MEETING DEVELOPMENT EXPENDITURE

CHEAP MONEY POLICY SUGGESTED

By Shantilal Sonawala

THE Five-year Plan expenditure is to be met out of resources available within and outside the country. As the Plan has ambitious targets, the Union Finance Minister is hard put to it to raise the necessary resources. The aim of this article is to bring out the fact that, although taxation has till now been the chief method for collection of revenue, a limit has already been reached at the present stage and any further increase in the taxation level will not be in the interests of our national economy. The authorities have a double responsibility to see that the Plan expenditure is met from the available resources and, at the same time, such expenditure achieves the objectives laid down. The emphasis on borrowing and deficit finance in the present stage is, therefore, advocated in this article as a temporary solution for meeting development expenditure. Cheap money policy is suggested as a remedy by which larger funds, as and when they become available to the public, can be mopped up by way of borrowing to meet expenditure.

The target laid down in the Five-year Plan for the resources to be collected by way of taxation alone is Rs. 800 crores made up of (*a*) Rs. 350 crores at 1955-56 taxation level and (*b*) Rs. 450 crores by way of additional taxation. Out of the Rs. 800 crores, the Centre has to raise Rs. 575 crores, while the States have to raise Rs. 225 crores in five years, i.e., approximately Rs. 115 crores and Rs. 45 crores per annum, respectively. The estimates of taxation revenue in the Central Budget for 1957-58 reveal a total of Rs. 519.39 crores, a rise of Rs. 93 crores as compared with the 1955-56 level.

Although the 1957-58 figures for States are not yet available, the following budget figures of 1956-57 are indicative of the trend:

Receipts by way of Taxation

(In crores of rupees)

States	1955-56	1956-57
Part A	272.66	285.37
Part B	69.16	73.00
Part C	13.10	14.26
Total ..	354.92	372.63
		+27.71 crores

The taxation level, as envisaged under the Plan, has already been reached with the increase of about Rs. 140 crores per year. It is, therefore, doubtful whether any further increase from this level will be in consonance with economic conditions of this country. It is likely to yield better results even at the present level of taxation, provided other development programmes progress at the same rate of expansion. The level of taxation should be kept up in relation to the increase in national income, resources available and savings out of the increase in income arising out of larger production.

Taxation has no doubt yielded better results. But all this revenue has not become available for development expenditure, because there has been a considerable rise in non-development expenditure as under::

(In crores of rupees)

	1955-56	1957-58
(1) Civil Administration expenditure	135.91	187.60
(2) Defence expenditure	203.97	282.71

The budget estimates lay down the total Plan outlay of the Centre and the States at Rs. 900 crores, of which the Centre's share is Rs. 775 crores, made up of Rs. 37 crores on revenue account and Rs. 460 crores on capital account and assistance to the States to the tune of Rs. 70 crores on revenue account and Rs. 208 crores on capital account. The States have a Plan expenditure estimated at Rs. 140 crores.

The deficit in the budget is estimated at Rs. 365 crores, out of which Rs. 338 crores arise out of capital outlay and Rs. 27 crores under revenue account. The question is how this deficit is to be met. In this connection, the item of capital expenditure which requires special mention is the expenditure of Rs. 49.25 crores on State trading account. It must be examined whether this is an expenditure which is likely to be a loss on capital account or capital to be reimbursed at a subsequent period. Again, thorough examination is necessary as to whether there is any scope for economy in development and non-development expenditure which has been raised to new heights.

The emphasis, therefore, shifts to the achievements required to be reached under the Plan in order to raise the resources for meeting the Plan expenditure. It must be examined whether the targets envisaged in the first year of the Plan have been achieved. If not, more efforts are necessary in order to see that the Plan expenditure achieves the desired results. The public and the taxpayers alone should not be asked to undergo sacrifices. There is need for similar determination on the part of the administrators to achieve results through economy and sacrifice.

Borrowing is another source for collecting revenues for the Plan. The target laid down under the Plan, namely, Rs. 700 crores in five years or Rs. 140 crores per year, has not been achieved. This, it is stated, is due to lower savings available to individuals for investment; the income, as envisaged under the Plan, has not yet come up to the level of savings. Thus, the question is whether the present economic structure can bear the Plan development expenditure, which from the beginning was placed at an ambitious level, especially considering that non-development expenditure has also been simultaneously raised to new heights. If both are to be met at an economic level what methods are necessary to lift the burden?

Taxation, as we have seen, has already risen and can yield better results only if it is consistent with increase in national income, resources available and savings invested out of increase in income arising out of larger production. The next source is borrowing and loans. This can be tapped more efficiently if the technique followed be commensurate with the resources available. In this connection, three considerations deserve to be noted. In the first place, the policy of constant threats to the capital markets does not create the right atmosphere for purposes of capital borrowings. Secondly, larger yields in industrial shares do not encourage investment in Government loans; nor do they encourage small savings. Thirdly, the methods of war-time finance adopted during the period of World War II should provide some guidance to the present state of this country's economy. Cheap money is the only solution for the problem of bringing about a higher level of activity internally in a country, which has to make all resources available within itself. After all, deficit finance is a phase in the country's overall policy in five years. Deficit financing remains "deficit" only so long as there is no corresponding income through production. As soon as production catches up with the spending the deficit is automatically wiped out.

The much-feared danger of inflationary effects on the economy is the only reason, if not prejudice, in not pursuing this policy. It is not here suggested that inflationary policy should be followed throughout, but it is to be adopted only as a temporary policy till the results overcome the effects of initial inflation. The larger activity of industrial expansion has never coincided with a policy of deflationary financial policy. The policy which has a record of success in the U.S., since it went off the Gold Standard, the record of success in Britain and Germany during post-war period, could be more profitably followed in India at this stage. The fear of increase in price levels may militate against the adoption of this policy. But it must be noted that price levels have increased, in spite of all the cautious policy followed by the Government in the last two years. The prices of manufactured goods have not gone up to the same extent as food articles or raw materials. The rise in food articles has been due to many causes other than inflation.

The moment it is felt that the situation as a consequence of the adoption of cheap money policy is getting out of control, measures are available to curb the price level. These measures include making essential commodities available to the public through larger releases from stocks and physical control. A policy of stockpiling of foodgrains and cloth which are to be made available to the consumers on the appearance of inflationary tendency is necessary in order to check undesirable results if this policy is followed. The danger of price rise is there. But under present circumstances, the risk is worth taking, as in no country developments have been achieved without some inflation. Measures to check inflationary tendency in an economy are sufficiently well known.

Notices

MINERVA MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Monday the 17th day of June, 1957, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1956.
2. To declare a Dividend.
3. To appoint Directors in place of those who retire, but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 13th day of May 1957 to the 8th day of June 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the shareholders individually.

By Order of the Board,
N. SIRUR & Co. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 24*th April* 1957.

N.B.—The Dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 24th June 1957, to those Shareholders whose names stand on the Register of Members on the 13th May 1957 and who have paid all dues to the Company whether in respect of the calls on their shares, interest thereon or otherwise. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

THE MODERN MILLS, LIMITED

NOTICE OF 16th DIVIDEND

NOTICE IS HEREBY GIVEN THAT A Dividend of Rs. 5 and a Bonus of Rs. 3 per share of Rs. 50 for the year ended 31st October, 1956, sanctioned by the Shareholders at the Twenty-third Annual General Meeting held on the 24th April, 1957, is made payable at the State Bank of India, Bombay, on and after Monday the 29th April 1957, to those Shareholders whose names stood on the Register of Members on the 27th March 1957. The dividend warrants are made negotiable at par at the State Bank of India, Bangalore.

By Order of the Board,

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 10th to 24th May 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 29*th April* 1957.

Note:—Payment of the proposed dividend, if declared, will be made on or after 1st June 1957 to those members whose names are registered in the Books of the Company on 24th May 1957 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE DUNLOP RUBBER CO. (INDIA) LTD.

(*Concluded from page* 901)

previous year. This was partly due to increased production but also to the fact that some raw material stocks were abnormally low at the end of 1955. Sundry debtors were up by Rs. 28,79,000, due to the greater sales turnover. Cash, bank and current balances were also higher, making the total increase in current assets Rs. 1,07,15,000. Deducting the increase of Rs. 17,96,000 in sundry creditors and other current liabilities there is shown a net increase in working capital during the year of approximately Rs. 89 lakhs, which is reflected in the combined rise in the bank overdraft (including the usance promissory notes) and unsecured loans.

Labour

"During the past year we have continued our efforts to maintain and improve our high reputation for congenial working conditions and welfare facilities. At our Sahaganj factory we now house, at low rents, a community of 4,600 employees and their families. The standard of housing is very high and excellent medical services including a modern hospital are available to all. Canteens have been provided in which good meals are available at subsidised prices. The existing educational facilities for children are now proving inadequate and a new school building is under construction. A market building is also being provided to improve shopping conditions for the residents in the Company's housing estate. The construction of 65 additional houses, to which the Chairman referred on this occasion last year, is now well advanced and improved street lighting is being installed. All forms of sport are encouraged, for which the Company provides the necessary grounds and buildings. Thus, we strive to look after the welfare of our employees and extend their social amenities. General labour relations remained consistently good throughout the year. Staff and operatives have given us their loyal support and contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in thanking them for their faithful service."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

BUCKINGHAM AND CARNATIC CO., LTD.

(*Concluded from page* 902)

all new problems and difficulties, your Company has made further progress. I would like once again to ask you to join me in a word of praise for the executive and supervisory staff of the management and the mills. By their conscientiousness and zeal, they are helping your Company to make a valuable contribution towards the second Five-year Plan and I only wish their efforts could be rewarded and further inspired by some mitigation of the present harsh personal taxation.

"I deeply regret the untimely death last year of two former Directors of the Company, Mr. B. W. Batchelor, C.B.E., and Mr. D. V. Bulloch, whose energy, foresight and enterprise during their many years of service achieved so much for the lasting benefit of your mills."

Note:—This document does not purport to be a report of the proceedings of the general meeting.

BANGALORE WOOLLEN COTTON AND SILK MILLS CO., LTD.

(*Concluded from page* 905)

"The workpeoples' and employees' provident funds do not appear in the published accounts of the Company as they are vested in Trustees. The liabilities of these funds as at 31st December 1956 amounted to Rs. 64,12,070 and Rs. 4,58,264, respectively, and corresponding amounts are invested in Trustee securities.

"I feel you will wish to join me once again in expressing appreciation of the valuable work done by the executive and supervisory staff of the management and the mills.

"I deeply regret the untimely death last year of two former Directors of the Company, Mr. B. W. Batchelor, C.B.E., and Mr. D. V. Bulloch, who worked in Bangalore for several years and whose endeavours over a long period contributed much to the present efficiency and prosperity of these mills."

Note:—This document does not purport to be a report of the proceedings of the general meeting.

MONEY UNCHANGED

(From Our Own Correspondent)

BOMBAY, 30*th April*

The slight relaxation in the pressure of demand for funds noted in the previous week persisted during the week under review also. Though the demand for bank credit was still on the high side, banks were able to get their requirements from the market and, at times, at slightly lower rates of interest. Inter-bank call money was done at 3½ per cent. and occasional business was put through at 3¼ per cent. also. House money at call was placed at 4 per cent., as against 4 to 4½ per cent. in the previous week. Short-term deposits were available for 4 to 4½ per cent. for one to six months.

As we go to press a day earlier than usual, the customary analysis of the Reserve Bank's statement for the week ended 26th April 1957 has been held over.

The Scheduled banks' statement for the week ended 19th April 1957 discloses a sharp rise in bank deposits, demand deposits recording an increase of Rs. 4.34 crores and time deposits Rs. 8.14 crores. Borrowings from the Reserve Bank have been reduced by Rs. 5.37 crores and those from the State Bank by Rs. 1.51 crores. Advances have risen by Rs. 3.99 crores, while bills purchased and discounted are lower by Rs. 4.95 crores. Investments are further down by Rs. 98 lakhs. Cash balances have improved by Rs. 5.28 crores and money at call and short notice by Rs. 3.26 crores.

The Gilt-edged market ruled dull during the week under review also, with no signs of any revival of interest. On the other hand, many of the Central and State loans were on offer and prices were marked down in some counters. 3 per cent, 1986 Conversion Loan was on offer at Rs. 74.40. 3 per cent. 1970-75 was neglected at Rs. 87.20, while 3 per cent. 1966-68 dropped 10 nP to Rs. 92.05. 3 per cent. 1964 was dull at Rs. 94.45. 3 per cent. 1963-65 was on offer 5 nP lower at Rs. 94.15. 3 per cent. 1959-61 was unchanged at Rs. 97.75. 3½ per cent. 1961 was steady at Rs. 99.50 and 3½ per cent. 1964 at Rs. 98.30, while 3½ per cent. 1965 was placed 5 nP lower at Rs. 98.25. Among State loans, 4 per cent. Madras 1968 drifted lower from Rs. 97.85 to Rs. 97.25 and Andhra 1968 from Rs. 97.75 to Rs. 97.10. 4 per cent. Mysore 1968 shed 5 nP to Rs. 97.85.

After an initial hardening tendency, the rupee developed some weakness in terms of the dollar during the week under review, following a similar trend displayed by sterling, but emerged better over the week. Thus, banks' selling rate of ready dollars declined from Rs. 479.75 to Rs. 479.25 per $100 before rising to Rs 479.50. Their buying rate was marked down over the week from Rs. 476.50 to Rs. 476.00 per $100. In New York, spot sterling hardened from $2.78½-2.79 to $2.79.3/16-2.79.5/16 before declining to $2.79-2.79½. Three months' forward gained from $2.78.1/16-2.78.3/16 to $2.78.3/16-2.78.5/16 and transferable sterling from 276.40-276.50 cents to 276.95 to 277.05 cents.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 29*th April*

Steady conditions prevailed in the sugar markets during the week under review, following reports that the earlier expectations of the sugar season to last till June might not materialise. It was felt that, as some of the factories were facing cane shortage, the season might end by 15th May and, in that case, the total production of indigenous sugar in the country would not go above 1.9 million tons. The production and despatches of indigenous sugar amounted to 1,701,000 tons and 944,000 tons up to 15th April, in the current season, as against 1,546,000 tons and 735,000 tons, respectively, in the corresponding period last year. The stocks with the factories on this date stood at 1,285,000 tons, as compared with 1,221,000 tons a year before. The export performance has been encouraging and, as the latest reports indicate that East Africa, Aden and Japan are also interested in Indian sugar, a further small export is likely to be announced soon.

The prevailing mill delivery prices (in rupees per maund) are: Jaswant 28.60; Simbhauli 28.37; Mawana 28 to 29; Daurala 29.56 to 30.62; Amroha 28.25; Bijnore 28.12; Mansoorpur 29.69 to 30.37; Rampur 30.50; retail 30.62.

The *khandsari* market ruled quietly firm during the week, prices touching the highest at Rs. 21 to Rs. 27 per maund.

Ready *gur* registered an advance of 37 nP during the week to Rs. 11.25 per maund today. Arrivals were lower, the average being 75 maunds, and local stock was put at 96,500 maunds. The earlier proposal in some section that *gur* would be utilised for manufacturing sugar is reported to have been found uneconomic by the factories. Futures *gur* advanced during the week on bull support and was quoted at: *Gur baisakh* Rs. 10.58; *asar* Rs. 11.54 and *fagun* Rs. 11.6.

LINSEED DECLINES

(Messrs. A. Bradley and Co.)

CALCUTTA, 29*th April*

Although the undertone of the linseed market was fairly steady, owing to scarcity of supplies, prices declined to some extent, following a fall in the price of linseed oil. Sellers were still rather reserved. Despite fairly good demand from crushers, turnover was small. In the oil section, shippers were unwilling to pay enhanced rates, owing to an appreciable decline in overseas prices. There was some small activity in ready goods, chiefly for shipment against previous sales.

The latest quotations are: Ready Rs. 22-10 and April-May Rs. 22-8 per maund.

SILVER GAINS GROUND

(From Our Own Correspondent)

BOMBAY, 30*th April*

The bullion market remained steady during the week under review. Activity was, however, confined to the silver section, which moved both ways before recording a gain over the week, while gold ruled dull. Silver staged a smart recovery in the earlier half of the week on good offtake in the ready section and bear covering induced by reports that the import duty paid for Tibetan coins was much less than expected. Subsequently, however, there was a setback on profit-taking due to rumours that heavy import duty had been paid and that about 2 million coins had already arrived. Nevertheless, the persistent demand for ready metal checked a sharp recession. The improvement in offtake is reflected in the premium of As. 4 which the ready metal came to command over the May settlement in the last two days, as against a discount of As. 4 noted ten days back.

Silver for forward delivery (14th May settlement) advanced from Rs. 181-4 to Rs. 183-1 on Saturday last, but relapsed to Rs. 181-15 today before finishing at Rs. 182-4. The June settlement gained from Rs. 181-4 to Rs. 182-8, but gave way to Rs. 181-12 at the close.

Ready silver finished at Rs. 182-8, after hardening from Rs. 181-4 to Rs. 183-3. The floating stocks of silver are reported to be 800 to 900 bars. The daily average offtake was 25 bars.

Forward gold (13th May settlement) hardened slightly from Rs. 105-8 to Rs. 105-15 before drifting lower to Rs. 105-11 at the close today. The June settlement was done today at Rs. 105-10, as against Rs. 105-7 a week ago.

Ready gold gained over the week As. 3 and closed at Rs. 105-12, after being done up to Rs. 106. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was lower at 3,500 tolas.

New York silver price was maintained at 91⅜c. London prices were also unchanged at 80*d.* for spot and 79⅜*d.* for forward. Gold declined from 250*s.* 3½*d.* to 250*s.* ⅜*d.* before recovering to 250*s.* 3*d.*

The following comparative table shows the trend of market during the week under review:

	30-4-1957	Highest	Lowest	24-4-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 29*th April*

Quietly steady conditions prevailed in the foodgrains market during the past week. The Union Food Minister said that there was "absolutely no cause for alarm" about the food situation in any part of the country and the situation was, in fact, hopeful.

Wheat at Hapur, which had touched the lowest at Rs. 14 per maund for average quality and at Rs. 15.25 for farm quality last week-end, improved to Rs. 15.25 and Rs. 16.75 per maund, respectively, during mid-session due to a fall in daily arrivals to 250 maunds. The week-end, however, witnessed a fall in prices to Rs. 15 and Rs. 16.31, respectively. Arrivals today mounted to 4,000 maunds, mostly by trucks from nearby centres, and local stock was put at 3 *khaties*. Rice also recorded further gains during the week on advices from the main producing areas. The prevailing prices today were: *Basmati* Rs. 24 to Rs. 28.12, *Mainpuri* Rs. 23.50, coarse quality Rs. 17.75 per maund.

Coarse grains, on the other hand, recorded a hardening trend during the week on good consumer demand, although local arrivals increased. Gram was transacted upto Rs. 12 per maund. Barley and *bejhar* were higher by 50 nP at Rs. 11.37. *Jowar* scored fresh gains, due to good demand in the face of poor local stocks. It was quoted at Rs. 12.87 per maund for brown quality and at Rs. 15 for white. *Guwar* was done 25 nP higher at Rs. 11.50.

Continued buying inquiry from O.T.R. destinations and Bihar accounted for an improvement of 31 nP in the price of peas *dara* green during the week. Daily arrivals were at an average of 3,000 maunds and, although loading facilities to the needy areas of Assam, Bihar and east U.P. were not very satisfactory, traders were building up stocks for despatch to these centres. Total arrivals of peas here from the beginning of the current season were estimated at 50,000 maunds and local stock was put at 20 *khaties*, as against 32,000 maunds and 10 *khaties*, respectively, a year before. New *arhar* arrivals had begun and the week's total aggregated 350 maunds and, due to good buying inquiry from outside, prices ruled steady. Other pulses also improved in sympathy with peas and *arhar*. Peas *dara* green was done at Rs. 11.06, peas white at Rs. 12.12½ *arhar* at Rs. 12.06, *urd* at Rs. 18.50 to Rs. 20.50, *moong* at Rs. 14.50 to Rs. 16.50 and *masoor* at Rs. 15.75 to Rs. 16.50 per maund.

Pulses futures recorded a firm trend during the week in line with better ready prices. Peas *jeth* was quoted at Rs.10.81, peas farm *jeth* at Rs. 10.92, *arhar jeth* at Rs. 11.73 and *urd baisakh* at Rs. 19.6.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, 30*th April*

The cotton futures market depicted a distinctly bearish trend during the week under review, thanks to the proposed steep upward revision in margin deposits in respect of Jarilla May contract with effect from tomorrow and persistent rumours that the revised margin would be made applicable to Vijay contract also. The series of announcements permitting imports of cotton from soft currency areas and the conclusion of the Indo-Egyptian deal providing for an import of 20,000 bales of Egyptian cotton also imparted weakness to the market. There were, besides, apprehensions that the Forward Markets Commission would not hesitate to adopt even more drastic measures, if the steps already taken were to prove ineffective in holding the price line. On top of these, the fixation of room rates in respect of Jarilla May announced on Friday was in favour of sellers. The cumulative effect of all these factors was considerable selling pressure, which resulted in a landslide in values. The fall in Vijay June was, of course, not as steep as that in the case of Jarilla, since the revised enhanced margin does not apply to it. The low levels to which prices receded, however, evoked some support to-day and a recovery was in evidence in both Jarilla May and Vijay June.

M.G. Jarilla May opened the week at Rs. 734, as against the previous day's close of Rs. 747. The contract encountered heavy speculative selling which pushed it down to Rs. 696 on Saturday. Opening today at Rs. 694, the contract received some support and recovered to Rs. 709, before closing at Rs. 707. The net drop in prices over the week was Rs. 40. Vijay April went off the board at Rs. 910 on Thursday. Vijay June commenced at Rs. 850 and fell on heavy liquidation to Rs. 831 on Friday. It, however, recovered to-day to Rs. 856. Vijay April went off the Board on the 25th inst. at Rs. 910. Total tenders against the contract aggregated 9,450 bales. It may be recalled that business in the contract commenced at Rs. 825½ on 18th June 1956. The highest level touched was Rs. 918 on 16th April and the lowest Rs. 719 on 28th December. The following is the trend of prices of the contracts during the week:

	30-4-57 Rs.	High Rs.	Low Rs.	24-4-57 Rs.
Jarilla (May)	707.00	734.00	696.00	747.00
Vijay (June) ...	856.00	856.00	831.00	859.50

The drastic steps taken by the Forward Markets Commission to check the rise in prices have come in for a great deal of criticism. A section of the trade feels that, although the Commission may succeed in preventing the rise in cotton prices beyond a certain limit, the latter will not reflect the correct statistical position of cotton. Such an artificial price level in the futures section, they contend, is not in the long-term interest of the trade. The heavier margin is considered an inducement to bears to push down prices. There is also the fear that the Commission may not be as prompt in arresting a fall in price, as it was in curbing a rising trend. The market forces behind the spurt in price, it is maintained, have not been properly analysed by the authorities before adopting the measures.

The spot section was influenced by the weakness in futures and values of certain varieties came down by five to ten points. Mills were not willing to make any fresh commitments and were inclined to adopt a wait-and-watch attitude. However, there was demand for 320F. Co2, O394 and other popular varieties.

The latest available rates—in rupees per candy of 784 lbs.—are given below (the figures in brackets- being last week's closing quotation:

Bengal *Deshi* 730 (740); Jarilla 810 (815); Khandesh 815 (820); Vijay 945 (945); Oomra *Deshi* 780 (780); Moglai 760 (765).

The signing of the Indo-Egyptian cotton deal was greatly welcomed by the trade. According to the agreement, India will purchase 20,000 bales of Egyptian cotton, payment for which will be made in rupees, in a specially opened rupee account, to be operated by the State Trading Corporation to provide easy payment facilities to exporters and importers. The entire amount will be utilised by Egypt in purchasing Indian goods like jute, tea, pepper and tobacco. Cotton imports from Egypt will take place against contracts approved by the Textile Commissioner.

The Government has issued a notification prohibiting inter-mill sales of raw cotton imported against actual user licences. Another notification issued by it directs all holders of *kapas* to get them ginned before 31st May.

The Karachi cotton futures market put on a cheerful appearance during the week. There were good buying induced by expectations of enlarged overseas demand, especially from China, following absence of possible competition from Indian cotton. Consequently, prices of cotton tended to move up. N.T.R.G. May improved by As. 7 to Rs. 79-14. July delivery gathered As. 8 to Rs. 82-7. Spot rates also registered improvement. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 87; Punjab *Deshi* 81; 4F Punjab Roller 82-14; S.G. 87-6; L.S.S. Punjab Roller 85-6; S.G. 90-6; N.T.R.G. 84-6; S.G. 94-14; 289F Punjab Roller 88-6; S.G. 96-14.

In contrast to the easy trend noted last week, the Alexandria cotton futures market depicted a slightly firm trend during the week under review. The firmness was aided by the trade agreement signed between India and Egypt under which India has agreed to purchase 20,000 bales of Egyptian cotton. As a result of the price discounts offered by the Egyptian Government to cotton exported from Alexandria, overseas demand was expected

to revive. Thanks to these factors, there was good buying support and both the long-staple Karnak and the medium-staple Ashmouni contracts recorded handsome gains. Permission is expected to be given for trading in new crop shortly. The condition of the crop is reported to be satisfactory. The latest available rates—in tallaris per lb.—from Alexandria are as under:

Karnak: May 112.65; July 113.35. *Ashmouni*: June 78.15; August 77.80.

Cotton futures at Liverpool market registered some improvement in prices, owing to mill fixations and trade buying which found offerings limited. Firm advices from the spot section also imparted strength. Near deliveries of American cotton mixed growth contract, however, were easy, due to occasional hedge selling. The Sudan contracts were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: May-June 26.55; July-August 26.35; October-November 26.23; December-January 26.18. *American Cotton Mixed Growth Contract*: May-June 26.56; July-August 26.45; October-November 26.27; December-January 26.24. *Sudan Lambert Seed Contract*: May-June 42.75; July-August 41.60.

The New York cotton futures market ruled easy during the week. There was a large volume of selling on reports that the U.S. Secretary of Agriculture had called for lower prices and bigger crops to solve the cotton problems. The scattered commission house support and New Orleans buying prompted by recent unwanted rains in the cotton belts were not sufficient to absorb the offerings. There was a growing awareness in trade circles that the present two-price system would not continue for long without seriously dislocating the futures market. The growing uncertainty regarding future policy weakened the sentiment of the market further.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	29-4-57	21-4-57	15-4-57
Spot	35.35	35.40	35.45
May	35.26	35.27	35.21
July	34.81	34.85	34.68
October	33.62	33.60	33.68

SUGAR FULLY MAINTAINED

(From Our Own Correspondent)

BOMBAY, 30*th April*

Despite heavy arrivals of sugar to the tune of about 20,000 bags during the week under review, the sugar market presented a fully steady trend. The steadiness was aided principally by thick rumours of an additional levy of excise duty on sugar in the forthcoming budget and an upward revision in railway freight. The delay in the normal monthly release of sugar for sale in the free market also lent support. Sugar prices, as a consequence, were fully maintained. Thanks to slim unsold released stocks with manufacturers and heavy buying inquiry from all sides, the ex-mill quotation for Bombay-Deccan sugar has been raised by As. 8 per bag.

In the spot section, small, medium and large grain sugar were held firm at Rs. 89, Rs. 90-92 and Rs. 93-98 per bag (inclusive of sales tax), respectively, same as last week.

Vaisakh delivery contract for "C" grade sugar advanced from Rs. 91-5 to Rs. 92 today, with buyers at this price. This contract is scheduled to be squared up on 15th May next. Business in a fresh forward delivery contract for *Shravan* commenced today with buyers at Rs. 93-4 per bag of C.28 grade sugar, inclusive of sales tax and additional excise duty, if any.

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 30*th April*

Conditions in the yarn market were distinctly easy during the week under review. Staple fibre yarns encountered heavy selling, on account of large accumulations of stocks, following continued slackness in demand from consuming centres. Cotton yarns tended to look down, thanks to bearish advices from the cotton market and absence of enquiries from handloom weavers. Rayon yarns lacked support, barring those deniers in which an acute shortage of supplies was felt. Even rumours of a drastic cut in import quota failed to have any effect. The mills, it was reported, would be given licences on the basis of Rs. 4 per loom shift worked during the previous period. If this anticipated cut were to materialise, the aggregate import licences would not, it was felt, be for a value of more than Rs. 1.87 crores, as against Rs. 2.66 crores *plus* a special licence of Rs. 75 lakhs in the previous licensing period.

Snia Rayon yarn (120 dull cones) for April delivery was subjected to heavy selling and was hammered down by Rs. 17 to Rs. 790. June delivery dropped Rs. 11 to Rs. 811. 150 Bright Cones for April delivery was neglected at Rs. 625. Spot 150 Japan was dull at Rs. 4.09. 120 Japan, however, gained 3 nP to Rs. 4.12. 120 Italy put on 3 nP to Rs. 4.03. 150 Italy were quoted at Rs. 3.69, as against Rs. 3.67 last week-end. Among indigenous yarns, National Rayons, 150 Bright Cones 1st grade was a fraction lower at Rs. 3.31, while 120 Bright Cones 1st Grade were slightly better at Rs. 3.72.

Staple fibre yarns (40x2) for April delivery receded by Rs. 4 to Rs. 608. June delivery lost Rs. 2 to Rs. 614. Spot 40x2 New Greats declined by 4 nP to Rs. 3.19. Citys were a shade lower at Rs. 3.22. Centurys were unchanged at Rs. 3.25. Kohinoors, on the other hand, were a shade better at Rs. 3.33. Among foreign yarns, (80x2) Fujis were dull at Rs. 5.31, while Paramounts put on 6 nP to Rs. 5.40.

In the cotton yarns section, ten counts Podars fell by 12 nP to Rs. 14.50. Moderns were unchanged at Rs. 14.87. Twenty counts Maduras declined by 13 nP to Rs. 19.12. Moderns shed 12 nP to Rs. 18.75. Gokaks decreased by 13 nP to Rs. 18.62. Thirty counts Indus were quiet at Rs. 21.75, as also Edwards at Rs. 21.50. Forty counts Minaxis were pushed down by Re. 1.13 to Rs. 27.12. Moderns changed hands at Rs. 27.75, same as last week. Sixty counts were neglected, Moderns being at Rs. 61.50, Raghuvamshis at Rs. 58.00 and Finlays at Rs. 61.00. Eighty counts were also neglected, Finlays being quoted at Rs. 81.50, Moderns at Rs. 76.00 and Mahendras at Rs. 73.00.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	30-4-1957	24-4-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Dull Cones Snia April	790.00	807.00
150 Bk. Cones April	625.00	625.00
120 Japan (per lb.)	4.12	4.09
150 Japan (per lb.)	4.09	4.09
120 Italy (per lb.)	4.03	4.00
150 Italy (per lb.)	3.69	3.67
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 April	608.00	612.00
40 x 2 June	614.00	616.00
40 x 2 New Great (per lb.)	3.19	3.23
40 x 2 Century (per lb.)	3.25	3.25
40 x 2 City (per lb.)	3.22	3.23
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.50	14.62
20s Maduras	19.12	19.25
30s Edward	21.50	21.50
40s Gokak	58.00	58.00
60s Raghuvamshi	76.00	76.00
80s Modern		

BLACK PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 30*th April*

Malabar black pepper ruled firm during the greater part of the week, in sympathy with New York where, spot having improved to $0.27½, some business for afloat and for shipment by named steamers was done at as high as $0.26½. The political situation in West Asia was also said to be a supporting factor.

Alleppey improved to Rs. 625, with sellers reserved. Garbled at Cochin were done at Rs. 107. May and June delivery were traded on the ring at as high as Rs. 111½. Calicut improved to Rs. 675.

When New York dealers found that Malabar sellers were quoting high, they diverted their attention to Singapore and bought some parcels of Lampong and Sarawak for nearby shipment at $0.26 and $0.25, respectively. This caused firmness in Singapore, despite poor inquiries from Europe where dealers were reported waiting for lower prices on improvement in the arrivals of new crop Sarawak.

At the close of the week, however, the market was a bit quiet, owing to pressure of sales by bears and profit-taking by bulls. Alleppey came down to Rs. 600, while garbled at Cochin was done at Rs. 105. Report of delay in the shipment of Russian purchases brought forth fresh selling by holders who were until now out of the market in the hope of better prices at the time of shipment to Russia.

The future of the market appears uncertain, in spite of the improved statistical position of Malabar, as trade, in general, is doubting the possibility of maintaining the present rate of export to the U.S.A. when once Sarawak begins pressing.

Today's nominal quotations are: Ready delivery Rs. 85 per Bengal maund; May Rs. 579-Rs. 584 and June Rs. 587-Rs. 592 per candy of 5¼ cwts.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 30*th April*

The oilseeds market suffered a moderate setback in prices during the week under review. Apprehensions of Government's intervention to check the rising trend in prices coupled with fears of the Reserve Bank of India restricting supply of credit induced unloading by bulls, particularly in the earlier sessions. Castorseeds were subjected to heavy selling by shippers, thanks to continued slackness in overseas enquiries for castor oil, and considerable profit-taking by several operators. Linseed remained dull, owing to lack of support from shippers in the wake of offerings by local trade. Cottonseeds ruled weak. There was large selling pressure let loose by the sharp fall in raw cotton prices. In sympathy with the general trend, the groundnut section presented an easy trend, as operators were generally hesitant to enter into fresh commitments, notwithstanding reports of scarcity in supplies of quality seeds. The general undertone of the market was distinctly easy.

Groundnut May contract commenced the week at Rs. 173.75 and declined to Rs. 170.00 on the 26th inst. After rising to Rs. 172.37 yesterday, it again receded to Rs. 170.25 today. Over the week, the contract thus lost Rs. 4.25. August contract opened at Rs. 178.87 and, after fluctuating between Rs. 175.50 and Rs. 178.50, finished at Rs. 176.62, the net loss over the week being Rs. 2.88. Spot Bold F.A.Q. was a shade lower at Rs. 34.62. Groundnut oil ex-mill was quoted at Rs. 19.37 as against Rs. 19.62.

Castorseed May contract commenced at Rs. 182.50 and after dipping to Rs. 177.25 on the 26th inst. recovered to Rs. 182.50, before finishing lower at Rs. 180.50. It thus shed Rs. 2.75. September contract receded from Rs. 188.75 to Rs. 182.75 on the 26th inst., but recovered to Rs. 187.00, today. Spot Madras was maintained at Rs. 36.00. Oil B.S.S. was lower by 12 nP at Rs. 22.00.

Opening the week at Rs. 31.12, linseed May fluctuated between Rs. 31.25 and Rs. 30.25 and closed at Rs. 30.31, representing a fall of 87 nP, as compared with last week-end. September contract moved between Rs. 32.25 and Rs. 31.69, before closing slightly higher at Rs. 31.75. Over the week, it thus declined by 56 nP. Bold Ready was done at Rs. 30.44, as against Rs. 31.00 last week. Linseed oil ready was lower by 25 nP at Rs. 16.75.

In the cottonseed futures section, May contract dropped by Rs. 3.25 to Rs. 111. September contract fell by Rs. 6.50 to Rs. 110.

Among others, kardiseed Bold ready was done at Rs. 22.00 as against Rs. 21.50 last week. Niger-seed Madras was higher by 25 nP at Rs. 28.25.

The following table shows the prices of oil-seeds and oils at close as compared with those at the close of the previous two weeks:

	30-4-1957	24-4-1957	16-4-1957
	Rs.	Rs.	Rs.
Groundnuts—			
May 1957	170.25	174.50	171.50
Khandesh Quality Ready (per cwt.)	35.00	35.37	35.00
June-July	35.06	35.37	..
Linseed—			
May 1957	30-31	31.12	30.62
Bold Ready (per cwt.)	30-44	31.00	29.62
June-July	31-06	31.69	..
Castorseeds—			
May 1957	180.50	183.25	180.75

Ready	16.75	17.00	16.87

CLEARANCE IN KIPS SLOW

(From Our Own Correspondent)

MADRAS, 29*th April*

Arrivals of E.I. tanned cow hides were moderate, and clearances slow. Shippers efforts to buy at lower prices were in vain and, consequently, were unable to fall in with U.K. levels for F.A.Q. marks. Importers were buying good marks at unchanged prices and also paid half a penny more. Demand for top class buff calf was patchy and 63*d.* to 64*d.* were paid. Tanned cow calf and buff heavies remained dull.

In the tanned skins section, demand for superfine tannages in goat skins was fair sized, but importers were trying to buy at lower prices. As tanners had sold for three to four months' shipments, they were not eager to take lower prices and were adopting a wait and see policy.

TEA PRICES LOWER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 25*th April*

Some 575,000 lbs. were on offer in Dust Sale 'I' which was held on Tuesday, 23rd April. The sale opened to a fair general demand, although prices were generally below last. Commonest kinds and low mediums were irregularly 10 to 15 nP easier, although a few selected types met with some competition. Coloury mediums stored in Kozhikode met a strong demand and advanced by 5 to 10 nP. High-grown teas were often neglected and prices were 20 to 25 nP lower.

The average price realised in Dust Sale 'I' was Rs. 1.76 per lb., as against Rs. 1.86 per lb. in the previous sale and Rs. 1.71 per lb., in the corresponding sale of 1956.

London Market.—No sales due to holidays.

Colombo Market.—No sale this week.

Calcutta Market—Export.—No sale this week.

Internal.—19,000 dust. Good general demand for all types. Strongest features Middle East non-wither dooars and Powdery C.T.C. types. Market opened easier, but strengthened as sale progressed. 4,500 leaf. Good general demand for all types generally 10 to 20 nP dearer.

Export quota.—There has been a stronger enquiry and the following quotations can be made:

Special rights 20 to 22 nP. Shipping License 17 to 18 nP 1957-58 export quota 26 to 28 nP.

Forthcoming Auctions.—Dust Sale 'J' will be held on Tuesday, 7th May.

TEA DUSTS GAIN

(From Our Own Correspondent)

CALCUTTA, 30*th April*

The view often expressed in these columns that there was considerable scope for expansion in internal consumption is amply borne out by the decidedly better demand noted in the tea sales for domestic consumption held last week. This was not, however, fully reflected in prices, due to reports that there was still a considerable quantity of common teas that remained to be marketed.

Dusts on offer amounted to 18,937 chests. When the sales opened, prices were easier by 10 nP. However, with the progress of the auctions, demand improved and towards the close, prices recorded gains. Black leaf teas were the strongest feature, and contributed a fair share for the improvement of the general conditions as the sales progressed. Offers for non-withery Dooars, residue kinds, and powdery C.T.C. Assams were readily absorbed. The market was not devoid of a weak spot which was amply provided by the best C.T.C. Assams which met with poor support.

The quotations were: Medium Assam C.T.C. Re. 1.70 to Re. 1.80, medium Assam grainy dust Re. 1.70, medium Dooars Re. 1.60 to Re. 1.65. Best Assam C.T.C. dusts were not quoted.

Leaf grades on offer aggregated 4,429 chests. Prices improved, following a keen general demand for all descriptions The strongest features were broken orange pekoes and clean well-made whole leaf grades.

TIN HARDENS

(From Our Own Correspondent)

CALCUTTA, 30*th April*

The feature of the metal market during the week under review was the uptrend in tin. Copper ruled easy, but other base metals were steady at around previous levels.

Stockists of tin noted with cheer the high advices from foreign markets. Both in London and New York, demand was running at a higher level, as consumers desired to build up stocks. Reports from London also indicated that there had been buying for the buffer pool, created under the International Tin Agreement. This together with the good consumer demand, accounted for the rise in price in London by £5 per ton. In the local market, the price gained from Rs. 514 to Rs. 517. However, at the higher level, the quotation was seven points below the replacement cost. Although the price gained, consumers were the least perturbed, and purchased only their minimum needs. For they believed that, with fair stocks with local stockists, the price was bound to move down. Electrolytic copper declined from Rs. 182 to Rs. 178. The decline was attributed to weakness in London and New York for the settlement of strike in a big Chilean mine. Fire-refined copper ingots gave way from Rs. 182 to Rs. 177. There was more demand for scrap and price of utensils scrap, at Rs. 175, showed a gain of Rs. 2. Virgin lead was unchanged at Rs. 80. Demand was running high as Government enquiries for sizable tonnages were current. Electrolytic zinc, at Rs. 78, was fully steady. Ready supplies were difficult to be obtained.

JUTE GOODS MOVE UP

(From Our Own Correspondent)

CALCUTTA, 30*th April*

With more enquiries for export and larger volume of business, prices of jute goods improved during the week under review. Another reason was the uptrend in raw jute prices, following the continuance of bad weather for the jute crop. For completion of sowing, rains are badly required, and although the meteorological office has been almost daily forecasting storms accompanied by showers, the week under review was as dry and hot as the previous week. However, prospects for rain in the next few days were considered fair. If rains occur in the near future, chances of a higher crop would become bright. If so, the uptrend in raw jute prices cannot persist. At any rate, sowings have been delayed in many parts of the jute-growing districts for lack of rain, and it is expected that the crop would begin reaching the markets a month later than usual. This would mean that mills would have to carry on with their stocks of raw jute as well as those in the bazaar. However, it is believed that fair stocks are still available in the bazaar, albeit the fall in imports from Pakistan. Indian purchases of Pakistani jute during the month of March were as low as 6,000 bales.

If rains fall within the next two weeks, many in the market believe that prices of both the raw material and the finished products would tumble down. Lack of rains was also responsible for the uptrend in raw jute prices in the East Pakistani markets. Total exports of raw jute from Pakistan during the current season are expected to reach 4 million bales. At the end of March, exports aggregated 3.6 million bales, after adding the March shipment of 300,000 bales. In view of the expectation in East Pakistan that there would be a fair carryover, prices should begin moving down when it rains. Forward business in the new crop has been forthcoming with difficulty, in view of the price uncertainty. The United States and France were believed to be requiring fair quantities before June. Apart from the uptrend in raw jute prices during the week, prospects for increased business in jute goods with overseas buyers seemed to have improved. Cuba and Australia were in need of sacking, as could be made out from the keener enquiries from those two countries. In view of India's imports of cotton, India's trade balance with the Sudan is on the adverse side. Following the recent visit of the Sudanese trade delegation, it was expected that the Sudan would purchase from India a larger quantity of jute goods during this year. Burma showed interest in heavy cees.

That jute mills are going through a difficult period is clearly indicated in the working results of mills, many of which have been unable to declare a dividend. This state of affairs is due to the continuance of higher prices for raw jute, in the face of the need to lower prices of jute goods in order that the latter may be pushed through in the highly competitive foreign markets. The increased labour costs and the continuance of demand for still higher wages in the face of low *per capita* output are also causes for headaches to the managements of mills. The heavy losses by mills on account of the above factors account for the recent closures. Three mills have already closed down, and the Standard Jute Mill is to close down as from the 4th May. These closures have naturally caused anxiety to the West Bengal Government. The jute industry provides direct employment to 260,000 people. Naturally, the Government is endeavouring to look into the causes for these closures, and find a solution. The price of raw material has to come down if the jute industry is again to be placed on a sound footing. In view of this, it would serve a useful purpose if a full investigation is made to determine what would be a fair price for raw jute. If, however, raw jute prices have to be maintained at the present high levels and further closures of mills are at the same time to be prevented, an official subsidy to mills based on consumption of each mill is the only alternative. These and other closures in the country, it was realised, led New Delhi to promulgate the retrenchment compensation Ordinance on Saturday last.

The market opened during the week with ready B. twills being steady at Rs. 111.87 and hessian 40" 10 oz. at Rs. 41.62. At these levels, buying support was in evidence, and on Wednesday last these quotations were maintained. Mills sold a fair quantity. Speculators showed particular interest in hessian, but B. twills fell back to Rs. 111.62 on Thursday. However, by the week-end, better conditions prevailed and more business was done. This followed the gain in prices of raw jute. Fair business was put through for forward deliveries. By Saturday, ready B. twills had risen to Rs. 112.50 and 40" 10 oz. hessian to Rs. 41.81. Yesterday, further addition to prices was recorded. Ready B. twills rose to Rs. 113.25 and the 10 oz. hessian to Rs. 42.00 and 8 oz. fully steady at Rs. 34.12.

Raw jute prices gained by 50 nP to Re. 1.50 for most varieties for reasons already discussed. The latest quotations for the 1956-57 crop for April-May delivery are given below:

	Middles Rs.	*Bottoms.* Rs.

The question of excluding pending contracts from imports of West German industrial equipment into India from the application of India's deferred payments scheme was discussed during the recent trade talks between the two countries held in India, but no final solution has been found, according to a statement made by the leader of the German trade delegation Dr. Von Bargen, at Bonn on his return from India. Despite the German exporters' protests, India still wishes, he says, to apply the new scheme to pending contracts which were concluded before the new regulations became effective. But India has promised that it will settle such cases generously. The talks at New Delhi did not touch on the question of West German credits to India. But Indian industrialists and exporters have been invited to Germany to study sales prospects for Indian goods on the West German market.

INDIAN ALUMINIUM COMPANY, LTD.

(*Concluded from page* 892)

and savings must be achieved and steps taken for increasing and conserving foreign exchange earnings in order not to allow to an accentuation of inflationary pressures.' Higher production per man hour and increased stimulus to saving habits are the two vital defences which must be reared and strengthened on all fronts.

The Middle Line

"India is at the crossroads of destiny after a decade of political freedom. The pace and the velocity has quickened. There is a revolution in the air of rising expectations, if we are to survive as a nation of decent human beings. It ill befits the experience and the wisdom of the business groups to indulge in cheese-paring polemics about the Plan or diminish the high endeavour required for democratically reaching our objectives of a progressive and a happier society. Foreign observers have pointed out that 'Indian business carries on its shoulders a deep sense of sin and it seeks redemption either by finding the shelter of Government doing exactly what it is told' or exhibiting a posture of dialectical defiance under the convenient label of free enterprise. Surely, there is a middle line both for business people and for the planners: there is enough acumen and independence of judgment in the country to present a rational, sober and constructive viewpoint along the line of co-operative endeavour to assist Government in formulating measures both in the fiscal and monetary spheres. A community of responsibility for the Plan is obviously more desirable than obiter dicts from authority or a *non possumus* from private business. The Finance Minister has dedicated himself for his next tenure of office to think only of the category of people in the lower income groups and their welfare—a simple dedication worthy of his high office and in line with the dynamics of the situation. Should it not also be the endeavour of all, as well as the decisive criteria for every legislative measure, that this category of people eat more, use more cloth and are better housed?

"Selective Expansion"

"One should not hesitate in borrowing from overseas experience and, with temerity, I suggest the policy of 'selective expansion,' recently advocated for Britain by the London *Economist*, and defined as 'the pursuit of maximum pace of expansion and willingness to let the lower income groups have the lion's share of the resulting increase in national income; instead of taking away from one to give another, it puts a lien on progress in favour of those who need it most."

"The pace and the characteristic of expansion will be determined at every step by the sufficiency of managerial and administrative talent in the country, but the governing factor and the most imperative task above all, in my opinion, should be to maintain the respectability of the rupee both domestic and abroad—the sheet-anchor of stability and growth.

"In conclusion, I should like to express on your behalf and mine, our appreciation of the services rendered by the staff and the workers of the Company in making possible the achievements of the past year and giving promise of better results for the future."

STOCK & SHARE QUOTATIONS

Abbreviations :—D.= Deferred shares. P.O.= Preferred Ordinary shares. Y= Accounts published yearly. H.= Accounts published half-yearly. P.= Company has Preference shares. T.= Company has Debentures. N.= Nominal quotations. x.d.= Ex. Dividend. c.d.= Cum. Dividend. i= Interim Dividend. f= Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCIV. No. 2409 BOMBAY, 11th MAY 1957 PRICE: Re. 1.50

PLANNING FOR PRODUCTIVITY

A SUBJECT which has attracted considerable attention in the last two or three years is productivity in industries. Two factors have been responsible for the new interest in the subject. In the first place, there is a whole series of developments which might be comprehensively termed "automation." This has greatly increased industrial productivity in several countries. In a competitive world, it is scarcely possible that one country can afford to lag very much behind another in the adoption of modern devices of production. Secondly, there is the "nuclear" development, the utilisation of atomic power. Taken together, these two developments have been rightly hailed as a "second industrial revolution," with immense possibilities of increase in the range and quality of industrial output. It is now generally recognised that those who choose to fight these developments are waging a losing battle.

India too, on its part, cannot afford to cut adrift from the world currents, despite all the pious resolutions of the advocates of antediluvian equipment in our industries. Productivity in our industries has necessarily to be stepped up. An initial handicap, not only in India but elsewhere, is the opposition of labour to all modern ideas of productivity. The workers are somewhat suspicious of what for many years remained a hazy concept which carried the threat of exploitation. Further, productivity, in ordinary parlance, has become synonymous with man-hour output. The workers, therefore, feel that productivity means only higher work-loads for them. This explains their negative attitude towards modern means of production. The first thing to do is obviously to convince the workers that productivity does not necessarily mean higher work-load. They must be told that it essentially implies maximum utilisation of all factors of production. Although man-hour output may be a convenient index for measuring productivity, the concept of productivity itself is certainly very much wider than what is indicated by man-hour output. Productivity, according to a formal definition, represents the ratio of goods produced to the total resources required to produce it. Surely, this definition does not emphasise only man-hour output, inasmuch as labour is only one of the resources employed in producing goods. Any increase in productivity is obviously the result of improved utilisation of all resources, including manpower, equipment and raw materials. It is only when the problem of increase in productivity is tackled in this comprehensive and many-sided manner that any real increase in output can be hoped for.

The implementation of industrial programmes in the second Five-year Plan obviously calls for a large increase in productivity. This will ensure economical utilisation of the resources employed during the period of the Plan. An important effect of increased productivity in India, as in other countries, is bound to be higher output, reduction in physical effort, better wages and better working conditions. The ground for productivity studies in this country has been cleared, though necessarily to a small extent, by the commendable work of the I.L.O. team which visited India about four years ago. It may be recalled that the team split itself into two groups, one working in the textile mills in Bombay and Ahmedabad and another in certain engineering units in Calcutta. The work of these teams brought to light one very important result. It demonstrated to the management, as well as trade union leaders, that, given adequate supervision, it is possible to secure a significant improvement in productivity, with the same plant and equipment even after comparatively short and complete training in productivity techniques. The increase in output in the engineering industry ranged from 17 per cent. in some sections to 116 per cent. in others. In the textile industry, the increase varied from 6 per cent. in certain jobs to 36 per cent. in other jobs. The record of the team brought out the fact that work-study techniques could be applied in India with marked success in raising output, and that they could also improve industrial relations, though this result was dependent on human and sympathetic approach by work-study men and supervisors.

The latest attempt at spotlighting the importance of productivity is the one that has been made by the report of the delegation of officials and non-officials (leader: Dr. Vikram A. Sarabhai) which visited Japan last October. The report emphasises that, in a rapidly developing economy, the increase in productivity could be a powerful element of national policy designed to increase national wealth and raise living standards without creating unemployment; the report warns that productivity should not be confused with rationalisation and retrenchment of surplus labour. Accordingly, it has suggested the creation of a national productivity council which will launch an effective national movement for increase in productivity in India. Such a council, according to the report, should be an autonomous organisation at the Centre. It should create productivity-consciousness all over the country. It should stimulate the establishment of local productivity councils in different centres. It has been suggested that the council should be representative of employers, labour, Government, technicians in industry, scholars, research workers and professional consultants. It is further suggested that, before the council is set up, the Government of India should convene a seminar representing the various sections which will be interested in the increase of productivity. This seminar, it is stated, should determine the principles which should govern the movement in order to ensure the full co-operation of various elements.

The report has stressed the great interest in productivity that is evinced in Japan. It, however, points out that the productivity of Japanese industries is substantially low as compared with other Western countries; it is one-fifth of the American level, one-third of the British and two-fifths of the level in West Germany. Indeed, it is the recognition of this comparatively low level of productivity in Japan that has induced the authorities in that country to launch a country-wide movement for the increase in productivity, with the help of the National Government and on the initiative of four important national economic organisations, namely, the Federation of Economic Organisations, the Japan Federation of Employers' Associations, the Japan Chamber of Commerce and Industry and the Japan Management Association. The move was made in 1953 to create an organisation for propagating the productivity concept and techniques. Two years thereafter, that is, in March 1955, the Japanese Productivity Centre (J.P.C.) was established. Progressive industrialists in various regions of the country took the initiative in establishing regional productivity centres.

It is interesting to note that, in Japan, the co-operation of the workers in the productivity movement was initially secured through agreement that the profits of any increase in productivity would be jointly shared by capital, labour and consumers. The sponsors also stressed that the movement should not be confused with mere efficiency drive and that redundancy of labour must be avoided through the joint efforts of the Government and the industries concerned. Finance for the movement, it is stated, was provided partly by the National Government and the Technical Assistance Programme of the United States and partly from membership fees from industries. The J.P.C. and regional centres are governed by the boards, on which there are representatives of employers, labour and scholars. Productivity organisations stimulate and encourage the exchange of technical information in international as well as domestic fields. The J.P.C., according to the report, has sent a number of teams of industrialists, labour and technicians for the study of the techniques of productivity increase in the U.S. Productivity consultants and specialists have been secured from abroad for organising training coarses and seminars.

The report points out that productivity techniques include the following:

"(1) writing down the requirements of each of the jobs and the attributes necessary for the person performing them; (2) the selection of the right man for the right job; (3) carefully determining better, easier, safer, and faster ways to do the job; (4) training the man to do the job in the proper way; (5) seeing to it that the work can be performed in a pleasant atmosphere, healthy surroundings and with a maximum of job satisfaction; (6) organising the work, so that there are minimum of interruptions and wasted motions; (7) designing the product, so that a minimum of material is required; (8) looking for materials that are just as good but less expensive; (9) finding possible causes of material loss and eliminating or controlling them; (10) finding better ways to use the machines available and caring for them, so that more production and longer life can be obtained from them; (11) obtaining machinery when required for an overall increase of productivity of the various resources, and (12) giving the working

proper incentive to apply himself diligently to his work and to find out and adopt better and easier ways of doing it."

We commend the delegation's suggestion for setting up a national productivity council in India. Such a council, if properly manned and organised, could give great impetus to industrial productivity. It must, however, be reiterated that any increase in productivity implies a simultaneous work in many spheres, including training of workers, quality control and industrial research. The delegation has done well to throw some light on the work that is being done in Japan in these spheres of economic activity. Thus, in Japan, great emphasis is laid on vocational training. Facilities for apprenticeship training are available in both large-scale and small-scale units. In 1954, over 28,000 establishments conducted apprenticeship programmes with 65,000 apprentices. Out of these, 87.4 per cent. was employed in small-scale units, each employing less than 10 workers. This is obviously indicative of the value attached to systematic apprentice training even by small-scale industries. Small-scale units which found it difficult to give apprenticeship training individually have organised co-operative apprenticeship training programmes. The Government itself attaches much importance to apprenticeship training of all kinds, considering that it regulates such training by statute in order to prevent exploitation of apprentices.

The delegation found that Japanese industries are "very quality-conscious" and strive to maintain and enhance the quality of their products. Representatives of various sections within a plant are associated in functional committees which deal with production policy. In the plant, there is generally a production control section which is part of the technical control department. All production is planned at least three to six months ahead in every detail, and in some industries, such as machinery, iron and steel and shipbuilding, for a much longer period. Further, quality control is administered through a systematic inspection of raw and finished materials and processed goods at every stage of manufacture. In the task of improving the quality of output as well as in the wider field of general industrial progress, the national laboratories and forty-seven laboratories maintained by the Prefectures play an important role by undertaking extensive research programmes.

In applying to India industrial practices in Japan, or any other highly industrialised country, there is one great obstacle which must first be overcome. So long as the Government's industrial policy is not genuinely productivity-conscious but is vitiated by an anti-machine philosophy, it will be difficult to work for higher levels of productivity. Unless this philosophy is abandoned—if it cannot be done abruptly, it should be done at least as rapidly as possible—there can be no real progress in industrialisation, much less, in the application of the more recent trends in industrial practices. It is a pity that so few realise that the alternative to marching in step with other nations is industrial stagnation of a kind that will leave the Indian economy in a sad state of disrepair.

COMPULSORY DEPOSITS

AMONG the fiscal measures which have been adopted recently, none has created greater confusion among companies than the compulsory deposits scheme. The scheme, as is well known, lays down that every joint stock company is under obligation—on pain of forfeiture of its claim to depreciation and development rebate—to deposit with the Government (1) up to 25 per cent. of its accumulated depreciation and other reserves "not represented by fixed assets" and (2) up to 75 per cent. of the balance, in excess of Rs. 1 lakh, of its annual profits before deducting depreciation, but after deducting tax and dividends. Although the scheme which formed part of the Finance No. 3 Bill 1956 came into force nearly four months ago, it was only last month that the Government was able to publish the draft rules relating to it. This delay itself indicates that the Government had not clearly formulated the scheme before taking Parliamentary sanction for it.

The scheme raises certain fundamental issues such as the constitutional propriety of arming the Government with powers to direct the disposition of the reserves of companies. It is also doubtful whether it is in the interests of corporate finance that the authorities should possess such powers. The whole scheme is certainly fraught with serious consequences to the future of the joint-stock economy in this country. From this point of view, the least that the Government should have done was to allow a reasonably long period for the public to study the rules and offer its criticism thereon. But the Government had announced that it must receive comments on the rules before the end of April 1957, though the rules themselves were published only on 15th April 1957. One wonders whether it is even now too late for the Government to extend the time limit, in view of the importance of the scheme to the many enterprises that are bound to be affected by it.

Since the scheme was announced in Parliament, the Government has effected certain modifications in it. Thus, the draft rules relate only to the current profits of the companies and not to their accumulated reserves. It is not known whether it is the Government's intention not to implement that part of the scheme which relates to such reserves. If that is the intention, the Government should declare it in unambiguous terms. A welcome feature is that banks, insurance companies and electricity undertakings have been exempted from the deposit scheme. It is, however, not clear why a special status has been claimed for enterprises in which the Central and the State Governments are shareholders to the extent of 40 per cent. of the share capital and for companies incorporated under special Act of Parliament; these enterprises have been exempted. Be that as it may, another welcome feature is that the deposit to be made out of the current profits has been fixed at 50 per cent. of the amount by which the statutory surplus exceeds Rs. 1 lakh, as against the maximum of 75 per cent. prescribed under the Act.

In view of the fact that the scheme is bound to create many practical financial difficulties for companies, it is certainly desirable that the list of exempted enterprises should be suitably extended. It has been rightly suggested that the non-profit-making organisations, as also new industrial undertakings (under section 15C of the Indian Income-tax Act) and industries of national importance (such as those that are included under section 56A of the Act), should be exempted from the operation of the scheme. There is also a strong case for exempting companies the assessable income of which is either *nil* or minus. As Mr. G. P. Kapadia, to whose note on the subject we drew the attention of our readers last week, points out, in the case of companies, the assessable income of which is *nil* or minus, the addition of the depreciation amount or depreciation arrears would create a notional surplus; such companies, though they would be entitled to total exemption and be free of the charge of income-tax and super-tax, would be caught within the scheme. He adds: "The scheme of deposits envisages cases where a company as such definitely reaps the advantage of the depreciation amount and the development rebate and it is able to save as a matter of fact tax in respect of those amounts for a particular year and it is this saving that is intended to be deposited. With a *nil* result or a minus result, the advantage in the form of tax saving can be reaped only when there are surplus profits after fully providing for the depreciation and/or the arrears of depreciation, and therefore, such companies should not be brought within the purview of the deposit scheme and should be left out of consideration." Indeed, we feel that, if the scheme is to be successfully implemented, it will be better for the Government to exempt, in the first place, as large a sector of the economy as possible, to study the working of the scheme and then to find out whether the list should be enlarged or further abridged.

Just as important as the need for enlarging the list of exempted enterprises is the need for a liberal interpretation of the purposes for which the exemptions and refunds of deposits may be claimed. Under the draft rules, an "approved purpose" means any purpose which involves the utilisation of the resources of the company for (1) capital expenditure for the construction, erection or acquisition, by way of replacement or otherwise, of buildings, plant, machinery and other fixed assets required for the purpose of the existing business of the company; (2) repayment of moneys borrowed by the company on the security of its fixed assets for the purpose of carrying on such business; and (3) includes any other purpose the application of the financial resources of a company on which, in the opinion of the Commissioner of Income-tax or Board of Referees, having regard to the nature of the company's business (and such other circumstances as he or the Board of Referees may consider relevant), justified.

It is necessary to include in the list of approved purposes amounts utilised in building up stocks and stores and advances for trade purposes made by the company concerned. It is well known that, in some industries—in the sugar industry, for instance—stocks pile up as a result of Government's control and administrative policies. It would be great hardship if the companies were forced into a position of having to build up large stocks which, in its turn, would compel them to go to banks for their working capital and were also deprived of the facility of including the stocks under "approved purposes." The case is also strong for including in "approved purposes" capital expenditure incurred for the purpose of expansion of existing business, working capital for maintenance and development of business and loans of any kind. The companies which intend to utilise their resources in furtherance of the industrial programmes, included under the second Five-year Plan, deserve sympathetic consideration; in such cases, the expenditure which has already been incurred or is proposed to be incurred should come within the purview of "approved purposes" under the scheme.

As regards interest payable by the Government on amounts deposited by the companies, the draft rules provide that the deposits will carry simple interest at a rate which will be notified by the Central Government for each financial year. It is further provided that the interest will be computed on the basis of daily balances and paid on 31st March and 30th September each year. There is no justification for subjecting the rate of interest to annual enactments. It would appear that the Federation of Indian Chambers of Commerce and Industry has suggested that the interest should be not less than one per cent. above the Bank rate. There can be no insuperable difficulty in implementing a suggestion for linking the rate with the Bank rate. Further, there is a special reason why the deposits should carry a reasonable, if not an attractive, rate of interest. Some of the companies may, in actual practice, be compelled to borrow from banks in order to make the necessary deposits. They would then have to pay a rate of interest that would be considerably higher than the Bank rate. It would certainly mean some relief, welcome as well as deserved, if the rate of interest were fixed at a reasonable level.

Above all, the success of the scheme depends upon its efficient administration. The scheme calls for ability to take quick decisions, knowledge of the working of different types of industrial enterprises and imaginative grasp of their problems. It is to be hoped that those who are entrusted with the task of administering the scheme will have these qualities. The draft rules provide for the appointment of a Board of Referees which will work under the "general control" of the Central Government. It is further provided that, on matters relating to representations made by companies, the decision of the Board shall be final. In view of the fact that the powers conferred on the Board are large, there is certainly considerable force in the Federation's suggestion that the Board should be constituted as an independent body, free from control by the Central Government, on the lines of the Income-tax Appellate Tribunal. The acceptance of this suggestion would infuse greater confidence among aggrieved companies and make them feel that their representation will receive the consideration it deserves.

Although the implementation of the suggestions, made above, may make the scheme both more workable and more acceptable, there is no doubt that the Government will do well to consider whether the interests of the country will not be better served by a total withdrawal of the scheme. Apart from the serious difficulties which it will cause both to the tax-collector and the taxpayer, the scheme is bound to have an inhibiting effect on the flow of foreign investments into this country. Foreign investors are not likely to be attracted to a country where not only will their current income be taxed but also the reserves they may accumulate will be at the mercy of the tax authorities. The scheme is, in fact, bound to prove to be the greatest impediment to the inflow of foreign capital to India, and that, at a time when the country urgently needs foreign capital to bridge the yawning gap in the foreign exchange necessary for the success of the programmes included in the second Five-year Plan.

SOME THOUGHTS ON COMING BUDGET

U.K.'S MONETARY POLICY—COTTON HEDGE CONTRACT—PAPER INDUSTRY

THURSDAY, 5 P.M.

THE pattern of stock exchanges in the coming weeks and months will depend primarily upon the Central Budget scheduled to be presented to Parliament on Wednesday the 15th inst. There is a feeling of mild optimism in certain influential quarters that the Budget will not be so bad for investors as many seem to apprehend. This optimism is based on two grounds. First, the Government is already worried over the continued depression of stock markets and the virtual absence of new industrial flotations of any worthwhile size. Secondly, the Government is fully aware of the difficulties that are being experienced by well-established companies like the Tata Steel, the A.C.C. and the Alkali Chemical to raise additional capital for financing their expansion schemes which form an integral part of the second Plan. It may not, therefore, take any steps which would worsen the position of capital markets still further. It is this optimism which is mainly responsible for the steadiness of share markets in recent days. There would be a severe fall in share values if the Budget failed to be in line with this expectation.

MARKET GOSSIP

The general public, by which is meant the vast majority of operators, however, is full of apprehensions. It shares the common belief that fresh taxation of the order of Rs. 30 to Rs. 40 crores is quite likely, in addition to the widely anticipated stiff increase in railway freight rates. The Railway Budget is due to be presented, as readers are aware, on Tuesday the 14th inst. Considering the large resources required for financing the Plan, so argues the concerned section of the general public, the Finance Minister cannot but help imposing fresh tax burdens on corporations and individuals alike. Having been bitten several times in the past, it is reluctant to believe that T.T.K. will let the investors off lightly.

The cat will be out of the bag in six days from now. This journal has no desire to indulge in any Budget speculations. It is the responsibility of the Finance Minister to ensure the secrecy of his new proposals and the privilege of Parliament to be the first to hear them. It is, therefore, better to refrain from intruding, even indirectly into their sphere of rights and responsibilities. But one has every right to say what ought to be the Budget.

* * * *

The requirements of the second Plan will naturally dominate the Budget. But the Plan has been cast on ambitious lines. At one time, there might have been some justification—though we saw none at any time—for the debate whether or not the Plan was overambitious. It must, however, be apparent now to all those who have an open mind that there is no need for such a debate, and that the Plan is clearly beyond the capacity of the country. The Finance Minister, if he is wise, will bear in mind this fundamental point while framing his Budget proposals. It may be that political expediency will not permit him to admit the truth in public. There is, however, nothing to prevent him from quietly doing things that will not break the camel's back. In any case, the execution of the Plan has already been slowed down at several points, as witness the restrictions on imports of a number of essential items, the continued stringency of the money market and the suspension of quite a few projects. The main stumbling blocks to the progress of the Plan are the much discussed shortage of foreign exchange resources and the not-so-well-known scarcity of real resources within the country itself.

Today, there is no slack in the country which can take the enormous developmental expenditure of nearly Rs. 1,000 crores envisaged in the Plan for 1957-58. Despite the introduction of new taxation and regulatory measures five months ago, the price line has continued to edge forward. The index number of wholesale prices stood at 421 by the middle of last month and it must be higher still now. In any case, the mid-April figure itself is 34 points above the level a year before. If the food group alone is taken, one finds that the rise over the year is nearly 47 points; in this group, cereals show a rise of as many as 81 points. These data are sufficient to show that even now people are paying through their nose for their food.

The prospects for the near future in respect of food are none too bright. If anything, they seem to be disturbing. From the statements of Ministers in charge of food, made early this week, it is clear that the food position is not comfortable, that the country's dependence on imports of foodgrains has definitely tended to exceed the earlier expectations and that the Government will not hesitate to buy as much foreign grains as possible in order to cover the deficit and build up minimum reserve stocks. This means an additional drain on the foreign exchange reserves and that at a time when they have dropped to a precariously low level.

* * * *

The country is running into a scarcity of other resources as well. Raw cotton is an instance. Consumers of cotton are now stressing that arrangements should be made to import more foreign cotton. There are then shortages of steel, tin plate, non-ferrous metals, cement and transport equipment The magnitude of these shortages is bigger than had been anticipated. Early this year, for instance, it was felt that sufficient steel had been stockpiled to carry the country through this year. But it now seems that this calculation is not correct, as witness the move to freeze stocks of steel with the dealers.

The scarcity of savings and capital is too well known to need reiteration. The short-term money market is still suffering from acute stringency, though the currency in circulation has reached the record total of Rs. 1,577 crores, as against Rs. 1,519 crores this time last year. The Scheduled banks' advances stand at the high level of Rs. 908 crores which constitute 74.4 per cent. of their deposits aggregating Rs. 1,221 crores (Rs. 1,063 crores a year before). It may be interesting to note here that, a year ago, the banks' advances stood at Rs. 753 crores or 70.8 per cent. of their deposits. Yet business men complain of lack of working capital. And we all know that the complaint is genuine.

As for the long-term capital market, there can be no better proof of the inadequate supply of resources than the arrears of call pertaining to the new issues of T.I.S.Co. and the A.C.C. to mention only two instances. Further proof of it is provided by the heavy discount at which even first class preference shares are quoted.

Even on a money supply of about Rs. 2,400 crores, the price levels have reached a stage which cannot but be regarded as disturbing. To mount a developmental expenditure of Rs. 900 crores to Rs. 1,000 crores on this inflated base would be to invite grave risks to the internal and external value of the rupee. This is particularly so for two reasons. In the first place, only a small part of the planned developmental expenditure is towards increased production of consumer goods, so that there is the danger of too much money chasing too few goods. Secondly, there is hardly any room for increasing the supply of goods through imports of either finished goods or raw materials or both. As already stated, the country's foreign exchange resources are very low. Despite the addition of Rs. 60.69 crores being a part of the credit given by the International Monetary Fund, India's foreign assets as on the 3rd inst. were only Rs. 496.42 crores, that is, a net overall decline of Rs. 70.63 crores since 1st February 1957 when the I.M.F. gave the credit line. This leaves us a margin of only Rs. 96.42 crores for the future, assuming that Rs. 400 crores are necessary as the irreducible minimum reserve, without which the confidence of the outside world in the rupee will be impaired. This margin is sufficient to cover the country's needs for barely four months. It is pertinent to point out, in this connection, that India's export trade usually slackens during the monsoon months which are ahead by only four weeks, so that the chances of large additions to our sterling balances through exports in the coming months are slender.

It is true that the Government of India is trying its level best to augment the foreign exchange reserve position by securing credits from the World Bank, the U.S., the U.K. and other countries. One of its officials is abroad now to explore ways and means of securing quick results in this direction. He is on a difficult mission, for neither the economic policy nor the foreign policy of the Government of India is conducive to securing such results from the Western world. There is no dearth of goodwill for India in Western countries, especially in the U.K. and the U.S. But what stand in the way of this goodwill yielding concrete results are the growing leftist tendencies in the ruling party and its increasing affinity with the communist and the pro-communist world. The talk in high places of leaving the Commonwealth has adversely affected the chances of getting credits and capital from the Western world.

To sum up. The economic position and prospects on the eve of the Budget are not encouraging, to say the least. There are shortages of food and raw materials, with very little chances of their disappearance in the near future. The foreign exchange position is critical and the climate for securing credits to bridge the gap is not favourable. Price levels have reached uncomfortably high peaks and the chances of their coming down are remote. The internal capital markets are fast drying up, owing to confiscatory levels of taxation, and those who have savings have been scared away by the political and economic policies of the party in power.

In framing his Budget proposals and announcing the policies of the Government, the Finance Minister should take all the foregoing factors into consideration and try to remedy the situation. He should try to restore the confidence of investors and boost production by giving judicious reliefs in taxation and by respecting the sanctity of private property. He should be bold enough to face the realities of the situation and refrain from pitching the Plan targets too high. He would do well to recognise that excessive taxation kills incentive, discourages production and thereby aids the inflationary pressure. Finally, he should realise that, if he presses too far with the implementation of the overambitious second Plan in the present state of affairs, the external and the internal value of the rupee will be gravely jeopardised. Politically, the consequences of such a development will be far more serious than a straightforward readjustment of the Plan to the available resources.

* * * *

The U.K. Government has announced the appointment of a committee under the chairmanship of Lord Radcliffe to inquire into the working of the monetary and credit system. The other members of the Committee are: Professor A. K. Cairncross, Professor of Applied Economics in Glasgow University, Sir Oliver Franks, Chairman of Lloyds Bank, Viscount Hall, Managing Director of Morgan Grenfell, Mr. W. E. Jones, President of the National Union of Mineworkers, Professor R. S. Sayers, Professor of Economics, London University, Sir Reginald Verdon Smith, Chairman of Bristol Aeroplane Company, Mr. George Woodcock, Assistant General Secretary, T.U.C., and Sir John Woods, Director of English Electric. Clearly, the composition of the Committee indicates that the Government is anxious to have the monetary policy examined by a body representative of all interests. The appointment of the Committee, it may be recalled, was indicated by Mr. Peter Thorneycroft, Chancellor of the Exchequer, in the course of his Budget speech. He then said that a committee would be set up with terms of reference "to inquire into the working of the monetary and credit system and to make recommendations." This inquiry would be primarily directed to reviewing the working of the system in the conditions of today, taking particularly into account the great influence now exerted upon it by the public finances and the need to maintain a high level of savings and investment. The Committee, Mr. Thorneycroft added, would be concerned with the achievement of the best possible system of money and credit while observing to the full the international obligations in the matter of exchange rate and other matters which the Government had assumed and had every determination to honour.

It may be remembered that the last occasion when the U.K.'s monetary system was the subject of inquiry was in 1931 when the Macmillan Committee examined the system and issued a report which is generally regarded as a classic on the subject. Many changes have taken place in the U.K., as in the rest of the world, since that report was written. For one thing, Britain, again along with many other countries, then faced the problem of pumping more credit into the economic system. The problem is radically different now, for it is essentially one of restricting credit fighting inflation. Secondly, public debt has greatly increased during the last few years, so that its management is a more difficult problem than in pre-war years. It is for these reasons that, in the past year or two, the suggestion has been frequently made from several quarters for the appointment of a committee of inquiry. The Committee, the formation of which has now been announced, is a sequel to these suggestions and an indication of the realisation on the part of the authorities that the range of issues relating to monetary and credit policy deserves re-examination by an expert committee. The outcome of the Committee's labours will naturally be awaited with interest, not only in Britain but in the rest of the world, for nearly all countries face economic and monetary problems which are not different from those which Britain faces today. In India itself, the suggestion for a full-fledged examination of the credit and monetary policies has been made in certain quarters. Obviously, the suggestion has not commended itself to the authorities. But in the past, there have been instances of the Government appointing a committee in India soon after a similar committee has completed its work in the U.K.; the Company Law Reforms Committee is a case in point. It remains to be seen whether the authorities will reconsider the suggestion for inquiry now, or at least, after the Radcliffe Committee has submitted its report. In some ways, the Indian monetary and credit problem is even more intractable than Britain's, what with the large size of its non-monetised sector and the monetary sector which is somewhat beyond the control of the central banking authorities.

* * * *

All cotton traders are keenly awaiting tomorrow's meeting of the E.I.C.A. Board at which the Board will consider the recommendation of its subcommittee that only one single hedge contract must be allowed for the next season's (1957-58) cotton crop, instead of two simultaneous contracts as at present. This recommendation marks a switch-back to the position prevailing prior to 18th June 1956. The basis of the proposed single contract (Indian Cotton Contract) shall be Fine M.G. Moglai staple 25/32", tenderable up to two classes "on" and up to "rejection standard." Tendering differences must be fixed on the basis of spot rates and not on forward rates as at present. The cotton tendered, when rejected, is to be invoiced back at a discount of Rs. 15.

The sub-committee has suggested that, while one settlement is operating, the next one may be opened before the delivery period of the first settlement commences, the delivery months being March, May and August. It has opposed fixation during the currency of contract of floors and ceilings within the existing Government floors and ceilings. It, however, favours levy of deposits on purchases remaining outstanding, if prices rule about Rs. 600—Rs. 100 when the price is between Rs. 600 and Rs. 650 and Rs. 200 when it exceeds Rs. 650.

The chief consideration which seems to have weighed with the sub-committee in suggesting only one single hedge contract is that the operation of two contracts simultaneously in the context of tight supply position is ineffective, inasmuch as fluctuations in cotton futures values will not correctly reflect the demand for and the supply of cotton. Whether and to what extent this view is justified are questions open to debate. But it stands to reason that a final decision on the question of having a single contract or two contracts could conveniently wait till the picture of the ensuing season's cotton crop becomes clear. There are no indications at present—indeed, there can be none—about the probable size of this crop. It would, therefore, be unwise to base the suggestion for a switch-over from two hedge contracts to one single contract merely on the assumption that the supply position will continue to be tight. It is not, of course, the function of the hedge contract for cotton to assure

(Continued on page 975)

EQUITIES MOVE NARROWLY

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, *9th May*

THE share market was featureless during the week under review. The trend was somewhat indecisive, but the fluctuations were confined to a narrow range. The volume of business thinned down, due to proximity of the Central budget and the uncertainties about the tax proposals induced operators to sit on the fence. The reappearance of stringency in the money market and the implications of the serious food situation in some parts of the country, which would, as was indicated by the Union Minister for Food and Agriculture, at a Press Conference in New Delhi on Monday last, necessitate large-scale imports of foodgrains, fears about the success of the Central Government's borrowing programme in the face of the present stringency in money and reports that a Singapore Trust had submitted a petition to the Allahabad High Court for liquidation of the British India Corporation Ltd., Kanpur, for default to settle its claims were all factors which chilled the enthusiasm of the operators. Nevertheless, there was no selling pressure, except for profit-taking at higher levels. The undertone remained steady.

The Stock Exchange remained closed today, being a public holiday on account of the Municipal elections.

In the steel section, Tata Ordinaries opened on a quiet note with a slight decline from Rs. 168.50 to Rs. 167.25 due to end-of-account considerations. In the new account, the shares displayed some firmness and rose to Rs. 171.50 on Tuesday. On profit-taking at that level, they came down to Rs. 169.25 at the close yesterday. The new shares were done a rupee lower at Rs. 120. After an initial drop from Rs. 20 to Rs. 19.80, Indian Irons gained ground to Rs. 20.80, but again shaded off to Rs. 20.45.

Textile counters were conspicuously dull, with very little activity. Bombay Dyeings gave way from Rs. 543 to Rs. 538.50, but came up to Rs. 548. At the close, there was a setback to Rs. 542.50. Centurys stood Rs. 4 lower on balance at Rs. 459, after touching a high of Rs. 465.50. Kohinoors were done up to Rs. 322.50, before they finished lower at Rs. 321.50. Central Indias were dull at Rs. 114.50. Gokaks shed Rs. 3.75 to Rs. 186.50. Indu Ordinaries were a fraction better at Rs. 10.15 and Indore Malwas changed hands Rs. 2 higher at Rs. 139. Minervas gained Rs. 1.50 to Rs. 84, while Models dropped Re. 1.75 to Rs. 178.25. Morarjee Goculdas receded by Rs. 8.75 to Rs. 211.25, but New Greats improved by Re. 1 to Rs. 230. Shree Niwas Cottons were unchanged on balance at Rs. 178. Simplex closed at Rs. 170.50, as against Rs. 171.50 a week ago, after being done up to Rs. 172. Standards held their own at Rs. 443, while Svadeshis were marked down by Rs. 1.50 to Rs. 214 and Tata Mills by nP 25 to Rs. 47.25.

Bank shares continued to elicit enquiries and scored further small gains. Barodas gathered Re. 1 to Rs. 102. Centrals old and new gained nP 50 each to Rs. 51.25 and Rs. 54, respectively. Bank of Indias were up by nP 50 at Rs. 133. Punjab Nationals were done at Rs. 51 *ex-div.* (div. Rs. 2), as against Rs. 52.50 *cum-div.* a week ago. United Commercials improved by nP 75 to Rs. 54.25.

Buyers were in evidence in the insurance section, though business was limited. New Indias were picked up Re. 1.25 higher at Rs. 41.25 and Indian Mercantiles nP 75 higher at Rs. 41.25.

Conditions in the electricity section were better, with most of the counters attracting attention and scoring useful gains. Ahmedabad Electrics moved up by nP 25 to Rs. 93.75, while Bombay Suburbans were lower by Re. 1 at Rs. 106.50. Surat Electrics were maintained at Rs. 108.25. Tata Hydros appreciated by Re. 1.50 to Rs. 123. Tata Powers by Rs. 10 to Rs. 1.223.75 and Andhra Valleys by Rs. 22.50 to Rs. 1.180. Tata Powers (New) shot up by Rs. 40 to Rs. 1.200.

The miscellaneous section was on the whole lethargic, with price variations confined to a narrow range. Sugar shares did not evoke any enthusiasm, despite the good outlook for the industry. Belapurs were lower by Rs. 2 at Rs. 227. Bhopals gained no more than nP 25 to Rs. 17.75, Phaltans nP 75 to Rs. 136.25 and Walchandnagars nP 50 to Rs. 250.50. In the cement group, A.C.Cs moved between Rs. 160.75 and Rs. 158.50 before finishing at Rs. 159.25. Digvijays gained Re. 1.25 to Rs. 145.50. Ashokas were a shade better at Rs. 9.90 and Jaipur Udyogs at Rs. 12.05. Orissa Cements lost nP 10 to Rs. 13.25.

In the engineering and mining section, Alcocks scored Re. 1.25 to Rs. 258.75. Tata Locomotives were erratic. After an initial setback from Rs. 146 to Rs. 144, the shares advanced to Rs. 150.25, but drifted lower to Rs. 147.50 at the close. Premier Constructions shed Rs. 2.25 to Rs. 162, while Larsen and Toubros were unchanged at Rs. 15.25. Mahindra and Mahindras were a feature with a rise of Re. 1.50 to Rs. 15.50. Shivrajpurs were done at Rs. 84 *ex-div.*, as against Rs. 91 *cum-div.* a week ago. Indian Coppers were unchanged at Rs. 3.30, while B.B. Petrols gained nP 14 to Rs. 2.60.

Among shipping and automobile shares, Scindias moved both ways. After declining from Rs. 18.50 to Rs. 18.20, they gained back to Rs. 18.60, but drifted again to Rs. 18.35 at the close. Great Eastern Shippings gained on balance nP. 70 to Rs. 18.90. Premier Automobiles were marked down by Re. 1.25 to Rs. 90, while Hindustan Motors were steady at Rs. 7.25.

In the miscellaneous group, Bombay Burmahs receded from Rs. 567 to Rs. 561. After a recovery to Rs. 567, they gave way to Rs. 560.50. Their partly-paid shares lost Rs. 2.50 to Rs. 210. National Rayons improved from Rs. 226.50 to Rs. 230, but receded to Rs. 227.25 at the close. Gwalior Rayons improved by nP. 30 to Rs. 12.60. British India Corporations lost nP. 45 to Rs. 6.50. Tata Chemicals were steady at Rs. 16.25. Alembic Chemicals shot up by Rs. 5.50 to Rs. 122.50. Tata Oils gathered nP 75 to Rs. 44. Hindustan Levers were done nP. 40 higher at Rs. 19.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, *8th May*

A slightly improved sentiment was in evidence on the Calcutta Stock Exchange during the week under review, but the volume of transactions remained low. This followed expectations of a relaxation in the tight money conditions. How this would be brought about was debatable in view of the rising demand for credit for industrial requirements. Thoughts about the forthcoming budget continued to check the enthusiasm of operators, although a section of the market believed that new taxation measures would not be as severe as was thought earlier. There was a rumour that there would be a welcome reduction in tax on earned income, although the better sentiment generated thereby was partially nullified by another set of rumours forecasting taxes on gifts and wealth.

The West Bengal Premier, Dr. Roy's speech at the annual meeting of the Tea Association of India, held here on Sunday last, wherein he thought that tea companies should restrict dividends to shareholders to 6 or 7 per cent. and that business conditions for tea were satisfactory, caused surprise in market circles and led to lessening of interest in tea shares. The decision of the British India Corporation to close down the Cawnpore Cotton Mills, in view of the heavy loss the mills have incurred during the last 5½ years in the absence of Government's permission to rationalise the mills, was also noted with disappointment in the market.

Among textiles, Kesorams, after being lower at Rs. 13.12, returned to the opening level of Rs. 13.25. Cawnpores hardly received attention at Rs. 5.93, but Basantis improved to Rs. 5.37 from Rs. 5.06.

The higher costs of production and the absence of any increase in coal prices continued to discourage investors in coal shares. It was noted with regret that coal was not one of the industries which would be eligible for re-lending facilities from the proposed Re-finance Corporation. In this section, activity was meagre, but the small number of transactions that took place were due to interested buying. Khatras Jherriahs were lifted to Rs. 54.62 from Rs. 53.75. At one time, New Manbhooms were as low as Rs. 8, but subsequently picked up to Rs. 9.50. Burrakurs were steady at Rs. 22, as were Bengals at Rs. 222 following the announcement of a final dividend of Rs. 10 per cent. for the year ended 31st October 1956, which together with the interim one of 7½ per cent. makes the total distribution for the year as 17½ per cent., same as that paid for the previous year.

Jutes were quiet. Nationals, after being lower at Rs. 19.90, closed better at Rs. 20.20. Fort Williams were hammered down to Rs. 16.00 from Rs. 18.09.

Among engineerings, Guest Keens were as high as Rs. 27.12, following a good working report for 1956 and the declaration of the final dividend at 15 per cent. Indian Irons improved to Rs. 20.50 from Rs. 19.84. For a time, Texmacos were fractionally better at Rs. 19.10, but closed at Rs. 18.95. Braithwaites tended quiet at Rs. 24.50.

Selected miscellaneous industrials were favoured at higher rates. India Steamships met with support at Rs. 10.12, as against Rs. 10.03, while B.I. Corporations gave way to Rs. 6.45 from Rs. 7.03. At Rs. 25.75, Darbhanga Sugars gained a few points on interested buying. Indian Coppers were unchanged at Rs. 3.28. Imperial Tobaccos changed hands at Rs. 13.94. Orient Papers were lively at Rs. 30.50. Dunlop Rubbers at Rs. 24.06 were fractionally higher. Metal Boxes were better at Rs. 27.56.

* * * *

Madras Stock Exchange

MADRAS, *7th May*

A quiet trend was in evidence on the Madras Stock Exchange during the major part of the week under review. Buying enquiries were at a low ebb, thanks to pre-budget uncertainties. With only a week to go for the presentation of the budget, operators were not inclined to speculate on proposals and enter into commitments either way. Transactions put through were, as a consequence, greatly restricted and values moved narrowly, the general tendency being downward. The sentiment of the market was, of course, a bit better today, although the improvement in values was limited only to a few selected scrips.

Tea shares in the planting section staged a retreat. Nonsuch Teas dropped As. 8 to Rs. 22 *cum-div.* Nilgiri Teas receded by 25 nP to Rs. 8.75. Talayar Teas decreased by 15 nP to Rs. 10.40. Twyfords lost 20 nP to Rs. 17.40. Blue Mountains shed 2 nP to Rs. 3.65. Chembras were a shade lower at Rs. 3.35. Balanoors remained quiet at Rs. 19.25, Coonoor Teas at Rs. 23.75, Haileyburias at Rs. 22.50, Neelamalais at Rs. 5.90, and Highlands at Rs. 14.25. Kalasas, however, evoked some support and improved by 30 nP to Rs. 14.20. Kil Kotagiris and Periakaramalais gained 15 nP each to Rs. 6.10 and Rs. 7.45, respectively. Waterfalls put on 8 nP to Rs. 4.20. Peermades were done 25 nP higher at Rs. 26.25. Among coffee shares, Kumergodes receded by 10 nP to Rs. 6.60. Balmadies were neglected at Rs. 3.35 as also Rajendras at Rs. 11.37 and Shevroys at Rs. 2.03. Consolidated Coffees, however, advanced by 45 nP to Rs. 22.50. Coffee Lands increased by 10 nP to Rs. 25.25. In the rubber group, Malankaras declined by 25 nP to Rs. 29.25. Teekoys dropped 94 nP to Rs. 8.06. Kailas shed 4 nP to Rs. 4.90. Ponmudi Rubbers were lower by 25 nP at Rs. 1.75. Nelliampathys were dull at Rs. 3, Nilamburs at Rs. 16.50 and Peninsulars at Rs. 28. Cochin Malabars, on the other hand, were marked up by 30 nP to Rs. 7.80 on special support. Midlands gathered 10 nP to Rs. 16.85. Pullangodes were better by 13 nP at Rs. 2.33. Thirumbadis were transacted at Rs. 1.88.

In the textile section, Coimbatore Cottons fell by Rs. 5 to Rs. 325. Metturs dropped Rs. 4 to Rs. 398. Saradas receded by Rs. 2 to Rs. 95. Bangalore Woollens eased by a rupee to Rs. 173. Kasthuris shed As. 8 to Rs. 28.50. Coimbatore Pioneers were unchanged at Rs. 268, Kotharis at Rs. 14.25, Pankajas at Rs. 70, Ranga Vilas at Rs. 87 and Premiers at Rs. 185. Buckinghams, however, firmed up by Rs. 3 to Rs. 172. Cambodias were quoted higher by 82 nP at Rs. 13 *cum-div.* Coimbatore Spinnings hardened by Rs. 2.50 to Rs. 89. Vasantas gathered a rupee to Rs. 289. Janardanas put on 50 nP to Rs. 92. Maduras gained a like amount to Rs. 41.75. Lakshmis rose by As. 8 to Rs. 138.50.

In the sugar group, Travancores lost 10 nP to Rs. 10.40. United Breweries softened by 4 nP to Rs. 166. Cauverys were dull at Rs. 32. Jeypores at Rs. 13.50, K.C.P. ordinaries at Rs. 135 and Kirlampudis at Rs. 26.50. E.I.D, however, increased by 27 nP to Rs. 26.87. Indias moved up by 25 nP to Rs. 15.50. Mysores were better by 12 nP at Rs. 37.37.

In the miscellaneous section, Aluminium Industries decreased by 25 nP to Rs. 12.60. Indian Aluminiums were neglected at Rs. 12.85, Indian Steel Rollings at Rs. 11, Parrys Confectionery at Rs. 2.81 and Sen-Raleighs at Rs 12.62. But Binnys improved by Rs. 2 to Rs. 174. India Cements strengthened by As. 8 to Rs. 27. F.A.C.Ts added As. 4 to Rs. 5.65. Spencers gained 33 nP to Rs. 16.65. Mettur Chemicals were higher by 25 nP at Rs. 9.65. Rallis hardened by a like amount to Rs. 31.25.

BOMBAY SHAREHOLDERS' ASSOCIATION BULLETIN

Investors in India are mostly drawn from average middle class people and many joint-stock ventures owe a large part of their success to this class of investors. They have, however, for a long time been the least vocal and organised among the various elements constituting an enterprise. Thanks to the untiring efforts of the Bombay Shareholders' Association during the last twenty-eight years of its existence, they have become conscious of their rights and responsibilities. This is indicated by the large gatherings of shareholders at annual general meetings of joint-stock companies in the last few years and the fund of information they elicit from the chairmen about the companies and their workings. The Bombay Shareholders' Association has also been responsible for the several reforms in the field of joint-stock enterprise.

In order that its services may reach a wider circle of investors, the Association has done well in bringing out a publication of its own, the first number of which has just come out. The *Bulletin* pledges itself to present the case of the investor honestly and fearlessly. The first number gives a brief account of the Association's activities during the last twenty-eight years and brief summaries of the two recent memoranda submitted by the Association to the Government. The most notable feature of the *Bulletin* is the "Question Box," in which questions of interest to investors are answered. On the whole, the publication is a pioneering effort, which it is hoped will give useful information about profitable avenues of investment and give guidance to those who want to invest their savings in various undertakings engaged in the development of the country.

The broad pattern of the development of heavy machinery manufacture during the second Plan period has been approved by the Government of India. The entire group of projects will be developed as an economic integral whole, so as to meet the needs of the country for several industries, including steel plants, chemical and fertiliser industries and various others. While the details of the different projects covered by this programme have yet to be worked out, it is estimated that the entire development will cost over Rs. 80 to Rs. 90 crores, of which about Rs. 50 crores will be the foreign exchange component. The scheme provides for, (1) a heavy machine building shop; (2) a foundry forge shop to meet the requirements of the machine shop and other industries; (3) a heavy structural shop; (4) a plate and vessels shop; (5) a heavy machine tool plant; (6) a mining machinery and equipment plant; and (7) an alloy and tool steel plant.

NEWS IN BRIEF

AN Afghan trade delegation, headed by Mr. M. R. Yunossi, Director-General of Foreign Trade, Afghanistan, is expected to visit India shortly.

The Government of Madhya Pradesh proposes to establish at Satna a cement factory with a daily production capacity of 900 tons at an estimated cost of Rs. 4 crores. The establishment of a similar factory at Maihar is also under consideration.

The famous Leyland direct-injection diesel engine, known as the 0.350 unit, which is already in use in over 50 countries, is to be progressively manufactured in India by Ashok Leyland Ltd. as a power unit for the Leyland Comet seven-ton truck and Comet passenger chassis which are being built by the Company in Madras.

India's reserves of manganese ore are estimated at about 112 million tons by the Indian Bureau of Mines. The reserves, it is claimed, are of all grades and are chiefly found in Madhya Pradesh, the reserves in this State being put at as much as 100 million tons. The remaining 12 million tons are scattered in other areas. Out of the total reserves, about 60 million tons are of high grade, containing 45 per cent. and above of manganese.

An agreement for the purchase of oil drilling equipment has been signed between the Government of India and the U.S.S.R. According to the agreement, equipment worth Rs. 37.24 lakhs will be supplied by the Russian Government within six months. At present, eight officers of the Oil and Natural Gas Commission are undergoing training in oil drilling in the U.S.S.R. Another batch will soon leave for Russia for training in seismic prospecting and instrument technology.

Three industrial tribunals will shortly be set up in Uttar Pradesh to administer industrial justice in the State. The tribunals will have their headquarters at Allahabad and will start functioning from the 16th inst. The Government is also setting up four regional labour courts, one each at Kanpur, Bareilly, Gorakhpur and Meerut. These courts, which will replace the present adjudication machinery, will deal with cases referred to them by Conciliation Boards through the Government.

The U.S., India and Japan are reported to be working out plans for the joint development of India's iron ore mines in Orissa. The plan calls for the U.S. to furnish a capital of $25 million, India $17 million and Japan $8 million. Meanwhile, Messrs. Sanderson and Portes, an engineering firm in the U.S., which has been investigating the best method of transporting iron ore from Orissa mines, is expected to submit its report in about three months. According to Mr. John Garde of the firm, an important feature of the project under consideration is the construction of a 100-mile rail track from Orissa to the Port of Visakhapatnam, from where the ore will be picked up by freighters.

Several schemes for the manufacture of electrical equipment, accessories and fittings are understood to have been approved by the Government of India. A Calcutta firm is to manufacture overhead railway electrification material at the rate of 240 tons per year. A number of schemes for the manufacture of transformers, involving the setting up of new units of substantial expansion of existing factories, have also been approved. With the approval of these schemes, the existing and licensed capacity for the manufacture of transformers will be about two million kv.a., as against the target capacity of 2.2 million kv.a. recommended by the Development Council for Heavy Electrical Industries. A Bombay firm is being allowed to increase its capacity for the manufacture of distribution transformers from 36,000 kv.a. to 72,000 kv.a. per year. Another firm is being allowed to expand its production of transformers from 108,000 kv.a. to 180,000 kv.a. per year. A new unit is being set up at Tiruchirapalli for the manufacture of 100,000 transformers per year.

* * * *

From Abroad

The number of foreign visitors to Paris in 1956 was 1,559,238, an increase of 7 per cent. as compared with the previous year.

The Toyota Motor Sales Company of Japan will shortly set up a truck and passenger car assembly plant and a network of sales offices in Thailand in an effort to boost its exports of automative parts. The proposed plant will cost about £75,000 and will be wholly Japanese-owned.

The Government of Communist China has announced that it will raise the price of food, clothes and a few other goods, because the ambitious investment in heavy industry last year has led to nation-wide shortages. The consumer will have to pay an average of 20 per cent. more for pork, some edible oils, woollen clothes, cigarettes and salt.

An American company, The Forest Oil Corporation of Pennsylvania, has been granted a licence to prospect for oil in Cyprus. The licence is for a period of two years and covers the whole island and its territorial waters. Exploration is expected to start shortly. Six years ago, the Trag Petroleum Company prospected for oil on the island, but their tests led them to believe that there was none to be found.

French investments during 1956 registered a remarkable increase over the previous year. A report issued by the Economic and Social Development Fund estimates that 3,360 milliard francs (1 milliard=1,000 million) were spent on equipment in 1956. This is 14.9 per cent. over the 1955 figure. Although the increase is partly explained by the higher prices, the net increase in investment is estimated at about 8 per cent. over the previous year.

A group of European steel experts are now in the United States on a six-week on-the-spot study of American management methods. The visit is organised jointly by the American Iron and Steel Institute and the High Authority of the European Coal and Steel Community. The experts will be specially interested in the different structure of American management as compared with its European counterpart, and will study the elements that are suitable for incorporation into the European structure.

Nearly a third of the new orders for ships placed in Britain in the first quarter of this year are from customers abroad. The orders related to 90 ships, aggregating 600,000 gross tons. Of the new orders, tankers and cargo ships each accounted for 43 per cent., passenger and passenger/cargo vessels for 8 per cent., and other types for 6 per cent. This brings the number of ships ordered during the 12 months ended March to 382, or over 2,750,000 gross tons. About 22 per cent. of the year's orders is on foreign account.

The U.S. is reported to have granted Indonesia a loan of $15 million and promised another $77 million for development purposes. Indonesia has agreed to repay $15 million loan over 40 years with interest at 4 per cent., if the repayment is in Indonesian currency and at 3 per cent. if it is in dollars. According to the International Co-operation Administrators, the U.S. is also prepared to lend Indonesia approximately $77 million in rupiah (Indonesian currency) still held by the U.S. from the former's purchase of $97 million worth of U.S. surplus farm commodities.

Libya has signed an agreement with the Export-Import Bank and the International Co-operation Administration for a $2.5 million U.S. loan. The funds, made available under the U.S. Mutual Security Programme, will be used to repair the Tripoli power plant and to expand its capacity by the installation of two 10,000-kilowatt generating units. The Libyan Government has already received a $3.6-million credit from the private Westinghouse Corporation to help in the power expansion project. The overall cost of the project is estimated at $11 million.

The Finance Bill of Britain, published on 30th April, outlines details of the scheme announced in the Budget for giving special tax treatment to British companies which trade abroad. These companies are to be called Overseas Trade Corporations (O.T.C.). Their trading income will be entirely exempt from British income-tax and profits tax, except when paid out as dividends to their shareholders. Companies will thus be able to reinvest profits abroad without paying British tax on the profits. They will also be able to shift profits from one overseas country to another without (as at present) incurring tax on the money in transit through Britain.

American overseas relief agencies distributed more than 1,140 million pounds of U.S. reserve food stocks free to needy people abroad during the nine months ended 31st March 1957. The overseas shipments by the religious agencies had a total value of $99,895,942. Other reserve stocks similarly distributed by non-religious voluntary agencies amounted to 108 million pounds, valued at $14,184,256. Of this, the largest amount—nearly 101 million pounds was distributed by C.A.R.E.—Co-operative for American Remittances Everywhere. In addition, 61 million pounds of dried milk valued at $9,605,040 were distributed through the U.N.I.C.E.F.

The International Committee of the National Planning Association of the U.S., a non-political organisation devoted to planning in economic and other fields, has recommended the establishment of a new Government Corporation with an initial capital of at least $1,000 million to handle economic aid. In the opinion of this Committee, all foreign aid should take the form of repayable loans. Such a programme will ensure better continuity than the present system whereby foreign aid has to be decided anew each year. The Committee maintains that repayable loans will relieve the foreign nations of an indefinite moral obligation which may breed resentment and nullify the good effects of the aid programme.

The Government of Indonesia, in a determined bid to restore the financial equilibrium of the country's economy, has imposed a complete ban on imports for an indefinite period. The ban, however, does not apply to Government orders and goods allowed to be imported as an incentive to export under the export inducement certificate schemes and a few other items. The country's gold and foreign currency resources recently reached the lowest level, being 15.14 per cent. of the currency in circulation, as against the legal percentage of 20. The Government financial experts feel that the Cabinet will have to ask Parliament for an extension of the period for another three months and possibly permission to reduce the legal percentage.

PERSONAL

MR. S. V. Rayan, Editor, *Commerce*, returned to Bombay on Sunday last after a two-month tour of the U.K. and the Continent.

Mr. Anil Kumar Chanda, at present Deputy Minister for External Affairs, has been appointed Deputy Minister for Works, Housing and Supply.

Sir Joseph Kay, K.B.E., Chairman and Managing Director, Messrs. W. H. Brady & Co., Ltd., left Bombay for the United Kingdom on Wednesday this week.

Mr. E. A. Midgley, M.B.E., United Kingdom Trade Commissioner, left New Delhi for Britain on the 3rd inst., after spending 20 years in India. Mr. Midgley will take up a new post in the Board of Trade.

Mr. R. G. Saraiya, Chairman of the Bombay State Road Transport Corporation, and leader of the Indian delegation to the 16th Congress of the International Chamber of Commerce, left for Rome on Wednesday last.

Mr. K. G. Ambegaokar, Deputy Governor of the Reserve Bank of India, has proceeded on four months' leave. Mr. C. S. Divekar, Chief Accountant, has been appointed Principal Executive Officer to look after Mr. Ambegaokar's administrative duties.

Mr. P. W. Webster, who is now serving at the Lowestoft (England) depot of Marconi International Marine Communication Co., Ltd., has been appointed to represent the Company in Bombay. He will take up his new duties in the middle of next month.

Mr. D. C. Ghose and Mr. T. Kanoria have been elected President and Vice-President, respectively, of the Tea Association of India for the year 1957-58. The other members of the Committee are Messrs. B. K. Birla, S. R. Daga, Dhanoolal Chirimar, L. C. Kanoi, S. S. Kanoria, S. M. Mohta and K. L. Thirani.

Mr. J. F. Brierley of the India Paper Pulp Co., Ltd., and Mr. I. A. Macpherson of the Titaghur Paper Mills Co., Ltd., have been elected Chairman and Vice-Chairman, respectively, of the Indian Paper Makers Association for the year 1957-58. The other members of the Committee are Messrs. P. H. Sykes (Bengal Paper Mill Co., Ltd.), D. S. Birkbeck (Tribeni Tissues Private Ltd.), and V. Mehta (Shree Gopal Paper Mills Ltd. and Ballarpur Paper and Straw Board Mills Ltd.).

"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

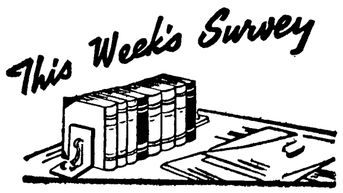
CALCUTTA, *14th May*

Federal Finance

Despite the preoccupations due to the civil disobedience movement in India, the preparatory work for the framing of a new constitution for the country is being carried on as steadily as practicable. After the conclusion of the second Round Table Conference, three committees were sent out to India to elicit further information on certain complex problems and make what suggestions they thought best to solve them for the assistance of the framers of the constitution. One was concerned with franchise—the basic principle on which the constitution is to be broadbased; another was set the difficult task of adjusting the relations between the Indian States and British Provinces and the third was entrusted with the knotty problem of Federal Finance. Of these, we are concerned with the last, the other two being merely political. Finance is the crux of the problem; and once this baffling perplexity is smoothened out, the vessel of State will be assured of plain sailing in fair weather.

The Oil Committee Organisation for European Economic Co-operation has reported that aggregate stocks of oil in Western Europe are already at the level of 1956. Even if the Suez Canal were not used, supplies during this quarter would be sufficient to meet the current demand and seasonal re-stocking. In the light of the advice which the Oil Committee received from the O.P.E.G., the O.E.E.C.'s emergency consultative oil group, on present stock and forward supply position for the second quarter, it is agreed that the co-ordinating task which the O.P.E.G. has been performing so effectively since December last is no longer necessary. It maintains that West Europe's requirements can now be satisfactorily met by a return to the normal commercial operations of the individual oil supplying companies.

World jute production in 1956 is estimated at 4,651 million lbs., as compared with 4,477 million lbs. in 1955, according to *Foreign Agriculture*, a monthly publication of the U.S. Department of Agriculture. Of this, Pakistan's share was 62 per cent. The present balance between world supply and demand in raw jute, according to the publication, is good. World demand for raw jute has increased somewhat through the years, but the pattern of consumption of raw jute and supply of manufactured goods is changing. European countries and Pakistan are manufacturing and exporting jute goods in increasing quantities, but Indian exports have failed to increase in the same proportion. Twelve and a half per cent. of the looms of the Indian Jute Mills Association are now sealed from production.



COAL PRICE INQUIRY COMMITTEE

THE Government of India has constituted a six-member inquiry committee under the chairmanship of Mr. S. Boothalingam, Secretary, Union Ministry of Steel, Mines and Fuel, to study the cost of production and price structure of coal. The other members of the Committee are: Mr. V. Narayanan, Joint Secretary, Ministry of Finance; Mr. S. R. Kalyanaraman, Member (Commercial), Railway Board; Mr. P. M. Menon, Joint Secretary, Ministry of Labour and Employment; Mr. S. R. Kaiwar, Joint Secretary, Ministry of Steel, Mines and Fuel, and the Coal Controller of the Government of India.

In accordance with the terms of reference the Committee will examine and report upon the cost of production of coal in the country taking into account the awards of various industrial tribunals and other relevant factors that have a bearing on the coal production programme envisaged under the second Five-year Plan. The Committee has been asked to submit its report within a period of two months. It will also suggest the changes necessary in the price structure of coal and report on the impact of the price changes recommended by it on the economy of the country.

The Government's decision to set up a committee of inquiry is in accordance with the recent announcement made by Mr. K. C. Reddy on the eve of his laying down office as Minister for Production and his taking charge as Minister for Works, Housing and Supply. He then said that the inquiry would be conducted either by a committee or by the Tariff Commission, the decision in respect of which would be announced shortly thereafter. The reason behind the Government's preference for a Committee of inquiry to go into the question, instead of entrusting it to the Tariff Commission, is not known. If the Government's intention in not giving the task to the Tariff Commission is to avoid a purely official set-up to study the question, but to constitute a semi-official body by associating with it representatives of the industry also, it has certainly failed to do so. The Committee is composed only of officials so that it lacks the non-official element that would give it a representative character. We do not wish to pre-judge the recommendations of the official Committee. Even so, it may not be too late for the Government to enlarge the Committee by including representatives of the industry and other sectors of our economy.

INDO-FRENCH ECONOMIC RELATIONS

The reported move of the Government of France to send an official delegation to India in order to explore the possibilities of strengthening and expanding the economic relations between the two countries will be widely welcomed. The major problem confronting the planners and the Government of India at present is the shortage of financial resources for carrying out the series of development schemes included in the second Five-year Plan, especially the acute foreign exchange situation. If the Plan is to be implemented successfully, it is imperative that the industrially advanced countries such as the U.S., the U.K., Germany and France must take a more active interest in India's economic development. The proposed French delegation to India is expected to hold detailed discussions with the various Ministries at the Centre and the Planning Commission and undertake a tour of the important places in the country, with a view to assessing the ways in which France can most usefully aid India in the task of economic development. In particular, the delegation will, it is said, examine the feasibility of concluding a general technical co-operation agreement between India and France.

The proposals which this delegation will put forward and the action of the Indian and French Governments thereon will be awaited with utmost interest. Meanwhile, it is gratifying to be told that the Government of France is considering a scheme envisaging extension of long-term credit to India. Although the exact amount of the credit is not known, it is believed to be around 20,000 million francs (or about Rs. 27 crores). Incidentally, it may be noted that France is one of the countries which by Mr. R. K. Nehru, Secretary to the Union Ministry of Finance, who is now abroad to arrange finance for the second Plan, will visit.

The proposed grant of a long-term credit for India by France is of great significance in the context of the continued adverse balance of trade which India has been having with that country in recent years. In fact, the deficit has tended to increase, such for the calendar year 1956 being Rs. 12.83 crores, as against Rs. 10.40 crores in 1955. The rise in deficit is due in a large measure to the spurt in imports from Rs. 17.32 crores to Rs. 19.54 crores and partly also to the fall in exports from Rs. 6.92 crores to Rs. 6.71 crores. Imports are bound to be larger still in the coming years, what with the increasing tempo of the implementation of the Plan. Such heavy imports involve payment of foreign exchange which is scarce. Surely, the proposed grant of long-term credit by France will help overcome this problem to some extent.

Apart from this credit, France will do well to augment technical assistance facilities in fields like electric traction, petroleum, electronics and mining. It may be noted here that the French are already assisting several projects in the public sector. Mention, for instance, may be made of the Hindustan Shipping Yard at Visakhapatnam and the Bharat Electronics at Bangaiore. They are also participating in industries such as cement, chemicals and paper. But there are several other fields where French technical collaboration can be increased. Viewed thus, the gesture of France to take a number of young Indians for industrial training in France—the number of places offered for 1957 is 70—and the contemplated move to establish two or three advanced technical colleges in India will be widely appreciated.

ENGINEERING INDUSTRIES

Shortage of adequate supply of iron and steel is one of the main handicaps of Indian engineering industries. Since the latter are basic to the entire industrial structure of the country, it is imperative to see that their progress is not held up for want of the requisite raw materials. Mr. P. R. Bagri, President of the Engineering Association of India, has, therefore, done well, in his address to the 14th annual meeting of the Association, held on 4th inst., at Calcutta, to pinpoint the need for augmenting the supply of iron and steel, one of the basic requirements of the engineering industries. Mr. Bagri urged that a steady supply of these materials should be ensured as intermittent supplies made it impossible to draw up production programmes in advance. He, therefore, appealed to the Government to plan steady supplies and to budget for steel for a period of not less than two years at a time. As a short-term measure, however, he suggested that the iron and steel with public projects, which cannot be put to use immediately, be diverted to steel processing factories which should be allowed to borrow from each other in case of need. Another suggestion made by him was that the available supplies of steel should be augmented by melting within the country nearly 200,000 tons of steel scrap which at present is being exported. In view of the difficulties encountered in getting steel and its proper allocation, Mr. Bagri strongly felt the need for the appointment of a Steel Allocation Advisory Committee which should contain, among others, representatives of consumers' interest. He also suggested that the Government should consider the question of introduction of uniform price for scrap at all railheads, as was done in the case of steel.

Another aspect of engineering industries Mr. Bagri touched upon was export promotion. According to him, while there is realisation of the need to increase exports, the existence of a home market ready to absorb all that is produced acts as a hindrance which needs to be overcome by suitable incentives in favour of exports. Conventional ways of price fixation, it is common knowledge, do not always work in foreign markets and he therefore recommended the formation of an organisation in the Ministry of Commerce and Industry to consider in what manner and how much of assistance could be given to engineering exports. Remission of taxes on export profits, facilities to discount export bills and a smooth procedure for refund of import duties on material used for export, etc., Mr. Bagri suggested, would give the manufacturers the much needed export incentive.

Inaugurating the meeting, Mr. Manubhai Shah, Union Minister for Heavy Industries, said that unless the production of capital goods went up at a faster pace than now it was not possible to accelerate the tempo of industrialisation. This was the reason, he observed, why the Government gave high priority to the development of heavy engineering industry. The Minister disclosed that the Government would set up a central heavy machine building plant for manufacturing machinery for the steel plant and other projects at an estimated cost of Rs. 80 crores. The plan, besides catering for mineral industries and mining projects, would also be in a position to produce every two or three years machinery for one complete steel plant. Urging the industrialists to set up shadow machine tool factories attached to their industries, Mr. Shah said that an adequate supply of machine tools of the right kind was a necessary adjunct of industrial expansion.

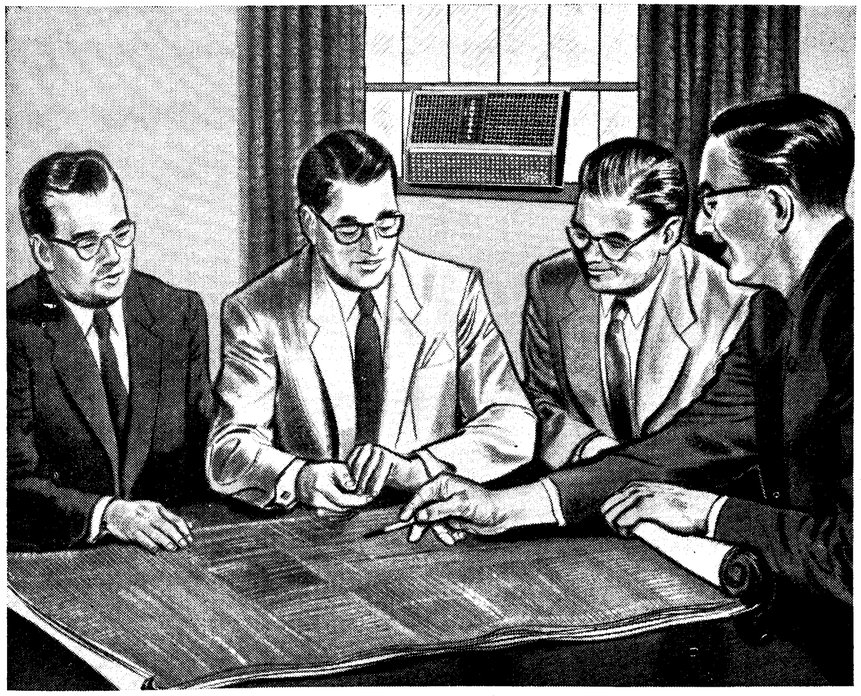
The demand for machine tools at the end of the second Plan period is estimated to be of the order of Rs. 17-18 crores, as against last year's production worth Rs. 80 lakhs and imports to the tune of Rs. 7-8 crores. The Government of India proposes to set up factories for the production of machine tools worth Rs. 5 crores annually by 1960-61. It is also proposed to expand total production in the country by Rs. 5 crores worth of goods thereby enabling the country to manufacture machine tools worth Rs. 10 crores annually. Apart from machine tools, there is need for increasing the output of machinery. In this connection, Mr. Shah pointed out that by the end of the second Plan, Rs. 90-100 crores worth of machinery was expected to be produced as against the present output of the value of Rs. 23 crores. The annual demand for machinery, which at present is estimated to be of the order of Rs. 130 crores, is expected to go up to Rs. 250-300 crores by the end of the Plan period. This calls for special efforts on the part of the engineering industry designed to improve and extend the range of its output.

A COMMONWEALTH BANK

The U.K. Government is considering the idea of setting up a commonwealth bank. For some time past, the proposal for an agency to provide a new channel for savings and investment has been a subject of some discussion in Commonwealth countries. Although Mr. Nigel Birch, Economic Secretary to the Treasury, disclosed in the House of Commons last week that the subject was engaging the Government's attention, he was cautious enough not to commit himself over the outcome of this consideration.

The proposal to establish a Commonwealth organisation, such as a Commonwealth bank, now under consideration was first mooted in November last, when the British Government promised to refer to the Commonwealth countries suggestions for a new organisation to integrate development plans. The Commonwealth countries, it is believed, have not so far displayed any enthusiasm over the proposal. Consultations are going on still, but the U.K. Government is inclined to pursue the matter only if the reactions of member-countries are favourable. Meanwhile, some interest seems to have been aroused on the proposal to set up a bank out of subscriptions aggregating £30 million from member-countries. This plan is the subject of consultation with the countries concerned and the British Economic Secretary seems to feel that this proposal has chances of a favourable reception.

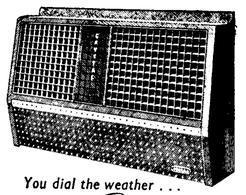
Mr. Birch, however, made it clear that such a bank would be of benefit only if it stimulated savings in the U.K. and proved a more convenient channel for investment. There was a possibility that it would help to canalise the flow of dollars into the Commonwealth. But on all these points, according to the Economic Secretary, there was still some doubt at least. When a member of the House stated that dollar aid to the Commonwealth countries might turn them into a "dollar empire with a dollar way of life," if Britain itself did not give greater help, Mr. Birch replied that everyone welcomed American capital going into the Commonwealth, but the fact remained that Britain was overwhelmingly the next important external provider of capital for the Commonwealth. He added that even today about 70 per cent. of investment in the Commonwealth came from Britain, British investment, both public and private, in the Commonwealth (excluding Canada) amounted, at present, to about £150 million per annum. The investment in Canada was about £100 million per annum. These rates of investment, according to Mr. Birch, were as high as could be managed under the present financial position of Britain.



A cool, calculated investment –the 'Crystal' room air conditioner!

FRESH, quiet, free from dust and outside noises—your 'Crystal'-cooled office invites good work, impresses clients and visitors. You can calculate for yourself how many dividends it earns you in better business, more goodwill . . . and cool comfort!

The 'Crystal' is made *in* India *for* India, by Voltas Limited—the people who know air conditioning best. Its smart appearance adds distinction to your office . . . its low installation and running costs recommend it to every astute businessman! And remember the 'Crystal' is backed by Voltas' unrivalled after-sales service.



You dial the weather . . . the Crystal supplies it

VOLTAS the people who know air conditioning best!

COMPANY LAW SUPPLEMENT
(Monthly)

By JOHN AND ROW
(Authors of the Ready Referencer on the Indian Companies Act, 1956)

ANNUAL SUBSCRIPTION Rs. 24/-

Main object .. .. .. Keeping the Law up to date

CONTAINS:

1. Criticisms of certain sections of the Act.
2. Articles of general importance.
3. Government notifications.
4. Digest of cases.
5. Model Articles of Association.
6. Queries and answers.
7. Forms and precedents.

EXPRESS PUBLISHERS (PRIVATE) LIMITED
33, BROADWAY, MADRAS-1

THE TRAVANCORE BANK
LIMITED
Head Office: **TRIVANDRUM**
Under the patronage and largely supported by the Government of Kerala
Branches at
BOMBAY, MADRAS AND OTHER IMPORTANT CENTRES IN SOUTH INDIA

Current Accounts	... ...	Interest at ½ per cent p. a. upto Rs. 1,00,000.
Savings Bank Deposits	...	Interest at 2 per cent. p. a. upto Rs. 1,000, and 2½ per cent. p. a. over Rs. 1,000.
Fixed Deposits and Short-Term		Deposits received on attractive terms

Save Systematically and earn good profits through our THRIFT DEPOSIT SCHEME
(Interest allowed upto 4% p.a.)

ADVANCES granted against Government and other approved securities

FOREIGN EXCHANGE BUSINESS of all descriptions transacted.

For further details please apply to your nearest Branch or Head Office, TRIVANDRUM.

General Manager.

DEPOSITS OUT OF COMPANIES' PROFITS

COMMERCE FEDERATION URGES GOVERNMENT TO MODIFY RULES

From Our Own Correspondent

NEW DELHI, *7th May*

DELHI LETTER

THE Federation of Indian Chambers of Commerce and Industry has submitted an important note to the Finance Ministry on the draft rules for the deposit of the current profits of companies. The note suggests at the outset that the definition of "approved purposes" under the rules should also include: (i) capital expenditure for the purpose of expansion of existing business and working capital for development and maintenance of business; (ii) loans of any kind and not merely borrowings on fixed assets, and payment of interest; (iii) amounts utilised for stock-in-trade, stores and other outstandings and advances for the business and trade items; (iv) cash resources required for the purpose of the business; and (v) investments in companies to which sections 15C or 56A are applicable, as also in such other companies and industries as may be considered important for the industrial development of the country.

In regard to the definition of "total income," the note suggests that the income to be taken into account should be what is ascertained according to commercial principles and not the assessable income. The note points out, in this connection, that, if the basis of the assessable income is adopted, disallowable items (which go out of the coffers of the company), like donations and other necessary expenses, which, under the Act or for other technical reasons, are added back to the assessable income, would not remain in the hands of the company and the cash resources would stand depleted, and yet the company would be called upon to make a deposit in respect of the same. It is also suggested that receipts in kind in the form of shares or debentures should be exempted in computing the total income.

Another suggestion advanced by the Federation is that the position regarding taxation in foreign countries, especially in Pakistan, should be taken into account in defining total income. According to the draft rules, the position is that total income will include profits made by companies outside India and income-tax and super-tax alone will be deducted from the total income in order to determine the statutory surplus. In Pakistan, for example, there is a business profits tax. The rule should provide, the note says, for deduction of this tax as well as other tax liabilities from the total income to arrive at the statutory surplus. For dividend deduction in respect of foreign companies, a proportionate deduction having reference to the Indian income and the total profits is to be made. Logically, therefore, the income to be taken into consideration should be that portion only which arises in India. Some countries prevent remittances, and such is the case particularly for Pakistan. The rules should provide, too, that, in respect of companies having income in such countries, the income to be taken into consideration will be that portion of the total income as is received in India.

Reserves and Accumulated Profits

The Federation's note deals next with the determination of "a substantial portion of reserves and accumulated profits" under the draft rules. One of the rules is in respect of utilisation by a company, for approved purposes, of the whole or a substantial portion of its money represented by reserves and accumulated profits. But it is not clarified what is meant by "a substantial portion of reserves and accumulated profits." The note continues that there should be no pre-condition that the company must have utilised its reserves and accumulated profits for approved purposes before it can be allowed to utilise a part of the current profits for development and other approved purposes. It may be that the reserves and accumulated profits had been already spent for necessary purposes, though not "for approved purposes." That should not disentitle a company from utilising current profits for approved purposes. The company should not be penalised for utilising its funds in past years for necessary purposes in its best interests, which, after many years, may not now be considered as having been spent for approved purposes. The company could not have foreseen such contingencies. The rules should, therefore, provide that, only if the current profits are not utilised for approved purposes, the question of deposit should arise.

The Federation note also deals with the draft rules concerning the rate of interest on amounts deposited, the percentage of profits demanded for deposit and the constitution and working of the Board of Referees. Regarding the rate of interest to be given by the Government on deposits, the note suggests that it should be not less than 1 per cent. above the Bank rate, for the companies, in certain circumstances, may have to borrow money to make the deposits at considerably higher rates of interest than the Bank rate. As regards the percentage of current profits to be deposited, which is now fixed at 50, as against the maximum of 75 laid down in the Finance Act, the note points out that the actual saving to every company is to the extent of the amount of the tax and not to the extent of the absolute amount of depreciation or development rebate. Therefore, the saving is to the extent of only about 50 per cent. of the amount of the depreciation allowance and/or the development rebate. While laying down the percentage of 75, 25 per cent. appears to have been excluded to leave a small margin with the company itself. Taking into account the tax factor, the note suggests that the rate should be fixed at 37½ per cent. and not at 50 per cent. As regards the proposed Board of Referees, the note urges that it should be an independent body, free from control by the Central Government and on the lines of the Income-tax Appellate Tribunal, so that it may create confidence in the assessees. But it is stated that the Board will be a purely official body.

Cocoa Powder and Chocolate

The Government of India has just published the resolution on the continuance of protection to the cocoa powder and chocolate industry. It has accepted the Commission's recommendation that the protective duty on cocoa powder should be maintained at the existing rate of 31¼ per cent. *ad valorem* (including surcharge), that the protective duty in the case of covering chocolate should be 50 per cent. *ad valorem* or Re. 1 per lb. (including surcharge), whichever is higher, that these rates of duty should remain in force up to the 31st December 1958, and that cocoa beans should continue to be exempted from payment of import duty. It is announced that the revised rate of protective duty recommended by the Commission in respect of covering chocolate is being brought into force with immediate effect. As regards the Commission's recommendation that the Government might consider the desirability of stopping the import of covering chocolate by actual users, the *Gazette* announcement says that it will be considered along with other relevant factors while formulating import policy from time to time. The Government may also take suitable action in due course on the Commission's ancillary recommendations and suggestions for developing cocoa plantations in India, for improving the quality of the local product, and for general assistance to the industry.

Calcium Lactate Industry

The Government of India's resolution on the Tariff Commission's report (1957) on the continuance of protection to the calcium lactate industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Tariff Commission's main recommendation that protection to the industry should be continued at the existing rates of duty—37.8 per cent. *ad valorem* (standard) and 27.3 per cent. *ad valorem* (preferential)—for a period of three years, that is, upto 31st December 1960. It has also accepted certain other ancillary recommendations of the Commission for assistance to the industry and will take suitable steps to implement them as far as possible. The attention of the industry is drawn to the Commission's suggestion that, if at any time the industry finds that its competitive position in the domestic market is seriously threatened by abnormally cheap imports, it may apply for a review of the existing scheme of protection.

THE POUND STERLING

TWO STEPS FORWARD, ONE STEP BACK

(From Our Own Correspondent)

LONDON, *4th May*

LONDON LETTER

THE post-war history of this country has seen a continuous expansion of money incomes against a background of the diminishing value of the pound sterling. It is alarming to realise that, at the close of the war, the pound was worth, in terms of purchasing power, two-thirds of its pre-war value, and that today it is worth little more than one-third. From time to time, the curve of depreciation has flattened out, as in 1953, only to resume its steady, if nowadays somewhat less marked, trend.

In 1956, the total national income of the United Kingdom was £18,000 million, that is, more than twice the pre-war level, and the following table shows how it has risen continuously over the past six years, the second column showing the amount of direct consumer expenditure:

(In thousand million £'s)

	National income	*Consumer expenditure*
1951	12.8	10.1
1952	13.9	10.6
1953	14.9	11.2
1954	15.9	12.0
1955	16.8	12.8
1956	18.0	13.4

Thus, in money terms, the national income increased by 40 per cent. between 1951 and 1956. However, over this period, the pound depreciated by 18 per cent., so that, in terms of 1951 money, the national income of 1956 would have been £14,750 million, that is, an increase of about 15 per cent. But consumer expenditure, which is the better index of the well-being of the population, has increased about as much.

The following table shows for the past five years what the increase has been, expressing everything in terms of 1948 prices:

Consumer expenditure at 1948 prices

(In thousand million £'s)

1952	8.70
1953	9.10
1954	9.50
1955	9.80
1956	9.86

Thus, over the five years in real terms, consumer expenditure has increased by about 13 per cent.; two years ago, the rise was as much as 3 per cent. over 12 months, but last year, it was as little as ½ per cent.

Sobering Thought

It is a sobering thought that, in 1956, while in money terms the national income rose by £1,200 million, that is, by about 7 per cent., consumer expenditure in real terms rose by only ½ per cent., and it is a curious commentary on human behaviour to find that, in spite of this background, personal savings rose to about 10 per cent. of personal income, that is, a higher figure than in any year since the war. Of course, credit restriction was a factor in this. The possibility of spending money by the hire purchase of goods was lessened, the fact that the professional classes could not increase bank overdrafts no doubt lead them to save more, and the fact that people had to save for such things as house purchase would all have contributed. Of course, if the effect of this abstention from spending in 1956 is to slow down the rate of internal sterling depreciation, the Government will be able to claim an economic victory. But, unfortunately, there are other factors at work beyond the control of the savers to continue the depreciation of the pound.

This situation warrants a revision of fiscal policy. If the pound is to continue to depreciate as steadily in the next five years as in the past five years, are there no steps to be taken to preserve the value of savings invested in gilt-edged and in insurance, in fact, all forms of saving other than in property and industry whose value obviously rises as the value of money depreciates? The trouble is that the authorities will not address their attention to what is an important problem for savers, because to do so would be to admit that the internal value of the pound will continue to depreciate and this they will not do. Even confronted by the facts of the past 11 years they will say that the aim of their policy is to flatten out the curve of depreciation. With this objective, everyone must have sympathy, but the wary investor will also hedge against the possibility that the objective may not be achieved.—*All Rights Reserved.*

OUTLOOK FOR MARKETS

LONDON, *27th April*

April, following the close of the financial year for many companies, has witnessed a spate of accounts published and dividends declared which has allowed the City to take stock of the commercial outlook. The immediate reaction has been that the post-Suez months engenderd excessive optimism which the facts of company earnings have not quite justified. Yet too much should not be read into the fall over the past week in the *Financial Times* equity index from 201 to 198.2—a drop of 1½ per cent. The index still stands 20 points higher than it closed at the end of December (178.8) and the expectation is that, as soon as dividend disappointments have been swallowed, the upward rise will be resumed. After all, while inflation prospects hold good, it is hard to see where one could go wrong!

Nothing could point the way of inflation more clearly than the dividend yields on gilt-edged and equities, respectively. The gross yield on 3½ per cent. War Loan is 4.9 per cent., and this can be taken as the normal return on a Government stock. Compare this with the 4.6 per cent. which is all that I.C.I. yield on their latest mark-down following a 10 per cent. dividend declaration; or 4.0 per cent. and 4.4 per cent. on two leading cement manufacturers who have just declared; or with 3.7 per cent. on British Petroleum and 3.7 per cent. also on Unilever!

Even if one admits the likelihood that the move already made to cheapen Government money is only a preliminary and that there will be a further Bank rate reduction as soon as the international situation (which here means the Middle East and oil) becomes calmer, then, while that means that the prices of gilts should rise, is there any reason why equities should not keep in step and still below the figure for Government stock? It is known that the Government are contemplating the re-financing of some £400 millions of maturities by the half-year, but the overall total of money to be borrowed will not be increased and, if the re-financing takes the form of a cash repayment as a preliminary to re-borrowing, then some of this cash may move into the equity market and bring down yields still further.

Setback for Industrials

On the other side, one could argue that some of the latest results indicate a further setback for industrials. For instance, I.C.I. net profits have fallen from £24 million to little over £19 million. Associated Portland Cement dropped their profits from £5 million to £4.6 million; Brush—biggest maker of diesel engines in the world—have not only made less profit but passed their dividend; and Hawker Siddeley, whose shares are yielding over 5 per cent., are looking about for means of countering the end of the aircraft boom. But these cases again must be understood before jumping to conclusions merely on the profits figures. I.C.I. have increased their already vast turnover of over £400 million by 6 per cent. and, while such a concern with world-wide interests is affected by rising costs and the need to compete in world markets, a reduction in profits is much less significant in the long view than an expansion in business. And firms such as Hawker and Brush, who are understood to be contemplating a financial amalgamation, have such wide interests that they can turn with ease to atomic developments.

The general conclusion seems to be that more competitive conditions readily explain lower current profits without necessarily casting any doubt on the likelihood of steady expansion by the industrial giants. And, while equity rates remain as low as they do, there is no need to feel concern at the long-term earning prospects of British industry.—*All Rights Reserved.*

COMPETITION THE PRICE OF FREE ENTERPRISE

WITHOUT ITS SPUR, THERE WILL BE INERTIA

ONE of authoritarianism's strongest weapons in its war of attrition against free enterprise is its power to "divide and conquer." This power is usually brought to bear on the pocket book. New forms of governmental compulsion in the economic field are almost always of direct and immediate financial benefit to some individuals or groups—at the expense of others, of course. The beneficiaries may number themselves among the staunchest adherents of economic freedom, but, if political interference with free markets puts money into their pockets, improves their competitive position, or protects them against the risk of loss, their objectivity must be strong indeed, if they cannot convince themselves that theirs is an exceptional case requiring special treatment.

Even business men, who should be and commonly are loyal supporters of free enterprise, are not always immune to such temptations. When they yield, authoritarianism has gained a new group of perhaps unconscious allies, and the free economy has lost some of its most natural and most needed defenders.

It is generally agreed that free enterprise and competition necessarily go hand in hand and that the combination has made possible the phenomenal economic progress of the western world during the last two centuries. Yet it is easier for men to extol competition as a broadly beneficent principle than to accept it as an active force ceaselessly bearing down upon them as individuals, always limiting their earnings and occasionally ruining them. Competition is a never-ending battle, and, in a battle, there must be losers as well as winners. Even to the winners, victory may be costly.

Restraints of Competition

Men individually, therefore, have always been restless under the restraints of competition and have tried innumerable ways of escaping from them. The mediæval guilds protected their members by restricting the number of apprentices who would later become competitors. Handicraft workers bitterly resisted the rise of the factory system, demanding, and in some cases obtaining, legislation against the use of more efficient machinery—a practice which has been revived in recent years in some "planned" economies. The trusts of the late nineteenth century tried to eliminate competition by buying it out when they could not destroy it. Mail-order houses, department stores, chain stores, and so-called discount houses have, in turn, been obliged to contend against the organised opposition of established trade groups, likewise reinforced by legislation.

Every major innovation in industry and commerce has been resented and, when possible, resisted by those who were hurt by it. Men are prone to justify their opposition to new forms of competition by calling them "unfair" or "ruthless" or "cut-throat" competition. What do these words really mean? All competition is ruthless and cut-throat to those who are unable or unwilling to meet it. As for the charge of unfairness, there is, of course, such a thing as unfair competition.

Too often, however, the charge of unfairness means only that the practice complained of is contrary to existing usage in the industry or trade—that it is an innovation. This does not necessarily make it unfair. Every innovation that successfully meets the competitive test by reducing costs, improving quality, or otherwise serving the needs and desires of consumers is a step in economic progress. At the same time, every such innovation injures those who cannot or will not adapt themselves to it. If new practices had always been prohibited as unfair competition because they were contrary to existing usage, the world would still be in the Stone Age.

One form of competition that has always been especially irksome is foreign competition. Customs barriers are almost if not quite as old as is Government itself. It took men thousands of years to learn that international trade is a two-way street, that import barriers are also export barriers, and that their final effect is to deprive the people of all countries of the benefits and economies of international trade as a whole. Today, almost all believers in free enterprise support the general idea of freer trade across international boundaries.

Yet there are few economic sectors in which practice lags so far behind principle. The question is admittedly complicated by the requirements of national defence and other considerations that are not strictly of an economic nature. Some of these considerations are quite valid, especially at a time when the foundations of peace are none too firm and when internal economies everywhere operate under a bewildering variety of artificial regulations and restrictions. But how much of the real opposition to specific measures of trade liberalisation comes from those who have succeeded in persuading themselves that the general rules of free enterprise and competition somehow do not apply to them?

"Tight Money" Protest

Most of those who have joined in the outcry against tight money during the past year or more would, perhaps, be surprised to discover that what they have actually been attacking is not governmental or Federal Reserve policy but the natural competition of the free market. This confusion between form and substance is not surprising, in view of the financial history of recent times. For about 20 years prior to 1951, the money market was a manipulated market, and it was continuously manipulated in favour of easy money. During the nineteen-thirties the manipulation was practised in a largely futile effort to promote business recovery. During World War II and for five and a half years thereafter, its main purpose was to enable the Federal Treasury to borrow as cheaply as possible.

In 1951, after it had become apparent that the continuing fulfilment of the Federal Reserve's supposed war-time commitment to the Treasury was making monetary policy an instrument of inflation, the Federal Reserve reached an "accord" with the Treasury, whereby it was enabled to allow the money market to fluctuate much as a truly free market would do. The long period of manipulation, however, has left the impression in many people's minds that the money market is at the mercy of the Federal Reserve, behaving as the central banking authorities want it to behave. In a superficial sense, this is true. The Federal Reserve could make money easier, but it could not control the economic consequences of such action.

It is impossible to appreciate the function of the money market in a free economy without recognising that the money market is, to a large extent, a mirror of the market for goods and services. Men are continually bidding against one another for the limited supply of the products of industry. The more money they have, the higher they are able to bid. The higher bids, however, cannot appreciably increase the output of an industrial system that is already operating virtually at capacity.

Tight money, therefore, is a natural reflection of keen competition for a limited supply of goods and services and an essential means of preserving the balance between demand and supply when the competition becomes too keen. Those who demand easier money at such a time are really protesting against the necessary pinch of competition and are, in effect, demanding inflation.

Competition, despite its unpleasant features, is still accepted in principle by most Americans, because it is recognised as an indispensable condition of free enterprise. Unfortunately, many foreign countries have shown less stamina or less perceptiveness. They have failed to enact adequate counterparts of the American anti-trust laws and have permitted cartels to fix prices and allocate markets. Without the spur of competition, industrial inertia has prevailed. Antiquated methods and equipment have been retained. Relative costs have risen. Competitive advantages in international trade have been lost. Subsidies have been used on an increasing scale. National budgets and balances of international payments have developed chronic deficits. Inflationary pressures have become irresistible. Industries have been socialised.

Can it happen here? Not if Americans want free enterprise enough to accept competition with all its rigours, even when the consequences fall heavily upon them as individuals. Not if they unite in opposition to vast governmental handouts, even when they are the beneficiaries. Not if they are shrewd enough to recognise and steadfast enough to resist the insidious tendency of authoritarianism to "divide and conquer."—*By courtesy: "The Guaranty Survey."*

SUPPLY OF LONG-TERM INDUSTRIAL FINANCE IN WESTERN EUROPE

MAJOR ROLE OF GOVERNMENTAL ACTION IN POST-WAR ERA

THE genesis of Government intervention in the field of long-term industrial finance in Western Europe can be traced to the extra-ordinary conditions prevailing there after the First World War, characterised by the enormous task of reconstruction and rehabilitation of the war-devastated economies, and the unprecedented demand for capital which was much beyond the institutional and private investors' capacity to fulfil. The situation was further accentuated by the inability of the banks to advance long-term credit out of their deposits which were predominantly short-term, owing to legal and/or technical restrictions. The methods adopted to tide over the difficulties arising from shortage of capital differed from country to country. Notable, and by far the most far-reaching in character, among such measures was the intervention by the Governments concerned in the capital market by the setting up of new public or semi-public credit institutions with powers to issue their bonds (sometimes under public guarantee) to hold deposits and to borrow from savings banks and other credit institutions. Among other measures taken in this connection, mention must be made of: (1) Issues of securities by Governments or public authorities, the bulk of which had to be taken up by the banks, insurance companies, savings banks, etc., where the public savings are kept, (2) extended use of central credit through rediscount and other mobilisation devices, and (3) Government guarantees to loans and advances made to firms working on "labour-creation" contracts or investing in capital equipment connected with such work.

Renewed Scope

Though, as the emergency appeared to fade away, some of these measures were allowed to lapse, the need for raising productive capacity during the Second World War and for reconstruction and rehabilitation of industries following the war, and the collapse of capital markets in a number of countries during the period of hostilities, gave renewed scope to public and semi-public institutions in the field of industrial credit and investment. France and Italy were the foremost countries where such institutions had to supply vast amounts of resources and facilities. Another instance was Belgium, where a major part of industrial finance was supplied by, or rather through, semi-public and public institutions, mainly by issues of bonds in the markets and by extracting savings deposits at rates of interest which private institutions found it difficult to pay. Other important instances were West Germany and Austria. These significant developments indicate, according to a study entitled *The Supply of Capital Funds for Industrial Development in Europe*, published by the European Productivity Agency* of the Organisation for European Economic Co-operation, that in the final analysis, the restoration of Western Europe's damaged economy could not have reached its present stage without Government intervention in the supply and distribution of capital and credit. There are, however, indications, according to the study, that considerable adjustments have become necessary in the public institutional arrangements and also in certain important respects in the policies underlying them, in view of the changed circumstances since their creation. One such major change is the great expansion in the public domain consequent on the acceptance by a number of countries of the concept of welfare State.

Medium and Long-Term Finance

The Report examines at considerable length the role played by institutional finance, medium and long-term, with particular reference to public and semi-public institutions, in the economic reconstruction of some of the important O.E.E.C. countries. Among the countries where public institutions for long-term lending have made a very substantial contribution to that end, mention must be made of West Germany. Here, the only private institution, namely, *Industriekreditbank* (or I.K.B.), originally established in 1924, and re-shaped in 1949, specialises in granting long-term loans for the reconstruction of industry, with special regard to the requirements of small and medium-sized firms. An important feature of its working is that it cannot receive deposits from the public, but it can issue its own bearer bonds and re-finance certain transactions of banks and bankers. Further, its bonds enjoy a clearly defined priority in case of its winding-up. The sources of funds for I.K.B. are: (1) Issues of bearer bonds, and (2) loans from public institutions, partly, "counterpart" funds of Marshall Aid. Its future policy is to increase its bond issues and, thereby, fulfil its primary function of linking small and medium-sized industrial firms with the capital market to which they have no direct access.

On the other hand, the most important of the public institutions in the country is the *Kreditanstalt fuer Wiederaufbau* (or K.f.W.), established in 1948, with a capital of DM. 1 million, held by Federal and Laender Governments. Its object is to provide medium- and long-term loans for the reconstruction of all branches of the economy in so far as resources cannot be obtained from other credit institutions. Short-term transactions and acceptance of deposits are not permitted. It also obtains its resources through issue and sale of its bearer bonds and borrowing from Federal Government and abroad and "counterpart" funds. A noteworthy feature of the K.f.W. is that extensive tax exemptions, freedom from legal provisions and regulations applicable to all other banks, place it in a privileged position. Its most important function has been to take over from the Federal Central Bank the large accumulation of American Aid counterpart funds—which constitute its largest source of funds—and to channel them into the country's economy through the medium of long- and medium-term loans.

Difference in Lending Policies

A significant difference in the lending policies between I.K.B. and K.f.W. is that, while 95 per cent. of the former's loans are made to small and medium-sized firms, a considerable proportion of those of the latter are made to large companies and public services. Broadly, there is a division of tasks between these two institutions. But they agree on the policy that investment should be promoted not so much for increasing productivity as for increasing the efficiency of the borrowers. Yet another public institution is the Refugees Bank established in 1950. Its special purpose is to provide financial assistance and services to German and German-speaking refugees. The Federal Government is the main supplier of funds to this bank. American Aid funds have been its main source of lending capital.

A curious feature in the field of industrial finance in France, to take another instance, is that all attempts by purely private companies to provide long-term capital to industry have remained without significant results. Important among the public institutions is the *Caisse des dé pôts* (or C.D.D.), with a long record of outstanding service to the country's economy. Since its establishment in 1816, its scope and responsibilities have grown far beyond its initial duties. It derives its resources from savings banks, old age pension funds, and many other accumulations of savings. It finances industries by direct investment in their securities, debentures guaranteed by the Government and debentures issued by the Credit National. It also discounts banks' bills arising out of advances to industry, making available thereby large amounts of medium-term credit.

The institutions providing long- and medium-term finances to industry which form an intricate pattern, raise their funds from four main sources: (1) issues in public market for capital; (2) borrowing based on the savings concentrated in the C.D.D., (3) advances from the Treasury (including American Aid "counterpart" funds) and (4) rediscount with central banks of bills originating from advances by the commercial banks to their customers. The foremost organisation in this network is Credit National, a semi-public institution formed in 1919. Besides being the most important medium-term and long-term lender to industry, it plays a principal part in the rediscount mechanism on which rests the main supply of medium-term finance. There are two important features to be noted in connection with the rebuilding of French industry. In the first place, American Aid "counterpart" money has contributed more than any other factor in the capital market. Secondly, loans under Government guarantee have been an extensively used method of assisting industrial firms whose capital structure and earnings offered no adequate basis for obtaining credit from elsewhere.

Institutions in Italy

Italy was another important country which witnessed, as a result of the active part played by the State since the 1930's, considerable expansion in the public, semi-public and private institutions providing long and medium-term finance. The reorganisation of the deposit banking system in the 1930's was aimed at reserving the functions of channelling savings and capital market resources into medium and long-term lending to industry to certain complex network of institutions, and since then, the Government has been guided by the principle of linking medium and long-term lending to resources of a corresponding nature. At present, there are 21 public and private institutions of this kind, 12 of which are of regional importance. The most important among the public institutions are the *Instituto Mobiliare Italiano* (or I.M.I.) and the *Instituto per la Ricostruzione Industriale* (or I.R.I.). Established in 1931, the I.M.I. provides long-term finance to industry and commerce on the security of property, bonds, shares and, in some cases, on personal guarantees. The Government holds 45 per cent. of its capital. During 1945-1954, 44 per cent. of its advances went to public services. Following considerable additions to its resources in 1954 under Marshall Aid, advances to industry increased substantially. The I.R.I. was set up in 1933 with the double purpose of relieving the banks from their participation in industrial companies, and of providing them the long-term finance they needed for carrying on their business and reducing unemployment. After the war, the I.R.I. was reorganised and entrusted with all financial operations relating to industrial concerns in which the I.R.I. or the Government participate, or to public enterprises the capital of which is supplied by public authorities.

Notable among the private institutions are: (1) *Mediobanca* (2) *Ente Finanziamenti Italiani* (E.F.I.) and *Centrobanca*. These institutions mostly specialise in medium-term finances. The first draws its resources from time deposits, through issue of bonds and debentures. It also undertakes underwriting operations. The E.F.I., on the other hand, obtains its funds through its own bond issues. These two lend to industry generally. The third one, namely, *Centrobanca*, draws its funds through deposits, loans from other banks and rediscounting. A distinguishing feature of its lending policies is that it lends only to small and medium-sized firms.

Notable Progress in Belgium

In Belgium, semi-public institutions made notable progress in the last one and a half decades. They were set up by public authorities and a large part of their operating funds came from issues of notes and bonds in the capital market. The *Credit communal*, founded in 1860, is one of the most important of them. Its main contribution to industrial development has been in long-term loans for the construction and improvement of local roads, water-supplies, electric power plants, etc. Another institution, namely, *Société nationale de Crédit à l' industrie*, established shortly after the First World War for the purpose of financing small and medium-sized firms, has also done notable work during emergencies. The most important private institutions providing long-term finance to industry are the two finance companies—*Société générale de Belgique* and *Brufina*—which, after the bank reform in 1934, took over the long-term loans and participations of the two largest commercial banks. Apart from holding in portfolio and managing considerable amounts of industrial securities, these institutions help the companies in which they hold shares to obtain long-term funds from other sources. This help is mainly of two kinds: (1) the finance companies arrange new issues of capital on behalf of the industrial concerns in which they are interested and place these issues in the market, and (2) they guarantee the industrial companies' borrowing from other sources in the capital market.

The U.K. stands on a somewhat different footing. Supply of long-term institutional finance has been based chiefly on private arrangements in which the joint-stock banks and insurance companies played the leading part. The Industrial and Commercial Finance Corporation Ltd. (I.C.F.C.), a private company formed in 1945, is typical of these institutions. Its specific purpose is to provide long-term capital to industrial and trading companies which, for various reasons, cannot borrow conveniently on the capital market. It is particularly helpful to small and medium-sized firms for whom it is not easy to raise funds otherwise. The I.C.F.C. also sponsored two institutions, namely, Estate Duty Investment Trust Ltd., to provide long-term funds for the payment of death duties on the estate of industrial and commercial company directors, and Ship Mortgage Finance Company Ltd. Another corporation, that is, the Finance Corporation for Industry, formed by the Bank of England, insurance companies and investment trusts, takes care of projects involving larger capital outlay. For instance, it has played a vital role in meeting the requirements of the steel industry.

Significant Examples

But these institutions, that is, the I.C.F.C. and F.C.I., provide examples when banks' resources are utilised for long-term industrial financing. In this connection, the Report observes that these two institutions offer significant examples of a method whereby a part of the commercial banks' resources can be harnessed to long-term lending through agencies technically equipped for this specialised work and able to devote their full attention to doing it consistently. On a long view of the prospects of this relatively new departure in industrial financing, according to the Report, it may be in the best interest of all concerned that the local capital used by such institutions should not be dependent upon bank advances. It could be raised by issue and sale to the capital market of bonds and debentures. Bank advances, the Report says, would then be used, more appropriately, to meet marginal fluctuations in requirements and to provide temporary finance between bond issues.

Having thus analysed the place of the institutional finance in various countries, the Report makes some pertinent observations for future guidance to the Governments in formulating their financial policies. The Report feels, for example, that the usefulness of the type of institutions described above will increase further with the increase in savings which cannot be directly invested in industry. Further, the limitations of public market for capital make further expansion on these lines all the more desirable. Again, a major aim to be pursued will be to ensure a steady market for the securities—equity or loan capital—issued by the specialised institutions, or under their auspices. The Report is also of the view that the concepts governing the proportions of loan capital and equity capital in the institutions analysed may be re-examined. It is especially relevant in view of the emphasis that is being laid on providing institutional finance to medium and small enterprises. It also calls upon the Governments to streamline and simplify the institutional pattern of the institutions.

*This Agency was set up as a new branch of the O.E.E.C. in May 1953. Its task is to stimulate productivity, and thereby raise European standards of living by influencing not only Governments but also industrial, agricultural and research organisations. One of its primary aims is to convince management and workers alike of the benefits of productivity and to enlist their co-operation.

WORLD BANK'S NET INCOME RISES

The International Bank for Reconstruction and Development has reported a net income of $25.7 million for the nine-month period ended 31st March 1957, as compared with $21.2 million for the corresponding period in 1956. The income is placed in the supplemental reserve against losses on loans and guarantees, and this has raised the reserve to $176.4 million. Loan commissions amounted to $12.3 million and are credited to the Bank's special reserve, increasing that reserve to $89.3 million. Total reserves as on 31st March 1957 were $265.7 million.

Gross income, exclusive of loan commissions, was $53.6 million, as compared with $47.3 million in 1956. Expenses, which included $22.2 million for interest on Bank bonds and other financial expenses, aggregated $27.9 million for the period.

BANK OF RAJASTHAN

In the opening paragraph of our review of the working of the Bank of Rajasthan Ltd., during the year ended 31st December 1956, given in our issue dated 4th May 1957 (*vide* page 887), it was stated that the Bank's advances had risen by Rs. 13 lakhs. They were actually higher by about Rs. 46 lakhs. The figure of advances relating to the year 1955 given in the table should have been Rs. 76.84 lakhs, instead of Rs. 109.54 lakhs mentioned therein. Also, the ratio of advances to deposits in respect of 1955 should read 28.5 per cent. instead of 40.6 per cent.

FINANCIAL AND CREDIT SYSTEMS OF U.K. AND U.S.

SPECIAL COMMITTEES SET UP TO EXAMINE THEM

THE great economic dilemma of the post-war world, how to maintain full employment and economic expansion without incurring persistent inflation, is underlined by the recent decisions in the U.K. and the U.S.A. to appoint special committees to inquire into these countries' financial and credit systems. The oil industry has a fundamental interest in the outcome of these inquiries. Economic expansion and rising oil consumption go hand in hand. But, if economic growth is accompanied by the steady erosion of currency values, oil companies, with their almost unparalleled needs for big and continuing capital investment, are among the most strongly affected, the more so where tax laws take no account of increasing replacement costs.

Indeed, the position of oil concerns epitomises the problems faced by the modern economy as a whole. However deeply concerned with the adverse effects of falling money values, few would welcome the achievement of a stable currency at the price of economic stagnation and perhaps of widespread unemployment and eventual economic decline. Some economists, indeed, have suggested that a steady slow fall in money values may prove to be an inevitable accompaniment of economic expansion and of the avoidance of slumps.

Faced with inflation as a fact, a number of countries have attempted to mitigate its effects on the small saver by linking interest payments and the repayment of capital to price or similar index numbers. But such arrangements can only be palliatives. Their acceptance as a permanent widespread practice would inevitably itself accelerate the decline in money values. In a money economy, it is essential that currency should function, not only as a medium of exchange, but also, to quote the textbooks, as a store of value. If it ceases to be a reliable store of value—if a £ or a $ set aside today will become worth only a few shillings or cents in 10 years—money ultimately becomes less acceptable also as a medium of exchange.

Fresh Examination Timely

It has become increasingly evident that existing financial and credit mechanisms and controls in many of the more developed economies are inadequate to the new and much more complex tasks they have now to perform. In the United States, the inquiry commission has been proposed by President Eisenhower "to conduct a broad national inquiry into the nature, performance and adequacy of the (U.S.) financial system." It is not intended to solve specific problems or any immediate crisis, but

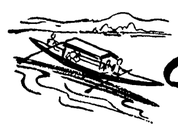
HOLIDAY THIS SUMMER IN



Kashmir

CONCESSIONAL RETURN TICKETS BY RAIL-OFFERED

Concessional Rail-Cum-Road and Rail-Cum-Air Return Tickets, at one and one-third single Rail journey fares for I, II and one and one-half single journey fares for third classes for the Rail portion and Rs. 27/- per seat for the Road journey and Rs. 76/- for Air journey between Pathankot and Srinagar are issued to Srinagar via Pathankot from the following stations:

Central Rly. Stations.		Western Rly. Stations.	
		General Offices Booking office, Churchgate, Bombay.	
Bombay V. T.	Begampet	Bombay Central	Jaipur
Byculla	Hyderabad (Dn)	Surat	Rajkot
Dadar	Kacheguda	Baroda	Jamnagar
Poona	Gwalior	Ahmedabad	Ajmer
Nagpur	Bhopal	Bhavnagar	Agra Fort
Jubbulpore	Sholapur	Terminus	Mhow
Agra Cantt.	Saugor	Indore	
Raja-ki-mandi	Kurnool Town		
Agra City	Secunderabad		

Tickets will be issued till October 31, 1957, valid for 3 months from the date of commencement of the journey.

Children—Half fares for Rail journey and full return fares for road journey and half fares for Air journey.

Those who desire to visit Kashmir are requested to make their own arrangements for securing the permit from the District Magistrate or the authority concerned for entry into Kashmir.

Full particulars from Station Masters concerned.

CENTRAL AND WESTERN RAILWAYS

U.S. COTTON SALES PROGRAMME

EXPORTS FROM OTHER COUNTRIES TO BE AFFECTED

CHANGES in U.S. cotton policy have a profound effect on the international trade in that fibre owing to the fact that that country is the largest single producer of cotton in the world and also the biggest exporter. It is, therefore, of interest to note that there is a growing feeling in U.S. cotton circles that the prevailing double-price system, that is, one price for cotton traded domestically and a lower price for cotton exported, has done considerable harm to futures trading in cotton. And the expectation is being entertained that the Department of Agriculture will consider the feasibility of restoring single-price trading. In fact, a return to the single-price system has been strongly urged by certain influential quarters. But there is no doubt that the current policy has resulted in a substantial scaling down of the surplus Government-owned cotton stocks in that country. Sales for export under the special Export Programme till 6th March aggregated 6.4 million bales (of 478 lbs.). Actual exports till the end of December were 3.0 million bales but shipments since the turn of the year have been heavy and trade sources estimate that exports up to the end of February were 4.8 million bales as compared with 841,700 bales in the same period last season. Exports for the full season are expected to reach 6.5 million bales easily which, it may be observed, is the official estimate.

The U.S. Department of Agriculture has already announced a new export programme relating to the six million bales of loan cotton taken over by the C.C.C. on 1st January. Sales will be made periodically on a competitive bid basis as under the current programme. Cotton cannot be exported under the new 1957-58 programme until after 15th August 1957. The programme will be substantially the same as the present programme. Cotton can be delivered against all sales, including Public Law 480, barter and credit sales, and substitution is allowed. The only real difference between the two programmes is that cotton sold under the 1957-58 programme has to be shipped within nine months after delivery of the cotton or the warehouse receipts to the buyer or by 31st July 1958, whichever is the earlier. The current programme provides for export within 12 months or by 15th August 1957, whichever is the earlier. Sales under the new programme, it was officially assured, will be made "in an orderly manner so as to avoid disrupting world market prices and impairing the traditional competitive position of friendly countries."

Concern has been expressed over what effect the U.S. export programme is having on cotton exports from other countries. On present estimates, according to the International Cotton Advisory Committee, Washington, aggregate free world exports this season are expected to increase to around 13 million bales compared to 11.6 million bales in 1955-56. This means that total exports outside the United States would be approximately 6.5 million bales or about 3 million bales less than was exported in 1955-56. Export availabilities in the free world outside U.S. are presently estimated at between 7.0 and 7.5 million bales, of which about 6.5 million bales will be actually exported. This would mean, of course, that there would be some increase in carryover stocks in net exporting countries outside the United States on 1st August 1957. However, total stocks, according to the Committee, are still likely to be no higher than the average of the last five seasons. Also, against the increase in stocks must be set the significant increase in domestic consumption in these countries in recent years.

As will be seen from the table below, the main reductions in export availabilities this season are in Mexico, Egypt, Pakistan, Brazil and Peru, and so exports from all these countries will be much lower than last season. In most other countries there is sufficient cotton on hand to maintain exports at close to last season's level if demand is favourable.

In studying the impact of the U.S. export programme on cotton exports from other countries, the Committee observes, account must also be taken of the lower prices of American-type cottons this season. It is true that prices declined by very roughly 20 per cent. when it became known that the United States intended to make all its cotton competitive with other cottons. Since the beginning of the season, however, prices have risen quite significantly and are now much nearer the average price last season. Using the 1955-56 average price, however, probably understates foreign exchange earnings from cotton, especially in the case of producers in the Northern Hemisphere for the main export business came in the first half of the 1955-56 season when prices were significantly above those ruling at the end of the season. Nevertheless in many instances revenues from cotton sales during the present season have been noticeably lower than in 1955-56. This does not apply to all Egyptian types, however, particularly the extra long staples, where there has been a marked rise in price this season. In Egypt itself, however, the increase in price only partly compensates for the decline in exports.

Imports into many countries during the opening months of the current season were running at a higher rate than last season. Available figures indicate that in the main consuming countries of Western Europe and in Japan, more was consumed during the first few months than was imported. In view of the continuing heavy exports from the U.S., however, to these countries, the gap between imports and consumption was narrowed or even removed subsequently.

The following table gives the country-wise breakdown of estimates of export availabilities in the current season:

(In thousand bales of 478 lbs.)

	1955-56		1956-57 (estimated)
	Available for export and stocks	Actual exports	Available for export and stocks
Mexico	2,081	2,018	1,350
Egypt	1,756	1,439	1,400
Sudan	720	561	695
Pakistan	900	726	625
Turkey	310	142	290
Syria	390	375	385
Brazil	1,475	815	1,150
Peru	630	491	530
Uganda	344	294	300
Belgian Congo	253	222	238
India	2,548	554	2,330
Others	2,456	1,763	2,269
Total free world (excluding U.S.)	13,863	9,400	11,622

Source: International Cotton Advisory Committee, Washington.

WORLD FIBRE OUTPUT

The aggregate free world output of chief industrial fibres during 1955-56 touched the record level of 28,300 million lbs. (12,800 kilos), which represented an increase of as much as 12 per cent. as compared with the previous year, according to the 1956 edition of *Industrial Fibres* published by the Commonwealth Economic Committee. The improvement was shared by all the major varieties, such being particularly impressive in the case of man-made fibres and jute. Total fibre production in the Commonwealth had continued to rise and there were appreciable increases in wool, jute and man-made fibres. But sisal output was virtually unchanged and cotton production fell by about 5 per cent. World consumption of apparel fibres again increased, but the improvement was not sufficient to prevent a further rise in stocks of cotton. By contrast, stocks of wool and jute declined between 1955 and 1956. The total cotton crop in the non-Communist world was nearly 4 per cent. larger than in the previous season, due chiefly to a rise in American output. Wool production also rose by 4 per cent., while there was an increase of 37 per cent. in the output of man-made fibres.

(*Concluded from next column*)

Corporation has been the importing agency, while the Board continues to handle distribution thereof in the country. The Corporation imported 57 tons of raw silk during July-December 1956 and a further 51 metric tons during January-June 1957. Canalisation of imports through the agency of the Government has not only minimised the quantum of imports but also helped both the weaving and the sericulture industries to promote their respective interests by preventing violent and rapid fluctuations which were chronic before canalisation of imports by Government agency.

In the course of his address, Mr. Nanjappa also alluded to exports of silk waste of South Indian origin. He recalled that, on the recommendation of the Board, the Central Government had approved the policy of shipping only the surplus silk waste available in South India, after meeting the demand of the Spun Silk Mills Ltd., Channapatna. The Government, however, announced—on 5th September 1956—an *ad hoc* export quota to the extent of 40 per cent. of stocks held in South India, in order to liquidate the heavy accumulations of stocks.

DEVELOPMENT OF SILK INDUSTRY

PROGRESS NOT SATISFACTORY

IT is regrettable that, despite the repeated stress laid on the need for accelerating the pace of implementing the schemes for the development of silk industry, the State Governments have not taken effective steps to remove the bottlenecks of inadequate organisation and procedural delays. The total expenditure actually incurred by the Governments during the year ended March 1957 out of the grants given by the Centre was a bare 30 per cent., being only Rs. 10 lakhs, as against the sanctioned amount of Rs. 32.30 lakhs. The latter sum is in addition to the loans aggregating Rs. 27.02 lakhs, Rs. 7.84 lakhs sanctioned for the establishment of the Central Foreign Race Seed Station in Shrinagar, and Rs. 3.89 lakhs for the administrative and other developmental expenditure by the Central Silk Board. The actual expenditure out of the grants is, of course, higher than the amounts spent in the preceding three years—Rs. 7.23 lakhs in 1955-56, Rs. 5.20 lakhs in 1954-55 and Rs. 1.61 lakhs in 1953-54. Surely the progress, as Mr. V. Nanjappa, Textile Commissioner to the Government of India and Chairman of the Central Silk Board, said at the eleventh general meeting of the Board held at Bangalore recently, cannot be considered satisfactory. He did well to urge, once again, the State Governments to take "all necessary steps to increase the pace of expenditure," so that adequate progress may be made in the implementation of their development schemes during the Plan period.

In this connection, Mr. Nanjappa alluded to the financial assistance given by the Centre to the States for strengthening the sericultural organisations in their respective regions and to the liberalisation in the pattern of assistance as a further step towards improvement in the rate of expenditure. According to him, under the new pattern of technical assistance, the Central Government makes 100 per cent. grants for development schemes, excluding the cost on land and buildings, the grant of which will be considered on merit. Characterising this assistance as being substantial, he said: "I do expect that this substantial assistance by the Government of India would accelerate the implementation of schemes in the States. If the States spent the amounts in the Plan period, it would not be difficult to ask for further aid from the Government of India. . . . It is necessary that State Governments should set up adequate organisation to deal with the increased grants available from the Government of India."

While the performance of the State Governments in the utilisation of grants is thus unsatisfactory, it is gratifying to note that the Centre is quite earnest in obviating delays in the matter of providing sanction of matching grants by States. The Government convened in February-March 1957 a conference of the Ministers of Production and Finance, the Planning Commission, and the Silk Board to discuss the State schemes for 1957-58. These schemes, Mr. Nanjappa revealed, were further scrutinised by the Technical Development Committee at the meetings held on 23rd and 24th April last. It recommended 92 out of the 148 schemes, involving about Rs. 39.16 lakhs as grants and Rs. 20.64 lakhs as loans. The schemes were approved by the Standing Committee on 25th April. The grants and loans now approved and recommended by this Committee, it is claimed, have in most cases come up to the ceiling allotments made to the States for the current year. "It is now for the States," to quote Mr. Nanjappa, "to implement the schemes vigorously and utilise the grants fully. I sincerely hope that, with the co-operation of the State Governments, we should avoid heavy surrenders at the close of the year and give a better account of ourselves."

The Chairman of the Central Silk Board reviewed the position regarding import of raw silk and indicated the effect of such import on the indigenous silk industry. His review shows that, till the licensing period January-June 1956, the Central Silk Board was both importing and distributing raw silk in the country. It imported 90 metric tons of raw silk in 1955 and 50 metric tons during the licensing period January-June 1956. These imports were intended primarily to meet the requirements of the specialised sectors of the silk weaving industry, particularly to meet export requirements, besides stabilising prices of silk. The Board made a net profit of Rs. 7.6 lakhs out of 90 tons and a sum of about Rs. 4.27 lakhs out of 50 tons. Since the licensing period July-December 1956, the State Trading

FINAL DETAILS OF "PLAN FOR COTTON" TO BE WORKED SHORTLY

MARKED RISE IN CLOTH IMPORTS

From A Special Correspondent

MANCHESTER, 30*th April*

MANCHESTER LETTER

A SEVEN-MAN Lancashire textile mission will fly to Karachi this week for talks with Pakistan cotton industry leaders with the object of securing voluntary limitation of cotton cloth exports to Britain. Announcing this in Manchester, the Cotton Board said that the members of the mission would be those who in January had talks in India and Hong Kong—the major shippers of cloth to this country. The Lancashire team will again be led by Sir Cuthbert Clegg, a Vice-President of the Cotton Spinners and Manufacturers Association.

At the end of the first quarter of the year, the situation so far as export trade in cotton goods is concerned is remarkably similar to the position 12 months ago. Cloth shipments to overseas markets are within a few thousand yards of last year, while yarn sales have improved fractionally. After the sharp decline in export business recorded during the past two or three years, the mere fact that current shipments are being maintained is satisfactory, but the totals give no cause for complacency.

Imports Rise Markedly

Of more interest are the substantial imports of foreign cloth which, in the first three months this year, have reached unprecedented levels. Although the interference with normal shipping routes may have aggravated the position, the fact remains that arrivals of cotton goods from abroad have exceeded 100,000,000 square yards for the first time in any one quarter—and, in the same period, exports from Lancashire were barely 120,000,000 square yards!

The value of cotton yarn and manufactured goods exported to the end of March was just £1,000,000 higher than a year ago at £23,665,121. The following table shows recent quarterly comparisons by volume, emphasising the narrowing gap between Lancashire's reduced export trade and the larger imports now being received:

(Cloth in sq yards and yarn in lbs.)

		Exports		Imports
		CLOTH	YARN	CLOTH
1955				
1st quarter	.. ..	165,314,000	10,667,800	99,341,000
2nd ,,	.. ..	116,106,000	7,510,000	71,600,000
3rd ,,	.. ..	143,437,000	8,195,200	70,294,000
4th ,,	.. ..	129,237,000	9,167,800	58,351,000
1956				
1st quarter	.. ..	120,194,000	9,069,000	74,802,000
2nd ,,	.. ..	116,780,000	8,670,000	84,980,000
3rd ,,	.. ..	111,510,000	7,590,000	74,190,000
4th ,,	.. ..	125,960,000	9,650,000	72,320,000
1957				
1st quarter	.. ..	120,185,000	10,050,000	103,064,000

The volume of goods sent to leading markets has shown very little change as compared with a year ago. Australia remains the best single consuming outlet, having taken nearly 2,000,000 lbs. of cotton yarn and 17,500,000 square yards of cloth. South Africa has absorbed 15,000,000 yards of fabric, while trade with the British West African territories has also been well maintained.

All the chief supplying countries have sent larger quantities of grey cloth to Britain this year. Shipments from India have increased by 10,000,000 yards to 45,731,000 yards and Hong Kong has provided an extra 2,000,000 yards, at 14,103,000 square yards. Although arrivals from Japan are less than half the volume imported two years ago, current supplies amount to 12,508,000 square yards, an increase of some 3,000,000 yards on last year. An interesting feature remains the much larger shipments from undesignated countries, which this year have already amounted to over 15,500,000 square yards, as against less than 4,000,000 yards 12 months ago.

Planning Ahead

Final details of "Plan for Cotton," embodying the trade union proposals for the Lancashire cotton industry of the future, will be worked out in Manchester on 20th May at a meeting between the Legislative Council of the United Textile Factory Workers' Association and Mr. Harold Wilson, M.P., author of the plan. Mr. Harold Bradley, Secretary of the Legislative Council, said this week that the document would then be passed on to constituents for approval.

Work on "Plan for Cotton" began four years ago. It has recently been revised in the light of changed circumstances. The revised version is understood to contain proposals for a return to centralised purchasing of raw cotton and the setting up of a commission to regulate imports of cheap cotton cloth.

Yearly Pay Scheme

A guaranteed annual wage for Lancashire textile workers as a means of curbing the drift of operatives to more secure jobs has been suggested by Sir Alfred Roberts, General Secretary of the Card, Blowing and Ring Room Operatives' Association, one of the three principal Lancashire cotton unions. In many cases, bottlenecks were being created by a shortage of key workers, and the labour force in the producing sections of the industry now stood at 245,410—11,000 fewer than a year ago, said Sir Alfred in his quarterly report. "These shortages are likely to continue unless and until the industry can offer not only attractive conditions and wages but also reasonable stability of employment," he said. "It is instability and insecurity which have driven so many workers to seek employment in other industries. It may well be that a guaranteed annual wage—an idea which is rapidly developing in the United States—is the best answer to the problem."

Sir Alfred said that an escape clause in the guaranteed week agreement made it quite valueless when it was most needed. "Employers should give some thought to the question of security and stability of income if they really wish to maintain and increase the number and quality of the workers employed in the mills," he added.

Price Hesitation Again

Trade in textile goods in Lancashire in the first few months of the year has made slow progress, but a steady turnover has been recorded without evidence of any strong demand or alternatively a sharp falling away in interest. Variations have naturally occurred from week to week in the consumption of finished goods, but the general offtake has not shown any startling development.

One of the main reasons given for the improvement in turnover which took place towards the end of 1956 was the revival of confidence in prices which was then apparent among customers. Subsequently, values have been well maintained and, in the American staple at least, there is no statistical reason to suggest that any substantial decline will occur in the near future. There are still, however, many buyers who hold bearish views and this hesitancy is causing commitments to be limited in a manner reminiscent of the way in which trade has slackened in recent years, leading to the contraction of productive capacity within the industry.

In the main, the current belief in certain quarters that prices may decline has been based on the possibility of cheaper raw material rates ruling in the United States. The authorities in Washington, however, have shown no sign of accepting a reduced level of values in their disposal plans for the surplus stocks now being offered on a competitive bid basis each fortnight.

Uncertainty still persists as to the trend of prices for Sudan and other long-staple cottons. The situation has been complicated by the decision to discontinue local auctions and revert to sales by tender. There is a widespread feeling among users that lower rates are inevitable and, in such circumstances, a natural disinclination to look far ahead is to be anticipated.

Restraining Production

Unless there is a decided change in policy in the United States, stability in values of American cotton should be maintained. The provisions of the soil bank programme are aimed at producing a smaller crop next season, although this method may not cause as pronounced a reduction in acreage as appeared likely at one time. While the soil bank plan has its opponents among American growers and merchants, it also has supporters. They point out that the programme has been established in order to get marginal land out of production. Farmers who, through scientific methods, have already succeeded in increasing their yields considerably will use every possible device, including intensified fertilisation, more insecticides and better irrigation, to achieve a still higher yield and so reduce their cost per unit.

Ultimately, these progressive growers will favour larger production and will accept a further gradual reduction in the loan basis. It is significant that, out of 3,000,000 acres scheduled for the soil bank at the end of March, more than 2,000,000 acres came from the traditional growing areas in the Southern States where yields have lately been much lower than in the new farming lands.—*All Rights Reserved.*

ESTIMATES COMMITTEE ON SHIPPING

RAPID DEVELOPMENT OF MERCHANT NAVY URGENT

By M. A. Master

WITHIN a very few months of the beginning of the second Plan, both Government and shipowners made commitments for the purchase and construction of vessels of about 170,000 g.r.t. As the Minister for Transport observed at that time, the entire sum of Rs. 37 crores, to be given as loans, allotted for this purpose by the Planning Commission, was exhausted. The country has yet to acquire about 220,000 g.r.t. of shipping to reach even the very low target of 900,000 tons by March 1961, mentioned in the Plan.

There is, however, a complete ban on the raising either of the additional finance or the release of the necessary foreign exchange for the acquisition of new tonnage. The country will, therefore, feel grateful to the Estimates Committee for considering it "unfortunate" that the target of two million tons recommended by the Reconstruction Policy Sub-Committee was not yet realised and for emphasising in clear terms that "rapid expansion of Indian shipping should be regarded as a national problem of great importance and urgency." They feel that India "is destined to play an important role in international affairs." Apart from preserving India's strategic importance, the Committee are convinced that Indian ships as "roving ambassadors" will provide "an effective instrument in strengthening India's external relations." They have no doubt that "Indian shipping has a wide scope for securing more overseas traffic and that it has a very bright future." They, therefore, look upon shipping to play a much wider and more dynamic role in the building up of a new India.

We, therefore, cherish the hope that, now that the Estimates Committee have given an inspiring lead for the rapid development of shipping, it will bring new life and new spirit in the placid and complacent atmosphere of New Delhi and will awaken both in the Planning Commission and in the Ministry of Transport a livelier and more responsible sense of their obligations for the rapid development of the Indian merchant navy.

Shipping Target Low

The Estimates Committee have carefully examined whether the objectives set forth in the second Plan for 100 per cent. participation in the coastal trade, 12 to 15 per cent. in the overseas trade and 50 per cent. in the adjacent trade, at the end of the Plan, will be achieved, even if the country is to reach the target of 900,000 tons by March 1961. The tonnage of cargo, which will move in both the coastal and overseas trades, is bound to witness a very substantial rise. The Chairman of the Scindia Company expects that the movement of dry cargo in the coastal trade alone will go up from three to five million tons. The Government themselves have indicated that shipping will have to carry an additional load of about six million tons in the overseas trade by 1958. From such evidence as was placed before the Estimates Committee, they have come to the conclusion that 900,000 tons will not be sufficient to attain the objectives laid down by the Planning Commission. They have, therefore, requested the Government that the position should be carefully reassessed and that the apparent discrepancy in the volume of traffic to be carried and the shipping tonnage to be achieved at the end of the second Plan should be reconciled.

They have thereby rendered a great service to the country. It is no use deluding ourselves that the country would carry, if not 15 per cent., at least 12 per cent. of the country's overseas trade by the end of the second Plan, with total shipping tonnage of 900,000 tons. Everyone will, therefore, welcome this frank appeal on the part of the Estimates Committee for the reassessment of the present target in the light of the possibility of attaining the very moderate objectives placed before the country.

The recommendations of the Estimates Committee, which will be widely welcomed and will effectively help, if implemented, the rapid development of Indian shipping, refer to the terms and conditions on which loans are to be granted, the necessity for giving operational subsidies and the redressing of some of the grievances which seriously affect Indian shipping, which is in its early stage of growth. It is a matter of satisfaction that, from the beginning of 1946 till the end of the first Plan, the shipowners have raised about Rs. 66 crores for financing the additional tonnage acquired—about Rs. 44 crores from their own resources and about Rs. 22 crores by way of loans from the Government. They have been requesting the Government to liberalise the terms and the conditions on which these loans have been granted. Despite the assurance of the Minister for Transport that the shipowners have an arguable case and that the terms and the conditions of the loans would not only be liberalised, but any concessions that might be granted would also be given retrospective effect, the recent indication of the Government of India that no loans would be given in the future unless the shipowners agreed to pay 4½ per cent. by way of interest instead of 2½ per cent. in connection with the loans given to them for the acquisition of overseas vessels, came as a bolt from the blue.

State-Aid

The Estimates Committee have pointed out at length the nature of State-aid given to shipping in such important maritime countries as the United States and the United Kingdom, as well as in such war-shattered countries as Italy, Germany and Japan. Exemption from income-tax on profits derived from the ships for the first five years, duty-free import of steel, timber and machinery required for the ships, sums given out of profits of industries as interest-free loans to shipping industry to be free of income-tax, investment allowance of 20 per cent. which has now been raised to 40 per cent. and concealed subsidies to enable shipping to carry exports and imports at low freight rates are some of the important forms—as mentioned in the Report—in which financial aid is given to national shipping by other maritime lands. The Estimates Committee have emphasised that Indian shipping companies have "played a very significant role in maintaining the maritime traditions of the country against heavy odds." They have stressed the fact that, "in view of the expanding economy of the country, there "is a heavy demand of shipping for carrying her export and import trades." They have added that "utilising foreign shipping for this purpose means a heavy drain on the foreign exchange resources." In view of all these factors, the Estimates Committee have recommended that the question regarding the terms and conditions of the loans, as regards the quantum of loans, as regards the rate of interest and as regards the period of repayment, as demanded by the Indian National Steamship Owners' Association, "should be considered sympathetically by Government and every encouragement given to the shipping industry." It is hoped that this categorical recommendation of the Estimates Committee, consisting of thirty members of the Lok Sabha, will not be ignored by the authorities concerned but will be implemented without any delay.

As regards operational subsidies, the Estimates Committee have referred to the following assurance in the Industrial Policy Resolution of April 1956: "When there exists in the same industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them." The Estimates Committee have then stated their views in this connection in the following clear and emphatic terms:

" Keeping in view the above Policy Statement, and the pressing need of developing Indian shipping, the Committee suggests that the question of giving operational subsidy to avoid closing down of certain essential services (as has happened in the case of India-U.K. passenger service) may be reconsidered. As the Government is indemnifying the Shipping Corporations in the public sector against losses for a certain period subject to reimbursement out of subsequent profits, similar facilities may be extended to the private sector also, *in the larger interest of Indian shipping* as a whole" (italics ours).

We must congratulate the Estimates Committee on the high sense of justice and fair play which they have thus shown for recommending equal treatment to the shipping services irrespective of the fact whether they are started by the State or by the people.

Relief is Other Directions

Representations have been made to the Government by the shipping companies for affording them relief in a variety of other directions. To make the proceeds from sale of ships exempt from income-tax and capital gains tax, to exempt the profits ploughed back into the shipping industry from income-tax, to exempt ships' stores and bunkers from customs duty and sales-tax are some of the important demands made by the shipowners. "Keeping in view the assistance that is being given to the shipping industry by other countries," the Estimates Committee have requested the Government that the representations made by the shipowners "be examined sympathetically." They have added that all reasonable facilities should be given to the shipping industry at the present stage of development. There can be no doubt that, if the Government would be pleased to implement the recommendation of the Estimates Committee mentioned above, they would not only make it possible for Indian shipowners to go in for a very rapid expansion of Indian tonnage but also considerably help them to place the Indian shipping industry on a permanently sound and economic basis.

The Committee have welcomed the decision of the Ministry of Transport in placing "new building orders in the Continental yards and purchasing a tanker even to the extent of exhausting the entire amount of Rs. 37 crores provided by the Planning Commission in the second Five-year Plan." Looking to the onward trend in the present market and the uncertainty of securing fixed time-schedules of delivery, the Committee have recommended that "the Ministry should take effective steps to secure the requisite funds from the Planning Commission without which it would not be possible to procure any tonnage even in the third Plan and the industry will have to face the same situation which it is facing now." We trust that these wise words will not only be heeded but acted upon by those who have got the power to shape the destiny of shipping in this country.

Serious Drain

The Estimates Committee have shown great awareness of the serious drain which has been made on our foreign exchange resources in the absence of a substantial merchant navy of our own. They have pointed out that Government had to pay more than Rs. 96 crores as freight to foreign vessels for import of foodgrains alone on Government account during 1950-55. They have also referred to the large amount of charter-hire money, over £24 lakhs for the coastal and over £91 lakhs for the overseas trade, involving a great drain on the foreign exchange pool, which the country had to pay between 1951 and 1955. They have added that these very large figures "do not include expenditure on charters for import trade which is met from overseas purchase." They have also referred to the conservative estimates of the annual freight bill of no less than Rs. 140 crores paid by India to non-Indian shipping lines for the movement of goods and commodities to and from foreign countries. They have invited the pointed attention, in this connection, to the observation of Mr. C. H. Bhabha, that, "if only through a systematised and properly evolved policy, 20 per cent. of this total freight annually is laid by for investment in ships for the next few years, the day may not be far off when India could claim for the modest target of two million tons of shipping visualised and recommended by the Shipping Policy Committee as far back as 1947." They have indicated the manner in which the earnings in the overseas trade have witnessed a rise from Rs. 7½ crores in 1950-51 to Rs. 10.50 crores in 1954-55 and have shown by quotations how shipping is a great earner of foreign exchange.

As a result of their examination from all these points of view, the Committee have recommended "the need of assigning a *higher priority* to the development of the shipping industry as a resourceful potential instrument of earning foreign exchange" (italics ours). We hope and trust that this clear recommendation for according a higher priority to the development of shipping will find a ready and adequate response from the Planning Commission and the Ministry of Transport.

The Committee have also expressed the hope that the Government of India would negotiate with the World Bank, as well as with the Exchange Banks in other maritime countries, for securing at least the minimum amount of loan assistance required for the essential development of the shipping industry in India. They have also requested the Government to examine the suggestion made by Mr. Bhabha regarding the procurement of loans through marketable bonds. They have further requested the Government to examine the feasibility of getting a few ships from the reserve fleet of the U.S.A. against a long-term loan and to associate shipowners in connection with this matter for their specialised knowledge of the industry. These important recommendations of the Estimates Committee will merit, we hope, the immediate and favourable consideration of the authorities at New Delhi.

The Estimates Committee have pointed out that the country actually remitted more than Rs. 22 crores, by way of foreign exchange, from 1952 to June 1956, as the purchase price and/or construction cost of additional tonnage. This does not cover the very substantial amount running into crores which will have to be remitted hereafter. They have, therefore, carefully examined the expansion of the building capacity of ships in this country. They are of the opinion that, even when the second shipyard comes into being within the second Plan period, it will only mean a building capacity in the country of about 120,000 g.r.t. of shipping per year. That will not meet the needs of the country. It is the opinion of the Estimates Committee that the planning for a third shipyard, to be established during the period of the third Plan, should be started from now. It is their definite conviction that "it should be our objective in planning, not merely to build the ships required for mercantile purpose on the high seas and for coastal traffic but also the ships required for our navy. The ultimate plan should provide for building ships for other countries in South and South-East Asia in competition with other suppliers." There will be universal agreement in the country with the way in which the Estimates Committee consider the role which the shipbuilding industry should play in the reconstruction of this great country.

Utilisation of Capacity

The Estimates Committee have also indicated that, at the end of the second Five-year Plan, the total imports and exports in the major ports alone are anticipated to be 32 million tons. They have also remarked that steps should be taken as early as possible to rationalise the carriage of traffic between rail and sea in such a way that the coastal shipping is utilised to its full capacity in the wider interest of the country. They have called it unfortunate that no representative of the shipping interests, which are vitally concerned in the matter, was included in the personnel of the Rail-*cum*-Sea Co-ordination Committee. They have not hesitated in emphasising the fact "that the policy of allowing chartering of vessels for coastal trade is not in keeping with the policy of 100 per cent. reservation of coastal trade" and have advised that the use of charter vessels for normal trade purposes on the coast should be avoided. They have further recommended that "the Ministry should also enforce gradual reservation of coastal trade in wet cargo for Indian shipping companies until foreign participation is completely eliminated, as the 100 per cent. reservation of coastal trade for Indian shipping companies will be achieved only when the entire cargo on the coast in both dry and wet is lifted by Indian shipping companies."

The Committee have also suggested that the question of acquiring more tankers in the private and/or public sector for the import of crude oil from abroad should be given serious consideration. They are convinced that certain passenger services should be maintained and run, if necessary, at some financial losses in the initial stage. As the Indian flag participation in the India-U.S.A. trade is conspicuously absent at present, they have called upon the Ministry of Transport to examine that question, in consultation with the representatives of the Indian Shipping Companies, in all its aspects and devise ways and means so that Indian shipping could participate in that important trade. The country is deeply indebted to the Estimates Committee for the comprehensive manner in which they have analysed the present shipping problems and the constructive way in which they have made recommendations for building up a merchant navy worthy of this country.

The Estimates Committee have invited again and again the attention of the authorities concerned to the sad lack in this country of the vital statistics connected with shipping and trade. They could not receive from the Government any information in regard to the total freight bill of India. They did not receive any proper statistics as regards the total volume of cargo carried by the foreign flags in the overseas trade. No particulars could be obtained in regard to the total cargo imported on account of the Central and State Governments and the freight paid thereon. No such vital statistics on these important subjects as well as on other subjects of equal importance are available in this country. We would, therefore, join our humble voice to the strong request made by the Estimates Committee that the Government should lose no time in collecting, collating and presenting these statistics to the public at regular intervals.

In congratulating once again the Estimates Committee on their excellent report and in offering the country's grateful thanks for the very valuable and the constructive suggestions that they have made, we share their hope that "the day is not far off, when a continuous chain of Indian ships, under the tricolour, will constantly girdle the globe carrying her message of universal peace and brotherhood." The ushering of the dawn of that great day lies in the hands of the Planning Commission and the Ministry of Transport and we wish them all strength, all success and all good luck in their great endeavour for that purpose.

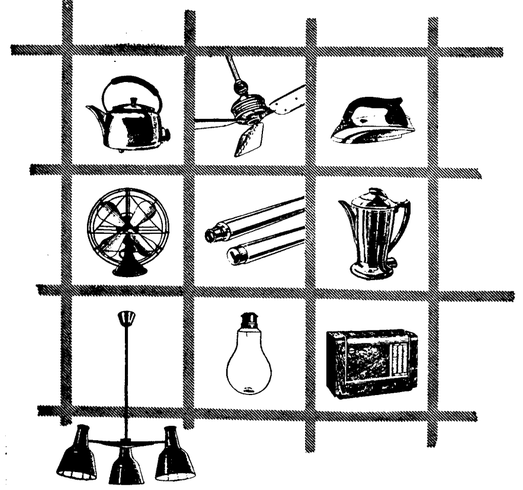
SPEEDING TURNROUND IN PORTS

The Inland Water Transport Committee of the International Labour Organisation, at its meeting held in Hamburg from 11th to 23rd March 1957, recommended introduction of schemes for regularisation of employment of dock workers, adoption of practical methods for improving organisation of work at the docks and the desirability of accepting new types of mechanical equipment and new methods of work when they are efficient, economic and safe, with a view to speeding up the turnround of ships in ports. A resolution adopted by the Committee observed that it was desirable that a concentrated effort be made to introduce practicable methods of improving organisation of work and output in ports. A quicker turnround of ships, it held, could make a substantial contribution to raising general economic efficiency. This increased productivity, the resolution added, could and should be achieved through the use of improved methods rather than by excessive effort. Such improvements were expected to be reflected in better social standards in which dock workers should have their fair share.

The following steps were also recommended: (i) Schemes for the regularisation of employment of dock workers, where they do not already exist, should be developed; (ii) the competent authorities or employers, or both, should take all practicable steps to ensure that new methods of improving organisation of work or the introduction of new equipment do not lead to sudden or arbitrary dismissals; (iii) there should be appropriate machinery involving consultation with employers' and workers' organisation at port level and, if desired, at the national level; (iv) the prompt settlement of grievances and disputes and, in particular, those based on rates of pay or the strength of gangs for particular cargoes and circumstances; and (v) there should be efficient systems of communication between all concerned in order to inform the docker on all matters relating to his condition of employment.

The application of work study techniques to port work, the Committee noted, had the prospect of material assistance in determining methods of increasing efficiency. Various suggestions were also made for the effective introduction of schemes of payment by results. The Committee further observed that it was desirable to accept new types of mechanical equipment, whether they were for use on boardship or on the quayside, and new methods of work, when they are efficient, economic and safe. It was also desirable, it said, that they should contribute to easing the work of the dock worker and to speeding up the turnround of ships. To increase the efficiency of the port industry in relation to matters other than labour, the Committee urged that special attention be paid to co-ordination problems, the adjustment of time-tables and various specific administrative steps.

G.E.C. means BEAUTY AND COMFORT...



...IN EVERY HOME

WORLD SUGAR PRODUCTION TOUCHES ALL-TIME RECORD

PRICES, HOWEVER, RULE FIRM

THE current sugar season (1956-57) will go down in the history of the world sugar trade as the most eventful, in that the season has witnessed an all-time record production. The aggregate world output of sugar during the season is estimated at as much as nearly 43 million tons (raw value), representing a rise of over one million tons as compared with 41.98 million tons produced in 1955-56. The whole of this increase is accounted for by cane sugar, the anticipated production of which amounts to 27.32 million tons, as against 26.01 million tons. The beet sugar output, however, has suffered a setback, albeit slight, the estimate for the season being 15.68 million tons, as against 15.88 million tons; it is, of course, higher by 770,000 tons as compared with 1954-55.

The rise in world cane sugar output in 1956-57 has been shared by practically all the major producing countries, with the exception of Brazil, the Philippines and Indonesia. The improvement is particularly marked in Cuba, the actual extent of the increase being 558,000 tons. India accounts for a rise of 185,000 tons, Hawaii for 75,000 tons, Australia for 62,000 tons and Mexico for 57,000 tons. Sugar production in Brazil, however, is expected to be lower by 118,000 tons, in Indonesia by 41,000 tons and in the Philippines by 12,000 tons. The decline in beet sugar production has occurred despite an appreciable expansion of 410,000 tons to 4.15 million tons reported by the U.S.S.R. The U.S. and the U.K. also have reported an increase of 82,000 tons and 39,000 tons, respectively. Most of the European countries have experienced a failure of beet crop. The fall in output is especially sharp in France, being 230,000 tons. The production in Italy is placed lower by 208,000 tons, in Czechoslovakia by 182,000 tons, in Western Germany by 140,000 tons and in Poland by 87,000 tons.

Trend of Production

An idea of the trend of sugar production—cane and beet—during the current season as compared with the two previous seasons can be had from the following statement:

(In thousand tons—raw value)

	1956-57	1955-56	1954-55
Cane Sugar			
Cuba	5,222	4,664	4,456
India	5,037	4,842	4,557
Brazil	2,205	2,323	2,337
Australia	1,197	1,135	1,285
Hawaii	1,075	1,000	1,018
Philippines	1,075	1,087	1,224
Puerto Rico	1,070	1,028	1,040
Mexico	925	878	1,054
Formosa	850	800	754
British West Indies	810	779	848
Indonesia	800	841	903
Other countries	7,053	6,722	6,494
Total	27,319	26,099	25,970
Beet Sugar			
U.S.S.R.	4,150	3,740	2,855
U.S.A.	1,763	1,681	1,824
France	1,375	1,605	1,660
West Germany	1,136	1,276	1,295
Poland	985	1,072	1,132

Despite the substantial improvement in sugar production as noted above, the world sugar markets have been ruling distinctly firm in the past year, although the firmness has abated lately. Cuban raw sugar in the New York market, which had gone down to as low as 3.13 cents per lb. (f.a.s. Cuba) on 7th May 1956, that is, 0.12 cent below the World Sugar Agreement minimum, touched a peak of 6.75 cents on 15th April 1957; the currently ruling price is lower at 6.40 cents. The firmness in sugar prices must be attributed principally to the large purchases made by European countries, following a setback to the beet crop, not to speak of the effect of the Suez crisis. These countries which were until recently net exporters of sugar have almost turned out to be net importers. This change in status has come about at a time when the Cuban sugar stock is much reduced. Notwithstanding an increase in its sugar production, the U.S.S.R., traditionally an exporter to the free market, has also bought large quantities of sugar, the total bought since the beginning of this year being 410,000 tons, of which about 150,000 tons of raw sugar were purchased only recently from Cuba at a net price of 6.06 cents per lb. f.a.s. It may be recalled here that world consumption of sugar itself has been steadily going up. On the basis of the trend of consumption in the past few years, the total quantity that will be consumed during 1957 may be estimated at nearly 42 million tons.

It is in view of the continued firmness in world sugar markets and with a view to checking any tendency of spiralling prices, it will be recalled, that the International Sugar Council announced on 31st January last removal of all restrictions on sugar exports by member-countries during the current year. The Council also called upon all the participating countries to release immediately to the free sugar market the minimum stocks held by them under the World Sugar Agreement. Following these steps, sugar prices were expected to come down. This expectation, however, has not been fulfilled. With demand for sugar from a large number of countries still buoyant, "there is," to quote a report, "little prospect of any easing in supplies until the European beet crop is harvested towards the end of the year."

Considering the aforesaid prospects and the need for more foreign exchange, the reported decision of the Government of India to allow a further quantity of 100,000 tons of sugar for export, in addition to the 100,000 tons already permitted, must, indeed, be widely welcomed. This additional export will fetch for the country a further Rs. 8 crores of foreign exchange. There is no need for domestic consumers to have any uneasy feeling on this score, as there is plenty of sugar in the country.

EXPANSION OF SUGAR INDUSTRY

Production of white sugar in India during 1956-57 is expected to aggregate 2.0 million tons. This was stated by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, while addressing a meeting at the Doiwala Sugar Mills (now under Central Government control) at Dehra Dun the other day. With increased production, India was, Mr. Jain said, already establishing itself as a permanent exporter of sugar, and much of the credit must go to the large number of cane growers and workers in sugar factories. He recalled that, in 1953-54, India produced a little over 1.0 million tons of sugar and had to import sugar worth about Rs. 60 crores. But now India had exported 100,000 tons of sugar, thereby earning Rs. 8 crores of foreign exchange, so vitally needed for the implementation of the second Five-year Plan.

The Minister referred to the large-scale development of the sugar industry envisaged in the Plan and alluded, in particular, to the establishment of a large number of factories by cane growers on co-operative basis; out of the 57 new units licensed, co-operatives accounted for 38 units. When the programme was initiated, many, he said, felt sceptical about its success, but results achieved so far had belied their suspicions. The sugar industry had good prospects and "the cane growers can take advantage of it through co-operative factories which will help them to improve their standard of living and develop the countryside. According to him, the Government of India had decided to advance Rs. 10 lakhs or more to State Governments per factory for investment in co-operative undertakings and about Rs. 50-60 lakhs were given by the Industrial Finance Corporation of India.

SUGAR PRODUCTION IN TANJORE

The Government of India has turned down the request of the Tanjore District Planning Board to start a co-operative sugar factory in the district on the ground that licences have already been sanctioned for three factories sponsored by private individual promoters and that the extent of area under sugarcane cultivation in the district is negligible, and that, even including the additional acreage that can be brought under sugarcane cultivation, the quantity of sugarcane that can be grown will be just sufficient to feed the three sugar mills. The Government has also mentioned that all the four co-operative sugar mills envisaged under the second Five-year Plan have already been allocated to other districts where the area under sugarcane cultivation is much larger. It has instructed the State Government to adopt a go-slow policy in the matter of starting new sugar mills and to see that the two important conditions, that the requirements of the factory with regard to the quantity of sugarcane can be grown within the operation of the factory and that at least a minimum of Rs. 8 lakhs has been raised as share capital, are fulfilled before entertaining any proposal.

SUGAR PRODUCTION AND STOCKS

More than 1.70 million tons of white sugar came off the crushing plants of sugar mills in India during the 5½ months ended 15th April 1957, as against 1.55 million tons in the corresponding period last year, or a rise of 155,000 tons. The total despatches in the same period amounted to 944,000 tons, as against 735,000 tons. The closing stocks with the factories as on 15th April 1957 aggregated 1,285,000 tons, the figure for the same date in 1956 being 1,221,000 tons.

Q. 35

SAFETY IN COAL MINES

COLLIERY MANAGERS CRITICISE DRAFT RULES

THE serious accident which occurred in Burro Dhemo Colliery, near Asansol, in September 1956 brought once again to the forefront the problem of safety in coal mining. The Committee which inquired into the accident, in its report, emphasised that, with a little precaution and certain essential equipment, much suffering could have been avoided. There are no two opinions on the fact that an element of risk is inherent in all mining operations, but the problem is one of improving the safety and reducing accidents in coal-mining operations. The draft rules called the Coal Mines Regulations (in replacement of those of 1926), published by the Ministry of Labour, Government of India, in November 1956 for eliciting public opinion, are meant to improve safety in coal mines.

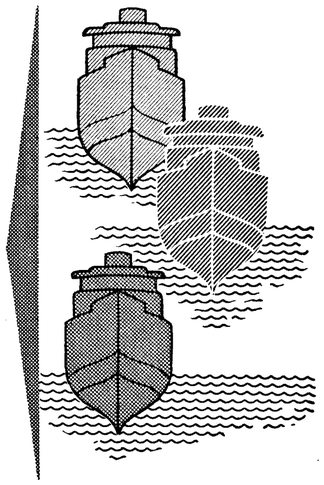
The colliery owners contend that some of these rules are rather too rigid and the existing regulations are quite sufficient to serve the desired purpose. They feel that what is required is advice as to the methods whereby safety can be improved and not rigid enforcement of rules. It is also pointed out, in this connection, that much of the vexation is avoidable, because in some spheres the functions of the Ministry in charge, the Coal Board and the Inspectorate of Mines, have not been clearly defined and in some others they even overlap. Research into the causes of accidents and disease and into methods of safer mining is yet in an elementary stage. These rules which define the duties and responsibilities of the various persons concerned with mining operations, have been criticised by colliery managers as well on the ground that they are very drastic and are designed to throw heavy responsibilities on the managers and to bring about radical changes in their position in relation to the mines and miners under their charge. They are very much perturbed that, under the impact of these regulations, their own safety is likely to be endangered. The Indian Mine Managers' Association has, in this connection, submitted to the Government of India various comments and suggestions on the draft rules, some of which have been incorporated in the amended draft, but there are still several points on which the Association does not agree.

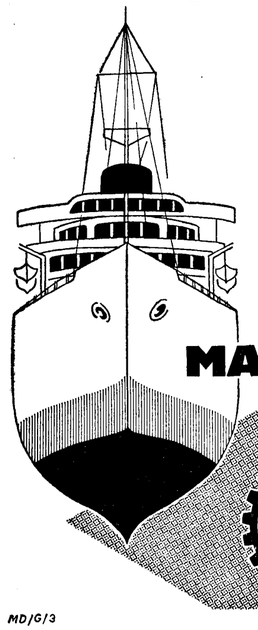
According to Mr. P. S. Jagpal, Chairman of the National Association of Colliery Managers (Indian branch), Raniganj, the provisions of the new draft regulations have gone too far in apportioning an unduly heavy burden of responsibilities on colliery managers. Addressing the annual general meeting of the Association, held in Jharia a few days ago, he said that the responsibility should be distributed at different levels, thereby making each worker conscious of his duties and obligations. The problem of safety in the colliery would hardly be solved simply by making the manager solely responsible for anything and everything. Referring to the present labour laws, which, according to him, were too cumbersome. Mr. Jagpal suggested that where a case involving danger to life and property in a mine was to be tried, it should be done so only by specially constituted technical courts, having a certain number of members drawn from technically qualified mining personnel.

Mr. Jagpal pointed out that discipline was vital to safety and efficiency and the existing legislation should be suitably amended to relieve the manager from the purview of non-technical responsibilities, such as labour laws, welfare provisions, etc. In this connection, he referred to the practice prevalent in the U.K. where the Coal Board had provided a qualified assistant to each manager to enable him to devote more attention to the technical side of his duties. To improve working conditions and to ensure safety in the mines, safety officers and ventilation officers should be employed in larger mines or group of mines. This would indirectly improve efficiency as well.

He also urged that proper facilities be given for the training of technical personnel in an efficient and effective manner, so that they may be helpful in increasing production. Surveyors should also be given their due status in the new set-up to encourage people with higher education to enter the profession. Mr. Jagpal also pointed out that a few years of planning was necessary before any colliery reached the stage of economic production. It was, therefore, expected of the planners of the nation to give a clear-cut directive in this connection before it was too late.

The vessels converted, refitted or repaired at* MAZAGON DOCK *include many owned by leading shipping companies.





The ship repair facilities of Mazagon Dock have served the vessels of many countries over a considerable number of years. Thousands of tons of steel and timber have been used on ship repairs. Thousands of Indians have found employment here and hundreds have qualified themselves as engineers. The high standard of ship repair service rendered by Mazagon Dock has earned for it the reputation of Western India's most dependable ship repairers.

EXPORT DUTY ON TEA

SLAB SYSTEM NOT TO BE REPLACED BY "AD VALOREM" DUTY

THE Government of India is reported to have informed the Federation of Indian Chambers of Commerce and Industry that it is not possible to replace the existing slab system of export duty on tea by an *ad valorem* duty, which has a great advantage, in that it adjusts itself to the level of prices. The main ground on which the Government has ruled out the *ad valorem* duty is that it is administratively impossible to introduce it.

It will be recalled that the present slab system of export duty was introduced in March 1955, the duty being fixed on the basis of the weighted average prices of all Indian teas sold in the London auctions during the previous month. This replaced the flat rate duty which was being levied till then. Export duty on tea was levied for the first time in February 1947, when the rate was As. 2 per lb. The Government then gave an assurance that the levy was a temporary one and would be withdrawn if it hampered exports in any way. The duty was later raised to As. 4 per lb. and was maintained at that level till it was further enhanced to As. 7 in October 1954. The reason for the enhancement was that tea prices had shown a rising trend at the auctions and the Government wanted to mop up a portion of the tea companies' profits. In January 1955, there was a further increase in export duty to As. 10 per lb., before it was replaced by the slab system, under which the duty varied from As. 4 to As. 12 per lb.

The Government of India is of the view that the *ad valorem* duty introduces an element of uncertainty regarding the price, which may militate in some way against entering into contracts for sale. Besides, there are administrative difficulties in implementing an *ad valorem* rate of duty. For the price of tea varies according to grade and from one producing district to another and from sale to sale. Furthermore, the Government points out, there are different methods of sale of Indian tea—some quantity is sent on a consignment basis to London for auctions there, some sold on forward contracts, while a substantial quantity is being sold in the Calcutta and Cochin auctions. An assessment of the price, which tea sent on a consignment basis to London auctions will fetch, will be very difficult.

The slab system of export duty is no doubt preferable to a fixed duty, but tea producers and traders feel that the wide gaps in the present slab system give rise to speculations about a possible rise or fall in the export duty, which, in turn, dominate the whole trade and upset the stability of the tea market. The experience of 1956 shows that the slab system induces shippers and buyers for outmarkets to regulate their activities towards the end of a particular month in order to take advantage of a fall or to avoid a rise in export duty. Moreover, as Mr. H. B. Kanoi, Chairman of the Tea Association of India, pointed out at the first annual general meeting of the Association held early this week, the "variations in export duty prove irritating to the overseas buyers, as they alter their buying programme whenever the duty is increased in India and they prefer to purchase teas from alternative sources which results in loss of trade to India."

The competition to Indian tea in overseas markets, particularly in the U.K., is growing. The major portion of Indian tea is of common variety known as "common teas," the largest market for these teas being the U.K., where they face keen competition from East African teas. East Africa is able to sell at considerably low prices, because the cost of production is very low as compared with that in India, the main contributing factor being the availability of cheap labour. Expressing the concern of Indian tea planters at the rapid progress which East Africa is making in extending its area under tea, Mr. Kanoi said that, in course of time, it would be difficult for Indian teas to face the severe competition from East Africa, unless suitable measures were adopted by the Government of India to improve the competitive position of Indian teas. Mr. Kanoi suggested that the International Tea Agreement should be revived, covering all producers, old and new, and statistical control should be overall and strict. He added that if the Agreement was signed without participation of countries, other than the signatories of the previous Agreement, which had growing surpluses for export to world markets, then they would be able to expand their exports at India's cost.

Another suggestion made by Mr. Kanoi for promoting tea consumption both abroad and internally, was to do extensive propaganda, on which depended, to a large extent, the future of the Indian tea industry. There are certain promotional activities undertaken by the Tea Board, but Mr. Kanoi complained that the full amount of cess collected for that purpose was not being utilised. Out of the sum of about Rs. 2 crores collected from the cess, only a small sum was being spent, the balance accumulating in the general revenue of the Board. Mr. Kanoi said that this should not be the case and the industry which paid for its own propaganda must get the necessary service through adequate publicity.

Mr. Kanoi also enumerated the various other problems with which the industry was faced, namely, inadequate storage facilities for tea in Calcutta, the heavy tax burden following the imposition of high export duty, West Bengal entry tax and Assam Road and inland waterways tax, transport difficulties, inadequate finances and low labour productivity. He added that the industry suffered greatly from a generally low capital structure and the large sums required for seasonal working expenditures.

Replying to the demands of the industry, Dr. B. C. Roy, Chief Minister of West Bengal, who inaugurated the meeting, promised to look into the warehousing problem in Calcutta. He, however, categorically stated that the West Bengal entry tax on goods could not be dropped. Abolition of the tax would mean a loss of Rs. 2 crores to the State's exchequer. He wondered why the industry should ask for reduction of taxation when its business had been fairly satisfactory, despite all difficulties. He advised the tea industry to look to the interests of the country as a whole instead of considering group and individual interests. The industry's demand for withdrawal of taxes and the President's report of an all-time record of tea exports and satisfactory prices in 1956 seemed to Dr. Roy to be contradictory. If the industry could maintain an export quota at so high a figure and if prices were reasonably fair, in spite of all taxes and competition, he saw no reason why they should not do so in future.

The time had come, Dr. Roy said, when shareholders should also make some sacrifices and contribute to the development of the country. He was told that some of the companies gave as much as 40 to 50 per cent. dividend to shareholders. Dr. Roy suggested that tea companies should curtail their dividends to shareholders to 6 to 7 per cent. This economy would help companies to build up their reserve funds for expansion, he said. The tendency to have a fairly high profit with limited capital was disastrous to the industry in the long run.

(*Concluded from next column*)

surmountable. Unless, however, the percentages of the various grade of jute and mesta to be grown are fixed, it is doubtful whether the production of good quality jute will show any appreciable improvement.

BOARDS FOR LAY RACES OF JUTE LOOMS

The Indian Standards Institution has published a specification for boards for lay races of jute looms. A lay race is made of a thin wooden board and is fixed on upper surface of the lay of a loom; the shuttle travels along the length of the race during its passage from one shuttle box to the other.

The standard lays down general requirements, such as freedom from defects and from knots. The specific requirements prescribe the slope of grain, species of timber and minimum dimensions of boards. The dimensions and tolerances in dimensions of lay races are not specified in this standard, since they are shaped to the correct size in the consumers' workshop.

The recommended code of practice for the manufacture of boards for lay races along with a list of approved species of timber and their short description is given in the appendices to the standard. It is hoped that the short description of the approved species of timbers will be useful both to the manufacturers and users of lay races in selecting the proper species of timber for their requirements. It is expected that this standard would be of use to the manufacturers especially those operating on cottage industry basis in making boards for lay races of acceptable quality and to purchasers in acquiring dependable supplies.

NEW JUTE CROP DELAYED

MESTA OUTPUT GROWS

THE raw jute market has been ruling steady during the last ten days, with an all-round increase in prices for all varieties. Thus, Indian Northern Bottoms are being now quoted at Rs. 30 per maund, as against Rs. 29 on 26th April. A similar rise is noted in Assam Upper Bottoms at Rs. 30 and in Local Daisee Bottoms at Rs. 32.50. The main contributory factor for this rise is the delay in sowing, due to drought in almost all areas, which has induced sellers to be reserved, in the expectation that they would be able to get better prices if the drought prolongs.

Usually, at this time of the season, there is heavy selling in new crop at a price below the old crop, but this year, little new crop has been sold, due to the delay in sowing. It is expected that the new crop will start coming into the market a month later than usual, provided the drought is not prolonged further. It is, however, stated that there is a fair quantity of stocks in the bazaar, which, together with the stocks on hand, will enable the mills to carry on for some weeks.

At higher levels, however, there is some resistance on reports that the current year's production of mesta has been encouraging. The all-India final estimate of mesta for 1956-57 places the current year's area and production at 738,000 acres and 1,474,000 bales (of 400 lbs. each), as against the partially revised estimate of 572,000 acres and 1,159,000 bales, respectively, for 1955-56. This shows an increase of 166,000 acres or 29 per cent. in area and 315,000 bales or 27.2 per cent. in production over last year.

The increase in area during the current year has been shared mainly by West Bengal, Bombay and Bihar, and has been attributed to favourable climatic conditions at the time of sowing. Some minor decrease in acreage during the current year has, however, been reported from Mysore and Madhya Pradesh. The overall increase in the current year's production has been shared by almost all the States, except Andhra Pradesh and Madhya Pradesh. The increase is marked in the case of West Bengal, Bihar and Bombay and has been attributed partly to increase in acreage, and partly to favourable climatic conditions at the growing period of the crop.

The aforesaid output of mesta for 1956-57, together with the production of 4.22 million bales of raw jute, places the total supplies of raw material from India at 5.69 million bales, as against 5.30 million bales in the previous year. The stocks with mills at the beginning of the season aggregated 1.02 million bales. The imports of raw jute from Pakistan during the first seven months of the current season amounted to about 380,000 bales. As against these supplies, the total estimated consumption by mills in India during the current season is estimated at 6.2 million bales.

It will be recalled that the high level conference of the representatives of the Government of India and the jute industry held in Calcutta recently discussed, among other things, the mills' requirements of different qualities of jute, their availability within the country and possibilities of augmenting supplies of each variety in an appropriate order of priority. The conference also discussed the policy governing the acreage to be planted with mesta in relation to the total estimated demand for raw materials of the industry in 1960-61. It is stated that the consumption of mesta by mills is steadily growing. It is feared in some circles that the growers will switch over from production of jute to mesta in some areas, in view of the lower cost of production of mesta. The area under mesta production can be more widely distributed, because it can be grown under different climatic conditions, so that the shortfall in output in one area due to adverse weather can be made good by the larger supplies from other areas. It can also be grown in a shorter period than jute. Further, the quality of mesta has been improved considerably in recent years, so that it can very usefully supplement raw jute in production of jute goods. It, cannot, however, completely replace raw jute, as the latter has its own advantages and high quality jute is required for producing certain varieties of jute goods. It is true that India is dependent on Pakistan for the minimum quantity of high grade fibre used in the manufacture of bright hessian. But the difficulty of obviating this dependence is not in-

PROBLEMS OF NON-FERROUS METALS INDUSTRIES

NEED FOR ADEQUATE STOCKPILES STRESSED

NON-FERROUS metals manufacturers can look upon the first Plan period with considerable satisfaction on account of the fact that the industry's performance during the period, as Mr. P. R. Kamani, President of the Indian Non-Ferrous Metals Manufacturers' Association pointed out, has indeed been "creditable." In his presidential address to the annual general meeting of the Association held last week in Calcutta, Mr. Kamani observed that during 1951-56 the production capacities and actual output of the non-ferrous metals industries showed an all-round improvement. Quoting figures to substantiate the claim, he pointed out that production of copper last year was an all-time record. Monthly production of aluminium reached its peak in 1956. Production of copper, aluminium, lead and antimony was estimated at 7,628, 6,500, 2,496 and 589 tons respectively. Mining operations in lead and its subsequent smelting have also made rapid strides during the past five years and the expectation was that production of zinc and lead will increase considerably in the immediate future.

Non-ferrous metals manufacturers, Mr. Kamani pointed out, are aware of the important role they have to play in the fulfilment of the Plan. The growth of the industry has been in a large measure due to the liberal policy of the Government in the import of virgin and scrap metals. The country, he suggested, should continue to import such metals, despite the difficult foreign exchange situation in order to ensure an adequate supply. Another aspect of the question of metal self-sufficiency to which Mr. Kamani drew pointed attention was the desirability of ensuring an adequate stockpile of metals in the country with the Government or with private individuals. The U.K. and the U.S. have shown how stocks could be built up whether for strategic or civil purposes and how valuable they were in times of scarcity. Mr. Kamani was doubtful if measures could immediately be taken to facilitate large build-up of metal stocks in the country. But he urged that the policy should be such as would facilitate a free building up of stocks by the trade. The Government of Japan, Mr. Kamani pointed out, has participated financially in companies formed among the industry and the trade to purchase and sell in a manner which would help the free inflow and outflow of the metal, and ensure adequate metal stocks in the country. Explaining the Government's stand on this point, Mr. Manubhai Shah, Minister for Heavy Industries who also addressed the meeting, pointed out that though it was desirable to have sufficient stocks, in view of the difficult foreign exchange situation, it was "incongruous" to think of large-scale stockpiling of non-ferrous metals.

Forward Market in Metals

Regular inflow of metals into the country, Mr. Kamani said, will be accelerated by the existence of a properly constituted forward market in metals and to this extent he welcomed the steps now being taken by the Forward Markets Commission to regularise the rules of the Bombay Metal Exchange and give it official recognition. He expressed the hope that in doing this, the Commission would give its earnest consideration to questions such as the desirability of making contracts of the Exchange of the transferable specific delivery type, the enforcing of a system of security deposits, the regularising of membership categories and membership strength on the Exchange, the desirability of having a machinery for quick and effective settlement of disputes, the laying down of proper procedure for emergency clearance and adequate representation to manufacturers on the executive committee of the Exchange. These steps, he emphasised, would, however, be no substitute for adequate prospecting and exploration of the country's resources. Such investments have in the past proved productive of results and with intensified activity in the same direction, dependence on imported raw materials must increasingly diminish.

Metal self-sufficiency, which all these steps must jointly ensure, is ultimately in the interest of the user industries which draw on primary metals and scrap for their raw materials. This section of the industry has made rapid strides in the past and is fast expanding. But in some branches, particularly rolling of sheets and rods as also of alloys and castings, there is the problem of excess capacity. In these, the problem is one of re-conversion into lines of work which have a comparatively ready demand. While the import policy has generally been very helpful in the utilisation of indigenous capacity, there is still need for effecting modifications in it in the light of later developments in the industry. As an instance, Mr. Kamani pointed out that there is no need for importing items such as brass rods, bronze rods, brass and bronze wires and aluminium foils. He did not suggest that import control should be introduced in respect of items which are only experimentally manufactured. But he averred that at a time when foreign exchange difficulties are acute, materials which are being manufactured here should not be allowed to be imported. It would be of some relief, Mr. Kamani held, to the non-ferrous rolling industry if some of its units were permitted to re-equip their mills for rolling of aluminium, thereby enabling utilisation of surplus capacity. Replying to this point, Mr. Manubhai Shah pointed out that as the development of certain engineering industries depended largely on the receipt of regular supplies of raw materials, the Government had to be somewhat liberal in allowing imports so as not to handicap the consuming industries.

With the expansion of industries under the public sector, the demand for non-ferrous products is bound to increase. Mr. Kamani suggested, therefore, that it would be desirable if the Development Wing of the Ministry of Commerce and Industries were able to assess the prospective demand for the products turned out by this sector, as a guide to the industry. He was also of the view that the Government should permit export of such exportable items as semi-manufactures of copper, and all tin, lead and antimony alloys.

Stores Purchase Policy

As regards the stores purchase policy of the Government, Mr. Kamani observed that it had been of considerable help to the industry in the past and hoped that with the progressive implementation of the recommendation of the Stores Purchase Committee, it would be more helpful in future. He urged the Government that in planning orders abroad, components which are capable of being manufactured within the country should be taken into account so that indigenous manufacturing capacity could be properly utilised. This, he continued, was of particular interest to manufacturers of alloys and castings who find that large orders for wagons and coaches placed abroad might deprive them of the demand for their own products such as axle boxes and bearings. He also pleaded for adequate co-ordination of the production of the civil sector of industry with that of the ordnance factories in order to avoid wasteful competition between the two.

Addressing the gathering, Mr. Manubhai Shah stressed the need for establishing smelting and metal producing units within the country even if these required use of imported ores. He explained that production of metals from imported ores was always more profitable than continuous import of metals. In respect of zinc, copper, lead, tin and antimony, he said, it was possible through trade agreements with countries possessing these ores to import them to India with a view to setting up production plants. But this should be considered, as the Minister rightly suggested, in the light of the electricity and power generation programme in India.

WORLD SHIPBUILDING

Lloyd's Register of Shipbuilding returns indicates how the world's yards have been getting busier every year, thanks to the unprecedented and growing demand on shipping space in the past few years. There were 1,598 vessels aggregating 8,381,697 gross tons under construction in world's yards as at the end of March 1957, showing an increase of 316,629 tons, as compared with the figure for the end of 1956, which itself had shown the substantial increase of 616,000 gross tons over the figure for the previous quarter.

Ships under Construction in World's Yards

As at 31st Dec.	No. of ships	Gross tons
1950	1,169	4,818,753
1951	1,212	5,494,065
1952	1,179	6,118,585
1953	1,136	6,294,876
1954	1,169	5,854,247
1955	1,452	6,612,641
1956	1,575	8,065,068
1957 (31st March)	1,598	8,381,697

A country-wise analysis of the tonnage under construction as at 31st March 1957 shows that Japanese shipbuilding activity has continued to expand while that of Britain has been decreasing. Japan increased the tonnage under construction in its yards by 69,645 tons to 1,433,835 tons over the quarter, while that of Britain decreased by 48,956 tons to 2,086,262 tons. Japan continued to lead world output with 586,545 tons launched and 481,172 tons completed during the quarter, as compared with 224,945 tons launched and 349,303 tons completed in Britain. The loss in output due to shipyard strike in Britain during the latter half of March is assessed at about 60,000 tons. As at 31st March, the Indian shipyards had under construction 12 ships aggregating 26,530 tons, five of which were motor ships of between 4,000 and 6,000 tons each and the rest small ships each under 1,000 tons, and aggregating 2,303 tons. There were also for registration in India, seven vessels of 35,450 tons under construction in foreign yards.

The total tonnage under construction in the world for countries other than the country of build amounts to 3,357,909 tons, of which 27.9 per cent. is being built in Japan, 17.2 per cent. in Germany, 14.0 per cent. in Great Britain and Northern Ireland, and 9.3 per cent. in Sweden. The countries "importing" the largest amounts of new tonnage are: Liberia (1,051,063 tons), Norway (566,844 tons), and Panama (530,573 tons), and the countries making the largest additions to their existing fleets are U.K. (1,785,745 tons), Liberia (1,051,063 tons), Norway (856,380 tons), Panama (530,573 tons), Japan (496,625 tons), the Netherlands (478,696 tons), Italy (439,175 tons), France (398,506 tons), and United States of America (361,990 tons). Oil tankers under construction in the world amount to 277 ships of 3,729,134 gross tons (116 steamships of 2,414,405 tons and 161 motor ships of 1,314,729 tons), which is 285,735 tons more than the previous quarter, and represents 44.5 per cent. of the total tonnage under construction in the world.

ENGINEERING EXPORT PROMOTION COUNCIL

Reviewing the activities of the Engineering Export Promotion Council, Mr. K. L. Chowdhury, the President of the Council, observed the other day at Calcutta that in spite of enormous difficulties the Council had been doing good work in promoting export of engineering goods. Sending trade delegations, organising exhibitions and opening of showrooms and offices in foreign countries were some of the methods adopted by the Council in popularising engineering goods. As a result of these measures many products exported from India have come to enjoy a reputation in foreign markets and the Council had been receiving regular inquiries from almost all neighbouring countries. It has also succeeded in getting over the reluctance of some manufacturers in this country and has made them export-minded to some extent. The Council had been carrying on surveys of various items of engineering goods and exploring the possibilities of their export to foreign countries. Besides, it had been conducting market surveys in different countries with a view to ascertaining the scope of exports to them. The Council was also collecting statistics regarding the export of engineering goods.

Mr. Chowdhury listed non-availability of pig iron and steel, lack of shipping space, high freight rates, competitive markets and prejudice of foreigners against Indian products as some of the main difficulties the Council had been experiencing in its attempt to develop export trade. The endeavours in overcoming some of these difficulties having proved fruitful, the Council proposes to make more vigorous efforts in the direction. Mr. Chowdhury said that during the current year, the Council would send two delegations to foreign countries—one to the Middle East countries and the other to Indo-China, Malaya, Singapore, the Phillipines, and Hongkong. It has also decided to send two groups of technicians to Japan and Western Europe with a view to making an on-the-spot study of various methods adopted by those countries to promote the export of their products.

NEW PRODUCTS AND PROCESSES

Device to Prevent Plane Collisions

A DEVICE to prevent airplanes from colliding while in flight is being developed by the Collins Radio Company of Cedar Rapids, Iowa, in the United States. The electronic device, called a "collision detection and avoidance" system, will not be ready for use until 1959. Meanwhile, the company has proposed the manufacture of interim equipment which would warn pilots of nearby planes. Based on radar, it would show the presence of aircraft ahead, behind, to the right or left, and above or below. Further development, expected to require considerably more research, would produce a device that would automatically determine if a nearby aircraft is on a collision path and advise the pilot of the necessary evasion action to take. The Iowa firm said recently that the first device—a proximity warning indicator—will be available to airlines early in 1958. The "collision detection and avoidance" equipment is to be ready the following year.

Miniaturised Nuclear Reactor

A miniaturised low-cost atomic reactor which is small enough to fit into any school, industrial or medical laboratory has been developed by Atomics International, a United States firm which specialises in development of the peaceful uses of atomic energy. According to Dr. A. B. Martin of Atomics International, the availability of this safe, simplified, low-cost reactor will open the door to widespread study and development in the nuclear field. The Laboratory Reactor is expected to do for the nuclear science field what the Model T Ford automobile did for the automobile industry. The reactor operates at a power level of 5 watts, and provides sufficient radiation for important studies in the engineering, biological and medical fields. It uses uranyl sulfate in a water solution for fuel and is housed in an 8-foot tank filled with ordinary water. Priced at $55,000, the reactor can be constructed, installed and ready-to-run at any location in less than six months, the manufacturers say.

Plant Growth Stimulant

Scientists of the United States Department of Agriculture (U.S.D.A.), working with a substance that induces amazing plant growth, are seeking to make their research work of practical application to world agriculture. The substance which has brought remarkable acceleration in plant-height growth—gibberellic acid—achieved these results with a number of plants on which it was used in a broad scope of experimental tests at U.S.D.A.'s Agricultural Research Centre at Beltsville, U.S.A. The researchers are now continuing their work in efforts to apply gibberellic acid's amazing power with benefit to agriculture in various ways. Preliminary studies at Beltsville show that gibberellic acid may have great potentialities for increasing rates of growth and, possibly, the productiveness of a wide variety of crop plants. Strangely, work with it to excite greater growth in plants is the result of original efforts to eliminate its restraining effects on the yields of rice grain in Japan.

Electronic Photograph Printing

A system which will inspect photographic negatives electronically and then automatically produce contact prints in which the variations of density in the original negative have been adjusted to give a uniform contrast is going into production in the U.K. The advantage of the system lies in the fact that it can be used to produce clear uniform contact prints of aerial photographic maps, of photographs, of blueprints, or industrial equipment, or of other commercially important photographic negatives when the original negative is partially fogged, or otherwise unclear. The operation of the system depends on the scanning of the negative by an electron beam which feeds the details of the original picture into a control unit. This control unit then reduces the density of each spot on the negative so that it matches up to produce a uniform suitably adjusted contact print.

Electronic "Mind"

A new type of electronic computing machine, which considers information given to it and then makes up its own "mind" in solving the problems presented to it, has been demonstrated in the United States by the Westinghouse Electric Corporation. The electronic "mind" was designed to control chemical processes too complicated for human operators to handle. The machine works at the problem by trial and error rather than solving equations as most electronic computers do. The machine tries one answer to a problem in control and if that does not work it tries another. Once it has the best answer to the problem it deliberately makes small mistakes in order to check its own performance and make sure that it really has the best answer.

Tiny Cooling System for Jets

A jet-powered refrigeration unit whose working parts can be packed into a ladies' handbag has been developed by the Carrier Corporation in the United States. It will be used in the air-conditioning system of the Douglas Aircraft Company's new DC-8 jet airliners, which have been ordered by a number of commercial airlines. Two of these units, each one powerful enough to cool seven average-size homes, will be installed in the new Douglas jet planes. The units have been designed to meet rigid requirements for substantial weight reduction. Each one weighs less than the average male airline passenger, the Carrier Corporation says.

It's a fact..

PROTECTION OF THE UNEMPLOYED

HOW IT IS ENSURED IN YUGOSLAVIA

THE efforts of economic enterprises to raise production results invariably surplus manpower. There is then a tendency to retrench this surplus labour which affects mainly the workers and employees with lower qualifications. However, this does not mean in Yugoslavia today that enterprises are free to dismiss workers unrestrictedly. On the contrary, in the majority of cases, the approval of the appropriate organs over the enterprises must be sought before serving notice terminating employment.

Where a worker or employee loses his job through no fault of his won, he is protected by social and economic measures designed to ensure re-employment to the individuals seeking it and material protection to those who are unable to find new employment immediately. The economic organisations, the State organs and the individual employers in Yugoslavia are required to notify the labour exchange offices about such dismissals and the vacancies occurring thereby.

Rights of Unemployed Persons

Temporarily unemployed persons enjoy material protection. Guaranteed to them is relief in the form of monetary compensation, transportation at reduced fare to the places where they might find employment, health protection for themselves and members of their families, a permanent children's allowance. The period of unemployment is recognised in the case of such individuals as part of their regular work record for the realisation of health protection and children's allowance, etc. Only the right to pension is excluded here; such a period is not counted with the statutory periods governing qualification for pension payments. The social insurance contribution of unemployed persons is paid by the labour exchange. These same rights also apply to apprentices and the pupils of industrial schools.

Relief is payable only to those workers and employees who are registered with the labour exchange and amounts to 50 per cent. of their last earnings or salary rate. This is payable to those individuals only who until the termination of employment had been employed for at least one year without interruption or 18 months with interruption during the two years preceding such termination.

Certain restrains, however, are applicable. Relief is not payable to a worker or employee who is living in a household the aggregate income of which suffices for his upkeep too. Where such income is less, the relief may vary from 75 per cent. to 25 per cent. of the regular amount thereof.

After paying relief for six months, the labour exchange may direct a worker or employee to a job which does not correspond to his qualifications, but which may only be one grade below the level of his qualifications. If the medical commission of the social insurance office should establish, though, that such an individual is not fit to accept such a job, payment of relief is continued.

In cases where the labour exchange finds employment for a worker or employee in another locality, or where the individual has done so himself, he has the right to reduced fare or free transport to such a locality for himself and the members of his family, as well as to free removal of his belongings.

Registrations in Labour Exchange

In 1955, an average of 8,422 persons, or 12.53 per cent. of the total number registered at the labour exchange, were benefiting by relief payments every month. The corresponding percentage for 1953 and 1954 were 11.60 per cent. and 8.39 per cent.

The employment exchange authorities have been able to find re-employment for a large number of unemployed within a relatively short time. For example, of the total workers and employees who have been benefiting by this right, only 3,480 or 4.6 per cent. received such relief for longer than one year, while 46.129 of the total 76,121 beneficiaries from 1st April 1952 to 31st December 1955 received such payments for less than three months.

During 1955, the right to transport at reduced fare was utilised by not more than 1,534 persons. An average of 690 dinars per person was disbursed for the purpose, which shows that shorter trips had been involved. The number of beneficiaries of reduced-rate or free transportation has been gradually declining, indicating that the labour exchange offices have been finding openings for re-employment within their own territories.

Again, during 1955, children's allowance was being paid to an average of 3,964 workers and employees per month. The total amount thus disbursed—241,235,230 dinars—almost equalled that paid towards relief benefits, which reflects favourably on the average benefits granted to unemployed individuals till they can find a new job.

EUROPEAN PRODUCTIVITY AGENCY ON AUTOMATION

The complicated problems presented by automation, with its far-reaching social consequences, cannot be dealt with entirely by technicians and economists. Workers' and trade union participation in the study and solution of the problems is indispensable. This is one of the main points emphasised in a report (*About Automation*, by Pierre Liénart and Serge Colomb. Can be obtained by writing to the Trade Union Section, E.P.A., 3, rue André Pascal, Paris, 16ème. Price: 150 Fr. francs) published by the Trade Union Section of the European Productivity Agency.

The report is published as part of the follow-up programme to the trade union seminar on automation held in London in May 1956, on the initiative of E.P.A. The publication is intended to give trade unionists an overall picture of the technical and economic aspects of automation and the particular problems it presents to trade unions. The conclusion of the report is as follows:

"Only in an expanding economy can the introduction of automation, with its undeniable technical and economic advantages, be considered without fear. The extension of automation must be carefully planned to prevent a state of anarchy developing on the production side, for this would have disastrous consequences for both workers and industry. This planning must not be left entirely to the technicians. Satisfactory and permanent solutions to the problems arising from automation will be found only if the support of labour is obtained by the offer of effective guarantees. These can be given only if labour has the means of effective intervention wherever automation causes structural changes in the firms introducing it. Technical discoveries may be considered as real progress only in so far as they bring to man new means of ensuring his full development and his economic fulfilment."

EMPLOYEES' PROVIDENT FUND

The Government of India has decided to raise the limit of eligibility to the membership of the employees' provident funds to Rs. 500 per mensem, inclusive of dearness allowance and cash value of food concessions. The decision will take effect from 31st May 1957.

Under the existing provisions of the Employees' Provident Funds Scheme, 1952, an employee drawing more than Rs. 300 per month as basic wage is ineligible to become a member of the Fund, although employees who became members while getting a lower wage continue as members, even when the basic wage exceeds the limit of Rs. 300 per mensem. The Employees' Provident Funds Act 1952, which applied only to factory industries, was amended by Parliament in December 1956 to empower the Government to extend it to non-factory establishments also. The Act has since been extended to cover plantation employees. The scheme covers over 2 million workers employed in 4,500 factories in India.

LABOUR WELFARE DIPLOMA

The next diploma course of the Institute for Labour Welfare Workers, Bombay, will commence from 1st July 1957. The course, which is of two years' duration, is designed to give theoretical and practical training to persons aspiring to be social welfare or labour leaders, labour welfare officers or personnel officers in factories. Diplomas will be awarded to candidates declared successful in the examination to be held after the completion of the course and this diploma is recognised as a requisite qualification for the posts of welfare officers in Bombay State and several other States. The minimum qualification for admission to the course is the intermediate arts, science or commerce. Preference will be given to those having higher qualifications or experience in labour work. Applications for admission to the course are to be made in the prescribed form and should reach the Principal, Institute for Labour Welfare Workers, on or before the 30th inst.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

FIFTY-NINTH ANNUAL GENERAL MEETING

MR. C. R. SRINIVASAN ON SUGAR INDUSTRY'S ROLE IN THE COUNTRY'S ECONOMY

THE Fifty-ninth Annual General Meeting of the East India Distilleries and Sugar Factories Ltd. was held in Madras on 30th April 1957. Speaking on the occasion, Mr. C. R. Srinivasan, Chairman of the Company, said that the sugar industry had made a promising start in finding an export market for its output, and added that, if only the Government were to take note of the export potential and the need to build it up in all possible ways, the sugar industry, besides safeguarding its own economy, was destined to play an important part in the balance of payments position of the country.

The following is the full text of Mr. Srinivasan's speech:

"Last year, when I had the privilege of addressing you for the first time, as Chairman of the Company, I indicated to you in broad outline the shape of things to come, following the merger of Parrys with E.I.D. Now that I have the opportunity of addressing you again, you will no doubt be interested to know what progress we have made in the objectives set out. The E.I.D. is now a director-managed concern, with a majority of Indians on the Board. You will remember that at the time the merger proposals were placed before you, only myself and Sri V. Ramakrishna were on a Board of five, the other three being Messrs. Wonfor, Noel-Tod and Hadfield. The Board invited two distinguished Indians, Dr. U. Krishna Rau and Sri R. Venkataswamy Naidu, to join the Board and I may take this opportunity to record how much we valued their co-operation and goodwill, their knowledge and understanding of the problems that came for assessment at the Board level. May I also take this opportunity of recording my appreciation of the spirit of loyalty and sense of duty that uniformly characterised my British colleagues on the Board who were all in executive charge and entrusted with the responsibility of implementing the decisions of the Board. I have nothing but praise for the way the Directors on Parry Board also responded to their call. The Parry Board all along has been a close preserve of senior British executives, but today we have two Indian nationals on the Board and I have no doubt that in due course more Indians will find their place on it.

Recruitment to Covenanted Ranks

"It is the accepted policy of the Company that other things being equal, Indian nationals will have preference and priority in recruitment to the service cadre of the Company. It is also the policy of the Company to have these recruitments to the covenanted ranks by open competition. For the first time posts were advertised and applications invited towards the close of last year and, I may confess, I was amazed at the thousands of applications that came pouring in. From a study of these applications two things emerge, viz., that there is plenty of qualified talent in this country waiting for openings and opportunities and that service in Parrys set-up is greatly coveted even by men already in service elsewhere. My only regret is that we are not in a position yet to make fuller use of the abundant talent available. Of those who are in the service of the Company today, it is but right that I should record that I have found them in good fettle, eager and willing to give of their best, especially in the new set-up.

"And now let me turn to the report and the accounts for the year ended 30th September 1956. These have been in your hands for the statutory period and, with your permission, I shall take them as read. I regret very much that these accounts are submitted to you later in the year than has been done in the past. The delay, however, has been quite unavoidable. It has been largely occasioned by this being the first time that consolidated Group accounts have been furnished and the preparation of accounts in this form has necessarily had to be done with great care. Also, the provisions of the Indian Companies Act 1956, regarding the charging of expenses by a managing agent to managed companies, have delayed the finalisation of the accounts of our subsidiary, Parry and Company, Ltd. To enable the Directors of Parry and Company, Ltd., to formulate an equitable assessment of the amounts of overheads, etc., that should correctly be charged to the managed companies, an elaborate system of recording through time sheets, the time spent by each member of the staff on the affairs of each company in the Group was introduced. The consolidation of the information made available by these time sheets took some time to complete, but in order to comply with the spirit and the letter of the Indian Companies Act it was quite essential that this additional work should be undertaken. Having now accumulated reliable statistics, I expect, it will not be necessary in succeeding years to undertake this work in such detail and I, therefore, hope that it will be possible to issue the accounts for the current year well before this time next year. You are, of course, aware that in order to ensure that dividends were paid within the fiscal year ended 31st March 1957 your Directors declared a second interim dividend of 10 per cent. in anticipation of these accounts being adopted and thereby shareholders have been saved the embarrassment of the final dividend being paid the next fiscal year.

New Facet

"The operations of the year have been fully reviewed in the Directors' report and there are only one or two points I should like to refer in this context. You would have noticed with interest that the sugar industry has developed a new facet with the emergence of an export market due to fortuitous circumstances. Part failure of the beet crop in Europe and the closure of the Suez Canal created a shortage of sugar supply in the Middle East which it was possible for India to cover at remunerative prices. Exports are being handled through the agency of the Indian Sugar Mills' Association, on a non-profit basis. Such profits as are made are carried over to a reserve, with a view to balancing any loss that may be incurred in the future in the maintenance of the export market. So far, firm orders to the extent of about 86,550 tons have been booked and shipments in substantial measure have already commenced according to an agreed schedule. Further orders are expected and the Government of India, I understand, are agreeable to release stocks for export and they had no idea of imposing any rigid limits in this respect. In hammering out the export scheme and giving it dynamic expression you will be glad to know that Mr. P. Hadfield, Deputy Managing Director of this Company, played a notable part as Vice-President of the Indian Sugar Mills' Association. Our Group has not yet sold any sugar for export. This is understandable against the background that South India is still deficient in sugar and it is easier to negotiate freight at the two ports, Bombay and Calcutta, from which exports are now made. But the value of this offtake by means of exports cannot be overlooked or underestimated in sugar economy.

"Today there is an all-India surplus in production, supply outpacing demand. This, no doubt, is a heartening reversal of the position three years back when sugar had to be imported to relieve shortage in the country. In 1954-55, the total production of sugar in the country was 15.89 lakhs of tons; in 1955-56, it moved up to 18.56 lakhs of tons; in 1956-57, it is estimated production will touch 20.2 lakhs of tons. Besides expanding production, we have also a carryover of well over 5 lakhs of tons. The present pace of consumption is rated at 19 lakhs of tons and at the end of the Planning period it is expected this may move up to 22.5 lakhs of tons. At the same time, with new sugar mills progressively coming into production during the Plan period and several of the old ones expanding their crushing capacity the total production in the country is expected to reach up to 25 lakhs of tons at the end of the second planning period. If sugar economy is to be protected, obviously, apart from expanding internal consumption a regular outlet by way of export has to be created, developed and maintained. By good luck we have made a promising beginning and if only Government will take note of the export potential and the need to build it up in all possible ways, I believe the sugar industry, apart from safeguarding its own economy, is destined also to play an important part in the balance of payments position of the country. Before leaving this subject, may I crave your indulgence to correct a misstatement in the Directors' report. In the last para under the heading 'sugar' in page 6 of the report the closing sentence says that the export target at the end of the second Five-year Plan has been fixed at 2,500,000 tons. This is obviously a mistake, the figure refers to the total production target.

Fertiliser Production

"You will also have observed that in the report mention is made of the substantial increase in fertiliser turnover. The turnover in fertilisers during the period under review amounts to just under two crores of rupees, equivalent to £1½ million sterling, and that of chemical imports to 61 lakhs of rupees, equivalent to 457,000 pounds sterling. Business in these lines bids fair to increase in the coming years as people in the agricultural sector are getting fertiliser-minded and it is the policy of the Government to increase food production by extensive as well as intensive cultivation. With a view to simplifying and streamlining operation and control of the Group's factory at Ranipet where the major part of our fertiliser manufacture is carried on, the transfer of Parry's interests in the fertiliser business to East India Distilleries and Sugar Factories Ltd. has just been completed and, in addition, it is proposed to set up another factory at Bezwada to which I shall refer in greater detail presently. It is obvious that a turnover of this magnitude, running into millions of pounds, will require careful consideration of our cash and credit resources. On the basis of our present capital and reserves it seems to me our credit resources are fully extended and it would be unwise to base our further expansion programme on such additional banking facilities as may be available to us. Your Directors are now exploring various alternatives by which further capital can be introduced into the Group and we shall come forward presently with proposals to this end. In this context, it may be just as well to correct a possible misapprehension arising from the acquisition of Parry's equity shares. Although the total cost of cash for the purchase of the Parry ordinary shares amounted to £558,000, the actual net outgoing of cash from the Group on this account is £204,000 only. This is because £225,000 of the outgoing amount was immediately used by the main sellers, the Coromandel Investment Trust Ltd., to purchase the E.I.D. shares then held by Parry & Co., Ltd., and they also agreed to accept deferred payment in respect of £144,000, balance of the purchase price. Of this amount of £144,000 for which deferred payment over five years was agreed, a first instalment of £15,000 only has just been paid.

Results of the Year

"Turning to the results of the year, I would like to stress that the accounts of our two main subsidiary companies, Messrs. Parry & Co., Ltd., and Messrs. Parry Murray & Co., Ltd., are for nine months only, but it is most satisfactory to note that for these nine months they have recorded profits on a par with their results for the previous twelve months, which confirms the view taken by your Directors 18 months ago on the profitability of acquiring the ordinary capital of these Companies. If we convert these figures to a basis of twelve months and if we reduce the taxation charge by the sum applying to previous years, we find that the net profit after taxation would have been increased by some £60,000 and that our present dividends would be covered three times by earnings. On the basis of a full year's income, the figures for 1956 show that the purchase price of ordinary shares in Parry & Co., Ltd. (on an annual basis of 22.4 per cent.) works out to less than five years' yield on these shares. I may also make a reference to the amount of taxation paid on the Group profits for the year under review, as set out in note 3 of page 18 of the report and accounts. The total amount of tax represents the very high figure of about 56 per cent. of the profit and of the total amount of taxation, £66.223 consists of additional taxation imposed by the Indian Finance Act, 1956, and the Indian Finance (No. 3) Act, 1956. This sum represents 13 per cent. of the profit or, viewed in another way, 12 per cent. on the ordinary capital. I feel, therefore, that it may be recorded as a matter for satisfaction that, in spite of the burden of this upsurging in taxation, your Directors have been able to maintain a total dividend of 15 per cent. on the ordinary share capital. To what extent the burden of taxation may be varied during the current year is, of course, dependent on the contents of next month's budget and I cannot, therefore, venture on any forecast, but the figures I have quoted will establish beyond doubt or dispute that private enterprise, rightly directed, will prove a bulwark to our national economy.

Prospects for Current Year

"Turning to the prospects for the current year, I am glad to say that progress is well maintained in all directions. It is common knowledge that import restrictions have progressively been tightened in recent months. To the extent that the policy is dictated by a desire to protect indigenous industries we may take comfort that the trading activities of Parry & Co., Ltd., will not be seriously affected, as in Parrys' sales agency portfolio we hold a high proportion of goods of Indian manufacture. The major items in the import agencies that we hold are essential commodities, such as sulphur, phosphates and plant for generation of electricity, in respect of which, I expect, restrictions will be relaxed. Incidentally, shareholders will be interested to learn, in connection with the last item, that over the past eighteen months Parrys have obtained orders for the Diesel generating equipment manufactured by Messrs. Mirless Bickerton and Dey Ltd., of Stockport, to a total contract value of just under two crores of rupees, or very nearly £1½ million. These orders include about 6,000 kilowatts of power for the Koyna Project in Bombay, 6,000 kilowatts of power for the construction of the Russian Steel Plant at Bhilai in Madhya Pradesh, and over 20,000 kilowatts for the Delhi State Electricity Board. It must, however, be recognised that the general exchange position has sadly deteriorated and its shadows have begun to fall even in respect of capital goods. Unless long-term credit facilities from overseas manufacturers are forthcoming, exchange restrictions, I am afraid, will affect the flow of orders in respect of capital goods. It may be possible to arrange medium-, if not long-term credit, if the Government can find ways and means to guarantee exchange rates. I understand the Government are considering at the moment representations to this effect from concerned interests and I hope that the problem posed will be resolved soon.

"Apart from the direct activities I have so far referred to, you are aware that Parry & Co., Ltd., perform the duties of the Managing Agents for three companies, the Deccan Sugar and Abkhari Company, Ltd., the Travancore Sugars and Chemicals Ltd., and Parrys Confectionery Ltd. You will be glad to hear that all these companies are in good shape and have maintained their dividends. In respect of the Deccan Sugar and Abkhari Company, Ltd., you will be interested to know that the Company is at the moment engaged in a programme of modernisation and reorganisation of its factories at Samalkot and Pugalur which will considerably improve the efficiency of both units. The Company is issuing 398,400 shares at par, totalling approximately twenty lakhs of rupees which, I expect, will easily be taken up by the shareholders having regard to the record of the Company in the past and current market quotations for these shares.

Cauvery Sugars and Chemicals

"Last year, the Cauvery Sugars and Chemicals Ltd. was promoted with the goodwill and co-operation of the East India Distilleries and Sugar Factories Ltd., and Parry & Co., Ltd. Capital issued was of the order of 49 lakhs and the entire issue was underwritten. Orders have been placed for the requisite machinery and the factory is now under construction. The factory is well located at Pettavathalai in Kulittalai Taluk, Tiruchirapalli District, as good quality cane in sufficient supply is confidently expected to be available. The capacity of the factory is 800 tons of cane per day. The East India Distilleries and Sugar Factories Ltd. have been appointed Technical Consultants and Parry and Co., Ltd., are the Secretaries and Treasurers. The main reason which prompted our association with this new company is the desire to have a common selling organisation which will not only operate economically but also ensure a fair margin for the production of the Nellikuppam Factory, Pugalur Factory and Cauvery Factory. The new factory is expected to go into production in June-July next year.

"Earlier, I referred in another context to our intention to set up a factory at Bezwada for fertilisers to cover the needs of the Krishna and Godavari Delta. This Company (Andhra Fertilisers Private Ltd.) in which the East India Distilleries and Sugar Factories Ltd. will be equal partners with Messrs. K. C. P. Ltd., will shortly be formed. It is proposed to establish a superphosphate manufacturing unit, for which Government approval has already been obtained. The sales franchise of this new company will be exercised by the East India Distilleries and Sugar Factories Ltd. I don't think I need say anything more about the value or importance of this unit, intended as it is, to enable us to improve our coverage in Andhra in respect of fertilisers.

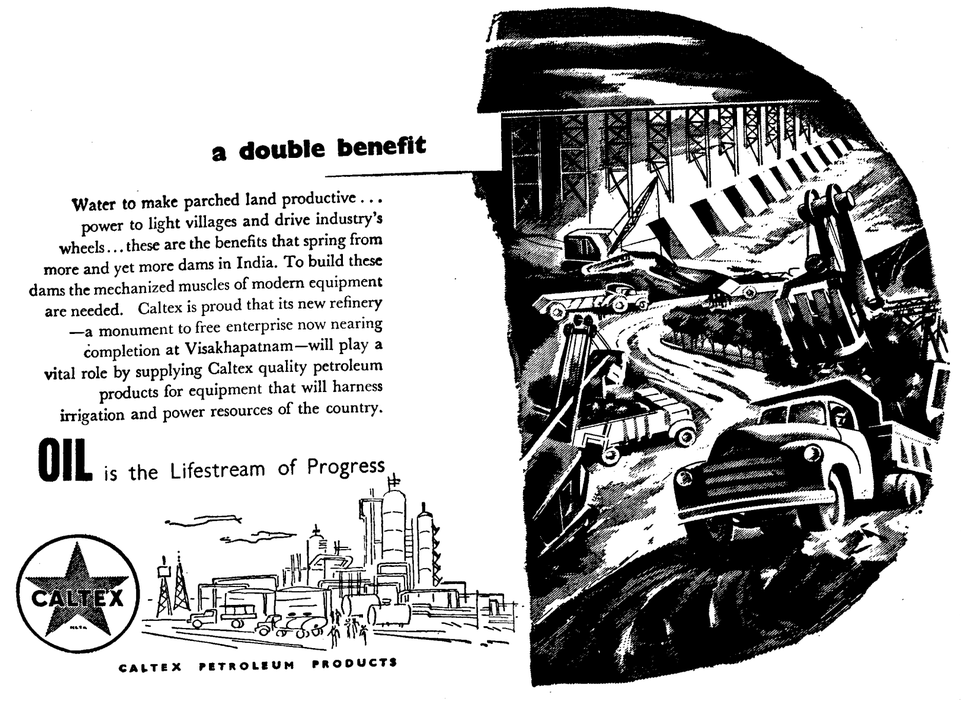
Starch Production

"One other company that we propose to interest ourselves in is the Pamba River Starch Company Private Ltd., in which the East India Distilleries and Sugar Factories Ltd. will be an equal partner with Messrs. Corn Products Ltd. and Messrs. Travancore Sugars and Chemicals Ltd. The object of the Company is to manufacture from tapioca roots a high grade starch principally for the export markets. We are holding up the integration of the Company pending clarification of the conditions under which companies may be required to deposit a part of their reserves with the Government, pending also the issue of an import licence for the plant required and, finally, pending a clarification of the policy of the present Government of Kerala on the issue of nationalisation.

"I shall now revert to the report and accounts placed before you; before proposing the adoption of the report and accounts for the year ended 30th September 1956, I shall be glad to answer to the best of my ability any questions which any shareholder may wish to put to me concerning the report and accounts.'"

The Directors' report and the accounts for the year ended 30th September 1956 were unanimously adopted. Mr. R. Venkataswamy Naidu and Mr. P. Hadfield were re-elected to the Board, and the Auditors, Messrs. Lovelock and Lewes, were reappointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.



PUNJAB NATIONAL BANK LIMITED

MR. S. P. JAIN'S REVIEW OF ECONOMIC TRENDS

COMMERCIAL BANKS SHOULD EXPAND THEIR ACTIVITIES IN RURAL AREAS

THE view that commercial banks have to organise themselves to collect money from unorganised sectors and supplement their deposits through other facilities was expressed by Mr. S. P. Jain, Chairman of the Punjab National Bank Ltd., in the course of his speech at the One Hundred and Tenth Ordinary General Meeting of the Bank held in Delhi on 27th April 1957. In this connection, he added that banks had to expand their activities in the rural areas either directly or through the agency of subsidiary or small banks. The success of this effort would depend to a large extent on the policy and support of the Government of India and the Reserve Bank.

The following are extracts from Mr. Jain's address:

"GENTLEMEN,

"I extend to you all a hearty welcome to the one hundred and tenth ordinary general meeting of the Bank.

"The past year has been one of outstanding progress for your Bank with profits, deposits, advances and foreign exchange business touching new peaks.

"The accounts show a profit of Rs. 90.20 lakhs, including Rs. 2.35 lakhs brought forward, as against a profit of Rs. 69.40 lakhs in 1955. This profit has been arrived at after provision for contingencies. After transfers—Rs. 27.5 lakhs to taxation, Rs. 27.5 lakhs to reserves, Rs. 13 lakhs for bonus to staff, Rs. 2 lakhs for gratuity to staff and charity—the Board has proposed a final dividend of Rs. 2 per share in addition to the interim dividend of Rs. 2 per share. This raises the rate of dividend to 16 per cent. per annum. It has been proposed to form a trust under which a fund will be built up by annual appropriations from profits for gratuity benefits to employees.

Deposits

"The working capital has risen by Rs. 28 crores to Rs. 141 crores, registering 2½ times increase over 1950. Against our paid-up capital of Rs. 87.5 lakhs, our reserves stand at Rs. 1.25 crores including the share premia amount of Rs. 37.5 lakhs. Deposits rose to Rs. 106 crores registering an increase of Rs. 16 crores during the year, against Rs. 14 crores in 1955. It will be noted that the quantum of increase in the total deposits of all Scheduled banks in 1956 declined as compared with 1955. The growing confidence of the public in your Bank is reflected by the fact that of the increase in the deposits of all Scheduled banks in 1956, 20 per cent. was gained by the Punjab National Bank. Your Bank did not make any general increase in the interest rates and the cost of money remained, therefore, steady in the year under review.

Strong Liquid Position

"The figures on the assets side indicate a strong liquid position. Cash in hand, bank balances, money at call and short notice and investments aggregate Rs. 59.3 crores constituting 55.7 per cent. of the deposits. If the bills discounted and purchased, amounting to Rs. 8.77 crores, are added, we have a total of Rs. 68 crores. raising the ratio of our liquid assets to deposits to 64 per cent.

"Our loans and advances show an increase of Rs. 12.84 crores from Rs. 42.02 crores in 1955 to Rs. 54.86 crores in 1956. There has been 31 per cent. increase in our advances. Our efforts to step up advances to meet the developmental needs are continuing and we are strengthening our organisation to that effect both in the head office and in the field.

"You will be glad to know that there has been rapid increase in our letter of credit business. 'Acceptances, endorsements, and other obligations' which are mainly in connection with foreign exchange business amounted to Rs. 13.4 crores in 1956, as compared with Rs. 6.53 crores in 1955, registering 100 per cent. increase.

"Your Bank's application for issue of bonus shares about which I had mentioned in my review at the last meeting is still pending with the Finance Ministry. The required permission should be obtained before long, because your Bank's issue is against share premia which are but receipts of capital from the shareholders themselves.

"Our network of branches continues to expand. With the opening of 14 branches during the year, we have 340 offices including one office in Rangoon and two in Pakistan. The demand for lockers was well sustained and we are continuing to develop this business. You will be glad to know that the head office building in New Delhi is coming up and will be complete in about a year for occupation. The removal of the head office to New Delhi will meet the convenience and wishes of a large number of the Bank's customers. With regard to branch offices also, we are trying to improve the premises and follow a policy of progressive extension of service to the public. In this connection, our expansion programme is also receiving careful consideration.

Tight Money

"The problems of the banks during the last year were the consequences of the problems that faced the country. What have agitated all minds are the acuteness of finance for domestic needs as well as to pay for imports and the rising trend of prices. There were the large needs for development, imports of steel, capital machinery, etc. There was an increase of Rs. 158 crores in advances and bills against an increase of Rs. 77 crores in deposits. The banks had to resort to increased borrowings from the Reserve Bank, liquidate a small part of their investments and reduce cash balances to meet the demand. Shri T. T. Krishnamachari, the Commerce Minister, on taking over the Finance portfolio, was confronted with the serious problem of credit for trade and industry and the limited capacity of the commercial banks to meet the same. Living up to his reputation for prompt and dynamic action, the Finance Minister had consultations with banks and representatives of industry along with the Governor of the Reserve Bank and liberalised the bill market. This very largely assisted the commercial banks to meet the demand for funds from industry and commerce and Shri T. T. Krishnamachari rightly earns the credit for the easening in the otherwise tight situation. The higher money cost aimed at curbing inflation in India has had no significant effect. Similar is the experience in the U.K. and they are in the process of reversing gears. The gilt-edged market has been adversely affected and but for the open market operations which induced confidence, there would have been a greater drop in prices. The stamp charges and higher interest rates raised the cost of money to banks. The banks had to incur the stamp charges on bills even when the bills were not ultimately fully utilised. The stamp charges could have been covered, if at all necessary, in the interest rates. The cost of money from the Reserve Bank induced the banks to raise their interest rates. This affected money already with the banks and pushed up its cost in large commercial centres. New money was not attracted to banks from small investors and mofussil areas.

Rise in Prices

"The second significant economic trend as regards rise in price levels was characterised as inflationary arising from large developmental expenditure. In the White Paper published in March, the Finance Minister has analysed that the rise in prices has been basically due to declining agricultural production. There has been some complacency in this respect due to the comparatively comfortable position in regard to agricultural supplies at the end of the first Plan. The White Paper states: 'The success of the Plan, it is apparent, would turn largely on the realisation of the targets of agricultural production. Apart from the obvious effect of agricultural production on prices and on the balance of payments, the flow of savings in the economy also depends to a significant extent on production in this sector. Scarcity of foodgrains and agricultural products in India often leads to relatively sharper increases in agricultural prices than in the prices of manufactures and this in turn leads to a redistribution of national income away from both the fixed income groups and the investing classes.' This has been the crux of our problem.

Foreign Exchange

"The foreign exchange scarcity is another serious problem to be effectively tackled. The difficult foreign exchange position arising from developmental activities is being understood and appreciated the world over. The appearance of this scarcity condition earlier than expected only confirms that the rate of development has been faster and larger than planned. The position was also aggravated by higher prices of capital equipment and increased transport cost due to the Suez crisis. The deferred payment system that has been evolved is, of course, very costly, but it is a screening process by itself. Projects which are not adequately remunerative will not be proceeded with immediately and foreign exchange expenditure to that extent will be automatically curtailed. Representatives of capital exporting countries abroad who have visited our country after the announcement of deferred payment scheme have understood and appreciated the value and desirability of such a scheme. Our efforts in the direction of rapid economic and industrial development are also appreciated. In order, however, that import of necessary equipment in line with the policy enunciated by the Government takes place, certain institutional facilities have to be arranged for. They are: (i) the coverage of fluctuations in foreign exchange beyond normal trade risk by Government or any Government agency, (ii) underwriting the risk or giving some acceptable guarantee to the overseas seller, (iii) association or institution formed by a combination of manufacturers in industries of national importance should be able to obtain financial assistance for development from institutions like the World Bank, International Finance Corporation etc. It will be necessary for the Finance Ministry and the Reserve Bank to work out details.

Magnitude of Second Plan and Standard of Living

"The second Plan aims at increasing the national income by 1961 to Rs. 13,480 crores from Rs. 10,800 crores. The rise in the national income at the end of the Plan is of the order of Rs. 2,680 crores. Against the present saving of Rs. 800 crores, we have to save Rs. 1,482 crores. The increase in our savings for reinvestment and development will be Rs. 682 crores against a national income increase of Rs. 2,680 crores. Thus, three-fourths of the additional income, viz., Rs. 2,000 crores, will be available for sustaining a higher standard of living. If our effort is not of the magnitude planned, our national income will not go up as envisaged. If our national income does not go up as targeted, the quantum available for consumption will be curtailed with its consequence on the standard of living. What we have to fulfil is, no doubt, a big task, but we have to gear ourselves to the best effort.

More Funds Needed

"More funds are needed by both the public and private sectors. There has to be a proper apportionment of the available resources, if the overall economic activity has to be stepped up. The tax policy of the Government has to be such as to leave savings in the hands of that class of society which has the habit of saving for investment. While there has been more expenditure in the rural sector, the burden on the urban sector has been increasing. As the Taxation Enquiry Commission has stated: 'The *per capita* tax is uniformly and distinctly higher in urban than in rural areas. The *per capita* Central taxation in the urban sector is a little over two and a half times the rural estimate, while the State taxes come to nearly three times.' Vast sums of money are thus diffused and not drawn into the money stream.

"The commercial banks have to organise themselves to collect money from the unorganised sectors and supplement their deposits through other facilities. In large towns there is already keen, rather unhealthy, competition. The current deposits are being converted to call deposits which were paid higher interest rates. This does not create any additional money, but only makes the money dearer. The commercial banks have, therefore, to expand their activities in the rural areas either directly or through the agency of subsidiary or small banks. To a large extent, the success of this effort will depend on the policy and support of the Government of India and the Reserve Bank. Fortunately, we have at our helm a Finance Minister who is bold and who has ideas and vision. The greater the difficulty of a problem the greater appears to be his resourcefulness and courage. The new Reserve Bank Governor, Shri H. V. R. Iyengar has intimate knowledge of the problems relating to the development of our economy and is aware of the needs of industry and trade. This knowledge and experience will help him to have a practical outlook in his new task.

"In the banks' expansion in the countryside, there are certain factors of primary importance. The Government should provide facilities for security of cash and other assets, so that banks many be saved the large expenditure on employment of chowkidars, which forms an appreciable percentage of expenditure in small branches. This may be done by giving instructions to the police authorities to take special care for the safety of the property of banks. Some scheme of co-operative insurance may also be evolved by the banks themselves or through insurance companies. Secondly, to enable large banks to open branches, the wage structure for the new offices should be in consonance with the prevailing living conditions in the rural areas concerned and not according to the bank classification.

Credit to Cultivator

"The third factor is that the banks should be in a position to cater to the credit needs of the rural areas. It is difficult for the banks to make available such credit from their existing resources. The Reserve Bank is not finding a proper agency in the co-operative banks to make available the entire money that they have apportioned for supplementing credit to the rural areas. The co-operative banks are only confining their activities to co-operative societies and, knowing as we do the weak structure of the co-operative societies, in certain States especially, we should not insist on credit being made available only through them. By commercial banks expanding in the countryside, rural credit will be augmented. The commercial banks may also in turn take the help of agencies which have commercial dealings with agriculturists, at present, such as sugar factories, ginning presses, rice mills, oil mills, etc. The Reserve Bank may lay down a condition at the time of discounting the bills of commercial banks for rural credit that the cost of money to the cultivator should not be higher than what he will have to pay when he obtains credit through co-operative societies. We are under the impression at present that credit through co-operative societies is cheaper. What we find today in many parts of the country is that the ultimate cost of money to the cultivator is 3½ to 4 per cent. higher than the rate at which the Reserve Bank makes available the money. When we are keen on increased agricultural production we should use all agencies to make available to him necessary credit at reasonable cost. The utilisation of the commercial banks in this sphere will achieve a dual purpose. The non-monetised sector of the country will be monetised through savings of the rural sector coming into banks. The agriculturist will get organised credit in his effort to increase food production which is admittedly the key to the success of the second Plan. I hope the Reserve Bank will find this proposal worth pursuing.

Financial Institutions

"In the growth of new industries, a great handicap is sluggishness in the stock exchange. It is difficult for any new enterprise or even the existing ones to raise additional finance through the Stock exchange. Therefore, it is important that the financial institutions in the country should carry on a more positive and active role. The Industrial Finance Corporation, the State Finance Corporations and also the Industrial Credit and Investment Corporation have done satisfactorily during the last year. But for meeting the tempo of development in this country they have to do very much more. The present limit of advances at the State level should be increased considerably. It should be brought up to something of the order of Rs. 25 lakhs. All small and medium needs should be met by the State institutions. The State Corporations should be strengthened by additional resources through the Reserve Bank. The Industrial Finance Corporation of India should increase their limit from 1 crore to 2½ crores of rupees. Most of the large industrial organisations today cost us anything between 3 and 8 crores. Money should be advanced when the Corporation is satisfied that the undertaking or project in question is in line with the general policy and pattern of the National Plan. The Industrial Credit and Investment Corporation should also, in my opinion, be more active and finance large industries like non-ferrous metals, chemicals and large engineering workshops as they are of very great importance. These industries have been left under the second Plan to be developed by the private sector. In this connection, it is heartening that a Refinance Corporation is being formed to utilise the U.S.A. Wheat Sales Fund for extending medium-term credit. The terms that have been announced are very sound and I am confident that banks will take advantage. It will greatly improve money market conditions and the requirements of industry for expansion will be met considerably.

Better Climate and Investment Prospects

"The industries in this country are, by and large, making reasonable profits and I am confident that with the better atmosphere that may now be created with the removal of the uncertainties when the new budget will come, the share market will improve and the investor will come forward to invest his savings in the industrial projects of this country. The process will be greatly aided if the investors find it convenient to borrow money against their industrial securities whenever money is needed and the advances against industrial shares could be rediscounted by the Reserve Bank. The Finance Minister should come out with a clear cut policy and a four-year budget that will give him the resources that he requires and enable the people to budget as he does and fulfil their responsibilities under the Plan with the resources that they require. I am confident that with the boldness and imagination that he possesses, Shri T. T. Krishnamachari will see that he gets what he requires for carrying on the responsibilities of the Government and, at the same time, creates conditions and an atmosphere under which the people will have the enthusiasm and resources to fulfil a difficult but essential task.

People's Gold for Development

"A suggestion that I would like to refer here to is that of the Prime Minister, in one of his speeches, that the people should give their gold to the Government, so that hoarded wealth may be put to use. The Finance Minister should evolve a policy that will induce the people to part with their gold. Even if the Government buys gold at a price higher than the world price the gold stock with the Government will help to strengthen our currency considerably and will enable the Government to get money from abroad at more reasonable cost. What the exchequer will lose in the purchase price will be adequately compensated by the large financial resources that could be obtained and by the early development of our country.

"Before I conclude, I must express my thanks to all our worthy constituents for their continued co-operation and confidence. I owe more than formal thanks to my colleagues on the Board and the Local Advisory Committees. I would also like to welcome our new General Manager, Mr. A. M. Walker, whose experience with the erstwhile Imperial Bank of India should prove of real value to our institution under the present fastly developing conditions in the country. I must also record my appreciation for Shri R. L. Tuli who has carried on with diligence and ability, the responsible and onerous duties of General Manager till Mr. Walker's taking over. I have also to thank other officers and staff at all levels at the head office and elsewhere for their loyalty and sense of devotion to the interests of the Institution."

26th POZNAN INTERNATIONAL FAIR

A GREAT INTERNATIONAL MARKET CONTRIBUTING TO EAST-WEST TRADE

Notices

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Twenty-third Annual General Meeting of the Members of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday the 31st day of May, 1957, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend on the Preference Shares.
3. To appoint a Director in place of Mr. G. L. Bangur, the Director retiring by rotation at the Meeting, who, being eligible, offers himself for re-appointment.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 175, 179 and 180 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:—

(a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. *When Annual General Meetings to be held.*—In addition to any other Meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other Meetings of the Company shall be called "Extraordinary General Meetings."

(b) Article 87 shall be deleted and the following new Article substituted therefor:

87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

(c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(d) Article 175 shall be deleted and the following new Article substituted therefor:

175. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

(e) In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(f) In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 15th to 31st May, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *6th May*, 1957.

Note.—Payment of the proposed dividend, if declared, will be made on or after 7th June, 1957, only to those members whose names are registered in the Books of the Company as holders of the Preference Shares on 31st May, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in Respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of Auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to the 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 161.

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

THE TWENTY-SEVENTH ANNUAL GENERAL Meeting of the Shareholders of Guest, Keen, Williams, Limited will be held at the premises of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta-1, on Wednesday, 29th May, 1957, at 11 a.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 29th December, 1956.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass the following resolution, namely:

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the Register required to be maintained under section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times abovementioned only during the period prescribed by sub-section 5(a) of section 307."

The Register of Members of the Company will be closed from the 8th May, 1957, to the 29th May, 1957, both days inclusive.

By Order of the Board,
W. MORRICE,
Director and Secretary.
CALCUTTA, *1st May*, 1957.

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

Explanatory Statement Required by Section 173 of the Companies Act, 1956

Item No. 5.—With reference to the resolution relating to inspection of Books, Registers and other documents referred to in the above notice, the Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved accordingly.

THE NEW INDIA ASSURANCE COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 27th May to 25th June, 1957, both days inclusive.

By Order of the Board,
B. K. SHAH,
Managing Director.
BOMBAY, *3rd May* 1957.

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Corporation will be closed from 25th May, 1957, to 22nd June, 1957, both days inclusive.

By Order of the Board,
E. C. CALDWELL,
Registrar.
KANPUR, *4th May*, 1957.

INDIAN PAPER MAKERS ASSOCIATION

MR. P. H. SYKES'S SPEECH AT ANNUAL GENERAL MEETING

SUGGESTION TO ESTABLISH AN INDEPENDENT PULP INDUSTRY

ADDRESSING the Annual General Meeting of the Indian Paper Makers Association held in Calcutta on 1st May 1957, Mr. P. H. Sykes, Chairman of the Association, referred to the difficulty of new paper mills coming up in States where there was a shortage of raw materials. In this connection, he suggested that an independent pulp industry should be set up in a place where raw materials were available in plenty. This would encourage separate paper-making units to be established near paper markets and thus lay the foundation for an export business in paper.

The following is the full text of Mr. Sykes's speech:

"GENTLEMEN,

"This has been a dull year, by comparison with its predecessors, if one rates as excitement the usual series of worries over labour troubles, transport difficulties, adverse legislation, etc., from all of which, I am glad to say, there has been some relief—a sign, perhaps, that the country is steadily surmounting its growing pains. The year has, however, been far from dull from the point of view of the development of the industry that is taking place at present. In this connection, progress has been remarkable. I speak in respect of not only increase in production achieved and increase in production planned but also the great interest now being taken by the Government in our industry and of the very real understanding of our problems they are so clearly demonstrating.

"This interest is being shown in many ways, the latest of which being their appreciation of the rise in our costs and their sanctioning of an increase in the price of our paper to meet it. More important still—in the long run—is their complete understanding of the raw material problem and the necessity to link it with their desire for increased production. This desire, I can assure you, is tempered by their realisation that more paper cannot be made unless there is something—and an indigenous something—out of which to make it. Within the framework of their Five-year Plans Government are thinking big (demand, they say, is likely to go up by 400 per cent. within the next 15 years), but they realise production targets to meet this increase can never be achieved unless (*a*) supply of the necessary raw materials is assured, and (*b*) the new projects they license are only for lines of paper in maximum demand or for lines hitherto imported.

"I feel there has been too much slanging of Government and too much talk of private and public sectors. We are lucky in our industry. We may come under the Industries (Development and Regulation) Act, but Government are clearly showing that if we private industrialists pull our weight we can expect plenty of co-operation from them. If our projects are sound we can go ahead, so can Government or, alternatively, they are happy to join hands with us in joint enterprises. I find these signs of willing co-operation, and of goodwill towards us, eminently satisfactory and it is up to us to show what we are made of.

"I referred just now to production targets. A year ago, I myself was staggered by the size of the targets being fixed by Government and I was sceptical of their chances of achievement, but today I am a convert, at least so far as the second Five-year Plan is concerned. The fact of the matter is that the rate of consumption is going up on the lines of the Planning Commission's calculations and you have only got to study today's demand to realise this. It is, however, difficult to be certain of how things will go in the third and fourth plans. When one thinks of the vast potential business in the wrapping and packaging trade alone, the fringe of which has barely been touched, one can well believe, assuming that industrialisation continues at the same tempo and that education is on the increase, that demand and consumption will continue to climb for a long time yet, but what is going to be worrying is the raw material position in, say, ten years' time. I believe that, unless a big planting programme is initiated, and very soon at that, we will tend to run out of bamboo and that it is up to the industry in the interim to exploit to the full the possibilities of bagasse, reeds, grasses and various types of wood. Government are of the opinion that waste materials are what the paper industry should rely on for their pulp manufacture. That should give us to think. It means that the national (i.e., railways, etc.) and other industrial demands for certain types of wood and the commercial demand for bamboo may continue to receive preference over our demand for timber and bamboo for paper-making purposes. In other words, certain types of wood may be denied us and the public's demand for bamboo for commercial and village-industry purposes will continue to be given first preference.

"The paper industry is already experiencing difficulty in obtaining its full requirements of bamboo, because not only are the various units competing amongst themselves but, as I have already mentioned, there are many other users of bamboo. Bamboo is employed extensively in the villages, there is a large cottage-industry use for it and there is a big commercial trade in it (scaffolding, lathis, etc.). There may, for the time being, still be supplies of bamboo available for mills established in forest areas sufficient for them to expand, but, even in those cases, a declining supply position will, unless large-scale planting is undertaken, eventually bring expansion to a halt. Mills situated in States short of raw materials cannot expand under present conditions, for, whilst they are infinitely grateful for the decision taken at the end of 1955 guaranteeing continuity of their existing leases in other States and for the way those States are honouring this guarantee, they cannot obtain new long-term leases of forest areas in States which, as opposed to their own, are rich in pulp-making raw materials. Thus, unless they are permitted to import wood-pulp indefinitely (which will not be the case) they cannot expand and, up to the present, their only means of securing their pulp requirements, so as to enable them to increase production, is to agree to put up new units in States wih raw materials, which is of course a sheer waste of money when compared with expansion of their existing units, which could be effected so much more quickly and cheaply. Furthermore, this shortage of raw material supply means that new paper mills cannot be set up in other non-raw material producing States.

"To my mind, the remedy is obvious, and that is a source of supply of indigenous pulp which will enable paper (as opposed to paper-*cum*-pulp) units to be sited anywhere. At present, because of the integrated mill system (mills producing both pulp and paper), not only, as I have already said, are paper mills being confined to States with raw materials but, because of transport and other material problems, they are naturally tending to be further confined to those raw material-rich areas which are central and easily accessible.

"An independent pulp industry sited where the raw material grows would not only enable separate paper-making units, small as well as large, to be established near the paper markets but it would also encourage the exploitation of remote areas and would lay the foundation for an export business. The indigenous pulp would replace imports of wood-pulp and of paper at present made from imported wood-pulp worth, together, many crores of rupees per annum.

"It is for these reasons that a decision has been taken by a group to embark on a pulp-making enterprise and Assam has been selected as a suitable site for the mill. I am glad to tell you that the Governments of India and Assam are in full accord with the promoters and the theory I have just outlined and have given every encouragement and assistance to the project. Let us, therefore, wish the sponsors well in this new venture which is of obvious importance, pioneering, as it will, a new industry for our country.

"Another point I have to make is that a pulp mill of this nature will greatly assist the railways. Bamboo, reeds and grasses take up a lot of room and the railways cannot enjoy locking up great numbers of wagons over long hauls. The short hauls contemplated by the pulp mill in Assam will be confined to a small uncongested area, while river-rafting, road transport and, perhaps, aerial ropeways, will help out. The finished article, pulp in bales, will be definitely more economic to transport, for the wagon space occupied by the amount of bamboo necessary to manufacture one ton of pulp is about three and a half times as much as that required by one ton of pulp in bales.

"I now propose referring to the new Panel for the Pulp and Paper Industry that has recently been set up by the Government of India. The formation of this Panel, which, I am glad to say, has industrial representation on it, as well as governmental, marks, I consider, a very great step forward in the development of the industry. It is a well-knit body, with representatives from the Development Wing of the Ministry, the Planning Commission, the Forest Service and the Railway Board serving on it and it embraces the interests of the rayon industry as well as those of ours. Our Association has always been keen on an advisory or development council for the paper industry, but one has never been formed. Now this Panel has been set up and it will provide a very adequate substitute. It will furnish a close link between the industry and Government in all matters of development and its scope will be very wide. It will, for instance, examine the whole of India's forest materials position and thus be in a position to recommend to Government the best places for siting new units. It may even study the marketing and distribution of the end-product and the types of paper that are being manufactured or need manufacturing. It will certainly organise the dissemination of technical information within the industry and it will advise the Government on the manufacture in India of paper-making plant and equipment. Sub-committees have already been established in most of these various connections and the one that deals with forest resources may very possibly take the place of the *Ad Hoc* Committee, a purely governmental body, which was established towards the end of 1955.

"I think it will be in the interests of all of us to get used to the idea of pulp and paper machinery and equipment being manufactured in India. Though it will take a long time it has got to come and, until the new industry has become properly established, we shall undoubtedly have to make allowances for many teething troubles. Engineering firms are so booked up at the moment that the process will be a protracted one, but the determination of India to manufacture her own machinery is both obvious and natural and the desire to get a move on is being spurred on by the current foreign exchange difficulties. We all know that the importation of capital plant for new projects, now necessitating arrangements for deferred payment, etc., is not going to be so easy as it was and the more equipment, therefore, that we can get made out here the better for us. Government are going to do all they can to promote indigenous manufacture and we must do our best to co-operate, but only to the point that the quality of our paper is not affected, for—I think we all agree, and so do Government—the raising of the standard of Indian-made paper is of equal importance. I wish very much we could get our prices down but with the trend in costs as it is—it looks as though another rise in freight rates was coming—and with the possibility of having to pay more for our equipment it is quite impossible.

"Before I close I would like for a moment to touch on a not very pleasant matter. It concerns the cornering of the shares of one of our oldest member-companies. It is disgraceful that an attempt should have been made by people of no experience whatsoever of our industry to oust from its managing agency a firm that over the past sixty years has shared extensively in the building up of the Indian paper industry to its present position and has invariably helped its managed company to surmount the many grave difficulties that that company, in common with the rest of the industry, has had to face during the past.

"It gives me pleasure to acknowledge the services of our efficient Secretary and of our parent body, the Bengal Chamber, and to thank my fellow committee members for the assistance they have given."

SOME FACETS OF INCOME-TAX LAW—II

A FEW MORE CONTROVERSIAL SECTIONS EXAMINED

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

WE may now consider a facet represented by section 24 which deals with set off of losses; sub-section (2) deals with carry-forward. Under the proviso to section 24(1), speculation losses are to be disintegrated and carried forward under sub-section (2) to be set off only against speculation profit. The proviso was enacted in 1953. Prior to that, profits and losses under the head business, whether speculative or otherwise, all fell under section 10 and were treated as one; only the resultant figure, after setting off profit and losses under that head, was brought to tax. The problem that has arisen is whether the carry forward of loss brought over since 1952 could be disintegrated between speculation and normal business loss, in order to give effect under section 24(2) in the year of assessment, say, 1955-56. There are two views on the subject. One is that carry forward of loss after 1953 must be disintegrated, so that speculation loss can only be carried forward against speculation profit. Since the carry forward is given effect to in 1955-56 when both the proviso and carry forward about speculation sections are in operation, loss on account of speculation, even though brought forward prior to 1953, cannot be set off except against speculation profit.

The other view, as forceful and logical, is this. Losses of speculation were carried forward to 1953 under the head business as one business. This loss prior to 1953 must be regarded, therefore, as loss from business and set off against subsequent business profits. Not to do so would deprive the assessee of a vested right, which right has not been taken away by an express retrospective provision. What has been treated a loss from one business can only be disintegrated by reopening the assessment order under section 34. And, even if reopened, it can be reopened for deciding a point on the law as then in force. The law prior to 1953 did not warrant such disintegration and, therefore, integrated loss cannot be disturbed. On a balance of views the latter stand must succeed.

Speculative Loss

Allied to this is another interesting point. A person in the previous year has made a speculation loss in 1954, say, of Rs. 20,000. It is carried forward to the 1955 account in which he has ready business loss of, say, Rs. 20,000, speculation profit Rs. 30,000 and dividend income of Rs. 2,000. The assessee says that he must be allowed to set off carry forward of Rs. 20,000 against speculation profit of Rs. 30,000. The Department argues that, whereas speculation loss is to be segregated, profit is not. Therefore, carry forward can only arise after setting off under section 24(1) 30,000 + 2,000 − 20,000=12,000. Speculation profit available is thus only Rs. 10,000. The Department's view seems to be strictly correct according to the letter of the law, but it violates flagrantly the spirit behind the enactment. The whole spirit of carry forward of speculation profit and losses is to segregate such transaction, almost as if it were a separate head. If the setting off resulted in the profit, it should be added to income, if it resulted in a loss it should be carried forward without reducing the total income of the year for assessment. The conflict between spirit of the law and the letter of the law seems to be strewn and scattered all over the Act—more so in Income-tax than any other law. What is given by one hand is snatched by the other.

Section 16 is one of the most controversial of the sections. Since charging section levies tax on "total income," this section becomes the centre of lots of controversy. Let us look at one or two of its facets. Charge is founded on section 3 and section 4. Section 3 says that tax shall be levied in respect of total income. Tax can be levied in respect of "total income" is not equivalent to total income, for, if it were, then tax can only be levied on the fact of existence of total income, not on its distribution or disposal, since in case of a company tax is levied first on the quantum, then an additional tax on the distribution. But the Courts have held whatever tax or taxes may be levied in respect of total income it must not exceed the total income itself.

Two points emerge for consideration. Can an excess dividend tax be levied by way of additional tax on a company which has part agricultural and part non-agricultural income? Agricultural income is exempt, non-agricultural income is taxed. Agricultural income does not enter into the total income. Is an additional tax, therefore valid, if in computing it you take both agricultural and non-agricultural incomes? Dividend is declared by the company from both. And additional tax is levied by finding an excess of dividend income less total income less taxes and amount exempt from tax. Since the excess is made up both of agricultural and non-agricultural, unless one deducts from dividend proportionate agricultural income, one will be levying an additional tax on an agricultural income although the Act expressly exempts it from tax. If the income is not exigible to income-tax, much less it is exigible to additional tax.

Grossing up of Dividends

Another aspect is that of grossing up of dividends. Dividends are exigible to tax directly in the hands of the shareholders. No exemption is provided under section 14(2). It gets credit from tax paid by the company which under section 49 is regarded as tax paid on behalf of the shareholders. Credit is to be given under section 18(5), provided grossing of dividend is done under section 16(2). Grossing of dividend under that section is permitted at the rate applicable to the total income of the company in the year it is distributed. Now what is the rate applicable to the company? Unless there is a rate, there is no grossing up and unless there is a total income there is no rate. Hence, the Department, argues that, where a company in a year has no assessable income, there is no rate applicable and, therefore, on any dividend declared, there can be no question of grossing up. The assessee argues that the reference to the rate is the rate applicable to the company, that is, the normal rate prescribed for companies as a class and not the effective rate actually applied to a particular company whose dividend is grossed up. If a company declares dividend, it declares a dividend out of profits available for distribution. To the extent that they are from sources not liable to tax, for example, agricultural income, no grossing up can be permitted, but to deny the right of grossing up where dividends have been paid out of past taxed profits which have borne tax is to render nugatory section 49 which expressly provides the warrant for the theory that tax paid by the company is paid on behalf of the shareholders. There are some references pending before the High Court on this issue and the true interpretation of this section will be pronounced, until then let the din and dust of controversy lay low and the zealots on both sides hold their souls in patience.

Finally there is the facet represented by section 34(3). Section 34(3) proviso 2 provides that nothing contained in section 34 limiting the time within which an assessment can be reopened shall apply to reassessment under section 27 or assessment or reassessment made on the assessee in consequence of any finding or direction contained in the order under section 31, section 33, section 33A, section 33B or section 66 or section 66A. These sections are sections which relate to appellate authorities like Appellate Assistant Commissioner, Commissioner of Income-tax, Tribunal or High Court. The serious question that arises is this. In an appellate order the A.A.C. states that the particular income taxed by the I.T.O. is not the income of the year and, therefore, declares that action under section 34 should be taken to include it in the proper year, in which it rightly falls. If he so directs, then can the Income-tax Officer, ignoring the time limitation of four and eight years, reopen any year's assessment in order to give effect to the A.A.C.'s direction? Does the section 34(3) enable the I.T.O. to revise and give effect to the order of the year under appeal only or any past year, may be 25 years back? If that is so, then the precious right of an appeal has little meaning; for you are always exposed to the risk of the A.A.C. making an adverse finding in that or any other year—and irrespective of time limitation, you may be proceeded against, which proceedings, but for your appeal, would have barred all action against you.

Section 34(3)

The *raison d'etre* of section 34(3), as generally understood, may here be mentioned. An appellate order is merely an order of finding or a direction. Actual implementation of the finding or direction must be given by the Income-tax Officer by altering the order previously passed. This action of the Income-tax Officer must comply with the prescribed period of limitations under section 34. If there is delay in passing these appellate orders, such delays, so far as the year in appeal is concerned, should be condoned. But does this mean that the A.A.C. can give a direction on a matter not before him in an appeal and direct the Income-tax Officer to reopen past assessment *ad libitum* without reference to the period of limitation.

An A.A.C's powers are limited to giving relief or confirming the assessment. He has power to cancel assessment and direct fresh assessment. Therefore, is his power of making a direction limited to section 27 appeal only? While the law as interpreted by the Department is to ignore all reasonable time limitation on opening assessments, on the side of the assessee it is extremely strict; so much so that, if in a reassessment proceeding the assessee detects an obvious overassessment, he can have no remedy or relief. Reassessment proceedings will be closed or dropped and relief denied, though the Department is satisfied that the assessee has been clearly overassessed.

Let me conclude by tersely summing up, in the words of a writer, that income-tax proceedings can be dramatised in three Acts: Act I; taxpayer and some money; Act II: taxpayer and less money and Act III: taxpayer himself.

COCOA POWDER AND CHOCOLATE INDUSTRY

TARIFF PROTECTION EXTENDED FOR ONE MORE YEAR

THE tariff protection to the cocoa powder and chocolate industry which is due to expire on 31st December next, has been extended for a further period of one year, that is, up to the end of next year. This is the result of the Central Government's acceptance of the recommendation made by the Tariff Commission. In its report on the question of continuation of protection to the cocoa powder and chocolate industry submitted to the Government, the Commission recommended, among others, that the protective duty on cocoa powder at the existing rate of 31¼ per cent. *ad valorem* (including surcharge) and that on covering powder, at a rate of 50 per cent. *ad valorem* or one rupee per lb. (including surcharge), whichever is higher, should be in force till the end of December 1958. It also suggested that the cocoa beans should continue to be exempted from payment of import duty. Further, the Commission felt that the Government might consider the desirability of stopping the import of covering chocolate by actual users. While the Government has accepted the first two recommendations, it has taken note of the suggestion relating to covering chocolates, which, it says, will be taken into consideration while formulating the import policy from time to time.

The cocoa powder and chocolate industry, it will be recalled, was first granted protection in February 1947 when the revenue duty of 30 per cent. *ad valorem* on cocoa powder and covering chocolate in force at that time was converted into a protective duty at the same rate. The Government also assisted the industry by remitting in full the import duty of 30 per cent. *ad valorem* on cocoa beans. These provisions remained in force till the end of March 1950; thereafter, following two other investigations, one in 1949 and the other in 1954, and lately by an *ad hoc* measure, they were continued till the end of the current calendar year. Despite tariff protection and assistance through grant of import duty drawback on cocoa beans thus, the industry still suffers from huge idle capacity. The capacity actually utilised during the first nine months of 1956 was a bare 13 per cent. for the cocoa powder sector and 5 per cent. for the chocolate sector.

Present Rated Capacity

The present annual rated capacity (on a single-shift basis) of the industry for the manufacture of cocoa powder and chocolate is 275 tons and 790 tons, respectively. As against this, the actual production of the former declined from 52.8 tons in 1953 to 26.6 tons during the nine months ended December 1956, while that of the latter fell from 102.3 tons to 30.7 tons. One of the reasons given for the low level of production is the decline in the demand for chocolate owing to the increase in prices caused by the abnormal rise in prices of cocoa beans in 1954. Though a slight reduction was effected substantially it would appear to have had no significant effect on demand. This, obviously shows that the industry has not taken adequate steps to popularise the products which is so essential for creating a taste among people. Recognising this, the Commission has rightly suggested that the domestic producers should undertake more active salesmanship and propaganda to promote the sale of their products. Another reason for the existence of huge idle capacity is the difficulties confronting the Sathe Biscuit and Chocolate Company, which is the only firm manufacturing products direct from cocoa beans, to balance its production of cocoa powder with chocolate. This difficulty, in the opinion of the Commission, can be overcome by popularising consumption of chocolate which requires cocoa butter for its manufacture.

It is, however, gratifying to be told that the industry has made considerable progress in raising the keeping quality of covering chocolate in the last few years. Although stray complaints were received by the Commission during its inquiry, both the Development Wing of the Union Commerce and Industry Ministry and the Food and Technological Institute have expressed the view that the Indian products compare favourably with the imported one. Nevertheless, the Commission has done well to stress that, for an edible article like chocolate and cocoa powder, there should be continuous efforts to improve the quality and food value by application of better techniques of production, careful selection of raw materials and adoption of improved recipes. In view of the limited resources of the industry to maintain an up-to-date research laboratory for the purpose, the Commission has also done well to call upon the domestic producers to keep themselves informed of all technical developments that take place from time to time in other countries in the manufacture, storage, and transport of covering chocolate and cocoa powder and to make use of them to the maximum extent possible. Incidentally, it wants the Indian Standards Institution to lay down standard specifications for cocoa powder and chocolate.

Raw Materials

A particular feature of the industry is the total dependence on imports of cocoa beans, its principal raw material. The chief sources of supply are Ceylon, Gold Coast and Nigeria. It is noteworthy that, in Madras and Mysore States, efforts have lately been made to develop the plantation of cacao trees. About 74 acres are said to have already been brought under cacao plantation. According to this, the Commission feels that, if the cacao plantations in Madras and elsewhere are to be of value, they should be developed in the closest collaboration with the domestic cocoa powder and chocolate industry and that expert advice in the matter must be obtained from the U.K. Development Corporation and the chief cocoa-growing countries. Besides, it has suggested here that the Indian Council of Agricultural Research might include, in the terms of reference of the delegation to be sent to Ceylon shortly in connection with spices, a study of cacao plantation in that island.

After carefully considering all the relevant factors, the Tariff Commission estimates the current total demand for both chocolate and cocoa powder at 300 tons a year. As regards future demand, the Commission feels that it will not be unrealistic to estimate it at 500 tons a year. This view is based on two considerations, namely, (1) the expectation of the industry that the demand will increase as a result of the fall in the price of the principal raw material, namely, beans, and (2) the total level of supplies available in the country during the three years preceding the rise in prices of beans in 1954. The sum total of imports and domestic production during this period was 433.7 tons in 1951, 346.8 tons in 1952 and 487.3 tons in 1954.

Imports Decline

Imports of cocoa powder and chocolate declined from 240.2 tons in 1954 to 94.65 tons in the period January-June 1956. During the three years, 1954-56, licences were granted to established importers to the extent of 5 per cent. of their best year's imports. Since the licensing period of July-December 1955, milk crumbs have been allowed to be imported against quota licences. Additional licences for the import of chocolate covertures have also been made available to established importers with effect from the January-June period. The industry had no comments on the policy for established importers, but it felt that the operation of actual users' licences had operated to its disadvantage. The Development Wing admitted that recommendations had been made on certain occasions for the grant of such licences when it was represented that cheaper supplies were available abroad. After considering the relevant points as also the present idle capacity of the industry, the Commission declares that imports of cocoa powder and covering chocolate in the present state of our balance of payments difficulty merely on the basis of cheapness are not justified. It has accordingly asked the Government to consider the desirability of stopping import of these items by actual users in future.

For the purpose of comparing the fair ex-works price of the Indian products with the landed cost of imported ones, and for determining the measure of protection to be recommended for the industry, the Commission has taken as the basis the production costs of the Sathe Biscuit and Chocolate Company, Ltd. The fair ex-works price, inclusive of freight disadvantage, of the Indian cocoa powder and covering chocolate comes to Rs. 1.85 and Rs. 2.70 per lb., as against the landed cost without duty of Rs. 1.41 and Rs. 1.81, respectively. The difference thus comes to 44 nP or 32.2 per cent. in the case of cocoa powder and 89 nP or 50 per cent. in the case of covering chocolate.

The Tariff Commission has also expressed itself strongly in favour of curbing the temptation to import cheaper chocolate prepared with hydrogenated palm kernel oil or other substitutes for cocoa. It has suggested that the Government should consider the question of prescribing that all covering chocolate should, at the time of its importation into or sale in the country, display on the container its composition, that is, whether it contains cocoa butter, hydrogenated palm kernel oil or any other substitutes.

IMPORT AND EXPORT ADVISORY COUNCILS

As the term of the Import Advisory Council and the Export Advisory Council—reconstituted in November 1954, expired on 8th May 1957, the Government of India has decided to reconstitute these bodies for a period of two years.

The structure of the two Councils will be similar. They will consist of the Minister of Commerce and Industry as Chairman and the Minister of Commerce as Vice-Chairman. The President of the Federation of Indian Chambers of Commerce and Industry and of the Associated Chambers of Commerce will be ex-officio members of both Councils, with the right to send a nominee to represent them if they so choose. The Secretary-General of the Federation of Indian Chambers of Commerce will also be a member of both the Councils. For the rest there will be 19 non-official members on each Council to be nominated by the Government of India. The first meeting of the reconstituted Import Advisory Council will be held on 25th May 1957, and the Export Advisory Council will meet on the following day.

INDUSTRIAL ESTATE AT OKLA

In Okla, situated near Delhi, an industrial estate for the development of small industries is fast growing. Out of the 35 factories that are being constructed, 29 have already been allotted to small *entrepreneurs* from Delhi. The remaining six factories are expected to be allotted shortly. Thirteen of the factories, it is stated, have already been equipped with water and electricity and are ready for occupation. Ten more factories by June and 12 more by July are expected to be ready for occupation. The Small Industries Corporation, which has taken up this task, has also sunk a tube-well for the supply of unfiltered water.

Certain criteria on the basis of which industries have been accommodated are (1) there should be benefit to both the consumers and producers, (2) load of electrical power needed for operation should not be heavy, and (3) the industry should not produce injuries effects. Moreover, preference has been given to co-operatives and private limited concerns as well as to firms which are prepared to install graded machinery and manufacture items according to standard specifications.

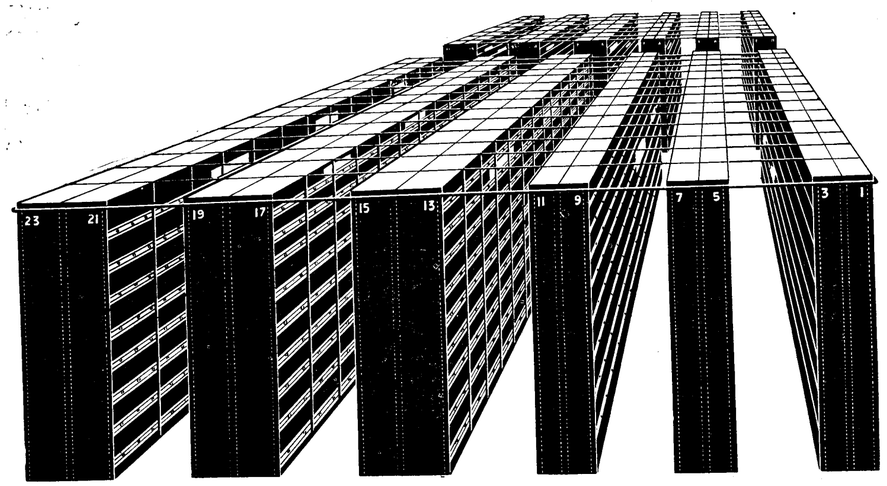
INDO-NORTH VIET NAM TRADE

The State Trading Corporation of India and an official trade delegation from North Viet Nam concluded a trade agreement on 1st May. This is a sequel to the exchange of letters that took place between the two Governments last June. Under the agreement, India has agreed to buy from North Viet Nam 7,000 metric tons of rice during the current year. The first shipment is expected to be made by the end of May.

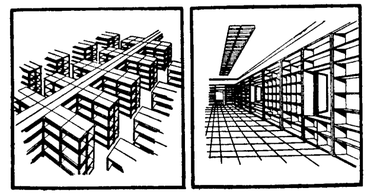
A significant feature of the agreement is that North Viet Nam has agreed to accept payment in rupees and utilise the money for the purchase of goods in India which include jute manufactures, textiles, raw hemp, machines, engineering goods and hides and skins. It is also understood that discussions are in progress for the purchase of cement from North Viet Nam.

A medium-scale chemical factory, the first of its kind in India to produce calcium carbonate, an essential raw material for rubber and leather industries, has been established recently at Habra, near Calcutta, at an estimated cost of Rs. 4 lakhs. In its initial stages the factory is expected to produce 10 tons of calcium carbonate a day, at a price of Rs. 700 per ton. Consequently, it will help save foreign exchange to the tune of Rs. 1.2 crores every year. When the factory goes into full production, on a three-shift basis, it will turn out 30 tons a day. It is stated that India now imports 2,000 tons of this material from Japan, Belgium, and the U.K. every month.

The Madras Regional Board for Salt Industry approved, at its meeting held recently, the establishment of a model salt factory at Rajakamangalam near Nagercoil. The factory, including a number of other items of work, is estimated to cost Rs. 14 lakhs. It may be noted that, since 1948, when the country was importing about 50 per cent. of its requirements, considerable progress has been achieved in salt production in the country, as a result of which it has been possible not only to achieve self-sufficiency but also to export in substantial quantities. Recently, it is stated, 50,000 tons of salt were exported to Indonesia.



Large areas of hidden storage space available ...on your own premises!



STORAGE space is difficult *and* expensive to obtain in most towns. *You* can utilise *your* storage space to great advantage with Khira adjustable Steel Shelving. Call in our expert today and let him give you free plans for improving *your* storage facilities!

10 reasons why 'Khira' Steel Shelving saves you thousands of rupees!

* Low initial cost and long working-life
* Anti-rust treated and oven-baked enamel finish
* Immunity from pest and rot
* Resistant to fire hazard
* Won't warp or split
* Economy of space
* Easy to erect
* No maintenance
* Easy to alter
* First cost is the last cost

EARNINGS OF MODERN MILLS HIGHER

DIVIDEND WELL MAINTAINED—FINANCIAL POSITION GOOD

ENCOURAGING results are disclosed by the audited accounts of the Modern Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) for the year ended 31st October 1956. The gross profit has advanced to Rs. 18.54 lakhs from Rs. 14.50 lakhs, to which level it had gone up from Rs. 3.30 lakhs earned in 1952-53. Though the pace of expansion in profit during the year under review is much less than that in the previous year, the year's performance is nevertheless highly satisfactory in the context of the adverse trading conditions which prevailed in the closing months of the year, following the imposition of additional excise duty in September last. The net profit, after making provision for Managing Agents' commission, depreciation and taxation, also stands higher at Rs. 12.08 lakhs, as against Rs. 7.41 lakhs for the previous year.

Despite the increase in earnings the distribution to the shareholders has been maintained at the previous year's level of 16 per cent. made up of a dividend of 10 per cent. and a bonus of 6 per cent. It may be mentioned, in this context, that the distribution was stepped up in the previous year from 10 per cent. paid for 1953-54 by paying an additional cash bonus of 6 per cent. If the distribution has not been raised, it is because of the large provision of Rs. 6.30 lakhs which the Company has had to make for staff gratuity, including a sum of Rs. 4.76 lakhs in respect of previous years. This is in accordance with the Award given by the Industrial Court, Bombay, on 28th November 1956 with retrospective effect from 22nd November 1954. Consequent on this, the allocation to the machinery rehabilitation reserve has been pruned from Rs. 3 lakhs to Rs. 2 lakhs and the general reserve, which had received Rs. 30,000 in the previous year, has not been provided with anything.

The following table brings out clearly the salient features of the Company's working for the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1956	1955	1954	1953
Sales of yarn, cloth and waste.	1,36.31	1,85.80	1,71.51	1,46.79
Closing stocks of yarn, cloth and waste	52.37	55.24	63.84	60.81
Other income	0.72	0.36	1.09	0.91
Expenses	1,65.62	1,63.06	1,68.13	1,64.82
Gross profit	18.54	14.50	7.53	3.30
Managing Agents' commission..	1.28	1.48	0.79	0.37
Depreciation	4.75	5.26	6.03	6.28
Taxation	0.44	0.36	..	0.28
Net profit (+) or loss (—) ..	+12.08	+7.41	+0.71	—3.63
Transfer from reserves	..	..	1.80	5.95
To reserves	2.00	3.30	..	..
gratuity provision	6.30	0.41	0.25	0.22
Dividend—				
Ordinary	3.54 (D. 10% +B. 6%)	3.54 (D. 10% +B. 6%)	2.21 (D. 10%)	2.21 (D. 10%)
Carry forward	0.55	0.32	0.16	0.12

The Company's sale proceeds of yarn, cloth and waste for the year are only a shade better than those for the previous year, as compared with the sharp rise noted in the previous two years. This reflects the adverse trading conditions during the closing months of the year, consequent on the rise in excise duty and the credit restrictions imposed by Government. Commenting on the trading conditions, the Directors observe:

"Trading conditions during the greater part of the year under report were satisfactory, but the steep and sudden increase in the excise duty made effective from 1st September 1956 and the credit restrictions imposed by the Government completely paralysed the cloth trade. To facilitate clearance, the mills had to share the duty with the dealers and in some cases had to bear even the entire increase in the duty on pending contracts. But for this setback from which the market has yet to recover, the results of the year under report would have been still better."

The Company's paid-up capital as on 31st October 1956 stands at Rs. 22.13 lakhs made up of 44,261 ordinary shares of Rs. 50 each. Of these shares, the Mysore Spinning and Manufacturing Company, Ltd., the holding company, holds 23,136 shares. The reserves and surplus (including premium on shares) aggregate Rs. 43.63 lakhs. There is a 5 per cent. first mortgage debenture liability of Rs. 12 lakhs secured by the fixed assets of the Company. The provision for taxation stands at Rs. 1.35 lakhs. The current liabilities of Rs. 64.91 lakhs include loans secured from banks against hypothecation of liquid assets for Rs. 32.19 lakhs. The gross block of Rs. 122.08 lakhs has been written down to Rs. 57.40 lakhs. The current assets aggregate Rs. 86.61 lakhs and more than adequately cover the current liabilities and provision for taxation.

The Rs. 50 fully paid-up shares of the Company are being nominally quoted at Rs. 70. On the basis of the latest dividend, the yield works out to 11.4 per cent. per annum.

ENCOURAGING RESULTS OF MAHINDRA AND MAHINDRA

The year ended 31st October 1956 has proved to be a period of phenomenal success in respect of sales operations for Messrs. Mahindra and Mahindra Ltd. (Chairman: Mr. K. C. Mahindra, Bombay). This has been characterised by a greater demand for the Company's manufactures resulting in a substantial increase in its turnover and profit earnings. The gross profit for the year under review amounts to Rs. 39.30 lakhs, as compared with Rs. 20.24 lakhs for the previous year and Rs. 13.20 lakhs for 1953-54. In other words, the gross profit has increased by nearly 200 per cent. during the short span of two years. The net profit, after making higher provisions for depreciation and taxation, has jumped from Rs. 9.22 lakhs to Rs. 21.15 lakhs. The provision for depreciation has been raised from Rs. 1.51 lakhs to Rs. 2.15 lakhs and that for taxation from Rs. 9.50 lakhs to Rs. 16 lakhs.

The Directors have transferred a sum of Rs. 1.52 lakhs to the reserve for additional taxation and contingencies which had received Rs. 6 lakhs in the previous year and a sum of Rs. 10 lakhs to general reserve, as against *nil*. A dividend of 12½ per cent. per annum (free of tax) has been declared on the ordinary capital, as against 10 per cent. paid *pro rata* after the Company was converted into a public limited one in June 1955. The ordinary dividend absorbs Rs. 6,87,500 and the 6 per cent. (tax free) preference dividend Rs. 1,50,000, leaving a surplus of Rs. 2.12 lakhs to be carried forward, as against Rs. 86,830 brought in.

As mentioned at the outset, the year under review has been a period of record sales turnover for the Company, following the large demand for jeeps, tractors and trailers. The volume of steel imports during the year exceeded the most optimistic expectations. The following comparative table gives the figures in terms of value of sales in the various categories:

(In lakhs of rupees)

	Jeeps etc.	*Trailers*	*Tractors*	*Steel*
1954-55 ...	264.1	16.5	13.8	272.0
1955-56 ...	364.5	22.0	38.2	962.0

The Company's jeep manufacturing programme has made satisfactory progress. The Directors feel that the increased demand for jeeps and allied vehicles during the year provides confidence for the future. The expansion of plant facilities in regard to trailers is nearing completion. The new factory at Pimpri commenced operations from March 1957 and is equipped to produce agricultural and industrial trailers from 1½ cwt. to 14 tons capacity. A beginning has also been made with a trailer assembly shop at Madras. With regard to tractors, the Directors observe, a comprehensive demonstration-*cum*-sales campaign throughout the country has provided encouragement for the future. But the main problem for sales in the immediate future, according to them, is the scarcity of foreign exchange. As such, no import licences have yet been granted by the Government for the current season. The prospects of business in steel imports currently will be determined by the availability of exchange. Imports of steel on private account has already been restricted by the Government and priorities have been given only to Government requirements. There is a large outstanding tonnage still to be shipped during 1957, but the Directors do not expect the same volume of business in 1958.

A steel stockyard was established in Bombay during the year and an increasing volume of steel was handled at both Calcutta and Bombay yards. The jeep manufacturing division made substantial progress with the acquisition of built-up factory areas at Worli and Ghatkopar. It will be recalled that the Company's original plans were based on an output of 2,500 to 3,000 units. The Company was, however, advised to raise its output in view of the Tariff Commission's estimate that the demand for jeeps would increase to 5,000 units by 1961. The Company proposes, accordingly, to enlarge its programme of requirements of machinery and equipment. A modern well equipped tool room machine shop and body shop commenced operations last year and these sections are being rapidly developed to meet the demand of the phased manufacturing plan. The foundry and gear shop was originally expected to be in operation towards the end of the current year, but some delays are now anticipated on account of the non-issue of licences for import of the remainder of the Company's capital goods requirements.

The following is a synopsis of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	80,00,000	Gross block	63,94,924
Reserves and surplus ...	16,12,095	*Less*: Depreciation ...	7,30,755
Provision for taxation ...	34,62,244	Net block ...	56,64,169
Liabilities	9,03,56,935	Work-in-progress ...	2,29,464
		Stock - in - trade ...	6,14,01,540
		Stores, etc. ...	1,59,870
		Debts, deposits and advances ...	3,10,86,570
		Investments	19,33,222
		Cash ...	29,56,438
		Goodwill ...	1
	Rs. 10,34,31,274		Rs. 10,34,31,274

Of the current liabilities shown above in the summary of the balance-sheet, a sum of Rs. 7.19 crores represent borrowings from banks, showing an increase of Rs. 5.17 crores over the year. This increase is an indication of the full assistance received by it from the banks for its trading operations. The Company's additions to the gross block during the year were of the order of Rs. 47.11 lakhs. The Company's application for relief under section 23A, sub-section (3) of the Indian Income-tax Act has been granted and the dividends paid by the Company last year have been declared to be adequate. A similar application for relief will be submitted in respect of this year also.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 14.10 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 9.7 per cent. per annum, free of tax.

SAVAMALAI ESTATE RAISES DIVIDEND

A modest improvement in earnings is disclosed by the audited accounts of the Savamalai Estates Ltd. (Secretaries and Treasurers: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode), for the year ended 30th November 1956. The gross profit, which had declined successively from Rs. 2.20 lakhs for 1952-53 to Rs. 1.25 lakhs for 1954-55, has advanced to Rs. 1.43 lakhs for the year under review. After making slightly larger provisions for depreciation and taxation, the net profit stands higher at Rs. 80,493, as against Rs. 68,116 for the previous year. The Directors have transferred a sum of Rs. 50,000 to the general reserve, same as in the previous year. The rise in earnings have enabled the Directors to propose a higher dividend of 15 per cent., as against a dividend of 10 per cent. paid for the previous year, to which level it had been stepped down from 30 per cent. for 1952-53 and 25 per cent. for the following year. With the small increase in dividend for 1955-56, the cut effected in the previous two years has been partially restored. The dividend absorbs Rs. 55,017, leaving a balance of Rs. 46,818 to be carried forward.

The Company's harvest of coffee during the 1955-56 season amounted to 2,396 cwts., having declined from 2,860 cwts. in the previous season, in contrast to the general increase in coffee output to record levels. This has, however, been made good by the higher valuation at Rs. 2-8 per point as compared with Rs. 2-4 per point in 1954-55. The payment received up to the end of March 1957 amounted to Rs. 2-5 per point. This works out at approximately Rs. 132-8 per cwt. for robusta and Rs. 192-8 per cwt. for arabica, as against Rs. 132-8 and Rs. 180, respectively, for the previous season. The crop for the current season is estimated at 3,120 cwts., but a shortfall of 220 cwts., is anticipated in the arabica crop estimate due to adverse weather conditions.

The Company's area under mature coffee is 335.23 acres, made up of 207.10 acres of robusta and 128.13 acres of arabica, and under immature coffee 156.20 acres (robusta 71.62 acres and arabica 84.58 acres).

The Company's paid-up capital is Rs. 3.67 lakhs, half of which represents the capital raised by the capitalisation of reserves in 1952-53. The reserves and surplus aggregate Rs. 3.97 lakhs. The current liabilities aggregate Rs. 79,712 and provision for taxation less advance payments stands at Rs. 40,127, to cover the balance of estimated liability on account of agricultural income-tax for the seasons 1953-54, 1954-55 and 1955-56. No provision has been made against Central income-tax on account of coffee. The gross block of Rs. 7.77 lakhs has been written down to a book value of Rs. 6.99 lakhs. A sum of Rs. 50,854 was spent during the year on the upkeep of immature areas and cost of opening and planting the new arabica clearings. The current assets amount to Rs. 1.85 lakhs and cover the current liabilities and provision for taxation by a comfortable margin.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 21 *cum-div.* On an *ex-div.* basis, the dividend of 15 per cent. for the year works out a yield of 7.7 per cent. per annum.

TATA STEEL OUTPUT

The production of iron and steel by the Tata Iron and Steel Co., Ltd. during the month of April 1957 has suffered a setback, as compared with that in the previous month. As compared with the output in April 1956, the production during the month under review of pig iron and saleable steel shows a decline, while that of steel ingots is higher, as will be seen from the following table:

	(In tons) April 1957	March 1957	April 1956
Pig Iron	92,300	95,100	100,000
Steel Ingots	89,300	93,200	87,200
Saleable Steel:			
Finished	62,500	73,600	64,300

PROFIT OF CAMBODIA MILLS SHRINKS

DIVIDEND, HOWEVER, UNCHANGED

LABOUR unrest resulting in strikes and lock-outs, consequent upon the implementation of the Textile Tripartite Enquiry Commission's recommendations in October last, have been responsible for a sizable shrinkage in sales turnover and a corresponding reduction in the earnings of the Cambodia Mills Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Coimbatore), for the year ended 31st December 1956. The gross profit has dropped from Rs. 5.16 lakhs to Rs. 3.41 lakhs, in distinct contrast to the smart recovery made in 1955, when the profit jumped from a low of Rs. 1.99 lakhs earned in 1954. The net profit, after providing for Managing Agents' commission and depreciation, stands lower at Rs. 92,303, as against Rs. 1.97 lakhs in the previous year. Indeed, the net profit would have been still lower had it not been for the fact that the Managing Agents have agreed to forgo their entire 1 per cent. commission on purchases of cotton and stores and 2½ per cent. commission on development which together amounted to Rs. 79,828. The net profit, however, compares favourably with the net loss of Rs. 0.88 lakh suffered in 1954.

In view of the lower earnings, the Directors have not been able to transfer anything to the reserves, while in the previous year a modest allocation of Rs. 6,594 had been made to the development and reconstruction reserve. The net sum available for appropriation (including the surplus brought in from 1955) is just sufficient to pay the 6 per cent. preference dividend and to maintain the ordinary dividend at 5 per cent. per annum. However, the small sum of Rs. 40,638, being the excess provision for taxation no longer required, and the refund of B.P.T. and E.P.T. has come in handy for maintaining the dividend comfortably.

The following table will enable a comparative study of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	91.22	1,23.06	1,10.47	92.66
Expenses (including raw materials consumed)	92.01	1,00.19	1,08.64	83.83
Gross profit	3.41	5.16	1.99	9.17
Managing Agents' commission..	0.31	1.13	0.98	1.38
Depreciation	2.13	2.06	1.91	1.59
Taxation	..	..	..	2.60
Net profit (+) or loss (—) ..	+0.92	+1.97	—0.88	+3.60
Reserve for taxation no longer required	0.32	..	..	..
Refund of B.P.T. and E.P.T. ..	0.09	..	..	..
Transfer to reserves	..	0.07	..	2.57
Dividends—				
7% cum. preference	0.07	0.07	0.07	0.07
Ordinary	1.00 (5%)	1.00 (5%)	..	1.50 (7½%)
Carry forward	0.54	0.28	—0.55	0.40

It will be seen from the above table that the sale proceeds have made a substantial drop of Rs. 31.84 lakhs during the year under review. This stands in marked contrast to the rise of Rs. 12.59 lakhs noted in the previous year and also reverses the upward trend in sales for the previous two years. The decline, as the Directors point out, is due to lower production attributed to the loss of 62 full working days through strikes and lockouts and the go-slow tactics adopted by workers. Expenses have, however, come down from Rs. 100.19 lakhs to Rs. 92.01 lakhs, but this only reflects the setback in production. The expenses would have been lower still but for an additional one month's bonus to labour for the year 1955 having been charged to the accounts under review as a result of a bonus arbitration award.

Commenting on the Company's expansion programme, the Directors state that the implementation of the extensive rehabilitation scheme has made satisfactory progress. They anticipate that all machinery ordered so far will have been installed by September this year, including the humidification plant which is already in partial operation.

The Company's financial position, as disclosed by its balance-sheet as at 31st December 1956, is quite satisfactory. Its paid-up capital of Rs. 21 lakhs, made up of 1,000 7 per cent. cumulative preference shares of Rs. 100 each and 200,000 ordinary shares of Rs. 10 each, is supplemented by reserves and surplus aggregating Rs. 20.53 lakhs. This reserve has been built up even after capitalising a sum of Rs. 10 lakhs in 1948, when the paid-up capital was increased from Rs. 11 lakhs to Rs. 21 lakhs. The current liabilities amount to no more than Rs. 5.43 lakhs and include loans from banks aggregating Rs. 1.54 lakhs. The gross block of Rs. 42.33 lakhs, including additions during the year amounting to Rs. 2.44 lakhs, stands written down to Rs. 18.34 lakhs. The current assets aggregate Rs. 28.62 lakhs and cover the current liabilities by a wide margin of Rs. 23.19 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 12.18 *cum-div.* On an *ex-div.* basis, the dividend for the year provides a yield of 4.28 per cent. per annum, free of tax.

Points From The Chair

Textile Industry

"TRADERS have developed the habit of buying cautiously, partly because of the general impression that the last increases in excise duties on 1st September 1956 were a temporary measure, and also because of the uncertainty about the Government's intentions for replacing existing sales taxes on cotton textiles by excise duties. The consumer is also being cautious or may be he is spending more of his money otherwise. It seems strange that the supply of cloth should be more than enough when only 16 yards of mill and handloom cloth is presently available for internal consumption and one could reasonably expect demand to be rising towards the official estimate of 18½ yards as at the end of the second Five-year Plan, an estimate which many of us consider to be too low. I do not think, however, that we should be misled by the present apparent adequacy of supply, as within a year or so there is more likely to be a shortage. I hope, therefore, that the Government will proceed with their plans announced last year for the expansion of the textile industry. For the most part, these plans depend on expansion by the handloom industry assisted by spinning mills and Ambar Charkas, and on conversion of handlooms to powerlooms. The expansion of composite mills has, in fact, been linked to the export trade."

R. E. CASTELL,
Bangalore Woollen, Cotton and Silk Mills Co., Ltd.

Sugar Production

"Today there is an all-India surplus in production, supply outpacing demand. This no doubt is a heartening reversal of the position three years back when sugar had to be imported to relieve shortage in the country. In 1954-55 the total production of sugar in the country was 15.89 lakhs of tons; in 1955-56 it moved up to 18.56 lakhs of tons; in 1956-57 it is estimated production will touch 20.2 lakhs of tons. Besides expanding production, we have also a carryover of well over 5 lakhs of tons. The present pace of consumption is rated at 19 lakhs of tons and at the end of the planning period it is expected this may move up to 22.5 lakhs of tons. At the same time, with new sugar mills progressively coming into production during the Plan period and several of the old ones expanding their crushing capacity, the total production in the country is expected to reach up to 25 lakhs of tons at the end of the second planning period. If sugar economy is to be protected, obviously, apart from expanding internal consumption a regular outlet by way of export has to be created, developed and maintained. By good luck we have made a promising beginning and if only Government will take note of the export potential and the need to build it up in all possible ways, I believe the sugar industry, apart from safeguarding its own economy, is destined also to play an important part in the balance of payments position of the country."

C. R. SRINIVASAN,
East India Distilleries and Sugar Factories Ltd.

Tight Money

"The problem of the banks during the last year were the consequences of the problems that faced the country. What have agitated all minds are the acuteness of finance for domestic needs as well as to pay for imports and the rising trend of prices. There were the large needs for development, imports of steel, capital machinery, etc. There was an increase of Rs. 158 crores in advances and bills against an increase of Rs. 77 crores in deposits. The banks had to resort to increased borrowings from the Reserve Bank, liquidate a small part of their investments and reduce cash balances to meet the demand. Shri T. T. Krishnamachari, the Commerce Minister, on taking over the Finance portfolio, was confronted with the serious problem of credit for trade and industry and the limited capacity of the commercial banks to meet the same. Living up to his reputation for prompt and dynamic action, the Finance Minister had consultations with banks and representatives of industry along with the Governor of the Reserve Bank and liberalised the bill market. This very largely assisted the commercial banks to meet the demand for funds from industry and commerce and Shri T. T. Krishnamachari rightly earns the credit for the easening in the otherwise tight situation. The higher money cost aimed at curbing inflation in India has had no significant effect."

S. P. JAIN,
Punjab National Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

PODAR MILLS LTD. Annual General Meeting, Bombay, 16th May 1957. Dividend: Rs. 7.00 per share (dividend Rs. 5.00 per share plus bonus of Rs. 2.00 per share), payable on and after 17th May 1957. Transfer books remain closed from 25th April to 16th May 1957, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 20th May 1957. Dividend: Re. 0.50 (5 per cent.) per share. Transfer books remain closed from 4th to 20th May 1957, both days inclusive.

SVADESHI MILLS LTD. Annual General Meeting, Bombay, 20th May 1957. Dividend: Rs. 14.00 per share (includes bonus of Rs. 2.00 per share), payable on and after 21st May 1957.

PRESIDENCY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 21st May 1957. Transfer books remain closed from 7th to 21st May 1957, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 22nd May 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 8th to 22nd May 1957, both days inclusive.

TATA MILLS LTD. Annual General Meeting, Bombay, 22nd May 1957. Dividend: Rs. 3.50 per share (includes bonus of 50 nP per share), payable on and after 23rd May 1957.

AURUNGABAD MILLS LTD. Annual General Meeting, Bombay, 23rd May 1957. Transfer books will remain closed from 13th to 25th May 1957, both days inclusive.

ANGLO FRENCH TEXTILES LTD. Annual General Meeting, Pondicherry, 23rd May 1957.

KATAKHAL LALA BAZAR RAILWAY CO., LTD. Annual General Meeting, Calcutta, 24th May 1957. Transfer books remain closed from 10th to 24th May 1957, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 24th May 1957. Dividend: Re. 1.25 per share (includes bonus of Re. 0.25 per share), payable on and after 28th May 1957. Transfer books will remain closed from 16th to 25th May 1957, both days inclusive.

GUEST, KEEN, WILLIAMS LTD. Annual General Meeting, Calcutta, 29th May 1957. Dividend: 15 per cent. (final). Transfer books remain closed from 8th to 29th May 1957, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 31st May 1957. Dividend: Re. 1.00 per share.

PORT CANNING AND LAND IMPROVEMENT CO., LTD. Annual General Meeting, Bombay, 31st May 1957. Dividend: *Nil*. Transfer books will remain closed from 16th to 31st May 1957, both days inclusive.

GODFREY PHILLIPS INDIA LTD. Annual General Meeting, Bombay, 31st May 1957. Transfer books will remain closed from 25th to 31st May 1957, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st May 1957. Transfer books will remain closed from 15th to 31st May 1957, both days inclusive.

JAY SHREE TEA GARDENS LTD. Annual General Meeting, Calcutta, 31st May 1957. Dividend: Re. 1.00 per share. Transfer books will remain closed from 13th to 31st May 1957, both days inclusive.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 7th June 1957. Dividend: Re. 0.75 per share (final), payable on or after 25th June 1957. Transfer books will remain closed from 18th May to 7th June 1957, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 17th June 1957. Dividend: Rs. 6.00 per share, payable on and after 24th June 1957. Transfer books will remain closed from 13th May to 8th June 1957, both days inclusive.

INDIAN WOOD PRODUCTS LTD. Final dividend of 20 per cent. (making a total of 30 per cent.) for the year ended 30th September 1956.

TROPICAL PLANTATIONS LTD. First and final dividend of 12 per cent. i.e., Rs. 3.00 per share for the year ended 31st December 1956. Transfer books will remain closed from 25th to 31st May 1957, both days inclusive.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. A final dividend of Rs. 2.00 per share (making a total of Rs. 3.50 per share, for the year), for the year ended 31st December 1956. Transfer books remain closed from 4th to 11th May 1957 both days inclusive.

NONSUCH TEA ESTATES LTD. Interim dividend of Re. 1.00 per share, for the year 1956-57. Transfer books remain closed from 10th to 16th May 1957, both days inclusive.

COMPANY REGISTRATIONS

SIEMENS ENGINEERING AND MANUFACTURING CO. OF INDIA PRIVATE LTD. (First Director: Mr. D. M. Khatau.) Business: Electrical engineering and electrotechnical manufacture. Authorised capital: Rs. 1,00,00,000. Private company. Address: Stadium House, 81/83, Veer Nariman Road, Bombay-1.

PIONEER EQUIPMENT CO. PRIVATE LTD. (First Director: Mr. Yeshwant M. Mehta.) Business: Importers, exporters and general traders. Authorised capital: Rs. 25,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

GORDHANDAS DESAI PRIVATE LTD. (First Director: Mr. Gordhanbhai Ishwerbhai Patel.) Business: Manufacture of scientific apparatus, equipment, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Karmani Building, Sir P. M. Road, Bombay.

WIMCO'S PROFIT SHRINKS SLIGHTLY

FINLAY MILL REPEATS DIVIDEND

Western India Match Co., Ltd.

THE directors of the above Company (Chairman: Mr. Chunilal V. Mehta, Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

While production and sales show an increase over the previous year, severe competition from the subsidised cottage industry remains and the Company's trading result can in the circumstances be deemed satisfactory.

As sanctioned by the shareholders at the extraordinary general meeting held on 19th June 1956, the transfer of Shahdara Factory and certain other assets in Pakistan has been completed and the proceeds have been received by the Company in India. During the year under review, the Company's small splint factory at Dharmadam has also been disposed of as it was no longer economical to continue manufacturing activities there.

The directors have decided to build a factory for the manufacture of paper and Government have granted the necessary licence. This establishment is to be situated adjacent to the Company's Calcutta Factory, and orders for machinery have already been placed.

After the shareholders had approved of the re-appointment of the managing agents at the extraordinary general meeting held on 23rd October 1956, the Government also granted their consent, and the Swedish Match Company have now been re-appointed the managing agents of the Company for a further period of 10 years from 1st January 1957 on the terms and conditions of the Agreement approved at the aforesaid extraordinary general meeting. Government however required that the directors nominated by the managing agents shall not be called "Managing Directors" and they have in consequence been redesignated "Executive Directors."

The factories and other property of the Company have been adequately maintained and net fresh capital expenditure in respect of additions to machinery and buildings amounts to Rs. 11,96,760. Rs. 9,66,888 (Rs. 8,56,341) has been provided for depreciation on the same basis as the last two years. For 1956 a provision of Rs. 29,90,000 (Rs.34,40,000) has been made for taxation.

The net profit for the year, after providing for depreciation and taxes for 1956 as aforesaid, is Rs. 37,22,994 (Rs. 39,65,281), to which should be added the sum of Rs. 5,61,984 (Rs. 5,28,887), being the balance brought forward from last year, making a total of Rs. 42,84,978 (Rs. 44,94,168). The directors recommend that this amount may be dealt with as follows:—

To pay a dividend for the year ended 31st December 1956 at the rate of 10 (10) per cent. per annum [i.e. Rs. 10 (Rs. 10) per share] free of income-tax absorbing Rs. 27,50,000 (Rs. 27,50,000), to pay a bonus for the year ended 31st December 1956 at the rate of 1 (1) per cent. per annum [i.e., Re. 1 (Re. 1) per share] free of income-tax absorbing Rs. 2,75,000 (Rs. 2,75,000), to set aside for general reserve Rs. 4,00,000 (Rs. 5,00,000), to extra commission to the managing agents as per the old agreement Rs. 3,57,740 (Rs. 4,07,184) and to carry forward to next year's account Rs. 5,02,238 (Rs. 5,61,984).

In terms of a recent decision of the Bombay High Court the directors are advised that the managing agents are entitled to the extra commission, in respect of the profits for 1956, under the provisions of the earlier managing agency agreement, which expired on 31st December 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,75,00,000	Block ...	1,55,25,785
Reserves ...	1,35,45,829	Stock-in-trade	1,11,08,813
Provision for taxation ...	3,03,387	General stores	45,79,262
Liabilities ...	1,37,67,905	Loose tools ...	51,960
Profit and loss account ...	8,59,978	Goods-in-transit ...	16,86,234
		Debts, deposits and advances ...	93,95,630
		Investments ...	73,194
		Cash ...	1,27,01,225
		Banderols held in trust ...	8,54,996
Rs.	5,59,77,099	Rs.	5,59,77,099

Finlay Mills, Ltd.

The directors of the above Company (Agents: Messrs. James Finlay & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

The trading profit for the year, after allowing Rs. 8,76,000 (Rs. 2,65,000) for depreciation and Rs. 40,000 (Rs. 5,60,000) for taxation amounts to Rs. 14,60,058 (Rs. 13,56,538) to which is added the amount brought forward from previous year of Rs. 1,67,199 (Rs. 3,90,661) making a total of Rs. 16,27,257 (Rs. 17,47,199). From this amount the directors have appropriated to development rebate reserve Account Rs. 2,98,000 (Rs. 5,70,000), to retiring gratuity reserve account Rs. 2,50,000 (Rs. 10,000) and to payment of a dividend at the rate of Rs. 20 (Rs. 20) per share, and 50,000 shares (free of income-tax) absorbing Rs. 10,00,000 (Rs. 10,00,000) leaving a balance of Rs. 79,257 (Rs. 1,67,199) to be carried forward to next year's accounts.

The Alexander and Finlay Thread Co., in which the Company has a 50 per cent. interest with the English Sewing Cotton Co., Ltd., Manchester, showed a loss during the year of Rs. 1,24,870 of which the Company's share is Rs. 62,435. The technical difficulties referred to in the last report have now been overcome but market conditions during the year deteriorated. It is hoped, however, that the results of the current year will show improvement.

Permission has been obtained for the installation of 18,500 additional spindles and part of the necessary preparatory machinery has already been received. A new *Baling Press* has been installed in the *Bleach House*. Machinery has been well maintained during the year.

Prices and deliveries of cloth were satisfactory for the first eight months of the year, but these declined in the latter portion of the year coincident with the increase in excise which came into effect from 1st September 1956. The additional amount of excise as a result of this increase is estimated at approximately Rs. 18,00,000 per annum.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Block ...	58,84,802
Reserves ...	67,54,875	Stock-in-trade	72,83,082
Provision for taxation ...	5,60,189	Stores, spares, etc. ...	21,43,952
Liabilities ...	57,92,082	Debts, deposits and advances ...	19,55,966
Profit and loss account ...	79,257	Investments	9,00,585
		Cash ...	18,016
Rs.	1,81,86,403	Rs.	1,81,86,403

Waverley Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The loss for the half-year, after taking into account the sum of Rs. 50,000 (Rs. 1,01,000) for depreciation, amounted to Rs. 42,389 (profit of Rs. 1,30,080). After deducting therefrom the credit balance brought forward from the previous half-year of Rs. 14,518 (Rs. 1,14,640), unclaimed dividends forfeited Rs. 517 (Rs. 312), over-provision of liability in respect of previous half-year written back Rs. 7,550 (Rs. 12,591) and amount transferred from general reserve Rs. 50,000 (*nil*) there remained a credit balance of Rs. 30,196 (Rs. 2,65,660 which includes Rs. 8,037 being E.P.T. Post-war refund). Forfeited dividends paid, amounted to Rs. 119 (Rs. 63) leaving an available balance of Rs. 30,077 (Rs. 2,65,597). This amount the directors distributed as follows:—

Paid dividend on 15,000 preference shares at 5 per cent. per annum for the half-year ended 30th June 1956, or Re. 1.25 (Re. 1.25) per share Rs. 18,750 (Rs. 18,750) and carried forward Rs. 11,327 (Rs. 2,12,031 after paying ordinary dividend at 12½ per cent. absorbing Rs. 31,250 and paying Rs. 3,566 as income-tax on E.P.T. Post-war refund).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the Mills worked 48 hours per week with 12½ per cent. of the total looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956 and to 5 per cent. from 20th February 1956. Since the close of the period the industry sealed 2½ per cent. of the total looms from 16th July 1956 and a further 5 per cent. on 17th September 1956, again making a total of 12½ per cent. of the total looms sealed. Due to the purchase of loom hours three mills worked 96 hours per week on a double shift basis working 260 looms on each shift as from 2nd July 1956.

Trading conditions throughout the half-year continued to be difficult, and with the increase in production due to unsealing of looms prices fell rapidly and at no time was it possible to transact business simultaneously in raw jute and goods at a profit.

Mills were on strike from 13th October 1956 to 29th December 1956, due to the refusal of workers in the Spinning Department to carry out duties of one spinner to two frames and in the Weaving Department weavers refused to work one weaver to two looms although this procedure had been in force for a considerable period.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	15,27,071
Debentures ...	10,00,000	Stock-in-trade	20,37,624

Liabilities ...	21,88,372	Debts, deposits and advances ...	5,68,535
Profit and loss account ...	11,327	Investments	60,000
		Cash ...	70,864
Rs.	48,34,699	Rs.	48,34,699

Assam Match Co., Ltd.

The directors of the above Company (Chairman: Mr. Dinshaw D. Romer, Bombay) present the audited accounts of the Company for the year ended 31st December 1956.

The trading result of the year has been satisfactory, both production and sales being good. The factory and other property of the Company have been adequately maintained. Rs. 1,36,810 (Rs. 1,16,268) has been provided for depreciation on buildings and machinery on the same basis as the last two years. For 1956 a provision of Rs. 4,80,000 (Rs. 4,00,000) has been made for taxation.

The net profit for the year, after providing for depreciation and taxes for 1956 as aforesaid, is Rs. 5,44,478 (Rs. 4,35,902) to which should be added the sum of Rs. 1,18,395 (Rs. 1,17,493) being the balance brought forward from last year, making a total of Rs. 6,62,873 (Rs. 5,53,395), which the directors recommend may be dealt with as follows:

To pay a dividend for the year ended 31st December 1956 at the rate of 10 (7½) per cent. per annum [i.e. Re. 1 (Re. 0.75) per share] free of income-tax absorbing Rs. 3,00,000 (Rs. 2,25,000), to pay a bonus for the year ended 31st December 1956 at the rate of 2½ (5) per cent. per annum [i.e. 25 (50) naye paise per share] free of income-tax absorbing Rs. 75,000 (Rs. 1,50,000), to set aside for general reserve Rs. 90,000 (Rs. 60,000), to set aside for dividend equalisation reserve Rs. 25,000 (*nil*) and to carry forward to next year's account Rs. 1,72,873 (Rs. 1,18,395).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	18,62,280
Reserves ...	15,70,000	Stock-in-trade	19,16,671
Provision for taxation ...	18,48,265	Stores and loose tools	7,38,430
Liabilities ...	14,02,587	Goods-in-transit ...	2,91,910
Profit and loss account ...	1,72,873	Debts, deposits and advances ...	30,27,155
		Investments	5,968
		Banderols held in trust ...	58,828
		Cash ...	92,483
Rs.	79,93,725	Rs.	79,93,725

Port Canning and Land Improvement Co., Ltd.

The directors of the above Company (Bombay) submit the audited accounts of the Company for the year ended 30th April 1956.

Messrs. David Sassoon & Co., Ltd., were in charge of the Company as secretaries, treasurers and agents during the period under review; they ceased to act from the 1st August 1956.

The directors regret that book debts amounting to about Rs. 1,39,000 which were shown as doubtful for the first time in last year's accounts have on scrutiny turned out to be time-barred for years; they have had to be, therefore, written off as bad. Most of the remaining book debts are reported to be under suits or decreed; they have been, however, shown as doubtful pending realisation or proving otherwise. It may be pointed out that since the year's working resulted in a loss, no provision could be made for doubtful debts.

An adjustment in respect of the value of the land acquired by the State of West Bengal is not considered practicable until such time as the actual compensation receivable is known. Buildings at Canning and Kutcha houses and other structures at lots and dead stock having been written down in past years, no further depreciation could be provided.

The Company's capital and the reserves and other funds are mainly absorbed in the land block acquired by the State of West Bengal. Unfortunately, the terms of acquisition under the West Bengal Estates Acquisition Act, 1953, are entirely inadequate and inequitable.

A proper representation not having been submitted to the Government of West Bengal immediately after the Company's estates vested in the State on the 15th April 1955, it has now been submitted.

Since acquisition the working of the Company has been far from satisfactory; during the year, the Charland suit against the Company by Government remained unsettled; the case was compromised subsequently, the realisation of Company's non-rent receiving interest and properties was scarcely begun; the collections dwindled to about Rs. 1,39,000 as against about Rs. 6,69,600 during the previous year; and the expectations of the Canning Office that the Company's expenses would be covered by collections failed to materialise. No material change took place in the tax position from that of last year.

The Company's present and future working has been prejudiced by the premature payment of retrenchment compensation to the staff at Canning during the year under report. Since then, certain members of the staff have been allowed to leave service without regard to the terms on which they were re-employed.

According to their agreement with the Company, Messrs. David Sassoon & Co., Ltd., were to serve as secretaries, treasurers and agents for a period of twenty years expiring on the 31st December 1956. They, however, ceased to act from the 1st August 1956, on which date the directors took charge under protest.

The Directors have been endeavouring to obtain full possession of the facts. They regret to report that the state of the Company's affairs was most unsatisfactory. There is little prospect of improvement at this late stage and the question of putting the Company into liquidation therefore requires your urgent consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Block ...	68,00,359

Provision for taxation ...	2,92,981	Debts, deposits and advances ...	3,24,989
Liabilities ...	60,774	Investments	4,57,359
		Cash ...	1,70,220
Rs.	77,53,806	Rs.	77,53,806

Polson Ltd.

The directors of the above Company (Managing Agents: Messrs. Polson Agencies Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1956.

The net profits after providing for managing agents' commission and depreciation amounted to Rs. 9,59,038 (Rs. 12,16,322) which with the sum brought forward from the preceding year's accounts of Rs. 30,914 (Rs. 25,124) made a total of Rs. 9,89,952 (Rs. 12,41,446). From this amount the directors have transferred to rehabilitation reserve Rs. 62,126 ((Rs. 72,810), to development reserve Rs. 2,62,064 (Rs. 33,222), to reserve for taxation Rs. 1,20,000 (Rs. 4,68,500) and to reserve fund Rs. 1,10,000 (Rs. 3,00,000) leaving a balance available for distribution Rs. 4,35,762 (Rs. 3,66,914). Out of this, the directors have paid a dividend of Rs. 6 (Rs. 6) (subject to deduction of income-tax) per share on the preference shares Rs. 1,20,000 (Rs. 1,20,000) and a dividend of Rs. 12-8 (Rs. 10) per share, free of income-tax, on the ordinary shares Rs. 2,70,000 (Rs. 2,16,000) leaving a balance of Rs. 45,762 (Rs. 30,914) to be carried forward.

The sales during the year were Rs. 95,84,598 as compared to Rs. 97,38,656 of the previous year.

The Polson Model Dairy at Patna was put into commission on the 3rd December, 1956. The inauguration ceremony of the Patna Dairy was done by the Governor of Bihar on the 28th February, 1957.

The dairy is the last word in structure and machinery and the directors have full hope that they shall be able to turn out butter which could stand competition anywhere in quality. The dairy has the maximum production capacity of 10,000 lbs. per day.

The Company's dairy at Khagaul (Dinapore) which has now been finally closed due to the opening of the Patna Dairy, remained closed for over four months owing to labour trouble and this was to a very great extent responsible for creating shortage of butter on the market in various places resulting in loss of business and deficiency in profits. It is, however, hoped that with the starting of the new dairy at Patna the position will be retrieved considerably.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,60,000	Block ...	46,27,512
Reserves ...	26,00,003	Raw and manufactured goods ...	11,44,355
Provision for taxation ...	12,50,528	Stores and spare parts	5,48,890
Liabilities ...	13,10,659	Debts, deposits and advances ...	20,18,675

		Cash ...	10,26,790
Rs.	93,66,952	Rs.	93,66,952

Brushware Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th November 1956.

It will be observed that the accounts are presented in the new form required by the Companies Act, 1956.

The results for the year, after providing for all charges including provisions for taxation and depreciation, and adjustments, show a surplus of Rs. 16,798 (Rs. 7,280) from which has been transferred to rehabilitation reserve a sum of Rs. 7,500 (Rs. 3,500) leaving a balance of Rs. 9,298 (Rs. 3,780). After adding the balance brought forward from the previous year of Rs. 7,251 (Rs. 10,971), there is an available balance of Rs. 16,549 (Rs. 14,751). The directors recommend to dispose of this amount as follows:

In payment of a dividend of Re. 1 (Re. 0.75) per share, free of income-tax, for the year ended 30th November, 1956, absorbing Rs. 10,000 (Rs. 7,500) and carry forward Rs. 6,549 (Rs. 7,251). The dividend on the ordinary shares complies with the requirements of Section 23A of the Indian Income Tax Act, 1922.

Such of the recommendations made by the firm of Industrial Consultants, reference to which was made in the last report, as could be given effect to, having regard to the financial position of the Company, have been implemented leading to reduction in manufacturing costs.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,000	Block ...	8,925
Reserves ...	3,21,000	Stock-in-trade	2,61,888
Provision for taxation ...	21,854	Stores and spare parts	49,449
Liabilities ...	1,43,865	Debts, deposits and advances ...	1,39,840
Profit and loss account ...	6,549	Investments ...	1,30,209
		Cash ...	2,957
Rs.	5,93,268	Rs.	5,93,268

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee & Sons, Ramjeenagar, Tiruchirapalli) submitted the audited accounts of the Company for the year ending 31st December 1956.

The result of the working of the year is satisfactory. The net profit after deducting all expenses including Rs. 63,889 being the bonus to workers for 1954 and 1955 and writing off Rs. 1,20,435 (Rs. 92,151) as depreciation on fixed assets amounted to Rs. 4,67,686 (Rs. 1,73,179). Donations amounting to Rs. 2,339 (Rs. 4,112) have been paid therefrom. Along with Rs. 1,508 (Rs. 8,321) carried forward from last year, there is a sum of Rs. 4,66,855 (Rs. 1,77,388) to the credit of the profit and loss account, which the directors recommend to dispose of as follows:

To provision for taxes Rs. 1,75,000 (Rs. 50,000), to pay a tax-free dividend of 11¼ (9) per cent. to shareholders Rs. 1,57,350 (Rs. 1,25,880), to general reserve Rs. 48,668 (*nil*), to reserve for rehabilitation Rs. 13,000 (*nil*), to dividend equalisation reserve Rs. 10,000 (*nil*) and to carry forward to next year Rs. 62,837 (Rs. 1,508).

The slackness of the demand for yarn and costlier prices of cotton coupled with the threatened cut in energy supply and expected enhancement in the wages to workers may depress the earnings of the current year.

Accounts in brief were as under:—

•Liabilities	Rs.	Assets	Rs.
Capital ...	13,98,670	Block ...	5,08,023
Reserves ...	9,50,000	Stock-in-trade	14,11,008
Provision for taxation ...	2,18,177	Stores and spare parts	2,06,591
Liabilities ...	3,34,805	Debts, deposits and advances ...	6,71,386
Profit and loss account ...	62,837	Other assets	54
		Investments	1,02,456
		Cash ...	64,971
Rs.	29,64,489	Rs.	29,64,489

Straw Products Ltd.

The directors of the above Company (Managing Agents: Messrs. J. K. Agents Private Ltd., Bhopal) submitted the audited accounts of the Company for the year ended 31st December 1956.

During the year after meeting all the expenses and charges and taking into account bonus to workers and staff, provision for depreciation, remuneration to directors, and managing agents' commission and remuneration, the Company has made a net profit of Rs. 8,18,607 (Rs. 4,03,078) which together with the excess depreciation written back amounting to Rs. 4,60,295 (*nil*) and the balance brought forward from the last year's account of Rs. 16,003 (Rs. 42,925) comes to Rs. 12,94,905 (Rs. 4,46,003). The directors have made provision for disposal of the above amount as under:—

Provision for taxation Rs. 3,75,000 (Rs. 1,30,000), to pay dividend at Re. 1-4 (Re. 1) per share on 1,50,000 shares free of tax, equivalent to 12½ (10) per cent. Rs. 1,87,500 (Rs. 1,50,000), transfer to general reserve Rs. 6,50,000 (Rs. 1,50,000) and balance to be carried forward to next year Rs. 82,405 (Rs. 16,003).

During the year under review the production and sales of the Company's products have been satisfactory, and the reputation for high quality has been maintained. Labour relations have also been cordial.

The depreciation provided for in excess of the allowances given under the Income-tax Act in the previous years has been written back in the accounts.

The construction of 72 one-roomed double storeyed tenements for the labour has been completed and the same have been allotted under the rules of the Industrial Housing Scheme of the Government of India.

Out of the two machines, the old *Cylinder Mould* machine has been discarded and sold. The new machine, order for which was placed during the year 1955 has arrived, and is already under erection. The machine is expected to go into production during the second quarter of this year. Order for equipment for extension of the main machine has also been placed and it is expected that this extension too will be completed before the end of this year. It is to be noted that with the above addition and extension, the production capacity of the factory will be more than doubled by the end of this year.

The directors have pleasure in informing that the Company has been granted licence for establishment of a paper mill of 18,000 tons per annum capacity in Orissa. Negotiations for purchase of machinery and plant are under finalisation. Orissa Government has granted bamboo forests on long leases to the Company to ensure full supply of raw material. Working and development of forests allotted from 1st October 1956, has also commenced.

All these expansion schemes and new projects will require heavy capital expenditure for which plans are being worked out for raising further capital. The authorised capital of the Company has already been raised to Rs. 5 crores.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	89,20,615

A NEW ERA IN FINANCING ECONOMIC DEVELOPMENT OF AUSTRIA

EVERY WORKER AN INVESTOR?

[A significant development in Austria of late has been the ending of the period of expansion of State ownership of industry and business. Those at the helm of affairs in the Government have now come to realise that concentration of ownership of property either in the State or in private hands is a danger. Reflecting this shift in emphasis is the commencement of a new era in financing economic development, promising to lighten the load carried by the Government as the owner of so many public services, industries and businesses nationalised in 1946. This is, indeed, a development which deserves to be noticed in India where the State's incursion into the country's economic activity is on the increase. In view of the vital importance of the new trend in Austria, we publish below an interesting article on the subject by a correspondent of the Swiss Bank Corporation Bulletin, *contributed to a recent issue of the* Bulletin.—Ed.]

AUSTRIA needs capital urgently on a large scale for the development of her economy. One pregnant example is enough to demonstrate this. In Austria, the energy deficit is widening rapidly. To close the gap, the imports of coal from the U.S.A. have had to be increased from a monthly average of 40,000 tons in 1954. to 110,000 in 1955 and 160,000 in 1956. As Austria has immense natural resources in water power, great efforts have been made to increase the output of hydro-electric energy. As long as investment capital could be obtained from Marshall Aid funds and from World Bank loans, the output of water power increased by leaps and bounds, year after year. But, as the demand for electrical power has been increasing by more than 12 per cent. yearly, the rate of increase in the power supply has barely kept pace with the demand, despite the vast amount of capital invested.

The following estimates of the power requirements in the next three years show that, even if the investment capital can be found, the rate of economic expansion will probably prevent the gap from being quite closed:

(In milliard kw.h.)

	Production	*Demand*
1957	10.83	11.30
1958	11.70	12.10
1959	12.24	12.80

But, as further investment capital from Marshall Aid funds and World Bank loans will probably be unobtainable and as the prospect of floating foreign loans on the requisite scale is remote, the solution of the problem of capitalisation of development must be sought elsewhere.

Austria is rich in deposits of mineral oil and natural gas. But investment capital is required for their development. Crude oil from Austrian wells is available already, but the capacity of the Austrian refineries (2.3 million tons yearly) is not great enough to provide sufficient heating oil to cover even home demand.

Not Feasible

Both the hydro-electric power works and the oil industry are publicly-owned. Hence the task of finding the investment capital required for their expansion is mainly the business of the State. In practice, this means that the capital would usually have to be raised by taxation or by the issue of State loans at home or abroad. Neither way promises to be very productive. The Austrian State revenue for the current year is estimated to be about $34 milliard at most. No substantial increase is feasible.

Equally urgent, moreover, is the need of investment capital for private industry. No estimates of the amount required for the modernisation of plant and equipment yet exist, but the aggregate amount is believed to be of the order of magnitude of $10 milliard. The need would become more urgent still, if Austria joined the Free Trade Area. The rate at which new investment capital can be made available from Austrian sources depends essentially on the rate of growth of national income, savings, and the willingness of savers to invest.

During 1948-53, the Austrian national income increased at the average rate of 9 per cent. and in 1954-55 at 10 per cent. yearly, reaching $100 milliard at the end of 1955. To keep up this rate of increase would require the investment of new capital comparable in amount with that provided by Marshall Aid. In the last few years, savings have greatly increased. In 1954, savings deposits alone aggregated $6.7 milliard, in 1955 $9.2 milliard, in 1956 $12.5 milliard. This was highly satisfactory. But until now the Austrian people have shown little inclination to invest in shares and have bought bonds only very grudgingly. Nearly all post-war bond issues have been taken up by banks, insurance companies and pension funds. In Austria, small savers have always shown a marked preference for mortgages. Industrial expansion in Austria since World War II has been chiefly self-financed, that is, out of the undistributed profits of existing industries.

Finding Investment Capital

If the economic development of Austria is to continue at the present rate, the problem of finding the investment capital needed must be solved. Ostensibly, the solution that suggests itself first is that of making Austria attractive as a field for the investment of foreign capital. Borrowing abroad, however, has very narrow limits. The last World Bank loan obtained in 1956 was for U.S. $31 million, that is $800 millions, hardly enough to cover the deficit in the 1956 programme of water-power works construction.

Private investors in other countries would not be interested in financing the development of Austrian State-owned power works or industries. There is, indeed, a reluctance in Austria to encourage the inflow of foreign capital on a large scale for fear that foreign influence on the Austrian economy might become too strong. Preferably all the latent sources of investment capital in Austria itself should be exploited in full first.

Pressed from all sides to provide far more investment capital for the development of the national economy that could be made available in the customary ways, the Austrian Government decided to try a bold experiment—for which there was no precedent—and, to the surprise of everybody, has achieved success far beyond anything expected. A new era in financing economic development has begun, promising to lighten the load carried by the Austrian Government as owner of so many public services, industries and businesses nationalised in 1946. This new policy is destined ultimately:

Vastly to increase the number of small investors; to stimulate thrift; to make all workers "investment-conscious;" to encourage every worker to become part owner of the enterprise in which he is employed; to increase the sense of responsibility of the worker to the economy as a whole and to his own works in particular; to generate preference for the earning of dividends over the desire for higher wages; and to give the workers a direct influence on the management of those industrial concerns where they are employed.

Altogether 40 per cent. of the share capital of the two great Austrian, State-owned commercial banks was offered to investors of Austrian citizenship in the form of "Volksaktien"—people's shares—to be acquired by purchase—30 per cent. in the form of preference shares paying a guaranteed minimum dividend of 6 per cent. nominal, without voting power, offered to the general public and 10 per cent. in common stock, carrying voting power, not offered for sale publicly but to certain public bodies through a syndicate.

This is the first time any part of the share capital of a State-owned Austrian enterprise has been offered for sale. By means of a very skilfully worded folder, distributed nation-wide through the post, the advantages of investing one's savings in these preference shares was explained clearly in simple language. The folder showed that $150 million 6 per cent. preference shares in the Creditanstalt-Bankverein and $75 million common stock in the Oesterreichische Landerbank in denominations of $500 and $1,000 were purchaseable at 115 per cent., payment in cash or by instalments spread over a period of five months. The net yield at this price is 5.22 per cent. At present prices, the average yield on Austrian shares is about 3½ per cent., so that, at the issue price, the investment in preference shares is exceedingly attractive, especially as the purchaser is entitled to the dividend for 1956. If, contrary to expectation, the profits in any one year are not enough to meet the guaranteed dividend on the preference shares, the arrears must be paid off within the two following years. If the profits justify a higher dividend than 6 per cent., this will be paid. Dividends are not to be curtailed intentionally by the accumulation of reserves.

Only after the payment of the dividend on the preference shares will the holders of the remaining 70 per cent. common stock be entitled to a share in the net profits. If the share capital of the banks is increased, the subscription rights of the holders of preference shares will entitle them to acquire new preference shares only. Being bearer-shares, the preference shares will be marketable freely on the Vienna Stock Exchange at the market price of the day without special formality. From now onwards, the State will hold only 60 per cent. of the share capital in these two banks, but will exercise 85.7 per cent. of the voting power.

Success of the Experiment

As the Austrian people had never shown much interest in shares as a form of investment, great scepticism prevailed in Austria at the possibility of the success of the experiment. Within a few days, however, the whole issue was heavily oversubscribed. As the State wished the preference shares to be distributed as widely as possible, the application list was kept open till 28th February as originally announced.

Speaking of the result of the issue, the Austrian Finance Minister, Prof. Dr. Reinhold Kamitz, declared that the period of expansion of State ownership of industry and business had now ended. The concentration of ownership of property, whether by the State or in private hands, was a danger. What the State aimed at in this experiment was to teach the saver the advantage of sharing in the ownership of industry and business. By creating a demand for people's shares, a far wider market for all shares will be achieved. Demand for capital needed to expand and modernise industry can in future be referred to the capital market. Moreover, instead of workers saving short-term to make purchases of consumer goods, they will form the habit of saving long-term to finance the economy.

A precedent has been established. While still retaining the majority of the share capital and voting power in State-owned concerns, the State will be able to raise new investment capital by the sale of part of the share capital in other State-owned concerns. Workers who become shareholders in concerns owned by the State will in future insist that State-owned industries earn profits and pay dividends.

MONEY STRINGENT AGAIN

(From Our Own Correspondent)

BOMBAY, 8th *May*

Stringent conditions came to prevail in the short term money market during the week under review. The slight relaxation in the pressure of demand for funds noted in the previous two weeks proved to be a short-lived affair and money was again in keen demand in the face of a general shortage of floating funds. Banks had often to seek accommodation from the Reserve Bank, with the result that money rates remained firm.

The prevailing conditions are duly reflected in a further fall in Scheduled banks' deposits with the Reserve Bank during the week ended 3rd May 1957 and a sharp rise in their borrowings against usance bills.

Inter-bank call money was keenly bid at 2½ per cent. House money at call was in demand at 4 to 4½ per cent. and short-term deposits at 4½ per cent. for one to six months. A higher rate of 4¾ per cent. was reported to have been offered for one month deposit early in the week.

The statement of the Reserve Bank of India for the week ended 3rd May 1957 discloses an expansion in notes in circulation to the tune of Rs. 15.20 crores, in contrast to the shrinkage of Rs. 7.20 crores in the previous week. Notes held in the Banking Department are lower by Rs. 11.53 crores and the consequent increase of Rs. 3.67 crores in total notes issued is covered by an increase of Rs. 4.97 crores in rupee securities and a decline of Rs. 1.29 crores in rupee coin. There is no change in foreign securities, but balances held abroad maintain the downward trend with a further fall of Rs. 8.48 crores during the week. This is the seventh week in succession for which foreign balances show a decline, the aggregate fall during this period being of the order of Rs. 46.32 crores. The deposits of the Central Government and other Governments are lower by Rs. 1.02 crores and Rs. 2.13 crores, respectively. Deposits of banks also have shrunk by Rs. 3.54 crores. Loans and advances other than to Governments are up by Rs. 9.07 crores, of which outstanding advances to Scheduled banks against usance bills account for Rs. 6.74 crores. Fresh advances to banks against these bills during the week amount to Rs. 13.07 crores. There has been an addition of Rs. 14.72 crores to the Reserve Bank's investments during the week, while a decline of Rs. 4.67 crores is noted in Government Treasury Bills purchased and discounted.

A further increase in total deposits of banks is shown by the Scheduled banks' statement for the week ended 26th April 1957. While demand deposits are lower by Rs. 1.77 crores, time deposits have gone up by Rs. 6.84 crores. Borrowings from the Reserve Bank have fallen by Rs. 2.86 crores. Advances have risen by Rs. 4.12 crores and inland bills purchased and discounted by Rs. 3.97 crores. Foreign bills have, however, declined by Rs. 1.45 crores. Cash balances show a shrinkage of Rs. 4.29 crores, while money at call and short notice are up by Rs. 1.28 crores.

For yet another week, the Gilt-edged market remained dull, with the volume of business reduced to very low proportions and hardly any variations in prices. Most of the Central and State loans were on offer. 3 per cent. 1986 Conversion Loan attracted sellers at Rs. 74.40, while there were buyers at Rs. 74.37. 3 per cent. 1970-75 were on offer at Rs. 87.20. 3 per cent. 1966-68 was unchanged at Rs. 92.05, as also 3 per cent. 1964 and 1963-65 at Rs. 94.45 and Rs. 94.15, respectively. 3 per cent. 1959-61 was on offer at Rs. 97.75, but 3 per cent. 1958 and 1957 had buyers at Rs. 99.65 and Rs. 99.75, respectively. 3½ per cent. 1961 was in demand at Rs. 99.50, while 3½ per cent. 1964 had sellers 5 nP lower at Rs. 98.25, and 3½ per cent. 1967 at Rs. 98.50. Among State loans, 4 per cent. Madras 1967 dropped 65 nP to Rs. 97.35 and 1968 7 nP to Rs. 97.18. 4 per cent. Travancore 1963 shed 75 nP to Rs. 98.25.

There was a further hardening of the rupee in terms of U.S. dollar during the week. Banks' selling rate for ready dollars declined from Rs. 479.50 to Rs. 479, before gaining partially to Rs. 479.25 per $100. The buying rate fell from Rs. 476 to Rs. 475.75 per $100. This is in consonance with the trend in sterling. In New York, spot sterling hardened from $2.79-2.79¼ to $2.79⅜-2.79½, but declined to $2.79¼-2.78⅜ yesterday. Three months' forward improved from $2.78-3/16-2.78-5/16 to $2.78⅜-2.78½ before falling to $2.78⅜-2.78¼. Transferable sterling gained from 276.95-277.05 cents to 277.65-277.75 cents.

HIDES STOCKS SMALL

(From Our Own Correspondent)

MADRAS, 6th *May*

The tanned hides and skins market remained unchanged, as several tanners and merchants had gone to upcountry for *Ramzan* holidays. U.K. inquiries for kips were moderate and, as prices in the local market were firm, shippers did not accept U.K. levels. There was selective call for buff calf, especially top marks, but sellers were reserved because stocks were small. Tanned cow calf and buff hides were neglected. Inferior fifths cow hides fetched attractive prices for inland trade and, consequently, trading with the U.K. in this section was negligible.

There were good inquiries for prime class goat skins from the Continent, and sheep skins from the U.K. since the prices quoted were 3*d.* to 6*d.* lower than the earlier transactions, shippers did not evince any interest in new business. Market quality sheep and goat skins were in good demand by exporters, and arrivals found ready clearance at unchanged prices.

The London public sales have been postponed to tomorrow, and the quantities of goat and sheep skins available are now 608,000 and 498,000 pieces, respectively.

Shipments during April were 2,616 bales cow hides, 282 cow calf, 10 buffs, 406 buff calf, 683 goat, 381 sheep to the U.K.; 250 bales goat, 56 sheep to the Continent: 102 bales buffs, 54 buff calf and 53 bales goat to the U.S.A.

BULLION RECOVERS

(From Our Own Correspondent)

BOMBAY, 8th *May*

The bullion market displayed steady conditions during the week under review, though the trend was two-sided. In the earlier half of the week, silver suffered a slight setback on reports of heavy payment of import duty on Tibetan coins. The recession was made good during the last three days on heavy offtake in the ready section, the depletion in floating stocks and rumours of an increase in silver price in Tibet. Gold also softened a bit early in the week on reports of arrivals of unauthorised metal, but good demand from upcountry centres soon pushed up the rates.

The notable developments of the week under review were the widening of backwardation charges in both silver and gold and the increase in premium of ready over forward. Backwardation charges widened from As. 7 to Re. 1-5 in the white metal and from *nil* to As. 11 in gold. At the close, however, they were a shade lower at Re. 1-3 and As. 10, respectively. The premium of ready silver over the current settlement rose from As. 4 to Re. 1-6 and that over the next settlement from As. 12 to Rs. 2-8. Ready gold, which had commanded a premium of just an anna over the current settlement a week ago, came to be quoted As. 12 higher. The premium over the next settlement widened from As. 2 to Re. 1-6.

Silver for forward delivery (14th May settlement) improved from Rs. 182-4 to Rs. 183-6, but gave way to Rs. 181-7 on Monday this week. Thereafter, there was a sharp recovery to Rs. 183 at the close today. The June settlement gained from Rs. 181-12 to Rs. 182-4 before giving way to Rs. 180-3. Subsequently, there was again an improvement to Rs. 181-14.

Ready silver advanced from Rs. 182-8 to Rs. 184-6. The floating stocks of silver are placed at 500 bars. The daily average offtake was 25 bars.

Forward gold (13th May settlement) dropped from Rs. 105-11 to Rs. 104-13 before gaining ground to Rs. 106 at the close. The June settlement was marked down from Rs. 105-10 to Rs. 104-11, but in the subsequent recovery it gained to Rs. 105 at the close.

Ready gold hardened from Rs. 105-12 to Rs. 106-12. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 4,500 tolas, while the offtake was of the order of 5,000 tolas per day.

New York silver price was unchanged at 91⅛c. In London, however, prices fluctuated both ways, but, on balance, they were lower. Thus, spot silver dipped from 80*d.* to 79½*d.*, before gaining to 79⅝*d.* Forward silver gave way from 79⅝*d.* to 79½*d.* Gold declined from 250*s.* 3*d.* to 250*s.* ½*d.*, but improved to close at 250*s.* 1½*d.*

The following comparative table shows the trend of market during the week under review:

	8-5-1957	Highest	Lowest	30-4-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

SUGAR EXPORT PROSPECTS

(From Our Own Correspondent)

HAPUR, 6*th May*

Sugar prices continued to rule steady during the week on further export prospects. Production of indigenous sugar, which up to 15th April was put at 17.01 lakh tons, as against 15.46 lakh tons a year before, is expected to exceed 19 lakh tons. Sugarcane supplies to factories in Meerut district are reported to be diminishing and it is thought that most of the factories will terminate crushing operations by the 15th inst., but, in the nearby Muzaffarnagar district, the season is expected to last till the end of the month. Demand for sugar this year has been very keen from Madras side, but despatches are held up from time to time, due to want of loading facilities. Although the Government is reported to be considering to allow further exports to the extent of 200,000 tons, but traders feel that no such exports should be sanctioned till total production of sugar is not known; otherwise it will create a bullish trend in prices.

The prevailing mill delivery prices of sugar are: Jaswant Rs. 28.69; Simbhauli Rs. 29; Mawana Rs. 2.50 to Rs. 29.50; Daurala Rs. 29.75 to Rs. 30.75; Amroha Rs. 28.31; Bijnore Rs. 28.12; Mansoorpur Rs. 28.62 to Rs. 30.37; Rampur Rs. 30.75; retail Rs. 30.50 per maund.

The *khandsari* market ruled quiet during the week and prices varied between Rs. 21 to Rs. 26.50, according to quality.

Ready *gur* improved during the week as daily arrivals were lower at about 100 maunds. Local stock was about 96,000 maunds, as against 69,000 maunds last year. Germination reports of new crop were reported to be satisfactory. The prevailing prices were Rs. 11.25 to Rs. 11.50.

Gur futures improved during the week on bull support influenced by better ready prices. The week-end quotations were: *Gur baisakh* Rs. 11.15; *asar* Rs. 11.78; *fagun* Rs. 11.31.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 8*th May*

The cotton futures market presented a rather curious trend during the week under review, the two contracts, Jarilla May and Vijay June, moving in opposite directions. Thus, while the former ruled firm, Vijay June staged a retreat. The firmness of Jarilla May was aided by good buying support, following encouraging spot advices. Indeed, this contract would have scored a marked rise in prices but for the operation of stringent margins, uncertainty regarding the Forward Market Commission's attitude to the trend in cotton futures, and large-scale profit-taking operations. Vijay June lacked support. Business put through was greatly restricted, such done being mostly of a squaring up nature. The bulls were reluctant to make any large-scale purchases, owing to fears of Government intervention and heavy margins, while bears were hesitant to sell, in view of the tight supply position of cotton. The undertone of the market was generally steady.

M.G. Jarilla May delivery opened the week at Rs. 713 and, after improving to Rs. 725 the same day, declined to Rs. 709 on heavy profit-taking. It, however, picked up strength in the subsequent sessions and rose to Rs. 718 yesterday. It opened today at Rs. 720 and closed at Rs. 718. The net gain over the week was Rs. 11.

M.G. Vijay June commenced the week at Rs. 858, as against Rs. 850. The contract encountered selling which brought down the quotation to Rs. 843.50 on Saturday. After recovering to Rs. 853 today, it again eased to Rs. 850.50 at the close. The net loss over the week was Rs. 5.50.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	8-5-57	*High*	*Low*	30-4-57
Jarilla (May) ...	718	725	703	707
Vijay (June) ...	850.50	858	843.50	856

With the waning of interest in the current contracts, attention of cotton traders is focussed on the commencement of trading in new contracts. The ways and means of formulating a hedge contract which will truly reflect the supply and demand position of cotton are being studied by the Special Sub-Committee of the East India Cotton Association. The consensus of opinion among the Committee members would appear to be in favour of a single contract which it is thought would be more realistic and workable from the contracts formulated in the past seasons. It is understood that the Sub-Committee has already made certain recommendations in this regard. One of such recommendations is that no floor and ceilings within the existing Government floors and ceilings should be prescribed during the season.

Meanwhile, the E.I.C.A. is reported to have urged the authorities to decontrol cotton in the coming season. For, it feels that continuance of control over cotton is not justified particularly when there is no control on prices of cloth and other important commodities. The continued imposition of control over prices of cotton has hindered the smooth working of a hedge contract. The hedge contract, framed within the present control machinery, does not permit the forward section to reflect correctly the cotton supply position. If, however, the Government were not prepared to lift control, the floor and ceiling prices should, the E.I.C.A. points out, be so fixed as to obviate the necessity of official interference in the middle of the season. The E.I.C.A. is also reported to have suggested that, in order to check wide fluctuation in prices of cotton futures, the floor prices for the ensuing season be raised.

In the spot section, values were fully maintained. Mill demand broadened on apprehensions of shortage of supplies before the arrival of new crop. All the popular varieties were in good demand. There was keen interest in 320F, Jayadhar, Wagad, etc., as well as in American cotton. Interest in Egyptian cotton, however, continued to be low, as the prices were not attractive to mills.

The shipment period for import of raw cotton from the U.S.A. to India under the Indo-Burma U.S. tripartite agreement, 1956, has been extended up to 30th June 1957.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 730; Berar Jarilla 815; Khandesh 820; Vijay 945; Oomra *Deshi* 780; Moglai 760.

Depressed conditions prevailed in the Karachi cotton futures market during the week under review. The sentiment of operators was adversely affected by fears of keener competition from U.S. cotton in world markets. These fears were based on the possibility of the American Government adopting a low price support policy for cotton, following a recent statement by Mr. Ezra Benson, U.S. Secretary of Agriculture, that high prices would hamper export sales and that cotton must be priced right if it were to sell. These fears touched off large-scale selling in May and July contracts, leading to a drop in values. N.T.R.G. May fell by Rs. 1-10 to Rs. 78-4. July position declined from Rs. 82-7 to Rs. 80-5. In the spot section, barring *Deshi* styles which remained firm, others ruled easy. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 88-8; Punjab *Deshi* 83-8; 4F Punjab Roller 81-6; S.G. 85-6; L.S.S. Punjab Roller 82-14; S.G. 86-14; N.T.R.G. 82-14; S.G. 89-14; 289F Punjab Roller 85-14; S.G. 94-6.

The Alexandria cotton futures market depicted an easy trend during the week under review. The easiness was due to fears of competition from U.S. cotton following Mr. Benson's aforesaid pronouncement about the farm programme. There was, therefore, selling and values tended to look down.

In the spot section, premiums for all grades, excepting higher grades, suffered a decline.

Mr. Mohammed Abu Nossier, Egyptian Minister for Trade, is reported to have categorically denied that East European countries were re-selling Egyptian cotton in the world market at prices lower than those quoted by Egypt. He said that the trade agreement with East European countries governing cotton transactions did not permit such resales. Meanwhile, it is reported that Egypt's dependence on cotton purchases by Communist countries has enabled the U.S.S.R. and its satellites to keep prices above world markets through adoption of bulk-buying techniques. It is generally believed that these countries obtain hard currencies by reselling Egyptian cotton at a discount of up to 25 per cent. Any loss on these deals are made good by the increased ability of these countries to buy in the most attractive markets and by their firmer grip on the Egyptian market, the import requirements of which can be met with goods of lower quality than would be competitive elsewhere.

The following are the latest available rates—in tallaris per lb.—from Alexandria:

Karnak: May 110.75; July 111.20. *Ashmouni*: June 75.70; August 75.55.

Values in Liverpool cotton futures market registered handsome gains. This was due to speculative buying induced by the belief that, whatever might be the future course of U.S. cotton policy, for the rest of the season, the C.C.C. export sales would be designed to stabilise prices of U.S. cotton at about the current level. Sentiment was also influenced by fairly good spot advices. The Sudan contract, however, encountered selling and registered a decline. The following are the latest available rates—in pence per lb.—from Liverpool.

American Cotton One Inch Staple Contract: May-June 26.60; July-August 26.43; October-November 26.27; December-January 26.23. *American Cotton Mixed Growth Contract*: May-June 26.75; July-August 26.53; October-November 26.37; December-January 26.33. *Sudan*: May-June 41.90; July-August 40.75; September-October 40.00.

Despite Mr. Benson's plea for a freer market for cotton instead of the present mandatory price support, the New York cotton futures market put on a cheerful appearance during the week. Throughout the week, there were good buying enquiries, induced by expectation of knowledgeable quarters that any major shift in farm policy was unlikely in the immediate future. Reports of adverse rains in certain cotton belts also imparted strength. Distant deliveries, however, came in for selling and staged a retreat.

The Department of Agriculture announced on the 6th inst., a further export sale of 143,514 bales of Government-owned cotton (1955 crop). The average price accepted for basis Middling 1" cotton was 27.61 cents. About 57,873 bales of 1956 crop cotton were also sold at an average price of 27.36 cents per lb. under the 1957-58 export programme. This brings the total sales effected today under the old programme to 7,585,638 bales and those under the new programme to 2,520,340 bales.

It is reported that the U.S. has tentatively offered economic aid to Poland, which will also include funds for purchase of an unspecified quantity of U.S. cotton.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	7-5-57	29-4-57	21-4-57
Spot	35.35	35.35	35.40
May	35.31	35.26	35.27
July	35.09	34.81	34.85
October	33.86	33.62	33.60

YARNS DECLINE FURTHER

(From Our Own Correspondent)

BOMBAY, 8th *May*

The easy conditions noted in the yarn market last week continued unabated during the week under review. In particular, rayon yarns encountered heavy selling pressure, let loose by reports of open sales for quick shipment of fine denier quality yarns at substantially reduced prices by some leading Continental manufacturers. Such sales were said to have forced the other members of the Syndicate to offer yarns at reduced rates, the cut being 4d. per lb. for finer deniers and 2d. for coarse varieties. Staple fibre yarns were also subjected to selling, thanks to reports of large accumulations of stocks with dealers as well as consumers and fears of South Indian producers being inclined to dispose of their stocks at lower rates.

Cotton yarns ruled quiet, owing to slackness in demand from consuming centres. Snia Rayon yarn (120 dull cones) for June delivery dropped Rs. 12 to Rs. 799. Spot 120 Japan receded by 7 nP to Rs. 4.05. 120 Italy declined by 3 nP to Rs. 4. 150 Italy shed 2 nP to Rs. 3.67. 150 Japan was neglected at Rs. 4.09. Among indigenous yarns, National Rayons 120 bright cones 1st grade lost 3 nP to Rs. 3.69. 150 bright cones 1st grade were done at Rs. 3.34.

Staple fibre yarns (40x2) for June delivery slumped by Re. 11 to Rs. 603. Spot 40x2 New Greats receded by 8 nP to Rs. 3.11. Citys lost 6 nP to Rs. 3.16. Centurys shed 3 nP to Rs. 3.22. Kohinoors were a shade lower at Rs. 3.32. Among foreign yarns (80x2) Fujis and Paramounts shed 6 nP each, the former to Rs. 5.25 and the latter to Rs. 5.34.

In the cotton yarn section, ten counts Podars and Moderns were neglected at Rs. 14.50 and Rs. 14.87, respectively. Twenty counts Maduras receded by 12 nP to Rs. 19. Moderns were quiet at Rs. 18.75, as also Gokaks at Rs. 18.62. Thirty counts Indus were neglected at Rs. 21.75 and Edwards at Rs. 21.50. Among forty counts, Moderns were dull at Rs. 27.75. Minaxis, however, had some support and improved by 50 nP to Rs. 27.62. Among sixty counts, Raghuvamshis eased by 25 nP to Rs. 57.75. Moderns declined by a like amount to Rs. 61.25. Finlays changed hands at Rs. 61, same as last week. Eighty counts Mahendras decreased by Re. 1.50 to Rs. 71.50. Moderns were unchanged at Rs. 76. Finlays were on offer at Rs. 81.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	8-5-1957	30-4-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Japan (per lb.)	4.05	4.12
150 Japan (per lb.)	4.09	4.09
120 Italy (per lb.)	4.00	4.03
150 Italy (per lb.)	3.67	3.69
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 June	603.00	614.00
40 x 2 New Great (per lb.)	3.11	3.19
40 x 2 Century (per lb.)	3.22	3.25
40 x 2 City (per lb.)	3.16	3.22
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.50	14.50
20s Madura	19.00	19.12
30s Edward	21.50	21.50
40s Gokak	..	..
60s Raghuvamshi	57.75	58.00
80s Modern	76.00	76.00

SUGAR ADVANCES

(From Our Own Correspondent)

BOMBAY, 8th *May*

There was a spurt in sugar prices during the week, thanks to renewed rumours of an upward revision in excise duty on sugar and frantic gate delivery demand in the Bombay-Deccan area. The buying support was so keen that the heavier arrivals—being 24,000 bags, as against 20,000 in the previous week—had no effect. The latest monthly release of 164,000 tons also did not have any significant influence. It was reported that the sugar mills had not received the release orders even on the third day of its announcement. The undertone of the market was firm.

Spot large grain sugar advanced by Rs. 2 to Rs. 95-100 per bag, inclusive of sales tax. Medium grain rallied a like amount to Rs. 92-94. Small grain rose by a rupee to Rs. 90.

Vaisakh delivery contract for "C" grade sugar moved up by Re. 1.1 to Rs. 93-1 before being quoted today at Rs. 92-12. *Shravan* delivery improved from Rs. 93-4 to Rs. 94-10; it was, however, lower at Rs. 94-6 today.

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, 8th *May*

Trading in the oilseeds market during the week under review was characterised by hectic purchases at higher prices by bulls, especially in groundnuts and cottonseed. The buying support in the groundnut section was due to scarcity of floating stocks and enlarged enquiries from *vanaspati* manufacturers, coupled with firm advices from up-country centres, Rajkot and Delhi in particular. Castorseeds, which were adversely affected in the earlier regions by upcountry offerings and apprehensions of increased competition from Brazil based on reports of higher castor output in that country, recovered smartly during the last two sessions of the week. The recovery was aided by reports that India had succeeded in selling castor oil at higher prices in overseas markets and that the U.S. could not sell castor out of its stockpile, in view of political uncertainty. Cottonseed displayed a firm trend. In sympathy with the general trend, the linseed section also ruled strong. The undertone of the market was firm.

Groundnut May contract opened steady at Rs. 169.87 and advanced to Rs. 178.00 on the 7th inst.; owing to profit-taking, however, it closed lower at Rs. 176.60 today, having made a handsome gain of Rs. 6.35 over the week. August contract commenced the week at Rs. 176.50 and moved up to Rs. 182.87 before closing at Rs. 181.25. The net rise was Rs. 4.63. Spot Bold F.A.Q. put on 88 nP to Rs. 35.50. Groundnut oil ex-mill was quoted higher at Rs. 20.12 as against Rs. 19.37 last week-end.

Castorseed May contract opened at Rs. 180.50 and climbed up to Rs. 182.25 the same day. After declining to Rs. 176.00 on the 4th inst., it again moved up to Rs. 184.75 today, though it finished a shade lower at Rs. 182.50. The gain over the week was Rs. 2. September contract maintained a similar trend. Opening at Rs. 180.50, it touched the same day a level of Rs. 188.00, but came down to Rs. 181.00 on the 4th inst. In the subsequent days, it rose steadily to touch the peak of Rs. 190.75 today, before finishing at Rs. 188.25. Spot Madras quality was higher by 50 nP at Rs. 36.50. Castor oil B.S.S. gathered 37 nP to Rs. 22.37.

Linseed May opened at Rs. 30.87 and with minor variations, touched the height of Rs. 31.25 before finishing at Rs. 31.00. September contract commenced at Rs. 32.31 and moved between Rs. 31.75 and Rs. 32.44 before finishing at Rs. 32.31. Spot bold ready hardened by 50 nP to Rs. 30.94. Linseed oil ready was done at Rs. 16.87 as against Rs. 16.75 last week-end.

Cottonseed May Contract moved between Rs. 111.50 and Rs. 114.25, and September contract between Rs. 116.25 and Rs. 119.25, during the week. The closing rates were Rs. 113.50 and Rs. 118.25, respectively. Over the week, the former made a smart gain of Rs. 3.50 and the latter put on Rs. 8.25.

Among others, *kardi* bold and *niger* seed Madras were higher, the former by 12 nP at Rs. 22.12 and the latter by 25 nP at Rs. 28.50.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	8-5-1957	30-4-1957	24-4-1957
	Rs.	Rs.	Rs.
Groundnuts—			
May 1957 ..	176.60	170.25	174.50
Khandesh Quality Ready (per cwt.)	36.37	35.00	35.37

Ready	16.87	16.75	17.00

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 7th *May*

Quiet conditions were experienced by Malabar black pepper during the week, with narrow fluctuations in prices. Turnover was very much restricted, as both buyers and sellers were awaiting new developments. Alleppey ruled round about Rs. 600, while garbled at Cochin was quoted at Rs. 102 in ready. May and June were listed at Rs. 103½. Calicut was in the market at Rs. 655, but business was small.

Sarawak at Singapore was fluctuating between $70 and $72 (Singapore dollars). Bulls at both Bombay and Cochin were inactive. They appeared unwilling to accumulate further contracts for the moment. Demand from overseas was discouraging. All eyes are now turned to Singapore where pressure from arrivals from Sarawak was expected to develop soon. From the trend of prices at Singapore, it appeared that there was no pressure so far.

The future of pepper now depends upon the attitude of Sarawak sellers and New York buyers. Unless aggressive buying by New York, pepper is expected to be a tame affair, as speculative elements in the commodity all over the world is slowly dying out.

It is imperative that the Government of India should announce as early as possible a limit on the supplies of Malabar pepper to Russia and its associates so as to restrict their chances of re-export of Malabar pepper to the U.K. and other European countries and the U.S.A. Otherwise, Russia and others will be earning foreign exchange by reselling Indian pepper at the cost of India.

May-June was quoted at $0.26 sellers, while July-August-September changed hands at $0.25½ sellers.

In the delivery section, May delivery is moving narrowly for want of new buying.

Today's nominal quotations are: Ready delivery Rs. 82 per Bengal maund, May Rs. 576-Rs. 581 and June Rs. 586-Rs. 591 per candy of 5¼ cwts.

TEA PRICES WEAKEN

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 2nd *May*

Some 1,900,000 lbs. were on offer in Sale No. 9 which was held on Tuesday, 30th April. Quality showed a slight decline from the previous sale, but there were still some useful teas on offer. The sale opened to a good demand which weakened steadily as the sale progressed. Common and low mediums were about steady, but good mediums were irregularly 15 to 20 nP easier. Best liquoring teas were irregular, but where quality was maintained prices were fully firm and occasionally slightly dearer. A feature of the sale was the demand for clean black well-made teas which sold at a premium. Whole leaf teas met with more enquiry and must be quoted dearer. The following are the quotations:

	1957 Rs.	1956 Rs.
Plain B.P.	1.45	1.69
Low medium B.O.P. ...	1.55 to 1.60	1.97
Medium B.O.P.	1.65	2.12
Good B.O.P.	1.80 to 1.90	2.14 to 3.00
Well made black leaf O.P.	2.25	2.50

The average price realised in Sale No. 9 was Re. 1.74 per lb., as against Re. 1.82 per lb. in the previous sale and Rs. 2.39 per lb. in the corresponding sale of 1956.

London Market.—Sale of 29th April 1957.—Generally 1d. to 3d. dearer. Good liquorings strongest feature.

Sale of 30th April 1957.—Little stronger, although irregular.

Colombo Market.—Sale of 29th April 1957.—Fairly good demand, Coloury mediums firm, others declined 5c. to 10c., highgrowns 10c. to 20c. lower. Lowgrowns steady.

Sale of 30th April 1957.—Strong demand. Dusts about steady, fannings and broken mixeds 10c. to 15c. dearer.

Calcutta Market.—Export.—No sale this week.

Internal.—19,000 packages. Good general demand for all types. Commonest 10 to 12 nP dearer; mediums 4 to 6 nP easier. Black leafy Middle East types easier. Medium C.T.C. dusts 15 to 20 nP easier; best C.T.C. strongest feature and sold above valuations.

Export Duty.—Government have announced the price of tea for the purpose of determining the export duty as Rs. 2.41, as against Rs. 2.64 per lb. in force for the previous month. The duty is thus lowered to 25 nP.

Export Quota.—Business has been done at the following prices:—Shipping licence 15 nP—Special rights—20 nP. 1957-58 export quota 27 nP.

Forthcoming Auctions.—Sale No. 10 will be held on Tuesday, 14th May. Thereafter, providing sufficient quantities are available, weekly auctions will be held and sale 11 is due to be held on Tuesday, 21st May.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale J*:—750,000 lbs. Less demand, prices irregularly 15 to 25 nP easier."

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 7th *May*

The continued absence of rains in the jute-growing districts and the consequent delay in sowing operations contributed to a further rise in prices of raw jute (1956-57 crop) during the week under review. This naturally led to fully steady conditions in the goods market. At higher levels, there was profit-taking for a time, but yesterday prices again gained and touched the highest levels for the week. However, overseas inquiries were limited. A fair amount of business took place in special constructions. Shipments in the month of April were much lower than in March, and as such a rise in stocks held with mills as at the end of the last month was anticipated. Between the 1st and 25th April hessian shipped was only 12,000 tons, as against 17,000 tons in the previous month, and sacking shipments, at 17,200 tons, were lower by 14,000 tons. In view of the expectation of an increase in stocks, foreign buyers elected to give only restricted support in the belief that prices would move down sooner or later. Mills reported forward business for deliveries up to the end of the year.

With fair demand, the goods section opened on a steady note. From Rs. 112.87, ready B. twills improved to Rs. 114.00. Ready hessian 40" 10 oz. was pushed up to Rs. 41.94 on Tuesday from Rs. 41.87, and it should be noted that this improvement was maintained, despite selling pressure in the *fatka* market. In sympathy with the higher trend in raw jute, a further rise in goods was the feature on Wednesday when B. twills touched a high of Rs. 115.15 and 40" 10 oz. hessian gained to Rs. 42.18. Despite profit-taking, these levels were maintained. On Thursday, the market was closed on account of *Id*. On Friday, there was a bear raid, as speculators began to unload in anticipation of rains. Ready B. twills fell to Rs. 113.25 and hessian 40" 10 oz. to Rs. 41.75. However, during the week-end, a fractional rise in prices was reported to lift B. twills to Rs. 113.75 and hessian 40" 10 oz. to Rs. 41.90. Yesterday conditions improved as the weather continued to be as dry and hot as before. B. twills rose to Rs. 115.00 and 40" 10 oz. hessian to Rs. 42.37, with the eight oz. quoting Rs. 34.62.

Raw jute prices improved by about 50 nP per maund. Sellers were reserved. Mills were, however, buyers of fair quantities, in view of their need to replenish stocks. They felt that building up stocks was essential now that there was definite possibility of the new crop being delayed by one month. There is not much prospect for imports from East Pakistan. Although Pakistan has plenty of jute still to be sold, prices there continue to be uneconomic as far as mills in India are concerned. Mesta has become a favourite with mills because of its cheapness, daissee mesta bottoms realising Rs. 26.50 per maund, as against Rs. 26.00 a week ago. Transactions in new crop were few and far between. From past experience dealers have learned that forward business in raw jute is not profitable. It has become so usual for raw jute prices to rise immediately after floods, and such rise in prices have placed sellers in a disadvantageous position. In the past, mills had entered into commitments to sell finished goods in the forward position depending on the discounted rates for raw jute. The latest quotations for the different varieties of the remaining 1956-57 crop, May-June delivery, are:

	Middles Rs.	Bottoms Rs.

TEA PRICES MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 7th *May*

Prices fell during last week's sales for domestic consumption. Dusts offered aggregated 18,325 chests, the quality of which was poor. A decline of as much as 20 nP was recorded in the price of the larger grainy C.T.C. Assams. Good support was, however, forthcoming to the powdery teas, and, consequently, they were quoted higher occasionlly. Prices of orthodox kinds from Assam, Cachar and Dooars declined by 4 to 6 nP per lb. Black leaf teas also shared the quiet trend of the market although more support was available from Middle East buyers. The quotations were: medium Assam C.T.C. Re. 1.70, medium Assam grainy dust Re. 1.65 to Re. 1.70, medium Dooars Re. 1.60 to Re. 1.65, and best C.T.C. Assam not quotable.

The internal leaf sale was not held.

Export rights changed hands at 22 nP per lb. However, sellers were soon demanding 23 nP, but buyers were then prepared to offer only 21 nP. In new season's shipping licence, sellers quoted 28 nP, but buyers offered 27 nP with no business taking place. Special rights realised 23 nP.

The prevalence of strong conditions and the unexpected rise in prices of useful liquoring teas by 2d. to 4d. per lb. in the London auctions held on 1st May, tea trade circles here believe, should not be taken as an indication that export auctions here, as and when they commenced in the new season, would record greater demand. For buying for London is expected to be cautious and lower, in anticipation that stocks in the United Kingdom at the end of June would be 25 million lbs. more than those a year ago. Although good support was expected from the Middle East, that would not be sufficient to strengthen the market. For, if the principal buyer, i.e., the United Kingdom, showed less interest, that would affect sentiment of the market as a whole.

The 1957 crop in North-east Indian gardens is expected to be satisfactory, but in view of the competition in export by producing countries implied in the absence of an international tea agreement, it remains to be seen how producers in India can avoid voluntary restriction of output.

METALS ACTIVE

(From Our Own Correspondent)

CALCUTTA, 7th *May*

With more consumer demand, there was increased activity in the metal market during the week under review. This was duly reflected in a rise in prices. Ready supplies were difficult to obtain in respect of some of the base metals. Consumers were anxious to cover against orders.

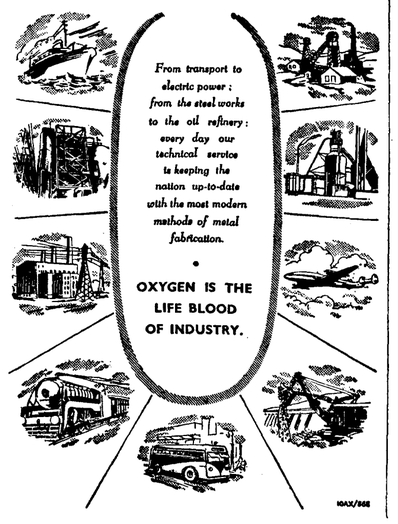
India's requirements of non-ferrous metals has been increasing, and imports of base metals are on an *ad-hoc* basis. Naturally, any development in the supplying countries is reflected in quotations here. However, from the speech of Mr. Manubhai Shah, Union Minister for Industries, which he delivered to the annual meeting of the Indian Non-ferrous Metals Manufacturers Association held here on Friday last, the trade and industry circles noted that foreign trends would continue to influence prices in India. For, Mr. Shah said that New Delhi, faced with a difficult foreign exchange position, could not agree to stockpiling non-ferrous metals and ores. From Mr. Shah's further remarks, it appeared that continuance under the O.G.L. of virgin metals was doubtful. In a forthright speech, the Association President, Mr. P. R. Kamani, appealed to the Government of India to ban imports of brass rods, phosphor copper, phosphor tin, brass and bronze wires, nickel alloys and castings in view of production in manufacturing units engaged in these being sufficient to meet the country's requirements. He pleaded for permission being accorded to the non-ferrous metals industry to roll aluminium too, and urged facilities for export of copper semi-manufactures.

During the week, tin rose from Rs. 517 to Rs. 522, and was the most impressive feature. Consumers purchased tin for meeting immediate requirements only, as they believed that, with a satisfactory supply position, prices might come down. Reports from Far Eastern markets revealed keen activity by Japan. Electrolytic zinc was also a strong feature and improved from Rs. 78.00 to Rs. 82.50. A fair quantity changed hands, with the ready delivery position commanding a premium of Rs. 8 over June-July forward. Virgin lead was fully steady at Rs. 80. Buying for despatch to up-country manufacturing units was fairly large. From Rs. 177, electrolytic copper moved up to Rs. 180. However, transactions were limited, in view of the good stock position in the bazar.

INDUSTRY EVERYWHERE

is served by

THE INDIAN OXYGEN & ACETYLENE CO., PRIVATE LTD.



FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 6th *May*

Quietly easy conditions prevailed in the foodgrains markets during the past week, thanks to pressure of new crop arrivals here and in other markets of the State. Towards the week-end, however, there was some improvement in prices, due to good demand for wheat from millers which under a recent order of the Government are not being supplied imported wheat on Government account. Scarcity of foodgrains is felt in some parts of Bihar where wheat crop has failed on account of heavy rains and hailstorms. The Union Food Minister who undertook a tour of the affected areas has announced that the State Government will receive 60,000 tons of wheat in the next three months to be distributed through 5,500 fair-price shops. The Government of India has sufficient stocks and is further receiving supplies of 15 lakh tons of wheat before September from the U.S.A., which will eliminate any possibility of scarcity.

After recording a fall of Re. 1 to Rs. 14.50 and Rs. 16 average quality and farm produce improved slightly towards the week-end to Rs. 14.62 and Rs. 16.25, respectively, today. Daily arrivals have increased to an average of 3,000 maunds, and total arrivals of new wheat from the beginning of the season are estimated at 25,000 maunds. Most of the arrivals have been lifted by consumers, as sales through fair-price shops here has been stopped from the 1st inst. and some purchases were made by millers and local stock is put at 6 *khaties*, as against 8 *khaties* last year, when new wheat arrivals aggregated 20,000 maunds on this date. Rice recorded a modest decline during the week, due to better supply position. The final estimate of rice for 1956-57 at 78,174,000 acres and production at 28,142,000 tons which is an all-time record, also acted as a bearish factor. The prevailing prices were: *Basmati* Rs. 24 to Rs. 28, *Mainpuri* Rs. 23.25, coarse quality Rs. 18 per maund.

Gram registered a fall of 50 nP per maund during the week, due to easy Punjab advices where new crop arrivals were flooding the markets. Barley and *bejhar* were mostly unchanged, the daily arrivals of each being 200 maunds. *Jowar* continued to attract good demand at unchanged prices. The week-end prices were:—Gram Rs. 11 to Rs. 11.50; barley Rs. 11; *bejhar* Rs. 10.63; *jowar* white Rs. 15; brown Rs. 12.87; *guwar* Rs. 11.75 per maund.

A record maize crop has been produced during the year in the country. The all-India final estimate of maize for 1956-57 puts the current year's area and production at 9,244,000 acres and 3,020,000 tons, respectively, which is an increase of 1.4 per cent. in area and 18.2 per cent. in production over last year.

Continued brisk buying enquiry from North Bihar and east U.P. accounted for the steady conditions in the peas section, although daily arrivals mounted to an average of 3,000 maunds. Loadings are very much restricted and traders are building up stocks for despatch as soon as loading was available. In fact, demand for peas has very much increased in the country and, side by side with demand, production has gone up and quality, too, has improved. Total arrivals from the beginning of the season were put at 68,000 maunds, as against 40,000 maunds a year before. Local stock was put at 30 *khaties*, besides a heavy quantity stored in *kothas*. *Arhar* arrivals averaged 500 maunds daily and, due to good outside support, prices improved fractionally. Other pulses were steady in sympathy. The prevailing prices at the close of the week were: Peas *dara* green Rs. 11.12; white Rs. 12.50; *arhar* Rs. 12.12; *urd* Rs. 19 to Rs. 21; *moong* Rs. 14.87 to Rs. 17; *masoor* Rs. 15 to Rs. 17.

Pulses futures ruled quietly steady during the week. Peas farm (gram) future contracts were stopped during mid-season, following the stern warning by the Forward Markets Commission that such trading was illegal. The standing transactions were settled at Rs. 10.75. The latest quotations were: Peas *jeth* Rs. 10.87; *arhar jeth* Rs. 11.87 and *urd baisakh* Rs. 19.12.

COW HIDES IMPROVE

(From Our Own Correspondent)

KANPUR, 5th *May*

During the week under review, the hides and skins market ruled firm and there was an improvement in the price of cow. Although new supplies were ample, they met with demand. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow, 1st grade Rs. 300 and 2nd grade Rs. 220 per score; wet salted buff, 1st grade 2 lb. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep, 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents gross block of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

VOL. XCIV. No. 2410 BOMBAY, 18th MAY 1957 PRICE: Re. 1.50

PREDATORY BUDGET

THE first impression that one gets after reading the lengthy budget speech of Mr. T. T. Krishnamachari, the Union Finance Minister, is respect for his skill and ingenuity to handle an exceptionally difficult problem within the limits imposed by his Party's ideology, as also for his power to make an impassioned appeal to the public to bear the new burdens with patience, if not with a smile. Indeed, he deserves to be complimented on raising a mundane issue to a highly emotional plane and thereby trying to evoke public support for the steps he has taken. If the published reactions to his proposals are any indication, he seems to have succeeded in creating the fatalistic feeling that they (the proposals) must be accepted as an inevitable price for speedy economic development. To Mr. Krishnamachari goes also the credit of being the first Indian Finance Minister to impose in a single budget the largest number of taxes, calculated to yield nearly Rs. 100 crores. It requires of a Finance Minister enormous courage and conviction to cast his net so wide as has been done by Mr. Krishnamachari. He has left out none. The rich and the poor alike have been roped in. Fortified by the fact that the present Government is safe in power for another five long years, he has laid his hands heavily even on those whom the State Finance Ministers had fought shy of approaching. Perhaps, such heavy doses of taxation as the community has now been subjected to would not have been found necessary had the State Finance Ministers been less timid in raising additional taxes in their respective areas and paid greater attention to securing higher production in the sphere of agriculture. With almost every State Government leaving large deficits in their budgets and expecting grants, credits and subventions from the Centre for financing their development schemes, the Union Government's position had become desperate. It is not surprising, therefore, that its final budget for 1957-58 resembles the efforts of a desperado to save himself from sinking.

Mr. Krishnamachari is entitled to praise for another important performance. And that is his description of the present economic health of the country. He has been candid enough to highlight in his speech all the weak spots, even at the risk of his picture becoming sombre. He has not hidden anything from the public and has frankly told the people how serious is the balance of payments position, what exactly is the state of the food front and internal savings. On the whole, his assessment of "emergent and prospective trends" is realistic and gives no room for false optimism.

The taxation proposals dominate the budget speech of the Finance Minister. It is, therefore, to these that one has to pay attention first. These proposals, to put it mildly, constitute too heavy a burden on the community and will do more harm than good. The Finance Minister says that he has framed them in the light of the following four objectives:

(1) They must produce a sizable addition to public revenues;

(2) they must provide incentives for larger earnings and more savings;

(3) they must restrain consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release the resources required for investment; and

(4) they must initiate such changes in the tax structure as would make tax yields progressively more responsive to increased incomes and facilitate an orderly development of the economy, with due regard to the social objectives we have adopted.

To us it looks as though the taxes he has now heaped on the people are in accordance with the first objective, but we do not see how they will serve the second objective, namely, the need for providing incentive for larger earnings and more savings. It is true that the Finance Minister has given some reliefs, but he has more than neutralised them by placing new burdens. In fact, from the rich and the middle classes, his right hand has taken away far more than that given by his left hand. The third objective can be realised only in part and that too only in certain circumstances all of which do not obtain today. If anything, the chances of new taxes adding to inflationary forces are greater. If this reading is correct, as it seems to be to us, the fourth objective, too, will be realised only in part. There is no doubt that the tax base has been so broadbased as to yield progressively more in keeping with the increase in incomes, but one cannot be so sure whether they "will facilitate an orderly development of the economy," inasmuch as most of the proposals in the sphere of direct taxation of the proposals in the sphere of direct taxation are, of course, in keeping with the social objectives adopted by the Government and the Congress Party but only on paper. We advisedly make this qualification, for there can be a positive achievement of the egalitarian aims of the Party only if the real wealth of the country goes up and, what is more, if the democratic way of life is preserved. There are good reasons to doubt whether both these conditions will be fulfilled so long as the socialism of the Party is more akin to that of the communist world than to socialism of the democratic world. The introduction of wealth tax and expenditure tax on top of several forms of double taxation that already abound in this country only goes to strengthen these doubts.

A detailed analysis of the implications of the new proposals to the economy, in general, and to the interests affected, in particular, has to be deferred to our next issue for want of time. But the conclusions stated above may be elucidated now. An increase in excise duties over a wide front is unavoidable in the context of the needs of even a modest plan. And the public, it will not be incorrect to say, has been prepared for it. In wielding this instrument as he has done, the Finance Minister, however, seems to have strengthened the chances of aggravating the inflationary forces. In the case of some commodities, as, for instance, vegetable oils, sugar, matches, mineral oils and tea, the incidence of the enhanced excise duties on the prices for consumers may turn out to be so heavy as to generate a fresh wave of price inflation. The risk is all the greater, because imports are to be drastically cut in order to conserve foreign exchange. In any case, if his aim of keeping down consumption of these commodities is to be achieved, the increase in excise duties must be passed on to consumers and not allowed to cut into the profit-margin of manufacturers, as has happened in the case of cotton textiles. If the latter were to be the outcome, the addition to public revenues by way of excise duties would be offset by a fall in receipts of income and corporation taxes. If the consumers were to bear the rise in excise duties, it would push up prices and the cost of living which in turn would enhance the cost of the development projects. Thus the outcome of this step remains to be seen.

The Finance Minister claims that another object of his steeply raising the excise duty on certain commodities is to create surpluses which will compel manufacturers to find an export outlet for them. He says that his experiment of this device on cloth has yielded satisfactory results and hopes that its extension to sugar would yield similar results. His claim about cloth is open to question. Even supposing it is right, it is a moot point whether the results achieved in sugar exports will be worth the heavy sacrifice which domestic consumers are asked to pay, especially because, when normal conditions return to world sugar markets, the high-cost-ridden Indian sugar industry will not be able to keep even the small foothold it has now secured. In regard to tea and coffee, too, the position is not different. In coffee, there is a large surplus at present and, if domestic consumption were to fall consequent on the high rate of excise duty, the disposal of the surplus would become more difficult and that at a time when the export prospects are not bright. The enhanced excise duty on tea runs counter to the oft-repeated advice of the Government to the industry that every effort should be made to expand the domestic market for this beverage in order to reduce its dependence on export markets the vagaries of which are unpredictable. If more exports of tea were the object of the Government, the best way of attaining it would be to encourage more production for which there is plenty of room.

In the sphere of direct taxation, the reliefs given to the middle class and to those who are subjected to maximum rates of income and super taxes are welcome small mercies. So are the reliefs extended to Section 23A companies. But these cannot be expected to enthuse the interests concerned to such an extent as to constitute a significant incentive to hard work and more savings. More so, because these little benefits have been offset by the other measures. The loss of purchasing power to the middle class consequent on higher cost of living and the enhanced indirect taxes on almost every article that it uses will exceed the

private capital by reducing the rate of inter-corporate super tax. This bait, if it is one, is not so tempting as to yield the desired results. All that it seeks to do is to maintain the *status quo* in respect of company super tax for foreign companies. But the other changes made in the fiscal field, more especially the introduction of wealth tax and the expenditure tax, the control on reserves and the heavy tax on bonus shares, have brought about a further deterioration in the climate for foreign investment. It may be interesting to note, in this connection, that, on the basis of an average annual salary of Rs. 60,000 per year or Rs. 5,000 per month, the vast majority of foreigners who come to this country for work will be subject to the most obnoxious of all taxes, namely, the expenditure tax which obtains nowhere else in the world. This tax, by itself, may prove a great deterrent to the flow of foreign private capital, because no foreigner would like to invest in this country, unless he can have his own men in the key posts of his enterprise and he will find it pretty difficult to find such men so long as they have to submit a statement of their expenditure to the tax authorities in order to enable the latter to assess the tax on it.

The wealth tax has even more mischievous potentialities in an underdeveloped country like India. It is a tax which is usually levied to check economic development, for it acts as a disincentive to savings and capital formation. What is worse, in applying it to individuals, as well as corporations, the Finance Minister has thrown all canons of taxation to the wind, as it is one of the flagrant forms of double taxation. In fine, the Finance Minister has greatly underestimated the importance of incentive to individuals for hard work and increased the direct responsibility of the State for the economic progress of the country. If leaders of free enterprise had hoped to see in this budget perceptible signs of a change of heart and a greater sense of realism in the Congress Party, they have good reasons to feel disappointed.

RAILWAY BUDGET

THE Railway Budget presented, this week, by the Union Minister for Railways, Mr. Jagjivan Ram, does not differ significantly from the interim budget submitted in March last. Only, there is a slight upward revision in gross traffic receipts now estimated at Rs. 377.9 crores for 1957-58, as against the earlier estimate of Rs. 368.5 crores, thanks to the proposed increase in supplementary charge from 6¼ per cent. to 12½ per cent. It is estimated that, over a full year, the increase will account for an improvement in traffic receipts to the tune of Rs. 12½ crores. Since the increase is to come into force only on 1st July, it will yield, for the current financial year, a smaller sum of Rs. 9½ crores. The estimates of working expenses, miscellaneous expenses and other items remain the same as they were in March 1957. The net surplus, as the figures published elsewhere will show, is estimated at Rs. 30.83 crores, as compared with Rs. 21.43 crores proposed in March 1957.

The increase in surcharge is not, however, applicable to the commodities which were exempted at the time it was originally imposed. Thus, grains and pulses, fodder, manure, *khadi*, newspapers, newsprint and books will not bear the supplementary charge. Passengers, however, have not been left alone. They have been asked to contribute a sizable amount—tentatively estimated at Rs. 14 crores in a whole year and about Rs. 8 crores in the current year—to meet the bill of economic development. Only, the method chosen for collecting this revenue is different and the railways will not benefit by it. Thus, instead of the Railway Minister, the Finance Minister has imposed the new burden on passengers in the form of a tax on fares. The rate of tax is 5 per cent. for distances up to 30 miles, 15 per cent. for distances between 31 miles and 500 miles and 10 per cent. for longer distances; season tickets are exempted from this new tax. The proceeds of this tax are to be utilised to strengthen the finances of State Governments. Explaining the principle involved in the tax, Mr. T. T. Krishnamachari said: "The States need more resources, and railway travellers, like consumers of other commodities, should, under present conditions, make a contribution." This is an entirely new approach to railway finance which may be misused in the coming years to the detriment of passengers and railway economy. Further, the increase in fares is adding insult to injury in the sense that, while passengers have been told that there is no prospect of relief from overcrowding, they are being asked to pay more for the discomfort of railway travel. But that is the price which one has to pay for development. Mr. Jagjivan Ram, on his part, has announced some welcome relief for blind persons and for T.B. patients who use the railways. All blind persons in the country will now be able to travel with one attendant on a single ticket only. Persons suffering from tuberculosis will enjoy similar concession during their journey to and from sanatoria or hospitals.

As regards the much broader question of the overall revision of freight rates, Mr. Jagjivan Ram revealed that the report of the Freight Enquiry Committee had been received. It would appear that the Ministry has not yet been able to examine and implement the Committee's recommendations. The Minister, however, indicated that the detailed study of the Committee's recommendations and the preparation of the new structure of rates and tables based thereon might be completed before the end of the current calendar year. Naturally, the Committee's recommendations and the Government's decision will be awaited with considerable interest.

Although the Railway Minister's speech does not reveal any marked variation in figures released at the time of the presentation of the interim budget in March last, it is important for the reason that it throws some new light on the Railway Plan. Considering that long-distance traffic is bound to increase with the passage of time and more especially with the implementation of the agricultural and industrial programmes included in the second Five-year Plan, it is obviously necessary that the railways should be able to carry as large a part of the increased traffic as they can do economically. It is now widely recognised as well as appreciated that transport might turn out to be the weakest link in the second Plan chain and that, unless it is strengthened, many of the other programmes included in the Plan might be endangered. There are two aspects of the Railway Plan which deserve notice. In the first place, there is the purely financial aspect, in that the allotment made to the railways is not as large as is consistent with its needs. Secondly, there is the foreign exchange aspect. The Railway Plan implies a sizable expenditure of foreign exchange. The solution to this problem is bound up partly with the overall improvement in the country's foreign exchange position and partly with the continuing negotiations between the Government of India and the World Bank.

So far as the financial aspect is concerned, the outlay on the Plan, it may be recalled, was originally fixed at Rs. 1,425 crores. At the instance of the Planning Commission, it was revised downwards to Rs. 1,125 crores. If this were all the expenditure to be incurred, the railways would be able to carry only about 162 million tons at the end of the second Plan period, as against 180.8 million tons under the original Plan. On the basis of the trends in goods traffic in the first year of the second Plan, it is now feared that the demand for railway transport will even exceed the 180.8 million tons which had been assumed earlier. It will thus be seen that shortages in transport will manifest themselves in a very acute form if the railways are not permitted to exceed the targets set under the modest Rs. 1,125-crore Plan.

Mr. Jagjivan Ram calculated that an additional amount of over Rs. 100 crores at the present price levels would be required by the railways in order to enable them to carry 180.8 million tons. Meanwhile, there is also another circumstance which has added to the difficulties of the railway planners. This arises from the fact that prices of materials which are required for implementing the Plan have risen. This factor, it is estimated, will necessitate an addition of another Rs. 100 crores to the outlay on the Railway Plan. It may be recalled that, under the original Plan, the railways were expected to find Rs. 375 crores from their own internal resources. On the basis of the fares and freights which were in force at that time, the railways, it was computed, would actually be able to find only Rs. 325 crores. Thus, there was even then a clear gap of Rs. 50 crores. This gap will widen now, thanks to the fact that the outlay on the Plan may itself have to be increased by Rs. 200 crores. Mr. Jagjivan Ram, on his part, failed to indicate how this gap was going to be filled. It remains to be seen whether the Ministry will resort to a further increase in fares and prices in order to get the revenue it needs. Generally speaking, there may be nothing inherently wrong about charging what the traffic will bear, so long as the additional revenue is utilised for constructive purposes. But it must be recognised that such a policy should be implemented judiciously if it is not to add to the inflationary pressures within the country. Again, assuming that the necessary resources can and will be raised, it is a moot point whether they can be translated into physical targets, what with the shortages of basic raw materials and equipment. Incidentally, the authorities cannot possibly deny to the private sector the right to expect the adoption of a similar policy when it comes to the question of the latter wanting to augment its resources for purposes of expansion.

In view of the difficult financial position in which the railways have been placed, so far as the implementation of their expansion programme is concerned, it is hardly surprising that Mr. Jagjivan Ram has refused to undertake any ambitious schemes for new railway lines. Referring to the surveys for the new railway lines contemplated and in progress, he said that, on examination, some of the lines may be eliminated on financial and other considerations. Even in regard to the rest, he saw no prospect of their construction being undertaken during the second Plan period. He felt that, in these circumstances, there could be no point in undertaking any fresh surveys, thereby dissipating the available manpower, which was rapidly acquired for speeding up the approved plan projects. He, therefore, declared that it would not be prudent to sanction any new surveys during the year 1957-58. But the authorities will, however, go ahead with certain projects which are under contemplation or have already been taken in hand. These include the electrification of 800-mile track, the sections included in the Plan being the Calcutta suburban area and the main-line sections from Burdwan to Gomoh, Igatpuri to Bhusaval and Tambaram to Villupuram. Another 500 miles of track covering Gomoh to Moghalsarai and Asansol to Rourkela and Rajkharswan to Barajamada will also be taken up for electrification. All this represents a realistic approach to the question of priorities.

Clearly, the success of the Railway Plan is not all a question of reaching the physical targets. It is no less dependent on the attitude of constructive co-operation which workers adopt in relation to their work. The authorities deserve to be congratulated on the extensive welfare schemes which they have undertaken in the interest of railway labour. It must be remembered, in this connection, that the railways are the single largest employer in this country; the labour force consists of 1 million persons and with the members of families added, it would almost mean a population of 5 million. Mr. Jagjivan Ram announced that he was considering proposals for the introduction of the pension system of retirement benefits in place of the existing provident fund-*cum*-gratuity schemes. Housing and medical facilities are other spheres in which improvements are being effected. A noteworthy feature is that some commendable efforts are being made to enlarge the educational facilities for railway men's children. It is not as widely realised as it should be—even the leaders of railway labour are only insufficiently conscious of the importance of this factor—that there is both need and scope for enlarging these facilities. The fact is that a very large proportion of India's railway stations is located in areas ill-served by schools. Further, many of the stations are far removed from the towns the names of which they bear. It is of the utmost importance that children of railway men should not grow up in life with no more knowledge than they can gather by themselves without the aid of schools and teachers. If labour leaders were wise and not merely vocal, they would demand that the Railway Administration accept a special responsibility for the education of the children of the staff, even if such a demand meant a slight sacrifice of their other rights. In fact, they should utilise a part of their union funds for increasing the facilities available for educating workers' children.

While the grant of more amenities and creation of better working conditions for labour are obviously necessary it is well to bear in mind that there has been a great increase in ordinary working expenses of the railways. Between 1950-51 and 1956-57, these expenses have risen from Rs. 180 crores to Rs. 229.34 crores. In 1957-58, they are expected to rise to Rs. 244.16 crores. It is obviously necessary to keep in mind the need for economy in working expenses, so that they may not absorb a disproportionately large share of the increase in revenue. The need for economy cannot be too strongly emphasised from the point of view of the general health of the railway economy and of the inflationary implications of unproductive expenditure on mere administration. In other words, the authorities cannot afford to relax their efforts designed to secure utmost economy in administrative costs. Such a policy will also release increasingly larger funds for genuine development purposes.

INCENTIVE TO SAVE AND INVEST KILLED

WEALTH TAX—STATE TRADING—COMMODITY MARKETS' REACTION TO BUDGET

THURSDAY, 5 P.M.

THOSE who thought that the Finance Minister would be soft towards investors as the economic position of the country was not conducive to the imposition of heavy taxes have been proved wrong. The events of the week have clearly shown that they were indulging in mere wishful thinking. The pity of it is that this feeling was widely prevalent two or three days before the presentation of the General Budget on Wednesday evening and acquired fresh strength after the Railway Budget a day earlier which disclosed only a modest addition of 6¼ per cent. to the surcharge on freights, as against steep increases in fares and freights anticipated earlier. Even the disclosure of the Railway Minister that the question of passenger fares was receiving the attention of the Finance Minister did not give rise to any serious misgivings among the operators about the contents of the General Budget. In fact, some of the bears had started covering their position, while a few of the leading operators had built up a small bull position. Accordingly, in the pre-budget trading on budget day, the share markets in Bombay, Calcutta and Madras were ruling steady to firm, with the rates standing well above the lows witnessed earlier in the week. The Finance Minister can thus claim to have successfully caught the market napping.

MARKET GOSSIP

Because of the fond hopes nursed on the eve of the budget, the share markets' disappointment was profound. In fact, the budget provided a severe shock, as the burden of fresh taxation belied even the worst fears. Even the pessimists did not expect it to be more than Rs. 60 crores. But it turned out to be no less than Rs. 93 crores. If allowance is made for underestimates of revenue —a regular feature of Central budgets—the actual burden will be well over Rs. 100 crores. This is a staggering figure. One will do well to bear in mind that it represents the net outgo from the hands of the public to the Exchequer after allowing for the small reliefs given by the Finance Minister.

* * * *

More time is required than we have had to assess the significance of the budget proposals to the various sections of equities. The full texts of the relevant Finance Bills were received only a little while ago and their complicated provisions require careful study. But it does not take long to realise that the cumulative effect of all the taxes on savings and investments will be most damaging. The irony of it all is that, even after having imposed such a heavy burden on the public, the Finance Minister seriously claims that he has provided incentives for hard work, efficiency and savings. He is, of course, right in one sense; the more conscientious among the citizens will try to work hard, stint and save in order to cover the higher cost of living and the fall in the purchasing power of the rupee which is inevitable at least till such time as all the investments that are now being made yield more production and add to the supply of goods. But this section of the public constitutes a negligible minority. The vast majority of workers, however, will soon get fed up with life, if both expenditure and savings are taxed.

The wealth tax and the expenditure tax are the most hideous ones, especially when they are mounted upon the traditional system of income taxation as has been done by Mr. T. T. Krishnamachari. They will discourage savings and hard work. They will open the floodgates of corruption in the administration. They will add to the scope that already exists for harassing the assessees. They will reduce the scope for privacy in life and tend to make the people slaves of the State. They will give a new impetus to the inherent tendency among our people to hoard their wealth in such unproductive assets as gold, silver, diamonds, platinum and other precious metals; in short, they will drive underground such savings as are left and adversely affect the banking habit built up over years of hard work and against heavy odds. They are entirely foreign to the Indian soil and offend the generally accepted principles of sound, equity taxation. They will bring about a further deterioration in the morale of the people.

Such will be the general effects of the new taxes that have been incorporated into the fiscal structure of the country. They may sound exaggerations because they are not quite perceptible at present. But they will be as time passes.

In any case, from the share markets' point of view, the wealth tax on corporations is a serious affair. Even at the rate of half per cent., it will mean a heavy burden to a developing economy. It is a heavy blow to new companies, in particular, and will make it extremely difficult for companies to find fresh capital. It will definitely retard flotations of new enterprises. It must be abandoned. Even Dr. Kaldor did not advocate this step and the Finance Minister himself is apologetic about it. In no part of the free world does such a measure exist.

Of about Rs. 100 crores of new taxation now thrust on the public, the rural population will bear only a small percentage. The major portion, perhaps as much as 75 per cent., will come out of the pockets of people who live in cities and towns which constitute the backbone of share markets. It is thus obvious that the flow of fresh money into these markets will greatly thin down, if not completely dry up, at least for some years to come. In any case, the heavy depreciation in equity values which has already taken place will frighten away investors from putting any further money in this mode of investment.

* * * *

There are already signs of flight of capital from productive channels to the unproductive precious metals. Spot gold has crossed the Rs. 110-mark per tola and silver is quoting at Rs. 186; just before the budget, they were ruling at Rs. 107-13 and Rs. 185, respectively. As both the metals had begun to discount the prospect of a wealth tax and expenditure tax long before the budget, the increase after the budget is modest. It will not be surprising if they climb up to still higher levels. Another evil outcome of the tax proposals will be an increase in the smuggling of gold which the authorities have never been able to prevent. The smuggling of gold affects the country's foreign exchange supply and has an adverse effect on the value of the rupee in the foreign exchange markets of the world. The Indian rupee, it may be noted here, is already quoted at a discount of 15 per cent. in Zurich, the capital of the free foreign exchange markets of the world.

* * * *

In raising the Bank rate to 4 per cent. on Wednesday last, the authorities have bowed to the inevitable. This action only shows that there is a limit to the extent to which one can try to stem the inexorable economic forces by resorting to ingenuity and wizardry. More about this in a subsequent issue. Meanwhile, attention must be drawn to the reduction in the stamp duty on usance bills from ½ per cent. to 1/5 per cent., so that, though the Bank rate has gone up by ½ per cent, the usance bill rate is only a shade higher than before. The reduced stamp duty, however, is a fraction higher than the 1/8 per cent. which used to be the level before Mr. Krishnamachari used his ingenuity and invested this tax with a monetary function.

EFFECT OF BUDGET ON SHARES

* x.r. † ex-dividend.

There has been no sharp reaction to the raising of the *de jure* Bank rate in the gilt-edged market. Values are only a shade lower. But this is due to the continued support of the Reserve Bank. Buying enquiries are completely absent, because of the impression that the existing values should find lower levels if the Government were to borrow on the basis of the enhanced Bank rate, as it must if its borrowing programme were to be a success. The money market is pretty tight, with few lenders and more borrowers. The signs are that there will be a further hardening of interest rates and bank credit will cost more. The State Bank of India has already raised its advances and *hundi* rates by ½ per cent. to 4½ per cent. and 5½ per cent., respectively.

* * * *

The annual tax on wealth, which has now been imposed, is one of those proposals which can trace their origin in India to the Kaldor Report, now the Bible of the Union Finance Ministry. The burden of the tax, however, is somewhat less heavy than what Dr. Kaldor proposed. But Kaldor's proposals constituted a package deal; the novel taxes proposed by him and now adopted by the Government in their outline were matched by substantial relief in income taxation. This compensating factor is conspicuously absent in T.T.K.'s scheme of taxation. Be that as it may, while Kaldor proposed an exemption limit of Rs. 1 lakh, the Wealth Tax Bill fixes the limit for individuals at Rs. 2 lakhs of net wealth. On the next Rs. 10 lakhs, the rate is ½ per cent. and on the next slab of Rs. 10 lakhs, it is 1 per cent.; on the balance of the net wealth, it is 1½ per cent. For the Hindu undivided family, the exemption limit is Rs. 3 lakhs; the rates and the slabs are the same as those for individuals. In the case of every company, there will be no tax on the first Rs. 5 lakhs of net wealth, while the rate on the balance of net wealth is ½ per cent. Thus, the tax is payable by individuals, Hindu undivided families and companies. Since a "company" means a company as defined under section 3 of the Companies Act 1956 and includes a foreign company within the meaning of section 591 of that Act, there is no escape from the tax, irrespective of whether the unit concerned is a private or public company. It is computed that there are about 26,000 individuals, 4,000 Hindu undivided families and 6,000 companies which are likely to be assessed to this form of tax.

The phrase "net wealth" has been used to indicate the excess of the aggregate value of the assets over the aggregate value of debts on the valuation date. By "assets" are meant property of every description, movable or immovable, excluding agricultural land. Exempted items of assets include: property held in trust, treasury savings deposit certificates, annuity certificates and other forms of national savings and provident fund accounts. The valuation of any asset, it is provided, shall be estimated to be the price which, in the opinion of the wealth tax officer—there is provision for appeal to the Appellate Assistant Commissioner and the Appellate Tribunal—it would fetch if sold in the open market on the valuation date. Thus, it is the market value of an asset that will be taken into account for purposes of tax. Notwithstanding this, the Bill further provides:

"(a) Where the assessee is carrying on a business for which accounts are maintained by him regularly, the wealth-tax officer may, instead of determining separately the value of each asset held by the assessee in such business, determine the net value of the assets of the business as a whole having regard to the balance-sheet of such business as on the valuation date and making such adjustments therein as the circumstances of the case may require; (b) where the assessee carrying on the business is a company not resident in India and a computation in accordance with clause (*a*) cannot be made by reason of the absence of any separate balance-sheet drawn up for the affairs of such business in India, the wealth tax officer may take the net value of the assets of the business in India to be that proportion of the net value of the assets of the business as a whole wherever carried on determined as aforesaid as the income arising from the business in India during the year ending with the valuation date bears to the aggregate income from the business wherever arising during that year."

Perhaps, the language of this clause admits of some improvement so as to make it clear that it is the depreciated value of the asset of a business concerned that will be taken into account.

* * * *

Although the Government has never precisely defined the functions of the State Trading Corporation, it was understood that the Corporation was intended mainly to supplement, rather than supplant, normal trading channels. Further, the Corporation, it has generally been conceded, is in a somewhat better position to undertake trading with countries with centralised economies. Indeed, a substantial proportion, though not the major portion, of the trading activities of the Corporation, it is gratifying to note, is still directed towards such countries. Thus, till 1st May 1957, its export contracts amounted to Rs. 24.48 crores, of which the exports to Communist countries aggregated nearly Rs. 7 crores. Such countries would appear to have been even more important as sources of imports. Thus, out of the total import contracts valued at Rs. 12.35 crores, these countries accounted for over Rs. 5 crores. The following figures give the export and import contracts of the Corporation till 1st May 1957, the first figure representing the quantity in tons, unless otherwise specified, and the figure in brackets the value in lakhs of rupees.

Export Contracts

Iron ore: Japan, 1,700,750 (938.33); Poland, 140,000 (72.00); Hungary, 15,000 (8.00); Italy, 75,000 (43.50); Czechoslovakia, 507,000 (268.43); Yugoslavia, 45,000 (25.30); Holland, 20,000 (11.46); U.S.A., 9,000 (4.98); East Germany, 18,000 (9.96). Total 2,529,750 (1,381.97).

Manganese ore: Japan, 85,100 (154.31); Holland, 67,500 (151.11); U.S.A., 87,521 (165.94); Italy, 22,000 (57.18); England, 62,000 (105.90); France, 40,521 (65.64); Norway 1,000 (1.28). Total 365,642 (701.46).

Chrome: U.S.A., 6,500 (11.00); Japan, 12,000 (19.28). Total mineral, 18,500 (30.29).

Miscellaneous: Shoes, U.S.S.R., 500,000 pairs (113.29); coffee, U.S.S.R., 775 L. tons (61.02); handicraft, U.S.S.R. (16.66); and Czechoslovakia (2.28); woollen fabrics, U.S.S.R., 250,000 yards (34.31); jute bags, Viet-Nam, 6 lakh pieces (9.55); coir matting, Czechoslovakia, 52,700 sq. yds. (1.69); salt, Indonesia, 50,000 metric tons (15.00); tobacco, U.S.S.R., 2,000 tons (20.16); cotton seed oil, East Germany, 1,200 tons (18.97); castor oil, Czechoslovakia, 620 tons (11.59), and U.S.S.R., 1,500 tons (28.30); cardamoms, East Germany, 5 tons (1.10); total (334.00). Grand total (2,447.74).

Import Contracts

Cement: Rumania, 70,000 (50.55); Yugoslavia, 25,000 (29.06); Russia, 25,000 (29.83); Japan, 55,000 (61.04); Poland, 100,000 (107.40); Pakistan, 165,000 (166.65).

Soda ash (light): China, 15,000 (33.40); East Germany, 10,000 (22.27); U.K., 30,000 (50.56).

Caustic soda: United Kingdom, 45,000 (210.33); East Germany, 425 (1.84).

Ammonium sulphate: East Germany, 34,520 (78.74); U.S.A., 70,000 (131.45).

Chilean nitrate: Chile, 15,000 (43.50).

Gypsum: Pakistan, 150,000 (19.50).

Raw silk: China, 35 m. tons (15.56); Japan, 73 m. tons (34.24).

Ships: Yugoslavia, 2 (138.80). Total (1,235.61).

Among the items of export trade in which the Corporation is engaged, the most controversial are the ores—iron and manganese. It will be seen from the figures given above that the export contracts in these two items account for over Rs. 20 crores. It is not, of course, known what proportion of these contracts has been fulfilled or what proportion represents export contracts, concluded by the private sector and subsequently channelled, for want of quotas, through the Corporation. Be that as it may, this aspect of the Corporation's trading activities raises a number of intricate issues. In the first place, in an important export commodity like ores, is it necessary to have a system of quotas at all? Secondly, why should the Corporation engage itself in ores trade at all and attempt to take over the entire iron ore trade? A spokesman of the Corporation, it is reported, has argued that the Corporation can better fulfil the foreign importers' requirements than private traders. This claim has been disputed in trade circles which point out that, last year, the Corporation actually failed in some of its contracts with the U.S., France and Japan. Yet another argument of the Corporation is that it can implement ore export policy on a long-term basis which private exporters cannot adopt. Traders insist that this is begging the question, for they argue that, if the Government had acceded to their suggestion for a long-term policy instead of declaring periodical

DEBACLE IN SHARES

TAX PROPOSALS SAP MORALE

(From Our Own Correspondents)

BOMBAY, 16*th May*

THE special Budget session of the Stock Exchange held last evening and the regular session today witnessed a debacle in share values, the like of which had not been seen since 1947, when the Liaquat Ali Khan budget was presented. Prices fell headlong over a wide front on sustained nervous unloading, following the announcement of budget proposals by the Union Finance Minister in the first session of the new Parliament. The heavy tax proposals, covering a wide range and sparing no section of the society, from the low-income group to the wealthiest, confounded even the worst pessimists. Though it was generally anticipated that there would be heavy tax measures, it was never believed that they would be so heavy and varied. The tax proposals, numbering nearly 112, involved extensive changes in the existing taxes and the addition of new ones. They included the upward revision of excise duty on 13 items, raising customs duty on 90 items, imposition of tax on wealth and a tax on expenditure, increase in railway fares, and the upward revision of certain postal and telegraph rates and increase in tax on companies.

The worst part of the tax proposals was the heavy burden placed on corporate earnings. It was generally expected that the corporate sector had had the worst and that there would be no further levy on companies. But the Finance Minister sprang the most unpleasant surprise on this sector by strangulating it with a rise in the tax rate for it. The income-tax on companies has been raised from As. 4 to 30 per cent. and corporation tax from As. 2-9 to 20 per cent. A tax of ½ per cent. on wealth of companies in excess of Rs. 5 lakhs would be levied. The tax on bonus issues has been stepped up from 12.5 per cent. to 30 per cent.

The only small mercy shown by the Finance Minister on companies was the reduction in super-tax on dividends (declared by companies in excess of 6 per cent.) from 12½ per cent. to 10 per cent. on distribution between 6 per cent and 10 per cent. of the paid-up capital, from 25 per cent. to 20 per cent. on distribution between 10 per cent. and 18 per cent. and from 37½ per cent. to 30 per cent. on that in excess of 18 per cent. The effect of this reduction will, however, be more than offset by the increase in corporation tax, which will reduce the distributable profits of companies. The Finance Minister has also afforded some relief in super-tax in inter-corporate dividends by reducing it from 17 per cent. in the case of Indian companies and 30 per cent. in the case of foreign companies to 10 per cent in the case of both Indian and foreign companies. The corporation tax on foreign companies operating through branches and earning other incomes has also been reduced from 36 per cent. to 30 per cent. These reliefs to foreign companies, the Finance Minister expects, will give some encouragement to investment of foreign capital in India. There is also a reduction in the minimum amount required to be distributed by section 23A companies engaged in manufacturing activity. However, the general view is that the overall burden of tax on companies is very heavy and will affect capital formation.

The effect of the further levies on companies, together with the wealth tax on individuals, tax on expenditure, the impact on living costs as a result of the increase in excise duties on various items such as sugar, cement, steel, petrol, vegetable oils, coffee, tea, tobacco, and paper, with its repercussions on wage bill of companies, the anticipated increase in stringency in money, as a result of the rise in Bank rate from 3½ per cent. to 4 per cent., cumulatively demoralised the sentiment. Fears of payment difficulties in Calcutta and the reported closure of the Calcutta Stock Exchange for five days from today as a protest against the tax proposals also affected sentiment. The closing prices today were slightly above the lowest levels touched during the day on heavy bear-covering and reported purchases by the Life Insurance Corporation of some of the blue chips.

Earlier in the week, the market remained quiet with fluctuations confined to a narrow range, as a pre-budget caution. The undertone in the pre-budget session yesterday, however, improved a little on expectation that the budget proposals might not prove to be so severe as generally feared and that the worst had been discounted in prices.

The steel section was affected, besides the higher corporation tax, by the increase in excise duty on steel ingots from Rs. 4 to Rs. 40 per ton, which is estimated to yield Rs. 6.7 crores per annum. Tata Ordinaries dipped from Rs. 169.25 to Rs. 163.25 before steadying up to Rs. 166.75 in the pre-budget session. In the budget session, they nose-dived to Rs. 154 and to Rs. 145 today. At the close they slightly hardened to Rs. 153.50. Indian Irons came down from Rs. 20.45 to Rs. 19.05, but improved to Rs. 19.70 yesterday afternoon. They receded to Rs. 17.20 in the budget session and further to Rs. 16.55 today before gaining to Rs. 17.20 at the close.

The Commerce Minister's statement a few weeks ago in Bombay that there would be no reduction in excise duty on cloth was confirmed by the absence of any relief in the budget proposals presented yesterday. As the leading industry in the country, textile mills would be much affected by the heavy corporation taxes. Bombay Dyeings drifted from Rs. 542.50 to Rs. 520.50 before recovering to Rs. 531 in the pre-budget session. Today, they slumped to Rs. 491 and closed a shade higher at Rs. 509. Centurys touched a low of Rs. 390 today, as against the pre-budget closing of Rs. 444 and last week's closing of Rs. 459. They, however, finished at Rs. 406. Kohinoors retreated from Rs. 321.50 to Rs. 292, before closing at Rs. 305. Central Indias shed Rs. 10.50 to Rs. 104, Finlays Rs. 20.50 to Rs. 264, Gokaks Rs. 11.50 to Rs. 175, and Indu Ordinaries 65 nP to Rs. 9.60. Indore Malwas lost over the week Rs. 7 to Rs. 132, New Greats Rs. 12 to Rs. 218 and Shree Niwas Rs. 13 to Rs. 165. Simplex gave way from Rs. 170.50 to Rs. 162. Standards fell precipitously from Rs. 443 to Rs. 385. Svadeshis suffered a loss of Rs. 10.50 to Rs. 203.50 and Tata Mills Re. 1.75 to Rs. 45.50.

Bank shares were not much affected. Barring a sentimental in a few scrips, the undertone was steady. Barodas held their own at Rs. 102. Centrals fell by Re. 1 to Rs. 50.25, while their new shares were unchanged at Rs. 54. Bank of Indias were a fraction better at Rs. 133.25. Punjab Nationals were done Re. 1.50 higher at Rs. 52.50, while United Commercials dropped 75 nP to Rs. 53.50.

The main beneficiaries of the rise in Bank rate are the electricity undertakings, whose return is linked with the Bank rate. However, this bullish factor was not reflected in prices of electricity shares, in view of the other penal tax measures. Ahmedabad Electrics came down from Rs. 93.75 to Rs. 93.50. Surat Electrics shed 25 nP to Rs. 108 and Bombay Suburbans 50 nP to Rs. 106. Andhra Valleys were a shade better at Rs. 1,185, while Tata Hydros dropped from Rs. 123 to Rs. 120 and Tata Powers from Rs. 1,223.75 to Rs. 1,222.50.

Sugar shares were affected by the doubling of the excise duty on sugar from Rs. 5.62 to Rs. 11.25 per cwt. which would yield to the Government Rs. 18.55 crores in a year. Belapurs slumped from Rs. 227 to Rs. 205, and closed at Rs. 210. Phaltans lost over the week Rs 9.25 to Rs. 127 and Walchandnagars Rs. 11.50 to Rs. 239. The increase in excise duty on cement from Rs. 5 to Rs. 20 per ton hit cement shares, A.C.C. drifting from Rs. 159.25 to Rs. 142. At the close they were done at Rs. 146.

In the engineering and mining section, Alcocks were hammered down from Rs. 258.75 to Rs. 242.50. Tata Locomotives dropped earlier in the week from Rs. 147.50 to Rs. 142.75, but recovered to Rs. 150 in the pre-budget session, on expectation of higher dividend. Today, they gave way to a low of Rs. 134.50, but quickly rallied to Rs. 144.50 at the close. Premier Constructions lost as much as Rs. 18 to Rs. 144. Larsen and Toubros were down by 15 nP at Rs. 15.10. Shivrajpurs gave way from Rs. 84 to Rs. 76. Indian Coppers were dull at Rs. 3.28. B.B. Petrols declined by 20 nP to Rs. 2.40.

Shipping and automobile shares ruled weak. Scindias were hammered down from Rs. 18.35 to Rs. 16.50, before they finished at Rs. 17.20. Great Easterns dropped 90 nP to Rs. 18. Premier Automobiles were done Rs. 2 lower at Rs. 88. Hindustan Motors lost 25 nP to Rs. 7.

In the miscellaneous group, Bombay-Burmahs dropped heavily from Rs. 560.50 to Rs. 485. At the close, they recovered to Rs. 506. National Rayons fell from Rs. 227.25 to Rs. 198, but looked up to Rs. 203.50 at the close. Tata Chemicals were not much affected and they closed 25 nP lower at Rs. 16. Tata Oils lost Re. 1.50 to Rs. 42.50. Wimcos were done at Rs. 157.50 *ex-div.*, as against Rs. 170 *cum-div.* a week ago.

Calcutta Stock Exchange

CALCUTTA, 15*th May*

Trading on the Calcutta Stock Exchange during the week under review reflected the traditional pre-budget caution. There was a decline in the volume of transactions and prices gradually fell. At lower levels, prudent investors accorded restricted support to the more popular counters. The chill wind of rumour suggested a possible levy of excise duty on paper and paper products, and that explained the downtrend in the shares of paper mills. The rising trend in the prices of food and other essential articles in daily use was a factor which frightened genuine investment, as it was feared that, if the rise was not checked, it was capable of generating sufficient labour troubles.

The fear that, if more imports of basic raw materials were not permitted, several industries would suffer further affected sentiment. The tightness in the money market continued to restrict activity in the share market and the company deposit scheme would further affect money conditions. The only enlightening influence was the President's address to Parliament wherein he declared that the Government was determined to go ahead with the development plans despite temporary difficulties. After this address, a change in sentiment seemed possible, but on Tuesday the market was closed on account of Lunar eclipse. The increase in freight rates on goods and parcels traffic announced by the Railway Minister yesterday was noted with concern, as the measure would result in an additional cost of Rs. 12.5 crores a year to industry and trade.

Jutes ruled quiet, in view of the fears about the raw material position. The section-feeler, Nationals, sagged to Rs. 19.25 from Rs. 20.10. Ballys lost from Rs. 145 to Rs. 141, while New Centrals were firm at Rs. 12.25.

Coals hardly invited the attention of buyers. Revival of interest was not expected until after the Coal Price Committee had completed its deliberations and its recommendations were known. Bengals were pushed down to Rs. 214, while Burrakurs ruled steady at Rs. 21.87, and provided an exception to the general trend.

Engineering shares were easy, but the volume of transactions was higher as operators displayed interest at lower levels. Guest Keens were subjected to profit-taking which took the rate down to Rs. 26.19. Kumardhubis fell from Rs. 9.06 to Rs. 8.94. More scrips of Indian Irons changed hands, the rate moving down to Rs. 19.06 from Rs. 20.54.

• • • •

Madras Stock Exchange

MADRAS, 14*th May*

The Madras Stock Exchange depicted a quiet trend during the week under review. In view of uncertainty regarding budget proposals, operators were hesitant to enter into fresh commitments either way. The volume of business put through was, therefore, considerably restricted, the general trend of prices being downward.

Tea shares in the planting section encountered selling and staged a decline. Coorg Teas dropped 65 nP to Rs. 11.35. Peermades and Balanoors receded by 50 nP each, the former to Rs. 25.75 and the latter to Rs. 16.75. Blue Mountains shed 5 nP to Rs. 3.60. Kil Kotagiris lost 7 nP to Rs. 6.03. Ouchterlonys were lower by 8 nP at Rs. 4.90. Twyfords fell by 15 nP to Rs. 17.25.

In the textile section, Coimbatore Spinnings receded by Re. 1.50 to Rs. 87.50. Metturs declined by Rs. 2 to Rs. 396. Saradas shed a like amount to Rs 93. Loyals and Lakshmis eased by 50 nP each to Rs. 49.50 and Rs. 138, respectively. Maduras lost 35 nP to Rs. 41.40.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

Sub:—**Technical collaboration in the design and execution of Railway Electrification Projects on the Single Phase A.C. Traction System.**

THE MINISTRY OF RAILWAYS (RAILWAY Board) invite tenders from Technical Associates with previous experience in the design and execution of Railway Electrification Projects on the Single Phase A.C. Traction System, for Technical Collaboration.

The prospective Technical Associates should advise the undersigned of their intention to make an offer in the form of a sealed letter so as to reach the undernoted address on or before 31st May 1957. The detailed proposals for Technical Collaboration should reach the undernoted address on or before 29th June 1957.

The particulars of tender and terms of reference can be obtained from the undersigned on payment of Rs. 2 per copy in cash or by money order.

P. N. MURTI,
Electrical Adviser,
Railway Board.

NEW DELHI, 13*th May* 1957.

THE BENGAL FLOUR MILLS COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 13¾ per cent. for the year ended 31st December 1956.

By Order of the Board,
BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th May*, 1957.

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from 24th June 1957 to the 8th July 1957, both days inclusive.

Shareholders are requested to notify immediately any change in address to the undersigned.

By Order of the Board,
FORBES FORBES CAMPBELL & CO.
PRIVATE LTD.,
Agents.

FORBES BUILDING,
HOME STREET, FORT,
BOMBAY, 15*th May* 1957.

NEWS IN BRIEF

THE Government of East Pakistan has decided to import a large quantity of mustard oil from India and shipping arrangements have already been made at Karachi for import of mustard seeds and oil.

The engineering interests of the British firm, Birlec Ltd., will in future, be handled in India by the Associated Electrical Industries (India) Ltd., with headquarters at Calcutta and branches in many other towns.

Babcock and Wilcox Ltd. of the U.K. will form a new company, in partnership with Vickers Ltd. and the Associated Cement Companies Ltd. of Bombay, for seting up a large factory in the Durgapur area of West Bengal to manufacture a variety of heavy-engineering products, including Babcock and Wilcox products of all kinds and cement-making machinery.

A micanite factory, the first of its kind in India, is being set up in Kodarma in the heart of the mica belt of Bihar. It is expected to go into production in a few months' time. The machines installed in the factory are mostly automatic and will require about a hundred workers to run them. The factory will produce 300 tons of micanite annually. The present annual consumption of micanite in India is only 40 tons.

The Madhya Pradesh Government has appointed a 24-man committee, headed by the State's Deputy Minister for Revenue, for formulating plans for the introduction of metric system and making the change-over as smooth as possible. The committees appointed previously in the former States of Madhya Pradesh, Madhya Bharat, Vindhya Pradesh and Bhopal have been dissolved.

The Standard-Vacuum Oil Company has begun drilling operations in quest of oil at the village of Nedhra in West Bengal. It is hoped that oil will be struck within a depth of 7,500 feet, but it is possible that a well of about 10,000 feet may have to be drilled. The operations will last between four and six months. The plant has its own power unit and laboratory. Equipment has come from the U.S.A. and most of the senior technologists are Americans. Indians are associated as assistants or trainees with every aspect of the operations.

An agreement was signed last week by Mr. T. M. S. Mani, Managing Director of the Neiveli Lignite Corporation, with the British firm of Messrs. Powell Duffryn for securing expert consultancy services for the mining scheme of the integrated Neiveli Lignite Project. The approximate cost of the consultancy services over a period of three and half years is put at Rs. 40 lakhs. The services of Messrs. Powell Duffryn were originally obtained as technical consultants under the Colombo Plan in 1954 for drawing up proposals for the mining, utilisation and procuring of the South Arcot lignite.

A sum of $1,853,000 has been allocated to India for 1958 by the United Nations Technical Assistance Board under its expanded programme of technical assistance. The proposed shares of the participating agencies are: U.N. Technical Assistance Administration $217,000; I.L.O. $189,000; F.A.O. $378,000; U.N.E.S.C.O. $633,000; I.C.A.O. $33,000 and W.H.O. $403,000. These amounts are in addition to the "regular" programmes of the U.N., the W.H.O. and the U.N.E.S.C.O. which carry out additional technical assistance projects using a part of their own regular annual budgets.

The Travancore Chemical and Manufacturing Company, Ltd., which is at present manufacturing potassium chlorate at Kundara, has commissioned a plant at Alwaye with a daily production capacity of 10 tons (about 3,000 tons per annum) of copper sulphate of guaranteed purity and strength. It is expected that the factory will be able to meet the entire demand in this country for this chemical. The other important fungicides like copper oxychloride and cuprons oxide will be produced shortly to replace the present imports of these chemicals as well.

A thermal grid scheme with a capital outlay of Rs. 570.106 lakhs has been drawn up by the Bombay State Electricity Board, with a view to providing cheap electrical power and a transmission network in the East and West Khandesh area. The scheme, called the Khandesh Electrification Scheme, is proposed to be put into commission by 1960. It envisages construction of a 30 m.w. station, complete with boiler and auxiliary coal and ash-handling plant, electrical equipment and a civil engineering colony, at Bhusaval on the Tapti river on a 400-acre plot situated where the Central Railway tracks diverge to Nagpur and Delhi.

The Government of India sanctioned loans amounting to Rs. 233.17 lakhs to various State Governments under the low-income group housing schemes during the month of March. Of this amount Uttar Pradesh got Rs. 45 lakhs, Andhra Pradesh Rs. 25 lakhs, Bombay Rs. 25 lakhs, Mysore Rs. 25 lakhs, Rajasthan Rs. 25 lakhs, Madras Rs. 20 lakhs, West Bengal Rs. 18.80 lakhs, Delhi Rs. 12.88 lakhs, Assam Rs. 10.79 lakhs, Bihar Rs. 9 lakhs, Orissa Rs. 8 lakhs, Kerala Rs. 3.50 lakhs, Himachal Pradesh Rs. 3.20 lakhs and Pondicherry Rs. 2 lakhs. The total amount of loans sanctioned to various States since the inception of the scheme in November 1954 is Rs. 1,746 lakhs.

The Government of India is understood to have decided to locate the heavy machinery manufacturing plant in Bihar. A technical team, consisting of experts from the Soviet Union, Britain, West Germany and India, is being appointed to survey the various sites in Bihar and recommend the most suitable site. The Soviet experts, in their report, have recommended Ranchi as the suitable site. But, owing to lack of transport facilities, the Government is not inclined to accept the recommendation. The plant is, however, likely to be located near about that place, probably near Bokaro. According to the manufacturing programme drawn for the first year of its operation, the plant will manufacture heavy and medium-sized forging and casting required by different industries in the country. In the second and third years, the plant will take up manufacture of components of steel plant.

Vessels will be able to enter and leave the ports of Bombay and Calcutta in adverse weather conditions without delay and in safety when two chains of navigational radio aids, ordered from a well-known British firm, are put into use. The Indian order for these navigational aids follows closely on the construction by the British firm, Decca, of similar equipment for Canada and will bring about a further expansion in the world coverage by the Decca system. In the case of Calcutta, the accuracy of marine navigation is of particular importance, as the city lies some miles inland from the mouth of the Hooghly River and eastwards along the coast is the complex Ganges delta. Although the approaches to Bombay are more straightforward, squalls and bad weather, particularly during the monsoon, can cause serious delays to shipping.

With a view to regulating the supply of chemical fertilisers of prescribed standard to cultivators at fair prices, the Government of India has promulgated the Fertiliser (Control) Order, 1957. Under this Order, which came into force on the 15th inst., the Central Government has been empowered to fix the maximum prices or rates at which any fertiliser may be sold by a manufacturer or a dealer in a particular area and for a specific class of consumer, having regard to the local conditions and other circumstances prevailing in that area. The dealers in fertilisers are required to obtain a licence every year, besides a certificate of registration for sale of fertiliser mixtures. The licensing and registration authorities will be appointed by the State Governments in the various regions. In addition, inspectors of fertilisers will be appointed for securing compliance of the Order. The licensing and registration fee will be fixed by the State Governments in consultation with Controller of Fertilisers. No person is allowed to manufacture for sale or sell or distribute any fertiliser which is not of the prescribed standard. Further, the fertilisers are required to be packed and marked in a prescribed manner, the contents of the container being displayed suitably.

From Abroad

The U.S. Export-Import Bank will send a delegation to Israel sometime in July next to study the latter's request for a $75 million loan.

Within two years, British Guiana will produce manganese on a large scale. The North-West Guiana Mining Company plans to produce 10,000 tons per month by 1959 and 30,000 tons by 1961.

The total working days lost due to official and unofficial strikes in Britain since December 1955 up to the end of March 1957, amounted to 5,960,000, according to Mr. Macleod, Minister of Labour.

West Germany proposes to step up the installed capacity of its atomic power plants from 500 mega watts to be attained in 1965 to 1,500 mega watts in 1967. The estimated cost of the expansion is £220 million.

THE HIND BANK LIMITED

Head Office: **CALCUTTA**

Chairman:
Mr. K. P. GOENKA

General Manager:
S. D. PARDIWALLA

Paid-up Capital - - **Rs. 50,00,000**
Reserve Fund - - **Rs. 26,00,000**

COMPLETE BANKING SERVICE OFFERED

Transacting all kinds of Foreign Exchange Business.

Bombay Office:
Sir Pherozshah Mehta Road
BOMBAY 1

S. L. MEHTA, *Manager.*

PERSONAL

MR. Escott Reid, outgoing Canadian High Commissioner in India, left Bombay last Tuesday for Italy *en route* to Canada.

Dr. Sushila Nayyar, M.P., has been elected first Vice-Chairman of the United Nations Social Commission.

Mr. K. G. Ambegaokar, Deputy Governor of the Reserve Bank of India, left Bombay last Wednesday for the U.K. on a four-month holiday.

Mr. J. E. Jenkins, Manager of the Anchor Line Ltd., Bombay, has assumed charge as General Manager of the Company for the East. Mr. Jenkins succeeds Mr. B. R. Graham who recently retired.

Dr. Fritz Koenecke, Chairman of Daimler-Benz (West Germany), arrived in Delhi in the 12th instant on a two-day visit. He had discussions with the Central Ministers and officials on the project for expanding the production of the Telco automobile works at Jamshedpur.

Mr. R. E. Rutherford, oversea sales and service liaison representative of Bryce Berger Ltd., fuel-injection engineers, of Staines, Middlesex, will visit India in July in the course of a four-month tour of Eastern countries. Other countries to be visited by Mr. Rutherford, who is already in Australia, are New Zealand, Malaya, Thailand, Pakistan and Ceylon.

The West German Ministry of Economics has extended its authorisation for German business men to take a more vigorous part in futures trading abroad by allowing speculative transactions. The activity of these business men is now restricted only to hedging.

East Germany, the world's leading lignite producer, is said to be still suffering from fuel shortages which are severely affecting the progress of its key industries. Iron and steel and engineering industries, in particular, have fallen behind schedule, due to difficulties in the supply of coke, coal and electric power.

The surcharge on freight shipped by vessels belonging to the lines of the outward and homeward U.K. and Continental shipping conference has been reduced from 17½ per cent. to 10 per cent. with effect from the 13th inst. The reduction applies to freight shipped by these lines from India, Pakistan and Ceylon to the U.K. and *vice versa*.

Britain's first big "fast breeder" reactor, now being completed on the stormy northern coast of Scotland, will supply nuclear fuel not only for future power stations but also for exports. It is a part of the £25-million atomic energy project which will begin operating from next year. The basis of the experiment is to increase the efficient use of uranium, so that one ton of uranium will do the work of 1 million tons of coal.

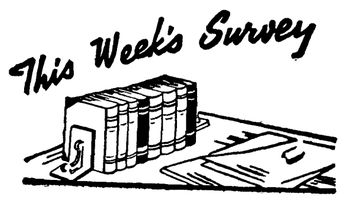
The United States has welcomed as "bold and imaginative" the Euratom report urging an immediate start on atomic power stations for Europe and setting a goal of 15 million kilowatts of nuclear energy for the area by 1967. In its opinion, the report represents another concrete step in the development of the European Atomic Energy Community. The 15-million kilowatt goal is entirely possible and feasible.

Reports from Madrid aver that the Spanish Government intends to hand over gradually to private enterprise the various industrial concerns initiated by the State-sponsored National Institute of Industry. In a statement issued to the Press recently, the Institute's President, Mr. Senor Suanses, stressed the advantages which would accrue from the takeover by private agencies of the Institute's various concerns, valued at about £540 million.

The recently appointed Transport Board of Ceylon has recommended nationalisation of the bus services in the country in January 1958. The Board expects to acquire a fleet of about 600 buses by the end of this year. The central workshop for the nationalised bus service will be equipped by Czechoslovakia and Germany which will also supply skilled personnel in the preliminary stages and train Ceylonese to succeed them.

The Italian Fiat Motor Company is making a determined bid to capture a portion of the American motor market. On the 8th inst., a specially equipped ship with a load of 1,000 Fiat cars left the port of Savona for the west coast of the U.S. where Fiat has already started its sales and service organisations. Out of a total of 315,000 cars produced in Italy during 1956, 269,573 were built by Fiat. Fiats' capacity will go up from the present 1,000 cars a day to 1,500 next year, following the expansion of the Company's plant at Turin.

It has been forecast by Sir Christopher Hinton, Managing Director of the industrial group of the U.K. Atomic Energy Authority, that, by 1980, nuclear power stations will be producing power at half the cost as compared with that produced by stations using conventional fuel. Even by 1965, the nuclear power stations then coming into operation will produce power much more cheaply than the conventional power stations coming into operation at the same time. Before the end of the 20th century, even domestic heating will come primarily from nuclear power. The reactors that are being built today, represent tremendous advances on those in satisfactory operation at Calder Hall. It is possible to forecast with certainty a tremendous improvement in the next decade.



ROAD TRANSPORT

ROAD and road transport have lately won much deserved recognition, though not the equally deserved financial assistance. But it is something to be able to look forward to 1961 (the end of the second Five-year Plan) when the classic targets set by the Nagpur Plan for road development—drawn up in 1943—will have been reached. Meanwhile, it is worthwhile considering whether the targets mentioned in the second Plan do not err on the conservative side and, if they do, whether it is not necessary to raise the targets upwards so as to lay the foundations for a road programme that will be large enough to take into account the anticipated increase in traffic. From this point of view, Mr. P. L. Varma, President of the Indian Roads Congress, in the course of his address at the annual session of the Congress, held last week at Shillong, did well to emphasise the need for revision of the Nagpur Plan.

The importance of roads arises from the fact that they help carry about 75 per cent. of the traffic in the country. Even in the sphere of long-distance traffic, their share is not inconsiderable. The estimated long-distance goods traffic at the end of the second Plan is about 195 million tons per annum. Of this, the railways are expected to carry about 162 million tons. The rest of the traffic has necessarily to be carried by coastal shipping, inland water transport and road transport. Now coastal shipping and inland water transport carried about 5 million tons in 1954-55. And even if their carrying capacity were to be doubled in the next two years, the burden on road transport will be large. Apart from this severely practical consideration, it must be recognised that roads have sociological implications of profound significance in that they help create in many ways opportunities of social and economic betterment to people in underdeveloped areas.

The leeway which has still to be made up in road sphere will be evident from the fact that the road mileage per square mile of area is 0.26 in India, as compared with 1.11 in the U.S., 1.99 in the U.K. and 2.4 in France. Not only is the proportion of road mileage per square mile low in India but a large proportion (about 60 per cent.) of the roads that exist consists of unmetalled surface. Under the second Plan, the allotment to road development is about Rs. 270 crores. The point is that, even after this expenditure is incurred, India's road mileage will increase by a mere 0.05 mile per sq. mile. Mr. Varma raised the issue whether the increase in road mileage, now contemplated, was adequate. He felt that the Nagpur Plan itself should be modified in the direction of a slight upward revision of the targets it set.

The Nagpur Plan, it will be recalled, envisaged a road system in which no village was more than five miles from a metalled road in a developed area and 20 miles in an underdeveloped area; it assumed the mileage of metalled roads required for this purpose at 123,000 miles. If this target is modified so as to bring (*a*) all villages in developed areas within a distance of three miles of a metalled road, (*b*) all villages in semi-developed areas within a distance of nine miles and (*c*) villages in underdeveloped areas within a distance of 20 miles, it will mean that the target of road mileage will have to be stepped up to 320,000. Even if this target were realised, India would have only 0.5 mile of road per square mile. No one will, therefore, deny that the revised target would, if anything, be modest. But the financial implications would be large. Mr. Varma estimated that they would imply an expenditure of Rs. 4,000 crores. And, at the present rate of investment on roads (Rs. 270 crores over a five-year period), the achievement of the modest target envisaged by Mr. Varma would take almost three-quarters of a century!

All this may not indicate what is immediately practicable. But it does show, as Mr. Varma himself pointed out, that the "need for greater allocation of funds for road development cannot be overemphasised." The Nagpur Plan was drawn up at a time when five-year plans had not been visualised. And it certainly should be revised in a way that will give a road programme consistent with the agricultural and industrial progress that is implied in the Five-year Plans. It may be useful to remember, in this connection, that most West European countries, despite the fact that their achievements in the sphere of transport have already been large, still spend about 5 per cent. of their gross national product on gross investment in transport. Of this, road investment has taken a share 3 to 10 times larger than that of railway investments. In India, too, the need, as well as the scope, for road development is large. To delay such development longer, or not to undertake it on a scale that will match the anticipated increase in production, will be to jeopardise the economic development programmes. Since finance is still the chief bottleneck, Mr. Varma's suggestions for road construction bonds, guaranteed by the State and redeemable for a fixed number of years and the earmarking of "road user" tax revenue exclusively for road development deserve examination by the authorities. In any case, it is well to realise that to postpone road development till the day the need for it is forced on the country is like asking a man to delay learning to swim until he is in deep waters.

PLANNING FOR CHEMICALS

A machine does not function efficiently if its numerous components do not exactly fit into each other. This phenomenon is no less true of the "machine" of planning. Sometimes, planners seem to feel triumphant at overreaching certain targets, while, at the same time, they look apologetical or escapist on the failure to attain certain others, fixed in the plans. In so doing, it is often forgotten that overdoing can be as wrong as inadequate achievement, since both can be a source of wastage and loss. Proper coordination of all programmes is the *sine qua non* of success in planning.

One of the sectors of the economy in which, to ensure a precisely planned development, much can, and should, be done, is that of chemicals. The feeling is irresistible, as one goes through the address of Mr. Manubhai Shah at the reconstituted Development Council for Heavy Chemicals the other day at Delhi, that the Government has sensed the need for dovetailing effectively the programmes of development of various chemicals with each other, on the one hand, and with the needs of the economy, on the other, Mr. Shah revealed that a joint meeting of the Development Councils for alkalis, acids, fertilisers, drugs and pharmaceuticals and the representatives of Ministries would be held at Bombay next month, in order to discuss and formulate a national fertiliser policy and draw up a programme of balanced development of important components of fertilisers. If the proposed policy were to be phased appropriately, it would imply, *inter alia*, reorganisation, or removal where necessary, of uneconomic plant capacities, or small-sized plants working at submarginal capacities, which, in the nature of things, involve high costs of production, wastage of national resources and unnecessary burden on the consumer. This is a liability which afflicts not a few industries, such as sulphuric acid, soda ash, chlorine and superphosphate. Moreover, the policy should also be designed to attain self-sufficiency in respect of many chemicals, such as soda ash, liquid chlorine and caustic soda, which are so essential for a number of industries, including iron and steel and ferro-manganese. Viewed thus, it is a matter for some gratification that the Government has on hand plans to increase the production of these chemicals fourfold in the next five years.

The lopsided development in fertiliser production is another serious defect which requires immediate rectification. As things stand, while a great measure of emphasis is laid on nitrogenous fertilisers, the production of phosphatic and potassium fertilisers is neglected. Evidently, this approach is inimical to balanced development of agricultural resources. Whereas, for instance, in Western countries, 115 units of superphosphate are used for every 100 units of nitrogenous fertilisers, in India, the corresponding proportion of superphosphate used is only 30 units. No wonder, then, that the yield per acre is so low in India, as compared with that in the West. Another important aspect is development of exports in chemicals, which obviously calls for a long-term policy, in view of the inadequate domestic production. From this point of view, the Government's decision to open an export promotion cell in the Development Wing of the Ministry of Commerce and Industry, will be widely welcomed. Admittedly, the reorganisation of the Ministry of Commerce and Industry has made it possible to evolve appropriate national policies for fertilisers, drugs and other chemicals. It is to be hoped that the joint meeting of the councils proposed to be held next month will exploit this opportunity to the full.

MANAGEMENT TRAINING

It is now generally realised that the economic progress of a country hinges to a large extent on the supply of adequate technical personnel. But what is not so readily realised, at least by laymen, is that industrial advancement is conditioned by the quality and adequacy of managerial and administrative personnel also. In India, there is a shortage of both technical and managerial personnel, the deficiency in the latter being equal, or perhaps even more than, in the former. This is a problem of no mean importance. There is considerable doubt in the minds of many observers whether, in its range and quality, administrative and managerial performance, in both private and public sectors, would prove equal to the challenges and responsibilities contained in the Plan. And, as the Plan proceeds, difficult issues are likely to relate more to questions of administration and organisation than to matters of policy and approach.

Mr. Jehangir Ghandy, President of the Management Board of the All-India Board of Technical Studies, has, therefore, rightly pinpointed the need for training in scientific management in all fields of national activity. He told the fifth meeting of the Management Board last week at Calcutta that the Courses Committee of the Board had submitted a comprehensive report on the reorganisation of management studies in the country. Mr. Ghandy said that, with a view to developing management studies, the Government of India, at the instance of the Board, had sponsored a request for securing technical assistance from the U.S. During a recent visit to the U.S., Dr. V. K. R. V. Rao, Director of the Delhi School of Economics, made a preliminary examination of the nature of assistance that might be secured from institutions specialising in management training in that country. On the basis of Dr. Rao's suggestions, arrangements are being made, in collaboration with the Technical Co-operation Mission, for sending a team of five experts to the U.S. to study the organisation and method of management schools there. A team of American experts would also visit this country for consultations regarding the manner in which collaborative and co-operative relationship could be established between the American institutions and their Indian counterparts. Since the U.S. is a country where, following the pioneering works of Frederick Taylor, exhaustive studies have been undertaken in the structure and mechanics of company management and the fruits of such studies applied to practical problems of management and administration with revolutionary results, association with institutions in that country is most likely to be of invaluable help, particularly in connection with the "case studies method."

COAL-MINING LEASES

The Bill to establish greater public control over coal-mining industry, introduced in the opening session of the new Parliament, has the distinction of being the first official measure to be taken up for consideration and passed in the current session itself. The introduction of this measure, which empowers the Government to acquire, for the purpose of development, unworked coal-bearing areas held by private lessees on payment of "reasonable" compensation, will probably be surprising to the uninitiated, but those who are familiar with the Government's industrial policy cannot but reconcile themselves to it. Incidentally, the said legislation was ready even by last December, but could not be introduced then on account of pressure of other official business and also for want of time.

The present measure represents the first step in implementing the Industrial Policy Resolution of 1956, in so far as it concerns the coal industry, under which the future development of coal is the responsibility of the State and all new units in the coal industry will be set up only by the State, save in exceptional circumstances as laid down in the Resolution. Out of the additional annual production target of 12 million tons set apart for the public sector under the second Five-year Plan, the bulk (10 million tons per annum) has to be raised by the development of new coalfieds, such as Korba, Karanpura, Kathara and Jhillimili and Misrampur. The overriding consideration for reaching the target set for the public sector is that development of new mines should, as far as practicable, be in the outlying areas. The main obstacle in the way of development of these areas is that very nearly all the coal-bearing areas are covered by mining leases held by private persons or prospecting licences which carry a right to a mining lease. Unless these coal-bearing areas are acquired, the Government will find it hard to fulfil its quota of additional production. Accordingly, as the explanatory note on the Bill says, "it is proposed to take power to acquire unworked coal-bearing areas covered by private leases or prospecting licences which are found surplus to the production required in the private sector."

It must, however, be noted that the Bill does not seek to acquire the rights over the minerals as such, but only to take up the rights of the present lessees. For, as the explanatory note explains, the rights in minerals are vested in all areas in the State Governments, following the acquisition of *zamindari* rights by the latter. The Union Government does not consider it appropriate to use the powers vested in it under the Land Acquisition Act, 1894, for the acquisition of the mineral rights, particularly because the Central Government does not intend to acquire the proprietary rights vested in the States. This difficulty can be overcome only by acquiring the lessees' rights over the coal-bearing areas required by the Government for the additional coal production. But there is no existing Central or State legislation under which the Government has powers to acquire the lessees' rights. "It is, accordingly, considered necessary to take powers by fresh legislation to acquire the lessees' rights over unworked coal-bearing areas on payment of reasonable compensation to the lessees, and without affecting the State Government's rights as owner of the minerals or the royalty payable to the State Government on minerals."

By acquiring the existing lessees' rights, the Government is restricting the scope for development in the private sector which has been asked to raise the output by 10 million tons per annum by 1960-61 from the existing collieries and immediately contiguous areas. The question of "reasonable" compensation may also give rise to discontent. The Government's conception of "reasonable compensation" has always fallen very much short of what equity and justice prescribe. It is to be hoped that the Government will use sufficient discrimination in using the powers it seeks to acquire and also be reasonable in the matter of giving compensation.

What Forum of Free Enterprise Stands for

SINCE the Forum of Free Enterprise came into being with the object of educating public opinion on the values of Free Enterprise and the significant contribution which it can make to the rapid progress of economic development, a great deal of enthusiasm for its cause, and interest in its work has been generated. Along with this, controversy has been provoked as to whether the tenets of Free Enterprise are consistent with the social and economic ends which the country seeks to attain. The Forum is convinced that they are; and in this statement reiterates its attitude towards some of the basic issues which have been raised so that no misconception or doubt on its point of view can be left in the public mind.

Free Enterprise not "Laissez Faire"

We consider that "Laissez Faire" or Nineteenth Century Capitalism has no place in contemporary Indian life. These systems, whatever their usefulness might have been, have outlived it. Today they are as dead as the dodo and can make no contribution to the industrial, social and economic advancement we seek. Equally do we hold that the Marxist approach to socialism through State ownership of the means of production is outmoded in time and thoroughly discredited in practice

Capitalism of today, or as we prefer to call it "Free Enterprise", operating within a planned economy, is the most alive and the most vigorous economic system in the world Its motive power is rooted in the fulfilment of the individual, controlled and bounded always by the values and principles of the society in which he lives. Thus, Free Enterprise contributes to the moral and material betterment of society by the voluntarily harnessed efforts of the people which compose it. From this must spring a happier and a richer life for all. Reverse the process by introducing authoritarian planning, which places the State above the individual, and the result will inevitably be confusion, frustration and the loss of liberties.

"The Socialist Pattern of Society"

As far as we know, this phrase has not yet been defined in specific terms. The Forum unreservedly accepts the concept of a fuller and better life for all, equality of opportunity, eradication of unjust privilege, in fine, the establishment of a Welfare State. Indeed we hold that these objectives will be attained more rapidly, more effectively, and with a greater degree of enthusiastic co-operation of the people, through Free Enterprise, than through any other system. Inherent in our acceptance of these social aims is also that of a planned economy, and the common existence and mutual interdependence of a State-controlled and Free Enterprise Sector. What we do not accept is the theory that this State-owned sector should continuously expand until it dominates the national economy, for then, as night follows day, will there be a regimentation of life, totally at variance with India's outlook and traditions, which have always recognised the place and worth of the individual in society.

The Bhakra-Nangal Dam, the Fertiliser Factory at Sindri, the Aarey Milk Colony in Bombay, to take only a few examples, are State achievements which are matters of pride not only to their authors but to the whole country On the other hand, the Nationalisation of Life Insurance, the introduction of State Trading and the acquisition of the Kolar Gold Fields are equally in our opinion examples of unwarranted State intervention. It is this trend which must be curbed and halted if the free way of life in our country is to be preserved and its economic progress through the democratic processes assured.

The first Convention of the Forum of Free Enterprise was held in Bombay, on April 25, '57 at which many leading industrialists, professionals, and businessmen were present. Write for copies of speeches made by Mr. A. D. Shroff & Mr. M. A. Sreenivasan at the Convention.

Free Enterprise and Scientific Advancement

A good deal has been said recently on the need to avoid obsolescent thinking in this age of atomic power and of breathtaking scientific advancement. It is important that we define our stand on this issue. We believe that the challenge of our times is to evolve a synthesis of these techniques and their effective use by free members of a democratic society In many ways our country is blessed by the fact that she is embarking on her plans of industrialisation at a time when superb scientific aids are available to her Possibly for the first time in history conditions prevail when the question of Bread *or* Freedom need not even be asked. For, today, science offers us not only Bread *and* Freedom, but also Speed of attainment thrown in for good measure. It would be a tragedy indeed if this bountiful opportunity were distorted and misconstrued to impose Centralised State Control as the instrument of applying the benefits of science to a regimented society. This and not our approach would be a demonstration of obsolete thinking.

Conclusion

For the reasons which we have given we claim that socially responsible private initiative, or Free Enterprise as we term it, is the most dynamic and effective system available to attain the moral and material ends which all of us so ardently hope for. That is why the Forum has pledged itself to the task it has undertaken, and that is why it will continue its effort in the certainty that in our good country the values of Free Enterprise will ultimately prevail.

PRESIDENT DOES TIGHT-ROPE WALKING

PRIVATE SECTOR INVESTING MORE?

From Our Own Correspondent

NEW DELHI, 13*th May*

PRESIDENT Dr. Rajendra Prasad has just addressed the Union Parliament today. The address is notable for the official admission that there has been "some inevitable slowing down in the first year of the Plan." In referring to the economic situation, however, the President has observed that it does not "warrant grave apprehensions" but is only of "serious concern." Nobody could make out what vital difference there is between "grave apprehension" and "serious concern." If "unproductive and anti-social habits of hoarding and speculation" were alone responsible for the deterioration in the economic situation, the Government could have surely curbed them. But the larger truth, according to the President's own admission, is that the deficit in the Central and State budgets and the strain on foreign exchange resources were occasioned by the requirements of the Plan which have proved to be far too onerous for the first year of the Plan. What was true of the first year is no less true of the second year. But how the determination and fervour of our people and their readiness to accept discipline, as hoped for by the Government, would enable the country to pass successfully through the present crucial period of the Plan, passes one's comprehension.

DELHI LETTER

There is no clear indication in the President's address that the size of the second Plan would be reduced or that its period would be extended. On the other hand, the emphasis is on the need for overcoming difficulties, where necessary, *by reconsideration and revision of methods* and by planned mobilisation of resources, not by either abandoning or slowing down the progress towards our objectives. One is left guessing whether "reconsideration and revision of methods" would involve reordering of priorities in the Plan.

Budget Eve

Eve-of-Budget speculation, however, has not been so much in evidence here as eve-of-Budget advice to the Finance Minister. The advice which broadly reflects the expectations of the larger section of Indian business has taken a distinct line of its own in the sombre background of difficulties in the matter of food, foreign exchange and credit for the private sector. The immediately relevant question is: "Will the impending regular Budget for the second year of the Plan fulfil the expectations of the public?" There are some indications that it partly may. Already it has been discreetly let out that the second year outlay in the public sector would be cut back to about Rs. 800 crores by a reordering of priorities. That this could be done without prejudice to "a steady rise in the tempo of economic expansion" appears to have been dimly recognised by the Finance Ministry. This is not unlikely in the context of the reported disinclination of the World Bank to meet the entire foreign exchange component of 400 and odd crores of rupees for the Railway Plan. If the Indian official mission, now in Washington, should by any chance fail to get the World Bank loan to the required extent, a possible shortfall in the ultimate second-year public sector outlay would inevitably occur. Even if there is to be no formal reordering of priorities, only the most urgent and essential projects in the public sector may come to be *actually* financed in the course of the budget year. The decision of the Government of India to take advantage of the Soviet offer of a long-term-credit of Rs. 60 crores for financing the proposed construction of a heavy machinery-manufacturing plant may, however, make no difference as far as the second-year outlay is concerned, for the initial preparations for launching this project will probably take more than a year.

Private Sector

As far as the private sector is concerned, present indications are somewhat encouraging. One of these is understood to be the Union Finance Ministry's direction that the Reserve Bank of India should work out a scheme for the administration of life insurance funds by a board of trustees functioning in association with the Bank itself. This board would have to look after the funds estimated at about Rs. 400 crores. Fifty per cent. of this may be invested in Government securities, while the other 50 per cent. is to be made available for investment in industrial debentures and for housing finance. This proportion would have to be broadly maintained every year when the board of trustees decides on the amount of the Government securities it would be taking up in that year.

Yet another indication is that two legislative measures for improving the credit position of the private sector are most likely to be introduced in the present session of Parliament. One of these Bills will seek to amend the Reserve Bank of India Act to empower it to purchase and hold shares of other credit institutions which might be set up to meet the requirements of the second Plan. The other Bill will seek to empower the State Bank of India to grant medium-term loans and also to lend money against the primary security of immovable property.

The third indication is the authoritative (?) estimate that the private sector is investing money more rapidly than is anticipated in the second Plan. This estimate, however, appears to be based on the private sector's imports so far or its orders for imports of capital goods of the value of about Rs. 325 crores. What is doubtful here is whether adequate foreign exchange will be available for all the pending orders or whether they will be covered by the deferred payment scheme. In the circumstance the likely private sector investment is not quite so encouraging as it looks.

New Developments

The Government of India, it is learnt, has approved of a number of schemes for the manufacture of electrical equipment, accessories and fittings. The approval for some of these schemes, however, is subject to arrangements being made for the import of plant and machinery on the basis of deferred payment and foreign collaboration. One of the schemes is for the manufacture by a Calcutta firm of overhead railway electrification material at the rate of 240 tons per annum. Another Calcutta firm is permitted to produce copper-grooved conductors for overhead railway and traction equipment. A Bombay firm is expected to increase its capacity for the production of distribution transformers from 36,000 K.V.A. to 72,000 K.V.A. per annum. A unit is to be set up near Allahabad by a Calcutta firm for the manufacture of power and distribution transformers at the rate of nearly 1½ lakhs K.V.A. a year. A Bombay firm is also permitted to expand its production of transformers from 108,000 K.V.A. to 180,000 K.V.A. per annum. A new unit is to be set up at Tiruchinappalli in Madras State for the manufacture of transformers to the extent of 100,000 K.V.A. Besides these, four schemes for the manufacture of A.C. S.R. and all-aluminium conductors have been approved. One of them will be a new unit in Delhi with a capacity of from 1,500 to 2,000 tons per annum. Three firms in Bombay are to manufacture switch-gears, metal-cased plugs and sockets and switches. A Poona firm is to expand production of household electrical, lighting and wiring accessories from 120,000 dozen a year to 360,000 dozen a year.

STOCK MARKETS STRONG

STEEL DENATIONALISATION

From Our Own Correspondent

LONDON, 11*th May*

THE strength in the stock markets which your correspondent noted a fortnight ago is not only being well maintained on the equity front but has definitely spread into Gilt-edged. The equity market has naturally gained from the clear indications that there are to be no industrial struggles and that wage increases pressed for will more or less be granted. The Gilt-edged market has enjoyed a boom because of the conviction that rates are coming down and that a reduction in the Bank Rate is hanging about on the horizon of Throgmorton Street. The Government have announced that the £400 million of stock maturing in June will be repayed without resort to a conversion. This has been made possible by the buoyancy of the revenue coupled with economies in spending. It is thought that only the offerings of £100 million of stock this week snapped up on the strength of a possible cut in Bank Rate will be necessary to finance the repayment operation. The latter is, of course, going on continuously with the Treasury buying in the redeemable stock as it is offered.

LONDON LETTER

Naturally one must expect the Gilt-edged market to move up and down as expectations of another cut in Bank Rate advance and recede, and, after the cut has come, they are likely to become more stable on their new level.

Mr. Bevan on Nationalisation

An exception to the recent stock market liveliness has been the marking down of steel shares, following on Mr. Bevan's reaffirmation that Labour policy would be to nationalise the steel industry once again. He has been asked why he and his party continue to bother about nationalisation which some Socialist thought characterise as outmoded and unnecessary. Mr. Bevan's smart answer to this is that his party attaches exactly the same importance to nationalisation as does the Tory party. If the latter think that the steel industry was worth de-nationalising then that only confirms Mr. Bevan's suspicions that it ought to be re-nationalised! Of course, Mr. Bevan has added that the new nationalisation will be in such a form that it will not be practicable to de-nationalise when the Tory Government comes back again into power. When challenged whether it was possible with Parliamentary Government to nationalise an industry in such a way that it could not be de-nationalised, he replied that his party could not make it *impossible* to de-nationalise steel but they could make it very awkward indeed! He would not give away how the new operation was to be performed but that it will be performed there can be little reasonable doubt, and the Labour Party will make no bones of their intention when the time comes for them to fight an election.

Wages Front

On the wages front, talks are already under way to increase engineering and shipbuilding wages, following the recent call-offs of strikes. The unions are reluctant to accept any arrangements which will prevent them from bringing in further claims within a short time of those currently under negotiation being settled. They will probably prefer to accept slightly less now and retain their liberty of action to come back for more if conditions warrant it. The building trades workers have just won another increase and more upward moves are in the offing. The Government are more than ever anxious that pay and prices should be studied together by a permanent body which could establish a wage policy for the country. The Trade Union Congress has frequently considered a wages policy and frequently turned it down—the last time three years ago. At that time, however, the proposal was for a once-for-all enquiry but the Government are now considering a standing body. From the Trade Union point of view, a standing body to study pay and prices would be much less dangerous, because, being in permanent session and issuing periodical reports, it would always be possible to defer unpalatable action to a later occasion.—*All Rights Reserved.*

AMERICAN LETTER

FEELING OF OPTIMISM ABOUT ECONOMY

OUTPUT OF NUCLEAR POWER BEFORE THE YEAR ENDS

From Our Special Correspondent

NEW YORK, 8*th May*

A PRONOUNCED upswing in optimism for business for the rest of the year and into 1958 became evident in the last few weeks. Buoyancy has superseded caution, even apprehension. So far this year, total business activity, considering the degree of prevailing inflation caused by the wage-price spiral, has been about the same as in 1956, or fractionally better.

Soft spots remain as before. The decline in home building activity has affected such related lines as saw mills, cement and plywood manufacturers. Housing starts are now in the neighbourhood of 880,000 units a year, instead of 1,000,000 units previously. Household equipment companies, paint makers, radio and TV sets are also off from last year, including farm machinery and paint. Automobile manufacturers now predict sales of 6 million units in 1957 rather than the previously forecast 6.5 million.

All this is no calamity, since the slack in those lines is being taken up by a greater boom than last year in other business endeavours. For example: Leading the upturn is railroad equipment. The railways are badly in need of replenishing their fleet of freight cars. The shortage of such cars is particularly pronounced during the harvest. Substantially greater activity is also evident in aircraft, electrical machinery, copper refining, shipbuilding, printing, detergents and soap, tyres, industrial apparatus and mining. Other increases were reported for machine tools, cigarettes, apparel, natural gas, alcoholic beverages and foods. Investment in plant and machinery has levelled off, but purchases by Government units are still on the increase. Budgets of Federal, State and Local governments foreshadow further gains in this area.

Pending changes in the top echelon of the U.S. Treasury, after Secretary Humphrey's resignation, should not be too pronounced as far as fiscal policy is concerned, but financial opinion is reserved on that point pending the final outcome. Optimism is also apparent in the realm of foreign developments. So far, anti-Communist factions have held the upper hand in the turbulences in Jordan. The movements of the U.S. Sixth Fleet in the Mediterranean turned into a cruise rather than bloody action.

Russian acceptance, at least partially, and in a nebulous sort of way, of President Eisenhower's two-year old advocacy of an open sky policy for inspection of East-West military preparations, was also chalked up on the buoyant side of the picture.

China Trade

Softening of U.S. policy towards Red China now seems probable. The U.S. now stands virtually alone in her opposition to trade with that nation. The chances are Washington will recognise trade of its Allies with Red China, grudgingly perhaps. It may also extend diplomatic relations, despite the fact that a technical state of war still exists between that country and the United Nations. U.S.-Chinese trade will continue to be opposed by Washington, as will be China's admission to the U.N. This stand is based chiefly on moral indignation over the continued incarceration of U.S. citizens in China.

Congressional concern over the size of the Federal Budget continues. It is certain to result in sizable cuts of proposed expenditures in the new fiscal year, in the field of foreign aid, particularly.

The economy drive is apt to extend into other areas as well. With no tax cuts and continued good tax receipts, the Budget surplus for the fiscal year ending 30th June 1958, is projected to run to $1,800 million.

Foreign trade has held up well. Exports were the highest ever in March. This was partly the result, however, of the dock strike which kept goods from being moved the month before. Imports, too, have held up well. The dire predictions that the closing of the Suez Canal would put a serious dent in European gold and dollar reserves to the point where purchases would have to be curtailed in the U.S. did not come true.

Nuclear Power

Development of nuclear power for peaceful purposes is coming of age. There will be five or six nuclear power stations in operation by the end of the year and at least 21 by early 1960. The atom age has revolutionised engineering. Machines for either peaceful or destructive purposes, which formerly had a life of many years, are now obsolete in half that time. This is boosting costs and it has made equally obsolete many ideas of depreciation and continuity held in previous eras.

Thus, the demand for investment money is becoming greater and there is no end in sight to these inherent pressures which have their ultimate effects throughout the economy. This is superimposed upon the demands of a steadily increasing population.

Politically, the situation in the U.S. remains unchanged. Dissatisfaction is rampant with the Administration's attitude in many fields at home and abroad. While peace has been preserved, there is a feeling that policy abroad has been indecisive and confusing, that the Middle Eastern situation, for example, could have been handled much better.

Domestically, many people feel the Eisenhower Administration is just as expansionary and inflationary as the preceding Administration of the Democratic Party when Government spending was king.

Mexico

This correspondent recently returned from an extended tour through Mexico. That country is booming. The last fiscal year showed a substantial Budget surplus. Gold and dollar reserves which fluctuate seasonally have been averaging about $500 million. Considering that similar reserves of the British Commonwealth in which the sun never sets average somewhat better than $2,000 million, this showing of Mexico is excellent.

There is general atmosphere of well-being and prosperity and a new middle class is in the making. Improvement of living conditions is making steady progress. Those foreign industries which came to Mexico have been extraordinarily successful. Two examples are Celanese Corporation of America and Pan-American Sulphur Company.

German influence likewise is strong. The Volkswagen Motor Works are establishing new branches and doing well. Native Mexican business is likewise impressive. To the two existing stock exchanges in Mexico City and Monterrey, a third one will shortly be added at Guadelajara.

There are two important steel plants in Mexico and the nationalised oil industry, Pemex, is not only doing well in its current operations, but is searching for new deposits of petroleum inland and offshore.

Government credit policy has stemmed inflation successfully. Although the influence of trade unions has become stronger with resultant increases in wages and in some prices, the more beneficial effect of this development has been to spread the income.

Distribution of goods remains a problem. The railway system, at the present time, is being reorganised with the help of an Export-Import Bank loan from Washington. Distrust of stability is slowly but gradually disappearing, but the the next Government will move into office in 1958 and its policies remain an unknown factor at this time.—*All Rights Reserved.*

...and YOU!

All 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries out strict tests on each product from the raw material stage to the finished article. The Dalda Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance . . . Lifebuoy . . . Lux . . . Rexona . . . Gibbs S.R. Toothpaste . . . Dalda Vanaspati . . . and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers . . . to you!

ROLE OF BANKS IN LONG-TERM LENDING IN BRITAIN

WIDE DIFFERENCES OF OPINION EXIST

WITH the growing needs of the expanding economy of the U.K. for long-term capital which the existing institutions have not been able to fully satisfy, attention has been directed for some time past towards possible sources of such finance. Divergent views have been expressed from time to time on the possible role the commercial banks can play in filling the gap between the actual needs and the extent to which they are fulfilled. No doubt, the British banks have already been playing a major role in this field by contributing a part of their deposits towards the resources of the two institutions, namely, the Industrial and Commercial Financial Corporation Ltd. and the Finance Corporation for Industry, which furnish significant examples of how a part of bank's resources can be channelled through specialised agencies. Despite this, however, one school of thought, represented by Sir George Erskine, holds the view that, at the present juncture, so clearly characterised by the shortage of long-term funds for industry, banks alone have the necessary equipment, organisational and monetary, to meet the situation. The other school, a powerful exponent of which can be found in Mr. Bland, the President of the Institute of Bankers, is emphatic that it is not good for the country, for industry or for the banks themselves, to attempt to close any gap that may arise between the demand for and the supply of long-term finance.

The view of Sir George, who gave expression to it in the course of an address at the Institute of Bankers two years ago, was essentially based on the fact that an overall shortage of long-term funds existed in the economy, and, since the banks were the only competent institutions to cover the gap, they had every justification for departing from the traditional practice of lending only on short-term basis. Besides, he held that such a course would benefit the banks as well as industry if they participated more actively in the field.

At the other extreme, Mr. Bland has declared, addressing the same Institute a few days ago, that the belief that the banks could, by providing more finance for the industry, increase the total physical volume of new industrial capital, is a fallacy. According to him, if the savings for industrial development are there, they will find their way into one branch of industry or another through the existing capital market. Conversely, if there are no savings, no capital will be forthcoming. For no amount of fiscal wizardry, he says, can bring into being capital that does not in fact exist. Moreover, the solution to the shortage lies, according to him, in a reduction in the share of the national income taken by the central and local government. Every tax cut, he claims, not only increased the incentive to produce, but also raised the proportion of income left with the taxpayer, from which alone industrial capital could be drawn.

Not True State of Affairs

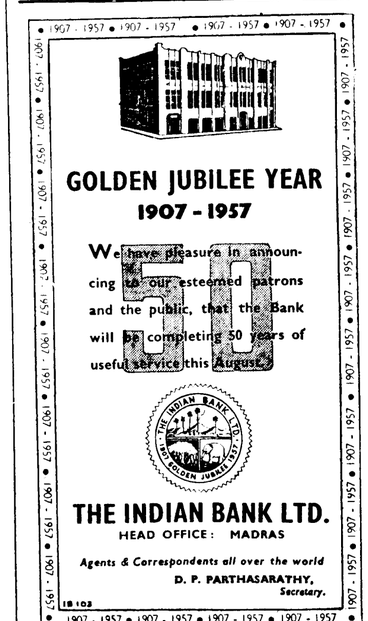
These views, according to "Lombard," of the *Financial Times*, do not represent the true state of affairs. They are either overstatement, as those of Sir George, or understatement, as those of Mr. Bland. In the first place, he questions the assumption of the latter that the existing machinery of the capital market can be relied upon to channel such savings as are available for investment to the best possible uses. For vast changes have taken place during the past few decades in the forms in which the nation's saving is being done, while there are no indications that the country's capital market machinery has also been reshaped to the extent necessary to ensure proper channelling of the savings. Secondly, the difficulty encountered in recent years in raising funds in the capital market suggests that there are many defects in the present arrangements, which may multiply with the waning of the post-war inflationary phase. Consequently, the banking system, according to the columnist, is undoubtedly well placed to help build up a capital market of the type the country needs. Besides, the banks can offer the kind of security which investors insist upon. Further, he does not find any reason why the banks should run any serious danger of weakening their financial structures by expanding the proportion of their total lendings employed in the long-term form.

"Lombard" also doubts whether the banking system will not seriously impair its own development by continuing to eschew the provision of funds for long-term financing. It will be all the more harmful to the future of the system, he fears, if, what with the Government's policy of maintaining a more or less constant 'stop' on lending to the private borrower, and with many business concerns finding an increasingly large proportion of their liquid resources internally, there arises (which is probable) a tendency for the demand for short-term finance to fall as years go by. The importance of the banking system, according to him, has already begun to decline relatively to the rest of the business community since the adoption by the Government of a stringent credit policy since the 1950s.

Be that as it may, it would appear that the establishment of public or semi-public institutions on the model of those created in certain West European countries such as France, Italy, Belgium, and West Germany, provides, possibly, an appropriate answer to the problem in the U.K. A special advantage with these institutions is that they get over the limitation imposed by the capital market. They provide specialised full-time service in the field which the banks, in their present position, may not be prepared to undertake, and constitute channels through which the resources of banks and other institutions can be utilised for long-term purposes, without having to violate what are called sound banking principles. A further advantage with these institutions is that they can directly raise capital from local markets by issue and sale of their bonds and debentures, without the need for depending too much on banks for funds, which facilitates the utilisation of banks' advances to meet marginal fluctuations in requirements.

(Concluded from next column)

discounted by Rs. 18 lakhs at Rs. 1.64 crores. The relatively smaller increase in advances, as compared with that in deposits, has enabled the Bank to strengthen its investment portfolio by Rs. 54 lakhs. Though the cash balances are a fraction lower, the total liquid assets are higher, as witness the rise in their ratio to deposits from 47.4 per cent. to 49.9 per cent. The Bank's investments are shown at book value, the market value being lower by Rs. 3.58 lakhs.



JAIPUR BANK'S PROFIT RISES SHARPLY

DIVIDEND STEPPED UP

A RISE of more than 50 per cent. in profit, that is, from Rs. 6.20 lakhs to Rs. 9.82 lakhs, is the most striking feature of the working results of the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur) for the year ended 31st December 1956. This sharp expansion follows the steady improvement in the Bank's profit since 1952 and has helped it more than double itself in the last three years. The profit for the year under review is a fresh record on the high side, exceeding the previous best of Rs. 7.11 lakhs earned in 1946.

With this improvement in earnings, the Bank has been able not only to strengthen its reserves by a sizable extent but to raise the distribution to the shareholders to 5 per cent. from 4 per cent., a level which had been maintained for the previous two years. In consonance with the rise in profit, the provision for taxation has been stepped up from Rs. 2.50 lakhs to Rs. 4.50 lakhs. The allocation to the reserve fund has been raised from Rs. 1.25 lakhs to Rs. 2 lakhs, thus restoring the cut made in the previous year.

The progress of the Bank during the past three years is clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount	37.70	31.87	28.05	24.34
Commission and exchange	12.81	8.69	6.38	4.91
Interest paid	21.69	16.27	13.46	10.18
Expenses	19.28	18.21	15.47	14.41
Depreciation	0.56	0.50	0.51	0.59
Profit	9.82	6.20	5.52	4.40
To provision for taxes	4.50	2.50	1.50	0.75
" reserves	2.00	1.25	2.00	2.00
" staff gratuity and bonus	1.00	0.25	0.25	...
Dividend	2.50	2.00	2.00	1.50
	(5%)	(4%)	(4%)	(3%)
Carry forward	0.24	0.42	0.25	0.48

	As on 31st December			
	1956	1955	1954	1953
Capital	50.00	50.00	50.00	50.00
Reserves	22.25	20.25	19.00	17.00
Deposits	9,81.89	8,15.03	7,03.58	6,60.72
Borrowings from other banks	10.05	63.00	..	0.33
Advances	6,06.46	5,28.58	3,80.04	3,78.23
Investments	3,28.40	2,74.16	2,38.59	2,10.56
Cash	1,71.49	1,74.95	1,97.11	1,63.87
Balance-sheet total	12,82.03	11,35.46	8,99.70	8,15.29
Ratio to deposits of—	%	%	%	%
Advances	61.8	64.8	54.0	57.2
Investments*	32.4	25.9	33.9	31.8
Cash	17.5	21.5	28.0	24.8

* After taking into account the investments earmarked against borrowings from other banks.

The gross income of the Bank for the year under review amounts to Rs. 51.35 lakhs, an increase of Rs. 10.17 lakhs over the year. Of this rise, income from interest and discount accounts for Rs. 5.83 lakhs and commission and exchange for Rs. 4.12 lakhs. This has been offset, to a large extent, by the increase of Rs. 5.42 lakhs in interest paid on deposits and borrowings and of Rs. 1.07 lakhs in expenses.

The Bank's balance-sheet as at the close of the year under review indicates a further expansion in business, as witness the rise of Rs. 1.47 crores in the balance-sheet total, thanks to the increase of Rs. 1.67 crores in deposits. With this rise, the Bank's deposits have nearly doubled themselves in the course of the last three years. As in the previous year and in consonance with the general trend, the increase in higher interest-bearing fixed deposits is more marked than in savings bank deposits and current accounts. Thus, fixed deposits have gone up over the year by Rs. 1 crore to Rs. 4.54 crores, while savings bank deposits are up by only about Rs. 15 lakhs, at Rs. 1.01 crores, and current and contingency accounts by Rs. 52 lakhs, at Rs. 4.27 crores. It will be noted with interest that the Bank's fixed deposits have successively risen in the last four years by Rs 2.77 crores, while the increase in current and contingency accounts is of the order of only Rs. 1.46 crores. This is, however, not a peculiar feature of this Bank alone. The Bank has been able to reduce its borrowings from other banks as at the end of the year from Rs. 63 lakhs to Rs. 10.05 lakhs.

On the assets side, advances show an increase of only Rs. 78 lakhs, as against a rise of Rs. 1.67 crores in deposits, a feature which is in contrast to the general trend. Nevertheless, the advances as at the end of the year constitute a record in the history of the Bank. A break-up analysis of the advances shows that loans, cash credits and overdrafts are higher by about Rs. 60 lakhs at Rs. 4.42 crores and bills purchased and

FOR YOUR RECORD

ECONOMIC CONDITIONS IN INDIA

FINANCE MINISTER'S APPRAISAL

THE final version of the Central Budget for 1957-58 was presented to Parliament on Wednesday, 15th May 1957, by Mr. T. T. Krishnamachari, the Finance Minister. Supplementing the White Paper and the interim budget for 1957-58, the final Budget was primarily a long list of tax proposals designed to secure a surplus on current account and to cut substantially the deficit on capital account. The new tax proposals are expected to net in about Rs. 93 crores, during the rest of the current financial year. Of this sum, the States will receive Rs. 15 crores and the balance—Rs. 77.85 crores, to be precise—will swell the revenues of the Central Government.

The Finance Minister prefaced his tax proposals by a factual analysis of the economic conditions in India. The following is the full text of his appraisal which is being reproduced for the purpose of record; full particulars of tax proposals will be published in our next issue, as the official text of them is not available at the time of writing:

"In March last, I presented to the predecessor of this House an interim budget for the year 1957-58 in order to obtain a vote on account to meet the Government's expenditure until the new Parliament assembled. The expenditure estimates I am presenting today are more or less the same as the ones I presented in March. They have, however, been reclassified in terms of the reorganised Ministries, and there are a few new items to which I shall refer in the course of my speech.

"A White Paper, reviewing the major economic developments in the economy during 1956 and outlining the perspective against which policies for the current year have to be formulated, was circulated along with the budget papers in March last. Copies of that White Paper need little modification in the light of subsequent data. I shall, however, review briefly the latest available economic indicators and attempt an assessment of emergent and prospective trends. Before I do so, I would say that the economic classification of the budget, as it is now being presented, will be issued in two or three days' time. We attempted this reclassification for the first time in March last, and we propose to continue the practice. But the document will have to be released after the short time-interval needed for working into the tables the proposals I am now placing before the House today.

Price Situation

"The White Paper of March last gave an analysis of the factors responsible for the upward pressure on prices during 1956. In recent months, the index of wholesale prices has remained stable around 420. For the week ended 27th April, it was 423.5, which is a rise of 8.5 per cent. over the level a year ago. Rice prices are now at 633 and wheat prices at 581; they are 14.1 per cent. and 16.4 per cent., respectively, above the level that obtained a year ago.

"Prices of industrial raw materials have risen by 9 per cent. during the year, of semi-manufactures by 5.3 per cent. and of manufactures by 2.4 per cent. The rising price trend is due in part to the insufficiency of food production in relation to the demand, and in part, it is attributable to certain external factors. There are, however, clear signs of demands in the economy tending to outstrip the supplies available. If unchecked, these trends cannot but get reflected in further increases in the cost of living and in the cost structure of industries.

Agricultural Output

"The latest available estimates of agricultural production indicate that the fall in production in 1955-56 was somewhat smaller than had been estimated earlier. The output of rice is now estimated at 26.8 million tons, as compared with the earlier estimate of 25.5 million tons, and the estimate for the total foodgrain output for the year has now been revised upwards from 63.4 million tons to 64.8 million tons. Even so, the year shows a short-fall of some four million tons, as compared with 1953-54 and some two million tons as compared with 1954-55. The decline in foodgrain output in 1955-56 was mainly in respect of coarse grains, while the output of rice was higher and that of wheat only slightly lower than in the previous year. The output of commercial crops shows no significant change relatively to the estimates given in the White Paper issued in March. The overall index of agricultural production, taking food crops and commercial crops together, would still show a fall of about two per cent. in 1955-56 as compared with 1954-55. The estimates of the likely level of agricultural production in 1956-57 indicate that the outturn should, on the whole, be somewhat better than the previous year's. The production of rice is expected to be around 28 million tons, that is, about 1.2 million tons better than in 1955-56, and of wheat about 8.6 million tons as compared with 8.3 million tons in 1955-56. The output of coarse grains and pulses is estimated at about the same level as in 1955-56.

"Among commercial crops, latest reports indicate that the production of cotton has increased by 20 per cent., groundnut by 6 per cent. and sugarcane by about 17 per cent.

"Nevertheless, reports on the food situation in recent weeks indicate difficult conditions in some of the States. I would not like to minimise the gravity of the situation as it obtains in these pockets. But statistically, it does seem that, if at all there is an overall shortage, it is of a marginal character. With the arrangements that have been made for the import of foodgrains from abroad to meet our normal needs and with the availability of additional supplies under the P.L. 480 Agreement, it should be possible to ensure adequate supplies to enable us to hold the price line. I would, however, concede that the situation will need careful watching and the apparatus necessary to deal with the situation as it develops from time to time would have to be kept in readiness.

Industrial Production

"Industrial production has continued to rise at an annual rate of about eight per cent., the newer industries, both in the capital goods and in the consumer goods sector, advancing more rapidly than the older industries. The pace at which industrial development has been proceeding is encouraging. In that process, it generates heavy demands on our foreign exchange resources for import of capital goods as well as raw materials. The immediate difficulties in respect of foreign exchange notwithstanding, it would be reasonable to hope that the rate of progress in the industrial sector will be maintained. The overall position that emerges from the review of production trends so far is that the supply of domestic goods and services has, on the whole, shown only a modest improvement over the previous year, and that the rise in prices during the year reflects the pressure of a shortage in supplies relatively to the strength of expansionary factors in the economy generated by the rising levels of both public and private investment.

Money Supply

"Considered by itself, the increase in money supply over the last twelve months or so is not very large. Between 13th April 1956 and 12th April this year, it increased by about Rs. 132 crores. This increase, it must, however, be remembered, occurred in spite of the large balance of payments deficit which resulted in a precipitous fall in the Reserve Bank's foreign exchange holding. The increase in rupee securities held by the Reserve Bank works out at Rs. 273 crores over the past twelve months. This is, clearly, an expansionary factor which reflects, in the main, the growing borrowings of the Government from the Reserve Bank; in part, it arises from the pressure on commercial banks to replenish their resources by selling securities.

"Scheduled bank lending to the private sector was up by Rs. 147 crores during the year. The liquidity of the banks has in the process been strained and money rates have hardened. Stringency in the money market has continued. This stringency is a usual accompaniment of a phase of economic boom when investment tends to cutrun savings; it is not an indication of an insufficiency of the monetary media. An abatement of monetary stringency has at this stage to be sought not through a general increase in the supply of credit, but through measures to prevent an excessive diversion of credit to less essential uses and through the creation of special institutions or facilities for supplying selectively the type of credit needed for priority developments.

Foreign Exchange

"The major problem before the country is the large and continuing strain on foreign exchange resources. Since the beginning of the fiscal year 1956-57, there has been a persistent pressure on the balance of payments resulting in a draft on the country's foreign exchange resources of about Rs. 300 crores. Since, during this period, a credit of Rs. 60.7 crores was obtained from the International Monetary Fund, the fall in the Reserve Bank's holdings amounted to about Rs. 240 crores. The balance of payments for the first quarter of 1956-57 showed a current account deficit of Rs. 44.5 crores. The deficit widened to Rs. 81.4 crores in the second quarter. For the third quarter for which data are now available, there was a further increase in the deficit which worked out at Rs. 84.8 crores. Excluding 'official donations' which enter into the current account, the deficits for the three quarters were Rs. 54.1 crores, Rs. 89.9 crores and Rs. 92.4 crores.

"Since January 1957, further foreign exchange resources of the order of Rs. 86 crores have been used up. The foreign assets of the Reserve Bank now stand a little below Rs. 500 crores. Despite the measures already taken to restrict imports, there is no indication yet of an abatement in the rate of withdrawals which averages Rs. 5 to 6 crores a week. This embarrassing 'lag' notwithstanding, the steps we have already taken and the further steps we shall take as necessary will, it is believed, begin to produce their effect before long.

"On a rough estimate, imports for the year 1956-57 will aggregate over Rs. 1,000 crores, while exports will be around Rs. 650 crores. The bulk of the additional imports received during the year is for developmental purposes and should help strengthen the economy in due course. It is, however, obvious that foreign exchange expenditure has to be limited to the availability of resources, and the present imbalance in the country's external account rectified.

"The various corrective measures adopted during the year were reviewed in the March White Paper; further action in the same direction which is necessary will, as I have just said, be taken. There is hardly any cushion left in our foreign exchange reserves to permit a further significant draft on them. The level of imports hereafter has necessarily to be regulated in the light of our current earnings and the inflow of supplemental resources we can secure from abroad and should be closely related to essential requirements of the high priority projects in the Plan. The import policy for the second half of 1957-58 is being formulated with the objective of securing a further sizable saving on imports. The large volume of imports of capital goods and of developmental commodities that has already come in should make it possible for investment within the economy to go forward for a time at a satisfactory rate and care will be taken to allow such imports as are necessary for getting the benefit of whatever equipment has been obtained and for maintaining production at a reasonable level. It would, however, be idle to pretend that all hardship can be avoided. The exigencies of the situation require that a balance on external account must be resorted as early as possible, and the necessary price has to be paid.

"An improvement in the balance of payments situation is, I should add, largely conditional upon the adoption of domestic policies designed to hold inflationary pressures in check. An excess of purchasing power within the economy raises internal prices; it also reduces the availability of supplies for export and pushes up the demand for imports. It is, therefore, necessary to orient fiscal and monetary policies to the keeping down of domestic consumption and to the diversion of a part of the domestic output to export markets. I may mention, in this connection, that the exports of cotton textiles in the first three months of 1957 have reached a total of 260 million yards, which gives an annual rate of over 1,000 million yards. The increase in excise duty on cloth in September last has, it seems, succeeded in one of its objectives without raising prices in the process. We should constantly be on the watch for similar opportunities to enlarge our foreign exchange earnings.

Budget Estimates for 1957-58

"After this broad review of the latest economic trends, I should now like to give an account of the budget estimates for 1957-58. In the estimates presented on 19th March 1957, revenue was taken at Rs. 636.22 crores and expenditure at Rs. 663.09 crores, leaving a deficit on revenue account of Rs. 26.87 crores. As a result of certain modifications which have since been found to be necessary, revenue deficit, on the basis of existing taxation, is now estimated to increase by Rs. 6.25 crores. This is as a result of a reduction of Rs. 1.25 crores in the net contribution of the Posts and Telegraphs Department to general revenues and an increase in expenditure of Rs. 5 crores. The reduction in the Posts and Telegraphs contribution is due to an additional provision of Rs. 1.25 crores for the renewals reserve fund. A broad examination has revealed that the provision made in recent years for depreciation and replacement of assets has been very inadequate and that at least 2.75 per cent. of the capital at charge should be provided as a depreciation reserve. Provision made this year amounts to Rs. 1.25 crores which represents only 1.25 per cent. on the capital at charge of about Rs. 100 crores. Pending a detailed examination, the provision is now being doubled for the current year.

"The increase in expenditure is accounted for by three items. The first is a provision of Rs. 3.12 crores for grants to the *Khadi* and Village Industries Commission for development of Ambar Charkhas. A programme for the introduction of 75,000 Ambar Charkhas was started last year. The results of this programme have been reviewed recently and it has been decided to continue and expand it further during 1957-58. For the present, the expanded programme provides for the introduction of an additional 90,000 Ambar Charkhas. The total cost of this programme during the current year is estimated at Rs. 10.09 crores, of which Rs. 3.12 crores will be by way of grants and the balance by way of loans to the Commission.

"The second item is a grant of Rs. 1.55 crores to the Government of Assam towards the extra expenditure which they have had to incur recently for the maintenance of law and order as a result of the disturbances in certain border areas. The State Government has had to incur large expenditure on providing relief to the affected population, borrowing police forces from other States and constructing roads and bridges to facilitate communications. This abnormal expenditure has caused a great strain on the State's resources and the Government of India has agreed to meet 50 per cent. of the cost of relief measures and of roads and bridges and the entire expenditure on the police borrowed from other States.

"The last item is a provision of Rs. 33 lakhs for incidental expenditure on transport, etc., in connection with the return of lend-lease silver to the U.S. Government. During the last war, the U.S. Government leased 226 million fine ounces of silver to the Government of India to be returned five years after the termination of the emergency. The liability for the return of this silver was divided between India and Pakistan, India's share being approximately 172 million fine ounces. It has now been agreed that the Government of India would make immediate arrangement for the shipment of 50 million fine ounces of silver and that the balance of 122 million fine ounces should be made available in the form of quaternary alloy coins. The cost of shipment of fine silver would be borne by the Government of India, while the alloy silver would be delivered in India and the U.S. Government would meet all cost of handling, transport and refining and also retain the metals recovered in the refining process.

(Continued on page 1024)

UTILISATION OF COTTON MILLS' CAPACITY

MORE UNITS WORK THREE SHIFTS

THE intensive utilisation of capacity in the mill sector of the Indian cotton textile industry noted in the past four years gathered further momentum during the following calendar year, that is, 1956. The number of mills working three shifts in 1956 was as high as 194, as against 174 in 1955 and 158 in 1954. The rise in three-shift working was induced by the increasing domestic demand for cotton manufactures and the Government of India's unhelpful policy in regard to the expansion in the weaving capacity of mills. Naturally, there was a fall in the number of mills working two shifts, the figure for 1956 being 156, as compared with 161 and 173 in the preceding two years, respectively. Similarly, the number of mills working one shift declined from 27 in 1964 and 24 in 1955 to 21 during the year under review. The number of mills which remained closed was also lower at 21, as against 26 in 1955 and 25 in 1954. The total number of mills in these three years was 417, 405 and 399, respectively.

The intensive utilisation of existing cotton mill capacity resulted in a marked improvement in output of both yarn and cloth. The quantity of cloth that actually came off the looms during 1956 was an all-time record of 5,306.58 million yards, which compares very favourably with 5,094.48 million yards, or an advance of more than 4 per cent. The increase in cloth output followed a rise in yarn production which during 1956 aggregated 1,671.20 million yards, as against 1,630.40 million yards in the previous year.

Shifts Worked

An idea of cotton mills in the various States according to the shifts worked at the end of 1956 can be had from the following table:

	Total number of mills	Remained closed	1-shift	2-shift	3-shift
Bombay	196	4	9	68	115
Madras	94	..	2	46	46
W. Bengal	28	3	2	3	20
Uttar Pradesh	23	3	3	6	11
Madhya Pradesh ..	19	2	1	8	8
Mysore	14	1	..	7	6
Kerala	12	..	..	4	8
Andhra	12	1	3	4	4
Rajasthan	11	1	..	7	3
Punjab	5	1	..	..	4
Delhi	4	..	..	..	4
Bihar	3	1	1	1	..
Orissa	3	..	1	..	2
Pondicherry ..	3	..	..	2	1
Total ..	427	17	22	156	232

The year 1956 also witnessed a substantial increase in employment. The total number of workers on the rolls of mills was greater at 932,873, which compares very favourably with 855,726 in 1955, the exact increase over the year thus being 77,147; in the previous year, there was a net addition of 58,243 persons. But the increase in the average daily number of workers employed was comparatively less, being only 48,747; during 1956, about 80,791 workers were employed daily (average), as against 758,044 in 1955 and 741,169 in 1954. The average daily number of workers employed in the different shifts in the past three years is indicated below:

	1956	1955	1954
1st shift	434,231	419,236	416,227
2nd shift	276,504	262,226	258,851
3rd shift	96,056	76,582	66,091
Total ..	806,791	758,044	741,169

It will be seen from the above figures that the average daily number of workers employed registered a rise in all the three shifts. The rise was particularly marked in the case of the third shift, being 19,474. The increase in the first shift was 14,992 and in the second shift 14,278.

The bulk of the labour force employed in the cotton mill sector is accounted for by the State of Bombay, the major seat of the textile industry. Thus, the number of workers on the rolls of cotton mills in this State comes to more than 58 per cent., the actual number at the end of 1956 being 550,743 out of the total of 948,968 for the whole country. Next in order of importance comes Madras which accounts for 12.4 per cent. The share of Uttar Pradesh and Madhya Pradesh in the total number of workers on the rolls is 6.6 per cent. and 6.2 per cent., respectively. The balance of 16.8 per cent. is shared by all the remaining ten States. The average daily number of workers employed in cotton mills was also the highest in Bombay, being 484,645, or as much as 58 per cent. of the total of 831,049 persons, followed by Madras, Uttar Pradesh, Madhya Pradesh and other States.

Employment Position

The employment position in cotton mills in the various States at the end of 1956 is shown in the following statement:

	No. of workers on rolls	Average daily number of workers employed
Bombay	550,743	484,645
Madras	117,704	105,339
Uttar Pradesh	62,874	52,487
Madhya Pradesh ..	58,843	49,696
West Bengal	43,745	41,335
Mysore	32,992	28,711
Delhi	21,333	18,347
Rajasthan	13,710	13,146
Andhra	11,850	9,701
Kerala	10,957	9,750
Punjab	8,932	7,907
Pondicherry	7,906	5,746
Orissa	5,863	4,150
Bihar	1,516	989
Total ..	948,968	831,049

While the basic wages earned by the cotton mill workers during 1956 were the same as those earned in the previous two years, the dearness allowance received was higher in all the States. This must be attributed to the marked rise in commodity prices, especially of foodgrains, which raised the cost of living in the urban areas. The all-India average general index of wholesale prices (base: year ended August 1939=100) during 1956 stood high at 403, as against 355 in 1954, or a rise of 13.5 per cent. The rise in prices was in marked evidence in the case of foodgrains—the principal constituent in the workers' family budget—the average for the year being 373, as against 305, representing a rise of 22.3 per cent. Following the increase in commodity prices, the all-India consumer price index number (base: 1949=100) for working class moved up, the average for the year being 105, as against 96 a year before. The following table gives the minimum wages and dearness allowance in the cotton mill industry for a standard month of 26 working days in the past two years:

	Minimum basic wages during 1955 and 1956	Dearness allowance (average)	
		1956	1955
	Rs. a. p.	Rs. a. p.	Rs. a. p.
Bombay	30 0 0	68 12 4	64 12 11
Ahmedabad	28 0 0	63 15 0	54 11 4
Sholapur	26 0 0	57 10 10	40 15 9
Baroda	26 0 0	57 6 0	49 6 9
Nagpur	26 0 0	46 13 9	40 2 10
Madras	26 0 0	47 12 0	41 7 3
Kanpur	30 0 0	51 12 3	43 5 5
W. Bengal	20 2 5	30 0 0	30 0 0

A disquieting trend in the cotton mill economy during 1956 was the distinct setback in the average production per worker in contrast to the improvement noted in the previous year. The average output of yarn per worker, for instance, was 2,071 lbs., as against 2,144 lbs. in 1955 and 2,111 lbs. in 1954. The average per-worker output of cloth was also lower at 6,577 yards, which compares unfavourably with 6,720 yards and 6,745 yards in the two preceding years, respectively.

During the year under review, absenteeism—that is, percentage of man-shifts lost to man-shifts scheduled to work—was comparatively more in Coimbatore, Madurai, Sholapur and Bombay; it was 11.4, 13.0, 18.4 and 8.3, as against 9.9, 12.2, 18.0, 8.2, respectively. Absenteeism was, however, less in Kanpur, being 11.1, as against 12.8. It was also less at 6.5 (6.8) in Ahmedabad and 6.2 (6.6) in Madras.

WOOL TEXTILES IN U.K.

The export record of U.K. wool textiles is one of which any industry could be proud, claims the annual report of the National Wool Textile Export Corporation. Using sterling area raw material, the industry has earned more North American dollars than any other U.K. industry since the war, the earnings in 1956 being $112,709 million, as compared with $108,030 million in 1955. The report says: "There would be no dollar problems for the sterling area, if more U.K. industries were capable of supplying as large a share of the consumption of their product in the U.S.A. and Canada as is done by the U.K. wool textile industry." According to it, 4 per cent. of the wool cloth consumed in the U.S.A. and 40 per cent. of that consumed in Canada is supplied by the U.K. Monetary values are an unreliable criterion by which to judge the success of the manufacturing section of the industry—as increased or decreased activity may be marked by rises and falls in the world price of wool. In terms of volume, the total exports of wool tops from the U.K. increased between 1938 and 1956 from 32.5 million lbs. to 81.5 million lbs. and, while wool yarn exports declined from 34.7 million lbs. to 28.9 million lbs., exports of wool tissues increased from 95.8 million sq. yards to 109.9 million sq. yards. In this connection, the report observes:

"It is well that these successes should be recorded, as there is a disposition among some economic writers and theorists to lump the export record of the wool textile industry with that of other less successful textile industries and to describe the textile industry as uncompetitive and its position as bad and likely to get worse. The moral would seem to be that we should lose no opportunity of publicising our record of success. If the industry is to enter the common European market, as now seems likely, we cannot afford any such handicaps as loss of morale at home or loss of prestige abroad, which unfavourable publicity may engender."

In view of the importance of wool textiles exports, attention is focussed on expanding research facilities in the industry. A new three-storey block to hold the topmaking and worsted spinning sections is to be built by the Wool Industries Research Association at Torridon, Leeds (U.K.). This was announced at the annual meeting of the Association recently. The other research departments will benefit by the release of space in the existing buildings.

The Chairman, Mr. John Foster Beaver, reported the success of negotiations with the Department of Scientific and Industrial Research for financial assistance. While the Association can receive the same Government support as heretofore, the industry will have to raise more money per year in order to obtain it. In the first two years of the new five-year period, the industry must raise £140,000 per annum to obtain a total grant of £70,000, but, in the succeeding three years, the industry must raise £170,000 per annum to obtain the grant of £70,000. The industry much appreciates this valuable help from the Department and, on the recommendation of the Wool Textile Research Council, the Wool Textile Delegation is taking steps to secure an increase in the statutory levy on the industry for purposes of research.

BASIC WAGES FOR COTTON GINNING MILL WORKERS

The Government of Bombay has fixed minimum rates of wages for employees in the cotton ginning and cotton pressing factories in the Saurashtra area of Bombay State. The rates are fixed after considering the advice of the Committee appointed for the purpose by the former Saurashtra Government. For fixation of rates, the area is divided into three zones and the rates, which will come into effect from 1st July, are payable on monthly basis.

The areas covered by each zone are: *Zone I*—The cities and towns of Rajkot, Bhavnagar, Jamnagar, Junagadh, Morvi, Veraval, Surendranagar, Porbandar, Joravarnagar and Wardhwan. *Zone II*—The cities and towns of Limbdi, Savarkundla, Una, Khambhalia, Botad, Upleta, Mahuva, Dhoraji, Palitana, Wankaner, Dhrangadhra, Gondal, Halvad, Keshod and Lathi. *Zone III*—All other areas not included in Zones I and II.

The rates of wages for skilled workers like engineers, engine drivers, fitters, boiler attendants, cobblers, carpenters, blacksmiths, valvemen and opener men are Rs. 63.50 in Zone I, Rs. 55.50 in Zone II and Rs. 47.50 in Zone III. Semi-skilled workers and firemen, roll cutters, oilmen, number makers, finisher men, toliwala *mukadams*, *mukadams*, and *labadias* will receive Rs. 50.50, Rs. 48.50 and Rs. 41.50, respectively.

Separate rates are fixed for unskilled light work and unskilled heavy work. The rates of wages for workers of the first category are Rs. 33.25, Rs. 29.25, and Rs. 27.50, respectively, in the three zones. The corresponding rates for workers of the second category are Rs. 46.25, Rs. 42.25 and Rs. 39. The rates are all-inclusive, that is, basic rate, cost of living allowance and cash value of concessions, if any. The minimum rate payable to a child is 50 per cent. and to an apprentice 75 per cent. of the minimum rates of wages fixed for an unskilled employee.

PROFOUND CHANGES IN COTTON INDUSTRY

BREAK FROM TRADITIONAL ATTITUDE TOWARDS SCIENTIFIC OUTLOOK

From A Special Correspondent

MANCHESTER, *7th May*

MANCHESTER LETTER

A NEW era in the Lancashire cotton industry with mills and workers making full use of the latest scientific developments, was forecast by Mr. William Roberts, President, the United Textile Factory Workers' Association at the annual conference at Morecambe. He said: "Profound changes are taking place in all sections of the industry by the adoption of improved methods of working, the extension of research facilities, and the installation of the latest types of machinery, equipment and electronic devices."

Addressing delegates representing 250,000 workers, Mr. Roberts urged people who believed the industry to be a long way behind the times to "get rid of their prejudices, based on stories which have been grossly exaggerated, and bring themselves up to date. The industry is not backward in accepting the challenge of our competitors who seek to enter our overseas markets. There have been remarkable changes in its structure, organisation and techniques within recent years, resulting in a breakaway from the traditional attitude towards a more scientific outlook."

Because of this new and scientific approach, there arose a need for wider and more advanced knowledge and a higher technological education. Something was being done about this and the announcement by the Cotton Board of a scholarship scheme offered splendid opportunities for advancement to interested and resolute young people.

Adverse Publicity

Mr. Roberts said that adverse publicity had driven young people with high intelligence and ability to seek places in newer industries. The scholarship scheme was another indication of the industry's belief in its ability to survive its many difficulties.

On the European Free Trade Area he said: "It is doubtful whether the provisions of the recent measure passed by Parliament is sufficient safeguard for our industry. There is a special need to pay regard to the matter of taxation. Our industry should be in a position of being able to compete on equal terms. This country is in a very much worse position than that of our competitors in Europe in that respect, also in respect of the permitted rate of depreciation."

Factories Move to Britain?

The setting up of more American factories in North-West Britain has been forecast by Mr. G. S. F. Ritson, Director of the Lancashire and Merseyside Industrial Development Association. Back from talks with bankers and industrialists in New York, Chicago and Philadelphia, he said in Manchester that U.S. interest in overseas investment had been quickened by the plans for a European Free Trade Area.

"I have come back more optimistic than on any previous trip," he said. A number of American firms producing machine tools, chemicals and ladies' clothing had promised to make a decision shortly. There was a tendency to wait and see how the European Free Trade Area developed, but the Americans were definitely interested, because they knew they would be outside the market unless they invested and set up factories in Europe. "We are hoping to get them to Lancashire," said Mr. Ritson.

The Development Association would emphasise the opportunities in North-East Lancashire for American firms, but, if a firm insisted on going elsewhere in the North-West, co-operation would still be given.

Slow Futures Trading

When the Liverpool cotton market was resuscitated three years ago, there were high hopes that the facilities which had been for so long denied to the trade would bring back the opportunities for hedging and provide a firmer basis on which to conduct business in the industry's raw material. There have been occasions when activity has quickened in the futures market, but, throughout most of this intervening period, trading has been dull and the turnover has been within narrow confines.

The market, throughout its revived existence, has been beset by problems which were not in evidence before the war and improvisation has been necessary to meet the changing circumstances of international trade. World events and the action of the authorities in several of the chief cotton-producing countries have frequently acted as a brake on activity, so that many traders are now disillusioned as to the outlook for this type of trading.

A survey of current conditions and the background leading up to them has been given in a recent issue of the *Economist*, which paints a gloomy picture but one not entirely without hope for the future. Describing "the very different world" in which the various futures markets had to restart operations after the war, the article observes: "Consumers, for so long corseted by official supply departments, had forgotten the art of buying and selling; many preferred fixed prices. The merchanting community had declined in numbers and substance; its capital had been eroded by inflation. The freedom of the markets was circumscribed by exchange restrictions and other forms of official interference with the marketing of commodities."

Dealing with the cotton situation, the writer admits that the new American selling programme has been successful within its limits, but declares that it has wrecked the mechanism of futures markets. As a result, the New York Cotton Exchange has been turned into a purely domestic market and the link between New York and Liverpool has snapped. Because American cotton export prices now have a minimum level, spinners on this side have little incentive to hedge their purchases.

Once again, the small man may be hit hardest by this development. The resources of the larger combines give them facilities for operating on their own account, and to some extent ignoring futures trading. The independent units, on the other hand, tend to suffer from the lack of adequate facilities for covering their transactions.

The writer in the *Economist* contends that the authorities in some markets have not done all they can to attract custom. This charge can scarcely be laid against the Liverpool Cotton Association which has introduced several fresh features and experimented with new contracts in an effort to provide an adequate service for the trade.

Disposal Plans Succeed

With little more than three months to go before the end of the current season, exports of raw cotton from the United States have forged ahead to such an enormous extent that they already exceed 6,275,000 bales, as compared with less than 1,500,000 bales in the same period last year. As a result, stocks held in America are expected to be some 3,000,000 bales lower at the end of this season, as compared with the 14,500,000 bales held a year previously.

This complete reversal of the situation which has existed for the past two or three years stems directly from the system of competitive bids introduced as a basis for disposal of cotton surpluses by the American Department of Agriculture. Officials of the Department are visiting European centres at the moment and have lately been discussing consumption prospects in Lancashire with local trade leaders.

The increased demand for cotton goods, which was so marked before the turn of the year, brought a larger movement of supplies of raw cotton and the subsequent maintenance of output in the mills has continued this trend. Stocks in distributing centres in Liverpool and Manchester have been built up to a higher level than has been the case for several years past and little difficulty should be encountered in securing supplies, should the pressure for finished goods remain on its current scale.

It is too early yet to assess the probable American crop for next season; the situation this year is still further complicated by the effect of the soil bank programme on the area to be harvested. It is reported that more than 3,000,000 acres have withdrawn from production under the programme, which would leave the acreage at around 14,500,000 and result in a crop of some 12,000,000 bales. Estimates of this kind, however, are subject to many imponderable factors such as the extent of good farming land withdrawn from cultivation and the high yields which one obtained from the remainder, coupled with more intensive harvesting methods.—*All Rights Reserved.*

MILL CONSUMPTION OF RAW COTTON

NEW RECORD IN PROSPECT

FIGURES relating to mill consumption of cotton during the first six months of the current season, that is, from 1st September 1956 to 28th February last, would appear to justify the general expectation that the offtake of raw cotton by mills during the season would reach a new peak. Consumption of Indian cotton during the period aggregated 2,324,414 bales (of 392 lbs. net), as against 2,221,013 bales during the same period last season and that of foreign cotton aggregated 292,297 bales as compared with 287,444 bales in the corresponding period of the 1955-56 season. If this trend were to continue for the rest of the season, consumption would reach roughly 5,233,422 bales, comprising 4,648,828 bales of Indian and 584,594 bales of foreign cotton. This compares with 4,968,707 bales used up by mills during the 1955-56 season of which 4,365,456 were Indian and 603,251 bales imported cotton. It is probable that the rate of consumption of foreign cotton during the rest of the season may be accelerated as the import of cotton from the soft currency areas and the U.S.A. permitted under the various import quota announcements gets speeded up. Foreign cotton may, therefore, account for a larger share of the total quantity consumed during the season than has been estimated above on the basis of the figures for the first half of the season.

An examination of the State-wise consumption of raw cotton shows that Bombay State, accounting for 1,119,551 bales of Indian and 236,440 bales of foreign cotton, continues to be the premier cotton-consuming State of the Union, followed by Madras, Uttar Pradesh, Madhya Pradesh, and West Bengal. The following table gives the State-wise consumption of cotton during the period:

States	1-9-1956 to 28-2-1957		
	Indian	Foreign	Total
Bombay—			
Bombay Island	574,462	88,266	662,728
Ahmedabad	243,357	110,784	354,041
Bombay remainder	301,832	37,390	339,222
Total	1,119,551	236,440	1,355,991
Madhya Pradesh	165,813	72	165,885
Rajasthan	55,768	..	55 768
Punjab	36,396	..	36,396
Uttar Pradesh—			
Kanpur	151,786	492	152,278
U.P. remainder	44,043	110	44,153
Total U.P.	195,829	602	196,431
Delhi	85,599	2,006	87,605
West Bengal—			
Calcutta	49,858	537	50,395
W. Bengal remainder	51,647	6,606	58,253
Total W. Bengal	101,505	7,143	108,648
Bihar	1,771	..	1,771
Orissa	16,392	445	16,837
Andhra	41,099	45	41,144
Madras	367,693	39,793	407,486
Mysore	88,470	5,191	93,661
Kerala	33,311	560	33,871
Pondicherry	14,717	..	14,717
Grand Total	2,324,414	292,297	2,616,711

As regards the principal varieties of Indian cotton utilised by mills during the period under review, it may be noted that, as usual, Jarillas, including Virnar, Malvi, and Verum, top the list, accounting for 620,440 bales, followed by Punjab Americans 216F and 320F aggregating 301,574 bales while Broach Vijay, rating as third, accounting for 234,405 bales. During the corresponding period of the previous season Indian mills consumed 525,594 bales of Jarillas, 290,795 bales of 216F and 320F and 241,078 bales of Broach Vijay. The fall in the latter variety was mainly due to the scarcity of supply. Certain other important varieties of cotton consumed by mills during the period were: Laxmi (in bales) 106,186; Jayadhar 101,436; Surti Vijalpa (including Suyog) 122,611; Madras Cambodia 100,528; Kalyan 114,709; Dhollerahs 75,089; Bengal *Deshi* 70,535.

As will be seen from the table below, there has been a sharp fall in the mill offtake of Egyptian cotton. This may be attributed to the fact that this cotton was not attractive price-wise to Indian mills. Now that the India-Egyptian trade agreement involving about 20,000 bales of cotton has been signed, mills may increasingly take to Egyptian cotton. Indian mills have absorbed more U.S. cotton in the current season than in the comparable period of the previous one and the chances are of a definitely marked rise in consumption during the rest of the season. But it may also be observed that mills are reluctant to resort to U.S. cotton as easily as they do East Africans or Egyptians with which they are more accustomed.

Among the varieties of foreign cotton consumed by mills, the most important were East African, Egyptian, U.S. and Sudan growths the share of each being 188,991, 56,926, 56,549 and 49,385 bales respectively. The following table gives the variety-wise breakdown of foreign cotton consumed during the period:

Variety	September-February	
	1956-57	1955-56
Egyptian—		
Ashmouni	2,298	495
Giza 30 and 31	16,573	35,332
Karnak	29,382	50,255
Menoufi	7,840	4,338
Others	433	317
Total	56,926	90,737
Peruvian	5,642	3,152
Sudan Egyptian	47,829	56,635
Sudan American	1,556	1,769
East African	118,991	114,359
Russian	177	502
U.S. growths	56,549	17,113
Mexican	265	134
Belgian Congo	1,208	453
Other foreign styles	3,154	2,444
Grand Total	292,297	287,444

Stocks of Indian cotton as at 28th February 1957 were 1,151,853 bales and their period of availability is estimated at three months. Stock held on the corresponding date (29th February) of the previous season were 1,187,986 bales. Foreign cotton held in stocks on 28th February aggregated 182,316 bales, as against 174,625 bales held on the corresponding date (29th February) of the previous season. These are expected to be sufficient for 3¾ months. The approximate period of availability of stocks at the current rate of consumption of all kinds of cotton held by mills is estimated at 3½ months.

Some conclusions may be drawn from this analysis. If the current trends were to be maintained for the rest of the season, it is quite likely that consumption of Indian cotton may exceed, or at least be equal to, 4.6 million bales. The rising trend in consumption in the wake of continuously falling crop estimates points to a very tight supply position for the rest of the season. Although earlier in the season a commercial crop of 5.4 million bales was thought to be within the limits of probability, subsequent estimates were progressively lower. The latest crop ideas centre round 4.75 million bales, of which the shares of different States are estimated as follows (in bales): Bombay 2,525,000; Punjab 780,000; Madhya Pradesh 410,000; Mysore

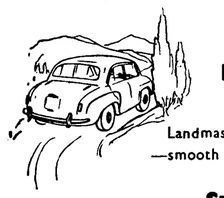
When buying a Car

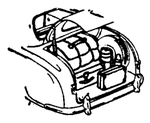


the considerations are

Performance

Thousands of Landmaster owners can vouch for Landmaster's big-car performance with small car economy, —smooth effortless power, —sparkling acceleration.

Spaciousness



Comfortable seating accomodation for six adults and large 16 Cu. ft. capacity luggage boot make Landmaster the ideal car for family motoring.

Comfort

Latex foam cushioning, richly upholstered interior, seats cradled between the axles plus enough leg, head and elbow room make motoring in Landmaster a pleasure.

Styling

Landmaster wins the admiration of the owners and others alike for its beautifully proportioned lines, air-flow contours and modern styling that keep it ahead for years.

—the choice obviously goes to . . .

ANNUAL FREIGHT BILL FOR INDIA'S OVERSEAS TRADES

STOP THE DRAIN AND SAVE FOREIGN EXCHANGE

By M. A. Master

STATISTICS regarding the deadweight tons of cargo carried by ships of all flags in the coastal and overseas trades of India and the amount of freight paid thereon have always been matters of great interest to the country. The payment of over Rs. 103 crores by way of freight to foreign flags, for the imports of foodgrains alone between 1946 and 1951, developed a very living and lively interest in the problem of India's annual freight bill. Questions have been raised again and again from 1953 onwards in the Lok Sabha in regard to the various aspects of this problem, but the Government have not been able to supply the members with either full or accurate information. This question was raised once again in the Lok Sabha on the 28th March this year. The only answer that was given was that the information was being collected and would be placed on the table of the House. We are afraid, the promised information would not be forthcoming, as steps have not been taken for collecting particulars in regard to the freight bill of this country.

The Government of India have, as a member of the United Nations, accepted the obligation to furnish to that organisation statistics regarding goods unloaded in coastwise traffic and goods loaded and unloaded in international seaborne traffic. Moreover, members of the International Monetary Fund are under an obligation to collect statistics regarding the freight in regard to transportation account by sea, which they have to submit to the Monetary Fund in regard to the country's balance of payment. We do not, however, know how and to what extent India has been fulfilling her international obligations in this matter.

It is well known that the recommendations made by the Ports and Shipping Statistics Committee, in connection with these vital obligations and other essential needs, were fully endorsed by the Government. It is, however, significant that the Estimates Committee, in their 48th report presented to Parliament in February 1957, were compelled to make the following observation in regard to the lack of vital statistics in this country. They have observed:

"The scant attention paid to the implementation of the various recommendations of the Ports and Shipping Statistics Committee seems to indicate that the importance of having a well-knit organisation for collecting and compiling various ports and shipping statistics has not been fully realised by the Ministry of Transport. The Committee suggest that, in view of the abnormal delay that has already occurred, high priority should be given to the implementation of the various recommendations of the report referred to."

Let us, therefore, cherish the hope that the strong appeal made by the Estimates Committee, consisting of 30 members of Parliament, will find an early and effective response from the Ministry of Transport.

Matter of Serious Concern

The foreign exchange resources of the country have become today a question of topical interest and a matter of serious concern. It is recognised that national shipping makes a substantial contribution to the foreign exchange pool of the country. Moreover, Government themselves have become the one largest importer of goods in India. Although no accurate statistics of the volume of goods imported by the Central and State Governments, year after year, and the total amount of freight paid thereon are available, the Government informed a member of Parliament, in July 1954, that 91 lakhs deadweight tons of cargo in 1951 and 61 lakhs deadweight tons in 1952 were imported into India on account of the Central and State Governments. Over Rs. 80 crores were paid by way of freight on these imports in 1951 and over Rs. 57 crores in 1952. The Government have, however, cautioned the member that the figures required further verification.

During the second Plan period, the imports on account of the Central and State Governments and the corporations and undertakings sponsored by them will witness a still greater rise. The additional imports—that is, imports in addition to the normal trade—in terms of the specific commodities such as imports of steel, cement and foodgrains and of the planned increase in exports of ores—the Estimates Committee were advised, as stated in their 48th report would come to "six million tons of imports and exports" and that that figure was expected to be reached in the year 1958. It will, therefore, be realised that the Government alone will have to find crores of rupees year after year, by way of foreign exchange, for paying the freight bill on their imports. The time has, therefore, come to ascertain definitely the annual toll, which India has to pay, by way of freight, to ships of foreign flags and what effective steps could and should be taken to save this continuous large drain on our exchange resources by the acquisition of additional tonnage for building up the merchant navy of India.

Had we got the tonnage of the commodities imported and exported and had we got the particulars of the countries to which they were carried or from which they were brought, it would not have been difficult to make as accurate an estimate as possible of India's annual freight bill. We have got no such statistics in this country. Important maritime countries do maintain statistics commodity-countrywise and country-commoditywise. Moreover, the Ministry of Transportation in Japan issues a White Paper giving separately the particulars of the tonnage of goods carried by national and foreign ships in the overseas trade of Japan and the earnings of Japanese ships both in the overseas as well as cross trades. We do not maintain such statistics.

Collection of Information

The Director-General of Shipping has been collecting information in regard to the freight earned by Indian shipping companies in the overseas trade of India. No such particulars are collected by him from foreign shipping companies. Calling upon foreign ships to furnish information in regard to the freight earned and amounts disbursed by them in the country is in accordance with international practice. For instance, the Government of the United States of America has made it obligatory on all foreign vessels to submit to them information in regard to the weight of the imports which the foreign ships bring to America and the amounts of freight paid or payable thereon. Similar information is also called forth so far as the exports carried and the freight earned thereon by foreign ships are concerned. In the case of exports, the disclosure of the information has not been made compulsory. Disclosure of such information regarding the carriage of exports and the freight earned thereon has been made compulsory by the Government of New Zealand.

We understand that, in order to enable India to discharge her obligation to the Monetary Fund, the Reserve Bank of India has been collecting information on a consolidated basis from foreign flags in regard to the freight paid by India on the imports brought by them to this country. No such information is collected in regard to the exports carried by foreign ships. Further, the information collected by the Reserve Bank is strictly confidential.

Take Effective Steps

With a view to ascertaining India's annual freight bill and to draw lessons from those statistics as to how India's foreign exchange resources could be increased, we would earnestly urge the Government of India that they should take effective steps without any further delay for collecting, compiling and publishing information in regard to the total quantity in deadweight tons of India's imports and exports and the total amount of freight paid thereon in accordance with the recommendations of the Ports and Shipping Statistics Committee, which have already been approved by them. Till such information is available to the public, we can only base our estimates as regards the annual freight bill in the light of the actual statistics available and on the law of average. We propose to do so in the paragraphs that follow.

We have first to find out what the total deadweight tonnage of India's imports and exports in the international seaborne traffic is. Several ports give in their reports the tonnage in deadweight of the cargoes handled by them. There is, however, no publication which gives these particulars for the whole of India. We have tried to collect information under this head for the year 1955-56 from such reports as are available. Particulars in regard to the tonnage of imports and exports at different ports or groups of ports are shown in the following table:

(In tons)

	Imports	Exports	Total
	Tons	Tons	Tons
Calcutta	3,409,062	4,621,673	8,030,735
Vizag	228,406	1,094,648	1,323,054
Madras	1,833,874	627,737	2,461,611
Madras minor ports	329,949	329,913	659,862
Andhra minor ports	1,948	589,074	591,022
Tuticorin	267,913	309,502	577,415
Travancore ports other than Cochin	..	..	300,000*
Cochin	1,220,836	453,539	1,674,375
Marmagoa	..	..	1,700,000*
Bombay	6,707,173	3,598,626	10,305,799
Saurashtra ports other than Okha.	364,462	879,238	1,243,700
Okha	230,122	196,824	426,946
Ports in Kutch other than Kandla.	36,697	77,966	114,663
Kandla	205,390	102,512	307,902
Orissa ports and Bombay minor ports	..	..	1,100,000†
	..	..	30,817,084

* Estimated on the actual imports and exports in the year 1953-54.
† Based on the estimates of the total volume of imports and exports made by Mr. S. Nanjundiah in 1949-50.

From the figures given above, it will be noted that about 30.81 millions dw.t. of cargo were handled at the ports in India during the year 1955-56.

Adjustments

The above particulars include the carriage of all cargo both in the coastal as well as in the overseas trade. Cargo carried on the coast is, however, counted twice: once at the port of loading and again at the port of discharge. With a view, therefore, to arriving at the total tonnage carried in the overseas trade, we have to deduct the cargo carried on the coast from the total figure given above.

From such figures as have been given by the Government in the Lok Sabha, we find that the total quantity of dry cargo carried on the coast in 1955-56 by steamers came to 2.8 million dw.t. Similarly, dry cargo carried on the coast in the same year by sailing vessels came to 1.5 million dw.t. As regards the refined oil products carried on the coast during the same period by tankers, they came to 1,383,000 dw.t.

As stated above, as the coastal cargo is counted twice, we should multiply 5.683 million ×2. That will give us the figure of 11,366,000 dw.t. Deducting this tonnage of 11,366,000 from the total tonnage handled at all the ports of 30,817,084, the balance that will be left will be 19,451,084 dw.t. That is the total quantity of cargo carried in 1955-56 in the adjacent and the overseas trades of India.

As the rates of freight for the cargo carried in the adjacent trades are much lower than the rates at which cargoes are carried in the overseas trades, we consider it desirable that the quantum of cargo carried in the adjacent trades should be deducted from the figure of 19.45 million dw.t. From such figures as have been given from time to time by the Government in the Lok Sabha and in letters addressed to the members of Parliament, we can say that it would be fair to put down the tonnage of this cargo at 1.4 million dw.t. for the year 1955-56. Deducting this tonnage from 19.45 million tons, the balance left will be 18,051,084 dw.t. This is the tonnage which was carried in the international seaborne trade of India in 1955-56.

Overseas Trades

This tonnage may be divided again into two parts. The tonnage of dry cargo and the tonnage of crude oil and refined products.

So far as the imports of crude oil and other refined products are concerned, 3,755,902 dw.t. of these commodities were imported into Bombay in 1955-56. The position in regard, therefore, to the movement of cargo in the year 1955-56 will be as under:

	Dw.t.
(a) Dry cargo in the overseas trades	14,295,182
(b) Crude oil and other oils by tankers	3,755,902
(c) Adjacent trades	1,400,000
Total	19,451,084

We cannot apply one single rate for ascertaining the total amount of freight paid in connection with our overseas trades, as the rates of freight vary not only according to commodity to be carried but also for the two ports between which the same is carried. Further, the scales of rates on different routes also vary. The rates between India and the U.K./Continent and the U.S. will be, generally speaking, higher than the rates between India and Australia and India and the Far East. It is also to be remembered that the liners have got their own schedules of freight. Unless a definite change is made in the schedule, the same rates are being quoted from time to time. This is not the case with the chartered steamers.

(*Continued on page* 1008)

IMPROVEMENT OF SUGARCANE CULTURE

NEED FOR INTENSIFYING RESEARCH

A DISQUIETING trend in the Indian sugar economy has all along been that the progress in the secondary stage—that is, manufacture of white sugar—has not been accompanied by corresponding progress in the primary stage—that is, cultivation of sugarcane. In fact, the conditions obtaining in the agricultural sector of the sugar industry continue to be none too happy, the all-India averages for per-acre yield and recovery per cent. of sugar in cane being at a low level; they amount to not more than about 13 tons and 10 per cent., respectively. This is certainly unfortunate, especially considering that sugarcane is the most important cash crop in the country and the livelihood of several thousands of cultivators depends on it. It differs from other agricultural crops, in that it must be processed soon after leaving the growers' fields. Incidentally, it may be noted that about 51 per cent. of the cane production is converted into *gur*, 30 per cent. utilised for white sugar, and the rest is used for seed, chewing, fodder, etc. Viewed thus, it is, indeed, gratifying to note that the Indian Central Sugarcane Committee (I.C.S.C.) and the various research stations attached to it have done quite valuable research work in the different specialised aspects of the cane crop. An interesting review of the progress made in the implementation of research schemes is contained in the twelfth Annual Report of the I.C.S.C., that covering the season 1955-56.

The review reveals that sugarcane research has as its aim constant improvement in quantity and quality of crop produced per unit of land under varied sets of environmental conditions obtaining in the country. The fountain-head of cane varieties at Coimbatore maintains almost a constant stream of new releases, its breeding programme being geared to the needs of the crop. It aims at producing varieties combining high tonnage and juice quality, tolerances to adverse conditions of growth, and resistance to pests and diseases. Such veteran canes as Pundia and Vallai have been completely replaced by Co.419 which has truly come to be recognised as the wonder cane of the South with an acre-yield of 40-90 tons and a recovery per cent. of 13-16. Co.419 is claimed to be a variety *par excellence* in the entire Peninsular India and is now on its march to the North, covering a considerable part of the cane average in Orissa, West Bengal and Assam, as also in certain tracts in Bihar. Co. 312 and Co.421 have proved very successful in the sub-tropical belt of North India, while Co.L.9 is showing up well in the Punjab, and Co.S.109, Co.S.245, Co.S.321 and Co.S.416 in the U.P.

Manurial Practice

Manurial doses vary largely in the different parts of the country, a heavy nitrogenous dressing (300-450 lbs. per acre) being applied in Bombay, followed by 200-350 lbs. in Madras. Nitrogen doses in the sub-tropical North generally range from 120 lbs. to 200 lbs. under irrigated conditions and barely 100 lbs. under unirrigated conditions. The manurial practice of India has till recently consisted of the use of nitrogen alone, phosphatic applications being restricted to Bihar and parts of Bombay and Madras. The most notable cultural improvement has been the shift in the planting date so as to raise the growth span of the crop and thus step up tonnage and quality. Peninsular India has largely switched over to an *Adsali* (18 months) crop from the older practice of *Eksali* (12 months) plantings. Similarly, in North India, a rapid change-over to autumn planting is taking place. Means have also been devised for increasing production by other cultural methods such as reduction in distances between and within the rows of crop and adoption of a new procedure of stubble harvesting (digging the cane, instead of cutting it at the surface). Weed control by 2, 4-D and MCP has, likewise, been successfully effected. Much useful work on the water requirements of sugarcane under control conditions has also been done at the sugarcane research stations in Bombay, Andhra, Uttar Pradesh, Punjab and Bihar.

As regards cane chemistry, the hand retractometer is being used in the sugar industry with fruitful results. Among its important applications is mentioned the evaluation of juice quality in standing cane by retractometer survey for which a dependable procedure has been developed. This has enabled pre-determination of crushing schedule in succession of ripening, leading to a substantial enhancement in sugar recovery. The nature of *gur* and its formation have been elucidated in the light of physico-chemical theories. Special attention is paid to improving juice clarification, methods of storage, cane crushers and juice-boiling furnaces.

Studies of soil characteristics constitute a major item of cane research in the States of Bombay, Uttar Pradesh and Bihar. The Bombay work began with a classification of black cotton soils in the major canal tracts into twelve distinct types, followed by a rapid test survey of soil types and preparation of maps showing physical properties and nutrient status. In the U.P., classification of cane soils into three major types has been effected, along with further divison into lower category levels of texture and phase. In both the States, extensive crop-cutting and manurial experiments have been carried out on different soils for assessing their manurial requirements.

Sugarcane Entomology

Another field in which useful research work has been done relates to sugarcane entomology. The morphology and biology of various important pests have been worked out in detail in case of termites, the influence of climatic conditions on pest population exhaustively studied, and sampling technique evolved for estimating the incidence of borers, pyrilla, whitefly and mites. In the field of borer control, mechanical measures such as collection of egg masses and adults, cutting out dead hearts, killing of live larvæ by spindle thrust and early earthing are successful, as also biological control by trichogramma under limited conditions. The discovery of new insecticides has, however, for the time being at least, relegated these methods to the background, for the results of chemical control have been quite spectacular in the case of both whitefly and pyrilla where D.D.T., B.H.C. and Endrin have proved admirably successful, and less so in the case of borers where Endrin is showing some promise. Similarly, control of termites can be effectively secured by treatment of setts lying in furrows with Aldrin and Dieldrin, the protection afforded lasting over one year. Besides the above, a number of minor pests such as grasshoppers, 'hispa,' black bugs, army worms, thrips, aphids and mites prove amenable to chemical control with one or other of various insecticides, such as D.D.T., B.H.C., Aldrin and Dieldrin.

Red-rot is the principal disease of sugarcane in sub-tropical India. Two epiphytotics in the recent past have been associated with the appearance of a distinct strain. A certain amount of information has become available with regard to the growth and longevity of the pathogen; the physiology of the fungus has not received adequate attention so far. Wilt of sugarcane is a disease often occurring in association with red-rot and, under these conditions, it causes much greater damage to the crop than either of the diseases occurring alone. It has been possible to produce typical symptoms of wilt by soil inoculation in the vicinity of artificially injured roots and by growing healthy plants in infected soil. Smut disease is also important which has more than once necessitated large-scale control measures, consisting in the eradication of diseased clumps and replacement of the susceptible variety.

While the progress made in sugarcane research is thus notable, much still remains to be done, especially in so far as varietal growth is concerned. For variety is the pivot round which both sugarcane cultivation and sugar industry revolve. Emphasising this aspect, the Central Sugarcane Committee has urged that special attention must be paid to the need for evolving prolific varieties which possess a high degree of resistance to disease, test and frost and which are suitable to the different soils and climatic conditions in the various regions of the country. It has also urged further research work on the application of different nitrogenous fertilisers. It is felt desirable to employ phosphatic fertilisers, in order to maintain a correct balance in the soil and further to improve the juice quality in cane, apart from increasing its yields.

(Concluded from next column)

became a key problem for the Eastern German economy, with the result that even skilled shipbuilding workers had to be transferred to lignite mines. The fuel shortage was further accentuated by the stagnation of oil production in Rumania and the sharp decline in Hungary.

COAL OUTPUT IN EUROPE

MEAGRE RISE IN 1956

THE production of coal in Western Europe showed very little progress during 1956, according to the *Economic Survey of Europe* in 1956, prepared by the Economic Commission for Europe. Most of the major producing countries largely succeeded in maintaining the output at the 1955 level. Nevertheless, supplies were fully maintained, so that industrial activity might not suffer a setback. In Eastern Europe, however, the past year witnessed a general shortage of fuel, because the production fell short of the planned output.

The total output of coal in Western Europe during 1956 aggregated 516.0 million tons, as against 510.8 million tons in the previous year. The U.K., which accounts for more than half the output of Western Europe, produced 225.6 million tons, an increase of 0.4 million tons over the year. The aggregate rise in output of all Western European countries is mainly due to the rise of 4 per cent. in output of West Germany, that is, from 160.8 million tons to 166.1 million tons, the rate of expansion being greater than that noted in the preceding two years. In France, the third largest producer, the output fell from 56 million tons to 55.9 million tons. Though the decline was less pronounced than during the previous two years, the output was fully 5 per cent. below the target.

The following comparative table shows the production, imports and exports of coal by some of the main countries of Western Europe:

(In million tons)

Country	Production		Imports		Exports	
	1956	1955	1956	1955	1956	1955
U.K. ..	225.6	225.2	5.3	11.7	8.2	11.6
West Germany ..	166.1	160.8	19.4	16.4	12.5	13.1
France ..	55.9	56.0	13.3	7.5	2.4	6.7
Belgium-Luxembourg ..	29.5	30.0	4.8	3.7	5.1	7.6
Saar ..	17.1	17.3	0.8	0.8	4.4	6.1
Netherlands ..	12.1	12.0	9.0	8.1	1.1	1.2
Yugoslavia ..	6.1	5.8	1.4	1.0	..	..
Austria	2.2	2.2	4.4	4.2	..	..
Italy	1.2	1.3	10.9	10.4	..	..
Other countries ..	0.2	0.2	9.0	11.1	..	..
Total ..	516.0	510.8	78.3	74.9	33.7	45.3

The production of coal and lignite in Eastern Europe amounted to 223.3 million, an increase of no more than 2.5 per cent. over 1955, as against the increase of 5 per cent. planned. In Poland, the largest producer, the output, at 97.6 million tons, was higher by only 1 per cent. Eastern Germany's production rose by 2.5 per cent. to 60.3 million tons and that Czechoslovakia by 9.5 per cent. to 46.6 million tons.

The main obstacle to further expansion in Western Europe's coal production in 1956 was the difficulty in attracting mining labour, or even retaining it in some countries. Towards the end of the year, however, there was an improvement in the labour position in Western Germany and the U.K. The labour force in French coal mines continued to diminish during 1956, owing mainly to call-up for military service. In Belgium, there was an expansion in labour force during the early months of last year, on account of recruitment of foreign labour. During the spring and summer, however, there was a marked decline in foreign workers engaged in Belgian mines and, in spite of more successful recruitment efforts towards the end of 1956, the total labour force fell by 6 per cent. over the year as a whole.

The lack of progress in Western Europe's coal production during the past year did not constitute a serious bottleneck for industrial activity, but it raised the need for larger imports. With the exception of Western Germany, all the major producing countries had to cut back sharply their exports of coal. In the U.K., the decline in exports made possible a reduction of imports to 50 per cent. of the 1955 level. Elsewhere, imports went up, the increase being more marked in France, where apparent consumption rose by 14 per cent. during the year. The net effect of these changes was that Western Europe's imports of American coal rose to more than 1.5 times the 1955 level. None of the major producing countries, according to E.C.E., foresees any marked increase in coal output during the current year and any big increase in requirements of coal in order to replace oil will obviously have to be met through larger imports of American coal.

In Eastern Europe, exports of coal from Poland were cut back sharply, the effects of which were particularly felt in Eastern Germany. Two of the blast furnaces in Stalinstadt had to be closed for lack of Polish coke and the stepping up of domestic brown-coal production

STOCKS OF JUTE GOODS RISE SHARPLY

OUTPUT HIGHER—SHIPMENTS FALL

A sharp fall in shipments of jute goods during the month of April, in distinct contrast to the encouraging increase noted in the previous month, had led to the belief that there would be a heavy accumulation of manufactured goods at the end of the month. This expectation has come true and the month-end stocks with mills are higher by 7,300 tons, to stand at the highest level since October 1956.

The total shipments of jute goods during the month under review aggregated 53,025.2 tons, as against 80,953.6 tons in the previous month, to which level they had risen from 60,253.7 tons for February. The decline in shipments is shared by both hessian and sacking, as will be seen from the following table of gunny shipments (gross figures based on shipping bills presented):

(In tons)

	April, 1957	March, 1957	February, 1957	April, 1956
Hessian				
Bags	2,603.3	3,030.3	2,054.4	3,149.8
Cloth	22,844.0	32,415.7	27,761.0	28,379.7
Total ..	25,447.3	35,446.0	29,815.4	31,529.5
Sacking				
Bags	26,176.6	40,095.4	27,004.9	39,950.6
Cloth	1,401.3	5,412.2	3,433.4	1,734.7
Total ..	27,577.9	45,507.6	30,438.3	41,685.3

As already pointed out, the decline in shipments is duly reflected in an increase of 7,300 tons in stocks of jute goods with mills. This follows the fractional rise noted at the end of March. The bulk of the increase in stocks is accounted for by hessian which has gone up from 29,800 tons to 35,400 tons. This is the fourth month in succession when the stocks of hessian have maintained the upward trend, the aggregate rise since December 1956 being 15,700 tons; this has taken up the stocks to the highest level since July 1956. Stocks of sacking are higher by only 2,300 tons, but the rise is in distinct contrast to the fall of 5,100 tons noted at the close of March last. Despite the increase during the month under review, the stocks of sacking are lower than those a year ago by 4,500 tons. The stocks of "other manufactures" have, however, fallen by 600 tons, as against an increase of 800 tons in March. As compared with those a year ago, the stocks of "other manufactures" are up by 2,100 tons, as will be seen from the following table:

(In tons)

	As on 30th April, 1957	As on 31st Mar., 1957	As on 28th Feb., 1957	As on 30th April, 1956
Hessian	35,400	29,800	25,200	35,900
Sacking	58,800	56,500	61,600	63,300
Others	10,800	11,400	10,900	8,700
Total ..	105,000	97,700	97,400	107,900

The accumulation of stocks is also due in part to the rise in production during the month under review. The total output of goods in April amounted to 86,800 tons, as against 84,700 tons in the previous month, thus maintaining the upward trend for the second month in succession. The increase in production is shared by all classes of goods, though to a more marked extent by sacking, the output of which has gone up from 43,100 tons to 44,800 tons, the highest level since August 1956. The hessian output has risen by only 200 tons to 36,200 tons and other manufactures by a similar extent to 5,800 tons.

This is not the first time that stocks with jute mills show a sharp rise, for, as recently as in January last, they rose by 7,500 tons to 103,200 tons, from which level they declined to 97,400 tons at the end of February. But the fresh rise during the last two months has come at a time when mills are faced with the rising trend in raw jute prices and unremunerative prices for manufactured goods. This has led to the closure of some of the units in recent weeks. The Lakshmi Mills and the Victoria Jute Products, for instance, ceased to work a few weeks ago. This was followed by the Standard Jute Mills, which was shut down from the 4th instant, on account of the loss suffered during the past 18 months. In the case of the last mentioned mill, however, the loom hours were "sold" to the Kinnison Jute Company, another mill in the same group. But the trouble has not ended there. For the Kinnison Jute had to declare a lock-out on Wednesday last week, involving 5,000 employees, following the refusal of workers to accept re-allocation of jobs, as a result of which the manufacturing process was completely dislocated.

Meanwhile, the Labour Department of the West Bengal Government has decided to ask the managements of jute mills for details of their rationalisation plans and for their estimates of the effect rationalisation will have on employment in the mills. This action has been prompted by the Governments desire to get a clearer picture of the current employment position in the mills as opposed to the position after rationalisation.

PLANS FOR 50-LB. BURLAP FEED BAG

Plans for the introduction of 50-lb. burlap feed bags in the U.S. market were announced at the Open Industry meeting of the National Burlap Bag Dealers Association's 24th annual convention held in New York recently. The 50-lb. feed bag, it was emphasised, would find favour in the industry leading to a substantial increase in American consumption of burlap, as not all feed manufacturers were satisfied with the bulk method of shipment.

Speeches delivered at the convention generally carried an undertone of cautious optimism. The growth of the return bag programmes and the adoption of the 50-lb. burlap potato bag were credited with being the major factors in limiting a wider use of bulk shipping and substitute packaging methods. Use of the new potato bag last year increased 18.6 per cent. over 1955.

Mr. G. J. Gardner, North American representative of the Indian Jute Mills Association, stated that prospects for increased Argentine purchases of burlap were good, since the indications were that there would be little burlap on hand by the end of the year. Consumers, he added, need fear no runaway prices for burlap should consumption increase, since the Indian mills, in an effort to keep burlap prices at competitive levels, were prepared to unseal additional looms and increase production, if this were merited by the demand.

John C. Daly, Vice-President of Stein, Hall & Co., Inc., New York, sounded a cautious note, pointing out that the 6.3 per cent. increase in burlap consumption in the United States last year "left much to be desired" in the light of the record-breaking rise in industrial expansion and gross national productivity. He suggested that the Indian mills should appropriate additional funds to the Burlap Council in New York, in order that it might better fulfil its mission.

MODERNISATION OF FRENCH JUTE INDUSTRY

Stabilisation of the French jute industry is the objective of the third phase of the modernisation plan drawn up by a working party of experts for the period 1957-61, reports the *Jute Bulletin* of the Indian Central Jute Committee. The plan, involving a capital investment of 43,000 million francs, aims at complete modernisation of the existing plants for stepping up output and reducing costs. Total production on fulfilment of the programme in 1961 would come to 100,000 tons of yarn and 75,000 tons of cloth. Expansion of capacity is ruled out, in view of increased competition from India and Pakistan.

Domestic consumption of jute cloth and sacks during 1961 has been estimated at 51,000 tons and that of yarn at 76,000 tons, as compared with 49,400 tons and 68,500 tons, respectively, in 1954. Estimates for 1961 are framed on the basis of a rise of 3 per cent. in the case of jute cloth and sacks and an increase of 11 per cent. in the case of yarns over the actuals for 1954.

Exports in 1961 are expected to be maintained at the 1954 level—34 per cent. of total output (21 per cent. to markets within the franc area and 13 per cent. to foreign countries).

The French industry accounts for 20 per cent. of European jute output and ranks second to the U.K. This position is likely to be maintained in 1961.

(*Concluded from next column*)

of Brazil's holdings may be inferior coffee which may prove difficult to sell. The supply of good quality coffee from Brazil may continue to be tight until the new crop becomes available in July or August. But the growing conditions are said to be good so far and the general expectation is that the weather will be fine in the next few months when the crop will be harvested.

COFFEE CROP SETS NEW RECORD

LARGE EXPORTABLE SURPLUS

IT may sound anomalous, but it is true, that the coffee industry in India is faced with the problem of marketing surplus production and is at the same time vigorously pursuing a development plan for further raising coffee production. The problem of disposing of surplus is a short-range one and is the result of two factors, namely, the declining trend of prices in export sales, prices having progressively fallen from January 1957, and the bumper crop for this year. The problem would have, perhaps, been of smaller magnitude, if the authorities had anticipated the crop more efficiently or at least placed some reliance on the crop estimates of experienced planters. Had they done so, they would have allowed a larger quantity of coffee for export at a time when the world market was favourable. Thus, owing to a miscalculation on the part of the Coffee Board, the country has lost the opportunity of earning more foreign exchange through the export of this beverage.

The latest revised estimates of the 1956-57 crop, according to the Marketing Committee, puts it a record high of 40,425 tons (as against the previous estimates of 38,000 tons) made up of 27,785 tons of arabica and 12,640 tons of robusta. It may be noted here that several months ago private estimates of the crop were of the order of 40,000 tons, but the Coffee Board would not accept this figure. Be that as it may, out of this crop, the receipts into the pool up to the end of April 1957, amounted to 39,515 tons (21,677 tons of plantation, 6,539 tons of arabica cherry and 11,299 tons of robusta). Most of the robusta has come into the pool and further receipts may not be appreciable. A quantity of 25,172 tons has been cured out of the 1956-57 crop receipts, of which 8,115 tons have been released for exports and internal market, 600 tons are earmarked for monsoon curing, 1,368 tons have been shipped inland and 52 tons are in transit, 5,300 tons will be left on the coast for post-monsoon curing.

The total quantity of coffee released for internal consumption through various channels during the four months ended April 1957 amounted to 8,316 tons, the releases during April alone accounting for 2,191 tons. As for exports, the total quantity sold up to the end of last month was 5,383 tons of plantation and 85 tons of arabica cherry. The prices realised continued to be low. Negotiations have been finalised for sale of 725 tons of plantation coffee to the U.S.S.R.

In its previous *News Letter*, the Coffee Board had reported that the stocks available for export sales were plenty, but the time available before the break of the monsoon to complete the programme was not sufficient. This surplus has since grown further, with a further increase in crop estimates. On the basis of the figure for the first quarter of the current year, the internal consumption runs at an annual rate of about 25,000 tons, so that the surplus available is over 15,000 tons. As against this, only about 5,500 tons have been sold for export.

Although coffee prices abroad appear to be steady at present, a fresh threat to the price level is being held out by the prospect of the large unsold stocks of Mexican coffee being released for sale in world markets. There had been considerable uncertainty till recently about the export policy of Mexico and Salvador, but these doubts have been cleared with the two countries agreeing to abandon altogether their minimum export price agreement. This means that Mexico is now free to clear its unsold stocks, estimated at 500,000 bags or one-third of the total crop, most of which, it is stated, it will be able to sell in the next six or seven weeks.

While the stocks of Mexican coffee constitute, for the time being, a threat to prices, there is also a prospect of prices being kept up, if Columbia is able to hold on to its stocks till the market is again stronger. It is stated that it will be able to do so, with its extensive storage facilities. The coffee growers' organisation in Columbia is said to be buying up already new crop from the producers.

As regards Brazilian coffee, prices are steady now, but, in this case also, there is a likelihood of prices coming down. As at the end of March, the stocks in Brazil aggregated 6 million bags, about half of which was of poor quality. In the second quarter of the current year, two million bags are scheduled to be shipped, so that at the end of June about 75 per cent.

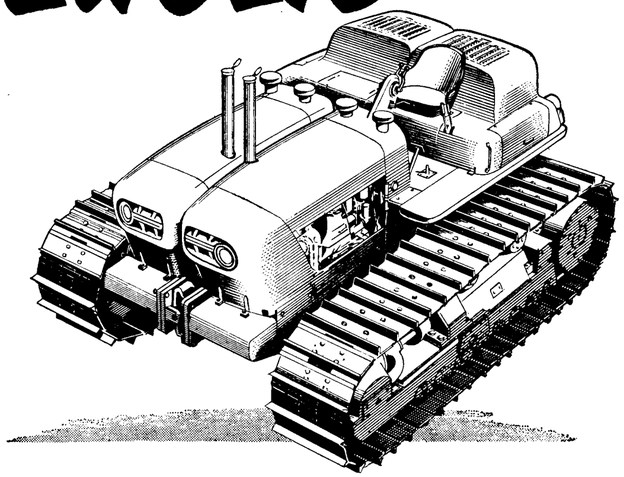
EUCLID TC-12



The World's Biggest Most Powerful

CRAWLER TRACTOR

.....This mammoth machine is an entirely new concept in the design and performance of crawler tractors.

Here are some of the features which make the Euclid TC-12 different.

Twin Engines give more horsepower, and there is plenty of weight to utilize this power.

Independent Track Drives for ease of manoeuvrability at all times, in any of the three speed ranges—forward or reverse.

Accessibility for servicing of all major components.

Torqmatic Drive and Transmission eliminates the need for any master clutch.

Track Oscillation gives maximum stability and traction on rough ground.

Ease of Transportation The TC-12 can be transported in two separate halves

Accessories Available Tipdozer - Dozecaster - rear mounted cable control unit.

INQUIRY INTO MAHBUBNAGAR RAIL DISASTER

GOVERNMENT REJECTS COMMISSION'S FINDING

THE Government of India has rejected the main findings of the Commission of Inquiry, consisting of Mr. S. T. Desai, Judge of the Bombay High Court, which, in its report on the train disaster in Mahbubnagar, Hyderabad, in September last, held that the "Central Railway administration and its senior engineering officials are responsible for the failure to provide a bridge opening, adequate for discharging the flood resulting from a rainfall of two to two-and-a-half inches per hour." Disagreeing with the findings of the Commission, the Government of India, in a resolution, published last week-end, avers that "no responsibility attaches to the Central Railway administration or its senior engineering officials in not having selected the bridge (bridge No. 229) for an increase of waterway."

It may be recalled that, on 1st September 1956, the Secunderabad-Dronachalam passenger train crashed on bridge No. 229 near Mahbubnagar, resulting in an estimated loss of over 120 lives. A Commission of Inquiry, with Mr. S. T. Desai as the sole member, was set up in December 1956. Mr. N. K. Mitra, Retired Chief Engineer, Indian Railways, and Mr. K. L. Rao, Member (Design and Research, Central Water and Power Commission) were appointed assessors to assist and advise the Commission. The accident gave rise to considerable misgivings in the public mind, especially as it had been preceded by another accident in Jangaon in the former Hyderabad State. Further, the Mahbubnagar accident was soon followed by the much greater Ariyalur rail disaster which claimed a loss of about 150 lives. In the course of a debate in Parliament, in the first week of December 1956, members strongly criticised the Railway administration, contending that, if it had "woken up" after the Jangaon incident, the Mahbubnagar and Ariyalur train disasters could have been averted. Speaking on behalf of the Government, the then Deputy Minister for Railways and Transport, Mr. O. V. Alagesan gave the assurance that the authorities would undertake more frequent inspection of bridges and track.

To revert to the official resolution on the Commission's report, the Government observes that the technical assessment and the conclusion reached by the Commission differ from those of the inspector. The two assessors of the Commission, the Government says, have also expressed divergent views. The resolution adds: "Such lack of agreement on issues which are essentially of a technical nature has necessitated a reappraisal of the facts of the case by the Government."

Technical Issue

On the technical issue as to how much rainfall fell in the catchment area of the bridge in question near Mahbubnagar on the night of the accident, there is again a divergence of views. The Government Inspector of Railways has assessed the intensity of rainfall as four inches per hour, whereas the Commission's estimate is two to two-and-half inches per hour. The estimate, says the Government resolution, "is at best a guess in the absence of a continuous self-recording rain gauge in the area which alone could enable a reliable estimate of the intensity of rainfall." The Commission, in its report, has dwelt at some length on the technical issue relating to the adequacy or otherwise of the ventway (opening) of the bridge near which the accident occurred and has reached the conclusion that the ventway was "inadequate." The Government's resolution maintains that the bridge had been constructed and the ventway provided according to the well recognised practice in the area.

The propriety of this practice, according to the resolution, was confirmed by the evidence of all engineers working in the area, including the opinion of Mr. Thirumalai Iyengar, Chief Engineer of the Hirakud Dam project, in his reply to the Commission's questionnaire. "It is unfortunate," the Government says, "that this expert opinion, based upon 30 years' experience in that part of the country, was not taken into consideration by the Commission, although received before the report was written, on the ground that it was received after the sittings had been concluded." Mr. N. K. Mitra, one of the assessors associated with the Commission, has also observed that the bridge in question was designed on the basis of Dickens' Formula, which was extensively used in that part of the country. He says that up to now, for southern India, nobody has found serious faults with the Dickens' Formula. He adds: "He would be a bold engineer indeed who would be able to guarantee 100 per cent. security against all floods and their effect on railway banks and waterways and yet design his works on rational or economical basis."

An Explanation

The Commission, in its report, has discussed the question whether the experience of the Jangaon accident near Hyderabad, in 1954, indicated the necessity of any modification to the ventway of the bridge involved in the Mahbubnagar accident which occurred on 2nd September last. The resolution points out that there are 15,000 bridges on the Central Railway, and the most practical and reasonably effective method for determining whether any of the bridges was vulnerable was to scrutinise carefully the past history of each bridge and then to take corrective action. This, the resoluton claims, was done, and up to the date of the accident 12 bridges had actually been modified as a result of this investigation. The bridge involved in the Mahbubnagar accident had no previous history and there was, therefore, no reason to apprehend any danger. No action was, therefore, taken to increase its ventway.

The issues involved in the Commission's report and the Government's resolution thereon are too technical for lay comment. Even so, the public is bound to form the impression that the Government had been somewhat partial to the Railway officials. At the same time, it must be recognised that nothing could be more reprehensible than indiscriminate punishment of officials in a "witch-hunting" spirit. The main point, however, is that the authorities should always be "safety-minded" for no aspect of the working of the Railways brings the administration into greater disrepute than accidents. From this point of view, it is noteworthy that the Government has been devoting some attention to the need for expert investigation of floods in relation to railway travel. Besides the Central Flood Control Board and the River Commission, which are investigating the general problem of floods, the Government has set up a high-level committee of engineers with Dr. A. N. Khosla, ex-Chairman of the Central Water and River Commission to review the flood problem in relation to railways. It is to be hoped that these inquiries and investigations will suggest ways for more effective prevention of accidents in rail travel. The Railway Ministry will certainly receive all support from the public as well as Parliament in any measure it feels compelled to take in the interests of improving the "safety" element. Only, it should be borne in mind that the task of ensuring "safety" is a continuing one, which neither can nor should admit of finality.

POWER PLANNING IN BRITAIN

REVIEW OF ENERGY RESOURCES

IN Britain, as in Europe, industrial expansion calls for ever-increasing investments in fuel and power industries. Additions to capital assets in these industries have recently been at a rate of between £300 million to £350 million a year. During the next 10 years, these are expected to rise to an annual average of £500 million on the basis of 1956 price levels. Such large-scale investments must be planned well ahead as there is normally a time-lag between the blue-printing of major power projects and their completion.

The plans for capital expenditure of the coal, gas and electricity industries have already been published. In the 10 years from 1956 to 1965, they are estimated to aggregate £4,850 million, besides the expenditure (unofficial estimates) of £1,000 million to be incurred by the oil industry. The £4,850-million programme consists of: National Coal Board £1,000 million; Gas Council £500 million; Electricity Authorities—Conventional stations £776 million; nuclear power stations £919 million; transmission £395 million, work in progress by 1965 (including £160 million for nuclear stations) £200 million, distribution £1,000 million and other expenditure £40 million. According to the latest expert, though largely unofficial, estimates, the whole power programme must be designed to meet an expansion of total demand (including exports) from the equivalent of 285 million tons of coal in 1956 to 320 million tons in 1965 and 385 million tons in 1975. Allowing for the latest changes of plan, including the expansion of the nuclear power programme, the proportion of primary energy needs met from coal will fall from 86 per cent. in 1955 to 75 per cent. in 1965 and to 62 per cent. in 1975. Nuclear power, non-existent in 1955, is expected to supply 6 per cent. of demand in 1965 and possibly 15 to 20 per cent. in 1975.

New Phase

Some more light on Britain's plans for developing energy resources was thrown by the U.K.'s Paymaster General, Mr. Reginald Maudling, in the course of a Parliamentary debate on the subject. He said: "We may shortly be at the beginning of completely new phase in our fuel and power policy as a nation." Two events might change the present position, according to him. The difficulties connected with importing oil from overseas had been underlined, and there was the remarkably rapid progress British scientists had made in harnessing nuclear energy to the production of power for civil purposes. Technical changes in the nuclear field were very rapid, and no man could predict from one year to the next where research would lead them. Referring to the nuclear programme, Mr. Maudling said: "Our scientists and engineers have carved out a most remarkable place by an achievement which the whole country salutes. We must support that by being bold in our plans for the use of nuclear energy." It should be possible, he added, to supply nuclear energy at a cost per unit which will compare reasonably with that of energy provided from conventional sources, but he pointed out that people should not talk about nuclear power displacing coal. It was replacing coal for other purposes.

Mr. Maudling said one of the "exciting possibilities" being examined was the import of liquid methane for the manufacture of gas. The investment cost of likely expansion in world oil output was really fantastic, said Mr. Maudling. It had been estimated that, over this decade, investment throughout the free world in oil production would be something like £40 million. That investment could be paid for largely only from the retained profits of oil companies. That was the reason they must have them. Another exciting possibility mentioned by Mr. Maudling was the underground gasification of coal, but, he went on, "our basic energy source is coal, and will remain coal. Our main policy must be to ensure that we make the maximum use of the coal underground."

The Government's atomic power programme, it may be mentioned here, was recently revised. Under the revised programme, it is believed that at least 6,000 M.W. of power will become available during the next nine years, and that, in a full year's operation, with this generating capacity, some 18 million tons of coal will be saved. The cost of nuclear power stations, as already mentioned, will be about £900 million. It is estimated that sixteen more stations will have to be built in addition to the three for which orders have already been placed at Berkely, Bradwell and Huntersten. According to one calculation, the coal or oil-fired stations large enough to supply the power outlined in the programme would cost £810 million.

TELEGRAPH ENQUIRY COMMITTEE

The Government of India has announced the appointment of a telegraph enquiry committee to make a review of the working of the telegraph service in India and to make suitable recommendations to improve the efficiency of the service. The terms of reference of the Committee, which will have Mr. Sudhir K. Kanjilal, Deputy Director-General, P.& T. Department, as Chairman, include both the technical aspects of the service and matters pertaining to its staff and establishment. The order appointing the Committee points out that the question of examining the working of the telegraphs branch of the P. & T. Department has been engaging the attention of Government for some time. The last review was made by a committee appointed in 1932. Since then, vast expansion as well as considerable technological advancement has taken place. Government have, therefore, decided to appoint a telegraph enquiry committee for a fresh review. The Committee is expected to submit its report within the next eight months.

In the terms of reference on the technical side, the Committee has been asked: (a) to study the present methods of operation and supervision in telegraph offices, including all problems connected with the booking, transmission, circulation and delivery of messages and to make recommendations for effective improvements therein, and (b) to examine and recommend necessary modifications in respect of: (i) the procedure for engineering and traffic control of circuits, (ii) the standards for conversion of combined post and telegraph offices into independent telegraph offices, and (iii) the present standards for introducing teleprinter working including the operative standards for introducing relay switching.

The Committee have been asked to report to Government within a period of eight months from the time its secretariat is set up.

TURBO-PROP AIRLINER

Another British turbo-prop airliner has just been announced. It is a new version of the Handley Page Herald transport plane, which will be powered by two Rolls-Royce Dart turbo-prop engines. It has been designed for branch-line operators throughout the world. The plane will carry 43 passengers in pressurized comfort, or nearly five tons of freight, or a combination of both passengers and freight, at a mean cruising speed of 275 m.p.h. This raises the number of existing or projected British turbo-prop aircraft to eight. The others are the Vickers Viscount and the Bristol Britannia, already in service, the Vickers Vanguard, the Fairey Rotodyne (50-seater helicopter with a jet-powered rotor and twin turbo-props for forward drive), the Armstrong-Whitworth 650 freighter, the Accountant feeder or executive aircraft, and the Miles 107 feeder liner.

Parallel production is planned both for the turbo-prop and the piston-engined Herald. In many regions, especially remote areas, the piston-engined type (with Alvis Leonides engines) will remain more suitable. It will score particularly in very hot countries and in operation from small, high-altitude airstrips in difficult terrain. The Dart-engined Herald, however, is some 70 m.p.h. faster, and it will be especially suited to fast branch-line services in developed areas. Its take-off and landing performance is almost as good as that of the piston-engined aircraft in temperate regions, where its greater speed and smoothness may make it more attractive to operators and passengers alike. Its purchase price is likely to be well received. A Dart Herald will cost £175,000, including furnishings. The operating cost of this new turbo-prop airliner will, say the manufacturers, be less than three half-pence a passenger-mile and 16d. a ton mile. The first flight is scheduled for early next year.

GAS TURBINES

Interest in gas turbines for use in the marine and industrial fields is steadily growing, as the claims of British designers and manufacturers are confirmed by operational experience. A contract has been placed with a British engineering firm for two 5,700 kw., natural-gas-burning sets to be installed at Multan for the Pakistan Industrial Development Corporation. Shipowners also are becoming more interested in the possibilities of gas-turbine engines for propulsion as a result of developments in linking gas turbines with free-piston gasifiers. An example of this new departure is the re-fitting of a 10-year-old British India liner with four free-piston gasifiers. The gas delivered by them will be fed to a 4,000 shaft horsepower reversing gas turbine. It is stated that the British India line wishes to obtain experience with this form of propulsion with a view to employing it in future new tonnage. In general, it is stated by industrial power engineers that developing countries where oil and natural-gas deposits exist provide likely markets for gas turbines.

TANK FOR SMALL CAR

A larger fuel tank is now being fitted to the Morris Minor. The Nuffield Organisation, makers of the car, say that 300 miles without refuelling should now be attained. The 5-gallon tank previously fitted is being replaced by a tank of 6½ gallons capacity. "Despite the extremely good petrol consumption of the Minor," said a Nuffield spokesman, "it has been felt that giving the car an even greater range would please many people, particularly in those oversea countries where filling-stations are few and far between."

HEAD OFFICE:—MEHTA HOUSE, APOLLO STREET, BOMBAY
Chairman: JAL H. MEHTA General Manager: M. S. DASTUR

HIGHER PAY SCALES FOR LIFE CORPORATION EMPLOYEES

SALARY BILL TO RISE BY RS. 5 LAKHS A MONTH

THE long-drawn-out controversy between the Life Insurance Corporation and its employees over the question of pay scales would now be over, at least temporarily, as an agreement has been reached over the question of pay scales of the employees. The Corporation has proposed a general upward revision of the pay scales which the representatives of the employees consider as fairly satisfactory and the latter are expected to recommend its acceptance to their respective organisations. The revised scales will affect 21,000 clerical and lower grade employees of the Corporation and will involve an increase of Rs. 4.5 to Rs. 5 lakhs per month in the pay bill of the Corporation.

According to the revised pay scales, clerical staff will get a single grade starting from Rs. 75 and rising up to Rs. 300. This replaces the two existing grades with a total span of 28 years—Rs. 55 to Rs. 220 and Rs. 100 to Rs. 300. Supervisory staff will get a special pay which will be integrated with their basic salary. Pay scales of class V employees (lower grade) have been increased by Rs. 5 in addition to an upward revision of ceilings. Dearness allowance is increased by Rs. 5 for those drawing a basic salary of less than Rs. 50 per month. Dearness allowance will remain the same for other employees. A new higher assistants cadre has been created. Drivers, liftmen, head peons, watchmen, etc., also stand to benefit by the revised scales. There is also an option clause providing for employees who so wish to continue in the old company grades. The effect of the new pay scales would be to bring them generally on par with pay scales of the former Oriental Life Assurance Company or the State Bank of India. At a Press Conference, held in Bombay last week, the Union Finance Minister, Mr. T. T. Krishnamachari, said that the Government was bound hand and foot to the terms of the agreement which, according to him, took the pay scales of the employees up to the top scales obtaining in life insurance companies before nationalisation except four companies. The Corporation's monthly wage will, which at present amounts to Rs. 34 lakhs, would, as a result of the implementation of the new scales, increase to Rs. 39 lakhs.

Pay Scales

Category (Class III)	*Scale* Rs.
1. Superintendents	200-20-500.
2. Higher grade assistants	140-10-210-E.B.-12-270-15-390-20-410.
3. Stenographers:	
(i) Employees confirmed before 31st August 1956	90-10-210-E.B.-15-300.
(ii) Employees confirmed after 31st August 1956	90-10-210-E.B.-15-270.
Note.—Stenographers selected for work with senior officers will receive special pay on the following scale:	
Chairman	50 p.m.
Directors	40 p.m.
Zonal manager, deputy zonal manager and senior officers at Central Office	30 p.m.
4. Assistants:	
(i) Employees confirmed before 31st August 1956	75-5-90-6-120-8-136-E.B.-8-160-10-220-E.B.-10-240-15-300.
(ii) Employees confirmed after 31st August 1956	75-5-90-6-120-8-136-E.B.-8-160-10-220-E.B.-10-240-15-270.
Note.—Section heads will be in this scale and receive a special pay of: Rs. 30 in the first five years of service, Rs. 35 in the next five years of service and Rs. 40 in the next five years of service.	
5. Receiving and paying cashiers	Same as assistants with an allowance of Rs. 10 per month.
6. Typists	
7. Telephone operators	
8. Addressing machine and punched card operators	
9. Comptometer operators	
Note.—Graduates appointed to categories 4 to 9 will receive two increments on confirmation.	
10. Record clerks, banda and duplicating machine operators	55-4-75-5-110-E.B.-5-130-6-172-8-180.
CLASS V	
Sweepers and cleaners	30-2-42-3-81-4-85-5-90.
Sepoys, *chaprasis*, *hamals*, etc.	35-2-47-3-86-4-90-5-95.
Head peons, liftmen and watchmen	
Daftries	
Drivers	70-3-85-4-105-5-115.

Note.—(i) Head peons, liftmen and watchmen will have a special pay of Rs. 5 p.m.

(ii) On promotion as *daftry* the employee will receive three increments in the grade. Minimum pay for a *daftry* will be Rs. 45.

Dearness Allowance

Basic salary	*Dearness allowance* (Rs.)
Less than Rs. 51	45
Rs. 51 to Rs. 100	50
Rs. 101 to Rs. 150	55
Rs. 151 to Rs. 200	60
Rs. 201 to Rs. 250	65
Rs. 251 to Rs. 300	70
Rs. 301 to Rs. 400	75
Rs. 401 to Rs. 500	80

As the Union Finance Minister observed, pay scales have been a sore point with employees of the Life Insurance Corporation. The upward revision of the scales, now effected, should, therefore, go a long way towards removing discontent in the ranks of employees. It should also enable the Corporation to obtain their enthusiastic co-operation which is so essential for the success of the Corporation's activities. While welcoming this bold and liberal, though belated, step one would like to point out that the major attention of the Corporation has hitherto been directed towards questions of pay scales and conditions of service of employees. Now that the "pay scales" question has been settled, it is to be hoped that the Corporation will be free to concentrate its energy and attention on its most essential function—the spread of life insurance.

VEHICLE INSURANCE IN U.K.

Not only in India but all over the world the costs of operation of vehicle insurance have risen so that in more than one country insurers complain of the unremunerative character of this type of insurance and the need for raising the premium rates. In the U.K., for instance, insurers have decided to raise the premiums for car, motor cycle and commercial and agricultural vehicles. The increase in rates, which will come into effect on 1st July 1957, will range from about 12½ per cent. to 33-1/3 per cent. of the present levels. According to the correspondent of the London *Financial Times*, for private cars first licensed from 1947 onwards, and rated for insurance purposes on cubic capacity, comprehensive premiums are to be increased by 33-1/3 per cent. For older private cars, and most of those insured against third party risks only, the premium increases will vary from 12½ per cent. to 25 per cent. For third party only, pre-1947 cars pay 12½ per cent. more and 1947 and later models 20 per cent. more. All premiums can be reduced by no-claims discounts of up to 30 per cent. where the experience has been satisfactory. The fact that the largest increase in premium now is being applied to the more modern cars insured against comprehensive risks indicates that much of the deterioration in claims experience has resulted from the high cost of repairing accidental damage to these newer cars. Even where a motorist has been bearing the first £10 or £20 of any claim, insurers have found that this has not been large enough to relieve them of contributing substantially to the repair of damage caused by minor accidents. In most instances, the premium reduction allowed against an excess from 1st July will be 5 per cent. lower than the existing allowance.

The percentage of the excess discount has remained constant since 1934. While the maximum amount which the policyholder has to bear has remained unaltered, the value of the discount has been increased by every increase in rate, and this has led to the "more realistic" scales now introduced. Commercial vehicles of all kinds will have premiums raised approximately 12½ per cent. For the rating of commercial vehicles many outlying areas are to be brought within district "C" (London area) and so will attract a higher premium rating. For all but the very lightweight types, motor cycle rates of premium for comprehensive cover will also be increased in varying degree, up to 33-1/3 per cent. for the heaviest machines. There will be no change in the rates for third party only cover. The decision to make these changes from 1st July ensures that insurance companies' motor accounts for 1957 receive some benefit. It takes approximately six months before any appreciable result from premium revisions is felt. The full benefit of the increases will not be brought into the figures of the insurance companies until the 1958 accounts are produced.

(*Concluded from next column*)

cost of setting claims. In Canada, the Corporation's fire business was again unremunerative and, for the first time, the Corporation made no profit in the U.K. during the year, following the heavy cost of claims on frost damage in the early months of the year. Elsewhere, the business turned out to be profitable.

The experience, on the whole, of the accident business was by no means unsatisfactory and it underlined the value of possessing a strong and healthy accident account in a year when fire business was generally unfavourable. In the U.S., where the Corporation does extensive business in accident insurance, it had a reversal of the experience of 1955 in the two major classes. Motor business was profitable and workmen's compensation unprofitable in 1955, while in 1956, it was the other way round. The remaining accident lines in the U.S. turned out well as usual. In Canada, the Corporation's business in accident insurance was again profitable. In the U.K., except that the motor business was unremunerative, the Corporation made a fair profit. "In other overseas branches," as the Chairman says in his statement, "the story was, generally speaking, the familiar one of profits earned on the whole, but of having to strive, not everywhere successfully, to extract a slender return out of the inadequate margins in motor premiums."

EMPLOYERS' LIABILITY ASSURANCE CORPN.

SETBACK IN PROFIT

THE audited accounts of the Employers' Liability Assurance Corporation Ltd. (General Manager: Mr. C. E. Keysell, M.B.E., London) for the year ended 31st December 1956 indicate that the past year has by no means proved to be an easy one for the Company, with the result that the underwriting profit has suffered a setback. The aggregate premium income has, no doubt, risen, but the heavy claims, particularly in fire insurance, in the face of inadequate premium rates, have been responsible for the setback in the underwriting profit. The premium income from fire insurance has maintained the upward trend noted in previous years, with a further rise from £3.30 million to £4.09 million. The accident and general insurance premium income has established a fresh record, at £26.21 million, having gone up from £24.59 million in 1955. The underwriting result in fire business is a loss of £249,791, in distinct contrast to the profit earned in the previous year of £25,763, to which level it had risen from a mere £1,778 earned in 1954. The profit in accident and general business, which had dwindled from £1,579,230 to £937,267 in 1955, has further gone down to £910,759 in the year under review.

The underwriting loss suffered in the fire business has further brought down the Corporation's aggregate profit for the year from £963,030 to £660,968, which is the lowest since 1952. This decline has, however, been made good to a large extent by the rise in the Corporation's share in the life profit of the Clerical, Medical and General Life Assurance Society from £55,223 to £87,493, and that in other income (from interest, dividends, and rents) from £1,120,248 to £1,266,902. After making a larger provision of £414,051, as against £378,516, for staff pensions and expenses not charged to other accounts and lowering the provision for U.K. taxation from £1,142,923 to £966,114, the net profit available is slightly higher at £635,198, as against £617,062. After bringing in the previous year's surplus of £1,346,657 (as against £1,167,095), the Directors have maintained the transfer to the contingencies account at £150,000. The distribution to the shareholders has been stepped up from 5s. per share (less tax) to 5s. 6d. per share (less tax), by raising the final dividend from 3s. 6d. to 4s. per share. The Corporation proposes to reduce hereafter the disparity between the interim and final distributions. Any resultant increase in the interim dividend for 1957 must not, therefore, be taken, the Chairman, the Rt. Hon. Viscount Knollys, in the course of his statement accompanying the report and accounts for 1956, warns, as an indication of a higher total distribution for 1957. The total dividend for 1956 absorbs £316,250, as against £287,500; the balance left to be carried over is £1,515,605.

The following comparative table shows the progress of the Corporation's underwriting results during the past three years:

(In £'s sterling)

	For the year ended 31st December			
	1956	1955	1954	1953
Fire				
Provision for unexpired risks at the beginning of the year	2,057,489	1,676,533	1,394,711	1,150,301
Premiums (less re-insurances)	4,094,867	3,299,206	2,802,419	2,443,350
Claims paid and outstanding	1,930,348	1,348,102	1,207,209	1,027,373

Provision for unexpired risks at the end of the year	9,821,545	9,238,047	8,389,626	8,085,391
Profit	910,759	937,267	1,579,230	706,562

The loss in fire business has been mainly attributable to the Corporation's branch in the U.S. where the experience of all insurers in fire business during 1956 was the worst for at least a quarter of a century, the loss from fire damage during the year being a record. The heavy claims, together with the fall in values at which property of all kinds was insured below the true up-to-date values, tended to create a disparity between the level of premiums and the

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur Ltd., for the year ended 31st December, 1956.

After providing for all expenses and making necessary provisions, the net profit of the Bank for the year amounted to Rs. 9,81,954-3-2 to which is to be added Rs. 41,779-5-10 brought forward from last year making a total of Rs. 10,23,733-9-0 available for distribution. The Directors recommend its appropriation as under:—

	Rs.	a.	p.
Reserve under Section 17 of the Banking Companies Act	2,00,000	0	0
Dividend at 5 per cent. Tax Free	2,50,000	0	0
Provision for Taxes	4,50,000	0	0
Staff Gratuity Fund and Bonus	1,00,000	0	0

and the balance of Rs. 23,733-9-0 be carried forward to next year's account.

The working of the Bank during the year continued to be satisfactory.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-appointment.

(1) Shri Gajadhar Somani. (2) Shri Sunderlal Tholia.

The Directors wish to convey their thanks to the depositors for their valuable support and confidence and the members of the staff of the Bank for their enthusiastic and devoted services.

You are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,
RAMNATH A. PODAR,
Chairman.

JAIPUR, 18th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956.

NEW PRODUCTS AND PROCESSES

Tools for Asbestos Cement Water Conduits

AN engineering works of the Netherlands manufacture tools with which asbestos cement water conduits can be shortened and finish-turned in a simple manner. The cutting tool, fitted with a blade-shaped guide wheel and a tool hit, is clamped to the pipe in such a way that the latter rests between two support wheels and the guide wheel. By rotating the tool about the pipe by means of a handle the blade-shaped guide wheel forms a groove; by placing the tool bit in position the groove is then deepened and the whole pipe is ultimately cut through. The tool is suitable for 75- to 200 mm. (3"-to 8") pipes. The finish-turning tool is supplied, together with accessories, in three designs for pipes inside diameters. The tool consists of a clamping device secured to the end of a screw spindle, and a hub with tool holder rotating about the spindle. The clamping device is slid into the pipe and tightened, the tool thus being centrally fixed in the pipe. The hub is rotated about the screw spindle by means of two handles, the pipe being finish-turned by two adjustable tool bits. The feed of the tool bits corresponds to the fine thread of the screw spindle.

Paint-Mixing Gauge

A Birmingham firm of paint manufacturers has devised a paint-mixing gauge which will enable amateurs to produce any one of 300 colour shades from 19 basic colours. The gauge has been produced primarily for garages, where re-spraying is often held up for lack of a particular shade specified by a customer. With the gauge go colour cards, the formulations for mixing the colours, and containers in which to mix them. The firm has compiled a basic kit which consists of the gauge, formulations, and cans, together with a supply of basic colours. The gauge and the kit were on display for the first time at the British Industries Fair, Birmingham. The mixing gauge is basically a sliding strip actuated by a control knob working in unison with the needle against a dial incorporating three scales. To mix a given colour, the gauge needle is set at the appropriate reading and a basic colour poured into the can until the level reaches the bottom edge of the sliding strip. The needle is then re-set according to formula and the next basic colour added until its level reaches the bottom edge of the strip. After the colours, thinners are added and the ingredients mixed to give the required shade.

Furnace Control

Gamma rays from radio-active cobalt are being used to detect and control the level of molten titanium in a new "cold hearth" arc furnace at the Westinghouse metals development plant at Blairsville, Pennsylvania. With the rays beamed through the furnace walls and the 12-inch titanium ingot inside, the level of the titanium can be "seen" by operators and the information is also used automatically to raise or lower the ingot to correct operating level. Source of the gamma rays is a small needle of cobalt-60, kept in a shielded lead box outside the furnace in line with the top surface of the ingot. Rays passing through the furnace are detected by two scintillation counters. If the ingot is too high, it partly blocks the rays; if too low, there is less interruption. Depending upon the amount of radiation they pick up, the scintillation counters feed pulses to electronic circuits designed to drive a hydraulic system that raises or lowers the titanium ingot. The system is said to be precise enough to detect and maintain the level of the ingot to within one hundredth of an inch of its ideal operating position.

Novel Finish for Metal Parts

It has recently been announced that a new, bright metal finish for industrial and domestic use may be developed as the result of experimental work now being undertaken at the Tin Research Institute at Greenford, Britain. Scientists at the institute have found that the addition of a small quantity of wood tar to solutions used in tin plating causes the tin coating to be deposited as a bright finish. This new application is still in the laboratory stage, and experiments are still going on to discover the constituent of the tar which causes this bright finish. Sufficient results have been obtained, however, to show that the bright plating process is a practical proposition. The scientists responsible for developing the process believe that electrical equipment and instrument parts are among the products which would benefit especially from the new process. It is expected that this new finish will challenge bright finishes of other metals in such fields when it reaches the stage of commercial development.

Hydraulic Fire Ladder

A Netherlands firm has recently started the manufacture of a fully-hydraulic, fully automatic fire escape provided with all the safety devices considered necessary for this type of ladder. The special feature of this ladder is that the hydraulic mechanism is not only utilised for elevating, pitching, sliding in and out and revolving the ladder on the carriage, but that the shock absorbers are also operated hydraulically. The ladder stops automatically when obstacles are encountered while it is being revolved, etc. Any faulty manipulation, which it is often difficult to detect accurately at a distance of 105 feet, is automatically prevented. Nor is it possible for the ladder to be extended beyond the permitted field of operation or to get outside it by pitching. Since this steel ladder is designed in a special shape and specially constructed a saving in weight is effected enabling it to be extended and loaded 25 per cent. more than other ladders of this type.

Production Testing

A quality control instrument for measuring as little as one ten-thousandth of an inch of paint film, electroplating or metal overlay has been developed by General Motors. The new device, the Laminagage, is a portable, non-destructive tester that can be used for a high rate of production testing. On bearings or decorative plated surfaces, where overlays or deposits must be kept within definite limits of thickness or thinness, the device quickly indicates whether the limits are within quality control standards. It is also useful in measuring thickness of paint on aluminium, nickel electroplate on steel, copper electroplate on steel and babbit bearing overlay on bronze. The instrument consist of a small metal cabinet containing electronic equipment and a probing coil connected by coaxial cable with the cabinet. The probing coil is used to contact the part under test—such as a bearing, a rod or a piston pin—and it can be designed for probing parts of virtually any shape—curved, flat, angular or rod-like. When the coil makes contact, the thickness of the paint film or plating overlay on the part instantly registers on a dial on the front of the cabinet. The Laminagage utilises the principle that distribution of an alternating electric current in a conducting material is greatest at the surface and decreases as it penetrates beneath.

Wire Rope Cutter

The Hydrashear cable cutter is a hydraulically operated cutter for wire rope. Its manufacturers, Metal Processors Proprietary Ltd., of 22 Newington Road, Marrickville, New Suth Wales, market the cutters in three sizes—for rope of ½", 1¼" and 1¾" diameter respectively. The machines are sturdily built, with main bodies of special steel casting, and all their components are of the best tool steel. The wire rope is placed in a hinged saddle and lached in position. A release valve is then closed, and by movements of a pump handle the main ram advances with an attached cutting blade to sever the rope. The release valve is opened to retract after cutting. The danger of accidents to operators is reduced to a minimum because no chips are dislodged, and there is no sudden recoil of the severed strands. A great advantage of the Hydrashear is that it can be taken to the site of the cable to be cut, and hence saves much time ordinarily spent in dismantling the cable and transporting it elsewhere for cutting.

New Electronic Aids for Jute Manufacture

Two instruments developed at the laboratories of the British Jute Trade Research Association at Dundee, Scotland, were displayed at the Electronics and Automation Exhibition recently held in London. The first is an electronic meter which measures the moisture content of textile packages including jute in a matter of seconds. A number of these meters are already in use in Dundee jute mills as aids to processing efficiency and control. The other device, also electronic, has been developed for measuring tension on running yarns. Its main advantage is that it is a self-contained portable instrument requiring no external power supply.

Portable Water Filter

A new portable pump filter giving an output of filtered water of high bacteriological purity from impure sources at a rate of 20 gallons per hour was shown for the first time at the 1957 British Industries Fair at Birmingham. Already tried out with marked success in tropical countries, it is now going into commercial production. It is easy to work, and there is nothing to go wrong if it is properly used. Weighing only a little over five lbs., it is ideal for survey parties, explorers, and for use in the armed services. The manufacturers also exhibited a full range of water filters for industrial and domestic uses; self-sterilising candles for all makes of filters, and domestic water-softeners.

Accurized Piston Pinholes

Australian automotive engineers have perfected a process to super-finish piston pinholes to very close dimensional tolerances. This process, known as "accurizing," had been adopted exclusively for all pistons manufactured by the Russell Manufacturing Company Proprietary Ltd. (the engine parts division of Repco Ltd.), of Richmond, Melbourne, Australia. Accurizing imparts the greatest degree of smoothness obtainable—a smooth finish within the limits of two to four micro-inches. Such a finish means that almost the whole surface of a pinhole acts as a bearing for a pin, and there is negligible initial wear during run-in. Accurized smoothness permits a pin to be fitted with an "easy" clearance that does not increase with running, and at the same time obviates the danger of breakdown resulting from overtight pins.

Moth-proofing Treatment for Wool

Australian scientists invented a new moth-proofing process recommended by the International Wool Secretariat, the Commonwealth Scientific Industrial and Research Organisation announced recently. The new process, Si-ro-moth, uses dieldrin, the most active and persistent insecticide of its type known, and was developed in the C.S.I.R.O. wool textile research laboratories at Geelong. The process is cheap and effective. The treated wool has no odour, and its appearance and physical and chemical properties are unchanged. At least 14 major companies use the process in Australia, and it is being rapidly taken up overseas.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the forezoing Balance Sheet of the Bank of Jaipur Limited, as at 31st December, 1956, and also the forezoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 9 branches audited by us, and the unaudited returns from 31 other branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) In our opinion, and to the best of our information and, according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE EMPLOYERS' LIABILITY ASSURANCE CORP. LIMITED

PARTICIPATION IN UNDERWRITING OF ATOMIC RISKS

THE RT. HON. VISCOUNT KNOLLYS' STATEMENT

IN his statement accompanying the Directors' report and statement of accounts for the year ended 31st December 1956, of the Employers' Liability Assurance Corporation Ltd., the Chairman of the Corporation, the Rt. Hon. Viscount Knollys, G.C.M.G., M.B.E., D.F.C., states that the Corporation is participating in the insurance of atomic risks. In all countries where material damage and public liability cover relating to the building and operation of nuclear reactors is being, or soon will be, underwritten, companies have formed themselves for the purpose into pools capable of meeting the very high limits of liability required. The Corporation, on its part, has participated in arrangements made in this manner in the U.K., in the U.S. and in a pool organised in London to cover risks in other foreign countries.

The following is the full text of Viscount Knollys' statement:

"The figures which comprise the record of the Corporation's trading results in 1956 are set out in the Directors' report in a way which, I believe, makes them quite clear. I have therefore thought that it would be best for me to confine myself here to a short summary of the important figures, which are as follows.

"The premiums of our group at £34,596,000 showed an increase of £2,522,000 over those for 1955, and the combined trading profit, after deduction of tax, was £640,508. A final dividend of 4s. 0d. per share is recommended by the Directors, making, with the interim dividend of 1s. 6d. per share, 5s. 6d. per share for the year, and we have accordingly provided for the amount of £316,250 which represents the total net cost, and for the additional profits tax of £144,882 consequent on this distribution. It is our intention, for the convenience of shareholders, to reduce the present disparity between our interim and final dividend payments. Any resultant increase in the next interim dividend must not, however, be taken as an indication of a higher total distribution for 1957.

"The total of our share capital and published reserves, including carry forward, now stands at £8,787,268, against £8,461,776 at 31st December 1955.

Fire

"The 1956 results of fire insurance for all insurers in the United States were probably the worst for at least a quarter of a century. As a consequence of the good profits made there in the preceding years rates had been reduced, but the total amount of loss from fire damage in the year was a record. It was estimated at $989 million, an increase of no less than $100 million, or 11 per cent., over that for 1955. Moreover, the values at which property of all kinds was insured had fallen, through the general inflation of the economy, below the true up-to-date values, a state of affairs which always tends to create a disparity between the level of premiums and the cost of settling claims.

"It was not therefore surprising that the loss of £304,000 on our fire account was primarily attributable to our United States branch, and to our subsidiary the Halifax of Massachusetts. Their combined fire premium income increased however by £731,000 in the year, and therefore not only is a part of the book loss accounted for by additions to reserves, but also there is on our ledgers a large amount of additional business on which we may expect to earn profits in the years to come. In saying this I am not forecasting an immediate return to conditions in which good profits can be made, for it will be a year or two before we can hope for proper increases in rates to have been obtained and to take effect. But fire business, as I have told you in previous years, should be paying business in the long run, and to build up a strong fire account it is necessary to acquire it steadily year after year, without seeking to adjust policy to temporary ups and downs of rates and loss experience.

"In Canada, fire business was again unremunerative. Rates have for a while past been too low, and are being kept down by the pressure of competition. In addition we suffered from the damage done by four separate windstorms.

"In the United Kingdom, for the first time for many years, we made no profit, and what turned the scales against us was the cost of claims for frost damage in the early months of the year, which must have affected the results of most other companies. We only just failed to break even however, and we may regard the year as an unsuccessful but not abnormal one, such as we must expect every now and then in a series of years of which the average result is well on the right side.

"Elsewhere generally we made profits, and in all our major branches we increased our premium income. Our total world fire premium income reached £4,779,000, an increase of £781,000 over that for 1955.

Accident

"Our experience on the whole of this account was by no means unsatisfactory, and it exhibits the value of possessing a strong and healthy accident account in a year that is generally unfavourable for fire business. In the United States, where our accident business is extensive, we had in the two major classes in 1956 a reversal of the experience of 1955. Motor business was profitable and workmen's compensation unprofitable in 1955, while in 1956 it was the other way round. The remaining accident lines written by our United States branch turned out well for us, as usual.

"I should, I think, warn you that conditions are difficult at present for motor insurers in the United States. Almost all rates have become inadequate, and in some States they are gravely so. On the compulsory part of motor cover in Massachusetts, for instance, the companies, basing their request on reliable statistics, asked for a rate increase of 22 per cent. for 1957, but were granted virtually none at all. Elsewhere increases are being pressed for (and some may well be obtained) large enough to indicate how insufficient the current rates are in the light of underwriting experience.

"Nowhere, however, is there a recent increase of any importance in force yet, except in the Western States and Illinois, and whatever benefit may come from any that are pending will hardly affect 1957 at all. It is, moreover, my view that our workmen's compensation results for 1957 are not likely to be as good as those in 1956, particularly as there is reason to expect that compensation benefits in many States may be increased by law without corresponding increases in rates. I cannot, therefore, hold out to you the hope of large profits from our United States operations this year, and indeed I think that Mr. E. A. Larner, our United States General Manager and Attorney, and his skilful team of officials and managers have at present an uphill task in front of them.

"Before I pass on from the United States, a new development that I should mention is the introduction as from the beginning of this year of compulsory third party motor insurance in the State of New York. As over 90 per cent. of the cars in the State were in fact already insured we shall not have much increase in business from this source. What is more important than the effect in New York itself is the likelihood that other States may follow suit, and indeed that compulsory motor insurance may become the rule instead of being, as it is now, the exception.

"In Canada, our accident account was again profitable, though we were only able to break even on our motor business there, for the rate reductions brought in at 1st January 1956, proved over-optimistic, especially in view of a steady increase in the cost of claims. Other classes, with only a few exceptions, showed good results, and profits on them were sufficient in all to outweigh the loss on fire business. In our other overseas branches, the story was, generally speaking, the familiar one of profits earned on the whole, but of having to strive, not everywhere successfully, to extract a slender return out of the inadequate margins in motor premiums.

" On our United Kingdom accident account in all we made a fair profit, besides adding satisfactorily to our premium income. It was disappointing only in that our motor business, in spite of the rate increases to which I referred last year, was again unremunerative.

"Last year, I called your attention to a development which I then described as being in prospect, and that was the cover which would be required in connection with atomic risks. It may interest you to know to what extent we are now entering this new line of business. In all countries where material damage and public liability cover relating to the building and operation of nuclear reactors is being or soon will be, underwritten, companies have formed themselves for the purpose into pools capable of meeting the very high limits of liability required. So far we ourselves have participated in arrangements made in this manner in this country, in the United States and in a pool organised in London to cover risks in other foreign countries. Both here and in the United States, we have thought it right to accept our full share of the commitments thus to be assumed.

Life, Marine and Aviation

"Net new business of our associated life office, the Clerical, Medical and General Life Assurance Society, was £10,126,498 for the year. This constitutes a record for the Society, and it is a landmark in that for the first time new business has exceeded £10,000,000. It includes group assurances and compares with £9,824,821 for 1955, an increase of £301,677. The premium income increased by £55,227 to £2,981,760, and the gross rate of interest earned on investments rose to the record figure of £5 17s. 2d. per cent.

"The Merchants Marine has continued its expansion in all classes, and sums of £15,000 and £32,748 have been transferred from the marine fund and the fire, accident and general account, respectively, to profit and loss account. A dividend of 10 per cent. for the year has been recommended by the Directors. The Company's liquid position has been improved by the sale of its premises in Cornhill at a price exceeding the book value.

"There has been no relaxation during the past year of competition for aviation business, which always tends to be severe because of the international character of the market. Our interest in this class consists of our holding of shares in the Aviation and General Insurance Company and our participation in the United States Aviation Insurance Group and its Canadian subsidiary. Both of these have maintained their high tradition of careful underwriting in spite of the difficulties that competition causes.

Investments

"The Corporation's total investments, including property and associated and subsidiary companies, amounted to £41,722,433, which represents an increase of £2,314,899 over the figure at the end of 1955. As most shareholders are aware, the chief feature of the investment record of 1956, in nearly all countries where British insurance companies operate, was an increase in the yield on Government and other fixed interest securities, or in other words, a fall in their market values. This trend has naturally affected the Corporation in the United States, in Canada and in Great Britain. Our total investments, however, were still worth a good deal more at market prices at 31st December last than the figure that represents their book value in our balance sheet, for the appreciation in value of our holding of ordinary stocks was still considerable.

"From time to time, in past years, mention has been made of the increasing volume of our Canada branch investments. I thought that this year you might be interested to have this development illustrated by some simple figures, and the following table, comparing 1956 with 1951, shows its salient features:

Market Values of Canada Branch Investments at 31st December

	1951 $	1956 $
Government and Provincial Securities (including Guaranteed)	2,629,563	5,475,080
Other Fixed Interest Securities	305,350	1,030,912
Common Stocks	6,000	1,008,137
	$2,940,913	$7,514,129

"The Canadian laws that govern the operation of insurance companies work out so that, with a development such as ours, more and more deposits have had to be put up against our business obligations. The increase in our security holdings in Canada has thus outstripped the growth of our premium income, and is in fact the most striking feature of our expansion there. I do not, however, know any other country in which I would sooner invest at this time, and I am more than willing to see both our premiums and our investments in Canada continue to expand.

"Indeed it may be that at some stage it will be clear that development there and in other countries overseas must be halted or held back unless it can be specially financed. If that situation should arise, I would regard it as our duty to provide the necessary funds rather than to restrain progress which we believe to be healthy and desirable.

"Our Australian advisory committee has been augmented by the appointment, on the 1st June 1956, of Mr. A. R. L. Wiltshire, C.M.G., D.S.O., M.C. Mr. Wiltshire was General Manager of the Bank of Australasia from 1944 to 1951 and of the Australia & New Zealand Bank from 1951 to 1954. He is a director of several important financial and industrial companies, and has, therefore, a fund of experience upon which to draw. With this and his acknowledged ability he will certainly be a valuable addition to our committee.

"In October and November, last year, I paid a visit to Canada and the United States. Mr. Keysell, our general manager, was also in these two countries then. He and I together heard from Mr. Larner in Boston about the progress of our United States branch and that of our subsidiary company, the Halifax of Massachusetts, and were able to exchange views with him on policy and on our major problems. Mr. Keysell also made one of the tours of some of our United States branch offices that he always finds so interesting and instructive. This one took him as far as California, and, before returning to London, he spent some time with Mr. Curtis, our manager for Canada, at Montreal.

"Mr. Crocker, the assistant general manager of the Corporation, paid a visit at the end of last year to our branches and agencies in South Africa, East Africa and Rhodesia. Earlier Mr. Wanford, our overseas manager, spent some weeks on our business in the Caribbean area.

"May I finally commend the excellent work that is done by our officials, managers and staff, and the loyal co-operation of our agents all over the world. I have done so each year since I became your Chairman, and each year it has been with a fresh sense of sincere admiration for the qualities of those who form our team and of gratitude for their achievements."

TRADERS' VIEWS ON EXPORT PROMOTION—I

NEED FOR SIMPLIFIED EXPORT PROCEDURES

IT will be recalled that the Export Promotion Committee, set up by the Government of India in February last, sent out a questionnaire early in March to various business associations for ascertaining their views on such questions as the long- and short-term measures to be adopted by the Government, industry and trade, in order to step up exports. Export policy and procedure, particularly the quota system and export duty, fiscal incentives necessary for export promotion, procedure for refund of excise duty and drawback of import duty, invisible exports, export financing, shipping and transport facilities were the principal topics on which these bodies were asked to state their views. Noteworthy among the short-term measures suggested by two business associations, namely, the All India Exporters' Association and the Gujarat Chamber of Commerce, are that the Government should (*a*) simplify export procedure and sales tax and excise procedure, (*b*) minimise avoidable delays in granting export licences and in enforcing customs formalities, (*c*) remove technical objections and (*d*) accord high priority in respect of transport facilities, both on railway and shipping, for export commodities. It is also pointed out by them that exports cannot be stimulated unless Indian products are enabled to overcome the price resistance offered by foreign products by reducing their costs of production. This obviously calls for appropriate wage policies the responsibility for which rests primarily with the Government and the trade unions. Incidentally, it is also suggested that subsidising of exports would go a long way in helping certain commodities to face foreign competition.

Among the other measures put forth by these two bodies, special mention must be made of their stress on provision of cheap credit. It may be recalled, in this connection, that on not a few occasions, Indian trade missions visiting foreign countries found to their dismay that many Indian products were scarcely known there and that foreign importers were also dissatisfied with the quality and packing of Indian exports. It is, therefore, quite appropriate that the associations should have laid considerable stress on the responsibilities of the industry for improving the quality of the goods and packing, and on the need for giving adequate publicity about Indian goods in the overseas markets. The Gujarat Chamber's view on this point is that a new export division should be opened in the Department of Commerce exclusively for the purpose of disseminating information about Indian products. It would, however, be desirable if the industrialists themselves were to undertake this publicity work. The Federation of the Chambers of Commerce and Industry, for instance, could be asked to perform this function.

Items of Export

Among the various items in which exports can be augmented in the immediate future substantially, mention is made of the traditional exports, namely, cotton textiles, tea, tobacco, jute goods, hides and skins, etc. The Gujarat Chamber of Commerce (G.C.C.) has expressed the view that the exports of jute manufactures can be increased substantially, if serious attempts are made to export them in forms other than of packing material, such as carpets and tapestry. Other items in which exports can be raised are, according to the Associations, sugar, leather and coir goods, carpets, silk, rayon textiles, sewing machines, cotton bags and umbrellas. It is also pointed out that exports in tea can be enhanced if the methods of grading and of publicity abroad are improved. The G.C.C. is also of the view that since the *vanaspati* exported to certain European countries is chiefly used for manufacturing margarine, the latter, if produced in India, will have a steady market abroad. Also, with the same end in view, it calls for a reorganisation of the leather industry on scientific lines and provision of adequate financial and technical help to the producers. The Gujarat Chamber has especially stressed the possibility of increasing the exports of engineering and electrical goods the production of which is expected to expand considerably during the second Plan. The All India Exporters' Association opines that, with a view to raising the exports of these items, the Government should devise extensive schemes of incentives by granting relief measures like relaxation of export duties and supply of finance on easy terms.

On the question of export policy and procedure, the Exporters' Association has expressed itself against the practice of giving licences to manufacturers. This, the Association feels, is harmful to exports, for the manufacturers are not sufficiently export-minded, because of the fact that the home market gives them better profit margin without undergoing the risk of exports. Better results can be obtained, it says, by granting quotas to established exporters. The Association has also suggested, incidentally, that (1) export quotas should be liberally increased wherever production has increased, keeping in view internal requirements, and (2) the export duty on those items should be removed the exports of which are likely to increase as a result of such removal.

Drawback of Duty Inadequate

The two business associations have also claimed that the present rate of drawback of duty on the re-export of imported goods at seven-eighths of the duty, subject to certain conditions, is inadequate. According to them, the advantage of the duty is not availed of by the exporters because of the complicated procedure involved and also of the feeling that the benefit is not proportionate to the trouble involved. The A.I.E.A. further feels that, in the case of export of manufactured goods in which the imported materials are used, full drawback of duty should be allowed.

An important suggestion made by the All India Exporters' Association with reference to incentives is that the recent imposition of inter-State sales tax on export sales is detrimental to export promotion. In its opinion, all sales that take place inside the country for ultimate export, provided no material change in the commodity takes place, should be exempted from the incidence of provincial or inter-State sales tax, or any other impost applicable to internal sales. Both the Associations have also strongly felt that the railway transport facilities are very inadequate. They have, consequently, suggested that the transport of goods meant for export should receive priority for railway transport. Shipping facilities should also be more regular and frequent. It is pointed out, in this connection, that lack of direct steamers to some important destinations adversely affects the export trade. Stress is also laid on the need to increase Indian tonnage. Other suggestions for pushing up exports are: (1) Facilities for transport of capital of Indians residing in foreign countries should be allowed on concessional rates. (2) An export-import bank for advancing loans to exporters on easy terms should be established. (3) Minimum standards for quality, packing and performance should be laid down for commodities meant for export. (4) It should be ensured that foreign shipping lines that touch Indian waters do not discriminate against Indian exports. (5) Special facilities may be provided for export industries in procuring machinery, raw materials, stores, etc.

Invisible Exports

It is significant that both the Associations are agreed on the point that it is very essential that Indian banks should take more interest in foreign business than hitherto, in order to increase invisible exports. Indian banks, it may be noted, account for only 25 to 30 per cent. of India's import-export business. It has been suggested by the A.I.E.A. that Indian banks should utilise the services of prominent exporters in an advisory capacity to help them on matters pertaining to exports. Mention is also made of the role of insurance. The re-insurance business, 70 per cent. of which at present goes to foreign companies, it is stated, constitutes a good source of foreign exchange. In view of the fact that Indian shipping companies carry only 6 per cent. of India's foreign trade, it has not forgotten to point out that every effort must be made to acquire additional tonnage. The attention of the Committee is drawn to coastal shipping also. It is stressed that the Government should adopt measures to reserve coastal traffic to Indian companies by patronage and loans to increase the

(*Continued on next page*)

CALCIUM LACTATE INDUSTRY

PROTECTION FOR THREE MORE YEARS

FOLLOWING the Central Government's acceptance of the recommendations made by the Tariff Commission on the claim of the calcium lactate industry for protection, the industry gets protection for three more years, that is, upto 31st December 1960—at the existing rates of duty, namely, 37.8 per cent. *ad valorem* standard, and 27.3 per cent. *ad valorem* preferential. Suitable steps are expected to be taken by the Government in due course to implement this recommendation. Among others, the Commission has urged (1) a careful watch on the volume and prices of imports, particularly from China, and (2) purchase of the entire requirements of calcium lactate from the indigenous industry by the Central and State Governments. The latter suggestion is, of course, qualified by the proviso that the producers maintain a necessary standard of quality and reasonable prices. While on prices, the Commission has stressed that, for determining the reasonableness or otherwise of prices, the abnormally low prices of imported products should not be taken as the standard. The Government of India has taken note of these two recommendations and steps will be taken to implement them as far as possible.

Incidentally, the Commission has provided for a review of the scheme of protection, when the industry is threatened by unduly cheap imports of foreign goods. At the same time, it has called upon Messrs. Sarabhai Chemicals, practically the sole producers of this chemical, to mark this product as conforming to Indian Pharmacopœia (I.P.) specifications only, until it is able to attain strict conformity to British Pharmacopœia (B.P.) specifications.

Progress of Industry

The calcium lactate industry has been enjoying protection since 1950; the last extension, granted in 1956, is expected to expire by the end of the current calendar year. There are at present three factories in the field, though production is concentrated in one factory. The following table gives the progress of the industry during the last four years:

(In tons)

	Annual rated capacity	Actual production			
		1953	1954	1955	1956 *
Sarabhai Chemicals, Baroda ..	72	28.77	31.63	51.25	35.26
Calcutta Chemical Co., Ltd., Calcutta.	30	N.A.	0.63	0.80	2.68
Alembic Chemical Works, Baroda ..	60	7.39	4.34	1.63	..
Total ..	162	36.16	36.60	53.68	37.94

* (January-September)

As can be seen from the table, an important problem of the industry is its idle capacity. It is noteworthy, however, that Sarabhai Chemicals is now utilising about 70 per cent. of its installed capacity, and that the company has drawn up plans to increase its capacity to 90 tons per annum. Nevertheless, the fact remains that imports have been found necessary to meet the domestic demand which is estimated at 56 to 60 tons per annum. They increased from 0.40 ton valued at Rs. 1,521 in 1943 to 7.55 tons, worth Rs. 22,891, for the period January-September 1956. In view of the increasing domestic demand for the product—which is placed at 75 tons per annum during the next three years and for meeting which the existing capacity will be more than adequate—and of the high fair ex-works price of the indigenous product, as compared with the imported product, the Commission has found it necessary to extend protection to the industry for three more years. The Commission has estimated the actual fair ex-works price of the product at Rs. 1.83, and that of the future at Rs. 1.76, per lb. As against this, the landed cost, without duty of the cheapest imported products, that is, from China, is placed at Rs. 1.06. Consequently, the difference between the actual fair ex-works price and the landed cost works out to 76 nP, or 73.7 per cent., expressed as percentage of the c.i.f. price. It is noteworthy, however, that the Commission has not chosen to raise the existing rate of protective duty to 74 per cent. to cover this difference. The reasons are threefold: (1) It will constitute a heavy burden on consumers who still import the product from sources such as the U.K., Holland, or Denmark, though it is cheapest in China, (2) it will also necessitate raising the preferential duty, which is not desirable, in view of the fact that the U.K.'s product does not constitute a serious competition; and (3) it is not clear whether the abnormally low price quoted by China is due to special advantages or commercial considerations.

As regards quality, though some improvement has been made by the industry in respect of assay and solubility, the Commission has expressed the view that there is much scope for the improvement, especially with regard to "odour."

(*Concluded from previous page*)

mercantile marine tonnage. Tourism is another source on which considerable emphasis is laid by the Associations. Good hotel accommodation in tourist centres and relaxation of customs examination of tourists as also of prohibition rules are rightly held to be essential facilities for promotion of tourism.

On the question of methods of export financing, the Associations have expressed the view that the availability of credit is limited and that the rates of interest are high even as compared with countries like Japan. A suggestion worthy of special consideration is the establishment of an export-import bank, which the Associations feel, will provide credit facilities on easy terms and stimulate exports. In this connection, the case of the Export-Import Bank of Japan is cited. It is further suggested that small exporters should get assistance from State Financial Corporations and co-operative banks.

The Associations have welcomed the establishment of Export Promotion Councils. But they are emphatic on the point that they should have competent officers in important foreign markets to assess market requirements and send correct reports regularly. It is particularly stressed in this context that the reports that are sent to the Ministry of Commerce by the Trade Commissioners stationed abroad are published after such a lapse of time that they lose all practical utility. Stress is laid, consequently, on the appointment of adequately trained and experienced staff as Trade Commissioners abroad and on the prompt dissemination of their reports to traders and industrialists.

Trade with Japan through

THE BANK OF TOKYO LTD.

(Incorporated in Japan)
(Liabilities of Members Limited)

The only foreign exchange bank in Japan licensed under the Foreign Exchange Bank Law, offering complete banking service through its branches all over Japan and overseas, and well equipped to give full and accurate business information.

HOLIDAY THIS SUMMER IN

Kashmir

CONCESSIONAL RETURN TICKETS BY RAIL-OFFERED

Concessional Rail-Cum-Road and Rail-Cum-Air Return Tickets, at one and one-third single Rail journey fares for I, II and one and one-half single journey fares for third classes for the Rail portion and Rs. 27/- per seat for the Road journey and Rs. 76/- for Air journey between Pathankot and Srinagar are issued to Srinagar via Pathankot from the following stations:

Central Rly. Stations.		Western Rly. Stations.	
Bombay V. T.	Begampet	General Offices Booking office, Churchgate, Bombay.	
Byculla	Hyderabad (Dn)		
Dadar	Kacheguda	Bombay Central	Jaipur
Poona	Gwalior	Surat	Rajkot
Nagpur	Bhopal	Baroda	Jamnagar
Jubbulpore	Sholapur	Ahmedabad	Ajmer
Agra Cantt.	Saugor	Bhavnagar Terminus	Agra Fort
Raja-ki-mandi	Kurnool Town		Mhow
Agra City	Secunderabad	Indore	

Tickets will be issued till October 31, 1957, valid for 3 months from the date of commencement of the journey.

Children—Half fares for Rail journey and full return fares for road journey and half fares for Air journey.

Those who desire to visit Kashmir are requested to make their own arrangements for securing the permit from the District Magistrate or the authority concerned for entry into Kashmir.

Full particulars from Station Masters concerned.

SUBSTANTIAL RISE IN NATIONAL RAYON'S EARNINGS

DIVIDEND RAISED—EXPANSION IN PROGRESS

WITH the declaration of a dividend of 14 per cent. for the year ended 31st December 1956, the Directors of the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai & Co. Private Ltd., Bombay) have increased the distribution to the shareholders for the third year in succession, after the maiden dividend of 9 per cent. paid for 1953. While in the previous year the dividend was raised to 12 per cent. from 10 per cent. for 1954, the higher distribution for the year under review is in the nature of a dividend of 12 per cent. and a cash bonus of 2 per cent. In our last year's review we questioned the wisdom of the Directors in having stepped up the dividend when the profit for that year did not justify any such action, especially when it was contrary to their own declared policy of maintaining the distribution at 10 per cent. for some years to come. No doubt, this policy has been observed only in the breach right from its conception but, for the year under review, the higher distribution is fully warranted by the substantial increase in earnings. Thus, the gross profit for the previous year at Rs. 115.26 lakhs, which was a shade lower than Rs. 115.78 lakhs for 1954, has jumped up by Rs. 40.03 lakhs to Rs. 155.29 lakhs. After making substantially higher provisions for Managing Agents' commission and depreciation and providing Rs. 26.61 lakhs for taxation as against *nil*—the Company expects that its profit for the year may be assessable for income-tax—the net profit stands slightly higher at Rs. 58.33 lakhs, as compared with Rs. 58.29 lakhs a year ago. The dividend on the preference shares is proposed to be paid after deducting tax at source.

As usual, the Company has conserved a good part of its profit, but its reserve fund, created only two years ago, should receive better attention. It has been provided with only Rs. 7 lakhs as against Rs. 10 lakhs in the previous year. The deferred taxation reserve, however, gets a higher allocation of Rs. 10 lakhs, as against Rs. 5 lakhs, while the debenture redemption reserve has been maintained at Rs. 10 lakhs.

The following comparative table presents the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	4,22.38	3,42.50	2,96.37	2,85.13

Carry forward	5.52	5.12	5.72	5.01

* Less tax.

It will be seen from the above table that the Company's sale proceeds have sharply increased by Rs. 79.88 lakhs. The cost of raw materials consumed and the other expenses have also gone up, but these are in consonance with the higher production and the rising trend in turnover. The Company expects that, due to stringency in the money market and other unfavourable market conditions, the excise duty on the production of rayon yarn, which the Government of India imposed with effect from 1st of December last year, will, in future years, impose a burden of more than Rs. 35 lakhs every year on the Company. Another adverse factor is the tremendous rise in freight charges which has boosted up the landed cost of the imported raw materials.

The Company's various schemes of expansion are proceeding apace. Elucidating the position of these, the Directors, in their latest report, observe as follows:

"The expansion of the rayon plant taken on hand is progressing satisfactorily. The second stage of the expansion was completed in December last and the third and fourth stages are expected to be completed within a short time. With the completion of this expansion, the total installed capacity of the plant will be 24 tons per day on the basis of 150 denier. The erection of the caustic soda chlorine plant is also progressing satisfactorily, and it is hoped that the plant will go into operation some time in the third quarter of this year. The starting of these plants was delayed due to the incoming machinery having been held up on account of the Suez crisis, which, in some cases, extended over three months resulting in corresponding delay in the erection and starting of the plants.

"Your Directors have also decided to put up a four million lbs. capacity tyre cord plant. Under the Government of India's new scheme for the release of foreign exchange for purchase of capital goods, the putting up of this plant would be possible only if the Company can arrange deferred payments extending over seven years in respect of 80 per cent. of the cost of the equipment to be imported. Representatives of the Company are being deputed abroad to explore possibilities of obtaining such credit and also for negotiating terms for the purchase of necessary equipment and the 'know-how.' An application has also been made to the Central Government for permission to increase the capacity of the caustic soda plant to take care of the requirements of caustic soda for the proposed tyre cord plant."

The Directors further state that the putting up of the tyre cord plant will cost about Rs. 3 crores and the erection of the plant itself might take about two years from the date of placing orders. In order to meet a portion of the cost of this new venture, the Directors have decided to increase, as already reported in *Commerce*, the ordinary capital of the Company by a further issue of 80,500 ordinary shares to the existing shareholders of the Company in the proportion of one share for every two ordinary shares held. Subject to sanction from the Government of India, the new capital is proposed to be issued at a premium of Rs. 25 per share.

The balance-sheet of the Company as at 31st December 1956 shows its paid-up capital at Rs. 334.92 lakhs of which the 5 per cent. cumulative preference capital in shares of Rs. 100 each accounts for Rs. 174.29 lakhs and the balance is in ordinary shares of Rs. 100 each. The paid-up capital shows an increase of Rs. 3.03 lakhs over the year which amount represents receipts in respect of forfeited shares sold during the year. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 124.32 lakhs, of which general reserve accounts for only Rs. 32 lakhs, deferred taxation reserve for Rs. 60 lakhs and the debenture redemption reserve for Rs. 20 lakhs. The Company's debenture capital secured by 5½ per cent. mortgage debentures amounts to Rs. 150 lakhs. The current liabilities aggregate Rs. 226.65 lakhs and provision for taxation Rs. 26.92 lakhs. The current liabilities include loans from banks amounting to Rs. 120.76 lakhs. There has been an addition of Rs. 266.01 lakhs to the gross block during the year bringing its total value to Rs. 946.21 lakhs. This has been written down to a book value of Rs. 681.21 lakhs. The current assets aggregate Rs. 186.46 lakhs and fall short of the current liabilities and provision for taxation by as much as Rs. 67.11 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 224 cum-div. On an *ex-div.* basis, the latest dividend affords a yield of 6.7 per cent. per annum, free of income-tax.

(Concluded from next column)

of 21,000 ordinary shares of Rs. 100 each, 1,500 six per cent. cumulative preference shares of Rs. 100 each and 3,000 6½ per cent. cumulative preference shares of Rs. 100 each. Of the ordinary capital of Rs. 21 lakhs, as much as Rs. 14 lakhs represent the amount capitalised out of reserves in the past. Even after this, the reserves and surplus aggregate Rs. 38.94 lakhs, of which general reserve alone accounts for Rs. 18 lakhs, reserve for renovation and replacement of machinery for Rs. 11 lakhs, dividend equalisation reserve for Rs. 7 lakhs, provision for contingencies for Rs. 2 lakhs and investment depreciation reserve for Rs. 50,000. The provision for taxation stands at Rs. 8.17 lakhs. The current liabilities amount to Rs. 30.44 lakhs. The gross block of Rs. 80.73 lakhs, including additions during the year of Rs. 10.56 lakhs, has been written down to Rs. 33.50 lakhs. The current assets aggregate Rs. 69.55 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 30.94 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being quoted at Rs. 289 *ex-div.* at which rate and on the basis of the latest dividend, the yield on the shares works out to 6.9 per cent. per annum, free of income-tax.

VASANTA MILLS' PROFITS BETTER

DIVIDEND MAINTAINED

THE hope expressed by the Directors of the Vasanta Mills Ltd. (Managing Agents: Messrs. R. K. Shanmukham Chetty & Bros., Singanallur, Coimbatore District) in their last annual report that the increase in the spinning output, consequent on the commissioning of the new spindles with effect from December 1955, held out prospects of earning "reasonably decent profits" for the year ended 31st December 1956, has been fully justified by the results for that year published recently. The profit earned shows a marked improvement over that for the previous year. As compared with 1955 results, the gross profit has staged a smart rise of Rs. 5.56 lakhs or 30 per cent., that is, from Rs. 18.53 lakhs to Rs. 24.09 lakhs. It may be noted here that this improvement is in refreshing contrast to the slight fall suffered by the Company in 1955 from Rs. 18.82 lakhs for 1954. Another interesting point is that the gross profit for 1956 is nearly twice as much as that for 1953 when it was no more than Rs. 12.77 lakhs. Lest this comparison should create the impression that the earnings for 1956 were excessive, it is necessary to add that 1953 was a very lean year for the cotton mills in South India, and as such does not represent a proper base for comparison. The main reason for better profit in 1956 is the improvement in the productive capacity of the Company. Indeed, as the Directors point out, the year's trading results could have been far more gratifying, but for the interference caused by the power cut over a short period.

The net profit stands at Rs. 8.37 lakhs, as against Rs. 7.25 lakhs a year ago. The relatively smaller improvement in net profit as compared with the gross profit is due to the substantially higher allocations to depreciation and taxation. Thus, the provision for depreciation has gone up from Rs. 4.68 lakhs to Rs. 7 lakhs and for taxation from Rs. 5 lakhs to Rs. 6.50 lakhs. The dividend has only been maintained at the previous year's rate of 20 per cent., to which level it had been stepped up from 15 per cent. for 1954 and 12 per cent. for 1953. The management has, however, devoted a good part of the improvement in net profit to strengthen the reserves. Thus, it has credited to general reserve fund Rs. 2 lakhs as against only Rs. 50,000 a year before. In addition, the transfer to the dividend equalisation reserve has been maintained at Rs. 2 lakhs.

The following comparative table provides a broad idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	1,80.03	1,60.92	1,60.57	1,31.50
Manufacturing and other expenses	1,56.35	1,42.77	1,42.37	1,19.26
Gross profit	24.09	18.53	18.82	12.77
Managing Agents' commission and allowance	2.22	1.60	1.62	1.14
Depreciation	7.00	4.68	4.73	3.55
Taxation	6.50	5.00	6.00	3.50
Net profit	8.37	7.25	6.47	4.58
To general reserve	2.00	0.50	3.00	..
other reserves	2.00	2.00	..	1.99
Dividends—				
Preference	0.28	0.28	0.28	0.28
Ordinary	4.20 (20%)	4.20 (20%)	3.15 (15%)	2.52 (12%)
Carry forward	0.44	0.56	0.30	0.28

The better results of the year are to be traced to the higher turnover which have substantially gone up from Rs. 160.92 lakhs to Rs. 180.03 lakhs. This, as mentioned already, is due to the additional spindles installed in 1955 going into full production during the year under report. Manufacturing and other expenses have increased by Rs. 13.58 lakhs, of which the general increase in wage level, based on an agreed settlement following the Textile Tripartite Committee's recommendations, accounts for an increase of about 10 per cent. in the total wage bill of the Company over the year. The Directors state that the heavy incidence of the excise duty and sales tax on cotton piecegoods have adversely affected the demand position, resulting in accumulation of stocks and blocking of a large portion of the Company's working capital. The replacement recently of one line of the old blow room equipment with the latest type of machinery, under the Company's programme of modernisation of the mills' spinning plant, is expected to improve the quality of the Company's products.

The Company's financial position, as disclosed by its latest balance sheet, is quite sound. Its paid-up capital of Rs. 25.50 lakhs is made up

(Continued in previous column)

Points From The Chair

Production in Private Sector

"INDUSTRYWISE, production in the private sector continued to show satisfactory progress, but many plans for expansion and new construction were apt to be altered drastically owing to the deterioration in the foreign exchange position of the country and the resultant changes in the import of capital goods. The situation which was already desperate because of the Suez complication got even more aggravated because of the official restrictions on foreign exchange spending. Yet another impost has been saddled on the industries which will tend to impede progress severely. I am referring to the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. The effect of this legislation could be extremely serious in case of some companies and it is to be hoped that when the rules are finally published, Government will take into consideration the various aspects of the problem and be liberal in their application."

MANEKLAL PREMCHAND,
Industrial Investment Trust Ltd.

Savings

"The Banking Companies Act has been amended giving more powers to the Reserve Bank of India in the matter of issuing directions to banks on matters of policy, administration and on other important matters. The Reserve Bank has already been helping the commercial banks with its advice and guidance and there is every reason to hope that the powers vested will be used for the development of banking on sound lines to suit the pattern of the second Plan. Bank credit has become costly during the year, as the resources of banks have not improved as rapidly as the demand for finance has developed. As against a rise of Rs. 104 crores in notes in circulation, the deposits of Schedule banks have risen only by Rs. 79 crores. The need for mobilising savings to meet the demand for investment in the Plan is very essential. Steps for development of banking in rural areas to tap savings must be encouraged by the authorities, as a very wide field is left untouched in this direction."

YARLAGADDA SIVARAMA PRASAD BAHADUR,
Andhra Bank, Ltd.

Place of Aluminium

"In the electrical field, reductions which have taken place in the price of other non-ferrous metals have not challenged aluminium's position as the cheapest available conductor of electricity, and it should not be forgotten that in the case of high voltage overhead transmission lines, aluminium established this position many years ago in the days when the price per ton of copper was considerably lower than that of aluminium. Since then aluminium has made steady progress in other sections of the electrical industry, in some of which, notably the insulated cables and wiring sections, the price advantage is not so spectacular owing to the composite use of other materials. The use of aluminium in funnels, superstructures and other marine components is technically established, and its economic advantages are becoming appreciated. It is interesting to note that in the newest passenger liners now being built for the Orient and P. & O. Lines extensive use will be made of welded aluminium in the superstructures. The production of aluminium foil for packing, wrapping and insulation in the United Kingdom, has increased during the last ten years from 5,000 to 20,000 tons a year, and we share the confidence of the foil rollers in the further expansion of this market shown by the substantial additional capacity planned to commence production within the next year or two."

Rt. Hon. VISCOUNT PORTAL,
British Aluminium Co., Ltd.

Wage Fixing

"It is a moot point whether the present practice in so many industries of fixing wages on a national basis should be continued or whether wages should be a matter for agreement within each individual business. After all, the sole criterion where wages are concerned should be the ability of the business to pay. In other words, wages must be linked to production—not to any outside factor such as a cost-of-living index. In the end, the law of supply and demand will ensure this, whether we like it or not, particularly in the economic circumstances of this little island where the real employers of all of us are the overseas buyers of our goods and services. No employer who can see beyond the end of his nose objects to paying high wages; provided they are *earned*, are reflected in greater and cheaper production, the higher the better. But the attempts in recent years to exact higher wages in certain major industries without a corresponding increase in production, without greater output and the elimination of the restrictive practices of a bygone era, are irresponsible, particularly when backed by the threat of strikes on a national scale."

HALFORD REDDISH,
The Rugby Portland Cement Co. Ltd.

COMPANY MEETINGS AND DIVIDENDS

NUTAN MILLS LTD. Annual General Meeting, Ahmedabad, 24th May 1957. Dividend: Rs. 20.00 per share.

RAIPUR MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 24th May 1957. Dividend: Rs. 27.50 per share, final (includes bonus of Rs. 10.00 per share), payable on 11th and 12th June 1957. Transfer books remain closed from 5th to 25th May 1957, both days inclusive.

ARVIND MILLS LTD. Annual General Meeting, Ahmedabad, 24th May 1957. Dividend: Rs. 27.50 per share, final, (includes bonus of Rs. 10 per share).

NORTH DAMUDA COAL CO., LTD. Annual General Meeting, Calcutta, 24th May 1957. Transfer books remain closed from 10th to 24th May 1957, both days inclusive.

AHMEDABAD NEW COTTON MILLS CO., LTD. Annual General Meeting, Ahmedabad, 25th May 1957. Dividend: Rs. 20.00 per share.

SARASPUR MILLS LTD. Annual General Meeting, Ahmedabad, 25th May 1957. Dividend: Rs. 20.00 per share.

ASOKA MILLS LTD. Annual General Meeting, Ahmedabad, 25th May 1957. Dividend: Rs. 30.00 per share.

GUEST, KEEN WILLIAMS, LTD. Annual General Meeting, Calcutta, 29th May 1957. Dividend: Re. 1.50 per share (final). Transfer books remain closed from 8th to 29th May 1957, both days inclusive.

JAY SHREE TEXTILES LTD. Annual General Meeting, Rishra, Dist. Hooghly, West Bengal, 30th May 1957. Dividend: Re. 0.37 (As. 6 per share) per share. Transfer books will remain closed from 17th to 30th May 1957, both days inclusive.

CAREW AND CO., LTD. Annual General Meeting, Calcutta, 31st May 1957. Dividend: *Nil*. Transfer books remain closed from 13th to 31st May 1957, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Pathirapally, 6th June 1957. Transfer books will remain closed from 20th May to 7th June 1957, both days inclusive.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 7th June 1957. Dividend: Re. 0.75 per share (final), payable on or after 25th June 1957. Transfer books will remain closed from 18th May to 7th June 1957, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 13th June 1957. Dividend: Rs. 14.00 per share (includes bonus of Rs. 2.00 per share), payable on 14th June 1957. Transfer books will remain closed from 20th May to 13th June 1957, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 17th June 1957. Dividend: Rs. 6.00 per share, payable on and after 24th June 1957. Transfer books remain closed from 13th May to 8th June 1957, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Final dividend 13¾ per cent. for the year ended 31st December 1956.

ANANDAM RUBBER CO., LTD. Dividend of Rs. 2.00 per share, for the year ended 31st December 1956. Transfer books will remain closed from 5th to 10th June 1957, both days inclusive.

NENMENY RUBBER AND PRODUCE CO., LTD. Dividend of Re. 1.50 per share, for the year ended 31st December 1956. Transfer books will remain closed from 20th to 24th June 1957, both days inclusive.

UDAYAGIRI RUBBER CO., LTD. Dividend of Re. 0.75 per share, for the year ended 31st December 1956. Transfer books will remain closed from 20th to 24th June 1957, both days inclusive.

THAMARAPALLY RUBBER CO., LTD. Dividend of Rs. 3.00 per share, for the year ended 31st December 1956. Transfer books will remain closed from 5th to 10th June 1957, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Final dividend of Re. 1.00 per share, free of income-tax, for the year ended 31st December 1956.

COMPANY REGISTRATIONS

INTERNATIONAL FISHERIES PRIVATE LTD. (First Director: Mr. Jehangir B. Wadia.) Business: Fishing. Authorised capital: Rs. 25,00,000. Private company. Address: 169/170, B.P.T. Buildings, Sassoon Dock, Colaba, Bombay

TRANSMISSIONS PRIVATE LTD. (First Director: Mr. Ramchandra Bhikaji Sathe.) Business: Importers, exporters and commission agents. Authorised capital: Rs. 5,00,000. Private company. Address: 104-14, Frere Road, Sugar Market, Bombay.

JAMNAGAR IRON TRADING CO. PRIVATE LTD. (First Director: Mr. Nandlal Somchand Sheth.) Business: Dealers in hardware. Authorised capital: Rs. 5,00,000. Private company. Address: Outside Bedi Galli, Jamnagar.

Notice

THE INDIA SUGARS AND REFINERIES LIMITED

MADRAS-17

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Ordinary General Meeting of the Company will be held at the Registered Office of the Company at No. 5, Deenadayalu Street, Madras-17, on Monday the 10th June, 1957, at 10-15 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September, 1956.
2. To declare a Dividend on Ordinary Shares.
3. To elect two Directors in place of:
   (i) Lala Ramgopal Gupta,
   (ii) Sri S. M. Ramakrishna Rao
   who retire and are eligible for re-election.
4. To appoint Auditors for the year 1956-57 and fix their remuneration.
5. As special business to consider and if thought fit to pass the following resolution, namely:

   "That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto in the presence of an officer of the Company, to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of the members of the Company between the times abovementioned only during the period prescribed by sub-section 5(*a*) of Section 307."

You are requested to be present in person or by proxy.

The Share Transfer Books of the Company will be closed from 22nd May 1957 to 10th June 1957, both days inclusive.

By Order of the Board,
For THE INDIA SUGAR AGENCIES PRIVATE LTD.,
Managing Agents.
C. HARIPRASAD,
General Manager.

MADRAS, 12*th May*, 1957.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

The Directors have recommended a dividend at 11¼ per cent. free of Indian Income-tax on the old Ordinary Shares and pro-rata *on the new Shares.*

The dividend when declared will be made payable on or after 17th June 1957 at the State Bank of India, Madras, and Dividend Warrants will be posted to the Shareholders whose names stand in the Register of Members as on 22nd May, 1957. Shareholders may kindly intimate to the Company any changes in address immediately.

Explanatory Statement Required by Section 173 of the Companies Act, 1956.

Item No. 5.—With reference to the resolution relating to inspection of Books, Registers and other documents referred to in the above notice, the Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved accordingly.

ANNUAL FREIGHT BILL FOR INDIA'S OVERSEAS TRADES

(*Concluded from page 991*)

or with the ships which are run as tramps. In view of these complexities and the absence of information of the carriage of commodities to different regions or the imports of commodities from different regions, we have tried to study the average rates which have been realised on different routes by Indian shipping companies.

From such information as is available from the published balance-sheets and from the office of the Directorate-General of Shipping, we note that the two leading shipping companies carried about 8 lakh tons of cargo on the India-U.K./Continental route during 1955-56 and earned a freight of nearly Rs. 10.65 crores. The rates which they have realised varied on an average from Rs. 130 to Rs. 137 per dw.t.

The Shipping Corporation carried in the same period a little over 181,000 dw.t. and earned a freight of Rs. 1.50 crores. It realised on an average the rate of Rs. 82 per dw.t. covering important routes, namely, India-Australia, India-Africa and India and the Far East.

Size of The Bill Assessed

The rates realised by other shipping companies on comparatively nearer routes or as tramps varied from Rs. 75 to Rs. 78 per dw.t.

A very large quantity of our cargo is imported or exported by chartered ships or by tramps. These ships generally carry such bulk commodities as foodgrains, iron ores, manganese ores, steel, cement, fertilisers, ilmenites, etc. We have carefully gone into some of the recent fixtures that have been made of chartered ships. Fertilisers have been carried at Rs. 85 per dw.t. The rates of freight of iron ores and manganese ores have varied from Rs. 85 to Rs. 108 per dw.t. So far as foodgrains are concerned, the rates at which the steamers have been chartered for carrying them have varied from Rs. 116 to Rs. 133 per dw.t. It has also to be remembered that some of these fixtures are made on F.I.O. terms. This means that the cost of stevedoring, which is normally borne by the ships, is not to be borne by the ships but by the shipper and the consignee, as the case may be. The practical effect of this procedure is that the ships get a higher rate than at which it is fixed, as the cost of stevedoring may vary from Rs. 10 to Rs. 15 per dw.t., including both the loading and the discharge.

In view of the facts given above, it would be fair to conclude that so far as the carriage of cargo by liners on the India-U.K./Continental route, or the India-U.S.A. run, or the India-U.S.S.R. service, or on such other important routes is concerned, the rate of freight which we should take on an average per dw.t. should be Rs. 130. Although the rates of freight on routes other than the India-U.K./Continent will be normally higher, we would not like to take a higher rate but would err on the safe side by taking it only at Rs. 130 per dw.t.

Further, so far as the carriage of cargo by chartered ships and tramps and the carriage of cargo on such routes as the India-Australia, India and the Far East, India-Africa, etc., are concerned, the average rate per dw.t. should be taken at Rs. 80. This is lower than the average rates at which charters have been fixed during the last four months.

We may here further point out the fact that the liner rates have been increased twice—first in March 1956 and again in April 1957. Every time there was an increase of 10 per cent. It is obvious that these increases do not cover the voyage results of the year 1955-56. It may also be added that the average rate of Rs. 130 indicated above, has nothing to do with the surcharge imposed on rates as a result of the Suez crisis. That crisis came after June 1956. The average of the earnings arrived at above was before that period.

Drain of Rs. 155 Crores

We have already stated above that 14.29 million tons of dry cargo was carried in the overseas trades. As a result of careful investigation in regard to the cargo carried by tramps in the overseas trade of India, it was established that nearly 5.6 million tons of such cargo were carried in the year 1953-54. As the average rate of freight to be applied to the cargo carried by charters, tramps and cargo carried on such nearer routes as the India-Australia, India and the Far East, is Rs. 80 per dw.t., as mentioned above, we estimate that the total quantity of the cargo that has been thus carried in 1955-56 will come to about 7.2 million tons. The balance will be carried by the liners on different routes. To this, we will have to add the freight earned on cargo carried in the adjacent trades. The average rate for that purpose has been put down at Rs. 35 per dw.t. Let us now estimate what the total freight bill of India has been in 1955-56 on the basis outlined above:

(In crores of rupees)		
71 lakhs dw.t. of cargo carried by liners at Rs. 130 per dw.t.		92.30
72 lakhs dw.t. of cargo carried by tramps or chartered ships and by liners on nearer routes at Rs. 80 per dw.t.		57.60
14 lakhs dw.t. of cargo carried in adjacent trades at Rs. 35 per dw.t.		4.90
Total	Rs.	154.80

We can, therefore, say that our annual freight bill came to about Rs. 155 crores in 1955-56. This does not include the freight earned in the coastal trade. It also does not include the freight paid on the imports of crude and other oils exceeding 3.75 million tons. The above figure does not take into consideration the two 10 per cent. increases in the rates of freight made by the liners.

The tonnage carried in our overseas trades has been on the increase. It has been stated by the Estimates Committee in their recent report that they have been advised that the normal carriage of cargo in the overseas trades will increase by the carriage of additional six million tons by 1958. Taking the average rate only at Rs. 100 on this additional carriage of cargo, as the same will consist mainly of bulk cargoes, there will be a rise in our annual freight bill by Rs. 60 crores. It will not, therefore, be unfair to conclude that our annual freight bill will run to the neighbourhood of about Rs. 215 crores by 1958.

More Than Pays Its Way

According to the information supplied by the Director-General of Shipping, the total earnings of Indian ships in the overseas trade in the calendar year 1955 came to Rs. 12.96 crores. It is estimated that it must have gone beyond Rs. 14 crores in the year 1956. As remarked by the Chairman of the Scindia Company, at its annual meeting held on the 13th March, "the Indian ships now engaged in overseas trade earn and save foreign exchange for the country to the tune of Rs. 7 to 8 crores and it will go up to about Rs. 12 crores when all ships on order at the end of the first Plan are delivered." This clearly shows the great potentiality of shipping as an earner of foreign exchange. We may add that the entire amount of the freight earned is not taken as the contribution of shipping to the foreign exchange resources of the country. Disbursements made by Indian ships in foreign countries are deducted from the total earnings of those ships. The results of the enquiries made in this connection in the United Kingdom, in Holland and in Norway show that the amount of disbursements come to about 40 to 50 per cent. of the total earnings of the ships. We have taken into consideration the earnings both on imports as well as on exports. The manner in which Indian ships contribute to the foreign exchange pool of the country was put in the following clear and concise words by Mr. Dharamsey Khatau in his speech as Chairman of the Scindia Company last March. He remarked:

"Actually, an Indian vessel in the overseas trade contributes to our foreign exchange pool in two ways—(*a*) by earning freight in foreign currency and (*b*) by saving foreign exchange required (i) to pay freight on our imports carried by a foreign ship, and (ii) for remittances of freight earned in rupees by a foreign shipowner on our exports. Such contribution amounts to nearly 55 per cent. of the overseas freight earnings."

The Planning Commission has laid down the very moderate objective that, by March 1961, Indian ships should carry about 50 per cent. of the adjacent trade and 15 per cent. of the country's international traffic. That would mean the carriage of about 3.6 million dw.t. of cargo in the overseas trade. The largest portion of this cargo will be carried by the liners. If Indian ships are able to do so, they would be contributing every year about Rs. 25 crores to the country's exchange resources. We would earnestly appeal to the authorities at Delhi to assign as high a priority as possible to the acquisition of additional tonnage.

Stop The Drain

We are fully aware of the difficulties which our Government have to face in providing foreign exchange for the needs of the country. They will have, however, to solve the conundrum without any delay. In the absence of the acquisition of additional tonnage, the Government will have to find about Rs. 60 crores every year by way of foreign exchange for paying the charter hire or freight on the additional six million tons of cargo which they will be importing. This is in addition to the great toll which they are paying by way of freight to the foreign flags today. Once the charter hire or the freight to the tune of Rs. 60 crores is paid, it will bring no tangible results for the future. The money will go. The drain will be drastic. We would, therefore, submit in all humility that at least a substantial portion of such foreign exchange as is available should be utilised for the purchase and/or construction of additional ships. A ship costing a crore and a half rupees will be able to repay the foreign exchange provided for its cost from its earnings within a period of six years. Thereafter, it will be contributing annually about Rs. 30 lakhs to the foreign exchange pool of the country. It will continue to do so for 15 to 20 years. Bearing in mind this great potentiality of shipping as the earner of foreign exchange, and recognising the needs of an adequate merchant navy for enabling India to maintain her strategy, strengthen her defence, and discharge her international obligations, we would, once again, earnestly appeal to the Government that they should give the highest possible priority to the acquisition of additional ships and thereby not only prevent the great drain on our foreign exchange, by way of freight paid to foreign flags, but also conserve and increase our foreign exchange resources.—*All Rights Reserved.*

Notice

THE INDO-BURMA PETROLEUM COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the members of the Company will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta, on Monday the 10th June 1957, at 10 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1956.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. H. J. Silverston, who retires by rotation and is eligible for re-election.
4. To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act 1956 has been received by the Company:—

   As an Ordinary Resolution: That the age limit prescribed under Section 280 of the Companies Act 1956, shall not apply to Mr. Mohamed Ismail Kee Kee Bhai, a Director who has attained the age of 68 years and who retires by rotation, and that he be and is hereby re-appointed a Director of the Company.
5. To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 261 of the Companies Act 1956 has been received by the Company:—

   As a Special Resolution: That Mr. W. Hutchinson who is an employee of Messrs. Steel Brothers & Co., Ltd., the Managing Agents, be and is hereby elected a Director of the Company.
6. To appoint Auditors for the year ending 31st December 1957 and to fix their remuneration.

Notice is further given that the Equity Register of Members of the Company will be closed from 27th May 1957 to 10th June 1957, both days inclusive.

By Order of the Board,
STEEL BROTHERS & COMPANY, LTD.,
Managing Agents.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA, *8th May*, 1957.

N.B.—1. A member entitled to attend and vote at the above-mentioned meeting may appoint a proxy who need not be a member to attend and, on a poll, to vote on his behalf.

2. An explanatory statement concerning items 4 and 5 as required by Section 173(2) of the Companies Act 1956, has been posted to the shareholders.

RAILWAY BUDGET REVEALS SURPLUS OF RS. 30.83 CRORES

ENHANCED SUPPLEMENTARY CHARGE ON FREIGHT TRAFFIC

THE financial picture of the Indian railways for the current year (1957-58), presented by Mr. Jagjivan Ram, Union Minister for Railways, to the Lok Sabha on Tuesday last, is substantially the same as that revealed in the interim budget submitted about two months ago. The only significant change is the enhancement, with effect from 1st July next, of the supplementary charge on goods and parcels freight from 6¼ to 12½ per cent., excepting on grains and pulses, fodder, manure, *khadi*, newspapers, newsprint and books. Thanks to this increase, the net surplus of railways that is now expected to occur amounts to as much as Rs. 30.83 crores, as against Rs. 21.43 crores anticipated earlier, Rs. 26.95 crores for 1956-57 (revised) and Rs. 14.22 crores for 1955-56 (actual). The rise of Rs. 3.88 crores in surplus during 1957-58 as compared with the previous year thus is expected to occur despite a marked increase of Rs. 14.82 crores in working expenses, Rs. 3.10 crores in net miscellaneous expenditure and Rs. 6.10 crores in dividend to General Revenues. It is obvious that these increases have been more than covered by a substantial expansion in gross traffic receipts, the exact increase being Rs. 27.90 crores. Of this rise, Rs. 9.4 crores are accounted for by the enhancement of the supplementary charge on goods and parcels traffic just announced.

The statement given below compares the budget estimates of railways for 1957-58 as now placed with those presented in March 1957 and the figures for the previous two years:

(In crores of rupees)

	Budget estimate, 1957-58		1956-57 Revised estimate	1955-56 Actuals
	As now proposed	As presented in March, 1957		
Gross traffic receipts ..	377.90	388.58	350.00	316.29
Ordinary working expenses ..	243.85	243.85	229.03	212.95
Appropriation to Depreciation Reserve Fund ..	45.00	45.00	45.00	45.00
Payments to worked lines ..	0.31	0.31	0.31	0.27
Total working expenses ..	289.16	289.16	274.34	258.22
Net traffic receipts	88.74	79.34	75.66	58.07
Miscellaneous transactions:				
Receipts	0.16	0.16	0.43	0.04
Expenditure	14.28	14.28	11.45	7.77
Net miscellaneous expenditure.	14.12	14.12	11.02	7.73
Net railway revenues	74.62	65.22	64.64	50.34
Dividend to General Revenues ..	43.79	43.79	37.69	36.12
Net gain or surplus	30.83	21.43	26.95	14.22

It will be noticed from the above table that there is an increase of Rs. 9.40 crores in the surplus corresponding to the increase in earnings. It is proposed to appropriate this additional amount also to the Development Fund, which requires strengthening, in view of the very heavy expenditure anticipated from the Fund in relation to the balance in it. The Fund is now expected to close the year with a balance of Rs. 20.12 crores, instead of Rs. 10.56 crores previously estimated.

Traffic Receipts

The anticipated improvement of Rs. 27.90 crores in gross traffic receipts for 1957-58 principally comes from goods earnings, the estimate of which is placed higher by Rs. 20.00 crores at Rs. 226.50 crores. The estimates of passenger, other coaching and sundry earnings are also placed higher by Rs. 3.50 crores, Rs. 3.50 crores and Rs. 75 lakhs, respectively. The details of these receipts are shown below:

(In crores of rupees)

	Budget estimates 1957-58		1956-57 Revised estimate	1955-56 Actuals
	As now proposed	As presented in March, 1957		
Passenger earnings:				
Upper	13.75	13.75	13.00	12.85
Third	105.25	105.25	102.50	94.86
Other coaching earnings ..	24.90	24.00	21.40	20.87
Goods earnings	226.50	218.00	206.50	180.28
Other sundry earnings ..	8.10	8.10	7.35	6.81
Suspense	—0.60	—0.60	—0.75	0.62
Total ..	377.90	368.50	350.00	316.29

The estimate of total ordinary working expenses for 1957-58 appearing in the White Paper remains unchanged at Rs. 243.85 crores (net). There have been some changes in the figures relating to operation (fuel) and miscellaneous expenses, due to some adjustments since found necessary. The change in the former is due to the addition of Rs. 1.02 crores to provide for the additional freight, consequent on the doubling of the supplementary charge of 6¼ per cent. on the transport of coal, since movement of railway coal is also being charged at the public tariff rate. There is an extra provision of Rs. 40 lakhs in miscellaneous expenses for Government contribution to the provident fund of employees who have completed three years' temporary service, which could not be estimated precisely earlier. This has, however, been absorbed in the reduction of Rs. 1.39 crores under suspense in the same demand, owing partly to a review of the provision required on the Southern Railway and partly to the transfer of the provision in respect of transactions relating to payment of certain stores bills to purchases—capital suspense as a result of change in procedure introduced on the Central Railway. There have also been some minor changes in the provision for individual railways, but these do not affect the total provision required under the demands. The details of working expenses after these minor alterations are shown in the table below:

(In crores of rupees)

	Budget estimate, 1957-58		1956-57 Revised estimate	1955-56 Actuals
	As now proposed	As presented in March, 1957		
Administration	30.71	30.71	34.60	31.56
Repairs and maintenance ..	93.92	93.92	86.16	80.38
Operating staff	59.39	59.39	52.66	49.73
Operation (fuel)	50.76	49.74	45.14	39.00
Operation other than staff and fuel	17.25	17.25	15.72	14.70
Miscellaneous expenses ..	15.24	26.23	28.43	32.18
Labour welfare	7.18	7.18	6.27	5.31
Total ..	284.45	284.42	268.98	252.86
Credits or recoveries	—40.60	—40.57	—39.95	—39.91
Net ..	243.85	243.85	229.03	212.95

The amount of expenditure on works has been retained at the same figure as in March. But the anticipation in March that an "on account" payment would be made for the Bombay Government plant in the Chola Power House did not materialise, since negotiations about the basis of valuation of the plant could not be finalised within the year. A provision of Rs. 3.30 crores has been tentatively made for this item, utilising Rs. 40 lakhs available within the demand, due to reduction in the provision for the Chittaranjan Locomotive Works and the reduction of Rs. 2.90 crores in the provision made in conformity with present anticipations of expenditure during the year on certain constructions on the Eastern Railway.

Railway Plan

In the course of his speech, Mr. Jagjivan Ram categorically declared that a substantial expansion of the Railway Plan had become inescapable, in order to cater to a higher volume of traffic and that such an expansion "must be planned straightaway." The railways, he said, would have to find an additional sum of about Rs. 250 crores during the second Plan period, including the gap of Rs. 50 crores which had to be filled in the railway contribution under the existing plan of Rs. 1,125 crores. To quote him: "As we are already well into the second year of the Plan, the augmentation of resources to meet the extra expenditure on rolling stock and works can brook no further delay, as, otherwise, the railways may be too late in creating the capacity required to carry the additional traffic load which, it is quite certain now, will devolve on the railways during the Plan period." In this connection, the Railway Minister alluded to the effects of the reduction in the size of the railways' original plan from Rs. 1,480 crores to Rs. 1,125 crores, and observed:

"To conform to the reduced allotment, the scope of the railway plan had necessarily to be cut down and, after eliminating most of the new lines except those essentially required for the projected expansion in steel and coal production, it was found possible to cater, within the funds allotted, for an increase of only 15 per cent. in passenger transport and a total of 162 million tons in goods transport. The reduction in the target of passenger transport capacity restricted the possibility of any substantial relief of overcrowding in our passenger trains during the period of the Plan.

"While the prospect of continuance of the present state of overcrowding was undesirable, the enforced reduction of the provision for extra goods transport from 180.8 million tons to 162 million tons was much more serious, from the point of view of the country's developing economy. After reserving capacity for 25 million tons on account of coal and other raw materials required for the new steel plants and expansion of the existing ones, 6 million tons more coal for other consumers and 4 million tons more for cement, a very meagre margin was left for the increases in the general merchandise traffic, including increases in trade and the output of all other industries and agriculture.

"The experience of the first year of the second Five-year Plan has made it abundantly clear that demands on rail transport during the Plan period are likely to exceed even the original estimate of 180.8 million tons. It is, therefore, manifest that the allotment of Rs. 1,125 crores, which includes financial provision for carrying only an additional 42 million tons of traffic, will be quite inadequate. In order to cater for a higher volume of traffic, a substantial expansion of the railway plan has become inescapable and such an expansion must be planned straightaway, as the execution of the line capacity and signalling works essential for moving the higher quantum of traffic will take their own time. On a rough basis, it is anticipated that an additional amount of over Rs. 100 crores at the present price levels would be required to carry 180.8 million tons.

"Apart from the demands of the larger quantum of traffic which the railways must carry as the Plan develops, the rise in the cost of labour and such essential materials as steel and cement, since the Plan was prepared, has already made the allotment of Rs. 1,125 crores insufficient for creating capacity even for the increase of 15 per cent. in passenger transport, and 42 million tons of goods traffic and it is estimated that achieving the physical targets originally included in the Rs. 1,125 crores Plan will itself require an extra amount of about Rs. 100 crores."

Extra Funds Needed

Proceeding, the Railway Minister said that, out of the railway plan of Rs. 1,125 crores, the railways themselves were expected to make a contribution of Rs. 375 crores. According to him, when the existing supplementary charge of 6¼ per cent. on goods and parcels was proposed in February 1956, the railway revenue resources on the basis of fares and freights in force were estimated for the Plan period at about Rs. 325 crores, thus leaving a gap of Rs. 50 crores to be filled, in order to meet the railway contribution of Rs. 375 crores envisaged in the Plan. On present estimates, it seems that the revenue surpluses at the basic fare and freight rates may be somewhat higher and that the levy of the supplementary charge of 6¼ per cent. will bring in about Rs. 71 crores extra over the Plan period. It is, however, quite clear that, on the basis of the present supplementary charge of 6¼ per cent. on goods and parcels freight, the resources that will be left over after filling the initial gap of Rs. 50 crores will not amount to more than a small proportion of the extra amount of over Rs. 200 crores which has to be found, if the railways are to cope with the anticipated demands of goods transport by 1960-61.

The Railway Minister expressed deep gratitude to Mr. A. Ramaswami Mudaliar and his colleagues on the Railway Freight Structure Enquiry Committee for the "thorough manner in which they had dealt with an intricate subject in this report. He, however, regretted that it had not been possible for him to indicate the Committee's recommendations and the effect of their implementation, since the report in its final and complete form was received only recently. All that he could say on the Committee's report was this: "While the recommendations of the Committee envisage an appreciable rise in the general level of freight rates, various aspects dealt with in the report have far-reaching implications and the recommendations, particularly those related to the augmentation of freight rates, call for a detailed study. It is anticipated that a complete examination of the recommendations and the preparatory work like the amendment of the goods tariff and the preparation of mileage tables, which must precede the introduction of the new freight rates, are not likely to be completed until the end of the current calendar year."

First Year of Second Plan

Dealing with the progress made during the first year of the second Plan period, the Railway Minister said that, as against the budget provision of Rs. 193 crores for 1956-57 for expenditure on works, plant and machinery and rolling stock, the railways' final estimates in the last week of the year amounted to Rs. 178 crores, the shortfall being almost entirely on the works side. The revised estimate of expenditure on civil engineering works in 1956-57 was nearly Rs. 11.8 crores less than the original estimate of Rs. 88.16 crores, and the final estimates fell short even of the revised estimate by nearly Rs. 6.6 crores. While the last-mentioned surrender of the funds was partly because the on-account payment for the purchase of the Bombay Government plant in the Chola Power House could not materialise, by far the greater portion of the shortfall was due to the shortage of materials, particularly permanent way items like rails, sleepers and fittings and signal and interlocking stores and equipment.

After giving details of the progress made on various projects, the Railway Minister revealed that an aggregate of 87 miles of new railway lines were opened to traffic during 1956-57. The construction of eight other projects aggregating 524 miles was in progress, and work was also in progress on nearly 700 miles of doublings, of which about 370 miles were on the South Eastern Railway, 116 miles on the Western Railway, and 78 miles on the Southern Railway. At the close of the last financial year, more than 150,000 men were working on the various projects. Approved surveys aggregated 2,800 miles during 1956-57, of which field work on nearly 2,000 miles was still in progress.

Referring to the Government's anxiety to stabilise and strengthen the railway route to Assam, the Minister said that the report of the Committee of Experts appointed to suggest measures for stabilising the Assam rail link route had been received and was being studied. In the meantime, all possible measures had been taken to keep the lines of communication intact.

The Railway Minister disclosed that the team of experts sent out by the World Bank to study conditions on Indian railways on the spot had submitted its report to the World Bank. A mission, including two members of the Railway Board, was proceeding to Washington immediately to finalise the loan negotiations.

The Minister also disclosed that the Ministry of Railways had decided to take over the procurement of the specialised railway items of steel requirements, and a mission was being sent out to Europe and other countries to expedite the procurement of rails, sleepers, etc., the shortage of which was seriously hampering the implementation of the railway plan.

CAREW AND COMPANY PASSES OVER DIVIDEND

RESULTS OF SHRI AMBICA MILLS BETTER

Carew and Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Gladstone Lyall & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th June 1956.

The working profit for the year amounts to Rs. 6,47,309 (Rs. 2,63,548) to which must be added the balance brought forward of Rs. 12,445 (Rs. 61,723) and, unclaimed dividends written off Rs. 2,240 (*nil*) making a total of Rs. 6,61,994 (Rs. 3,25,271).

Provision for taxation in respect of previous years absorb Rs. 2,66,990, in respect of the current year absorb Rs. 3,22,000 (Rs. 1,30,826) and taxes deducted at source of income from investments Rs. 288 (*nil*) leaving a balance of Rs. 72,716 (Rs. 1,94,445). This amount the directors propose to dispose of as follows:—

In paying a dividend of 6½ per cent. without deduction of income-tax, on preference shares, for the year ended 30th June 1956 absorbing Rs. 52,000 (Rs. 52,000) and in carrying forward Rs. 20,716 (Rs. 12,445 after paying a dividend of As. 4 per ordinary share absorbing Rs. 80,000 and transferring Rs. 50,000 to debenture redemption reserve).

Both sugar factories crushed heavy quantities of cane—Rosa crushing 35,00,585 (26,85,315.75) maunds with a recovery of 9.41 (9.44) per cent. and Darsana crushing 50,75,082 (46,08,158) maunds with an overall recovery of 8.12 (8.46) per cent. The figures recorded constitute a record for both factories but the Rosa recovery shows a decrease of 0.03 per cent. compared with the previous year, whilst at Darsana the drop in recovery was 0.34 per cent. Darsana's low recovery was attributable to many causes, principal amongst which was the fact that the season was extended to the 20th June with a very low recovery during the latter part of the season. Considerable difficulty was experienced with the railway authorities in regard to the hauling of cane from the various cane centres to the factory and as a result lengthy delays were experienced with a consequent rapid deterioration in the quality of the cane. This matter has been the subject of repeated representations to the Government of Pakistan and to the railway authorities, but a paucity of rolling stock and other operating difficulties has prevented any appreciable improvement in the situation. Geographically situated as it is, Darsana is at a disadvantage with other mills in East Pakistan in that cane has to be hauled to the factory over fairly long distances and although considerable progress has been made in the development of cane areas in the vicinity of the factory, we are compelled for the time being to continue taking cane from centres which are situated many miles from the factory. This position has arisen since Partition and the development of new areas is of necessity a long-term project. Added to these difficulties is the fact that Government, at successive Annual Sugar Conferences convened for the purpose of fixing the ex-mill sugar prices, has adopted a formula which arrives at an anticipated recovery based upon an average recovery from all mills over preceding years. The directors are pleased to report that at the Sugar Conference held in Dacca in November 1956 a more favourable approach was made by Government in assessing Darsana's anticipated recovery which should have a salutary effect upon the factory's future operations. Furthermore, whilst in respect of the year under review the ex-mill price fixed by Government for Darsana was unsatisfactory an improved price has been allowed by Government for the current season's operations.

The directors regret to report that defalcations were discovered in the Darsana Cane Department. Thorough investigations followed and remedial steps were taken immediately so as to prevent a recurrence.

The loss in maintaining the Darsana Estates dropped from Rs. 1,74,822 recorded in the accounts for the financial year ended 30th June 1955 to a nominal Rs. 120 in the financial year under review. This was mainly due to an increase in the cane price. The directors have taken steps to close down certain farms which have now proved uneconomical in present-day circumstances and it is the directors' intention to maintain only those estates from which a profitable working can be reasonably expected.

The directors report a small profit from the Darsana Pharmaceutical Division as against losses which have been sustained in previous years. Unfortunately, however, Government has not yet taken adequate steps to enable certain indigenous products to compete with the imported product, although it is understood that the Tariff Commission has recommended protective measures to Government in this regard. The matter has been rigorously pursued with Government and it is felt that ultimately the Pharmaceutical Division will be in a much more favourable position than it has been in the past.

As was mentioned in the directors' report dealing with the accounts for the year ended 30th June 1955, the ban imposed by the West Bengal Government on the importation of spirit into West Bengal from outside States has affected the sale of rectified spirit produced by Rosa Distillery which is the main reason for the drop in profits of Rs. 1,00,856 compared with the previous year. Sales of foreign liquor were more than maintained during the year and with the recently imposed restriction on the importation of liquor the directors are confident that the distilleries will show improved trading figures in the current year.

The quantity of cane which Rosa will crush in the current season will be much the same as that crushed in the year under review, but at Darsana the crush is considerably lower due to the fact that heavy flooding has been experienced resulting in extensive damage to crops, and also to the diversion of cane for the manufacture of *gur* by reason of the high price of *gur* which has prevailed during the season.

The Company was permitted in August 1956 to remit to India profits earned in Pakistan amounting to Rs. 7,33,276. There are further remittances due and negotiations are proceeding with the State Bank of Pakistan, Karachi.

The Company has appealed against tax assessments in Pakistan in respect of the disallowance of bank overdraft interest charged in the Pakistan accounts and the assessment of an alleged profit on the valuation of the Company's assets in Pakistan at the time of the devaluation of the Indian rupee. These assessments are referred to in the note on the accounts under contingent liabilities. The result of these appeals is awaited.

Appeals have recently been heard in regard to the charging of a proportion of the bank overdraft interest to the Pakistan accounts and the case has been remanded by the Appellate Assistant Commissioner to the Income-tax Officer. In regard to the alleged profit arising from the devaluation of the Indian rupee the directors are awaiting the decision of the Appellate Commissioner, but it is thought that the assessment cannot be maintained since, if it is, the Company has a counter claim in respect of a loss consequent upon the devaluation of the Pakistan rupee.

In respect of pending income-tax assessments it appears that the Company will be entitled to a smaller relief under the Double Taxation Avoidance Agreement due to allowance in the Indian assessments of agricultural losses arising in Pakistan. This has resulted in an under-provision for tax which the directors have considered it necessary to make provision for in this year's accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	45,12,826
Debentures ...	23,50,000	Stock-in-trade	1,14,97,858
Reserves ...	27,44,458	Stores and loose tools	41,19,606

Liabilities ...	1,41,58,498	Investments	21,898
Profit and loss account ...	20,716	Cash ...	2,25,563
	Rs. 2,41,40,414		Rs. 2,41,40,414

Shri Ambica Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Harivallabhdas Kalidas & Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1956.

After providing a sum of Rs. 11,06,569 (Rs. 18,50,000) for depreciation, a sum of Rs. 5,00,000 (*nil*), for rehabilitation and a sum of Rs. 49,00,000 (Rs. 29,00,000) for estimated taxation, the working of the year showed a profit of Rs. 33,34,927 (Rs. 33,41,721). To this amount was added the balance of profit from the previous year of Rs. 3,23,289 (Rs. 2,52,570) making a total of Rs. 36,58,226 (Rs. 35,94,291). Out of this sum the directors have transferred to gratuity reserve Rs. 3,00,000 (Rs. 1,15,000) and to general reserve Rs. 1,30,000 (*nil*) leaving a balance of Rs. 20,58,226 (Rs. 19,44,291 after placing Rs. 3,00,000 to dividend equalisation fund; Rs. 4,00,000 to machinery renewal fund and Rs. 8,00,000 to investment reserve fund) from which the following dividends were paid:—

Dividend on 5,600 first cumulative preference shares of Rs. 100 each at Rs. 5 per share free of income-tax for the year ended 31st December 1956 Rs. 28,000 (Rs. 28,000), dividend on 7,000 second cumulative preference shares of Rs. 100 each at Rs. 4 per share free of income-tax for the year ended 31st December 1956 Rs. 28,000 (Rs. 28,000), and dividend on 57,963 ordinary shares of Rs. 100 (Rs. 50) each at Rs. 25 (Rs. 25) plus Rs. 5 (Rs. 2) as bonus per share free of income-tax for the year ended 31st December 1956 Rs. 17,38,890 (Rs. 15,65,001) leaving to be carried forward Rs. 2,63,336 (Rs. 3,23,289).

With regard to the Lal Mills, the directors state that as already stated in the previous report the working of the mills is continued under the control of the provisional liquidator appointed by the District Court at Ahmedabad. During the latter part of the year 1956, the opponents in the matter filed an application to the High Court at Bombay for transfer of the entire proceedings to Bombay. The High Court has now passed necessary orders for transfer of the proceedings to Bombay and it is expected that further hearing of the Company's petition will be taken up at Bombay in due course.

There are 94,128 spindles and 1,733 looms in the mills. As a result of replacements and re-arrangement of machinery at No. 3 Mills, the directors think of making an addition of 56 looms to the existing 408 looms already installed.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,96,300	Block ...	87,23,284
Reserves ...	2,75,84,105	Stock-in-trade	1,51,73,093
Provision for taxation ...	36,99,488	Stores and spare parts, etc. ...	12,99,685
Liabilities ...	69,68,971	Stock-in-process ...	13,16,994
Profit and loss account ...	2,63,336	Debts, deposits and advances ...	92,54,069
		Investments ...	48,18,046
		Cash ...	56,27,029
	Rs. 4,62,12,200		Rs. 4,62,12,200

Nutan Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Jagabhai Bhogilal Nanavaty & Co., Ltd., Ahmedabad) present the audited accounts of the Company for the year ending 31st December 1956.

The profit of the Company after providing Rs. 4,40,799 (Rs. 2,80,000) for depreciation and development and rehabilitation and Rs. 7,40,000 (Rs. 5,90,000) for tax provision, amounts to Rs. 7,48,739 (Rs 6,14,055). Adding the balance brought forward from the previous year's account of Rs. 16,658 (Rs. 17,214) there is a total of Rs. 7,65,397 (Rs. 6,31,269). From this amount the directors have transferred to reserve fund Rs. 2,27,000 (Rs. 59,267), to dividend equalisation fund Rs. 1,00,000 (Rs. 1,91,000) and to contingency fund Rs. 1,00,000 (Rs. 50,000) leaving an available balance of Rs. 3,38,397 (Rs 2,33,252 after providing Rs. 97,750 for machinery renewal fund). The directors recommend the payment of dividends as follows:

To the payment of a dividend of Rs. 20 (Rs. 20) per share income-tax free on 15,000 (10,000) ordinary shares for the year ended 31st December 1956 Rs. 3,00,000 (Rs. 2,00,000), to the payment of a dividend on 5,000 4½ per cent. cumulative preference shares for the year ended 31st December 1956 (after deducting income-tax) Rs. 16,594 (Rs. 16,594) and to carry forward to next year's account Rs. 21,803 (Rs. 16,658).

Further progress was made on the mills' reorganisation and renovation programme during the year. A sum of about Rs. 6,94,000 was spent on extension of buildings and installation of new machinery and equipment. The main items covered by this expenditure include one Monfort's Stenter; 3 washing machines and one set of Chemic and Sour Cistern.

By a special resolution passed at the general meeting of the Company held on the 28th September 1956, a sum of Rs. 5,00,000 being the part of the undivided profits of the Company standing to the credit of the reserve fund was capitalised and 5,000 ordinary shares of Rs. 100 each were issued, which were entitled to dividend from the 1st January 1956, and which ranked *pari passu* in all other respects with the then existing 10,000 ordinary shares of Rs. 100 each. And therefore, the directors have recommended the said dividend for the year in respect of the above new shares also.

The installed capacity of the mills is 24,840 ring spindles, 720 doubling spindles and 572 looms.

By operation of law, the office of the managing agents, Messrs. Jagabhai Bhogilal Nanavaty & Co., Ltd., was due to expire on 15th January 1957. By special resolution passed at the general meeting of the Company held on 28th September 1956, they were re-appointed as managing agents for a further period of ten years from 15th January 1957, subject to the approval of the Central Government. The approval of the Government was received in the second week of January 1957, and accordingly they have been so re-appointed.

The shareholders will note that the form of balance-sheet and profit and loss account has been revised to conform with the provisions of the new Act. The directors have reviewed the amount as it stood at the end of the previous year at the credit of the depreciation fund and after providing a fair amount under this head at normal rates of Income-tax Act, the balance which represented extra provision of Rs. 7,83,972 made for depreciation for the previous years has been transferred to a reserve to be named development and rehabilitation reserve and the amount of Rs. 16,00,000 standing to the credit of Machinery Renewal Fund, the amount of Rs. 62,000 standing to the credit of insurance fund and the amount of Rs. 11,000 standing to the credit of the workmen welfare fund totalling Rs. 16,73,000 have been transferred to reserve fund.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	25,28,529
Reserves ...	67,78,770	Stock-in-trade	37,43,461
Provision for taxation ...	13,33,521	Stores ...	6,65,511
Liabilities ...	18,43,813	Other assets	58,932
Profit and loss account ...	21,803	Debts, deposits and advances ...	34,89,038
		Investments	2,35,992
		Cash ...	12,56,444
	Rs. 1,19,77,907		Rs. 1,19,77,907

N.B.—Figures within brackets relate to the corresponding period of the previous year.

BANK RATE RAISED

(From Our Own Correspondent)

BOMBAY, 15*th May*

The most important development of the week under review, so far as the money market is concerned, was the Reserve Bank of India's announcement this evening that, with effect from the 16th inst., the Bank rate would stand raised from 3½ per cent. to 4 per cent., which was the *de facto* Bank rate hitherto. This means that the basic rate at which the Reserve Bank lends to Scheduled banks against usance bills will be on par with the lending rate against Government securities. There is, however, at present, a stamp duty of ½ per cent. on usance bills, so that the effective rate of borrowing against usance bills will be 4½ per cent., as against 4 per cent. in the case of borrowing against Government securities It remains to be seen whether the stamp duty will be abolished, so that the two lending rates will be brought on par with each other. If the stamp duty is not abolished and if the lending rate against Government securities is raised to 4½ per cent. as it should be, if there were to be no excessive borrowings against Government securities, the cost of bank credit will go up further and the general market rates will harden. In such an event, the present disparity between the traditional Bank rate and the effective rates at which the Reserve Bank lends to the banking system will continue.

Meanwhile, the short-term money market continued to experience stringent conditions during the week under review, with the demand for bank credit on a larger scale, for financing holding of stocks of various commodities and consumer goods, due to budget uncertainties in the face of an acute shortage of supplies. Banks had frequently to seek accommodation from the Reserve Bank, with the result that interest rates were firmly held. Interbank call money was keenly bid at 3½ per cent. House money at call was in demand at 4¼ per cent. and short-term deposits at 4⅛ to 4¼ per cent. for one to six months.

A further expansion of Rs. 18.25 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 10th May 1957. Notes held in the Banking Department are also up by Rs. 83 lakhs, so that the increase in total notes issued is of the order of Rs. 19.08 crores. With this rise, the total note issue has crossed the Rs 1,600-crore-mark to stand at Rs. 1,605.23 crores. This increase is covered on the assets side by a rise of Rs. 20 crores in rupee securities and a contraction of Rs. 92 lakhs in rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 3.11 crores, while those of other Governments are lower by Rs. 2.15 crores. Bank's deposits have also declined by Rs. 4.40 crores. On the assets side, the downward trend in balances held abroad continues with a further drop of Rs. 9.84 crores during the week. Loans and advances to Governments are up by Rs. 3.51 crores and other loans and advances by Rs. 8.40 crores. Investments have dropped by Rs. 1.24 crores.

The Scheduled Banks' statement for the week ended 3rd May 1957 discloses that demand deposits have further declined by Rs. 9.63 crores, while the upward trend in time deposits persists with a further rise of Rs. 1.62 crores. Inter-bank borrowings are also up by Rs. 2.85 crores. Borrowings from the Reserve Bank show a rise of Rs. 8.66 crores and those from the State Bank Rs. 2.74 crores. Advances have shot up by Rs. 14.58 lakhs and bills purchased and discounted by Rs. 1.08 crores. Investments and cash balances show no notable variations.

The Gilt-edged market ruled quiet during the week under review, with a slight marking down in values in a few counters. The continued stringency in the money market and the pre-budget uncertainties restricted activity. The announcement regarding the rise in Bank rate came late in the evening after the market was closed. However, in private trading the sentiment was hesitant, in view of the uncertainty about the stamp duty on usance bills.

3 per cent. 1986 Conversion Loan was on offer and declined by 15 nP to Rs. 74.20. 3 per cent. 1970-75 was stagnant at Rs. 87.20. 3 per cent. 1966-68 at Rs. 92.05 and 3 per cent. 1964 at Rs. 94.45, while 3 per cent. 1963-65 shed 5 nP to Rs. 94.10. 3½ per cent. 1961 was featureless at Rs. 99.50. 3¼ per cent. 1964 at Rs. 98.25 and 3¼ per cent. 1965 at Rs. 96.25. 3½ per cent. 1967 was marked down by 5 nP to Rs. 98.45. Among State loans, 4 per cent. Madras and Andhra loans were the worse affected. Madras 1968 declined by 18 nP to Rs. 97, 1967 by 25 nP to Rs. 97.10, 1964 by 5 nP to Rs. 98.45 and 1963 by 10 nP to Rs. 98.40. Andhra 1967 dropped 25 nP to Rs. 97.25 and 1968 10 nP to Rs. 97. U.P. 4 per cent. 1968 were lower by 25 nP at Rs. 97.65.

The rupee ruled weak during the week under review in terms of the U.S. dollar. Banks' selling rate of ready dollar rose from Rs. 479.25 to Rs. 479.75 per $100 and their buying rate from Rs. 475.75 to Rs. 476.25 per $100. This is in consonance with the easy trend displayed by sterling abroad. In New York, spot sterling fell from $2.79½-2.79⅝ to $2.78-15/16-2.79-1/16 and three months' forward from $2.78⅜-2.78½ to $2.77⅞-2.78. Transferable sterling declined from 277.65-277.75 cents to 277.35-277.45 cents.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 13*th May*

The Madras kip market ruled steady during the week under review. Arrivals were moderate: shippers were active, and stocks, which had accumulated during the *Ramzan* holidays, were cleared at unchanged prices. U.K. enquiries were good, but prices were lower which shippers did not follow, in view of the higher levels in the local market. It is, however, likely that current prices might weaken during the next fortnight, as shipments to the U.K. have been heavy during the first half of the month. There was no change in the buff calf and cow calf section.

Improved tone continued in the skins section. due to good Continental enquiries. Tanned goat skins of all descriptions and tanned sheep were keenly sought for. Sellers were reserved awaiting the results of the London public sales, or were quoting 6*d.* over their last booking, with a view to gaining time.

In the London tanned skins (May) auctions, prices of goat skins improved by 6*d.* to 9*d.* due to good Continental bidding. Sales of sheep skins will be taken up today.

MARGIN IN BULLION

(From Our Own Correspondent)

BOMBAY, 15*th May*

Trading in bullion during the week under review was marked by a sharp rise in prices of both gold and silver in the maturing contract and the widening of the backwardation charges, which resulted in the enforcement of margin both in gold and silver. A margin of Rs. 7 per tola was imposed on all outstanding purchases of gold in the May settlement, as the carry forward charges in favour of buyers crossed As. 12 on the 9th inst. Despite the imposition of this margin, the backwardation charges widened to Re. 1-6 at the close of the settlement on Monday, as against As. 10 at the close of the previous week.

In silver, the backwardation charges widened from Re. 1-4 to Rs. 2-8 yesterday, when a margin of Rs. 500 per bar was levied on all outstanding purchases in the May settlement. The imposition of margin in silver was only of academic interest as it was done on the maturing day.

The market ruled strong during the week, on good demand for silver from upcountry centres and the decline in influx of Tibetan coins. This led to a depletion of floating stocks, resulting in a widening of the premium for ready over the June settlement from Rs. 2-8 to Rs. 3-6 yesterday. Today, however, it declined to Rs. 2-14 at the close. Gold also rose sharply to touch new high levels in recent weeks on buying induced by brisk offtake and bear covering. Towards the close, however, there was profit-taking on fears that the Budget would contain some measures which would affect the precious metal.

Silver for forward delivery (14th May settlement) advanced from Rs. 183 to Rs. 185-10 before the settlement ran out at Rs. 184-12. The June settlement appreciated from Rs. 181-14 to Rs. 183-10, but reacted to close at Rs. 182-6.

Ready silver hardened from Rs. 184-6 to Rs. 186-2, but shaded off to Rs. 185-4. The floating stocks of silver are estimated at 500 to 600 bars. The daily average offtake was about 30 bars.

Forward gold (13th May settlement) rose from Rs. 106 to Rs. 108-7 before the settlement ran out at Rs. 107-14. The June settlement moved up from Rs. 105-6 to Rs. 107-4, but the subsequent profit-taking brought it down to Rs. 105-15 at the close today.

Ready gold jumped up from Rs. 106-12 to Rs. 109, but gave way at the close to Rs. 107-13. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas while the offtake was 3,500 tolas on an average.

In New York, silver was unchanged at 91⅛c. In London, however, it was marked down from 75½d. to 79¼d. for spot and from 79¼d. to 79½d. for forward. But gold rose from 250*s.* 1½*d.* to 250*s.* 3½*d.* on account of the easiness of sterling.

The following comparative table shows the trend of market during the week under review:

	15-5-1957	Highest	Lowest	8-5-1957
	Rs. a.	Rs. .	Rs. a.	Rs. a.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, 14*th May*

After being steady in the previous two weeks, the metal market turned quiet during the week under review. Support from consumers being confined to meeting day-to-day requirements, prices were naturally marked down. Electrolytic copper declined from Rs. 182 to Rs. 180. Fire-refined copper ingots at Rs. 180 were at par with the electrolytic material. The quantity that changed hands was little. Overseas advices showed that the price trend had an element of uncertainty. On the London Metal Exchange, there was a sharp decline in the price of electrolytic zinc following the news that the United States Commodity Credit Corporation would no longer barter farm produce for foreign zinc. It was reported that this was only a temporary measure of the Corporation. In the local market, electrolytic zinc dipped to Rs. 77 from Rs. 81, despite the tightness in the ready supply position. Tin changed hands at Rs. 520, as against Rs. 521 earlier. Interest was confined to small quantities. Virgin lead, at Rs. 79.80, was lower by one point.

COTTON FUTURES DEPRESSED

(From Our Own Correspondent)

BOMBAY, 15*th May*

The cotton futures market put on a depressed appearance during the week under review. This is hardly surprising in view of the continued operation of the stringent margins on Jarilla May at the rate of Rs. 200 per bale when the price rises above Rs. 700 and the well-known attitude of the Forward Markets Commission to curb forthwith any rise in prices. Sentiment was also adversely affected by the prospect of getting large quantities of U.S. cotton under the Indo-U.S. Aid Agreement. Further, there was also the fear that the new budget proposals might contain fresh excise duties on textiles. The combined effect of all these factors was sharp decline of futures values.

Jarilla May opened the week at Rs. 720, as against the previous close of Rs. 718, and after hovering round about that level for the next two days, succumbed to heavy pre-budget liquidation from bull quarters yesterday, falling sharply to Rs. 712. Opening at Rs. 709 today, the contract again met with selling and closed lower at Rs. 689. The net loss over the week was Rs. 29.

M.G. Vijay June delivery, after having commenced the week's trading Rs. 2 higher than the previous day's closing, faced heavy selling and dropped to Rs. 839 yesterday. The contract picked up some strength today, rising to Rs. 842 before closing at Rs. 834. The net loss over the week was Rs. 16.50.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

		15-5-57	*High*	*Low*	8-5-57
Jarilla (May)	...	689	720	688	718
Vijay (June)	...	834	852½	833	850½

Trading in the futures market is devoid of all interest and the volume of business has fallen to a trickle. The interest is now mainly centred on the prospect of commencing trading in new crop contracts. As has been pointed out in our previous issue, the special Sub-Committee appointed by the E.I.C.A. has recommended, among other things, a single contract for the coming season with Fine Moglai 25/32″ as the basis. The proposals are still under the consideration of the E.I.C.A. and no decision has yet been taken. It is fairly widely held that no matter how perfect the new hedge contract may be, it cannot command confidence as a proper hedging medium unless it is allowed to function freely. It is contended that so long as prices move within the prescribed floors and ceilings there is no need for interference on the part of the authorities.

The spot section continued to rule firm, owing to scarcity of quality cotton. Sustained mill demand was evident for all popular varieties, particularly Vijay, Laxmi, Jayadhar, 197/3, Co.2, etc. The prolonged ban on exports has induced slackness on the export front. A section of shippers is understood to have determined to press for the lifting of the ban at the forthcoming meeting of the Export Advisory Council.

In the foreign section, there was a revival of mill demand for American growths. Interest was particularly noted in Californian G.M. 1-3/32″ and Elpaso 1-3/16″ and higher. The Joint Chief Controller of Imports, Bombay, has announced that inter-mill sales of imported cotton will not be allowed except with the permission of the Central Government. Applications for such permission should, in the first instance, be submitted to the Textile Commissioner with the following information: The quantity desired to be sold, type of cotton licence, number and date under which the cotton was imported, name of the mill buyer, price at which the cotton was imported and the price at which it is desired to be sold; and confirmation from the mill buyer who wants to purchase the cotton.

Taking advantage of the import quotas for East African and Sudanese cotton, mills have made considerable volume of purchase and hence the scramble for foreign cotton has subsided. Quota for these two varieties is reported to have been almost exhausted and fresh business is now possible only in Egyptian cotton against the import quota for 20,000 bales of staple length 1-3/16″ and above. But mills are not enthusiastic about this cotton as it is not considered very attractive price-wise. Moreover, there is also expectation of a further fall in Egyptian cotton prices.

The International Co-operation Administration has already announced a procurement authorisation favouring India with $13.59 million for purchasing cotton. The contracting period is from 7th May to 31st October for shipment from 1st August till 31st December. This authorisation will, at current prices, cover about 70,000 bales (500 lbs.). It is believed that the present authorisation is in addition to the public Law 480 agreement between the U.S. and India under which India can still import about 350,000 bales in the next two sessions. The trade is awaiting a parallel announcement by the Government of India. A section of the trade holds that in view of the shortage of better quality Indian cotton, the Government should permit import of comparable U.S. varieties. It is pointed out in support of this contention that the Cotton Advisory Committee, at its meeting of 9th April, had recommended import of American cotton of stapling 13/16″ and above instead of 1-1/16″ and above. The authorities would be well advised to consider the feasibility of this suggestion.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 720; Berar Jarilla 820; Khandesh 820; Oomra Deshi 930; Vijay 1010; Hubli Laxmi 990; Jayadhar 890.

Easy conditions prevailed in the Karachi cotton futures market during the week under review. This was due to the selling pressure induced by reports of higher U.S. fortnightly sales. Weak advices from the spot market was another discouraging factor.

However, some strength was imparted to the market by a fair volume of speculative buying following the reduction in freight rates announced by the steamer companies. The bullish result of the survey of May tenders was another helpful factor, which induced some buying in N.T.R.G. July which, as a result, improved slightly. N.T.R.G. May declined by As. 11 to Rs. 77-11 while the July position put on As. 2 to Rs. 80-7. The spot section also ruled easy. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 88-8; Punjab *Deshi* 83-4; 4F Punjab R.G. 80-7; S.G. 84-3; L.S.S. Punjab R.G. 82-3; S.G. 86-3; N.T.R.G. 82-3; S.G. 88-11; 289F Punjab R.G. 85-3; S.G. 88-11.

Alexandria cotton futures ruled easy during the week with the long-staple Karnak registering a sizable decline. The easiness was aided by the bearish implications of the news that the Bill permitting the withdrawal of 50,000 bales of long-staple cotton from the U.S. stockpile to be offered for commercial sale has been passed by the House of Representatives (Lower House of the Congress) and forwarded to the Senate. According to the U.S. authorities, the release was necessitated by the domestic demand for such cotton which should otherwise be met by imports. This, it was thought, would result in reduced demand for longer staple Egyptian cotton, especially, Karnak. A wave of speculative selling was touched off in Karnak contracts which declined as a consequence. The medium-staple Ashmouni also moved down in sympathy. The latest available rates—in tallaries per lbs.—from Alexandria are given below, the figures in brackets being last week's closing quotation.

Karnak: May 108.40 (110.75); July 108.50 (111.20). *Ashmouni*: June 75.25 (75.70); August 75.25 (75.55).

Cotton values recorded handsome gains in the Liverpool market on Commission House buying and good support from spinner interests. Encouraging spot advice was another helpful factor. Both the American and American type contracts improved, although the Sudan contracts declined on selling. However, uncertainty, regarding U.S. cotton policy continued to restrict business. In the spot section, inquiries for both ready and shipment cotton especially higher grades of U.S. cotton, widened. The latest available quotations—in pence per lb.—from Liverpool are as under:

American one Inch staple contract: May-June 26.60; July-August 26.49; October-November 26.33; December January 26.33. *American cotton mixed growth contract*: May-June 26.75; July-August 26.63; October-November 26.45; December-January 26.42.

Despite continued adverse weather in the Texas region and reports that soil preparation and cotton planting were several weeks late in some of the major cotton-growing regions, the New York cotton futures market continued to rule easy during the week. The passing of the Bill by the House of Representatives permitting release of 50,000 bales of long-staple cotton from the stockpiles to meet the domestic demand would appear to have been partly responsible for the weakness of the market. However, some scattered demand was evident later which prevented a further fall in prices. New Orleans interests also were buyers.

Increasing support is evident in U.S. cotton circles for the principle of abandoning the high price support and acreage control schemes in favour of a freer production and marketing on a single-price system. But the ultimate from any new legislation may take is anybody's guess.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	14-5-57	7-5-57	29-4-57
Spot	35.35	35.35	35.35
May	—	35.31	35.26
July	34.97	35.09	34.81
October	33.90	33.86	33.62

• • • •

U.S. Secretary of Agriculture, Ezra Taft Benson, told American cotton shippers the other day at New Orleans that under existing Federal legislation, "it is difficult to foresee the time when total acreage allotments for cotton would exceed the 1957 level." He added that 1959 cotton acreage could be in the neighbourhood of 14 million acres. This would be a drop of 3.6 million acres from the 1957 and 1958 minimum acreage allotment. Despite these rigid cotton acreage controls, Benson said that cotton production remained high due to the increase in production per acre. In the last 15 years, he pointed out, farmers have raised cotton output per acre by 65 per cent. He called for a basic re-examination of cotton production controls to protect American growers from what he termed "their abundant capacity to produce." The Secretary of Agriculture said it was now time to "consider the desirability of moving in the direction of being more competitive, price-wise," and he urged measures to increase free world consumption of cotton. He warned that the basic solution to the production of surplus cotton will not be solved by the "visible signs of improvement" now evident in cotton reserve surplus programmes. He foresaw increasing pressure to raise acreage allotments as U.S. reserves dwindled. Among the factors which have contributed to piling up large reserves are expanded use of synthetic fabrics and the doubling of foreign cotton production since 1932, "when American cotton growers began to hold the price umbrella for foreign cotton producers." Benson also noted that the overproduction or undersale of cotton was a problem of concern to the general U.S. public, which is paying the cost of U.S. cotton export sales programme, under which U.S. cotton reserves are being sold abroad at world market prices in an orderly fashion. The Secretary pointed out that American taxpayers are bearing the brunt of the sale abroad of cotton at six to seven cents below the domestic price. He put the loss in the past 15 months at $535 million. He said the cotton industry in the future should concentrate on merchandising and realistic pricing. He also urged a review of U.S. cotton legislation to prevent huge surpluses in the future.

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 15*th May*

Dull conditions prevailed in the yarn market during the week under review. Owing to uncertainties about the Central Budget, transactions put through were limited with prices moving narrowly. Even the expectation of large arrivals of imported rayon yarns, following resumption of traffic through the Suez Canal, and rumours of a cut in prices by Continental manufacturers failed to have any effect on the market. Staple fibre yarns ruled easy, thanks to reports of accumulation of stocks in the local markets, as well as in important consuming centres, and pressure of deliveries from mills which had made forward sales in the last few months. Cotton yarn lacked support and finer counts even encountered some selling.

Snia Rayon yarn (120 dull cones) for June delivery met with special buying support and improved by Rs. 7 to Rs. 806. Spot 120 Japan remained dull at Rs. 4.05, as also 120 Italy at Rs. 4. 150 Italy and 150 Japan gathered two nP each to Rs. 3.69 and Rs. 4.11, respectively. Among indigenous yarns, National Rayons 120 bright cones first grade gained 4 nP to Rs. 3.73. 150 bright cones first grade moved up by 13 nP to Rs. 3.47.

Staple fibre yarns (40×2) for June delivery were quoted at Rs. 604, as against Rs. 603. Spot 40×2 Kohinoors were a shade lower at Rs. 3.31. Centurys were quiet at Rs. 3.22. Citys, however, rose by 4 nP to Rs. 3.20 and New Greats by 5 nP to Rs. 3.16. Among foreign yarns (80×2) Fujis lost 3 nP to Rs. 5.22. Paramounts were dull at Rs. 5.34.

In the cotton yarn section, ten counts Moderns were unchanged at Rs. 14.87, but Podars put on 6 nP to Rs. 14.56. Twentys were neglected, Gokaks being quoted at Rs. 18.62, Moderns at Rs. 18.75 and Maduras at Rs. 19. Thirty counts Edwards declined by 25 nP to Rs. 21.25. Indus receded by 19 nP to Rs. 21.56. Among forty counts, Minaxis dropped 31 nP to Rs. 27.31. Moderns, however, advanced by 37 nP to Rs. 28.12. Sixty counts Moderns declined by 25 nP to Rs. 61. Finlays were neglected at Rs. 61 and Raghuvamshis at Rs. 57.75. Among eighty counts, Mahendras changed hands at Rs. 71.50, same as last week. Moderns were neglected at Rs. 76. Finlays were on offer at Rs. 81.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	15-5-1957	8-5-1957
	Rs.	Rs.
***Art silk* yarn (per case of 200 lbs.)—**		
120 dull Cones Snia June	806.00	799.00
120 Japan (per lb.)	4.05	4.05
150 Japan (per lb.)	4.11	4.09
120 Italy (per lb.)	4.00	4.00
150 Italy (per lb.)	3.69	3.67
***Staple fibre* yarn (per case of 200 lbs.)—**		
40×2 June	604.00	603.00

60s Raghuvamshi	57.75	57.75
80s Modern	76.00	76.00

CASTORSEED MOVES UP

(From Our Own Correspondent)

BOMBAY, 15*th May*

In an otherwise almost featureless trading in the oilseeds market during the week under review, the castorseed section registered moderate gains, while cottonseed suffered a slight setback. In the earlier sessions, castorseed prices touched new high levels, following reports of some export business in castor oil with the UK. and enquiries from the U.S. Subsequently, however, there was a slight reaction, thanks to selling induced by fears of increased excise surcharge on oils. The section again picked up some strength towards the close, following absence of any increase in surcharge in the Budget. The groundnut and linseed sections which sagged in the middle of the week due to Budget uncertainties staged a recovery in the later sessions, the closing rates today being almost the same as at the close of last week. The cottonseed section ruled easy on reports of subdued activity in the cotton market.

Groundnut May contract opened the week firm at Rs. 176.37 and declined to Rs. 174.75 on the 13th instant. In the following sessions, it recovered slowly to touch Rs. 177.12 today. Over the week, it increased by 52 nP. August contract commenced at Rs 182.25. After receding to Rs. 179.75 on the 14th instant, it rose to Rs. 181.37 at the close today, representing a nominal gain of 12 nP over the week. Spot Bold F.A.Q. put on 25 nP. Groundnut oil ex-mill was maintained at Rs. 20.12.

Castorseed May contract commenced steady at Rs. 186.00 and increased to Rs. 186.75 the following day. At higher levels, profit-taking set in and the quotation went down to Rs. 183.75 today. As the budget was announced, the contract moved up to Rs. 187.50 at the close. Over the week, the contract gained Rs 5. September contract opened at Rs. 192.00 and declined to Rs 188.25, at the commencement today. It closed, however, higher at Rs. 192.00, the net rise over the week being Rs. 3.75. Spot Madras quality gathered 12 nP to Rs. 36.62. B.S.S. advanced by 63 nP to Rs. 23.00.

Linseed May contract opened at Rs. 31.37 and on reports of inquiries from shippers, rose to Rs. 31.50 the next day. After narrow fluctuation during the rest of the week, it closed today at Rs. 31.19. September contract opened at Rs. 32.62 and after similar fluctuation closed at Rs. 32.31, same as last week. Spot Bold ready was nominally lower at Rs. 30.87. Linseed oil ready improved by 13 nP to Rs. 17.00.

Cottonseed May contract commenced the week at Rs. 113.50, and September at Rs. 118.20. They steadily declined to Rs 111.75 and Rs. 115.50, respectively, representing a decline of Rs. 1.75 and Rs. 2.75. Among others, *kardi* bold put on 12 nP to Rs. 22.25. *Niger* seed Madras was done at Rs. 28.75 as against Rs. 28.50.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	15-5-1957	8-5-1957	30-4-1957
	Rs.	Rs.	Rs.
Groundnuts—			
May 1957 ..	177.12	176.60	170.25

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 14*th May*

In the earlier part of the week, Malabar Black pepper showed an improving tendency in sympathy with New York, where spot was raised to $0.28, following enquiries from the dealers and the grinders. Restricted offerings from all the origins proved a supporting factor. Alleppey remained steady at Rs. 600. Judging from the working of the markets at all the primary centres, it appears that the growers will remain rather free sellers at round about the level of Rs. 600. Garbled at Cochin were done at Rs. 103¾, while the future delivery was quoted at Rs. 105. Calicut moved around Rs. 650.

Singapore showed firm undertone in the wake of short covering and New York buying. Sarawak black (special) was done at $73 (Singapore dollars). The market is reported to be fully steady, for want of pressure of arrivals and consequent reserved selling by the packers. Though arrivals in Singapore from Sarawak is on the upgrade, the quantity involved is reported to be not so heavy. Foreign buyers as well as exporters at Singapore are expecting pressure of arrivals in the very near future. But prices being unattractive, they are unwilling to go short. Any further hardening of prices is sure to encourage expansion in arrivals from Sarawak where holders are reported holding up shipments whenever prices are down.

After touching $0.26½ May and June shipments at present are moving round about $0.26. July-August-September is quoted at the same price nominally. Business in general is very much restricted as both buyers and sellers are awaiting new developments. Small buyings are enough to push up prices in the circumstances. Subsequently, New York, after paying $0.26¼ for the shipment by the named steamers having withdrawn, the market turned quiet but remained fully steady for want of pressure from the sellers.

In the delivery section, at the beginning of the week, prices improved owing to speculative buyings in the belief that the possible reduction in the surcharge on the freight from India to Europe and U.S.A., following the settlement of the Suez may lead to higher prices locally. After the expiry of May delivery, however, June and July deliveries were somewhat lower but steady. Reduction of 10 per cent. in the surcharge of 17 per cent. levied during the Suez troubles was announced. Following are today's nominal quotations: Ready delivery Rs. 85 per Bengal maund; June Rs. 592-597 and July Rs. 602-607 per candy of 5¼ Cwts.

TEA IN LESS DEMAND

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 9*th May*

Approximately 750,000 lbs. were on offer in Dust Sale 'J' which was held on Tuesday, 7th May. There was rather less demand and buyers only showed interest at much lower rates. With the exception of a few selected types, prices were irregularly 15 to 25 nP easier all round. High grown dusts again met with less enquiry and were occasionally difficult of sale.

The average price realised in Dust Sale 'J' was Re 1·62 per lb., as against Re. 1.76 per lb. in the previous sale and Re. 1.73 per lb. in the corresponding sale of 1956.

London Market.—Sale of 6th May 1957.—Better tendency. Generally half to one penny dearer with prices for the better types hardening as the sale progressed.

Sale of 7th May 1957.—Fully firm.

Colombo Market.—Sale of 7th May 1957.—Low-grown firm 5c. to 8c. lower for medium brokens unless coloury. Also plain liquoring Uvas and thin liquoring highgrowns better. Dimbula dickoya sorts 30c. to 50c. dearer. Medium and highgrown fannings generally dearer. Offgrades good demand about 5c. easier all descriptions.

Calcutta Market.—Export.— No sale this week.

Internal.—26,000 dust. Fair general demand which weakened as sale progressed. Market opened 4 nP to 6 nP easier, closed 10 nP to 12 nP easier rates. 6,000 leaf. Active enquiry at irregular rates.

Export Quota.—There has been an easier tendency and there are now sellers of Special Rights at 16 nP. 1957-58 Quota is quoted at 23 nP sellers.

Forthcoming Auctions.—Dust Sale 'K' will be held on Thursday, 23rd May.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 10.—Approximately 2,000,000 lbs. Good general demand, but weakening as sale progressed. Black leaf brokens and good mediums often dearer. All fannings and common and stalky brokens sold at lower rates. Whole leaf fully firm to dearer."

TEA DUSTS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 14*th May*

Prices gave way during last week's tea sales for domestic consumption. Dusts on offer amounted to 20,715 chests. Even when the sales opened, prices were lower, which attracted good demand. However, as sales progressed demand petered out and this affected prices further. The decline for the different lots varied from 4 nP to 12 nP per lb. Commons and Dooars were fully easy, the decline sometimes extending up to 12 nP per lb. Assam teas represented a decline in quality. Orthodox Assams closed 10 nP lower, while the opening rate was 4 nP lower. C.T.C. Assams were also easier. The quotations were: Medium Assam C.T.C. Re. 1.65 to Re. 1.70, medium Assam grainy dust Re. 1.60 to Re. 1.65, medium Dooars Re. 1.70, and best Assam C.T.C., not quoted.

Leaf grades offered amounted to 1,186 chests. Demand was good.

Export rights for new season's teas were offered at 25 nP, as against 28 nP in the previous week. Buyers offered 22 nP, as against 27 nP. No business was, however, done. Special rights changed hands at 15 nP, as against 23 nP. In a similar way, buyers offered to pay 13 nP for shipping licence, as against 21 nP; however, sellers demanded 18 nP, as against 23 nP.

It was reported that tea stocks in the United Kingdom as on 3rd May were 153 million lbs. which represented as heavy a decline as of 38 million lbs. This should have been the main cause for the evidence of a good general demand in the Mincing Lane auctions held last week. Fanning grades, black leaf teas and broken orange pekoes were all in keen demand. There was also strong demand in the sales held in Colombo on 7th May. Good brokens and mediums rose on strong support from South Africa.

On Tuesday last, a small sale was held in Chittagong and was the last sale of the 1956-57 season. Demand was poor and prices declined. Dusts on offer aggregated 1,509 chests with plain Sylhets being quoted at Re. 1-12. Leaf offered were 2,400 chests which included 188 chests green tea. Prices fell by As. 10 to As. 12, the rates being: O.F. Rs. 2-0, O.P. Re. 1-15, B.O.P. Re. 1-14-6, P.F. Re. 1-14, and B.P. Re. 1-12. The 1957-58 season's first sales will be held on 12th June.

Industry circles have noted with extreme regret the plea of Dr. B. C. Roy, the West Bengal Chief Minister, to reduce dividends to shareholders of tea companies to 6 or 7 per cent. He was addressing the first annual meeting of the Tea Association of India held here on 5th May. Dr. Roy had said that some tea companies had paid as much as 40 to 50 per cent. dividend to the shareholders. However, it should be noted that in 1955-56 the variable dividend of yield of plantations was only 9.99 per cent.

From Dr. Roy's other remarks, it was clear that the West Bengal Government had no intention whatsoever to abolish the entry tax, which, Mr. Kanoi in his presidential address to the meeting represented, had made the price of Indian teas passing through Calcutta unfavourable compared to teas directly exported for participation in the Mincing Lane auctions.

The new season's first export sale was held yesterday. The teas on offer were 7,555 chests new Darjeelings, the quality of which invited less attention. All the same, there were a few lots possessing useful flavour. There was fair demand, and prices with the superior lots rose above valuations. Although the balance of the teas on offer also received fair attention, prices were below valuations. By the close, prices of all teas fell below valuations as demand weakened. Buyers for internal consumption were interested in the lower priced brokens and smaller fannings grades. Old season's special export licence changed hands at 19 nP. The price subsequently gave way to 16 nP. New season's quota was offered at 28 nP with buyers at 26 nP.

JUTE GOODS HARDEN FURTHER

(From Our Own Correspondent)

CALCUTTA, 14*th May*

Prices of jute goods recorded gains during the week under review following more interest shown by foreign buyers. Raw jute also moved up, in view of the delay in sowing operations. Jute-growing districts of Bengal and Assam are yet to have rains for completion of sowing. There were indeed light rains here and there. As expected, stocks of finished goods with mills as at the end of April have shown an increase of 7,300 tons, at 105,000 tons, as against 97,700 tons at the end of March. Sacking goods increased by 2,300 tons to 58,800 tons, and hessian by 5,600 tons to 35,400 tons. On the other hand, miscellaneous constructions, at 10,800 tons, registered a small decrease. The net increase of 7,300 tons should not be surprising if figures relating to shipments in April are examined. For, sacking goods shipped during April aggregated 27,500 tons only, as against 45,500 tons in the previous month, and hessian shipments, at 25,400 tons, were as low as 10,000 tons. These figures included coastal shipments. It was noted that the fall in shipments of sacking and hessian alone was 28,000 tons. Considering this, the increase in stocks was not a disappointment to market circles. At the same time, market circles correctly assumed that purchases for consumption in and around Calcutta and for despatch to upcountry centres by surface routes were higher.

The higher stocks did not affect sentiment in the market as it was a normal feature during this part of the year. There was also fair business done with shippers. Support from the Argentine was fair, and Burma showed interest for a further quantity of heavy goods. The improvement in raw jute prices was also a factor which pushed up the prices of goods. The uptrend in New York prices was encouragingly noted, and contributed its share to steadiness here. It was reported that American stocks of burlap needed replenishment at an early date, as in the past few months purchases were against daily requirements only. This has naturally led to shortage in the United States and is reflected in spot and afloat stocks.

Labour troubles in the jute industry have naturally received the attention of the West Bengal Government. During recent years, wages bills have tremendously increased, and raw jute prices have also gone up. Several mills have modernised their plants and machinery, in order to bring down costs of production and be in a position to compete in foreign markets. However, rationalisation plans have not reduced costs of production inasmuch as there has not been noticeable reduction in labour strength. The Labour Department of the West Bengal Government, being desirous of having a clearer picture of the present employment position in the industry as opposed to the position after rationalisation, has asked the Indian Jute Mills Association to submit to it full particulars of plans of modernisation. Information as to the effect rationalisation would have on employment has also been requested. It is thought that these details would enable the Government to have a practical examination of the labour problem. If the jute industry is to be saved from a crisis and more mills are to be avoided self-effacement, cost of production should be reduced. This can be brought about by a reduction in wage bills as well as a decline in raw material prices.

Raw jute prices have firmed up, and the anticipated delay in arrivals of new crop has enabled the stockists to realise higher prices. It is believed that there is plenty of jute within the country, and mills can operate satisfactorily even if the new crop is delayed. However, stockists are determined to get higher prices, and during the week under review, prices registered a further rise. Indian northern bottoms improved from Rs. 30 to Rs. 31, and local daissee bottoms from Rs. 32.50 to Rs. 33.

The goods market opened steady, on overseas buying interest. Hessian 40" 10 oz. was firm at Rs. 42.55 and ready B. twills at Rs. 115.75 on Tuesday last. At this stage, the higher stock figures as at the end of April were announced, and the immediate reaction in the market was a decline in prices. Ready B. twills gave way to Rs. 114.70 and hessian 40" 10 oz. to Rs. 42.20. It was soon realised, however, that the decline in stocks was only by 7,300 tons, as against 10,000 tons earlier anticipated. A recovery followed, lifting B. twills to Rs. 115.70 and hessian 40" 10 oz. to Rs. 42.45 on Thursday. The rise in raw jute prices provided sufficient support to the market. Consequently, by the week-end, B. twills rose to Rs. 116.95 and hessian 40" 10 oz. to Rs. 42.95. Yesterday, prices eased fractionally with B. twills quoting at Rs. 116.87 and hessian 40" 10 oz. at Rs. 42.75.

FOODGRAINS DECLINE AT CLOSE

(From Our Own Correspondent)

HAPUR, 13*th May*

Foodgrain prices, after ruling steady to firm during most part of the week, recorded a downward trend towards the close, following increase in daily arrivals of new grains in the markets and the Government's announcement to keep prices at reasonable levels. The Government's import programme was reported adequate not only to meet the current requirements but also to build up sizable stocks. It was stated that import of wheat and rice in the country amounted to 1.3 million tons in the first four months of this year, as against 1.42 million tons in the whole of 1956. Another 1.4 million tons of wheat and rice would be imported by the end of September.

In order to prevent scarcity conditions developing in certain areas, precautions are being taken to avoid cross country movements of foodgrains and it has been decided to keep Calcutta and Bombay cities 'cordoned off,' as their whole requirements would be met by imported wheat. The Central Government has assured all help to the deficit areas and is releasing 15,000 tons of wheat per month to U.P. for the next four months, 20,000 tons per month to Bihar for the next three months and 25,000 tons per month to mofussil areas of Bombay for the next five months.

Wheat prices, after touching the highest at Rs. 15.25 per maund for average *dara* quality and Rs. 16.50 for farm produce, declined in the week-end to Rs. 14.75 and Rs. 16.25 per maund, respectively. Daily local arrivals of wheat have gone up and are placed today at 4,000 maunds and local wheat stock has swelled to 10 *khaties*. Total arrivals from the beginning of the current season were put at 40,000 maunds, corresponding figure last year being 30,000 maunds when stock here was estimated at 13 *khaties*. Buying enquiry continues to be fairly good from Bihar and east U.P., but loading facilities are still far from adequate. Unconfirmed reports states that the inter-State movement of wheat would be restricted as a result of which prices in the surplus and producing areas were expected to decline. Demand of rice was good during the week under review and prices appreciated slightly to—*basmati* Rs. 24 to Rs. 28.50, Mainpuri Rs. 24.50, coarse Rs. 18.25 per maund.

Gram prices also, after early gains, declined slightly at the week-end on Punjab advices. Barley and *bejhar* prices were well held, due to good consumers demand in the face of none-too-heavy arrivals amounting to an average of 200 maunds daily. *Bejhar* stock is now estimated at 6 *khaties*. *Jowar* prices continued steady, due to falling stocks and prices at the close of the week were:—Gram Rs. 11.62 to Rs. 12, barley Rs. 10.87, *bejhar* Rs. 10.75, *jowar* white Rs. 15, brown Rs. 13 and *guwar* white Rs. 12.6 per maund.

Continued good buying enquiry from east U.P. and Bihar, despite restricted loading facilities, accounted for steady conditions in peas, prices of which for *dara* green quality were quoted at Rs. 11.37 and for white quality at Rs. 12.50 per maund. Arrivals have gone up to an average of 4,000 maunds, including some quantity brought here in trucks from nearby centres for storing purposes and local stock has swelled to 45 *khaties*, besides the quantity held up in *kothas* for early despatch. Total arrivals from the beginning of the season amounted to 80,000 maunds, the corresponding figure last year being 50,000 maunds, when local stock was only 14 *khaties* as loading facilities were adequate. *Arhar* arrivals have also gone up to about 2,000 maunds daily and local stock is put at 10 *khaties*. Prices ruled steady. Closing prices for the week were: Peas *dara* green Rs. 11.37, white Rs. 12.50, *arhar* Rs. 12.37, *urd* Rs. 19 to Rs. 21.50, *moong* Rs. 15 to Rs. 17 and *masoor* Rs. 15.37 to Rs. 17 per maund.

After early spurt on bull support, pulses futures eased at the week-end on profit-taking sales. Fluctuations during the week were:

	Opening 6-5-1957	*Highest*	*Lowest*	*Closing* 13-5-1957
	Rs.	Rs.	Rs.	Rs.
Peas *Jeth* ...	10.87	11.48	10.84	11.22
Arhar *jeth* ...	11.87	12.65	11.87	12.33
Urd *Baisakh*	19.12	19.31	19.12	19.19

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 13*th May*

Despite the Government's announcement to release a further quantity of about 1.64 lakh tons of sugar for free sale, sugar prices recorded gains during the week, due to good outside buying enquiry and expectations of further exports. Rumours of increase in excise duty in the budget proposals also accounted for bullish trend, as some of the factories preferred not to sell sugar in the market before the budget announcement. Production and despatches of indigenous sugar amounted to 18.22 lakh tons and 10.35 lakh tons, respectively, up to 30th April 1957 in the current season, as against 16.53 lakh tons and 8.06 lakh tons, respectively, in the corresponding period last year and the stocks with the factories on this date stood at 13.14 lakh tons, as against 12.58 lakh tons last year. In U.P. alone, which has half of the total number of factories in the country sugar production in the current season is estimated at 10.4 lakh tons. The prevailing mill delivery prices are: Jaswant Rs. 29.12, Simbhauli Rs. 29.25, Daurala Rs. 29.75 to Rs. 30.75, Amroha Rs. 28.37, Bijnore Rs. 28.25, Mansoorpur Rs. 29 to Rs. 30.25 and Rampur Rs. 31, and retail Rs. 31 per maund.

The *khandsari* prices also improved during the week in line with the crystal section and prices were: Rs. 22 to Rs. 27 per maund according to quality.

Ready *gur* prices continued steady at almost unchanged price levels during the week. Local arrivals were small at about 100 maunds daily and stock is put at 96,000 maunds. Prevailing prices are: Rs. 11.50 to Rs. 12 per maund. *Gur* futures moved both ways in heavy turnover during the week and the latest quotations are: *Gur asar* Rs. 11.68 and *fagun* Rs. 11.53, as against Rs. 11.77 and Rs. 11.31, respectively, quoted a week ago.

EXCISE ON SUGAR RAISED

(From Our Own Correspondent)

BOMBAY, 16*th May*

The sharp increase in excise duty on sugar from Rs. 5.52 to Rs. 11.24 per cwt., announced by the Union Finance Minister yesterday, has created utter confusion in the sugar market. The sugar factories have put up the ex-mill rates by about Rs. 3 per maund, in addition to the enhancement of Re. 1 they had effected before in anticipation of the rise in excise duty. The currently ruling prices in the sugar market are, therefore, substantially higher than those at the end of last week.

Small grain sugar has jumped up by Rs. 10 to Rs. 98 per bag, inclusive of sales tax. Medium grain has advanced from Rs. 89-Rs. 91 to Rs. 99-Rs. 100, and large grain from Rs. 93-Rs. 97 to Rs. 101-Rs. 107.

Vaisakh delivery contract for 'C' grade sugar was squared up to Rs. 92-8, as against Rs. 91-14 a week before. *Shravan* delivery which stood at Rs. 94¼-Rs. 95 before the presentation of the Budget spurted to Rs. 99 on receipt of news regarding upward revision in excise duty.

Arrivals of sugar into the market during the week were considerably large, being 25,700 bags, as against 12,000 bags in the previous week.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and Dece respectively. Reserves include general and other reserves and all other funds, which a company may h excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual co land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and st for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where qu for portion of a year they represent the proportionate dividend for that period. In the case of those compi which close their accounts yearly dividends shown are for their financial year.

(e) For seven months ended 31st March 1956. ‡New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. ‡—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

MARKET GOSSIP

(*Concluded from page 979*)

quotas, they would have been in a better position to adopt long-range policies. Further, the Corporation, it is alleged, has not been able to do anything in spheres in which it may legitimately be expected to be of assistance. Thus, it is neither lifting low-grade ores nor opening up reserved areas. Nor has the Corporation rendered any assistance to the mining industry. Private exporters, on the other hand, claim that they are the backbone of the mining industry in that they help finance the large number of small miners.

Far from playing a really helpful role in developing the mining industry or

ECONOMIC CONDITIONS IN INDIA

(*Continued from page 987*)

"On the capital account, the estimates presented in March last provided for an outgo of Rs. 772.21 crores for capital expenditure and loans to State Governments and others. As stated earlier, an addition of Rs. 6.97 crores is now required for loans to the *Khadi* and Village Industries Commission for the Ambar Charkha programme.

Refinance Corporation

" A provision of Rs. 15 crores is being made for loans to the Refinance Corporation which is proposed to be constituted shortly. The agricultural commodities agreement between the Government of India and the U.S. under American Public Law 480 provided, among other things, that a sum of about Rs. 26 crores would be reserved for relending to private enterprise in India through established banking facilities. As a result of subsequent discussions with the U.S. authorities, a scheme has been evolved for channelling these funds through a Refinance Corporation, which will provide re-lending facilities against loans given by Indian banks. The Corporation is proposed to be constituted as a joint-stock company under the Companies Act, 1956, initially with an ordinary share capital of Rs. 12.5 crores to be subscribed by the Reserve Bank of India, the State Bank of India, the Life Insurance Corporation of India and about 14 from amongst the larger scheduled banks in India. It is anticipated that the Corporation will require loans from the Government of India out of the earmarked funds relating to the P.L. 480 Agreement to the extent of about Rs. 15 crores during the current financial year.

Export Risk Insurance

"Another provision of Rs. 50 lakhs is being made for investment in the share capital of the Export Risk Insurance Corporation. The Corporation will be registered under the Indian Companies Act as a private limited company with an authorised capital of Rs. 2.5 crores and paid-up capital of Rs. 50 lakhs. The maximum risks which the Corporation should carry will be 10 times the subscribed capital and the reserves built by it. In setting up the Corporation to introduce a scheme of export risk insurance in India, the Government of India has been actuated by the desire to place the Indian exporter on even terms with exporters of other countries, who are aided by similar schemes in their countries.

"These three items on capital account will aggregate Rs. 22.47 crores. Against this, capital receipts are now expected to improve by Rs. 25.83 crores. Of this increase, Rs. 9.56 crores represent the additional contribution to the Railway Development Fund which has been announced in the Railway Budget presented on 14th May 1957, and Rs. 1.27 crores the additional contribution (inclusive of interest) to the Posts and Telegraphs renewals reserve fund mentioned earlier. The balance of Rs. 15 crores is on account of assistance under the agricultural commodities agreement with the U.S.A. which is now estimated at Rs. 65 crores, as against the credit of Rs. 50 crores assumed earlier, the total foreign aid thus amounting to Rs. 150 crores. In the result, there will be a net receipt of Rs. 3.36 crores on capital account. Taking the revenue and capital accounts together, the overall deficit of Rs. 365 crores estimated earlier will now increase by Rs. 2.89 crores to Rs. 367.89 crores.

"The review of economic conditions and of the financial position as it emerges for the budget year shows clearly that, while more resources are required for meeting the increasing demands of the investment programme, both public and private, the economy is not generating the necessary savings. Budgetary deficits, rapid expansion of bank credit, continued pressure on prices and a large balance of payments deficit—these taken together —connote a deficiency of voluntary savings relatively to the size of the investments being undertaken.

Demands on Economy

"Further, the emerging pressures have to be judged in relation to the requirements over the entire Plan period. Expenditure on the Plan has inevitably to be stepped up year by year, and the strain on the country's resources will grow in the period that must elapse before the investments being made come to fruition. These demands on the economy can be met successfully only by sustained effort at increasing productivity and mobilising savings on a national scale. Simultaneously, it is essential that the pace of investment, both in the public and private sectors, is kept in reasonable relationship to the progress made in enlarging domestic savings and securing an inflow of external finance adequate to meet the foreign exchange requirements of the programmes in hand. This is the setting against which the policies and proposals that I propose to place before the House have to be judged.

"The first item of policy I wish to consider is credit policy. I referred earlier to the expansion of bank credit that has taken place over the last twelve months and the consequent strain this has imposed on the liquidity of the banking system. In the last few years, the tempo of investment activity in the private sector has been steadily rising, and more recently, there is evidence of a marked quickening of this tempo. This has entailed larger demands on the banking system by trade and industry. The credit advanced by Scheduled banks rose during the year 1956 by Rs. 153 crores to a record level of Rs. 788 crores, and, in the first four months of this year, it has risen by another Rs. 119 crores. The deposit resources of banks have not gone up to a corresponding extent. As a result, there has been an acute stringency of funds in the money market and an appreciable increase in the call money rate and the lending and deposit rates of banks. Considering the overall trends in the economy, the remedy for a situation of this nature is not an outright increase in the supply of money and credit to the extent of the demand, but a cautious and orderly expansion to meet genuine needs, accompanied by measures to prevent an excessive diversion of credit to less essential uses.

Credit Policy

"Against this background, the Reserve Bank has been pursuing a policy designed to moderate the inflationary possibilities of a large credit increase through general and selective credit restraint —without, at the same time, denying credit to essential lines of activity. This policy of judicious restraint took the form of an increase in the Bank's lending rates; the rate on advances under the bill market scheme was raised in two stages in March and November 1956, from 3 to 3½ per cent. and in February this year by an enhancement of the stamp duty on usance bills which increased the effective rate of borrowing by banks to 4 per cent. Simultaneously, the Bank increased its rate on advances against Government securities to 4 per cent. In addition, as it appeared that speculative trading, particularly in essential commodities in short supply like foodgrains, absorbed some portion of bank credit, the Reserve Bank issued directives with a view to regulating advances against such commodities.

"These measures have generally been effective. In the busy season now coming to a close, credit extended has been of a somewhat smaller order than in the last busy season. The technique of selective control has had some effect on the level of bank credit; it has restrained the rise in prices in the sectors to which it was directed and has helped in channelling resources to more desirable outlets. It must be emphasised that the Reserve Bank's policy has not been one of mere restriction of overall credit; in fact, it has been one of ensuring controlled expansion—a process which has been helped in particular by the liberalisation of the Bank's credit facilities under the Bill market scheme and also through its open market policy.

"The expanded facilities under the bill market scheme could be availed of by banks on a larger scale by a greater accretion to their deposit resources. Some progress has been achieved in this respect, but, I feel that a greater effort on the part of the banks to attract resources, especially by reaching classes which have not yet developed the banking habit, is called for.

"In view of the increasing tempo of developmental activity programmes for the current year and in the succeeding years, I am convinced that credit policy should continue to be directed towards moderating the pressure of demand for funds without at the same time hampering essential lines of productive activity. It is in this context that the Reserve Bank has been continuously keeping its Bank rate under review.

Bank Rate Raised

"Earlier today, the Bank announced an increase in the Bank rate from 3½ to 4 per cent. As the effective lending rate of the Reserve Bank to Scheduled banks has been 4 per cent. for some months now and the markets have had sufficient time to adjust themselves to this rate, this seems an opportune moment for rationalising the lending rate structure of the Reserve Bank by raising the Bank rate itself. There are other considerations also which indicate the desirability of making this adjustment in the Bank rate at this stage. I am not unaware of the limitations of the Bank rate as an effective weapon in a developing economy. Nevertheless, an increase in the Bank rate should assist the Reserve Bank in its task of moderating the pressure of demand for credit. While the Bank's latest decision might appear to be only a formal recognition of a *de facto* situation, it is an action in keeping with the analysis of the economic situation I have presented today, to curb the inflationary potential in the economy.

"In view of the increase in the Bank rate, there is no longer the need to keep the stamp duty on usance bills at existing levels, and I am, therefore, reducing it with immediate effect to 50 naye paise per Rs. 1,000 for three months.

"I may mention once again, in this context, the steps we are taking to set up a Refinance Corporation to cater to medium-term needs of industry. This Corporation will in time, I hope, fill a lacuna in our existing system of industrial financing. This is an instance of the positive aspects of the policy of controlled expansion which I have mentioned a little while ago.

Small Savings

"This brings me to my next point, which relates to small savings. In the ultimate analysis, the limit to expansion in the economy is set by the availability of savings, and in a country like ours where the banking habit is undeveloped, small savings have a special role to fill. Taking the first Plan period as a whole, the progress of the small savings movement has been encouraging. The target for the second Plan requires a substantial stepping up of collections year by year and I am anxious to ensure a sufficient incentive for the investor in small savings in all forms.

"The small savings movement is to my mind more than a way of collecting money; it is a scheme for spreading the habit of thrift and of encouraging participation by the common man in the Plan effort. I wish to take this opportunity to appeal to every family, whether in the urban or in the rural areas, to save more and make the small savings movement a success.

"While the campaign for small savings has to be intensified, I propose also to increase the rate of interest on small savings investments with effect from 1st June 1957. Briefly, I have decided to increase the rate of interest on post office savings bank accounts by ½ per cent. and to have a new series of 12 years certificates, to be called National Plan Savings Certificates in replacement of the present National Savings Certificates and National Plan Certificates. The interest on savings bank accounts will now be 2½ per cent. on balances up to Rs. 10,000 and 2 per cent. on balances in excess up to Rs. 15,000 in the case of individuals and 2 per cent. on balances in the public accounts.

"There will be only two types of savings certificates hereafter: (1) the National Plan Savings Certificate with a maturity of 12 years and (2) the Treasury Savings Deposit Certificate with a maturity of ten years. The yield on both these will be increased; for the former to 4.25 per cent. compound interest, at the end of 12 years and for the latter to four per cent. at the end of 10 years. Both these certificates will be tax-exempt. For people who hold these certificates for periods less than 12 years, the yield will be suitably adjusted. For example, Rs. 100 invested in a National Plan Savings Certificate will become Rs. 127 at the end of seven years, Rs. 148 at the end of 10 years and Rs. 165 at the end of 12 years. In the case of the Treasury Savings Deposit Certificates interest at the rate mentioned is paid every year, but an adjustment is made in the event of the holder deciding to encash it before maturity. In the case of National Plan Savings Certificates the period of non-cashability will be fixed at 12 months. The further issue of National Plan Certificates and Seven Years National Savings Certificates will be discontinued.

Fiscal Policy

"Fiscal and monetary policy at this juncture has to be designed in a way that will make it clear beyond doubt that we, on our part, are determined to do our best to implement the Plan as fully as possible. We have to make the fullest effort to raise the domestic resources required and I shall come presently to my tax proposals —which reflect this determination. It is clear, however, that the problem is not merely one of raising more domestic resources, but also of finding ways and means, first, to conserve and, secondly, to augment our foreign exchange resources in keeping with the large requirements of the Plan.

"The steps we are taking in the field of domestic economic policy will, it is hoped, react beneficially on our foreign exchange position as well, but the latter is, admittedly, a more difficult problem. What we can earn by way of foreign exchange on our exports is not a matter entirely in our hands, it depends on the trend of world prices and demands. Similarly, the prices we have to pay for our imports are beyond our control and all that we can do is to limit the volume of our imports.

"Here again, there are problems. The cuts we impose on imports become effective only after a time lag. Moreover, a developing economy needs increasing imports and there is danger, in a restrictive import policy, of impeding the flow of imports needed for the very purpose of development.

Foreign Exchange Policy

"The foreign exchange policy is thus a matter of delicate balancing and it is a balancing, if I may say so, in which a favourable turn of the wind could make a material difference. In the March White Paper, the various measures taken to save and conserve foreign exchange have been listed. The import programme for the first half of this year involved considerable cuts in imports, and the process will, I am afraid, have to be carried considerably farther in the import programme for the second half of the year.

"The Government has already announced its policy in regard to licensing of capital goods imports. Private investors are being encouraged to seek medium-term credits from abroad and to invite foreign enterprise to associate itself increasingly with Indian enterprise. We have in front of us a rather difficult period and we will have to exercise the utmost caution and vigilance in the matter of imports while taking every possible step to increase our export earnings. The fact that in the last 12 months the level of imports has been exceptionally high warrants the presumption that the economy can put up with sizable import cuts for some time to come without serious dislocation. At any rate, I wish to reiterate the Government's determination to restore a position of better balance in external account as early as possible.

"An underdeveloped economy which launches upon a programme of industrialisation suffers from the inevitable handicap of having to import from abroad, all or practically all, of the equipment and capital goods that it needs to make the right start. Nevertheless, a start has to be made in the process, risks have to be undertaken. In the nature of things, it is not possible to chalk out the course of policy and action in the field of foreign exchange with the same precision or detail as in the case of domestic policy. The second Five-year Plan involves heavy foreign exchange expenditure and the estimated gap in the balance of payments has widened partly because in some respects the initial estimates were on the low side and partly because of the rise in prices abroad. This gap is by no means easy to fill.

"We shall have to make our best efforts along the lines I have mentioned. At the same time, we must recognise that external resources on a considerable scale will be necessary in order to enable us to see through the developmental tasks we have taken in hand. Given reasonable effort all along the line on our part, we shall, I am confident, get over the transitional difficulties that are confronting us at present.

"The estimates of required outlay have gone up since the Plan was formulated. The fulfilment of the Plan to schedule postulates, *inter alia*, the availability of external resources on a considerable scale, and the need for these resources is the greatest in the earlier part of the Plan. Evidently, shortfalls in this respect cannot be made good by a draft on domestic resources. We have this aspect of the problem under continuous review. It is not possible to say at this stage to what extent the progress of the Plan will be affected because of foreign exchange shortage.

(*To be continued*)

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCIV. No. 2411 BOMBAY, 25th MAY 1957 PRICE: Re. 1.50

FURTHER THOUGHTS ON THE BUDGET

WHILE giving expression to our first thoughts on the Central budget for 1957-58, as presented to Parliament on the 15th inst., we stated in these columns last week that the numerous taxation proposals would do more harm than good to the country. On further thought, we are convinced that that observation is no exaggeration; if anything, it is an understatement. Unless modified on the lines which we shall presently indicate, the budget will prove definitely inimical to sound and safe economic development of the country, and detrimental to its moral fabric. While it is bound to make the rich poorer, except, of course, those persons who successfully resort to ingenious methods of avoiding taxation, one is not certain that it will make the poor richer. The chances are that the poor may become poorer. Indeed, this has been the outcome of developmental expenditure in the first year of the second Plan. With an increase of 14 per cent. in the cost of living in that year, the real income of the people, in general, has perceptibly gone down. The richer classes, too, are less rich, thanks to a fall in their earnings and a heavy capital depreciation in their investments. The same applies, perhaps to a greater degree, to almost all the strata of the middle class. If there is any section that has not suffered to a perceptible extent it is the industrial workers who constitute but a negligible fraction of about 1 per cent. of India's total population. Many of the new taxation proposals are so ill-conceived that they threaten to aggravate this depressing outcome witnessed in the first year of the second Plan.

Taxes to the right, taxes to the left, taxes in the front and taxes at the back. This is the theme of the final budget for 1957-58 and it needs a little explanation, lest it should be dismissed as mere rhetoric. If one works hard and earns more, one has to pay more tax. If one does not work and prefers to live on past savings, one is called upon to pay even more taxes. If one spends more, the excess expenditure is subject to tax, in addition to the high rates of sales tax that already obtain. If one saves in order to avoid the expenditure tax and sales tax, then the savings attract more tax in various ways. Thus, one is cornered from all sides. The only effort that does not attract more taxation pertains to matrimony and procreation. Really speaking, activities in this direction are sought to be encouraged through a slightly higher tax-free allowance for a married person and a more liberal treatment to persons with children in respect of expenditure tax. Can the aforesaid state of affairs be honestly described as conducive to (*a*) better and bigger production, (*b*) larger savings and their direction to productive channels, (*c*) honesty and integrity among taxpayers and tax collectors alike, and (*d*) an inflow of foreign capital and technical know-how from countries where the freedom of man is highly prized? The authors of the budget assert that it is, *vide* the Finance Minister's budget speech and his observations at the Press Conference last Sunday. But we have our own serious misgivings on this point.

To the credit of the Finance Minister and his Ministry, it must be said that, on middle class incomes ranging between Rs. 4,200 and Rs. 35,000 per annum, a slight relief in income taxation has been given in respect of both earned and unearned incomes. Those who fall within this group also get some concessions in regard to their investments in life insurance, provident fund and national savings certificates. They do not have to pay any expenditure tax, which begins to operate only on (annual) incomes of Rs. 60,000 and over. They are not subject to wealth tax, assuming that their total wealth does not exceed Rs. 2 lakhs. But, if they have any investments in shares of joint-stock companies other than banks and insurance, they do pay wealth tax, albeit indirectly, as these companies are subject to this tax. These gains are, however, illusory. The relief given to a person with an income of Rs. 400 per month, for instance, is Rs. 34 per annum, or a little less than Rs. 3 per month, in respect of earned income. It is Rs. 52 per annum, or Rs. 4.33 per month, to one having a monthly income of Rs. 625. It is somewhat greater in respect of unearned incomes falling within these brackets, but not many salary earners in this range have any sizable unearned incomes. As against such minor reliefs in income-tax, people belonging to the middle class have already suffered much more by way of increased cost of living and, consequently, a fall in their capacity to save. On top of this, they are faced with a strong prospect of a further increase in cost of living. Even persons with an income of Rs. 2,500 per month, who get a relief of Rs. 600 per annum or Rs. 50 per month in income taxation, will be no better off for the reasons just mentioned. The rise in the price of petrol alone will more than wipe out the advantage if they possess even a small car.

The reduction made in the incidence of tax applicable to the top income groups is also an eye-wash, as aptly described by Mr. A. D. Shroff in his critical analysis of the budget proposals before a public audience on Wednesday last. The effects of increases in other taxes and introduction of wealth and expenditure taxes more than nullify the benefit given in income and super taxes. Indeed, this relief is unreal, because most of the persons who are supposed to benefit by it will sooner or later be paying more than one rupee by way of direct taxes for every rupee earned by them. This is not what even Prof. Kaldor, the mentor of the Finance Ministry for this year, wanted to happen. Given the option, we have no doubt that the top income group will prefer the continuance of the *status quo* to what the Finance Minister has now imposed on them. In other words, the wealth tax and the expenditure tax may be dropped and so also the reliefs to the upper income group. Similarly, the middle class would not mind giving up the illusory saving in income-tax, if the increases in some of the indirect taxes on the necessities of life, as, for instance, cloth, matches, sugar, tea and coffee, were withdrawn or substantially reduced. By accepting these two suggestions, the Finance Minister will be able to repair the enormous harm he has done to people's confidence in the future. His failure to do so will have serious repercussions on the pace and momentum of economic growth of the country for two reasons. First, the capacity of the private sector to fulfil the role assigned to it in the Plan will be seriously handicapped and, secondly, the public sector, by its very nature, is unsuited to fill the resultant gap.

The imposition of wealth tax, which is a capital levy of a continuous character, is patently unjust and unnecessary, in view of the existence of both estate duty and capital gains tax. It is doubly unjust to apply it to joint-stock corporations which constitute only another but a more efficient form of co-operatives. Wealth tax on companies means double taxation and even triple taxation, when applied to subsidiaries of a company. Coupled with the penal taxation on the issue of bonus shares, wealth tax on corporations is wholly unjustified. The fact that the tax is payable even by new companies as soon as they are formed and irrespective of their making a profit or a loss will seriously retard the development and growth of corporate enterprise. It is, indeed, strange that the Finance Minister of a democratic country should have at all imposed this tax on corporations, because there can be no genuine democracy, if there is no free enterprise and free institutions. It is obvious that the scope for free institutions will be greatly limited, if the development and growth of the joint-stock company system is checked.

There are some who argue that wealth tax should be modified, so that new companies may be exempted from the levy for some years, that is, until they are able to earn a net profit sufficient to pay a reasonable return on the capital invested. This suggestion obviously springs from the realisation that the demand for the abolition of wealth tax on corporations will not be acceptable to the Government. But a modification of the tax on these lines is a poor substitute for its abolition. If a concession is shown to a new company, the same must also be extended to established companies which are undertaking expansion and modernisation of their factories. Since, in actual practice, it will be difficult to work out a satisfactory scheme for exemptions and since, in any case, a capital levy of this nature is introduced only to arrest economic growth, which is the reverse of what this country is after, the wealth tax must be scrapped.

On grounds of principle, as well as of difficulties involved in collection, the unprecedented and novel expenditure tax, too, should go. This tax may seem innocuous now, but, in practice, it will prove to be a first-class weapon of oppression in the hands of the party-in-power. There is no limit to the extent to which this tax, as also the wealth tax, can be utilised to harass the people. It will infringe the freedom of people and lead to a police State. In combination with the increases in the existing forms of direct taxation, these two new taxes will induce people to devise ways and means of evading as much tax as possible and to corrupt the tax collectors. They will also arrest the inflow of foreign capital, besides accelerating the exodus of such capital that has been going on for some years now. Such a development at a time when the country's balance of payments position is steadily worsening will be a real tragedy.

Some contend that the Government's object in taxing the country to the hilt is to prove to foreign lenders, including the World Bank and the I.M.F., that it has taken all possible measures to raise domestic resources for financing the second Plan, and that it is now their turn to come to the rescue of India. We think that this is a delusion. The foreign lenders are not such simpletons as to be carried away by this argument. They have enough diligence to analyse for themselves the merits and demerits of the country's economic policies and projects. They will soon realise, if they have not already done so, that this country is groaning under unduly heavy and inequitable taxation. It is common knowledge now that the consensus of opinion in foreign countries about the second Plan is that it is over-ambitious and beyond the readily available resources of India. After studying the Plan, the World Bank and the I.M.F. had urged the Government of India to attempt a modest plan. They had also advised the Government to give more scope for, and freedom to, the private sector. Almost all the direct and some of the indirect taxes that have now been imposed, as well as the continued but unconvincing insistence that the Plan cannot be altered in terms of either its size or its period, tantamount to a total disregard on the part of the Government of the well-meant advice of India's best friends. In view of all this, the chances of India being able to attract foreign capital are dim, if not bleak.

From what has been stated thus far, it will be realised that the system of direct taxation has been so revamped as to reduce the scope for and the freedom of the private sector and to discourage even the present little flow of foreign capital into India. Some of the indirect taxes, too, as, for instance, the unconscionably heavy increase in the cost of steel and cement, as well as the further addition to the excise duty on petrol, will act as a brake to the growth of industries in the private sector and add to their capital cost. Indian industries are already suffering from an initial handicap in capital cost of anything between 30 and 40 per cent., owing to the high prices paid for imported plant and machinery. The increase in the prices of steel and cement will only add to this handicap. On top of this, there is the threatened cut in the imports of various items of industrial stores and raw materials which will hit the private sector more than the public sector. It will be at least some consolation, if the public sector puts to economic and efficient use the resources—financial and material—now sought to be diverted from the private sector and shows quick results. Unfortunately, all available evidence is to the contrary. There is no certainty that this diversion of resources will bring satisfactory and timely return to the society in terms of real wealth. There is bound to be considerable wastage, delay and unproductive expenditure. To give only one instance. A sum of Rs. 10 crores is being earmarked for investment on 75,000 Ambar Charkas. If the same amount is invested in the mill sector, it will be sufficient to finance at least eight spinning mills, each with 75,000 modern spindles, the economic advantages of which are only too well known to our readers to require an exposition.

INDUSTRIAL RELATIONS

THE importance of peaceful industrial relations for the success of the second Five-year Plan has now received widespread recognition. Surely, industrial peace is far too vital a consideration to be sacrificed at the altar of ideological warfare. The Government and the employers, however, may well congratulate themselves on the fact that the recent record of labour disputes in India compares favourably with that in many an industrially advanced country. The credit for this must go as much to the employers as to the workers, to the former for their realistic recognition of the fact that, in the new order, they must be willing to recognise workers' rights and to at least a few sections of the latter for their willingness to see that excessive demands may culminate in the drying up of the source from which they derive their livelihood.

It is true that there have been quite a few deplorable disturbances to the generally satisfactory industrial relations. But, by and large, the recent record in the sphere of these relations has been encouraging, especially when India is compared with several other countries. But the important questions are: What are the chances that this record will be maintained or even improved? And, if the outlook is not bright, what should be done to improve it? These are by no means academic questions, for on the right answer to them will depend industrial progress, at least in the next few years. The future course of industrial relations will be determined by the degree of success with which the Government is able to hold the price levels. In the context of the inflationary forces which are already developing in this country, it would be a difficult task indeed for the Government to prevent these levels from going up. And, if they go up, demands for higher wages will become too insistent for the Government and the employers to disregard. Unfortunately, the room for manœuvre in production costs is strictly limited, what with the increased fiscal burdens and the strange device of compelling the establishments to keep a part of their own finances as deposits with the Government. The abolition of the appellate tribunal, the difficult foreign exchange position, the omnibus official restrictions on further expansion in production in certain sectors are other factors which are bound to reduce employment opportunities in the country and employers' ability to meet demands for higher wages as and when they are put forth.

Clearly, the task of maintaining industrial peace, which is by no means easy even in normal circumstances, may be rendered particularly difficult at a time of inflation and high taxation which may well be ahead of this country. It is, therefore, vital that unnecessary jolts should be guarded against and both sections of industry prepared for a realistic appraisal of all the intricate issues involved in the sphere of industrial relations. The participation of workers in management is one such issue, for such participation ensures the creation of an atmosphere which facilitates what the Director-General's Report to the International Labour Congress in 1955 called "collective thinking." Some industrial managements in this country have already instituted welcome schemes designed to secure participation of workers in management. But, in the context of the present position of uneducated workers and politically dominated unions, it may become necessary to hasten slowly in this direction. In any case, as Mr. G. D. Somani said, in the course of his presidential address at the annual conference of the All-India Organisation of Industrial Employers, held this week at New Delhi, it would be dangerous to introduce such new schemes by legislation.

The two other important issues are wages and labour legislation. The abolition of the appellate tribunal has given an additional significance to the question of wages. The absence of an authority which will resolve wage disputes from the wider national angle leaves a certain vacuum. When the proposal for wage boards for different industries is implemented, it may be possible to fill the vacuum created by the disappearance of the appellate tribunal. If wage boards are to be really effective, they must be so constituted and their terms of reference must be so drawn up that they take a broad, rather than a partisan, view of the wages question. From this point of view, it is certainly to be welcomed that the terms of reference of the Wage Board which has already been constituted for the cotton textile industry are well conceived. For, as Mr. Somani pointed out, the terms of reference of the Board lay down that, in evolving a wage structure, the Board should, in addition to the considerations relating to fair wages, also take into account the needs of the industry in a developing economy.

The second issue, to which we referred at the outset, is labour legislation. The Factories Act, the Mines Act, and the Industrial Disputes Act have all been amended almost beyond recognition, while several pieces of new legislation like the Employees' State Insurance Scheme and the Provident Funds Scheme have been enacted. In recent years, one piece of labour legislation has followed another in quick succession and all these pieces of legislation put together have altered the traditional role of industrial managements, so that they are now genuine agents of the Welfare State. It may be that all this was necessary in its own way. For labour is worthy of its hire and is not a mere commodity in the market. Even so, it is time that the Government took stock of the labour laws. Mr. Somani, on his part, made two valuable suggestions. He said that the Government should now examine whether the administrative machinery was adequate enough for enforcing these labour laws. Secondly, he suggested that the different pieces of social legislation, such as provident fund and medical benefit, should "be viewed and reviewed in a co-ordinated way."

In this connection, it is noteworthy that Mr. G. L. Nanda, the Union Minister for Labour, who inaugurated the session, expressed the opinion that, as far as he was concerned, he would not like to have new labour bills passed. Instead, he would concentrate his efforts at securing a proper and efficient enforcement of the existing laws. It is to be hoped that he will be able to carry his colleagues in the Cabinet as well as his party over the question of a reasonable period of respite from major labour legislation. Mr. Nanda revealed that he was thinking of setting up a study group to examine the questions relating to social security and wage policy. It would, perhaps, be useful, if he also set up a study group for reviewing the working of the entire legislation in the sphere of labour, in order to determine to what extent the workers derive the benefits the existing legislation confers upon them. If such a study reveals that the administrative machinery and regulations have to be tightened up, he should not hesitate to adopt the appropriate measures. In the sphere of labour, as in all spheres of human activity, it is better to have a few laws that are ably administered than a plethora of enactments which are insufficiently observed in actual practice.

PROHIBITION

BY her forthright attack on the Central and State Governments' Prohibition policy, Rajkumari Amrit Kaur, the former Union Minister for Health, has voiced the widespread feeling among informed sections of the people that a dogmatic approach to the question of prohibition has thrown up quite a few problems which could well have been avoided had the policy-makers shown a little more realism in handling an issue on which unanimity of opinion was conspicuous by its absence. In a trenchant criticism of the Finance Minister's new taxation proposals, during the course of a debate on the General Budget in the Rajya Sabha, the former Health Minister put in a strong plea for scrapping prohibition and vigorously urged the re-imposition of the salt duty, the policy governing both being informed more by false sentiments than by rational considerations. "Could any one of those running the Congress Government in States and the Centre," she candidly asked, "lay their hands on their heart and affirm that prohibition policy had been a success?" She then supplied the answer by saying: "I say it has been a failure and will continue to be so. Turkey tried it and failed; the United States of America also tried it and failed. Whatever be the condition in India very few people drink. The number of addicts is less than one per cent. and those who touched drink are less than one per cent. But what is happening is that the money which should go to the Exchequer is being taken by the bootleggers and they are the biggest protagonists of prohibition. If Gandhiji were alive today," she went on, "he would say, 'abolish prohibition and try other means.'" It would be interesting to know the reaction to this statement of those in authority who very often find in Gandhiji's name a convenient cover for reactionary policies.

Prohibition, it is common knowledge, constitutes a direct loss to the national exchequer to the extent of not less than Rs. 50 crores, whereas the indirect loss by way of cost of the vast hierarchy of prohibition staff is not an inconsiderable drain on the public purse. Obviously, this is too big a price for a measure which has brought only doubtful benefits to the people. At a time when the country is struggling hard under the weight of an over-ambitious Plan and the Finance Minister is at his wit's end to seat the Plan elephant on the small stool of the national economy, the Government may do well to rethink its policy in respect of prohibition and see how far it can be made to conform to the realities of the situation. There need not be any moral qualms about this. For, if prohibition is sought to be justified on moral grounds, it is cutting the ground under the official stand. The Constitution envisaged it only as a health measure not as a moral elevator. It is extremely doubtful if even the health objective has been achieved in those regions where it has been enforced. Illicit liquor, often prepared under unhygienic conditions, adversely affects the health of the drinkers. So far as the moral value of prohibition is concerned, the less said about it the better. It has bred widespread defiance of law, if not also contempt for it. In many places, illicit distillation has developed into a virtual cottage industry and the market has been flooded with pernicious products of extreme danger to public health. Further, the wisdom of assigning prohibition priority over such items as food, clothing, shelter and medical relief, has been repeatedly questioned by many witnesses testifying before the various Prohibition Enquiry Committees. Opposition to prohibition on financial grounds is no less formidable. According to very conservative estimates, as much as Rs. 50 crores could be obtained through excise and customs if prohibition were scrapped.

SIGNIFICANCE OF LIFE CORPORATION'S SUPPORT TO EQUITIES

SMALL INVESTORS—MR. MAHINDRA ON BUDGET

THURSDAY, 5 P.M.

AFTER staging a sharp fall, equities on all the Stock Exchanges seem to have steadied up a bit at levels a shade higher than the lowest points touched in the immediate post-budget session. But they are still far below the levels at which they were standing a fortnight ago. And many are not sure whether even those prices will be seen again in the near future, because there is hardly any buying enquiry from either investors or speculators. The hopes of the Finance Minister making any alterations in his taxation proposals in favour of investors are not bright. Protests against the new burdens and pleas for reliefs have gone forth from the Stock Exchanges and Shareholders' Associations. There is also a move on the part of the leading business men in Bombay to make a strong but well-reasoned representation to the Finance Minister. It is, however, a moot point whether he will pay any heed to the pleas and persuasions of even his friends, let alone his critics.

MARKET GOSSIP

There are several reasons for taking this view. In the first place, the Prime Minister has given his solid support to the taxation proposals and publicly complimented the Finance Minister on his courageous performance. Secondly, there is hardly any worthwhile opposition from the Members of Parliament to those taxes that adversely affect the fortunes of investors. Thirdly, the business community, too, is hopelessly divided on the issue of critically examining the taxation proposals and making a joint protest against them.

An influential section of business men is out to offer complete co-operation to the Government even to the extent of not making a verbal protest against any of the new taxes. It thinks that such protests will be futile and will only bring further hardships on business men. It is prepared to be content with whatever that is left for the private sector, in the hope that better days will come. The influence of this section over the Federation of Indian Chambers of Commerce and Industry is obvious from the tame and humble representation made by this organisation to the Government on the budget. To note the difference in the approach between the two sections of business community, one has only to compare that representation with the speech of Mr. A. D. Shroff at a public meeting held under the auspices of the Commerce Graduates Association in this city yesterday. This meeting, incidentally, was well attended and the Walchand Hirachand Memorial Hall of the Indian Merchants' Chamber, where it was held, was packed to capacity. Mr. Shroff did not mince matters. He analysed the significance of the various taxation proposals to the country's economy in a forthright and telling manner.

Be that as it may, the lack of unity among business men even on issues which vitally affect all of them and the future of democracy adds to the strength of the Finance Minister and enables him to take the country to the Congress Party's avowed but undefined goal of socialistic (or is it communistic?) pattern of society with ease and comfort.

* * * *

The Finance Minister has struck at the private sector so forcefully that it seems to have been numbed into silence and apathy. Many a business man has reconciled himself to the new imposts. He is not in a mood to fight. The business community is, of course, sullen, but it seems willing to accept all the imposts, except the wealth tax on companies. It is hoping and praying that the Government will be good enough to exempt at least the public companies from this levy. In his reply to the general debate on the budget in the Rajya Sabha, the Finance Minister has given no indication of his willingness to respond to this prayer. It remains to be seen whether he will change his mind and spare the investors of this onerous burden at least when he goes to the Lok Sabha. If he is merciful then, he will save thousands of small investors who have, as patriotic citizens, put their hard-earned savings in shares of first class industrial concerns and thereby contributed their mite to the industrial advance of India. Failure on his part to do so will put them to heavy losses which in turn will deprive the private sector of an important source of capital. In this connection, the Finance Minister will do well to bear in mind that, unlike the big operators, the small investors in equities have no financial resources to average their cost by buying at lower levels. Also, since his intention is not to subject the smaller fry to wealth tax, he ought to exempt the companies also from such tax to be in keeping with this intention. If his object in applying this tax to companies was to prevent groups of rich people from trying to escape the wealth tax, he should have tried other methods, without penalising small investors.

Again, if a set of conditions is created, under which small investors fight shy of investing in equities, it will run counter to one of the fundamental objectives of the new Company Law, namely, that the ownership of companies should be diffused over as large a number of persons as possible. In other words, if in framing tax policies and measures, no regard is had for persons of small means, who participate in the industrial development of the country by putting their savings in shares of joint-stock companies, the Government may as well bid goodbye to its equally avowed objective of preventing concentration of ownership of companies in a few hands. Times out of number, Mr. T. T. Krishnamachari has declared from house tops that he is the champion of small investors and industrial democracy. It is to be hoped that second thoughts will persuade him to withdraw the wealth tax on companies and thereby stand up to his own past profession.

* * * *

The fractional recovery in equities during the past few days is due partly to bear covering and partly to the excellent support extended by the Life Insurance Corporation to such first class shares as Tata Ordinary, Indian Irons, A.C.C., Bombay Dyeings and Wimcos. According to knowledgeable sources, the Corporation has bought fairly large blocks of these scrips and thereby added to the floating supply of funds, a development with which the banks appear to be pleased. The floating stocks of shares also must have shrunk to some extent and may do so further after the next settlement.

Why is the Life Insurance Corporation buying these shares at current levels? Does it believe that the worst is over? Or does it also belong to those vast majority of investors who are unable to comprehend the tops and bottoms for equities?

Uncharitable critics of the Finance Ministry say that the Corporation's support to the equities has been inspired by the Finance Minister, in order to abate the possible opposition in Parliament to his new tax proposals and that it may disappear once the debate on the budget is over. This explanation is farfetched, for the budget is going to be before the House for a fairly long time. Further, the Government's position in Parliament is so strong and the Finance Minister's prestige with the Congress Party so high that it is not necessary for it to resort to such stunts as the one now alleged in order to win support for the new tax proposals.

It is, however, likely that the Corporation has been asked to step in, in order to preserve the morale of the market, and to avert a bear raid and the consequent tumbling down of equity values. Another reason may be the fact that first class shares can be had for a song. After all, the Corporation has to show a good profit and a sizable surplus at the time of valuation, in order to make the nationalisation of private life insurance a success in the eyes of the public. Purchases of sound equities at relatively attractive levels of yield may be one way of achieving this goal.

It is also permissible to surmise that slumps in share markets such as the current one provide a golden opportunity for the State to occupy the strategic heights in the field of industry and mount the guns against the private sector without paying too high a price. This objective, it will be recalled, was one of the chief arguments advanced by the Prime Minister and the Finance Minister in favour of nationalisation of life insurance. Ever since the commencement of depression in equities in August last, the Life Insurance Corporation must have acquired a sizable share-holding in all the leading industrial concerns, thereby enabling the Government to keep a watch over their working. This development need not necessarily be regarded as an unmixed evil. It may sometimes prove quite beneficial to investors. If, for instance, the Life Insurance Corporation is a large-scale holder of the shares of Indian Iron, the Government may be favourably inclined to permit an increase in the Company's dividend.

* * * *

A rough estimate of the effects of the various new burdens imposed by the Finance Minister on some of the leading companies suggests that most of the companies will be able to maintain the dividend at the previous year's levels, though only by straining their past reserves to some extent, if the profit-margin is found insufficient. The A.C.C., for instance, may have to pay Rs. 67.36 lakhs more by way of new taxes, of which the wealth tax alone accounts for about Rs. 16 lakhs. The additional burden on the Tata Iron and Steel is placed at Rs. 70 lakhs, of which the share of wealth tax is said to be Rs. 17 lakhs. The corresponding figures for Indian Irons are Rs. 35 lakhs and Rs. 10 lakhs, for Bombay Dyeings Rs. 13.20 lakhs and Rs. 2.83 lakhs and for Dunlop Rubber Rs. 6.30 lakhs and Rs. 2.90 lakhs, respectively.

The profits of cement, steel and rubber goods industries are controlled by the Government with the help of the Tariff Commission. The latter has fixed the profits of these industries after going into their cost of production and the incidence of various imposts. Now that there has been a sizable increase in their production costs owing to factors beyond their control, their profit-margin may be well below the levels fixed by the Commission as being reasonable. They will, therefore, be justified in requesting the Government to order a fresh enquiry into their costs of production, as well as tax burdens, and to award an increase in their retention prices to compensate for the increase in their costs and the taxes payable by them. It is to be hoped that all the companies concerned will move in this matter without any avoidable delay.

* * * *

By a pure coincidence, on the day the *de jure* Bank rate in India was raised from 3½ to 4 per cent., Switzerland, too, put up its Bank rate from 1½ per cent. to 2½ per cent. This is the first change to be carried out by the Swiss National Bank in the last 21 years, since 26th November 1936, to be precise. The Bank stated that this step demonstrated its resolve to maintain the purchasing power of the Swiss franc. The economy, it added, is at present exposed to great tension, with exports, building activity, retail trade turnover, bank credits and employment all at record levels. Note circulation, too, has increased in recent months to a level never before reached in peace-time. The Swiss Government is also envisaging steps aimed at slowing down the boom trend. It will again reduce building orders for the current year and consider a reduction in the limits for Government export risk guarantees. The Government has appealed to cantons, municipalities and private enterprises to support its measures by more restraint on investments, price increases and wage demands.

It may be interesting to note, in this connection, that an important factor which enabled Switzerland to enjoy the fruits of an extremely cheap money for 21 long years was the large flow of capital from several parts of the world seeking refuge there. Although there has been very little change in the influx of refugee capital, the demand for money has gone up substantially, what with the issue of foreign loans, in addition to the causes mentioned above.

* * * *

No one can claim that the ghost of inflation has been laid in this country. In many parts of the world, inflation may have spent itself out, thanks to the rapid increase in production won through strenuous efforts. But, in India, which has set before itself high targets of industrial expansion and finds that resources are not large enough to match the magnitude of its ambitious plans, there is yet a very real danger of inflation. Obviously, a great deal of effort will be needed to hold it in check, even if it cannot be altogether eliminated. Some notable observations on the impact of inflation and heavy taxation on Indian economy were made by Mr. K. C. Mahindra, Chairman of Mahindra and Mahindra Ltd., in the course of his speech at the annual meeting of the Company, held this week in Bombay. He called attention to the inflationary pressures which had begun to weigh rather heavily on an economy. He, therefore, welcomed the Government's affirmation of the consideration that "sustained increased productivity and savings are the only true key to progress."

Mr. Mahindra rightly said that an important sphere of inflationary pressure which had not come within the broad sweep of Mr. Krishnamachari's measures was the positive influence of raising public expenditure. This is an aspect of anti-inflationary campaign that has suffered much from neglect. It seems somehow to be tacitly assumed that Governmental expenditure is inevitable and that those who call for economies in such expenditure are inveterate enemies of a Welfare State. The argument usually is that, in a Welfare State, public expenditure must necessarily grow and the taxpayer has to be prepared to pay for the services which the State renders. It seldom occurs to people to ask whether the high level of public expenditure is necessary or whether a large part of it is not wasted on the unproductive item of maintaining a far-flung and ever expanding bureaucracy. The fact is that a large level of public expenditure, which does not add to the productive capacity of the nation, is itself a powerful inflationary force. Again, as Mr. Mahindra pointed out, no amount of restraint on consumption or on credit would be of avail, if the magnitude and the pace of Governmental spending were not diminished. He added: "The volatile spenders, both State and Central, need to be kept in check under a strong leash, if the delicate balance of stability is to be achieved." Appropriately enough, he quoted the distinguished Governor of the Bank of England who stated not long ago that "the economic machine could not be driven with one foot on the accelerator of public expenditure and the other on the brake of credit restriction."

Criticising the "certain ambivalence" in economic thinking, to which the Finance Minister himself had often drawn attention, Mr. Mahindra averred that the increase in corporation taxes, compulsory deposits and tax on wealth are positive disincentives to capital formation. After citing the results of the survey conducted by the Indian Institute of Public Opinion, which showed that there was no significant rise in the rate of capital formation between the years 1952-53 and 1955-56, he went on to examine the impact of wealth tax on the economy. He contended that it was unrealistic to place heavy burdens on the source and instrument of capital formation. He added: "Assuming that a tax on wealth was demanded by the political judgment of the majority of the people and that wealth was being concentrated in a few hands, surely, tax on the assets of a productive instrument is not the best method of divesting individuals of a portion of their holdings, for you are thereby hurting the most the very organs which should stand four square in the battle for fighting inflation."

Clearly, whichever way the tax burdens are looked at, it seems difficult to escape the conclusion that they might affect adversely capital formation and thereby lead to a slowing down of activity in the private sector. In this connection, Mr. Mahindra called attention to the Finance Minister's observation that "these measures are not intended to curtail genuine investment in the private sector, though it could not be unreasonable to assume that a slight slowing down for a short period will not, in present circumstances, be undesirable." Mr. Mahindra was certainly not uncharitable to the Government when he commented: "If disincentives are really what are being aimed at, business men should frankly be told to go slow, but we should not be asked to accept the sort of Alice-in-Wonderland economy in which the more the Government spends and the higher the taxes went, the more would be left for investment and spending!"

It is a pity that the Government has not recognised that disincentives are the fuel to the inflationary fire which is now perhaps a mere flame but may well turn out to be something more sinister.

EQUITIES RULE STEADY

DOWNWARD TREND ARRESTED

(From Our Own Correspondents)

BOMBAY, 23*rd May*

THE share market ruled steady during the week under review. Though the trend was indecisive, a small recovery in prices was recorded on balance. This does not mean that the market got over the panic created by the Budget proposals and was stabilising itself at lower levels. On the other hand, there was a sense of frustration among investors and speculators alike and this was duly reflected in the telegraphic memoranda submitted by the Bombay Stock Exchange and the Committee of the Bombay Shareholders' Association on the tax proposals, particularly those on joint-stock companies.

The withdrawal of the increased import duty on kerosene and newsprint did not give rise to hopes of further concessions in tax proposals, as the chances of such a prospect were completely ruled out by the Finance Minister in a statement at a Press Conference held subsequently. The attitude of the Finance Minister in not giving in to representations gave rise to apprehensions. Fears about settlement difficulties by a leading operator of Calcutta also chilled enthusiasm. If, however, there was no further depression in prices during the week, it was due to the support given by the Life Insurance Corporation, which was said to have purchased some blue chips.

In the steel section, Tata Ordinaries reacted from Rs. 153.50 to Rs. 150.75, but recovered to close at Rs. 154. Tata Steels (New) shed on balance Re. 1.50 to Rs. 107.50. Indian Irons staged an improvement early in the week from Rs. 17.20 to Rs. 18.05. Subsequently, they receded to Rs. 17.40 and closed at Rs. 17.60.

The textile section displayed a slightly better tone. Bombay Dyeings improved from Rs. 509 to Rs. 522 before closing at Rs. 520. Centurys advanced from Rs. 406 to Rs. 413.50 before being placed at Rs. 396 *ex-div.* yesterday. After giving way to Rs. 391.50, they closed today at Rs. 395. Kohinoors were marked down from Rs. 305 to Rs. 292.50, but improved to Rs. 296. Central Indias shed Rs. 2 to Rs. 102. Finlays were better by a rupee at Rs. 266. Indore Malwas rose by Rs. 7 to Rs. 139. Shree Niwas were unchanged at Rs. 165. Simplex moved between Rs. 160.50 and Rs. 166 before finishing at Rs. 161.50. Standards lost Rs. 5 to Rs. 380. Svadeshis were done at Rs. 186 *ex-div.*, as against Rs. 203.50 *cum-div.* a week ago, and Tata Mills at Rs. 41.75 *ex-div.*, as against Rs. 45.50 *cum-div.*

The miscellaneous section disclosed small gains in select counters. In the sugar group, Belapurs rallied from Rs. 210 to Rs. 219, but shed a part of the gain when they closed at Rs. 217.50. Phaltan Sugars rose from Rs. 127 to Rs. 129.50 and Walchandnagar Industries from Rs. 239 to Rs. 245. Bhopals were done 35 nP higher at Rs. 18.25. Among cement shares, Associated Cements came up from Rs. 146 to Rs. 151.75 and closed at Rs. 151.50. A.C.C. coupons were, however, done Rs. 2 lower at Rs. 56. Digvijays were marked down by Rs. 8.25 to Rs. 137, despite the slight increase of 50 nP to Rs. 9 per share in the dividend for the year 1956. In the engineering and mining group, Alcocks advanced by Rs. 3.75 to Rs. 246.25. Tata Locomotives dropped from Rs. 144.50 to Rs. 139.50, but staged a come-back to Rs. 143. Premier Constructions shed Rs. 2 on balance to Rs. 142. Shivrajpurs improved by Re. 1.50 to Rs. 77.50. Indian Coppers looked up to Rs. 3.36.

In the shipping and automobile group, Scindias were erratic, moving between Rs. 17.55 and Rs. 16.90 and at the close they stood 10 nP higher at Rs. 17.30. Great Easterns gained 65 nP to Rs. 18.65. Premier Automobiles were Re. 1 lower at Rs. 87 and Hindustan Motors 35 nP lower at Rs. 6.65. Among miscellaneous industrials, Bombay Burmahs came up to Rs. 515 from last week's closing of Rs. 506, but finished lower at Rs. 513.50. National Rayons provided a feature with a rise of Rs. 10 to Rs. 213. Tata Chemicals stood 25 nP higher at Rs. 16.25 and Tata Oils 50 nP higher at Rs. 43. Wimcos were a shade better at Rs. 158.

• • • •

Calcutta Stock Exchange

CALCUTTA, 22*nd May*

The Calcutta Stock Exchange, in common with other share markets in the country, were in the doldrums during the week. The Budget, presented to Parliament on Wednesday last, envisaged to raise such a colossal sum of Rs. 77.85 crores in the rest of the current financial year from new taxes and/or changes in the existing taxation. Proposals for new taxes were not a surprise entirely, and the market had earlier anticipated new measures which might raise an additional sum of Rs. 50 crores a year. Incidentally, the Finance Minister had often indicated that every year he would aim at increasing revenues by Rs. 50 crores by new taxes and/or changes in taxes. With such a background, fresh proposals of the magnitude as announced shook the market from head to foot, and operators and investors demonstrated their complete lack of confidence in the future by almost staying away from the market.

Of the additional sum proposed to be raised for the Exchequer, a good portion is an increase in the direct burden on industry. The increase in the excise duty on various items in daily use by the community would lead to increased cost of living. On this score, employers entertained fears of labour unrest which, together with the increase in the direct burdens and the upward revision in the steel price, would contribute to higher costs of production. The tax on the wealth of companies would affect depreciation allowances. Market circles also thought that the expenditure tax would, in course of time, eliminate a section of the rich, whose contribution to share market activity was invaluable. The addition to the bonus share tax would lead to less interest in investments. Consumer resistance to higher prices, it was feared, would force industries to share the increased excise duty with the buying public. This would, in sum, reduce profitability. The increases in company's income-tax and corporate tax would also have a similar effect. All these thoughts were sufficient to keep away interest from the market. The increase in the Bank rate to 4 per cent. from 3½ per cent., although in the nature of things, also had its reaction on the market. As though all these deterrents were not sufficient, the Finance Minister added to the chillness when he subsequently declared that there was no possibility to his accepting any major changes in his taxation proposals.

It should be said, in fairness to Mr. T. T. Krishnamachari, that his surprises were fairly well distributed to all sections of the industry. Proposed changes to excise duty on tea would yield an additional sum of Rs. 2.45 crores. Inevitably, the price of tea would have to be put up. This would weaken the competitive strength of Indian tea in foreign markets. It was also believed that a decrease in internal consumption would result. These fears were reflected in the tea section. Hantaparas were forced down to Rs. 158 from Rs. 160 and Brooke Bonds declined to Rs. 16.81 from Rs. 18.00.

Little interest was envinced in the jute section. New Centrals were fractionally lower at Rs. 12. Anglo-Indias, at Rs. 136, were lower by three points.

Among engineering shares, Indian Irons slumped to a low of Rs. 16.21, as against the pre-budget rate of Rs. 19.57. There was a recovery on Monday this week to Rs. 17.96, but it was short-lived and a recession to Rs. 17.42 was recorded in yesterday's trading. Jessop & Cos. were quiet at Rs. 24.75, as were Texmacos at Rs. 17.35.

• • • •

Madras Stock Exchange

MADRAS, 21*st May*

The Madras Stock Exchange put on a distinctly bearish appearance during the week under review, thanks to the heavy tax imposts announced by the Union Finance Minister on Wednesday last. Although possibilities of fresh tax proposals were anticipated, no one had thought that they would be so harsh and rigorous. The imposition of tax on wealth and expenditure, the steep increase in direct and indirect levies, and the upward revision in railway freight and postal rates all sapped the morale of investors. There were fears that the additional tax imposts would lead to an all-round increase in wages, which, together with the reduction in the exemption limit for income-tax, would, it was felt, bring about a reduction in funds for stock market activities. It was further apprehended that the increase in income-tax on companies and corporation tax would adversely affect the financial position of several industries, while the enhancement of tax on bonus issue would retard schemes of expansion. Simultaneously with these tax proposals came the announcement of a rise in Bank rate. It was not surprising, therefore, that the market was in the grip of bears and equity values staged a retreat.

Textile shares came in for heavy selling. Bangalore Woollens dropped Rs. 5 to Rs. 168. Buckinghams fell by Rs. 4 to Rs. 168. Coimbatore Cottons slumped by Rs. 7 to Rs. 165. Dhanalakshmis slipped down by Rs. 5 to Rs. 340. Janardanas declined by Rs. 2 to Rs. 90 and Ranga Vilas by Re. 1.50 to Rs. 85.50.

Among tea shares in the planting section, Blue Mountains declined by 15 nP to Rs. 3.45. Chembras receded by 16 nP to Rs. 3.77. Devasholas were quoted 38 nP lower at Rs. 19.87. Highlands shed 25 nP to Rs. 14. Ouchterlonys and Nilgiri Teas lost 10 nP each to Rs. 4.80 and Rs. 8.75, respectively. Twyfords dropped 75 nP to Rs. 16.50. Peermades retreated by 50 nP to Rs. 25.25. Parksides declined by 40 nP to Rs. 15.60. Neelamalais decreased by 15 nP to Rs. 5.80. Waterfalls eased by 5 nP to Rs. 4.15. Among coffee shares, Consolidated Coffees receded by 27 nP to Rs. 22.10, and Coffee Lands by 25 nP to Rs. 25. Sheveroys were a shade lower at Rs. 2. In the rubber group, Rajagiris dropped 40 nP to Rs. 18. Malankaras declined by 25 nP to Rs. 28.75. Cochin Malabars shed 8 nP to Rs. 7.65.

NEW INDIA ASSURANCE CO., LTD.

The Directors of the New India Assurance Company, Ltd., have recommended a dividend of Rs. 3 per share of Rs. 15 for the year ended 31st December 1956, as against Rs. 2-8 per share paid for the previous two years.

NEW TAX PROPOSALS*

INTERESTS OF COMMON MAN IGNORED

By A. D. Shroff

ONE Finance Minister in the old days said that, if the monsoon was good, the Central budget came out successful. But if not, it went wrong. It was a gamble in rains. The Central budget presented last week is a gamble in planning. The whole basis and justification for the new and additional taxation proposals, which are revolutionary in character, are to be found in an attempt to implement the second Five-year Plan.

The Finance Minister has estimated a total deficit of about Rs. 33 crores on current account for the year 1957-58 and an overall deficit of Rs. 365 crores, including capital account. Considering the fact that, under planned development, some amount of deficit financing is unavoidable, I think there is some justification on the basis of sound budgeting that proposals for new taxation should have been evolved to cover the deficit on current account and this, in my judgment, could have been achieved without causing any serious shock to the general economy of the country.

Coming to the actual proposals which cover a range of indirect and direct taxation, the total incidence of the new and additional taxes proposed comes to Rs. 93 crores for the whole year, of which excise duties form a little over Rs. 63 crores. In the proposals for new taxes, the Finance Minister has enunciated four objectives: First, these taxes must produce a sizable addition to public revenues. Secondly, they should provide incentives for larger earnings and more savings. Thirdly, they must restrain consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release the resources for investments. Fourthly, they must initiate such changes in the tax structure as would make tax yields progressively more responsive to increased incomes and facilitate an orderly development of the economy, with due regard to the social objectives they have adopted. I propose to analyse the tax proposals with a view to seeing to what extent these objectives are fulfilled, conceding at once that the first objective of producing a sizable addition to revenues at least in the near future will be fulfilled. There is a wide range of both consumer and capital goods which have been covered by the proposals for increasing excise duties.

Tax on Consumer Goods

I shall first deal with consumer goods. Reading the budget, I have been impressed with the fact that, irrespective of all other considerations which particularly affect different rates in different commodities, the only objective the Finance Minister had before him in involving the new proposals was to collect as much as possible. For example, the increase in excise duties has no relevancy at all to the peculiar situation which is prevailing in the tea industry. Last year, we made a record export of tea, and knowledgeable people in the tea trade believe that, perhaps, it would be very difficult to maintain that record in the coming year. We exported last year as much as two-thirds of our production and every effort is being made to sell more tea in the domestic market. At a time like this when the tea trade faces the peculiar difficulty of marketing its crop, when the world situation in tea definitely indicates overproduction, when Indian tea is facing more effective competition from newcomers like East Africa, and when the tea trade is making special effort to augment indigenous consumption of tea, the excise duty on tea cannot but have negative effect on this effort and augment the difficulties of the tea trade.

Going through the list of excise duties, one is struck by the fact that the much-talked-about common man appears to have been completely forgotten in most of the new proposals. An increased excise on matches and sugar and the very onerous duties on cloth which are continued are bound to reflect in the cost of living of the average man with the income of Rs. 26 per month. It has been boastfully stated that the excise duties on cloth, which was substantially raised last year, have produced the necessary effect of checking a further rise in the price of cloth, and this very well illustrates the capacity of the average person in this country to buy the necessities of life beyond a certain price level.

(Continued on page 1076)

**Based on the speech delivered at a meeting held under the auspices of the Commerce Graduates' Association in Bombay on Wednesday this week.*

NEWS IN BRIEF

THE approximate amount to be spent for each of the 20 small Industrial Estates proposed to be set up at the Community Development block headquarters is Rs. 2 to Rs. 3 lakhs.

Consequent on the enhancement of the Central excise duty on coffee from 18.75 nP to 35 nP per pound, the minimum release prices of coffee from the pool have also been increased by a like amount.

The Government of India has increased uniformly the prices of various controlled categories of steel by Rs. 70 per ton. The increase has been necessitated by the upward revision in excise duty on steel ingots.

A proposal to set up a fourth ratings trainings establishment at Cochin is under consideration. Details regarding the number of trainees to be admitted at a time and the course of training to be given at the institution are being worked out.

The excise duty on cement has been increased from Rs. 5 to Rs. 20 per ton. In pursuance of this, the Government of India has increased, with immediate effect, the selling prices of cement of all types by an equal amount in each case. The Cement Control Order 1956 has been suitably amended.

The U.S. Agriculture Department has announced issuance of a public authorisation to India to buy 50,000 bales of U.S. upland cotton worth $8,666,000, including ocean transport costs. The sales contracts may be made during the period 24th May 1957-31st May 1958, with deliveries on 24th May 1957 and 31st July 1958. India has not yet designated buyers for the cotton.

Three German oil experts conducted preliminary geological investigations and collected fossils from Travancore coast, Madras coast, Tiruchirapalli and Godavari basin. The experts arrived in India towards the middle of January 1957 and visited different locations which are of interest from the point of view of all exploration. Their final report is awaited.

The all-India final estimate of *kharif* pulses other than *tur* for 1956-57 puts the current year's area and production at 16,166,000 acres and 1,664,000 tons as against the partially revised estimate of 15,567,000 acres and 1,632,000 tons, respectively, for 1955-56. This shows an increase of 599,000 acres or 3.8 per cent. in area and 32,000 tons or 2.0 per cent. in production over last year.

The World Bank, in participation with other investors, has made a loan of $15 million to the Financial Corporation for National Reconstruction (Herstel Bank) of the Netherlands. The loan will provide the Herstel Bank additional capital for lending industrial transport and commercial enterprises.

The work on the establishment of a cement factory at Ghorapatti in Eastern Doon will start shortly by a private firm which has been granted a licence by the Uttar Pradesh Government. The survey conducted in this area has revealed that the gypsum deposits are sufficient to produce 750 to 1,000 tons of cement per day for about 50 years. The belt of gypsum and limestone extends up to Mahipur in Saklana Patti of Tehri Garhwal district.

Five Indian firms have undertaken the manufacture of railway coach underframes, planned under the 1957-58 Purchase Programme. Global tenders were invited for the supply of these underframes, but, before placing orders with foreign suppliers, the Railway Board convened a meeting of indigenous firms. Five firms which offered to undertake the job have been asked to supply 500 broad-gauge, 791 metre-gauge and 60 narrow-gauge bogie underframes.

With a view to regulating the supply of chemical fertilisers of prescribed standard to cultivators at fair prices, the Government of India has promulgated the Fertilisers (Control) Order, 1957. The order which came into force on the 15th inst. empowers the Government to fix the maximum prices or rates at which any fertiliser may be sold by a manufacturer or a dealer in a particular area and for a special class of consumers, having regard to the local conditions and other circumstances prevalent in that area.

The Government of India has approved of the establishment of a Central Institute of Management or a Central Management Organisation. The proposed organisation will be a joint and co-operative enterprise of the Government of India and commerce and industry of the country. For enlisting the co-operation of industry and commerce in the enterprise, it is proposed to hold discussions as soon as possible with the regional management organisations formed by the representatives of commerce and industry in the different parts of the country.

The review of the progress so far made with regard to the construction of the Bombay-Kanya Kumari Road as given by Mr. Raj Bahadur, Minister for Shipping, in the Lok Sabha the other day, reveals that nine miles have been constructed and five miles along a by-pass are under construction. The mileage improved is 79 and that under improvement is 284. Ten bridges have been constructed and 15 are under construction. Work on the bridge at Kariyan Kodi was suspended for some time for revising the design of the bridge so as to overcome some foundation difficulties which have come to light during execution. The work has since been resumed.

There was a fivefold increase in the purchases of *khadi* by the Indian railways during 1955-56 as compared with the previous year. The railways purchased *khadi* cloth worth about Rs. 34.5 lakhs, as against Rs. 6.95 lakhs. Following instructions issued by the Railway Board in 1954, the railways have been trying to obtain *khadi* substitutes for as large a variety of mill-made items as possible. The Railway Board recently decided that, in future, mill-made cloth at present being used should be substituted by suitable *pugree* cloth made of *khadi*. The current requirements of this type of cloth are estimated at 800,000 to 900,000 yards per year, estimated to cost between Rs. 10 lakhs and Rs. 12 lakhs per annum.

The State Governments are taking all possible steps to extend supply of electricity in rural areas and small towns all over the country, according to the Union Minister for Irrigation and Power. In accordance with the provision under the second Five-year Plan, a total amount of Rs. 75 crores has been earmarked for schemes for distribution of electricity. The bulk of these schemes relates to electricity supply in rural and small town areas. It is expected that, in the Plan period, about 10,000 new villages having a population of less than 10,000 and about 500 small towns with a population between 10,000 and 20,000 will be electrified. During the first year of the Plan, about 2,179 areas were electrified.

For the development of wool industry in the districts of Almora, Naini Tal, Garhwal and Tehri in Uttar Pradesh, the Industries Department has taken several measures. Training-*cum*-production centres have been functioning at hill district headquarters under expert supervision. These centres impart training to the unemployed, thereby enabling them to earn or supplement their livelihood through the introduction of improved appliances, new designs and standardisation of wool. The Industries Department proposes to establish a design museum which will not only be a collection of various textile designs but also serve as a central pool of ideas —old and new textile designs. The Department has also decided to expand the activities of the wool research stations during the second Plan period. The State Government sanctioned Rs. 2,18,900 for the expansion of the hill wool scheme last year.

From Abroad

Following the reopening of the Suez Canal to British tankers, the emergency surcharge on petrol prices has been removed by some oil companies.

With a net addition of two vessels and a tonnage increase of 34,930 gross tons, the Swedish merchant navy exceeded in April the figure of three million gross tons.

The suggestion for subsidising newsprint in order to offset the "threat" to the stability and existence of newspapers in Britain has been rejected as undesirable by the U.K. Government.

Talks are in progress between West German banks and the Federal Association of German Industries to raise £30 million to £40 million special fund for the long-term financing of exports.

The Egyptian Government has raised the export duty on Karnak and Menoufi cotton from 8.25 to 12.25 tallaris per cantar and that on other varieties from 2.15 to 6.15 tallaris per cantar with effect from 1st September 1957.

A Swedish goodwill drive in the United States, aimed at stimulating Swedish exports to the U.S., furthering American tourism in Sweden and strengthening the cultural ties between the two countries, is to be planned by a four-man committee appointed by the Swedish Minister of Trade.

The Federal Government of Rhodesia and Nyasaland has approved of a ten-year agreement with the British Overseas Airways Corporation, under which the latter will provide long-range aircraft on charter terms for operating the Central African Airways Corporation services between the Federation and the U.K.

The area sown to wheat in Australia in the 1956-57 season is estimated at 7.79 million acres, according to the Commonwealth Bureau of Census and Statistics. The harvest is estimated at 134.7 million bushels, an average of 17.3 bushels per acre. The estimates exceed the December forecast by 5,000 acres and 8.1 million bushels.

The U.S. Tariff Commission has ruled that there is no reason to change the present U.S. tariff on imported jute fabrics, as they are not being imported into the U.S. in such increased quantities, either actual or relative, as to cause or threaten serious injury to the domestic industry producing like or directly competitive products.

The quarterly estimate of the Dominion Bureau of Statistics, Ottawa, puts Canada's population as on 1st March last at 16,420,000. This is an increase of 112,000 from the previous quarterly estimate of 16,308,000 on 1st December last year and compares with a gain of 79,000 for the corresponding quarter of 1955-56.

The British Government is not prepared to consider provision of funds for Commonwealth investment at a lower rate of interest than that prevailing at present in the U.K., according to Mr. Enoch Powell, Financial Secretary to the Treasury. The Government feels that grant of loans at lower rates will involve a direct or indirect subsidy.

PERSONAL

MR. Russi Mody has been appointed Deputy Agent of the Tata Iron and Steel Co., Ltd., and will be in charge of the Agents' office in Calcutta.

Mr. Kenneth Miller, who is at present serving on the Calcutta staff of the British India (B.I.) shipping line, has been appointed Commodore Chief Engineer Officer of the B.I. fleet.

Mr. Ellsworth Bunker, U.S. Ambassador in India, left New Delhi on Friday last for the U.S.A. He will confer with U.S. Government officials during his week's stay in Washington and will return to Delhi early in June.

Prof. M. S. Thacker has been appointed Secretary, Department of Scientific Research and Technical Education, Ministry of Education and Scientific Research, Government of India, in addition to his duties as Director, Council of Scientific and Industrial Research.

Mr. R. S. Bhatt, Managing Director of the Bombay State Financial Corporation, has been appointed a member of the Tariff Commission, in the vacancy caused by Mr. B. N. Adarkar's appointment as India's Executive Director of the International Monetary Fund.

"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 28*th May*

The Jute Trade

In common with almost every other industry the jute trade is, as everyone knows, passing through a serious crisis of intense depression. There has, during the past 18 months, been no outstanding feature in the manufacturing side of the industry in Bengal, in which jute is a monopoly. In spite of the curtailment of output by the closing down of 15 per cent. of looms and the continuance of working 40 hours per week only and a substantial reduction at the end of the past year in the stock of manufactured goods, there has been little response from consuming countries. A short crop of the raw commodity last year did not bring in any improvement in price and the outlook is particularly gloomy at present in view of dissensions within the industry itself. While the members of the Jute Mills Association, comprising the majority of the mills, are abiding by their decision of closing down 15 per cent. of their looms and working 40 hours every week, mills outside of the Association—their number is three only—are working 108 hours with the full employment of their looms. Negotiations had been proceeding between the belligerents for several weeks past with little result, until week before last, when His Excellency the Governor of Bengal was impelled, by urgent representations made to him by certain commercial interests, to intervene. His Excellency invited the parties concerned together with representatives of certain important commercial organisations to a free and frank discussion at Government House in his immediate presence. The result of this conference was a compromise which has not yet been ratified by the parties to the controversy.

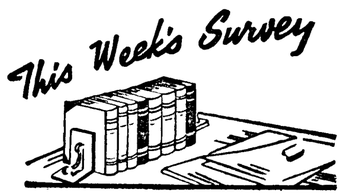
Pakistan's Finance Minister is expected to leave for Washington shortly to negotiate with the U.S. Government officials further economic aid for Pakistan in the next financial year commencing on 1st July. He is also expected to finalise a deal for the supply of three million tons of foodgrains by the U.S.A., to be delivered at the rate of one million tons a year in the next three years.

The output of tinplate in the U.K. is rising sharply and the total production this year is expected to be higher by over 20 per cent., as compared with 1956. Exports in the first quarter of 1956 increased by 30 per cent., although domestic demand for tinplate increased less than had been expected. If these rates were to continue, the total exports are expected to reach 400,000 tons this year.

The Australian Government has extended the licensing period for imports from three to four months with effect from 1st April 1957. It has considered the question of lengthening the period by a further two months. It, however, considers that such an extension is not feasible at this stage, for it feels that, by minimising the periodic flexibility in administration, it will be impossible to keep commitments and licences within the precise limits which the Cabinet considers necessary.

The U.S. programme for bartering agricultural surpluses for non-ferrous metals and other strategic materials from abroad is going to be resumed, but on a restricted scale. This is indicated by the Department of Agriculture which is carrying out a revision of the programme designed to ensure that it really increases exports. The Department wants to provide safeguards that disposal will not take the place of commercial sales of U.S. agricultural commodities.

The International Federation of Cotton and Allied Textile Industries has been granted consultative status with the Economic and Social Council of the United Nations. Through this relationship, permanent liaison and consultation is arranged between the Council and its subordinate bodies and the Federation regarding international economic affairs which are of interest to the cotton and allied textile industries.



LIFE INSURANCE

PRIOR to 1956, when nationalisation of life insurance was effected, one of the grounds on which private insurers used to oppose nationalisation of their business was that they had succeeded largely in stepping up the new business from year to year. Indeed, their argument was, by and large, correct, for from a mere Rs. 168 crores in 1953, new business moved up to Rs. 247 crores in the following year and still further to Rs. 268 crores in 1955. If this trend had not been interrupted life insurance business may well have expanded to some Rs. 290-300 crores last year. But new life business in 1956 under the nationalised set-up was not only lower than what it might have been but also lower than what it actually was in the previous year. Thus, such business in 1956 was only Rs. 200 crores.

In the course of a statement on the position of life insurance business in India, laid on the table of the Lok Sabha, last week, the Deputy Minister for Finance, Mr. B. R. Bhagat, gave some reasons to explain the fall of life business in 1956. He stated that, between January and August last year, when life insurance companies were under the management of custodians, life business aggregated Rs. 145.51 crores, somewhat higher than in the corresponding period of 1955. It would, however, appear that between September 1956, when the Corporation had taken charge of life insurance, and December of that year, new life business aggregated only Rs. 54.76 crores. The Minister attributed this fall to the dislocation caused by the changes of staff and other measures necessitated by the alteration in the set-up of life insurance. Further, he averred, in effect, that any comparison of the 1956 figures with the previous year's figures was not valid, inasmuch as certain favourable factors which operated in 1954 and 1955 were not present in 1956. Thus, there was a rush for estate duty policies which accounted for Rs. 7½ crores in each of the years 1954 and 1955. Further, there was a reduction in premium rates in 1954 which gave a stimulus for replacement of old policies by the new, accounting for some Rs. 36 crores in each of the years 1954 and 1955. Again, staff insurance schemes at favourable rates were introduced in 1954—it was prohibited some time in 1955—and produced Rs. 10 crores worth of new business in 1954 and Rs. 18 crores in 1955.

All this explanation does not entirely explain the fall in life business in 1956. For one thing, the performance in 1956 should not be compared with that in 1955 but with what it might reasonably have been in that year on the basis of recent trends in life insurance. Secondly, even if allowance were made for the favourable factors prevalent in 1955 and absent in 1956, the overall new life business is low. Thirdly, if it is argued that the reduction in premium rates effected in 1954 led to some spurious new business in that year and in the following year, too, it might also be argued that the general one-rupee reduction in premium rates announced soon after the nationalisation of life insurance might have resulted in similar business.

Be that as it may, it is not necessary to look for, or give a far-fetched and intricate explanation for the fall in 1956 new business. The plain fact is that nationalisation gave such a rude shock to insurance men that there was inevitably some decline in new business activity. It is, however, gratifying to note that efforts are now being made to cost the insurance net wider, in order to draw additional groups of uninsured population within the net. The group insurance scheme, the superannuation plans and the Janata policy are all measures conceived in the right direction. The relaxation of restrictions on assurances of female lives and of army and navy personnel is also a well conceived measure. The raising of the tax-free limit for life insurance premia and contributions to provident fund from one-fifth to one-fourth of the income, subject to a maximum of Rs. 8 000, is also designed to make the task of the Life Insurance Corporation in getting new business easier. It is to be hoped that all these steps will lead to a significant increase in the new life business of the Corporation, though there will continue to be honest differences of opinion on the purely academic question whether insurance would not have progressed better under the auspices of private insurers.

TEXTILE INDUSTRY

The outlook for cotton textile industry is tending to become somewhat bleak. Among the many handicaps with which the industry is faced, the burden of taxation is perhaps the heaviest. Appropriately enough, it was to this aspect of the industry's plight that Mr. N. H. Tata referred when he spoke as the Chairman of the Swadeshi Mills Company, Ltd., at the annual meeting of the Company held at Bombay this week. Anyone who has cared to observe the trends in India's textile trade in the past decade will fully agree with Mr. Tata when he declares that the textile industry is reeling under the impact of heavy and crushing burden of excise duty, increase in employers' contribution to State Insurance Scheme, award of gratuity to workers, higher interest charges and a formidable list of other burdens. Indeed, the industry has today turned out to be a high-cost, over-taxed industry.

When such is the position, it is deplorable that the Union Finance Minister has now come forward with compulsory deposits and fresh tax proposals—levy of an annual tax on wealth, substantial increase in corporation tax and tax on bonus shares. These measures are bound to affect the cotton industry most adversely. In particular, the mills will have to bear the wealth tax irrespective of whether they earn a profit or not, and even a new unit will have to pay the tax before it earns any profit. As Mr. Tata averred, at a time when financing of industrial enterprises is already a nightmare for the managing agents, the climate created for industrialists in the private sector can hardly be said to be in keeping with the reassuring statements repeatedly made by the national leaders in support of the growth and development of non-Governmental enterprises. There is certainly no exaggeration whatever in his statement that a stage will soon be reached when the law of diminishing returns is bound to operate, and, then, "it would be slaughter of the proverbial goose that laid the golden egg."

As it is, quite a few textile mills have suspended manufacturing activity, thanks to the fact that they have found it uneconomic to engage themselves in production. It is true that concern is expressed in official circles over the closure of mills but this concern is purely over the unemployment of labour involved. Surely, it will, as Mr. Tata rightly observed, be an interesting and thought-provoking investigation for the Government to find out how far such units are unfortunate victims of an economic crisis caused by sudden dislocations in cloth and money markets. Significantly enough, he remarked:

"After all, it would be sheer folly on the part of any manufacturing unit today, with burdens of heavy standing charges in the form of heavy interest charges, insurance and salaries, to seek relief through the expedient of a closure, involving under our labour laws staggering statutory liabilities in the shape of retrenchment compensation or benefits for involuntary unemployment of its labour force. Consequently, it is as much suicide for the employer as calamity for the worker. To ignore the plight of the industrialist and the vast body of investors while searching for relief measures for the unemployed worker is to underestimate and ignore the operation of certain economic forces responsible for the closure of such units."

There is considerable force in these observations of Mr. Tata, as also in his statement that much damage would be done to cotton industry and to the national economy by hurriedly conceived actions, ill-timed and executed without taking the industry into confidence. "An abrupt announcement of executive decisions without prior consultations," to quote him, "has a tendency to make Government remedial measures worse than the disease they intend to cure. Far from achieving this objective, such measures hurt the economy of the country in an endeavour to punish the alleged offenders." These measures may be necessary in exceptional circumstances, but they are highly unjustified so far as the textile industry is concerned. Considering that this industry is well organised, represented by a number of millowners' associations in several States, the Government, as Mr. Tata aptly urged, can readily establish an effective machinery for communication and consultation without impairing the effectiveness of impending legislation.

NEYVELI LIGNITE PROJECT

The inauguration of the earth-moving operations of the first mine cut of lignite reserve at Neyveli, in South Arcot, this week by the Prime Minister, represented a major step in the speedy economic development of South India. The function marked the completion of the exploration stage of the project and the initiation of the first important move for the extraction of lignite for use in power production. The Neyveli project is not a source of power alone; for it is a multi-purpose one, intended to harness the lignite reserves for providing much needed electricity for industrial development in the South, for manufacture of fertilisers in the interests of agricultural development and for production of briquettes for use as domestic and industrial fuel.

The acute shortage of fuel in South India has been retarding the development of industry and agriculture in that part of the country. It is common knowledge that the existing power supply is got from hydro-electric grid and the monsoon often plays the truant, with the result that power shortages are common and have a deleterious effect on industrial production, particularly the output of such essential commodities as cement and cloth. Further, agriculturists do not get the power supply at a time when they need it most. The power that is to be generated from the thermal plant to be set up at the site of the lignite project will be fed into the Madras hydro-electric grid.

The first serious step taken towards solving this acute problem was in 1947, when a special officer was deputed to investigate the lignite deposits in and around Neyveli. The work done during the subsequent ten years culminating in the inauguration of the earth-moving operations of the first mine cut this week provides an example of how much can be done by a determined few. The multi-purpose project, estimated to cost Rs. 68.9 crores, was given a high degree of priority in view of the acute shortage of fuel in South India. The total estimated reserve of lignite in the area is 2,000 million tons. However, only an area with a reserve of 200 million tons has been selected for exploitation under the project. This will suffice a mine life of about 57 years at an average mine output of 3.5 million tons per annum. Investigations have revealed that about 2½ tons of raw lignite are equivalent in thermal value to a ton of good coal, the former has moisture content of 50 per cent. and an ash content of 3 per cent. The annual output of 3.5 million tons of lignite will, therefore, be equivalent to a little over 1.25 million tons of good coal. It is proposed to make the most economic utilisation of this lignite by using it as fuel in boilers close to the mine itself and thereby generate electric power. The installed capacity of the thermal station, consisting of two units, will be about 200,000 kw. and its cost is estimated at Rs. 20 crores. The first of the two units is expected to be commissioned by the middle of 1960 and the second by the end of that year.

The second aspect of the multi-purpose project is the production of nitrogenous fertilisers which would help step up agricultural production. The cost of fertiliser plant, capable of producing 70,000 tons per annum, is estimated at Rs. 21 crores. It is expected to go into production by the end of 1960, the time by which lignite mining in commercial quantities is scheduled to start. The fertiliser factory will add to the manurial resources of the area.

The balance of lignite, after meeting the requirements of the power house and fertiliser plant, will be utilised for producing briquettes, which will be the third aspect of the project. It is proposed to set up a plant for the production of 714,000 tons of raw lignite briquettes, which, on carbonaton, will yield 380,000 tons of carbonised briquettes and by-products. Under the aid from T.C.M., a pilot plant for the briquetting and carbonising equipment is expected to be received and erected by the end of October this year. The operation of the plant, estimated to cost Rs. 10 crores, on a commercial scale is expected to commence by about October 1961. The carbonised briquettes will serve to replace the very expensive charcoal and the very valuable cow-dung. It is a smokeless fuel and is ideal for domestic use. This will release the large quantity of cow-dung now burnt as fuel for use as a valuable manure. The briquettes can also be used as a substitute for coal which has to be transported over long distances at great expense, thus providing relief to the railway transport system.

The task of mining, which is by no means an easy one, is being rendered more difficult by the presence of artesian springs. A prerequisite to the mining operations is the ground water control at a pumpage of 27,000 to 28,000 gallons per minute. The mining is also in the nature of a large-scale open-cast operation which has not been attempted in India before. It was, therefore, decided to engage the services of expert consultants and an agreement was signed two weeks ago with a London firm for expert consultancy services in respect of the mining scheme.

There are other possibilities of the use of lignite. Several industries can be based on lignite, utilising the experience of other countries in the field. In short, the lignite project opens up an era of development and prosperity for the South. It must, however, be noted that the prospect depends on so many other factors, particularly the provision of adequate transport facilities.

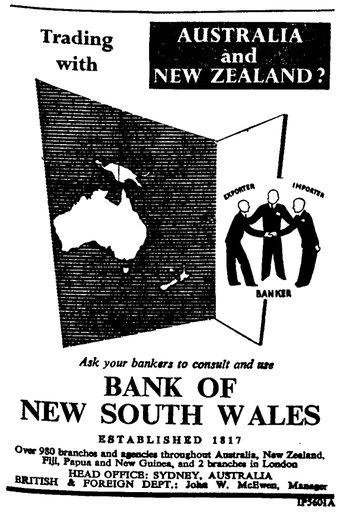
BAGHDAD PACT ECONOMIC COMMITTEE

After deliberating for three days, the six-nation Baghdad Pact Economic Committee concluded its third session at Karachi on Saturday last. The highlight of the session was the offer of large-scale economic assistance by the U.K. and the U.S. to the other members of the Pact—Pakistan, Persia, Iraq and Turkey. The British delegate announced a fourfold increase in aid for technical assistance, the sum already earmarked being £1 million, to be spent over five years. This is in addition to the grant of a lump sum of £1 million for the improvement of communications in the Baghdad Pact area. The leader of the U.S. delegation conveyed his Government's intention to commit $12.57 million for services and capital development phases of several regional projects stemming from the Pact. On behalf of Pakistan, the Prime Minister announced a contribution of Rs. 5 lakhs to render technical assistance to other partners, besides offering training facilities and expert services.

The Karachi session was notable for the adoption of a number of resolutions aimed at greater economic co-operation and collaboration among the member-countries, special stress being laid on the need for bringing atomic energy training to the area, improving communications, widening agricultural co-operation and expanding trade relations. The Committee decided to set up at Baghdad an atomic training centre, with its non-recurring expenditure to be met by Britain and the recurring expenditure by the four West Asian members. In its resolution on agricultural planning and food reserves, the Committee provided for a working paper to be issued on the possibility of establishing fertiliser factories and approved of a plan, whereby consultants would investigate the possibilities of opennig study centres for agricultural machinery and water and soil conservation. The other resolutions covered pest control, animal diseases and institution of research fellowships in Britain and the U.S.

Incidentally, the Committee constituted a Working Party to examine proposals for establishing a Pact Energy Service to provide relief in such disasters as floods and drought. It also decided to examine, on a priority basis, a project for the building of a coastal highway along the Persian Gulf to link Karachi with Basra via Bandar Abbas and another for providing a rail link between Karachi and Teheran. The Baghdad Pact Secretariat is expected to arrange shortly a preliminary survey work on the projects which, it is understood, will be implemented with U.S. financial assistance. Further, the Committee recommended priority for a network of land and tele-communications, linking the capitals of the Pact regions.

While the desire of the Baghdad Pact countries to improve their economies thus is to be appreciated, serious doubts will arise as to whether the desire will, in fact, be fulfilled fully especially as the Baghdad Pact is essentially a military alliance. Surely, the functioning of separate economic blocs under military pacts must be deplored, inasmuch as they are incongruous in the present context of the need for thinking in terms of international economic co-operation.



CEMENT AND STEEL

Commending the increases in excise duties in general to the acceptance of Parliament, the Union Finance Minister, Mr. T. T. Krishnamachari, said they were conceived with the double objective of restraining consumption and of giving a fillip to exports. The increase in excise duties on cement and steel cannot be wholly justified on this ground, for they are not export commodities, though it might restrain their consumption to a considerable extent. The excise duty on cement has been raised from Rs. 5 per ton to Rs. 20 per ton, and that on steel from Rs. 4 per ton to Rs. 40 per ton; the former is estimated to yield Rs. 6.7 crores and the latter Rs. 5.7 crores. The Finance Minister himself admitted that the increases were "large" but he justified them by affirming that they were warranted by the rapid increase in the demand for the two commodities and the "situation of growing shortage and the consequent increase in retail prices which we are facing." The incidence of the duty has already been passed on to consumers. Thus, the price of cement has been increased by Rs. 15 per ton and that of all controlled categories of steel by Rs. 70 uniformly.

It is not clear what the Finance Minister meant when he said that the Government faced an "increase in retail prices." Presumably, he was referring to the prices which steel and cement fetch in the black market. But the blame for this state of affairs must rest with the control authorities. In any case, the remedy does not lie in increasing the excise duty on the commodities. If the demand for the commodities has outstripped supply, the right remedy is to augment supplies through imports, in the short run, and vigorous efforts at increasing production, in the long run. Since imports are not feasible owing to shortage of foreign exchange, the only choice left is to adjust the demand to the available supply by a rearrangement of priorities. In the recent past, the Government was not demonstrably successful in the matter of augmenting supplies of cement through imports, though it achieved relatively greater success in respect of steel imports. The State Trading Corporation was entrusted with the task of importing cement to the tune of one million tons. Actual imports were, however, a mere 90,000 tons. This fact makes the present increase in excise duty particularly irksome. For, it may be recalled, the price of cement was stepped up in order to create a pool price for both domestic and imported cement. The cost of Indian cement (including packaging and transport) works out to about Rs. 90 per ton, whereas imported cement cost Rs. 140 per ton; the pool price was fixed at Rs. 102-8 per ton, so that imports could be subsidised by domestic production. Thus, while the pool price was pegged at an artificially high level, the imports of cement, which provided the only justification for the high pool price, have been a mere trickle. In effect, this means that, while the consumer has not benefited through large supplies, the Corporation reaps the rich harvest of increased cement prices. When imports could not be had, what should normally have been done was to lower the pool price. Not only has this not been done but the price to the consumer has been enhanced to the full extent of the increase in excise duty.

There are quite a few other important issues involved in the raising of excise duty on steel and cement. Assuming that the demand for these commodities far exceeds the supply, why should the Government not tighten up the control regulations and rearrange the priority list for cement and steel permits, rather than increase the excise duty? This would mean that the essential consumers enjoying a high priority under the Plan will get their quota of cement and steel at reasonable prices, while the overall consumption level would be curbed. It stands to reason that the cost of basic raw materials should be kept as low as possible so that the competitive capacity of industries might not be handicapped and the cost of production of their finished goods would not be unduly inflated. Again, so far as cement is concerned, there is obviously no justification for both a high pool price and an increased excise duty.

The first consignment of 900 tons of oil-drilling equipment ordered by the Government of India from the Soviet Union arrived in Bombay on the 18th inst. This is part of the agreement signed recently between India and the U.S.S.R., under which the Soviet Government will supply accessory oil-drilling equipment worth about Rs. 37.24 lakhs within six months. The freighter also carried 5,000 tons of steel for India. Its arrival marks the resumption of the direct shipping services between the Soviet Black Sea ports and India which were suspended during the Suez crisis.

THE BANK OF MAHARASHTRA LTD:
Head Office: **POONA 2**

CAPITAL

Paid-up Capital	Rs. 16,00,000
Reserves	Rs. 10,00,000
Working Funds Exceed	Rs. 7,50,00,000

The public should benefit by the increased interest rate, with the safety of their deposits.

Interest on Savings Bank Deposits 2 per cent. per annum.

FIXED DEPOSITS

Period	*Rate*
1 to 2 years	3½ p.a.
3 years	3¾ p.a.
5 years	3¾ p.a.

Amounts over Rs. 10,000 are accepted for 3 to 6 months at attractive rates of interest.

Your business transactions are facilitated by opening an account in the Bank of Maharashtra Ltd. as the Bank has 34 branches at prominent commercial centres.

Safe Deposit Vault equipment at Head Office, Deccan Gymkhana (Poona), Sholapur (Phaltan Galli Branch), Nasik, Ahmednagar, Shrirampur, Panvel and Kirloskarwadi—Lockers available.

C. V. JOAG *Manager.*

SOME IMPRESSIONS OF THE BUDGET

WHY IS T.T.K. SWEARING BY THE SECOND PLAN?

From Our Own Correspondent

NEW DELHI, 21*st May*

DELHI LETTER

PRIME Minister Nehru's choice of a strong man for the Finance portfolio was vindicated on Wednesday last, when Mr. T. T. Krishnamachari grimly presented to a crowded Lok Sabha his regular Budget for 1957-58. The new members of Parliament, representatives of the Press and a considerable section of the business community alike were completely taken by surprise (or storm?). Some of the Congress members themselves were unable to appreciate the need for a series of draconian measures of additional taxation, and one of them naturally felt dizzy, while another felt relieved that there was no tax on intelligence. Perhaps, the bitterest comment came from a former Congressman, Mr. Shibbanlal Saksena, of Uttar Pradesh, who said: "If they had brought this budget a few months earlier, they would not have been here back in power." As for the Delhi Press, in particular, and the Indian Press, in general, their representatives (who had not been given an opportunity to say that the drastic budget proposals were not unexpected) mustered strong at a Press Conference convened by the Finance Minister on Saturday last. That Mr. Krishnamachari was subjected to a barrage of questions for an hour and a half was a measure of the consternation and anxiety of the Fourth Estate which is one of the foremost watch-dogs of public weal in a parliamentary democracy. But the reactions of the business community had not clearly emerged last week-end. Anything like a lead to Indian business would be given by the Committee of the Federation of Indian Chambers of Commerce and Industry before this week-end.

In point of importance, the Finance Minister's Press Conference was next only to his budget presentation. Throughout the conference, Mr. Krishnamachari gave extempore replies some of which were not wholly convincing but some of which were revealing. These latter replies merit critical examination, if only because they provide some clue to the Finance Minister's plans for implementing the second Five-year Plan. At the outset, the question of excise duties possibly adding to the general cost of living figured prominently at the conference, and the Finance Minister asserted that their effect on the common man would be very marginal and the traders' present margin of profit would absorb much of the increase. It was his—or rather his Ministry's—estimate that last year's additional taxation would raise the family budget of a rural dweller by 1.62 per cent. and that of an urban dweller by 3 per cent. As a result of the proposals made by him now, they would go up to 2.34 per cent. and 4.38 per cent., respectively. He, however, cautioned, in the same breath, that these figures were statistical exercises, and thus he did not appear to attach much credence to them, possibly because they did not reveal the full extent of the impact on large sections of the people whose annual *per capita* incomes are less than the national average. While he conceded that the initial price increases might be disproportionate to the new excise levies, he foresaw the possibility of their coming down in the wake of Government publicity of "fair" prices, as in the case of the last cloth excise levy. (Incidentally, it has been estimated that the burden of this levy is being borne 50-50 by the textile industry and the consumer.)

Here, the Finance Minister appeared to imply that a certain amount of consumer resistance (usually operating in respect of cloth purchases which could be easily postponed up to a point) would also operate in the case of even the more vital necessities of the kitchen like matches, vegetable oils, tea, coffee and sugar (which, of course, can be substituted by *gur* to some extent). This assumption would simply not materialise, for the simple reason that their purchases cannot be postponed in point of time or easily curtailed, except, to some extent, in the case of sugar. As effective demand (demand backed by purchasing power) would not, in the circumstances, fall appreciably and as the retail prices alone (which usually rise out of all proportion to the commodity tax-levies) matter as far as the ordinary consumer is concerned, there is here no question of mopping up "surplus" purchasing power in his hands but only of committing a larger portion of his relatively limited purchasing power to these essential items of daily consumption, the demand for which is patently inelastic. The inevitable result would be that less cloth and, perhaps, less sugar would be purchased, and this would, sooner or later, arrest the expansion or restrict the production of textile and sugar industries. This situation might only be aggravated by possible higher prices for essential bus and lorry transport services and for tobacco (which is a vital necessity to all those who are habituated to its use in one form or another), following the additional excise levies on motor spirit, diesel oil and unmanufactured tobacco. As all the additional excise levies would net in something like Rs. 60 crores, besides Rs. 14 crores from the tax on essential railway travel, in a full year, and as the larger part of this huge amount of about Rs. 75 crores would come out of the relatively modest incomes of the middle classes and the classes lower still, either their consumption of cloth and sugar would be reduced to that extent or, if by any chance their consumption should continue to be at the same level as now, even the meagre savings of these classes would become impossible, and this would mean less money for the Government itself from the small savings and life insurance drives.

Mr. Krishnamachari is too shrewd not to have known these implications, for he was certainly more frank in his budget speech than at the Press Conference. Here one has only to recall his reference to the "objective of restraining consumption" while outlining his proposals for the new excise levies. If still he rediculed the idea of "inflation" and described it as a loose expression at the Press Conference, he could not have seriously meant what he said. For here was a clear case of price inflation which would have the effect of restraining consumption in some important lines and thus of restricting the production of such universally consumed goods as cloth and sugar at a time when their increased production alone could counter the inflationary pressures. The Finance Ministry certainly appears to welcome price inflation, because it is a stealthy way of promoting heavy industries at the expense of light or consumer goods industries. Its resolution of the conflict between the two sets of industries through commodity taxation and price inflation provides, incidentally, a clue to what Mr. Krishnamachari has in mind with regard to the second Plan, which has run up against difficulties of a kind not foreseen by the planners. Your correspondent left the Press Conference with some clear impressions which are put down below for what they are worth.

The first impression is that the Finance Ministry is anxious to convey to the World Bank and to friendly foreign countries that it has done its best (or worst?) in the matter of tapping internal resources and of subjecting every class of the population to a regime of austerity and that it is their duty now to do their part in the matter of providing the required foreign exchange for the Plan's core which is steel, coal, transport and ancillary power and which has the highest priority.

The second impression is that, as deficit financing is to be restricted to a maximum of Rs. 800-900 crores in the second Plan period, more taxation is contemplated in the next one or two years more or less on the lines of the Kaldor Report. This impression is borne out by the fact that the Finance Minister has already taken three major leaves out of Dr. Kaldor's book in respect of capital gains, wealth and expenditure taxes.

The third impression is that Mr. Krishnamachari is publicly swearing by the present size of the second Plan only in deference to the psycho-political sensibilities of Prime Minister Nehru and the Congress President Dhebar but that he is determined, in his own quiet and unobstrusive way, to rephase the Plan by reordering priorities in respect of schemes and projects outside the "core" of the Plan. That this could be done by allowing a shortfall in actual expenditure to take place in the budget year (besides the pruning to the tune of about Rs. 300 crores to Rs. 400 crores, he had effected, according to his own admission at the Press Conference, in the expenditure items of the departments before finalising the budget), was indirectly evident from some of his replies. Mr. Krishnamachari, who set so much store by his steel projects, was thus coming out as the 'steel' (strong) man of the Cabinet for pruning the Plan to a more realistic and manageable size. The second Plan's future is no longer in the hands of the Planning Commission; it is in the hands of the Finance Minister.

MR. KRISHNAMACHARI SEEN FROM THE CITY

From Our Own Correspondent

LONDON, 18*th May*

LONDON LETTER

INDIA'S budget has created much more than the usual interest in London this year. First, because it is an interesting budget in itself, and, secondly because of its relationship to the requirements of India for overseas capital. Of course, the two aspects are related: the Minister of Finance obviously wishes to attract capital to India from this country and other sources. The chosen method appears to be that of obtaining increased credit facilities and the potential lenders, knowing that their credits are going into the Five-year Plan, weigh up the prospects of that Plan.

India will not be at all surprised to find that it will be easier to get credit if the Plan is extended in time so that less investment is looked for in each year. This is the result of the scepticism of the Western world towards the potentialities of capital development east of the Elbe and east of Suez! Says the West, "Steady unspectacular progress is sound progress" and it is probably true that, if the Five-year Plan were publicly announced to be spread over a longer period, India's prospects of obtaining increased overseas credits would be improved. But the City is not so naive as not to see the obvious political difficulties in such a course of action, even if the Minister of Finance should really wish to take it—about which the City can only surmise.

So the practical view taken here is: if India wants more capital and if the proposed investment of this capital looks, on the face of it, sound, then what is India doing to make investment more attractive?

As the City sees it, Mr. Krishnamachari has appeared to take some inspiration from Mr. Thorneycroft who produced his budget a month ago. Both wanted to increase incentives and saving—both find critics to say they have failed. The impression in the City is that the general trend of Indian tax policy is to "soak the rich" and investors have a fear that, as a *genus*, they are always classed with the rich, however poor they may feel; so, although there are tax concessions in the new budget, the concensus of opinion is that these are outweighed by the tax increases. The Minister of Finance has been a great deal bolder and more ingenious in his propositions than was Mr. Thorneycroft and a great deal bolder and more ingenious than any British Socialist Chancellor of the Exchequer has ever seemed likely to be when in office. But expenditure taxes clearly designed to encourage saving have to be looked at in the context of what happens to what is saved. When capital is taxed and unearned income is taxed more steeply, the foreign investor may be excused from feeling that he is going to be squeezed both ways if he undertakes direct investment through a subsidiary.

But one cannot help feeling that much of the criticism against the budget here is more applicable to the position of the Indian investor than to the position of the foreigner advancing credits. Nevertheless, to the extent that capital from overseas is going to be encouraged to reach India via private enterprise, the criticisms may be valid. They would only fail to have as much significance were the Indian Government to raise funds for direct investment by itself and this brings us right back to the question of foreign confidence in India's Five-year Plan. So the Minister of Finance will have to go on balancing his internal politics against his external requirements and no doubt trim his sails to the way he finds the wind blowing.—*All Rights Reserved.*

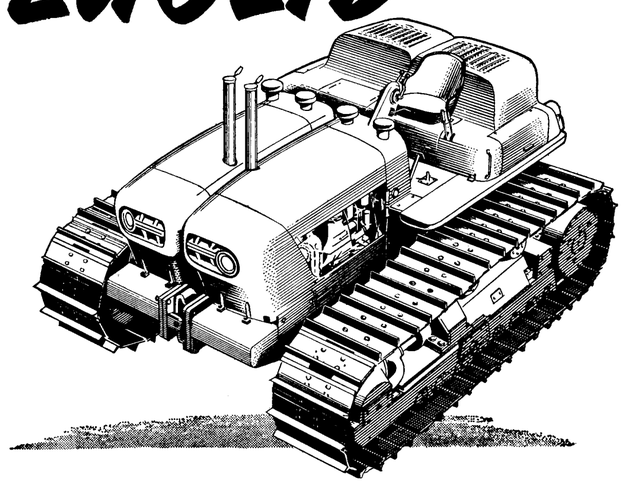
EUCLID TC-12



The World's Biggest Most Powerful
CRAWLER TRACTOR

.....This mammoth machine is an entirely new concept in the design and performance of crawler tractors.

Here are some of the features which make the Euclid TC-12 different.

Twin Engines give more horsepower, and there is plenty of weight to utilize this power.

Independent Track Drives for ease of manoeuvrability at all times, in any of the three speed ranges—forward or reverse.

Accessibility for servicing of all major components.

Torqmatic Drive and Transmission eliminates the need for any master clutch.

Track Oscillation gives maximum stability and traction on rough ground.

Ease of Transportation The TC-12 can be transported in two separate halves

Accessories Available Tipdozer - Dozecaster - rear mounted cable control unit.

STATE BANK OF HYDERABAD

FUNCTIONS ENLARGED UNDER NEW STATUS

THE latest audited accounts of the State Bank of Hyderabad (Managing Director: Mr. Balwant Singh, Hyderabad) have been drawn up for the fifteen months ended 31st December 1956, thus changing the financial year-end of the Bank from 30th September to 31st December. An event of much significance which took place during this period was the change in the Constitution of the Bank under the State Bank of Hyderabad Act 1956 and its name from the Hyderabad State Bank to its present name, as from 22nd October 1956. At the same time, the paid-up capital of the Bank was also reduced from O.S. Rs. 75 lakhs—I.G. Rs. 64.29 lakhs (as on 21st October 1956) to I.G. Rs. 50 lakhs in terms of the statutory provisions. The entire share capital of the Bank is now held by the Reserve Bank.

The profit of the Bank for the fifteen months under review amounts to Rs. 6.53 lakhs, thus recording a marked fall from Rs. 10.93 lakhs earned in the previous twelve months. This profit is made up of Rs. 4.45 lakhs earned prior to complete nationalisation, that is during the period 1st October 1955 to 21st October 1956, and of Rs. 2.08 lakhs earned from 22nd October to 31st December 1956. It must, however, be noted that the profit has been arrived at after making due provision for bad and doubtful debts and fall in the value of investments which were revalued at market rates.

After making a provision of Rs. 2.10 lakhs for taxation, the Directors have set aside Rs. 1.35 lakhs to the reserve fund, Rs. 75,000 to the pension fund Rs. 25,000 to the gratuity fund, Rs. 1.62 lakhs to the contingency fund and Rs. 1.35 lakhs for bonus to staff.

The reserve fund of the Bank was recast on 31st December 1956 in terms of section 27 of the State Bank of Hyderabad Act, 1956, and, including the amount transferred from the profits of the period under review, it now stands at Rs. 22.06 lakhs, as against Rs. 65.14 lakhs on 30th September 1955. Due provision has been made for the "bad and doubtful debts" of the Hyderabad State Bank. The total deposits of the Bank as at 31st December 1956 stand at Rs. 14.60 crores, as against Rs. 15.21 crores 15 months ago. During the year 1956, deposits to the extent of Rs. 65 lakhs were repaid to the State Government in terms of an arrangement with the erstwhile Government of Hyderabad. As compared with the net deposits position as at 31st December 1955, the deposits remain at the same level, in spite of the repayment of Government deposits.

There has been a fall in advances which stand at Rs. 9.72 crores, forming 70 per cent. of net deposits as on 31st December 1956, as against 79.7 per cent. on 31st December 1955, in distinct contrast to the general trend of Scheduled banks. During the slack season, the advances are said to have declined by 28.3 per cent., which compares very favourably with the decline recorded in other Scheduled banks and is a clear indication of the high liquidity of the credits given by the Bank. There has been an increase in investments from Rs. 2.10 crores as on 31st December 1955 to Rs. 3.03 crores as on 31st December 1956. The total of cash and bank balances also increased during the year from Rs. 2.33 crores to Rs. 2.40 crores, that is, from 16.8 per cent. to 17.3 per cent. of the net deposits.

After 30th October 1956, the Bank ceased to manage the public debt of the erstwhile Hyderabad State and that work was transferred to the Reserve Bank of India from 1st November 1956.

Facilities were afforded by the Bank up to 31st December 1956 for the conversion of O.S. currency into I.G. currency and the work of the disposal of O.S. currency has been progressing satisfactorily.

Under section 24 of the State Bank of Hyderabad Act, the Bank is required to carry on any business entrusted to it by the Reserve Bank of India. The Bank may also accept any subsidies offered by the Reserve Bank of India to meet any approved programme of development. The Bank has now been appointed as the Statutory Agent of the Reserve Bank of India at places where the Hyderabad State Bank was acting as the Agent of the Reserve Bank of India.

Under section 42 of the Reserve Bank of India Act, the Bank is a 'notified bank' and the borrowings of Scheduled banks from the Bank, with effect from 1st February 1957, are excluded for the purposes of calculating demand and time liabilities for cash reserves to be maintained with the Reserve Bank of India. Also, under section 24(2) of the Banking Companies Act, 1949 the balance maintained by a banking company with the Bank is deemed as cash for purposes of compliance with the provisions of section 24(1) of the Banking Companies Act, in terms of which every banking company is required to maintain in cash, gold or unencumbered approved securities, an amount which shall not, at the close of business on any day, be less than 20 per cent. of the total of its time and demand liabilities.

BANK OF MADURA

In consonance with the general trend, there was an expansion in business and profit of the Bank of Madura Ltd. (Secretary: Mr. P. S. Viswanathan, Madurai) during the year ended 31st December 1956. The profit for the year amounted to Rs. 1.81 lakhs, a fresh record in the history of the Bank, exceeding the previous high of Rs. 1.62 lakhs earned in 1955. The Directors have provided a sum of Rs. 80,000 for taxation, as against *nil* in the previous year. The allocation to the reserve fund has, however, been pruned from Rs. 1 lakh to Rs. 50,000. The investment reserve, which had received Rs. 10,000 in the previous year, has not been strengthened further. The dividend has been maintained at 4½ per cent., at which level the distribution was resumed last year after a break of four years.

The Bank's reserves as at the close of the year under review stand at Rs. 4.22 lakhs, as against a paid-up capital of Rs. 11.25 lakhs. Deposits have risen from Rs. 255.91 lakhs to Rs. 262.47 lakhs. These are supplemented by borrowings from other banks amounting to Rs. 29.50 lakhs. Advances have gone up from Rs. 119.93 lakhs to Rs. 168.93 lakhs, of which loans, cash credits and overdrafts show a rise from Rs. 109.92 lakhs to Rs. 155.24 lakhs and bills purchased and discounted from Rs. 10 lakhs to Rs. 13.67 lakhs. The relatively greater increase in advances, as compared with that in deposits, has resulted in a shrinkage in investments from Rs. 103.42 lakhs to Rs. 95.10 lakhs and cash balances from Rs. 46.21 lakhs to Rs. 44.03 lakhs.

As a result of the talks held in Sydney and Melbourne among leading banking officials of India, Pakistan, Ceylon, Australia and New Zealand, Colombo Plan countries are to be invited to nominate candidates for a course in training in central-bank administration which will open in Sydney in September. The general aim of the course will be to assist in the development and training of officers for higher central-bank executive positions, and also to build up knowledge of central banking, with particular reference to conditions in South-East Asia and South Pacific.

The World Bank has rejected Pakistan's request for a loan to finance the setting up of a steel plant. The Bank is reported to be of the view that foreign exchange savings made through the establishment of the proposed steel plant will not be large enough to justify the loan.

BOMBAY STATE FINANCIAL CORPORATION

LENDABLE RESOURCES SLENDER

THE annual report of the Bombay State Financial Corporation (Managing Director: Mr. R. S. Bhatt, Bombay) for the year ended 31st March 1957 is the first one of the Corporation, reconstituted by the amalgamation of the former Financial Corporations of the States of Bombay and Saurashtra on 1st November 1956, following the reorganisation of the States. The performance of the reconstituted Corporation during the year under review does not, therefore, bear comparison with that of either of the old units in the previous year. A comparison with the combined performance of the two units in 1955-56, however, shows that its turnover, as indicated by the loans sanctioned, has declined sizably, while the profit is slightly better.

The profit for the year under review amounts to Rs. 7.38 lakhs, as compared with Rs. 3.55 lakhs earned by the old Bombay unit and Rs. 3.23 lakhs by the Saurashtra Corporation in 1955-56. After providing Rs. 3.04 lakhs for taxation and setting aside Rs. 37,500 each to the statutory reserve fund and reserve for doubtful debts, the balance available for distribution of dividend is Rs. 3.59 lakhs. As this is not sufficient to cover the guaranteed minimum dividend of 3½ per cent. per annum on the increased capital of Rs. 2 crores, the Government of Bomba has been requested to give a subvention o Rs. 3.41 lakhs to make up the deficiency. This brings the total contingent liability on account of subventions availed of (including the one in respect of 1956-57) to Rs. 13.35 lakhs.

During the year under review, the Corporation received 97 applications for loans aggregating Rs. 301.31 lakhs, of which 45 were new, and 16 for additional accommodation from concerns which had already received financial assistance from the Corporation, while 36 applications for Rs. 1.39 crores were brought forward from the previous year. Of these, 37 loans for Rs. 72.47 lakhs were sanctioned, as against 39 loans for Rs. 79.86 lakhs granted by the old Bombay Corporation and 11 for Rs. 28.05 lakhs sanctioned by the Saurashtra unit. Twelve applications for Rs. 34.67 lakhs pere rejected, 31 for Rs. 94.86 lakhs otherwise disposed of and 17 for Rs. 68.79 lakhs were kept pending. These bring the total loans sanctioned up to the end of 1956-57 to 129 in number for an aggregate sum of Rs. 264.15 lakhs.

An industry-wise analysis of the loans sanctioned during the year shows that general engineering industry accounts for the largest sum, at Rs. 33.3 lakhs covering 14 applications. Four applicants from the textile industry were granted Rs. 14.50 lakhs, 4 from the metal industry Rs. 9.40 lakhs, 5 from the pharmaceutical and chemical industry Rs. 3.72 lakhs, 3 each from electric supply concerns and miscellaneous group for Rs. 4.45 lakhs and Rs. 1.25 lakhs, respectively, and 2 each from ceramics and oils for Rs. 3.25 lakhs and Rs. 2.60 lakhs, respectively.

Of the 129 loans for Rs. 264.15 lakhs sanctioned so far, small-scale concerns account for 53 loans for Rs. 40.92 lakhs and medium-scale concerns for 76 loans for Rs. 223.23 lakhs. In addition to the foregoing, the amount subscribed to debenture capital of one industrial concern aggregates Rs. 3.75 lakhs. Out of the aggregate loan of Rs. 267.90 lakhs, the amount disbursed so far is Rs. 161.70 lakhs. Of this amount, Rs. 10.67 lakhs have been repaid, leaving the total outstandings at the end of March 1957 at Rs. 151.02 lakhs.

In terms of the Bombay State Financial Corporation Order 1956, the authorised capital of the reconstituted Corporation has been raised from Rs. 2 crores to Rs. 4 crores, divided into shares of Rs. 100 each, the issued and paid-up capital from Rs. 1 crore to Rs. 2 crores. The reserves as at the end of the year under review stand at no more than Rs. 2.69 lakhs. As already mentioned, the outstanding loans and advances amount to Rs. 151.02 lakhs. Investments (all in Government securities) at cost aggregate Rs. 29.91 lakhs, the market value of the same being Rs. 29.83 lakhs. The depreciation in investments is thus negligible, as against which the investment reserve amounts to Rs. 1.05 lakhs. Cash balances aggregate Rs. 24.65 lakhs.

It will be seen from the above particulars that the lendable resources of the Corporation are slender. The Directors are keenly aware of this situation. For they observe in their report that, as the total amount of loans sanctioned by the Corporation as reconstituted has exceeded its paid-up capital, the question of raising additional resources as early as possible is receiving the Board's active consideration.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Cooch Behar State Bank, Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank.
(c) In our opinion, proper books of accounts as required by law have been kept by the Bank so far as appears from our examination of those books.
(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account.
(e) In our opinion and to the best of our information and according to the explanations given to us, the said Accounts give the information required by Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.
(f) The Bank granted unsecured advances under the head "Bills Purchased" to a firm in which a Director of the Bank is a partner. The amount outstanding as on 31st December, 1956, was Rs. 5,000. The maximum balance during the year was Rs. 10,000. The said advances have contravened Section 20 of the Banking Companies Act, 1949.

UPWARD TREND IN MILL TEXTILE OUTPUT

STOCKS LYING UNSOLD QUITE LARGE

IT must be said to the credit of cotton mills that they have endeavoured to maintain as high a level of output as possible, notwithstanding the several unhelpful official measures. The aggregate quantity of cloth that came off the looms of mills during the first four months of the current calendar year amounted to 1,836 million yards, which compares very favourably with 1,679 million yards in the corresponding period of 1956. On this basis and assuming that the trend will be maintained in the rest of the year as well, the total output for the whole of 1957 may be estimated at more than 5,500 million yards, an all-time record in the history of the textile industry; the previous peak was 5,307 million yards, touched last year.

The rise in mill cloth production has followed a marked increase in the output of yarn which during the first four months aggregated about 601.42 million lbs., representing an improvement of 71.71 million yards as compared with the same period a year before. On this basis, the output for the whole year may be estimated at nearly 1,803 million lbs., as against 1,671 million lbs. in 1956.

Trend of Production

The following table indicates the trend of mill production of cloth and yarn during January-April 1957, as compared with the same period in 1956:

(Cloth in million yards ; yarn in million lbs.)

	Cloth		Yarn	
	1957	1956	1957	1956
January	483.70 (94,098)	413.78 (94,098)	156.42	132.51
February	430.00 (103,000)	425.49 (95,980)	143.00	133.63
March	463.00 (111,693)	418.76 (92,949)	150.00	132.56
April	453.00 (107,481)	420.82 (93,203)	152.00	131.01
Total ..	1,835.70 (416,242)	1,678.85 (376,199)	601.42	529.71

Figures in brackets relate to quantities expressed in lbs.

The maintenance of a high level of output, as noted above, is in contrast to the continued shrinkage in the weaving capacity of mills. This trend reflects the gradual modernisation of machinery that has been taking place in the industry for some time now. The industry's performance would have been far greater had it been allowed to grow in size through introduction of automatic looms.

The number of looms installed as at the end of August 1956 was lower at 206,580, as against 207,347 and 207,763 a year and two years before, respectively. The decline in loomage reflects the scrapping of looms worn out without being replaced by an equal number, thanks to the Government of India's unhelpful policy in regard to the expansion in the mills' weaving capacity. The continued decline in loomage is in evidence at a time when the demand for cloth is tending to rise. Naturally, the mills have been forced to take recourse to the more intensive utilisation of the existing capacity. Thus, the daily average number of looms worked during January 1957—the latest month for which statistics are available—was higher at 417,014, as against 409,863 six months before (July 1956). The rise in second shift was particularly marked, having been 2,996 looms (the number of looms actually run in January 1957 was 177,210), followed by the first and the third shifts, with a rise of 2,377 looms (to 186,083 looms) and 1,778 looms (to 53,721 looms).

Spinning Capacity Expands

In contrast to the reduction in loomage, the spinning capacity of mills has continued to expand. The number of new spindles installed during the cotton year ended August 1956 was 307,261, which compares favourably with 180,379. As at 31st August 1956, there were 12,375,805 spindles, as against 12,068,544 a year before. Side by side with expansion in installed capacity, the cotton mills have endeavoured to make more intensive utilisation of capacity. The daily average number of spindles—rings and mules—worked in January 1957 was higher at 26,863,669, as against 26,227,187 a year before, a rise of more than half a million spindles. The improvement was accounted for largely by the first shift, the daily average number of spindles actually worked in this shift being 11,040,037, or a rise of 333,129 as compared with July 1956. The number worked in second and third shifts was also higher by 266,403 and 36,950 at 10,636,848 and 5,186,784, respectively.

The expansion in the capacity of cotton mills actually utilised in recent months has been rendered possible by the improvement in the availability of cotton textile machinery and equipment, as a result of liberal imports and rise in indigenous production. During 1956, India imported cotton machinery worth Rs. 13.18 crores, as against Rs. 7.35 crores in 1955. The rise was accounted for chiefly by spinning machinery, the imports of which aggregated Rs. 7.77 crores, as against Rs. 2.85 crores. The bulk of this consisted of spinning machinery other than spinning ring frames and spindles. The imports of the different kinds of cotton machinery during the years 1955 and 1956 are indicated below:

(In crores of rupees)

	1956	1955
Bleaching and dyeing machinery ..	0.17	0.13
Printing machinery	0.32	0.15
Spinning ring frames	2.21	} 2.85
Spindles	0.02	
Other spinning machinery	5.54	
Plain and automatic looms	0.11	} 1.43
Other kinds of looms	0.93	
Other sorts	3.88	2.79
Total	13.18	7.35

The efforts of the mills to maximise output are, indeed, commendable, considering that they are passing through a critical stage at present. Raw cotton prices have been continuously moving up, the all-India average wholesale price index of this commodity (base: year ended August 1939=100) during March 1957 stood at 487, as against 463 in December 1956 and 478 in March 1956. Besides the higher cost of cotton, the wage bill of mills has also gone up, consequent on the rise in cost of living following the increase in commodity prices, especially of foodgrains. The average amount of money per worker distributed as dearness allowance by mills in Bombay and Ahmedabad during January 1957 was Rs. 70-12 and Rs. 72-4-9, as against Rs. 61-6 and Rs. 60-0, respectively, in January 1956.

Stocks Accumulate

Apart from the rise in cotton prices and the higher wage bill, the mills are at present confronted with the most pressing problem of heavy accumulation of stocks. The total quantity of cloth lying unsold with mills at the end of March last amounted to 450 million yards, as against 218 million yards a year before. The stocks of yarn unsold were also higher at 18 million lbs., as against 13 million lbs. These heavy stocks must be attributed to poor offtake —domestic and overseas—which indicates strong consumer resistance to the heavy incidence of tax. The burden of excise duty and sales tax on several varieties of coarse and medium cloth works out to as much as 25 per cent. of the total sale price. In fact, consumer resistance has been so much that many mills have been compelled to bear a substantial part of the tax burden themselves without passing it on to consumers. If, in spite of this, the mill production of cotton manufactures has registered a rise, it is, perhaps, largely because of the consideration that, by maintaining the production at maximum level, the unit cost of production could be kept lower.

THE INDIAN OVERSEAS BANK LTD. MADRAS

We'll help you solve your trading problems

The Indian Overseas Bank can handle your overseas trading problems 'on the spot' With branches located strategically all over South East Asia, the Bank is in a position to offer Indian businessmen expert personalized service on all matters concerning foreign trade. If you are planning to develop your trade in this area of growing commercial importance you couldn't do better than to consult the Indian Overseas Bank.

HANDLOOM CLOTH EXPORTS

There was a rise of 3.96 million yards in the exports of handloom cloth from India during 1956 as compared with the previous year, the quantity actually shipped in that year being 59.79 million yards, as against 55.83 million yards in 1955 and 58.57 million yards in 1954. In terms of value, the exports aggregated Rs. 8.66 crores, as against Rs. 7.77 crores. The principal buyers of Indian handloom fabrics were Ceylon, Malaya, Aden, Sudan, Singapore, Kenya, Tanganyka and Kuwait. The U.S. bought only 835,000 yards; this quantity, however, was much larger than that purchased in 1955 and 1954 when it amounted to 219,000 yards and 76,000 yards, respectively. The market for Indian handloom goods in the U.S. is expected to expand greatly in the coming years. It will be recalled here that a team of American fabrics experts toured India sometime ago in order to assess the possibilities of augmenting exports of Indian goods to this country and to obtain advice on measures to ensure the production of cloth acceptable to American consumers. The report of this team is being examined by the Government. In the report, the experts are reported to have stated that the U.S. is a large potential market of quality handloom fabrics.

The improvement in exports of Indian handloom cloth during 1956 must be attributed to the special measures taken by the Government. An external marketing scheme to promote exports, for instance, has been in operation for some time. Marketing officers have already been posted at Singapore and Baghdad and provision is made for appointing similar officers at Colombo and Rangoon. Further, handloom fabrics emporia have been opened at Aden, Bangkok, Colombo and Singapore. The fabrics are also included in the scheme of goods available for export from India in the trade agreements with a number of foreign countries. It is contemplated to set up an Export Promotion Committee to advise the Handloom Board on the measures for raising exports of handloom piecegoods.

STANDARDS FOR HANDLOOM WOOLLEN FABRICS

The Indian Standards Institution has published eight Indian standard specifications for woollen and worsted handloom fabrics. The woollen sector of the handloom industry plays an important part in the economy of the country. Most of the wool produced in India is of coarse type and is classed as "carpet wool." This wool is generally used by the cottage industry in manufacturing blankets, floor rugs, carpets, etc. Part of the carpet wool is also exported. Nearly half of the wool produced in India is used in the manufacture of blankets which find a ready market in the country. The present standards have been formulated with a view to helping the producers of handloom woollen cloth in manufacturing goods of defined and uniform quality. The standards prescribe the general requirements for the manufacture of fabrics such as quality of wool, particulars of yarn and freedom from defects in the cloth, etc., and specific requirements, ends per inch, picks per inch, weight, breaking strength, width, length, and fastness of colour, shrinkage. Methods of tests for the determination of these characteristics have also been indicated. The standards prescribe weights and measures in the foot-pound system. However, in view of the decision of the Government of India to introduce throughout the country a uniform system of weights and measures based on the metric system, factors for converting values to that system have also been included in the standards. By the time the standards come up for revision, it is expected the industry would have adopted the new system making it possible to specify values in it.

MANUFACTURE OF "SARIS"

The Textile Commissioner to the Government of India has drawn the attention of cotton mills to the restrictions on the manufacture of *saris* as envisaged in his notification dated 26th August 1954. The circular issued in this connection says:

"Mills may manufacture, without applying for prior permission of this office, *saris* with a border or borders of more than 3" but not exceeding 5½" in width, containing coloured yarn in this border or borders having a heading or headings not less than 3" but not more than 9" in width, provided such *saris* do not exceed 5½ yards in length. Mills which desire to manufacture *saris* of the said description exceeding 5½ yards in length should apply to this office for prior permission, and no production should be undertaken without getting the written aproval of this office."

TEXTILE TALKS WITH PAKISTAN PROVE UNSUCCESSFUL

SHIPMENTS OF MACHINERY RECEDE

From A Special Correspondent

MANCHESTER, 14*th May*

LITTLE surprise has been expressed in Lancashire at the abortive discussions between the British trade mission and the Pakistan textile leaders. The general opinion among traders here was that it would be very difficult to persuade the representatives of Eastern nations, which had only recently established textile industries, to make voluntary restrictions on their exports. The position of India was regarded in a very different category, as the old-established trades recognised that, as Lancashire was at one time supreme in her position as the leading exporter of cotton goods to the world, so their present dominance could gradually be undermined by the growth of rivals in other countries. It is felt that the declaration of the Hong Kong Cotton Spinners' Association that the industry there could take no part in any pact to restrict shipments had a considerable bearing on the negotiations.

MANCHESTER LETTER

On its return, the British mission faces a critical situation. Imports from abroad have been growing steadily and, under pressure for supplies during the current trade revival, merchants have not been slow to supplement their stocks with goods from other countries. The producing sections are certain to call for a new approach to the Government for aid in countering foreign inroads into the home market.

The facts presented to the Board of Trade at the end of 1955 have not altered in their material particulars. The Government then admitted that the industry had a strong case, but said that no action could be taken at that time. Now 18 months have elapsed; the trade has lately regained some of its former buoyancy, but the threat from overseas cloth imports at highly competitive prices is still a thorn in the side of local spinners and manufacturers.

Machine Activity

Output of cotton and rayon goods in March barely maintained the progress made in Lancashire in the early months of the year, although the average weekly production was still in excess of the levels ruling in the same month of 1956. Single cotton yarn production was exactly one million lbs. a week higher than in March last year, although the weekly average of 12,860,000 lbs. was 600,000 lbs. below the February figure. Cotton waste yarns showed a slight improvement at 2,160,000 lbs., but output of spun rayon and mixture yarns declined fractionally to 3,140,000 lbs. per week.

The amount of cloth produced from all sources during March was 48,390,000 linear yards a week, as against 48,300,000 yards in the previous month and 46,400,000 yards in the same month a year ago. Output of cotton fabric was solely responsible for this improvement, as the volume of goods from man-made fibres and mixtures was 400,000 yards a week lower than in 1956.

The significant fact remains that the number of operatives on the books of employers is still about 8,000 lower than 12 months ago. At the end of March, available manpower in spinning, waste spinning and doubling was 128,130, a reduction of nearly 1,000 as compared with March 1956. The drift of labour from weaving mills has been much more pronounced, as the numbers now ready for employment amount to 117,350, as against 124,200 last year. The weaving trade has, in fact, failed to maintain the slight gains secured in the labour force during February.

Practically no change occurred in machine activity in March as compared with the previous month. The number of mule equivalent spindles running was unaltered at 21,700,000, representing 77 per cent. of those in running mills. In weaving, the number of looms at work was 236,500, as against 237,000 in February and 242,000 in March last year.

Plant Exports Lower

A marked reduction in all the main types of textile machinery shipped abroad from this country occurred during the first three months of the year as compared with the same period of 1956. Total exports amounted to 376,731 cwt. valued at £11,311,042, whereas last year's comparable figures were 467,048 cwt. worth £12,632,664. Plant for preparatory processes was over 20,000 cwt. lower at 41,239 cwt. and there was a drop of 10,000 cwt. in shipments of spinning machinery to 29,071 cwt. Exports of looms and other weaving machines were below 60,000 cwt., as against nearly 90,000 cwt., and textile finishing plant accounted for 25,000 cwt., as against 34,000 cwt.

Still heading the list of destinations is India, which has already absorbed over 90,000 cwt., but, in the same period last year, 115,572 cwt. were taken. One of the few cases where increased shipments have been recorded was for Pakistan where 32,688 cwt. of plant have been despatched, as against 14,396 cwt.

New Pay Claim

The committee set up by leaders of the nine textile trade unions to consider a new wage application on behalf of 245,000 Lancashire mill workers and a compensation scheme for redundant operatives met in Manchester last week to finalise its recommendations. These will be submitted to a meeting of the joint executives of the textile unions in Manchester on the 24th inst. A spokesman said that, until then, details of their decision could not be disclosed.

It is expected that the meeting on the 24th inst. will decide whether or not a new pay claim for mill workers should be submitted in the immediate future.

A talking-point in many quarters during the past week has been the more encouraging tone of the latest textile company results received. Already, it seems, the expansion in turnover which occurred last autumn has been reflected in the accounts of certain firms now being published, especially those concentrating on the spinning section.

Although the reports do not show uniformly higher earnings, the general level of profits is in excess of last year's comparisons. For instance, the Bee Hive Spinning Company at Bolton records a net profit of nearly £40,000, as against £28,000, and an increase in the dividend from 8 to 10 per cent. The Willow Bank Mill at Oldham shows a substantial improvement, with profits of nearly £22,000, as against £7,000, the dividend being maintained at 50 per cent.

From Rochdale's Eclipse Mill comes news of higher earnings at £26,000, as against £15,000 and a dividend maintained at 16⅔ per cent. Another Bolton firm with better results is Swan Lane Spinning, whose half-yearly profit figures show an increase from £30,000 to over £52,000 and an unchanged dividend of 7½ per cent.

Royton Mill Groups

Two Royton mill groups which have lately been experiencing adverse conditions have also reported better progress. Shiloh Spinners Ltd. has restored its net profit to the level of two years ago and the current earnings of £73,000 compare with £48,000 last year, while the dividend, too, regains its former level of 10 per cent., as against 8 per cent. Royton Textile Corporation has turned a small deficit of £2,690 last year into a net profit of £6,192 and the dividend is maintained at 10 per cent.

A sharp recovery in earnings was recorded by Crosses and Heatons Ltd., the Bolton Spinning combine. Net profits this year were £16,500, as against a loss of £29,000 in the previous 12 months. This improvement has enabled the directors to restore the annual dividend to 10 per cent. On the other hand, there are those concerns whose figures have failed to come up to the level of 12 months ago. The loss of £22,000 incurred by William Pickles & Co. last year has been increased still further to a loss of £43,000 and the dividend has again been passed.

A net deficit of £7,500 has also been recorded by the now solely merchanting business of Balstone Cooke and Rayonese Ltd., but last year's loss was far more severe, amounting to £172,000. The Preston firm of Hartley Fabrics has announced a net profit of £7,000, as against £13,500 a year ago, and a reduction in the dividend from 12½ to 7½ per cent.

So far as interim dividends can provide any guide to future results, directors are being canny. Unchanged interims have been reported by the Belgrave Mills, Oldham, the Falcon Mill, Bolton, the Goyt Mill, Marple, and the big spinning and weaving group of Joshua Hoyle and Sons. Irwell Bank Spinning Company, however, has raised its yearly distribution from 15 to 17½ per cent. and Coldhurst is paying an interim of 3¾d. per share, tax-free, as against 2d. per share tax free.—*All Rights Reserved.*

COTTON CONSUMPTION IN FREE WORLD

DISAPPEARANCE EXPECTED TO MATCH PRODUCTION

DESPITE the fact that consumption of cotton in the U.S., which accounts for more than 30 per cent. of the free world consumption and nearly one quarter of the entire world figure, is currently running at a substantially lower rate, as compared with the 1955-56 season, aggregate free world consumption is expected to set a new record this season. This is because of the marked improvement in the offtake of raw cotton witnessed in many of the Continental countries, Japan and India. Consumption in the United States is expected to be down by about 500,000 bales (of 478 lbs.) but the fall is likely to be more than counterbalanced by the increase in the former countries. According to the estimates of the International Cotton Advisory Committee, Washington, the aggregate free world cotton consumption in the current season may exceed 29 million bales, as against 28.5 million bales in the previous season. This figure, when juxtaposed with the estimated production for the season of 29 million bales, shows that, for the first time since 1950-51, consumption may equal or even slightly exceed output.

The following table gives the latest available figures of cotton consumption in some of the major consuming countries of the free world:

Cotton Consumption in Selected Countries

(In bales of 478 lbs.)

	From 1st August till the end of month shown		
Country—	Month	1955-56	1956-57
United States	Feb.	5,541(a)	5,175(a)
Canada	Feb.	235	230
United Kingdom	Nov.	547(a)	526(a)
France	Dec.	489	547
W. Germany	Dec.	537	577
Italy	Dec.	287	329
Netherlands	Dec.	141	139
Belgium	Dec.	181	189
Spain	Jan.	241	264
India (Mill)	Dec.	1,730	1,759
Pakistan (Mill)	Nov.	258	271
Japan	Dec.	848	1,137
Hong Kong	Jan.	104	109

(a) Adjusted to calendar months.

Consumption in the U.S., during the first seven months of the current season, that is, August to February, is expected to have aggregated 5,175,000 bales, as against 5,541,000 bales during the corresponding period of the previous season, representing a decline of about 7 per cent. The main reason for this fall was that textile business continued to be poor. Informed sources now predict that mill offtake of cotton will continue at the present reduced rate for the rest of the season. Accordingly, consumption in the U.S., is expected to be lower by 500,000 bales. But the anticipated increase in consumption in the rest of the free world is of the order of one million bales.

Cotton consumption in Canada, after declining more than seasonally in December last, rose significantly in the new year, but for the first seven months of the season was slightly lower than the comparable 1955-56 period. Consumption in the United Kingdom till the end of December is estimated to have declined by some 25,000 bales. Cotton yarn production in January, however, increased slightly, as compared with January 1955, and more recently seems to have stabilised at this level. On the Continent, offtake in most countries continues to run ahead of last season and, for the first six months of the season, is estimated to have increased by roughly 200,000 bales as compared with the same period in 1955-56. The main increase in consumption has occurred in France, Western Germany, Italy, and Spain. The improvement in textile production is very noticeable in France, where consumption has been consistently higher this season and for the first five months showed an increase of 58,000 bales or 12 per cent. Orders booked in December were the highest for the last two years and the consumption outlook for the rest of the season, according to the Committee, appears to be generally favourable. There has been a marked improvement in cotton consumption in Italy also this season. Consumption declined steeply in December, but was still higher than in the comparable period in 1955-56 and for the first five months was up by 43,000 bales or 14 per cent. Consumption in Western Germany also declined sharply in December and was actually under the December 1955 level. For the August-December period, however, it still showed a gain of nearly 40,000 bales.

Consumption in India, as is well known, rose to new records in January and February. In Japan, it increased by 244,000 bales during the first four months of the season. Subsequently, yarn production during December set a new record for the post-war period but then declined much more than seasonally in January. It is estimated, however, that consumption in the first half of the present season increased by some 300,000 bales as compared with the same period in 1955-56. Cotton piecegoods exports from Japan in January were the lowest for several months but demand continues strong. Export contracts booked in February are reported to have been around 150 million square yards. Domestic demand has fallen off, influenced by the bearish trend in cotton textile prices arising out of the increase in mill stocks in recent months.

TECHNOLOGICAL LABORATORY

Dr. R. L. N. Iyengar, D.Sc., has been appointed Director of the Technological Laboratory of the Indian Central Cotton Committee at Matunga, Bombay. This Laboratory has an international reputation having been, until recently, the only one of its kind in the East and the researches carried out therein forming a very significant portion of knowledge in cotton technology. The Laboratory has on hand a scheme for modernisation and expansion, for which the Government of India has contributed Rs. 15 lakhs—Rs. 5 lakhs for building and Rs. 10 lakhs for machinery and equipment.

Dr. Iyengar, who has devoted 30 years of his life to cotton research, was selected as a research scholar in textile physics by the Indian Central Cotton Committee in 1927 and worked under the eminent textile technologist, Dr. A. J. Turner, the founder-Director of the Technological Laboratory. After successfully completing the research problems assigned to him at the Laboratory, Dr. Iyengar was posted to the Agricultural Research Institute, Coimbatore, where he not only helped in the evolution of the famous Madras Cambodia Uganda varieties of cotton, but carried out extensive researches on the effect of various botanical and agronomical factors on the physical properties of the cotton fibres and made the important discovery that the large amount of variation present in cotton fibres is primarily due to the large variation that exists in the single seed itself, so that if any improvement in this respect is to be achieved it should be tackled at the source, namely, the single seed. Among the research problems which Dr. Iyengar has investigated after his return to the Laboratory as Research Officer, mention must be made of the maturity coefficient of Indian cottons, standard method of determination of halo length of cotton, quick method of determining the fineness of fibres, strength of attachment of fibres to the cotton seed, and moisture relations of cotton. He was also in charge of the ginning section of the Laboratory and was responsible for completing a number of investigations for the improvement of cotton ginning in India, which to this day has been sadly neglected. He also conducted an economic and technical survey of the existing gins in India which has yielded very valuable information. Dr. Iyengar has designed and perfected a number of testing and scientific instruments, such as Photo-electric Diameter Tester for finding rapidly the fineness of fibres, filaments, etc., a strength tester and a ballistic tester for determining the force and work respectively required to pull a cotton fibre from the seed, discs for the measurement of halo length of cotton, and a Ginning Percentage Balance for the rapid determination of the ginning percentage of cotton, the last of which has been patented.

ANNUAL MEETING OF MAHINDRA AND MAHINDRA LTD.

CHAIRMAN, MR. K. C. MAHINDRA'S ANALYSIS OF NEW TAX MEASURES

CALL FOR RATIONAL POLICY TO AUGMENT RESOURCES

ADDRESSING the shareholders of Mahindra and Mahindra Ltd., at their Eleventh Annual General Meeting held in Bombay on 22nd May 1957, Mr. K. C. Mahindra, Chairman of the Company, expressed the view that the effects of the proposed taxation measures would be "far-reaching in respect of disincentives, in respect of capital formation, in respect of savings, apart from the incongruous and unjustifiable levy of multiple taxation on the same quantum of income and now on wealth." He added that the most important aspect of a rational policy of taxation was to create incentives and add to the national income, so that resources available for taxation were continuously being augmented.

The following are extracts from Mr. Mahindra's speech:

"This is the first occasion on which the Chairman of your Company is addressing the shareholders. It is a matter of satisfaction and a little pride that the report which has been presented to the shareholders reflects the conclusion of an exceedingly successful year of operations for the Company. It has been a year when high levels of sales and earnings have been reached. This achievement was possible principally because of your organisation keeping pace with the demands of an expanding economy. Illustratively, for instance, the Government put through a programme of heavy purchasing of steel from abroad. As one of the principal importers of steel, your Company was in a position to service this demand for additional steel and thereby continue to occupy a dominating position in imports. It should be mentioned that, under the very rigid regulations governing steel business, the profit margins are extremely low and importers and dealers usually depend upon large volume in order to meet the substantial expenditures of such an operation.

"The turnover in jeeps and allied vehicles was about 20 per cent. more than the previous year, but a very satisfactory improvement was made by the spare parts division. Tractors achieved a remarkable advance in sales, almost tripling the record of the previous year. With the commissioning of your new trailer factory at Pimpri the Company is now in a position to embark on the manufacture of heavy trailers, and several steps are at present being taken to improve upon the techniques of production, and equip ourselves to service the demands for heavy trailers in the country.

Manufacture of Jeep Components

"The problem of manufacture of jeep components has been our foremost concern, and while the progress so far made is in accordance with the progressive phases of manufacture presented to the Government in 1955, it is early to say whether the restrictions now enforced in respect of import of capital goods and tooling would seriously disturb the schedule of timing. Every effort is being made to overcome the difficulties of foreign exchange, and I have hopes that no serious setback will be experienced during the current year in maintaining our progress.

"Shareholders will appreciate that, although it was the original design to build gradually and concentrate the jeep operations at Pimpri, a major decision in this respect became inevitable last year when, owing to scarcity of steel and cement, it was found that the requisite building operations would not be completed within the time available to us. Accordingly, decision was taken to re-locate the jeep programme. For this purpose, we were fortunate in acquiring certain built-up factory areas in Worli and in Ghatkopar and, accordingly, the manufacturing operations did not suffer too much of a lag in time.

"I will not be doing my duty to the shareholders if I were to gloss over the great difficulties which the manufacturing organisation is facing today: difficulties principally in the matter of foreign exchange but also connected with scarcity of steel and cement, shortages of appropriate raw materials of industry and the continuously rising costs. Problems of this nature will surely retard, if not bring to a halt, our expansion programmes.

"There is, besides, the great problem of financing the operations, which are now at a high level. You will have noticed in the Directors' report a reference to the line of credit of approximately one million dollars which the Willys Overland Export Corporation extended to the Company. This credit is in itself an evidence of faith and confidence which our principals have shown in your organisation, and I should like to place on record on your behalf our appreciation of this gesture from the Kaiser interests, who now own the Willys organisation.

Tariff Commission's Report

"During the year, the Tariff Commission rendered a great service to the automobile industry by presenting a very able report to the Government, and it is encouraging to know that the industry has now been placed in the category of protected industries eligible for receiving the favours and the bounties attached to such developments. Nevertheless, the industry, in order to become strong and self-sustaining, must proceed to develop on sound and healthy lines. It is imperative that during the ten years' period recommended by the Tariff Commission and accepted by the Government, the ten years of protectiveness, the industry should shape its course in a manner that it relieves the country and the consumers of such burdens as will naturally be suffered during the protection stage. I do not see this happy consummation being reached, unless a considerable degree of common exploration and research is carried out in order that we develop an automotive vehicle which will suit not merely the conditions of locomotion and transport in the country but the pockets of the millions of this land where purchasing power is so low and where the roads are scanty and undeveloped. Your Company is engaged in developing a vehicle ideally suited to the road conditions of India, but I must confess it does not qualify as a peoples' car because of its high cost today. Cost can only be brought down by sheer weight of volume turnover. There is no other way in the automobile industry. It is incumbent upon the operators of the automobile business in India to explore the operational uses of a vehicle like the jeep, to develop and build on its functional structure and evolve the multitypes suitable for what people need, suitable for the roads and available within the purchasing power of an ever-increasing number of users.

"The Tariff Commission also laid considerable stress on the necessity for common production programmes for auxiliary components like forgings, castings, chassis members, etc. No one need quarrel with the general proposition. It is, however, doubtful whether such an object will be achieved when the types and models of vehicles being produced are so disparate in characteristic and so few in number.

Fiscal Measures

"In another place I called attention to the inflationary pressures which have begun to weigh rather oppressively on our economy. The Finance Minister has devised some bold measures to curb the inflationary potential and to keep down domestic consumption through a series of heavy excise duties. In the Budget presented last week to the Lok Sabha an unequivocal affirmation has been made that sustained increased productivity and savings are the only true key to progress. This statement will be welcomed, particularly in the light of the heavy sacrifices he has called for from the organised business section of the country. I draw attention, however, to a serious omission —the continual inflation of wage demands aided and abetted by industrial tribunals and ordinances has not received the rebuke it deserves, for be it not ignored that the wage leverage upwards is the most potent and powerful threat to the success of any disinflationary measures. A wage freeze, a moratorium for five years on wholesale increases in wage demands, would be amply justified under the existing competitive urges when prohibitive restraints are being imposed on payments to shareholders and wealth, *qua* wealth, is being taxed to satisfy socio-economic purposes. The promise to hold prices in the agricultural sector will require a reorientation of transport operations and methods, for it is my belief that maldistribution of foodgrains stock is mainly responsible for the scarcity conditions which have developed in various odd spots in the country.

Government Spending

"One important sphere of inflationary pressure has not come within the broad sweep of Mr. T. T. Krishnamachari's measures—the positive influence of rising public expenditure. No amount of restraint on consumption or on credit would be of avail if the magnitude and the pace of Governmental spending is not diminished. The volatile spenders, both State and Central, need to be kept in check under a strong leash if the delicate balance of stability is to be achieved. The distinguished Governor of the Bank of England stated recently that 'the economic machine could not be driven with one foot on the accelerator of public expenditure and the other on the brake of credit restriction.' Mr. Cobbold went on to add that it was not for the Bank to suggest where public expenditure should be cut. That was a political judgment, but it was his prime duty to 'sound warning bells when Government and near-Government spending is putting too heavy a burden on the country's resources.' How true it is of our present economy. We look to the Finance Minister to exercise enough persuasion with his colleagues, so that political judgments conform to dire economic necessity of the moment.

"For the success of our ambitious plan of development the co-operation and enthusiasm of the people must be marshalled; a feeling of commonness of responsibility must be generated; likewise, a sense of sacrifice must filter down to the people. From this angle, a deliberate increase in costs of living may provide the feeling and the background of obligations and responsibility. Our able Finance Minister is a realist; he should have risen above the historical emotions respecting salt, as also the moralising sanctions respecting prohibiton. Rajkumari Amrit Kaur, a devoted follower of Gandhiji, and erstwhile Minister of Health, has urged the abandonment of symbolic attachment to salt and has also advocated the scrapping of prohibition laws: these two can provide him immediately with substantial revenues and at the same time incite a large number of the low income category of our population to participate in the grand venture.

"Another aspect of the economics of disinflation which has not engaged the attention of our Finance Minister is the imperative need for providing incentives for greater production all round. Mrs. Joan Robinson, the eminent Cambridge economist, who has studied deeply the Indian plans and made several visits to India for the purpose, stated a few months ago that 'to support any large scheme of investment with a long gestation period there must be an appropriate amount of quick-yielding investment to get the consumption sector (including food production) into the posture to meet the demand that will fall on it—if the threat of inflation hangs over the Plan, it must surely mean, not that the Plan is too large, but that the balance is wrong.'

Corporate Taxes

"When I come, however, to the tax measures affecting joint-stock companies, I cannot but help regard the new burdens as indicative of the 'certain ambivalence' in economic thinking to which the Finance Minister has himself drawn attention. The increase in corporation taxes, compulsory deposits and tax on wealth are positive disincentives to capital formation, which by itself has not presented a promising picture over the last five years. A recent survey by the Indian Institute of Public Opinion arrived at the depressing conclusion that 'there was no significant rise in the rate of capital formation between the years 1952-53 and 1955-56. The second Five-year Plan assumed that the rate of saving in the economy would be stepped up from 7 per cent. to between 10 and 11 per cent., and this assumption was made in the belief that the capital formation in the last years of the first Plan was undergoing some change in an upward direction, possibly of the order of 1 to 2 per cent. a year. It now appears that, so far as 1956-56 is concerned, there is no justification for this assumption and that it may be that capital formation in 1956-57 has even fallen back below 7 per cent.'

"External dis-savings are huge and consumption expenditure is steadily mounting up.

"GUR" AND "KHANDSARI" INDUSTRIES

DEVELOPMENT ON SCIENTIFIC LINES URGED

A DISTRESSING feature of developments in India's sugar economy is that, while the white sugar sector has established itself fairly well, the *gur* and *khandsari* sectors have not registered any progress. In fact, the conditions now obtaining in these sectors continue to be none too happy. The methods of manufacture, for instance, are crude and wasteful; in all areas, the industries are unorganised; and modern facilities for stocking and transport are non-existent. This is certainly unfortunate, considering that the *gur* and *khandsari* industries play a vital role in the economy of the country. They consume the major portions of sugarcane grown in the country; the present annual rate of consumption is of the order of 30 million tons, that is, about 55 per cent. of the aggregate cane output. This is expected to be substantially higher at 40 million tons at the end of the second Plan period, when cane production will be about 77 million tons. The two industries together provide employment to no less than 2.1 million persons on a seasonal basis and to 70,000 persons all round the year. The total investment in the industries is about Rs. 40 crores, the aggregate value of output being estimated at Rs. 100 crores, if not more.

In view of the importance of *gur* and *khandsari* to both sugarcane growers and consumers of these products, it is imperative that energetic steps should be taken to set the two industries on a sound and secure footing. Dr. Panjabrao S. Deshmukh, Union Minister of State for Co-operation, did well, therefore, to urge, when he inaugurated the Seminar on Open Pan Crystal Sugar Manufacture on Small Scale, that, if the *gur* and *khandsari* industries were to take their rightful place in the agri-industrial renaissance of India, they should "forge ahead on modern scientific lines." Dr. Deshmukh stated that, in a predominantly agricultural country like India, these industries constituted a very important enterprise in the cottage sector and, as such, had not only come to stay, in spite of the startling progress made by the white sugar industry, but also needed to be fostered and developed.

Cane Disposal

There is no doubt that, for a long time to come, both the industries would continue to remain an ever-increasing means of disposal of sugarcane grown in the country. Out of an area of 14.5 million acres under cane in the whole world, approximately 4.0 million acres, constituting about 28 per cent. of the total, are accounted for by India. This country is thus the largest cane producer in the world. India's acreage under sugarcane has varied a great deal and, at times, reached 4.8 million acres, as in 1951-52. The white sugar factories consume only about 30 per cent. of the total cane crop, while as much as 55 per cent. is used for making *gur* and *khandsari*. The State of Uttar Pradesh has the largest area under cane and also the highest number of crystal sugar factories. The production of *gur* in this State, too, is the highest; and about 90 per cent. of the total output of *khandsari*—100,000 tons—is also produced here. It is but appropriate that this State should take a leading part in developing the *khandsari* industry and help in establishing it on a sound footing in a much more expanded form.

In the course of his speech Dr. Deshmukh drew special attention to the conditions under which the *gur* and *khandsari* industries are currently operating. His analysis clearly shows that the industries operate mostly in the non-mill areas and the technique adopted in most cases happens to be extremely crude. There is at present a marked disparity between the income obtained by cane growers in the mill and non-mill areas. Hardly any intensive cane development work is undertaken in the latter areas, as a result of which the yield of cane per acre is comparatively low. Viewed thus, the latest move of the U.P. Government to launch a large-scale project of cane development in the non-mill areas must be welcomed.

The Minister made a pointed reference to the fact that the *khandsari* industry was concentrated almost wholly in the Rohilkhand tract of Uttar Pradesh. In his opinion, the industry is holding its own only because of its institutional setting and for the reason that it is a means of raising working capital by the former. In its present form, it can hardly be regarded as a sound business proposition, from the point of view of both technical efficiency and interest of cane growers. If, however, technological developments were introduced in the industry, it should be possible, according to Dr. Deshmukh, for cane growers to realise not less than 75 per cent. of the value of cane supplied to vacuum pan sugar factories, as compared with the present 60 per cent.

Research Scheme

In this connection, the Minister referred to the *gur* and *khandsari* research scheme, financed and administered by the Government of India, which now forms part of the Indian Institute of Sugarcane Research, Lucknow. He revealed that a large volume of useful data had emerged from the researches carried out under this scheme for effecting improvements in the manufacture of *gur* and *khandsari*. The sulphitation process evolved under the scheme, it is claimed, enables production of *khandsari* sugar which very much resembles mill sugar. It is also claimed that *khandsari* produced by this method gives a much higher recovery than that derived under the indigenous method. Surely, this alone, as Dr. Deshmukh rightly observed, is a great step forward in the development of the industry. Further, due to the quality being better, the product will have ready sale and be preferred by many who have developed a taste for crystal sugar. What is more, the sulphitation process of improved *khandsari* manufacture is said to offer a large employment potential in villages. Dr. Deshmukh calculated that, against an investment of about Rs. 1 lakh per unit, employment could be provided to no less than 100 persons for five months in a year.

In conclusion, the Minister congratulated the Planning Research and Action Institute on having adopted the improved process in their pilot project for manufacturing *khandsari* in non-factory areas. The organisational pattern adopted by this Institute, we are told, is more or less the same as that recommended for the marketing and processing societies in the All-India Rural Credit Survey Report. About 900 cane growers have contributed 50 per cent. of the capital of the pilot project units at Ghose in the district of Azamgarh (Uttar Pradesh). Characterising this as a "healthy sign," Dr. Deshmukh hoped that these pilot units would provide means of solving the problem of rural credit and better economic utilisation of the sugarcane crop in areas far remote from vacuum pan factories. He also visualised the possibilities of these units being developed into multi-purpose production centres for catering to the needs of villages.

Although the importance of the vital role which the *gur* and *khandsari* industries play in the country's economy has been repeatedly emphasised ere now, the State Governments have not so far given any effective steps to improve their conditions. The spokesmen of these Government's talk often about developing the decentralised industries, especially as a means of solving the problem of unemployment in the rural areas. But it is highly regrettable that the Governments themselves do precious little to implement the reforms and measures by which they swear. In other words, they talk a lot, but do very little. The continued plight of the *gur* and *khandsari* industries is a typical instance of their inherent weakness. Since these industries are heavily concentrated in Uttar Pradesh, one naturally expects that the Government of this State ought to have launched long back a vigorous programme of development for this sector, a programme that will provide for improvement in manufacturing processes, adoption of better techniques of storage and transport, and provision of cheap credit facilities for those engaged in the industries. In view of the importance of these industries, the U.P. Government can even set up a separate department, under the care of a Deputy Minister, and make it responsible for developing the *gur* and *khandsari* industries on modern scientific lines.

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of April 1957 was 277,000 tons, bringing the total production upto 30th April to 1,822,368 tons. The corresponding figures during the last season were 251,000 tons and 1,653,000 tons, respectively.

The offtake of sugar from factories during the month was 198,000 tons, as against 125,000 tons in the corresponding period last season. The total offtake of indiginous sugar during the first six months of the current season comes to 1,035,000 tons, as against 805,000 tons.

Stock of sugar with factories as on 30th April 1957 was 1,314,000 tons, as against 1,258,000 tons on the same date last season.

COAL-BEARING AREAS

LOK SABHA APPROVES BILL TO TAKE OVER LEASES

IN less than four days after its introduction, the official Bill to establish greater public control over the coal-mining industry (a reference to which was made in this journal last week) was approved by the Lok Sabha on the 17th inst. The clause-by-clause consideration of the Bill will be taken up this week. The Bill empowers the Government to acquire, for the purpose of development of the industry, unworked coal-bearing areas held by private lessees on payment of reasonable compensation.

Moving the Bill for consideration, Mr. Swaran Singh, Minister for Steel, Fuel and Mines, explained the object of the Bill and said that the Government had to acquire unworked coal-bearing areas in order that the public sector might be able to achieve the targeted additional annual production of 10 million tons set for it under the second Plan. The Land Acquisition Act and Mines and Mineral Concession Rules did not, he added, confer adequate power on the Government to achieve this object and hence the present Bill. The Minister expressed the Government's anxiety to hit the target, in spite of the fact that it was "ambitious". He urged the House to treat the Bill as urgent as the first year of the Plan was already over and as the target had to be reached in the remaining four years. He disclosed that the National Coal Development Corporation had already imported machinery worth Rs. 1 crore. The Government could go ahead with the work only if the present Bill was passed.

The Bill provides for payment of compensation equivalent to "the actual legitimate expenditure incurred by the lease holder, *plus* a sum, in the nature of interest, calculated on the expenditure incurred and not exceeding 50 per cent. of such expenditure." Speaking on this provision, Mr. Swaran Singh said that the compensation rules contained in the Bill were in accord with the principles followed by the Government in similar cases. The Bill also provides for a tribunal to resolve disputes regarding compensation and power of appeal to the High Court against the tribunal's decision.

A Tame Affair

The debate on the Bill proved to be a tame affair; only a few members participated in it. Some of them, however, criticised the provisions particularly those relating to compensation. As is only to be expected, these criticisms regarding compensation came from leftist members who considered the terms to be somewhat liberal. It is, however, some consolation that they did not suggest expropriation of the leases or rights to coal mines. One of the Communist members from Andhra, welcoming the measure, said that the compensation should be paid only to lessees of the properly worked coal-bearing areas and that there should be no provision for appeal against the decisions of the tribunal over compensation. The Socialist member from Bombay, Mr. Naushir Bharucha, criticised the provisions of the Bill and said that the compensation proposed should be in line with the objective of a socialistic society. He thought that neither the scheme of the Bill nor the clauses relating to payment of compensation were satisfactory. If the Government wanted to take over a certain coal-bearing area, it should do so by paying direct compensation and not become a sub-tenant of the State Government concerned. A Congress member from Andhra suggested that the Bill should be referred to a Select Committee to report within a week. He felt that the principle of compensation on the basis of market price *plus* something else might lead to complications in the future. There should also be no provision for payment of *salami*, which was illegal in many States.

Pandit Thakurdas Bhargava, Congress member from Punjab, said that the principles laid down in the Constitution regarding acquisition of private property and compensation should be fully adhered to. Private property should be acquired only when it was absolutely necessary and on payment of just and adequate compensation. He felt that the compensation provision in the Bill was fair and wanted it to be further liberalised, if necessary.

One of the Congress members from Bihar suggested that, before any area was acquired, the Government should satisfy itself whether or not it was liable to pay compensation for it.

CHANGING SOCIALIST PATTERN AND NATIONALISATION

NEED FOR RETHINKING BY INDIAN LEADERS

By Prof. C. L. Gheevala

SOCIALISTS today are faced with a dilemma as to the means to be adopted for the achievement of the general objectives which commonly characterise all socialist aspirations. Socialism is basically a moral and emotional protest against conditions of material poverty and physical squalor. It, therefore, believes in creating conditions of equality of opportunity for the large mass of people, so that they may have the maximum scope for their self-expression and development. There have been various schools of thought, with profound variations in their choice of means—Owenites, Marxists, Fabians, Christian Socialists, Syndicalists and Guild Socialists—all of which claim to be "Socialists." The true ends which should inspire the Socialist faith are being forgotten and the doctrinaires among the socialists are deifying the means into the ends themselves. They seek to identify socialism with increasing public enterprises, nationalisation, central planning and bureaucratisation irrespective of the consequences. It is not realised that socialism which is basically a way of life representing certain ethical values and behaviour cannot be imposed from above by dictates of the Government or by merely nationalising industries and abolishing the system of private enterprise. That way lies the road to State capitalism and eventually to a monolithic State.

Socialism, which stands for social justice, equality of opportunity, liberty of the individual and fraternity, cannot be ushered in by mere institutional changes. The problem is more fundamental; it is one of creating a new moral leaven in favour of socialist values, instilling new ideals; in short, it is one of re-fashioning the individual out of an acquisitive society. While institutional changes may be necessary, and even desirable, emphasis must always remain on changing the individual from within, on working for a revolution in the minds of men.

At no stage, confusion has been more profound regarding the choice of means, than at present. As propounded by Karl Marx and still upheld by his doctrinaire followers, socialism has been defined as "nationalisation of the means of production, distribution and exchange." It is significant to note that the Marxist prophesy of the collapse of capitalism has proved untrue. He wrote at a time when most of the Governments in Europe were despotic. He could hardly foresee the coming of the Welfare State in the wake of the spread of democratic ideals and representative institutions in various parts of the world. Instead of growing pauperisation, the living standards have gradually risen and poverty and insecurity are in the process of disappearing. It is no longer true to maintain that the pattern of ownership of the means of production determines the character of the whole society and that collective ownership through nationalisation is the only necessary condition of realising the socialist objectives. The recent experience of the working of the Welfare State runs counter to the doctrinaire approach which equates socialism not only with nationalisation of industry, but with centralised planning and redistribution through State Collectivism.

An Outmoded Doctrine

As pointed out by Keynes, " It is not the ownership of instruments of production which it is important for the State to assume. If the State is able to determine the aggregate amount of resources devoted to augmenting the instruments and the basic reward to those who own them, it will have accomplished all that is necessary." The modern State, under the dynamic influence of democratic ideals, has revealed a new awareness of social justice and equality. *Laissez faire* is an outmoded and a discredited doctrine. Today, the State already wields considerable power in the social and economic spheres and has subjected a large segment of economic field to what may be described as strategically decisive political control. With the vast complex of physical, legislative, monetary and fiscal powers, the State seeks consciously to regulate the level of employment, the distribution of income, the rate of accumulation and the balance of payments. The policies effectively influence the size of industries, the pattern of output and the direction of investment decisions. The vast amount of labour legislation regulates the relations between the employers and the employees and safeguards the rights of the workers. The State has thus emerged as the final arbiter of economic life and the era of unregulated and unfettered market economy is over. Besides, with the growth of the managerial joint-stock corporation, the function of decision-making has already shifted to non-owning classes of executives from the capitalist class of *entrepreneurs*. In this context, therefore, the cataclysmic view of the growing pauperisation of the masses, the consequent class struggle, the dictatorship of the proletariat and the ownership of the means of production by the State which constituted the central core of Marxian thesis have become irrelevant as means of achieving the socialist objective.

No Socialism

It is against this background that the present socialist dilemma regarding means and ends has to be viewed. It is now increasingly realised that mere change of ownership is no guarantee for ensuring that the economy would be run on socialist lines. On the contrary, the socialists in some of the leading democracies have been struggling to reorientate their approach to the problem of nationalisation since it has created fresh problems arising from undue concentration of economic power in the political hands, on the one hand, and the growth of vast bureaucratic corporations, on the other. Even trade unions which at one stage supported the nationalisation of industries have started re-examining their stand since expanding public enterprise has meant serious curtailment of their rights.

Our Prime Minister has correctly enunciated the problem facing all those who want to plan on a democratic basis. He said: "We want to produce material goods of the world and to have a high standard of living, but not at the expense of the spirit of man, not at the expense of his adventurous spirit, not at the expense of all those fine things of life which have ennobled man throughout the ages." In its Election Manifesto, the Congress party has attempted to clarify its attitude towards nationalisation and private enterprise thus: "It is not intended to nationalise the existing private industries, except where such is considered necessary in terms of 'planning' or where they occupy a 'strategic' position in the economy of the country. Private Enterprise will be encouraged, but always in the context of planning." This statement has to be viewed in the context of the Industrial Policy Statement of April 1956, where a substantial segment of our industrial life is to be progressively developed under the public sector. However, in a scheme of comprehensive central planning, there is need to guard against the danger of ideological considerations exercising undue influence over the planners engaged in formulation of programmes and policies.

Vague Terms

As pointed out by John Jewkes, a remarkable consequence of the growth of planning ideas is the extensive use of vague and obscure terms, which frequently represent a mere substitute for thought itself. In the absence of any precise definition and a clear-cut demarcation, the terms 'basic,' 'strategic' and 'planning' are vague and elusive, since, at some stage of a crisis developing in the economy, the planners might fail to distinguish between industries which are essential and those which are non-essential from the point of view of strategic controls over the economy. It is, therefore, essential that the policy of nationalisation must accept certain fundamental limitations and must define the sphere of its operation in very clear, precise and unambiguous terms if the democratic values of socialism have to be preserved and fostered.

Role of Profit

The planning argument is advanced on the presumption that the profit motive and the national interest are mutually conflicting. The other underlying presumption appears to be a sort of a belief that profit motive is ethically wrong and that the same could be eliminated only by nationalisation. This view stems from a basically unsound approach to the problem. Behind this lies an inadequate appreciation of the economic role of profit and a great deal of confused thinking which mistakes profit for 'profiteering' and equates profits with 'exploitation' as enunciated by the Marxian dogma of "surplus value." If appropriation of the "surplus value" is exploitation, no country in the world is a greater sinner than Soviet Russia which has extracted maximum "surplus value" from its workers not only for the upkeep of its vast military and bureaucratic machine but also for enforcing a rate of investment far in excess of the one achieved in the so-called capitalist countries. They have even resorted to most ruthless methods of repression and caused widespread suffering to the people in achieving this objective.

What the socialist needs today is a more balanced and correct approach to the problem of the role of profit in a dynamic economy. Whether it be public or private industry, capital formation must be the prime motive of economic activity and this makes it indispensable that the level of total saving must be maintained at a high level. In fact, it is a condition precedent to rapid economic growth. In this context, it is immaterial whether the means of production are owned by the State as in nationalised industries or by industries in the private sector; it is incumbent on both to set aside some part of current production for re-investment and ploughing back for the expansion of existing units or the starting of new industries. It is only a static society which consumes in current enjoyment its entire output of goods. This only leads to stagnation, and stagnation, as has been aptly said, means death.

A growing dynamic society cannot think in these terms nor can any socialist object to profit in principle. What can legitimately be objected to is profiteering which is anti-social, and the maldistribution of resources resulting in concentration of wealth in the hands of the few. The State today is fully equipped in its armoury of varied monetary and fiscal measures to meet such a situation. To seek, therefore, to eliminate profit through a policy of nationalisation will be nothing short of an act of suicide. There is no guarantee that the bureaucracy in a State-owned economy or nationalised sector will promote higher rate of investment and not misuse or fritter away the resources as is feared in the private sector. Except in the case of provision for social services which cannot be governed by profits, there can be no excuse for not applying to the State or the nationalised sector the principle of profit or a higher rate of return.

Role of Private Sector

It is significant to note that the post-war experience of nationalisation has proved that public ownership or nationalisation does not necessarily guarantee the realisation of the objectives of planning. As affirmed by some of the leading socialists, reality has proved rather different from the blue-print. "Some of the anticipated advantages did not materialise; while certain unexpected disadvantages emerged." It is in this context that socialists, more particularly in India, who have grown under the inspiring legacy of Gandhian thought and undertaken the task of evolving a new pattern in conformity with the basic democratic values and ideals, require a new reorientation in their approach to private sector or what is chosen to be described as free enterprise in contradistinction to State capitalism.

It would be mere distortion of historical facts, or a grotesque caricature to seek to equate present-day free enterprise with *laissez faire*. Free enterprise is as far away from nineteenth century capitalism, as democratic socialism from Marxian socialism nursed under a totalitarian system. It will hardly profit the socialists to compare the aberrations of the early *laissez faire* capitalist system and the consequent suffering of the people, with the cold-blooded, calculated brutalities of the totalitarian economies, with their liquidation of millions of people and the atmosphere of ubiquitous and omnipresent terror, perpetrated in the name of socialism. Free Enterprise, today, in contrast to authoritarian bureaucratised economic system, stands for voluntary effort expressed through people's initiative and enterprise. No responsible exponent of the system has asked for the revival of exploitative capitalism. It fully accepts its social obligations in a scheme of planned economic development. Under a system of democratic planning, regulated private enterprise has a positive role to play; and it is essential that the same is duly recognised. It is not something in the shape of a relic of a dying system to be just tolerated for a short while or to be suffered on grounds of political expediency. It is a living and dynamic system, which is both fundamental and indispensable for ensuring democratic processes. It must be accepted as an integral part of the system of true democratic socialism which is based on the recognition of the intrinsic moral worth and dignity of the individual. "The reason why socialistic economy requires private sector is because socialists place a value on individual freedom."

Congress Party's View

In this connection, it is relevant to point out that the socialist pattern, as enunciated through the Congress resolutions, emphasises that "the democratic process is to be ensured though enabling the private sector to play its proper role. The two sectors, private and public, should be viewed as parts of a single plant if the economic growth of the country should be both democratic and peaceful." State Enterprise and Free Enterprise must, therefore, function simultaneously in the economy, complementing each other in the interest of achieving the common objective. What is essential is a balance of a "mixed economy" in which, in the words of the Prime Minister, "it is desirable to have a competitive private sector," not only for ensuring the proper functioning of the public sector, but also for keeping it up to the mark to some extent. As emphasised by the Socialist Union in their publication, *Twentieth Century Socialism*, "as long as an independent sector remains, it can act as a perpetual and very effective check on the State's activities. If there continue to be private employers and independent trade unions, and bargaining between them produces good results, there will be no escaping the insistence of the unions on similar conditions from public employers. If public enterprise is less efficient than private, if it gives less satisfactory service to the consumer, the comparison will be there for all to see and public opinion will not acquiesce for long. At every point, the nature and efficacy of State activity can be directly challenged."

Nationalisation is not Socialisation

Government in some of the leading democracies of the world today has moved away from the *laissez faire* policy and is wielding a wide variety of fiscal, physical and monetary powers, to enable it to achieve the objectives of planned economic development by means of overall regulation and direction. It has been found by experience that adequate control over the public sector is difficult to exercise, and it has been equally more difficult to make the nationalised sector amenable to public accountability in reality. In the United Kingdom, where the Labour Government experimented with nationalisation, it was a common saying that the Government had less power over Lord Citrine than over the Imperial Chemical Industries! This only illustrates how difficult the task of governmental co-ordination becomes in an expanding public sector. While appreciable progress is made, after initial teething troubles, in the working of the State enterprises in India such as Sindri Fertilisers, Chittaranjan Locomotives Factory, the Integral Coach Factory, the Indian Telephone Factory, a great deal more yet remains to be done. We are still following the outmoded system of running State enterprises, entailing serious complaints, irregularities and delays. To cite only one instance out of many, it took Government three years to obtain possession of the site for a factory and this delay, as the report points out, caused the Exchequer "an increase of about 400 per cent. in the cost of land, 80 per cent. in the cost of plant and machinery, 40 per cent. in the cost of steel and 100 per cent. in the cost of fabrication." Reports of the Parliamentary Estimates Committee are replete with instances of "bureaucratic mishandling of public enterprises, lack of co-ordination, inefficiency and waste of public resources."

Central Planning

To one who is familiar with the operation of economic forces, it becomes clear that the best of planners cannot foresee the issues arising out of central planning. The present crisis in our foreign exchange resources with all the repercussions on the pace of planning is an instance in point. We who are pledged to democratic planning must guard against developing a strange hypersensitiveness to public criticism, which, as is amply illustrated by the experience of planning in countries like Russia and its satellites Poland and Hungary and China among the totalitarian States and even to some extent during the days of the Labour Government in the U.K. among the democracies, inevitably results in either hunting for scapegoats or threatening to resort to more desperate and drastic remedies of placing the whole economy on a "war-time basis" as a national emergency! It may be that, in a totalitarian regime, to a politician, a public confession of failure is tantamount to political suicide. But surely, in a democracy, the logic of planning need not, like a blind fury, threaten to drive us from one crisis to another!

The planning argument in favour of nationalisation has thus fallen into disrepute. It is sometimes forgotten that monopoly, even where it is public, suffers from serious drawbacks. It not only results in seriously curtailing the freedom of the individual citizen, inasmuch as it denies him his right and privilege to start industries and produce goods of his choice, but by removing the conditions of competition, it smothers all initiative, enterprise and venturesomeness which are the basic requirements for efficient working of the economic system. The nationalised sector, in the absence of competitive conditions, equally fails in safeguarding the interests of the consumer which can only be promoted by a free choice of goods and competitive suppliers. In short, experiment in nationalisation in countries like the United Kingdom has only led to the creation of vast bureaucratic organisations which suffer from all the dangers of overcentralisation, endangering the very existence of a democratic society.

Progress Will Be Checked

It has been admitted that nationalisation has not provided the right answer to problems of development. As pointed out by Frank Beskrick, "Centralised control might well damp down the rate of development. There is no evidence that increased technical efficiency would necessarily follow from State ownership." As further affirmed by C. A. R. Crossland, the leading British socialist, "A higher working class standard of living, more efficient joint consultation, better labour relations, a proper utilisation of economic resources, a wide diffusion of power, a greater degree of co-operation and more social and economic equality—none of these now primarily require a large-scale change in the ownership for their fulfilment." Except those who are wedded to the Marxist-Leninist dogma, none subscribes to the belief that the ownership of the means of production, distribution and exchange is a *sine qua non* of a socialist order of society. It has become clear that the mere act of nationalisation does not automatically change industrial and social relations in the direction we desire. The recognition of these new problems is aptly expressed in the new slogan "Nationalisation is not Socialisation."

This is, however, not to suggest that, in a backward economy, the State should not undertake development of certain industries either of a basic or a strategic character deemed essential for bringing about rapid industrialisation of the country. In fact, there are quite a few industries, which the State is already either managing or controlling and there are quite a few, which are beyond the capacity of the private sector to develop and which the State can conveniently undertake to develop in the larger interest of the national economy. What is essential is to emphasise that there is no *a priori* case in favour of nationalisation as a panacea for all our economic ills.

Every act of nationalisation, therefore, must be justified on sound pragmatic grounds. It is not enough to state, as was asserted by the then Finance Minister, in respect of nationalisation of life assurance, that, "there is no need for making out a case that private enterprise has failed in order to effect nationalisation. Nationalisation can be justified on grounds of ideology and philosophy." Any proposal in favour of nationalisation will have to convincingly demonstrate—whether it be of the air transport undertaking, life assurance or the Kolar gold mines—that the same will result in economic improvement where the existing industry has manifestly failed and that other physical or fiscal controls have proved incapable of improving the situation. The approach, therefore, will have to be selective, cautious and empirical. In case where an industry is sought to be nationalised on grounds of alleged inefficiency, it will have to be proved that the same is impervious to other treatment except that of public ownership. Nationalisation must be an exception, made under extraordinary circumstances, and not a rule to be followed in deference to certain ideological pursuits. A mere snap political judgment in disregard of economic implications may lead to disastrous consequences.

The best *via media* that has been suggested in this context has been that of "competitive public enterprise approach." Government need not take over any of the existing units, but should try to set up, if conditions warrant, new Government-owned plants to compete with the existing private units. This approach not only saves the community from the dangers of overcentralisation and bureaucratisation, but provides the necessary milieu for a healthy functioning of the public sector since it will have to justify itself on grounds of performance and efficiency. It is essential that the competition between units in the public and the private sectors should be just and fair, free from any discriminatory treatment in the allocation of resources, raw materials or labour. "Competitive performance must be the sole test—if the public companies cannot compete on equal terms, they do not deserve to be set up. They must be subject to the same test and standards and must function under the same normal commercial conditions." In the name of "common good" or "public service," the State sector cannot claim a "right divine" to go wrong, to work inefficiently or to fritter away national resources.

Shorn of its ideological trappings, the State cannot *ipso facto* assert any superior moral claim over the private or the people's sector, except in terms of its actual performance of the functions it is expected to fulfil. The public and the private sectors must, in the last analysis, be judged by the contribution each makes to the realisation of the objectives of planning, e.g., expanding economy, fair shares and economic security. In their organisational set-up, the nationalised units must be so constituted as to be able to show greater *entrepreneurial* initiative and maximum degree of freedom and independence in their day-to-day affairs. Similarly, the private units in the sector which have a vital and important role to perform must not be hamstrung by a network of administrative restrictions of an unfair or an arbitrary character. In this sense alone, the false dichotomy of the public and private sectors can be done away with and both these segments can be called the limbs of the national sector, which must unceasingly work for the rapid industrialisation of the country, providing expanding employment opportunities and raising the standard of living of the people and seeking to bring about a reduction of the present inequalities in income and wealth.

Dangers of Centralisation

Democratic Socialism must equally address itself to the wider and more fundamental question of dangers of centralisation and bureaucratisation to individual freedom and initiative. It can ignore these vital issues at its own peril. The serious consequence of a policy of nationalisation and the public sector, which is to expand both absolutely and relatively, would be the setting up of vast bureaucratic corporations with large accretions of power. Such bureaucratic organisations can only be remotely responsible to Parliament and in reality will constitute a veritable threat to the freedom of the individual. As pointed out in *Twentieth Century Socialism*, "In such a system, there is no freedom to experiment with ideas which have not won State approval. The man who wishes to risk or dare is a misfit or worse. *To eliminate all private capital is to open the road to totalitarianism.*" (Italics ours.) Instead of realising the objectives of a socialist order—"a society of free and equal"—it will create problems arising out of undue concentration of economic power in the political hands and the bureaucracy. R. H. Crossman, the British Labour M.P., as a result of the socialist experiment in the U.K. which sought to subject the economy to public control in the name of freedom and democracy, candidly posed the dilemma: "Yet the State Bureaucracy itself is one of these concentrations of power which threaten our freedom. If we increase its authority, still further, shall we not be endangering the liberties we are trying to defend?"

It has been aptly observed that "the modern planning movement sets out with goodwill and noble intentions, to control things and invariably ends up by controlling men." It is true that we are pledged to democratic planning and that our Constitution guarantees certain fundamental rights. Yet, while accepting freedom and democracy in theory, in actual practice the socialist pattern runs the risk of being increasingly identified with an all-powerful State. It is seriously maintained by some that the recent trends in Government policy, set in motion with the amendment of Article 31 of the Constitution and the drastic changes in the Company Law, while intended to check some of the abuses, will unmistakably result in inhibiting private initiative and enterprise to a considerable extent. Besides, the State Trading Corporation, with its inroads into cement distribution, canalised imports, export of manganese and iron ores and a host of other items which are to be brought within its ambit ostensibly with the purpose of mobilising and diverting large profits for meeting part of the investment programme of the Government, justify the doubts and misgivings

(*Continued on page* 1075)

ROADS AND NATIONAL HIGHWAYS

SPEEDIER EXECUTION OF PLANS URGED BY ESTIMATES COMMITTEE

THE implementation of a national road policy is of the utmost importance to the country's economy, considering how largely and how intimately the success of the economic programmes is bound up with an extensive and well maintained network of roads. Naturally enough, the subject of Indian roads has attracted considerable attention and study in recent years, thanks to the efforts of the transport and engineering departments of the Central and State Governments, the Indian Roads Congress and certain non-official organisations such as the Indian Roads and Transport Development Association. It is gratifying to note that the Estimates Committee of Parliament has made yet another welcome attempt at the study of the problem in its report entitled "Ministry of Transport (National Highways and Roads)" wherein the Committee has described and commented on the evolution of India's road policy and offered valuable suggestions for the speedier implementation of road programmes.

The relative backwardness of India's road mileage will become evident when it is remembered that the average road mileage per lakh of population is 69.1 in India, as against 365.4 in the U.K., 641.2 in Switzerland, 449.0 in Belgium, 1,221.0 in France and 2,143.7 in the U.S. The average road mileage per square mile of area is 0.2 in India, 2.0 in the U.K., 1.9 in Switzerland, 3.3 in Belgium, 2.4 in France and 1.1 in the U.S. Realising the importance of roads and with a view to preparing a road development plan for India, the Central Government convened a Conference of the Chief Engineers of Provinces and States at Nagpur from 15th to 18th December 1943. This Conference took a 20-year view and proposed that, at the end of that period, no village in a well developed agricultural area should remain more than five miles away from the main road. It recommended that (1) roads should be divided into four classes, namely, national highways, provincial or State highways, district roads and village roads; national highways were defined as highways running through the length and breadth of India connecting major ports, foreign highways and capitals of provinces and of large States and including roads required for strategic movements for the defence of India. It also recommended that the Centre should assume financial responsibility for the construction, development and maintenance of national highways. After holding consultations with the State Governments, the Central Government assumed full financial responsibility for national highways with effect from 1st April 1947.

Nagpur Plan

The Nagpur Plan laid down a 400,000-mile target, to be reached in 20 years, consisting of: national highways 22,000 miles, national trails 3,000 miles, provincial highways 65,000 miles; district roads—major 60,000 miles, other 100,000 miles—and village roads 150,000 miles. These figures had to be revised in the context of partition which followed later. The reduced figures for post-partition India are: national highways 16,600 miles, national trails 4,150 miles, provincial highways 53,950 miles, district and village roads 256,300 miles. At the beginning of the first Plan, India had 98,000 miles of hard surfaced roads and about 149,000 miles of low type roads. At the end of the first Plan, the length of metalled roads rose to 121,000 miles and that of unmetalled roads to 195,000, as against the Nagpur Plan targets of 123,000 miles and 208,000 miles respectively. At the end of the second Plan period, the mileage of metalled roads is expected to rise to 143,000 and that for unmetalled roads to 235,000.

The question is whether the contemplated targets are adequate in the context of the economic development now envisaged under the Five-year Plans. On this question, it is noteworthy that Mr. E. A. Nadirshah, ex-President of the Indian Roads and Transport Development Association, made some important observations in his evidence before the Estimates Committee. He informed the Committee that road mileage in 1943 was about 220,000 miles (88,000 miles of hard surfaced and 132,000 miles of earth roads). The Nagpur Plan proposed to raise it to about 208,000 miles of earth roads, that is, an increase of about 111,000 miles of roads (35,000 of hard surfaced and 76,000 of earth roads). Therefore, the increased mileage proposed was roughly 50 per cent. of the 1943 figure. The Nagpur Plan was prepared on the anticipated traffic requirements of the country by 1963. Since the inception of the first Plan the tempo of the economic development had changed. The increase in production in the first Five-year Plan was about 30 per cent. over the pre-Plan period, i.e., 1950-51, and in the second Plan it was estimated at about 100 per cent. over that in the year 1950-51 and it will be about 150 per cent. over that of 1943. Therefore, the country's requirements of roads by 1961 should logically be about 2½ times those of 1943, when the Nagpur Plan was formulated. Mr. Nadirshah further added that the Nagpur Plan was drafted, taking into consideration certain conditions that would be prevalent after 20 years. The conditions were absolutely different after independence and the experts who drafted the Plan could not have thought of all these things at that time. The Nagpur Plan was, therefore, deficient in that respect as sufficient data was not available at that time on roads that existed in different princely States.

Ministry's Views

The Ministry informed the Committee that so far as the basic principles laid down in the Nagpur Plan were concerned, these needed no change. The mileages of roads required on these principles were worked out satisfactorily while preparing the Nagpur Plan. As, in some areas, roads are required closer together than the average assumed at the time of the Nagpur Plan, the overall mileage figures worked out in the Nagpur Plan may not suffice for attaining the basic targets laid down. No detailed study had been made after the preparation of the Nagpur Plan for determining the maps the mileages that will be actually required for attaining the basic targets. The representative of the Ministry further informed the Committee that at present there was no plan for revising the Nagpur Plan but that had to be taken up. The Nagpur Plan envisaged that in developed areas the villages should not be more than five miles away from a *pucca* road and in non-developed areas not more than 20 miles away from a *pucca* road. This stipulation was not considered adequate now. The representative further added that the time had definitely come to take up that question. Commenting on these views, the Committee considers that it is necessary to have a perspective plan just like the Nagpur Plan which will meet the requirements of the next 25-30 years. It, therefore, recommends that in view of the integration of the princely States and change in the political map of the country after the Nagpur Plan was formulated and in view of the industrialisation that is taking place, the Ministry should devise a plan as early as possible based on existing conditions.

State roads are important for the reason that they are linked with the national highways and along with them constitute a single road system. The programme for State roads is determined by the States themselves though the road organisation at the Centre is consulted. Construction of roads is financed from State revenues which are supplemented by the allocations and grants from the Central Road Fund. Under the first Five-year Plan of the State Governments, the schemes envisaged an increase in the mileage of metalled roads from 10,007 in 1950-51 to 12,453 by 1955-56 in Part 'A' States and from 7,588 to 8,129 in Part 'B' States. During the same period, the mileage of unmetalled roads was expected to be reduced from 2,199 to 757 in Part 'A' States and from 526 to 206 in Part 'B' States. The road development plans for Part 'C' States were framed with a view to providing for the construction of as many new roads as possible and for opening up areas which are at present inaccessible while improvement and reorientation of the existing roads to meet the changed administrative requirements and the economic development of the areas is also being given due emphasis. The total provision for road development in the plans of the States was Rs. 93 crores. The States' sector of the second Plan has a total provision of Rs. 164 crores for road construction in the States, the Union territories and the North East Frontier Agency. About 18,000 miles of surfaced roads are expected to be constructed under this programme during the second Plan period. The programme takes into account the special needs of backward areas which could not be given adequate attention in the first Plan. Some provision has also to be made for the improvement of low grade or earth roads constructed during the first Plan as part of the rural development programme.

As regards rural communications, the Nagpur Plan, as already stated, provided that every village in a well developed agricultural area should be within five miles from a main road and in a non-agricultural area within 20 miles from a main road. The Transport Ministry informed the Committee that, at present, there were 121,000 miles of *pucca* roads but it could not be said that no village was within five miles away from a *pucca* road. The Ministry also stated that a study of the whole subject would be undertaken shortly. Mr. Nadirshah observed that village roads would be successful if earth roads were constructed properly in the beginning and the soil was stabilised. Every section should be provided with a mechanical grader to level up the earth roads as the roads would get cut up with the passage of wheels. After traffic had developed *macadam* surface could be put on the roads. This would be cheaper and economical. He further added that the present practice of constructing roads in rural areas which consisted of no more than shaping the earth to required grades and levels was hardly meeting the barest minimum of engineering requirements. The only scope whereby expense could be saved was by utilising scientific methods of soil evaluation now practised which sometimes resulted in failure and the original money spent was more or less wasted. The Committee has recommended that the method of construction of rural roads as suggested by Mr. Nadirshah should be considered by the special officer who is to be appointed to undertake a broad study of development of rural communications and he should lay down definite standards for the construction of better rural roads at a cheaper cost.

National Highways

Now to a closer examination of the position of national highways. The Government of India, as already stated, assumed full financial liability for the development of national highways with effect from 1st April 1957. In view of the limited funds available, it was decided that first priority should be given to the construction of the missing links and bridges on the more important routes. Between 1947-48 and 1950-51, a total expenditure of Rs. 6.2 crores was incurred on the development of national highways; about 110 miles of missing links and three large bridges were constructed and 1,000 miles of existing roads improved. Again, during the period, the mileage of national highways improved from 12,200 to 12,310. The Committee regrets to note that the performance in these years was "extremely poor in the matter of new construction." During the period of the first Plan, 636 miles of missing links and a large number of culverts and bridges, including 30 major bridges, were constructed, about 4,000 miles of existing sections improved and about 400 miles of the improved sections made fit for two-lane traffic. Again, during this period, the mileage of national highways increased from 12,310 to 12,946.

A provision of Rs. 55 crores has been included in the second Five-year Plan for the development of national highways. In terms of physical achievements, about 1,200 miles of missing links and new diversions (including 614 miles in progress at the end of the first Plan period) are proposed to be taken in hand under the second Plan. Out of these 1,200 miles, about 900 miles are expected to be constructed during the second Plan period. The balance of work will be carried over to the third Plan period. With the construction of 900 miles of new lengths in the national highways system, the actual length of national highways will rise from 12,900 miles at the end of the first Plan period to 13,800 miles by the end of the second Plan period. That is to say, all missing road links in the national highway system are expected to be constructed by the end of the second Plan period. Besides the construction of the missing links, it is proposed to take in hand during the second Plan period the construction of 116 major bridges (including 42 bridges in progress at the end of the first Plan), the improvement and asphalting of 4,700 miles of existing sections (including 3,000 miles in progress at the end of the first Plan) and the widening of 3,300 miles (including 300 miles in progress at the end of

(*Continued on page 1075*)

NEW PRODUCTS AND PROCESSES

Finding Underground Ore Deposits

SCIENTISTS at the California Institute of Technology have developed a new and remarkable method of discovering underground deposits of ores and precious metals. According to Robert P. Sharp, chairman of the Institute's geology division, it may some day be rated as one of the most significant contributions to ore prospecting in this century. Numerous rock samples were collected and tested in a laboratory. The tests showed that the amount of oxygen elements of differing atomic weights (oxygen isotopes) in the rocks varied directly with the sample's distance from an ore deposit. Further studies showed that these variations were caused by the extent to which the rocks had been heated and permeated about 250,000,000 years ago by hot fluids which boiled up from the interior of the earth and broke through the earth's crust. When the hot fluids reached the earth's surface, they heated surface rock formations such as limestone and dolomite. This heating caused certain chemical changes in the rock, and these changes can be detected today by scientific analysis such as that used by the California scientists. Geologists already knew that the fluids from inside of the earth, which were hot enough to melt rocks, carried rich minerals with them to the surface of the earth. When the fluids cooled, they formed the surface and underground mineral deposits of today. The California scientists have now discovered how to locate areas, either on the surface or underground, where such mineral deposits are located. Study of rock formations to determine their content of oxygen isotopes will make this possible. Previously, the discovery of underground ores has been largely a matter of luck.

Synthetic Diamonds

A man-made material that is just as hard as diamonds, if not harder, has been produced in the United States by the General Electric Company. Called borazon, a compound of boron and nitrogen the new material is said to be the hardest substance ever made by man. It is created by the use of tremendous pressure and heat. It can scratch a diamond and is able to stand heat that will burn up a diamond. If borazon can be produced in adequate quantities at a reasonable cost, it may take the place of diamonds as a cutting material in industrial processes. Diamonds are limited in quantity, expensive ($6,000 a pound), and virtually all of them are found in Africa. Dr. Robert H. Wentorf, a 30-year old physical chemist, is credited with the discovery of borazon. A member of the General Electric research team which produced tiny man-made diamonds and garnets two years ago, Dr. Wentorf used a similar method to produce borazon crystals the size of grains of sand.

Type Script Duplicator

A new machine was on display at the British Industries Fair recently held at Birmingham, which not only reproduces typescript at the rate of 100 sheets a minute, but can also take photographic stencils made by another machine and so provide rapidly copies of drawings, etchings, plans, prints—virtually anything that can be put on paper. Electrically powered, the duplicator is made by a British firm. It works by itself and, according to the number of copies required as set on a dial, stops itself on arriving at the appropriate figure. In addition, thanks to a special device known as cyclovane control, ordinary thin paper can be used without smudging; or, for the reproduction of hotel menus and the like, card can be fed into the machine with equally good results. The firm had its beginnings 80 years ago in a tiny workshop started by David Gestetner in the City of London. Today it has a worldwide business in duplicating-machines, and its factory occupies some 500,000 sq. ft. on the outskirts of London.

Computer System for Railways

An electronic computer control system has been developed to help oversee the distribution of empty box cars to shippers along the lines of the Southern Pacific Railway. The system which has been developed jointly by Southern Pacific and the Stanford Research Institute will control operations in 11 of the railway's geographical divisions covering 8,000 miles of track from Portland, Oregon, to El Paso, Texas. The operation of the electronic computer system will commence on 1st July this year. It will involve the daily sifting and analysis of 70,000 individual car records and the evaluation of the car handling efficiency achieved, the forecasting of traffic trends and the advising of the railway's officer in charge of car distribution where to move empties to maintain optimum box car supply. The data processing computer which is to be used to operate the system will be located at San Francisco, California.

Machine Parts Counter

A high-speed counter, capable of tallying as many as five million manufactured parts per hour with a maximum error of only 0.1 per cent., is being introduced for use by small parts manufacturers in the United States. It is expected to provide economies in many plants which now ship bulk orders of small parts on the basis of weight, instead of time-consuming count, and usually ship extras to avoid any risk of shortages. From a hopper with ten cubic feet capacity, the machine feeds the parts to a row of eight conveyors where they are counted by phototransistor eyes and sped on their way down a chute into the shipping container.

Manufacturers of

ALUMINIUM, BRASS AND COPPER SHEETS, STRIPS, CIRCLES, WIRES, RODS, ETC.

ALUMINIUM, BRASS AND COPPER RIVETS AND WASHERS, COPPER STRIPS AND TAPE.

ALUMINIUM ELECTRICAL FITTINGS AND LOUD-SPEAKERS.

ALUMINIUM AND MILD STEEL SPOOLS AND CANS.

Also:

MANUFACTURERS OF "CYCLE BRAND" NON-FERROUS METAL WARES AND UTENSILS AND "QUEEN BRAND" STAINLESS STEEL UTENSILS AND HOSPITAL WARES.

Telephone: 72220 & 41618

Tele. Address: "CYCLEBRAND" Kalbadevi BOMBAY-2.

LALLUBHAI AMICHAND PRIVATE LTD.

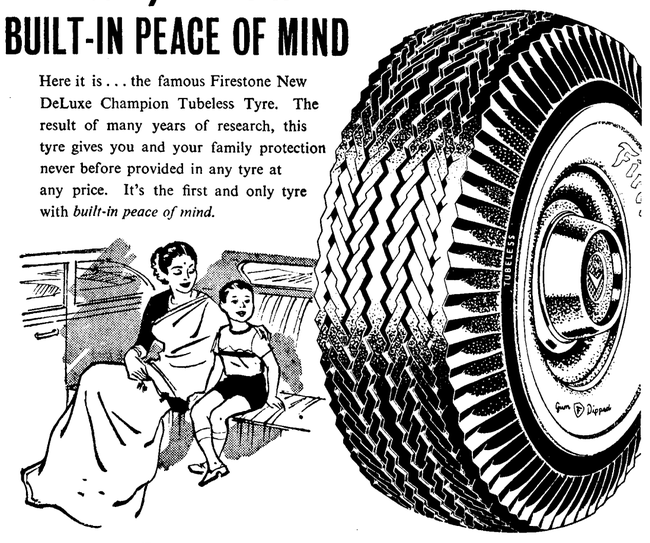
the tyre with

BUILT-IN PEACE OF MIND

Here it is . . . the famous Firestone New DeLuxe Champion Tubeless Tyre. The result of many years of research, this tyre gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with *built-in peace of mind.*



Reduces Fear of Blowouts, Punctures and Skids

The New DeLuxe Champion Tyre is fitted with an air-tight Safti-liner instead of a conventional tube. So there's nothing to rip, tear or explode, causing dangerous blowouts. And the Safti-liner grips puncturing objects and nullifies the loss of air. The multiple angle tread design gives a much better skid protection on any road surface and curve

NEW TAXATION PROPOSALS

FINANCE MINISTER'S ELUCIDATION

THE following is a continuation of the Union Finance Minister, Mr. T. T. Krishnamachari's budget speech, made in Parliament on 15th May 1957. The earlier part of the speech was published in our last issue.

"The core of the Plan is steel, coal, transport and ancillary power. With the external assistance that has been already promised and with further support from the International Bank and other sources, we shall, I think, be able to carry through the projects in this 'core.' This group of programmes has the highest priority, in view of its bearing on further development. But, in regard to other projects, especially those for which no external resources are specifically forthcoming, and which are not otherwise of high priority, it would be prudent for us not to make fresh commitments for some time until the outlook becomes clearer and we have more assurance of our being able to find the foreign exchange resources needed for them.

"Some rephasing of the Plan is thus inevitable, but, if, as I hope, the balance of payments situation takes a turn for the better before long and, if we succeed in securing adequate external resources, the achievement on the Plan should not fall much behind schedule. Even if the Plan did not encounter difficulties in certain sectors—which it does—a rephasing of it might be necessary in certain parts. The rapid development of the country in the last few years has made it incumbent on our part to give closer attention to the socio-economic objectives of the Plan. The Plan has set to itself the objective of increasing national income progressively over a period of 15 to 20 years.

Urgency of Development

"The urgency of development is related to the need for raising living standards all round and for creating an environment in which democratic values and ways of life take root and gather strength. To those who regard the Plan as too ambitious, I would respectfully submit that they should take a good look at the living conditions of the bulk of our people. If they would only do this, I am sure they will, along with me, be able to see the several directions in which the Plan is inadequate.

"In the last few years, there has been some visible improvement in the standards of nutrition and, probably, of clothing. The housing conditions and environmental hygiene in urban and rural areas of the low-income groups are deplorable; the slums in our cities are a disgrace to any society which claims to be considered civilised. I am deeply anxious to see that the Plan is strengthened in this respect.

"Let us not forget that the very fact that a measure of success has been achieved already in raising living standards makes it all the more urgent that the process be carried forward with vigour and determination. The millions in India have woken up to new desires and new wants for the first time in many generations. With knowledge that a better future for all be possible has come the aspiration that the desired improvements should take place without delay. Whether it is the demand of industrial labour for higher wages and better housing conditions, or of low-paid teachers and Government employees for a fair deal and greater security—all these are but manifestations of the new awakening and of the new striving for an economic future which is consistent with the dignity of the citizens of a free society.

Claims of People

"One cannot merely shrug one's shoulders in the midst of such a situation and say that all these things must wait till somehow or other the financial situation in the country improves. Whatever the difficulties of the moment, the demands of the people—especially of the low-income groups—must be assessed carefully and met to the maximum possible extent. Admittedly, there has to be some order of priorities in dealing with the legitimate but innumerable claims of the people. Even among the less fortunate sections of the society, there are at present wide disparities in income and it is essential that the needs of some should take precedence over those of others. The employees of State Governments and local bodies, for example, who are also doing great national service, enjoy conditions of service which are less favourable than those for Central Government employees.

"I would humbly venture the claim that the Central Government has taken a lead recently in bettering the conditions of these people; but in view of the somewhat strained finances of many States, we have not been able to make much headway. The point remains that, in attempting to improve the living conditions of the people, every care has to be taken to make a beginning where it is most needed. I am also aware that the claims of investment should not go overboard in attempting a speedy improvement in the living conditions. But, when all the concessions to reality are made, the fact remains that to pronounce that our present Plan is too ambitious would be a declaration of defeat in advance. The tasks we have in hand are worthwhile. Their successful completion will make a significant contribution to further development. There should be no stinting of effort or sacrifice in the furtherance of these tasks.

"The Plan is the main theme and the dominant concern of all our thinking and policy-formulation. It could not be otherwise in a country which accepts development as its topmost priority. The Plan has run into difficulties, but I see no warrant for alarm or panic. What is required is preparedness to make the necessary sacrifices, and courage and resourcefulness in handling the problems that arise in the course of its implementation.

Taxation Policy

"This brings me to the most crucial aspect of economic policy, namely, taxation. I should like first to enumerate briefly the objectives of our taxation policy before I come to taxation proposals for the year. Taxation policy and proposals at this juncture have to be shaped in the light of the following criteria:

"(*a*) They must produce a sizable addition to public revenues;

"(*b*) They must provide incentives for larger earnings and more savings;

"(*c*) They must restrain consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release the resources required for investment; and

"(*d*) They must initiate such changes in the tax structure as would make tax yields progressively more responsive to increased incomes and facilitate an orderly development of the economy with due regard to the social objectives we have adopted.

"As I stated in my budget speech in March last, the overall budgetary deficit of Rs. 365 crores which I left uncovered then is too large in the context of the present economic situation. The changes which I am now incorporating in this budget leave this initial deficit practically unchanged, and I think it is vital for us to find ways and means of bringing down this deficit significantly. The other criteria of policy which I have just mentioned need hardly be elaborated, but their application, I hope, will be clear as I proceed with the elucidation of my tax proposals for the year.

Indirect Taxation

"I might begin first with my proposals in the field of indirect taxation. Taking customs first, it will be appreciated that the scope for raising additional revenues from them is limited. Hon'ble members are aware of the severe restrictions we have imposed on imports in order to curtail our foreign exchange expenditure. Moreover, import duties on most of the so-called luxury articles are already fairly high and the duties on capital goods and industrial raw materials have necessarily to be kept as low as possible. The proposals I have made envisage the raising of the rates of duty by small amounts on about 90 items. I have also taken this opportunity to rationalise the rates in the Customs Tariff which run into several hundred items. There is considerable diversity in these rates which is of no real significance and is, in fact, administratively cumbrous. I have tried to give the tariff rates a simpler form and, in this process, the surcharges have been merged into the basic rates. I have also availed myself of this opportunity to convert the rates of duty both in the import and the export tariff in terms of decimal coinage. No other change is being made in in the export duties. Altogether my proposals in respect of import duties will yield a revenue of about Rs. 6 crores spread over a large number of items, too numerous to mention here.

"*Excise Duties*: I now come to Union excise duties. I may say at once that I have fairly substantial proposals under this head, and in doing so, I have in mind the double objective of restraining consumption and of giving a fillip to exports. I propose the following increases:

"*Motor Spirit*: The existing excise duty which works out at 98 nP per imperial gallon, inclusive of surcharge be raised to 125 nP per imperial gallon. This will yield an additional revenue of Rs. 6.65 crores in a full year.

"*Refined Diesel Oil*: The existing duty of 25 nP per I.G. be raised to 40 nP per I.G. This is estimated to yield Rs. 1.90 crores in a full year.

"*Diesel Oil, not otherwise specified*: The duty be raised from Rs. 30 per ton to Rs. 40 per ton, the additional yield from which over a year is estimated at Rs. 35 lakhs.

"*Kerosene*: The existing duty of 18.75 nP per I.G. be increased fractionally to 20 nP per I.G. This will yield Rs. 20 lakhs in a full year.

"*Cement*: The existing duty of Rs. 5 per ton be raised to Rs. 20 per ton, the estimated annual yield being Rs. 6.7 crores.

"*Steel ingots*: The existing duty of Rs. 4 per ton be raised to Rs. 40 per ton, yielding on an annual basis Rs. 5.7 crores.

"*Sugar*: The existing duty of Rs. 5.62 per cwt. be raised to Rs. 11.25 per cwt. This will yield Rs. 18.55 crores in a full year.

"*Vegetable Non-essential Oils*: The duty of Rs. 70 per ton be raised to Rs. 112 per ton. This will mean an increase from about 3 nP to 5 nP per lb. The estimated yield on this account is Rs. 3.15 crores in a year.

"*Tea*: The duty be raised as follows:

"Loose tea—from 6.25 nP per lb. to 10 nP per lb.

"Package tea converted from duty-paid loose tea—from 18.75 nP per lb. to 35 nP per lb.

"Package tea—from 25 nP per lb. to 45 nP per lb.

"This will yield an additional revenue of Rs. 2.45 crores in a year.

"*Coffee*: The existing duty be raised from 18.75 nP per lb. to 35 nP per lb., the estimated additional yield being Rs. 80 lakhs.

"*Unmanufactured Tobacco*: The duty be raised as under:

"If other than flue-cured and used for the manufacture of cigarettes or smoking mixtures for pipes and cigarettes—from 56 nP per lb. to 75 nP per lb.

"If not flue-cured and not actually used for the manufacture of cigarettes or smoking mixtures for pipes and cigarettes, and such tobacco cured in whole leaf form and packed or tied in bundles, hanks or bunches or in the form of twists or coils—from 37 nP per lb. to 50 nP per lb.

"If other than flue-cured and not otherwise specified—from 87 nP per lb. to 100 nP per lb.

"The additional yield from these increases aggregates Rs. 6.15 crores in a full year.

"*Matches*: The existing duties be raised so as to permit of sale of match boxes at 6 nP and 4 nP per match box of 60's and 40's, respectively. The gain to revenues in a full year by these increases is estimated at Rs. 6.2 crores.

"*Paper*: My proposals involve an increase in the existing duty on various types of paper, the aggregate additional yield being estimated at Rs. 2 crores on an annual basis.

"These proposals in respect of Central excise duties are estimated to yield Rs. 60.80 crores in a full year. For the remaining part of the current year, their yield is estimated at Rs. 53.20 crores, out of which the share of the States will be about Rs 4.2 crores in respect of tobacco and matches.

"In recommending these increases, I have kept in mind the need for a balanced increase among the various items I have listed. The increases proposed in respect of cement and steel are large, but they are warranted by the rapid increase in the demand for them within the economy and the situation of growing shortage and the consequent increase in retail prices which we are facing. The increase in the duty on sugar has the same objective as the increase we made last year in the excise duty on cloth, namely, to restrain domestic consumption in the interest of larger exports. In the case of matches, the existing duties were fixed with a view to ensuring sale at 3 pice per match box of 60's and 2 pice per match box of 40's. Under the decimal coinage system, the equivalent of these prices comes to 4.7 nP and 3.1 nP respectively, and this would have meant in effect a retail price of 5 nP and 3 nP, respectively. With the increase in the excise duty now proposed, the retail price will be 6 nP and 4 nP, respectively.

"As regards tobacco, it is known that a Tobacco Expert Committee was appointed in January 1956 under the chairmanship of Mr. Raghuramiah, M.P., to review the procedure adopted in applying the criterion for assessment of unmanufactured tobacco. The Committee, after careful consideration of the problem, has recommended that the criterion of 'capability' of use for manufacture of *bidis* should be revised by the criterion of 'physical form' of tobacco other than flue-cured for purposes of assessment. Accordingly, such tobacco is proposed to be reclassified on the basis suggested by the Committee. For revenue purposes, the rates of duties on such tobacco are also being somewhat enhanced. With the proposed increase in the rate of duty on these two types of tobacco, the rate of excise duty on unmanufactured tobacco for use in the manufacture of cigarettes is also being proportionately raised.

"The tariff relating to paper has been rearranged with a view to greater rationalisation and to absorb the higher profit margins now developing in the retail trade and the rates of excise duty which had been kept deliberately low in the initial stages are being enhanced.

"Finally, following the increases in the rates of excise duty on vegetable non-essential oils and strawboards and millboards, the existing slab exemption in favour of small producers of these commodities are being suitably revised by executive notifications.

Direct Taxation

"I turn now to direct taxation. First, I propose to make certain adjustments in personal income-tax and super-tax rates. Till now, these changes have followed a standard pattern which, I think, needs a fundamental change. It is necessary to recognise that the basic rates should apply to the person who earns his income, that is, sweats and toils for it, and that others who derive their income from property and investments, that is, without making any direct effort, should be made to pay more by a surcharge. Under the present system, there is no provision for earned income allowance for super-tax. For income-tax, there is an allowance of 20 per cent., subject to a maximum of Rs. 4,000 for earned incomes not exceeding Rs. 25,000. For incomes in excess of this amount, the allowance of Rs. 4,000 is reduced at the rate of 20 per cent. of the excess over Rs. 25,000, so that, for an earned income of Rs. 45,000, the allowance is reduced to nil. I now propose to change this system altogether, applying a standard schedule of rates to all earned incomes and imposing a higher surcharge on unearned incomes. I have come to the conclusion that our existing rates of direct tax at top levels deprive the tax structure of all flexibility. It is said that they tend to diminish the incentive for work, but I am aware that they encourage large-scale evasion. It is now recognised that the very high rates of direct taxation in the top income brackets in many countries of the world are, in practice, tolerated or tolerable only because of considerable evasion that takes place. In other words, the high rates tend to be applied to a corroded tax base.

"I now propose a revised schedule of these rates and introduce a new scheme of surcharge levy which will mean that the total of the income-tax, super-tax and surcharge for the highest slab will be brought down from the existing level of 91.8 per cent. to 84 per cent. for unearned and 77 per cent. for earned incomes. The surcharge will be 5 per cent. on the tax computed at the standard schedule rates for earned incomes up to Rs. 1 lakh and 10 per cent. on incomes in excess of that sum. For unearned incomes, there will be a uniform surcharge of 20 per cent. over the standard schedule rates. When a person's income is partly earned and partly unearned, the unearned income will be considered to belong to the slab in which the earned income ends and to higher slabs where necessary. The rates for the lower slabs have been adjusted in keeping with this change in respect of top slabs. To provide relief to the middle classes, I propose that no surcharge on unearned income be levied where the total income does not exceed Rs. 7,500. The reduction in the rates of direct taxation will cost the Exchequer Rs. 7½ crores. This reduction should, however, be judged in the light of the other changes in direct taxation which I mention later.

"I propose also to widen the present income-tax base by reducing the taxable minimum from Rs. 4,200 to Rs. 3,000. The minimum limit had been raised over the past few years mainly for administrative reasons. An income of Rs. 4,200, modest though it is in absolute terms, is quite a large multiple of the average level of incomes in the country. It is reasonable to expect that those with an income over Rs. 3,000 should also make their contribution, however small, to the public exchequer, and should come within the range of direct taxation. As development proceeds, there will, I expect, be a large and progressive increase in the number of incomes within this range and I think it is essential, if the Exchequer is to benefit proportionately from the expansion of incomes consequent on development, that these incomes are brought within the income-tax range. I therefore, propose to place the exemption limit now at Rs. 3,000 for individuals and Rs. 6,000 for Hindu undivided families. I propose, however, to couple this with an increased allowance for married people. The extra tax-free slab of Rs. 1,000, which at present applies to married people, will now be raised to Rs. 2,000. The wider coverage of income-tax consequent on this set of proposals will bring in about Rs. 5 crores this year.

Tax On Companies

"My next proposal relates to the taxation of companies. I propose to raise the income-tax payable by companies from the present level of 4 annas in the rupee to 30 per cent. and the corporation tax from the present level of 2 annas 9 pies in the rupee to 20 per cent. As hon'ble members are aware, shareholders of companies are entitled to credit of income-tax paid on their behalf by the company. The net effect of the proposal to increase income-tax on companies will, therefore, not be very significant. It will to some extent help us to check tax evasion.

"The need for corporate savings is as great as ever. In view, however, of the increase proposed by me in the rate of corporation tax, I propose to reduce the excess dividends tax—to 10 per cent. on distribution of dividends between 6 per cent. and 10 per cent. of the paid-up capital; to 20 per cent. on distribution between 10 per cent. and 18 per cent. of the paid-up capital; and to 30 per cent. on the balance.

"During the debate on the Finance (No. 3) Bill introduced by me last December, reference was made by certain members to the stimulus that my proposals were likely to give to bonus share issues. I was aware then that, with the increase in the rates of excess dividends tax and the introduction of the capital gains tax, there should be some change in the rates of tax on bonus issues. I have considered this matter and propose to raise the tax thereon from the present level of 12½ per cent. to 30 per cent.

"At present, rates of super-tax for inter-corporate dividends are about 17 per cent. for Indian companies and 20 per cent. for foreign companies. With the increase in the basic rates of corporation tax, these rates require adjustment. I propose, accordingly, to reduce the rate of inter-corporate super-tax to 10 per cent. for both Indian and foreign companies on dividends received from Indian subsidiaries. The effect of this will be that, so far as foreign companies working through subsidiaries are concerned, the total tax payable by them will remain practically unaltered. Similarly, for foreign companies operating through branches and earning other incomes, the rate of corporation tax will be reduced from 36 per cent. to 30 per cent. I expect that, with these changes, there will be some encouragement to the investment of foreign capital in India.

"My next proposal with regard to companies relates to the tax on undistributed profits of companies in which the public are not substantially interested. This tax has frequently been the subject matter of considerable argument. The principle on which the tax is based is unexceptionable, namely, that individuals having income in the higher brackets should not be allowed to avoid payment of super-tax by forming close corporations and not distributing their profits in such corporations. However, in the context of our development plans, we have to balance against the need to prevent super-tax avoidance the needs of companies for funds required for expanding industrial activities. I propose to reduce to 45 per cent. the minimum percentage of available profits which an industrial company of the above type should distribute in order to avoid the penal consequences of inadequate distribution; for non-industrial companies, the percentage will continue to be retained at 60 per cent. For a company which derives profits partly from industrial activities and partly from other activities, the minimum distribution required will be 45 per cent. of available industrial profits and 60 per cent. of other available profits. Investment companies will be required to distribute 100 per cent. as usual. In cases where the accumulated profits and reserves are not less than the paid-up capital or the value of the fixed assets, the minimum percentage required to be distributed is at present 100 per cent. for all companies. I propose to reduce the percentage to 45 for the industrial companies and 90 for others. With these reductions in the minimum amount required to be distributed, it will be unnecessary to continue the present scheme of adjudication by the Commissioner of Income-tax and the Board of Referees on the business needs of companies seeking total or partial exemption from the operation of the provisions relating to minimum distribution.

"There are certain other minor changes proposed upon which I do not wish to dilate here. These relate to exemption from income-tax of employer's contribution on a recognised provident fund, increase in the percentage of the income that will qualify for rebate of income-tax if saved in the provident fund or insurance, limitation on the carry-forward of losses, etc. I have also taken the opportunity of redrafting the provision relating to deposits to be made by companies of a portion of their undistributed profits and development rebate and depreciation allowances so as to bring out the Government's intention more clearly.

* Effect of budget proposals.

"Altogether, the changes I propose in the taxation of companies will bring in additional receipts amounting to Rs. 7½ crores.

Wealth Tax

"I come now to two new tax measures designed to alter the tax structure in a way that will ensure a more effective and at the same time a more equitable basis for taxation. My first proposal is to levy a tax on wealth. It is recognised that income, as defined by existing Income-tax laws and practice, is not a sufficient measure of tax-paying capacity and that the system of taxation on incomes has to be supplemented by taxation based on wealth. This is more equitable and it also promises, over a period, to reduce the possibilities of tax evasion. I mentioned earlier the reliefs in income-tax at top levels of income which I am introducing this year. These reliefs are meant as an encouragement to larger effort and greater initiative on the basis of which alone a healthy and progressive economy can be built up. It is necessary, at the same time, to adopt other measures which are egalitarian in intent but which do not have a disincentive effect. The tax on wealth that I am now proposing is one such measure. This tax will be payable by individuals, Hindu undivided families and companies. In the case of Individuals, values upto Rs. 2 lakhs and in the case of Hindu undivided families values upto Rs. 3 lakhs will be exempted. In respect of wealth exceeding that amount, the rate will be ½ per cent. for the first Rs. 10 lakhs, 1 per cent. for the next 10 lakhs and 1½ per cent. on the balance. This will thus be a progressive tax which, together with the surcharges I have recommended in respect of income-tax on unearned incomes, will contribute towards a more effective taxation of the richer classes without diminishing incentives to earn in the process.

"In the case of companies, there will be no tax on assets up to a value of Rs. 5 lakhs; on values beyond that the rate will be ½ per cent. The wealth tax is intended primarily as a measure of personal taxation, but, in the peculiar economic structure of India, I consider it advisable not to exclude companies from the purview of this tax. However, the rate of tax has to be low. This is why I have proposed a flat rate of only ½ per cent. on assets above the exemption limit I have just mentioned.

"Certain properties will be exempted from this tax. Some of these are agricultural properties; properties belonging to charitable or religious trusts; works of art; archæological collections not intended for sale; balances in recognised provident funds and insurance policies; personal effects including furniture, cars, jewellery, etc., up to a maximum of Rs. 25,000; and books and publications not intended for sale. With a view to achieving simplicity in the procedure for evaluating the various kinds of assets which form part of a business undertaking, it is proposed, as far as possible, to treat the business undertaking as a whole as a single unit for valuation. Other assets will be taken at their market value. The yield from this tax is estimated at about Rs. 15 crores. The imposition of this tax, as also the other measures now proposed, should help in checking evasion. I am taking credit of Rs. 5 crores on this account.

"Broadly speaking, the administrative set-up and the procedure for assessment and appeal will be the same as for income-tax. With regard to valuation of immovable non-agricultural property, the assessee will be given a right of reference to an arbitration committee against the decision of the first appellate authority. This committee will consist of a valuer appointed under the Estate Duty Act and another non-official member drawn from a panel of persons familiar with local property values.

Tax on Expenditure

"The other proposal I make is the introduction of a tax on expenditure. This is a form of taxation which has no backing as yet of historical experience. It is, however, a tax which, given effective administrative arrangements, can be a potent instrument for restraining ostentatious expenditure and for promoting savings. In the present circumstances, I think all we can do is to make a small beginning. I propose to levy this tax only on individuals and Hindu undivided families whose income for income-tax purposes is not less than Rs. 60,000. The tax will be imposed on all expenditure incurred, from whatever source it may be, in excess of certain sums which will vary with the size of the family. The amounts excluded are a basic amount of Rs. 24,000 for an assessee and his wife and Rs. 5,000 for each dependent child.

"The rate of tax will be based on a slab system, the rate for each slab increasing progressively with the increase in the level of expenditure. Thus, for excess expenditure up to Rs. 10,000, the rate will be 10 per cent. and, for higher slabs, the rate will increase progressively. As in the case of wealth tax, the administrative set-up and the assessment and appellate procedure will be the same as for income tax. I propose to make this tax applicable from the financial year 1958-59 and, therefore, take no credit for any receipts in 1957-58.

Railway Passenger Fares

"I propose to levy a tax on railway passenger fares. The rate of tax will be 5 per cent. for distances up to 30 miles, 15 per cent. for distances between 31 miles and 500 miles and 10 per cent. for longer distances. No tax will be levied on season tickets. The yield of this tax is expected to be Rs. 14 crores in a whole year. In the current year, the yield will be about Rs. 8 crores. The proceeds of it less the amount attributable to Union Territories will have to be distributed entirely to the States. The States need more resources and railway travellers, like consumers of other commodities, should, under present conditions, make a contribution. I propose to seek the advice of the Finance Commission before I bring forward proposals before Parliament in regard to the actual distribution of the proceeds of this tax.

Changes in Postal Rates

"The postal and telegraph branches of the Posts and Telegraphs Department are working at a loss. Except for unregistered letters and inland letter cards, practically all items of postal traffic are carried at a loss. On a number of items like post cards, money orders and registered newspapers, the rates charged have, for many years, been substantially less than the cost of providing the service. For example, it has been estimated that the average cost of carrying a post card is 7.24 naye paise, as against the present postage of 5 naye paise. This results in an annual loss of over Rs. 155 lakhs. Every increase in traffic in these items—and traffic has been increasing—results in an increase in the losses. With the progressively increasing expenditure on construction of staff quarters and the provision of other amenities for the staff, the existing postal rates are bound to prove even more uneconomic. The opening of unremunerative post offices and telegraph offices as part of the Department's expansion schemes under the first and second Five-year Plans has contributed to the loss in the postal and telegraph branches. The Department has also been building up its capital assets at a fairly rapid rate, the total capital outlay at present being about three times what it was before independence.

"The annual provision, from revenue, for depreciation and replacement of these assets, as I have said before, is at present only Rs. 1.25 crores, and it has been decided to increase this provision to Rs. 2.50 crores during the current year in anticipation of a detailed examination of the whole question. In response to a demand which had been widely and persistently voiced by the book trade, both in and out of Parliament, Government had appointed a committee to examine the question of charging a concessional rate of postage on *bona fide* books as compared with other items chargeable as packets, so that the cost of sending books to rural areas which could be reached only through post offices might not be unduly increased. After considering the Book Committee's report, it has been decided to allow a concessional rate of postage on books. All these measures, however, inevitably result in reducing the surplus earnings of the Department and of increasing the losses of the postal and telegraph branches.

"To ensure the financial stability of the Department, it has become necessary to raise some rates. On post cards, the existing rates of 5 naye paise for single and 10 naye paise for the reply post cards will be raised to 6 naye paise and 12 naye paise, respectively. Postage on local post cards will be raised similarly from 3 naye paise for single and 6 naye paise for reply post cards to 4 naye paise and 8 naye paise, respectively. For packets containing *bona fide* books only, the postage on the initial weight slab of 5 tolas will be reduced from the existing rate of 6 naye paise to 5 naye paise, but, on other packets, the existing rate of 6 naye paise will be raised to 8 naye paise. The postage on additional weight slabs, in both these cases, will remain unchanged. In spite of these adjustments in the book, sample and pattern packet rates, the traffic in this category of articles will continue to result in a loss of over Rs. 8 lakhs per annum. The rates on parcels will be increased from the existing level of 50 naye paise fos every 40 tolas or fraction thereof to 60 naye paise for the first 40 tolas or fraction thereof and 50 naye paise for every additional 40 tolas or fraction thereof. On inland telegrams, the charge for every additional word over the minimum of eight words will be raised from 7 naye paise to 8 naye paise for ordinary and 14 naye paise to 16 naye paise for express telegrams. The additional revenue expected in the current year from these increases is Rs. 85 lakhs.

Recapitulation

" I must now recapitulate briefly the proposals I have made so far. First, my proposals involve small increases of import duties on a number of articles, the additional yield from which during the year is estimated at about Rs. 6 crores. Secondly, the proposals I have made in respect of excise duties involve an enhancement of the rates of duty on various items such as motor spirit, refined diesel oils and vaporising oil, diesel oil not otherwise specified, steel ingots, cement, sugar, matches, unmanufactured tobacco other than flue-cured, vegetable non-essential oils, and paper. The additional revenues on this account are estimated at Rs. 53.20 crores for the remaining portion of the current financial year but Rs. 4.2 crores will be payable to the States as their share of the additional duties on tobacco and matches. Thirdly, the proposals I have made in regard to personal income-tax and super-tax are estimated to bring in Rs. 25 crores in the current year of which the share of the States on account of income-tax will come to Rs. 3 crores. The reduction in income-tax and super-tax rates involve a loss of Rs. 7.5 crores. The lowering of the exemption limit is estimated to yield Rs. 5 crores. The adjustments in company taxation will yield about Rs. 7.5 crores. The tax on wealth is estimated to yield Rs. 15 crores, and to this I add Rs. 5 crores by way of better collections of income-tax reflecting a reduction of tax evasion. The changes I have suggested in direct taxation do not make a big addition to public revenues this year, but I expect that they will make an increasing contribution to the Exchequer, as we get more experience with the new forms of taxation I have proposed and as the machinery for assessment and collection gets geared to its new tasks. Fourthly, I have proposed a tax on fares payable by passengers travelling by railway. This will yield Rs. 8 crores which will be distributed entirely to the States. Fifthly, I have proposed changes in postal and telegram rates which are expected to yield a revenue of Rs. 85 lakhs. Sixthly, I have proposed an expenditure tax which will be effective from 1958-59 but will apply to expenditures incurred in 1957-58.

"The net accretion to the Central revenues as a result of these proposals will amount to Rs. 77.85 crores and the revenue budget will now show a surplus of Rs. 44.73 crores. Ordinarily, the overall deficit would, as a consequence, amount to Rs. 290 crores, if the additional revenue of Rs. 15 crores which would be passed on to the States as a result of these proposals is not taken into account. As hon'ble members will observe from the White Paper, Central assistance to the States for financing the Plan during 1957-58 has been placed at Rs. 278 crores. As a result of the additional revenue accruing to the States, there will therefore be a corresponding reduction in this figure, the reduction being taken in the provision for loans to State Governments. The overall deficit will thus amount to Rs. 275 crores and will be met by expansion of Treasury Bills.

Taxation and Development

"I would like to say a few words about the import of these proposals. We are pledged to move in the direction of a socialist society. This means that we wish to develop an efficient system of production and an equitable pattern of income and wealth which will ensure well-balanced progress. Such a system requires a strengthening of incentives to work and to save. This is the rationale of my tax concessions on earned incomes. A standard rate of tax on earned incomes and a differential rate for taxation of unearned incomes, coupled with a tax on wealth and a tax on expenditure, will give us a better basis for assessment of tax liability, especially in respect of higher income ranges, and will help us to close progressively the loopholes for tax evasion and corrosion of the tax base. If I have brought down the exemption limit for tax liability, it is, first, because the present limit is too high in relation to the average level of incomes in the country, and secondly, because I am of the view that the ground must be prepared, from now on for bringing into the tax net the increases in incomes which will take place in these ranges in the coming years. All my proposals in the field of direct taxation form an inter-related whole and should, I suggest, be judged as such.

Incentives

"My proposals in respect of company taxation are designed not merely to increase revenues but also on balance to encourage the ploughing back of profits through a check on dividend distribution. These measures are not intended to curtail genuine investment in the private sector, though it would not be unreasonable to assume that a slight slowing down for a short period will not, in present circumstances, be undesirable. There are, however, other devices to regulate private investment. I wish, therefore, to retain the bias in the tax structure in favour of corporate investment. It is for this reason that I have left untouched the existing liberal depreciation allowances and the system of development rebates, which it is recognised on all hands, are a powerful incentive for investment. I have also, as I mentioned earlier, readjusted the tax rates to encourage foreign investment. I recognise that the shareholder or the investor expects to get a reasonable return on his capital, but I also think that, under modern conditions, there is even greater need for providing incentives for those who work and manage concerns and thus fall within the category of earned income earners.

"My proposals involve a raising of burdens on the near necessities of the common man. This is inevitable in the present circumstances. These burdens, large as they may look in the aggregate, have a low average incidence. A process of development in a country where most incomes are low cannot be financed without calling for sacrifices from all sections of the community, and there are special reasons at this juncture for applying some restraint on consumption in order to check inflationary pressures and to stimulate exports. I recognise, at the same time, the need in particular sectors may well be from time to time to assist in maintaining consumption at a reasonable level in terms of the minimum nutritional standards and, to this end, it may be necessary to subsidise food. My intention, therefore, is to build up from out of the additional receipts of taxation a food subsidy fund of the order of Rs. 25 crores. This fund will be used to keep down food prices, particularly for the more vulnerable areas.

Still Leaves Deficit

"The proposals that I have made will still leave the overall deficit for the year at a level somewhat higher than I would consider safe; but it is not unwise in my judgment to run a measure of risk, especially if, by doing so, the expansionary impulse in the economy can be maintained at a reasonably high level. A budgetary deficit involves creation of fresh purchasing power. It implies that, on balance, Government puts more purchasing power into the hands of the public than it withdraws from it. The stresses and strains that have developed in the economy are a warning against unrestricted deficit financing. I am not against deficit financing; I recognise it can play a role in promoting development. But, it is a medicine to be taken in small doses; it is not food that would sustain the system. On the whole, I doubt if we shall be able over the Plan period to undertake deficit financing of the order indicated in the Plan, and this means we have to raise more resources by taxation, loans and small savings. Considering the needs not only of the current year but also of the next few years in terms of the second Five-year Plan, I am convinced that the measures I have placed before the House today are essential and salutary.

"Indeed, I feel confident that, over a period, they will help us in getting out of the stagnancy of public revenue relatively to national income, which is a bottleneck from the point of view of further developmental planning. The ratio of public revenues to taxation in India is low, even by the standards of relatively underdeveloped countries. The way to raise it is to initiate structural changes in the tax system so as to make it more progressive in terms of returns. The emphasis of my proposals is on this aspect of the tax problem. The propriety of the changes I have suggested should be judged in this light rather than in terms of their immediate yield. I have, in effect, outlined the tax structure for the Plan period. There will undoubtedly have to be some adjustments in this structure from year to year, but I expect that these adjustments will be relatively small. For the rest of the Plan period, our aim will be to watch how the changes I have initiated this year work in practice and how the system can be improved upon—to the benefit of the taxpayer no less than in the interest of the tax-receiver. Within this broad framework, I believe, all concerned can proceed with their plans with confidence and assurance of sympathetic consideration by Government of any genuine difficulties.

Conclusion

"This brings me to the end of my story. I am aware that the policies and proposals I have placed before you add up to a varied and somewhat formidable bill of fare. But the exigencies of the situtation demand nothing less. There are moments in the history of every nation when it must advance on a great many fronts at the same time. The task before us is not merely one of raising resources for the immediate needs of the Plan. We have also to attempt, at the same time, a rationalisation of the tax structure, so that it can sustain a mounting crescendo of developmental effort in the years to come. I am one of those who also believe that the greatest advances towards economic quality and positive social improvement are made in difficult times when the conscience and the solidarity of a people are raised to the highest pitch . This, I believe, is one of the chief lessons of the Second World War. Sacrifice on a nation-wide scale and injustice or excessive inequality go ill together. And that is why I have endeavoured in the present budget to snatch from the needs of the moment an opportunity for imparting a new turn to our tax structure towards greater efficiency and equity. A heavy responsibility rests on us all at this juncture, and I have presented to the House an approach in terms of policies and of proposals which is to the best of my judgment appropriate to this responsibility. I hope, when the time comes for someone to judge whether we rose to the occasion or not, we shall have to our credit a record worthy of this House and of the nation."

Excise on Kerosene and Newsprint

Subsequent to the above announcement, the Finance Minister announced restoration of old rates of excise duty on kerosene and newsprint. The following is the statement made by him, in this connection in the Lok Sabha on the 20th inst:

"In the Finance No. (2) Bill, 1957, introduced by me on 15th May 1957, certain increases were proposed on the customs duty on newsprint and customs and excise duties on kerosene. According to the declaration made under the provisions of the Provisional Collection of Taxes Act, 1931, these duties came into force with immediate effect.

"In the case of the customs duty on newsprint as contained in the Finance Bill, which has the effect of raising the duty, this was an error. In the final compilation of the customs duties and their incorporation in the Finance Bill, the error seems to have arisen from the fact of my having stated expressly that customs duty on newsprint should not be raised but the emphasis seems to have been lost. I have rectified this error by a notification issued under Section 23 of the Sea Customs Act on 18th May 1957.

"In the case of the excise duty on kerosene, as the House will be aware, the duty was raised from 18.75 nP per Imperial gallon to 20 nP per Imperial gallon. The effect of this fractional increase should not have gone towards increase in the retail selling price of kerosene, as this additional duty adds only one-fifth of a nP or thereabouts to a bottle of kerosene oil. However, the prices seem to have been raised and what was, in effect, a fractional increase to round up a figure was being utilised for the purpose of making the retail prices go up. The consequences of such increase in the retail prices would, I am afraid, have mal-effects over a very wide field. I have, therefore, taken the liberty of restoring the *status quo* in regard to the duty on kerosene."

As a direct result of the recent visit of the Australian trade mission to India and Ceylon, its exports to these countries are expected to rise by £A3 million in 1958-59. This is the actual amount of business written by the mission and the visit is expected to make a permanent addition of £A2 million to exports to India in subsequent years. India, according to the Director of Trade Promotion, will remain a good market for Australian heavy equipment and machinery for many years. Greater capacity in Australian combing mills will enable an expansion of Indian wool-tops market.

World consumption of tin is expected to rise by over 8,000 tons this year. Japan is one of the countries which is taking more from the world supply and its offtake from Malaya is expected to be around 8,500 tons during 1957, as against just over 6,500 tons last year. Estimates of the year's production in Indonesia and Bolivia show that both the countries may not turn out as much this year as they did last year, and the extra supplies may have to be drawn from either Russia or Brazil. Russia, however, is holding back large quantities for stockpiling.

INCREASED AMENITIES FOR RAILWAY EMPLOYEES

TRAINING SCHEME MAKES SUBSTANTIAL PROGRESS

INDIAN railways, which constitute the single largest nationalised undertaking, employing over a million persons, have a dual role to play. Being a public utility concern of vital economic importance it has to ensure a high degree of efficiency. It is also under an obligation, as the principal component of the public sector of the economy, to be a model employer. The former can be achieved by recruiting the right type of men to the railway services and giving them proper training and inculcating in them a sense of discipline and service and the latter by ensuring just and humane conditions of work and wages. The extent to which the railways succeed in achieving these two objectives will be the measure of the success attained by this largest national concern.

The vast network of Indian railways is administered as a department of the Union Government. With the application of the recommendations of the Central Pay Commission which reported in 1947, the idea of a uniform wage policy for all employees of the Government of India has been established. Therefore, any general improvement in the scales of pay for railwaymen can only form part of the general policy applicable to employees of the Government of India. A decision in such matters is, therefore, generally based on financial and other considerations, viewed in the background of the general economy of the country and not on the financial position of railways by itself, although minor adjustments peculiar to the wage structure of railway employees are made. However, in the field of welfare measures, there is considerable scope for improving the lot of railwaymen.

Better Housing

It is heartening to see that Mr. Jagjivan Ram, the Union Minister for Railways, in his speech on the Railway Budget introduced in the Lok Sabha on 14th May, has stressed the need for providing better amenities to the men and women who keep the wheels of railway transport moving. The million and above employees of the railways, together with their families, constitute almost five million people in all, forming a substantial portion of the country's population. Almost one out of every seventy inhabitants of the country derives a direct benefit from the railways. The following table gives the number and cost of staff employed by the railways:

	(On 31st March)	
	1955	1956
No. of Staff—		
Open Line—		
Classes I and II	2,570	2,921
Classes III and IV	977,918	1,020,197
Total	980,488	1,023,118
Lines under Construction—		
Classes I and II	58	93
Classes III and IV	2,665	3,947
Total	2,723	4,040
Cost of Staff (in rupees)—		
Classes I and II	3,24,64,762	3,36,84,403
Classes III and IV	1,37,36,61,928	1,45,17,79,123
Total	1,40,61,26,690	1,48,54,63,526

The question of improved housing and other amenities for the railway staff has been in the forefront both in the first and second Five-year Plans. In 1947, after Partition, the number of quarters available for housing railwaymen was about 270,000. On the conclusion of the first Plan, in March 1956, the number had risen to 336,168 of which 41,000 were built during the Plan period. About 15,000 quarters were built last year, 15,000 quarters more are programmed for the current year and it is anticipated that at the end of the second Five-year Plan 64,500 new quarters will have been added to the number at the commencement of the Plan. The policy is to provide quarters not only for essential staff, who are liable to be called out for duty at any time of the day or night and, therefore, are required to live near the places of their work, but also to other staff in areas where housing is difficult. In addition to building new quarters, improvements to existing quarters have been undertaken on a large scale, such as substitution of better types of quarters for the old, and provision of amenities like sanitation and electrification.

Though education is the responsibility of State Governments, Railway Administrations have, in the interest of the children of staff at stations where educational facilities were inadequate, opened a number of schools which are being maintained entirely from railway revenues. The number of schools maintained by the Railway Administrations as at the end of 1955-56 were 155. The necessity for the expansion of these facilities has formed the subject of discussion between the National Federation of Indian Railwaymen and the Railway Board, and a survey has just been completed for the purpose of estimating the additional number of primary schools that should be opened to cater for the needs of the children of railway employees. Negotiations with local bodies and State Governments are at present being conducted to settle the terms on which the primary schools which are required will be opened. Provision is also being made to meet the educational needs of the children of railway employees posted at outstations.

An officer had been appointed in the Railway Board's Office to review the existing medical arrangements on railways and to plan for future expansion. This review has now been completed and the plans for future expansion of medical facilities on railways have been drawn up. To enable incipient T.B. infections to be detected and treated in the initial stages of the disease, it has been planned to set up 80 chest clinics, and of these 33 are already in operation. For the treatment of advanced T.B. patients in sanatoria, 646 beds have been reserved for railway employees in different sanatoria. It has also been decided to convert existing dispensaries into health units and to build new ones. The necessity for devoting whole-time attention at the senior officers' level to health work has been recognised by the creation of a post of District Medical Officer of Health at the headquarters of each railway.

Staff Training

The problem of the recruitment and training of the large numbers of extra staff of all categories necessary for the detailed planning and execution of the works included in the second Five-year Plan as well as for coping with the large increase of traffic anticipated during the Plan period has been receiving constant attention. The capacity of the Railway Staff Training College, Baroda, for the training of officers, was increased by April 1956 to 30 officers at a time, and arrangements have subsequently been made to increase this further to 110 officers at a time. Considerable progress has been made in the expansion of training facilities on the railways for subordinate staff.

In order to meet any possible shortage of skilled technical personnel for the Civil Engineering Department, three centres have been set up, each with a planned capacity for 150 to 200 trainees at a time, one at Mhow in Madhya Pradesh, another at Shahjahanpur in Uttar Pradesh and a third at Madhopur in Bihar. One of the recommendations of the Estimates Committee was that there should be at least one basic training centre on each railway like those at Kanchrapara, Lilooah, Jamalpur and Kharagpur workshops. Instructions have been issued to railways to provide facilities in the various railway workshops and running sheds for the training of technical staff of different categories, including a basic training shed in all major workshops and basic training centres for giving lectures to trainees. Some railways already have basic training centres and proposals have been framed for setting up new centres and for expansion of existing ones where necessary.

State Bank of Hyderabad—*Continued.*

PROFIT AND LOSS ACCOUNT FOR THE PERIOD OF FIFTEEN MONTHS FROM 1st OCTOBER, 1955, TO 31st DECEMBER, 1956.

EXPENDITURE	Rs. a. p.	Rs. a. p.

REPORT OF THE AUDITORS

TO THE RESERVE BANK OF INDIA.

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 30 (1) of the State Bank of Hyderabad Act, 1956, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1956.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December, 1956, and the Profit and Loss Account for the period from the 1st October, 1955, to the 31st December, 1956, with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report:

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iii) that, the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) that, the Profit and Loss Account shows a true balance of profit for the period covered by such Account;

(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and

(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

SOVIET TRADE OFFERS
ARE THEY FREE FROM HAZARDS?

By John Cardwell

THE Soviet claim that no strings are attached to its offers of trade and aid to the Middle East and Asia is one of those half-truths that are realised only after bitter experience; and it is then often too late. It is doubtless correct that no political conditions are written into the trade agreements, but they are not so altruistic as the Communists suggest. They are all carefully drawn up primarily to strengthen the Soviet Union, politically and materially, and to weaken the position of the free world.

While there is no reason to assume that the Soviet Union wishes to abandon the concept of economic self-sufficiency, this policy is clearly intended to end Western predominance in certain selected markets and to extend the Soviet Union's political influence. This development is presented as part of the aim of peaceful co-existence, but the Soviet leaders have no doubt about its ultimate aim.

Most of the countries selected for this Soviet drive have certain features in common, and are usually heavily dependent on one or two agricultural crops, such as cotton or rice, or on industrial raw materials such as rubber. As a result, their economies are highly vulnerable to variations in yield and fluctuations in price. At times, some of them have been unable to dispose of exportable surpluses in the world markets and consequently to import the machinery needed for their industrial programmes. Hence Soviet offers to purchase these surplus primary products in exchange for urgently needed industrial equipment have generally fallen on fertile ground.

Egypt, in a bid for arms, was glad to barter substantial quantities of high grade cotton for Soviet aircraft and Czechoslovak arms. Burma was eager to barter rice for cement and other commodities. Moreover, the Communists generally make the most of their opportunities on these occasions by extending the terms as long as possible and thereby strengthening their hold on their trade partners. Many of the barter deals are from three to five years and cannot be easily revoked.

Again, while Communist State trading makes it possible for the Soviet bloc to adjust export prices according to political requirements the new trading partners have not the same facilities. On the contrary, they have suffered from the Communist manipulation of prices and practices, whereby some of the bartered produce is resold to a third party at cut prices. Burma, Egypt and Indonesia all complained of this Soviet trading practice, but they were powerless to stop it.

Another Hazard

Another obvious difficulty for those countries trading with the Soviet bloc is that they have little control over what is supplied in exchange. They often find that the goods are highly priced, of poor quality and are delivered at the wrong time. For instance, large quantities of cement arrived in Burma in the monsoon season and were ruined by damp. That is why the Prime Minister of Burma, U Nu, said afterwards that "a man who takes barter when he can get cash must be out of his mind." He added that the Government envisaged a reduction and eventual cessation of barter deals.

But barter is only one of the hazards of trading with the Soviet bloc. Another method adopted by the Communists is to make payment in inconvertible currency tied rigidly to spending inside the Soviet bloc. For example, one condition of the Soviet-Burmese trade agreement of 1955 stipulates that 20 per cent. of the total value of Burmese rice bought by Russia will be paid for in sterling, but this must be kept in the Soviet Union to meet the expenses of the Burmese Embassy, students, and official missions in Moscow. Other countries have also discovered that this currency control and insistence on spending in the Soviet bloc can sometimes be most embarrassing. The goods available may not be suitable, they may be poor in quality or over-priced by world standards, but the buyer can do nothing about it. The Russians are clearly in a strong position to dictate terms, both political and economic. And the greater the volume of trading, the tighter the Soviet stranglehold becomes.

Deals With Egypt

Soviet penetration in the Egyptian market has also been extensive. In 1955, Egypt exported to the Soviet Union cotton, cotton-seed and rice worth £7,018,418 and imported only £2,300,000 worth of produce; the difference of nearly £4½ million presumably went towards arms shipments. By the following year, according to Moscow radio, Egyptian exports to the Soviet bloc were double those of 1954 and exceeded 34 per cent. of Egypt's total foreign trade. Moreover, if China, which has lately developed trade with Egypt is included, the Communist share in trade with Egypt last year was 38 per cent.

Hungary, Poland, Eastern Germany and Roumania have also done extensive business in the Nile Valley and there is every prospect of more to follow. At a meeting in Cairo in January, the Soviet Deputy Foreign Trade Minister, Bolshakov, said the U.S.S.R. could provide Egypt with all she needed in foodstuffs, raw materials and machinery (no mention of arms) and was ready to buy Egypt's agricultural surpluses. While in Cairo, Bolshakov, concluded a provisional agreement with Egypt "aimed at doubling trade exchanges between the two countries," and a Cairo Press report of 5th February said

The Mirrlees Watson Company, Limited

AND

Mirrlees' **BLAIRS LIMITED** BLAIRS

GLASGOW — SCOTLAND

The above companies intimate that as from 1st April 1957 their offices in Calcutta have been closed and they will be represented for the sale of their Specialities as follows :—

IN SOUTHERN AND WESTERN INDIA—

BINNY & COMPANY (MADRAS) LIMITED

Engineering Department, 7, Armenian Street, Madras-1. **Post Box No. 66.**

IN THE NORTHERN PART OF INDIA—

PORT ENGINEERING WORKS LIMITED

8, Clive Row, Calcutta-1. **Post Box No. 150.**

SPECIALITIES—Following are some specialities of the two Glasgow Companies—

Sugar Machinery —
Complete Cane Sugar Factories, Remodelling and Extension of Existing Factories.
Vacuum Salt Making Plants.
Chemical and Alcohol Distilling Plants.
Steam Ejector Air Pumps and Vacuum Equipments for Various Industries.

Automatic Stokers for all Heating Purposes.
Sugar Refining Plants.
Evaporators and Vacuum Pans for Industrial Purposes.
Water Distilling Plants.
Steam Condensing Plants with Auxiliaries.
Centrifugal and Axial Flow Pumps.
Steam Turbines 4 to 800 B.H.P.
IMO Screw Pumps.

MANUFACTURE IN INDIA — Under licence from the Government of India

BINNY'S ENGINEERING WORKS (PRIVATE) LIMITED

will manufacture sugar machinery to the designs of Mirrlees and Blairs, while **PORT ENGINEERING WORKS LIMITED** will work in close collaboration.

AUDITORS' REPORT.

We have audited the attached Balance Sheet as at 31st December, 1956, of the Elphinstone Spinning and Weaving Mills Co., Ltd., and the Profit and Loss Account of the Company annexed thereto, for the year ended on that date and report as under :

(1) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;
(2) In our opinion, proper books of account as required by law have been kept by the Company so far as appears from our examination of these books;
(3) the Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;
(4) In our opinion and to the best of our information and according to the explanations given to us, the said accounts read with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required and give a true and fair view—
(i) in the case of Balance Sheet of the state of the Company's affairs as on 31st December, 1956, and
(ii) in the case of the Profit and Loss Account of the Profit for the year ended 31st December, 1956.

S. B. BILLIMORIA & CO.,
Chartered Accountants.

BOMBAY, 29th April, 1957.

The above Balance Sheet to the best of our belief contains a true account of the Capital and Liabilities and of the Property and Assets of the Company.

NEW PUBLICATIONS

Village Panchayats in India. By Mr. H. D. Malaviya. Published by Mr. N. Balakrishnan for the All India Congress Committee, 7 Jantar Mantar Road, New Delhi. Pages 843. Price: Rs. 12.

THE *raison d'etre* for the establishment of self-governing *panchayats* in villages in India lies in the fact that democracy remains superficial and tenuous unless its spirit permeates, takes its roots in, and its fruits reach out to, the thousands of villages that constitute India. Though this fact was realised long back —strong evidence of which was provided by the bitter fight waged for the incorporation of *panchayats* in the Directive Principles of the Constitution—the question of their formation occupied a relatively less important place in the minds of the leaders. In recent years, and especially in recent months, when it is known that *panchayats* in the Community Development Blocks have been playing a notable role, attention has been focussed on this problem. The recent Development Commissioners' Conference has, in fact, called for the enhancement of the powers of *panchayats* and emphasised the need for uniformity in the *panchayat* laws prevailing in the States. On a vital aspect like this—it may be noted that village *panchayats* have been established in over 3 lakh villages so far—however, literature has been meagre. The present book, therefore, fulfils a long and acutely felt need.

It was a great day when village *panchayats* found a place in the Constitution of India. But that is not enough. It is not enough if the villagers are asked to exercise their franchise once every few years. They must have adequate powers to improve their state of affairs without having to wait on the sweet will of the authorities for years. No wonder, Gandhiji so often emphasised, as quoted by the author, "Democracy requires that every one, man or woman, realise his or her own responsibility." This, according to Gandhiji, was true *Panchayat Raj*. In fact, as Dr. Radha Kumud Mookerji has very rightly observed in his "proem" to the book, the more backward an area or community, the greater is its need for self-government as the most potent force of its uplift. Therefore, the objection of the people of the late Dr. Ambedkar's way of thinking to villages being allowed self-government because they are "a stink of localism, and a den of ignorance, narrow-mindedness and communalism," makes no sense. Arguments in favour of self-governing *panchayats*, in fact, can be multiplied endlessly. For instance, the sense of responsibility that goes with self-government raises the moral stature, confidence and pride of the people, besides providing valuable exercises in self-government which "develop in them the social tissues which sustain the civic life." Further, it facilitates decentralisation of authority which is so essential for rapid economic development. For there is a great deal to be said in favour of keeping the competent and highly skilled administrators free from unnecessary burdens. Besides, does it not avoid the evil of making a few men indispensable to democracy?

The material provided in the book under review is so vast and illuminating that one can easily see the vital role that *panchayats* have to play in a democratic India. In this voluminous book of 48 chapters running into 843 pages, the author starts with the village communities in human history, and, after running through an interesting account of the state of agriculture and village communities in India, from ancient times to A.D. 1800, comes to a highly instructive comparative study of the conditions of slavery, feudalism and village communities in India and the Western countries. The following chapter, namely, "The Great Destruction" gives a hair-raising account of the plight of the peasantry during the East India Company's and the British rule. In the chapter entitled "The Great Challenge," an interesting description of the state of the Indian peasantry since the appearance of Gandhiji on the Indian scene, the trends of thought, and the impact of Marxism-Leninism on them, in relation to peasant conditions and movements are discussed at considerable length. In this wider context, the importance that was given to village *panchayats* in the national movement is discussed in the next chapter. This is followed by two valuable chapters, one devoted to explaining clearly Gandhiji's views on *panchayats* and the other to "*Panchayats* after Independence." In the latter chapter are given chiefly, the comprehensive recommendations of the Congress Village *Panchayat* Committee, decisions taken by the *Panchayat* Committee of the Local Self-Government Ministers' Conference held at Simla in 1954, and the learned views of Acharya Vinoba Bhave on *panchayats*. The chapters comprising Book II provide an exhaustive account of the progress of the *Panchayat* Movement in various States in India.

Book III is once again a comprehensive and highly instructive study of the problems of village *panchayats*. These relate to the conflicts in the villages and the finances and administration of the *panchayats*. The state of affairs which the author has so painstakingly and yet so clearly portrayed only goes to show how much more has yet to be done to improve the conditions of villages and to make them the foci of social progress. On the basis of the analysis, the author has made out a strong case for drastic reforms including land reforms in the villages. The book is an original contribution to the literature on the subject and should serve as a useful reference to those connected with or interested in rural affairs.

Asia Commercial Directory, 1956-57. Published by Pan-Eastern Publishing Company, 49, Queen's Road, Hong Kong.

As trade relations between the countries of Asia are increasing rapidly, manufacturers and traders of each country may naturally be interested in commercial conditions and trade practices prevailing in others. In this respect, the publication under review is of considerable value. Primarily meant for the business man, the Directory gives useful information regarding the economic background, trade regulations, weights and measures, currencies and coinage of every country in the region, besides listing leading trade organisations, commercial houses and trading firms. The book will prove a valuable reference volume for traders, bankers, commission agents and shippers.

Canada, 1956. Published by the Information Services Division, Dominion Bureau of Statistics, Ottawa. Price: 75 cents.

This attractively got-up handbook is a fairly good snapshot of the Canadian economic, political and cultural scene in 1956. It gives a succinct and well-documented account of the recent many-sided development of the Canadian economy. The publication also attempts to high-light the rich and varied natural resources of Canada, the skill and enterprise of its business and industrial community, the far-flung network of transport and communication facilities which, indeed, form the basis of all economic progress. A welcome feature of the handbook is that the text is supplemented by a large number of tables, maps, and excellent illustrations.

HARNESSING BACTERIA FOR SULPHUR PRODUCTION

LARGE-SCALE TRIALS IN BRITAIN

By Sylvia Laverton

SINCE sulphur is one of the essential raw materials of modern industry, every country which has developed, or wishes to develop, great industries has an interest in its production. This is especially the case with those which, like the United Kingdom, have to import most of what they need from countries with natural deposits or suitable ores.

In 1950, Britain was faced with a critical shortage of sulphur because of a sudden decline in exports from the United States. The matter was so serious that scientists at the official Department of Scientific and Industrial Research began work on a process which would harness bacteria for sulphur production. They were aware that there was nothing fundamentally unsound in the idea of setting bacteria to work on a large scale, since isotope studies have proved that the vast sulphur deposits in Texas and Louisiana, U.S.A., were actually formed long ago by bacterial action.

The scientists, therefore, isolated suitable bacteria, selecting strains that worked rapidly; and, by utilising sulphate-enriched sewage sludge, developed a process which has proved successful in a small-scale plant. Trials in a large plant will be made later this year, but even at this stage it is obvious that the process is well on the way to becoming a commercial possibility.

Notable Achievement

It is also a notable achievement, for microbiological methods have never been applied before to the production of heavy chemicals such as sulphur. A good deal was already known about the sulphate-reducing bacteria, the family name of which is *Desulphovibrio de sulphuricans*. They have a considerable nuisance value. Growing readily in stagnant, polluted water, they produce the unmistakable stench of hydrogen sulphide, the smelly gas that makes rotten eggs so obnoxious. They also cause serious corrosion in metal pipes running through clay soils.

The problems involved in putting these bacteria to work on an industrial scale were twofold. Raw materials had to be found which were plentiful and cheap, and a supply had to be built up of vigorous bacteria which were able to work fast enough to operate at a high output rate. Sulphates, the key material, presented no difficulty. Gypsum or anhydrite from natural deposits, or waste sulphate from fertiliser manufacture, are all suitable.

A careful study then revealed that sewage sludge filled the remaining requirements admirably. It provides nutrients on which the bacteria can live, and by its reducing action helps them to convert sulphate to sulphide, in a form easily turned into elemental sulphur by chemical means. Sewage sludge is available cheaply on the large scale necessary if the process is to make an appreciable contribution to Britain's sulphur needs.

Process Modified

Experiments in the laboratory showed that the semi-continuous fermentation process used at a number of sewage works to obtain methane from sludge could be modified quite easily to produce sulphide if sulphate were added to the sludge. The original bacteria came from one of London's sewage works at Beckton. They worked lamentably slowly. In the laboratory at Teddington, they took six months to produce one per cent. sulphide (calculated as sulphur) from a mixture of sewage and six per cent. of gypsum. By frequently transferring the bacteria to fresh sludge when sulphide production was most active, the scientists at Teddington were able to step up the rate of production no less than 40 times, until it took only five days to produce one per cent. of sulphide sulphur.

In the pilot plant at Beckton, the same satisfactory yields were obtained, and the process ran easily. The sulphide gas was swept out of the fermentation tank by gas from a normal fermentation unit, the two running in series. The final product was a gas containing between five and 10 per cent. hydrogen sulphide, 60 to 65 per cent. methane, and 30 per cent. carbon dioxide, from which it is not difficult to obtain pure sulphur. A large plant is now being installed with a fermentation tank holding 100,000 gallons of sulphate-enriched sludge, and a sulphur recovery unit. It will provide more information about the economics of the process.

(Continued in previous column)

(Concluded from next column)

Use of Hydrogen

Laboratory work has also been carried out at Teddington with pure cultures of sulphate-reducing bacteria using hydrogen gas as a reducing agent instead of sewage sludge, in a fully continuous fermentation process.

Bacteria growing normally reach a maximum growth rate, and hence maximum sulphide production, and then slow down. Using a modified form of the continuous-culture technique developed for other organisms at the Ministry of Supply's Microbiological Establishment near Salisbury, Wiltshire, the bacteria were kept growing at their maximum rate and activity by steadily feeding in fresh nutrient material with hydrogen gas, and allowing the exhausted material to flow away, keeping the total volume of fermenting liquid constant. For economical working, this process depends on a plentiful supply of cheap hydrogen, which is not yet available in the United Kingdom.

At present there is no world shortage of sulphur, either as such or in the form of ores suitable for chemical processing. But consumption is rising in Britain, because it is geared to the steadily expanding chemical industry, for which it is a basic raw material. If the 1950 crisis were to recur, sulphur bacteria could help to alleviate the shortage. A conservative estimate is that at least 100,000 tons could be made without difficulty, by converting existing sewage works in the larger cities. This huge tonnage would be made from waste material with the aid of microbes so small that they can only be seen under the microscope.

CAT

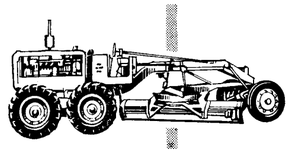
MOTOR GRADERS

All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.

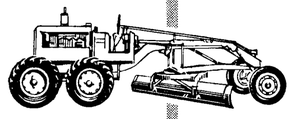
Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.

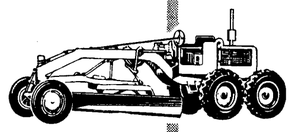
Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.



No. 12—115 HP



No. 112—75 HP



No. 212—50 HP

TRADERS' VIEWS ON EXPORT PROMOTION—II

GREATER EXPORT-MINDEDNESS NECESSARY

A FORCEFUL plea has been made by the Indian Merchants' Chamber (I.M.C.), in its comprehensive memorandum submitted to the Export Promotion Committee, for the creation of a greater degree of export-consciousness amongst all sections of the public, because the only solution to the foreign exchange problem in the present context lies almost entirely in export promotion. The Chamber holds the view that there is nothing unreasonable in earmarking a certain portion of the country's production of as many items as possible for the export markets, notwithstanding the fact that it calls for a certain measure of sacrifice on the part of the domestic consumers. This view is endorsed by the Bombay Chamber of Commerce and Industry also in its memorandum to the Export Promotion Committee. Thus, it has pointed out that, in the interest of maintaining continuity of supplies to overseas markets, risking occasional internal shortage is necessary. The I.M.C. has also made out a strong case for the diversification of exports both country-wise and commodity-wise. This is imperative, because of the fact that the possibilities of increasing exports in the three staple commodities, namely, cotton piecegoods, jute manufactures and tea, which at present account for more than half of the country's export earnings, are limited, owing to the increasing competition for them from foreign products. The views expressed by the I.M.C. and the Bombay Chamber generally fall in line with those of the two Associations already presented in these columns last week.

Special emphasis has been laid by the I.M.C. on the fact that export promotion is a joint responsibility of the Government on the one hand and trade and industry on the other. The Government can, and should, help promote exports by following appropriate policies. It should, says the I.M.C., provide fiscal incentives and facilitate reduction in costs and replacement of old and worn-out machinery and equipment by modern up-to-date ones. The manufacturers, on their part, should undertake the responsibility of expanding the exports of the items already figuring in the trade by raising the quality of goods and their packing and by effecting economies in costs of production. They should try to push into export trade new items by exploring markets for them. In this respect, the exporters have a major role to play. The I.M.C. strongly favours the establishment of an Export Promotion Cell with a Deputy Minister at its head and comprising the representatives of trade and industry. This Council should be entrusted with the task of preparing and carrying out a comprehensive plan of export promotion.

Suggestions for Export Promotion

Among the various suggestions for export promotion put forward by the I.M.C. for the consideration of the Committee, mention must be made of (1) simplification of the procedures laid down in regard to drawback of import duties and to rebate of excise duties; (2) grant of rebate of direct taxes on profits made on export; (3) market surveys of the various export markets and study of consumers preferences in the importing countries; (4) intensification of propaganda on export items in foreign markets through the media of trade journals, and by participation in international fairs, etc., preferably through the Export Promotion Councils, where they are existing, or by trade associations; and (5) rationalisation of machinery and equipment of the exporting industries. In this context, the I.M.C. has made a special reference to cotton textile industry. It has stressed that efforts must be made to assist the industry as a whole to renovate and replace their obsolete plants and machinery by providing financial and technical assistance so that they may be in a position to manufacture those qualities of cloth which are in demand abroad. Referring to the tea industry, it has emphasised the need for better organisation of the industry, intensification of propaganda and planned market studies. In addition to the foregoing, the Bombay Chamber of Commerce has focussed attention on (1) removal of export restrictions, (2) better inland transport facilities for exportable goods, (3) rationalisation of administrative and documentation work at ports, and (4) improvements in contracts with overseas buyers. Besides, it has also felt that a country aiming at boosting exports cannot afford to have low internal prices and high export prices.

The two chambers have also discussed at considerable length the difficulties experienced by Indian exporters in foreign markets. According to the I.M.C., these arise chiefly because of (*a*) the earlier start made by certain foreign countries in the overseas markets and opening by some companies of their factories in certain markets, (*b*) high import tariffs, (*c*) the high competitive position of certain foreign products occasioned by the provision of subsidies by their Governments, as in the case of jute goods, or by the prevalence of low wages, as in regard to cotton textiles from Japan, and (*d*) difficulties caused to Indian firms in opening branches in overseas countries. The Bombay Chamber holds the view that two of the main difficulties encountered by Indian exports in foreign markets are, first, the unfavourable opinion the foreign importers have in regard to the quality of the Indian exports, and, secondly, lack of guarantee of continuity of supplies, coupled with the fear that the price once agreed upon may suddenly be enhanced through an increase in the export duty.

Export Policy and Procedure

Alluding to export policy and procedure, the I.M.C. has conceded that the adoption of quota system is justified for two reasons, namely, limited exportable surplus and inadequate transport facilities. It is, however, strongly of opinion that the quotas should be given sufficiently in advance. Further, according to the Chamber, quotas should be released, in certain cases, even if, strictly speaking, no exportable surplus exists because of the need for maintaining the continuity of exports to the traditional markets. It feels that there is no justification at present for the continuance of export duty on cotton waste at the present high level, in view of its large export surplus in the country. This view is shared by the Bombay Chamber which has drawn pointed attention to the fact that the U.S. Government is actually subsidising the export of various kinds of cotton waste, thereby making it difficult for the Indian cotton waste to compete with them. The Chamber has also referred, in this connection, to the export of manganese ore through the State Trading Corporation and has expressed the belief that the Movement Quota is working to the detriment of the merchants engaged in this trade. It, therefore, argues that State trading in this commodity should be abolished immediately. It is further of the view that the export duty levied at present on manganese ore should be abolished, as "it acts as a hidden subsidy to other exporting countries."

On the question of assistance to exports, the I.M.C. has advanced certain specific suggestions. Among fiscal incentives, subsidies for exports figure prominently. Examples are cited, in this connection, of the policies pursued by Australia, Belgium, Canada and Germany. Other methods followed by various countries include remission of direct taxation, refund of social welfare charges, advances to exporters on favourable terms, schemes of currency retention, import entitlement and preferential rates for the conversion of export earnings into domestic currency. Both the I.M.C. and the Bombay Chamber hold views identical to those advanced by the two earlier Associations on such subjects as drawback of import duty, refund of excise duty, transport and shipping facilities, and invisible exports. Special mention may be made here of the Chambers' plea for better attention to tourism which provides wide possibilities for augmenting foreign exchange resource. It is emphasised, in this regard, that the present facilities available to tourists for travelling, accommodation and sightseeing are totally inadequate, and the present attitude of the officials who directly come in contact with the tourists leaves much to be desired.

Export-Import Bank

On export financing, both the I.M.C. and the Bombay Chamber feel that the establishment of an institution on the lines of the Export-Import Bank of the U.S.A. or Japan may be considered. They, however, differ on the question of exports on consignment basis. The I.M.C. believes that it is not a very desirable system of export, for the exporter is not sure of the price he will get. The Bombay Chamber, however, opines that wherever exports on consignment basis are feasible, they should be encouraged. But both of them are emphatically opposed to the idea of a scheme for exporting commodities through a single agency. The I.M.C. believes that the system of export credit guarantee can play an important part in stimulating exports.

A special responsibility rests on the Export Promotion Councils. According to the I.M.C., they should undertake surveys of the various export markets and study the exact requirements of these markets. They should also send periodically trade delegations abroad to make a comprehensive study of the market conditions. The Councils should also participate, the Chamber says, in international exhibitions and fairs. The Bombay Chamber is of the opinion that Export Promotion Councils are useful only to a limited degree and that, if they are to be more productive in their efforts, they should be decentralised commodity-wise at major ports for particular commodities. This Chamber has also stressed that the statistics and information furnished by the Director-General of Commercial Intelligence and Statistics and the Trade Representatives abroad should be up-to-date.

On the subject of the State Trading Corporation, both the I.M.C. and the Bombay Chamber have no two opinions. They are firmly against the S.T.C. participating in the export field. They argue that the Corporation is not conducive to the development of export trade, for the State is not a suitable agency to undertake trading operations, which require special skill and technique and, what is more, instantaneous decisions, which the State is not capable of. The creation of S.T.C., the I.M.C. asserts, has dampened the enthusiasm of the private channels. The Bombay Chamber points out that, if the S.T.C. is to be allowed into the export field, it should be done in competition with private exporters and should be run on a purely commercial basis.

MAIZE PRODUCTION

The production of maize is reported to have touched a record level in 1956-57. The current year's estimated area under the crop at 9,244,000 acres and production of 3,020,000 tons, represents an increase of 128,000 acres or 1.4 per cent. in area, and 466,000 tons or 18.2 per cent. in production, respectively, as compared with 1955-56.

The increase in area during the current year has been reported mainly by Uttar Pradesh, Bihar and Jammu and Kashmir. This increase has, however, been offset to some extent by the decreases reported mainly by Rajasthan and Bombay. The significant increase in production has been shared by all the maize-producing States except Rajasthan, Bombay and Madhya Pradesh. Notable increases in production have been reported by Uttar Pradesh, Punjab and Bihar. The increase in production has been attributed partly to increase in area and partly to favourable climatic conditions during the growing period of the crop.

ATUL PRODUCTS MAKE FURTHER HEADWAY

PROSPECTS ENCOURAGING

YET one more year of record achievement, both in regard to sales effected and profits made, is disclosed by the audited accounts of Atul Products Ltd. (Managing Agents: Messrs. Lalbhai Sons & Co., Ahmedabad) for the year ended 31st December 1956. The satisfactory results are proof of the good reputation that the Company has earned for its products, particularly its dyes, in the market, and due no less to the wide and dependable sales organisation which it was able to establish in the preceding year. That the Company's profits have been well set on a steady upward trend is evident from its gross profit which has increased from Rs. 12.44 lakhs for 1954 to Rs. 20.61 lakhs for 1955 and further up to Rs. 30.95 lakhs for the year under review, representing a rise of Rs. 10.34 lakhs over the year. As compared with Rs. 1.22 lakhs earned for 1953, which incidentally was the first full year of working, the appreciation in gross profit by Rs. 29.73 lakhs during a period of only three years is, indeed, a good achievement for a chemical concern. It would, however, appear that, having regard to the large size of the capital employed and the need for providing full depreciation, the profit-margin is not remunerative. It is significant, in this connection, that the auditors have remarked that "the provision for depreciation on fixed assets is inadequate."

Out of the gross profit for 1956, the Directors have provided Rs. 12.68 lakhs as normal depreciation for the year and also set aside a sum of Rs. 6.92 lakhs towards arrears of depreciation. The amount allocated to the depreciation fund in the previous year was Rs. 12 lakhs. The reserve fund has not been provided with anything this year also. On the other hand, the Directors have proposed to raise the dividend from 5¼ per cent. paid for the previous year to 6 per cent.

The following table brings out some of the salient features of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sales	1,83.42	1,29.24	1,15.80*	75.30*
Closing stocks of finished goods and goods in process	25.13	41.59	34.24	27.57
Other income	4.16	3.19	1.84	1.75
Raw materials consumed	93.78	84.93	82.99	60.14
Expenses	46.38	34.23	22.20	15.78
Gross profit	30.95	20.61	12.44	1.22
Managing Agents' commission	..	..	..	..
Depreciation	19.60	12.00	13.59	..
Taxation	..	..	..	..
Net profit (+) or loss (—)	+18.27	+8.61	—1.15	+1.22
Income-tax paid in 1951 adjusted	..	..	..	0.11
To dividend	11.36 (6%)	8.36 (5½%)	..	..
Carry forward	0.24	0.25	..	1.15

* Net sales.

It will be seen that the Company's sale proceeds of dyes, chemicals and pharmaceuticals for the year have increased by Rs. 54.18 lakhs over those made a year ago. This is reflected in the closing stock of finished goods which stands lower at Rs. 15.33 lakhs as against Rs. 37.50 lakhs at the end of 1955. Raw materials consumed have increased from Rs. 84.93 lakhs to Rs. 93.78 lakhs, as also expenses from Rs. 34.23 lakhs to Rs. 46.38 lakhs.

The Directors state that, due to some small bottlenecks, the Company has not been able to take out full production from the Azo plant but they hope that the production of Azo dyes will increase during the year 1957. Similarly, although the production of sulphur black increased during the year, the expanded plant came into operation only recently, and the full effects of this additional outlay will be realised in the year 1957. The naphthol plant, cibagenes and cibanogenes plant, coramine and vioform plant and the vat jade green plant of Atic Industries Private Ltd. got into operation towards the end of the year 1956 and are now in proper working condition. The sodium thiosulphate plant has now been redesigned and it is expected that it will yield a much larger production during the current year.

Following the granting of a licence by the Government of India to Atic Industries Private Ltd., for the manufacture of several other vat dyes, the capital of this Company has now been increased to Rs. 2 crores. Its subscribed capital has been increased from Rs. 50 lakhs to Rs. 120 lakhs and the present holding of Atul Products Ltd. in the capital of Atic Industries is Rs. 60 lakhs. The work of implementing this new scheme of extension is now in hand. Correspondingly with this and other schemes of expansion, the present set-up of basic services like steam, power, etc., will also require substantial modifications and these are being carried out. Out of the loan of Rs. 3 crores from the Government of India, the Company applied for a further instalment of Rs. 57 lakhs towards the end of the year 1956, in addition to the Rs. 75 lakhs taken previously. This amount has now been received by the Company.

The Company's paid-up capital of Rs. 189 lakhs is all in ordinary shares of Rs. 100 each. It has no reserves except the meagre surplus of Rs. 24,255 carried forward from the year's profits. Loans from the Government of India secured by mortgage of fixed assets and investments account for Rs. 75 lakhs and current liabilities amount to Rs. 145.38 lakhs. The gross block of Rs. 261.13 lakhs, including additions during the year of Rs. 43.43 lakhs, has been written down to Rs. 215.93 lakhs. The auditors have pointed out, as already mentioned, that the provision for depreciation on the fixed assets appears to be inadequate. The current assets aggregate Rs. 193.69 lakhs and include, among other things, investments in national savings certificates and shares of companies Rs. 62.42 lakhs, stores, building materials and uninstalled machinery Rs. 20.65 lakhs, stock-in-trade Rs. 63.26 lakhs and debts, deposits and advances Rs. 33.06 lakhs. The current assets cover the current liabilities by a fair margin of Rs. 48.31 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are a popular counter on the Ahmedabad Stock Exchange and are currently quoted at Rs. 153.50 *cum-div.* On an *ex-div.* basis, the latest dividend works out to a yield of 4 per cent. per annum.

The Company is engaged in an industry the prospects for which are bright. Given reasonable encouragement, it can be counted upon to make a solid contribution to the economic progress of India, as it is in capable hands and has established valuable connections with foreign manufacturers for getting their know-how.

(Concluded from next column)

plant including the buildings, may cost about Rs. 60 lakhs. The Directors expect the plant to be in operation before the end of 1958.

The Company's financial position is very satisfactory. The paid-up capital of Rs. 66.25 lakhs includes 40,000 ordinary shares of Rs. 100 each and the balance in various categories of cumulative preference shares of Rs. 100 each. As already mentioned, the paid-up capital was increased during the year by issuing 13,750 ordinary shares of Rs. 100 each by capitalising a part of the reserve fund. Even after this transfer, the reserves and surplus aggregate Rs. 297.99 lakhs of which the general reserve fund alone accounts for Rs. 190 lakhs. The current liabilities amount to Rs. 46.77 lakhs, and provision for taxation Rs. 41.25 lakhs. The gross block of Rs. 195.82 lakhs has been written down to Rs. 98.53 lakhs. Additions during the year were of the order of Rs. 30.44 lakhs. The current assets aggregate Rs. 353.74 lakhs of which investments in Government securities and shares of companies, together with interest accrued, account for Rs. 103.67 lakhs, stock-in-trade for Rs. 66.74 lakhs, debts, deposits and advances for Rs. 58.01 lakhs and cash and bank balances for Rs. 107.68 lakhs. The major portion of investments is in the equities of a large number of first class industrial concerns under various managements, so that the Company can justly claim to have utilised its resources profitably not only for expanding and modernising its mills but also for helping other industrial concerns to do likewise. It is gratifying to note that, as at the close of 1956, the aggregate market value of the Company's quoted investments at Rs. 110.91 lakhs exceeded the cost price by well over Rs. 9 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted on the Ahmedabad Stock Exchange at Rs. 995 *cum-div.* (final dividend Rs. 27-8). On an *ex-div.* basis, the yield works out to 3.6 per cent. per annum. The low yield reflects the popularity of the shares consequent upon its strong financial position and the confidence of investors in the future of the Company.

ARVIND MILLS' RESULTS ENCOURAGING

DIVIDEND UNCHANGED

THE good demand for cloth in the first three quarters of the previous year, that is, until 1st September, from which date the additional excise duty was imposed on cloth, has enabled the Arvind Mills Ltd. (Managing Agents: Messrs. Narottam Lalbhai & Co., Ahmedabad) to substantially increase its earnings for the year ended 31st December 1956 and strengthen its reserves. The gross profit has advanced by Rs. 27.53 lakhs to Rs. 97.44 lakhs, after having fallen from Rs. 71.02 lakhs for 1953 to Rs. 66.95 lakhs for 1954. The net profit, after making slightly smaller provisions for Managing Agents' commission and depreciation but a substantially higher allocation for taxation, stands higher at Rs. 38.74 lakhs, as compared with Rs. 25.19 lakhs in the previous year. The tax provision has been nearly doubled from Rs. 19.50 lakhs to Rs. 37 lakhs.

Although the profit is higher, the return to shareholders has only been maintained at the previous year's level of 35 per cent., consisting of a dividend of 25 per cent. and a cash bonus of 10 per cent. This total distribution includes an *ad-interim* dividend of Rs. 7-8 per share paid earlier in the year. The dividend for the year under review, however, is on a higher capital raised by the capitalisation of a sum of Rs. 13.75 lakhs, standing to the credit of the reserve fund, during the year. It may be mentioned, in this context, that the distribution was stepped up in the previous year from 25 per cent. paid for 1954 by introducing the bonus element. The same rate of dividend on increased capital has taken up a large sum, Rs. 14 lakhs, as against Rs. 9.19 lakhs in 1955.

The major part of the increase in profit has, however, been utilised to strengthen the reserves of the Company. Thus, the Directors have transferred a sum of Rs. 24.42 lakhs to the reserves, as against only Rs. 14.50 lakhs in the previous year. A breakdown of the total shows that a sum of Rs. 6.06 lakhs has been transferred to reserve fund, Rs. 5 lakhs to dividend equalisation fund, Rs. 1 lakh to contingency fund and Rs. 12.36 lakhs for development and rehabilitation. In view of the high tax on dividends, the Directors could not have adopted any other policy. Indeed, it is remarkable that they decided to pay as much as 35 per cent. in all, for such attracts penal dividend tax at 30 per cent. (it was actually 37½ per cent. at the time the Directors took a decision on the dividend).

The following comparative table will give an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

* On the increased capital of Rs. 40 lakhs raised by capitalising Rs. 13.75 lakhs.
† Net sales.
‡ On the increased capital of Rs. 26.25 lakhs raised by capitalising Rs. 5.25 lakhs.
N.A.—Not available.

The Company's sale proceeds of cloth, yarn and waste during the year at Rs. 348.30 lakhs are a shade lower than Rs. 348.92 lakhs for the previous year. The cost of raw materials consumed has fallen by Rs. 11.84 lakhs. This together with the further progress made in the mill's reorganisation and renovation programme during the year, has been responsible for the better profits for the period under review. The Company had spent a sum of about Rs. 29.77 lakhs in 1956 on extension of buildings and installation of new machinery and equipment. Permission was received from the Office of the Textile Commissioner, Bombay, for installation of 15,000-spindle plant for manufacture of yarn from staple fibre. Necessary orders for the purchase of machinery have been placed. It is estimated that the said

(Continued in previous column)

ELPHINSTONE MILLS' PROFIT LOWER

DIVIDEND, HOWEVER, MAINTAINED

THE results of the Elphinstone Spinning and Weaving Mills Company, Ltd., Bombay, for the year ended 31st December 1956, provide yet one more example of a textile mill which, along with several other units of its category, has suffered from adverse trading conditions occasioned by the additional levy of excise duty on cloth. The gross profit, which had gone up from Rs. 6.30 lakhs for 1954 to Rs. 15.73 lakhs for 1955, that is, by Rs. 9.43 lakhs, or by about 150 per cent., has fallen by Rs. 2.96 lakhs to Rs. 12.77 lakhs for the year under review. Although the gross profit has thus declined, it still constitutes the second best for the past five years, being appreciably higher than Rs. 8.65 lakhs earned for 1952.

After raising the provision for taxation from Rs. 5 lakhs to Rs. 5.50 lakhs and lowering that for depreciation from Rs. 5 lakhs to a mere Rs. 1.88 lakhs, the net profit stands lower at Rs. 5.39 lakhs, as against Rs. 5.73 lakhs in the previous year. One welcome feature is that, while no allocation had been made to the reserves for the past six years in succession, an amount of Rs. 1 lakh has been credited to the development reserve out of the year's profit. The dividend has been maintained at 10 per cent. to which level it had been stepped up a year ago from 6 per cent. paid for 1954, after a break of one year in 1953 when no dividend was paid.

The following comparative table presents the Company's progress during the past four years:

(In lakhs of rupees).

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	179.73	186.82	177.81	155.45

† Only approximate.

The year's expenses which have risen from Rs. 167.61 lakhs to Rs. 177.35 lakhs are inclusive of a sum of Rs. 3.50 lakhs as gratuity to workers which became payable for the first time during the year as a result of an award given by the Industrial Court in November 1956. The award was given retrospective effect from 22nd November 1954. The dearness allowance payable to the operatives and staff for the year was also higher, as compared with the previous year, owing to higher cost of living.

The Directors state in their report that a major portion of the machinery ordered by the Company for renovation has arrived and that a part of it has been put into commission. It is to be hoped that these additions will enable the Company to show better results in future, assuming, of course, that trading conditions are normal.

The balance-sheet as at 31st December 1956 shows that the reserves and surplus aggregate Rs. 17.67 lakhs, as against a paid-up capital of Rs. 55 lakhs, of which Rs. 25,00,000 are in seven per cent. cumulative preference shares of Rs. 100 each and the balance in ordinary shares of Rs. 50 each. The development reserve has been strengthened by the addition of Rs. 4.40 lakhs, being the surplus left over in the depreciation reserve after providing for normal depreciation to the various fixed assets. The provision for taxation stands at Rs. 19.81 lakhs and current liabilities amount to Rs. 54.98 lakhs. The gross block of the value of Rs. 120.97 lakhs (additions during the year Rs. 11.36 lakhs) stands written down to Rs. 42.74 lakhs. The current assets aggregate Rs. 104.72 lakhs and cover the current liabilities and the provision for taxation by a margin of Rs. 29.93 lakhs.

The Rs. 50 fully paid-up shares of the Company are being currently quoted at Rs. 62.50 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.8 per cent. per annum, free of income-tax.

Points From The Chair

The Pound Sterling

"THIS country can never recover its proud position and prestige of the past until basic issues are settled, ensuring reasonable stability in the purchasing power of the pound sterling and in wage earnings. The loyalty to their country of the great body of workers is sound, and they know, as we all know, that we sink or swim together. They are able to take care of the few who, for ideological or baser reasons, would cripple the nation's progress towards recovery, but they need to be aroused to an awareness of the country's plight. I believe that Mr. Macmillan's Government is working towards this end, and he has this policy steadily in view, that the pound, if it is humanly possible, will be made worth more and the purchasing power of the money in the hands of the worker will become sufficiently attractive for him to go all out for increased personal output and earnings. But no Prime Minister could have faced his debut at a worse crisis in the affairs of the nation, and he needs all the lifetime of this Government to apply the necessary remedies. The country should wish him well and give him their confidence in his onward course towards better living standards for all."

SIR THOMAS EADES,
Automatic Telephone & Electric Co., Ltd.

Energy Requirements

"The problem was essentially one of transportation, the available tanker tonnage being insufficient to maintain on the long voyage around the Cape the normal rate of supplies from the Middle East. In consequence, liftings from short-haul sources in the West increased and production in the Middle East, where so much of our interests lie, declined to a monthly average of just over 10 million tons for the four months, November 1956/February 1957, compared with nearly 15½ million tons monthly for the preceding four months. The early months of 1957 have, in such circumstances, been a difficult period in which we have experienced a reduction in our trade, and the growth of consumption in the European area, where we have a large marketing interest, has, for the present, slowed down. But the basic facts of the world's growing forward energy requirements, and the increasing contribution to be made by oil, remain unchanged, and we can look forward to an expanding business, granted the stable conditions requisite for the progressive development of Middle East oil production on which the economic future of the producing countries in that area so largely depends."

N. A. GASS, C.B.E., M.C.,
British Petroleum Co., Ltd.

Inflation

"My own personal view is that the most urgent problem which the Government and the whole country, both employers and employees, must face up to is the necessity of arriving at stability, both of our currency and of our costs. If we are still to be faced with this inflationary trend with increased costs, wages, materials and, of course, replacement of ships, and indeed of equipment of all business throughout the country, we can never emerge from the troubles and difficulties that have confronted us year by year since the end of the last war. If we can win this fight against inflation, and prices and wages can be stabilised, then many of our prospective troubles will quickly diminish and ultimately disappear. Taking the shipping industry alone, most companies now have a large portion of their ships acquired at heavy capital cost in recent years but, if costs could be stabilised, even at the present high level, there would be reasonable prospects of accumulating depreciation allowances which, with the increased investment allowances, would go far to meeting replacement cost later on. Indeed, the gap which at present is so serious would ultimately be closed."

WALTER C. WARWICK,
Royal Mail Lines, Ltd.

Britain's Exports

"Owing to the almost unique economic position of this country, with our need to import such a large proportion of our food and nearly all the raw materials required for our manufactures, it is inescapably true that our very lives depend on exports. In effect, all we have to sell is our labour of brain and brawn. Yet, with an expanding world trade, our share has been steadily diminishing, while that of some other countries, particularly Germany, has increased steadily. In part, I believe, this to be due to a loss of confidence by many of our overseas customers in the future of Great Britain. What goes on in this country is watched with keen interest abroad. High taxation has tended to restrain ambition, particularly in the younger generation, while the so-called welfare state has given an impression of a decrease in that self-reliance and initiative which, in earlier days, characterised the adventurous Britisher. In the period of 'over-full employment' Britain has been openly criticised—and rightly criticised—for allowing in so many cases one man's work to be done by three or four. Strikes, many of them arising from squabbles between two unions rather than from any genuine industrial dispute, have made an unfortunate, if exaggerated, impression on our overseas customers. And all this has been exploited by the communists and other trouble-makers for their own subversive ends. Unless the responsible trade unions leaders will make a determined effort to eliminate the communist elements in their midst, the trade unions may well be destroyed from within."

HALFORD REDDISH,
Trussed Concrete Steel Co., Ltd.

BOMBAY GAS CO., LTD. Annual General Meeting, Bombay, 11th June 1957. Transfer books will remain closed from 4th to 11th June 1957, both days inclusive.

TRAVANCORE OCALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Alwaye; Kerala State, 12th June 1957. Dividend: *Nil.* Transfer books will remain closed from 3rd to 12th June 1957, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 13th June 1957. Dividend: **Rs. 14.00 per share (includes bonus of Rs. 2.00 per share),** payable on 14th June 1957. Transfer books remain closed from 20th May to 13th June 1957, both days inclusive.

PALANPUR VEGETABLE PRODUCTS LTD. Annual General Meeting, Bombay, 14th June 1957. Transfer books will remain closed from 1st to 14th June 1957, both days inclusive.

SIRSILK LTD. Annual General Meeting, Somajiguda, Hyderabad-Deccan, 17th June 1957. Dividend: *Nil.* Transfer books will remain closed from 3rd to 17th June 1957, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 17th June 1957. Dividend: Rs. 6.00 per share, payable on and after 24th June 1957. Transfer books remain closed from 13th May to 8th June 1957, both days inclusive.

BANGALORE PRINTING AND PUBLISHING CO., LTD. Dividend of Rs. 10.00 (includes bonus of Rs. 2.00 per share) per share, for the year ended 31st December 1956. Transfer books will remain closed from 7th to 15th June 1957, both days inclusive.

MYSORE COFFEE ESTATES LTD. Interim dividend of 7½ per cent. for the year ended 31st March 1957. Transfer books will remain closed from 1st to 7th June 1957, both days inclusive.

VIJAYALAKSHMI MILLS LTD. Dividend of Rs. 10.00 (10 per cent.) per share, free of tax, for the year ended 31st December 1956. Transfer books will remain closed from 30th May to 12th June 1957, both days inclusive.

COMPANY REGISTRATIONS

EAST AND WEST PAPER IMPEX PRIVATE LTD. (Managing Director: Mr. Taru Jethmal Lalvani.) Business: Printing and Publishing. Authorised capital: Rs. 25,00,000. Private company. Address: Advani Chambers, 4th Floor, Sir Phirozeshah Mehta Road, Fort, Bombay.

SHRI AMBAJI TRADERS PRIVATE LTD. (First Director: Mr. Rameshchandra J. Trivedi.) Business: Purchasing and selling coal, etc. Authorised capital: Rs. 10,00,000. Private company. Registered office of the company will be situated in the State of Bombay.

TRANSMISSIONS PRIVATE LTD. (First Director: Mr. Ramchandra Bhikaji Sathe.) Business: Importers, exporters and commission agents. Authorised capital: Rs. 5,00,000. Private company. Address: 104-14, Frere Road, Sugar Market, Bombay.

JAY SHREE TEXTILES PAYS MAIDEN DIVIDEND

PROFIT OF TRAVANCORE RUBBER AND TEA SHRINKS

Jay Shree Textiles Ltd.

THE directors of the above Company (Managing Agents: Messrs. Birla Bros. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account after providing Rs. 5,67,169 (Rs. 22,192) for depreciation, making sundry adjustments and providing Rs. 32,412 for doubtful debts, shows a profit of Rs. 4,69,630 (Rs. 2,85,035). From this has been deducted last year's debit balance of Rs. 2,82,610 (Rs. 5,67,645) leaving a balance for disposal of Rs. 1,87,020 (debit of Rs. 2,82,610). The directors recommend a payment of dividend on 4,91,700 equity shares of Rs. 10 each at As. 6 (*nil*) per share which will absorb Rs. 1,84,388 (*nil*) leaving a balance to be carried forward to next year's account Rs. 2,632 (debit of Rs. 2,82,610).

Unabsorbed depreciation.—An approximate amount of Rs. 40,70,000 is outstanding as unabsorbed depreciation allowance on 31st December 1956. This includes initial depreciation, extra depreciation, extra shift allowance and also the development rebate as worked out by the Company according to the provisions of the Indian Income-tax Act, 1922.

Workings and future programme.—As indicated in last year's report, the directors are pleased to state that the working of the Company has shown considerable improvements during the year under review. It is hoped that this improvement will be maintained. Sales (including processing charges) during the year have increased from Rs. 54.21 lakhs in 1955 to Rs. 62.30 lakhs during the year under review.

The Company's main items of manufacture are—Flax hosepipes for fire-fighting; linen threads and twines; flax canvas and paulins; staple yarn and fabrics; hair belting yarn; and knitting wool, etc. The Company's products have become very popular —specially hosepipes, threads, twines and belting yarn. In the past the country used to import these essential items from foreign manufacturers, but now the Company is able to meet almost the entire demand of the country, cutting down imports to the minimum possible and thus effecting a saving of vital foreign exchange.

Some of the departments of the Company have been expanded, by adding new machineries, during the year under review. Plans are being finalised to make further expansions to meet rising demand for the Company's goods. The directors are glad to report that the Company has also been given permission to work 152 of its existing looms on cotton canvas. Some of the looms have already been started for the production of this item.

The Company has received permission from the Government of India for establishing a new staple fibre spinning plant. The directors are now giving the necessary consideration to the scheme.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Investments	6,016
		Cash ...	82,625
Rs.	92,82,225	Rs.	92,82,225

Travancore Rubber and Tea Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Aspinwall & Co., (Travancore) Ltd., Pathirapally, Kerala State] submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts are being presented this year in a new form to comply with the Companies Act 1956. The net profit for the year is Rs. 3,77,430 (Rs. 7,43,417) after making provision for income-tax and agricultural income-tax amounting to Rs. 3,08,050 (Rs. 5,37,773) depreciation Rs. 1,21,084 (Rs. 1,06,986), and also provision for rubber replanting, amounting to Rs. 70,412 (*nil*), which in previous years has been dealt with as an appropriation from profit and loss account. A true comparison with the previous three years is given below:—

	Rs.	a.	p.	Dividend paid
1953	6,78,476	9	11	10 per cent.
1954	8,92,756	5	2	15 per cent.
1955	8,01,203	5	7	12½ per cent.
	Rs.	a.	p.	
1956 ..	3,77,429	9	2	Dividend recommended
	70,412	0	0	7½ per cent.
	4,47,841	9	2	

The decrease in earnings in 1956 is mainly due to the poor tea crop resulting from unprecedented drought, though increased expenditure in payments to labour is a contributory factor to the decreased profit.

Rubber.—Against an estimate of 10,35,000 lbs. the crop harvested was 10,32,428 lbs. A portion of the rubber crop was sold on the Estates as liquid latex with advantage. Expenditure and average sale prices are compared below:

	Crop	Estate expenditure	Average sale price
	Lbs.	Cts. per lb.	Cts. per lb.
1953	9,89,722	64·91	129·27
1954	10,03,214	64·10	129·40
1955	10,35,280	70·88	144·64
1956	10,32,428	77·78	145·72

A small area of young budded rubber comes into tapping for the first time in 1957, and it is conservatively estimated that a crop of 10,75,000 lbs. of rubber will be collected during the year.

Tea.—The crop harvested, 8,89,643 lbs., is the lowest since 1949. The shortfall was entirely due to severe drought conditions experienced at the beginning of the year, and again from mid-November onwards. Comparative figures of tea crops, cost and revenue for the year under review and the three previous years are given below:

	Crop	Estate expenditure	Average sale price
	Lbs.	Cts. per lb.	Cts. per lb.
1953	11,50,696	122·75	188·22
1954	11,58,752	125·68	241·23
1955	11,65,729	134·87	204·06
1956	8,89,643	183·13	210·90

Rain came during February 1957, and showers have fallen at intervals since. Drought for a second successive year has thus been halted, but the group managers have, rightly, been conservative in their crop estimates for the coming year, which is put down at 10,50,000 lbs. tea, at an estate expenditure of 150.26 cts. per lb.

General.—Labour relations in the two groups during 1956 have on the whole been good, but labour costs have, as stated, been substantially higher, and further increases are to be feared.

The Employees Provident Fund Act came into force on 31st July 1956 in respect of Estate Factory Labour only, but from 1st May 1957 Field Labour will be included. A preliminary estimate of cost to the Company in respect of the entire labour force is Rs. 1 lakh per annum.

Bonus to labour for 1955 and 1956 is still under dispute in the State, and no useful estimate can yet be made of the incidence of final settlement on the profit and loss account of the current year.

World tea prices have fluctuated sharply during the year, and they continue to do so, making any sort of accuracy in forecast of profit impossible. The standard of tea manufacture has been well maintained, and prices secured have compared most satisfactorily with neighbours. The controlled price of rubber remained unchanged throughout the year under review.

The total amount available for distribution is Rs. 7,51,051 (Rs. 11,30,189), after reserving Rs. 70,412 for rubber replanting. From this figure of Rs. 7,51,051 must be deducted Rs. 96,000 (Rs. 96,000) representing the 6 per cent. dividend paid on the preference shares, and Rs. 1,028 (*nil*) transfer to capital reserve; and the Board now recommend payment of a first and final dividend on the ordinary shares of 7½ (12½) per cent., amounting to Rs. 3,07,500 (Rs. 4,12,500); leaving the sum of Rs. 3,46,523 (Rs. 3,71,083 after placing Rs. 30,000 to non-executive retirement fund; Rs. 70,606 to rubber replanting reserve and Rs. 50,000 to dividend equalisation fund) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,00,000	Block ...	68,42,976
Reserves ...	13,61,221	Stock-in-trade	6,28,661
Provision for taxation ...	3,49,893	Stores, loose tools, nursery etc. ...	2,50,588
Liabilities ...	9,11,522	Debts, deposits and advances ...	2,10,807
Profit and loss account ...	3,46,523	Investments	4,82,360
		Cash ...	2,53,767
Rs.	86,69,159	Rs.	86,69,159

Asoka Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Lalbhai Dalpatbhai & Co., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit for the year after providing Rs. 5,96,726 (Rs. 3,10,000 for depreciation only) for depreciation and development and rehabilitation and Rs. 14,00,000 (Rs. 12,25,000) for tax provision, amounted to Rs. 16,04,359 (Rs. 14,16,485). After adding the balance brought forward from the previous year's account of Rs. 69,806 (Rs. 55,359), there is a total of Rs. 16,74,165 (Rs. 14,71,844). From this sum the directors have transferred to reserve fund Rs. 3,54,870 (Rs. 3,50,000), to dividend eqoalisation fund Rs. 3,00,000 (Rs. 1,50,000) and to contingency fund Rs. 1,00,000 (Rs. 2,00,000) leaving a balance of Rs. 4,19,295 (Rs. 4,71,844 after placing Rs. 3,00,000 to machinery renewal fund). The directors recommend the payment of dividends as follows:—

To the payment of a dividend on 6,000 5 per cent. cumulative preference shares for the year ending on 31st December 1956 (less. income-tax) Rs. 22,125 (Rs. 22,125), to the payment of a dividend on 6,000 4½ per cent. redeemable cumulative preference shares for the year ending on 31st December 1956 (less income-tax) Rs. 19,913 (Rs. 19,913), to the payment of a dividend of Rs. 30 (Rs. 30) per share, income-tax free, on 12,000 ordinary shares for the year ending on 31st December 1956 Rs. 3,60,000 (Rs. 3,60,000) and to carry forward to next year's account Rs. 17,257 (Rs. 69,806).

A sum of about Rs. 10,94,191 was spent on extension of buildings and installation of new machinery and equipment in the year under reference. The installed capacity of the mills is 37,368 ring spindles and 914 looms with complete dyeing and bleaching plants.

The directors have reviewed the amount as it stood at the end of the previous year at the credit of the depreciation fund and after providing a fair amount under this head at normal rates of Income-tax Act, the balance which represented extra provision of Rs. 8,34,718 made for depreciation for the previous years has been transferred to a reserve to be named development and rehabilitation reserve, and the amount of Rs. 37,00,000 standing to the credit of machinery renewal fund, and the amount of Rs. 27,000 standing to the credit of workmen welfare fund totalling Rs. 37,27,000 have been transferred to reserve fund.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,00,000	Block ...	31,89,044
Reserves ...	1,43,05,808	Stock-in-trade	46,59,828
Provision for taxation ...	31,47,742	Stores ...	7,94,648
Liabilities ...	25,10,238	Debts, deposits and advances ...	60,45,019
Profit and loss account ...	17,257	Investments	25,91,031
		Cash ...	51,01,475
Rs.	2,23,81,045	Rs.	2,23,81,045

Raipur Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Lalbhai Dalpatbhai & Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit for the year after providing Rs. 5,38,607 (Rs. 4,75,000 for depreciation only) for depreciation and development and rehabilitation and Rs. 14,32,275 (Rs. 6,65,015) for tax provision amounted to Rs. 9,10,261 (Rs. 8,37,281). The adinterim dividend of Rs. 7-8 (Rs. 7-8) per share for the first-half of the year 1956 absorbed Rs. 1,50,000 (Rs. 93,750), leaving an available balance of Rs. 7,60,261 (Rs. 7,43,531). The directors disposed of this amount as follows:—

To the payment of a dividend of Rs. 17-8 (Rs. 17-8) plus Rs. 10 (Rs. 10) as bonus per ordinary share, income-tax free, on 20,000 (12,500) ordinary shares for the second half of the year ended 31st December 1956, Rs. 5,50,000 (Rs. 3,43,750) to the payment of a dividend on 5,000 4½ per cent. cumulative preference shares for the year ended 31st December 1956 (less income-tax) Rs. 16,594 (Rs. 16,594), to the payment of a dividend on 5,000 4½ per cent. 'B' class redeemable cumulative preference shares for the year ended 31st December 1956 (less income-tax) Rs. 16,594 (Rs. 16,594) and to carry forward to next year's account Rs. 1,77,073 (*nil* after placing Rs. 3,50,000 to capital redemption fund and paying Rs. 16,594 for dividend on 5,000—4½ per cent. 'A' class redeemable preference shares, which were redeemed in 1956).

Further progress was made on the mill's reorganisation and renovation programme during the year. A sum of about Rs. 13,69,000 was spent on extension of buildings and installation of new machinery and equipment. The main items covered by this expenditure include a new building for canteen, drawing, slubbing and intermediate frames, one barber-colman winding and warping unit, one hot-air stenter, one singeing machine and one electrically driven sprinkler pump.

By a special resolution passed at the general meeting of the Company held on the 30th March 1956, a sum of Rs. 7,50,000 being the part of the undivided profits of the Company standing to the credit of the reserve fund was capitalised and 7,500 ordinary shares of Rs. 100 each were issued, which were entitled to dividend from 1st January 1956, and which ranked *pari passu* in all other respects with the then existing 12,500 ordinary shares of Rs. 100 each. And therefore, the directors have distributed the said dividend for the year in respect of the said shares also.

The installed capacity of the Mills is 31,120 ring spindles, 1,708 doubling spindles and 636 looms with complete dyeing and bleaching plants.

The directors have reviewed the amount as it stood at the end of the previous year at the credit of the depreciation fund and after providing a fair amount under this head at normal rates of Income-tax Act, the balance which represented extra provision of Rs. 2,10,089 made for depreciation for the previous years has been transferred to the reserve to be named development and rehabilitation reserve, and the amount of Rs. 35,00,000 standing to the credit of machinery renewal fund, the amount of Rs. 47,500 standing to the credit of workmen welfare fund and the amount of Rs. 35,000 standing to the credit of fund for erecting chawl totalling Rs. 35,82,500 have been transferred to reserve fund.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	37,32,143
Reserves ...	1,10,62,006	Stock-in-trade	55,62,552

Anglo French Textiles Ltd.

The directors of the above Company [Managing Agents: Messrs. Best & Co. (Pondicherry) Private Ltd., Pondicherry] submitted the audited accounts of the Company for the year ended 31st December 1956.

The year's trading has resulted in a loss of Rs. 1,46,331 (profit of Rs. 1,00,890 after provision for taxation). A sum of Rs. 30,000 at the credit of the reserve fund, and the balance of Rs. 11,779 (Rs. 18,889) to the credit of profit and loss account brought forward from the previous year have been adjusted against this loss of Rs. 1,46,331, leaving a debit balance of Rs. 1,04,551 (credit of Rs. 11,779 after paying a dividend of 6 per cent. on preference shares absorbing Rs. 1,08,000) in the profit and loss account to be carried forward to next year.

During the year, the Mill produced 7.217 million lbs. of yarn of an average count of 16.65, and 12.721 million yards of cloth. These compare with the corresponding figures for the previous year, 1955, of 6.74 million lbs. of yarn of an average count of 17.27 and 14.13 million yards of cloth.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1956.

The loss for the half-year, after taking into account the sums of Rs. 85,000 for provision to write down jute stock and in transit to estimated realisable value, and Rs. 65,000 for depreciation, amounts to Rs. 65,330 deducting from this the credit balance brought forward from the previous half-year of Rs. 23,103, amount overprovided in liability in respect of previous period written back Rs. 21,343, unclaimed dividends forfeited Rs. 1,529 and amount transferred from general reserve account Rs. 1,00,000, there remains a credit balance of Rs. 80,645. West Bengal sales-tax amounted to Rs. 1,028 and amount shortprovided in liability in respect of previous period Rs. 215, leaving an available balance of Rs. 79,402. This amount the directors recommend should be distributed as follows:—

To dividend on 15,000 preference shares at Rs. 3 per share for the half year ended 30th June 1956 Rs. 45,000, leaving to be carried forward Rs. 34,402.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1956, have been valued at market price.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956 and to 5 per cent. from 20th February 1956. Since the close of the period the Industry sealed 2½ per cent. of the total looms from 16th July 1956 and a further 5 per cent. on 17th September 1956, again making a total of 12½ per cent. of the total looms sealed.

Trading conditions throughout the half-year continued to be difficult, and with the increase in production due to unsealing of looms prices fell rapidly and at no time was it possible to transact business simultaneously in raw jute and goods at a profit.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	23,20,758

Profit and loss account ...	34,402	Investments	2,10,000
		Cash ...	1,80,646
Rs.	1,04,62,606	Rs.	1,04,62,606

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Expenditure on Development Projects

THE Government has constituted three teams with officials and non-officials to inspect the expenditure on development projects at the Centre and the States. The High Power Committee constituted to inquire into the question of public expenditure has not yet submitted its report.

* * * *

Re-finance Corporation

Banks have been asked to express their views on the proposal to set up a re-finance corporation to provide medium-term loans in the private sector. The details of the scheme are being worked out and will be announced shortly. Tentative quotas of capital to be subscribed by the Reserve Bank, the State Bank, the Life Insurance Corporation and other private banks to the Re-finance Corporation have been fixed, but the whole matter is still under discussion.

—*T. T. Krishnamachari*

Decimal Coinage

An analysis of the reactions of the public and of the State Governments to the introduction of decimal coinage in the country has shown that the more important difficulties experienced by people are in relation to the adjustment in postal rates, State transport fares and increase in the price of small units of certain goods sold by shopkeepers. The Director-General of Posts and Telegraphs and the West Bengal Government have already taken action to meet these complaints at Calcutta. The P. and T. Department will soon have only new denomination postage stamps and stationery on sale and this will remove the difficulty experienced. The complaint about increased prices charged by private parties is not related directly to coinage reform. It is expected that the ordinary processes of demand and supply will soon ensure better balance in prices. The three Government of India mints are working to full capacity to produce coins of the new donominations and the Government is confident that, as soon as the supply of these becomes plentiful, the complaints which are already dying down will disappear altogether.

* * * *

Capital Goods Import

The question of guarantees to be given by Scheduled banks in respect of imports of capital goods on long-term credit basis is under examination by the Government. Importers of capital goods have been asked to try to obtain goods on deferred payment terms and negotiations are going on. The price difference between goods obtained by immediate payment and on long-term credit is a matter of detail to be worked out and I cannot give any definite answer on the subject now. The question whether it is a fact that manufacturers are quoting 15 per cent. extra and also demanding interest of seven per cent., which will push up the cost of the machinery, is a matter of opinion. I am not in a position either to confirm or to deny it.

* * * *

U.N. Technical Aid

An amount of 2,344,500 dollars has been allotted to India under the U.N. Expanded Technical Assistance Programme. The assistance will be in the shape of services of experts; equipment ancillary to the services of experts; and training facilities in foreign countries. The services of experts will be available to the private sector also to some extent.

—*B. R. Bhagat*

Liberty Ships

The Government of India has approached the U.S. Government for the purchase of "Liberty" ships and negotiations are still being carried on.

* * * *

Madras Port

The optimum handling capacity of the Port of Madras is of the order of 1.75 million tons per year, but the Port has been required to handle as much as 2 to 2½ million tons per year ever since 1950. Though the Port has been working on three shifts to handle this additional cargo beyond its capacity, a certain amount of delay to ships is inevitable. A project for increasing the number of quay berths from nine to 17 has been sanctioned. The construction of two of these berths is in progress.

* * * *

Development of Ports in Kerala

The second Five-year Plan includes schemes for the development of the ports of Alleppey, Quilon, Vizhinjam Kozhikode, Badagara, Tellicherry, Cannanore, Azhikhal and Ponnani in Kerala State. The total estimated cost of these schemes is Rs. 47.85 lakhs. The works cover improvement of landing facilities, navigational aids, modernisation of cranes, etc. The development of minor ports is primarily the responsibility of the State Governments. The Central Government gives financial assistance for the schemes included in the Five-year Plan.

Second Shipyard

A team of British experts is expected to visit India by the middle of September this year to draw up a preliminary project report for a second shipyard in the country.

—*Raj Bahadur*

Salem-Bangalore Rail Line

The survey work on the Salem-Bangalore railway line is expected to be completed by the end of this month. There is, however, not much likelihood of the line being constructed during the second Five-year Plan.

—*Shah Nawaz Khan*

National Construction Corporation

The National Construction Corporation has been set up for the execution of such projects or project works as are entrusted to it by the State Governments. The question of preparing a blueprint of its programme in advance does not arise. The Corporation has taken up construction of two aqueducts at estimated rates plus 15 per cent. for overheads and excavation of seven miles of canal at schedule of rates within the Rajasthan territory and excavation of five miles of canal at the schedule of rates within Madhya Pradesh territory on the Chambal project canal system. The Corporation is working on the same conditions as are applicable to other contractors on the Chambal project.

* * * *

Canal Water Dues

The total amounts of canal water dues outstanding till now from Pakistan under the "disputed" and "undisputed" heads are Rs. 87.93 lakhs and Rs. 78.41 lakhs, respectively. No final settlement of the Indo-Pakistan canal water dispute has yet been reached. At the instance of the World Bank, the two Governments have agreed to an extension of the co-operative work with the participation of the Bank for a further period of six months.

* * * *

Power for Rajasthan

Power from Bhakra-Nangal is expected to be supplied to Rajasthan within the course of one year from now.

—*S. K. Patil*

Indian Airlines

The present plans of the Government envisages replacement of the Indian Airlines Viking services by Viscount aircraft, but there is no proposal just now to replace the Dakota services. Five Viscount aircraft are expected to be put into operation during 1957. It is proposed to set up a maintenance centre for the Viscounts at Palam in Delhi. As a result of the introduction of Viscounts on the Indian Airlines routes, increase in air traffic is expected, although I cannot estimate by what percentage. The whole question of routes will also be reconsidered with the introduction of Viscounts. Any suggestions in this regard from members will also be welcome.

—*Humayun Kabir*

Import of Wheat and Rice

The cost of wheat and rice purchased from abroad in 1956 amounted to about Rs. 40 crores, besides the wheat obtained from the U.S.A. with aid funds. Food imports are arranged on a calendar year basis. The quantity of wheat imported from the U.S.A. during January-April 1957 amounted to six lakh tons. The import programme is reviewed from time to time in the light of requirements and availability of shipping. The present intention is to import about 2½ lakh tons of wheat every month.—

—*M. V. Krishnappa*

Co-operative Farming

The total area brought under co-operative farming in the various States amounts to 144,000 acres. The U.P. Government as such has not expressed any opinion on co-operative farming, but none of the ministers there have expressed doubts about it.

—*Ajit Prasad Jain*

Fair Price for Jute

The Food and Agriculture Ministry is of the view that the jute grower should be assured of a fair price. It will not be possible for me to enumerate now the various steps taken by the Government to achieve this object. It is not a fact that prices of raw jute in Bihar had been very low during February, March, and April this year. The price in these months compared favourably with the price in the previous year.

—*Dr. Panjabrao Deshmukh*

Iron Ore Export

The question of canalising export of iron ore through the State Trading Corporation is under active consideration. The services of the Corporation have been appreciated by the Importers.

—*Nityanand Kanungo*

Labour Participation

The question of labour participation in the management of industrial and commercial undertakings will be discussed at the next Indian Labour Conference. It may be possible to evolve concrete recommendations in this respect with the agreement of all the parties concerned.

* * * *

Employment Figures

The Government has asked the States to furnish information about employment in important projects and also about the general unemployment position. The States have also been asked to give this information in their annual reports regularly. Some States have already furnished the information, while replies from others will come in due course. Since May 1955, the National Sample Survey has been collecting information regarding employment and unemployment. An assessment of the employment situation from time to time is also contemplated through the employment market information programmes. The Planning Commission has also made arrangements for collecting information on the subject.

—*Abid Ali*

Notices

THE DUNBAR MILLS LTD.

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office, No. 21. Strand Road, Calcutta-1, on Tuesday the 25th June, 1957, at 3 p.m., for the following purposes:—

1. To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st December, 1956.
2. To declare a Dividend.
3. To elect a Director in the place of Shri P. D. Bangur who retires by rotation as also under Section 261 of the Companies Act, 1956, being an Associate of Messrs. Kettlewell Bullen & Co., Ltd., the Managing Agents of the Company, and to consider and if thought fit, to pass the following resolution as a Special Resolution, in respect of which special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto:—

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Shri P. D. Bangur, an Associate of Messrs. Kettlewell Bullen & Co., Ltd., the Managing Agents of the Company, be and is hereby re-elected a Director of the Company."
4. To elect Auditors for the current year and to fix their remuneration.
5. To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books of the Company will be closed from the 17th June to 25th June, 1957, both days inclusive.

By Order of the Board,
KETTLEWELL BULLEN & CO., LTD.,
Managing Agents.

CALCUTTA, 30*th April*, 1957.

N.B.—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory Statement under Section 173 of the Companies Act, 1956, in regard to item No. 3

The Company has received a Special Notice. as required by Section 261 of the Companies Act, 1956, of intention to propose the resolution set out under this item as a special resolution for the reason that Shri P. D. Bangur, a Director of the Company, who retires by rotation at this Annual General Meeting, is also a Director and Member of Messrs. Kettlewell Bullen & Co., Ltd., the Managing Agents of the Company, and as such "an associate of the Managing Agents" and hence he can only be appointed a Director of the Company by a special resolution of the Company under the said section 261 of the said Act and that it is in the interest of the Company that it should continue to avail of the benefit of the valuable advice and guidance of the said Shri P. D. Bangur by appointing him as a Director of the Company.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

THE TRANSFER BOOKS OF THE COMPANY will be closed from Monday the 24th June to Saturday the 20th July 1957, both days inclusive.

The dividends for the year ending 31st March 1957, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Saturday the 20th July 1957.

By Order of the Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, 17*th May* 1957.

INDUSTRIAL FINANCE CORPORATION OF INDIA

PARLIAMENT STREET, NEW DELHI

NOTIFICATION

IT IS HEREBY NOTIFIED THAT THE SHARE Register of the Corporation will be closed and the registration of transfers suspended from the 16th June 1957 to the 30th June 1957 (both days inclusive).

By Order of the Board,
H. V. VENKATASUBBIAH,
General Manager.

Dated 16th May, 1957.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS

(Railway Board)

TENDER NOTICE

Sub:—**Technical collaboration in the design and execution of Railway Electrification Projects on the Single Phase A.C. Traction System.**

THE MINISTRY OF RAILWAYS (RAILWAY Board) invite tenders from Technical Associates with previous experience in the design and execution of Railway Electrification Projects on the Single Phase A.C. Traction System, for Technical Collaboration.

The prospective Technical Associates should advise the undersigned of their intention to make an offer in the form of a sealed letter so as to reach the undernoted address on or before 31st May 1957. The detailed proposals for Technical Collaboration should reach the undernoted address on or before 29th June 1957.

The particulars of tender and terms of reference can be obtained from the undersigned on payment of Rs. 2 per copy in cash or by money order.

P. N. MURTI,
Electrical Adviser,
Railway Board.

NEW DELHI, 13*th May* 1957.

SOVIET TRADE OFFERS

(*Concluded from page* 1052)

the agreement would increase trade from 30 million to 60 million dollars.

The Czechoslovak Deputy Foreign Minister, who was in Cairo at the same time, also announced that his country would buy more from Egypt this year, and in return Czechoslovakia would build a number of factories for which Egyptian engineers and workers would be trained—and presumably indoctrinated—in Czechoslovakia.

Syria presents a similar if slightly less complete picture. Again cotton is the principal export to the Soviet bloc and even China has taken a substantial quantity in recent months.

Soviet, Czechoslovak and East German trade experts have all been in the capital of the Yemen in recent months, and it was subsequently announced that the Yemen had purchased 9 million dollars' worth of Czech arms to be paid for over 15 years. Later it was learned that the arms had been delivered and the Yemeni army was being trained in their use, presumably against the Aden Protectorate.

The unusually long-term payment, however, is an indication of the lengths to which the Soviet bloc will go, when barter and currency strings are not available, to get a foothold in new territory, especially when it offers a threat to a vital centre of the free world.

COAL

(*Concluded from page* 1040)

There would be instances, he said, where it would not be necessary to pay compensation. The area might be lying unworked due to the negligence of the lessee.

Replying to the debate, the Minister for Steel, Fuel and Mines said that there was no assumption that the Government would pay undue compensation. If the provisions for compensation were analysed, he added, it would be seen that the Government was in no way liberal. It was trying to be just and fair. It was fair that, if the Government stepped into the shoes of the lessees, it should pay compensation for the expenditure on obtaining the licence or lease. It would also have to pay the cost of maps, charts and other documents relating to the coal-bearing area concerned. Answering the criticism of Mr. Bharucha on the Government's intention to be a sub-tenant of the State Governments, Mr. Swaran Singh said that it had always been the intention of the Government not to take any unilateral decision by which the revenues of State Governments might be affected. With this object in view, the Government had undertaken the responsibility of paying the State Governments moneys which they might have realised from the coal mines in the States had they not been acquired. He assured the House that there were ample safeguards against excessive payment of compensation. The Minister also added, in reply to the suggestion of the Congress member from Bihar, that the Government would, in the first instance, satisfy itself whether a particular area was profitable. This is a reassuring statement.

MAHINDRA AND MAHINDRA LTD.

(*Concluded from page* 1039)

Yet in addition to heavier corporation taxes, a fresh tax on the 'wealth' of a company has been imposed, because of 'the peculiar economic structure' in India. The Finance Minister has said that 'companies were being brought within the wealth tax, because in India a very large number of companies were owned by a group of individuals, that company shares were not broadbased.' Surely, it is not only being unrealistic but a little disingenuous to place heavy burdens on the source and the instrument of capital formation—a role which hardly fits the credentials and the personality of Mr. Krishnamachari. The egalitarian crucible appears to have consumed the promising yeast of change which the Finance Minister wishes to introduce in the fundamental bases of tax policies of the country. Assuming that a tax on wealth was demanded by the political judgment of the majority of the people, and that wealth was being concentrated in few hands, surely tax on the assets of a productive instrument is not the best method of divesting individuals of a portion of their holdings, for you are thereby hurting the most the very organs which should stand four square in the battle for fighting inflation, for sustaining stability and for furthering industrial growth. On the contrary, the effects of the proposed taxation measures will be far-reaching in respect of disincentives, in respect of capital formation, in respect of savings apart from the incongruous and unjustifiable levy of multiple taxation on the same quantum of income and now wealth. Perhaps the Finance Minister is of the opinion that such disincentives are demanded by the existing strains in the economy. But one should have thought that the most important aspect of a rational policy of taxation is to create incentives and add to the national income so that resources available for taxation are continuously being augmented.

"While Mr. Kaldar recommended a tax on personal expenditure, tax on gifts and a tax on *annual* wealth, he simultaneously recommended a reduction in rates of income and super tax to 45 per cent.—all to form a harmonious basis of taxation, a self-checking system which will provide incentives for savings and discourage evasion. This portrait of a new taxing system is missing from the proposed measures. Delhi perhaps has not learned that policy cannot be processed from haphazardly collected and oddly assorted recommendations. The complex difficulties of administering the new taxation measures in an equitable manner have not been fully realised, nor serious note taken of the inevitable harassment and corruption which will be entailed in evaluating personal expenditure and wealth.

Alice-in-Wonderland Economy

"Perhaps it is the view of the Finance Minister that a halt should be called to development and expansion particularly in the private sector. The most significant sentence in his Budget speech is a sentence of five negatives: 'These measures are not intended to curtail genuine investment in the private sector, though it would not be unreasonable to assume that a slight slowing down for a short period will not, in present circumstances, be undesirable.' If disincentives are really what are being aimed at, businessmen should frankly be told to go slow, but we should not be asked to accept the sort of Alice-in-Wonderland economy in which the more the Government spends and the higher the taxes went, the more would be left for investment and spending!

"In conclusion, I should like to express on behalf of the shareholders their appreciation of the commendable efforts of the staff and the workers of the Company in achieving such remarkable results in the past year, which give promise of a good future for the organisation."

GILT-EDGED BETTER AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 22*nd May*

The short-term money market continued to rule stringent during the week under review. While funds remained in short supply, the demand for bank credit was unabated, with the result that banks had to seek accommodation from the Reserve Bank. There was, however, no further rise in interest rates and the volume of business was small. Inter-bank call money continued to be bid at 3½ per cent. House-money at call was placed at 4½ per cent. and short-term deposits were offered 4⅜ to 4½ per cent. for one to six months.

A small shrinkage of Rs. 5.13 crores is disclosed by the Reserve Bank of India statement for the week ended 17th May, 1957, in contrast to the sharp expansion noted in the previous two weeks. Notes held in the Banking Department are up by Rs. 5.30 crores. The fractional increase in total notes issued is covered by a similar rise in rupee coin. In the Banking Department, deposits of the Central Government have shrunk by Rs. 5.05 crores, while those of the other Governments and banks have gone up by Rs. 97 lakhs and Rs. 2.89 crores, respectively. There has been a further decline of Rs. 8.99 crores in balances held abroad. Loans and advances to Governments show a rise of Rs. 1.46 crores and other loans and advances Rs. 6.02 crores. Of the latter, outstanding advances to Scheduled banks against usance bills account for an increase of Rs. 1.04 crores. The running total of these advances since 1st January 1957 has not been published for the second week in succession, with the result that it is not possible to have an idea of fresh borrowings against usance bills during the week. Investments have increased by Rs. 1.40 crores, while Government Treasury bills purchased have declined by Rs. 4.98 crores.

The Scheduled banks' statement for the week ended 10th May 1957 discloses a further fall of Rs. 3.17 crores in demand deposits of banks and a sharp increase of Rs. 12.06 crores in their time deposits. With this increase, time deposits have successively maintained an upward trend for the seventh week, the cumulative expansion during this period being Rs. 49.38 crores. Borrowings from other banks are up by Rs. 1.03 crores and those from the Reserve Bank by Rs. 8.27 crores. There has been a sharp rise of Rs. 11.10 crores in advances and of Rs. 1.18 crores in bills purchased and discounted. Cash balances have shrunk by Rs. 4.11 crores, while money at call and short notice is higher by Rs. 1.13 crores.

The gilt-edged market ruled easy during the major part of the week under review, following the increase in Bank rate from 3½ per cent. to 4 per cent. Most of the securities were on offer and buyers were scarce, with the result that prices were marked down. Towards the close, however, sentiment took a turn for the better and many securities found buyers. The sudden change was said to be due to the Reserve Bank's limited support to the market. The support is limited in the sense that the Bank does not buy of its own accord, but takes up some when offered. Presumably, this is the first step towards grooming the market for the new loan issue. There was a slight recovery in prices in the last two days, but on balance almost the entire list showed a moderate fall.

3 per cent. 1986 Conversion Loan declined from Rs. 74.20 to Rs. 73, at which level the Reserve Bank was a buyer. There was a recovery to Rs. 73.50 with buyers at that level. 3 per cent. 1970-75 was marked down from Rs. 87.20 to Rs. 86.85 before gaining partially to Rs. 87. 3 per cent. 1966-68 was on offer and it fell from Rs. 92.05 to Rs. 91.90. 3 per cent. 1964 also found sellers and shed 45 nP to Rs. 94 and 3 per cent. 1963-65 was marked down by 10 nP to Rs. 94. 3 per cent. 1959-61 was, however, unchanged at Rs. 97.75. 3½ per cent. 1962, 3½ per cent. 1961 and 3½ per cent. 1964 were offered support by the Reserve Bank at market rates. 3½ per cent. 1962, after receding from Rs. 97.80 to Rs. 97.50, looked up to Rs. 97.60. 3½ per cent. 1961 dropped by 25 nP to Rs. 99.25, but regained the loss at the close. 3½ per cent. 1964 and 1965 fell by 25 nP to Rs. 98, before improving to Rs. 98.15. 3½ per cent. 1967 had buyers at Rs. 98.45, after declining to Rs. 98.35. 3½ per cent. 1974 shed 5 nP to Rs. 98.45, at which level there were buyers.

There were no sellers in State loans, except in 4 per cent. 1967 and 1968 Madras and Andhra issues. Madras 1967 fell by 20 nP to Rs. 96.90 and 1968 by 25 nP to Rs. 96.75. Andhra 1967 recorded a drop of 45 nP to Rs. 96.80 and 1968 40 nP to Rs. 96.60.

The rupee ruled a shade easy in terms of the dollar in the earlier part of the week, but recouped towards the close. Banks' selling rate of ready dollars rose from Rs. 479.75 to Rs. 480, but again declined to Rs. 479.75 per $100. The buying rate was, however, unchanged at Rs. 476.50 per $100. In New York, sterling was a bit erratic, but, on balance, stood better. Spot sterling fell from $2.78-15/16—2.79-1/16 to $2.78-13/16—2.78-15/16, before recouping to $2.79—2.79⅛. Three months' forward improved from $2.77⅛—2.78⅛ to $2.78—2.78⅛ and transferable sterling from 277.35—277.45 to 277.40—277.50 cents.

SUGAR ADVANCES

(*From Our Own Correspondent*)

HAPUR, 20*th May*

The increase in excise duty on sugar from Rs. 5.52 to Rs. 11.24 per cwt. accounted for a spurt in crystal sugar prices, but trading came almost to a standstill. Prices had already recorded a firm trend for some time past in anticipation of a rise in excise duty, but, as soon as the increase was announced, prices advanced by Rs. 3-Rs. 3.50 per maund. Mill delivery rates for practically all the factories were not quoted and trading was dormant, as the trade had not yet fully assessed the full implication of the enhanced duty.

The *khandsari* market also advanced in line with the crystal section. Prices ranged between Rs. 26 and Rs. 29 per maund, according to quality.

Ready *gur* ruled quietly steady, due to slack demand from consuming centres. The local stock was unchanged at 96,000 maunds, the corresponding figure last year being 64,000 maunds. Daily arrivals were scanty, the average being 75 maunds. Dry superior quality was quoted at Rs. 12.25, while *kotha* mixed dry and wet were done at Rs. 11.25 per maund.

Future *gur*, which had recorded sharp gains, following the increase in excise duty on sugar, declined later on heavy Mozafarnager selling. *Gur asar* opened at Rs. 11.65 and finished at Rs. 11.75. *Fagun* opened at Rs. 11.53 and closed at Rs. 11.94.

BULLION BUOYANT

(*From Our Own Correspondent*)

BOMBAY, 22*nd May*

Conditions akin to a boom prevailed in the bullion market during the week under review, with both the metals scaling new high levels for recent years, on strong speculative support. The buying spree in bullion particularly in gold, touched off by the new tax proposals was unabated, during the week. There was a brisk demand for ready delivery, too, in almost all centres, which resulted in a shrinkage of floating stocks and a widening of the premium for the ready metal over the forward. The fall in the arrival of Tibetan coins, the usual seasonal demand and baseless fears about devaluation of currency gave impetus to the rise in prices.

Ready gold touched a high of Rs. 112-8, the highest level seen since the first week of September 1951. It was only Rs. 6-4 short of the all-time record level of Rs. 118-12 touched in April 1951. Forward gold reached a high of Rs. 111-5 during the week. Ready silver climbed up to Rs. 191, the best level touched since the middle of February 1952, and forward silver Rs. 187.

The higher levels, however, attracted profit-taking and the closing prices were dull below the best levels. Fears of larger inflow of Tibetan coins on account of the wide disparity between domestic and Tibetan prices and of larger smuggling of gold for the same reason also induced caution.

Forward silver (June settlement) advanced from Rs. 182-6 to Rs. 187 before shading off to Rs. 185-13 at the close. The July settlement moved up from Rs. 181-1 to Rs. 185-4, before dropping to Rs. 184-3 at the close.

Ready silver rallied from Rs. 185-4 to Rs. 191, but reacted to close at Rs. 188-13. The premium for ready over the current settlement widened from Rs. 2-14 to Rs. 4, but at the close narrowed down to Rs. 3. The daily average arrivals of silver are reported to be 400 to 500 bars only. The daily average offtake was 15 bars.

Forward gold (June settlement) shot up from Rs. 105-15 to Rs. 109-3 before reacting to Rs. 108-12 at the close. The July settlement moved up from Rs. 106-12 to Rs. 108-7, but finished lower at Rs. 108.

Ready gold appreciated from Rs. 107-13 to Rs. 112-8 and wound-up at Rs. 111-10. The ready premium widened from Re. 1-14 to Rs. 2-14. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 4,500 tolas, while the offtake was of the order of 5,000 tolas.

In New York, silver was again unchanged at 91⅜c. In London, spot silver was maintained at 79½*d.* but the premium of spot widened from ⅛*d.* to ¼*d.*, following the decline in forward from 79⅛*d.* to 79*d.* Gold hardened from 250*s.* 3½*d.* to 250*s.* 5¾*d.*, but closed lower at 250*s.* 4½*d.*

The following comparative table shows the trend of market during the week under review:

	22-5-1957	Highest	Lowest	15-5-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES QUIET

(*From Our Own Correspondent*)

KANPUR, 19*th May*

During the week under review, the hides and skins market ruled quiet. New arrivals from mofussil areas were considerable, and the local areas did not figure as a prominent source of supply. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow, 1st grade Rs. 240, 2nd grade Rs. 200 to Rs. 230 and 3rd grade Rs. 125 per score; wet salted buff, 1st grade 2 lb. 1 oz. and 2nd grade 2 lbs. 3 ozs. per rupee; goat, 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces; sheep, 1st grade Rs. 350 and 2nd grade Rs. 250 per 100 pieces.

COTTON FUTURES STEADY AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 22*nd May*

A steady trend was depicted by the cotton futures market during the first three days of the week under review. But in subsequent sessions it staged a sharp decline. The earlier steadiness was induced by the absence of any enhancement of excise duty on cloth and import duty on cotton. Strong spot advice was another helpful factor. But on Monday the market staged a sharp decline. Before commencement of business on that day the East India Cotton Association, Bombay, under instructions from the Forward Markets Commission, notified the trade that with effect from 1st June the rates of margin deposits on Vijay June contract will be Rs. 400 per candy (Rs. 200 per bale) in respect of all purchases at or above Rs. 824 per candy. It was also notified that in respect of Jarilla May contract, all outstanding business will be squared up at the closing rate on 23rd inst. Thus, the tussle between the law of supply and demand and the Commission's firm determination to hold cotton prices at a level which it considers reasonable has been worked up to a new pitch. A wave of selling followed which resulted in a sharp break in values. Sentiment was further adversely affected by the improved prospects of getting Egyptian and U.S. cotton and the weakness in other markets. Selling pressure, however, abated yesterday and prices tended to look up. Both the contracts opened today lower than yesterday's finishing rate, improved slightly, and closed steady at the day's best levels.

M.G. Jarilla (May delivery) opened the week at Rs. 694 as against the previous closing of Rs. 689 and improved, on good support, to Rs. 710 on Saturday. On heavy selling, following the raising of margin deposits in Vijay June, the contract reacted downwards, touching a low of Rs. 692 on the 20th inst. It again improved to Rs. 705 yesterday. Opening at Rs. 690 today, the contract met with some support which pushed it up to Rs. 695 at which rate it closed.

M.G. Vijay (June delivery) opened the week at Rs. 834, and after hovering round that level declined sharply on consistent panicky selling induced by the enhancement of margin rates, to Rs. 811 on Monday. After firming up to Rs. 819½ yesterday the contract again eased to Rs. 810 today although it closed higher at Rs. 816½. The following table gives the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	22-5-57	*High*	*Low*	15-5-57
Jarilla (May)	695	710	685	689
Vijay (June)	816½	837	810	834

The E.I.C.A. Board, at its meeting on Friday last, is reported to have fixed Moglai 25/32" as the basis of the new cotton contract. It was also decided that the room rates should be fixed at a level which should not be more than 50 per cent. of the difference between the spot and the futures price. Maximum trading limit for the forward business was fixed at a level which was Rs. 30 below the spot ceiling level. Regarding the margin, it was decided to levy Rs. 2,500 per 100 bales on the net position if the contract closed at or above Rs. 750. It is generally believed that the necessary formalities regarding this new contract will be finalised by the end of this month.

All attention is now focussed on next season's cotton policy. Changes in floor and ceiling prices are generally expected. The Cotton Advisory Board's recommendation for enhancement of the floor prices by Rs. 50 is understood to have been accepted by the Government. There is also considerable support for the view that there should be an upward revision of the ceiling prices. Mill interests are, however, averse to such a proposal on the ground that it will restrict consumption. An announcement of the Government's view in this respect is awaited with considerable interest.

In the spot section, mill demand, after slackening a little immediately after the presentation of the budget, again improved. Values continued to rule firm and mills were virtually combing the market for lots of quality cotton, especially Vijay, 0394, Laxmi, Co2, etc.

In the foreign section, enquiries were noted for higher grades of U.S. cotton. Official announcement by the Government of India regarding the procedure for import of U.S. cotton is eagerly awaited. With the downward trend in prices in Alexandria there is every possibility that Indian mills will increasingly go in for Egyptian cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—for a few varieties of Indian cotton prevailing at Sewri:

Bengal *Deshi* 775; Kandesh 820; Oomra *Deshi* 775; Vijay 1,020; Hubli Laxmi 1,000; Jayadhar 890.

The easy trend noted last week in the Karachi cotton futures market gathered momentum on speculative selling following weak advices from the spot section in the week under review. Although the supply position of cotton is somewhat tight, it failed to induce an upturn in values. This was due, partly, to the fear that continued large C.C.C. sales would affect the export demand for Pakistan cotton. N.T.R.G. May which had closed at Rs. 77-11 dropped Re. 1-6 to Rs. 76-5 and the July position declined from Rs. 80-7 to Rs. 78-12. The spot section also ruled easy. Most of the current season's crop has been marketed and only about 170,000 bales are left unsold of which 70 per cent. are inferior grades. Pakistani mills are expected to consume about one million bales this season, about two-thirds of the crop. The following are the latest quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 86-6; Punjab *Deshi* 82-8; 4F Roller 91; Punjab Roller 80-9; S.G. 84-9; 289F Punjab Roller 83-9.

The Egyptian Government's decision to increase the export tax on cotton by 4 tallaris per cantar caused an immediate withdrawal of buyers from the Alexandria cotton futures market which, as a consequence, ruled easy. However, the market picked up some strength later owing to some trade buying in near deliveries induced by the expectation that as the enhanced tax comes into force on 1st September some export demand would be forthcoming in the interim period to take advantage of the lower rate prevailing till then. Long-staple Karnak May and medium staple Ashmouni June deliveries slightly improved as a result, while the distant deliveries declined on liquidation. The Egyptian Government has given permission for new crop future trading to commence on 18th inst. Announcing the cotton policy for the coming season, the Government said that it would guarantee minimum price for cotton at the following rates (in tallaris per cantar) in the new season:

Karnak Good and Fully Good 69; Menoufi 64; Giza 30 Good 59; Ashmouni 55. The latest available quotations—in tallaris per lb.—from Alexandria are as follows:

Karnak: May 110.15; July 107.50; November 95.80; *Ashmouni*: June 75.05; August 74.50; October 70.05.

The decision of the Egyptian Government to raise the export duty is indeed ingeniously conceived in that it appears to be designed to offer an additional inducement to foreign customers to make their purchases before the coming into force of the new duty on 1st September 1957. Whether this will help Egypt to reduce the balance of its crop left unsold remains to be seen. The current rate of duty is 8.25 tallaris per cantar for Karnak and Menoufi and 2.15 tallaris per cantar for other varieties. The proposed rate is 12.25 tallaris per cantar for Karnak and Menoufi and 6.15 tallaris for other varieties.

Egypt is determined to leave no stone unturned in an effort to boost up exports of its cotton, the steep drop in which in the current season has been a constant source of anxiety to the Egyptian Government because of the fact that cotton is Egypt's staple export product accounting for the major portion of its foreign exchange earnings. Ways and means of accelerating exports to traditional markets are being explored. New openings are also being sought and China is considered a good prospective buyer. The Government has also authorised barter sales with the U.S. to the extent of 25 per cent. of exports.

Mr. Abu Nosseir, Egyptian Minister for Trade, has announced that his Government has decided, as a provisional measure, to grant a 10 per cent. premium on export sales for hard currencies effected during the months of September and October. The 10 per cent. premium is applicable to cotton sold for free Swiss francs and free U.S. dollars. Meanwhile, it is reported that a tripartite agreement between Ceylon, Japan and Egypt involving about 10,000 bales of Egyptian cotton is in the offing. Under this arrangement, Japan will import 10,000 bales of Egyptian cotton through Ceylon.

Limited turnover with narrow price movements characterised trading in the Liverpool cotton futures market during the week under review. The undertone was generally easy. There were considerable spot house offerings which were absorbed to a limited extent only by Commission House buying. Mill fixation in near months resulted in an improvement in May-June delivery quotation while the more distant months eased due to absence of support. The announcement of the U.S. Department of Agriculture that the C.C.C. would take over the four million bales of 1956 loan cotton on 1st July also imparted additional weakness as it was thought that this would make available more cotton for export sales to overseas buyers. But it produced no pronounced bearish effect because many were inclined to think that this would not result in any sharp decline in Liverpool price as there was some leeway to be made up between the latter and the present C.C.C. offers. The reopening of the Suez Canal for British ships and the prospects of a resumption of Anglo-Egyptian trade brought about a sharp decline in the prices of Sudan cotton contracts at Liverpool. The following are the latest available quotation from Liverpool:

American Cotton One Inch Staple Contract: May-June 26.60; July-August 26.39; October-November 26.29; December-January 26.39. *American Cotton Mixed Growth Contract*: May-June 26.75; July-August 26.56; October-November 26.41; December-January 26.39. *Sudan Lambert Seed Contract* (figures in brackets last week's closing rates): May-June 40.75 (41.35); July-August 39.25 (40.20); September-October 38.40 (39.45).

Values in the New York cotton futures market recorded handsome gains, on persistent buying in near deliveries by New Orleans interests and Commission House support which found offerings limited. Late start of the crop in the central and western belts and reports of adverse weather in Texas region induced a measure of caution among sellers. The spot section also ruled firm.

The U.S. Department of Agriculture has announced that it will purchase from U.S. producers on 31st July next all 1956 crop cotton—upland and extra long-staple—on which loans had been made by the C.C.C. and which would be unredeemed by that time. Till 3rd May last, a total of 4,816,842 bales of 1956 crop cotton had been pledged for loans but 814,854 bales had been redeemed, leaving loans outstanding on that date at 4,001,988 bales.

Agreement on a cotton programme has been reached by the American Cotton Producer Associates who met at Memphis recently. The programme later won complete approval by representatives of other sections of the industry. The plan, in essence, provides for a domestic subsidy which would be paid to the shipper rather than to the producer. Acreage allotments would be established first on the basis of estimated domestic consumption and there would be a supplementary allotment on the basis of estimated exports. A loan level would be established for cotton grown on the land allotted for domestic consumption but there would be no loan on cotton destined for export. The effect of the programme would be to reduce the price both to domestic mills and foreign buyers and permit greater production of cotton on U.S. farms.

The U.S. Agriculture Department announced on the 20th inst. issuance of a public authorisation to India. Under it, India would buy for rupees, 50,000 bales of United States upland cotton worth 8.6 million dollars, including ocean transport costs. The Department said sales contracts might be made on 24th May 1957—31st May 1958, with deliveries on 24th May 1957 and 31st July 1958. The Department said that India had not yet designated buyers for the cotton.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	21-5-57	14-5-57	7-5-57
Spot	35.55	35.35	35.35
May	—	—	35.31
July	35.28	34.97	35.09
October	34.19	33.90	33.86
December	34.22	—	—

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 22*nd May*

The yarn market depicted an easy trend during the week under review. Despite absence of any tax proposals on raw cotton and cotton yarn manufactures, buying enquiries were at a low ebb, thanks to stringency in money conditions and upward revision in Bank rate. Reports from consuming centres were also not encouraging. Consequently, deals put through in yarns were greatly restricted, with values moving generally downwards.

Snia rayon yarn (120 dull cones) for June delivery encountered heavy selling and dropped Rs. 10 to Rs. 796. Spot 120 Japan and 150 Japan lost 2 nP each to Rs. 4.03 and Rs. 4.09, respectively. 150 Italy were neglected at Rs. 3.69. 120 Italy, however, elicited some support and gathered 5 nP to Rs. 4.05. Among indigenous yarns, National Rayons 120 bright cones first grade shed 6 nP to Rs. 3.67. 150 bright cones first grade eased by 4 nP to Rs. 3.43.

Staple fibre yarns (40x2) for June delivery were hammered down by Rs. 19 to Rs. 585. Spot 40x2 Citys declined by 8 nP to Rs. 3.12. Centurys receded by 6 nP to Rs. 3.16. New Greats declined by 4 nP to Rs. 3.12. Kohinoors were quoted 3 nP lower at Rs. 3.28. Among foreign yarns (80x2), Paramounts softened by 3 nP to Rs. 5.31. Fujis, however, gathered 3 nP to Rs. 5.25.

In the cotton yarn section 10 counts Moderns declined by 6 nP to Rs. 14.81, while Podars met with special support and advanced by 19 nP to Rs. 14.75. Among 20 counts, Gokaks were dull at Rs. 18.62, as also Maduras at Rs. 19. Moderns, however, improved by 12 nP to Rs. 18.87. Thirty counts Edwards dropped 25 nP to Rs. 21, but Indus moved up by 19 nP to Rs. 21.75. Among 40 counts, Moderns fell by 37 nP to Rs. 27.75. Minaxis, on the other hand, put on 6 nP to Rs. 27.37. Sixty counts Raghuvamshis and Moderns were unchanged, the former at Rs. 57.75 and the latter at Rs. 61. Finlays, however, advanced by a rupee to Rs. 62. Among 80 counts, Mahendras declined by 50 nP to Rs. 71. Moderns changed hands at Rs. 76, same as last week. Finlays were on offer at Rs. 81.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	22-5-1957	15-5-1957
	Rs.	Rs.
***Art silk yarn* (per case of 200 lbs.)—**		
120 dull Cones Snia June	796.00	806.00
120 Japan (per lb.)	4.03	4.05
150 Japan (per lb.)	4.09	4.11
120 Italy (per lb.)	4.05	4.00
150 Italy (per lb.)	3.69	3.69
***Staple fibre yarn* (per case of 200 lbs.)—**		
40×2 June	585.00	604.00
40×2 New Great (per lb.)	3.12	3.16
40×2 Century (per lb.)	3.16	3.22
40×2 City (per lb.)	3.12	3.20
***Cotton yarn* (per bundle of 10 lbs.)—**		
10s Podar	14.75	14.56
20s Madura	19.00	19.00
30s Edward	21.00	21.25
40s Gokak		
60s Raghuvamshi	57.75	57.75
80s Modern	76.00	76.00

CASTORS FIRM

(From Our Own Correspondent)

BOMBAY, 22*nd May*

With the exception of linseed which remained almost featureless, trading in the local oilseeds market during the week under review was characterised by hectic buying in the face of scarcity of stocks. Prices in the castors section, in which this tendency was particularly in evidence, consequently touched new highs. The enhancement of the excise duty on vegetable non-essential oils from Rs. 70 to Rs. 112 per ton did not affect sentiment much, as it was felt that, in view of the tight supply position, the increased burden could be easily transferred to the consumers. With the apprehensions regarding increased export duties having been completely set at rest, the castor section commenced the week with renewed vigour under pressure of demand from shippers. Reports of enquiries from foreign sources, and news of actual business having been done, coupled with the fall in war risk insurance premiums and rumours about devaluation of the rupee gave further momentum to the upward trend in the following sessions. Towards the close, however, profit-taking set in at higher levels, following the arrival of new stocks in the market. Groundnut, too, evoked by persistent demand from spot houses and *vanaspati* manufacturers against a tight supply position, forged ahead, in the spot section in particular. The gains would have been much more pronounced had it not been for the fear that the margin requirements may be doubled by the Forward Markets Commission. While the linseed section lacked support from shippers, cottonseed improved slightly in sympathy with the castor and cotton market.

Groundnut May contract opened the week steady at Rs. 176.75 and retreated to Rs. 175.00 on the following day. Subsequently, however, it steadily improved, having touched today the high of Rs. 179.50, before finishing a shade lower at Rs. 178.37. It thus gained Rs. 1.25 over the week. August contract moved down from its opening level of Rs. 181.62 to Rs. 179.50 on 17th, but rose to Rs. 184.50 today. It closed at Rs. 183.37, which represented a gain of Rs. 2. Spot Bold F.A.Q. put on 75 nP to Rs. 36.50. Groundnut oil ex-mill was quoted higher at Rs. 21.25, as against Rs. 20.12.

Business in castorseed May commenced at Rs. 187.00, which receded to Rs. 186.00, on 18th following arrivals of stocks. Persistent demand from shippers in the following days pushed up the prices to Rs. 195.75 yesterday. Consequent on arrivals of fresh stocks, however, it was quoted at Rs. 193.00 at the close today. The contract improved by Rs. 5.50 over the week. September contract, too, moved from its opening quotation of Rs. 191.50 to Rs. 200.25, yesterday, though it finished slightly lower at Rs. 198.25 today, having thus gained no less than Rs. 6.25 over the week. Spot Madras quality crept up by Rs. 1.37 to Rs. 38.25 while oil B.S.S. gained a similar amount at Rs. 24.37.

Linseed May contract, after opening at Rs. 31.25, moved narrowly during the week between Rs. 31.00 and Rs. 31.44 before finishing at Rs. 31.19, the same as last week. September contract drifted lower from its opening high of Rs. 32.50 to Rs. 32.12 at the close, which was nominally lower than a week ago. Bold ready, in the spot section, declined by 25 nP to Rs. 30.62. Linseed oil ready, too, receded to Rs. 16.87 from Rs. 17.00.

Cottonseed May opened the week at Rs. 112.50 and steadily improved to Rs. 114.75 on 20th, but eased subsequently and closed today at Rs. 113.50. September contract moved in a similar way between Rs. 116.00 on opening and Rs. 118.25 on 20th inst. It closed at Rs. 117.00.

Among others, kardiseed bold ready moved up by 25 nP to Rs. 22.50, while nigerseed Madras was maintained at Rs. 28.75.

With the enhancement of excise duty on vegetable non-essential oils in the budget, presented last week, the amount of rebate of excise duty payable to the exporters has been fixed at five-sevenths of the duty actually paid. The new rate of rebate came into effect as from 16th May.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	22-5-1957	15-5-1957	8-5-1957
	Rs.	Rs.	Rs.
Groundnuts—			
May 1957	178.37	177.12	176.60

Ready	16.87	17.00	16.87

SUGAR RISES

(From Our Own Correspondent)

BOMBAY, 22*nd May*

The confusion in the sugar trade noted last week-end following the sharp increase in excise duty on sugar still persists. All the pending ex-mill delivery transactions are reported to have been cancelled. The factories, it appears, are not quoting ex-mill rates. Sugar merchants do not, therefore, know the extent to which the factories will bear the enhanced excise duty. In view of this uncertainty, buying enquiries for sugar in the market are restricted, although prices have tended to advance, thanks to reduction in arrivals. Sugar arrivals during the week aggregated 17,125 bags, as against 25,700 bags in the previous week. The undertone of the market is firm.

Over the week, small grain sugar has spurted from Rs. 98 to Rs. 99-Rs. 99½ per bag, inclusive of sales tax. Medium grain has risen by Re. 1-8 to Rs. 100½-Rs. 101½. Large grain is firm at Rs. 103-Rs. 106.

Shravan delivery contract for 'C' grade sugar has put on As. 12 to Rs. 99-12.

PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 22*nd May*

Despite higher advices from New York and Singapore, Malabar black pepper remained steady during the week, with prices moving up though slowly. Turnover in Asta was meagre for want of new buyings and short interest. In the delivery section, business was comparatively better but of sporadic nature.

Alleppey moved up from Rs. 600 to Rs. 612½. Cochin also showed an improved tone and prices for the future delivery moved to Rs. 111.

The future of the market now depends upon Sarawak where prices are held rather tightly in view of comparative small arrivals from Sarawak and buying by Indo-China. Indo-China is reported to have bought some quantity on Asta terms from Singapore, possibly for re-export to New York for obtaining foreign exchange.

May-June shipments are quoted at $0.27, while June delivery is changing hands at Rs. 606.

Following are today's nominal quotations: Ready delivery Rs. 87 per Bengal maund; June delivery Rs. 606-611 and July delivery Rs. 616-621 per candy of 5¾ cwts.

DEMAND WEAKENS IN TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 16*th May*

A little over 2 million lbs. were on offer in sale No. 10, which was held on Tuesday, 14th May. The sale opened to a good general demand which weakened towards the close. Clean black leaf brokens of low medium and medium growth were often 10 nP to 15 nP dearer, but stalky types only found buyers at lower rates. Most fannings grades were slightly easier, although high-grown fannings were in some demand. There was a selective enquiry for high-grown teas and prices were generally slightly easier following quality. Whole leaf teas met a strong demand and must be quoted dearer. The following are the quotations:—

	1957 Rs.	1956 Rs.
Plain B.P.	1.45 to 1.50	1.71
Low medium B.O.P.	1.60 to 1.65	2.06
Medium B.O.P.	1.70	2.19
Good B.O.P.	1.95 to 2.05	2.87
Well made black leaf O.P.	2.30	2.44

The average price realised in sale No. 10 was Re. 1.74 per lb., the same as in the previous sale and Rs. 2.36 per lb. in the corresponding sale of 1956.

London Market.—Sale of 13th May 1957.—Strong demand. Any change in sellers' favour.

Sale of 14th May 1957.—Firm to dearer.

Colombo Market.—Thin liquoring and stalky teas, also plain UVAS, easier. Otherwise active demand for better medium and high-grown brokens. Useful Dimbula Dickoya types advanced 20c to 30c. All medium and high-grown fannings dearer; Middle East types dearer; other low-growns firm. Off-grades black leaf and best liquoring fannings firm to dearer; other sorts declined 5c to 10c.

Calcutta Market—Export.—Darjeeling sale A, consisting of 7,566 chests, started with keen general demand at rates often above brokers' valuations, but interest declined as sale progressed with fair amount of withdrawals at close.

Internal.—19,900 packages dust. Good general demand at irregular rates and generally easier. Best C.T.C. Assams weakest feature 10 nP to 20 nP easier. Middle East types well supported at lower rates. 1,400 packages leaf. Fair demand at easier rates.

Export Quota.—With an active market, special licence is quoted at 17 nP and 1957-58 export quota at 24 nP.

Forthcoming Auctions.—Sale No. 11 will be held on Tuesday, 21st May, and sale No. 12 on Tuesday, 28th May.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 11.—1,175,000 lbs. Strong general demand, mainly from internal buyers. Black leaf brokens 5 nP to 10 nP dearer; others about steady. Fannings slightly easier; whole leaf stronger and dearer."

REACTIONS TO RISE IN TEA EXCISE

(From Our Own Correspondent)

CALCUTTA, 21*st May*

The budget proposals presented to Parliament on Wednesday last contained shocks for each and every section of the community, and the share of the tea trade in this regard was the increase in excise duty on tea: Loose tea—from 6·25 nP to 10 nP per lb.; package tea (converted from duty-paid loose tea) from 18.75 nP to 35 nP per lb.; package tea from 25 nP to 45 nP per lb. These changes are expected to contribute to the exchequer an additional revenue of Rs. 2.45 crores.

Assuming that the increase in the excise duty is shared by consumers, on the one hand, and the industry and trade, on the other, tea prices would rise. Indian tea is already facing stiff competition in foreign markets from producing countries, production cost of which is lower than that in India. East Africa, which has the benefit of cheap labour, has been increasing its acreage under tea in recent years. This has been reflected by more East African tea being exported to London. Tea trade circles strongly feel that the increased excise duty will weaken Indian tea in foreign markets. It is also pointed out that the industry's expectation for an increase in the domestic consumption of common teas will be difficult of realisation.

Although a definite idea of the size of the North Indian tea crop can be had only by the end of August, there are sufficient indications that the world crop during this season will be similar in size as that of last year. In point of fact, it will be correct to say that the world crop will register an increase. For it is widely known that East Africa has increased its acreage and Ceylonese production has so far registered a significant increase. In such a context, stiff competition in the export market will again present a problem this year also.

The tea industry is at present worried and is making efforts to draw Government's attention to the need for formulating even now the ways for tackling a possible slump in the export as well as internal markets. The trade has been for long demanding the abolition of the present slab system for determining the export duty on tea based on ruling prices in London in the previous month. On the other hand, if the slab system is related to prices at Calcutta and Cochin, it will be realistic. Alternatively, the average of the London and Indian quotations can also be taken as the base. That there was the need for a change in the present system was amply indicated last year when the duty on rains tea was levied on the basis of London prices for the best second flush teas. Efforts should also be made to increase internal consumption. How this can be achieved when other beverages such as cold drinks are cheaper than tea is difficult to say. Tea gardens must produce more quality teas than commons, if last year's experience of a slump in the inferior varieties is any lesson. Lastly, the revival of the international Tea Agreement which will take stock of the world demand and fix each country's export share must be explored, although it is known that it is not due to lack of seriousness on the part of New Delhi that so far no progress has been made in this regard.

In the internal sales held last week, dusts on offer amounted to 19,902 chests. General demand was fair, but prices eased. Quality of most teas on offer represented a decline. Fair support was in evidence to the black exportable leafy teas at falling prices. Dooars and commons, with the exception of a few bright liquoring kinds, shared in the general decline. The best C.T.C. Assams gave way by 10 nP to 20 nP per lb. Assam teas of orthodox manufacture also fell. The quotations were: Best Assam C.T.C. Re. 1.60 to Re. 1.65, medium Assam grainy dust Re. 1.60, and medium Dooars Re. 1.55. Best C.T.C. Assams were not quoted.

Leaf grades on offer were a meagre quantity of 43 chests, which met with an easier market.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 20*th May*

U.K. trading in kips remained difficult, thanks to continued firmness of the local market and importers' reluctance to pay the prices ruling during the first half of this month. Arrivals were of the usual volume, and shippers were actively clearing them at unchanged prices. Demand for tanned buff calf top marks was good, but supplies were short, while market types were not easy of sale. Tanned buff hides and cow calf were unchanged.

There was patchy trading with the Continent and the U.K. in superior tannages of goat skins and higher prices were obtained 15s. 3*d.* for 8/9 lbs. Run. Tanners were not eager to make sales, in view of the sudden rise in the raw skins market. Tanned sheep skins market was steady to firm.

In the May tanned skins public sales, prices of sheep skins generally recorded an advance of 3*d.* to 9*d.* per lb. (on March levels) except on semi-prime fifths and inferiors which declined by 6*d.* to 12*d.*

As shippers had imposed limits on parcels, 180,000 skins goat and over 200,000 sheep remained unsold.

JUTE GOODS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 21*st May*

The fair business done for export imparted firmness to the jute goods market during the week under review. Raw jute also firmed up. Before the presentation of the budget, there were rumours of a possible levy of excise duty on jute goods; the fact that these had proved baseless shows that there is a correct appreciation in New Delhi of the difficulties facing the jute mills industry. It is, however, noted that the increase in freight rates will lead to a rise in costs of production, as movement of raw jute by rail will now cost more. Jute goods for consumption after movement by rail will also cost more. It is unlikely that the industry will be able to bear the increased costs of production on this score. As such, the increase will be passed on to the consumer. To that extent, the competitive position of Indian jute goods in foreign markets will weaken.

Normally, the announcement of higher output figures for the month of April would have caused nervousness in the market. But significant notice was not taken of this increase, as there had been a welcome improvement in the rate of exports during the current month. Naturally, a reduction in stocks of goods with mills as at the end of May was anticipated. Output in April was 86,800 tons, an increase of 2,100 tons as compared with March. Hessian and miscellaneous constructions rose by 200 tons each to 36,200 tons and 5,800 tons, respectively, while the balance of the increase occurred in sacking goods at 44,800 tons. Of the total production in the month, hessian was 41.7 per cent. and sacking 51.6 per cent., as compared with 42.5 and 50.9 per cent., respectively, in the previous month. Traders presumed that this higher percentage for sacking production showed that the profit margin for heavy goods was becoming comparable to that of hessian. It will be remembered that the increase in stocks of goods last year was followed by the transfer of a portion of sacking looms to hessian, as the production of the latter was more economic than the former.

It is noted that the total availability of jute goods last month was 86,800 tons production *plus* 97,700 tons being the stocks at the end of March, or a total of 184,500 tons. If the stock as at the end of April, that is, 105,000 tons, is deducted, the demand is of the order of 79,500 tons, which is considerably less than the production for the month. This is due to the heavy decline in exports. However, in the current month, exports have been gradually rising. During the ten days ended 10th May, hessian shipped was 13,400 tons and sacking 14,200 tons, as against 8,500 tons and 6,900 tons, respectively, a year before. These were the figures which eclipsed the report that consumption of burlap in the United States in April was 5 million yards lower at 68 million yards. During the week, speculators showed keen interest for cornsacks in anticipation of orders from Australia.

Mills did fair business for forward deliveries. On Tuesday, prices were a shade lower, following bearish pressure. Earlier, mills were active sellers and this also affected prices. Thus, ready B. twills fell from Rs. 116.95 to Rs. 115.60 and hessian 40" 10 oz. from Rs. 42.85 to Rs. 42.46. Speculators began buying at lower levels, and this was a sufficient reason for a recovery in prices. B. twills thus picked up to Rs. 116.60 and hessian 40" 10 oz. to Rs. 42.70. This was on Wednesday last. On the following day, prices rose further, as earlier fears of an excise duty on jute goods were found baseless. Bullish pressure pushed up B. twills to Rs. 117.40 and hessian 40" 10 oz. to Rs. 42.72. These levels were maintained despite profit-taking. Conditions were steady on Friday, despite selling by bears and absence of genuine buying. B. twills were priced at Rs. 117.00 and hessian 40" 10 oz. at Rs. 42.80. However, on Saturday, the quotations for these representative constructions declined to Rs. 116.40 and Rs. 42.75 on continued bear-selling. During trading yesterday, hessian 40" 10 oz. was maintained at Rs. 42.75, while B. twills receded fractionally to Rs. 116.00. The 8 oz. hessian was quoted at Rs. 34.50.

Raw jute prices firmed up further. Dry and hot weather continued and sellers were reserved. The latest quotations for the balance of 1956-57 crop May-June delivery are:

BASE METALS DECLINE

(From Our Own Correspondent)

CALCUTTA, 21*st May*

Base metals recorded a sharp decline in prices during the week under review. This followed weak advices from the London, New York and the Far Eastern markets. After the increase of Rs. 36 per ton in excise duty on steel ingots, as proposed by the Finance Minister in the Budget presented to Parliament on Wednesday last, the announcement of the rise of Rs. 70 per ton, the price of steel towards the week-end, was not unexpected.

During the week, electrolytic copper dropped Rs. 4 to Rs. 176. A similar fall was recorded in the fire-refined material at Rs. 176 per cwt. Stocks in the bazaar were adequate and, in view of the uncertain trend, consumers' interest was confined to meeting immediate requirements only. Indian requirements of copper have gradually increased, the imports in the four months ended April last being 14,600 tons, representing an increase of 100 per cent. as compared with the imports in the corresponding period last year. Virgin lead declined from Rs. 79 to Rs. 74. Overseas advices entertained the fear of a general price cut in the United States and, as a result, there was a sharp reaction on the London Metal Exchange. In accordance with the general weakness, electrolytic zinc at Rs. 74 was lower by Rs. 3. But for the difficult supply position, the price would have gone down further. For, in the U.S.A., a cut in price was announced and the price in London was affected noticeably. Tin fell from Rs. 519 to Rs. 518.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, 20*th May*

Slightly quieter conditions prevailed in the linseed market during the week. Trading was very poor, as sellers were reserved, owing to scarcity of goods and buyers were disinclined to commit themselves for large quantities until the oil market improved. Very little activity was recorded in the oil section, on account of lower advices from overseas. Shippers were out of the market and local buyers were reserved.

The latest available quotations are: May-June Rs. 22-8, June-July Rs. 22-12 and July-August Rs. 23-4 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Rs. 1-13 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,80,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub

NEW TAX PROPOSALS

(*Concluded from page* 1028)

Let me give a little illustration. I was recently at a village near Baroda and went around a free primary school. The total number of people in the village was about 900 and the number of children of school-going age was 98. When I inquired, I found that only 58 children attended the school and I asked why the other 40 were not brought to the school. I was told that the parents were hesitating to bring them, because they had no clothes to put on. Well, if this is achieving a higher standard of living for the masses under our schemes of planned development, I would leave it to the authors of planned development to get whatever satisfaction they derive from this reality in Indian life. What I wish to emphasise is that, in a country like ours where the overwhelming majority of the people live on the bare subsistence, the objective of restraining consumption, particularly of the daily necessities of life, can only be described as the achievement of a still lower standard of living.

The four objectives which I have stated are to control inflationary forces and reduce consumption of some of the essential commodities. I think that anybody who has a nodding acquaintance with the economy of the country would appreciate that, with the amount of money that is being pumped into circulation day in and day out (we spent last year Rs. 710 crores and, in 1957-58, it is proposed to spend another Rs. 900 crores for the so-called planned development) and with the cloth excise duty which has been placed on a vast range of commodities, it is inevitable that the inflationary pressures, instead of being checked, will be accelerated in the coming months, with the consequence that the money income of the people, which we are told is going up in terms of prices, really reflect no real improvement. As a matter of fact, even official statisticians have recently prepared estimates and have shown that, particularly in recent years, the gain in real income in India is a minus figure. There is an admitted increase of 13 per cent. in the level of prices last year. The trend of rising prices is continuous.

There is widespread concern over the food situation. There are complaints, which we read in papers from numerous parts of the country, of both shortage of food and high prices, even in spite of the fact that fair price shops have been opened all over the country. In a situation like this, to talk of controlling inflationary forces by new excise duties on consumer goods is nothing short of a phantasmagoric hallucination.

Tax on Capital Goods

The two essential capital goods are cement and steel which are both controlled commodities and essential commodities for the purpose of development. These have been still scarce. The excise duty on cement has been raised from Rs. 5 to Rs. 20 per ton and on steel ingots from Rs. 4 to Rs. 40 per ton. Higher prices for both have been announced, as they are controlled commodities. Industries in India are already suffering from an initial handicap in capital cost of anything between 30 and 40 per cent. in the shape of higher prices for imported plant and machinery, technical services and royalties. The capital costs of putting up factories will, therefore, be further enhanced by steel costing Rs. 70 more per ton and cement costing Rs. 15 more per ton from now. At a time when the private sector is expected to make its biggest contribution to the development of the economy and when capital is none too freely available, a substantial increase in the cost of these essential capital goods must result in higher capital costs and, because of the scarcity of capital available, must certainly discourage private enterprise in the country.

Apart from this, I would like to draw the attention of the public to profiteering by the Government. Last year, the State Trading Corporation took over the entire distribution of cement in the country and fixed a price of Rs. 102-8 per ton on the ostensible plea that, as the country was short of cement, high-priced cement would have to be imported in order to make available adequate supplies to meet the growing consumption in the country. The Government announced that there would be an import of half a million tons of cement from abroad and, as imported cement costs more than locally made cement, the Government felt that the local retail price of cement should be at Rs. 102-8 per ton. I have made enquiries and I am told that the Government have so far imported less than 100,000 tons of cement and they have no intention whatsoever of importing any more because of the foreign exchange situation. Coming to the cost at which indigenous cement is made available to the State Trading Corporation, there is an illegitimate profit of Rs. 12 per ton made by the Corporation which penalises the consumer of an essential commodity like cement. The public are entitled to call for an explanation from Government as to why they should indulge in profiteering of this character in an essential commodity like cement when times without number one of the charges hurled at private enterprise is profiteering. The private sector has always been told that, whenever the commodity is scarce, the private sector benefits and profits out of it. Here you find that daylight robbery of Rs. 12 per ton is made by the State Trading Corporation on an essential commodity like cement.

The excise duty on ingot steel has been raised from Rs. 4 to Rs. 40 per ton. Five tons of ingot steel gives you four tons of finished steel, and, therefore, the real increase in price which should have been brought about as a result of excise duty would be about Rs. 48. It is difficult to understand why the Government have put up the price of Rs. 70 per ton. This is another fine illustration of profiteering indulged in by the Government. Although Tatas may be producing one million tons of steel, as it is a controlled commodity, they cannot sell one pound of steel on their own. It is all sold through the Government.

Then there is the increased levy on petrol. Anybody who has cared to study the economic conditions of the country in the last year or two must have been struck by the fact that, perhaps one of the troublesome bottlenecks in the development of the country is lack of adequate transport. It has been recently realised by the railways that they alone cannot carry all the load that is required to feed our development projects and, therefore, it is imperative that road transport should be encouraged. At this time, there is an increase of four annas per gallon in the price of petrol which will further hamper the development of our country.

(To be continued)

COAL DUMPS

The Committee on Transportation, set up by the Coal Council of India, with the Member for Transportation in the Railway Board as convenor and five other members, has addressed a circular to all chambers of commerce and trade associations to ascertain their views on a proposal to set up coal dumps at important industrial and consuming centres and transhipment points. These bodies have been asked whether they or their representatives would undertake to run such dumps and to take advantage of available transport during the period when the railways will have more wagons to offer.

The proposal, according to the Committee, has potential advantages to the overall economy of the country. The main advantages are: the utilisation of railway transport capacity during the slack season to build up stocks of high grade coal upcountry for industries, as well as low grade coals at various consuming centres, the reduction of pithead accumulations and better utilisation of metre-gauge wagons by having dumps at break of gauge points. The functions of such dumps will be to distribute equitably coal to various competing consumers belonging to the same industry or trade without giving any undue preference.

Notice

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN THAT A LOCAL Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Bombay Local Head Office of the Bank will be held at the Bombay Local Head Office, Apollo Street, Bombay, on Wednesday, the 26th day of June 1957, at 4-00 p.m. (Standard Time), for the purpose of—

(1) electing two persons to be Directors of the Central Board in pursuance of section 19(1) (c) of the State Bank of India Act, 1955, to fill the vacancies which will arise on the 1st July 1957 through the retirement of Sarvashri Neville Ness Wadia and Pratapsinh Mathuradas, two Directors of the Central Board, and

(2) electing one person to be a member of the Local Board at Bombay in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri M. H. Hasham Premji, a member of the Local Board, whose term of office will expire on the 30th June 1957.

P. C. BHATTACHARYYA,
Chairman.

BOMBAY, 22*nd May* 1957.

REVISE THE PLAN

IT is becoming increasingly clearer that those who thought that the second Five-year Plan had been drawn up in an over-ambitious spirit were right after all. Both from expected and unexpected quarters the criticism has continued to be made that the Plan must be revised, in order to make the implied burdens less heavy for the people. Indeed, a somewhat apt variation of the old question—whether the Sabbath was made for man or man for the Sabbath—has been asked in reference to the Plan itself. That astute politician and tried administrator, Mr. C. Rajagopalachari, has described the Plan as a "veritable monolithic cast to our public affairs" which has been imprisoned within the stone walls of the Plan and has been robbed of necessary flexibility. Both in Parliament and at the closed meetings of the Congress members of Parliament, a great deal of justifiable misgivings, if not also indignation, has been expressed over the heavy taxation necessitated by the Plan. And the one question which is being repeatedly asked is whether the Plan cost could not be cut to suit the size of the resources cloth.

In the face of all this public criticism, the Government's persistence in sticking to the size and period of the Plan carries little conviction to the people. For its "no-change-in-Plan" attitude, the Government has so far given two reasons—one political and the other economic. The political reason is the less convincing of the two, though the Government apparently attaches greater importance to it. The political argument against changing the Plan is that the Government has been voted into power because of the Plan and is, therefore, committed to it. This argument overlooks the basic facts of the Indian political structure. In a country where the overwhelming majority of the people are ignorant of the fundamental issues relating to the Plan, or even what the Plan is all about, it is wrong to contend that the Plan has been an election issue. Indeed, the Indian public has shown itself to be more disturbed by linguistic or regional issues than by Plan considerations. Perhaps, more seats have been lost to the Congress through linguistic differences than gained by its adherence to planned economy. The fact is that the prestige of the Congress is high, thanks to its eminent leaders and their past sacrifices, and this prestige has little to do with the Plan. By modifying the economic programmes which form part of the Plan, the Party will not suffer any diminution in its political status. On the contrary, there is a certain danger in its persistence in sticking to an over-ambitious Plan, in that the Plan may induce in the people a feeling of revulsion, a sullen and contrarious mood expressing itself in a demand for being saved from the Plan. In a totalitarian country, people may be made to suffer for their good. But, in a democratic country, the authorities have to carry the people with them and can go only so far as they are allowed to go. While, in the former case, the pace of progress may be quick, in the latter, whatever progress is achieved is likely to be more enduring. Thus, for purely political reasons, the Government need not persist in its "no-change" attitude towards the Plan.

The economic argument against modifying the Plan has not been clearly stated so far. In the course of what has presumably meant to be an answer to those who urge such modifications, the Union Finance Minister, Mr. T. T. Krishnamachari, observed, in the Rajya Sabha last week, that the Plan was not a piece of India rubber to be enlarged at will. In a sense, this is true. But it is also true that the Plan is not a Procrustean bed to which people must be fitted somehow. The fact is that both the people and the Plan have to change. Since it is easier to change the Plan than the people—at least in the short-term—it is perhaps wiser to alter the Plan to a size that the people will "take" rather than stick to the Plan in a spirit of "come-what-may." Both resources and Plan have to change; the former should be stretched as far as the people will allow them to be stretched and the latter modified in the light of available resources. From this point of view, the Finance Minister did some audible thinking when he spoke on the subject in the course of his budget speech. He stated, in effect, that the core of the Plan—steel, coal, transport and ancillary power—must be carried through. He observed that, "even if the Plan did not encounter difficulties in certain sectors—which it does—a re-phasing of it might be necessary in certain parts" and went on to explain the need for this re-phasing in the light of the socio-economic objectives of the Plan. Again, although he admitted that the Plan had "run into difficulties," he felt that "to pronounce that our Plan is too ambitious would be a declaration of defeat in advance." It is a pity that the Government should be obsessed with ideas of "success" and "defeat" in relation to the Plan and it should not attempt at a more realistic appraisal of what it can achieve within the given set-up of available resources and the size of the resources it can reasonably hope to raise.

There are several considerations which make it imperative that the Government should take both a close and a long look at the Plan. There is first the "resources" aspect of the Plan. The Planning Commission has bloated the size of the Plan after it was first formulated. To this has to be added the rise in the cost of the Plan, necessitated by the increase in prices. Some light on the overall gap in internal resources for carrying out the Plan was thrown by Mr. Krishnamachari, in the course of a recent Press conference. The original Plan was for Rs. 4,800 crores. In this, there was a taxation gap of Rs. 450 crores. Another gap of Rs. 400 crores was to be covered later on, presumably by taxation, making a total of Rs. 850 crores. They had intended to cover Rs. 1,200 crores by deficit financing. This brings the gap to Rs. 2,050 crores. Mr. Krishnamachari estimated that, if the Plan was to be carried out more or less intact, it would need Rs. 400 crores more; this would widen the gap to Rs. 2,450 crores. He said that he had set the target for deficit financing at Rs. 800 crores. The recent budget proposals—namely, those made in March, September and December last year and the present proposals—will cover Rs. 800 crores. He also allowed for a progressive increase in revenue to

the tune of Rs. 100 crores. The States were expected to raise Rs. 225 crores, as against which they have already raised Rs. 75 crores; this leaves a balance of Rs. 150 crores to be raised by them. All this would still leave a gap of Rs. 525 crores. This is a large gap, especially when one takes into account that even this estimate is based on certain large assumptions. In fact, it may even be more, as the expenditure on defence is steadily rising. Estimates of outlay and available resources have varied in the past. They might vary still. How then can the Government argue that the Plan cannot be revised?

Other considerations which indicate the need for prompt revision of the Plan are the human element in fiscal policy, the foreign exchange consideration and the lack of administrative personnel. The recent manifestation of popular indignation against the tax proposals must make the Government realise what to expect in future. The Government must recognise that even what is fiscally correct or reasonable need not necessarily be popular. Again, if the first instalment of tax proposals for the second Plan is itself greeted by such opposition, how much greater will be the opposition when further tax proposals are made? Secondly, the foreign exchange position, on the Government's own admission, presents a difficult problem. Indeed, this is the most intractable of the country's problems, for it is the one that cannot be solved entirely by what can be done in the domestic sphere. On the contrary, what is being done in the domestic sphere is aggravating the problem. Thirdly, there is the shortage of administrative and technical personnel. This shortage is likely to be intensified in the next few years.

These and other considerations indicate the need for significant alterations in the Plan, whether in its size or its period or both. There is no reason why the Government should not look the facts squarely in the face and take appropriate decisions. The unpalatable facts include the slow pace in State-sponsored enterprises. It would appear that the Rourkela steel unit is not proceeding satisfactorily and that Bhilai is lagging behind schedule. It is doubtful whether all the State-sponsored projects will be completed in time. If they are not completed and resources are raised on the assumption they will be, it might well lead to wastage or misdirection of funds. For the temptation will then be to spend the money raised on less essential enterprises. Again, it is not as if the Plan is incapable of revision, for in it are included programmes and blue-prints of projects which admit of modification, reduction or even elimination.

The Government is doing an injustice to its critics if it charges them with being ignorant of the importance of the "core" of the Plan. Actually, no one has suggested that the "core" should be given up, or even abridged. But the critics too, on their part, have failed to indicate what parts of the Plan could be safely held over. What is clearly needed is that a careful review of the Plan should be made by practical-minded people, in order to find out how precisely the Plan could be modified without endangering its core to which the Government rightly attaches considerable importance. Such modification, when it is completed, besides being intrinsically desirable, will lessen the popular tension in the country over fiscal proposals and also lead to a livelier appreciation abroad of the Government's sense of realism. "Our Plan—right or wrong" could be a wrong, and even dangerous policy, whether in the domestic or in the international sphere.

BUDGET AND FREE ENTERPRISE

IN an understandable anxiety to get the burden of new taxes reduced, most of the critics of the budget seem to have missed the disturbing implications of the philosophy behind the budget to free enterprise without which the country's unity and the democratic way of life will be exposed to serious danger. It is true that these implications are only of long-term import, but that is precisely the reason why they should be seriously considered even now. To ignore them at present is to ask for a *fait accompli* later.

A careful study of the various post-budget speeches of the Finance Minister and the Prime Minister will clearly bring out the philosophy and the type of socialist pattern of society they have in view. The philosophy seems to be that it is immoral to possess wealth and to have private property. From this philosophy flows the pattern that the State shall always be spelt with a capital S; the people will exist for the State and not the State for the people. In almost every one of the tax proposals of 15th May 1957 this theme is reflected. It will, indeed, be no exaggeration to say that, in framing the taxation proposals, it is not only the financial needs of the Plan that have weighed with the Government but also its ideological predilections. The new proposals will assuredly reduce the freedom of free enterprise and greatly increase its dependence on the State.

An important outcome of raising the incidence of both direct and indirect taxes will be a fall in the savings that are usually available to free enterprise, as a good portion of the earnings of the urban public will be diverted to the State. Another outcome is the drop in the market value of equities and fixed-yield securities of companies belonging to the private sector. These companies, as also others, will, therefore, have to turn to the Government whenever they need more finance. No industrialist or a new *entrepreneur* will be able to establish a new industry or to expand the existing ones, unless the Government comes to his rescue even for finding the initial capital. This dependence will reduce, if it has not already done so, the chances of having free institutions uninfluenced by the Government. True lovers of freedom will not, we are sure, welcome this trend, as it will lead to a monolithic State, sooner or later. Even now, the vast majority of business men are afraid of criticising the Government, though they realise that what the Government does is wrong in several important respects.

There is already acute stringency in the short-term as well as the long-term capital markets. Despite the creation of several institutional credit agencies, the industrial units are not able to get all the capital they want. The Government has a very large say in the policies, functions and the administration of these bodies. One more organisation—the Re-finance Corporation—will shortly be brought into existence with the backing of the Government. Borrowings or raising of equity capital from or through these organisations will be no easy matter, unless those who seek their assistance have the blessings of the Government. In effect, the Government becomes the biggest Managing Agent of the industries in the private sector, though it waxed eloquent against the Managing Agency system when the Company Law Bill was on the anvil.

The plight of capital market is essentially the result of the Government's economic policies. Apart from the fact that heavy taxation all round has shattered the confidence of investors, there has been a marked fall in the savings that usually flow into the money market. This is due to the policies and programmes of the Government which have failed to make any significant addition to the national income and have enhanced the purchasing power in the hands of people with large consumption propensity and hardly any saving habit. We have particularly in mind here the schemes for development of cottage industries and community development projects, as well as the lack of a co-ordinated policy for keeping the prices of raw materials, stores and foodgrains at reasonable levels, and in parity with those of manufactured goods. While the flow of savings into the capital market has thus been adversely affected, the pressure on it has increased at the same time, because the high level of taxes and the fall in the profit margin of industries, thanks to the higher cost of production, have reduced the savings in the corporate sector and their capacity to self-finance. Some of the indirect taxes under the latest budget, as, for instance, the excise duty on sugar and matches and the tax on transport, strengthens the bias in favour of cottage industries, while the increase in direct taxes, as well as the introduction of taxes on wealth and expenditure, will tell on the savings of the corporate sector.

The swiftness with which the opposition to wealth tax and expenditure tax has softened is amazing. Even the quarters that will have to bear the brunt of these taxes have toned down the rigour of their opposition and seem to be prepared to be content with such minor modifications as would mitigate the hardship of double taxation. They probably realise that it is futile to keep on demanding the withdrawal of these two taxes of glaring inequity, as it would amount to knocking against a hard rock, and that a practical course would be to concentrate on securing a few concessions here and there. But those who think on these lines forget that a compromise on fundamental principles invariably undermines their very existence and that, though the rates are only small now, they may later on be stepped up, as has happened with sales tax, excise duties, the selling prices of steel and cement, and the State Trading Corporation. In adding to his fiscal armoury these two new weapons, the Finance Minister has only introduced the thin end of the wedge. They may be wielded more forcefully and used to cover a wider range of the field in order to accelerate the pace of socialist pattern. If these fears are to be set at rest, the Government should give an assurance that, apart from making such changes as are necessary to do away with the iniquity of double taxation, the incidence of wealth tax and expenditure tax will not be raised in the coming years and that they will be abolished after the second Plan is completed.

If the incidence of tax proposals is calculated, it will be seen that the Finance Minister has placed a virtual ceiling on incomes, for which there was so much agitation from a large section of the Congress Party and from all the leftist politicians, and also planned for a gradual diminution of past savings. One wonders whether all those who agitated for a ceiling on incomes and capital levies of the sort now introduced fully realised the implications of their demand. A cumulative result of wealth tax, capital gains tax, estate duty, tax on bonus shares, dividend tax, etc., will be a perceptible fall in the number of genuine *entrepreneurs* in the very near future. Indeed, it will not be surprising, if, after some years, there are no new *entrepreneurs* at all who can plan and execute large industrial projects. The worst sufferers of such a situation will be the people themselves, for they will have to depend increasingly on the State for employment opportunities, in which case they will have hardly any freedom, especially if the Government of the day happens to be more authoritarian than the present one, as it may well be. It will thus be foolish on the part of the people in general to feel happy at the fleecing of even the moderately rich people and *entrepreneurs*.

There is also another point to be borne in mind, in this connection. The critics of capitalism argue that the budget has not adversely affected the millionaires to any perceptible extent, and that they will continue to exist for a much longer period than expected by the Finance Minister. Even assuming that there is some truth in this contention, the consequences of the budget to the common man will be quite unpleasant in the years to come. To the extent the enhanced direct taxation arrests the expansion of *entrepreneurs*, it will tend to restrict the number of employers and widen, at the same time, the number of businesses the existing millionaires own and control. This, in turn, will strengthen the forces that are opposed to capitalism and free enterprise. Thus, the budget runs, unwittingly perhaps, contrary to the cherished goals of the Congress Party itself.

So far as the immediate future is concerned, the large additions to indirect taxation promise to create illwill between the business community and the masses. The Government has launched, through the medium of the daily Press, a country-wide campaign of what it considers to be fair prices of articles subjected to enhanced excise duties. The theme of this campaign—which incidentally has brought a windfall to a section of the newspaper world—is that the incidence of new taxes on price levels is only negligible. But the actual increase in prices is much more and the public has started blaming the business community for all its present predicament. It may be that some traders are indulging in profiteering, but who created the climate for such practices? Surely, not the traders nor the industrialists. If the blame is to be laid at anybody's doors, it must be at the doors of those who have been following dubious socio-economic policies. Since, however, the vast majority of the public are so ignorant as not to understand the intricacies of these policies, the worst sufferer of the price spiral will be the cause of free enterprise. It is a pity that several of the leading lights in the private sector never realised the dangers involved in supporting such an over-ambitious and ill-balanced plan as the second Five-year Plan. We wonder whether they realise it even now.

RECOVERY IN SHARES WELL SUSTAINED

EXPENDITURE TAX—I.F.C.—DUNLOP ISSUE NATIONALISATION—SUGAR EXPORTS

THURSDAY, 5 P.M.

THE modest recovery staged by the share markets last week from the immediate post-budget low levels has been well maintained. In fact, a fairly large number of well-known scrips has registered further, albeit small, gains. It can accordingly be stated that a steadier trend has come to prevail, though it is too early yet to say whether the markets have turned the corner. A good part of the improvement must be attributed to the continued support received by the blue chips from the Life Insurance Corporation. There has also been some bargain-hunting by several investors. The yield on quite a large number of first class shares has risen to attractive levels. And the scrips belonging to "growth industries" which are not yet dividend-payers or have been paying only modest dividends are standing at either substantial discounts or a little above par. The present is, perhaps, an opportune time for investors to make judicious buying or switch over, with the help of good brokers. It is not suggested that there are no risks at all. But the current levels of equities offer a fairly adequate margin to cover such risks. Further, however socialistic may be the budget, equities will not cease to be a good hedge against the fall in the purchasing power of the currency so long as ownership of private property is allowed. The hazard of inflation in India is not unreal, what with the deficit financing of Rs. 275 crores contemplated in the budget.

MARKET GOSSIP

• • • •

Well-informed circles in the market seem to be confident that the Finance Minister will make suitable adjustments in the Wealth Tax on companies in order to avoid double taxation. Incidentally, we are informed that quite a few countries in Europe and one or two in South America have a small tax on total wealth of companies and as such it is not right to contend that India is the only country to subject both individuals and joint-stock companies to Wealth Tax. That may be true, but the point is that, in these countries, the system of taxation is different from that followed in India and as such they are not comparable precedents. Again, these are small countries with a population which is tiny as compared with that of India.

If there is Wealth Tax in some of the European countries, there are several compensating features. The Finance Minister quoted last week the instance of West Germany and remarked that, if this European country could have a wealth tax on companies, there was nothing wrong in India imprising a similar tax. But he seems to have conveniently forgotten the sizable tax concessions of various nature which the different industries in West Germany enjoyed till very recently, as incentives to bringing about a rapid recovery of their country's economy. There is also another fact to be borne in mind; the West German Government has faith in the virtues of free enterprise which the Government of India does not have and the Wealth Tax in W. Germany has not the same social objective as that attributed to it by our Finance Minister.

The consensus of opinion among business men is that the Wealth Tax at least on companies should be removed, inasmuch as this tax is also to be levied on those who hold the shares of companies. The Finance Minister, however, does not seem to be willing to concede this demand. The least he can do is that suggested by the Millowners' Association of Bombay. The Association says:

"To avoid double taxation, companies be enabled to issue to shareholders wealth tax payment certificates, so that shareholders will be entitled to credit of wealth tax paid on their behalf by companies. Shareholders not liable to wealth tax be given refunds and those liable to tax be given necessary credit."

If the Finance Minister is really keen on helping free enterprise to have the freedom and incentive it requires to survive, he can go a little further and include investments in shares and also debentures of joint-stock companies in the list of assets to be exempt from Wealth Tax.

If the Wealth Tax is modified on some such lines as those indicated above, the equities may gain in value a little further. In any case, the incidence of Wealth Tax turns out to be substantial only in the case of very big companies the assets of which exceed Rs. 1 crore. It may be noted that a company with assets worth Rs. 50 lakhs will have to pay only Rs. 22,500 a year. Similarly, companies having assets valued at Rs. 1 crore are liable to pay Rs. 47,500 per annum. Accordingly, shares of small- and medium-sized companies will not be very materially affected by Wealth Tax.

• • • •

The levy of expenditure tax is not by itself a bearish point so far as the share markets are concerned. On the contrary, to the extent it encourages savings, it enhances the chances of share markets receiving a greater flow of funds than otherwise. How exactly the expenditure tax will operate will be clear from the following official exposition of this new tax:

"Liberal allowances have been made for personal expenditure. Thus, a person with a wife and two children does not have to pay any tax so long as his expenditure on personal consumption does not exceed Rs. 34,000 a year. Similarly, a Hindu undivided family consisting of two brothers, each with two children, does not have to pay tax if its expenditure on personal consumption does not exceed Rs. 54,000.

"The rates of tax have been carefully graduated. Thus, a person with a wife and two children, who spends Rs. 50,000 a year on personal consumption, pays a tax of Rs. 2,200 and, if this expenditure is, say, Rs. 80,000 he pays Rs. 17,800. It will be conceded that, for a family of this size, an expenditure of Rs. 80,000 indicates very high and perhaps ostentatious living, and it is only reasonable that he should be subjected to high taxation.

"Expenditure tax should help to check ostentatious consumption. It will provide another means of checking income-tax evasion. Together with Wealth Tax, it should be a powerful instrument to rope in tax-evaders. After all, a person who has concealed his income must either save it or spend it. It is almost impossible for a person to work out a system by which his immediate gain by understatement of his taxable quantum will not, sooner or later, be wiped out by the consequentially increased liability on another account."

• • • •

It is understood that the draft rules pertaining to compulsory deposits by joint-stock companies, published a few weeks ago, have been finalised and will be made public very soon. As a result of several concessions given by the Government, the amount due to be deposited by all the companies that will be affected by the finalised rules aggregate, according to reliable estimates, more than Rs. 2.5 crores, as against Rs. 14 crores originally expected by the officials. If this estimate is correct, the amount involved is not so large as to accentuate the stringency in the short-term money market.

• • • •

The President of the International Finance Corporation, Mr. Robert L. Garner, has been touring the Continent for the past few days. In a statement to the Press in W. Germany, he is reported to have named Australia, South Africa, Mexico and Peru as overseas countries best suited for I.F.C. credits, since they were least threatened by inflation. If he has been correctly quoted, the omission of India from this brief list is very significant and, perhaps, not unjustified.

Mr. Garner is said to have remarked that German exporters might find lucrative opportunities by co-operating with I.F.C. in the countries named by him. Explaining how the I.F.C. proposed to operate, he said that it was mainly interested in medium-sized industrial companies in the $0.5 million-$2 million range. The duration for which financial aid would be given was seven to twelve years. A direct participation of upto one-third of capital was envisaged, in which case, the I.F.C. would, he added, insist on a share in profits. Such participation, however, would be temporary, since the I.F.C. aimed at a quick revolving of its lending funds.

Close on the heels of the success of the Indian Iron's rights issue has come an attractive rights issue by the Dunlop Rubber Company (India) Ltd., Calcutta; the terms of this long-awaited offer were announced last week-end. According to these terms, the Company proposes to issue 1,400,000 new ordinary shares of Rs. 10 each at Rs. 15 per share, that is, at a premium of Rs. 5 per share. The shares will be offered to the existing ordinary shareholders as on 11th June in the ratio of seven shares for every eight shares held by them on that date. The Company's present paid-up ordinary capital is Rs. 1.60 crores and, on the basis of the above terms the Company will get additional funds to the tune of 2.10 crores, including the premium amount of Rs. 70 lakhs. The paid-up ordinary capital will, therefore, stand raised at Rs. 3 crores, when all the shares are taken up, as they doubtless will be. The object of the issue is to provide finance for the Company's new tyre factory to be set up in Madras. The capacity of the South Indian factory, together with the further expansion proposed in the Sahaganj factory, is expected to provide the Company with sufficient overall capacity to meet the demands for the Company's products for some time to come.

Judged from the performance of the Company during 1956, when it earned a gross profit of Rs. 1.33 crores on a sales turnover of Rs. 17 crores, as against Rs. 1.19 crores on a turnover of Rs. 15.12 crores in 1955, the profit can be expected to be maintained at this level in the current year. In the past six years, the Company has paid a steady dividend at 15 per cent. per annum on the present paid-up capital absorbing Rs. 24 lakhs per annum. The Directors expect to maintain this dividend on the increased capital also, which for a whole year would require Rs. 45 lakhs. The dividend for 1956 was more than twice covered by the net profit. There will, therefore, be no difficulty in maintaining the 15 per cent. dividend on the higher capital, if the profit level is maintained.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 23.37, at which rate and on the basis of the dividend for 1956, the yield works out to 6.4 per cent. per annum. At the issue price, the yield comes to 10 per cent. per annum. If, however, an investor were to purchase the shares at the current market value and take up the rights, his cost per share will come to Rs. 19.46, at which the yield works out to 7.7 per cent. If he were to get additional shares in addition to what he is entitled to in the normal course, the yield will be still higher. Although the issue has come at a time when the investors' confidence has been shaken by the budget and acute stringency prevails in the short-term money market, it looks as though investors will have no cause for regret later, if they go in for this issue, in view of the attractive yield and good prospects for the Company.

It is learned from knowledgeable circles that the issue will be fully subscribed, if not oversubscribed. It would appear that the major portion of the Company's shares is held by the parent company in London. Besides this, the Life Insurance Corporation also must be holding a sizable block. Consequently, the balance to be absorbed by the investors will not be appreciable. It may be interesting to note, in this connection, that, according to the Tariff Commission's report, dated 25th June 1955, on fair prices of rubber tyres and tubes, 75.01 per cent. of the Company's ordinary share capital was held by the parent company, 15.75 per cent. by institutional investors, 8.37 per cent. by Indian individuals and 0.87 per cent. by non-Indians. If there is no change in this order of holdings, the new issue will bring in well over Rs. 157 lakhs by way of much-needed foreign capital.

• • • •

The Bombay State Financial Corporation, according to its Chairman, Mr. Purushottam Kanji, will shortly approach the market for purposes of raising additional resources. Being the premier financial institution of its kind, serving a highly industrialised State, now enlarged by the addition of Saurashtra and parts of the Hyderabad and Madhya Pradesh States, the Bombay State Financial Corporation has felt the need for additional resources. Addressing the first meeting of the reconstituted Corporation—it had to be reconstituted following the merger of the original Corporation and the Saurashtra Industrial Financial Corporation—the Chairman, Mr. Purushottam Kanji, stated that the Corporation had sanctioned loans aggregating Rs. 2.68 crores, of which there was a firm commitment to the tune of Rs. 2.03 crores, and a further pending commitment of Rs. 30.70 lakhs, which far exceeds the capital resources of the Corporation; the authorised capital of the Corporation is Rs. 4 crores, while the issued and paid-up capital is Rs. 2 crores. The Chairman revealed that the question of raising additional funds had been receiving the active consideration of the Board. He expressed the hope that, when they approached the market for funds, the commercial banks, the Life Insurance Corporation and other financial institutions, together with individual investors, would lend their support to the Corporation. We have no doubt that the Corporation's efforts at raising additional resources will meet with the success it deserves.

In this connection, it is encouraging to note that the Corporation, despite the fact that two bodies have been merged in it, is being very economically managed. Of the amalgamated Corporation's total income, namely, Rs. 9.27 lakhs, taxation accounts for 33 per cent., reserves for 8 per cent., expenditure on office staff for 13 per cent., operational expenses for 7 per cent., leaving 39 per cent. available for distribution as dividend. This year, however, the Corporation found it necessary to approach the Government of Bombay for a subvention of Rs. 3.41 lakhs in order to make up the amount of Rs. 7 lakhs needed for paying the guaranteed 3½ per cent. dividend.

Perhaps it is not as generally appreciated as it should be that State financial corporations render a real, if somewhat unostentatious, service to national economy. By reason of close association with the medium- and small-scale units, they have now acquired a knowledge of their working and problems which may well serve as a basis for formulating a more coherent policy designed to assist and encourage those units. From this point of view, some of the general observations which Mr. Kanji made on the working of the Corporation deserve notice. He said that, during the brief experience of the working of the Corporation, the authorities, had found that there was considerable scope for expansion and development of small- and medium-scale units in several groups of industries, and particularly where the lines of manufacture were suited to small-scale manufacture. It would appear that there is "a fairly good margin of profit for these units." Nevertheless, the efforts of some producers, according to Mr. Kanji, are frustrated by "market resistance to indigenous products, lack of marketing facilities, delay in realising fresh debts or lack of adequate finance, etc." In some cases, he said, they were themselves responsible for their difficulties, in that their undertakings were inefficiently managed or they failed to employ qualified personnel or use efficient means of production or turn out standardised goods. Sometimes they failed because they did not carry out adequate market research before embarking upon their production schemes. Obviously, these faults and imperfections deserve to be brought home to the producers in the interests of the success of the Government's schemes designed to aid them. The Chairman, on his part, has certainly done well to advise the small-scale producers to avail themselves of the services offered by the Department of Industries, of the technical facilities given by the Small Industries Service Institutes, and the hire purchase system for acquiring machinery instituted by the National Small Industries Service Institute and the National Small Industries Corporation.

• • • •

We have repeatedly emphasised the point that there has, of late, been much fresh thinking even in the leftist ranks in the West on the question of nationalisation of industries. No longer do they now swear by the supreme efficacy of State ownership of industries and services for curing all economic ills. A fresh evidence of this is forthcoming from the reported statement of Sir Hartley Shawcross, former Labour Attorney General and now M.P. in Britain, that the nationalisation of great firms like I.C.I. and Unilever would lead the country to "disaster." He emphasised that, where an industry was doing really well, it was best for the State to leave it well alone. He felt that Britain was not making the industrial

EQUITIES RECORD SMALL GAINS

PROFIT-TAKING AT HIGHER LEVELS

(From Our Own Correspondents)

BOMBAY, 30*th May*

A TWO-SIDED movement in equity prices was noted on the Stock Exchange during the week under review. There was a sizable recovery during the earlier part of the week on fresh support and bear covering, lifting prices on Monday to the highest levels in the post-budget period, thanks to the sustained support from the Life Insurance Corporation. There was a favourable response to the Finance Minister's reply to the budget debate in the Rajya Sabha, in which he promised to "give consideration to any changes required which are of a marginal character" in the wealth and expenditure taxes when these two new measures were referred to the Select Committee. The Finance Minister also promised to give some allowances in income-tax to people with children. He, however, expressed his opposition to dropping the wealth tax on companies and to raising upwards the proposed taxable limit of Rs. 3,000. He added that, if companies were to be excluded from the purview of the wealth tax, he would have to drop the wealth tax itself. This means that the Finance Minister relies to a large extent on companies for his estimated income from this tax. However, the expectation that the rigours of the wealth tax might be minimised when the Bill went to the Select Committee and that the Life Insurance Corporation might take delivery of the shares in tomorrow's settlement which would help reduce the *budla* charges, also induced a better feeling.

In the latter part of the week, however, the recovery was not sustained. On the other hand, there was a mild setback on profit-taking and abatement of buying by the Corporation towards the close. On balance, equities disclosed small gains over the week.

Tata Ordinaries came up from Rs. 154 to Rs. 158.50 before retreating to Rs. 154.75 yesterday. Today, however, there was a mild recovery to Rs. 155.75. Tata Steels (new) advanced over the week by Rs. 1.50 to Rs. 109. Indian Irons hardened from Rs. 17.60 to Rs. 18.50 and, after a drop to Rs. 18.15, closed at Rs. 18.35.

Textile shares also displayed some strength in the earlier part of the week, but a large part of the gains was wiped out in the subsequent recession. Bombay Dyeings, for instance, moved up from Rs. 520 to Rs. 528.50, but receded to a low of Rs. 517. At the close, they improved to no more than Rs. 523.50. Centurys advanced from Rs. 395 to Rs. 408.50. After a dip to Rs. 396, they regained to Rs. 400. Kohinoors finished with a loss of Rs. 4 at Rs. 292, after an early rise from Rs. 296 to Rs. 300. Central Indias were maintained at Rs. 102. Finlays, however, gained Re. 1 to Rs. 267. Gokaks stood Re. 1 lower on balance at Rs. 175. Indu Ordinaries gained a fraction to Rs. 9.55 and Indore Malwas to Rs. 139.50. New Greats changed hands Rs. 2 higher at Rs. 220, while New City Mills dropped Rs. 2 to Rs. 133.75. Khataus improved from Rs. 169 to Rs. 172.50. Osmanshahis retreated from Rs. 58.50 to Rs. 55, but gained to Rs. 58 at the close. Simplex rallied from Rs. 161.50 to Rs. 165, but gave way again to Rs. 162.50. Standards were done up to Rs. 393, as against the previous week's closing of Rs. 380. In the subsequent reaction they came down to Rs. 388. Swadeshis rose from Rs. 186 to Rs. 189.75 before finishing lower at Rs. 185.50. Tata Mills closed at Rs. 41.60, a loss of 15 nP over the week.

Business in bank shares was far from lively, though the undertone remained fairly steady. Barodas were unchanged on balance at Rs. 101.75. Centrals gained Re. 1 to Rs. 52, as also their new shares to Rs. 55. Bank of Indias were maintained at Rs. 134, United Commercials at Rs. 54.50 and Union Banks at Rs. 7.25.

In the insurance section, New Indias provided a feature with a rise of Rs. 4.75 to Rs. 45. Vulcans changed hands 25 nP higher at Rs. 15.75.

Electricity shares attracted investment support and prices were marked up in most cases. Ahmedabad Electrics gathered Re. 1 over the week to Rs. 94 and Bombay Suburbans Re. 1.25 to Rs. 106.25. Surat Electricity advanced by Rs. 3.75 to Rs. 110 and Tata Hydros by Rs. 4.50 to Rs. 124, while Tata Powers were unchanged at Rs. 1.215. Andhra Valleys gained a fraction to Rs. 1.201.25.

In the miscellaneous section, sugar shares ruled steady with an all-round rise in prices. Belapurs recovered from Rs. 217.50 to Rs. 224. Though they came down to Rs. 219.50, the gain over the week was Rs. 2. Phaltans rose by Rs. 2.50 to Rs. 132 and Walchandnagars Re. 1 to Rs. 246. Cement shares too displayed a hardening tendency, despite the profit-taking at higher levels. Associated Cements rallied from Rs. 151.50 to Rs. 155.75, but the gain was pruned a little and the closing was done at Rs. 154.25. A.C.C. coupons were unchanged at Rs. 56. Digvijays appreciated from Rs. 137 to Rs. 141.50. Dalmia Cements gained 30 nP to Rs. 11.70 and Orissa Cements 5 nP to Rs. 13.05, while Jaipur Udyogs provided an exception with a drop of 25 nP to Rs. 11.80.

Engineering and mining shares also attracted attention, but the gains were not marked in most counters. Alcocks, however, provided a feature with a rise of Rs. 16.25 to Rs. 262.50. Tata Locomotives moved in a narrow groove and finished with a fractional loss at Rs. 142.25. Premier Constructions showed no change over the week at Rs. 142. Larsen and Toubros were marked up by 30 nP to Rs. 15.30. Mahindra and Mahindras were done at Rs. 15 *ex-div.* (div. Rs. 1.25), as against Rs. 16 *cum-div.* a week ago. Shivrajpurs improved by Rs. 1.25 to Rs. 78.75. Indian Coppers were steady at Rs. 3.38 and B.B. Petrols at Rs. 2.44.

Among shipping and automobile shares, Scindias firmed up from Rs. 17.30 to Rs. 18.40, before reacting to Rs. 17.85. Great Eastern Shippings were in demand and gained 50 nP to Rs. 19.15. Hindustan Motors were up by 20 nP at Rs. 6.85, while Premier Automobiles shed 25 nP to Rs. 86.75. In the other miscellaneous group, Bombay Burmahs (old) staged a sharp rise from Rs. 513.50 to Rs. 543, but came down to Rs. 530 at the close. British India Corporations were done 20 nP lower at Rs. 6.25. National Rayons closed at Rs. 215, after being done up to Rs. 219. Tata Chemicals were a fraction better at Rs. 16.30 and Tata Oils gathered 50 nP to Rs. 43.50. Wimcos shed Rs. 2 to Rs. 156. Hindustan Levers had business 50 nP higher at Rs. 19.65.

* * * *

Calcutta Stock Exchange

CALCUTTA, 29*th May*

After remaining dull earlier in the week under review, the Calcutta Stock Exchange recorded a slight improvement subsequently, following expectations of some modifications in the Budget proposals which are considered detrimental to the growth of private industry. Although the Finance Minister gave the public to understand that his policy was not to introduce proposals aiming at far greater additional revenue than was actually needed and withdraw some measures as a gesture, yet market circles believed that Mr. T. T. Krishnamachari had retained a margin to be used to gain goodwill and support for the majority of his proposals. It was this belief coupled with the decision to refer to a select committee of the proposed expenditure and wealth taxes that abated the dullness and revived buying interest.

It should be noted that the volume of business remained pitiably low and that the improvement in evidence was fractional. However, the change in sentiment impressed the authorities of the Calcutta Stock Exchange who withdrew the emergency measure which was introduced immediately following the Budget proposals and which called upon sellers to deposit a margin of Rs. 3 per share before selling Indian Irons. The introduction of two new official Bills in the Lok Sabha proposing measures for the extension of medium-term credit facilities for industry was noted with satisfaction. Second thoughts over the Budget proposals made investors take a better view of the small concessions in the exacting tax measures.

Jutes were featureless with Gourepores being unchanged at Rs. 229. Nationals were steady at Rs. 19.70, but Ganges gave way to Rs. 47 from Rs. 49.

A small recovery was in evidence in the engineering section. Indian Irons, after being lower at Rs. 17.63, closed at Rs. 18.30. The recovery followed the news of success of the recent rights issue.

Among other engineering shares, Texmacos were fractionally better at Rs. 17.50 and Guest Keens attracted attention at Rs. 26.87. Jessop & Cos., after being fractionally better at Rs. 24.62, sagged to Rs. 24.37.

News of interest to investors during the week under review was the announcement by Dunlop Rubbers of the proposal to issue rights shares in the proportion of seven shares for every eight shares at present held. The issue price is Rs. 15 per share, that is at a premium of Rs. 5 per share. An interim dividend of 7.5 per cent. has also been announced simultaneously, and the Company expects to maintain the dividend for the year at 15 per cent. even after the addition to capital. Fifteen per cent. on the issue price of Rs. 15 per share works out to a rate of 10 per cent. which is more than satisfactory. The additional capital is required for expansion of manufacturing capacity. The scrip was quoted at Rs. 22.87, as against Rs. 23.69 earlier in the week. Indian Coppers were better at Rs. 3.35, but Indian Cables were fractionally lower at Rs. 22.87. Clive Row Investments had buyers at the slightly improved rate of Rs. 10.00. Orient Papers changing hands at Rs. 26, as against Rs. 25.69 earlier.

* * * *

Madras Stock Exchange

MADRAS, 28*th May*

Easy conditions prevailed on the Madras Stock Exchange during the week under review. Although the market ruled steady on the opening day of the week, following encouraging advices from Bombay, it staged a setback subsequently which persisted till the close today. The hopes of any modifications in tax proposals in favour of investors became very slender. Replying to the debate on the budget in the Rajya Sabha on Thursday this week, the Union Finance Minister clearly indicated that there was no possibility of any substantial variation in tax measures. He particularly defended the wealth tax, the expnditure tax and the tax on bonus shares. Plantation shares were subjected to selling, thanks to apprehensions of a rise in the rates of agricultural income-tax in the States of Madras and Kerala. The textile section ruled distinctly subdued on reports of heavy accumulations of stocks with mills. Sugar and miscellaneous industrials were neglected, buying enquiries being poor.

Among tea shares in the planting section, Haileyburias were pushed down by Rs. 2.50 to Rs. 20. Peermades and Twyfords declined by 25 nP each to Rs. 25, and Rs. 16.25 respectively. Kalasas and Parksides receded by 20 nP each, the former to Rs. 14 and the latter to Rs. 15.40. Blue Mountains were quoted 25 nP lower at Rs. 3.20. Balanoors decreased by 12 nP to Rs. 18.75. Chandramalais eased by 5 nP to Rs. 3.95. Waterfalls shed 15 nP to Rs. 4. Among coffee shares, Coffee Lands declined by 40 nP to Rs. 24.60. Kumergodes lost 5 nP to Rs. 6.20 and Sheveroys 3 nP to Rs. 1.97. Rajendras were neglected at Rs. 11.37. In the rubber group, Cochin Malabars declined by 15 nP to Rs. 7.50. Kailas receded by 20 nP to Rs. 4.70. Midlands were marked down by 55 nP to Rs. 16.40. Peninsulars retreated by 50 nP to Rs. 27. Rajagiris lost a like amount to Rs. 17.50. Thirumbadis shed 9 nP to Rs. 1.73, Nelliampathys decreased by 15 nP to Rs. 2.85. Pullangodes eased by 2 nP to Rs. 2.38.

In the textile section, Coimbatore Cottons fell by Rs. 7 to Rs. 158. Metturs dropped Rs. 4 to Rs. 392. A similar loss was suffered by Radhakrishnas which were sold at Rs. 271. Lakshmis slipped by Rs. 2 to Rs. 139. Vijayakumars declined by Rs. 1.50 to Rs. 134. Janardanas shed a rupee to Rs. 89. Coimbatore Spinnings and Rajalakshmis lost 50 nP each, to Rs. 86 and Rs. 136, respectively. Kotharis were 35 nP lower at Rs. 13.75.

In the miscellaneous section, India Cements declined by 25 nP to Rs. 26. Aluminium Industries shed 5 nP to Rs. 13.25. Mysore Lamps receded by 12 nP to Rs. 15.50. A.C.Ts eased by 5 nP to Rs. 5.60. Rallis, however, improved by 25 nP to Rs. 34.50. Indian Aluminiums gathered 6 nP to Rs. 12.81.

Sugar shares lacked support. Deccans were quoted 30 nP lower at Rs. 7.35. Travancores lost 10 nP to Rs. 10.50. E.I.Ds were quiet at Rs. 26.75, and also Kirlampudis at Rs. 38. Jeypores, however, met with special buying support and advanced by 25 nP to Rs. 13.75. Likewise, Mysores were favoured 13 nP higher at Rs. 37.50.

INDIAN IRON'S RIGHTS ALLOTMENT

At a meeting held in Calcutta on Wednesday last, the Board of Directors of the Indian Iron and Steel Company, Ltd., allotted to the shareholders or their nominees 5,183,708 fully paid ordinary shares of Rs. 10 each, which it offered to the ordinary shareholders on 12th March at a price of Rs. 13.50 per share.

It is stated that, while the number of additional shares applied for was of the order of 278,993, the offer was oversubscribed by 123,050 shares only. This means that not all the shareholders exercised the right for new shares and that of those who had applied—their number is put down at 97 per cent. of the total—some had asked for additional shares. Requests for additional shares were met on the following basis: Applicants for not more than 150 shares each received their allotment in full; applicants for more than 150 shares received allotment on the basis of an allocation of 150 shares in each case plus 20 per cent. of excess of shares applied for over the 150 shares. Allotment on such a basis has been subject, in each individual case, to a limit of 20 times the existing holding of the applicant.

MARKET GOSSIP

(Concluded from previous page)

progress it should. But the reasons he gave for this state of affairs might as well have been given by a member of the rightist group. He attributed Britain's failure to make the progress it should to three factors: (1) The taxation policy pursued by the Government discouraged investment and modernisation of plant; (2) in some industries and firms, managements had been backward in promoting efficient and competitive production; and (3) there had been not simply too many industrial disputes but too great a lack of real interest in the welfare of their own industry by the workers engaged in it. He added; "It is natural that the workers and trade unions should be concerned with their own welfare. But it is essential that they should realise that their welfare depends upon the welfare of the industry in which they are engaged." Surely, these observations deserve a wider audience than the one to which they were addressed.

* * * *

The quota of 200,000 tons of sugar fixed for export is reported to have almost been exhausted, although the quantity actually shipped is very much less, being no more than 50,000 tons. The aggregate value of 200,000 tons sold so far comes to over Rs. 16 crores. Among the principal buyers of Indian sugar are China, Iraq, Aden and other West Asian countries. Lately, Singapore, Malaya, Ceylon and Burma have also purchased some quantities of sugar. The last transaction put through was with Aden at £68 (Rs. 906.67) per ton c. & f. and with Basra at £68 10s. (Rs. 913.34) c. & f.

The export business in sugar is directly handled by the Indian Sugar Mills' Association. The entire profits retained by the Association from exports are being pooled in a special fund. The object is to subsidise sugar exports, if and when the world sugar prices fall and the Indian product becomes uncompetitive. The estimated profit accruing to the fund on exports of 200,000 tons of sugar is Rs. 71 lakhs.

NEWS IN BRIEF

WITH a view to augmenting salt production, the Government has decided to issue more licences to private manufacturers.

The Government of India has decided in principle to set up a currency paper mill. The detailed scheme is being worked out.

The Government of Italy has offered three scholarships to Indian nationals for post-graduate study or research in fine arts in that country during 1957-58. The value of each scholarship is 50,000 lire (Rs. 380 approximately) per month, with exemption from tuition fees. The cost of tourist second class sea passage to and from Italy will also be provided.

A delegation of ten Chinese Government officers, which arrived in India on 14th May 1957, to study the technique of the salt industry in this country, are now on a 14-day tour of the salt-producing centres in Bombay State; the tour commenced on 24th May. After visiting Kharaghoda, Jamnagar, Mithapur, Bhuj, Kandla and Bhavnagar, the delegation will reach Bombay on the 5th inst. It will leave for Madras on the 7th inst.

India bought from Britain during April 1957 goods worth £14,822,764, as against £13,171,931 in the same month last year, bringing the total purchases for the first four months of 1957 to £62,703,812, as compared with £55,297,413 in the corresponding period of 1956. Although purchases of British machinery (other than electrical) declined slightly from £3,982,498 to £3,370,341, India purchased over £1,000,000 worth more of road and rail vehicles, the aggregate value being £2,172,819, as compared with £1,183,112 a year before.

The Government of Switzerland has offered two scholarships to Indian nationals for post-graduate study or research in any branch of science, technology or engineering during the year 1957-58 at any Swiss university or the Federal School of Technology, Zurich. The value of each scholarship, which is tenable for one year, is 500 to 700 Swiss francs (equivalent to Rs. 540 to Rs. 760) per month, with exemption from tuition fee. Cost of tourist/second class sea passage to and from Switzerland will also be provided.

The Integral Coach Factory at Perambur has taken up the additional work of furnishing the coaches turned out by it on a modest scale for the present and has now almost completed furnishing a first batch of ten. This work is now being done in the premises of the Factory itself. Administrative sanction has been given for putting up a separate factory or furnishing the coaches on the southern side of the housing colony. Acquisition proceedings for the purpose have already commenced. Pending the completion of the *pucca* factory, a big shed is being erected to take up the furnishing work on an enlarged basis. Work on this shed is nearing completion.

The all-India final estimate of black pepper for 1956-57 puts the area and production at 233,600 acres and 31,600 tons, as against the partially revised estimate of 232,500 acres and 32,100 tons, respectively, for 1955-56. This shows an increase of 1,100 acres or 0.5 per cent. in area and a decline of 500 tons or 1.6 per cent. in production over last year. The increase in area has been reported mainly by the Kerala State. Despite an increase in area, there has been an overall decline in the production of black pepper. The decrease has occurred in Kerala and Mysore States and is attributed generally to the unfavourable weather conditions during the flowering and growing periods of the crop.

Sea passage fares on the India-United Kingdom route, which were increased when ships used the Cape route during the Near East crisis, have now been partly reduced with the reopening of the Suez Canal. The reduced fares, however, are slightly higher than those prevailing before Suez Canal crisis and diversion of ships *via* the Cape. The Bombay Office of the P. and O. Steam Navigation Company has stated that, with the reopening of the international waterway, some of the Company's vessels will now use the Suez Canal. The surcharge on freight shipped by vessels belonging to the lines of the outward and homeward U.K. and Continental shipping conference has been reduced from 17½ per cent. to 10 per cent. from 14th May.

The Electrical Manufacturing Company of Calcutta has set up a modern non-ferrous casting plant for manufacturing complete range of conductor accessories and insulator hardware required on transmision and distribution lines. Overhead equipment for railway electrification is also licensed to be manufactured by the Company. This is being made from various alloy metals in technical collaboration with French experts. The non-ferrous foundry employs most up-to-date techniques like gravity die casting and pressure die casting. The foundry has also arrangements for making tools and dies. Some spare capacity is available at present for the Indian electrical industry to indent against specific requirements.

Details of commodities received by India up to 30th April 1957 under the Indo-U.S. Agricultural Commodities Agreement during 1956 were given in the Lok Sabha the other day by the Union Minister for Food and Agriculture. The commodities received were: Wheat 741,000 tons (Rs. 30.79 crores c. & f.); rice 133,000 tons (Rs. 10.88 crores) and cotton 88,149 bales of 480 lbs. each (Rs. 7.44 crores). A grant of $54 million and a loan of $234.1 million will be given to India out of the rupee proceeds of the commodities to be received under the Agreement, namely, wheat, rice, cotton, tobacco and dairy products, after the loan agreement has been signed and the projects on which it is to be utilised are mutually agreed upon by the Governments of India and the U.S.

The Union Ministry of Railways has taken over from the Ministry of Commerce and Industry the work relating to the procurement of the more important categories of steel requirements for the Indian railways with effect from 1st April. This has been done to enable the Indian railways to take urgent measures for the procurement of their steel requirements, the supplies of which are at present in heavy arrears. The supplies with which the Ministry of Railways will be concerned are rails, steel, sleepers, fishplates and bearing plates. A small steel procurement unit has been set up for this purpose in the Railway Board Office in New Delhi. The Government of India has also decided to send a small steel purchase mission to Europe to negotiate the supply of steel and conclude contracts on the spot, without having to refer matters back to New Delhi. The mission is expected to visit Canada too. It is also proposed to depute an officer to Japan to explore the possibility of obtaining steel from that country.

The Railway Board has taken a major step towards self-sufficiency in railway equipment by developing capacity with firms in India for the manufacture of the entire requirements of coaching underframes planned under the 1957-58 purchase programme. The indigenous capacity for the manufacture of underframes has so far been insignificant and initial efforts by the Railway Board development cell to encourage manufacturers in India to enter the field bore no results. Global tenders were consequently invited for supply from foreign sources. Before placing orders with foreign suppliers, the Railway Board convened a meeting of indigenous firms and as a result thereof it was possible to locate capacity for the manufacture of underframes in the country. Five firms came forward to manufacture the entire pending requirements of underframes. The manufacturing capacities of these firms have, therefore, been booked for a supply of 500 broad-gauge, 791 metre-gauge and 60 narrow-gauge bogie coaching underframes. This, it is stated, has saved the country several crores of rupees in foreign exchange.

From Abroad

The Trans World Airlines is inaugurating today a daily scheduled service on international and U.S. routes with its new Jetstream aircraft, claimed to be the largest and the longest range airliner.

An open market for South-East Asia on the lines of the European common market has been suggested by Mr. Assomull, President of the Indian Chambers of Commerce in Singapore.

A Japanese atomic energy mission headed by Koichi Uda, Minister for Atomic energy, will arrive in Britain on the 13th inst. to discuss details of the Japanese order for an atomic power station of the Calder Hall type, having a generating power of 140,000 kw.

A scheme enabling the U.K. university undergraduates to visit Canada during the long vacation has been put into operation by the Commonwealth Migration Council. Under the scheme, second and third-year undergraduates pay their own fares and are provided in Canada with remunerative jobs with Canadian concerns under arrangements made by the Council.

American frozen food production increased by about 60 per cent. in 1955 as compared with 1954, according to the Department of Agriculture. In 1955, about 178 frozen food items were available to U.S. housewives, ranging from appetisers to desserts. Foreign foods, as well as American regional specialities, were offered. Potato products led all other frozen food items, with approximately 160 million pounds being sold. About 91 million pounds each of meat and poultry items and 69 million pounds of bakery products were sold.

Russia has become one of the four biggest buyers of untreated South African wool. Direct shipments to the U.S.S.R. in the current season have already exceeded the total quantity sent during either of the two previous seasons. According to the Wool Board, 19,879,660 lbs. of wool worth about £5 million were sent to Rsssia in the first nine months of this season. During the same period, Britain took 43,775,229 lbs., France 36,787,587 lbs. and Germany 35,717,229 lbs.

Ghanna, which achieved its independence recently, has become a member of the International Labour Organisation. Pledging his country's acceptance of the I.L.O.'s Constitution, Prime Minister Nkrumah, in a communication to the I.L.O. Director-General, has said that his Government recognises, and will continue to be bound by the obligations entered into on behalf of the Gold Coast by the United Kingdom in respect of the ten I.L.O. Conventions. These Conventions include those on forced labour and protection of young workers. With the admission of Ghanna, the I.L.O. has now 79 member-States.

About 800,000 automobile workers in the U.S. got pay rises at the end of April 1957 under "Annual Improvement Factors." The Annual Improvement Factor is designed to provide employees with a share in the country's technological progress and, in this way, improve their standard of living. For hourly workers, the increases are six cents an hour or 2½ per cent., whichever is greater. Salaried workers get boosts roughly comparable to those received by the hourly workers. The Chrysler Corporation, for instance, will raise the pay of its 25,000 salaried employees by $10.98 a month, or 3 per cent. of base pay, whichever is greater. The wage boosts are awarded for greater worker efficiency and are determined by the increase in output per man-hour.

A European school at Luxembourg will be officially recognised as a result of the agreement signed by the representatives of the six countries of the European Coal and Steel Community. If the agreement were approved by the member-States, it would give official status to a school which came into existence in 1953 as a result of the needs of the children of officials working for the Community. An agreement on a secondary school-leaving certificate to be recognised by the education authorities of all the six Community countries is also expected to be reached shortly. This certificate will be the first of its kind to cut across national educational frontiers. It will give to the pupils in the school belonging to the six member-countries a qualification equivalent in all respects to that given in their schools at home.

The special committee, appointed by the Japanese Ministry of Trade in March last to devise measures for countering any impact of the European common market scheme on the economy of Japan, is working on a plan for establishing an Asian trade area which may take advantage of the Development Loan Fund proposed by President Eisenhower. A spokesman of the committee said at Tokyo recently that the Fund might be used to help the Asian nations to create an Asian development fund designed to stabilise the prices of the primary products which they produce. It is believed that Mr. Kishi, Japanese Prime Minister will discuss this question with the U.S. officials when he visits Washington shortly. The special committee consists of persons representing leading Japanese bankers, industrialists and traders as well as the Government.

The fortieth session of the International Labour Conference will open at Geneva on the 5th inst. The new subjects to be discussed are discrimination in the field of employment and occupation in both Government and private establishments and conditions of employment of plantation workers. The subjects which were considered at the previous session of the Conference and which will be discussed again at the forthcoming session relate to forced labour, weekly rest in commercial establishments and offices, and protection and integration of indigenous and other tribal and semi-tribal populations in independent countries. Besides, the Conference will discuss reports from member-States on the application of conventions and recommendations of the I.L.O. It will also consider the report of the Director-General, as well as financial and budgetary questions.

The B.O.A.C. announces that, after much consideration of its aircraft requirements for the Asian, Australian and African services from the mid-1960's onwards and following a study of a number of alternative types, it has concluded that its needs will best be met by a new advanced project offered by Vickers-Armstrong Aircraft Limited. This aircraft, at present designated the VC-10, is to be a medium to long-range fast turbo-jet, powered by four Rolls-Royce Conway engines and the Corporation's version will have seats for up to 120 passengers. The B.O.A.C. and Vickers-Armstrong are now jointly engaged in the preparatory work required to draw up the detailed specification and conditions of contract and the Corporation has indicated to the Company that, when this task has been completed to their mutual satisfaction, it intends to place an order for 35 VC-10 airliners for delivery beginning in 1963. The value of the order will be about £68 million (over Rs. 90 crores) including the cost of initial spares.

PERSONAL

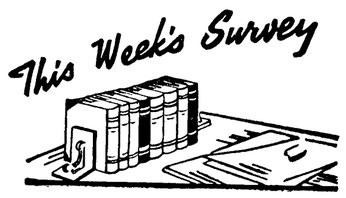
MR. Nicolas V. Gleboff, a United Nations Secretariat staff member since 1946, has been appointed deputy resident representative of the U.N. Technical Assistance Board in India.

Mr. K. P. Mushran, Member of the Railway Board and leader of the four-man Indian steel delegation, left Bombay for London on Tuesday this week. The delegation will try to obtain supplies of steel from the U.K. and the Continent.

Mr. J. B. Bowman has taken over charge as the Motor Transport Controller and Vice-Chairman of the Bombay State Road Transport Corporation from Mr. S. G. Barve, who has been appointed Secretary, Public Works Department, Government of Bombay.

Mr. V. V. Giri has been appointed Governor of Uttar Pradesh, Dr. Zakir Hussain Governor of Bihar and Mr. H. V. Pataskar Governor of Madhya Pradesh. Mr. Giri and Mr. Pataskar will assume charge in the first week of June and Dr. Zakir Hussain in the first week of July.

Mr. Amar Nath Vidyalankar, Minister for Education and Labour, Punjab, will lead the Indian delegation to the fortieth session of the International Labour Conference to be held at Geneva from the 5th to 27th inst. Mr. K. V. Padmanabham and Dr. S. T. Merani of the Consulate-General of India, Geneva, will be the advisers. The other members of the delegation are: Employers' group: Messrs. Naval H. Tata, R. V. Deshmukh, M. M. Verghese, Tanubhai D. Desai and S. P. Sen; workers' group: Messrs. G. D. Ambekar, Kali Mukherjee, M. N. Sarmah, K. Karunakaran and M. B. Joshi.



MR. PANT'S ADVICE

THE Union Home Minister, Mr. Gobind Ballabh Pant, in the course of his speech at a meeting of the Secretaries of the Central Ministries, held at New Delhi, is reported to have spoken vehemently against corruption in administration, delay in the disposal of cases, general lack of enthusiasm for work among officers and their attitude of superiority towards the common man. Urging that the guilty should be punished and deprecating "go-slow" tactics in Government departments, he stressed that all officials should carry out their functions allotted to them in an energetic, enthusiastic and responsible way. Those who are employed on behalf of the State, he is further reported to have said, should consider it a privilege to do all they can for the people. Finally, Mr. Pant expressed the opinion that there was appreciable room for economy in administration and the taxpayer should get more out of the money he was paying. He emphasised that, if they all realised that public money should yield interest in the same way as one's own money, they would seldom take liberty with public funds.

In commending this well-meant advice to the attention of all public servants, both at the Centre and in the States, we would like to emphasise that not all Government employees are guilty of the charges which are so often indiscriminately levelled against them. The fact is that the entire administration has shown great flexibility of outlook in adjusting itself to new conditions. Further, in assessing its success and failure, one must take into account the new situations they have had to face. How many, how rapid and how varied have been the changes? First came the Second World War, with all its emphasis on a whole host of controls. Next came the Partition. This was followed by integration of Indian States with the Indian Union. As soon as this was completed there began the linguistic reorganisation of the States. Each of these changes, it must be remembered, affected large areas and large masses of population.

As if these developments were not enough, the Government has chosen to add to the work of its employees new burdens in the shape of State-sponsored new industries and nationalisation of existing industries and services. It is hardly surprising that the administration shows signs of strain, to which the Public Accounts Committees and Audit reports has drawn repeated attention. Some New Delhi reports aver that a few of the State-sponsored enterprises are not able to keep to their schedule. In some segments, administration is weak, in others it is even faulty. Personnel, chosen and trained for a different purpose, are being asked to handle tasks of which they have no knowledge and for which they have neither training nor experience. If the appearance of the signs of weakness, which can now no longer be concealed from the public gaze, induces the authorities to review their economic programme and policy with a view to discovering how far they could go, consistent with the need for maintaining efficiency, it will not have come in vain. On the other hand, if the Government persists in sacrificing the country's larger good, in general, and industrial efficiency, in particular, at the altar of ideological values, it will be inviting tragic failures, thereby paving the way for public misery.

CO-OPERATIVE FARMING

The spirit of co-operation—or co-operative principles—is not something that can be administered to people in the shape of a pill. Inculcation and encouragement of right social attitudes among the people are an essential prerequisite for the progress of co-operation. It is a pity that, in envisaging that a considerable proportion of the land under cultivation should be brought under co-operative farming in the next 10 years, the Planning Commission has obviously missed this point. The basic question is whether the villagers are ripe for accepting co-operative farming and making it a success. The answer is found in the evaluation report published by an Officer of the E.P.O. on the working of 22 co-operative farming societies.

The findings of this officer further strengthen the views already expressed by the Indian Co-operative Union a few months ago on this question. If certain societies have achieved a fair measure of success, it is primarily because of the better awareness of the people there of the virtues of the co-operative way and enlightened leadership, of the growth of new attitudes, out of which develops the spirit of adaptability shown by the people. Examples of societies, where the mismanagement or fraud by a secretary or the selfishness of the members of the managing committee has marred their progress have been cited. It will be recalled that the Indian Co-operative Union itself had stated in unmistakable terms that factions among the members, disputes about relative intensity of work by different members, and mistrust of the management regarding the use of funds were some of the chief stumbling blocks in the way of progress of the societies.

This is only half the truth. It cannot be gainsaid that there is a hard core of co-operative spirit in every individual. In between the core and the surface, however, there are so many influences and counter-influences that very often stifle the spirit of co-operation. Thus, the chief stumbling block to the success of co-operative farming is the people's attachment to property. The fact that this sense is so very deeply embedded in the psychology of the farmer only reflects the social prestige that is attached to property. There are cases where the hope that the farmers will be given ownership rights over property which they are asked to cultivate, has acted as a stimulant for co-operation and better results. This is the case generally in the new settlement areas. Conversely, the fear of having to surrender these rights has also acted as a deterrent. This factor, added to the common village rivalries and factions, constitutes the most difficult obstacle to the success of co-operative farming. There is also the problem of fragmentation of holdings which is the direct outcome of oppressive pressure on land. The fear that alternative employment cannot be secured if co-operative farming is introduced is another serious hindrance which can be overcome only as the employment opportunities in the villages increase.

The present approach to co-operative farming smacks of the proverbial method of putting the cart before the horse. There are many other things which could and should be done in the co-operative field before people can be asked to pool their land. These are co-operative credit, marketing, clubs and other village activities. As progress is made on these lines and in expanding employment opportunities and as their benefits are understood by the people, new ideas and new social attitudes may be expected to develop in the minds of the people. The first task of the Central and State Governments is, therefore, to create the necessary climate for making co-operation successful.

FAMILY PLANNING

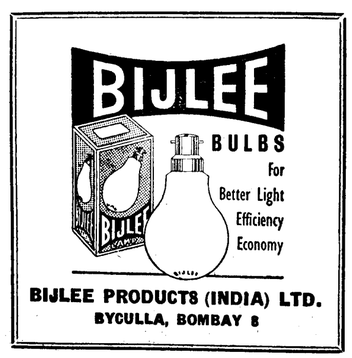
Population control through family planning can no longer be dismissed as a silly nostrum popular among proponents of capitalism who, unfortunately, are suspected of having some personal axe to grind in the matter. The economic and demographic facts, particularly in the underdeveloped countries, are proving, if they have not already proved, that the problem of population is not an imaginary bogey conjured up by interested parties to further their own ends but a real and concrete problem of considerable economic and social consequences. Even Communist countries which formerly considered family planning as an anathema—as, for instance, China—are gradually realising that even a sizable increase in the rate of economic progress may fail to produce any perceptible effect on the standard of living if population is continuously rising at a rapid rate. None would seriously contend, not the least the advocates of family planning, that a rapid increase in population is bad in itself. It is also not suggested that the rate of increase of population in underdeveloped countries of Asia and Africa is excessive, as compared with that of developed countries. There may be some truth in the statement that once the underdeveloped economies become industrialised and dynamic, an increase in the number of people may turn out to be a positive advantage. But it cannot be denied that, at the present moment, when most of the region's population is predominantly peasant and a difficult and expensive process of economic change is under way, a smaller net annual addition to the already large population might ease some of their problems. According to the *Demographic Year Book*, 1956, prepared by the Statistical Office of the U.N., the biggest absolute increase in population is taking place in Asia. Every year, the Asian population is increasing by 24 million. Every minute 170 new babies come into the world and about 90 people die, leaving 80 additional mouths to feed. This ratio between the global death and birth rates indicates that the world's population of 2,700 million is increasing by about 120,000 every day. If the growth were to continue at this rate, the U.N. experts estimate there would be by the end of this century twice as many people in this planet as there are at present.

The challenge of the population problem, as Mr. D. P. Karmarkar, Union Minister for Health, rightly pointed out, seriously threatens plans of building up a new India. Addressing the second meeting of the Family Planning Board held on 25th May in New Delhi, the Minister said that, at the rate the population is increasing now and with the death rate declining, as a result of better doctoring and sanitation, the number of inhabitants in this country may well double itself in another 30 years. This, he pointed out, is an alarming situation, inasmuch as an increase in population would throw out of gear all efforts to improve the standard of living of the people. It is, therefore, of utmost importance that serious consideration should be given to this problem and ways and means devised to keep the growth of population within the economic resources of the country. The Family Planning Board has thus a great responsibility and a vital role to play in the implementation of the second Plan.

Fortunately for India, vast numbers of people in this country would welcome family planning and population control. The Government of India has, therefore, wisely adopted family planning as an instrument of social betterment. A comprehensive plan has been drawn up to make family planning not merely a temporary expedient but a way of life designed to ensure the welfare of the family. Although there is a general recognition of the necessity and urgency of family limitation, there is still indifference in some quarters and resistance in others towards family planning. Unless these are overcome, the programmes cannot be speedily implemented.

It is heartening to see that a fourfold action programme, based on the available knowledge, has already started. It envisages service through clinics in rural and urban areas, training, education and research. Since it is doubtful whether family planning clinics alone can disseminate knowledge on birth control, a proposal is under consideration for providing a family planning clinic in each teaching institution for doctors, nurses, health visitors and midwives and to incorporate family planning in their courses of study. This appears to be a sound suggestion and is well worth pursuing.

The success of the scheme will depend considerably on peoples' faith, support and initiative. The Family Planning Association of India and some of its State branches have made notable contributions. The Minister said that, if a network of State, district and local branches of the Association were formed, it would considerably help the family planning programme. A special pattern of financial assistance for them could also be worked out to strengthen their activities. The Family Planning Board, at its first meeting, had recommended the appointment of Family Planning Officers in each State. But so far only Madras State has appointed a whole-time Family Planning Officer.



A point that deserves special attention is medical research. The success of the programme in the rural areas, where the need for family limitation is felt most, depends on the extent to which modern medical science succeeds in evolving a cheap, effective and simple contraceptive. No less important is research in demographic problems. Scientific investigation into human fertility, methods of regulating it, social and economic factors affecting the reduction of birth rate, etc., should be vigorously undertaken.

FREE TRADE AREA

The misgivings expressed by many in the Commonwealth countries over the possible adverse repercussions on their economies in the event of Britain joining the European free trade area can be said to have been dispelled by the categorical declaration by Sir David Eccles, President of the Board of Trade, that "there is no question of joining Europe on any terms which would in any way injure Commonwealth relations." Inaugurating the Congress of Commonwealth and British Empire Chambers of Commerce in London on Monday this week, Sir David sought to emphasise the fact that the free trade area would be in the interest of not only Britain but the entire Commonwealth. The area, he pointed out, would expand Britain's home base, enable it to be richer and, with other countries of Europe, to have a larger supply of capital for investment outside Europe. "That," to quote him, "is the basic economic reason for going into the European market." Otherwise, he warned that West Germany would run the show in the common market; no other country out of the six—France, West Germany, Italy, Belgium, the Netherlands and Luxembourg—had the willpower, the technical skill and the industrious labour that West Germany had.

In the opinion of Sir David, there is a political reason which should weigh more heavily still. Explaining this, he observed:

"Twice in my lifetime, the Commonwealth had some thousands of miles across the ocean to fight the war in Europe. These were the last two attempts of the West European nations, or one of them, to dominate others and form a hostile bloc across the channel which would threaten the very life of the United Kingdom. Throughout history, we have had to face up arms against any such threat from the Continent of Europe. Now, although it is not military or hostile in its intent, six countries of Europe have signed a treaty to do exactly what, for hundred years, we have always said we could not see with safety to our own country."

Sir David made it clear that it would not be in the interests of the Commonwealth if this move were to succeed with Britain left outside. He thought that, if Britain could join on terms not harmful to Commonwealth relations in any way, a great political risk would be averted. This statement is, indeed, reassuring. It is rather difficult to say with any degree of certainty as to how far and to what extent the European common market and the free trade area will affect the trade of Commonwealth countries which account for a quarter of the world's population and one-third of the world's trade. Being the leader of the Commonwealth, the United Kingdom should naturally assume the responsibility for safeguarding the economic interests of every one of these countries from the repercussions of its participation in the free trade area.

PLYWOOD AND TEA-CHESTS

A perusal of the speech of Mr. K. R. Damle, I.C.S., Chairman, Tariff Commission, at the public enquiry into the question of continuing protection to the plywood and tea-chests industry, held in Bombay the other day, will clearly reveal that the industry can legitimately feel proud of its achievements in recent years. Not only have the quantity and quality of production registered a marked improvement but the prices charged are said to be quite reasonable having regard to the cost of manufacture. It is certainly encouraging to find that the industry is at present utilising as much as 82 per cent. of its installed capacity, as against just 42 per cent. in 1953. Indeed, Mr. Damle said that India could claim to be self-sufficient in the matter of plywood tea-chests.

The total installed capacity of the industry (on a single-shift basis) at present is estimated at 211 million sq. ft. or about 11.93 million sets, which compares very favourably with 145 million sq. ft. or 8.20 million sets in 1953. Between 1953 and 1956, the production of plywood tea-chests and commercial plywood has more than doubled itself, from 61.20 million sq. ft. to 124.16 million sq. ft. The increase has been shared by both tea-chests and commercial plywood, the figures for 1956 being 98.33 million sq. ft. (5.56 million sets) and 25.83 million sq. ft., as against 49.79 million sq. ft. (2.82 million sets) and 11.41 million sq. ft., respectively, in 1953. The amount of capital invested is estimated at Rs. 3.5 crores and the number of persons directly employed at 6,425 per day; the corresponding figures for 1953 were Rs. 2.77 crores and 5,653 workers.

The current rate of tea-chests production, namely, 5.56 million sets, is just sufficient to meet the domestic demand. So far as future demand is concerned, estimates differ. Thus, whereas the Development Wing of the Union Ministry of Commerce and Industry expects the future demand to be steady at the present level of 5.5 million sets, the Tea Board expects it to rise to 6.55 million sets by 1960. As regards commercial plywood, the estimates range from 20 million sq. ft. to 30 million sq. ft. The Planning Commission puts the total requirements to be 30—50 million sq. ft. at the end of 1960. Since demand is the primary basis on which the future expansion and development of the industry have to be determined, it is of the utmost importance that a fairly reasonable estimate of the current as well as future demand for tea-chests and commercial plywood should be arrived at.

While assessing the demand for commercial plywood, due consideration must be paid to the possibilities of substitution of this material by other products. It is stated, for instance, that panels made of delignified bamboo may become a powerful competitor. Further, hard-boards like masonite made out of bagasse or other raw materials, it is said, have considerable potentialities for replacing, at least partially, commercial plywood in certain consumer industries. As these trends in the use of substitute materials are likely to become increasingly evident, the commercial plywood manufacturers should take energetic measures to popularise the use of plywood through educational advertising or salesmanship. More important, of course, is the need for producing quality product at competitive rates. The need is all the greater in the case of tea-chests. As Mr. Damle rightly emphasised, exports of tea are a valuable source of foreign exchange to the country and, since packed tea has to travel long distances both within and outside the country, great importance attaches to the quality of the chests. Although the Tea Board has stated that, generally speaking, the quality of Indian tea-chests is found to be in no respect inferior to foreign tea-chests, the Tariff Commission, we are told, has received complaints in regard to indifferent bonding, use of several pieces, instead of one whole piece in the inside veneer, and use of unsuitable and unseasoned timber.

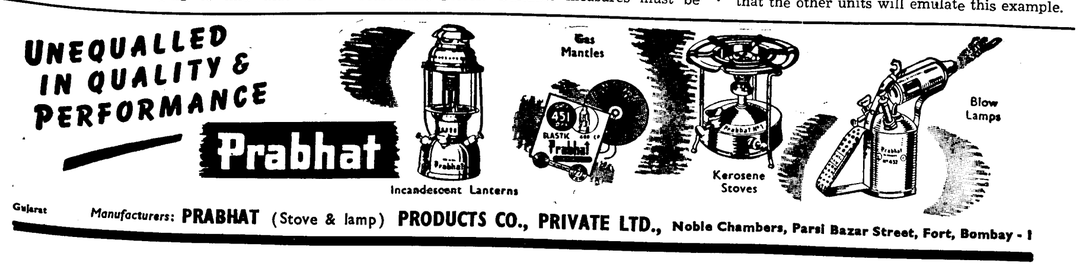
The ability of the plywood and tea-chests industry to maximise output of quality product at an economic price will depend on the extent to which some of the hardships confronting it are removed. The industry is said to be finding it hard to obtain adequate supplies of timber, an important raw material, at a reasonable price. The Tariff Commission will do well to recommend to the Government suitable measures for removing the handicap. The tea-chest producers are also experiencing difficulties in securing adequate supplies of planks and tin-plate at reasonable prices. Suitable measures must be suggested for overcoming this difficulty too. Another important raw material is glue. The industry has almost entirely switched over from casein glue to synthetic glue. At present, the entire requirements of glue are met by imports, mostly from the U.K. and West Germany. It is understood that schemes for the production of synthetic adhesives have already been licensed and research on them is in progress at the Department of Chemical Technology, Bombay, and the Forest Research Institute, Dehra Dun.

SMALL INDUSTRIES

The recent move of the Central Government to secure collaboration between large and small industries, so that the two sectors can develop as complementary to each other rather than being competitive, is certainly to be welcomed. In a communication addressed to about 3,000 large industrial units licensed under the Industries (Development and Regulation) Act, the Union Ministry of Commerce and Industry has called upon them to consider the extent to which it is possible for each unit to "farm out" manufacturing of components to small-scale industries. Suggestions in this regard are required to be sent to the Development Commissioner for Small-Scale Industries, the National Small Industries Corporation, the Director of the Regional Small Industries Service Institutes or the Directors of Industries in the States who are already said to be working on this programme.

In a way, the above move marks a departure from the existing official policy governing development of small-scale industries. This policy, as readers are aware, has been extended in several spheres to such an extent that economic considerations have been relegated to the background, their place being taken over by highly ideological considerations. How else can one explain the Government's policy of imposing restrictions and tax burdens on large-scale industries with a view to helping the small units? Small-scale industries no doubt play an important role in the country's economy. But, in determining the exact place of these industries in the economic set-up of the country, it is imperative that the economic importance of large-scale industrial sector should receive adequate recognition. Further, in imposing new burdens on the large-scale sector, the authorities should also take into account the price which the consumer will ultimately be called upon to pay for his requirements of goods and commodities. Needless to say that the development of small industries must be ensured purely on its merits and not at the cost of the more efficient large-scale sector.

The real, most effective way of achieving an orderly and secure development of small industries lies not in palliatives or short-cut remedies but in enabling them to grow up as auxiliaries to large factories, as in Japan, where the heavy industries restrict their manufacture only to the parts requiring high precision, while other parts, comparatively easier to manufacture, are obtained from small industries. The large industries in Japan retain to themselves the task of inspection and designing in regard to the parts obtained from small units. The bigger units are thus saved the need to make heavy investments and block capital on machinery and equipment, while the small industries have a ready market for their products. In view of these advantages, the Government of India has, indeed, done well to recognise, albeit belatedly, the importance of a pattern of development based on the inter-dependence of heavy and small industries. It is reassuring that several large units have already accepted the scheme in principle, thanks to the efforts made by the National Small Industries Corporation and other Government agencies working for the development of small industries. In fact, some units are reported to have already entered into arrangements with the small-scale units for the supply of different small components. It is to be hoped that the other units will emulate this example.



FOOD PROBLEM IN PROPER PERSPECTIVE

REMEDY LIES IN GREEN MANURE AND MINOR IRRIGATION

From Our Own Correspondent

NEW DELHI, *28th May*

DELHI LETTER

IT is one of the unfortunate facts of the economic scene in India that food, like land reform, has come to have strong political undertones. The politics of it all is so much in the background that politicians, whether inside or outside the Government, are unable to size up the situation in strictly economic terms or in terms of an honest statistical appraisal of agricultural growth and performance since the agriculture-oriented first Plan started. In any case, the political view has to be severely discounted, for food has too often belied the breezy optimism of politicians and vaunted agrarian reformers who have generally, as a non-official specialist in agricultural problems has put it, no practical experience of husbandry. This despatch on food presents, therefore, a strictly non-political approach to the problem.

It is no mere platitude that food continues to be the Achilles heel of India's planned economy. But it is surprising that the Union Food and Agriculture Ministry, while rightly swearing by its crop estimates which have reached a higher level of precision than ever before, does not appear to have a whole view of the situation as it is affected, for good or ill, by other factors. Among these other factors the most relevant are: land reform (talked about or implemented); consumption of foodgrains by producers and marketable surpluses released by them, prices, supplies and effective demand by different income groups in the monetised sector; balance or lack of balance between foodgrain crops and commercial crops; and consumer hoards, if any, and partial holding back of marketable surpluses by producers at a time of rising foodgrain prices. These factors are interrelated and they determine relative scarcity or otherwise from time to time in the monetised sector. But the Food and Agriculture Ministry does not appear to have worked out a systematic statistical measure of the relationships between these factors.

Nothing Fresh

The Government's most considered view to date, as seen from the Finance Minister's Budget speech, is that "statistically, it does seem that, if at all there is an overall shortage, it is of a marginal character." This is no fresh contribution to the debate, for there has always been a marginal scarcity in this country in the matter of food. If this marginal scarcity is presented as a continuing phenomenon in spite of a more or less high annual level of production of foodgrains excluding pulses since 1953-54 (when it was 58.3 million tons as against 55.7 million tons, 55.4 million tons and 57.5 million tons, respectively, in 1954-55, 1955-56 and 1956-57), it strikes one as an unwitting admission that the production increase almost entirely attributed to the Plan is questionable. Here the non-official specialist referred to earlier has estimated that nearly half of the *real increase* in 1953-56 (over that of 1951-52 or 1952-53) in output on irrigated lands and a sixth of the increase in output from unirrigated lands (which account for just under two-thirds of the total production from all lands) can alone be attributed to the irrigation, manuring and development schemes of the first Plan.

Again, the sudden 'expansion' in production of foodgrains excluding pulses from 42.9 million tons in 1951-52 to 49.2 million tons in 1952-53 and to 58.3 million tons in 1953-54 is intriguing. As there is absolutely no reason to believe that crop estimates since 1953-54 are overestimates, some valid explanation has to be found for the far lower crop estimates in the first two years of the first Plan, especially because it is well known that agriculture all the world over has always registered and continues to register only a slow rate of growth. The conclusion is, therefore, hazarded that the *annawari* crop estimates throughout the country in the years of control and intensive procurement (upto 1952-53) should have been under estimates, for it was common knowledge in those days that the *patwaris* (village accountants) were influenced by producers in several ways to under estimate yields in order to reduce their obligations under the grain procurement schemes. In other words, a part (anything from a fifth to a fourth) of the production of those years was concealed from the paper estimates; under conditions of decontrol since 1952-53, crop estimates (made largely now on the basis of sample crop cutting surveys) have again become fairly reliable with an inevitable small margin of error.

Magnitude of Deficit

Considered in this background, the estimated production of foodgrains other than pulses in 1956-57 works out to 326 lbs. *per capita* per annum, as against nearly 335 lbs. *per capita* per annum in 1951-52 on the basis of the latter year's real production (paper estimate plus concealed production); the decline reflects the simple fact that population has increased by about 29 million since 1951. This would mean that there is this year an overall deficit of around 1.5 million tons in the country as a whole on the production basis of the 1951-52 level of *per capita* production. This, however, does not ignore the fact that the deficit this year is much larger in terms of the pre-war level of *per capita* production or the fact that there was a deficit in 1951-52 itself in terms of the pre-war level). Perhaps, the overall deficit may be even 2 million tons. This can be more than fully covered by the Government's programme to import foodgrains this year under the commodity loan agreement with the U.S. Commodity Credit Corporation.

This overall deficit of 1.5 or 2.0 million tons is, however, not so trivial as it looks, for its effects in terms of supplies and prices in the non-producing sector of the country can easily be out of proportion to what the deficit warrants. It is here that the studies contemplated by the Economic and Statistical Research Division of the Union Food and Agriculture Ministry in respect of income-price-demand relationships may provide sound guidance for official policy regarding prices which alone will determine the magnitude of relative scarcity or of relative plenty in the monetised sector. All this, however, is only of significance for the immediate future. The chronic overall production deficit would get increased to about 10 million tons for the present population, if *per capita* consumption of foodgrains were to be at 17.5 oz. per day, for lack of other ingredients in adequate quantities of a balanced diet.

The real overall deficit of the magnitude of 10 million tons is, however, not a problem of immediate significance. It may well be solved in the short-term (say, three years from now) if agricultural productivity schemes of a kind involving very small capital inputs and quicker results in terms of output are assigned the highest priority. Distribution of chemical fertilisers on a far larger scale may easily suggest itself to some as the most efficacious way of increasing output in the short run. But this has its well-nigh insuperable practical difficulties. For, if it is a question of indigenous production of fertilisers, it cannot be stepped up to the required extent in a year or two without a large investment outlay; if they are to be imported, it is a question of foreign exchange which simply cannot be had; even if the requisite quantity of fertilisers can be had, it is a question of their subsidised sale to small agriculturists or of an estimated outlay of Rs. 100 crores to Rs. 150 crores on distribution as fertiliser loans to agriculturists.

The only other feasible alternatives are compost and green manure schemes and minor irrigation. Green manure, in particular, has greater potentialities than any other manurial scheme, for enough green manure seeds can easily be produced on 3 or 4 per cent. of all lands this year so as to cover in the next two years half of the total net sown area (about 320 million acres) in the entire country. This is the least expensive because an acre of land would require not more than four annas of seeds and the most productive because the yield will be increased by at least a fifth. Small irrigation by small tube-wells and filter-points, renovation of rain-fed tanks, open wells, etc., generally involves a capital outlay of less than Rs. 50 per acre, and if this also has a priority in the next two or three years, the overall deficit of 10 million tons (for a *per capita* consumption of 17.5 oz. per day) can be more than made good by the end of 1959-60. If Prime Minister Nehru gives a rigorous lead in respect of green manure and minor irrigation as he does in the case of night-soil manuring and co-operative farming, the short-term solution may well be in sight.

The all-India final estimate of *khariff* pulses other than *tur* for 1956-57 puts the current year's area and production at 16,166,000 acres and 1,664,000 tons, as against the partially revised estimate of 15,567,000 acres and 1,632,000 tons, respectively, for 1955-56. This shows an increase of 599,000 acres or 3.8 per cent. in area and 32,000 tons or 2.0 per cent. in production over last year. Some of the pulses included in this estimate are also grown during the *rabi* season in some States. *Khariff* pulses reported in this estimate, however, cover about 62 per cent. of the total area under pulses other than gram and *tur*.

GOVERNMENT OF INDIA

4 PER CENT TEN-YEAR TREASURY SAVINGS DEPOSIT CERTIFICATES

(FREE OF INCOME-TAX)

Interest at the rate of 4 per cent will be payable free of income-tax annually from the date of deposit and will not be taken into account in calculating the total income of the Depositor for the purpose of income-tax.

The maximum amount that may be held in these deposits including the amount invested in 3½ per cent Ten-Year Treasury Savings Deposits in terms of Government of India, Ministry of Finance Notification No. 7(1)-B/51 dated 22nd January 1951, will be—

For an individual	**Rs. 25,000**
For an individual jointly with another	**Rs. 50,000**
For Charitable Institutions	**Rs. 1,00,000**
For other Institutions	**Rs. 50,000**

Deposits in cash/cheque will be received from the 1st June 1957, and until further notice in multiples of Rs. 100.

Deposits will be refundable at any time after expiry of one year from the date of deposit at certain discount.

Applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, branches of the State Bank of India, State Bank of Hyderabad and Bank of Mysore Ltd. conducting Government treasury business and treasuries and sub-treasuries in India at places where there is no such office of Reserve Bank of India or branch of State Bank of India, State Bank of Hyderabad or Bank of Mysore Ltd.

Deposit Certificates will be accepted for safe custody by Public Debt Offices and interest remitted to holders, if so desired.

For full particulars apply to any of these offices, branches or treasuries.

AMERICAN LETTER

BATTLE OF BUDGET CONTINUES

FURTHER INCREASE IN MONEY RATES UNLIKELY

From Our Special Correspondent

NEW YORK, *22nd May*

PRESIDENT Eisenhower has taken his legislative programme, now before Congress, to the people of the United States in a series of radio and television programmes. He defended the Budget and explained the necessity of high preparedness spending for defence. He said that foreign aid is imperative and intimated, in effect, there was no room for any cuts in expenditures.

The President was not successful in getting his points across. The battle of the Budget continues, perhaps not to the same extent as before his speeches. The storm continues just the same. The Budget is not universally accepted and any law not supported by a majority of the people is likely to be a bad law, at least psychologically, even though the hard facts of life may prove the President to be right later.

The dissenters proposed to reduce the Federal Budget of $71,800 million by $2,000 million. The *New York Times* points out that $2,000 million, more or less, really makes little difference and not sufficiently so to enable the Government to reduce taxes. It is fairly obvious to me that much of the uproar is politically, rather factually, inspired. The opposition party in Congress would like to take credit for economy measures in order to get ready for the next election.

Taxes

The fact remains, however, that taxes under the Eisenhower Administration have been larger than under the preceding ones and the proposed Budget is at a record for times of peace. A substantial part of this increase is due to higher prices and inflation.

Despite the budgetary surplus, inflation continues. Blame for that must be placed on wage increases. According to many labour contracts, wage boosts are now more or less automatic and it cannot be disputed that productivity has not yet caught up with the rise of industrial expenses. Such a lag happens every once in a while and it has been apparent in many periods of the past. If it continues, inflation is inevitable.

Current statistics are cheerful, indeed. The stock market hit new highs for 1957 in the second half of May. Retail sales for the first four months aggregated $61,200 million, a new record. In the third week in May, stocks prices advanced $2,200 million. Judged by Standard and Poor's 500-stock index, the list is a mere $11,400 million below its previous high of 2nd August, last. A good deal of the strength is based on technical considerations.

Retail Sales

The gain in retail sales is nationwide. Total sales in the first four months were 5.1 per cent. above the figure of the first third of 1956. About 3.5 to 4 per cent, perhaps, is attributable to price increases so that the net boost is relatively small. Automotive sales were $12,609 million as against $11,809 million last year. It represented the greatest rise in any retail category. In this area, too, price increases played an important part, but a pick-up in spring buying was also a factor. The figures include domestic new and used cars as well as foreign automobiles which enjoy greater popularity in the U.S. every year.

Optimism about the overall economic picture is increasing. A group of top industrial officials and Government spokesmen, after a lengthy meeting at Washington, predicted that business will fare better in 1957 than it did in 1956. They expressed concern, however, over creeping inflation.

Secretary of Labour, Mr. James P. Mitchell, predicted a rise in employment this summer to a record high of 68 million. The authoritative trade magazine *Steel* pointed out that scrap steel prices are higher. Scrap is considered a barometer for steel production. Last December, scrap prices moved downward, three months ahead of the actual decline in steel output.

The automobile industry seems to be doing a better job in gearing its production to sales by dealers. Auto stocks were 735,000 cars on 1st May, as compared with 902,000 units 12 months previously.

Farm Income

Visibility over the farm belt of the U.S. also was improving. Farm prices are firm and Secretary of Agriculture, Mr. Ezra Taft Benson, predicted a 5 per cent. gain in 1957 farm income over 1956. Seven out of 10 farmers in the U.S. have no mortgage debt. Housing starts rose seasonally in April, but they were at the lowest level for that month since 1949. Work began on 92,000 public and private dwelling units. It resented the first upturn in the seasonally adjusted rate since last October.

The spending for consumer goods and services reached an annual rate of $427,100 million in the first quarter, a new high. This figure is not adjusted for price increases.

On the same basis, personal income also is at a new high. The Commerce Department reported that personal income reached a record annual rate of $339,000 million in April. This is $1,200 million higher than the rate in March and nearly $18,000 million above the level of April 1956.

Earnings reports for business so far this year have been fairly stable. The ultimate showing for 1957 will depend on how much profits will be cut by rising costs.

Unless inflationary forces turn out to be stronger than they are at the present time, it is quite unlikely that money rates will go up further. There is certainly no point in boosting the prime lending rate. It cannot be denied that there is pressure on borrowers who need money Most of the banks in the major money centres in the U.S. are "loaned up." Companies which do not have long established accounts, have difficulty in obtaining loans.

Bank Money

Commercial bank money is, of course, part and parcel of the entire capital markets' structure. There is hunger for every type of money. Evidence of that may be found, for example, in the offering by the International Business Machines Corporation of more than $200 million worth of equity securities in the form of 1,050,223 common shares to stock-holders.

The post-war economic growth, plus greater and costlier automation in a period of rising prices, has accelerated the trend toward large stock offerings by leading industrial corporations. The demand for capital in all forms this year is likely to be as great as it was in 1956. If savings hold up, there should be little difficulty, except temporarily, perhaps, in satisfying this demand.—*All Rights Reserved.*

BRITISH EXPORTS OF AIRCRAFT

During the last five years, British aircraft and aero engines manufactured abroad under licence have earned for the United Kingdom almost £25,000,000. Figures of royalty payments to Britain for the manufacture of aircraft and aero engines abroad (including lump-sum fees for the granting of licences) show that such payments rose from £2,562,000 in 1952 to £7,007,000 last year. Of the 14 types of British aero engines for which manufacturing licences have been granted in nine countries, the Armstrong-Siddeley Sapphire is a leading money-spinner. Between 8,000 and 9,000 of these engines have been built so far in the United States, where 4,000 to 5,000 Rolls-Royce Nenes and Tays have also been made. Of the eight types of British aircraft built in eight oversea countries, the Canberra figures prominently. More than 350 have been built in the United States as the B-57, and a further number in Australia. Licence agreements signed in recent months covering the manufacture of Gnats in India and Finland and of Bristol engines in the United States are expected to do much to ensure that the high annual royalty income level is maintained.

MEDIUM-TERM FINANCE FOR INDUSTRY

RESERVE BANK AND STATE BANK ACTS AMENDED

THE Reserve Bank of India (Amendment) Bill and the State Bank of India (Amendment) Bill, introduced in Parliament by the Finance Minister on 20th May, were passed by Parliament on the 27th. The main purpose of the Bill is to facilitate the two institutions to participate in the share capital of financial institutions that may be set up for providing medium-term finance for industries in the private sector. The former Bill also provides for the extinguishment of the liability of the issue department of the Reserve Bank in respect of the unencashed high denomination notes demonetised in terms of the High Denomination Bank Notes (Demonetisation) Ordinance, 1946.

The need for amending the above Acts arose in view of the fact that the existing bodies like the Industrial Finance Corporation, the State Finance Corporations and the Industrial Credit and Investment Corporation could not meet the needs of medium-term finance of industries, thereby necessitating the establishment of separate financial institutions for the purpose. The immediate aim of the Bills is to enable the two Banks to participate in the share capital of the Re-finance Corporation, proposed to be established with a share capital of Rs. 12.5 crores. It has been decided that the Reserve Bank of India should subscribe Rs. 5 crores to the capital of the Corporation, the State Bank of India Rs. 2.5 crores, the Life Insurance Corporation of India Rs. 2.5 crores and the other banks Rs. 2.5 crores. Besides the share capital, the funds of the Corporation will include Rs. 26 crores of American counterpart funds which will be placed at the disposal of the Corporation by the Government of India as an interest-bearing loan for 30 years. It is noteworthy, therefore, that the American "Counterpart funds," which have played such a pivotal role in the economic rehabilitation of a number of Western European countries, particularly of France, Germany, Belgium, Austria and Italy, by being channelled in the shape of long-term and medium-term funds for industries through public and semi-public corporations are being put to a similar use in India.

Expanding Needs

It will be noted that the decision to establish a separate financial institution for the above-named purpose has not come a bit too soon. The expanding needs of industry for medium-term credit have created an enormous pressure on the limited financial reserves of the commercial banks which, as a matter of sound financial policy do not lend for periods exceeding six months generally. Many banks, however, find themselves periodically renewing those short-term loans, turning them virtually into medium-term loans. This is so primarily because the borrowers are unable to raise either fixed interest-bearing capital or equity capital from the market on account of inadequate supply of savings. The banks are reluctant to lend on a medium-term basis, as their deposits are of a call or short-term nature. Of the Scheduled banks, deposits that are repayable on demand constitute about 60 per cent. and those repayable within three to six months 30 per cent. The balance of 10 per cent. represents one year deposits. Quite apart from the considerations of soundness, there is the fact that banks are not in a position to lend more even if they wish to do so, for their existing resources are being fully utilised. The ratio of advances to deposits has been well over 70 per cent. for several weeks now and has been in the neighbourhood of this level for a long time even before.

In the case of the State Bank of India, there are statutory restrictions to grant loans and advances for periods in excess of six months and against the primary security of immovable property. The present amendments to the State Bank of India Act are aimed at removing these disabilities and enabling the State Bank to participate more effectively in the industrial development of the country contemplated under the second Plan.

Speaking on the Bills, the Finance Minister stated that he had been thinking about the need for an institution which could serve the purposes that were being served by discount houses or issue houses in certain countries abroad. These discount houses provide, as readers are aware, equity capital to new industries which cannot obtain the same in the capital market, until they go into production. Obviously, the establishment of an institution to serve this purpose will fill a void in the credit structure of the country.

Complaints have been made time and again that there have been nepotism and favouritism by the new institutional lenders in granting loans. In order to prevent such criticisms in the case of the proposed Re-finance Corporation, it has been decided by the Government that business interests should not be associated with it. According to the Finance Minister, only practical bankers will be associated with it. He expressed the hope that the new institution will help industrialisation of the country in the channels desired by the Government.

PUNJAB FINANCIAL CORPORATION

The audited accounts of the Punjab Financial Corporation (Managing Director: Mr. H. L. Bahl, Jullundur) for the year ended 31st March 1957 disclose a fall in the loans sanctioned during the year, both in number and amount, while the actual amount of loans disbursed and the profit have recorded an increase over the year. The number of applications received agregated 49 for a sum of Rs. 56.49 lakhs, as against 56 for Rs. 70.17 lakhs in 1955-56. The applications sanctioned amounted to 28 for Rs. 26.35 lakhs, having fallen from 33 for Rs. 39.57 lakhs. Applications numbering 21 for Rs. 40.38 lakhs, as against 17 for Rs. 30.25 lakhs, were under consideration at the end of the year, the rest having been rejected and lapsed or withdrawn. It is noteworthy that the number of applications rejected have declined from 12 for Rs. 6.65 lakhs to six for Rs. 2.55 lakhs. This is attributed to the fact that more loan proposals received during the year were well-conceived and practical schemes. The actual amount of loans disbursed during the year aggregated Rs. 21.53 lakhs, having risen from Rs. 19.33 lakhs in 1955-56.

The profit of the Corporation for the year under review amounted to Rs. 3.70 lakhs, as compared with Rs. 3.07 lakhs earned in the previous year and Rs. 2.39 lakhs in 1954-55. After setting aside a sum of Rs. 1.70 lakhs as provision for taxation, as against Rs. 1.30 lakhs a year ago, the Directors have transferred Rs. 3,000 to the reserve fund, which had received Rs. 20,000 in the previous year. A sum of Rs. 27,000 (as against *nil*) has been provided for investment to cover the overall depreciation in the value of Government securities held by the Corporation. These appropriations leave a balance of only Rs. 1.70 lakhs, which is not sufficient to meet the guaranteed dividend of 3 per cent. The shortfall is, however, being met with a subvention of Rs. 1.30 lakhs from the State Government. Thanks to the steady improvement in earnings during the last three years, the amount of subvention received has declined from Rs. 2.09 lakhs in respect of the year 1953-54 to Rs. 1.30 lakhs for the year under review. The contingent liability on account of subventions received so far amounts to Rs. 6.42 lakhs.

The total number of loan applications received up to the end of the year 1956-57 aggregated 244 for a sum of Rs. 288.92 lakhs. Of this sum, the loans sanctioned accounted for Rs. 115.21 lakhs covering 107 applications and the actual amount disbursed for Rs. 64.91 lakhs covering 63 applications.

The paid-up capital of the Corporation is Rs. 1 crore and is supplemented by reserves aggregating Rs. 38,000. The loans and advances outstanding as at the close of the year amounted to Rs. 56.78 lakhs. Investments (at cost) aggregated Rs. 35.90 lakhs (the market value being Rs. 35.64 lakhs) and cash balances Rs. 10.44 lakhs.

CORRESPONDENTS ALL OVER THE WORLD

FOREIGN CAPITAL FOR ITALY

Following the publication of regulations by the Italian Government in July last under the new law on foreign investments brought into force, foreign investments in the country have risen steadily. Under the new law, foreign investments for the "establishment or expansion" of "productive enterprises" enjoy privileged treatment. These enterprises are those which engage in the production of goods and services, as well as those which require for the conduct of their business land reclamation or improvement projects, the installation of factories, yards, power generating sets and the like. A special feature of the rules is that no limitations in time or the quantity concerning the transfer abroad of profits or of the capital itself are placed on such investment. Investments in other enterprises, however, are entitled to the transfer abroad of annual profits up to 8 per cent. Two years must elapse before the capital itself may be transferred abroad. It may be interesting to note here that, in 1956, an amount of the equivalent of £34.7 million was invested in Italy, as against £24 million in 1955. Of the 100 applications received by the Treasury from foreign investors for recognition as "productive enterprises," only two were rejected. It is especially noteworthy that the Inspectorate for Foreign Financial Relations of the Italian Treasury has adopted a speedy and elastic procedure—under which an official reply is assured to the investor within 30 days of his submitting application—for treating applications. This is reported to have greatly encouraged potential foreign investors to sound the prospects of investment in Italy.

Of the new investments, a vast majority is reported to be of U.S. dollars and Swiss francs. A large portion of investments went to petroleum, chemical and engineering industries, that is, in those fields which form the basis of modern industrialisation.

COOCH BEHAR STATE BANK

The dull business conditions in Cooch Behar during 1956, particularly in jute and tobacco, the main cash crop of the State, and the acute stringency in the money market were mainly responsible for the slight decline in the turnover and profit of the Cooch Behar State Bank Ltd. for the year ended 31st December 1956. The profit has been marked down from Rs. 31,330 to Rs. 22,110. With the surplus of Rs. 1,540 brought forward from 1955, the amount available for appropriation is Rs. 23,650. Out of this sum, the arrears of income-tax due in respect of the years 1952 and 1953 have taken up Rs. 9,741. A provision of Rs. 9,400 has been made for taxation, as against Rs. 6,000 set aside last year. The reserve fund, which had received Rs. 10,000 in the previous year, has been strengthened further by the addition of Rs. 4,509, leaving no balance for further appropriation, with the result that the Directors have had to skip over the dividend which was paid for 1955 at As. 2 per share of Rs. 5.

The setback in business is duly reflected in the fall in the Bank's deposits as at the end of the year from Rs. 3.21 lakhs to Rs. 3.12 lakhs and in advances from Rs. 6.67 lakhs to Rs. 4.91 lakhs. The investments have gone up from Rs. 50,000 to Rs. 64,044 and cash balances from Rs. 2.09 lakhs to Rs. 3.69 lakhs.

The Bank was incorporated in 1949, having been sponsored by the then Ruler of the Cooch Behar State. Following the merger of the State with West Bengal, the major part of the shareholding of the Ruler was transferred to the Governor of West Bengal and the Bank is now a State-owned company. Negotiations for taking over the Bank by the State Bank of India have now been completed. On the appointed day to be fixed by negotiation, and, on approval of the same by the Central Government, the assets and liabilities of the Bank will be taken over by the State Bank of India.

STATE BANK OF INDIA

In answer to a question in the Lok Sabha whether there are restrictions on withdrawals from current accounts in the State Bank of India, if the drawee puts his signature in Hindi, Mr. T. T. Krishnamachari, Union Finance Minister said:

"The State Bank accepts cheques and endorsements in Hindi without restriction as to the amount at its branches located in Hindi-speaking areas and adjacent areas where Hindi can be easily understood. At other places, the local agent has the discretion to specify a limit as regards the amounts for which cheques can be signed in vernacular. Alternatively, the Bank may require the accountholder to sign cheques in the presence of a supervising official; but this requirement is waived at the discretion of the local head office of the State Bank when circumstances appear to make such insistence on this requirement undesirable. The restriction obtaining in areas where Hindi is not the regional language or where Hindi is not easily understood is considered necessary in the interests both of the Bank and the public. This can be appreciated if one keeps in view the fact that quite a number of constituents signing in vernacular have not yet acquired fluency and fully developed handwriting therein. There are also possibilities of signatures being forged if they are drawn in a language with which the supervisory staff of the bank are not fullf familiar."
