Saturday last two supplementary projects agreements providing for $10.5 million in development assistance funds for the Indian railways and $2 million for the Community Development programme.

The Government of India has decided to extend the rebate of duty on excisable goods to cotton fabrics used in the manufacture of bags which are exported out of the country. The rebate is at present applicable only to ready-made apparel, tents, and sugar products, including biscuits and preserved fruit.

A 16-man delegation will represent India at the 26th Congress of the International Chambers of Commerce to be held at Naples from the 6th to 10th inst. The leader of the delegation, Mr. R. G. Saraiya, will preside over one of the general meetings of the Congress devoted to the problems of underdeveloped areas.

The Government of India has sanctioned a loan of Rs. 1.93 crore to Madras to enable the latter to meet the expenditure during the current year on the three schemes for the improvement of scarcity areas—Vaigai project, Amaravathi reservoir project and Mettur canal scheme. The total amount of loans so far sanctioned for the schemes aggregates Rs. 4.86 crores.

The estimated total output of iron ore in India increased to 365,168 tons in February 1957 from 354,406 tons in January 1957. Returns received from 108 mines for the month of February 1957, show a total despatch of 260,100 tons to the iron and steel plants and 75,192 tons to the export markets. The reported stocks as at the end of the month amounted to 1,478,607 tons.

The Rs. 69-crore Neiveli Lignite Project will be inaugurated on the 20th inst. by the Prime Minister, Mr. Jawaharlal Nehru. It is estimated that 3.5 million tons of lignite will be mined from Neiveli per year. The Union Government has also set up a Lignite Corporation, with Mr. T. M. S. Vilani as the Chief Executive Officer, to look after the implementation of the Project.

The Federation of Indian Chambers of Commerce and Industry will send a delegation of industrialists, led by Mr. G. D. Birla, to Europe and the U.S.A. some time in August next. The Federation will also undertake during the current year two important studies—one on the country's taxation structure and the other on the role and place of managing agency organisation in a developing economy.

The formulation and execution of a man-power programme to meet the requirements of India has been recommended by Mr. John Hillard, an American expert, who is currently advising the Government of India on man-power problems. He is understood to have also suggested special studies of different categories of personnel and stressed the importance of information regarding man-power resources and utilisation.

Indian mines registered an improvement in both production and employment during 1955, according to the Indian Bureau of Mines. The production in terms of rupees was 105.6 crores, as against 102.6 crores in the preceding year. The average daily employment in mines was 591,000, as against 568,000 in 1954. The value of mineral production was nearly 1 per cent. of the total national product.

Pursuant to the suggestion made at the fifth Development Commissioners' Conference held at Simla last year, the Ministry of Community Development proposes to establish 625 pilot housing projects in the country and drawing up master plans for building up model villages and suitable designs for rural houses. A sum of Rs. 1.6 lakhs has been earmarked for each project. The Ford Foundation has offered aid for this purpose.

Drilling for oil has started in the region 3½ miles east by Burdwan under the Indo-Stanvac oil exploration project. The search is being conducted by the Standard-Vacuum Oil Company under an agreement with the Government of India, signed in 1954, according to which 10,000 sq. miles of land where oil deposits are reasonably believed to exist have been allotted to the Company. The Government has 25 per cent. of the shares in the Indo-Stanvac venture.

The expert body appointed by the Eastern Regional Committee of the All-India Council for Technical Education has recommended a large expansion of technical studies in the eastern regions comprising West Bengal, Bihar, Assam and Orissa) through 1,128 additional seats at the degree level and 2,870 seats at the diploma level as recommended by the experts. The increase suggested will bring the total seats available to 4,728 for degree and 4,300 for diploma courses.

The Government of India is reported to have advised the Madhya Pradesh Government to expand its technical training programmes with a view to meeting the requirement of the two major industrial projects located in the State—the Bhilai steel plant and the Heavy Electrical Equipment Factory at Bhopal. The two projects together are expected to require 11,000 trained technicians and craftsmen, about 8,000 for the steel mill and 3,000 for the electrical factory. The State Government is understood to have prepared a Rs. 158.6-lakh scheme for the training of technical personnel. At present, the State has facilities for training only 300 technicians and craftsmen. To begin with, it has been decided to provide facilities for training 1,200 students in the current year by starting new vocational training centres and doubling the capacity of existing institutions.

From Abroad

A Swiss financier plans to build an oil refinery at Emden, West Germany, with the aim of undercutting petrol prices charged by the large oil companies.

A rubber trade delegation from Malaya will leave for London shortly to discuss with the British rubber manufacturers the problems relating to rubber shipments from Malaya to the U.K.

The U.S. and Pakistan have reached an understanding by which 54,000 ounces of U.S. silver loaned for coinage purposes during the second World War will be repaid to the U.S. Treasury.

The U.S. Government has announced its willingness of offer $10 million as economic aid to Jordan to assist economic development and maintenance of political stability in the country.

A credit agreement was signed in London on 30th April between the Argentine State Railways and a U.K. banking group, headed by Baring Brothers, under which the latter will supply the former £5 million to finance the purchase of steam locomotive spare parts. Nearly a year ago, the Baring Brothers headed a group of British banks which offered Argentina a credit of about £20 million to facilitate purchase of British capital goods.

More than 700 big companies in the U.S. have prepared emergency plans to keep production and management going in case nuclear attacks destroy their head offices or main factories. Several of the companies have already well developed emergency arrangements. One company has supplied 16 of its centres with undated salary cheques and also bonds and other securities. If there is an attack on the head offices, employees are expected to make their way to one of these reporting centres.

Japan will demand a special session of G.A.T.T. to discuss the European common market treaty before the regular plenary session opening at Geneva on 24th October next. Announcing this at a meeting of the 18-member G.A.T.T. Intersessional Committee at Geneva last week, Mr. Ichiro Kawasaki, Japanese permanent delegate to the U.N. in Geneva, said that there was much concern in his country about the possible effects of the common market treaty on Japan's export trade.

A French technical mission is to visit Japan in July to advise on modernisation of the coal mining industry. The visit is the outcome of a Japanese request to the World Bank for a loan to help in the modernisation of their coalfields. The granting of the loan is subject to a preliminary report by a team of experts from a third country. A French group, formed a year ago to carry out technical mining studies, won the contract for the preparation of the report against British, American, German and Belgian competition.

The Russian Section of the London Chamber of Commerce has written to the President of the Board of Trade expressing concern at the reported American proposal that certain additions be made to the Soviet embargo list as a condition of bringing the Chinese embargo list into line. The Section, it is stated, has no desire to prejudice the negotiations for a reduction of the Chinese list which it welcomes in the general interests of British exports, but it is opposed to such reduction being at the expense of the U.K.'s trade with Russia. It believes that consideration should be given to the possibility of further relaxing the Russian list so as to enable British commerce and industry to take advantage, within reasonable strategic limits, of the increasing interest being shown by the Russians in such items as machine tools and factory equipment of all kinds. It, therefore, urges the U.K. authorities firmly to refuse to impose additional controls of any kind on exports to Russia and not to hesitate to take a unilateral stand on this matter, if necessary.

PERSONAL

MRS. Vijayalakshmi Pandit, Indian High Commissioner in the United Kingdom, who was on a brief visit to India for consultations with the Government, left for London on Tuesday last.

Dr. Panjabrao S. Deshmukh, has been designated Minister for Co-operation in the Union Ministry of Food and Agriculture, and Mr. M. V. Krishnappa as Deputy Minister for Food.

Mr. M. G. Vohra of the Hind Cycles Ltd. and Mr. B. P. Kapadia of the Hindustan Construction Co., Ltd., have been elected Chairman and Vice-Chairman, respectively, of the Engineering Association of India, Bombay Region, for the current year.

Mr. W. H. Pinckard has announced his retirement as Chairman of the Board and Chief Executive Officer of California Texas Oil Co., Ltd., New York. Mr. W. F. Bramstedt, President, has been elected to succeed him. Mr. A. J. Singleton, Executive Vice-President, has been elected President.

Dr. B. K. Madan, Principal Adviser to the Reserve Bank of India, left for Sydney, Australia, on Monday this week to attend the meeting of the Governors of Commonwealth Central Banks in the South-East Asia region to be held there from the 6th inst. for formulating a plan of higher training of prospective central bank senior executives. He will be away from India for about three weeks.

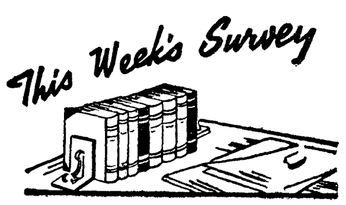
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 7*th May*

Ceylon Tea

Last week we reviewed in these columns, the course of the tea industry and trade in India during the past year. We have since received the report of the Colombo Tea Traders' Association for 1931. The tea industry suffered a serious set-back during the year and prices ruling at the close were in most cases under cost of production. This state of affairs was brought about chiefly by excessive exports of tea from Java and Sumatra, these countries having increased their crop since 1910 by four hundred per cent., whereas the outturn in that period from India and Ceylon only increased by sixty-five and thirty-nine per cent., respectively. The tea restriction scheme which was carried out during 1930 by India, Dutch East Indies and Ceylon was not renewed during 1931. Ceylon succeeded in obtaining the required percentage of adherence. South India, however, was unsuccessful and Dutch producers failed to confirm the figures tentatively submitted. A further enquiry was made in August towards this end from the Ceylon Association by the Indian Tea Association which asked whether it was considered desirable to seek the co-operation of producers in Ceylon, India and the Dutch East Indies to discontinue the manufacture of tea during the month of August. The proposal did not, however, commend itself to the Ceylon producers in London. The matter of restriction received renewed attention later on by growers in the Dutch East Indies, but with little avail.



FOOD SITUATION

THE latest statement of the Union Food and Agriculture Minister, Mr. Ajit Prasad Jain, that there is absolutely no cause for alarm about the food situation in any part of the country and the situation is, on the other hand, hopeful, is certainly comforting and should go a long-way towards correcting the near-panic caused by frequent reports of high prices and scarcity in certain areas. One of the disquieting trends in Indian economy in the past few months has been the persistently upward trend in food-grains prices, although the trend has somewhat been arrested lately. The wholesale price index of food articles (Base: year ended August 1939=100) for the week ended 13th April 1957 stood at 406.1, as against 360.9 a year before, representing an advance of 45 points or 12.5 per cent. over the year. The advance is accounted for by both cereals and pulses, the prices of which having gone up by 17.6 per cent. and 20.5 per cent., respectively.

It is not the mere rise in foodgrains prices that is a matter of anxiety. Reports indicating acute scarcity conditions have emanated from different States. In fact, some centres are reported to be experiencing actual famine conditions. Mr. Jain, however, has described these reports as exaggerated. He has declared that the Central Government has enough stocks of wheat to meet the requirements of all the States. His assessment of the food situation in the three States of Uttar Pradesh, Bihar and Bombay, where the position is said to be difficult, may be summed up as follows:

The total needs of the aforesaid three States amount to 150,000-175,000 tons in the next five to six months. This is not a 'mighty' quantity and, according to the import programme, the Government is receiving from the U.S. 1.5 million tons of wheat before September next. Bihar requires, in addition to the 8,000 tons per month it is receiving at present, a further quantity of 35,000 tons of wheat in the coming five months which the Centre is ready to meet. In the U.P., the recent breakdown in transport has been remedied and supplies have reached the areas. The Centre has agreed to supply 15,000 tons of foodgrains to the hilly region and eastern parts of the U.P. and also to continue the fair-price shops even after the 1st inst. U.P. and Bihar together require 70,000 tons of wheat and the Government has ample stock to meet the shortage. As regards Bombay, the Centre is under an obligation to meet its demand fully—the demand is for 20,000 tons a month, as against 10,000 tons received hitherto—since the State has been cordoned off, export or import of wheat not being allowed. It has also agreed to supply 20,000 tons or more of wheat to the State in order to compensate for the loss in *jowar* crop in certain parts.

The figures relating to the production of wheat and rice, the two staple foodgrains of the country, make encouraging reading. The aggregate yield of rice during the current year is estimated at 28.14 million tons—an all-time record—as against the partially revised estimate of 26.85 million tons for 1955-56, a rise of nearly 1.29 million tons or 4.8 per cent. Similarly, the wheat crop is expected to reach the peak level of 8.78 million tons (touched in 1954-55), or an increase of 430,000 tons as compared with the previous year. While the rise in output of rice and wheat thus is gratifying, the fact remains that the damage caused to coarse grains like maize and *jowar* in certain parts of the country will continue to exert pressure on wheat and rice. The Government of India will do well not to be complacement about the food situation; it should take energetic steps to replenish the stocks as and when they get exhausted.

HEAVY ENGINEERING INDUSTRIES

The dearth of well qualified and adequately trained personnel is acutely felt in all fields of economic activity, particularly in the heavy engineering industries. In fact, this is a serious handicap which has all along been hampering the pace of progress in the implementation of the series of industrial development programmes. Viewed thus, the reported decision of the Government of India to constitute a committee to select the requisite technical personnel to man the heavy engineering plants proposed to be established under the second Five-year Plan must, indeed, be welcomed. The decision is a sequel to the recommendation made by the Jehangir Ghandy Committee of Enginering Experts. This Committee, it will be recalled, was appointed by the Government of India some time ago to study and report on the relative merits of the Russian and British proposals relating to the heavy engineering industries to be started in the public sector.

After examining the relative merits of the proposals contained in the British and Russian reports on heavy engineering industries, the Ghandy Committee is reported to have favoured the adoption of the British report only in so far as it pertains to heavy vessels and heavy plate shops, and that of the Russian report which relates to location of heavy machine building plant and forge foundry. While on the former, the Committee feels that the techniques developed in Britain are quite unique and suitable to Indian conditions. According to it, the British report is flexible and suggests the location of economic units on an India-wide basis. Such location will, besides helping the private sector to take an active part, enable the multiplication of units as required and directed towards a specialised group of products. There is also the additional advantage that the rate of expansion of heavy engineering industries can not only be nourished but also controlled, while, at the same time, achieve a balanced development as and when it is convenient to do so in accordance with either the real requirements or the available capital resources of the Government from time to time. If this recommendation were to be accepted by the Government, the City of London Authority may, it is believed, float a sterling loan for meeting the cost of heavy equipment that is likely to be imported from the U.K.

As regards the Russian report, the Ghandy Committee has favoured the location of heavy machine building plant and forge foundry, largely because of the favourable credit terms offered. In the considered opinion of the Committee, the heavy machine building plant must both produce considerable equipment for the three Government-owned steel plants and meet the equipment needs of the other industrial projects included in the Plan. The chief consideration which seems to have weighed with the Committee in not accepting the Russian proposals in full is the heavy initial cost which India cannot afford at present.

FOREIGN EXCHANGE

The one problem which is engaging the utmost attention of planners and the Government is that relating to foreign exchange. This is only to be expected, considering the marked deterioration in the country's balance of payments of late. The aggregate foreign assets of India now stand at a perilously low level of about Rs. 512 crores, a sharp contraction of Rs. 222 crores as compared with the position a year before. Candidly enough, Mr. T. T. Krishnamachari, Union Finance Minister, admitted, while talking to Press men at Madras the other day, that the foreign exchange position was, indeed, difficult, "there being not much of a surplus." But then, he added, the Government was endeavouring to fill the gap by various means—restricting imports, raising exports and conducting negotiations for credit with foreign suppliers of capital goods. He declared that not a single important project under the second Plan would be held up for want of either foreign exchange or funds. He referred, in particular, to the prospects of securing capital goods from British industry on the basis of deferred credit. He also revealed that arrangements were being made to get essential plants for more than a score of industries under the scheme, subject, however, to two conditions. First, repayment should be spread over seven years. Secondly, the industry must be capable of earning foreign exchange for repayment one year after the commencement of production.

While the endeavours of the authorities to solve the problem of foreign exchange will be widely welcomed, doubts will arise as to whether the efforts will meet with complete success. For the problem has turned out to be very acute, especially since the foreign exchange reserves have, as the White Paper on the 1957-58 Budget says, already been drawn down to an extent which leaves little scope for further draft upon them. This aspect has been forcefully brought out in an interesting article on India's balance of payments deficit appearing in the latest issue of *The N.B.I. Review*. The growing gap between foreign receipts and expenditure, the *Review* points out, follows the familiar pattern of export earnings lagging behind a rising import bill. At the same time, the once ample cushion provided by the sterling balances built up during the war has gradually disappeared, with the result that it is no longer possible to make good deficits incurred on current account by indenting on resources accumulated in past years.

The *Review* has examined the special measures taken by the Government to check the deterioration in the balance of payments. The measures include a vigorous pruning down of imports in the current half-year (this is expected to save Rs. 30 crores in the import bill, tightening up of capital goods imports, directive to the private sector of industry to seek out extended credits when purchasing equipment from abroad, abolition of basic travel allowances except for approved purposes relating to business, education or health, and close watch on imports of raw materials so as to prevent any unnecessary stockpiling. Characterising all these as being mostly negative measures designed to hold the line, the *Review* emphasises, and rightly so, that the permanent reinforcement of the foreign exchange front must mostly come from increased export earnings, private foreign investment, and loans from Governments and international agencies. In this connection, it observes:

"An export drive is under way aided by eight Export Promotion Councils. A first glance at the problem suggests that, though, ultimately, increased exports will add substantially to foreign earnings, they are unlikely to make any quick contribution to the bridging of the gap which now yawns before those responsible for carrying out the second Plan. Nonetheless, the authorities were entirely right in deciding to examine prospects in the export field without delay. Negotiations have been going on for some time with the World Bank and other bodies for loans to cover the foreign exchange needs of various development projects, and for as far ahead as one can foresee, it is obvious there must be heavy reliance on the I.B.R.D. and other international lending institutions. Ultimately, the way may be clear for Indian Government borrowing abroad, but there are still a number of technical and other difficulties to be resolved."

There is considerable force in the aforesaid remarks of the *Review*, as also in its statement that any fresh inflow of private foreign investment is likely to be halted until it is seen what new policies, if any, emerge as a result of the recent general elections. In any case, some basic fiscal changes are, as the *Review* pertinently emphasises, necessary to inspire and maintain investment interest abroad. It adds that, in the end, perhaps, there may be no option but to slow down some parts of the second Five-year Plan.

AGRICULTURAL PRODUCTION

The task of raising agricultural output was the main issue on which, appropriately enough, the deliberations of the sixth Development Commissioners' Conference, held at Mussoorie last week, centred. It may be noted here that the production of foodgrains which substantially declined since 1953-54, has witnessed considerable recovery in 1956-57. The fact, however, remains that further strenuous efforts are called for in order to raise agricultural output in the ensuing years. It is noteworthy that the States have agreed to an increase of 28 per cent. in the target for foodgrains to be reached at the end of the second Plan. The Planning Commission has been contemplating, with a view to bringing programmes of food production more in relation to the programmes of irrigation, a 15- to 20-year programme for irrigation projects.

Be that as it may, what essentially determines the success of these programmes is the efficiency of the agencies through which the targets are proposed to be attained. Community Development (C.D.) and the National Extension Service (N.E.S.) blocks, which claim to have achieved a 25 per cent. increase in food articles in the areas covered by them since their inception, hold out, obviously, great hopes. The working of these community projects, however, has not been as encouraging as one might expect. This has been disclosed by the latest evaluation report. Among other defects, it points out, that the Advisory Committees at the block and district levels have yet to play the role that is expected of them in the development programmes, that there is an inadequate orientation of the project staff in the objectives and techniques of community development, and that loans made in the project budgets have not been fully utilised. To add to these, a wide disparity has been found in the distribution of achievements and, therefore, of benefits as between village and village

RAMTIRTH BRAHMI OIL

Ayurvedic Medicine (Regd.)

(Special No. 1)

Appreciated by Famous:

PROFESSORS · HOMOEOPATHS · APOTHECARIES and HAKIMS

because its application ensures many reliefs and advantages

★ Stops hair-falling and grows new healthy hair abundantly and restores natural black colour.

★ Removes Greyness and makes hair lustrous.

★ Removes Dandruff.

★ Baldness can be overcome by its application.

It is **AN INVALUABLE HAIR TONIC** *for the prevention of* **DANDRUFF and FALLING HAIR**

Useful to EVERYBODY IN ALL SEASONS

Sold Everywhere—ask for **THIS BRAND ONLY**

Price: Big Bottle .. **Rs. 3/50.** Small Bottle .. **Rs. 2/00**

Send M. O. Rs. 6/00 for big bottle and Rs. 4/00 for small bottle (including postage and packing charges). No V.P.P. Sent.

(Registered)

ASANA CHART

To be healthy and to keep fit, ask for our attractive ASANA CHART (Map) showing YOGIC ASANAS which will be sent on receipt of M.O. for **Rs. 1/90,** including postage. These Asanas can easily be performed at home.

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and from 6 to 7-30 p.m. Lectures on every Sunday at 10 a.m.

INTER-STATE ISSUES FIGURE AT MEETING OF NORTHERN ZONE COUNCIL

PROSPECTS FOR CAPITAL GOODS CREDITS

From Our Own Correspondent

NEW DELHI, 29*th April*

DELHI LETTER

AN important highlight of the week under review was the inaugural meeting of the Council of the Northern Zone, comprising the States of Jammu and Kashmir, Punjab and Rajasthan and the Union territories of Delhi and Himachal Pradesh. This Zonal Council, Constituted in terms of the States' Reorganisation Act, is to have its headquarters at Delhi. The inaugural meeting discussed a number of problems common to all the units in the zone. Two notes presented by the Planning Commission on the development plans and the agricultural production programmes for the current year were first considered by the Council. The Deputy Chairman of the Planning Commission pointed out that the targets of agricultural production had not been reached in most of the States. The Chief Ministers of the States concerned undertook to examine the matter and report to the Council.

The question of manpower planning in the context of the second Plan was next considered, and the Council set up a committee to study it in detail and report back to the Council. The Council also undertook to consider the desirability of exchange of service personnel belonging to all-India and also State services on a limited scale for periodic service in States other than the parent State.

Inter-State Problems

The Northern Zone, as the Union Home Minister, Mr. Pant, explained in his inaugural address, has to deal with some very important matters of an inter-State character. Apart from the Bhakra Project which is jointly controlled by Punjab, Rajasthan and Himachal Pradesh, there is the problem of soil conservation, in the catchment area of the Sutlej in Himachal Pradesh, to protect the project and the Nangal Hydel canal. There is also the problem of resettlement of persons who will be displaced when the main Bhakra reservoir is completed by 1959. The Nangal hydro-electric grid already cuts across the boundaries of Himachal Pradesh, Punjab and Delhi, and the utilisation of the ultimate power potential of 3.5 lakh kw. from the project will also call for a long-term plan of co-ordinated industrial development and a common tariff policy in the zone. Similarly, a rapid development of about 3 million acres of land likely to be irrigated by the project in Punjab and Rajasthan will call for co-ordination between the two States in the matter of fixation of water rates, crop planning, etc. Thirdly, Himachal Pradesh, having virtually no railways, depends on private road transport covering the area from points in Punjab; any steps to nationalise the road transport system will, therefore, call for co-ordination between the States concerned. And, last, there are many points in common between Jammu and Kashmir and Punjab, and they are tied together for their economic development.

Indo-Australian Trade

While pointing out, at the Zonal Council meeting, the pivotal position of food in the economy of India, the Union Home Minister said that it was necessary to produce more food so that foreign exchange could be made available for plant and machinery which must be imported. But what would be eminently good for this country would not be good for a country like Australia which has all along been one of our suppliers of wheat and other foods. The Australian Trade Mission, for example, has expressed here its concern over a possible setback to Australian exports with increased food production in India. Already the volume of Australia's wheat exports to this country has fallen in recent years. Although the Government of India has assured the trade delegation that Australia could look forward to a continuing share in any necessary imports of wheat by India, the delegation has rightly chosen to explore the possibilities of developing other lines of exports in order to maintain the present volume of Australian exports.

The leader of the Australian mission has just told a Press Conference here that the immediate results of their Indian tour have exceeded their expectations and the prospects are good for a healthy two-way trade between India and Australia. There are also good prospects for establishing engineering industries in collaboration with Australian and Indian firms. Australia is already associated with the manufacture in India of windmills, spray irrigation equipment and road rollers. On the trade side, the delegation has discovered good prospects for such Australian products as vitamin-fortified non-fat milk powder, dairy equipment for additional cattle colonies, certain chemicals, refrigeration equipment, light agricultural machinery and some steel products. As for Indian exports to Australia, large orders have just been placed for carpets, coir goods, jute floor coverings, ginger, spices and nuts. The delegation has also told the Government of India that there is scope for importing Indian cashewnuts, pepper and jute manufactures.

Shipping Services

The mission, however, has firmly expressed its inability to entertain orders in terms of the Indian deferred payment scheme connected with the import of capital goods. The shortage of capital resources in Australia itself, according to the leader of the Trade Mission, has led his country to attract foreign capital. Any large-scale Australian investment in India has, therefore, to be ruled out from the realm of possibility. But one positive result, among some others relating to trade, of the Indo-Australian talks pertains to shipping services between the two countries. It is revealed that, under arrangements negotiated with the Australian mission and Indian shipping interests, the Eastern Shipping Corporation will put on the Indo-Australian run, in September or October next, one of its new ships. This new ship will be the third of its kind because the Corporation has already two ships for goods traffic between the two countries. The British India Company also will be putting the first of its new ships on the Australian line in a year's time. For its part, Australia is likely to start a shipping service next year.

Supply of Credit

It is now becoming apparent that, with all their goodwill towards India, the Western nations are in no position to meet, in the brief period of the second Plan, this country's huge demands arising from its drive for industrialisation. This is borne out by the latest *Bulletin* of the London Credit Insurance Corporation which is described as an influential firm of credit insurance consultants, particularly in overseas trade. Extracts from the *Bulletin* are reproduced, *in extenso*, in a London despatch to *The Hindustan Times* here. The Bulletin, after analysing India's foreign exchange difficulties, concludes that "it may be politic for India to convert her Five-year Plan into a ten-year plan." The *Bulletin's* arguments in respect of India's seven-year deferred payment scheme for the import of capital goods are:

"So far as the Western nations are concerned, the Indian proposals could not have come at a more inopportune moment. After several uneasy years in which it seemed that a credit race might develop there is now general agreement among the various countries as to the maximum credit period which should be allowed for the sale of capital goods. There may be minor differences but, broadly speaking, the view is that five years is the longest period of credit that should be permitted and then only for heavy capital goods. This is also the maximum period for export credits financed by the Japanese Export-Import Bank. . . .

"It is doubtful whether the (British) banks would feel able to finance seven-year's credit even assuming that such terms were acceptable to the Exports Credits Guarantee Department. It is also questionable whether manufacturers, when large sums are involved, would be willing to carry the uninsured portion of the contract, particularly in view of the uncertainties as to India's ultimate capacity to pay. . . .

"The present situation is beyond the capacity of India to solve single-handed. In view of our close historical association and the fact that India is a member of the sterling area, it would be right for the U.K. to take the lead in mobilising outside assistance. The sterling area (however) has neither the resources nor the industrial capacity to be able to carry the programme through in the time-table devised by the Indian Government. . . . The size of India's projected import bill is too great for this to be treated as a problem of normal credit giving."

ROLE OF SALESMANSHIP IN ECONOMY

BUSINESS MEN MUST BE CONSUMER-ORIENTED

By G. J. Ticoulat

THE sales road to economic development requires what I call the sales mentality. It means very simply that business men have to be consumer-oriented rather than production-oriented. It means that, in the economic sense, people are looked upon as potential markets not as so many mouths to feed. It might be argued that the consumer approach is a luxury which only the highly industrialised country can afford. To a certain extent, that may be true. And yet, I have read with interest this statement by the well-known statesman of the Republic of Indonesia, Mohammad Hatta: "No longer will the main stress be put upon production for the world market as was the case in the colonial era. Now we will concentrate on creating domestic markets and awakening the buying capacity of the people."

It is only accurate to point out that consumer-orientation, or the sales mentality, flourishes with maximum effectiveness only in a particular economic atmosphere. I do not think that a Government monopoly, for instance, could ever produce a really good vacuum cleaner, at least not for long. Healthy competition is the essence of the sales approach to economic development.

Without competition, no Olympic records would be broken. Without competition for sales, fresh ideas do not come along and, sooner or later, industry stagnates. At least that has been our experience in the United States. And when we in the United States talk about the difficulties of competition, it is not because we want to get rid of it. It is because we want to compete successfully. But no matter how good our plants and materials may be, no matter what the products do, we can never compete effectively without efficient people on the sales force employed by us.

It is because of consumer-orientation that you find the elaborate machinery for encouraging demand and distributing goods in the United States. By that I mean dealer organisations, advertising, consumer credit financing, strategically located and modern manufacturing facilities, market, engineering and consumer research. By investing $5,000 million a year in research, American industry maintains a steady flow of new products into nation-wide markets.

Point of Sale

Sales people in the United States often use the term "Point of sale." In one sense, what we mean by "Point of sale" is that nothing has happened, economically, until the customer has committed the physical act of buying a product. The entire industrial process is foiled, if the product is not sold. In a modern industrial society, the worker cannot possibly sell his own labour, as he did in the days of individual craftsmen and artisans. It is more accurate to say that the sales force sells the labour of the worker and places in the hands of the consumer the results of the worker's skills and enterprise. By stimulating new markets, therefore, we automatically stimulate greater employment.

We of the United States, although smaller in population than Western Europe and considerably smaller in population than Asia, produce and consume about half the world's output of goods and services. This is a fact which may be explained in part by the way in which the country developed historically, politically and economically. But at the heart of this enormous consumption of goods and services is the average American, with all the strengths and weaknesses of average people anywhere. He has been encouraged, and he has encouraged others, to demand the products of twentieth century industry and technology. He has been the key to our own economic development. He might have gotten along, for example, with an old-fashioned ice box which had to be constantly replenished with cakes of ice. But he wanted an electric refrigerator which makes its own ice. He could have been satisfied with the horse for travelling distances. But he wanted to get there in an automobile. His wife could wash clothes in a tub. But an electric washing machine did it faster and better.

While these products tend to make life easier, it took creative selling to build the demand for them. Mass demand, stimulated by creative selling, led to the mass production of goods at prices people could afford to pay.

SUPPLY OF AGRICULTURAL CREDIT

MANY COUNTRIES SET UP NEW INSTITUTIONS

THE chronic problem of many of the underdeveloped countries, especially in the region of South and South-East Asia, is the great pressure of population on land. Certain general characteristics of agrarian structure in these countries have helped to intensify the seriousness of this problem. These include, great inequalities in the distribution of land, fragmentation of holdings, high rents and insecurity of tenure, lack of adequate credit facilities and high indebtedness, and inefficient utilisation of land and human resources. In recent years, the agricultural policies of a number of countries have been directed towards overcoming these serious obstacles to economic and social advance. Notable among the measures taken since 1952 are those for improving the supply of credit for agriculture through the establishment of new institutions and through expansion and reorganisation of existing channels. Another notable feature is the special attention that has been devoted to the question of the reduction of agricultural indebtedness, in formulating the agrarian policies in not a few countries.

These and other similar developments that have taken place since 1952 in a number of countries are reviewed in a recent publication of the United Nations, entitled *Progress in Land Reform, Second Report*. The expansion of credit facilities for agriculture in the underdeveloped areas is beset with many impediments of varying magnitude. Here, institutional finance to agriculture is very meagre and the few institutions that exist suffer from inadequacies in organisation and administration. This is in sharp contrast with the position obtaining in the economically advanced countries where, besides Government-aided institutions, facilities of the commercial banking system, of private financing agencies and of credit co-operatives, are available to meet the needs of farmers. Consequently, Government action is needed in these areas only to meet the marginal needs of agriculture, whereas, in the former, active governmental assistance is called for financially, administratively and otherwise.

Measures in Advanced Countries

Viewed in this light, it is understandable that the measures taken in a large majority of the advanced countries are confined primarily to supplementing the existing credit institutions. In Austria, for example, substantial Government funds have been made available for afforestation, soil improvement, combating forest pests, provision of machinery and tools, and construction of forest roads to improve the forestry sector. The Government of France, to cite another instance, had further strengthened the institutional financial structure for agriculture, which is already able to meet practically all the credit requirements of the farmers, by establishing in 1955 a joint security fund to which regional and local agricultural agencies are required to belong. The function of the fund is to act as a guarantee of all individual and co-operative credit operations and as a central agency to facilitate expansion of credit in areas where new land is brought under cultivation and agricultural marketing facilities are expanded. Also noteworthy are the efforts of the East German Government to expand the activities of the German Farmers' Bank, which was established in 1950, as a central Government credit institution for agriculture, with a network of branches throughout the country. On the other hand, across the demarcation line (that is, in West Germany) expansion of facilities to agricultural enterprises of medium and small sizes has been provided since 1954 through a further tax exemption to the central bank for the promotion of co-operatives. Yet another notable instance is provided by Ireland where, to supplement the activities of the commercial banks which generally meet the short-term and medium-term needs of farmers, the Agricultural Credit Corporation Limited was established by the State in 1954 to provide longer-term credit needs, such as for the purchase of cattle and machinery. Specialised co-operatives for farming and sugar-beet cultivation also provide working capital. Japan also established a similar institution in 1952 to provide long-term finance for activities in the fields of agriculture, fisheries and forestry.

Mention must be made, in this connection, of the new legislation passed in the U.S. to provide new types of emergency loans for certain specified purposes. These are: the special livestock loan programme instituted in 1953 and a soil and water conservation loan programme commenced in 1954. The production emergency loan programme was also modified in 1953 with a view to meeting credit needs in disaster areas. Under another type of emergency loan programme, farmers in areas determined by the Secretary of Agriculture, where the needs of credit cannot be met by any other source, are granted credit. Other legislation includes the Farm Credit Act of 1953, under which the Farm Credit Administration of the Department of Agriculture was established as an independent agency and the Farm Credit Act of 1955 which broadened the loan authority of land banks to provide credit facilities to part-time farmers. Further, in Yugoslavia, a new credit system has been in force since 1954 which applies to all agricultural producers. Sources of finance under this system are: (*a*) federal, regional and local investment funds, (*b*) funds provided by banks, and (*c*) credit resulting from special agreements with processing industries.

Less Developed Countries

A majority of the less developed countries which replied to the questionnaire sent out by the U.N., on the other hand, have been actively assisting in establishing basic agricultural credit institutions and in the supervision and expansion of credit facilities. Of these, special mention must be made of the State Agricultural Bank in Burma, in June 1953, with a capital of 80 million kyats, 62 per cent. of which is held by the Government. This institution is intended to improve agricultural credit facilities.

A notable development in Chile was the creation in 1953, by merger of four credit institutions, of a State Bank with a combined capital of 5 billion pesos to centralise the provision of credit for developmental purposes. With a view to increasing the flow of medium- and long-term credit, the Bank issues bonds to finance agricultural and industrial development. In addition, an Agricultural Development and Research Board, composed of several agencies concerned with agricultural planning and development, was set up in 1956, in order to use more efficiently their combined resources.

India is another country where the entire rural credit machinery is being overhauled in pursuance of the recommendations of the All-India Rural Credit Survey, published in 1954. The Survey Report envisages a comprehensive programme of assistance to, and reorganisation of, co-operative institutions at all levels. One of the most important changes contemplated is that loans will be related to crop production, instead of property rights. The Reserve Bank of India will be the main urgency in the credit field, while the Ministry of Food and Agriculture will be primarily responsible for other co-operative economic activities such as marketing, processing and warehousing. Following the acceptance by the Government of the recommendations embodied in the Survey Report, the Reserve Bank of India Act was amended in 1955 under the provisions of which have been established the National Agricultural Credit (Long-term Operation) Fund to advance loans to the State Governments to facilitate their participation in the co-operative institutions, and the National Agricultural Credit (Stabilisation) Fund, which is intended to grant medium-term loans to State co-operative banks for the purpose of enabling them to convert short-term into medium-term loans in certain special circumstances. In addition, the Central Government has passed the necessary legislation under which the National Co-operative Development and Warehousing Board, and the twin statutory funds, namely, the National Co-operative Development Fund and the National Warehousing Fund have been brought into existence. The Board will be generally responsible for promoting co-operative economic activities. To this end the former Fund is to make long-term loans to State Governments to enable them to subscribe to the share capital of co-operative societies engaged in processing and marketing of agricultural produce. There is also a Central Warehousing Co-operative, which, together with the Warehousing Fund, will help bring into being a network of warehouses all over the country.

Notable developments have also been reported in Nyasaland, Puerto Rico, Sudan and Thailand. In certain other countries, major expansion of agricultural credit has taken place through the existing institutions. The more important of the countries which have taken measures in this regard are: Columbia, where its Bank for Agricultural Credit has considerably increased its activities in recent years, one such activity being the farm supplies section; Egypt, where, since the land reform of 1952, the commitments of the Agricultural Credit Bank have expanded considerably, especially in areas where land has been redistributed; India, Laos, Thailand, Malaya, French Morocco and Viet-Nam.

Another Significant Aspect

Another significant aspect considered by the U.N. Survey, in this connection, is the conditions under which loans are made available to the farmers. It is noteworthy that, generally in the economically developed countries, individual farmers and co-operatives are able to supply their credit needs under conditions and rates of interest which compare favourably with those applicable to borrowers in the other sectors of the economy. In certain countries, however, some improvement has been reported. Mention must be made here of East and West Germany where loans have been made available at reduced rates and Yugoslavia which has been providing agricultural loans at lower interest rates and on more favourable terms of repayment than to other sectors.

In regard to underdeveloped countries, the Report observes:

"In most underdeveloped countries, not only is the supply of credit available to agriculture inadequate, but the security which the borrowers can offer is generally very poor. The two factors tend to reinforce each other; they find expression in high interest rates and, in some cases, dependence on individual moneylenders. The various measures reported aim at improving the terms on which loans to farmers are made available. In some countries, the aim is to improve the contacts between potential borrowers and suppliers of credit. Thus, in Burma, in addition to the establishment of the State Agricultural Bank, there exists special machinery for the issue and supervision of loans provided by the Government in areas where the Bank does not operate. Loans are issued by township officers on the recommendation and security of recognised village loan committees or, in the absence of the latter, village land committees. Where co-operatives are not yet well established, as, for example, in Haiti and Laos, advice on credits requested and supervision of use of loans are the responsibility of the agents and technical staff of the Department of Agriculture. For Chile, it is reported that one of the most frequent criticisms levelled against the State Bank is that the considerable amount of paper work required to apply for a loan, and the bureaucratic and administrative formalities involved discourage many of the small-scale and medium-scale cultivators from seeking loans. Moreover, the procedure involves such long delays that the loans are virtually useless for the required purpose by the time they are granted."

Among other countries, mention must be made of Gautemala where supervised credit system was established with the aid of United States Technical Assistance, in order to prevent the peasants from using loans for purposes other than those for which they are granted. Moreover, in some countries, specially low interest rates are charged for loans intended for agricultural purposes. In Laos, for instance, loans with interest at 2 per cent. per annum, repayable in three years, have been extended to farmers as an emergency credit to buy cattle, implements and other equipment. In French Morocco, co-operatives were granted loans at 4½ per cent.

In order to relieve the burden of indebtedness, a number of measures have been adopted since 1952 in not a few underdeveloped areas. The more important among them are Colombia and Taiwan, in which local committees have been established to ensure reasonable terms for the repayment of old debts and to provide adjudication in cases of hardship. India is another notable example where legislation to provide debt relief has been passed since 1952 in some States, fixing maximum interest rates, limiting total interest to the principal amount of a loan, adjusting debts to the capacity of the debtors to pay, etc. The other countries which have acted in this direction include Malaya and Thailand.

CREDIT UNIONS IN U.S.

There are today nearly 17,000 credit unions in the United States, with 8.8 million members. Their operations are regulated by both State and Federal laws. Their assets total more than $3,000 million, their loans more than $2,000 million—about 17 per cent. of all personal loans outstanding in the United States. Generally, membership in credit unions is confined to those who share some sort of common bond—social, occupational, religious or community. About 80 per cent. has been formed by employee groups, either in single industrial plants or in trade unions. The average credit union has about 525 members or shareholders, who have invested a minimum of $5 in its operations. Its average loan is about $450, extended at an interest rate of not more than one per cent. a month on the unpaid balance. Profits at the end of each year are distributed among the shareholders as dividends.

Originally set up to make small personal loans to members, credit unions now make loans for other purposes as well. These include the purchase of automobiles and appliances, and in some cases, even homes. In the past three years, their outstanding instalment credit has risen 80 per cent., compared with about 40 per cent. for banks and regular finance companies. Although they are run by so-called "amateurs"—mostly company employees who are not paid for their credit union work—these lending institutions have a surprisingly good performance record. Their losses on loans have run at a rate of less than one half of one per cent., fairly close to the national average. It is small wonder that banks and finance companies have begun to look upon credit unions as new business rivals.

MITSUI BANK LTD.

The 12 months ended 31st December 1956 represent the first full year of working of the Mitsui Bank Ltd. in India since it opened its only branch in Bombay on 28th May 1955. During the year under review, the Bank has earned a small profit of Rs. 29,412, as against a loss of Rs. 1.03 lakhs in the previous seven months. This small profit has, however, been offset by the loss of Rs. 88,312 suffered on revaluation of the Bank's investments, the loss on the same account in the previous seven months being as much as Rs. 1.67 lakhs. The net loss for the year, therefore, amounts to Rs. 58,900, as against Rs. 2.70 lakhs. After bringing the previous year's balance of deficit amounting to Rs. 16,202, a loss of Rs. 24,283 has been transferred to the Bank's London office, leaving a net loss of Rs. 50,319 to be carried forward to 1957.

The Bank's deposits as on 31st December 1956 stand at Rs. 14.01 lakhs, having risen from Rs. 11.61 lakhs a year ago. As against this, the advances amount to Rs. 95.70 lakhs, as compared with Rs. 32.47 lakhs. At the same time, investments have gone up from Rs. 19.34 lakhs to Rs. 19.88 lakhs, while cash balances have shrunk from Rs. 10.30 lakhs to Rs. 5.41 lakhs. The bulk of the advances would appear to have been met from remittances from its head office and/or other branches abroad, as witness the sharp rise in liabilities to head office and branches outside India from Rs. 50.97 lakhs to Rs. 109.09 lakhs.

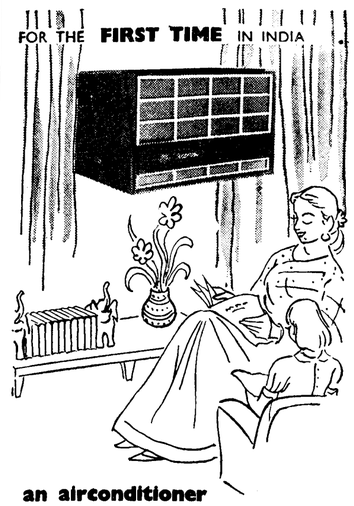
NATIONAL BANK OF BELGIUM'S GOLD RESERVE

The Governor of the National Bank of Belgium has called an extraordinary meeting, to be held in Brussels on 9th May, to amend the Bank's articles to conform with the new law of 12th April 1957. This law fixes the gold parity of the Belgian franc and requires the Bank to keep a gold reserve of 33½ per cent. of its sight obligations.

The present gold cover, according to the weekly return dated 17th April is 37.8 per cent.

The previous requirement, suspended since 1944, was that a reserve of 40 per cent. should be maintained in gold and convertible currencies, of which not less than 30 per cent. should be in gold.

A further funding of a part of the U.K. deficit in the European Payments Union—standing at $333.4 million at the end of March 1957—is likely as a result of the consultations now in progress between member countries concerning the renewal of the E.P.U. for a further 12 months to 30th June 1958. This funding operation may be accompanied by a capital repayment, as occurred in 1954. No date has yet been set for the E.P.U. Council to meet, the object of the current consultations being to present the Council with a ready-made renewal agreement.



an airconditioner with better cooling capacity at lower running cost

Accaire

AW—101

ROOM AIRCONDITIONER

This vastly improved Accaire is amazingly quick in cooling the room. Its superior efficiency may be judged from its higher capacity to cool at a lower running cost. What's more, it is made by the pioneers of airconditioning in India.

OTHER ADVANTAGES INCLUDE:

- Choice of six delightful colours
- More silent operation
- Better service after sale
- One year's guarantee

BANK OF RAJASTHAN'S INCOME GOES UP

PROFIT HIGHEST SINCE 1951

THE audited accounts of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta, Udaipur) for the year ended 31st December 1956 disclose that the Bank has had another year of successful working, with a further expansion in business and an increase in profit. The total working funds of the Bank as at the end of the year are higher by about Rs. 84 lakhs, of which deposits alone account for over Rs. 70 lakhs. Advances have risen by Rs. 13 lakhs and liquid assets stand strengthened by Rs. 30 lakhs. The profit also has gone up from Rs. 1 lakh to Rs. 1.23 lakhs.

The increase in profit may appear small and incommensurate with the rise in working funds, but it is in refreshing contrast to the slight recession suffered in 1955, when the profit was marked down from Rs. 1.13 lakhs to Rs. 1 lakh. It must also be noted that the year's profit is the highest since 1951, when a record profit of Rs. 2.06 lakhs was earned. If the profit has not moved up in consonance with the increase in working funds, it is due to the fact that the Bank's ratio of advances to deposits was well below the general average for all Scheduled banks throughout the year. Another factor which is responsible for this is the further sharp rise in administrative expenses. The increase in profit has been utilised to strengthen the reserve fund by Rs. 34,119, as against Rs. 24,626 added a year ago, to create a gratuity reserve fund with an initial allocation of Rs. 7,500 and to step up the dividend to 4½ per cent. from 3½ per cent. paid successively for the previous four years.

The Bank's progress during the last three years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount	10.95	7.99	6.81	5.92
Commission and exchange ..	3.62	2.81	2.75	2.70
Interest paid	6.73	4.72	3.46	2.71
Expenses	6.80	5.43	5.16	4.98
Depreciation	0.29	0.12	0.20	0.22
Profit	1.23	1.00	1.13	1.05
Provision for taxation	0.40	0.43	0.58	0.50
To reserves	0.42	0.25	0.24	0.24
Dividend	0.41 (4¼%)	0.32 (3½%)	0.32 (3½%)	0.32 (3½%)
Carry forward	0.01	0.01	0.01	0.02

	As on 31st December			
	1956	1955	1954	1953
Capital	9.23	9.23	9.23	9.22
Reserves	5.36	5.28	5.03	5.01
Deposits	3,39.99	2,69.82	2,05.79	1,72.80
Advances	1,22.77	1,09.54	58.37	60.12
Investments	1,06.61	1,05.89	79.46	63.02
Cash	1,42.45	1,13.66	87.00	61.79
Balance-sheet total	4,04.56	3,20.76	2,39.02	2,09.50
Ratio to deposits of—	%	%	%	%
Advances	36.1	40.6	28.3	40.0
Investments	31.3	39.2	38.6	36.5
Cash	41.9	41.9	42.3	35.8

The gross income of the Bank for the year under review amounts to Rs. 15.14 lakhs, a rise of Rs. 3.88 lakhs over the year. As in the previous year, the bulk of the increase in income is accounted for by "interest and discount" earned, which has gone up by Rs. 2.96 lakhs. There has been a sharp rise of Rs. 2.01 lakhs in interest paid on deposits and borrowings and of Rs. 1.46 lakhs in expenses. The increases in both these items are much higher than those noted in 1955, and have offset substantially the rise in income.

The Bank's deposits have gone up by Rs. 70.17 lakhs and, with this rise, the deposits have almost doubled themselves in three years and reached a record level of Rs. 3.40 crores. Fixed deposits amount to Rs. 1.70 crores, an increase of Rs. 48 lakhs over the year, savings bank deposits are up by Rs. 12.03 lakhs at Rs. 70.53 lakhs and current and contingency accounts by Rs. 10.13 lakhs at Rs. 92.25 lakhs. As against this rise in deposits, the increase in advances is only Rs. 45.93 lakhs, of which loans, cash credit and overdrafts (at Rs. 79.72 lakhs) account for Rs. 32.13 lakhs and bills purchased and discounted (at Rs. 43.05 lakhs) for Rs. 13.80 lakhs. The Directors observe in their report that the average ratio of the Bank's advances to deposits for the year was only 38 per cent., as against 65.4 per cent. for other Scheduled banks.

As the scope for advances in Rajasthan is limited, the Directors are desirous of extending its area of operation where its funds can be usefully employed all over the year. With this end in view they have already opened a branch in Bombay.

FREE WORLD'S COTTON TEXTILE TRADE

DOWNWARD TREND PERSISTS

THE downward trend in the cotton textile trade of the free world which set in during 1955 continued unabated in the calendar year 1956, although the decline was not so marked as in 1955. The aggregate quantity of cotton piecegoods actually exported by the twelve major producing countries in the free world—India, Japan, the U.S., the U.K., Holland, France, Western Germany Belgium, Hong Kong, Portugal, Italy and Switzerland—during 1956 was 4,270.9 million yards, as against 4,631.7 million yards in the previous year, representing a fall of 360.8 million yards or 7.8 per cent. The fall compares favourably with a drop of 497.9 million yards or nearly 9.5 per cent. a year before. Taking however, the world as a whole, that is, including China and East European countries, the cotton textile exports in 1956 were said to be slightly above that recorded in the previous year.

The persistent setback to world cotton textile trade must be attributed to four important factors. First, several countries which were formerly importing a large part of their requirements of cloth are turning out to be producers of cloth themselves; their imports are, therefore, being replaced by domestic output. Secondly, the offtake of piecegoods by many countries has tended to be lower, thanks to imposition of restrictions on imports necessitated by balance of payments difficulties. Thirdly, exports of textiles from the free world to the communist nations have suffered a fall on account of business in this region being largely done on a barter basis. Finally, there is the growing competition from cloth woven from man-made fibres. Throughout 1956, international business in such goods was about 12 per cent. more than in 1955, the whole of the expansion being accounted for by Japanese shipments. The aggregate exports of rayon piecegoods from the twelve leading exporting countries, for instance, amounted to 1,985.6 million yards, as against 1,881.8 million yards. Of this quantity, the share of Japan alone was more than 50 per cent., the quantity actually shipped being over 998 million yards, as compared with 911 million yards.

Trend of Exports

An idea as to how the aforesaid twelve major producers of cotton textiles fared in the international cloth trade during 1956 as compared with the preceding two years can be had from the following statement:

(In million yards)

	1956	1955	1954
Japan	1,262.0	1,138.9	1,278.0
India*	804.4	873.0	952.0
U.S.A.	517.5	551.7	613.3
U.K.	474.2	554.5	637.4
Holland	255.9	238.4	230.4
France	222.8	388.7	518.0
W. Germany	187.7	247.7	230.8
Belgium	159.6	211.4	215.8
Hong Kong	123.7	164.7	162.6
Portugal	115.2	109.4	137.0
Italy	88.3	100.9	103.4
Switzerland	59.6	53.4	50.9
Total	4,270.9	4,631.7	5,129.6

* Figures include both mill and handloom piecegoods.

It will be seen from the above table that the decline in world cotton textile trade in 1956 was shared by all the leading exporting countries, except Japan, Holland, Portugal and Switzerland. The drop was particularly pronounced in France, the U.K. and India, the actual extent of the decline in exports from these countries being 165.9 million yards, 80.3 million yards and 67.6 million yards, respectively. The reduction in shipments—in million yards—from other countries was: West Germany 60.0; Belgium 51.8; Hong Kong 41.0; the U.S.A. 34.2; Italy 12.6. Japan, however, accounted for a marked rise in cloth exports, the quantity actually exported in 1956 being higher by as much as 123.1 million yards at 1,262 million yards; this figure was, of course, slightly less than the post-war record of 1,278 million yards achieved in 1954. Holland accounted for an increase of 17.5 million yards. Switzerland for 6.2 million yards and Portugal for 5.8 million yards.

The most striking feature of free world cotton textile trade during the year under review was the continued supremacy of Japan as the largest supplier of cloth. India retained its position as the second largest supplier, while the United Kingdom gave its third place held by it in 1955 to the U.S. Holland emerged as the fifth largest exporter, the position which was formerly held by France. In the order of importance, France occupied the sixth place, followed by Western Germany, Belgium, Hong Kong, Portugal, Italy and Switzerland.

Cotton piecegoods exports from India during 1956 aggregated, as already noted, 804.4 million yards, a fall of 67.6 million yards as compared with the previous year. The whole of this fall was accounted for by mill-made cloth, the total shipments of which were about 746 million yards, as against 816 million yards. Exports of handloom cloth, however, were slightly higher at 58 million yards. The drop in the exports of mill-made piecegoods was shared by all the varieties, barring coarse counts which registered some improvement in exports.

Non-competitive Prices

The reduction in the offtake of Indian mill piecegoods was largely the result of the non-competitive prices *vis-a-vis* other textile producing countries, Japan, Russia and China, in particular. This is due to the rigid cost structure of mills, thanks to the heavy incidence of taxes, increasing wage bill and low productivity. Moreover, the fall in the world price of cotton has almost wiped out the advantage which India enjoyed previously over other countries in the form of relatively low prices for domestic cotton. The other important factors contributing to the setback are those which have affected the world trade in textiles, namely, establishment of cotton mills in countries which were until recently large buyers of cloth, restriction on imports imposed by several countries following foreign exchange difficulties, and the growing tendency among certain countries to enter into barter treaties which canalise trade between them.

COTTON VS. MAN-MADE FIBRES

WORLD TRADE IN FORMER MUST BE FREE FROM RESTRICTIONS

THE view that, if cotton is to maintain its position against man-made fibres, it is imperative that there should be a further liberalisation of the world cotton trade has been forcefully brought out by Mr. Mario Ludwig, Director of the International Federation of Cotton and Allied Textile Industries, in the course of an interesting article contributed to the Convention Number of the *Cotton Trade Journal*, Memphis, issued on the occasion of the thirty-third annual meeting of the American Cotton Spinners' Association held on 26th April 1957. Mr. Ludwig points out that the fabric woven from cotton should be made sufficiently attractive in price to the consumer. In his considered opinion, the price of raw cotton must be determined, as far as possible, by the free interplay of the natural forces of supply and demand. In order to achieve this objective, he urges the removal of all artificial restrictions on trade. He has drawn particular attention to the following three notable recommendations which the Federation made to the United States Secretary of Agriculture during the latter's visit to the cotton centres in Europe late in 1955:

(i) Definition and publication, as soon as possible, of a long-term policy regarding raw cotton prices; (ii) achievement of an orderly adjustment of raw cotton prices by a gradual return to the natural laws of supply and demand, particularly with a view to the adaptation of raw cotton production to the types and qualities which correspond to present mill requirements; (iii) elimination of price differentials, subsidies and other artificial measures which can only result in prolonged uncertainty, harmful to all concerned.

Since then, the United States Department of Agriculture has made various attempts to solve the cotton problem. Mr. Ludwig, no doubt, admits that its measures of surplus disposal have been relatively successful so far. Nevertheless, he feels that they cannot solve the long-term problem of the American cotton economy. According to him, the much desired long-term cotton policy is still missing, although, in all fairness, it must be recognised that the responsible authorities in the United States are making every possible effort to achieve this objective.

Price of End-Product

The Director of the Federation emphasises that it is only natural that the consumers' main interests should be focussed on the price of the end-product. Therefore, as the price of the raw material is such an important factor in the cost structure of textile goods, raw cotton pricing policies should be such that spinners and manufacturers are enabled to produce an end-product which will be attractive to the consumer both as regards price and quality and which will be competitive with other fibres. This is only possible, if and when unrealistic price support policies, price differentials, subsidies and other forms of artificial interference with the normal channels of trade are eliminated.

Proceeding, Mr. Ludwig says that the laws of supply and demand can play a particularly valuable part in the raw cotton trade, as they can work with the aid of one of the most highly sensitive instruments of commodity trading, namely, the futures market. But even these, in his view cannot fulfil their task, if obstacles are put in their way. Today, efficient trading in futures is still hampered by price and import controls, foreign exchange regulations and governmental interference in commodity markets. Cotton futures trading should be open to as many customers from as many areas as possible and prices should truly reflect actual supply and demand. Exchange restrictions may exclude foreign customers, prevent hedging and limit trading to nationals of the country where the market is located. Price regulations may lead to unrealistic quotations when compared with prices in free foreign markets. Buying or selling in bulk by Governments may interfere with the normal price formation for cotton. For these reasons it is essential that every effort should be made to return to unhampered and expanding trading on the world's cotton futures market.

In conclusion, Mr. Mario Ludwig observes that the cotton policies for the future should aim at a further liberalisation of the world cotton trade. Only then will it be possible for cotton to maintain its position against man-made fibres; only then will it be possible to ensure the future prosperity of the cotton trade, from the producer to the consumer.

MINIMUM PRICE AGREEMENTS IN COTTON INDUSTRY

MILL PROFITS DECLINE

From A Special Correspondent

MANCHESTER, *23rd April*

AFTER months of speculation as to the eventual fate of the minimum price agreements in the Lancashire cotton industry, it has been decided to include the schemes in the spinning and doubling sections in the first batch of agreements to be investigated under the Restrictive Trade Practices Act. Britain's Board of Trade has now notified the Registrar of Restrictive Practices that agreements in a number of industries are to be probed and submitted to the Restrictive Practices Court. A decision has then to be made whether the restrictions in each agreement are against the public interest.

MANCHESTER LETTER

Individuals and organisations likely to have knowledge about the schemes under consideration will be asked to assist the Court with evidence and anybody else can write in with details of their own experience about the alleged pacts. Legal agreements establishing minimum margins on cotton yarn prices have been in force for about 10 years, but voluntary arrangements were introduced in the Lancashire industry some years before the war.

Removal of Uncertainty

To those directly concerned with the administration of the systems in force in the cotton industry, the inclusion of the agreements in the first schedule may come as a relief, in that the uncertainty which has persisted since the Act was originally planned will now be resolved one way or the other. Few people in the trade have a neutral attitude towards the price-agreements; individuals are either wholeheartedly behind the schemes or equally opposed to them.

Whatever criticisms have been levelled against the arrangements in the past, they have certainly enabled the spinning and doubling branches to maintain a firm front, avoiding the collapse of the most vital producing sections at times when trade has been exceedingly difficult. Some will say that the operational costs basis provides a "cushion" for the inefficient and it is possible to blame the organisations for a lack of flexibility when some variation in the schemes might have been of benefit to the industry as a whole.

It is significant, however, that, despite the adverse comments made from time to time by representatives of sections which have no similar stabilising influence, private opinions have frequently been expressed in support of the arrangements. Many traders believe they have been the salvation of the post-war industry in Lancashire, because they have averted any threat of substantial internal price-cutting reminiscent of conditions nearly a generation ago.

It was no surprise to those closely connected with the textile industry to learn at the beginning of the year that the results published by local companies during 1956 showed substantially reduced earnings as compared with the financial details announced in the previous 12 months. In the first quarter of the current year, however, the trend of profits has not declined to the same extent and the improvement in activity recorded since the early autumn should lead to better returns in due course.

Total net profits earned by 25 companies, which have so far announced their results this year, were £984,426, as compared with £1,154,950 12 months ago. The average profit has, therefore, declined from £46,198 per company to £39,377, while the dividend has been reduced from 12.63 per cent. to 11.36 per cent. per company.

No Marked Variations

The position of firms in the different sections of the industry has not shown any marked variation. All have reported lower average earnings and a reduction in dividends. In the case of those companies entirely devoted to spinning, the average net profit has fallen from £31,307 to £27,757 and the dividend from 14.35 per cent. to 13.94 per cent. Companies combining spinning and weaving have recorded a drop in average earnings from £86,700 to £75,259 and the distribution has declined from 10.36 per cent. to 9.29 per cent. In ratio, the weaving group has again been the most affected by adverse conditions, average profits being £20,754, as against £28,728 and the dividends have been cut from 11.83 per cent. to 8.64 per cent.

In the first quarter of the year, only one of the main combines in spinning and weaving announces its results. The net group profit earned by the Amalgamated Cotton Mills Trust declined slightly from £397,307 to Rs. 375,941, but, with the assistance of an increased sum arising from the sale of fixed assets, a larger dividend was declared. On the reorganised capital, this was equal to 15 per cent., tax-free, as against the former tax-free distribution of 11⅛ per cent.

Results of Free Trade

Any current report surveying the prospects for industrial activities, whether prepared by chairmen of individual companies or on behalf of trade organisations, must of necessity refer to the important part which the anticipated free trade area in Europe is going to play in determining the shape of the future. In a large and comprehensive volume, the Economic Commission for Europe has dealt fully with this vital topic which, it says, may result in some transitional unemployment, the shift of European industry to the Rhine area and the possibility of world trade being split into protectionist sectors.

Summarising the probable outcome of the project, the Survey contends that efficient industries as a whole should benefit from the economies achieved, if all the industrial countries of Western Europe join in the scheme, thus forming a single market of nearly 250 million people.

The advantages and dangers of the plan have already been discussed in innumerable articles, but there are aspects of the situation which have not been fully developed. East-West trade in Europe, for example, which has shown signs of broadening in recent years, might be hampered by the suggested preferential tariff, resulting in the lowering of prices by Eastern countries. It has also been estimated that the free trade area would represent about 40 per cent. of world trade, causing about 25 per cent. to suffer from the arrangements made to erect fresh tariff barriers. Countries outside Europe could well establish their own competitive trading areas, a move already under consideration in Latin America.

The Federation of British Industries has also issued a detailed analysis forecasting the results of the plan, in which it declares that the development will bring about a change of course in British commercial policy comparable in significance to the United Kingdom's abandonment of free trade over 25 years ago. Those industries now enjoying higher than average tariff protection, which include textiles, are likely to be particularly affected by the proposals, it adds.

The Voice of Industry

Comments on the scheme are now receiving almost daily publicity. A few, chosen at random, are given below:

Mr. Wallace Ellison, Chairman of Brocklehurst-Whiston Amalgamated Ltd., the Macclesfield group: "Although a breathing space or period of adaptation to changing circumstances is provided for in the scheme, many branches of industry in this country will be called upon to give most careful thought to redeployment of their capital resources and their labour. The common market must be a common market with no specially privileged participating countries and free trade must be fair trade."

Mr. Fred Livsey, Chairman of Mutual Mills, Heywood: "We have made extensive inquiries on the Continent to find out what effect the proposals will have on our trade. From the evidence obtained, we are forced to the conclusion that, while the plan may work to the benefit of many industries, it holds no immediate prospects for the textile trade."

Mr. John Foster Beaver, Chairman of the Wool Industries Research Association: "Without careful safeguards the textile industries, particularly the older ones, will be exposed to very considerable risks. All our industries will be challenged and, if they are to retain and expand their position, they must be in the forefront with scientific development and achievement."

Mr. Ernest Thornton, M.P., former Secretary of the United Textile Factory Workers' Association: "It may well be that we shall be compelled to meet this challenge. Is it not important that we should seriously study the issues and problems involved and be prepared to meet the challenge with vigour and determination? Big changes will be needed in outlook as well as in methods of both employers and workers."—*All Rights Reserved.*

SOME FACETS OF INCOME-TAX LAW*—I

LEGAL IMPLICATIONS OF A FEW SECTIONS

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

"FACET," says a dictionary, is a side of or a slant on a many-sided body. Like a diamond it has many facets which when you view it in the light of cold reason seem to sparkle with brilliancy of an unreason, an anomaly or an absurdity. Charging sections 3 and 4 are the centre and circumference of the Act. They are the hub round which the other sections turn. The other sections must hang round the hub or fall out of its orbit. Section 4(1)(*b*)(iii) reads: "In case of a resident the scope of liability will *inter alia* be all income accruing or arising to him without the taxable territories during such year." This means that income which accrues or arises outside India will be exigible to tax. Now this means that income factually accruing alone is caught within its net. In other words, "fictional income," i.e., income created by a fiction of law, falls outside it. One may compare in this regard an inland income under clause (i). It says that income accruing or arising or deemed to accrue or arise in India will be taxable. Why was it necessary to provide in the charging section dealing with inland income that deemed incomes are chargeable and expressly to omit it in clause (ii) with regard to foreign income?

The obvious conclusion is that the Legislature was not anxious to create "deemed income" outside India—possibly guided by international conscience which precludes exercising sovereignty on non-residents outside the country. Be that as it may. Section 44D briefly provides that if any person, by virtue of a transfer of assets to a limited company outside India, the income whereof gets payable to such a non-resident, and if such a person has power to enjoy the income of the non-resident either forthwith or in future, then notwithstanding that such income belongs to a non-resident and accrues or arises outside India, it shall yet be deemed to be the income of the transferor. After the transfer of assets to a non-resident company, income does not arise in India, nor does it arise to the resident. Yet the fiction provides that such income accruing or arising will be deemed to be exigible in the hands of the resident who is no more the owner of a source. This is the first slant on the Act.

Section 4(1)(*a*) provides that income received in India either by a resident or a non-resident will be exigible to tax. Section 4(1)(*b*)(iii) provides that any income arising to a resident outside India prior to the previous year, if received or brought into India will be liable to tax. The slant that is introduced is why under section 4(1)(*a*) is it necessary in case of a resident to provide taxation on receipt basis—something that is already caught on the accrual basis outside India? So far as resident is concerned, it does not seem to read sense. In section 4(1)(*a*) the words used are "income received." In section 4(1)(*b*)(iii) words used are: "income received or brought into."

Why this change of phraseology? Under section 4(1)(*a*) "income received" signifies the first receipt. For "incoming concept" can arise only when it is first received. Something which has already come in once cannot come in again, but it can be brought into. Something that has once come in may be brought again elsewhere but not received elsewhere. In short, these words have therefore the legal connotation of income when it is first received as well as income when it is brought in a second time. Thereby hangs a difference and that is this. Income once received, if not attacked at that stage gets exemption from tax thereafter, for any movement of income after the first receipt is movement of capital. In regard to non-resident staying beyond the Government's sovereign jurisdiction, first receipt alone can be subjected to tax. You can't tax capital. But in regard to resident staying within your juridical limits this international fineness or subtlety need not bother or deter you, even from collecting tax on capital by calling it income for purposes of financial exigency of the country.

There is yet another slant euphemistically called a facet. A non-resident husband sends his wife in India remittance. If he is a non-resident then his first receipt alone can be exigible, his second receipt is exempt. Legislation, therefore, steps in and says that remittance sent by a non-resident husband to his wife in India will be deemed to be income of the wife. What one cannot get at directly at the non-resident husband owing to international law, one can get at indirectly at the same pocket through the wife by introducing a fiction of law. A fiction of law has no limits. It can create black into white and white into black. It is no respecter of biology either. It can say, and has said, that a male may include female and a female male. They say a fiction must be carried to its logical conclusion. Here, the income of the husband is taxed in a foreign country and again in India. There is thus double taxation of the same income—once in the hands of the husband and again in the hands of the wife. The same income is taxed twice, yet there is no provision for any relief, because legally husband and wife are two persons and as such two distinct assessees at law. When it is a question of aggregation the same, husband and wife, as if by a magic wand, become one, the wand being the fiction of law.

Let us go to another facet. There are three categories of assessees: resident, non-resident and not ordinarily resident. Resident assessees are persons whose normal mode of living is in India. Non-residents are those whose normal living of life is outside India. Who are then the not ordinarily residents? They are a class of persons who are not normally resident, nor are normally non-residents. Persons who satisfy the conditions of a resident in a year but over a period of years their stay is so attenuated that it would not be proper to call them normal residents. One can understand the three differentials, but one cannot reconcile oneself to the differentiation and discrimination in the treatment given to this new-fledged comrade: giving him a deal better than the resident and better than a non-resident. His total income, unlike resident, consists of income arising or accruing in India. Income accruing abroad is not to be aggregated either for tax purposes like that of a resident or for rate purposes like that of a non-resident unless it arises from business controlled in India—a rare thing. Why this tender consideration for a species who like a bat is neither a bird nor a beast? There is little logic and less sense in such refinements introduced into our Act. But there they are and they persist even to this day.

This is not a solitary instance where the logic has become topsy-turvy. A company is a legal entity as much as a firm, an association of individuals or an H.U.F., yet there is a world of difference. A company, according to clause (*c*), will be resident in India if the control and management of its affairs is situated wholly in India in that year. A firm, according to clause (*b*), will be resident in India unless the control and management of its affairs is situated wholly without India. The import of "unless" in one and omission of "unless" in the other makes a world of difference in discrimination. A company is normally deemed to be a non-resident unless control of its affairs is wholly situated in India. Implication of this is that unless 100 per cent. control resides in India companies need not bring into accounts its foreign income. But in case of a firm unless 100 per cent. control resides abroad it cannot avoid paying tax on its foreign income. Why this tenderness towards a limited company and why this stepmotherly treatment towards a firm? The mind of a legislature, like the mind of God, is indeed inscrutable. This discrimination has more in it than meets a superficial eye.

A company has another test for its residence. It is this: If the company's income accruing in India is more than the income accruing abroad, it is to be treated as a resident for purpose of taxation, although on the test of control and management it is a non-resident company. The intention was perhaps to widen the net for a company which operated from abroad in India having a substantial income in India, yet it escaped liability on its foreign income on the test of control and management. But the other consequence arising out of the provision is serious enough. Take a non-resident company. In the year 'A' its income in India is Rs. 5,000. Its world income is a loss of Rs. 50 lakhs.

By this test the company's income in India is more than the income abroad. Positive income is greater than negative naught. Therefore, it becomes a resident company with a right to carry forward under section 24(2) its world loss against future Indian profit. In the following year 'B', let us suppose the position is reversed. It has made a profit of Rs. 50 lakhs in England and Rs. 5 lakhs in India. The company will not pay any tax on Rs. 50 lakhs for its income abroad is larger than its income in India; therefore it is a non-resident company not liable to pay tax on its income abroad. But it will also not pay tax even on Rs. 5 lakhs, for it can claim set-off of last year's carry forward of Rs. 50 lakhs. A foreign company is thus provided a comfortable berth in India to come and compete with the nationals and yet get away without paying taxes on their profit, while nationals are taxed on theirs. An important, though startingly glaring, preference is shown to a non-resident, as against one's nationals. A government protects its own nationals. Here is an instance where the Government protects non-nationals against nationals. A logic which, for want of a better word, can only be termed cock-eyed.

Let us pass on to another facet—section 18A. This section, in brief, says that as regards incomes other than those in respect of which tax has to be deducted at source tax shall be payable quarterly in advance. The question is: is dividend an income in respect of which a person must pay advance tax? It seems from the peculiar wording that it is. On dividend the company is not entitled to deduct tax. It can declare dividend either less tax or free of tax. Therefore, it does not satisfy the condition of deduction under section 18. It, therefore, clearly attracts advance tax payments under section 18A. If it does the tax must be paid in advance—both income-tax and supertax and no credit for income-tax can be vouchsafed to anyone while payment is made under section 18A. I know it is done—but this is being done extra legally to avoid a startling anomaly. You collect advance income-tax under section 18A only to refund the same *in toto* in an assessment, for under section 18, no income-tax is payable on dividend—a shareholder always gets a credit for tax paid by the company.

This facet offends two principles—one that it calls upon a person to pay tax before he earns it and, secondly, calls upon him in the alternative to make an estimate of his dividend income, which he can never do; it is a source over which he has no control nor any knowledge. In cases where such estimate or payment does not fit in the scheme of "pay-as-you-earn" scheme, relaxation and relief are already provided, namely, in case of agency commission. This source need not pay advance tax quarterly, but only after such commission is credited by the managed company. Yet so far as dividend is concerned no such relief is available. However, I understand there is some executive relief vouchsafed to the assessee by the Central Board of Revenue. The Act provides no relief even where its logic fails to have any force in an enactment.

Now, to another facet, the registered firm and the unregistered firm. The former pays tax through the partner's own assessment, the latter on the profit of the firm as one entity. This is a difference without a distinction—a device to collect more tax on the basis of an artificial distinction. Nowhere in the world does such a distinction obtain in the tax system. India is unique in its originality. Having created an artificial difference, the recent amendment goes one better and says: A registered firm, as an entity, enjoys an exemption, which a unregistered firm does not. Therefore, let us subject it to a special tax called registered firm's tax. This tax on a registered firm is justified on the ground that it enjoys a privileged position, not extended to unregistered firms. We will accept that position, but should not the tax then be worked on the true profits of the registered firm for the year? An unregistered firm's profit will be computed by setting off against it the last year's carry forward of loss while registered firm's profit will not be so reduced. The loss of the registered firm is not set off against the profit of the registered firm, for it is argued that it has been already allocated among the partners.

Partners having had already the advantage of these losses in their individual assessments, it would be wrong to deduct it again in computing profits of a registered firm. At first sight, this seems to be unanswerable. But if one examines the position critically, the fallacy will be apparent. A firm pays tax on its profits—but is the profit a measure of a tax on its corporate existence or is it a tax on income itself? If it is a tax on income, it is incomprehensible how there can be two assessees made liable on the same income. If it is a tax on income, then the fact that the tax is paid by a registered firm on the profits should entitle the partners to claim exemption on these allocated parts of profits. But it is not so. A registered firm pays tax on the income and when the income is allocated each partner pays the tax again on the aliquot part as his income. This clearly proves that the tax on a registered firm is merely a measure of tax for its corporate existence like corporate tax on a company and, if that be so, there should be no difficulty in deducting loss from the profit if proper measure of tax is to be determined. Yet when a claim is put forward for a proper rational measure, carry forward of loss is ignored. If income is a yardstick—the true profits measure will be current year's profit less last year's loss (if any). The Act has ignored this aspect with the result that a facet of the Act has developed a slant against the taxpayers.

Let me take you to section 23A before its recent amendment. If there is any section which bristles with pointed difficulties in every word, in every clause, in every section, it is section 23A. I would call section 23A a porcupine section, for it bristles with difficulty and doubts.

Let me give you only one or two illustrative examples. In a scheme of capital reduction, a section 23A company wrote off its capital to wipe out accumulated losses. In applying the formula under section 23A, must you compare the reserves with paid-up capital as reduced or cost of fixed assets, whichever is higher, or reserves must be compared with capital as originally paid up or with cost of fixed assets as originally invested? If the reduced capital of the company is made the basis of comparison, the company would be called upon to distribute 100 per cent. of its assessable profits less taxes for the reserves will have reached the limit of capital; whereas, in fact, reserves are considerably inflated, because they have not been reduced by accumulated losses as they should have been. Further, paid-up capital has been artificially reduced for purpose of comparison. This is hitting the company both ways—first by reducing paid-up capital and, secondly, by inflating the reserves. What is the correct position in law? I can hardly dogmatise; but it seems that the view, namely, that, for purposes of section 23A comparison, paid-up capital as reduced by losses should be taken, does not seem to be reasonable for the following reasons:

(i) Comparison in order to be useful and effective must be between like unto like.

(ii) If fixed assets are to be taken at the original cost, is there any reason why paid-up capital should be taken at reduced figure?

(iii) Should reserves be taken at a figure which is truly inflated, for accumulated loss written off against paid-up capital should be against reserves? Reserves to the extent of accumulated losses, therefore, have ceased to exist.

Take another facet of section 23A—paid-up capital and fixed assets. Reserves to be compared are figures at the beginning of the accounting year. Are these to be merely book figures or effective figures? What I mean to say is are these figures subject to some adjustments, as, for example, the following:

(i) Should accumulated loss be deducted from reserve, although not actually written off against reserve in books?

(ii) Should provision for taxation be deducted, even if no liability for the respective assessment year has accrued because assessments are in arrears?

(iii) Should extra dividend be declared under section 23A to comply with requisitions out of accumulated profits figure, although dividends were actually declared later on but relate back to the year when the first dividend was declared?

(iv) If dividend declared subsequently relates back to the original declaration under section 23A, will it not be correct to deduct these extra dividends declared after the beginning of the year from the reserves in the beginning?

(v) Should taxation reserve form part of the reserves to the extent found in excess of actual liability subsequently determined?

(vi) Should loan capital of the shareholders include loan by a firm in which all shareholders are partners or a firm in which few shareholders are partners and others are not, or a private company in which all shareholders are the shareholders of section 23A company?—*All Rights Reserved.*

PLYMOUTH

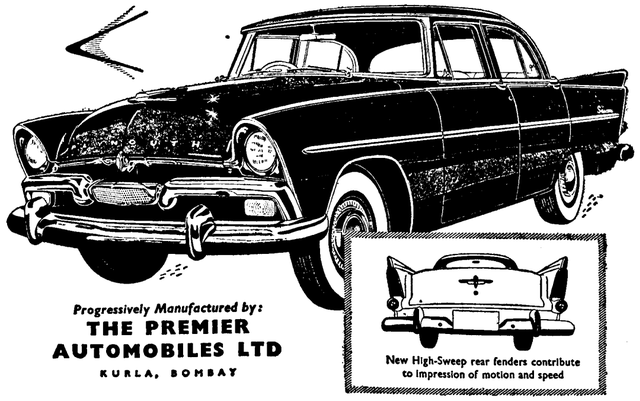
with Aerodynamic styling

The Plymouth has the advanced FORWARD LOOK. It's a better-looking car with many new performance features.

Here are its most important features:

★ New 12-volt electrical system gives quicker, easier starting, longer spark plug life, plenty of current
★ Independent hand brake provides real emergency brake function
★ Maximum vision with new horizon windshield wrapped around top and bottom
★ Safety-rim wheels, tubeless tyres and many other features
★ New safety door latch for passenger protection
★ Redesigned sealed beam headlights extend zone of lighting on left side by 80 feet

More Economical Performance *The 6-cylinder engine is dependable and economical. You will like its new pep with increased horsepower.*



New High-Sweep rear fenders contribute to impression of motion and speed

INDIAN ALUMINIUM COMPANY, LIMITED

MR. K. C. MAHINDRA'S ADDRESS AT ANNUAL MEETING

SCOPE FOR ENLARGED ALUMINIUM CONSUMPTION IN UTENSIL INDUSTRY SMALL

THE view that, although the utensil industry would continue to be a substantial consumer of aluminium, the scope for rising consumption in this industry appeared small, as compared to the electrical, transportation, building, construction, canning and packing industries, was expressed by Mr. K. C. Mahindra, Chairman of the Indian Aluminium Company Limited, in the course of his address at the Annual General Meeting of the Company held at Calcutta on Saturday, 27th April 1957. Mr. Mahindra emphasised that the success of the aluminium industry's efforts in the field of sales development or production operations or labour relations was influenced considerably by the actions of the Government. For, he said, the State not only operated the railways, on which the Company must depend for the transport of raw materials and finished products, but it also owned an increasing number of manufacturing industries to which the Company must sell its products. Mr. Mahindra, therefore, stated that it was not merely the measures of direct taxation which affected the Company but the host of other imposts, such as sales taxes, excise and import duties, and railway freights as well. He considered the increase in rail freight from January 1957 as being prohibitive and pointed out that such an increase had compelled the Company to resort to sea shipment from Cochin to Calcutta, which, though cheaper than the new transportation cost by rail, was nevertheless about 25 per cent. higher than the previous cost.

The following is an abbreviated version of the speech of Mr. K. C. Mahindra, at the annual meeting:

"The period since I last addressed this annual meeting has been an eventful one for your Company. Sales and profits in 1956 attained new heights, the programme for fresh issues of capital was successfully completed, and new patterns, long under preparation, emerged in sales of the Company's products and in the field of labour relations.

Market Development

"You will recall the pioneering efforts the Company has been making for the past five years or more to diversify its production and cater to the needs of industrial consumers for technically more advanced aluminium products. The transportation field provides the most notable example of the success of the Company's efforts in market development, which is reflected in sheet and plate assuming the primary place in shipments of the Company's products during 1956. An achievement of some significance is the formal acceptance, by the railway authorities, of the use of aluminium for the panelling of railway coaches, and it is satisfying to note that our sales in 1956 to the railways for various applications were double those of the previous year. There has been progress also in the road transport field and several State and private organisations are contemplating complete change-over to aluminium for buses. You will have noted from the Directors' report, however, that the shipments of circles declined considerably during the past year. Although the utensil industry will continue to be a substantial consumer of aluminium, the possibilities of expanding consumption in this industry appear small, compared to the electrical, transportation, building, construction, canning and packaging industries, where the use of aluminium is rapidly increasing.

The Company's Future

"The success of the recent capital issues made by the Company is a tribute to the confidence reposed in the Company's future and in its management. At a time when investors are shy and money is scarce, it is encouraging to feel that the Company has been able to raise substantial funds on the Indian market. Nevertheless, it should be borne in mind that the Canadian shareholder, Aluminium Limited, subscribed to one-half of the new capital issues, and this subscription assumes added significance today, in the light of the foreign exchange position of the country. The new dollar investment by Aluminium Limited and the loan of one million dollars it is further proposed to obtain from the Company's principal shareholder are of vital significance to the Company in obtaining imports of capital equipment essential to the execution of its expansion programme.

"Some of the advantages that your Company derives from participation of Aluminium Limited have been sharply brought into focus by the generous and prompt willingness of the Canadian group to assist the Company, when the Government expressed its inability to provide the requisite balance of foreign exchange for completing the Hirakud scheme. By virtue of such participation, your Company also receives, at cost, the benefit of the accumulated experience in the technique of aluminium production, fabrication and utilisation of one of the largest companies in the world engaged in this industry. The association of foreign capital is beneficial to your Company also in the training of Indian personnel. Today there are only four foreigners on our permanent staff and all the six operational units of the Company are administered by Indian managers. In an industry which requires technical and managerial skills of a high order, this is a creditable achievement, made possible by a continuous programme of training promising employees at various establishments of Aluminium Limited in Canada and Europe. This policy is being actively pursued in the light of the increasing complexity of the Company's activities, and is meeting the wholehearted co-operation of Aluminium Limited.

Labour Relations

"I had earlier referred to developments in the field of labour relations as being among the events of particular significance which had occurred during the past year. The comprehensive agreements negotiated at the Company's works at Belur, Muri and Alupuram, which are the result of free 'collective bargaining' between management and the Employees' Unions set out in detail the rights and responsibilities of the management and workers. For the first time in the history of labour relations in India, the workers also have come forward to agree with the management frankly and openly that productivity is the true key to progress, that the 'payment of bonus on Company's earnings or profits is not considered a sound or satisfactory principle by either party. It is felt by both the parties that relating bonus to production, which is directly linked up with workers' effort, is a better and more satisfactory principle'—indeed, a revolutionary contribution to labour-management relations in practice. Your Company firmly believes in the democratic process of free negotiation with the freely constituted representatives of its employees as the only firm and stable assurance of good relations, and the agreements concluded bear testimony to the consistent policy pursued by the Company in this respect. A meed of praise and commendation is due to the Company's personnel staff and to the workers for this pioneering achievement in social engineering.

Railway Freights

"Whatever endeavours we make, whether it be in the field of sales development or production operations or labour relations, the success of our efforts is influenced considerably by the actions of the Government. The State today not only operates the railways on which we must depend for transportation of our raw materials and finished products, but it also owns an increasing number of manufacturing industries, to whom we must sell our products. It is thus not only measures of direct taxation which affect us, but the host of other imposts such as sales taxes, excise and import duties, and railway freights. Railway freights are of particular significance to your Company, as they exert a considerable influence on our competitive position in the market for our products. From January of this year, the railway increased the freight rate applicable to the movement of aluminium ingot from Alupuram to Belur from Rs. 87 per ton to Rs. 160 per ton. This prohibitive increase in rail freight has compelled us to resort to sea shipment from Cochin to Calcutta, which, although cheaper than the new transportation cost by rail, is nevertheless about 25 per cent. higher than our previous cost. This is only an example of how Government actions influence our day-to-day operations. I appreciate that the development needs of the railways and for other Government works may be responsible for such actions, but the requirements of the aluminium industry in the context of the country's development should not be overlooked, and there is much need for restraint to be exercised by all of us, if an inflationary spiral is to be avoided.

Inflation

"In my address to you last year, I raised a small voice, calling attention to the impending threat of inflationary pressures. It is, indeed, a fact that the world has experienced, during the last decade, a sustained, perhaps a long-term, cycle of inflation. The Indian economy has no doubt stood well in this picture; the index of the value of money in 1956, as compared to 1946, shows a deterioration of 28 per cent.—only a shade worse than Switzerland and Germany. The annual rate of depreciation of the Indian rupee thus amounts to 3.2 per cent. in India, while the U.S.A. rate was 3.4 per cent., the U.K. 4.6 per cent., France 6.5 per cent., Australia 7.5 per cent. and Brazil 12.7 per cent. This, indeed, is a tribute to India's cautious and enlightened management of fiscal and monetary affairs. During the last twelve months, however, the danger symptoms have multiplied and the authorities, conceding the existence of severe 'stresses and strains' in the economy, recognise that 'there is no slack' left. Quicksands of inflation are an impossible foundation for orderly economic development.

Varied and Puzzling Issues

"We have in India today many varied and puzzling issues: Food prices subject to fickle anticipations about the coming monsoon; rising cost of wages and of raw materials in production, the shifting pattern of consumer preferences in the matter of cloth supplies and of cereals; lack of restraint in consumption an uncontrolled desire to eat more, to clothe well and to live better; monetary stringency induced substantially by heavy workloads. Throw in this economic cauldron the scarcity of resources at the disposal of Government and private business alike, the rapid dwindling of foreign exchange balances precipitated by an appreciable fall in exports, and the pronounced dislike of foreign capital to investment in India. A formidable task, indeed, to find the rightful prescription for progress and development.

Inflation

"It is sometimes averred that, in an underdeveloped economy, a steady inflationary tendency is contributory to rapid economic growth, but the crucial problem of the Indian economy today is the desire to instil increased purchasing power amongst the peasantry and, at the same time, maintain relatively stable prices of things which really count—things like food, clothing and shelter. The menace of inflation is aggravated not merely by the extent and magnitude of deficit financing—a crore a day is the figure revealed in the March Budgetary Statement—but also by the multiplier effect of the distinguishable type of priming through an ever-increasing flow of public expenditure. Illustratively, it is rarely recognised that the injection of an extra ton of steel, worth, say, Rs. 600, involves 'new' expenditure of almost Rs. 2,000, when the ton of steel is put to use. Consider the consequences of the heroic efforts in 1956 in releasing in the country an additional million tons of steel, a couple of million tons of cement, perhaps a million tons of foodgrains and 20 per cent. more cloth—this vast 'multiplier' expenditure in the country would undoubtedly swell the volume of purchasing power and generate a great inflationary demand. So even as the facts of political life in India make a smaller or slower plan of development impossible, the facts of economic life do not permit us to ignore the very real threat of inflation, of rapid corrosion in the real value of the rupee, which, if it occurs, will also have political repercussions.

"The Finance Minister, introducing the Budgetary Statistics last month, stated emphatically that 'a greatly increased measure of productivity

CHANGING PATTERN IN JUTE TRADE

DEVELOPING ECONOMY AND NEW USES HOLD PROMISE OF POTENTIAL MARKET

RAW jute occupies a unique place among the natural fibres of the world. In terms of annual output, it is only second to cotton. It plays an important role in the economy of the British Commonwealth, inasmuch as all but a fraction of world total is grown in the Commonwealth, being shared mainly by East Pakistan and West Bengal. While raw jute constitutes the main foreign exchange earner for Pakistan, jute goods form the largest single item in India's export trade. In either form, jute is one of the main dollar-earners of the sterling area.

Most of the countries in the world use jute goods, many of them have their own processing centres. India is the largest manufacturer and the U.K., Continental Europe, the U.S. and, more recently, Pakistan are the other main processing centres. The U.S. spin carpet and other yarns on a considerable scale, but imports its requirements of jute fabrics from India, the U.S., the Continent, Pakistan and Japan. Continental countries as a whole are self-supporting and have even a surplus for export. The present world demand for jute goods is about 1.8 million tons, which shows a slight decline from the pre-war level, on account of several factors. The world capacity for manufacturing jute goods has increased vastly, so that intense competition is only to be expected, particularly between India and Pakistan. This has tended to narrow the export opportunities for other non-Asiatic processing countries.

For over a hundred years, jute has enjoyed the monopoly of being the cheapest packaging material. During the last 15 years, however, some far-reaching changes have occurred in the industry, brought about more by external factors than by any internal circumstances. An interesting account of the changes is given by a special correspondent in the course of an article in a recent issue of the *Financial Times*, London. The most important of the developments which exercised tremendous influence on the world jute industry was the partition of India. "Almost overnight," the article says, "an international line of demarcation was drawn between the main jute-growing areas (East Pakistan) and the processing industry (India). It might have been hoped that economic realities would have ensured the continuance of a free flow of trade between the two areas, but, in practice, disputes over the jute trade immediately developed." The economic rivalry between the two countries —Pakistan trying to build up its own processing industry and regulating its jute crop, in order to avoid surpluses and so to keep up prices, and India, on its part, striving to make itself self-sufficient by expanding its jute acreage and improving yields per acre—have had widespread effects.

The uncertainty over supplies and artificially high prices in 1950-51 induced a search for substitutes for jute for heavy duty packaging. It was certainly not due to any genuine shortage of raw jute or consumer preference for other materials. The competition between the two, jute and its substitute, according to the article, took three different forms, namely, the use of substitute types of natural bast fibres for processing mainly in their country of origin; synthetic fibres and non-textile materials; and the development of bulk handling which diminishes the need for packaging. The synthetic fibres are said to lack the qualities of true jute and together with the difficulty of extracting the fibre from the plants economically, they do not appear to offer any considerable challenge on a world scale. The greater use of paper sacks has no doubt made sizable inroads into trades which were formerly served by jute, as in the case of cement and fertilisers. The development of bulk handling has also reduced the need for jute and other containers at the dockside, but internal distribution and storing require large quantities of sack. The use of sack also serves as a traditional index of measurement. While bulk handling is likely to develop further in several fields, there are certain physical limits to its use.

It is, however, claimed that jute has its own merit and has workmanlike qualities such as greater toughness, length of life and general serviceability in conveying commodities safely to their destination under all conditions, many of which the substitute fibres lack. The article referred to above discusses the merits of jute and gives an indication of the continuing vitality of the industry. It also points to the development of many new applications of the fibre, the cultivation of which is of such importance to the economies of India and Pakistan. As a fabric, jute is durable, easily repaired, withstands abrasion and the stresses of weather and climate, seals itself when pierced by hooks and crabs and, being porous, allows perishable produce to "breathe" when used as carrier. With such properties, the article says, it is not surprising that jute should have become a principal carrier of world commodities. Its rise to prominence has been associated with the rapidly expanding world trade in food during the past 100 years. This development created the need for a container which was efficient in use and cheap in relation to the value of the produce.

Emphasising that in Britain and other industrial countries jute has now many other end-uses besides sacks and wrapping cloth, the article states: "Its versatility is, indeed, remarkable, even if rarely seen or appreciated, for the reason that it is mainly hidden from view. . . Yet the fact is that every day, every one of us in the United Kingdom is surrounded by jute. We literally walk, sit, and sleep on jute daily without noticing it." The U.K. has contributed a good deal in developing new uses for jute. Of the total production of jute yarn in Britain, about 40 per cent. is absorbed by the consuming industries for use in carpets, cables, twines, cordage, and ropes. Jute, for instance, was associated with two triumphs of electrical engineering in 1956—the bedding and serving of the new transatlantic telephone cable between Britain and North America, and the undersea power cable between Vancouver and the mainland of British Columbia in Canada.

But apart from the uses already mentioned, jute woven in Britain is used as the backing for linoleum and tufted carpets and the foundation for imitation leather, roofing felts, and plaster work. In recent years, the services of jute to industry and agriculture have been improved by the application of scientific research. Jute cloth can be proofed against water, rot and mildew, insect damage, fire, and acid fumes. It can also be bleached, dyed, and lined with paper or plastic materials. It is against this background of versatility, the article adds, that the British jute industry, small and compact though it is, is regarded as a key industry necessary for the smooth running of many others.

In conclusion, the article says that the expansion of the world economy, particularly in the underdeveloped countries of Africa and the East, will continue to increase the demand for packaging and wrapping materials, even if we take the progress of bulk handling into consideration. The potential market for jute could be enormous and a relaxation of tensions on the Indian sub-continent could greatly help to ensure its success against rival materials. Fortunately, there has been evidence of a more realistic understanding in this area of the economic consequences of disharmony. The disturbance to jute markets caused by the Middle East crisis has tended to mask the growing recognition of need for adequate and steady supplies of the raw material at economic prices, but a settling-down phase is now evident and, when maintained, will enable jute to resume its longstanding role as the world's cheapest and best carrier. Outside the packaging field, the uses of jute are practically unlimited. Better methods of processing and the application of growing research knowledge, resulting in the improved performance of jute products and the extension of their end-uses, reflect the basic determination of jute interests to overcome the problems and uncertainties which have halted the progress of the industry in recent years.

(Concluded from next column)

Press and through other visual aids. As a result of the Tea Board's iced tea campaign, iced tea now figures on the menu of many leading tea rooms, restaurants and hotels in India and is also prepared and served in many homes. Although iced tea is not widely known in this country, the drinking of iced tea has entrenched itself as a popular or rather a national habit in the United States of America. People in America prefer iced tea for its clean, cool taste and for its freshening properties. If correctly prepared, iced tea retains the full flavour of tea and, at the same time, serves as a delightful and energising hot-weather drink.

WORLD TEA EXPORTS

CEYLON'S SHARE DECLINES

THE complete figures for 1956 relating to tea trade of the four main producing countries show that, except exports from Ceylon, the exports of all the other countries increased during the year. As the main supplier of tea to the world, India's share in the rise was obviously greater. Indian exports aggregated 514.15 million lbs., having gone up from 365.62 million lbs. Ceylon, second only to India in exports of tea, shipped 348.13 million lbs., as against 362.23 million lbs. in 1955. The following comparative table shows the exports of the main producing areas during the last three years:

(In million lbs.)

	1956	1955	1954
North India	433.07	289.69	301.99
South India	80.18	75.93	78.00
Ceylon	348.13	362.23	356.08
Indonesia	75.91	64.40	88.50
Pakistan	51.41	42.11	49.72

A country-wise analysis shows that the U.K.'s imports from these four countries during 1956 aggregated 521.73 million lbs., having gone up from 382.37 million lbs. in 1955. The bulk of this rise is accounted for by India, whose exports rose from 242.66 million lbs. to 353.36 million lbs. Ceylon's exports to Britain increased from 121.40 million lbs. to 135.90 million lbs. and Indonesia's from 9.25 million lbs. to 13.04 million lbs. Exports of Pakistani tea more than doubled themselves from 9.06 million lbs. to 19.43 million lbs. The U.S. imported from the four main producing countries 69.82 million lbs., a rise of 3.88 million lbs. over 1955. India's share increased from 24.04 million lbs. to 27.75 million lbs. and Ceylon's from 35.79 million lbs. to 36.34 million lbs. Indonesia shipped 6.24 million lbs., as against 5.92 million lbs. in 1955. Among the other countries which took more tea from India are: Canada—21.86 million lbs. (16.45 million lbs. in 1955); Europe—11.58 million lbs. (6.48 million lbs.); the U.S.S.R. —13.02 million lbs. (*nil*); Australia—9.42 million lbs. (6.15 million lbs.) and Egypt—21.6 million lbs. (12.9 million lbs.).

Ceylon has been steadily losing its market in Australia and Egypt. Its exports to the former, which had dropped from 51.6 million lbs. in 1954 to 40.5 million lbs. in 1955, fell further to 32.9 million lbs. in 1956. The decline in exports to Egypt was even more marked, from 24.6 million lbs. in 1955 to about 8 million lbs. Ceylon's exports to Iraq and Iran, two of the main consumers of Ceylonese tea, fell from 36.15 million lbs. to 29.16 million lbs. The increase in exports to Canada, Europe, Africa and New Zealand was insignificant when compared to the decline in exports to Australia and Egypt alone. Holland, which is the main customer of Indonesia, imported from that country 30.74 million lbs., during 1956, as against 25.40 million lbs. in 1955. This increase more than made good the decline noted in the previous year from 30.69 million lbs. The offtake of Australia also rose sharply from 3.68 million lbs. to 11.80 million lbs., and this has more than made good the fall in exports to Malaya from 10.89 million lbs. to 5.72 million lbs. In 1954, Malaya's offtake of tea from Indonesia amounted to 20.31 million lbs. Thus, in the course of the last two years, exports of Indonesian tea to Malaya has dwindled by nearly 75 per cent. Egypt's purchases from Indonesia have also gone up from 1.82 million lbs. to 2.42 million lbs. East Pakistan's exports to Karachi declined from 32.43 million lbs. to 31.43 million lbs.

The latest estimate of the crop of South Indian tea for the first quarter of 1957 places the output at 4.5 million lbs. higher than that for the same period of 1956. Tea production during the first two months amounted to 15.43 million lbs., as against 13.74 million lbs. in the corresponding period of 1956. Ceylon's output in the first two months was also up at 60.2 million lbs., having gone up by 8.2 million lbs. over the year.

TEA BOARD INTRODUCES TEA ICECREAM

The Tea Centre, Bombay, run by the Tea Board under the Union Ministry of Commerce and Consumer Industries, has introduced, for the first time in India, tea icecream which is becoming increasingly popular in the city. Both the tea icecream and iced tea—also served at the Tea Centre, Bombay —not only show novel methods of preparation of tea but also prove the versatility of tea itself. From the steadily mounting figures of iced tea sale during the summer season at the Tea Centre, Bombay, it is evident that people in this country are increasingly recognising the merits of iced tea as a relaxing cold drink.

The Tea Board will shortly launch for the third year in succession its iced tea campaign both in the

TRAINING OF ENGINEERING PERSONNEL

RATIONAL USE OF TEACHING STAFF URGENT

EFFECTIVE utilisation of material and human resources, as the Planning Commission observes, is of vital significance in planning. To achieve the requisite tempo of development it is essential that the task of "matching human resources on the one hand with material resources on the other should be taken up with as much precision as may be possible. Manpower has usually been referred to as the nation's first resource; much more so is technical." This observation of the Planning Commission underlines the importance of trained personnel for the success of the plans. Realising this, the first Five-year Plan made a provision of Rs. 28 crores for technical and vocational education. Although only 50 per cent. of this amount could be actually spent, an increase of 120 per cent. in the outturn of engineering graduates and 160 per cent. in that of diploma-holders was achieved by the end of the Plan period. The second Plan has earmarked Rs. 50 crores for technical education. According to the estimates of the Engineering Personnel Committee, even if the whole amount is spent on the expansion and development of facilities for technical education as envisaged by the Plan, there will be a shortage to the tune of 1,800 graduate engineers and 8,000 diploma-holders by 1960-61.

The river valley projects and industrial development programmes included in the first and second Plans are of such a magnitude that the supply of technical personnel should be steadily increased if the programmes are to be completed according to schedule. The river valley development is steadily progressing. The first phase of development of the Damodar Valley is almost complete. Two dams, Tilaiya and Konar, and also the Durgapur Barrage are already functioning. The construction of the Maithon Dam is almost over and work is underway on the Panchat Hill Dam. The Hirakud Dam was opened by the Prime Minister in January last and the construction of the Bhakra Dam is progressing. Koyna, Rihand, Chambal, Kosi, Nagarjunasagar and other dams are under various stages of execution. An idea of the magnitude of the river valley development projects can be had when it is remembered that the amount spent on them every year is more than what was spent during the entire century prior to independence. In the industrial field also substantial progress is being made. The steel mills, the atomic plant, the oil refineries, etc., signify the beginning of a new era of industrial development.

Magnitude of the Problem

The work of building up industrial India falls naturally to the engineers of the country. Further, if the level of activity were to be stepped up rapidly there must necessarily be a substantial increase in the ratio of engineers and technicians to the total working force. The number of professional engineers in 1954, has been estimated at 535,000 in the U.S.A., 540,000 in the U.S.S.R., 60,000 in the U.K., and only 25,000 in India. In 1955, the outturn of engineering graduates in India was little more than 3,100 and of diploma-holders about 6,000. The shortage of engineers in India will continue to grow as the Plan progresses.

The second Plan makes provision for the establishment of five engineering colleges, three higher technological institutes, 22 polytechnics and 61 junior technical institutes. The Engineering Personnel Committee, in its report submitted in May 1956, had recommended that in order to meet the growing demand for technical personnel 18 new engineering colleges and 62 polytechnics should be established, besides increasing the training capacity of existing institutions by 10 per cent. for degree and 25 per cent. for diploma courses. The Central Government and the Planning Commission, having carefully considered the question, came to the conclusion that the starting of a number of new institutions was not a feasible proposition as, in their opinion, the new institutions envisaged under the second Plan required all the technical and financial resources of the Government. It was, therefore, thought that the most fruitful and practicable way of expanding technical education was to enlarge the unit size of the existing well established institutions. A special committee, consisting of Dr. J. C. Ghosh, Member of the Planning Commission, and Mr. L. S. Chandrakant, Deputy Educational Adviser, was appointed to hold discussions with the Chairmen of the various committees connected with technical education, heads of institutions and State Governments regarding the possibilities of expanding the training capacity of existing institutions and to suggest, in the light of the discussions, the number of new institutions which would be necessary. The Committee prepared a report, embodying the principle of larger unit size, in which it made various proposals for expansion of training facilities. These proposals were that the 19 existing engineering colleges and 46 polytechnics should be so enlarged as to provide 2,538 additional seats for degree and 4,225 additional seats for diploma courses. For the balance of the requirements, three new engineering colleges and 27 new polytechnics capable of providing 520 seats for degree and 4,680 seats for diploma courses were suggested. These proposals, it may be observed, were approved by the All-India Council for Technical Education.

The most important consideration which weighed with the Government in deciding not to multiply the number of institutions as suggested by the Engineering Personnel Committee appears to have been the shortage of adequately trained teaching personnel. This indeed is a real limitation. What can be done to meet this shortage? In this connection, reference may be made to an article by Mr. Kanwar Sain, Chairman of the Central Water and Power Commission, in *Bhagirath*, in which he refers to some experiments conducted in the U.S.A. in order to meet the shortage of trained teachers.

Experiment in U.S.

A study instituted with the help of Central Michigan College, U.S.A., revealed that the teachers' traditional complaint of vast amount of unnecessary work was justified. It was found that each of the 137 teachers were spending from an hour and a quarter to more than four hours every day on a combination of activities which did not require professional teaching competence and could be included in the general phrase "housekeeping." Hence a system for the use of teacher "aides" was instituted. These teacher "aides" took roll call, checked papers, recorded grades, prepared materials for teaching, supervised homework—all the dozens of things that take so much of the teacher's special talents. It was found that the new system made it possible for the teacher to spend an average of 23 per cent. more time on activities closely related to instruction.

In Ohio, there were three colleges that were concerned over the calibre of instruction in science courses. They, too, hired teacher "aides." In addition, they hired three top-quality instructors, each a master in his own subject. These three moved from college to college giving each institution a level of competence in those three courses that it could not have afforded on its own. Obviously, small institutions cannot afford to hire top-quality teachers for every course. However, it is worth trying if this method could be adopted in India with any measure of success. Teacher's pay is certainly an important question. It is one of the paradoxes of our system, observes Mr. Sain, that we pay all our teachers on the basis of the same yardstick. It should be realised, he points out, that the educational system is not immune to the laws of supply and demand.

PISTON ASSEMBLY INDUSTRY

INQUIRY INTO QUESTION OF CONTINUING PROTECTION

AN important ancillary of the automobile industry, the piston assembly industry, has a vital role to play in the development of the former. As the transport requirements of the country are steadily increasing, the demand for automobiles is bound to increase and with it the demand for piston assemblies also. But the future of the industry, as Mr. C. Ramasubban, Member of the Tariff Commission, pointed out, at the time of the public inquiry into the claim of the industry for continuance of protection beyond 31st December 1957, held on 23rd April at Bombay, depends on maintaining high quality and keeping costs low.

The piston assembly industry has been enjoying protection for about a year and a half. The Tariff Commission inquired into the claim of the industry for protection in 1955 and recommended protection till 31st December 1957, by levying a protective duty of 50 per cent. *ad valorem*, standard, on trunk piston assemblies of 6 inches diameter and below and pistons, rings (excluding chromium-plated rings) and gudgeon pins required for such piston assemblies imported separately. The preferential rate was left to be fixed according to the relevant trade agreements. The Government accepted these recommendations and protection was granted to the industry with effect from 23rd November 1955.

At the 1955 inquiry, the Commission estimated the domestic demand, exclusive of the requirements of the Defence Service at 600,000 (units) each for pistons and gudgeon pins and 4,800,000 for piston rings. The demand was expected to increase by 10 per cent. during the following two years. The Development Wing of the Ministry of Commerce and Industries estimates the current demand for pistons at 738,000, for piston rings at 5,900,000 and for gudgeon pins at 738,000. Varying estimates have been given by two of the producers.

Installed Capacity

In 1955, only India Pistons Ltd., Madras, was manufacturing pistons, rings and gudgeon pins for use as original equipment as well as for replacement. Its capacity on single shift was estimated at 360,000 for pistons, 1,800,000 for piston rings and 480,000 for gudgeon pins. Another unit, namely, Hindustan Motors Ltd., Calcutta, was manufacturing piston assembly for use in engines manufactured by it. One more unit, Goetze (India) Ltd., New Delhi, with a capacity of 1,500,000 piston rings in the first year, was expected to go into production early in 1956. Besides, there were some small engineering units engaged in the manufacture of component parts of piston assembly according to orders but necessary details about them were not available to the Commission. The position at present remains more or less the same. The present capacity of India Pistons Ltd. has been estimated by the firm at 300,000 for pistons, 2,280,000 for piston rings and 360,000 for gudgeon pins. The lower capacity for pistons and gudgeon pins submitted by the Company is attributed to the wider range of large size pistons in its manufacturing programme. Goetze (India) Ltd., could not commence production as scheduled and the firm now expects to go into production of piston rings, including chromium-plated rings, in July this year. Its capacity remains unchanged at 1,500,000 rings on single shift. The capacity of Hindustan Motors Ltd. has been estimated by the Development Wing at 30,000 pistons per annum. As was the case during the last inquiry, no statistics are available about the small engineering units engaged in the manufacture of component parts of piston assemblies for their own use. The output of India Pistons Ltd. during the last year was 160,238 pistons, 2,080,528 piston rings, 142,187 gudgeon pins, production showing a steady upward trend.

The variety-wise breakdown of imports of piston assemblies and components during 1956 are as follows: Trunk piston assemblies of diameter 6" and below, 93,923; trunk pistons of diameter 6" and below 71,385; trunk piston rings (excluding chromium-plated rings) of diameter 6" and below 190,263; gudgeon pins for trunk pistons of diameter 6" and below 20,406. Protected categories of trunk piston assemblies and components thereof are assessed to protective duty of 50 per cent. *ad valorem*, standard, and 42½ per cent. *ad valorem* preferential.

NEW PRODUCTS AND PROCESSES

Electric Surface Thermometer

A FIRM in Amsterdam, the Netherlands, producing technical equipment, manufactures an electric surface thermometer designed as a resistance thermometer and capable of recording surface temperatures between —50° C. and +200° C. with an accuracy of ±0.2° C. Both surface and liquid temperatures can be measured. The thermometer consists of an entirely watertight nylon measuring head with welded-on polyvinyl chloride flex and an indicator housed in a portable cabinet. Measuring head and flex can be cleaned by immersion or boiling if necessary by means of disinfectants. The indicator is a sensitive milliammeter, which in the standard design can be supplied as required with a measuring range of 0-100° C., 50-200° C. or 10-42° C. (e.g., for use as a skin thermometer). The firm will supply, if desired, instruments with two measuring ranges and a selector switch or instruments with more than one measuring head and a selector switch. The firm will also supply to order instruments with measuring ranges other than the standard ranges mentioned above. The thermometer is fed by a flat 4½-volt pocket torch battery. The battery voltage on the metre is checked by pushing a button.

Chemical Instruction Equipment

The operation of apparatus in which chemical products are manufactured is a special task requiring, above all, technical thought and action. It is usually impossible to see what is going on inside the apparatus and equipment, so that manipulations are almost entirely dictated by the readings of the various measuring instruments. A Netherlands firm has manufactured equipment for training staff in attendance on chemical plants. With this equipment a series of basic operations for chemical processes can be carried out and taught, e.g., dissolving, reacting (with or without stirring), evaporation, distillation, crystallisation, settling, filtration, drying. It is a training school for all persons who will afterwards be employed at a chemical production plant. The equipment is used for teaching at technical schools and by factories having their own staff training courses.

Better Anti-Static Rubbers

Research into anti-static rubber materials in the U.K. has recently taken a number of important strides forward. One result of this research has been the development of a number of new anti-static rubber mouldings suitable for use in industrial plants as mountings for machinery. Hitherto the use of anti-static rubbers has been limited mainly to its use in hospitals, in aircraft tyres, and for flooring in ordnance factories. One advantage of the use of machinery mountings made from anti-static rubbers lies in the fact that the mountings act both as vibration absorbers and as electrical earths. Some of these anti-static rubbers developed in the U.K. have an electrical resistance of 10,000 ohms per cubic centimetre and they can be made, if required, in the form of precision mouldings formed to tolerance of plus or minus one two-thousandth of an inch.

Low Temperature X-Rays

A system which will permit X-ray examinations of the structure of materials to be carried out at low temperatures has been developed in the U.K. The system which is the first of its kind to be developed is expected to play an important role in the development of new electrical materials for industry. It will enable the crystal structure of materials being developed for research purposes and industrial use to be examined in the future by X-rays at a temperature which is held either above or below room temperature. This was hitherto impossible. The successful operation of the new X-ray unit depends on the fact that gas is used as a coolant in place of the liquid oxygen previously used for cooling purposes in X-ray units designed for use in materials examination. Temperatures ranging from between minus 140 degrees centigrade and plus 20 degrees centigrade can be obtained and held steady with the new apparatus.

Miniature Hurricanes

Scientists at the University of Chicago are creating miniature "hurricanes" in the laboratory to analyse characteristics of real tropical storms. The hurricane models are small whirlpools of water, whose movement simulates the motion of air masses in an actual hurricane. The whirlpools are induced by the same conditions which produce nature's devastating storms—that is, warming at the centre, cooling at the outside, and slow rotation. Through mathematical equations, the scientists can project the known forces generated by the whirlpools to arrive at the probable forces generated by actual hurricanes.

Stronger Paper

Stronger paper bags may be produced as the result of research carried out by U.S. scientists into the development of a new vegetable colloid material. The colloid material forms the basis of a new additive for jute and sulphate paper bags which gives them additional tensile and tear strength. Experimental tests have also indicated, the scientists responsible for developing the new compound claim, that the use of the additive in the pulp improves paper formation and permits a markedly increased machine speed to be used during paper making. It also increases the porosity and stiffness of the finished paper. Something of the efficiency of the compound in increasing the strength of the paper to which it has been added can be judged from the fact that in some cases indices of tensile and tear strength are increased by from 15 to 25 per cent.

It's a fact..

.....that a broken vessel will not retain water like a sound vessel does, nor hair darkened with a Hair dye will retain darkness like Loma does.

Hair dye darkens the hair superficially, Loma darkens the hair naturally

GENERAL INSURANCE BUSINESS IN INDIA

NEED FOR ADOPTING HEALTHY PRACTICES

FOR effectively mobilising the nation's savings and channelling them to productive enterprises, the insurance industry has a decisive role to play. Further, as a principal means of earning and effecting savings in foreign exchange the importance of insurance cannot be too strongly stressed. It is, therefore, essential that Indian insurance should develop on sound and healthy lines. This aspect was particularly stressed by Mr. D. Das Gupta, retiring President of the Indian Insurance Companies' Association, in his address to the annual general meeting of the Association held last week in Calcutta. Mr. Das Gupta said that although a code of conduct for insurers was formulated in 1952 and repeated appeals were made to the trade to run its business on healthy lines, malpractices continued to persist. This necessitated the drawing up of a new code of conduct last year, by way of supplementing the old one. The new code introduced certain additional restrictions with a view to making the observance of correct standards more effective than it had been hitherto. He, therefore, appealed to Indian insurers to see that no unhealthy practice obtained in the trade.

Mr. Das Gupta also touched upon certain important aspects of insurance in the country and made various suggestions to rationalise the rules governing insurance business. He laid particular stress on the need for giving full freedom to Indian insurers to write life assurance business in overseas markets. Indian insurers opened a number of branches in foreign countries after independence and the earnings from these sources have been steadily increasing. But there is need for granting permission to open more branches abroad and to provide facilities which would prove an additional incentive to insurers willing to venture abroad. Mr. Das Gupta referred, in this connection, to the drain on foreign exchange in the shape of premiums on reinsurances effected abroad. The net drain out of India in this respect was estimated at Rs. 117 lakhs in 1952. The volume of the drain, however, has been gradually declining.

Reinsurance Corporation

A significant development in this connection is the setting up of the Reinsurance Corporation last year in the private sector. Mr. Das Gupta expressed the hope that with the rapid development of the economy and the general insurance business in the country, the Corporation would grow into a full-fledged insurance service in the world market. With banks and shipping, insurance has always been a valuable source of earning foreign exchange. The Import Inquiry Committee estimated in 1950 that foreign exchange receipts through invisible trade constituted approximately 25 per cent. of the total of such receipts. At the time of the inquiry it was impressed upon the Import Control Inquiry Committee that Government should provide in the licensing procedure that those importers who made use of the services of Indian shipping, banking and insurance companies should be allotted an additional monetary quota for licensable imports equivalent to the difference between c.i.f. or c. & f. price as the case may be and the f.o.b. price of imports. In support of this suggestion it was further stated that while the bulk of the country's exports were on an f.o.b. basis it was anomalous that most of its imports were on c.i.f. contracts and that steps should be taken to remove the anomaly as early as possible. The Committee agreed to this in principle. Mr. Das Gupta, therefore, appealed to the Government to give its consideration to this aspect of the matter. Importers, he pointed out, also could help in this regard if they would insist on freight and insurance being placed with Indian companies.

Mr. Das Gupta drew pointed attention to the fear entertained by private insurers regarding competition from Government-controlled general insurance companies. The Government, as is well known, acquired a controlling interest in three general insurance companies, by reason of the fact that the latter were subsidiaries of life insurance companies which came under its control. The Government was thinking of placing its general insurance business with these companies. This would have given the subsidiary companies controlled by the Government an unfair advantage over the companies which are in the private sector. Such a policy of discrimination in placing business would not have been conducive to the development of general insurance. It is, therefore, gratifying, Mr. Das Gupta said, to learn that the Government has now agreed to allow 50 per cent. of its general insurance business to be retained by private insurers.

Principal Agencies

Continuation or otherwise of the principal agencies after 31st August 1957—the date on which they are to terminate under the provisions of the Insurances (Amendment) Act, 1950—is a subject which has been receiving the attention of insurers in this country. Referring to this, Mr. Das Gupta observed:

"The experience of the working of the principal agencies all these years has shown that they have justified their existence and reserve continuation. The principal agents have had a sobering effect on insurance industry and normally they have a close link with large industrial houses and in that position they have been able to give many insurers a stability by procuring business at a very reasonable cost. Further, with major reforms in general insurance and the code of conduct under way, the time is inopportune to discontinue the present system of principal agency and throw the business hitherto controlled by the principal agencies into the melting pot. This would upset the equilibrium which is so essential at this juncture. The cost angle also has to be considered. Many insurers who are operating through the principal agencies in certain areas may have to establish branch offices for servicing of clients and procuring business. This will result in increased expenses. All things considered, I would urge Government to continue the principal agency system after the 31st August 1957."

As regards the interpretation of the Insurance Rules by which it is insisted that to qualify themselves for all the three departments, principal agents should introduce a premium income of Rs. 20,000 separately in each department in a calendar year, Mr. Das Gupta averred that this was unfair. The Indian Insurance Companies' Association, he recalled, had suggested for the Government's consideration that so long as a principal agent introduced a premium of Rs. 20,000 in a calendar year in any of the three departments, he should not lose the principal agency in other departments even if he failed to reach this limit in the latter. He may, however, receive a lower rate of commission as provided for in the sixth schedule of the Act.

There is a general feeling that with the nationalisation of life insurance the Insurance Act, 1938, and the Rules made thereunder, have become out of date in many respects and, therefore, require considerable modification. Concurring with this view, Mr. Das Gupta cited, as an instance, the limitation of expenses under section 40C and the Rules framed thereunder. Marine business requires the maintenance of a trained and efficient staff in the same manner as fire and miscellaneous business. There is little justification, he pointed out, in having two sets of limits of expenses for the marine and non-marine departments. Further, he added, it was doubtful whether the companies could, with any amount of certainty and correctness, allocate expenses of the supervisory staff and overhead charges between these two departments. Consequently, allocation of expenses between them tended to assume a theoretical character, which was not at all satisfactory.

There is still a certain element of uncertainty in respect of the future of general insurance. Referring to the apprehension that the Government might take over general insurance also, Mr. Das Gupta observed that by so doing the State would benefit very little by way of availability of surplus funds to finance capital formation. In general insurance, while the risks undertaken are great, the premiums charged are comparatively small. Out of the premiums the insurers have to keep reserves for unexpired risks and build up funds for unforeseen catastrophies. The funds of a general insurance company are not trust funds like life assurance funds. Further, general insurance policies are for short periods only and renewable at the end of each term and merchants who generally take advantage of the facilities afforded by general insurance know how to guard their interests. There can be, as Mr. Das Gupta rightly suggested, no justification for the Government to entertain any proposal for taking over general insurance.

So far as the scope for general insurance business is concerned, Mr. Das Gupta observed that it was wide especially in spheres connected with personal accident insurance, householders' burglary insurance, sickness insurance, etc. So far only a fringe of business has been touched. It should, therefore, be obvious that if the Government adopts a sympathetic attitude and the insurers themselves strive to create greater awareness in the public of the value of insurance, there is a bright future ahead of general insurance business in the country.

HEALTH INSURANCE

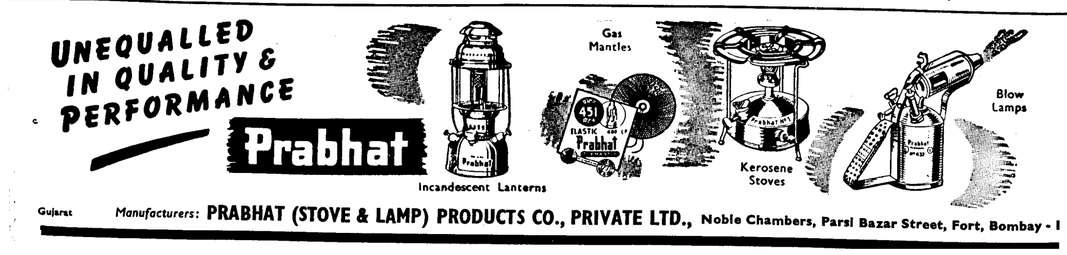
Although the progress of health insurance was not very rapid in the early stages of its inception in 1952, it has now made considerable headway, thanks to the determined efforts on the part of the Employees State Insurance Corporation to extend the scheme to more and more centres. It is computed that the scheme covers nearly 11,25,000 workers in 51 areas in 10 States. Presiding over the meeting of the Corporation held in New Delhi, Mr. Gulzarilal Nanda, Union Minister for Labour, Employment and Planning, called upon the Corporation to take energetic measures in order to extend medical care under the scheme to the families of insured persons. He felt that the hospital facilities under the scheme were very inadequate at present and observed that very much more will have to be done quickly to bring medical care to a satisfactory level.

The Corporation, as is well known, has approved measures for improvement of benefits available to insured persons. Thus, those suffering from tuberculosis now get medical treatment for a period extending from 18 to 24 months from the time they have to leave employment. Cash benefit is also granted for a further period of 13 weeks in such cases. Another important decision has been the provision of artificial limbs free of charge to insured persons who lose their limbs during the course of their work. The cash benefit is now remitted free of cost in many cases. Medical care originally contemplated, consisted of only outpatient medical care. It now includes specialist treatment as well as ancillary investigations. Hospitalisation is also to be provided for on the scale of one general bed for 800 employees, one T.B. bed for 1,600 employees and one maternity bed for 500 insured women. Another development of interest is the step taken to set up regional offices and regional boards of the Corporation, as far as possible on a State basis. These, when set up, will ensure better liaison between the State Governments and the Corporation and should make the running of the Scheme more smooth and efficient.

EMPLOYEES' STATE INSURANCE SCHEME IN BOMBAY

Total benefits amounting to Rs 5.30 lakhs were paid to industrial workers in Greater Bombay under the Employees' State Insurance Scheme during February last. Of this amount, Rs. 4,43,003 was paid as sickness benefit, Rs. 57,212 as temporary disablement benefit, Rs. 16,598 as maternity benefit, Rs. 9,159 as permanent disablement benefit and Rs. 4,360 as dependants' benefit. According to the progress report of the scheme for the month, as many as 8,696 workers were newly registered under the scheme. At the end of the month, 5,21,286 workers were entitled to medical care under the scheme.

About 11,802 insured workers attended diagnostic centres while X-ray plates were taken in 1,163 cases and blood examinations were made in 2,953 cases, and 831 persons were admitted to hospitals. The total number of beds occupied in hospitals during the month numbered 11,257. Payments amounting to Rs. 4.96 lakhs were made to insurance medical practitioners and Rs. 2.16 lakhs to chemists during February.



THE SHIVRAJPUR SYNDICATE, LIMITED

FIFTY-THIRD ANNUAL GENERAL MEETING

CHAIRMAN, MR. A. N. HAKSAR, STRIKES A CAUTIOUS NOTE ON OUTLOOK

THE fifty-third Annual General Meeting of the Shivrajpur Syndicate Ltd. was held in Bombay on 25th April 1957. Speaking on the occasion, Mr. A. N. Haksar, Chairman of the Company, reviewed the developments of the year in the field of export trade in manganese ore. He pointed out that State trading had introduced a dislocation or partial disruption of the old trade channels at a time when the overall costs to the consuming countries had substantially increased. He, however, added that the future need not be viewed with any undue pessimism, in view of the fact that the Government was keen on promoting exports of ore. The Company's new development and existing mining operations were progressing satisfactorily, which together with other measures were calculated to increase output in due course.

The following is the full text of Mr. Haksar's speech:

"LADIES AND GENTLEMEN,

"During the year under review, it was not possible to step up the output of your mines for reasons given in the report and raisings amounted to 83,238 tons, as against 91,427 tons in the previous year. However, there was an improvement in the supply of wagons, which enabled shipments and local sales to be increased to 117,482 tons, as compared with 82,332 tons in the year 1954-55.

Demand for Manganese

"You will also be interested to hear that there has been a continued demand for manganese ore of all qualities, at prices which have shown a progressive improvement over those previously obtained. Although it was the intention of the management to make new forward sales of your Company's ore to regular buyers for delivery in 1958 and 1959, consistent with their policy, it was not possible to do so, due to the advent of State trading. You are probably aware that the Government has proposed to canalise the export of manganese ore in a progressively increasing measure through the State Trading Corporation, and that only limited opportunities might be allowed to mining and trading interests for direct participation in the export trade, within the limits of the broad policy announced by the Government of India from time to time. As a beginning, a quota system of exports on a limited scale was introduced, and your Company was granted a quota for a period of one year ending 30th June 1957, for the export of 73,650 tons. The Government has also indicated that the balance of ore due for shipment against your Company's old contracts, which will remain after this quota is exhausted (i.e., 85,494 tons), can be partly canalised through the State Trading Corporation on a commission basis of 6¼ per cent. of the contracted price and the remainder shipped subsequently against future export quotas.

Reasonable Facilities

"In December last, the Chairman and other representatives of the Syndicate interviewed the officials of the State Trading Corporation in Delhi and, as a result of the discussions which took place, the S.T.C. promised all reasonable facilities in future for disposal of your Company's ores. However, it may not be out of place to mention here the risk involved to the country's economy as a whole, arising from the advent of State trading in manganese ore. This is the risk of forcing overseas buyers in gradually increasing measure to turn to new sources of supply, with the result that India's very valuable export trade in this commodity might be very seriously reduced, or even irreparably damaged. State trading has introduced a dislocation or partial disruption of the old trade channels at a time when the export duty on manganese ore, together with higher freight rates for shipping caused by the closure of the Suez Canal, have substantially increased overall costs to the consuming countries.

"It is reported that the Bethlehem Steel Company in the U.S.A. has completed arrangements to extract 600,000 tons of manganese ore annually from its new mine in Brazil after five years of development and exploration. Of this quantity, about 200,000 tons will be made available for consumption by the American industry and the remainder will go to the U.S. Government stockpile. In addition, it is also learnt that the National Tungsten Corporation in the U.S.A. will soon begin exploitation of one of the world's largest manganese deposits, namely, a new reef located west of the Andes Mountains in North Chile. There has been increased competition from Russia and South Africa so far as the U.K. market is concerned, while yet another potential competitor is the new State of Ghana from where increasing quantities of ore are expected to be exported. Such sources of supply are likely to prove formidable competitors to the Indian manganese ore trade, and this likelihood would become a certainty, if once the steady flow of supplies from India became interrupted or erratic.

New Method of Processing

"Furthermore, I would draw attention to a recent report in a commercial publication that a completely new method has been evolved of processing low grade manganese ore deposits in New Brunswick, Canada, and that a prototype plant has already been installed for this purpose. It is claimed that the process will prove economic and it is intended to erect a production plant capable of handling up to 5,000 tons of manganese per day to give an annual output of 75,000 tons of ferro-manganese and 75,000 tons of ingot iron. It is further claimed that the utilisation of the process on a broad scale would make the North American Continent completely independent of other sources of supply by making possible the treatment of low grade manganese ores, which hitherto were regarded as incapable of treatment.

"With regard to the question of renewal of the Shivrajpur Estate Leases, it will be recalled that my predecessor when he addressed you last year referred to the prospects of renewal of the old 'north' and 'south' leases and expressed the hope that the Thakore Saheb would sign with your Company a new lease for a period of 20 years. Unfortunately, due to the illness of the Thakore Saheb's Adviser, execution of the lease was delayed and, in the meantime, the Industrial Policy Resolution of 30th April 1956 was announced by the Government of India. This ruled that new deposits of certain minerals, including manganese ore, would in future be worked only by the Government, while old mining concessions could be renewed only after the prior approval of the Central Government. Accordingly, the Thakore Saheb applied on 16th October 1956, through the State Government, for the necessary consent to the granting of the new lease. Your Company has also followed up this appeal, and the Government's reply is awaited.

Bauxite Lease

"Whilst on this subject, I might also mention that the bauxite lease of your Company at Kapadvanj, working rights of which have been transferred to the Associated Cement Companies Ltd., has been renewed by the Government in accordance with the Mineral Concession Rules, 1949, for a further period of 30 years from 2nd January 1953.

"It will be seen from the report that various amenities, including the provision of further buildings and quarters, are being progressively provided for the employees at the mines and I am happy to say that our relations with the labour and the union's officials have continued to be cordial.

Bonus Issue

"You will also have seen from the report that permission has been granted by the Government to capitalise a portion of the reserves by the issue of bonus shares. I may assure you that your Board of Directors has this question under active consideration and, if it should be decided that it would be in the Company's interest to make any issue of bonus shares, the shareholders will be advised immediately.

"Turning now to the accounts, you will note that the layout of the Company's balance-sheet and profit and loss account has been changed to meet the requirements of the Companies Act, 1956. The results for the year can, I think, be considered satisfactory, and adequate provision has been made for taxation and other liabilities which the Company has to meet, for example, retiring gratuities to employees. In view of the large expansion programmes which are continuing to proceed on the mines, particularly in the Pani and Bamankua areas, your Directors considered it prudent to set aside a sum of Rs. 7 lakhs to mining development and prospecting reserve, Rs. 1 lakh to general reserve and Rs. 1,50,000 to equalisation of dividends reserve. After making these allocations, the Directors have recommended a dividend of Rs. 5 per share and a bonus of Rs. 3 per share, both free of income-tax, for the year.

Outlook

"As regards the future, both new development and existing mining operations are progressing satisfactorily. This, coupled with other measures taken in respect of modernisation of equipment and installation of an additional generating set, are calculated to increase production in due course.

"The Government appears to be keen to promote exports of ore, and it is hoped that your Company will be granted an adequate export quota, thus enabling it to meet much of its shipping commitments during the current financial year. As against this, it should not be forgotten that there exist other factors, such as the tendency to an increasing imposition of taxes, increasing costs of mining machinery and stores, and transport charges, etc., which would increase total mining costs. In fact only last month it was announced that the Government had increased the rate of royalty from 7½ per cent. to 12½ per cent. for manganese of 45 per cent. and over, and at the rate of 10 per cent. for ore below 45 per cent. Nevertheless, consequent on the improved trend of the market, the future, I feel, need not yet be viewed with any undue pessimism."

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. JOHN LUCKHAM'S REVIEW

THE Thirty-first Annual General Meeting of the Dunlop Rubber Company (India) Ltd. was held in Calcutta on 29th April 1957. Addressing the shareholders, Mr. John Luckham, Managing Director, said:

"GENTLEMEN,

"The Directors' report and accounts for the year 1956 have been in your hands for some time and, with your permission, I will take them as read.

"I should like to preface my remarks this year by referring to changes in your Board of Directors. Mr. Cecil Stack, who had been a Director of the Company since 1942 and Managing Director for the last six years, resigned at the end of last month. During the last year, Mr. Stack had been in indifferent health and since he had served for 33 years in this country he decided to accept an appointment offered to him by the Dunlop Rubber Company, Ltd., in London. It was with great regret that the Board accepted his decision and, I am sure, you will wish to join me in expressing our appreciation of Mr. Stack's long and valuable services.

"You will have seen from the notice convening the meeting that it is proposed to appoint Sardar H. S. Malik to the Board. Sardar Malik, as I am sure you are all aware, has recently retired from a long and distinguished career in the service of the Government of India and latterly as Indian Ambassador to France. I am confident that Sardar Malik's wise counsel and great knowledge of affairs will be of the utmost assistance to your Board and I commend this appointment for your approval.

The Year's Trading

"The factory was working to full capacity throughout the year and new records of output were achieved. Nevertheless, we were unable to meet the demand for all of our products and a shortage of giant and cycle tyres and cycle rims necessitated the Government granting import licences for these products to alleviate the situation. We have plans for increasing our production and I will deal with these later on in this review.

"Once again distribution of the Company's products was adversely affected due to the shortage of railway wagons. Many pleas have been made from both the public and private sectors for serious action to be taken to improve the situation, and it is to be hoped that this important problem will receive the attention it deserves.

"Total sales in value were 12½ per cent. higher than in 1955, but with the lower level of selling prices prevailing throughout 1956, the ratio of profit to turnover declined from 3.6 per cent. to 3.2 per cent. after taxation. This exceedingly modest profit percentage provides, I think, a good measure of our service to the community.

Products

"We have continued to receive the full benefits of the Dunlop world-wide research activities and many improvements have been put into effect during the year.

"Last year, my predecessor announced the introduction of the new Dunlop Roadster Giant Tyre, and it is with great pleasure that I am able to tell you that this has been extremely successful and has proved ideal for most conditions. This new tyre, combined with the ever-popular Dunlop Trakmaster Giant Tyre, provides users with an ideal selection to choose from to cover the different types of service conditions which are found in this country.

"Car tyre performance continues to be excellent and we have retained our premier position in the market.

"I must make mention here of the very rapid growth in the development of the scooter and to say that your Company have prepared themselves to meet the demand for the special type of tyre required.

"The bicycle industry continues to develop very rapidly and so far we have been unable to keep pace with the demand for our cycle tyres and rims, and, as already stated, imports were necessary to help fill the gap.

"Substantial increases in sales were also achieved in our industrial rubber products range. The second Five-year Plan has already increased the demand for conveyor belting and we are taking steps to ensure that we can play our part in meeting this. Further great strides were made in Dunlopillo Latex Foam cushioning and demand remains ahead of production.

"Our work in chemical plant lining made considerable progress during 1956, and we now have orders in hand which fully justify our decision to undertake this work.

New Factory

"I am happy to be able to tell you that, in addition to the expansion which has taken place and will continue at least for the next two years at your Sahaganj factory, the Company has obtained Government approval for the establishment of another tyre factory in Madras. The Chairman stated at this time last year that we, as a company, hoped to play our full part in meeting the very considerable increase in demand for rubber products which would arise under India's second Five-year Plan. The new factory in South India will, it is hoped, give us sufficient overall capacity to meet the demands for our products for some time to come. A substantial amount of additional capital will be required to finance this new project and as soon as our plans have been finalised you will be advised of the Board's proposals. An issue of further share capital will form the basis of these plans.

Raw Materials

"The raw material supply position, with the exception of crude rubber, was generally satisfactory and we were fortunate that at the time of the Suez Canal crisis we had adequate stocks of imported materials.

"As in the previous year, consumption of raw rubber by manufacturers, at 31,405 tons, far exceeded production, at 23,444 tons, and substantial imports were made.

"Since the world market price of rubber had fallen below the Indian controlled price, the Government introduced a cess on imported rubber equal to the difference between the landed cost of the imported rubber and the local price, applicable to all imports after August 1956. The amount collected under this price equalisation policy is payable to the Rubber Board as a contribution to the rehabilitation of rubber plantations. We were happy to co-operate with the Government in this scheme, but have been unable to get any indication of how the importer will stand in the event of the world rubber price again rising above the local price.

"Generally costs tended to rise during the latter half of the year, chiefly due to increases in freight rates and import duties. For instance, the duty on rayon yarn, one of our chief raw materials, was increased by 25 per cent. and to a lesser extent carbon black and tyre valves were also affected.

Profit and Loss Account

"The net profit for the year after providing for depreciation, interest and taxation was Rs. 55,09,909 and after taking into account the balance of profit carried forward the amount available for disposal is Rs. 66,81,594, as compared with Rs. 61,28,686 for 1955. The Directors are recommending the same rate of ordinary dividend as for 1955, that is 15 per cent., which will absorb Rs. 24 lakhs. The Directors also propose the transfer of Rs. 26 lakhs to general reserve, as against Rs. 22 lakhs last year. This will increase the general reserve to Rs. 216 lakhs and you will see from the balance-sheet that the ordinary share capital is covered more than twice by the total reserves and surplus. These reserves are, of course, fully employed in the business and the continued availability of profits for appropriation to reserves is very necessary to assist in providing the funds for development and expansion.

Balance-Sheet

"The additions to fixed assets during the year amounted to Rs. 42,22,000, consisting mainly of plant and machinery for expansion and modernisation. The amount of depreciation written off in 1956 was Rs. 30,55,000, as against Rs. 27,51,000 in 1955.

"Stock inventories at Rs. 4,55,47,000 were Rs. 63,84,000 higher than at the close of the

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the above Balance Sheet of the Bank of Rajasthan Limited, Udaipur, as at 31st December, 1956, and the annexed Profit and Loss Account for the year ended on that date as above set forth with Books and Accounts of Udaipur and Jaipur Offices and Returns of Branches and Pay Offices and report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit, and have found them to be satisfactory;

(b) In our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns, adequate for the purposes of our audit, have been received from the branches not visited by us;

(c) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the report are in agreement with the books of account and returns;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by law, in the manner so required and on such basis give a true and fair view, in the case of the Balance Sheet, of the state of the Bank's affairs as at the end of its financial year, and, in the case of the Profit and Loss Account, of the true balance of profit for its financial year;

(e) The transactions of the Bank which have come to our notice are within the powers of the Bank.

(f) The Returns received from Branches for the year ended 31st December, 1956, were duly audited by Chartered Accountants.

BUCKINGHAM AND CARNATIC COMPANY, LTD.

MR. R. E. CASTELL'S SPEECH AT THE ANNUAL GENERAL MEETING

DEMAND FOR CLOTH LIKELY TO EXCEED SUPPLY WITHIN TWO YEARS

ADDRESSING the shareholders of the Buckingham and Carnatic Company, Ltd., at their Thirty-sixth Annual General Meeting held in Madras on 26th April 1957, Mr. R. E. Castell, Chairman of the Company, stated that he shared the view that the official estimate of *per capita* demand for cloth by 1960-61 at 18.5 yards was too low. He was convinced that within the next year or two the demand for cloth was likely to exceed supply and hoped that the Government would not unduly prolong the implementation of its plans for raising cloth production.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The report of the Directors and the accounts for the year ended 31st December 1956, having been in your hands for the requisite time, I propose with your permission to take them as read, but I will be glad to reply to questions later.

"The delay in publishing the accounts and the holding of the annual meeting is regretted, but is due to the many complications which arose in preparing the accounts in accordance with the new Companies Act and because of the additional notice to shareholders which it is now necessary to give under that Act.

Modernisation

"The year under review was not an easy one for the Indian textile industry and the present trading results of your Company for 1956 owe much to the progress made with modernisation of machinery and manufacturing methods and to the continuing popularity of the Company's products. That this process of modernisation should be continued is essential for maintaining the Company's high standard of quality and to mitigate the effect of higher wages, heavy sales taxes and excise duties, by every possible economy in production methods. There are obstacles now in prospect which are likely to impede our further efforts with the general programme of modernisation, and I think it right that you should be informed of your Directors' present anxiety on this matter. The obstacles before us arise from India's present shortage of foreign exchange, which has caused the Government to adopt a most stringent import licensing policy. The effect on your Company seems likely to be serious, as much of our programme of modernisation depends on our obtaining machinery and components which at present can only be secured abroad, and which may not for many years yet be made in India, whereas our needs are urgent.

New Weaving Sheds

"Our first new weaving shed reached the stage of full operation in 1956 and has made a substantial contribution to the increase in the Company's productivity. The completion of our second new weaving shed, the building of which is already well advanced, forms an important part of our modernisation programme and to make this second new weaving shed as efficient as the first, we require a range of foreign precision-made components for rehabilitating the existing automatic looms to be transferred to it from the old buildings. The issue of import licences to cover these components is of vital importance.

"Yet another cause of anxiety is the prospect of drastic cuts in imports of dyestuffs, textile auxiliaries and other essential stores not now made in India, but which are so vital for our present standards of quality and variety. As you know, almost every yard of your Company's production is either bleached or dyed, and much of it is specially finished by one process or another. Unless we have the materials necessary to supply a range of well woven and properly finished cloths in pleasing and lasting colours, we cannot hope to continue to satisfy the Indian public or our customers overseas, who can afford to be fastidious and exacting, as there are other manufacturing countries eager and well equipped to supply all their needs.

"The textile industry, as a whole, was embarrassed last year by accumulation of stocks and this difficulty generally continues. Your Company was not much inconvenienced in this way, but in spite of the widespread popularity of their products, it was found necessary to reduce prices in order to compete overseas and internally to absorb some part of the heavy increases in excise duties during the year, particularly those from 1st September 1956.

"Per Capita" Demand for Cloth

"The final official estimate was that by 1960-61 the *per capita* demand for cloth would be 18½ yards: other authorities, including representatives of the textile industry, and I share their opinion, consider the official estimate too low. At first sight, it seems strange that stocks should have accumulated in 1956 when the total production of mill and handloom cloth, less the quantity exported, provided only 16 yards *per capita*. While there is no doubt that the higher cost to the consumer had in itself a restrictive effect on purchases, the circumstances in which the latest excise duties were imposed gave rise to a widespread belief that they were of a temporary nature and that cloth would be available later on at cheaper rates. There also seems to have been some diversion of spending by the masses to other essentials and to luxuries also.

"I am still convinced, however, that within the next year or two the demand for cloth is likely to exceed supply, and I hope, therefore, that the Government will not unduly prolong the implementation of their plans, announced in June 1956, for increasing cloth production.

Conditions Most Exacting

"As you will remember, these plans included the handloom industry and the mills, not to mention the powerlooms and the Ambar Charka: for the mills the plan was to install 14,600 additional automatic looms to produce 350 million yards of cloth for export. The conditions attached by the Government to the scheme for expansion of the mill industry are most exacting, particularly in the obligation that all the production of the new looms must be exported in addition to almost all the production previously exported. For every yard of the guaranteed quantity not exported, it is intended that a penal duty will be levied on the mill concerned. This condition involves a serious business risk for the industry, in view of the ever-increasing competition in overseas markets, which has been reflected in the progressive decline in India's exports of cloth for the past three years.

"However, after very careful consideration of all the circumstances, your Directors decided that, in spite of the risks, it would be wrong to miss the opportunity of increasing the productive installation of your mills, for which we have all waited so long. We, therefore, accepted an allocation of 144 new automatic looms, but I am sorry to say that we cannot proceed with the procurement of the additional machinery until the Government have announced their policy regarding the looms and other machinery which it will be necessary to import in order to expand our unit with proper efficiency. Even if the Government make a decision soon, it is unlikely that the new machinery can be installed and in operation before the end of 1958 at the earliest.

Increase in Exports

"I am glad to tell you that by strenuous effort we succeeded in increasing our export sales last year in the face of keen foreign competition, with the result that, in 1956, your Company earned foreign exchange to the value of nearly Rs. 1,90,00,000. We shall strive to improve on this performance, but it will be difficult even to maintain it, unless we continue to be supplied with those essential machines, components, dyestuffs and other materials which we can as yet only obtain from abroad.

"In 1956, nearly 10,000 bales of yarn were supplied by your mills to the handloom industry, against 8,500 bales in the previous year. It is possible that in the next year or two, with so many new spinning mills coming into production, and the spindleage of existing mills being increased, our statutory obligation to supply in quantities which are large for a composite mill, such as ours, will be reduced or even removed.

"When I addressed you last year, I mentioned that certain disputes which had been raised by labour were to be the subject of arbitration by the Hon'ble Mr. Justice Ramaswamy Gownder.

"In all, thirteen major issues were referred to the arbitrator, including such important ones as wages, leave facilities, bonus, shift timings, dearness allowance and gratuity.

"The award was recently published and by it labour was granted an increased minimum basic wage, a short-term gratuity scheme and certain other benefits. The rate of dearness allowance, the system of bonus, the leave facilities and shift timings were left unaltered, but in all, the award has placed a considerable additional financial burden on the Company.

"During the year, there were one or two stoppages by sections of labour, but fortunately work was resumed before interruption of the production of the mills as a whole assumed serious proportions.

"For reasons which are difficult for us to understand, the Madras Labour Union withdrew from the Mill Labour Advisory Organisation.

Accounts

"There is little to comment, I think, on the published accounts which are now shown in much greater detail than has been the practice in the past. It was unfortunate that the improvement in production was offset by increased costs and reductions in selling prices.

"It has been necessary to allocate Rs. 20 lakhs from profit and loss account in respect of the short-term gratuity scheme, to which I have already referred, this being the estimated liability on this account as at the date of the balance-sheet.

"You will note that an amount of Rs. 35,50,000 has been transferred from taxation reserve to the provision for increased replacement costs of buildings and machinery and, as this represents relief from taxation on our profits for 1954 and 1955 through the operation of allowances for initial and extra normal depreciation and development rebate, it is but logical to utilise it for the purpose for which it was intended by the Government of India, that is, to finance the expansion of our reconstruction programme.

"Debentures to the face value of Rs. 8,50,000 were redeemed and cancelled during the year and, in accordance with our practice, a similar amount has been transferred from the debenture redemption fund to the provision for increased replacement costs of buildings and machinery.

Compulsory Deposits

"Since the introduction of the interim budget in December 1956, your Directors have been perturbed by the implications of the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. It is obvious from our published accounts that the effect of this legislation could be extremely serious for your Company and it is, therefore, sincerely to be hoped that the draft rules which have recently been published for general information will finally make it clear beyond all doubt that those companies whose reserves are being fully used for the purpose of the business will be exempt from making such deposits.

"The liabilities of the workpeoples' and employees' provident funds, the accounts of which are now maintained by the Trustees, amounted, at 31st December 1956, to Rs. 1,50,47,590 and Rs. 13,32,355 respectively, and corresponding amounts have been invested in Trustee Securities.

"In 1956, the Company made a donation of Rs. 75,000 to the University of Madras on the special occasion of its centenary. This sum, combined with donations from the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., and Binny & Co. (Madras) Ltd., has been earmarked to provide a hostel for accommodating research students in chemical engineering, textile technology and allied subjects.

"Nowadays there is little, if anything, which is either private or free in that sector of enterprise in which we are engaged, but, in spite of

NEW PUBLICATIONS

Company Law. By N. C. Chatterjee and N. Krishnamurthi. Published by Federation of Indian Chambers of Commerce and Industry, 28, Ferozshah Road, New Delhi. Pages 862. Price: Rs. 25.

THERE is now no dearth of books on company law. But the fact that books continue to be written on the subject shows that there are still aspects of the subject which require special treatment. The book under review, however, is a very comprehensive publication on company law which, as is well known, is one of the most complicated pieces of legislation ever placed on the Statute Book by the Indian Parliament. It must be said, to the credit of the authors of this publication, that they have tried to make the treatise as helpful as it could possibly be made to lawyers, company promoters, and the management of companies as well as to all those who are interested in company law. The book is a lucid presentation of the different sections of the Companies Act and also carries references to the case law on the subject.

A chapter on income-tax and estate duty detailing the important provisions of the Income-tax Act, 1922, and the Estate Duty Act, 1953, pertaining to companies, has been included. Appendices have been added to some of the chapters which will convey useful information on important topics. The appendix at the end of the treatise incorporates a comparative table showing the correspondence between the 1913 and 1956 Acts and the 1948 Act of the United Kingdom as also indicating the relevant references to the report of the Company Law Committee. Among the welcome features of the book must be mentioned an exhaustive index which will make ready reference easy.

The authors observe that the apprehension has been expressed by competent persons engaged in the working of big companies, that too many statutory restrictions and possibilities of bureaucratic control and intervention may seriously affect the initiative of the business enterprises and ultimately hamper the further promotion of companies and effective development of existing ventures and sap the vitality of the private sector so essential for running a mixed economy. They point out that the spokesmen for the Government have given assurances that the stringent provisions were intended to check malpractices and not to hamper business management or initiative. The authors rightly express the view that the Act should be worked in this spirit.

The New Atomic Age. Published by the United Nations Department of Public Information, New York. Available at Orient Longmans, Bombay. Price: 25 cents.

The difference between the new atomic age and all other ages and industrial revolutions is that "the nations of the world are planning together to ensure the benefits and prevent the possible ills of this new technology." The unique contribution of the United Nations in this atomic development is that it "provides the common ground both for preliminary discussion and for co-operative action." This is a conclusion contained in a new booklet entitled *The New Atomic Age* published by the United Nations Department of Public Information.

The 40-page illustrated booklet describes in non-technical language the principles of producing atomic energy, and examines the role of nuclear radiation in industry, medicine and agriculture. Among its seven chapters is one devoted to international co-operation in the atomic field. It describes steps leading to the creation of the future International Atomic Energy Agency and co-operative work in this field undertaken or planned by the U.N. specialised agencies. Also covered in this section is the work being carried out by the U.N. Scientific Committee on the Effects of Atomic Radiation. Other chapters in the booklet, each containing a series of illustrations, deal with man's need for expanding his use of the atom; the energy potential in atomic fuels; the harnessing of the atom; uses of radiation in science, industry, agriculture and medicine; and the development of a new atomic industry.

Fundamentals of Statistics. By D. N. Elhance. Published by Kitab Mahal, 56-A, Zero Road, Allahabad. Pages 1017. Price: Rs. 15.

With the rapid advances in science and technology, and the increasing emphasis that is being laid on economic development, the science of statistics has come to occupy a very important place. In fact, progress does not convey any sense when there is no yardstick to measure it and express it in relative terms. The measure of the growth of population, their *per capita* income and welfare, prices, productivity, and a host of other concepts in the economic, educational and scientific spheres, of which there is a constant growth in this complicated world—all come under the realm of statistics.

The importance of this science is being increasingly realised in India, as is evidenced by the opening of Statistics Departments in the Indian Universities, and establishment of institutes for imparting special training. At a time like this, a book on Fundamentals of Statistics, such as the one under review, has a special function to fulfil. This book is a successful attempt at furnishing a comprehensive text for those who desire to equip themselves with a knowledge of statistical methods. It is written primarily for university students offering papers in statistics, and as such, will be found very useful to them. All formulæ have been neatly derived. And the book abounds in worked examples as well as exercises for the student, many of which have been taken from university question papers and competitive examinations. Besides covering measures of central tendency, dispersion, index numbers, correlation, analysis of time series, the book deals with theory of attributes, probability, sampling, chi-square test and goodness of fit, analysis of variance and interpolation. There is a notable chapter on business forecasting and another on growth of statistics in India. The get-up of the book is good.

Place and Problems of Small Industries. By S. K. Basu. Published by A. Mukherjee & Co. Private Ltd., 2, College Square, Calcutta. Pages 97. Price: Rs. 4.

Much emphasis has been laid in the second Five-year Plan on small-scale industries. There are many agencies which are now responsible for the development of these industries. The main problem which those who are engaged in this sphere have to face is one of finance. Mr. S. K. Basu, the author of the book under review, has devoted a considerable portion of the book to a discussion of the financial problems of small industries. Not only does the book offer a survey of the existing problems but also a critical appraisal of the working of the small-scale industries and of the agencies which provide financial assistance to these industries.

Economic Theory and Practice in India. By Sudhir Das Gupta. Published by Atmaram Jajodia. Pages 19. Price: Re. 1.

This booklet is the reprint of a lecture delivered by Mr. Das Gupta of the J. K. Organisation to the Post-graduate students of the Faculty of Business Administration of the Delhi School of Economics. Its central thesis is that economic theory, to be practically sound, must be inductive and not deductive. In other words, correct theories could be deduced only from actual practice. He rightly urges Indian economists to develop and perfect theories based on the peculiar conditions obtaining in India instead of blindly adopting Western theoretical maxims. Although this is a point of view, the significance of which is now more widely understood than before, it is perhaps more ignored than respected in actual practice.

LOPSIDED DEVELOPMENT OF LAMP INDUSTRY

PROPER REGULATION NECESSARY

AN undesirable feature vitiating the balanced growth of the electric lamp industry in India is said to be the irrational consumers' preference for its products *vis-a-vis* goods marked with foreign brands, although their quality and price are the same. Indeed, it is pointed out, the prejudice against the indigenous products has led to cut-throat competition among the producers of different brands, resulting in an unduly quick expansion of some units and retardation of certain others. Such a trend is certainly disquieting which must be removed, if the industry is to be set on a solid and sound footing. Mr. H. Sinha, President of the Indian Lamp Factories Association, did well, therefore, to draw special attention to this aspect when he addressed the eleventh annual general meeting of the Association held at Calcutta recently. Mr. Sinha urged the Development Council for Electric Lamp Industry to recommend to the Government of India appropriate measures to regulate the production, marketing and future expansion of the industry.

It will be noted with interest that, despite the fact that the country had been self-sufficient during the first Five-year Plan period in respect of all types of G.L.S. lamps, train and cab lights, loco headlight lamps, and coloured and decorative lamps, a serious problem continued to persist, namely, existence of large idle capacity. The Government had, therefore, imposed restrictions on production in 1953 which were, however, gradually relaxed by the end of 1955, when it was felt that the demand for the products had increased substantially. Since then, production has been expanding. The actual production of G.L.S. lamps in 1956 was 25.9 million, as against 19.9 million in the previous year. The output was very near the estimated demand for 26.9 million, the corresponding figure for 1955 being 24.5 million.

The following table shows the progress of the industry since 1946:

(In thousands)

Year	Actual production of G.L.S. and other types	Actual production of fluorescent tubes	Actual production of miniature bulbs
1946	8,110	..	..
1947	7,620	..	..
1948	9,240	..	..
1949	13,640	..	..
1950	14,330	..	..
1951	15,510	..	..
1952	20,880	73	143
1953	19,660	102	454
1954	22,960	214	898
1955	23,510	721	1,717
1956	29,780	881	1,023

As will be seen from the above table, a significant feature of the development of the industry in the last few years is the diversification of production. The rate of output of fluorescent tubes and miniature bulbs, the production of which was undertaken for the first time in 1952, is adequate to meet a substantial portion of domestic demand. In view of this encouraging progress, Mr. Sinha was confident that the increasing domestic demand for the products of the industry during the second Plan period would give the industry adequate impetus not only to utilise fully the reassessed capacity of 36 million pieces of G.L.S. lamps by the end of 1959 but also to expand the capacity of G.L.S. and other types of lamps (excluding fluorescent and miniature bulbs) up to 45 million pieces as originally programmed by the Development Council.

The two developments of some importance to the industry in recent years are the establishment of the Development Council for Light Electrical Industries on which the lamp industry is represented and the sanction, by the Government last year, of an extra capacity of two million pieces to each of the six different units. Surely, these indicate the helpful attitude of the Government towards the industry. Expressing his satisfaction on this issue, the President of the Association appealed to the authorities to keep certain considerations in view while devising methods to help the industry grow on healthy lines. In the first place, the Government should keep a watch on the expansion of the industry to ensure that it does not further aggravate the already lopsided development of the industry. Secondly, it should stick to the target of 45 million pieces, originally fixed for the industry, by the Development Council, and should not increase it to 50 million pieces, as estimated subsequently by the Planning Commission. This also means that the manufacturers should not be allowed to produce in future lamps of the existing foreign brand beyond the capacity already sanctioned by the Government. Again, the Government should examine whether it is possible, and if so, to what extent, to extend the special treatment accorded to the small and cottage industries to the organised sector also. Finally, it should examine the question of including a representative of the Association in the Development Council for Light Electrical Industries.

In the course of his address, Mr. Sinha pointed out that, while the expansion of certain units had been sanctioned by the Government, licences had not been issued for the import of necessary machinery. Though this is understandable in view of the critical foreign exchange position, it is, nevertheless, stressed that, unless licences are issued immediately, it would not be possible to secure the required machinery in time to enable the industry to cope with the pressure of demand for the products in the next few years.

In regard to the supply position of raw materials, no significant improvement has been reported. It is pointed out that, since the second half of 1956, the production of glass shells has been inadequate to neet the demand. This is attributed to the delay in the issue of licences for the import of automatic machines. It is, however, gratifying to note that, in the case of brass caps, the demand for which has so far been met entirely out of imports, their manufacture has been undertaken by Hind Lamps Ltd. The factory is expected to meet about 50 per cent. of the total demand. Further, two factories have taken up the manufacture of two other raw materials, namely, tubes and rods. Actual production is expected by the end of the current year. There is said to be much scope for expanding production of these raw materials within the country itself. Surely, the Government should take necessary steps to assist the indigenous producers in their efforts to step up output.

The Government has been encouraging the development of the indigenous industry through a restrictive import policy. Imports of general lighting service lamps up to 500 watts, train lighting and cab light lamps, for instance, have been banned. Imports of fluorescent tubes and auto lamps have been further restricted, the quota for the current half-year being 20 per cent. and 10 per cent. of the basic year's imports. Despite these measures, the industry feels that there is need for further restrictions on imports. In support of this view, mention is made of the existence of idle capacity in the country in respect of lamps imported, appreciable expansion in their production and establishment of new units as in the case of miniature lamps.

INDIAN FILM INDUSTRY

At the end of 1956, there were 255 film-producing concerns, about 900 distributing agencies, 60 studios and 40 laboratories in India. The total number of people employed in the industry was about a lakh, the capital invested about Rs. 42 crores and the gross annual income about Rs. 25 crores. The number of cinemas at the end of 1956 was 3,829, including 996 touring and temporary cinemas. The annual attendance at cinemas was estimated at 60 crores.

The film industry celebrated in December 1956 the twenty-fifth anniversary of the advent of the "talkie" in India. An important part of these celebrations was the screening of some of the outstanding Indian films produced during the last twenty-five years. A symposium on the Film and the Nation, meetings to honour the pioneers of the Indian talkie, and a variety show by film stars were other features of the celebrations.

In pursuance of the recommendations of the Film Enquiry Committee and the resolutions passed in the Rajya Sabha and the Lok Sabha urging Government to take steps for improvement in the standard of films, it was decided by Government to set up a National Film Board. A Bill to that effect was introduced in the Rajya Sabha on 10th December 1956. It is provided in the Bill that the Board will have three constituent units, namely, a Film Certification Bureau, a Film Production Bureau and a Film Institute.

Indian films are exported to a number of foreign countries, including Pakistan, Iraq, Malaya, Indo-China, Burma and East Africa.

The number of films approved for general public exhibition during 1956 was 294. The largest number was of Hindi films—121, followed by 53 films in Bengali, 50 in Tamil, 27 in Telugu, 14 in Kannada, 13 in Marathi, 5 in Malayalam, 3 in Gujarati, 2 each in Oriya and Urdu, and 4 in Assamese. There were no films in Punjabi and Kashmiri languages.

In 1956, the Central Board of Film Censors examined 3,244 films, of which 3,101 were given 'U' and 96 'A' certificates. This number included 2,330 foreign and 867 Indian films (including shorts). The number of films which were refused certificates was 47, of which 46 were foreign films. The total length excised from films was 73,923 feet. Bombay continued to be the major centre of production, Madras and Calcutta taking the second and third places respectively. About 47 per cent. of the total number of films were produced in Bombay, 33 per cent. in Madras and 20 per cent. in Calcutta. Bombay was the principal centre of production of Hindi films, Madras of Tamil and Telugu films and Calcutta of Bengali films.

The year witnessed further progress in the scope and influence of documentaries, the bulk of which continued to be produced by the Central and State Governments. During the year the Films Division produced 35 documentaries through its own units. Nine documentaries were produced on behalf of the Films Division by private producers.

TRADE AGREEMENT WITH W. GERMANY

An important feature of the exchange of letters that took place on 21st inst. between the Government of India and the West German Trade delegation following negotiations is that the schedules of Indian exports embodied in the agreement signed by the two countries on 31st March 1955 have been revised. As a result, some of the items of exports have been removed from the 'quota' list and placed in the 'liberal' list. Moreover, the quota items subject to quantitative restrictions have been generally increased. The agreement has opened up possibilities of bulk export of coal, iron ore, and manganese ore by the State Trading Corporation through long-term arrangement. Markets for handloom fabrics and handicrafts will also be developed. Another notable feature is that the Indo-German trade agreement of 1955 will now apply to Saar territory also.

In the course of the negotiations, it is stated, the German delegation has offered to receive an exporters' mission from India to enable close links being established between the business communities on either side.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

CHAIRMAN, MR. R. E. CASTELL'S REVIEW OF TRADING CONDITIONS

RESTRICTION ON IMPORTS NOT LIKELY TO AFFECT MODERNISATION PROGRAMME

THE Seventy-fourth Annual General Meeting of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., was held in Bangalore on 27th April 1957. Addressing the shareholders on the occasion, Mr. R. E. Castell, Chairman of the Company, said that the results for the past year were assisted by the programme of rehabilitation and replacement of machinery and further improvement of processing methods. He added that much remained to be done in respect of the programme of modernisation, but he hoped that the restriction on imports was not likely to retard progress in this direction.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The Directors' report and accounts for the year ended 31st December 1956 having been with you for the requisite time, I propose with your permission to take them as read, but after my speech I shall be glad to attend to any questions members may wish to ask.

"The delay in publishing the accounts and the holding of the annual meeting is regretted. It is due to complications arising from the introduction of the new Companies Act and because of the additional notice to shareholders which it is now necessary to give.

Another Successful Year

"As you will see from the accounts, your Company has concluded another successful trading year, the results of which have been assisted by the continuing programme of rehabilitation and replacement of machinery and the further improvement of processing methods. In spite of all that has already been accomplished, we still have a long way to go before we can complete our plans for modernisation and for this purpose more machinery and components are required, some of which must of necessity be imported, and we trust that our further progress in this direction will not be retarded by the present stringency in import licensing arising from the shortage of foreign exchange.

"As you know, your Company manufactures an unusually wide range of textile fabrics, including cotton, woollen, union and silk goods, and to maintain our reputation for quality and variety, it is impossible to rely wholly on equipment and materials made in India. Apart from the matter of machinery, therefore, your Directors are perturbed by the prospect of severe cuts in imports of those dyestuffs and other essential stores which can only be obained abroad.

Accumulation of Stocks

"Last year, the Indian textile industry as a whole experienced an accumulation of stocks, and these conditions still obtain. I think it must be accepted that the heavy increases in excise duties during 1956 were largely responsible for the decline in offtake. Traders have developed the habit of buying cautiously, partly because of the general impression that the last increases in excise duties on 1st September 1956 were a temporary measure, and also because of the uncertainty about the Government's intentions for replacing existing sales taxes on cotton textiles by excise duties. The consumer is also being cautious or may be he is spending more of his money otherwise.

"There was no serious accumulation of stocks in your mills during the year, but it was found necessary to reduce prices for cotton cloth in order to keep goods moving, despite the increases in excise duties already mentioned. It seems strange that the supply of cloth should be more than enough when only 16 yards of mill and handloom cloth is presently available for internal consumption and one could reasonably expect demand to be rising towards the official estimate of 18½ yards as at the end of the second Five-year Plan, an estimate which many of us consider to be too low.

"I do not think, however, that we should be misled by the present apparent adequacy of supply, as within a year or so there is more likely to be a shortage. I hope, therefore, that the Government will proceed with their plans announced last year for the expansion of the textile industry. For the most part these plans depend on expansion by the handloom industry assisted by spinning mills and Ambar Charkas, and on conversion of handlooms to powerlooms. The expansion of composite mills has, in fact, been linked to the export trade.

Automatic Looms

"The conditions laid down by the Government for the installation of additional automatic looms were difficult in several respects, particularly in their insistence that all the production of the new looms be exported, as well as almost all the production previously exported. However, after carefully considering every aspect of the matter, your Directors decided that the Company should not miss the opportunity to expand their existing installation. We have, therefore, accepted an allocation of 96 new automatic looms, of which we have agreed to buy 24 from Indian manufacturers. We are waiting for the Government to announce their policy regarding the other looms which we need to buy abroad.

"In spite of intense competition in overseas markets, the Company's export sales of cloth in 1956 were considerably more than in the previous year, and we shall continue to exert ourselves to secure foreign exchange for India by further developing our export trade.

"It is pleasing to record that after several years of losses, the Company's woollen section made a modest profit in 1956. This change of fortune was the result of sustained efforts by our technical, administrative and sales staff to increase production and to introduce new qualities and designs. Every further effort will be made to ensure that the woollen section continues to pay its way, but a fair reward is unlikely to come to us or any other unit of the Indian woollen industry so long as the present heavy excise duties and cesses apply to woollen goods. Also, for some time now we have had to pay higher prices for wool, both indigenous and imported.

"The year brought a further increase in production and sales of our popular union fabric 'Cotswol' and of the heavier cloth 'Angola' which, although mainly suppled to the armed forces, is also in general demand.

Silk Section

"Production and sales in the Company's silk section exceeded all previous records, but we now face a new problem, in that we specialise in the manufacture of superior quality silk *saris* and other fabrics, and although we use considerable quantities of raw silk produced in Mysore State, we must rely on importing a proportion of our requirements of filature silk and most of our needs of spun silk to maintain our reputation for the quality of our silk fabrics until such time as the indigenous materials are further improved. Unfortunately, supplies of the imported materials have lately been severely cut and unless we can find some remedy for this, our production and trade in silk fabrics is likely to be seriously disturbed.

Octroi Duty

"The imposition of a heavy octroi duty on raw materials and other essential items entering the City limits, announced by the Bangalore Corporation in 1954, is still a matter serious in its implications. The Company lost its case in the Mysore High Court, but has decided to appeal to the Supreme Court, for if this duty prevails, the local industry will be handicapped by an increase in costs which will not affect other manufacturing centres.

"Towards the end of 1956, the Company was asked to reduce consumption of Corporation water-supply by 40 per cent. So heavy a reduction would have seriously disturbed the Company's manufacturing activities, but fortunately the authorities later agreed to reduce the cut to about 20 per cent. Within this limit we have so far managed to avoid any serious dislocation of our output, but although we shall continue to do everything we can to offset the reduced water-supply by economies in consumption and use of bore-well water, we hope that the former full supply of Corporation water will be restored shortly.

"Although during the year we were involved in long discussions and negotiations with the Labour Association on a number of issues, I am glad to say that there were no stoppages of work causing loss of production.

"Your Directors have set aside Rs. 3 lakhs to cover the estimated cost of workpeople's housing during 1957, including the electrification of all the houses in Binnypet Village.

Accounts

"The published accounts, particularly the profit and loss account, have this year been shown in much greater detail and, I think, give you all the information you require regarding the financial position and the trading results of the Company.

"Although there was a slight reduction in the profits of the cotton section, satisfactory trading in all other sections was responsible for the improvement in the profits when compared with the previous year.

"You will observe from the comparative figures given in the Directors' report that the allocations for depreciation, bonus, officers' retiring fund and dividends remain approximately the same, but that it has been necessary to increase the provision for taxation by Rs. 9½ lakhs in order to cover the liability on the higher profits and also that arising from the additional burdens placed on companies by the Finance Acts of 1956.

Dividend Tax

"In this regard, I refer to the incidence of the increased dividend tax which is particularly severe on companies where the ordinary capital represents a relatively small proportion of the total effective capital. In the case of your Company, for example, the ordinary dividend represents a modest distribution of profits of slightly over 4 per cent. on the ordinary capital plus the reserves and it seems to me inequitable that we should be called upon to pay the excess dividend tax. However, merely because this tax is assessed arbitrarily on the rate of dividend on the ordinary capital, we are liable to an additional tax of Rs. 2,83,500.

"Your Directors view with grave concern the implications of the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. This Company, which has consistently followed the conservative financial policy of a reasonable allocation of profits between dividends and reserves is all the more adversely affected by this recent legislation and I can only hope that the draft rules, which have recently been published for general information, will finally make it clear beyond all doubt that those companies where the reserves are being fully used for the purposes of the business will be exempt from making such deposits.

Capitalisation of Reserves

"At an extraordinary general meeting of the Company held on 29th March 1957 the necessary resolutions authorising the capitalisation of Rs. 81 lakhs from reserves and the issue to shareholders of two ordinary shares for each ordinary share held by them on that date were unanimously passed and the new share certificates are now being prepared and will shortly be issued to shareholders.

"You have already received notice of an extraordinary general meeting which is to be held later this morning for the purpose of passing certain resolutions regarding the reappointment of Binny & Co. (Madras) Ltd. as Managing Agents of the Company for a period of 10 years with effect from 1st January 1957. The results of their management over a long period of years are well known to you. I am happy to inform you that the Central Government have approved of their reappointment and your Directors recommend these resolutions for your approval.

CENTURY MILL'S EARNINGS IMPROVE

LARGE DEVELOPMENT REBATE EARNED—RAYON PLANT EXPANSION GOING AHEAD

A WELCOME improvement in earnings is disclosed by the audited accounts of the Century Spinning and Manufacturing Company, Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Bombay), for the year ended 31st December 1956. The Company's gross profit has advanced by Rs. 8.99 lakhs to Rs. 96.64 lakhs, thus nearly making good the decline suffered in the previous two years when the profit dropped from Rs. 96.82 lakhs to Rs. 87.65 lakhs. The net profit, which had also declined from Rs. 51.82 lakhs in 1953 to Rs. 34.10 lakhs in 1955, has jumped to Rs. 56.11 lakhs. The expansion in earnings is encouraging, particularly when viewed in the context of the difficult trading conditions which prevailed during the year, following the two successive increases in excise duty on cloth, once in March and again in September 1956.

The provision for taxation has been reduced from Rs. 31 lakhs to Rs. 3.11 lakhs, thanks to the substantial depreciation allowances and development rebate the Company is entitled to in respect of the new plant and machinery installed during the year. This is indicated by the substantial increase in the provision for depreciation from Rs. 15 lakhs to Rs. 30.81 lakhs and the creation of a development reserve out of the development rebate of Rs. 55 lakhs. The dividend has been maintained at 22 per cent. for the fourth year in succession, to which level it had been stepped up in 1953 from 20 per cent. paid for 1951 and 1952. The dividend which absorbs Rs. 24.07 lakhs is paid out of dividend equalisation reserve, as the profit available for appropriation after setting aside Rs. 55 lakhs, representing the development rebate to the development reserve, is sufficient to pay a dividend of only one per cent. No other allocation to reserves has, therefore, been possible.

The following comparative table will bring out clearly the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	7,80.32	8,25.73	7,88.06	7,25.40

	(22%)	(22%)	(22%)	(22%)
Carry forward	7.62	6.35	31.33	12.81

* Includes cloth, cotton, yarn and waste.
† Only approximate.

The difficult trading conditions mentioned are duly reflected in the drop of Rs. 45.41 lakhs in the Company's sale proceeds, in distinct contrast to the rise of Rs. 37.67 lakhs in the preceding year. In fact, the year opened with bright trading conditions but the increase in excise duty on cloth from 1st March 1956 had some adverse effect on offtake. Subsequently, there was a mild recovery, but this was once again offset by the further increase in duty with effect from 1st September. The extent to which the rise in excise duty has affected the turnover is further reflected in the sharp rise in the closing stocks at the end of the year by as much as Rs. 65.16 lakhs. Expenses have also risen from Rs. 713.09 lakhs to Rs. 755.01 lakhs; this is partly due to the Company's rayon factory at Kalyan which went into production in September 1956.

Commenting on the Company's working during the year, the Directors state that the textile mill worked smoothly and efficiently except for the closure due to disturbances following the publication of the States Reorganisation Committee's report. Staggering of mill holidays due to restriction on power supply continued throughout the year but this was discontinued early in 1957. The work on the expansion of the rayon plant to a capacity of 12 tons per day is progressing. A large part of the necessary machinery ordered out for expansion has arrived. The building work for such expansion is also in progress.

The paid-up capital of the Company as on 31st December 1956 remains unchanged at Rs. 109.43 lakhs in ordinary shares of Rs. 100 each. As against this, the reserves and surplus aggregate Rs. 292.93 lakhs. The current liabilities at Rs. 324.90 lakhs include secured loans from a bank to the tune of Rs. 142.95 lakhs, these having gone up from Rs. 25 lakhs at the end of 1955. The gross block of the value of Rs. 606.67 lakhs (Century Mills, Rs. 287.31 lakhs and Century Rayon Rs. 319.36 lakhs) stands written down to Rs. 373.75 lakhs. Additions during the year were of the order of Rs. 76.09 lakhs. The current assets aggregate Rs. 356.51 lakhs and include investments in Government securities and shares of companies amounting to Rs. 11.29 lakhs, stores and spare parts, etc. Rs. 25.43 lakhs, stock-in-trade of Rs. 247.38 lakhs, debts, deposits and advances Rs. 64.85 lakhs and cash and bank balances Rs. 7.54 lakhs. The current assets cover the current liabilities and provision for taxation by a comfortable margin of Rs. 28.61 lakhs.

In order to bring the paid-up capital more in consonance with the block value, the Directors decided at the close of the year of review to increase the authorised capital of the Company from Rs. 1.5 crores to Rs. 5 crores—and the subscribed capital by Rs. 164.14 lakhs to Rs. 273.57 lakhs by capitalising reserves and issuing fully paid-up bonus shares in the proportion of three shares for every two shares held. The application to the Controller of Capital Issues for the issue of the bonus shares will be made as soon as the policy of the Government in respect of bonus shares is clarified.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 459.50 *cum-div.* (final dividend Rs. 14 per share). On an *ex-div.* basis, the shares provide a yield of 4.93 per cent. per annum, free of income-tax.

INDUSTRIAL INVESTMENT TRUST

The audited accounts of the Industrial Investment Trust Ltd. (Secretaries: Messrs. Premchand Roychand & Sons, Bombay) for the year ended 31st December 1956, disclose that the year proved to be one of further progress for the Company. The gross revenue at Rs. 6.96 lakhs is a shade better than that of Rs. 6.88 lakhs earned in the previous year, and the profit before taxation shows an increase from Rs. 5.82 lakhs to Rs. 6 lakhs. It must, however, be noted that the improvement in both gross revenue and profit has been less marked than in 1955. The dividend has nevertheless been raised to 5 per cent. after having been maintained at 4½ per cent. for the previous five years.

The Company's income by way of dividends on shares and interest on debentures and securities (less tax) amounts to Rs. 6.72 lakhs as against Rs. 6.79 lakhs for 1955, but this slight decline has been made good by a larger income of Rs. 24,182 from other sources, as against Rs. 8,691 in 1955. Of this income from other sources, the profit on sale of investments accounts for Rs. 11,511 and compares favourably with Rs. 6,013 earned in the previous year. Expenses have further declined substantially from Rs. 74,583 to Rs. 64,551. The Secretaries' commission is higher at Rs. 32,091, as compared with Rs. 31,154 for 1955.

The profit has been supplemented by a sum of Rs. 2,621 being the refund of U.K. income-tax, as against *nil* a year ago. After bringing Rs. 2.83 lakhs from the previous year, the Directors have transferred a sum of Rs. 11,511 to capital reserve being the net profit on sale of investments, as against Rs. 6,013, and Rs. 50,000 to investment reserve as against Rs. 25,000 in the preceding year. The higher dividend of 5 per cent. absorbs Rs. 5 lakhs leaving a balance, subject to taxation for the four years 1953 to 1956 of Rs. 3.24 lakhs to be carried forward, as against Rs. 2.83 lakhs brought in.

The Trust has got a paid-up capital of Rs. 99.99 lakhs in shares of Rs. 100 each. As against this, the reserves and surplus aggregate Rs. 23.37 lakhs. The Company's investments are slightly higher at Rs. 1.23 crores as against Rs. 1.22 crores at the end of 1955. A break-up analysis of these investments shows that Government securities account for Rs. 2.94 lakhs, as against Rs. 4.12 lakhs a year earlier, ordinary shares for Rs. 92.90 lakhs (Rs. 91.18 lakhs), preference shares for Rs. 19.15 lakhs (Rs. 18.81 lakhs) and debentures for Rs. 7.62 lakhs (Rs. 7.62 lakhs). The approximate valuation of the Company's investments at market quotations as on 31st December 1956, or in the case of unquoted investments at the book value, was higher than the total book value, by 3.1 per cent. as against 8.15 per cent. at the end of 1955.

The classification of the investments according to denominations of the securities shows that ordinary shares and stock account for 75.77 per cent., preference shares for 15.62 per cent. and Government securities and debentures for 8.61 per cent. The distribution of investments among different classes of undertakings shows that as much as 20.42 per cent. is invested in miscellaneous companies, 12.91 per cent. in cotton and silk mills, 9.76 per cent. in electricity and tramways, 9.46 per cent. in sugar industry, 9.29 per cent. in jute mills, 7.42 per cent. in banks and 5 per cent. in iron and steel industry.

PODAR MILLS' PROFIT SHADE BETTER

DIVIDEND MAINTAINED

A SLIGHT improvement in earnings is disclosed by the audited accounts of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) for the year ended 31st December 1956. Thus, the gross profit, at Rs. 12.32 lakhs, is a shade better than that for the previous year, at Rs. 12.09 lakhs. The increase in profit is no doubt small, but it has enabled the Company not only to arrest the downward trend noted in the previous three years but also to reverse it. This should be considered satisfactory in view of the difficult trading conditions which prevailed in the closing months of the year, following the levy of additional excise duty on cloth in September 1956. The net profit, after providing for Managing Agents' commission, depreciation and taxation stands at Rs. 6 lakhs, as against Rs. 5.99 lakhs in the preceding year. The Managing Agents' commission is slightly lower at Rs. 1.07 lakhs, as against Rs. 1.10 lakhs, as also taxation at Rs. 4 lakhs, as against Rs. 5 lakhs. A sum of Rs. 1.25 lakhs has been set aside for depreciation which had not received anything in the previous year. No allocation to the reserves has been made for the second year in succession. The distribution to the shareholders has been maintained at 12 per cent., to which level it had been stepped up in the previous year from 10 per cent. per annum paid for the previous four years. This is inclusive of the special bonus of 2 per cent. by which the level of distribution was raised a year ago.

The following comparative table discloses the progress of the Company's working for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	1,62.96	1,59.50	1,66.97	1,60.31
Closing stocks	18.75	17.81	22.26	26.66

Carry forward	4.73	3.93	3.14	2.99

It will be noted from the above table that the Company's sales turnover has made a welcome improvement of Rs. 3.46 lakhs in contrast to the fall of Rs. 7.47 lakhs in the preceding year. Cost of cotton consumed also has risen by Rs. 10.91 lakhs. Expenses, which had been progressively mounting up for the past five years, are lower by Rs. 2.02 lakhs.

Financial Position

The Company's financial position, as disclosed by its latest balance-sheet, is quite sound. Its paid-up capital remains unchanged at Rs. 50 lakhs, divided into 40,000 ordinary shares of Rs. 100 each and 10,000 four per cent. tax-free, cumulative preference shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating Rs. 50.37 lakhs. The provision for taxation stands at Rs. 24.43 lakhs and current liabilities aggregate Rs. 22.77 lakhs. The gross block of Rs. 48.70 lakhs, with additions during the year amounting to Rs. 9.16 lakhs, has been written down to a book value of Rs. 24.45 lakhs. The current assets aggregate Rs. 123.13 lakhs, and include, among others, investments in Government securities and shares of companies together with interest accrued for Rs. 32.63 lakhs, stock-in-trade for Rs. 26.37 lakhs, debts, deposits and advances for Rs. 22.74 lakhs and cash balances for Rs. 39.16 lakhs. The cash balances show a drop from Rs. 72.28 lakhs as at the close of the previous year which is partly accounted for by the additions to fixed assets and the rise of Rs. 13.78 lakhs in investments.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 164.00 *cum-div.* (final Rs. 7 per share). On an *ex-div.* basis, the yield on the shares works out to 7.64 per cent. per annum, free of income-tax.

JAY SHREE TEA MAINTAINS DIVIDEND

The results of working of the Jay Shree Tea Gardens Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) during the year ended 31st December 1956, show that the past year has proved to be a fairly prosperous one. The Company's gross profit amounted to Rs. 31.69 lakhs, representing an increase of Rs. 6.82 lakhs over that for the previous year, in refreshing contrast to the fall of Rs. 24.18 lakhs suffered in 1955. The generally higher prices of tea which prevailed during the year and the encouraging exports have contributed to the improvement in earnings of the Company. It must, however, be noted that the earnings for the year under review include those of the Risheehat Tea Company, Ltd., which was taken over with effect from 1st January 1956 but excludes those of the Invercauld Tea Estate which was sold with effect from the same date. While the year's profit is thus better than that earned a year ago, it is still far short of the record profit of 1954 at Rs. 49.05 lakhs.

The net profit has increased from Rs. 8.89 lakhs to Rs. 12.54 lakhs, after providing Rs. 7.88 lakhs for depreciation (Rs. 7.90 lakhs in 1955) and raising the provision for taxation from Rs. 6.50 lakhs to Rs. 9 lakhs. Out of the net profit, a sum of Rs. 1.09 lakhs has been set aside for previous year's adjustments. After writing back Rs. 2.75 lakhs, being the excess provision for taxation no longer required, the Directors have transferred a sum of Rs. 8.50 lakhs to general reserve, as against only Rs. 2.50 lakhs set aside last year. The Directors propose to pay a dividend of 10 per cent. per annum, the same as that paid for 1954 and 1955. The dividend absorbs Rs. 5.86 lakhs, leaving a balance of Rs. 98,818 to be carried forward, as against Rs. 72,556 brought in.

The following synopsis of the Company's latest balance-sheet reflects its sound financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	59,28,575	Net block	1,08,07,410
Preference share application money account	4,800	Stock-in-trade	35,96,073
Reserves and surplus	46,15,869	Stores	11,13,434
Provision for taxation	17,07,374	Debts, deposits and advances	23,66,331
Liabilities	60,13,532	Investments	2,74,587
		Cash	1,99,315
		Suspense	3,000
Total	Rs. 1,83,60,150	Total	Rs. 1,83,60,150

During the year under review, the Company issued 29,285 six per cent. tax-free, redeemable cumulative preference shares of the face value of Rs. 100 each. These were, in the first instance, offered to the existing shareholders and after their demands are met, the Directors have decided to offer the remaining shares to the public. As at the close of the year, 1,706 preference shares of Rs. 100 each have been subscribed, of which Rs. 50 per share have been called up. Substantial capital additions to the factory buildings, staff quarters, labour quarters as well as installation of modern machineries were undertaken during the year. The Company has made an application for permission to issue bonus shares to the existing ordinary shareholders in the ratio of one bonus share for every three existing shares. The application is still pending with the Government.

The Company has undertaken schemes to expand its activities in other industrial and commercial spheres. It has, thus, started a tea warehousing department and a department for import of iron and steel. It has further obtained a licence for the manufacture of 50 tons of sulphuric acid and 100 tons of superphosphate per day. The Directors, however, strike a note of caution in respect of all these schemes, in view of the general uncertainty of the markets, financial stringency and the threat of increased taxation.

ALKALI AND CHEMICAL

The Directors of the Alkali and Chemical Corportation of India Ltd. have given careful consideration to the number of acceptances and renunciation letters which have reached the Company in respect of the recent issue of 2,480,000 'A' ordinary shares. They feel that shareholders may wish to have further time in which to deal with the new shares provisionally allotted to them and they have, therefore, decided to extend the time by which the forms must reach Lloyds Bank from 27th April to the close of business on 11th May 1957.

This means that the shareholders have time until 11th May to follow the instructions given to them in the provisional allotment letter dated 3rd April.

NATIONAL CARBON CO.

The National Carbon Co. (India) Ltd. announces that its earnings before tax during 1956 amount to Rs. 90.43 lakhs compared to Rs. 86.82 lakhs for the year 1955. Tax provision for the year absorbs Rs. 43.62 lakhs as against Rs. 36.66 lakhs for the preceding year. Depreciation is higher at Rs. 9.12 lakhs as against Rs. 7.69 lakhs.

The expansion programme of the Company will continue to involve heavy capital expenditure. The directors have recommended that a final dividend of 7½ per cent. be paid. This, plus the interim dividend of 7½ per cent. distributed earlier in the year, will result in a total distribution of 15 per cent. for the year.

SATHE BISCUIT AND CHOCOLATE CO.

The directors of Sathe Biscuit and Chocolate Company, Ltd., report the Company's sales for the year ended 31st March 1957 have increased by over Rs. 9 lakhs to Rs. 33 lakhs and gross profit by Rs. 3 lakhs to Rs. 5 lakhs, subject to depreciation and audit. The Company is issuing a fresh capital of Rs. 5 lakhs in the form of 7 per cent. cumulative preference shares.

Points From The Chair

State Trading in Manganese

"IN December last, the Chairman and other representatives of the Syndicate interviewed the officials of the State Trading Corporation in Delhi and, as a result of the discussions which took place, the S.T.C. promised all reasonable facilities in future for disposal of your Company's ores. However, it may not be out of place to mention here the risk involved to the country's economy as a whole, arising from the advent of State trading in manganese ore. This is the risk of forcing overseas buyers in gradually increasing measure to turn to new sources of supply, with the result that India's very valuable export trade in this commodity might be very seriously reduced, or even irreparably damaged. State trading has introduced a dislocation or partial disruption of the old trade channels at a time when the export duty on manganese ore together with higher freight rates for shipping caused by the closure of the Suez Canal, have substantially increased overall costs to the consuming countries."

A. N. HAKSAR,
Shivrajpur Syndicate Ltd.

Demand for Cloth

"I am still convinced that within the next year or two the demand for cloth is likely to exceed supply, and I hope, therefore, that Government will not unduly prolong the implementation of their plans, announced in June 1956, for increasing cloth production. As you will remember, these plans included the handloom industry and the mills, not to mention the powerlooms and the Ambar Charka: for the mills the plan was to install 14,600 additional automatic looms to produce 350 million yards of cloth for export. The conditions attached by Government to the scheme for expansion of the mill industry are most exacting, particularly in the obligation that all the production of the new looms must be exported in addition to almost all the production previously exported. For every yard of the guaranteed quantity not exported, it is intended that a penal duty will be levied on the mill concerned. This condition involves a serious business risk for the industry, in view of the ever-increasing competition in overseas markets, which has been reflected in the progressive decline in India's exports of cloth for the past three years."

R. E. CASTELL,
Buckingham & Carnatic Co., Ltd.

Inflation

"It is sometimes averred that, in an underdeveloped economy, a steady inflationary tendency is contributory to rapid economic growth, but the crucial problem of the Indian economy today is the desire to instill increased purchasing power amongst the peasantry and at the same time, maintain relatively stable prices of things which really count—things like food, clothing and shelter. The menace of inflation is aggravated not merely by the extent and magnitude of deficit financing—a crore a day is the figure revealed in the March Budgetary Statement—but also by the multiplier effect of the distinguishable type of priming through an ever-increasing flow of public expenditure. Illustratively, it is rarely recognised that the injection of an extra ton of steel, worth, say, Rs. 600, involves new expenditure of almost Rs. 2,000 when the ton of steel is put to use. Consider the consequences of the heroic efforts in 1956 in releasing in the country an additional million tons of steel, a couple of million tons of cement, perhaps a million tons of foodgrains and 20 per cent. more cloth—this vast multiplier expenditure in the country would undoubtedly swell the volume of purchasing power and generate a great inflationary demand. So even as the facts of political life in India make a smaller or slower plan of development impossible, the facts of economic life do not permit us to ignore the very real threat of inflation, of rapid corrosion in the real value of the rupee, which, if it occurs, will also have political repercussions."

K. C. MAHINDRA,
Indian Aluminium Co., Ltd.

Meeting New Needs

"I have already indicated that the prime object of our research is to enable us to forecast and meet the new needs arising in a world of change. I do not pretend our motives are entirely altruistic. In a competitive age, failure in our efforts to produce new and better and cheaper products will cause the expansion which is the hallmark of a dynamic business to fade and die. It is by the discovery of new and better products that we keep our place in the race. It is by improving methods and processes and reducing the costs of manufacture that we bring our products within the reach of new classes of customers and so expand our markets. And here again, scientific research must be supported by sound market research, for, whatever the intrinsic merits of the product, it is futile to produce it if the public will not or cannot buy it. The interplay of scientific research and market research must, therefore, be close and continuous. It is some evidence of the importance which we attach to market research that we spend on it each year an amount no less than half that of our annual expenditure on scientific research and development throughout the world. Another object of research which follows as a natural consequence of rising standards of living and growing populations is the search for new raw materials that can be processed to yield ingredients for existing or novel products. Not only can this make more of these products available to satisfy increasing demands and cheapen the cost, but it often releases for other essential purposes the raw materials hitherto used."

THE LORD HEYWORTH,
Unilever Limited London.

COMPANY MEETINGS AND DIVIDENDS

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 7th May 1957. Dividend: Rs. 5.00 per share, payable on and after 20th May 1957. Transfer books remain closed from 22nd April to 11th May 1957, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 8th May 1957. Dividend: Rs. 11.00 per share (includes bonus of Re. 1.00 per share), payable on and after 14th May 1957. Transfer books remain closed from 22nd April to 10th May 1957, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 8th May 1957. Dividend: *Nil*. Transfer books remain closed from 22nd April to 8th May 1957, both days inclusive.

BLACKWOODS INDIA LTD. Annual General Meeting, Calcutta, 10th May 1957. Transfer books remain closed from 29th April to 10th May 1957, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th May 1957. Dividend: Rs. 22.00 per share, payable on and after 22nd May 1957. Transfer books remain closed from 22nd April to 14th May 1957, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 16th May 1957. Dividend: Rs. 7.00 per share (final dividend Rs. 5.00 per share plus bonus of Rs. 2.00 per share), payable on and after 17th May 1957. Transfer books remain closed from 25th April to 16th May 1957, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 20th May 1957. Dividend: Re. 0.50 (5 per cent.) per share. Transfer books remain closed from 4th to 20th May 1957, both days inclusive.

SVADESHI MILLS LTD. Annual General Meeting, Bombay, 20th May 1957. Dividend: Rs. 14.00 per share (includes bonus of Rs. 2.00 per share), payable on and after 21st May 1957.

PRESIDENCY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 21st May 1957. Transfer books will remain closed from 7th to 21st May 1957, both days inclusive.

BENGAL COAL CO., LTD. Dividend of Rs. 10.00 per share, for the year ended 31st October 1956.

MINERVA MILLS LTD. Dividend of Rs. 6.00 per share, for the year ended 31st December 1956, payable on 24th June 1957. Transfer books will remain closed from 13th May to 8th June 1957, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Dividend of Rs. 14.00 per share, for the year ended 31st December 1956, payable on 14th June 1957. Transfer books will remain closed from 20th May to 13th June 1957, both days inclusive.

KILLICK INDUSTRIES LTD. Interim dividend of Rs. 4.00 per share for the year ending 30th June 1957, payable on 28th May 1957. Transfer books will remain closed from 13th to 27th May 1957, both days inclusive.

SHARP RISE IN PROFITS OF GOLD MOHUR AND SWAN MILLS

BELSUND SUGAR PAYS MORE

Gold Mohur Mills, Ltd.

THE directors of the above Company (Agents: Messrs. James Finlay & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

The trading profit for the year, after allowing Rs. 6,25,000 (Rs. 4,63,000) for depreciation and Rs. 4,70,000 (Rs. 2,66,000) for taxation, amounted to Rs. 12,49,421 (Rs. 9,48,977). Adding the amount brought forward from previous year of Rs. 36,368 (Rs. 2,04,390) there was a total of Rs. 12,85,789 (Rs. 11,53,367). From this amount the directors appropriated to general reserve account Rs. 1,00,000 (*nil*), to development rebate reserve account Rs. 43,000 (Rs. 3,37,000), to retiring gratuity reserve account Rs. 2,35,000 (Rs. 30,000) and to payment of a dividend at the rate of Rs. 15 (Rs. 15) per share on 50,000 shares (free of income-tax) Rs. 7,50,000 (Rs. 7,50,000) leaving a balance of Rs. 1,57,789 (Rs. 36,368) to be carried forward to next year's accounts.

Machinery has been well maintained during the year and orders were placed for the installation of flourescent lighting in certain spinning departments as well as in the folding department.

Prices and deliveries of cloth were satisfactory for the first eight months of the year, but these declined in the latter portion of the year coincident with the increase in excise which came into effect from 1st September 1956. The additional amount of excise as a result of this increase is estimated at approximately Rs. 23,00,000 per annum.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Block ...	31,69,259
Reserves ...	48,98,022	Stock-in-trade ...	86,59,605
Provision for taxation ...	8,77,450	Stores, spares, etc.	6,93,650
Liabilities ...	32,48,686	Debts, deposits and advances ...	11,31,174
Profit and loss account ...	1,57,789	Investments	81,000
		Cash ...	4,47,259
Rs.	1,41,81,947	Rs.	1,41,81,947

Swan Mills, Ltd.

The directors of the above Company (Agents: Messrs. James Finlay & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

The trading profit for the year, after allowing Rs. 10,50,000 (Rs. 11,30,000) for depreciation and Rs. 3,40,000 (Rs. 8,00,000) for taxation amounted to Rs. 14,00,845 (Rs. 9,46,266). Adding the amount brought forward from previous year of Rs. 1,51,030 (Rs. 3,59,764) there was a total of Rs. 15,51,875 (Rs. 13,06,030). From this amount the directors appropriated to general reserve account Rs. 1,00,000 (Rs. 1,00,000), to development rebate reserve account Rs. 2,25,000 (Rs. 1,25,000), to retiring gratuity reserve account Rs. 2,25,000 (Rs. 30,000) and to payment of dividend at the rate of Rs. 25 (Rs. 25) per share, on 36,000 shares (free of income-tax) Rs. 9,00,000 (Rs. 9,00,000) leaving a balance of Rs. 1,01,875 (Rs. 1,51,030) to be carried forward to next year's accounts.

An order has been placed for the installation of an air-conditioning plant for the spinning department. Some additional machinery was installed in the cord department during the year. Machinery has been well maintained during the year.

Prices and deliveries of cloth were satisfactory for the first eight months of the year, but these declined in the latter portion of the year coincident with the increase in excise which came into effect from 1st September 1956. The additional amount of excise as a result of this increase is estimated at approximately Rs. 12,00,000 per annum.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,00,000	Block ...	45,17,754

Liabilities ...	77,54,603	Debts, deposits and advances ...	23,84,200
Profit and loss account ...	1,01,875	Investments	71,600
		Cash ...	5,136
Rs.	1,89,05,183	Rs.	1,89,05,183

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1956.

The results for the year after providing for depreciation shows a profit of Rs. 9,86,373 (Rs. 3,36,483) from which has been deducted for taxation Rs. 4,80,000 (Rs. 1,39,502) leaving a balance of Rs. 5,06,373 (Rs. 1,96,981). To this amount has been added the amount brought forward from the previous year of Rs. 51,985 (Rs. 49,906) making a total available for appropriation of Rs. 5,58,358 (Rs. 2,46,887). This the directors recommend, should be disposed off as follows:—

To transfer to development reserve Rs. 1,00,000 (*nil*), transfer to reserve Rs. 1,25,000 (*nil*) and to pay a dividend at Re. 1 (As. 12) per share free of income-tax for the year ended 30th September 1956 Rs. 2,59,870 (Rs. 1,94,903) leaving to be carried forward to the next account Rs. 73,488 (Rs. 51,985).

The factory commenced crushing on 17th November 1955 and finished on 29th May 1956 with a total crush of 37,64,594 mds. of cane, as compared to 19,84,371 mds. of cane in the previous year. The quality of cane available was normal and the recovery was 10 per cent. compared to 10.72 per cent. in the previous year.

The minimum cane price was Re. 1-7 per md. at the factory and Rs. 1-5 per md. at outstations. Cane cess was levied at As. 3 and Cane Co-operative Society's Commission was 9 pies per md. of cane.

Season 1956-57:—It is expected that more than 30 lakh mds. of cane will be crushed during this year. The Government of India is allowing export of sugar and the local market is maintaining steady condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,49,050	Block ...	8,44,538

Nellimarla Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1956.

The profit for the half-year, after making adjustments and providing for depreciation Rs. 37,356 (Rs. 56,200) and taxation Rs. 1,90,000 (Rs. 1,85,000), amounts to Rs. 2,29,504 (Rs. 2,36,215) to which must be added the credit balance brought forward from the previous half-year of Rs. 1,08,257 (Rs. 1,31,394), unclaimed dividends forfeited Rs. 6,325 (Rs. 4,530) and difference on gunny contracts in respect of previous period adjusted Rs. 7,000 (Rs. 16,344) making a total of Rs. 3,51,086 (Rs. 4,65,003 which includes Rs. 76,520 being E.P.T. Post-war refund). After deducting forfeited dividends paid Rs. 425 (*nil*) there is a balance of Rs. 3,50,661 (Rs. 4,65,003) from which the directors have transferred to reserve for machinery renewals Rs. 75,000 (Rs. 1,75,000) leaving an available balance of Rs. 2,75,661 (Rs. 2,90,003). This amount the directors recommend should be distributed as follows:—

To dividend on 5,000 preference shares at 6 per cent. per annum for the half-year ended 30th June 1956, or Rs. 3 per share Rs. 15,000 (Rs. 15,000) and dividend on 2,62,500 ordinary shares at 10 per cent. per annum for the half-year ended 30th June 1956, or Re. 0.50 (Re. 0.50) per share Rs. 1,31,250 (Rs. 1,31,250) leaving to be carried forward Rs. 1,29,411 (Rs. 1,43,753).

Jute stocks are shown at or under cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market rates.

The Mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. Trading conditions were fair during the period under review. Labour relations were satisfactory during the period.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,25,000	Block ...	7,59,219
Debentures ...	5,00,000	Stock-in-trade ...	21,21,500

Profit and loss account ...	1,29,411	Cash	23,24,396
Rs.	85,14,712	Rs.	85,14,712

Purtabpore Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Private Ltd., Kanpur) submit the audited accounts of the Company for the year ended 31st October 1956.

It will be observed that the accounts are presented in the new form required by the Companies Act, 1956.

The results for the year, after making the usual provisions, charging depreciation, and adjustments, show a profit of Rs. 3,91,334 (Rs. 3,00,414) to which has been added the carry forward from the previous year of Rs. 6,871 (Rs. 3,957) making a total of Rs. 3,98,205 (Rs. 3,04,371). The directors have transferred to rehabilitation reserve account Rs. 2,50,000 (Rs. 1,20,000) leaving at credit of profit and loss account Rs. 1,48,205 (Rs. 1,34,371 after placing Rs. 50,000 to contingencies reserve). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of 10 per cent. on the preference shares, free of income-tax, for the year ended 31st October 1956, absorbing Rs. 60,000 (Rs. 60,000), in payment of a dividend of As. 12 (As. 12) per share, free of income-tax, on the ordinary shares for the year ended 31st October 1956, absorbing Rs. 67,500 (Rs. 67,500) and carry forward Rs. 20,705 (Rs. 6,871).

The quantity of cane crushed by the factory during season 1955-56, was very similar to that in the previous season namely 25,97,018 (26,15,826) maunds but the extraction improved from 10.15 per cent. in the previous season to 10.22 per cent. in the season under review. The factory commenced crushing on the 1st December 1955, and completed the season on the 14th April 1956.

The cane price remained at the high rate of Re. 1-7 per maund for Factory gate and Re. 1-5 per maund at out-stations, and while the factory did not receive any increase in the quantity of cane crushed, in other parts of India that high cane price produced a very high quantity of cane and a corresponding increase in the quantity of sugar produced in the country. The result of this high production of sugar tended to reduce the market price for sugar and also to increase the quantity of sugar carried over from the season under review to the next season. This carry over of stocks was also aggravated by a shortage of Railway Wagons on the N.E. Railway in the early part of the year and this also had its effect in depressing the market price of sugar.

The efficiency of factory operation continued at a very high level while the Company's estates continued to supply cane to the factory and seed cane to growers to assist in improving both the quantity and the quality of the cane offered for crushing.

Rehabilitation reserve has been utilised to the extent of Rs. 5,50,000. This Company is a subsidiary of The British India Corporation Ltd., as defined by the Companies Act, 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	12,45,157

Profit and loss account ...	20,705	Debts, deposits and advances ...	13,85,034
		Investments	1,50,052
		Cash ...	12,828
Rs.	58,07,813	Rs.	58,07,813

Jawahar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Umaiyambika & Co., Salem) submit the audited accounts of the Company for the year ended 31st December 1956.

After deducting all working expenses and interest and providing Rs. 2,26,057 (Rs. 2,34,762) for depreciation, the year's working has resulted in a net profit of Rs. 13,48,418 (Rs. 8,91,769). From this sum, the directors have expended for bonus for 1951 Rs. 11,191, for donation Rs. 777 (Rs. 894), for bonus for the year 1955 Rs. 163 and for carrying charges in respect of cotton contracted for and purchased in previous years Rs. 15,000, with the sum of Rs. 83,416 profits carried forward from last year, there is a sum of Rs. 14,04,703 (Rs. 9,28,598) to the credit of profit and loss account which the directors recommend to dispose of as follows:

To provision for taxes Rs. 6,30,000 (Rs. 3,30,000), for general reserve Rs. 3,00,000 (Rs. 1,22,682), for dividend equalisation reserve Rs. 1,25,000 (Rs. 1,25,000), to provision for contingencies Rs. 1,00,000 (Rs. 1,50,000), to pay a tax free dividend of 25 (12½) per cent. to the shareholders absorbing Rs. 2,35,000 (Rs. 1,17,500) and to carry forward to next year Rs. 14,703 (Rs. 83,416).

It may be noticed that the accounts are drawn up in a form different from that in which they were drawn up till now. The present form is in compliance with the requirements of the Companies Act, 1956.

Though the Act came into force on 1st April, 1956, following the recent decision in the Bombay High Court, the managing agents of the Company have been allowed the remuneration under the terms of the current Managing Agency agreement.

The increase in the profits of the year when compared with the previous year is due to the very favourable margin of profit in the sale of 60s yarn. Considering the present trends in the market the demand for yarn has considerably weakened and the prices of cotton have increased. Hence the result of the working for the year 1957 does not seem to be bright.

The erection of machinery at our Branch at Chettinad is nearing completion. Production on a small scale was begun at the end of January, 1957. It is expected that all the frames, i.e., 12,480 spindles will be brought under working before the end of June, 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,40,000	Block ...	36,76,518
Debentures ...	4,16,000	Stock-in-trade	18,83,109
Reserves ...	14,05,975	Stores ...	2,98,024
Provision for taxation ...	4,65,009	Debts, deposits and advances ...	12,96,811
Liabilities ...	40,37,846	Investments	33,000
Profit and loss account ...	14,703	Cash ...	92,071
Rs.	72,79,533	Rs.	72,79,533

Eastern Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Bird and Co. (Private) Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account after providing for all charges and making provision of Rs. 5,44,728 (Rs. 7,36,882) for taxation and after paying an interim dividend on the cumulative preference shares at 2½ per cent. per annum, less tax, amounting to Rs. 46,094 (Rs. 46,094), shows a profit of Rs. 5,29,212 (Rs. 5,00,264) to which is added the balance brought forward from the previous year of Rs. 3,06,138 (Rs. 3,13,308), making a total of Rs. 8,35,350 (Rs. 8,13,572). The directors disposed of this amount as follows:—

By payment of a final dividend of 2½ per cent. per annum, making the total dividend 5 per cent. for the year on the 25,000 issued preference shares less income-tax at 48 pies per rupee plus 5 per cent. surcharge on income-tax Rs. 46,094 (Rs. 46,094), by payment of a dividend at the rate of 9 (9) per cent. per annum on the 51,260 issued ordinary shares without any deduction for income-tax paid by the Company Rs. 4,61,340 (Rs. 4,61,340) and by carrying forward Rs. 3,27,916 (Rs. 3,06,138).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,04,553 for which no quotations are available. The total of the market value of the investments for which quotations are available together with unquoted investments as valued by the directors, exceeds the book value at 31st December, 1956, by Rs. 47,43,413.

General reserve.—Rs. 1,401 have been transferred to profit and loss account to set off the loss due to change of investments during the year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,26,000	Investments	1,72,17,367
Reserves ...	54,10,811	Current assets	25,206
Provision for taxation ...	8,62,214		
Liabilities ...	30,15,632		
Profit and loss account ...	3,27,916		
Rs.	1,72,42,573	Rs.	1,72,42,573

Modern Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st October 1956.

The result of the Company's operations during the year showed a gross profit of Rs. 21,45,439. From out of this profit, a provision of Rs. 4,70,590 has been made for payment of bonus to the staff and workers for the year 1956 in accordance with the Agreement arrived at between the Rashtriya Mill Mazdoor Sangh and the Millowners' Association, Bombay, and approved by the directors. After the close of the financial year of the Company, the Industrial Court, Bombay, gave an Award dated 28th November 1956 bringing into force a gratuity scheme for workers with retrospective effect from 22nd November 1954. A further provision of Rs. 5,84,466 had therefore to be made for such gratuity taking into account not only the claims which the Company paid during the current year but also the accrued liability in respect of the workers who have completed 15 years of service and also the contingent liability in respect of such workers as have put in more than ten but less than fifteen years of service and who continue in the employment of the mills. After debiting the profit and loss account with both the above provisions aggregating Rs. 10,55,056 and also with depreciation on buildings and machinery amounting to Rs. 4,68,595 and with the provision for taxation amounting to Rs. 44,261 (both of which, it was the practice of the Company to provide in previous years by appropriation of profits), the net profit for the year stands at Rs. 5,77,527 (Rs. 6,99,346) as shown in the profit and loss account. This profit together with Rs. 31,670 (Rs. 16,412) brought forward from the previous year's account makes a total of Rs. 6,09,197 (Rs. 7,15,758) from this sum, the directors have allocated to machinery rehabilitation reserve fund Rs. 2,00,000 (Rs. 3,00,000) leaving a balance of Rs. 4,09,197 (Rs. 4,15,758) to be disposed of as under:—

To dividend of Rs. 5 (Rs. 5) and a bonus of Rs. 3 (Rs. 3) per share, making a total of Rs. 8 (Rs. 8) per share on 44,261 ordinary shares of Rs. 50 each for the year ended 31st October 1956 Rs. 3,54,088 (Rs. 3,54,088) and to carry to next year's account Rs. 55,109 (Rs. 31,670).

Trading conditions during the greater part of the year under report were satisfactory, but the steep and sudden increase in the excise duty made effective from 1st September 1956 and the credit restrictions imposed by Government completely paralysed the cloth trade. To facilitate clearances, the mills had to share the duty with the dealers and in some cases had to bear even the entire increase in the duty on pending contracts. But for this setback from which the market has yet to recover, the results of the year under report would have been still better.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,13,050	Block ...	57,39,984
Debentures ...	12,00,000	Stock-in-trade	70,59,728
Reserves ...	52,27,238	Stores and spares ...	8,68,033
Liabilities ...	57,05,944	Loose tools ...	16,951
Profit and loss account ...	55,109	Debts, deposits and advances ...	5,33,999
		Investments	1,24,788
		Cash ...	57,858
Rs.	1,44,01,341	Rs.	1,44,01,341

N.B.—Figures within brackets relate to the corresponding period of the previous year.
