COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2468 | BOMBAY, 5th JULY 1958 | PRICE: Re. 1.50

EXTERNAL PAYMENTS CRISIS

INDIA'S foreign exchange reserves fell further in the last week of June 1958 to stand at Rs. 217.70 crores. This brings the total recession in the second quarter of the current year to Rs. 70.66 crores, taking into account the sum of Rs. 21.33 crores received from the British Government by way of advance payment of the instalments due on the sterling pension annuities account. But for this receipt, the external assets would have fallen well below Rs. 200 crores by now. In addition to these external assets, India has gold coin and bullion of the value of Rs. 117.76 crores. Thus, the total external reserves are of the order of Rs. 335.46 crores. country, owever, can afford to reduce its rves to zero. It has generally been accepted both the Reserve Bank and the Government ndia that, as a policy of caution, the gold rves should be kept untouched and that, of foreign currency reserves, at least a mini- n of Rs. 200 crores should be maintained. his informal decision were to be stuck to, balance available for expenditure would be nore than Rs. 18 crores. This is not ade- te to cover the requirements of even one nth which, in the previous quarter, averaged out Rs. 24 crores per month. And yet there e outstanding commitments to the tune of s. 880 crores in respect of capital goods ordered y India under the second Five-year Plan. The tual foreign exchange gap as estimated by the lanning Commission is, however, lower at s. 560 crores, assuming that a minimum of s. 200 crores has to be kept in the form of currencies and that the gold coin and ot to be drawn down. Apparently, ween the two figures, namely, Rs. 560 crores is covered by the foreign aid that has been promised so far. Of the foreign exchange gap of Rs. 560 crores, it is further estimated, half will have to be found before April next and the recent U.S. Export-Import Bank loan of $150 million (roughly Rs. 72 crores) will not be available for this purpose. In other words, India will have to find Rs. 250 crores to Rs. 280 crores of foreign exchange in the coming nine months to pay for the commitments that mature during this period. This figure will go up to Rs. 300 crores, if allowance is made for the repayment of foreign loans that fall due in the fiscal year 1958-59. The amount of such repayment is officially placed at Rs. 23 crores.

The foregoing account gives a brief but a clear, we hope, picture of the magnitude of foreign exchange crisis that confronts India now. A solution for this cannot be delayed for long. This is the immediate aspect of the foreign exchange crisis. The next aspect covers the period from April 1959 to the end of the second Plan. that is, March 1961, a period of two years. The foreign exchange to be found during this period will be a little over Rs. 400 crores, taking also into account the repayment of the old loans that fall due. Then there is the third aspect of the foreign exchange problem; this pertains to the third Plan requirements and the repayments of loans already obtained and falling due during the period of that Plan. On the present reckoning, the latter amount to Rs. 123 crores in 1961-62, Rs. 107 crores in 1962-63, Rs. 48 crores in 1963-64 and Rs. 35 crores in 1964-65, or a total of Rs. 313 crores in the first four years of the third Plan. These amounts may well be more, for it is unlikely that they include the effect of all the deferred payment arrangements that have been concluded in the past one year. Accordingly, it will not be very wide of the mark to say that the third Plan period will commence with a down short-term foreign exchange liability of least Rs. 400 crores, if not more, of which 75 per cent. will have to be found in the first three years. There will in addition be the foreign exchange gap of the third Plan which may be anything between Rs. 1,500 crores and Rs. 2,000 crores, depending upon the type and magnitude of the Plan and on the level of world prices.

It will thus be seen that India is in for a foreign exchange deficit for several years to come, even if its living standards are to be raised by a modest extent in the face of a fast growing population. This fact we dare say is already well known to all those who have paid some thought to the problem of economic development of India. There is, therefore, nothing new t it. Even the present acute foreign exchange problem was anticipated and is well understood. It is not, therefore, correct to say, as Mr. H. V. R. Iengar, Governor of the Reserve Bank, did in his speech under the auspices of the Progressive Group early this week, that, in writing and talking about the foreign exchange crisis, people do so as though it has come upon the country suddenly and surprisingly. If, however, the Press writes about it and people talk about it, the explanation for it is to be found in human nature. Since no successful steps have been taken to arrest the fall in foreign balances and the balances themselves are fast approaching the irreducible minimum, the people concerned in India and abroad are wondering as to what the Government of India will do next. The problem has undoubtedly become hot news.

The authorities in India should have anticipated this development and initiated timely measures to prevent it. They may very well retort by saying that they have all along been seized of the problem and had not slept over it. That is, of course, true, but the proof of it is not convincing. There has been more talk on their part but very little effective action. We have all talked about the urgency of export promotion for nearly two years, if not more. What action has the Government taken in this direction, except to impose punitive taxation on domestic consumption which has proved t be self-defeating? Even the few measure initiated very recently are of a halting, un imaginative and belated nature. Wrong notion about profit margins of manufacturers an exporters and ideological considerations hav blinded it to the realities of the situation. On can pertinently ask the Government as to wh it has not taken concerted action on the recom mendations of the expert committee on expor promotion. There has been no dearth of sounc advice and practical guidance from competen quarters. I' is the Government which has beer very slow in responding to them. No wonder therefore, that people get discouraged, harbou doubts and are inclined to be pessimistic abou the future. Optimism in such matters cannot be engendered merely through pep talk o teasers, or passionate appeals to the patriotism of the people. Nor can it be done by exaggerating statistical truths notorious for their flexibility or by approvingly quoting unproved and untested testimony of some foreigner, however great an expert he may be.

Take, for instance, the statement of Mr Iengar that, in the past decade, the Indian rupee has depreciated to a much smaller extent than the U.S. dollar or the British pound. Will this kind of argument carry much conviction to foreigners who are inclined to invest in this country? Can it be contended that, in the international money markets, the Indian rupee commands more confidence than either the U.S. dollar or the pound sterling? Again, what consolation can the people of India derive from such comparisons? What worries an average Indian is the continuing increase in his cost of living, which, in the past two years alone, has shot up by no less than 15 per cent., as against about 7 per cent. in the U.S. and the U.K. That apart, the adverse effect of a 2 per cent. fall in the purchasing power of the rupee on Indian citizens is far greater than that of a 3 or 4 per cent. fall in the value of the dollar and sterling on the citizens of their respective countries. For an average Indian gets only Rs. 280 per annum, as against about Rs. 4,300 and Rs. 9,750 by his British and U.S. confrere, respectively. Equally unconvincing Mr. Iengar is when he tries to ginger up confidnce in the rupees in this country and abroad by quoting a reported statement of Mr. C. Douglas Dillon, the Deputy Under-Secretary of State for Economic Affairs in the U.S. Government. In a testimony to the U.S. Congress in favour of continued foreign aid to friendly foreign nations, Mr. Dillon is reported to have said that, in his opinion, there was "a very reasonable chance"—mark the words within quotations—that the Indian currency would be a relatively hard currency within 10 to 15 years. That is the cautious guess of Mr. Dillon and we do not know what reasons he advanced in support of it. But it is something hard to believe and difficult to substantiate. If, however, Mr. Dillon hazarded that view, it was with a view to influencing the Congress in favour of his Administration's foreign aid bill. It was a political and not an economic argument. But does it redound to the credit of the Governor of the Reserve Bank to advance that nebulous opinion in favour of the rupee? To do so is tantamount to indulging in overoptimism.

In any case, to speak about the likely status of Indian currency 15 years from now is to engage oneself in an academic exercise of no immediate value. The problem of the moment is one of finding ways and means of filling up at least the first part of the foreign exchange gap described earlier. This can be solved only with the co-operation of countries to which India has to pay. Stimulating exports and reducing imports are, of course, the usual methods of adjusting an imbalance in the external payments account. While we do not minimise the importance of these traditional methods, the gap is

so large and the time at the country's disposal so short that it is no use depending on this twin solution alone. Some are advocating devaluation as one of the remedies. But this remedy is worse than the disease. India may as well abandon its plan for economic development rather than resort to it. Equally undesirable are such methods as allowing exporters to keep a part of the export proceeds in foreign exchange or conferring on them special quotas for imports of goods that are scarce in this country. These methods do not differ from the much discredited system of multiple exchange rates. The most effective solution is to request countries like Britain, West Germany, Japan and the U.S., with which India has placed its orders for plant and machinery, to fund the short-term liabilities due to them into long-term loans. The Government of India should explore the possibilities of reaching an agreement along this line without any delay. No question of prestige is involved here, for even countries richer than India resorted to this course when they were faced with similar difficulties. In addition to this, urgent efforts must be made to secure a standby credit from the U.S. or a fresh lump-sum cash loan of $400 to $500 million which will go to boost our currency reserves and engender confidence among investors interested in this country. With such a backing from the U.S., it should be possible to raise medium and long-term loans in some of the creditor and capital exporting countries in the world. As a measure of emergency, it should also be possible to get at least $100 million from the International Monetary Fund over and above the $200 million which India obtained early last year.

All these are remedies that can be applied successfully and quickly, given the goodwill of friendly countries. But these alone will not be sufficient. They require to be supplemented by a reorientation of India's economic policies which will strengthen its capacity to produce and export the type of manufactured goods and raw materials needed by the rest of the world and which will enable it to compete effectively for a sizable share in the foreign risk capital seeking profitable opportunities outside its home. Care must also be taken to ensure that the planners in this country do not repeat the costly mistakes they made in the preparation of the second Plan.

CEMENT PRICES

THE Government's decision on the Tariff Commission's inquiry into cement prices has aroused country-wide interest. This is natural, considering that cement is a basic commodity of vital importance to buildings, roads and multi-purpose projects. And cement in this country has had a not uninteresting past. Absolute scarcity of cement prevailed in the early post-war years. But it was also among the few industries which qualified early for decontrol by reaching record production. This, however, proved short-lived. Shortages developed very soon, thanks to the fact that demand outstripped supply under the impact of large development expenditure. An expert committee was deemed necessary to suggest measures of economy in the use of cement. The Government, anxious to make revenue hay while the sun of shortage shines, imposed a stiff excise duty on cement. Not content with this, it proceeded promptly to transfer trading in cement to the State Trading Corporation which, at the expense of the ill-protected consumer, reaped a fortune that would be the envy of the worst of war-time profiteers. It now looks as though cement shortage is a thing of the past, though, in relation to potential, as distinct from actual, demand, there is scope for considerable increase in cement output.

The fact that the industry has, by and large, been able to meet the steadily increasing demand for its product is evident from the successive production records it has established. In 1946, it was able to produce no more than 1.54 million tons. By 1951, the first year of the first Plan, it had reached 3.19 million tons. Five years later, in 1956, production exceeded 4.93 million tons. Last year, it produced 5.55 million tons. By any reckoning, this is an impressive record. At present, the rated capacity of the 28 units in the industry—13 units of the Associated Cement Companies group, two State-Government factories and 13 units owned by different public limited companies—is about 6.33 million tons. Much increase in production is now being planned. Existing producers are expected to set up eight new factories and there will be no less than eighteen new entrants into the field. It is difficult to estimate how many of them will be able to reach firm production in the next few years. But the Tariff Commission has provisionally estimated that the industry's annual capacity will reach about 8.4 million tons by 1958, 10.5 million tons by 1959, 12.0 million tons by 1960, 14.8 million tons by 1961 and 15.1 million tons by 1962.

The question of cement prices is intimately connected with the industry's expansion programmes. After all, the industry should be enabled to raise a reasonable proportion of the finance it needs for expansion and nearly all the finance it would require for replacement and renovation of its existing plant. In fixing the prices of cement in the last enquiry, the basis adopted by the Tariff Commission was a 10 per cent. return on gross block plus an allowance for working capital calculated at 4½ per cent. on an amount equivalent to five months' cost of production. The Government, however, considered an 8 per cent. return on gross block sufficient. This was one of the reasons why it decided that the standard price of cement should be Rs. 67 per ton, as against Rs. 72 recommended by the Commission. Be that as it may, it is noteworthy that the Commission itself has now departed from the gross block formula. It has apparently become wiser and has advanced some very cogent arguments against the method of expressing the return to an industry as a percentage of its gross block. It points out that a return to an industry, expressed as a percentage of gross block, includes profit on the portion of the value of fixed assets which is already covered by depreciation set aside in the past. In the case of old and established industries with plant and machinery which have been written down over a period of years, the percentage is applied to a large part of its original value which has been recovered in cost by way of tax-free depreciation allowances. Again, this formula creates anomalies in an industry which consists of old and new units. "The gross block of old companies," the Commission says, "will continue to increase out of depreciation allowances already granted to them, while new companies grow side by side in which the relation between gross block and capital employed is substantially different."

These considerations have prompted the Commission to adopt "employed capital" as the basis for arriving at a fair return for the cement industry. In this connection, it quotes the accepted definition of employed capital, namely, the "net assets comprising fixed and current assets used in the business, less current liabilities and provisions." The Commission has also had to assess the employed capital for each unit in the context of the latter's future programme of expansion, while working capital has been assessed at five months' cost of production. After thus determining the basis for calculating the return, the Commission has addressed itself to the far more practical problem of fixing the actual quantum of return on employed capital. It recalls that, in the case of the rubber industry, it took the view that 10 per cent. of capital employed would be a fair return for that industry. It recognises that, since 1955 when the case of the rubber industry was examined, the rates of taxation applicable to companies have increased from about 44 per cent. to about 51½ per cent. and the rates of borrowings have also increased by 1½ to 2 per cent. There have also been increases in wages and emoluments to labour and staff. It, therefore, regards 12 per cent. of capital employed as a fair return for the cement industry. This is the quantum of return allowed to the low-cost units, namely, A.C.C., Dalmia Bharat, Dalmia Dadri, Digvijay, Jaipur Udyog, Kalyanpur, Orissa Cement, Rohtas and Sone Valley. The high-cost units, namely, the Andhra Cement, Ashoka, Bagalkot and India Cements will get a return of 10 per cent. The two State-Government-owned factories, namely, the Mysore Iron and the U.P. factory—they do not face income-tax liability—will get a return of 6 per cent. on capital employed. Besides, a rehabilitation allowance at the rate of Rs. 4 per ton—this would yield about Rs. 2 after payment of income-tax—has been permitted. It is gratifying to note that the Government, unlike in the past when it sometimes arbitrarily varied, amended or rejected the Commission's recommendations made after careful investigations, has accepted this basis of cement prices. It has, however, held, for certain administrative reasons, that the revised prices should take effect from 1st July 1958 and not from 1st January 1958, as recommended by the Commission; the revised prices will, however, remain in force till the end of June 1961, thereby not whittling down the duration of the period suggested by the Commission.

The question of cement prices assumes special importance in the light of the admitted need for increased production. It is true that, in the absence of reliable statistical data, no reasonable estimate of the country's requirements of cement can now be presented. Indeed, estimates of future requirements have varied from time to time and often so widely that the lay public has been mystified, rather than illuminated, by discussions on cement targets. Perhaps, the Government, too, is partly to blame for the way in which it has permitted its imagination, rather than prudence, to determine targets for cement. At present, the pruning of the Plan and the shortages in steel and other building materials have adversely affected the demand for cement. But the position will change when these impediments disappear. It must also be recognised that, in the long run, the domestic consumption of cement will grow and that it is also necessary to stimulate such consumption, for few commodities play a more important part in raising living standards than cement. If production exceeds domestic demand, there is, as the Commission points out, the "possibility of developing an export market in cement, especially by those units which are favourably situated near the coastline." But, at present prices, Indian cement is clearly priced out of the export markets where East and West European countries, as well as Japan, are keen competitors. At a time when the industry could have found a market, the Government, fearing shortages in the country, prevented exports, though it is now interested in promoting them. But export markets cannot be made to order. They have to be fought for and nursed.

In any case, so far as internal consumption is concerned, the Commission has recorded that the view was expressed at the time of the enquiry that "one of the main reasons for the slow tempo of demand is that the present consumer price of cement is high." The consumer price, namely, Rs. 117.5 per ton (which has remained unaffected by the increase in prices granted to the producers) is certainly on the high side. Till recently, the heavy margin of profit, amounting to Rs 13 per ton, earned by the S.T.C. was one of the reasons for the high price. But the increase in excise duty, deliberately effected in order to drown the cry of excessive profiteering by the S.T.C., and the rise in railway freights have no doubt reduced this margin sizably. Even so, the S.T.C. has, in the past, exploited the cement consumers to its own advantage. This exploitation continues, albeit in a different form, that is, enhanced excise duty. Further, the surcharge lost all its validity when the S.T.C. could not, or was not allowed to, arrange for imports of cement. The basic question now is not whether the S.T.C.'s margin of profit is high or low but whether it performs any service at all which entitles it to hold the monopoly in cement distribution. Equally basic is the question whether the increase in excise duty, justified on the ground that a shortage in cement exists and that the Government should, in the public interest, leave no room for black marketeers to keep all the jam for themselves, should be continued, now that there is no shortage.

Expansion of the industry, whether such expansion is intended to meet domestic demand or exports, will need large financial resources. According to a conservative estimate, the industry will need some Rs. 75 to 80 crores in order to double the installed capacity from 6 to 12 million tons. It is a moot point whether the profit margin now permitted by the Commission will enable the existing units to expand production to any sizable extent. From the point of view of increased production, the Commission's conclusions from its study of the relevant issues deserve notice. The Commission reiterates the well-known fact that the manufacture of cement is a continuous process which is maintained round the clock except when partial shut-down takes place for repair or overhaul. But it sets forth a conclusion which is not perhaps so well known, namely that only limited economies in costs are possible through increased production (by installation of additional plant). Accordingly, it has stressed: (1) subject to availability of the required quantity of raw materials, the desirable course for an *entrepreneur* would be to install kilns capable of large outputs of clinker in order to ensure that the manufacturing charges and overheads incurred result in achieving the largest volume of production; (2) if raw materials and space are available at a particular site where a plant is in existence, the most profitable way of further developing that site would be to double or treble the plant until the site is fully exploited; the need to go to another site should arise only when the site is completely exploited. Both in the interests of increased production and those of production at economic cost, we commend these very pertinent conclusions of the Commission to the Government and the cement producers alike.

SIGNIFICANCE OF GOVERNMENT'S DECISION ON CEMENT PRICES

SUGAR EXPORT—COMMODITY TREND—WORLD WHEAT

THURSDAY, 5 P.M.

MARKET GOSSIP

THERE have been no outstanding developments in the city markets during the week under review. The bullish fervour in shares continues and, over the week, there have been sizable gains on a wide front. But higher levels are attracting more profit-taking than they did last week. This is only but natural, having regard to the spectacular gains recorded in recent weeks. Those who see a substantial gain in their holdings will do well to remember that book profits are no good, that a gain on any investment is real only when it is realised and that it is easier to sell only in a rising market. On the basis of yield, which is the most important criterion, several of the popular counters appear to be overvalued. At current rates, Tata Steels, for instance, are barely yielding 5 per cent. Apparently, the market seems to be looking too far ahead, a highly risky thing to do. There are, however, several scrips yet, mostly in the cash list, where the yields are sufficiently attractive on the basis of their latest dividends.

In the bullion market, values have suffered a sharp recession due to a fall in demand and a marked rise in arrivals. It is alleged that, during the last few days, there has been a spurt in the smuggling of gold and, to some extent, even in silver. The abolition of the export duty on groundnut oil and castor oil on Monday had a favourable effect in the initial stages not only on oilseeds and oils but even on cotton, as it led to hopes of greater encouragement for the export of this commodity as well. But this improvement has not been fully sustained in both the commodities, because the overseas demand is not very encouraging. Reports of good rains in the interior have also restrained the upward trend in commodity prices, as they have given rise to expectations of better crops. Prices of sugar, too, have declined to some extent, as the quantity of sugar released for export was much less than the earlier expectations.

The money market is dull. The supply of funds with bankers is increasing, while the demand is slack. But this state of affairs has not yet influenced the interest rates to move in a downward direction, because of the expected withdrawal of funds on a sizable scale for subscriptions to the new loans of State Governments. Until these issues are out of the market's way, there is unlikely to be any perceptible change in short-term interest rates.

* * * *

The Tariff Commission's recommendations on cement prices and their acceptance by the Government of India without any ado are very interesting. They are examined at some length on the opposite page. From the share market's angle, they are, indeed, significant in one respect. They suggest that the Government is now in a better mood to appreciate the industry's point of view. Indeed, it has agreed to give up, as suggested by the Tariff Commission, even the rebate which it was getting from the cement companies on the cement sold by them to the public sector. It will be recalled that, last time when the Tariff Commission reported on the question of fair prices to the Government, Mr. T. T. Krishnamachari, the then Commerce and Industry Minister, who used to call himself the jailer of the private sector, did not accept the Commission's suggestions; instead, he considerably watered down the margin of profit proposed by the Commission and humiliated the cement manufacturers by placing stringent controls on the reserves to be built out of the special rehabilitation allowance. When one of the cement units, Sone Valley which was then under the management of Martin Burns, Calcutta, refused to submit to his conditions on a point of principle, he arbitrarily declared the Company to be ineligible to that allowance, an action which ultimately led to the transfer of the managing agency of that Company to another group of business men.

In refreshing contrast to this highhandedness by Mr. Krishnamachari which had demoralised not only the industry and those who had invested their savings in it but also the Tariff Commission, Mr. Lal Bahadur Shastri, the present Commerce and Industry Minister, has gracefully recognised the independent character of the Commission and given the respect due to it by accepting its recommendations. By doing so, he has also restored the confidence of investors, to some extent, as witness the continued firmness of cement scrips on the Stock Exchanges. Mr. Shastri has, indeed, acted correctly and that like a gentleman. It is to be hoped that this is a harbinger of a new era of better relations between the Government and investors.

As will be seen from the article on the facing page, the Tariff Commission has adopted a new basis for deciding the retention prices for cement producers. It is an extension of the principle followed by it for determining the fair price for rubber producers. Will this new basis be extended to producers of steel, too, and if so, will it be more favourable than the one now in force? Is the continued firmness of share markets due to expectations of an increase in the retention prices of steel in the near future? Answers to these questions will make interesting reading.

The sugar export policy that has now been finalised by the Government is the result of close co-operation between the Ministry of Food and Agriculture and the sugar industry. But the outcome resembles the mouse that emerged from the mountain of labour. The quantity of sugar which the Government has allowed for export, namely, 50,000 tons, is so small and the foreign exchange that is expected to be earned is so negligible that one wonders whether it was the consideration of saving face that finally led to this decision. The loss of internal revenue arising from this export by way of income-tax, corporation tax, excise duty and cane cess and the reduction in the national income brought about by lower price realisation are disproportionately high as compared with the foreign exchange that the country can get from this export. In the opinion of this journal, the game is not worth the candle. It may be argued that even a small contribution to the foreign exchange resources is valuable, because of their acute scarcity at present. But to try to justify the export of sugar, at a disproportionately heavy cost to the rupee resources available to the Government, which, too, are by no means plentiful, on this argument is simply ridiculous. Perhaps, for a smaller sacrifice on some other easily exportable commodity, as, for instance, tea, a much larger amount of foreign exchange could be earned.

The whole policy governing sugar exports is defective in many respects. It may not be free even from legal flaws. The sugar industry has, however, given an undertaking to the Government that it will not pick holes in the scheme and that it will not challenge the validity of the Sugar Export Promotion Ordinance in a court of law. This is a striking commentary on the spirit of co-operation and discipline displayed by sugar manufacturers. But we suspect that this is due to a fear complex rather than to the conviction that what the Government has asked them to do is the only right solution. For over a year now, many of them have been labouring under the fear of full nationalisation or partial nationalisation through the State Trading Corporation. Evidently, they are hoping that, by co-operating with the Government and carrying out its bidding, they can avoid this danger. Events alone will show whether they are right in this assumption. It must, however, be said to the credit of the Government that it has taken care to eliminate some of the defects noticed in the machinery chosen for export last year. Although the exports are to be channelled again through the Indian Sugar Mills Association, as was done in the previous season, certain safeguards have been provided which in a way neutralises the objections to allowing the trade to be handled by a monopolistic body. It had been expected that a separate company would be appointed for handling this export business but the idea seems to have been given up at the last moment. This only shows how undecided the Government was almost right up to the end.

* * * *

There has been a slight improvement in the trend of world commodity prices in recent months. Most of the commodities are now quoted higher than in the earlier part of this year. The recent rise in prices is, no doubt, small, except in two cases, but it is in refreshing contrast to the continuous decline suffered in 1957. The *Financial Times* index number of commodity prices as on 27th June 1958 (the latest date for which data is available) stands at 80.95 (base: 1st July 1952=100), as against 79.65 in the middle of March which was the bottom touched so far. Similarly, *Reuter's* U.K. commodity index of prices shows a rise to 416.5 (base: 18th September 1931=100) from 409.9 on 13th March last. A far more interesting picture of the trend of prices since the beginning of 1956 can be had from the following table of percentage changes in the *Economist* commodity price indicator for seventeen commodities:

	1st quarter	2nd quarter	3rd quarter	4th quarter
1956 ..	+0.34	−5.23	+4.41	+3.70
1957 ..	−3.26	−1.37	−4.16	−4.79
1958 ..	−1.40	+1.07	—	—

The overall improvement in prices would have been much less pronounced but for the sharp rise in copper and cocoa prices. The trend of prices of individual commodities varies according to differing circumstances. As an instance, cocoa has been steeply rising throughout the period of slump, because of the crop failure in West Africa. In most cases, stability of prices has been brought about by deliberate curtailment of production, albeit for a temporary period. Supplies have been held off the market by international agreements, such as in tin, wheat and, to some extent, in sugar and copper and by the U.S. Government's stockpile scheme for copper. Although all these price support and cut in output schemes have not brought about any substantial recovery in prices, they have at least helped to arrest the fall and impart a certain measure of stability to the markets. There are, however, a few exceptions to this, as, for instance, sugar.

The main question that is being discussed in world markets is whether commodities have touched the bottom or a fresh recession in prices will set in or whether the present signs of recovery will gather momentum. The consensus of opinion is that it is too early to give a definite answer. As all students of economics know, much depends on the supply and demand position. So far as supplies are concerned, the production of several commodities, particularly tin and copper, has been curtailed below the present actual consumption needs. In petroleum, the surplus stocks have been nearly worked off by a judicious cut in production and the trend of prices stabilised. As for the demand, there are already indications that buyers are coming in as inventories have been depleted, but whether the demand will gather strength to any significant extent will depend on the trend of industrial activity, particularly in the U.S. This again takes us back to the question whether the recession in the U.S. has flattened out and a gradual recovery in business will set in. Describing the latest position of the U.S. economy, the July 1958 *Monthly Letter* of the Firs. National City Bank of New York observes:

"The economy at mid-year is marking time, with the downturn arrested but no indication as yet of a vigorous recovery. A sufficient number of the basic economic indicators now show moderate gains over the low points reached in late winter or early spring to provide assurance that the expected 'bottoming out' has, in fact, occurred. On a seasonally adjusted basis, small but encouraging increases were registered during May in industrial production, personal income, retail sales, housing starts, and total employment. Preliminary data indicate that these advanced levels were at least maintained in June.

"The temptation to take a rosy view of imminent recovery is strong, but a more likely prospect, as described by Presidential Assistant, Gabriel Gauge, is that the economy 'will mill around in the summer.' The hope aroused by recent favourable developments is moderated by the prospect that seasonal declines will be accentuated in steel, automobiles, and other lines, that liquidation of inventories will continue, and that business men will cut plant and equipment expenditures further."

It is stated that the seasonal fall in U.S. output during summer will be greater than usual. It would not be unusual, the Bank's *Monthly Letter* points out, for industrial production to fall back again after a brief advance from recession lows, as it did happen in a number of previous recessions. In short, it is extremely difficult to say whether the recent recovery in commodity prices will continue. If it does, it cannot but be a slow one.

The trend of commodity prices depends not only on what happens in the U.S. but also on the trend of European economy. In this connection, the latest report of the U.N. Economic Commission for Europe, entitled *Economic Bulletin for Europe*, throws some interesting light. This report says that European industrial output has tended to stagnate or even to decline in certain industrial countries, and that there has been a marked slackening in the flow of incoming orders. The weakening of demand has fairly generally affected the basic materials and textiles industries, whereas developments in the metal-using industries have varied a great deal from country to country and industry to industry. Coal and steel have been the products principally affected by the stagnation or downturn in economic activity. The weaker market for steel, with the principal exception of certain types of rolled products destined mainly for motor vehicles, appears to be associated with the slackening of domestic demand for some products of the metal-using industries. For the first time since the recession of 1953-54, the report adds, the gap between coal production and consumption has been closing and the rapid accumulation of pit-head and other stocks is now tending to affect the course of output which is running below the previous year's level in both Western Germany and the United Kingdom. The accumulation of stocks and the less firm demand than heretofore have presented the industry with a dilemma concerning the maintenance of its labour force. In the market for forest products, signs of weakening demand, particularly indications of reduced building programmes for 1958, have rendered importers of sawn timber more cautious than usual. While the output of the metal-using industries is, on the whole, still well maintained, particularly in the motor vehicles industry, the decline in new orders in many Western European countries is giving rise to concern, especially for shipbuilding, where very few new orders were passed in the first quarter of 1958 and an increasing number of orders has been cancelled. Referring to the consumer goods industries, the E.C.E. report remarks that the declining tendency is clear and widespread in the textiles sector, where output has been falling since the middle of last year after a brief period of expansion, and that such indications as exist do not suggest an improvement in the textile market in the near future, possibly rather the reverse.

Taking all this into account, it appears that the commodities are not yet out of the woods. It is true that the Governments of Britain and West Germany have relaxed their credit restrictions, reduced the interest rates and given fiscal concessions to revive industrial activity and to encourage a higher rate of investment in plant and machinery. Some of the other European Governments are also in a mood to do so. It is, however, rather premature firmly to anticipate the effects of these steps. Commenting on this question, the *Economic Bulletin for Europe* observes:

"The long-term expectations of the Western European business community appear to be optimistic, in part on the basis of the economic expansion expected to follow the creation of the Common Market. In the short run, the deterioration of expectations has probably not gone far enough to render investors unresponsive to a relaxation of restrictions and to other Government actions to stimulate economic activity. The improvement of foreign exchange reserves in some countries, and the somewhat better distribution of those reserves, has removed one of the objections which could

EQUITIES RULE FIRM

PROFIT-TAKING WELL ABSORBED

From Our Own Correspondents

BOMBAY, *3rd July*

FOR yet another week, the share market continued to maintain a cheerful tone and prices forged ahead. There was heavy profit-taking at higher levels, but this was all well absorbed by the market without affecting the morale in the least. In addition to the usual speculators, a large number of outsiders, attracted by the prevailing easy money condition, would appear to have entered the market, with the result that there was demand for many cash scrips which had hitherto been dormant. The market sentiment was sustained by the announcement of an increase in retention prices of cement, which had long been expected, and by reports that the Textile Enquiry Committee might make interim recommendations for reduction of excise duty on cloth. The expectations of a bonus issue by the Indian Iron and Steel Company, which gained further ground this week, also whipped up bullish enthusiasm. The proximity of dividend announcement by the T.I.S.Co. and T.E.L.Co. attracted attention to these shares and they scored handsome gains.

In the steel section, Tata Ordinaries, which were listed *ex*-right on the 1st inst., came up to Rs. 164.75 before closing at Rs. 163.50, as against Rs. 187.50 *cum*-right. The new shares closed at Rs. 161.25 *ex*-right, as compared with Rs. 185.25 *cum*-right a week ago. Indian Irons advanced from Rs. 22.60 to Rs. 23.16 on good support, but profit-taking erased part of the gain and the shares closed at Rs. 23.04.

Textile shares scored smart gains on expectations of interim relief in excise duty. Bombay Dyeings touched a high of Rs. 58.80 and finished at Rs. 58.20, a rise of Re. 1.50 over the week. Century Mills hardened from Rs. 449 to Rs. 461.75, before shading off to Rs. 457 at the close. Kohinoors rallied from Rs. 274 to Rs. 278, but reports of a cut in interim dividend brought the shares back to Rs. 270.50. Edward Textiles recorded a rise of Rs. 5 to Rs. 260 and Elphinstones moved up by Rs. 2.50 to Rs. 44. Finlays gathered Rs. 6 over the week to Rs. 279 and Gokaks Re. 1 to Rs. 153. Indu Ordinaries changed hands 60 nP higher at Rs. 10.32. Indore Malwas were done Re. 1 better at Rs. 111. Khataus advanced by Rs. 5 to Rs. 190 and Morarjee Mills by Rs. 15 to Rs. 245. New Greats were unchanged at Rs. 210, while New City Mills put on Rs. 2 to Rs. 114.50. Podars were done at Rs. 140 *ex-div.* (div. Rs. 6 final), as against Rs. 145 *cum-div.* Shree Niwas Cottons gained Rs. 4 to Rs. 156 while Simplex, after an earlier gain from Rs. 179 to Rs. 181, slipped back to Rs. 177. Standards stood to gain Rs. 2.50 to Rs. 423. Svadeshis changed hands at Rs. 189.50 *ex-div.* (div. Rs. 9), as against Rs. 193.75 *cum-div.* a week ago, and Tata Mills at Rs 41.50 *ex-div.*, as against Rs. 42.25 *cum-div.*

Bank shares also looked up fractionally. Barodas were again a feature with a rise of Re. 1.50 to Rs. 119. Centrals were unchanged at Rs. 53.50, while their new shares shed 50 nP to to Rs. 57.50. Bank of Indias (old and new) gained 50 nP each to Rs. 134 and Rs. 135.50, respectively. Jaipurs were done 25 nP higher at Rs. 37.50. Punjab Nationals shed Re. 1 to Rs. 61, while United Commercials gathered 40 nP to Rs. 61.80.

In the electricity section, Ahmedabad Electrics moved up by 80 nP to Rs. 95.50 and Bombay Suburbans by Re. 1.50 to Rs. 107.50. Surat Electrics also rose by Re. 1.50 to Rs. 112. Tata Hydros were higher by Re. 1 at Rs. 119 and Tata Powers by Rs. 2.50 at Rs. 1,237.50, while Andhra Valleys were marked down by Rs. 3.75 to Rs. 1,140.

Sugar shares advanced in consonance with the general trend of the market. Belapurs appreciated from Rs. 259 to Rs. 263.50, but closed a little lower at Rs. 262. Bhopals put on 24 nP to Rs. 22.48, Changdeo 75 nP to Rs. 27.50 and Phaltans Re. 1 to Rs. 159. Walchandnagars rose by Rs. 3 to Rs. 288. The announcement of an increase in cement prices did not have any notable effect on cement shares, as the news had already been discounted in prices. Associated Cements moved up from Rs. 158 to Rs. 160.50, but receded to Rs. 158.50 at the close. Their new shares were steady at Rs. 152. Digvijays were the only notable feature with a rise of Rs. 7 to Rs. 159.25. India Cements picked up 90 nP to Rs. 28. Ashoka Cements gathered 24 nP to Rs. 10, while Dalmias and Bagalkots were unchanged at Rs. 10.68 and Rs. 9.16, respectively. Jaipur Udyogs picked up 28 nP to Rs. 13.91, while Orissa Cements declined by 28 nP to Rs. 13.40.

Engineering shares were keenly bid and smart rises were recorded in most counters. Tata Locomotives shot up from Rs. 174 to Rs. 180 on expectations of higher dividend. Premier Constructions advanced by Rs. 3.50 to Rs. 205.50 and Larsen and Toubros by 16 nP to Rs. 18. Josts Engineerings were taken Rs. 5.50 higher at Rs. 58. Among mining shares, Srivrajpurs gathered Re. 1 to Rs. 93 and Indian Coppers 30 nP to Rs. 370. B.B. Petrols were done 20 nP higher at Rs. 2.28.

Shipping shares were taken up at slightly higher rates. Scindias moved up from Rs. 18.52 to Rs. 19, but shaded off to Rs. 18.68. Great Easterns also gained over the week 16 nP to Rs. 24.72.

In the miscellaneous group, Bombay Burmahs (old) staged a sharp rally from Rs. 569 to Rs 599.50, before closing at Rs. 592. The Partly-paids put on Rs. 6.25 to Rs. 220. National Rayons, after being dormant for some time, attracted attention and gained from Rs. 232.25 to Rs. 238.75. Gwalior Rayons were steady at Rs. 13.80. Tata Oils were a fraction down at Rs. 41.75; the Company maintained the dividend for the year 1957-58 at Rs. 2.50 per share. Hindustan Levers were unchanged at Rs. 23.60. Chemical shares continued to be well favoured. Tata Chemicals picked up 40 nP to Rs. 16.96. Dhrangadhra Chemicals put on Rs. 3 to Rs. 104. Their new shares rose by Rs. 10 to Rs. 96. Alembic Chemicals moved up further by Rs. 7 to Rs. 165 and Amar Dyes by Rs. 6 to Rs. 123. Killick Industries gained Re. 1.25 to Rs. 145.

Calcutta Stock Exchange

CALCUTTA, *2nd July*

Following fair interest displayed by buyers, steady conditions prevailed on the Calcutta Stock Exchange during the short week under review. The end of the port workers' strike was hailed with enthusiasm, but it must be noted that the strike as such had hardly affected the market trend. Rumours that the Indian Iron and Steel Company, Ltd., would very shortly capitalise the share premium reserve account in the same manner as the Tata Iron and Steel Company, Ltd., did recently, whipped up bullish fervour, and an all-round improvement was the result. Rumours of imminent devaluation of the rupee continued, although the speech of the Reserve Bank Governor at a Bombay meeting indicated that no devaluation was being contemplated. The announcement of an increase in factory prices of cement was noted with satisfaction, but no spurt in cement share prices was recorded, as the happy news had already been discounted in recent weeks when the possibility was considered certain. The Textile Enquiry Committee's report was keenly awaited, as it was believed that some concessions would be afforded on the recommendation of the Committee. Had it not been for the existing foreign exchange uncertainty, a further acceleration of activity should have been in evidence. If imports of industrial raw materials were reduced—the rumour that no fresh allocation of foreign exchange would be made to the private sector in the three months to December continued to be circulated—working of industrial units would be affected.

Jutes continued to attract interest with buyers showing marked preference for scrips of the rationalised mills. Fair business in hessian with the Argentine, facilitated by the import relaxation by that country, and the gain in prices of jute goods were favourable factors which created enthusiasm. Impressive features included the rise in Ballys to Rs. 170 from Rs. 162, and Birlas to Rs. 17.50 from Rs. 16.94. Anglo-Indias strengthened earlier from Rs. 161 to Rs. 162 before declining yesterday to Rs. 158. Megnas hardened to Rs. 130 from Rs. 126. New Centrals were lifted to Rs. 16.06 from Rs. 15.81. Nationals had business at Rs. 23, as against Rs. 22.50 previously, and Ganges at Rs 58, as against Rs. 54. Northbrooks were fractionally better at Rs. 15.87. However, Indias declined to Rs. 132 from Rs. 134.

Coals were bought at around previous levels, with operators looking forward for the report of the Price Revision Committee. Thus, Burrakurs were unchanged at Rs. 21.25, while Khatras Jherriahs at Rs. 58 were fractionally better, as were New Beerbhooms at Rs. 15.

Sugar shares were steady. Belsunds gained to Rs. 10.66 from Rs. 10.37, and Cawnpores to Rs. 9.25 from Rs. 9.19. The increase in open market sugar prices following the export ordinance led to more interest being shown to this section.

Among minings, Indian Coppers advanced to Rs. 3.50 from Rs. 3.33, and Burma Mines to Rs. 1.68 from Rs. 1.40.

Engineering shares gained on fair support, mostly speculative. Indian Irons reached Rs. 22.95 from Rs. 22.30. Texmacos were on demand at Rs. 19.25, as against Rs. 19 previously. Kumardhubis moved up to Rs. 10.06 from Rs. 9.87 and Jessop & Cos. were better at Rs. 20.25.

Among miscellaneous industrials, Indian Cables recovered to Rs. 27.59 from Rs. 27.00. Metal Boxes were steady, although unchanged, at Rs. 29.12. Sone Valley Cements, on good support, gained to Rs. 5.56 from Rs. 5.44. Titaghur Papers at Rs. 39.12 recorded a rise. National Tobaccos at Rs. 13 registered a further improvement. Indian Oxygens touched Rs. 19. Rohtas Industries were pushed up to Rs. 20.87 from Rs. 20.06.

* * * *

Madras Stock Exchange

MADRAS, *1st July*

Cheerful conditions prevailed on the Madras Stock Exchange during the week under review. Operators received with satisfaction the news that the Government of Madras had completely restored, with effect from the 1st inst., the 75 per cent. power cut in the areas served by the hydro-electric systems in the State. The textile section ruled distinctly firm, thanks to rumours of a further reduction in excise duty on mill-made cloth; the textile industry Inquiry Committee was reported to have recommended such a reduction in its interim report submitted to the Government recently. Tea shares evoked keen buying induced by expectations of export incentives for tea such as a cut in export duty. In sympathy with tea shares and on optimism regarding better working results, rubber and coffee shares also met with enlarged buying enquiries. In the miscellaneous section, cement shares provided a bright spot, following the enhancement of the retention price of cement. Chemical shares were in good form, as also certain bank shares. Industrials kept up enquiries at select counters. Sugars and electricity shares were steady.

Tea shares in the planting section encountered brisk buying. Haileyburias rallied 50 nP to Rs. 19.75. Twyfords firmed up by 45 nP to Rs. 14.30. United Nilgiris advanced by 37 nP to Rs. 16.62 and Coorgs by 30 nP to Rs. 11.30. Emerald Valleys rose by 25 nP to Rs. 7.35. Nonsuch gained a like amount to Rs. 22.75. Stanes Amalgamateds found buyers 25 nP higher at Rs. 13.90. Kalasas gathered 18 nP to Rs. 15.60, Devons 15 nP to Rs. 18.25 *cum-div.* and Periakaramalais 12 nP to Rs. 4.45. Chembras and Nilgiris improved by 10 nP each to Rs. 4.00 and Rs. 8.50 *cum-div.*, respectively. Parksides were fully maintained at Rs. 18.25, Peermades at Rs. 19.40, Devasholas at Rs. 18.50 and Woodcotes at Rs. 1.56. Among coffee shares, Kumergodes strengthened by 90 nP to Rs. 10.90. Consolidated Coffees spurted by 62 nP to Rs. 28.12. Ouchterlonys hardened by 40 nP to Rs. 5.35. Rajendras put on a like amount to Rs. 12.00. Amalgamateds increased 25 nP to Rs. 12.50, Kadurs by 15 nP to Rs 3.00 and Sheveroys by 3 nP to Rs. 2.13. Anaparais were firm at Rs. 4.85, as also Bababudins at Rs. 12.35, Badras at Rs. 3.75, Balmadies at Rs. 3.45, Coffee Lands at Rs. 32.25, Cowcoodys at Rs. 7.20 and Mysore Coffees at Rs. 3.45. Sangameswars, Savamalais and Vayitris were done at Rs. 3.00, Rs. 4.95 *cum-div.* and Re. 1.68 respectively, as last week. In the rubber group, Rajagiris firmed up by Re. 1.50 to Rs. 16.25 *ex-div.* Travancore Rubbers improved by 75 nP to Rs. 15.00 *ex-div.* Midlands rallied 35 nP to Rs. 17.00. Malankara by 25 nP to Rs. 17.50. Nilamburs advanced by an equal amount to Rs. 14.00 *cum-div.*

Among textile shares, Metturs rallied Rs. 6 to Rs. 347.00, *cum-div.* Lakshmis advanced by Rs. 4 to Rs. 104.50, *cum-div.* Coimbatore Spinnings, Coimbatore Cottons and Janardanas firmed by Rs. 2 each to Rs. 55.50, Rs. 136.00 and Rs. 80.00 respectively. Maduras hardened by Re. 1.50 to Rs. 36. Buckinghams gained Re. 1 to Rs. 168.00 and Virudunagars put on a like amount to Rs. 31.00. Loyals were better by 75 nP at Rs. 36.25.

In the banking section, Punjab Nationals rallied Rs. 4.50 to Rs. 60.50. Canara Industrial and Banking Syndicates 'A' advanced by a like amount Rs. 170.00. Bank of Mysores firmed up by Rs. 2 to Rs. 255.00 Travancores rose by Re. 1.85 to Rs. 21.35.

In the sugar and brewery group, Mysores advanced by Re. 1 to Rs. 39.50. Andhras gathered 50 nP to Rs. 17.00 E.I.D. were better by 10 nP at Rs. 28.20 and Travancores by 14 nP at Rs. 10.90.

Among miscellaneous industrials, Mysore Electrical Industries advanced by Rs. 3 to Rs. 93.00 *cum-div.* and R.E.M.Cos. by Re. 1 to Rs. 14.00. Travancore Cements rallied Re 1.50 to Rs. 9.90 *ex-div.* Textools firmed up by Re. 1 to Rs. 184. Hindustan Levers put on 92 nP to Rs. 23.84. Mettur Chemicals spurted by 45 nP to Rs. 11.75. Mysore Chemicals and Fertilisers hardened by a like amount to Rs. 7.65. F.A.C.Ts gained 35 nP to Rs. 7.10. Mysore Papers were better by 30 nP at Rs. 17.30, Mysore Tobaccos by 25 nP at Rs. 12.62 and Spencers by 25 nP at Rs. 18.50. Dalmia Cements were firm at Rs. 10.80. Orissa Cements gained 6 nP to Rs. 14.06 *cum-div.* Aspinwalls were steady at Rs. 6.90 *ex-div.* and Rallis at Rs. 33.50.

CORRESPONDENTS ALL OVER THE WORLD

NEWS IN BRIEF

THE Union Government has decided to remove, with immediate effect, the export duty of Rs. 150 per ton on groundnut oil and of Rs. 100 per ton on castor oil.

The Tariff Commission opened its public enquiry into the question of continuance of protection to the antimony industry at its office in Bombay on 30th June 1958.

The Government of India has fixed the packing charges for cement for the quarter commencing from 1st July 1958 at Rs. 12.71 per ton of cement in new gunny bags.

The Government of India has approved of a scheme for quality control of East India tanned hides and skins as formulated by the Leather Export Promotion Council.

The Mysore Government has decided to constitute a road transport corporation which will cover the whole State. The Corporation is expected to come into being on 1st October 1958.

The U.P. Government proposes to set up a pilot sand washing plant at Shankergarh in Allahabad. It may be noted that the State has a rich deposit of silica sand which is very suitable as raw material for glass industry.

The Mysore State Co-operative Apex Bank Ltd., proposes to borrow from the Reserve Bank a sum of Rs. 6.5 crores for financing seasonal agricultural operations and marketing of crops. The loan is guaranteed by the State Government.

The 75 per cent. power-cut in the areas served by the hydro-electric systems in the Madras State has been completely restored, with effect from the 1st inst., following an improvement in the storage of water in the two main dams.

The U.P. Government has set up a committee under the chairmanship of Mr. S. P. Pandey, Deputy Secretary of the State Labour Department, for ensuring effective implementation of adjudication and arbitration awards, as well as those of the Industrial Tribunal and the Labour Courts.

Employment in factories in India excluding Kerala, Rajasthan and Himachal Pradesh, increased by 44,274 to 2,809,708 during the first half of 1957 as compared with that in the previous half-year. The number of factories working rose from 33,274 to 34,190 during the period under review.

The State Trading Corporation has placed orders for 30,000 tons of solid caustic soda and 12,000 tons of light soda ash with Imperial Chemical Industries and with suppliers in China. Of this, the first consignment of 6,000 tons of solid caustic soda is due to reach Indian ports by the middle of this month.

With the signing of a new agreement recently by the Government of India and the United States Technical Co-operation Mission, which seeks to provide India an additional $3,260,000 (Rs. 1.5 crores) for the purchase of 5,250 tons of DDT, the total U.S. funds granted for India's malaria eradication programme amounts to $11.9 million.

The Government of India is understood to have instructed the customs authorities at the various ports to allow shipments of tea against special export licences under shipping bills presented with complete documents to custom houses on or before 15th July 1958. The Tea Board, Calcutta, has accordingly advised exporters that they might utilise special tea export licences, which is being issued by the Board only up to 30th June, for shipment of their teas up to 15th July 1958.

Work was resumed in the Buckingham and Carnatic Mills, Madras, from the 1st inst., following an amicable settlement between the management and workers on the question of additional bonus for 1954, 1955 and 1956. It will be recalled that the workers had gone on strike on 9th June on this issue and that the management had declared a lockout two days later. The management has agreed to pay Rs. 15 lakhs as arrears of bonus, besides raising the present rate of bonus of about Rs. 20 lakhs to Rs. 25 lakhs.

With effect from 18th May 1958, the Employees' Provident Funds Act, 1952, has been made applicable to establishments owned by Government or a local authority. The Act which initially applied to six scheduled industries, was extended to 32 additional industries during the past two years. The Act covered by the end of March 1958, 6,524 establishments employing 2.956 million workers of whom 2.412 million were receiving the benefit of this social security measure. The contributions towards the monthly provident fund are of the order of Rs. 2.47 crores on an average.

With a view to stepping up local production of steel and giving India a more favourable trade balance, the Tata Iron and Steel Co., Ltd., has purchased six modern General Electric (U.S.A.) diesel electric industrial haulage locomotives for use in its mills. This brings the total number of such locomotives purchased by the T.I.S.Co. to 30. Twenty, including the most recent six, are 80-ton models, two are rated at 115 tons, three at 35 tons, and five at 25 tons. It is learnt that all are 66-inch gauge and fitted with special equipment allowing them to operate in the extreme dust, heat and humidity conditions encountered in the blast furnace area of the mills.

A commodity sales agreement providing funds for lending in India by the Export-Import Bank of Washington, has been completed by the United States and India. Pursuant to Section 104 (E) of the Agricultural Trade Development and Assistance Act of 1954 (P.L. 480), known as the Cooley Amendment, 25 per cent. of the rupees, or the rupee equivalent of 14,200,000 dollars, to be derived from sales under the Commodity Sales Agreement with India will be made available to the Export-Import Bank for loans in India. Under the legislation, the Bank may lend these rupees to subsidiaries, or affiliates for business development and trade expansion in India.

From Abroad

An oil refinery with an expected capacity of upto three million tons will be built at Nanking. It is also learnt that a number of chemical plants will be set up to make use of its by-products.

A new airliner has been manufactured in Soviet Russia capable of carrying 100 passengers and landing on water. The plane, named the An-10A, is a modification of the An-16, now in service.

Communist China's first atomic reactor is reported to have begun operation on 13th June 1958. Equipped by the Soviet Union, the reactor has an alpha type particle accelerator producing 25 million volts.

Ceylon's external assets fell by Rs. 7.13 crores to Rs. 84.74 crores as at the end of May 1958. This large deficit is attributed to the considerable decline in export receipts. The only time when Ceylon's external assets fell below the present figure since independence was in 1952-54 when they touched as low as Rs. 60.72 crores.

The International Co-operation Administration in the U.S.A. has been charged with incompetency in handling of foreign aid projects, by a Congressional Committee. This Committee is of the view that there has been "sloppy administration" of about ten capital projects, each involving $1 million or more, which the I.C.A. had initiated in the last three years.

The Pakistan Government announced, on 25th June 1958, its import policy for the second half of the year, July to December 1958. Altogether 267 items (as against 206 during the first half of the year) are allowed to be imported, thus signifying no change from the policy followed hitherto. An important feature of the new policy is that 40 per cent. of the allotment is earmarked for industrial requirements.

Crude oil exports from Iraq were restored on the 25th June 1958 to 25 million tons a year, for the first time since November 1956, when the three pumping stations in Syria were destroyed This restoration was made possible by the additional pumping capacity installed at three stations in Iraq, and at T.3 in Syria, and by building loops in the pipeline system across the Syrian desert. The yearly throughput is expected to be raised to 28 million tons early next year, when further loops now under construction will have been completed.

The production of motor cars in the U.K. was at the rate of 21,250 cars a week during the first five months of 1958. The automobile manufacturers expect that, by the end of 1958, the production will exceed the one-million mark. Both home and export sales of cars are running high. Exports, amounting to almost half of the total production, have been steadily increasing, and May shipments registered a new peak. The U.S. is still the largest single overseas market, for British cars, having taken over 27 per cent. of all cars exported.

U.S. manufacturers report that their sales in May aggregated $25,300 million, about one per cent. above the April total. The orders received by manufacturers increased more than usual for the month; they amounted to $24,700 million. An increase of 4 per cent. in orders for durable goods partially offset a decline in non-durable goods orders. The pickup in orders for heavy goods was accounted for by primary metals and electrical machinery.

It is estimated that world production of butter in 1958 will be at least as much as last year when it surpassed 3.5 million metric tons. According to F.A.O. experts, the rigid price support policies and their tendency to isolate domestic markets were largely responsible for surplus production, the contraction of world trade, and the lowering of consumption in the face of artificially high prices.

The authorisation of loans for economic development projects in Pakistan and Ceylon has been announced by the U.S. Development Loan Fund. The loan to Pakistan amounts to $4.2 million and is for private industrial development in the country. It will provide additional foreign exchange for the Pakistan Industrial Credit and Investment Corporation, set up with the help of Pakistani, U.S., Canadian, British and Japanese investors to make loans for private industrial enterprises. The $750,000 loan to Ceylon is for development of the Government railway. Both the loans are repayable in the currency of the countries and are a part of continuing American assistance to Pakistan and Ceylon.

Further preparations are being made in Britain to provide dock facilities for handling oil tankers of up to 120,000 deadweight tons. Close on the recent announcements by the Esso Petroleum Company, Ltd., of a new refinery near Milford Haven, Wales, with a marine terminal capable of handling simultaneously two tankers of up to 100,000 deadweight tons each, and by the Shell Petroleum Company, Ltd., of new floating stages on the Mersey in north-west England, Vickers Ltd. announced last week that it is to construct a new large dry-dock on the Tyne in north-east England. The new dock will accommodate oil tankers of up to 80,000 deadweight tons, the location designed and construction so arranged that extensions can be made, lengthening the dock to 1,000 ft., catering for tankers up to 120,000 deadweight tons. The estimated cost of the new Esso refinery and marine installation is £18,000,000, and it is planned initially to process 4,500,000 tons of crude oil a year. The principal products of the new refinery will be petrol, jet fuels, diesel fuels, and marine and industrial fuels, and it is estimated that the saving to Britain will be more than $40,000,000 a year.

PERSONAL

MR. Shanti Prasad Jain, a leading industrialist, left Bombay for Geneva on the 1st inst.

Mr. Dusan Kveder has been appointed Ambassador Extraordinary and Plenipotentiary of the Federal People's Republic of Yugoslavia to India.

Mr. G. Parthasarathi, India's Ambassador-designate to China, left Madras on 30th June 1958 for Colombo *en route* to Peking.

Shrimati Vijayalakshmi Pandit, High Commissioner for India in the United Kingdom, has been appointed concurrently India's first Ambassador to Spain.

Dr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company, Ltd., returned to Bombay from Geneva on Sunday this week after attending the U.K.-Continental-India Shipping Conference held at Brussels.

Mr. E. F. Morrey, Technical Adviser to Messrs. W. H. Brady & Co., Ltd., sailed from Bombay on the 1st inst. on retirement from India and the Company. Mr. Morrey has been connected with Bradys for about 20 years and was a member of the Committee of the Millowners' Association, Bombay, for the past three years.

Mr. M. N. Chakravarti, until recently General Manager of the Central Railway, has been selected for appointment as Member (Staff), Railway Board, *vice* Mr. K. P. Mushran, who has proceeded on leave preparatory to retirement.

Mr. K. C. Neogy, Member, Planning Commission, who was to have relinquished charge of his office on the 1st inst., has been requested and has agreed to continue till the 15th inst., as Mr. Shriman Narayan, his successor, is not in a position to join the Commission before that date.

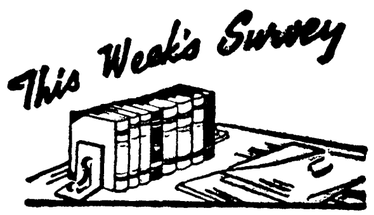
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th July*

Coal, Oil and Electricity

"There is now a growing feeling among the millowners of Bombay in favour of the use of coal in place of oil as the price of the former is lower and if the mills revert to the use of coal it will certainly give a fillip to the coal industry of India in general and that of Bombay City in particular"; with this significant observation does Mr. Shiavax C. Cambata conclude his interesting lecture on the coal supplies of Bombay which will be found elsewhere in this issue. The lecture was delivered at the Bombay Rotary Club last month. The important part played by coal in the development and progress of the city of Bombay, which was a mere fishing village about a century ago, and the present bad state of the coal industry, due to the competition of oil and electricity, were lucidly dealt with by Mr. Cambata who is the leading spirit of Messrs. Shiavax C. Cambata & Co. of Bombay who own collieries in the Central Provinces and deal extensively in coal. Not only does Mr. Cambata handle coal business on an extensive scale, but he is also in close touch with the various phases of the trade and commands first-hand authentic information regarding the industry in all its stages of development. He is also an active member of various well-known mercantile associations in and outside of Bombay. Bombay obtains her supplies of coal from the mines in Bengal, Bihar and Orissa, the Central Provinces, Central India, Rajputana, Nizam's territories and the Punjab. Besides these, coal from England and South Africa and to some extent from Australia and Japan is offered in the Bombay market. But the real tussle for trade lies between the Bengal and South African coal, both of which have done their level best to capture the Bombay market. Their success depends mainly upon quality and freight.



TWO NEW EXPERIMENTS

THE State-owned Hindustan Aircraft Ltd. and the Hindustan Machine Tools, both located at Bangalore, have initiated two novel experiments designed to ensure better labour-management co-operation in their working. The former has introduced an annual production bonus for its workers, while the latter has instituted a joint council of management for associating workers in the management. It is noteworthy that the Hindustan Machine Tools, which has a creditable record of cordial labour-management relations, is the first State undertaking to introduce the scheme of workers' participation in management. These measures are expected to be instrumental in opening a new chapter in employer-employee relations in the factories.

The production bonus in H.A.L. climaxes a series of concessions such as increase in dearness allowance, reduction in house rent, and night-shift allowance given to the workers following the strike and lockout in the factory last year. These concessions, together with the production bonus, will cost the management an additional Rs. 20 lakhs annually. About 10,000 out of the 12,000 employees are expected to benefit from the bonus scheme.

The production bonus will be applicable to all employees drawing a salary of up to Rs. 500 a month and will be paid annually with retrospective effect from April 1957. The quantum of bonus will depend upon the rate of production and will be uniform for all eligible workers. Bonus will be payable only if production reaches 70 points or above. According to a formula worked out by the management, Rs. 60 will be paid as bonus per worker if production reaches 70 to 79 points, Rs. 85 if it reaches 80 to 89 points, Rs. 110 if 90 to 99 points and Rs. 144 if production reaches over 100 points. It may be noted that production in the factory had never reached the maximum in the past, but had ranged between 60 and 80 points. In 1957, it was 75 points which would entitle the worker to a production bonus of Rs. 60 per annum.

A scheme which relates bonus to production, as against profits, has many points to commend itself. In so far as it links the quantum of bonus to the work turnover, it provides an inducement to workers to improve their performance. But it may conceivably lead to certain difficulties in future. For instance, should the need to curtail production arise in future on any account, will the workers be prepared to forgo the bonus? Will they not feel aggrieved if their emoluments happen to fall for no fault of theirs? Such a problem, though not likely to arise in the immediate future as long as the need for higher production remains, cannot be ruled out as altogether imaginary.

The scheme for associating workers in management, introduced in the Hindustan Machine Tool Factory, is sound in principle, and theory, but whether it will work smoothly in actual practice will depend on the extent to which the workers' representatives on the board of management are given rights on managerial and entrepreneurial responsibilities. On this aspect of the question, the arrangement under reference is unfortunately silent. Nevertheless, it can be pertinently added that, if the representatives of workers are men having sufficient knowledge of the technique and finances of industry and are willing and capable of taking a responsible view of the various issues facing the undertaking and if they could resist the temptation of importing politics into the functioning of the council, the scheme has a fair chance of success. Its working will, therefore, be watched with interest.

It may be noted here that, although the Hindustan Machine Tools is the first undertaking in the public sector to introduce the scheme for participating workers in management, the experiment is not new to this country. For, already similar schemes are in force in certain enterprises in the private sector, namely, the Tata Iron and Steel Company, Ltd. and the Indian Aluminium Company, Ltd. To what extent the scheme of Hindustan Machine Tools differs from these is not known. And until fuller details as to how and to what extent workers are to be associated with the management of the factory are available, it is not possible to say whether anything unique is being tried.

U.S. INVESTMENTS ABROAD

A notable feature of the recent trends in U.S. economy is the increase in American investments abroad. Between 1956 and 1957, the net outflow of U.S. private capital increased from $2,980 million to $3,035 million, the corresponding figures for the total of Government loans and grants being $2,621 million and $2,568 million. Thus, the net outflow of private capital even exceeded the U.S. Government's disbursements by way of loans and grants. Direct investments in foreign branches and subsidiaries of domestic corporations accounted for two-thirds of the outflow of private capital; the balance represents both credit and new security issues. It must, however, be remembered that about half of the total private investment went to Canada and Venezuela. Underdeveloped countries received only a very small fraction of the total investments. It is being increasingly realised in the U.S. that an increase in investments in these countries would be a welcome supplement to the U.S. foreign economic policy, which, as is well known, is designed to improve the living standards in economically backward areas.

Against this background, it is noteworthy that the U.S. Council of International Chamber of Commerce has stressed the importance of U.S. investment in underdeveloped countries. It says: "It has been virtually universally agreed that the development of the underdeveloped areas in the free world is a vital part of our foreign policy. Yet, so far, little or nothing has been done to give positive encouragement to American private capital to step in and do the job." Accordingly, it has urged the U.S. Government to negotiate bilateral "investment" treaties with underdeveloped Asian, African and Latin American countries. The Council said the investment treaties should seek "through bilateral negotiation with underdeveloped countries to remove or reduce all of the obstacles to American private investment." Such treaties, according to the Council, should include: (1) protection or insurance against nationalisation, (2) protection or insurance against non-convertibility of currencies, (3) protection against restrictions on the withdrawal of capital or earnings, (4) elimination of discriminatory taxation, (5) elimination of other discriminations in the laws of underdeveloped countries or in their administration, (6) elimination of restrictions on imports of raw materials and machinery, (7) guarantees against prohibitive levels of taxation by the underdeveloped country, (8) reciprocal freedom of taxes or lowering of tax rates by the two countries for a period of time, and (9) provision for deducting from U.S. income losses incurred in investing in the underdeveloped country.

Even those in the underdeveloped countries, who are unwilling to pay too high a price for participation of foreign capital in national economic development, will agree that the suggested conditions for inclusion in the investment treaties do not constitute the much-feared "strings." They are no more than ordinary guarantees which a prudent investor would demand before he invested his savings in a country other than his own.

MINERAL OILS

Mineral oils have been subjected to the levy of additional excise duty with effect from 20th May 1958. The levy is imposed by the Government of India in pursuance of the Mineral Oils (Additional Duties of Excise and Customs) Ordinance promulgated by the Union President. The rates of additional duty on different kinds of oils are as follows:

Kerosene	(per imperial gallon)	6 nP.
Motor spirit	(,,)	14 nP.
Refined diesel oil	(,,)	7 nP.
Vaporising oil	(,,)	3 nP.
Diesel oil not otherwise specified	(per ton)	Rs. 11.64
Furnace oil	(,,)	Rs. 13.91

The imposition of the additional excise duty on mineral oils, however, will not affect the current consumer prices, inasmuch as it merely represents the *ad hoc* reduction in prices effected by the major oil companies operating in the country. This reduction in oil prices, it will be recalled, was a sequel to the agreement entered into in May last between the Government of India and the oil companies after protracted negotiations. The additional excise now levied will yield to the Central exchequer a further sum of about Rs. 10 crores per annum. In other words, the entire benefit of price cuts announced by the oil companies will accrue to the Government. The Government's decision not to pass on the benefit of price cuts to the consumer of mineral oils rests on the ground that the price reductions are not of a magnitude which, even if passed on to the consuming public, will lead to any significant decline in consumer prices and that all available resources have to be tapped and mobilised for reaching the Plan targets.

While the diversion of funds accruing from the levy of additional excise duty to projects such as oil exploration and prospecting which in the long run will prove beneficial to the country is to be welcomed, one feels that the consumer also deserves relief, however small it may be. A relief to the tune of Rs. 10 crores is by no means insignificant. Cheaper petrol and diesel oil, as we emphasised sometime ago, will serve to impart a much needed fillip to motor transport, the development of which is as important as prospecting of oil. The vast majority of consumers of kerosene do not belong to the rich class and even a small relief would turn out to be a significant help to them. At any rate, there is the need for passing on, to some extent, the benefit of the cut in furnace oil price to industrial consumers who have been hit hard by mounting cost of production.

Be that as it may, the annual yield of Rs. 10 crores, in the shape of additional excise duty on mineral oils, works out to about 9.5 per cent. of the total c.i.f. value (Rs. 95 crores) of 5.5 million tons of oil and oil products consumed in India. While the landed cost of imports is Rs. 95 crores, the actual cost to the consumer is double the amount, thanks to (a) the heavy rail freight, excise duties and other taxes—these together account every year for Rs. 45 crores—and (b) the distribution charges and profits of companies amounting to about Rs. 50 crores. The rates of additional excise now levied will be in force till the Government of India evolves a new agreed price formula for mineral oils. The Government has already deputed one of its cost accountants to examine the accounts of the various oil marketing companies with a view to ascertaining what actually goes and should go into the prices of the different oil products sold in the country. This examination is expected to be completed in about six months' time.

WORLD POPULATION

Is the Malthusian spectre again casting dark shadows over the world? Have not the spectacular strides made by science and technology since Malthus's time and the immense productive capacity they have placed at the disposal of man, disproved the gloomy predictions of the parson? Has the world yet to learn and science yet to demonstrate, that this nineteenth century clergyman was at fault fundamentally? Maybe, the mathematical formulæ he used to prove his theory and his correlation of population growth to food supplies had no scientific basis. But is his diagnosis of the tendency of population growth to outstrip resources wrong? These queries are inevitably prompted by the disclosures on the demographic future of the world contained in a U.N. report, *The Future Growth of World Population*, published this week. The population of the world, the report points out, is increasing so rapidly that, in 600 years' time, there will be only one square metre for each person to live on; this area includes Arctic wastes, deserts and mountain tops. But this, the report reassures, "can never take place. Something will happen to prevent it." It, however, does not say as to what will happen. It is estimated that world population will rise from its present 2,737 million to 4,000 million by 1980 and reach 6,000 or 7,000 million by the turn of the century. Lest one should think that this is a distant future about which there is no need to worry, the report adds: "The year 2000 is no farther in the future than the year 1914 is in the past."

Commenting upon the growth of world population, the report says that, while it took 200,000 years for the world's human population to reach 2,500 million, it will now take a more 30 years to add another 2,000 million. Less than 100 years ago, there were about 1,250 million people in the world and even that figure was two or three times higher than ever before. Now the total is twice as much with the prospect that it may double or triple by the end of this century. A disturbing feature of the world demographic situation is that a total population of 6,000 million or 7,000 million would be reached within this generation, or in about 40 years. It is estimated that the population of most continents and of the world will quadruple in the course of this century. The exceptions are the European countries, including the Soviet Union.

Even if the present rate of growth should drop but it is still increasing—world population, the report says, will not stop growing until it has reached 10,000-25,000 million. One cannot say, it adds, that such growth is utterly impossible, but the vast changes in human organisation required to sustain it can hardly be conceived at the present time. Because of the declining mortality, population increases will probably be accelerated through the century in Africa, Latin America, and Asia even if it is admitted that, after 1975, fertility may decline. There will thus be a continuous decline in the relative importance of Europe, including Soviet Union, in the total world population. Early this century, there was one European for every two Asians. By the end of the century, this ratio may have become one to four.

Such an alarming rise in population growth, according to the report, has "grave implications" for the planning of the economic and social well-being of the future generations. Not only technical achievement but progress in international co-operation and organisation will have to be more effective than in the past if the expected numbers of mankind are to be organisationally and technologically accommodated to the minimum conditions required for human dignity.

The rapid increase in the world's population poses a problem of the first order. What is the remedy? The report does not suggest any dramatic solutions. It, however, commends the policies aimed at slowing down increases in population recently advocated by India and China as "deserving the closest attention of the rest of the world."

As long as it was a question of increasing the population, the whole of mankind was part of the stream followed by evolution during millions of years. Faced with the problem of checking the growth, it is swimming against the tide. Having discovered how to increase the flood waters, it also possesses the means of arresting them. It now depends on the present generation, as the report avers, whether this awakening of consciousness within the stream of life ends in failure or success.

METRIC SYSTEM

In the present period of transition to the metric system, Tuesday the 1st inst. is a notable day in that it witnessed the inauguration of this system of weights and measures in the jute industry. This will be followed, with effect from 1st October next, by the introduction of the system in all other industries and trades throughout the country, barring the State of Jammu and Kashmir and the Union Territories of Delhi, Himachal Pradesh, Manipur, Tripura, and Andaman and Nicobar Islands. The use of the existing units of weights and measures will continue to be permitted for a period of two years, that is, till 1st July 1960 in the case of the jute industry and 30th September 1960 in respect of others. The whole country will thus be covered by early 1960. The second stage will be to extend the system to areas not covered on 1st October and to introduce length and capacity measures. It will take between five and ten years from the date of enactment of legislation—December 1956—to effect a complete change-over. The change-over, it is estimated, will cost the Central and State Governments about Rs. 10 crores.

The legislation to adopt the metric system entitled the Standards of Weights and Measures Act 1956, lays down standards of length, area, volume, and mass to replace the standards now in use. The present unit of length, the yard, will be replaced by the metre which is equal to 1.09 yard. For measuring distances, the new unit will be the kilometre (1,000 metres) equal to 0.62 mile. The new unit for measuring land area will be hectare (10,000 square metres) equal to 2.47 acres or Are (100 square metres) equal to 0.025 acre. The pound and the *seer* will be replaced by the kilogram equal to 2.2 pounds or 1.07 *seer*. The quintal (100 kilograms) equal to 2.68 pounds will be used for purposes for which the maund is now in use. The unit for smaller quantities will be the gram (1/1000 of a kilogram) equal to 0.086 tola. Precious stones will be weighed in carats (1/5 of a gram) equal to 0.017 tola.

After the Act received the President's assent in December 1956, considerable preparatory work had to be completed before it could be enforced. According to the statement made by Mr. Nityanand Kanungo, Union Minister for Commerce, at a Press Conference in New Delhi last week, the Government of India has joined the International Bureau of Weights and Measures, the custodian of the international kilogram and metre. Arrangements have been made, with the assistance of the Bureau, for purchasing a kilogram and a metre, which will become our national prototypes and will be deposited at the National Physical Laboratory. Standard weights for the use of State Governments and Inspectors of Weights and Measures have been manufactured by the Central Government Mints at Bombay and Calcutta and distributed to the States. A survey of capacity for the manufacture of weights and measures showed that there is a very large capacity in the country. Lists of manufacturers have been drawn up. Approved manufacturers from these lists will be licensed by the State Governments. The manufacturers of weighing machines have made arrangements for the recalibration of weighing machines to metric units. Some of the States have enacted legislation for enforcing weights and measures and others are expected to do so in the next few months.

The foregoing account will indicate that the progress made in the preparatory work is quite notable. Even so, much still remains to be done. The changeover from the present to the metric system of weights and measures is so complicated that, unless proper steps are taken by the authorities, a section of the trade may indulge in anti-social practices. Viewed thus, it is certainly gratifying to be told that the authorities are fully alive to this problem. In order to acquaint the people with the change, advertisements have already been inserted in various newspapers. Posters explaining the change are expected to be widely distributed and simple conversion tables in various languages issued to the people.

(THIS IS AN ANNOUNCEMENT TO THE MEMBERS AND NOT A PROSPECTUS AND NEITHER AN INVITATION TO THE PUBLIC OR ANY SECTION OF THE PUBLIC FOR SUBSCRIPTION OF SHARES)

ORISSA CEMENT LIMITED

(A National Enterprise under the patronage of the Government of Orissa.)

ISSUE OF 5,00,000 ORDINARY SHARES OF RS. 10 EACH AT PAR

(a) AUTHORISED CAPITAL .. .. Rs. 5,00,00,000

Divided into

(i) 1,00,000 shares of Rs. 100/- each termed as Preference shares.

(ii) 40,00,000 shares of Rs. 10/- each termed as Ordinary shares.

(b) SUBSCRIBED AND PAID-UP CAPITAL:

40,000—4½% Cumulative Preference shares of Rs. 100/- each .. Rs. 40,00,000

10,00,000 Ordinary shares of Rs. 10/- each .. .. Rs. 1,00,00,000

Rs. 1,40,00,000

(c) NOW BEING ISSUED:

5,00,000 Ordinary shares of Rs. 10/- each at par. Full value of the shares is payable on application.

2. DIRECTORS.

Name	Address	Occupation
(1) Shri Jaidayal Dalmia.	2, Hardinge Avenue, New Delhi.	Industrialist.
(2) Shri Nihar Chandra Roy.	No. 57-B, Block D, New Alipore, Calcutta.	Service.
(3) Shri Kamalnayan Bajaj.	31-B, Carmichael Road, Bombay-26.	Merchant.
(4) Shri Vishnu Hari Dalmia.	2, Hardinge Avenue, New Delhi.	Industrialist.
(5) Shri Mohanlal Goenka.	P. O. Bankura (W. Bengal).	Industrialist.
(6) Shri B. Venkatraman, I.A.S. (nominated by the Orissa Government).	Cuttack.	Director of Industries, Government of Orissa, Cuttack.
(7) Shri Charan Das Khanna (nominated by the Industrial Finance Corporation of India).	Flat No. 4, 60B, Chowringhee Road, Calcutta-20.	Manager, Industrial Finance Corporation of India, Calcutta.

REGISTERED OFFICE:
Rajgangpur, Sundergarh District, Orissa.

BANKERS:
The Punjab National Bank Ltd.
National Overseas & Grindlays Bank Ltd.

SOLICITORS:
Messrs. Khaitan & Co., 1-B, Old Post Office Street, Calcutta.

AUDITORS:
Messrs. V. Sankar Aiyar & Co., Chartered Accountants, Scindia House, New Delhi.

MANAGING AGENTS:
Dalmia Agencies Private Ltd., Scindia House, New Delhi.

3. ISSUE OF FURTHER CAPITAL.

The Directors have decided to offer for subscription further 5,00,000 Ordinary Shares of Rs. 10/- each at par to the registered holders of Ordinary Shares whose names would appear in the Register of Members on 15th August, 1958, in the proportion of one new Ordinary Share for every two existing Ordinary Shares then held with right of renunciation. THE SHARE TRANSFER REGISTER SHALL REMAIN CLOSED FOR THIS PURPOSE FROM 21ST JULY TO 15TH AUGUST, 1958, BOTH DAYS INCLUSIVE. The shareholders are also given the right to apply for additional shares, the allotment of which will be at the absolute discretion of Directors. A circular explaining full details has been posted to all the shareholders on 24th June, 1958. Those who do not receive the circular latest by end of June, 1958, should make a reference to the Registered Office of the Company.

4. CAPITAL ISSUE CONSENT.

The consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company at Rajgangpur, Orissa. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

5. COMPANY'S ACTIVITIES.

The Company first installed a 500 ton wet process cement plant at Rajgangpur which went into production in the end of December, 1951. The production at the Cement Works was later expanded by installation of a second unit of 600 ton daily capacity which was commissioned early in 1957. Simultaneously, the Company undertook establishment of a modern Refractory Works having an annual capacity of 80,000 tons of firebricks of various kinds including basic bricks. The firebricks and silica bricks plant went into production early in 1958. Construction of basic bricks plant is in progress and is expected to be completed by the end of current year.

6. WORKING RESULTS.

The Company's working results for the last six years are given below:

Year	Gross Block at cost	Cement Production	Gross Profits earned before providing Depreciation and Managing Agents' Commission.	Depreciation provided	Dividend on Ordinary shares
	Rs.	Tons	Rs.	Rs.	
1952 ..	1,67,77,676	1,82,711	24,93,333	63,87,124	—
1953 ..	1,72,86,819	1,81,278	30,45,423	27,39,259	—
1954 ..	1,75,28,216	2,02,723	59,97,485	21,04,179	7½%
1955 ..	1,83,18,049	1,90,033	60,06,191	9,77,629	12½%
1956 ..	2,09,81,596	1,90,173	47,78,586	8,99,380	12½%
1957 ..	3,25,68,768*	2,86,971	64,99,479	19,45,549	15%†

* The figures of gross block for 1957 do not include expenses on construction in progress amounting to Rs. 1,16,29,248 not yet capitalised.

† Recommended by the Directors to the shareholders.

7. PROSPECTS.

With the expanded output of cement and with the working of the newly established Refractory Works, working results for the year 1958 are expected to be much better.

8. DIVIDEND AND RIGHTS.

The new shares shall also be entitled *pari passu* with existing paid-up capital to participate in dividend for the accounting year 1958 and thereafter.

SUGAR EXPORT ORDINANCE ANALYSED

NO JUSTIFICATION FOR RISE IN DOMESTIC PRICES

From Our Special Correspondent

NEW DELHI, *1st July*

DELHI LETTER

AFTER ten months of tortuous consideration of the question of sugar exports for earning foreign exchange, the Government of India has just enforced on the industry an export promotion scheme through the Sugar Export Promotion Ordinance, 1958. Under this Ordinance, the Indian Sugar Mills' Association has been notified as the export agency. And the Export Agency Division of the I.S.M.A. has also begun to function with its office at 4, Scindia House, Queensway, New Delhi. Information gathered from this Division is covered here.

Some relevant sections of the Ordinance would have to be known in the first instance before the industry's present stand regarding exports can be appreciated. Section 4 is as follows :—

(1) The Central Government may, by notification in the official *Gazette*, fix from time to time the quantity of sugar which may be exported during any period, and, in fixing such quantity, the Central Government shall have regard to—

(*a*) the quantity of sugar available in India,

(*b*) the quantity of sugar which, in its opinion, would be reasonably required for consumption in India,

(*c*) the necessity for exporting sugar with a view to earning foreign exchange in the public interest.

(2) The power conferred by sub-section (1) shall be so exercised as to ensure that the quantity fixed under that sub-section for any year does not exceed in the aggregate 15 per cent. of the quantity of sugar produced in India in the season ending with the month of October falling within that year.

As "year" has been defined as the year beginning on the first day of May, the sugar season falling within the year ending April 1959 is the current one which ends with the month of October 1958.

Under section 5, the export quota for each factory shall be fixed by the Central Government in proportion to the quantity of sugar produced, or likely to be produced, by it during the season referred to in sub-section (2) of section 4. Section 6 lays down the liability of every factory owner to deliver the export quota to the export agency. Section 7 provides for the levy of additional excise duty where a factory fails to deliver fully the export quota fixed for it. Sub-section (1) of this section is: "Where sugar delivered by any owner falls short of the export quota fixed for it by any quantity (hereinafter referred to as the said quantity), there shall be levied and collected on so much of the sugar despatched from the factory for consumption in India as is equal to the said quantity, a duty of excise at the rate of seventeen rupees per maund." And sub-section (2) of the same section says that "the duty of excise referred to in sub-section (1) shall be in addition to the duty of excise chargeable on sugar under any other law for the time being in force."

Section 9 contains provisions in respect of payments to owners for sugar delivered. This section is as under :

(2) From the total sale proceeds in respect of the quantity fixed for export under section 4 for any year, there shall be deducted the total expenditure incurred by the export agency in respect of the sugar, whether by way of administrative expenses or otherwise, and the balance shall be apportioned among the owners in proportion to the quantity of sugar delivered by them respectively during that year.

(3) In making any distribution under this section, the export agency shall make such adjustments as may be necessary having regard to the grade of sugar delivered by any owner, the adjustments being made on the basis of sugar of ISS-E-29 grade and with reference to the price differential schedule for different grades of sugar which the Central Government may, by notification in the official *Gazette*, publish in this behalf.

Section 10 of the Ordinance lays down that "the export agency . . . shall be bound, in the discharge of its functions, under this Ordinance, by such general or special directions as the Central Government may give to it in writing."

The Export Agency Division of the I.S.M.A. is now faced with the problem of how to restrain the upward trend in retail market prices of sugar —a trend which has been in evidence for the last one month or so. This trend set in, according to Mr. J. S. Prabhu of Messrs. Parry & Co. Ltd. (provisionally in charge of the Export Agency Division), some time before the promulgation of the Ordinance on account of the then expectation of a large quota of 200,000 tons or so for export. Taking into consideration the present supply and demand position and the need for keeping down internal prices at a reasonable level, Mr. Prabhu explained, the Government of India have fixed a quota of only 50,000 tons of sugar for export during the current season ending with October 1958. The I.S.M.A. members, continued Mr. Prabhu, have assured the Government that they will sell their released stocks (at the rate of 1.6 lakh tons per month) for domestic consumption quickly and at prices not exceeding the pre-Ordinance level of prices. The industry is absorbing voluntarily, the officer-in-charge emphasised, all the loss that will be sustained in exports and will continue to sell at the previous level of prices so that it can suitably resist any unjustified upward rise in prices brought about by the trade.

The loss that will be borne by the industry is estimated at Rs. 1.40 crore—on the basis of Rs. 280 per ton for 50,000 tons. Even after the refund of excise duty and cane cess on account of this quantity of sugar earmarked for export, there will be that loss of Rs. 280 per ton, inasmuch as the f.o.b. cost of Indian sugar (excluding excise duty and cane cess) will still be Rs. 733 per ton, as against the price (on f.o.b. basis) of Rs. 453 per ton expected to be realised from export. As the Ordinance has specifically laid down that the export agency shall make payment (to the factories) of proportionate export sale proceeds after deduction of all expenses of export, the industry cannot make any attempt to recoup the expected loss of Rs. 1.40 crore by charging higher ex-factory prices for the domestic market.

Under the circumstances there will be absolutely no justification for the reported price increase of one anna per seer or Rs. 2-8 per maund at the retail end to continue. As stocks will be released at the rate of 1.6 lakh tons per month and as the export quota of 50,000 tons will be considerably less than 10 per cent. of the estimated stocks in the remaining part of the current season, any attempt by the wholesale and retail trades to secure a windfall at the expense of the consumer may have temporarily succeeded in the first few days after the issue of the Ordinance but is expected to fail very shortly.

To a question (based on the Government's reported view) whether the increase in the ex-factory price of sugar by a rupee in the past one month or so (from Rs. 35-4 per maund to Rs. 36-4 in the Muzaffarnagar market for I.S.S. E-29 grade prior to the Ordinance) would not wholly cover the expected loss of Rs. 1.40 crore on the 50,000 tons of export sugar, it was claimed on behalf of the industry that this increase, if any, had nothing to do with the then expectation of sugar exports but was due to the shifting of that part of the burden of additional excise duty which the industry had unjustly to bear for some time without including it in its entirety in the ex-factory price. And so, the industry's contention is that it stands to lose Rs. 1.4 crore on export sugar as far as the present quota of 50,000 tons is concerned. The question, therefore, arises, whether the industry will willingly agree to export any further quota of sugar in the next season if conditions in world markets continue to be as unfavourable between November 1958 and April 1959 as they are now. A cautious approach on the part of the sugar industry to further exports is thus indicated—an approach which is no less cautious than that of the Government.

If wholesalers and retailers do not co-operate but put up prices now and then, it is difficult to see how the sugar export drive can be maintained for long. After all, it may be rightly pointed out that, roughly, four-fifths of all sugar consumers belong to low-income groups with monthly incomes of less than Rs. 150 and these four-fifths are responsible for three-fourths of all domestic sugar consumption. Any increase in the retail price of sugar may provoke a marginal shift to *khandsari* on the part of some proportion of low-income consumers. That would be a predicament for the sugar industry—losing a part (however small) of the domestic market while gaining, perhaps, a still smaller part of the foreign market. The views in this the last paragraph are, however, the correspondent's own.

PEP TALK FOR LANCASHIRE

From Our Own Correspondent

LONDON, *28th June*

LONDON LETTER

THE recent visit of the Chancellor of the Exchequer to Manchester has apparently brought a good deal of joy to the cotton traders who have been watching for month after month the closure of local mills. Indeed, the very day that the Chancellor was talking, yet another mill had to close down. And yet it is difficult to see what concrete comfort he brought to the industry telling them that as a whole he could not see it disappearing overnight! His view was that all industries should remain flexible and in their various departments be prepared to expand or contract according to the market. Given due flexibility and competitive power, he saw no reason why the cotton industry should not remain active.

He devoted a good deal of his talk to stressing the Government's determination to maintain a competitive economy with healthy rivalry in business to hold the balance between demand and resources. His phrase about free competitive enterprise was: "we must make very sure of keeping it out of the museum and in the market place." Then he went on to find comfort in the way in which wages and prices were moving towards greater stability. In a recent industrial sample, about a third of the firms had been making price reductions in the past three months and about two-thirds had held prices unchanged. On the wages front, while the Chancellor deplored increases that outran productivity, he thought the evidence was that recent wage claims were more realistic than some in the past and that broadly there was a more realistic approach towards wage claims in general. By "realistic," the Chancellor no doubt meant that the wage claims ought to be related to the income and the productivity of business.

The other phase of Government policy which Mr. Amory stressed was the determination to encourage a high investment economy. He appreciated that the tax concessions given in the last Budget were long-term and designed to make business men think forward. He noted that, whereas six years ago, investment accounted for about 15 per cent. of the national income, it had now risen to 17½ per cent. Whether the encouragement which the Government wished to give to investment would be utilised naturally depended upon the views that business men themselves took about the worthwhileness of that investment. The Chancellor said that the Government would be prepared to use short-term stimuli to the economy in case of need, but, more important, he regarded the corner in the British recession as having been turned and the strength of sterling a good index to the country's internal achievements. The economic climate, in the Chancellor's view, was very different from the natural climate in Manchester where they had been suffering from excessively depressing wet weather. The Chancellor frankly took an optimistic view. Unemployment in this country averaged about 2.1 per cent. which he thought was lower than anywhere else in Europe, and although in parts of the country—and that applied to Lancashire—the unemployment ratios were higher, the credit squeeze was relaxed in those areas and the banks were to be encouraged to be liberal with providing credit for setting up new industries or expanding existing industries.

In short, the Chancellor's theme was that industry should not be afraid to expand and that the minds of those in commerce should turn away from restrictive ideas to expansive ones. The Government was proposing to make grants and loans to firms which were setting up or expanding their businesses in the difficult areas—and that, of course, is just the sort of encouragement that Lancashire needs.—*All Rights Reserved.*

ENFORCEMENT OF ANTI-TRUST LAWS IN UNITED STATES—I

By Victor R. Hansen

ASSISTANT ATTORNEY GENERAL OF THE UNITED STATES

[This is the first of two articles describing the enforcement of the U.S. anti-trust laws against illegal business practices in domestic commerce and international trade. The author of the article is in charge of the Antitrust Division of the U.S. Department of Justice.—ED.]

THE philosophy of our American society is based on the great American principle of limited power. It not only is the cornerstone of our system of government, but is the cornerstone of American business. It not only applies to every segment of American society, but it applies to each and every individual as well. When economic power is concentrated in the hands of the few, our liberty is endangered.

It is the fundamental belief of our country that a dynamic and free democracy rests secure only on the foundation of a free economy. Our country long ago decided that it wants to have and maintain our system of free competitive enterprise a system which a majority of our citizens have judged most likely to insure economic democracy and that economic strength which is essential to political democracy.

Our system of free competitive enterprise means a system which, as nearly as may be, guarantees to every citizen the right to engage in whatever business he chooses, and to conduct his business in the way he desires. It means freedom of access to the market place, freedom for both buyers and sellers to trade in a market which is not controlled or rigged by private groups in their own self-interest.

Competition is the key to the preservation of this type of freedom. Goods must stand the cold test of competition, and the public, acting through the market's impersonal judgment, will allocate the nation's resources and thus direct the course its economic development will take.

The maintenance of a free competitive economy is a worthy objective, but, in the fulfilment of this objective, there are problems that must be faced in trying to achieve a well-balanced general enforcement policy for our anti-trust laws. The basic anti-trust statute is the Sherman Act of 1890. In 1914, this Statute was supplemented by the Federal Trade Commission Act and the Clayton Act.

As a practical matter, the direction which anti-trust enforcement takes is generally determined by a number of interrelated factors, such as the availability of funds and manpower, the volume and nature of complaints received, the level of business activity, legislative exemptions, judicial interpretation of anti-trust questions, and the changing pattern of our industrial economy.

Complaints Increase

At the present time, the number of attorneys available for prosecuting anti-trust cases is 227, while the number of complaints of violations has risen sharply in recent years to a peak of some 1,300 complaints of violation in 1957.

This increase in the volume of complaints received is reflected in the larger number of investigations pending. At the end of fiscal year 1952, there were 221 investigations pending: and by the end of fiscal year 1956 the number of investigations had increased from 221 to more than 280. Currently, the number of investigations pending has reached about 310.

All of this increased activity has contributed to an increase in the number of cases filed with the courts. While some 30 new anti-trust cases were filed in fiscal year 1952, this number increased to 33 in fiscal year 1953. The number of cases filed jumped sharply to 48 in fiscal year 1956, and to 55 in fiscal year 1957.

During the North Korean aggression, our emphasis was directed toward removal of restrictions impeding the defence programme. In recent years, the growth of industrial mergers and the strengthening of section 7 of the Clayton Act has shifted emphasis. Hence, anti-trust enforcement policy from year to year reflects a fluidity adaptable to the needs of our dynamic economy.

Within these broad policy determinants, specific cases are selected on the basis of their economic and legal impact—either within an industry or a particular geographical area, or within the framework of current industry and consumer demands. In all cases, however, attention must be given to the question whether the case under consideration will play its part in furthering the basic objectives of anti-trust enforcement.

The basic objectives of anti-trust enforcement can be simply stated :

First of all, it seeks to insure a plentiful supply of goods and services in the market place. Second, it is aimed at achieving a competitive market where the prices are set freely by buyer and seller under the normal laws regulating the market. Third, it strives to make available to the consumer as many sources of supply as the forces of supply and demand will permit. And, finally, it seeks to provide every consumer with a free choice in the selection of the dealer from whom he wishes to purchase his merchandise.

For an enforcement programme to be effective, we must necessarily direct our efforts in selecting for prosecution those cases which will best serve these objectives.

Collusion

Of paramount importance, of course, is our policy to place special emphasis on attacking collusive price structures which often require purchasers to pay more for goods and services than the market really demands. Hence, many of the actions instituted by the Antitrust Division during the past year have been aimed at conspiracies to fix the selling price of commodities which are of vital importance in the budget of every consumer.

Protection for the consumer, however, is sought not only in the necessities of life, but also in other items which we have come to consider a part of the American standard of living.

In view of the widespread interest in home construction, some emphasis has been placed on taking action against price agreements and other restraints which had the effect of increasing the cost of constructing homes.

The Antitrust Division cannot, of course, devote its total enforcement programme to price-fixing cases alone, for this would leave untouched the equally important objective of insuring that purchasers and consumers will have available alternative sources of supply and opportunity for a free selection among those sources of supply.

In line with this latter objective, we are particularly interested in eliminating from our industrial economy all instances involving boycotts and concerted refusals to sell products to particular dealers. As the Supreme Court has repeatedly held, a boycott is a prime weapon used by industry to deprive consumers of alternative sources of supply.

The reach of our anti-trust laws, of course, is not limited to domestic commerce, but extends to restraints upon the foreign trade of the United States. In the wake of the great expansion of international trade with a consequent increase in the flow of U.S. private investments abroad, the problem of cartels is also receiving our attention.

Our experience indicates that cartels are largely an extension of domestic monopolies into world trade, and an integral part of the monopoly problem at home. As the distinguished Eugene V. Rostow, Dean of Yale University Law School put it :

"Foreign monopolies, cartels and restrictive agreements of comparable effect are costly burdens upon the American economy. They affect certain prices within the United States, either directly or by influencing imports into this country ; and they influence, and often control, American export and investment opportunities in other countries. Some plans even limit the capacity of American firms or subsidiaries of foreign firms doing business in the United States to use certain manufacturing processes in this country. While no estimates are available as to the proportion of world trade affected by cartels, there can be no doubt that they constitute a quantitatively significant influence on both actual and potential movements of goods, services and capital in the economy of the free world."

Our enforcement programme, therefore, seeks to ferret out all such illegal restrictions and obstructions to our foreign trade. During the past year, the Antitrust Division filed six cases in the courts involving foreign trade restraints.

Foreign Cartels

Most of these cartel cases involve patent licensing agreements between competitors, which include territorial limitations and an undertaking to keep the agreement alive by licensing future improvements and exchanging future technology. As a result, it is alleged that the American company is precluded from selling in the territory allocated to the foreign cartel partner, and the foreign producer no longer sells in the United States.

However, due to the trend toward mergers and consolidations, the major anti-trust problem today, more than ever, is monopoly, and that unlawful economic concentration which creates monopoly power. Any antitrust programme that does not include a frontal attack upon this basic evil misses the present main threat to our economic freedom.

In attacking this monopoly problem, merger cases have continued to occupy a major position in the Antitrust Division's programme. During fiscal year 1957, five merger actions were filed, as compared with six actions filed during the two prior fiscal years. In the current fiscal year, we have thus far filed two additional cases. All of these cases assume special significance because there has not yet been a judicial determination of the recently amended anti-merger law in any Government action.

Thus, we have attempted to use our limited resources in man-power most effectively by concentrating on those areas which seem most significant economically—problems of mergers, cartels, and price fixing and boycott activities.

U.S. PRIVATE INVESTMENTS ABROAD

The Department of Commerce is conducting a survey of American business investments in other countries which the Department hopes will provide information that may "foster the freer flow of sound capital investment among nations." In announcing the survey, with which compliance by investors is mandatory, the Department said that the U.S. private direct foreign investments at the time of the last official survey, in 1950, showed a book value of about $12,000 million, and estimated "that this amount has approximately been doubled" since. "Data to be developed," the announcement said, "will show in detail the way this growth has been distributed among countries and industries, and will provide basic statistics for the compilation and understanding of the balance of payments between the United States and foreign countries. These statistics are essential for programming the foreign operations of the U.S. Government, and provide basic guides for the many firms that now have or are contemplating the establishment of productive facilities abroad."

ATTRACTING HOARDED GOLD

FRANCE REPEATS ITS EXPERIMENT

THE recent assessment of private bullion stocks in India by the Reserve Bank of India, the continued hoarding of bullion even at rising prices and the shortage of foreign exchange have given new life to the oft-repeated suggestion that large quantities of gold should be induced out of hoards and utilised for productive purposes. One of the suggestions for achieving this objective was the issue of interest-bearing gold certificates by the Government to be subscribed by the public in gold. It was estimated by the Reserve Bank that the private stocks of gold would be in the neighbourhood of 105 million ounces, which, at the average price for 1957-58 of Rs. 289 per ounce, would be of the value of Rs. 3,035 crores and, at the international price of $35 per ounce, Rs. 1,750 crores. The stocks of silver in the country were also estimated by it at 4,235 million ounces valued at Rs. 2,075 crores.

The suggestion to bring to the surface hoarded gold through the issue of gold certificates or bonds is not a novel one. For, six years ago (in 1952), M. Pinay, the then Prime Minister of France. floated a gold-*cum*-cash loan which fetched 1,254,400 ounces or 35 tons of gold from the privately-owned hoards, besides attracting cash subscriptions. The total subscriptions to that loan amounted to Frs. 428 milliard (thousand millions) of which about Frs. 200 milliard were in cash representing, in part, liquidation of privately-owned gold amounting to 35 tons in weight. It was only of limited success, because it represented only a fraction of the vast amount of gold held by the French people, reported to be the biggest hoarders in precious metals in the world. Undaunted by this partial success and as part of his efforts to rejuvenate France's financial position, the same M. Pinay, now Finance Minister in the de Gaulle Government, decided three weeks back to repeat his previous experiment.

The New Loan

The new loan, which opened for public subscriptions on 17th June, is for an indeterminate amount and will be kept open for an unspecified period. It carries interest at the rate of 3½ per cent. This rate of interest compares less favourably with the Bank rate of 5 per cent. in France, but it has two other attractive benefits attached to it. In the first instance, the interest is exempt from income-tax and, what is more, the entire capital (principal) is free from estate and transfer duties alike. Secondly, the capital is secured in part against inflation or devaluation by indexing the repayments, which will begin in 1970, to the market price of the god Napoleon. For this purpose, the base value of Napoleon gold coin has been fixed at Frs. 3,660.

Subscriptions are being invited in the form of francs, but it is expected that a substantial part of the subscriptions will come from sales of gold or even foreign currencies. Apparently, this arrangement is based on the theory that most people hoard their savings in gold in order to avoid depreciation in the value of money brought about by inflation and to escape taxes and that, if provision is made to safeguard these objectives, the hoarders will be tempted to convert their wealth from gold, which earns no interest, to Government bonds which promote a modest tax-free return.

Again, in order to encourage repatriation of capital by the French people thus, the law of 1948 which prescribes a fine of 25 per cent. on "reimported" capital is being abrogated. The bonds are redeemable by annuities at par, or should the average price of the Napoleon during the 100 sessions of the Paris gold market preceding 15th May each year rise above a certain level, to an amount equal to 25 times that average. In short, as the *Economist*, London, aptly put it, "the loan represents an appeal to hoarders of gold. They are invited to sell their gold for francs and invest them in the Government's gold loan on terms that, it is claimed, amount to earning interest on the gold instead of paying for its safe-keeping, and yet retain much the hedge against inflation that the possession of actual gold would give."

The terms of the new loan are identical with those of the 1952 loan, with the only noteworthy difference that there is a change in the price levl of the Napoleon serving as a guarantee. This has been necessitated by the 20 per cent. devaluation of the franc last year. The guarantee price of the 1952 loan was 4,000 francs.

In actual practice, however, the gold guarantee remained dormant most of the time, because, shortly after the issue of the first gold loan in 1952, the free market price of gold declined and with that the price of gold Napoleon (20-franc gold piece) too, fell. Thus, it was quoted as low as 2.500 francs in 1955, as against 5,000 francs shortly before the first Pinay loan was issued in 1952. The current quotation for the Napoleon coin is 3,600 francs; it had gone up to a high of 4,000 francs during the height of the recent political crisis. It will also be interesting to note that the first gold loan enjoyed a ready market in France, though its value fluctuated rather widely, the highest and the lowest levels during the past six years being 112 and 91, respectively.

Gold Guarantee

The Government expects that through the latest gold loan it will be able to rope in at least Frs. 200 milliard of fresh money, thus draining off some of the excess purchasing power of the public. The present loan is expected to be more successful than its predecessor, in that the gold guarantee in it is more attractive. Unlike the 1952 loan, the latest one will enjoy the benefit of the gold guarantee if the price of gold in the Paris market goes up above its present level of 3,600 francs. Further, in view of the renewed expectations of an increase in the world price of gold, some people are likely to convert their surplus francs into a tax-free security linked to gold. The second factor which is expected to make the loan more successful is the personal confidence which M. Pinay commands among the middle class. That the expectations about the success of the latest loans have not been misplaced is indicated by the fact that the sales of gold in the Paris market are already twice as large as put through during the eight-week period during which the 1952 loan was kept open.

The success of the loan should be judged not from the total subscriptions to it, but from the quantity of gold and foreign currencies surrendered. The stocks of gold hoarded by the French citizens are estimated at £2,000 million to £4,000 million. If the anticipated subscriptions in the form of gold and foreign currency come in, France will, it is stated, have enough gold and foreign currency in hand to tide over the next four months. This will give M. Pinay sufficient time to set the internal economy in order before taking up the task of adjusting the external value of the franc. Thus, the new loan is regarded in France as the first step to create the proper climate for further measures to improve the domestic economic situation.

WORLD BANK PRESIDENT

It is gratifying to hear that the Executive Directors of the International Bank for Reconstruction and Development has renewed the appointment of Mr. Eugene R. Black as President of their Bank for a further period of five years, the new terminal date being 1st May 1963. They could not have done better, for Mr. Black has proved himself as an astute and understanding international banker. It can be stated without any fear of contradiction that he has sought to do his best to promote the objectives of the U.N.O. in the economic sphere. In him the underdeveloped countries has a good friend and, if only India had heeded his timely advice on the second Five-year Plan, it would not be in the economic mire in which it finds itself today.

As President, Mr. Black is chief of the Bank's operating staff and Chairman ex-officio of the Executive Directors who represent the Bank's member-countries. Mr. Black is also ex-officio Chairman of the Executive Directors of the International Finance Corporation, which is affiliated with the Bank. Mr. Black's first five-year term as Bank President began on 1st July 1949 and was renewed in September 1953. Before that Mr. Black had served for more than two years as United States Executive Director.

The period of Mr. Black's presidency has encompassed nine of the twelve years of the Bank's existence. During that time, the membership of the Bank has risen from 47 to 67. When Mr. Black first took office, the Bank had completed the European reconstruction phase of its lending operations and was just beginning to lend for development. In the nine years which have since elapsed, development, lending has grown from $159 million to more than $3.3 billion, out of total loan commitments of $3.8 billion. In all, 47 member countries or territories have received loans from the Bank to help to lay the foundations of further economic growth.

Throughout his association with the Bank, Mr. Black has taken a close interest in increasing the funds available for its work by establishing and expanding the market for Bank securities in the world's investment centres. As a result, the funded debt of the Bank has grown from $254 million on 30th June 1949 to $1,660 million at the present date. Mr. Black has also fostered the growth of another supplement to Bank resources, the sale of parts of Bank loans to other investors. Since 1948, the Bank has made such sales to a total of over $400 million. The Bank has, therefore, received support for its operations from other investors, mainly in the private sector, to a total of more than $1 billion. Mr. Black has always stressed the need to enlist the support of other investors on the widest possible basis, thereby maintaining the Bank's international character. More than half of the Bank's borrowing has been outside the United States.

The Bank's other activities have also undergone rapid growth under Mr. Black's presidency. A total of 15 countries have enlisted the help of the Bank in carrying out comprehensive surveys of their economic development potentialities. There has been a growing use of the expert services of the Bank in investigating and advising on development programmes and projects of all kinds. And, in recent years, the Bank has increasingly lent its good offices toward the settlement of disputes involving its member-countries. A recent successful example of this activity was the settlement arrived at with Bank assistance of the compensation to be paid by the United Arab Republic for the nationalisation of the Suez Canal.

Mr. Black has continued in the past four years to maintain relationships of full confidence between the Bank and its member-countries. He has travelled all over the world on Bank business and has now visited more than 50 of the Bank's member-countries and territories. He is also a frequent visitor to the financial centres of Europe.

Mr. Black came to the International Bank after more than 25 years spent in private investment banking, including 15 years as an officer of The Chase National Bank of the City of New York. After the First World War, he went to work in the Atlanta office of the investment banking firm of Harris, Forbes & Co., and in 1933 he was appointed a Second Vice-President of The Chase National Bank. In 1937, he became Vice-President in charge of the bond department, and later became a Senior Vice-President. He resigned from The Chase National Bank in March 1947 to accept appointment as United States Executive Director of the World Bank. In May 1949, he was appointed to the presidency of the World Bank, succeeding Mr. John J. McCloy.

W. GERMAN BANK RATE CUT

The West German Bank rate has been reduced from 3½ per cent. to 3 per cent., with effect from the 26th ult. With this cut, the Bank rate has been taken back to the level which prevailed before August 1955. This is the second reduction during the current year; the previous one took place on 17th January, when the rate went down from 4 to 3½ per cent. The decision to reduce the Bank rate was taken by a majority vote of the Board of Members of the Federal Bank. While the Chairman of the Bank was, it is believed, strongly in favour of the move, some of the provincial members were opposed to it. Finally, two factors were reported to have guided the members to make the move, namely, (1) expectations of a glut in the money market after the half-yearly requirements had been met and (2) the recent increase in the flow of foreign currency which resulted in an embarrassingly large foreign exchange surplus.

The following table shows the changes in West German Bank rate in the post-war period:

Date	Rate %	Date	Rate %
27th May 1949 ..	4.50	4th August 1955 ..	3.50
14th July 1949 ..	4.00	7th March 1956 ..	4.50
27th October 1950	6.00	10th May 1956 ..	5.50
20th May 1952 ..	5.00	6th September 1956 ..	6.00
21st August 1952	4.50	11th January 1957 ..	4.50
8th January 1953	4.00	19th September 1957 ..	4.00
11th June 1953 ..	3.50	17th January 1958 ..	3.50
20th May 1954 ..	3.00	26th June 1958 ..	3.0

The latest cut in West German Bank rate followed a series of reductions in a few other countries, notable among which was Britain, which reduced its rate from 5½ to 5 per cent. With the latest cut in West German rate, the gap between the rates in Britain and W. Germany has been restored to 2 per cent. In view of this gap and in view of the fact that the rate of interest prevailing in the London money market is 4½ per cent., it is considered likely that large sums of German short-term funds may be placed in the London money market shortly.

WORLD BANK LOAN TO JAPAN

The World Bank has given a loan equivalent to $25 million to the Japan Development Bank to assist the privately-owned Hokuriku Electric Power Company in the execution of an electric power expansion programme. The funds will help to finance hydro-electric installations on the Joganji River on Honshu Island which will add 261,000 kilowatts to the Company's generating capacity.

The Girard Trust Corn Exchange Bank, Grace National Bank of New York, Brown Brothers Harriman & Co. and the Philadelphia National Bank are participating in the loan, without the World Bank's guarantee, to the extent of $789,000. This represents the first two maturities and part of the third maturity which fall due between 1st August 1961 and 1st August 1962.

The loan will be for a term of 25 years and bear interest of 5½ per cent., including the 1 per cent. commission which is allocated to the Bank's special reserve. Amortisation will begin on 1st August 1961. The loan is guaranteed by the Government of Japan.

The Bank has now made 11 loans in Japan aggregating $152 million; $36 million for the steel industry, $5 million for other industrial projects, $100 million for electric power development and $11 million for agriculture.

STATE BANK OF INDIA TODAY

AN APPRAISAL OF ITS ACHIEVEMENTS AND OUTLOOK

By B. P. Patel, I. C. S.
MANAGING DIRECTOR, STATE BANK OF INDIA

[This article, which is based on the author's talk to the Rotary Club, Bombay East, on 20th June 1958, provides an authentic account of the progress made by the State Bank of India in the fulfilment of tasks assigned to it.—ED.]

THE nationalisation of the Imperial Bank of India into the State Bank of India on 1st July 1955 is an important landmark in the history of Indian banking. This reform was undertaken in pursuance of the recommendation of the Rural Credit Survey Committee, to establish one strong, integrated, State-partnered commercial banking institution with the object of stimulating banking development in the country and following a policy which would be in effective consonance with national policies without departing from the canons of sound business. The State Bank of India Act enjoins on the Bank that, in discharging its functions, it shall act on business principles, regard being had to public interest. Accordingly, the Bank has been playing a twofold role in the Indian economy. As a commercial bank, it has been, on the one hand, providing finance to industry and trade and as a nationalised institution, it has, on the other, undertaken several promotional and developmental activities in such fields as branch expansion, finance to small-scale industries and assistance to co-operative societies. The Bank's policies are thus co-ordinated more and more with those of Government and its manifold activities are assuming greater significance in the overall plan to stimulate the economic development of the country and to achieve the objective of a welfare State.

Capital Structure and Management

The authorised capital of the Bank is Rs. 20 crores divided into 2,000,000 fully paid-up shares of Rs. 100 each and the issued capital is Rs. 5.625 crores divided into 562,500 fully paid-up shares. The (Central Board of the) Bank may increase the issued capital, the Reserve Bank of India always holding not less than 55 per cent. of the issued capital of the Bank. It may be mentioned here that the Bank is not entirely owned by the Government and the Reserve Bank of India, but there are as many as 1,227 private shareholders holding about 8 per cent. of the Bank's issued capital. The State Bank is thus not a State-owned but a State-partnered institution.

The management of the Bank is vested in the Central Board of Directors, consisting of the Chairman, Vice-Chairman, two Managing Directors, eight Directors nominated by the Central Government representing territorial and economic interests; of these eight, one Director is nominated by the Central Government, another by the Reserve Bank of India and six Directors are elected by the shareholders other than the Reserve Bank. Here again, it can be seen that the State Bank is not entirely State-managed, but private shareholders are also represented on the Board of Directors.

The Central Office of the Bank is located in Bombay, which controls the four local head offices situated at Bombay, Calcutta, Madras and New Delhi. Each of these local head offices has a Local Board consisting of all the Directors representing the private shareholders and territorial and economic interests and ordinarily resident in the area concerned, plus such number not exceeding four, to be elected by the shareholders concerned or nominated by the Central Government in consultation with the Reserve Bank, as may be prescribed.

Traditional Business

The Bank's total deposits which amounted to Rs. 186.6 crores on 1st July 1955 rose to Rs. 221.5 crores and Rs. 344.3 crores respectively by the end of the two succeeding years and stood at Rs. 420.5 crores at the end of May this year. There has thus been a continuous increase in the total deposits of the Bank, which today form about 28 per cent. of the total deposits of all the Scheduled banks in India.

The demand for bank credit in India has increased of late and the State Bank has made its own contributon to meet it. The Bank's advances (including bills) in India which amounted to about Rs. 110 crores in June 1955 rose to Rs. 185.4 crores in May 1957 and further to about Rs. 206 crores in March 1958. What is significant is that, contrary to the apprehension entertained in some quarters, the Bank's advances to the private sector have not only not declined but have actually increased from about Rs. 88 crores in 1954 to Rs. 114 crores in 1956 and further to Rs. 148 crores in 1957. The Bank's advances to industry, in particular, have gone up not only absolutely and as a proportion of the Bank's total advances but also as compared to the advances of other Scheduled banks to industry.

Developmental Activities

The State Bank has undertaken during the last three years several new activities with a view to filling in the gaps in the Indian banking system and to meeting the needs of a growing economy. The extension of banking facilities is one of such activities. The Bank has a statutory obligation to open 400 branches within five years of its inception. The first year of the branch expansion programme was essentially a period of preparation and co-ordination of efforts especially with the State Governments, the most formidable difficulty being the want of adequate building accommodation. The progress was rather slow and only 32 branches were opened in that year. The sceptics were none too slow in pointing out that the programme was over-ambitious for fulfilment in practice. The impatient rushed in to attribute the slow progress to inadequacy of effort. The initial difficulties, however, have been overcome and the programme has now gathered momentum. Two hundred and eight branches have already been opened before the close of the third year of the programme. The yearly rate of progress now exceeds 100 and with more than two years still to go, the Bank is quite confident that it will be able to open the balance of 192 branches and discharge the statutory obligation within the prescribed period.

The Bank has today 675 branches and offices spread all over the country and this network of branches/offices has been increasing the supply of efficient and cheap banking facilities in the country. The branch expansion programme has not only been stimulating the development of the banking habit, especially in the rural and semi-urban areas but, together with the other policies adopted by the Bank, it has also been assisting the establishment of a decentralised and balanced economy in the country.

Finance for Small-scale Industries

The provision of finance for small-scale industries is a new and important activity in which the State Bank of India has been making pioneering efforts. Recgnising the special need of these industries for financial assistance, especially in the context of the role assigned to them for stimulating production and employment during the second Five-year Plan period, the State Bank has put into operation a pilot scheme for the provision of co-ordinated finance for small-scale industries, in which co-operative banks, Departments of Industries and Industrial Finance Corporations function as participating agencies. The scheme which was initiated as an experimental measure at nine centres in 1956 has now been operating at 36 centres. The number of advances sanctioned so far by the Bank under the scheme is 366, the limits sanctioned being about Rs. 1.4 crores (as on 31st May 1958).

The Bank has liberalised its lending procedure in favour of small-scale industries. Working capital is provided against almost any commodity so long as the product has an assured market. In selected cases, clean accommodation is also made available and fixed assets are also accepted as security. Additional finance is made available on the guarantee of the Small Industries Corporation and the Bank has also agreed to act at 'pilot centres as the agents of the State Financial Corporations in their dealings with small-scale industries. An evaluation of our pilot scheme has been recently undertaken. We hope to emerge this year from the 'pilot' stage and to extend the scheme progressively to many more centres all over the country.

Financing of agriculture and co-operatives is another crucial sphere, where there is an urgent need and considerable scope for a new approach and new practices. While keeping in mind the problems and difficulties of agricultural finance, the State Bank has adopted a policy of being responsive to the needs of co-operative societies and has accordingly been extending special facilities to co-operative institutions since 1956 in such matters as advances against Government securities, advances against repledge of goods, remittance facilities, purchase and collection of cheques and bills and purchases of and advances against the debentures of land mortgage banks.

Rural Credit

The vast majority of our countrymen live in rural areas, away from the large ports and metropolitan cities which have developed banking facilities and which have all these years been drawing funds from upcountry places. It is in fact the rural areas that are in a more urgent need of larger funds and developed banking facilities. With a view to assisting the movement of funds in this "reverse" direction, the State Bank has been extending special facilities to co-operative banks for remitting funds, free of charge once a week, from their headquarters to upcountry branches.

Towards the close of the last year, the State Bank took another step forward, with a view to making its role more effective in relation to co-operatives. The growing tempo of the activities of the co-operative marketing and processing societies under the Plan programmes has brought to light the inadequacy of the resources of the co-operative banks to finance these activities, while, at the same time, fulfilling their primary obligation to finance agricultural production. The State Bank has, therefore, decided to supplement the co-operative resources by undertaking to finance the co-operative marketing and processing societies.

In furtherance of the Bank's efforts to co-ordinate its policies with those of co-operative banks and credit structure, care has been taken to ensure that while extending these facilities, neither the basic relationship between the co-operative central financing agencies and other co-operative institutions nor the functioning of the "integrated scheme of rural credit" is adversely affected. The Bank has accordingly commenced financing co-operative marketing and processing societies on terms and conditions which, while safeguarding the interests of the Bank, take into account the special needs and mode of operation of these societies. Since January 1957, credit has been sanctioned by the Bank directly to three co-operative sugar societies and a limit of Rs. 2 crores has been granted to a State Co-operative Bank, to enable it to finance sugar co-operatives. Further, the Bank has also been financing the import of machinery, etc., by co-operative processing societies. Agents of the Bank have been asked to keep themselves in close touch with co-operatives and to extend to them all possible help.

Co-operative Warehousing

Warehousing is an essential corollary to the development of agricultural marketing. The second Five-year Plan, therefore, envisages a comprehensive programme for the development of warehousing in the country through the agency of the Central Warehousing Corporation and the State Warehousing Corporations. The State Bank has lent its support to the Central Warehousing Corporation by subscribing to its share capital to the fullest extent indicated in the Agricultural Produce (Development and Warehousing) Corporation Act, 1956, and by nominating its officers to work on the Board of Directors of the various State Warehousing Corporations, set up under the Act. Much of the success of the warehousing scheme, however, hinges on the support of the banking system for the warehouse receipt. The State Bank has evolved an appropriate procedure for the grant of advances against the security of warehouse receipts and the goods deposited in the licensed warehouses. The Bank has already made a few advances against these receipts, which, it is hoped, should give a lead to other banks in the provision of this form of credit.

Foreign Exchange Business

It is common knowledge that Indian banks have only a limited share in the financing of the country's foreign trade. For the development of our foreign trade and commerce on terms beneficial to our people, it is essential that the Indian banks should play their part in the foreign exchange business in all the important

(Continued on page 43)

COTTON TEXTILE INDUSTRY IN JAPAN

EQUIPMENT MODERNISED AND PRODUCTION TECHNIQUES RATIONALISED

IN the context of the great stress now being laid on the need for augmenting export trade in Indian cotton textiles, it will be worthwhile to take note of the recent notable developments that have taken place in the textile industry of Japan, the most formidable competitor in the world textile markets. Japan ranks as the biggest exporter of textiles. During the year 1957, it exported over 1.468 million square yards of cotton cloth, as against 1,262 million square yards in 1956 and 1,139 million square yards in 1955. This quantity represented nearly 30 per cent. of the estimated total exports of 5,100 million square yards for free nations. The continuously upward trend in Japan's exports at a time when the world trade in textiles is showing signs of slackening is certainly creditable. It must be attributed to the marked improvement in the quantity and quality of production. The quantity of cloth that actually came off the looms of Japanese cotton mills in 1957 amounted to 3,705.54 million square yards, which compares favourably with 3,300.52 million square yards in the previous year and 2,814.33 million square yards two years before. The rise in cloth production followed a substantial increase in the output of yarn, from 826.89 million lbs. in 1955 to 1,017.59 million lbs. in 1956 and 1,089.19 million lbs. in 1957.

The steadily rising trend of textile production has been rendered possible by the expansion in the spinning and weaving capacity of the cotton industry of Japan. At the end of 1957, there were 9,018,000 spindles operable, as against 8,992,000 in 1956 and 8,168,000 in 1955. The number of cotton and staple fibre weaving machines was 392,052, that for the previous two years being 390,036 and 389,705, respectively. The expansion in spinning capacity would perhaps have been more appreciable but for the enforcement of the registration system for cotton spinning machinery. The Textile Industry Equipment Temporary Adjustment Law, enacted in 1956 to control the growth of spinning equipment and thereby checking excessive competition among spinners, stipulates that all cotton spinning machinery be registered with the Government. A similar policy has been applied to the weaving sector, which is dominated by small and medium enterprises, since 1955 under the Small and Medium Enterprises Stabilisation Law.

Mills Highly Modernised

The notable progress of the Japanese cotton industry in recent years is due not only to the world-wide prosperity but also to the efforts on the part of spinners to modernise and improve the production processes, according to an interesting review of the recent trends in the Japanese textile industry contained in one of the recent issues of *The Mainichi*. Most of the existing equipment were newly installed after the Second World War. This fact is reflected in the present high production efficiency and high quality of products. Moreover, constant efforts have been made to modernise and rationalise production techniques by introducing the latest production process and adopting automated machinery. As a result of these endeavours, most of the Japanese mills today are comparable to the world's most modernised mills from the technical point of view. This fact has often been endorsed by foreign experts who have inspected the Japanese mills.

Special care has been devoted to the improvement in processing technique. The percentage ratio of cloth finished in fast and washable colour to the total finished cotton cloth during the first six months of 1957 was 74 for dyed cloth, 56 for printed cloth and 62 for dyed yarn cloth, as against 55, 22 and 22, respectively, during the last quarter of 1954. This shows how notable has been the improvement in dyeing durability. Special care has also been devoted to the adoption of new finishing techniques. Such special techniques as mercerising, compressive shrinking and crease-proofing have made remarkable development recently. Sanforizing machines at plants operated by the spinning units belonging to the All-Japan Cotton Spinners' Association increased from 17 sets at the end of 1954 to 23 at the close of the first half of 1957 and silket machines from 16 sets to 28 sets. The quantity of cloth undergoing resin finishing has nearly doubled, the figure for 1957 being 127.54 million square yards, as against 54.73 million square yards in 1956 and 29.44 million square yards in 1955.

The two other directions in which much progress has been made relates to diversification of products and sales promotion campaigns. Efforts to create new designs and styles suitable for cotton products, coupled with the improvement in finishing techniques, have diversified cotton products, increasing the range of their uses. Originally used for underwear, everyday clothes and work clothes, the cotton products are today patronised by women for outdoor wear and fashionable dresses. Under the joint sponsorship with the National Cotton Council of America, the Japan Cotton Spinning Promotion Association has since 1956 conducted cotton goods market research, sales promotion campaigns and various publicity campaigns.

High Wages

In the Japanese cotton spinning industry, young unmarried female workers account for the majority of workers. These and also other workers (male) earn wages higher than the general level of wages in all manufacturing industries. In 1956, the average monthly wage paid by the spinning industry was 32,031 yen (Rs. 423) for male workers and 11,715 yen (Rs. 155) for female workers. They are higher by 38 per cent. and 32 per cent., respectively, as compared with the wages of 3,156 yen and 8.845 yen paid for male and female workers in all the manufacturing industries. Apart from monetary wages, the workers enjoy many other benefits, including dormitories whose facilities are usually far better than those to which workers mostly from farm communities are accustomed at home. The expenses borne by employers for welfare facilities of workers run high, because the cotton industry depends heavily on unmarried female workers for whom dormitories have to be provided. The average amount per worker borne by employers in 1956 was 2,895 yen per month or average monetary wage of 17,313 yen plus 15.8 per cent. of the average wage. Indeed, it is claimed that the good treatment accorded to mill workers "makes it possible for employers to acquire excellent workers upon whom the Japanese cotton spinning industry depends for its everlasting prosperity."

Exports of cotton cloth from Japan during 1957, as already noted, aggregated 1,468 million square yards. The geographical distribution of the export markets covers almost the entire world, with their number well over 100. The Japanese cotton goods are very popular because of superior quality and reasonable prices, thanks to the substantial improvements made in all the phases of the industry in recent years. Incidentally, it may be noted that Japan purchases abroad every year huge quantities of raw cotton. During the cotton year 1956-57, the total imports amounted to 2.96 million bales which were more than the quantity imported by Britain, West Germany and France. Japan accounted for 22 per cent. of the aggregate import of raw cotton by free world countries.

In addition to the contribution to the development of world trade as a medium for raw cotton exporting countries and cotton products importing countries thus, the cotton industry of Japan also plays a significant part in the domestic field. As the mainstay of cotton goods exports and the most important single export item of Japan, cotton textiles have since the war earned substantial amount of foreign currencies that the country badly needs to import foodstuffs and industrial raw materials in order to sustain its economy. In 1957, the exports of cotton cloth, yarn and secondary products ran up to $417 million, accounting for as much as 14.7 per cent. of the total export earnings.

The future development of the Japanese cotton textile industry, it is said, depends on its strenuous and constant efforts to provide consumers at home and abroad with diversified products of good design and excellent quality at reasonable prices. The industry is confident of its success in the future on the basis of its experiences in recent years. It also firmly believes that the industry, through its important role in national and international economies, can contribute to the mutual prosperity of Japan and other countries of the world.

EXPORTS OF COTTON TEXTILES

Several interesting suggestions designed to promote exports of cotton textiles have been put forward by the Africa and Overseas Exporters' Chamber, Bombay, in a memorandum submitted to the Committee of Enquiry (Textile Industry). At the outset, the Chamber has stressed the need for placing cotton yarn and cloth exports under the Open General Licence system with immediate effect. Pending the decision being taken, it wants that the necessity of having challans and paying challan fees should be done away with. The other important suggestions of the Chamber are given below:

Constant watch over the domestic markets, so that the availability of goods for export is regular;

adoption of a more liberal and rationalised procedure for the installation of automatic looms in mills, in order to ensure production of quality textiles at competitive prices;

standardisation of export qualities, supplemented by a compulsory pre-inspection of goods prior to exports on reasonable terms;

removal of unnecessary restrictions on exports of such items as mill-made check lungis;

relaxation of customs, excise and export control regulations;

issue of insurance policies by the Export Risks Insurance Corporation for occasional and individual shipments of cloth as per the requirements of the exporters;

abolition of restrictions on the drawal of samples and reduction in air freight rates for samples sent abroad;

extension of facilities of clearances under bonds to include ready-made garments;

acceptance by mills of small orders from overseas for special qualities (prints, etc.) as is being done in Japan where the textile industry accepts orders even for 2,000 to 5,000 yards;

proper packing of cloth bales by mills;

avoidance of frequent and periodical rise in freight rates; and

relaxation of exchange control regulations, particularly those relating to shipments of "loss transactions."

In addition to the aforesaid suggestions of a general character, the Chamber has urged the provision of four incentives to exporters. First, the exporters of cotton textiles should be allowed to retain a reasonable part of the foreign exchange earned and to convert it in importing the legitimate requirements of consumer goods. Secondly, as is being done in Japan, a certain percentage of the foreign exchange earned from exports must be deducted from the taxable income of the exporter. Thirdly, priority in movements and concessions in freight rates should be allowed in the case of both raw materials and finished goods meant for export. These, it is said, will give impetus to upcountry mills to participate in export trade and also enable the exporter to have a wider selection for the requirements of his overseas buyers. Finally, the procedure for the grant of drawback of duty must be simplified to the maximum extent possible.

TEXTILE IMPORTS INTO U.K.

The view that some arrangement with Pakistan and Hongkong regarding textile imports into Britain "is within our grasp if everyone understands the buyer interests" was expressed by Sir David Eccles, President of the Board of Trade, while speaking at a dinner of the China Association in London the other day. Sir David spoke shortly after the Members of Parliament representing the Lancashire textile producing constituencies had complained in the House of Commons about the harmful effect of "cut-throat" competition from Hongkong producers on the British industry. He stressed that there should be some voluntary arrangement whereby the effect upon the U.K. textile industry would not be catastrophic. "It is," to quote him, "very much in the interest of the long-term future of Hongkong and

FIRE — MARINE — ACCIDENT

WORSENING SITUATION IN TEXTILE INDUSTRY

MASS DEMONSTRATIONS EXPECTED TO BE STAGED IN COTTON TOWNS

From A Special Correspondent

MANCHESTER, 24*th June*

MANCHESTER LETTER

MASS demonstrations in Lancashire cotton towns may be staged to focus national attention on the worsening situation in the textile industry. Leaders of Lancashire's 230,000 cotton workers revealed in Manchester this week that approaches have been made to owners of more than 1,200 mills to link up in new efforts to secure assistance.

After a meeting of the Legislative Council of the United Textile Factory Workers' Association, Mr. James Milhench, the Secretary, said that the intention was "to lift the issue outside the field of party politics." The Master Spinners' Federation and the Cotton Spinners' and Manufacturers' Association had been invited to joint discussions with the trade unions with a view to deciding what further steps could be taken. In a letter to the millowners, the unions say that one suggestion is for local and regional demonstrations in which civic leaders would be invited to join.

Another Rebuff

Meanwhile, party strife seems likely to break out again in the House of Commons over the future of Lancashire textiles, with particular reference to the vexed problem of overseas cloth imports. Although there is general agreement among members representing constituencies in the area that something should be done to assist the industry, views differ as to the measures to be enforced and the attitude which should be adopted in approaching Eastern producers who are competitors yet still members of the Commonwealth.

Whatever the politicians' opinions, there are no two minds among local millowners and workers as to the situation regarding Hong Kong. The words of the Parliamentary Secretary at the Colonial Office—"The people of Hong Kong are just as much the responsibility of the Government as the people of Lancashire"—came as a slap in the face to hundreds of thousands of those whose livelihood, directly or indirectly, is endangered by the decline of cotton textiles as a provider of employment.

Lancashire M.Ps of both the main parties have drawn up resolutions urging assistance for the cotton trade, but there is a divergence of view on whether the imports from Hong Kong are being produced under sweated labour conditions and should, therefore, be banned under anti-dumping legislation. A debate on the subject is likely to produce another spate of words but little, if any action.

Hollinshead Mill, Blackburn, one of the towns's most up-to-date weaving sheds, containing 437 looms, is closing down, it has been announced. The mill is owned by the Scrim Manufacturing Company, Ltd., of Dudley, Worcestershire, which is going into voluntary liquidation. The Company announced that it was solvent and would honour all purchases and sales contracts. Mr. J. Sanford Smith, Joint Managing Director, said that the mill would be available for disposal in September after weaving out, or earlier by arrangement. "There is plenty labour available and it is an excellent proposition as a replacement for an older mill or as an additional production unit," he added.

The weaving, bleaching and finishing plant at Dudley owned by the Company is being taken over by an associate firm, Sanford Manufacturing Trading Company, Ltd. The paid-up capital of Scrim Manufacturing Company, Ltd., is £50,000 in £1 shares.

Slump in Wool Textiles

Mr. Edgar Isles, Chairman of British Cotton and Wool Dyers' Association, Manchester, described existing conditions in the wool textile industry as a "slump" when he addressed the annual meeting of the Company. He said that the difficult trading conditions began last November and had persisted ever since. But there were signs that confidence was slowly returning and the worst was behind.

Condemning the action of the Canadian Tariff Board in increasing duties on light and medium wool cloth of British origin, with no similar tariff change affecting other countries, Mr. Isles said: "Such discrimination is alarming and disappointing at a time when it is the declared policy of the Canadian Government to increase Anglo-Canadian trade." As part of its policy for diversifying its interests, the group had formed two subsidiary companies during the past year to take over shops as coffee houses. Mr. Isles said that three shops had already been established and a modern bakery was nearing completion to provide confectionery to sell in the shops.

An attempt to increase the final dividend recommended by the Directors of Crosses and Heatons Ltd., the Bolton spinning group, was made at the annual meeting last week. A shareholder moved an amendment to the resolution proposing a final dividend of 2½ per cent., making 5 per cent. for the year. He urged that the final payment should be 7½ per cent., making 10 per cent. for the year. He said that many other shareholders were disappointed at the reduction in the dividend and pointed out that the Company had spent large sums on re-equipment, yet the shareholders had received only limited distributions.

Comparing the results of Crosses and Heatons with the Lancashire Cotton Corporation, the shareholder said that the Corporation had increased its profits and that the shares stood at about 34*s*., whereas Crosses and Heatons were quoted at 10*s*. At one time not long ago, both shares had been obtainable at around 25*s*. Col. B. W. Heaton, the Chairman, replied that the two companies were not comparable, as they produced different types of yarns. Crosses and Heatons used substantial quantities of long-staple cotton grown in the Sudan. Prices of these cottons had fallen, and the group's losses on Sudan cotton during the past year had amounted to £150,000.

Col. Heaton told the shareholder that it was not possible under the firm's Articles of Association to raise any dividend recommended by the Directors. They could only vote to reduce them. In the circumstances, it was agreed to withdraw the amendment, the Chairman saying that the views put forward would be borne in mind by the Board when it came to considering dividend payments in the future.

Narrow Trading

Producers, with their heavy commitments in machinery, labour and stocks to consider, can scarcely be happy about their position in a time of prevailng bad trade. Reports from merchanting centres in the United Kingdom gave no justification for encouragement and the future is certainly obscure. Advices from distributors, as lately indicated by the Cotton and Rayon Merchants' Association, merely add to the depressing scene.

The level of home trading in the first quarter of this year was about 10 per cent. lower than during the same period in 1957, taking all fabrics into account, including those made from cotton, spuns, continuous filament and mixtures. An even more severe reduction in export orders occurred for all types of cloth. As a result, converters have tended to reduce their commitments.

Deliveries of all fabrics to the home trade in the first three months of the year were well in excess of the volume of orders and stocks held by merchants have declined. This trend has been regarded in some quarters as providing the possibility of a revival in demand, but, so far, distributors have shown a marked ability to operate with relatively small supplies, obtaining sudden requirements without a great deal of difficulty.

Dying Industry

Everything considered, there is no alternative except to face the grim reality that this is a picture of a shrinking, dying industry, made all the more tragic by the fact that it has come in the midst of the most dynamic period of economic expansion this nation has ever known. The latter half of this statement is perhaps not entirely appropriate to economic conditions in this country but the earlier comment might well describe the situation in our local textile industry. The comment, in fact, came from the Executive Vice-President of the American Cotton Manufacturers' Institute, speaking recently during a textile convention in the United States. It confirms a widely held belief that Lancashire is by no means the only textile centre to be grappling with phenomenal difficulties.—*All Rights Reserved.*

SUGAR EXPORT POLICY ANNOUNCED

QUOTA FOR CURRENT SEASON FIXED AT 50,000 TONS

WITH the promulgation of the Sugar Export Promotion Ordinance, 1958, by the Union President on 27th June, the prolonged uncertainty regarding the Government of India's sugar export policy has ended. The Ordinance empowers the Government to release specified quantities of sugar for export as well as to fix quotas for individual mills in proportion to their production. It also empowers the Government to levy in certain circumstances additional excise levy.

In pursuance of the above Ordinance, the Government of India has decided to release 50,000 tons of sugar for export during the current season ending on 31st October next. This quantity, it is said, has been fixed "after taking full note of the trends of production and consumption and the supply position of sugar." It may be noted here that the declared quota represents a little over 2.5 per cent. of the total estimated production of 1,975,000 tons for the season. The export will be channelled through the Indian Sugar Mills Association, Calcutta, which has been appointed the exporting agency. All the sugar factories in the country are required to deliver to the Association their export quotas, the payment for these quantities being at a uniform rate based on the net price realised by the exporting agency from the sale of sugar. Any factory which fails to deliver, in whole or in part, the quota prescribed for it will have to pay an additional excise duty of Rs. 17 per maund on the quantity of sugar in respect of which default occurs before the same is released for sale in the internal market.

"The average loss on the export of the declared quota (that is, 50,000 tons)," says the official Press Note, "may not be more than 50 nP per maund (Rs. 13.61 per ton) on the quantity of sugar now in stock with factories." The stocks of sugar with factories as on 15th June 1958 stood at 1,131,000 tons. On this basis, the total loss on selling 50,000 tons of sugar abroad works out to Rs. 1.54 crore (or Rs. 308 per ton).

The Government of India feels that, as prices of sugar have already risen in the various parts of the country by a rupee or more per maund, there can be no justification for any further rise in prices on account of exports. In fact, the prices, it says, ought to stabilise at a lower level. In this connection, the Government points out that the supply position of sugar is at present satisfactory. According to it, the season started with a carry-over of 430,000 tons. Production during the year will be 1,975,000 tons. Taking into consideration the rise in prices and also the fact that the production of *khandsari* sugar during the season is larger than in the previous season, the Government expects that the year will close with a substantial carry-over. It has clearly warned the trade and industry that, if, nevertheless, there is any undue rise in sugar prices, the Government will not hesitate to take measures to bring down the prices to a reasonable level.

The total loss on the exports of 50,000 tons of sugar, as already noted, is put at Rs. 1.54 crore. This is exclusive of the loss of revenue amounting to Rs. 1.71 crore resulting from the full remission of excise duty (Rs. 291.20 per ton) and cane cess (Rs. 50.90 per ton). The aggregate loss on overseas sugar sales thus works out to Rs. 3.25 crores, as against about Rs. 2.25 crores worth of foreign exchange that will be earned by these exports. These figures are arrived at on the basis of the currently ruling Indian price of Rs. 758 per ton (excluding excise duty and cane cess) and the world price of about Rs. 450 per ton.

The Government's statement that the supply position of sugar is at present satisfactory seems to be justified. The following table gives State-wise figures of stocks, production and despatches of sugar as on 31st May 1958:

(In tons)

	Production	Despatches	Stocks
Uttar Pradesh	942,014	575,742	584,986
Bihar	276,056	157,777	171,906
Bombay	317,917	180,557	196,558
Andhra	151,882	93,096	97,037
Punjab	81,974	43,303	52,624
Mysore	73,104	42,640	31,626
Madras	55,590	32,949	37,318
Madhya Pradesh	35,844	26,082	20,111
Rajasthan	14,095	10,292	9,118
Kerala	8,283	4,603	4,414
West Bengal	5,575	4,923	5,346
Orissa	3,903	2,777	2,368
Total ..	1,963,237	1,174,311	1,212,312

The production of sugar upto 15th June 1958 amounted to 1,967,000 tons, as against 2,002,000 tons in the corresponding period of the previous season. Despatches in the same period aggregated 1,259,000 tons, as against 1,322,000 tons a year before. Stocks with factories as on 15th June 1958 stood at 1,131,000 tons.

Shipment of raw sugar in jute bags is fast becoming obsolete in Cuba, according to Messrs. Olavarria & Co., a leading Cuban sugar exporting firm. Cuba, one of the last to give way to the trend of bulk shipments because of initial opposition by labour in the first half of 1958, will ship nearly one quarter of its sugar exports in bulk. During the six months ended June, about 520,905 tons of raw sugar were exported in bulk out of the total shipment of 2,378,305 tons to the U.S. and other markets. In the corresponding period of 1957, only 157,580 tons (out of a total of 2,489,931 tons) were exported in bulk. It is said that bulk shipment from the other sugar-supplying areas such as Puerto Rico and Hawaii has also advanced much further of late.

A new sugarcane research station is expected to be inaugurated at Chittoor (Andhra Pradesh) before the close of the current year (1958-59). The total non-recurring cost of the station is estimated at Rs. 1.5 lakh. The station, which has been sponsored by the Indian Council of Agricultural Research, will be run by the Government of Andhra.

(Concluded from next column)

than 750,000 tons were exported, besides the 1 million tons supplied to Pakistan, and this earned about Rs. 2.75 crores worth of foreign exchange. On the basis of today's prices, the exports in 1938 at 1,413,000 tons, would have earned Rs. 5.5 crores. "If a policy of encouragement of exports had been maintained," Mr. Macmillan contended, "coal could be making a very useful contribution and there is undoubtedly a case for renewed encouragement being given in the present economic difficulties." He, however, added that, even if the greatest encouragement were to be extended to coal exports today, it would be sometime before the old markets and the old reputation could be regained.

MINING COAL BY WATER POWER

Hydraulic mining trials, in which powerful jets of water will be used in place of drills and explosives to break down coal from the face, are to be started in a Welsh mine at the end of this year. Making this announcement in London, the National Coal Board says that, in this process, coal is extracted by the power of high-velocity water jets directed at the seam from a powerful hose. When the coal is broken down, the water jet is used again to clear the floor of the working place and drive the coal along to the collection points.

There is no explosive danger with water power, and—apart from the pumping plant—the equipment used for getting the coal is quite simple. Experiments in the hydraulic transport of coal are already being carried out at two other British mines—one in Scotland and the other in England. At one, coal is being pumped up a vertical shaft, and at the other lump coal is hauled through a 1,000-ft. long pipe on the surface.

The Board says that the main object of these two experiments is to develop more efficient methods of pumping and transferring coal into the pipeline without losing pressure. The new mining project could be adapted for the hydraulic haulage system to replace the existing conveyors if the trials prove successful.

Hydaulic mining is practised in New Zealand and gives a high rate of output. The equipment is easy to operate and move. Although a considerable amount of power is required to supply high-pressure water, this can be generated on the surface, where the plant is accessible and does not require expensive housing or flameproof electrical equipment.

SUCCESSFUL RESEARCH ON METALLURGICAL COKE

The problem of achieving the maximum lump size and strength of coke, and the most advantageous method of processing powder ores is being studied throughout the world. The production of metallurgical coke is a solution of both problems. Successful tests have been conducted in Czechoslovakia recently in the production of metallurgical coke in a coke oven. These results were obtained from the introduction of certain iron dust pellets into a mixture of coking coal during the coking: the strength of the coke was increased by eight per cent., the total production of coke was raised by about 13 per cent. and the yield of metallurgical coke increased by 3 per cent. The tests showed that the industrial production of metallurgical coke can be expected in the immediate future.

COAL OUTPUT IN INDIA

IMPEDIMENTS TO REACHING TARGET

IN its recent memorandum, entitled "Appraisal and Prospects of the second Five-year Plan," submitted to the National Development Council early last month, the Planning Commission had made a frank and realistic admission that the public sector of the coal industry would be able to contribute only about 8.5 million tons of additional production in the last year of the Plan (as against its target of 12 million tons), while the private sector would be able not only to achieve its target of 10 million tons but to exceed it. It also disclosed that it had been agreed that, as a cushion against possible shortfalls elsewhere, the private sector should be permitted to raise an extra 1.4 million tons in the Central India coalfields. In terms of the existing programmes, the memorandum pointed out that there might be a shortfall of 3 to 4 million tons in coal production against the target of 60 million tons.

This shortfall in target of the public sector seems to have given rise to hopes or speculations that the public sector may revise its target downward and raise that for the private sector to a corresponding extent, so that the overall target of both the sectors can be reached. Though it is nearly two months since the Planning Commission submitted its memorandum, no definite decision seems to have been taken on this question. Such a decision is, however, important from the point of view of the private sector, for it must know where it stands in respect of the responsibility to supply the country's requirements of coal. Though the private sector has, by its past performance, proved that it is capable of undertaking the additional task, it is in the fitness of things that it must be given sufficient time to undertake it. Emphasising this point, Mr. D. F. Macmillan, Chairman of the Bengal Coal Company, Ltd., acknowledged, at the annual meeting of the Company held last week, that some encouragement had been given to the private sector by excluding coal from the "harmful provisions" of the Mines and Minerals (Regulation and Development) Act, 1957, which would have far-reaching effects on existing leases and royalties. Though this is only a temporary relief, the industry appreciates this gesture and is endeavouring to obtain from the Government fair and reasonable amendments of the proposed Mineral Concession Rules, 1958.

Notwithstanding the concessions obtained, the task of attaining the target of output is not an easy one and Mr. Macmillan took the opportunity to sound a note of warning, by drawing attention to the limiting factors. Briefly, these pertain to imported materials and transport. He was, no doubt, conscious of the serious foreign exchange position, as a result of which the industry must do away, if necessary, with certain items of stores, plant and machinery, but there were some items, he added, as, for instance, steel wire ropes, without which coal could not be raised. The second limiting factor is the inadequacy of transport. He said that the wagon offerings for coal movement, which had greatly increased during 1957, had deteriorated since the beginning of 1958 and pit-head stocks were now higher than they had been for some considerable time. The performance of the South Eastern Railway, in particular, he remarked, was disappointing. To quote his figures, "against a guaranteed minimum of 950 wagons daily for coal movement during the past month, daily offerings have been as low as 412 wagons." Commenting on this position, he said: "The best laid plans to meet the country's coal requirements are vitally dependent on the performance of the railways and the railways' task will be greatly increased when the requirements of the expanded steel industry have to be moved."

In the context of the serious foreign exchange crisis confronting the country, Mr. Macmillan's reminder about the possibilities of recapturing markets abroad for Indian coal was both apposite and valuable. He recalled how, with the advent of World War II, the official policy in respect of coal exports was revised, and only low quality coals were allowed to be exported. The result is that Indian coal has lost its reputation abroad and China has recently been gaining a foothold even in India's closest coal markets, namely, Ceylon and Pakistan. Indeed, there was a report in the papers the other day that the railways in West Pakistan were using Russian coal! In 1957, only less

·SANFORIZED·
means
better sales
for you!

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized' Anytime, unannounced ...our expert visits a mill licenced to use the trade mark 'Sanforized'. Selecting samples of cloth at random, he subjects them to a rigorous international wash-test, reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'!

It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for ·SANFORIZED· on the label

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

TEA AUCTIONS IN CALCUTTA RESUMED

EXPORTS NOT VERY ENCOURAGING

TEA trade in Calcutta has heaved a sigh of relief at the decision of dock workers to call off the ten-day old strike with effect from 25th June. The worst fears about the repercussions of the strike on tea exports have thus not materialised. Consequent on the strike, the tea auctions in that city for both exports and internal sales had to be suspended for two weeks, but these have been resumed now. The auctions in Cochin were not, however, affected, because the strike in that port was withdrawn after two days. While the strike has affected India's export trade, in general, involving a sizable loss of foreign exchange, the loss on tea exports has been very little, because the dock strike came in at a time when the arrivals of new season's North Indian tea crop were small and the strike was withdrawn before the stocks could accumulate to any sizable extent in the warehouses. Though the North Indian crop in May was substantially larger than that in the corresponding month of 1957, the arrivals were not large, what with the output in June having been affected by drought conditions.

The withdrawal of the strike at Calcutta docks does not mean that the outlook for Indian tea has become brighter. It depends on so many other factors some of which may be recounted. These are: (1) the resumption of work at London docks, on account of which supplies to consumers and blenders in London have been disrupted in the last few weeks; (2) the world supply of tea this season; and (3) the production of common tea.

Since the beginning of the dock strike in London the quantity of tea put up for each sale in the Mincing Lane has been declining. There will be no sale this week in London. In view of the smaller offerings and the decline in stocks in London—the total stocks in bonded warehouses and afloat aggregated 151.6 million lbs. in the middle of June or 37.4 million lbs. less than last year—blenders are eager to replenish their stocks, particularly of good quality teas, but they are cautious in their purchases in view of the expectations that the world supplies of tea this year would be ample.

The crop figures for the current season so far justify these expectations, as will be seen from the following comparative table:

(In million lbs.)

Countries	Period	1958	1957	1956
N. E. India	Up to May	54.7	46.2	54.8
S.India	,, ,,	69.0	57.7	53.1
Pakistan	,, ,,	6.4	4.5	7.8
Ceylon	,, April	149.6	143.1	134.2
Indonesia	,, March	25.0	25.2	22.9
British East Africa ..	,, ,,	20.0	19.7	N.A.
Total ..		324.7	296.4	272.8

It will thus be seen that world production so far has exceeded last year's figure by 28.3 million lbs., of which India's share alone during the first five months is 19.8 million lbs. The production in North East India during June is stated to have been affected by drought conditions and it is felt amongst a section of the trade that the fall in output during June may offset to a large extent the increase in output in the previous month. It looks as though the South Indian tea production may set a fresh record this year, in which case, as in the previous year, any fall in North Indian output may be more than made good and there may again be a larger Indian output. Production in Pakistan and Ceylon is also running ahead of last year. It is feared that production in British East Africa, which is gradually improving its competitive position in world markets for common tea, may also exceed last year's output. Other producers of tea who have emerged as competitors to India are Japan and China which have in recent years considerably increased their output.

The total world production of free countries in 1957, it may be noted, amounted to 1,422 million lbs., as against 1,384 million lbs. Despite this increase in production, the surplus at the end of the year was only 89 million lbs., as against 103 million lbs. a year before. The fall in surplus is attributed to the increase in consumption from 1,320 million lbs. to 1,436 million lbs. Consumption in producing countries alone rose in 1957 to 450 million lbs., from 432.1 million lbs. Among the consuming countries, the absorption by U.K. rose from 489 million lbs. to 512.2 million lbs. and that in Irish Republic from 13 million lbs. to 27.6 million lbs.

It is not the rising trend of world production alone that is a source of worry to India. It is the quality of production and the competitive prices at which other producers are offering common teas that are troubling it. It is stated that, despite the larger production in May, the quality of North Indian tea was poor on account of heavy rains; in June, too, it suffered, though due to drought conditions. Such vagaries in weather may affect the production of quality teas, which are more and more favoured by buyers.

The trend of exports during the current calendar year is not *very* encouraging. The total exports from North-east India up to the end of May 1958 amounted to 129.43 million lbs., as against 127.99 million lbs. and 162.22 million lbs. in the corresponding period of 1957 and 1956, respectively. The South Indian exports have, however, gone up by 6.35 million lbs. to 35.96 million lbs. during the same period this year. The following comparative table shows the trend of exports from North-east India and South India to the main consuming countries.

(In million lbs.)

	North-east India January-May		South India January-May	
	1958	1957	1958	1957
Britain	68.86	82.10	17.50	14.38
Irish Republic ..	7.14	6.91	..	..
Europe	3.28	2.00	..	..
U.S.S.R.	2.78	4.05	..	..
Canada	5.13	3.52	4.12	3.10
U.S.	6.46	6.57	4.43	3.88
Egypt	11.84	7.46	..	..
Middle East Countries.	10.83	2.72	..	..
Other Countries ..	13.11	12.66	6.42	4.05
Total ..	129.43	127.99	32.48	25.41

The exports from North-east India to Britain, the main consumer of Indian tea, have successively dropped from 115.98 million lbs. in the first five months of 1956 to 63.86 million in the corresponding period of the current year. Prominent among the countries to which exports have looked up are Egypt (from 7.46 million lbs. to 11.84 million lbs.) and other Middle Eastern countries (from 2.72 million lbs. to 10.83 million lbs.)

Apart from the competition which Indian tea has to meet abroad the need for promoting exports by an energetic sales campaign has assumed special significance, on account of the need to earn foreign exchange. While the Government has just announced a scheme to encourage exports of sugar at a cost (of the domestic consumer) much more than what is expected to be earned, it has not taken any special steps to promote export of tea which has better chances of success than sugar.

STANDARD MARK FOR TEA-CHEST

The Indian Standards Institution has granted nine more licences to manufacturers for the use of the I.S.I. Certification Mark, in respect of tea-chest plywood panels conforming to the Indian standard specification for plywood tea-chests (*revised*). The nine manufacturers are: 1. Messrs. Crossley and Towers Private Ltd., Calcutta; 2. Messrs. National Timber Industries, Calcutta; 3. Messrs. Das & Co., Calcutta; 4. National Plywood Industries, Calcutta; 5. Dhubri Plywood Factory, Dhubri; 6. Bando Plywood Works, Calcutta; 7. National Saw and Plywood Works, Tinsukia; 8. Hindustan Timber Industries, Calcutta and 9. Messrs. Surma Match and Industries Private Ltd., Calcutta.

The Standard Mark consists of the monogram of the Indian Standards Institution, and the word "Plywood" is superscribed at the top side, while the number designation of the Indian standard is inscribed in the bottom side. The Standard Mark will be stamped on the plywood panels, under the supervision of the Development Wing, Ministry of Commerce and Industry, Government of India.

The Government of India has fixed the price of tea, for the purpose of determining the export duty at Rs. 3.41 per lb., as against Rs. 3.50 per lb. in force from 1st June 1958. There is no change in the existing rate of duty of naye paise 38 per lb.

(*Concluded from next column*)

tion of jute and paddy, both in respect of cost of production and price, was in favour of paddy. Whereas the cost of cultivation of jute moved up between the two years, that of paddy somewhat declined. The price, on the other hand, advanced for both, but by a larger margin in the case of paddy. Consequently, the cost ratio between jute and paddy increased from 2.08 in 1955-56 to 2.29 in 1956-57, while the price ratio declined from 2.63 to 2.24. Because of these trends, the position of jute growers, both as producers and buyers of paddy, was adversely affected in 1956-57 as compared with 1955-56.

ECONOMICS OF JUTE AND PADDY GROWING

JUTE CROP MORE PROFITABLE

THE annual investigation into the economics of jute growing in five selected centres during the year 1956-57, conducted by the Economic Research Section of the Indian Central Jute Committee, shows that the yield per acre in these centres was lower than that in the previous year and that the cost of production of raw jute recorded a rise. The average selling price per maund was, however, higher than in the previous year by a margin which just more than covered the rise in production cost. Investigation was also made of the important aspects of the costs of production of jute and paddy, in order to study the comparative position of these two major crops in the farmer's economy. Such a study revealed that the farmer found it more profitable to grow jute than rice.

The five centres to which the investigation was confined are: Monoharpur, Belakoba, Purnea, Kendrapara and Nowgong. In all these centres, the uncertainty about the weather affected the yield. In many cases, it is stated, harvesting was done prematurely in apprehension of total loss of crop in the event of any delay. The worst sufferers from the various adversities were the West Bengal centres, namely, Monoharpur and Belakoba. At both these centres, the damage to the jute crop was extremely heavy with the result that the yields were abnormally low. At Kendrapara, too, the damage was quite significant, though not as heavy as in the above two centres. The following comparative table gives the estimates of yield and cost of production, with its average selling prices, for the two years 1956-57 and 1955-56:

Centre	Cost per acre Rs.	Yield per acre Mds.	Cost per maund Rs.	Price per maund Rs.
Monoharpur	229.70	4.21	54.56	25.00
Belakoba	154.58	3.77	41.00	26.59
Purnea	129.96	8.06	16.12	24.47
Kendrapara	117.10	6.33	18.50	29.28
Nowgong	291.08	15.70	18.54	24.26
Average (1956-57) ..	180.29	8.45	21.34	25.39
Average (1955-56) ..	202.06	10.17	19.86	23.71

The decline in average yield for all centres in 1956-57 was due to the miserably low yield in Monoharpur and Belakoba and this in turn raised the average cost by nearly Re. 1.50 per maund. The cost of production per acre was lower not due to any fall in wages of labour (in fact, they were higher in three centres), but because of insufficient weeding on the waterlogged plots, as well as low labour cost of fibre preparation consequent on the very poor output per acre.

The decline in yield occurred, despite a remarkable improvement in the manuring of area under jute. It is stated that, even in the face of rising prices, the quantity of manure used per acre during 1956-57 amounted to about 27.7 maunds, as against only 18.8 maunds in 1955-56. From the point of view of profit, the grower's position was not on the whole worse than in the previous year. For the average selling price of jute, as will be seen from the foregoing table, was higher by Re. 1.68 per maund, which more than covered the rise of Re. 1.48 per maund in the cost of production.

The overall poor output, combined with the smaller contribution made by self labour towards jute cultivation, reduced the total net return per farm. The growers of the two West Bengal centres, however, sustained losses, because of the very poor crop. The poor quality of jute produced in Monoharpur during the year under review made the position worse still, because the average price, contrary to the trend in the other four centres, fell below the 1955-56 level.

The following table gives a comparative study of the economics of paddy and jute during 1956-57:

	Average for five centres Paddy	Jute
Cost per acre (Rs.)	118.16	180.29
Yield per acre (md.) ...	12.67	8.45
Cost per maund (Rs.) ...	9.33	21.34
Price per maund (Rs.) ...	11.31	25.39
Human labour per acre (man-days	38.75	60.81

It will thus be seen that, as compared with paddy, cost of production of jute per maund was much higher, but the price realised by it was still higher than paddy, so that it was more profitable to grow jute than paddy. As compared with 1955-56, however, the relative posi-

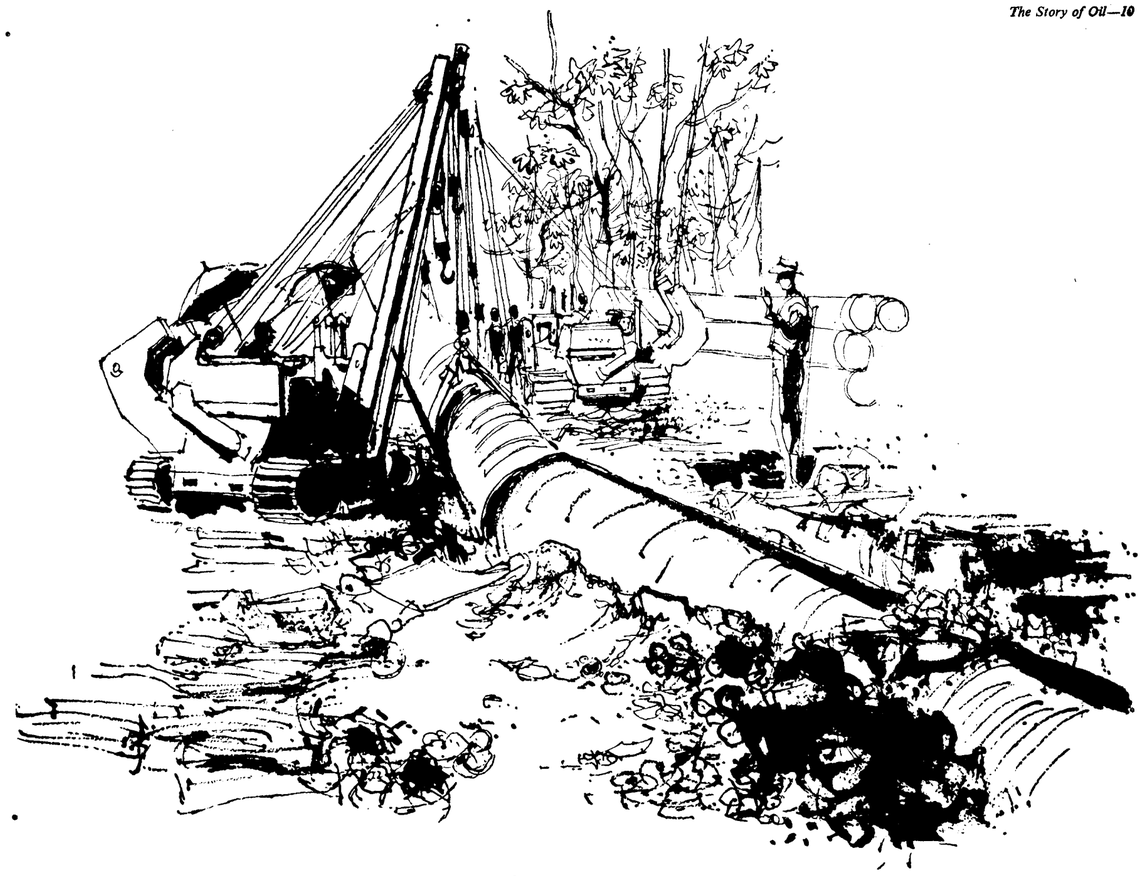
The Story of Oil—10



Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

ROURKELA IRON ORE PROJECT

U.S. GRANTS $20 MILLION LOAN TO INDIA

YET another instance of the U.S.'s interest in India's economic development is provided by the Indo-U.S. agreement, signed last week, under which India will receive a loan of $20 million at 3½ per cent. interest per annum, repayable in 15½ years, for purposes of financing the iron ore project in Rourkela area; the repayment of the loan will commence three years after its disbursement. The loan has been made out of the U.S. President's Asian Economic Development Fund to meet the foreign exchange component of the project which includes the construction of a new railway line from Sambalpur to Titlagarh and the improvement of port facilities at Visakhapatnam in order to facilitate larger exports of iron ore through this port.

Export of Iron Ore

American assistance for the development of iron ore, it may be recalled, was implied in the negotiations which took place between India and Japan in March last. Following the survey reports submitted by the Japanese preliminary survey mission for development of India's iron ore potential for long-term supply of iron ore to Japan, further discussions took place in March last between the Indian iron ore negotiating committee, led by Mr. M. K. Vellodi, and the Japanese steel mission led by Mr. S. Nagano, President of the Fuji Iron and Steel Mills of Japan. As a result of these discussions, a broad agreement was reached on the sale of two million tons of iron ore annually to Japan from 1964 onwards from the Rourkela area through the port of Visakhapatnam. An understanding was also reached regarding the basis on which the prices of the iron ore are to be determined from year to year. It was then understood that the Government of India would make an application to the U.S. Government for assistance from the U.S. President's Asian Economic Development Fund and that the Government of Japan would support the application. The Japanese Government also undertook to assist the development of iron ore mines by the supply of machinery and equipment on long-term deferred payment basis.

India's agreement with the U.S., covering the $20 million loan, was signed by Mr. Howard S. Huston, Minister-Director, Technical Co-operation Mission, and Mr. N. C. Sen Gupta, Joint Secretary, Ministry of Finance; Mr. Shigemitsu, Counsellor of the Japanese Embassy in New Delhi was also present. Before this agreement was signed, detailed discussions and examination of the feasibility of the railway constructions in the area took place. The agreement reached between India and Japan in March last estimated the cost of the iron ore development project at $65 million. Of this $32.5 million represents the foreign exchange component and $34.5 million local currency requirements. The Government of India has agreed to bear the entire cost of the project in rupees. Japan has agreed to make available a line of credit up to eight million dollars in yen for the purchase of necessary equipment in Japan. The U.S. Government, as stated at the outset, will make available $20 million. Even so, it seems clear that there may be some shortfall in foreign exchange component which will have to be met from India's own foreign exchange resources. This is because out of the total $32.5 million, representing the foreign exchange component of the project, American loan will account for $20 million and Japanese credit for $8 million; thus, the balance, namely, $4.5 million, will have to to be met by India.

Rail Link

The American loan, it is stated, will be used for the acquisition of commodities and services required for the improvement and expansion of railway and port facilities allied with the ore project. A 111-mile rail line between Sambalpur and Titlagarh is expected to be constructed and a rail link of the length of nearly 25 miles will be installed in order to connect the ore site with the South-Eastern Railway. Additional wagons and engines will be provided to permit transport of iron ore from Kiriburu to Visakhapatnam. The port and harbour facilities at Visakhapatnam are also to be expanded. It is stated that it will take another six months before engineering designs and cost estimates for the improvement of the port are prepared.

Finally, it seems necessary to point out that the entire foreign exchange, made available by the U.S. under the agreement, is meant for utilisation by the public sector. This is because not only the development of iron ore mines is a State responsibility under the Industrial Policy Resolution but the export of iron ore is a State monopoly, it being reserved for handling by the State Trading Corporation. It would, however, appear that the U.S. is unwilling to allow its loan to be utilised for developing iron ore mines. Thus, the loan will be utilised only for expanding transport facilities. The responsibility for the actual operation of the mines or for the opening of new mines devolves upon the Government, though it must be said to its credit that it has recently shown some welcome sense of realism by following a more liberal policy in respect of private prospecting and mining of mineral ores. It is to be hoped that the Government which, for no convincing reasons, has virtually taken upon itself the twin responsibility for the development of iron ore mines and export of iron ore, will discharge it in an effective manner.

DRILLING IN ASSAM VALLEY

With the completion to a depth of 10,280 feet of the 33rd well in the Nahorkatiya area and of 11,789 feet in the ninth well in Moran, the total depth of 42 wells drilled by the Assam Oil Company's drillers in the Nahorkatiya and the Moran areas is 459,364 feet or about 87 miles. The exploration of oil in the Nahorkatiya area dates back to 1925 when the first gravity survey for sub-alluvial oil prospects in India was carried out by the Company—long before oilfields had been discovered by such methods anywhere in the world. Some seismic survey was carried out in the area in 1938-39. But drilling could be undertaken only after the end of the Second World War. In 1951, preparations for the first Nahorkatiya well began with the movement to the chosen location of equipment and oilfield stores from depots at Digboi, Calcutta and Masimpur. Most of the materials were transported by rail to an unloading bay specially constructed near the camp, though some of the lighter materials were brought first by road from Tinsukia, and then, across the Burhi Dihing river by ferry. A sizable camp soon grew up around the location, and in early 1952, the construction engineers were joined by skilled drilling crews, many of them experienced in other "outside tests" in Assam such as Tiru Hills (1949), Barsilla (1950) and Nichuguard (1951).

Drilling began in May 1952 and a year later, oil was struck. To find the extent of the discovery drilling of other wells followed. A total of over 200 wells, including a very large number of test wells, all unproductive, were drilled in India before the discovery of oil at Nahorkatiya. Of the 33 wells drilled so far at Nahorkatiya area five produced no oil and two are mainly gas producers. Although the average depth of the wells is about 10,614 feet, the deepest in the area, well No. 12, reached a depth of 13,060 feet. Another feature of drilling in the area is speed: well No. 27, depth 9,405 feet, was completed in 20 days. Wells at Moran are deeper than those at Nahorkatiya; the deepest, well No. 1, is 13,739 feet or more than two and a half miles. Well No. 34 at Nahorkatiya, which was spudded-in on 21st June, reached a depth of 3,310 feet on the third day. Arrangements are also in progress to prepare the site at the location of well No. 35. Well No. 9 at Moran, drilling of which was completed on 17th June, is awaiting the production test. Engineers and rig-builders are busy at the location of well No. 10, which is due to be spudded-in early next month.

DEMAND FOR KEROSENE

World demand for kerosene is rising steadily, according to an article in the July issue of *Oil Progress*, a quarterly Caltex publication, and largely because of increasing industrialisation. "All this," the magazine points out, "is a far cry from the days when the only use for kerosene was as a lamp fuel and when, as a matter of fact, the only thing of known value in crude oil was its kerosene content." Yet, even today, kerosene is still used for cooking, heating and light in 4,000,000 rural homes in the United States alone, certainly one of the most industrialised of nations. In 1957, India alone consumed approximately 450 million imperial gallons of kerosene which is by far higher than the sale of motor spirit (including power alcohol and benzol) in the same year, of 260 million imperial gallons. "Even more important than these traditional functions," the journal continues, "are the new industrial applications in which kerosene is proving itself more valuable than ever. Powering jet engines is one of this versatile product's latest contributions, and it is more than a little startling to think that a screaming jet, crashing through the sonic barrier, uses essentially the same fuel as the humble kerosene lamp that has done yeoman service for so many years." It adds: "There are other new uses, of course, perhaps not so romantic but certainly important. More and more industrial products, such as insecticides, cut-back asphalts, paints, polishes, cleaning and degreasing compounds and gas-absorption oils, include kerosene as an ingredient. A considerable amount is burned in the engines that power tractors and other farm machines. And one of the most amazing growths of the kerosene market in recent years has occurred in the tobacco-raising areas of south-eastern United States, where kerosene heaters have replaced wood-burning stoves for curing tobacco, at such a rate that summer time consumption of the fuel ranges up to 50 times what it was a few years ago." In conclusion, its points out that "at the refineries in the Eastern Hemisphere which Caltex owns or in which it has an interest, more than 34,000 barrels a day, or approximately 12,500,000 barrels a year are produced."

AIR-HEATING EQUIPMENT

The Worthington Corporation announced recently that it will make available overseas a complete line of air heating and cooling equipment manufactured by its Mueller Climatrol Division. The announcement was made by Mr. Harold Rackin, Supervisor of Package Equipment Sales in Worthington's International Air Conditioning and Refrigeration Department. Mr. Rackin said: "We are proud to introduce this equipment to our many customers throughout the world. All of Mueller's products have been in use in the United States for some time now and we felt it imperative to offer them also in the export market." The Mueller line, Mr. Rackin said, includes 15 heating units, both gas and oil fired; three combination heating and cooling-units, and 10 air-conditioning units. Sizes range from 25,000 B.T.U's to 5,000,000 B.T.U's, Globe Press Service reports. The equipment may be installed in homes, offices, stores and industrial buildings for both comfort heating and cooling and for process work. "The process applications of this equipment," Mr. Rackin added, "are limitless" Mueller boilers are frequently used for heating water for swimming pools, providing hot water in apartment buildings and commercial structures, for flotation processes and many other applications along these lines.

BHAKRA-NANGAL PROJECT

The first stage of the Bhakra-Nangal Project, which includes the construction of the world's highest multi-purpose dam at Bhakra, has been completed. Over 400 feet of the dam—out of its total height of 740 feet—have been built up. When completed by June 1960, the dam will irrigate 6.5 million acres of new land in the Punjab and Rajasthan, improve 3.5 million acres already under cultivation and generate over a million kw. of electricity. The dam, which is now only partially completed, is ready for partial use for storing water. Engineers expect that water can be stored from July onwards and that it could be released for use in winter. This year and the next, the dam will store water for irrigating about 500,000 acres. Further, two major power houses below Nangal have already begun to generate 90,000 kw. of electricity, each; when additional generating units are installed, their capacity will be increased by another 50,000 kw. Much progress has been made in the construction of a power house on the left side of the dam. The first power unit (90,000 kw.) is expected to go into production towards the end of next year and the remaining four units of similar capacity will start working at three-month intervals thereafter.

CHEAP HOUSEHOLD GAS

Britain is to build a revolutionary new plant which produces cheap household gas not from conventional coal fuel but by hydrogenation of a by-product of the oil industry. Sited at Bristol, the plant is expected to produce gas at considerably less than the present cost when it comes into operation early in 1960. Instead of coal, the plant uses a by-product of the oil industry which is treated at high pressure in vessels constructed of special steel. Gas from this process is stated to be eminently suitable for public use, as it is pure and completely free of sulphur, has no smell on combustion, and is almost non-toxic. Several valuable by-products are produced by the process itself, including naphthalene, granular carbon, and others valuable to the plastics industry.

The capital cost of the new process is about one-third that of a power station of the same heat output. The process, which was developed at the South-Western Gas Board's own research station, is described as a "pioneering project which will eventually revolutionise the productive aspect of the gas industry."

MEKONG SCHEME

The conclusion of an agreement with the U.S. by Cambodia, Laos, Thailand and Viet-Nam in May last has given further impetus to the U.N.'s Mekong development project in which these countries are directly interested. The agreement envisages a three-year programme of engineering works along the river to be undertaken by an American firm. The programme involves a U.S. contribution of $2 million to the Mekong scheme. Other offers have come from New Zealand, France and the U.N. Technical Assistance Board. A system of hydrologic stations will be established by the American engineering firm along the main river and its tributaries for the collection of hydrological data. A New Zealand contribution of 100,000 U.S. dollars will go to the purchase of four survey launches, while the French offer of 60 million francs will be used to purchase hydrologic equipment.

STAINLESS STEEL

Eight miles of stainless steel a day comes from a new press-button strip mill in the English steel city of Sheffield. The plant has been built to meet the growing demand for stainless-steel sheet for the new atomic power stations, the domestic market and the motor industry. The process is continuous and only 70 men are employed on each of the three daily shifts. Since the new plant went into production, the output of the firm (Firth-Vickers Stainless Steels Ltd.) has risen threefold. Direct exports account for 20 per cent. of the output. The indirect figure is considerably larger.

NEW PRODUCTS AND PROCESSES

Media for Paints

TWO new alkyd resin media have been developed by Imperial Chemical Industries of the U.K. specifically for use in high-quality flat and semi-gloss interior decorative paints and finishes. Both the new media contain the same semi-drying oil modified alkyd resin. In one case, however, that of the medium called Modulac 135W, it is dissolved in ordinary white spirit. The other medium, Modulac 135WO, on the other hand, is dissolved in odourless white spirit. Both media are what are known as thixotropic gels which temporarily become free-flowing liquids when stirred. Heavily-pigmented flat wall paints, based on these new media, are said to have excellent storage properties, and to show complete absence of settling and high resistance to flocculation. The fact that they retain their high viscosity right up to the moment of application ensures freedom from drips and much cleaner working. The paints, it is claimed, also have good "hold-out" (which is inherent in the resin base and not dependent on added fillers), and are said to show excellent build and flow. In the case of whites and tints they have good initial colour and colour retention. Relatively thick films can be applied with moderate brushing, and adequate cover can be obtained in one coat over most surfaces. Paints based on the new media, developed by the Dyestuffs Division of Imperial Chemical Industries, present no unusual difficulties in milling, the only departures from conventional technique being those common to thixotropic paints.

New Process for Purifying Water

A new process developed at Griffin and George of Middlesex, Britain, for using resins to "de-ionise," or purify water is said to enable very pure water to be produced at a cost of 12s. 6d. per thousand gallons of London mains water used. Similar purification of London mains water using conventional "de-ionising" units, with exchangeable cartridges of resins, costs in the region of £25 to £50 per thousand gallons. The operation of the process, which has been developed by Griffin and George, depends on the use of a technique which enables the resins used in the purification units to be mixed and reclassified in columns down to three inches in diameter, thus permitting the resins to be regenerated—or made ready for re-use—in situ. The system, which will remove the electrically charged metal atoms which are left behind by even the most efficient distillation processes, is designed so that the quality of the effluent can be continuously maintained. The equipment is being produced in two sizes and is capable of handling flow rates of between five gallons and 25 gallons of water an hour.

New Chemical "Blanket"

Columbia University research scientists have developed a chemical "blanket" that is proving its effectiveness as an inexpensive method of conserving millions of gallons of water now lost through evaporation. Dr. Victor K. La Mer, Professor of Chemistry, Columbia University, said that in tests over periods of several months, hexadecanol, or cetyl alcohol, has reduced evaporation by 50 to 65 per cent. in reservoirs in south-western U.S. and Australia. The harmless chemical applied to the surface spreads out to seal off the water from the air with a layer only one molecule thick —so thin that one pound of hexadecanol covers ten acres as a monolayer. Dr. La Mer said that if savings such as those realised in tests are gained throughout the areas, such as Texas, in which water is sometimes critically short, savings could amount to many millions of dollars a year. By contrast, hexadecanol costs about 40 cents a pound and something like a pound every month per acre of water surface to be blanketed seems sufficient for average conditions. Widespread use of anti-evaporant monolayers now awaits the solution of practical rather than theoretical problems. These include problems of applying and replenishing the chemical to maintain its film against the action of dirt and wind.

Artificial Porcelain Teeth

A new process for making artificial porcelain teeth from Indian raw materials has been developed at the Central Glass and Ceramic Research Institute, Calcutta. Felspar and china-clay are mixed in proper proportions and ground to a fine powder. After removal of traces of iron the stain is mixed and the powder is made into a dough with an organic binder and water. The teeth are made by pressing the dough in suitable moulds, finished and fired. They are then mounted on plastic bases or cardboard pieces for storage. Porcelain teeth prepared by this technique, compare favourably in all respects with similar imported teeth. These teeth have been tested in the Calcutta Dental College and Hospital and also independently by two eminent dentists of Calcutta who have given favourable reports. The main raw materials like felspar and china-clay are easily available in the country. Colouring stains, palladium anchorages and gold coated nickel pins are the only items that for the time being have to be imported. Except the finishing equipment, which has to be imported from abroad, most items of machinery required are available in India. Parties interested in undertaking the commercial development of the process are invited to contact the Secretary, National Research Development Corporation of India, New Delhi-1.

FOREIGN EXCHANGE CRISIS

PROBLEM OF INADEQUATE TOTAL RESOURCES

By M. S. Parthasarathi

WHAT is the real character of the foreign exchange difficulties India is now facing? Will it be possible to solve them by exporting more to pay for all the imports she needs? These are important questions which must be satisfactorily answered if the planned economic development of the country is to proceed on right lines. At least, in the future Five-year Plan periods, the Government of India should not rely on expedients devised on the spur of the moment whenever the impact of economic development throws the payments position into serious imbalance.

Now, there are two ways in which the foreign exchange gap in a plan for economic development can be estimated. One is to estimate the imports of machinery and other investment goods required for carrying through the plan, thereby arriving at an estimate of total probable imports, and to set off against this figure the total likely exports. This will give an approximation of the gap in the balance of payments that should be anticipated for the period of the plan. This, however, is a very superficial and unreliable method of forecasting the foreign exchange gap, as indeed events have proved. An attempt is, therefore, made in the following paragraphs to sketch a somewhat more reliable procedure for estimating the probable magnitude of the gap.

Certain basic assumptions have to be made for the purpose of our study. It is taken for granted that one of the objectives of planning in India is to raise the national income by about 4.5 per cent. a year, that is, by about 25 per cent. in five years—the target fixed in the second Five-year Plan. The other important objective is to raise the net rate of saving to around 12 per cent. of the national income, since a 12 per cent. net rate of investment is considered by experts to be a self-sustaining and self-accelerating rate of investment capable of ensuring a satisfactory rate of increase in the national income.

It is assumed that balanced development will be the aim of planning. The capital-output ratio is expected to rise gradually from 2.3 : 1 in 1956-57 to 3.0 : 1 in 1970-71 and to 3.5 : 1 in 1980-81. This will give a capital-output ratio of 2.4:1 for the second Plan, 2.65:1 for the third Plan and 2.9 : 1 for the fourth Plan against 2.3, 2.62 and 3.36 assumed by the Planning Commission, since a gradual rise seems much more probable than the abrupt jump anticipated by the Commission. Also, the Planning Commission's ratios were excessively influenced by the bumper harvest of 1953-54 and 1954-55. It is also assumed that the country as a whole will attempt and accomplish a marginal rate of saving of 20 per cent. In view of the expected 1.5 per cent. annual increase in population, this will mean a *per capita* marginal rate of saving of 30 per cent.

TABLE 1

Projection of India's national income, savings and related data

Year	National income (Rs. crores)	Total net savings (Rs. crores)	Savings as percentage of N.I.	*Per capita* income (Rs.)	*Per capita* consumption (Rs.)	*Per capita* saving (Rs.)
1956-57 ..	11,410	800	7.0	294	273	21
1957-58 ..	11,920	900	7.6	303	280	23
1958-59 ..	12,460	1,010	8.1	312	287	25
1959-60 ..	15,020	1,120	8.6	321	293	28
1960-61 ..	13,610	1,240	9.1	330	300	30
1961-62 ..	14,220	1,360	9.6	340	307	33
1962-63 ..	14,860	1,490	10.0	350	315	35
1963-64 ..	15,530	1,620	10.4	361	323	38
1964-65 ..	16,230	1,760	10.9	371	330	41
1965-66 ..	16,960	1,910	11.3	382	338	44
1966-67 ..	17,720	2,060	11.6	393	347	45
1967-68 ..	18,520	2,220	12.0	405	356	49
1968-69 ..	19,350	2,390	12.4	417	365	52
1969-70 ..	20,220	2,580	12.7	430	375	55
1970-71 ..	21,130	2,740	13.0	442	384	58
1971-72 ..	22,080	2,930	13.3	455	394	61
1972-73 ..	23,080	3,130	13.6	469	405	64
1973-74 ..	24,120	3,340	13.8	482	415	67
1974-75 ..	25,200	3,550	14.1	497	427	70
1975-76 ..	26,330	3,780	14.4	511	437	74
1976-77 ..	27,520	4,020	14.6	526	449	77
1977-78 ..	28,760	4,270	14.8	542	462	80
1978-79 ..	30,050	4,530	15.0	558	474	84
1979-80 ..	31,400	4,800	15.3	575	487	88
1980-81 ..	32,820	5,090	15.5	592	500	92
1981-82 ..	34,290	5,370	15.7	609	513	96
1982-83 ..	35,830	5,680	15.9	627	527	100

Table 1 presents a projection of India's national income, savings and related data on the basis of the above assumptions. It will be seen that, even with a 4.5 per cent. annual increase in national income, it will be 16 years before national income doubles and 26 years before it trebles. It will take 25 years for *per capita* income to double and another three years for *per capita* consumption to double. These are modest targets which the Government and the Nation must strive to achieve. If by any mischance population rises by more than 1.5 per cent. a year, it will take much longer for national income, *per capita* income and *per capita* consumption to double.

Table 2 presents the increases in national income planned, the investment required to accomplish those increases, the domestic savings available and the gap between domestic savings and investment needed. For the sake of simplicity it is assumed that the lag between investment and output is only one year. Though the table shows a gap between domestic savings and investment needed even after 1967-68, when the savings rate will rise to 12 per cent. of national income, the gap will very probably disappear soon after; after that year the marginal propensity to consume may tend to fall below the 80 per cent. assumed throughout for the purposes of the table, thereby raising the marginal rate of savings to above 20 per cent. In parenthesis, it may be pointed out that a marginal rate of savings of 20 per cent. is about the minimum required to start with; a 15 per cent. marginal rate will require increasing amounts of foreign assistance year after year to maintain a 4.5 per cent. rate of increase in national income.

TABLE 2

Projection of increases in national income, net investments needed and gap in domestic resources

Year	Increase in N.I. planned for next year (Rs. crores)	Capital-output ratio assumed	Investment needed (Rs. crores)	Savings available (Rs. crores)	Gap in domestic resources (Rs. crores)
1956-57 ..	510	2.30:1	1,170	800	370
1957-58 ..	540	2.35:1	1,270	900	370
1958-59 ..	560	2.40:1	1,340	1,010	330
1959-60 ..	590	2.45:1	1,450	1,120	330
1960-61 ..	610	2.50:1	1,530	1,240	290
1961-62 ..	640	2.55:1	1,630	1,360	270
1962-63 ..	670	2.60:1	1,740	1,490	250
1963-64 ..	700	2.65:1	1,850	1,620	230
1964-65 ..	730	2.70:1	1,960	1,760	200
1965-66 ..	760	2.75:1	2,090	1,910	180
1966-67 ..	800	2.80:1	2,240	2,060	180
1967-68 ..	830	2.85:1	2,370	2,220	150
1968-69 ..	870	2.90:1	2,520	2,390	130
1969-70 ..	910	2.95:1	2,680	2,560	120
1970-71 ..	950	3.00:1	2,850	2,740	110
1971-72 ..	1,000	3.05:1	3,050	2,930	120
1972-73 ..	1,040	3.10:1	3,220	3,130	90
1973-74 ..	1,080	3.15:1	3,400	3,340	60
1974-75 ..	1,130	3.20:1	3,620	3,560	60
1975-76 ..	1,190	3.25:1	3,870	3,780	90
1976-77 ..	1,240	3.30:1	4,090	4,020	70
1977-78 ..	1,290	3.35:1	4,320	4,270	50
1978-79 ..	1,350	3.40:1	4,590	4,530	60
1979-80 ..	1,420	3.45:1	4,890	4,800	90
1980-81 ..	1,470	3.50:1	5,150	5,080	70
1981-82 ..	1,540	3.50:1	5,390	5,370	20
1982-83 ..	1,610	3.50:1	5,640	5,680	..

Table 3 presents a summary picture of the investment needed, the savings available and the gap between domestic savings and investment needed for the various Five-year Plan periods. It shows that, assuming no unutilised capacity in industry, transport and other sectors, and normal monsoons on the average, and on the basis of the capital-output ratios of Table 2, an investment of Rs. 6,760 crores (in 1956-57 prices) will be needed to fulfil the target of approximately 25 per cent. increase in national income. This is pretty close to the Rs. 6,200 crores of investment (in 1952-53 prices) contemplated by the Planning Commission, which will amount to about Rs. 6,520 crores in 1956-57 prices. The Planning Commission, however, foresaw a gap of only Rs. 1,120 crores in the balance of payments for the five-year period, whereas Table 3 shows that at least Rs. 1,690 crores of foreign resources will be needed for implementing the Plan.

TABLE 3

Savings, Investment and the Gap

(In Rs. crores)

	Investment needed	Savings available	Gap
Second Plan (1956-61) ..	6,760	5,070	1,690
Third Plan (1961-66) ..	9,270	8,140	1,130
Fourth Plan (1966-71) ..	12,660	11,970	690
Fifth Plan (1971-76) ..	18,160	17,740	420

This gap cannot be filled except by an inflow of resources from abroad. The reason is simple. India can attempt to bridge the gap by cutting down imports. But only the import of consumer goods can be cut, and even to that there is a limit, as is becoming evident. Further, the gap will very possibly be larger than the total amount of consumer goods which might normally be imported for the five years. India may also attempt to earn more foreign exchange by

(Continued on page 27)

AGREEMENT ON RAYON WOOD PULP FACTORY IN KERALA

NO INFRINGEMENT OF WORKERS' RIGHTS

THE Communist Government of Kerala deserves to be complimented on the commendable sense of realism it has shown in its recent agreement with the Gwalior Rayon Silk Manufacturing and Weaving Company, for the establishment of a rayon wood pulp factory in Malabar, Kerala State. If the attitude and stand taken by that State Government in negotiating the present agreement reflects its policy in respect of attracting industrialists into the State, it augurs well for the future of the State. If Kerala, which stands most in need of new industries and factories for solving its twin problems of poverty and unemployment, really wants to attract private capital, something needs to be seriously done to make the State safe for new investments. The least that the Government can do in this regard is to see that both the existing and new industries or businesses that might be started in the State are allowed to function normally, without fear of intimidation either by the Government or the workers. It would be the height of folly, if, by unwise statement or ill-advised actions prompted by pseudo-scientific ideologies, industrialists are scared away from the State. Such a policy of cutting the nose to spite the face will only harm the interest of the State. The Communist Government appears to be gradually realising the need for creating the proper climate and inducement for attracting new industries to the State. But, if they are to succeed in their attempts they must first correct the industrial anarchy they have created during the last fifteen months and restore discipline and respect for law among the employees.

To return to the agreement with Gwalior Rayon there has been much irresponsible and mischievous criticism of the agreement mainly by the leaders of the Socialist and Praja Socialist parties. One Praja Socialist leader has gone to the extent of calling the agreement a "document of surrender of the Kerala Government to the private sector." He has also alleged that the "major interests of labour" have been sacrificed by the Government through this agreement. That most of these criticisms are politically motivated, and prejudiced is evident from the fact that not one of them points out specifically what clauses make the agreement a bond of slavery. They are invariably no more than vague generalisations and wild accusations, which are not borne out by the terms of the agreement.

Provisions Reasonable

Although full details of the provisions of the agreement are not yet available, Press reports indicate that it contains many reasonable provisions. Thus, it is recognised that it is the right and responsibility of the Company to maintain discipline and efficiency in the plant and to hire labourers and discharge them for any cause which appears just to the Company and relieve the labourers of duty on account of inefficiency or lack of work or other valid reasons, subject only to the provisions contained either in the Statutes in force or in the Standing Orders of the Company. The Company has the right to plan direct and control the operations of the plant, to introduce new or improved production techniques, to extend production facilities and to establish production schedules and quality standards. These rights and responsibilities will be respected in every case, subject only to the Statutes in force. It will also have the right to frame rules and regulations from time to time for keeping discipline, order, safety measures or effective operation of work and labour will be required to accept these rules. Again, the Company, on the basis of a scientific evaluation, will prepare the wage schedule for wages and dearness allowance. The working hours and overtime wages, it is agreed, will be as stipulated in the Factories Act; rules regarding compensation benefits, leave, holidays, and welfare amenities are to be framed by the Company.

The Company will also lay down the procedure for redressing grievances expeditiously. As regards bonus, the agreement provides that bonus will not be related to the Company's profits or earnings but will be paid, if found necessary, on the basis of efficiency and productivity according to schemes to be formulated by the Company. The Government has also agreed to promote cordial labour-management relations. In the case of a dispute involving harassment to the management, or any other illegal act interrupting production, the Government will take timely and positive measures to prevent such occurrencies. It has also been agreed that factory work would be impossible, if the conditions existing at the time of commencement of work are materially altered and new burdens imposed upon the management, subsequently. Labour relations, taxes and levies on the Company will be administered without altering materially the conditions prevailing at the time of commencement of work. In case of disputes between the State Government and the Company, the Secretary to the Ministry of Commerce and Industry, Government of India, will be the arbitrator.

None of the above clauses are unusual or calculated to rob the worker of his legitimate rights. The agreement does not restrict the rights granted to him by labour legislation. But it is true that it contains an express assurance from the State Government that it will not take undue advantage of its powers to extort concessions from the firm later. The demand for such an undertaking is not unjust, considering that the proposed venture is in a state where a party wedded to an extremist economic and political philosophy holds the reins of government. For the State Government, it is not a bad bargain, for what it receives in turn is an industry involving an investment of crores of rupees.

It is, however, well to remember that what matters is not the letter of the agreement but the spirit in which it is entered into and the earnestness with which it is sought to be implemented. It is to be hoped that the Kerala Government will honour its pledges and facilitate the smooth operation of the factory when it is completed.

Meanwhile, it is reported that a new Bill, designed to ensure long-term industrial peace, is being drafted by the Government of Kerala. The Communists claim it to be "unique in India," that it will usher in an era of industrial peace and higher production. The salient features of the Bill, according to reports in the daily Press, are: fixation of minimum wages for labour, formulation of a code of conduct and discipline and formation of works committees. Since the present works committees under the Industrial Disputes Act have not been found adequate, the proposed committees will be given greater powers and be more representative in character. The committee will be the basic unit for maintaining industrial relations in the State. Decisions of works committees will be mandatory, subject to appeal to a higher body. Provision will be made for one negotiating body for one industry, though there may be more than one union. Unions will have to come to an understanding among themselves, or majority unions will be recognised as the negotiating body. In the matter of code of conduct and industrial discipline, when a union violates the provisions of the Bill, its recognition will be withdrawn and, when the management does so, a penalty will be imposed. Some of the provisions of the Bill are compulsory while others are permissive in character. The Bill is expected to be a comprehensive one covering nearly all points that are likely to create a dispute. The time for commenting on these features will be when the Bill is officially made public, but it is interesting to note that the Communists in Kerala are not content with the existing legislation on industrial relations and that they want to strike a new path.

BONUS AWARD UPHELD

A petition filed by the Dhanamal Silk Mills of Surat challenging the bonus award made by Mr. I. G. Thakore, constituting the Industrial Court of Bombay, in favour of the workmen, was dismissed by Mr. Justice Vyas and Mr. Justice Tambe at the Bombay High Court. The petitioner is a partnership firm manufacturing and selling art silk and silk cloth. The case arose out of the notice to the petitioner served by the Surat Silk Textile Labour Union demanding bonus for its workmen for the financial year 1955-56 out of the firm's profits.

It was argued before the Industrial Court on behalf of the firm that, before determining the amount available for distribution as bonus to workers, certain prior charges should be deducted out of gross profits. These prior charges were statutory depreciation, income-tax, a fair return on capital invested, reasonable remuneration to partners and the rehabilitation reserve. After the charges were deducted from the gross profits and if there was any balance left, it was contended, then only it should be utilised for bonus.

The Industrial Court disallowed statutory depreciation but allowed only normal depreciation. It allowed 7 per cent. as fair return on capital invested and a lump sum of Rs. 50,000 as remuneration to the partners. The claim for rehabilitation reserve was rejected. The Court also did not allow any reduction for income-tax on the ground that since the firm was a registered one it was not liable to income-tax, though the partners were individually liable on their shares to pay income-tax. The Court held that, in fixing the remuneration for the partners at Rs. 50,000, it had taken into account the individual partner's liability to income-tax. The Court maintained that there was a surplus available out of which the workers should be paid bonus at the rate of 15 per cent. of their basic annual earnings for the year 1955-56. This award was challenged by the petitioner firm on various grounds. It was urged that the matter should be sent back for re-hearing.

Dismissing the petition, their Lordships held that it was a well-established principle laid down by the Labour Appellate Tribunal that, in the case of a registered firm, no deduction for income-tax should be allowed as a prior charge. It was also well established, their Lordships observed, that only ordinary depreciation should be allowed.

INDUSTRIAL HEALTH

The progress made by the Industrial Health Department of the Tata Services Private Limited, which has completed 11 years of useful existence, is highly commendable. The story of this unique experiment in the field of industrial health is told in the Department's annual report for 1957. From modest beginnings in 1946, with a part-time doctor serving only the Tata Mills, the Department has gradually grown into a full-fledged organ for the promotion of occupational health. The Department started working in November 1946. By 1949, it was serving four textile factories and the Tata Oil Mills, Sewri, with a full-time staff of two doctors at the centre and another 10 doctors and seven safety engineers doing field work. By the end of 1957, six more factories, namely, Tata Chemicals, Mithapur; Tata Oil Mills, Tatapuram; Tata-Fison, Bombay and three Tata-Hydro Electric Companies were brought under the purview of the Department. The staff at present consists of three doctors at the centre and 14 doctors and eight safety engineers doing field work.

In a changing social order, the human problems of workers are particularly important. A good incentive for labour is "intrinsic job satisfaction," which depends mainly on a healthy mental outlook. The way the Industrial Health Department of the Tata Services Private Limited tries to achieve the objective is a five-phased programme of medical aid, environmental hygiene, mental hygiene, research and welfare work. The activities of the Department under these heads are detailed in the report. It is noteworthy that the Department also gives consultative service not only to units within the Tata organisation but also to outside concerns.

MANPOWER REQUIREMENTS

Technical hands required for the third and subsequent Five-year Plans are being assessed on the basis of past manpower studies, trends of economic development and other related factors. States and the Centre, which are adopting, more or less, uniform line of manpower studies, are devising a common formula to determine a pattern of future requirements. Along with their earlier experiences, they are keeping in view the practice of other countries and the methods employed by them for making manpower projections. Such planning is necessitated because of the long time taken in the training of technical personnel. India's past experience as well as experience of every country shows that the demand for trained manpower tends to grow at a rapid rate in a developing economy.

Methods to be adopted for preliminary assessment of manpower requirement for the third Plan period has already been considered in regard to agricultural personnel, including animal husbandry, dairying, co-operation, forestry, etc., and in respect of engineering personnel. Pilot studies have also been conducted of the employment market situation and of employment and unemployment among graduates by the Directorate General of Resettlement and Employment under the Ministry of Labour. Manpower Directorates have been set up in each State and at the Centre to assess the requirement of technical personnel for the Five-year Plans and to arrange for the necessary training.

ENFORCEMENT OF AWARDS

The Union Ministry of Labour has decided to set up a tripartite machinery at the Centre for evaluating the implementation of labour awards. A central evaluation committee, consisting of representatives of central organisations of workers and employers, is being established. The Ministry has asked the Central organisations of workers and employers to report to the Evaluation and Implementation Division of the Ministry any cases of non-implementation of any award or agreement within three months of the enforcement of such awards and agreement. These reports are to be submitted irrespective of the fact whether the disputes fall within the State or Central jurisdiction.

BENGAL COAL COMPANY LIMITED

MR. D. F. MACMILLAN'S SPEECH AT ANNUAL MEETING

PLEA FOR A DEFINITE DECISION ON PUBLIC SECTOR'S TARGET OF OUTPUT

ADDRESSING the shareholders of the Bengal Coal Company, Ltd., at their Annual General Meeting held in Calcutta on 26th June 1958, Mr. D. F. Macmillan, Chairman of the Company, stressed that a definite decision should be reached as soon as possible, in the best interests of all, on the output target for the public sector, for, if the privately-owned collieries were going to be asked to raise their target further, it should be given as much time as possible to prepare for the further task. He added that the private collieries had, by the results achieved by them so far, proved their ability to reach a higher target than the one allotted to them.

The following is the full text of Mr. Macmillan's speech:

"GENTLEMEN,

"The accounts for the year ended 31st October 1957, which have been in your hands for the statutory period, reflect another year of successful operation. Raisings were 2,801,164 tons and compared with 2,509,787 tons in the year 1955 which was the last year of the first Five-year Plan. The raisings of this Company in the first two years of the second Five-year Plan have increased by 11.6 per cent., in spite of the serious handicaps imposed by the delays by Government in defining their policy towards the private sector in the coal industry, to which have been added more recently the restrictions on the imports of essential equipment. Your Company is, therefore, making its full contribution to the economic planning of the country, and this has been made possible by its own far-sighted development plan which started as early as 1945.

"Leaving aside the capital levy of Rs. 3¼ lakhs called wealth tax, which has absorbed the Company's small capital reserve and the surplus built up in past years on realisation of investments, as well as digging into the Company's taxation reserve, the profit for the year after all charges including depreciation and ordinary forms of taxation, is, in fact, lower than the previous year. But your Directors are able to recommend a final dividend which will maintain the annual distribution on the ordinary nominal capital of the Company at Rs. 17.50 per share, which is the equivalent of 5.96 per cent. on the capital employed in the undertaking. Against the drain of Rs. 3¼ lakhs on the equity of the Company by payment of wealth tax, the Board have been able to place Rs. 7 lakhs to general reserve out of taxed profits.

Chinakuri Disaster

"Before dealing more generally with the affairs of the Company and of the coal mining industry during 1957, I wish to refer to the disaster and tragedy which overtook Chinakuri Colliery on 19th February last, when an underground explosion followed by fire resulted in the loss of 176 lives. As soon as it was possible—in fact within three days of this disaster—I issued a statement to all shareholders on the occurrence and there is little more that I can add today. After the evidence of underground rescue parties made it clear that there was no possibility of further survivors, it was decided, in view of the rapidly worsening conditions underground to seal and subsequently to flood the workings in order to bring the fire under control as quickly as possible. Dewatering was begun on 7th March and is still continuing. A Court of Enquiry has now finished taking evidence from the Compay's officials and workers and all other parties who wished to appear before it, and has adjourned until dewatering is completed and detailed examination can be made underground. I would remind you that the Company worked ten years to sink over 2,000 feet to the Dishergarh seam at this colliery, that all the knowledge and experience gained in working this seam had been applied to the planning and equipment of the colliery, with a view to maximum safety and efficiency in working, and that it started raising coal only three years ago. It will be the hope of all of us and of the whole of the mining industry that the evidence as finally accumulated by the Court of Enquiry will enable the actual cause of the explosion to be definitely determined.

"I would now ask the meeting to stand in silence in sympathy and respect for those who lost their lives and for the distress of the wives and families they left behind. . . . On behalf of the bereaved families, I must thank the Governor of West Bengal, Miss Padmaja Naidu, for opening a fund through which the general public could express their sympathy in a practical way. A total of just over Rs. 1 lakh was contributed to this fund and the first distribution was made by the Governor during a personal visit to the colliery on 26th March. The balance of the fund is to be made over to the families concerned in the form of National Savings Certificates. The generous response of the public has thus materially supplemented the compensation and other measures of relief provided by the Company. A very practical way of helping the families has also been the arrangement sponsored through the Indian Mining Association for the employment in the industry of an adult member of each family.

Coal Target

"I have already mentioned the Company's contribution in increasing raisings of coal so urgently required for the second Plan. Whilst the private sector of the industry is more than keeping pace with the rate of increased output required to achieve its target of 45 million tons annually by 1961, one sees reports from time to time which give the impression that there may have to be a further downward revision of the public sector's target. It is in the best interests of all that some definite decision should be reached as soon as possible since, if the privately owned collieries are going to be asked to raise their target further, they should be given as much time as possible to prepare for the further task which, by the results already achieved, they have shown their ability to attain.

"Some encouragement has been given to the private sector by excluding coal from the harmful provisions of the Mines and Minerals (Regulation and Development) Act, 1957, which would have had far-reaching effects on existing leases and royalties. Even though this may only be a temporary relief, it is nevertheless appreciated, and the industry is now endeavouring to obtain from Government fair and reasonable amendments of the proposed Mineral Concession Rules, 1958.

"I have stated above that the private sector is doing everything possible to attain the targets set for it by Government, but here I must sound a note of warning as regards the limiting factors of imported materials and transport.

Imported Materials

"We fully realise the serious foreign exchange position and it is apparent that for some time to come licences will only be given for the very highest priority of imports. In view of this, we must adapt ourselves, if necessary, to doing without certain items of stores, plant and machinery required for the progressive mechanisation and expansion of your collieries. However, there are some items, the most important of which is steel wire ropes, without which coal cannot be raised.

Transport

"As regards transport, although during 1957 the railways were able to make greatly increased wagon offerings for coal movement, the position has deteriorated since the beginning of the current year and pithead stocks are now higher than they have been for some considerable time. The performance of the South Eastern Railway has been particularly disappointing: against a guaranteed minimum of 950 wagons daily for coal movement, during the past month daily offerings have been as low as 412 wagons. It is perhaps superfluous to comment that the best laid plans to meet the country's coal requirements are vitally dependent on the performance of the railways, and the railways' task will be greatly increased when the requirements of the expanded steel industry have to be moved.

Exports

"It has always been a surprise to me and to other speakers from this chair in the past that our Government attaches so little importance to coal as an earner of foreign exchange. In the early 1920's steps were taken to ensure a good reputation amongst overseas customers for Indian coal by the setting up of the Coal Grading Board, whose inspection staff and certificates of quality ensured that the overseas customer got the quality which he had contracted for. Encouragement was also given to the export of Indian coal by allowing a rebate on rail freight on coal shipped to foreign markets. With these encouragements to the overseas customers and to the coal exporter, a good connection with the Far Eastern markets was built up and exports reached a figure of 1,413,000 tons in 1938. The Second World War intervened and when India emerged from it, official policy became obsessed with the need to conserve India's resources, particularly of the higher grades of coal, for future internal requirements. Assistance by way of rail freight rebates disappeared and there was an insistence that exports must mainly comprise the lower qualities of coal. As a result, the reputation of Indian coal in these export markets has been severely prejudiced and China has recently been gaining a foothold in India's closest coal markets of Ceylon and Pakistan. In 1957, less than ¾ million tons were exported—apart from just under 1 million tons supplied to Pakistan—and this earned about Rs. 2¾ crores worth of foreign exchange. The coal exports of 1938 at today's values would have earned Rs. 5½ crores. Today, with India's capacity to earn greater foreign exchange having assumed topmost priority, coal could be making a very useful contribution if a policy of encouragement of exports had been maintained and there is undoubtedly a case for renewed encouragement being given in the present economic difficulties. But, unfortunately, even if the greatest encouragement were to be extended to coal exports today, it would be sometime before the old markets and the old reputation could be regained.

Sandstowing

"We hope shortly to receive the report of the Price Revision Committee constituted by Government to assess a fair price structure for the coal industry. One matter which is, however, outside the purview of this investigation is the burden of sandstowing. You will notice from the accounts that the Company has had to bear a sum of almost Rs. 9 lakhs, being the difference between the cost of sandstowing at our collieries and the quantum of assistance received from the Coal Board. This is the equivalent of about Rs. 1.50 per ton of coal raised from our sandstowed collieries. At a time when Government are making every effort to encourage additional collieries to install arrangements for sandstowing, in the interests of both safety and conservation, it seems wrong that collieries which do undertake stowing should be placed at such a disadvantage by reason of this financial burden.

Labour

"As a result of a tripartite meeting held in New Delhi, the Appellate Tribunal Award, to which I referred in my speech last year, was implemented in July 1957 and labour have received the benefit of this Award made retrospective to 26th May 1956. Since the end of the period under review, in fact, with effect from 1st January 1958, workers throughout the coal industry have been granted an increased D.A. of Rs. 4.87 per month. There is no doubt that workers in the industry have benefited very considerably as a result of these awards and one still looks to labour to give greater productivity in return. Relations between the Company and its employees have generally been satisfactory throughout the year, but it is to be earnestly hoped that the miner will not fall prey to inter-Union rivalry and that he will realise that a full shift's work is his best personal contribution to the national interests.

"I have had an interesting analysis made of what has happened to each rupee received by the Company during the year under review from its customers in return for coal supplied. I will not weary you with the complete breakdown, but you will be interested to know that 42 nP of every rupee earned goes to the labour, 9 nP goes to Government in taxes and cesses, 5 nP is applied to meet depreciation of the Company's buildings and machinery, while you shareholders get 3 nP, and 2 nP have been retained in the business for future development. If anyone suggests to you that you do not deserve your 3 nP, just remind him that without the capital provided by the shareholders through joint-stock enterprise, there would be no undertaking to give employment to twenty-four thousand labourers, each of whom gets 42 nP out of every gross rupee earned by the undertaking.

Welfare

"It has been the Company's policy progressively to provide amenities for employees at collieries, and, in addition to the statutory requirements of pithead baths, creches and canteens, we have a programme for the provision of co-operative stores, playing fields and many other amenities. In addition to the considerable capital cost incurred in providing for the welfare of our employees, the maintenance of these facilities, including the expert medical attention provided, is costing us about Rs. 7 lakhs per annum.

"The provision of housing is one for which we were carrying out a planned programme until two and a half years ago when a new scheme was instituted under the auspices of the Coal Mines Welfare Fund whose resources come from a cess on coal; briefly, this scheme provides for the capital cost of labour quarters to be borne by the Welfare Fund, and thereafter the maintenance charges and a rental of Rs. 2 per month are to be paid by the Company, whilst the Company provides the land together with water-supply, lighting connection and approach roads. Although we are very keen indeed to construct the 848 quarters sanctioned at our collieries for 1958-59, it has been impossible to achieve anything as yet owing to various procedural delays on the part of the authorities concerned. This matter is being followed up and it is our desire to give the fullest possible encouragement for the provision of increased accommodation for our miners.

Staff

"Before concluding, I would like to pay a well merited tribute to Mr. Rosser, your Chief Mining Engineer, and his staff who have worked so magnificently through another year which has produced many and varied problems such as must always be attendant in the technical control of your 17 collieries."

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

Employers Please!

Provident Funds no longer entirely meet modern needs. In western countries particularly a more effective provision has been found in Group Insurance Schemes. With little cost to the employer, these schemes can work wonders in safeguarding thousands of homes and augmenting old age pensions.

In the United States, by the end of 1956, 3.5 crores of certificates had been granted under Group Schemes with a total value in Life Insurance cover of Rs. 55,000 crores. This is truly impressive when one considers that the total extent of Life Insurance written in India, individual and Group, stands at about Rs. 1,200 crores only.

An attempt was made three years ago to introduce Staff Insurance Schemes in India. It was greeted with enthusiasm by employer and employee alike. But certain defects in the implementation of these schemes demanded their withdrawal. The Life Insurance Corporation has now introduced new Group Schemes which do away with the shortcomings of previous attempts.

These Group Schemes are now available to employees of industrial concerns, business houses, commercial establishments and other similar institutions. They apply to a homogeneous group of individuals and are available at lower rates of premium. Ordinarily, no individual medical examination is required. The Group Insurance Schemes broadly afford two distinct benefits:

BENEFITS ON RETIREMENT

This category includes the Superannuation Schemes. These provide for pensions on retirement. Experience has shown that the lump sum Provident Fund is soon frittered away. The employee has often to depend on relatives and others for financial assistance or to seek work. The Superannuation Scheme is designed to solve this predicament.

BENEFITS DURING SERVICE

The plans under this category are called Group Insurance Schemes. They provide the employee with an Insurance umbrella during his working years. Provident Funds, so popular in this country, are inadequate in the event of early death. This contingency is covered with the Group Insurance Schemes; but one can also take these Schemes under the Endowment Plan, thus serving a two-in-one purpose of security during AND after service.

Both these schemes may be instituted in replacement of or in addition to an existing Provident Fund.

There are two ways of looking at these Group Schemes. To the employer they mean greater staff loyalty and an attraction to the best in new personnel. To the employee they are an inducement to stay with the organization and give of his best.

Life

UNION CO-OP. INSURANCE SOCIETY LIMITED

Mr. J. L. MEHTA'S SPEECH

THE Ninth Annual General Meeting of the Union Co-operative Insurance Society Ltd. was held on 25th June 1958 when Mr. J. L. Mehta presided.

In the course of his address Mr. Mehta referred to the policy of both the Central and State Governments in regard to co-operative insurance. He also deplored the fact that co-operative insurance societies are not allowed to take benefit of the development of the co-operative movement, as the insurance business of co-operative societies is not made preserves for co-operative insurance societies. He also referred to the fact that assistance from the Central and/or State Governments should not result in loss of liberties and individuality of co-operative societies. He finally appealed to the various Central and/or State Governments to see that business of co-operative societies is kept for co-operative insurance societies. He also requested the Central and/or State Governments to insure part of their properties with co-operative insurers.

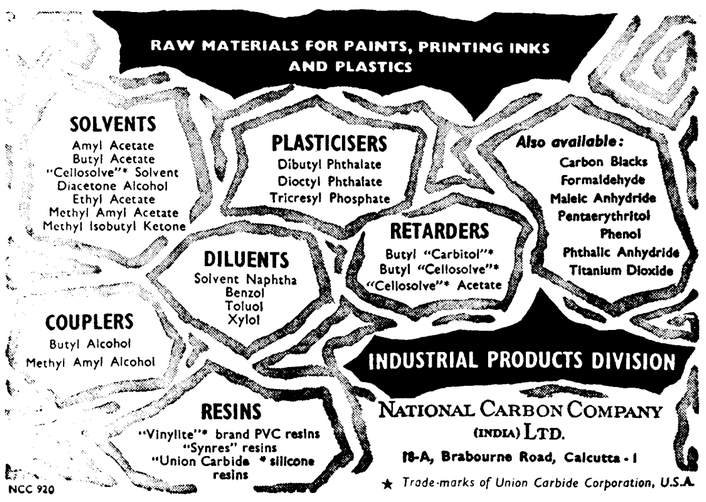
Reduction of Rates

Mr. Mehta then referred to the likely reduction in fire rates and other problems that are being faced by the insurance industry. While referring to the matter he informed that the rate in reduction is being envisaged on the basis of the data available for last one or two years only. He also informed that, though the fire loss ratio is less, it is a fact that the extra profit in the department is being used for subsidising marine and accident departments. He also appealed to the authorities concerned to allow the industry to judge the working of each department not individually but collectively and allow them to trade in their own way. He also expressed his fear that the revision of rates, at this stage, might not only lead to downward trends of profit but might also result in marginal units going out of trade.

Satisfactory Progress

Reviewing the progress of the Society, Mr. Mehta stated that the same was satisfactory. He also informed that, during the year, branches were opened at Calcutta, Delhi, Bangalore and Nagpur and efforts were being made to develop new territories. While referring to the special features, he stated that the premium income had gone up and the reserves had risen considerably. He informed with pleasure that the rate of dividend had been increased to 5½ per cent. and the bonus to policyholders to 12 per cent. In the course of his speech, he also referred to the cordial relations that the Society had with International Co-operative Alliance and co-operative insurers abroad. In conclusion, he thanked co-operative societies, official and non-official co-operators for patronising the Society and sister insurers for giving a fair deal.

The report and audited accounts for the year ended 31st December 1957 were adopted.



SEN - RALEIGH INDUSTRIES LIMITED

MR. S. K. SEN'S SPEECH AT ANNUAL GENERAL MEETING

POSSIBILITIES OF EXPORTING CYCLES BEING EXPLORED

ADDRESSING the Eighth Annual General Meeting of the Sen-Raleigh Industries of India Ltd., held at Calcutta on Friday, 27th June 1958, Mr. S. K. Sen, Chairman of the Company, said:

"It gives me pleasure to welcome you to the eighth annual general meeting of the Company. The Directors' report and the accounts of the Company for the period ended 30th September 1957 have been with you for sometime and, with your approval, I shall take these as read.

"Sales for the year recorded a further expansion of approximately Rs. 30 lakhs and the profit at Rs. 15,91,546.60 compares favourably with Rs. 14,36,292.23 earned in the previous year. This result has allowed your Directors to recommend payment of the same dividend on the preference and ordinary shares of the Company as in the last year. As in the past, your Company has followed a policy of strengthening reserves.

"The improvement in turnover was achieved solely through an expansion in production in the component section of the factory. By the end of the year, this section was supplying components to most of the other bicycle manufacturers in the country, thereby contributing largely in saving foreign exchange. Bicycle production, however, could not be raised as anticipated, owing to the difficulties experienced on more than one occasion in the year in maintaining a continuous supply of imported materials.

New Components Introduced

"The introduction of a large number of new items into our manufacturing programme in order to reduce the imported components used in a cycle to a figure below Rs. 5 by 1958 also had repercussions to some degree on production. Introduction of new components always requires some time for proving and testing, and, whilst, in earlier periods of easier licensing, there had always been sufficient buffers to tide over the transition period, the position in 1957 was often a race between manufacture of new items ahead of schedule against stocks of imported components running out on a given date. The reaction of a section of workers to the rapid introduction of a large number of new components was not always as co-operative as could be expected in such a crisis, and some time was also lost on this account in developing full production of the new components. A power failure in the D.V.C. System, too, was instrumental in affecting production for over a week in the year under review.

"In my last report, I had mentioned that the demand for our products justified the Company's undertaking a major expansion and had outlined the steps taken by the Company to double its turnover and bring the Company nearer self-sufficiency. This demand for our products still persists, and I am glad to be able to inform you that the plant required for the expansion, as well as for manufacturing all such components as had been planned to be made at Kanyapur, has now mostly arrived in India and is in the course of installation. No great progress, however, can be made in expanding production, until and unless the Government can afford to release foreign exchange for raw materials which are not as yet manufactured within the country. Although it is realised that the situation facing the country and its Government in relation to foreign exchange is critical, with restricted licences and diminishing buffers, a state of emergency dominates industry. Emergency measures are necessary to tackle such a situation and only a more dynamic approach on the part of the licensing authorities in dealing with the limited licence applications now reaching them can keep the wheels of industry turning without a break. With marginal stocks with which the light engineering industry is endeavouring to maintain production programmes, long delays in disposal of licence applications may well lead to disruption in production—so costly to the Company and the country.

"Outside suppliers of components in both the large and the small-scale sector have been affected in the same manner as we have by the foreign exchange shortages and, although it is still hoped that supplies from ancillary units mentioned in my last report would still be available within the year, so far it has not been possible for them to deliver any materials. In most cases, however, we are covered for some time on imported components and so, our production would not be affected immediately.

"Supplies of Indian-made tubing have in most cases replaced imported tubing without much difficulty during the change-over. In steel strips, a beginning has also been made in using Indian supplies, but, with quotas in this material running to only 10 per cent. of requirements we have still to go a long way before being independent of imports.

Period of Paradoxes

"The last few months had been a period of paradoxes for the bicycle industry. On the one hand, at the highest level, we have been exhorted to increase capacities to meet Plan targets and have even been asked to consider an upward revision of the targets. On the other hand, we have noted with concern the various pronouncements on the dwindling foreign exchange which has made the difficulties previously experienced in obtaining import licences for components appear as nothing compared to the formidable ones now faced in obtaining import licences for even raw materials at a level of production frozen to past performance.

"From the various pronouncements at ministerial level, the future of the bicycle, along with so many other industries in India, would seem to be linked with the speed of progress in bringing the three steel mills in the public sector into production. Not only would it then be possible for us to obtain our own requirements of steel from within the country, but, by exporting steel, the country would earn exchange that would then allow it to import such other materials as would still not be available within the country. Our future aspirations would, therefore, seem to depend on the success of these projects, for which we bid Godspeed.

Exports

"Some time back, we were approached by the Government of India to explore the possibilities of developing export markets. I am pleased to inform you that our request to Raleigh Industries Limited in this connection was received in a spirit of accommodation and rights of export of Raleigh products to the U.S.S.R., Czechoslovakia, Poland, Rumania, Bulgaria, and the Peoples Republic of China have been vested at present in the Indian Company. Steps have already been taken to explore the possibilities of sales in these markets.

"Negotiations with the Company's recognised Union are now under way for implementing its expansion schemes. The negotiations are based on improved earnings and amenities for workers against higher productivity, and the approach of the Union so far to the schemes drawn up on this base would indicate greater realisation of the problems facing the industry and a more logical approach to planned expansions than previously. It is hoped that these negotiations would be completed without a breakdown of production, so that transitions to higher productions wherever materials are available could take place immediately. This would reaffirm our faith in the possibilities of negotiated agreements and point towards a further advance in the trade union movements in the country.

"Finally, before closing, I would like to thank my collegues, all staff and workers, our foreign associates and dealers without whose unfailing effort these results could not have been achieved."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

BHARAT LINE'S RESULTS GRATIFYING

HIGHER RETURN TO SHAREHOLDERS—RESERVES STRENGTHENED FURTHER

THE results of the Bharat Line Ltd. (Managing Agents: Messrs. Dinshaw Private Ltd., Bhavnagar) for the year ended 31st December 1957 are highly gratifying. The gross profit is higher by 75 per cent. and the return to shareholders has been doubled, from 6 per cent. to 12 per cent., by the payment of a bonus of 6 per cent. The reserves, too, have been substantially strengthened. These results are the outcome of an improvement in the efficiency of the Company's operations and a sizable growth in freight earnings.

To present a more detailed picture of the Company's progress during 1957. The freight earnings which had consistently declined from the record level of Rs. 256.64 lakhs in 1954 to Rs. 220.24 lakhs in the previous year advanced during the year under review to Rs. 252.11 lakhs. This expansion reflects partly the benefit of the piece-rate system of wages for stevedore labour introduced in Bombay in March 1956, which led to improved working conditions in the Bombay Port, and partly the increase in freight rates on the basis of the recommendations of the Rail Sea Co-ordination Committee. All this does not mean that the past year was one of smooth sailing for the Company. Far from it. The loss of working time through detentions at ports continued to be heavy and operation and maintenance costs remained high. Accordingly, expenses went up from Rs. 180.37 lakhs to Rs. 183.34 lakhs. The actual increase is Rs. 2.97 lakhs, which, however, is only modest when viewed against the large rise in freight earnings. The gross profit works out to Rs. 70.38 lakhs, an increase of nearly Rs. 30 lakhs over that for 1956. There were no additions to the fleet during 1957 and, therefore, the provision for depreciation remains unchanged at Rs. 27.60 lakhs. As the provision for taxation is no more than Rs. 80,000, it is obvious that the Company is still having the benefit of accelerated depreciation allowances. After all the essential provisions, the net profit amounts to Rs. 36.15 lakhs, which is more than three times the net profit of Rs. 10.49 lakhs for 1956. Although the distribution to shareholders has been doubled from 6 to 12 per cent., absorbing Rs. 12 lakhs, as against Rs. 6 lakhs a year before, this has not been at the expense of the appropriation to reserves. Indeed, the Directors have added a large sum—Rs. 21.38 lakhs to be precise—representing nearly 60 per cent. of the net profit to reserves.

The following table clearly highlights the progress of the Company in 1957 against the background of its achievements in the preceding three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Freight earnings	2,52.11	2,20.24	2,33.71	2,56.64
Charter hire and other income..	1.61	0.92	0.76	6.18
Expenses	1,83.34	1,80.37	2,02.53	2,25.55
Gross profit	70.38	40.50	31.95	37.28
Managing Agents' remuneration	3.98	1.69	1.07	2.03
Provision for—				
Depreciation	27.60	27.67	24.22	30.05
Taxation	0.80*	..	..	..
Gratuity	1.85	0.65	..	..
Net profit	36.15	10.49	6.66	5.20
To reserves	21.38	4.76	1.00	..
„ dividend	12.00 (D. 6% + B. 6%)	6.00 (D. 6%)	5.00 (D. 5%)	5.00 (D. 5%)
Carry forward	4.06	1.29	1.55	0.99

* Provision for excess dividend tax.

Lest the enhancement in the rate of return to shareholders should give rise to the impression that the Directors have suddenly become liberal and less cautious in their appropriation policy, it must be pointed out here that hitherto they had paid only very modest dividends. They had deliberately followed a very conservative policy, stepping up the dividend only gradually from 3 per cent. for 1947 to 6 per cent. for 1956. The shareholders have thus made considerable sacrifices in the past in order to consolidate and strengthen the position of their Company, an objective which has been realised to a considerable extent. The Directors are, therefore, not unjustified in deciding to reward the shareholders for their patience and faith in the future. It would appear that it is the intention of the Directors to maintain the dividend at the higher level in the coming years. With this object in view, they have created a dividend equalisation fund with an initial credit of Rs. 15 lakhs taken from the general reserve. In order to meet the deferred taxation liability, a specific reserve called Deferred Taxation Reserve has also been opened. This account, too, has been credited with Rs. 25 lakhs by making a draft on the general reserve. Nevertheless, there is still a large balance of Rs. 63.90 lakhs in the general reserve account.

As already stated, no addition was made to the Company's fleet during 1957. This was due to the prevalence of abnormally high prices for new and second-hand ships and non-availability of foreign exchange. The Directors say that, since the last quarter of the year, conditions have changed for the better. They, therefore, hope to be able to acquire some suitable units for the Company at favourable opportunities

The Company's ships were regularly employed in the coastal trade and also participated in the India-Burma trade. It also maintained its service in the Persian Gulf trade. One old unit of the Company's fleet was disposed of during the year in a favourable sales market for second-hand ships. Two other units were put through special survey, one at Hong Kong and another at Bombay.

The Company's paid-up capital as at 31st December 1957 remains unchanged at Rs. 1 crore, all in ordinary shares of Rs. 100 each. In the interests of the small investor, the Directors have proposed to sub-divide the Rs. 100 shares into shares of Rs. 10 each. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 131.34 lakhs. An analysis of the Company's reserves shows that the general reserve now stands at Rs. 63.90 lakhs, investment reserve at Rs. 1 lakh, deferred taxation reserve at Rs. 26 lakhs, deferred revenue expenditure reserve at Rs. 21.38 lakhs and dividend equalisation reserve at Rs. 15 lakhs. The current liabilities and provision for taxation aggregate Rs. 166.27 lakhs of which loans taken from the Government of India secured by mortgage of four ships of the Company's fleet account for Rs. 90.71 lakhs. The gross block stands at Rs. 410.97 lakhs, after deducting the cost of one ship (Rs. 10.97 lakhs) sold during the year. As against this, the aggregate amount of depreciation provided so far is Rs. 162.42 lakhs. The current assets (excluding deferred revenue expenditure amounting to Rs. 21.38 lakhs) aggregate Rs. 127.69 lakhs.

The Rs. 100 fully paid-up shares of the Company are nominally quoted at Rs. 80. On this basis and taking the dividend at 12 per cent., the yield works out to 15 per cent. per annum.

(Concluded from next column)

tal expenditure and to replenish the working capital which has been locked up in the fixed assets of the Company, the Directors have decided to float, subject to the consent of the Controller of Capital Issues being obtained in that behalf, a 6½ per cent. first mortgage debenture loan of Rs. 18 lakhs. The balance of the capital expenditure will have to be financed from future earnings or borrowings, if necessary, for the purpose."

The Company's reserves and surplus as on 31st December 1957 amount to Rs. 13.08 lakhs, as against a paid-up capital of Rs. 29.81 lakhs, in shares of Rs. 100 each. The current liabilities aggregate Rs. 100.09 lakhs. The gross block of Rs. 93.11 lakhs stands reduced at Rs. 41.22 lakhs. The current assets aggregate Rs. 101.75 lakhs and are just enough to cover the current liabilities.

MINERVA MILL SUFFERS LOSS

DEBENTURE ISSUE CONTEMPLATED

A DECLINE in turnover, accumulation of stocks of cloth and yarn, higher manufacturing and other expenses, followed naturally by a decline in earnings have been the usual features of the working of the cotton textile industry in India during 1957. Readers of this journal are familiar with several instances of this trend. One more striking example of it is provided by the Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay), the accounts of which for the year ended 31st December 1957 were made public a few days ago. The Company's sale proceeds have declined, stocks as at the end of last year have mounted up, and expenses have increased. Consequently, it has suffered loss, in marked contrast to the encouraging performance noted in the previous year. The shareholders, therefore, get no dividend for the past year.

There is a gross loss of Rs. 5.94 lakhs which compares unfavourably with the gross profit of Rs. 7.13 lakhs earned in 1956 and Rs. 6.80 lakhs in 1955. This loss, it may be noted, is far more pronounced than that (at Rs. 1.55 lakh) suffered in 1954. After providing for Managing Agents' commission, depreciation and gratuity, the net loss has grown to Rs. 7.47 lakhs, as compared with a net profit of Rs. 1.81 lakh in the previous year. A provision of only Rs. 3.931 has been made for depreciation, as against Rs. 3.59 lakhs in the previous year. Thus, the net loss would have been bigger still had depreciation on a scale comparable with that a year ago been provided for. Indeed, the Directors themselves say that, in view of the loss sustained, they have not been able to provide for depreciation amounting to Rs. 3 lakhs on buildings and machinery. A sum of Rs. 1.09 lakh has, however, been set apart as provision for gratuity, as against Rs. 1.12 lakh. In order to wipe out the loss and to make the above provision, the Directors have transferred Rs. 6.70 lakhs from the general reserve and also written back Rs. 76,804, representing excess provision for taxation made in previous years. This leaves a sum of Rs. 19,733 to be carried forward as surplus.

In view of the loss for the year under review, no dividend has been proposed. Some may argue that the Company could have paid at least a small dividend out of the reserves built up in the past. But the Directors have chosen not to do so, because even the declaration of a small dividend for the year under review would make the Company liable to wealth tax estimated at Rs. 22,000.

The following comparative table shows at a glance the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sales of yarn, cloth and waste..	1,30.54	1,30.33	1,31.76	1,26.33

Commenting on the Company's working during the year under review and its plans to raise additional finance for renovation and modernisation of the mills, the Directors observe thus:

"The Directors very much regret that the working of the Company during the year under report has resulted in a loss due to the very difficult trading conditions which have still not improved. With the raw material ruling at high prices on the one hand, and the very poor demand for yarn and cloth on the other, sales had to be made at heavily losing prices to reduce accumulating stocks. It was generally a very bad year for the textile industry. Working can be made economical only by complete rationalisation which requires the co-operation of labour and by launching on a programme of renovation and modernisation of plant and machinery, which, of course, involves a large capital expenditure. To meet a part of such capi-

(Continued in previous column)

Points From The Chair

Bengal Coal's Rupee

"I HAVE had an interesting analysis made of what has happened to each rupee received by the Company during the year under review from its customers in return for coal supplied. I will not weary you with the complete breakdown, but you will be interested to know that 42 nP of every rupee earned goes to the labour, 9 nP goes to Government in taxes and cesses, 5 nP is applied to meet depreciation of the Company's buildings and machinery, while you shareholders get 3 nP, and 2 nP have been retained in the business for future development. If anyone suggests to you that you do not deserve your 3 nP, just remind him that without the capital provided by the shareholders through joint-stock enterprise, there would be no undertaking to give employment to twenty-four thousand labourers each of whom gets 42 nP out of every gross rupee earned by the undertaking."

D. F. MACMILLAN,
Bengal Coal Company, Ltd.

Importance of Incentives

"I am convinced that the state of the economy would have been very different, if economic policy had been devised with greater consideration for incentives to work, to save and to invest. I think that one reason why so much of our economic planning has gone wrong is that we have failed to make use of what is perhaps the most important of all our national resources. I mean the initiative, drive, energy and enterprise of private business. Instead, the result of Government policy has been to put private enterprise into a straitjacket of regulations and controls, and to regiment it to the point where it is almost stifled."

M. L. JALAN,
Calcutta Gas Co. (Proprietary) Ltd.

Value of Small Industries

"There need be no conflict at all between small and large-scale industries. They should be regarded as complementary. Certain industries by their very nature require large-scale organisation but there is a large field of activity in which the small-scale industry can play a useful role. These remarks have particular relevance to our present economic situation when development is handicapped by lack of foreign capital. Small-scale industries, by and large, have a low import content and for this reason, they require to be developed rapidly. It will be surprising to know that even in advanced countries like U.S.A. and Japan, particularly the latter, small-scale industries have been playing an important role in catering to the needs, of not only consumers, but also large industries themselves."

PURSHOTTAM KANJI,
Bombay State Financial Corporation

Industrialisation of M.P.

"The industrialist of today has to play a very vital role in the planned economic development of our country and I am sure that industrialists in this State would not lag behind. The State of Madhya Pradesh has large potentialities for industrial development. The State abounds in raw materials for various kinds of industries. It has rich mineral resources and forest wealth. All these indicate a very prosperous future for the State when these resources are properly tapped. A demand for location of an aluminium factory in the State has already been impressed upon the State Government on the ground that aluminium quarries are available in the State. It is learnt that a committee headed by Shri S. N. Mehta, Chairman of the Madhya Pradesh Electricity Board, has been set up to prepare the case of the State for the location of the Aluminium Plant. The Central Government's contribution of the Steel Project at Bhilai and Heavy Electricals Project at Bhopal does not weaken the case for the establishment of an aluminium factory in the State. It is also learnt that the State Government is considering the location of a Ferro-Manganese Plant of 20,000 tons annual capacity near Balaghat and is also contemplating the establishment of a Beneficiation Plant to convert low grade manganese ore into the higher grade variety. This would supplement the supply of high grade ore available from the Balaghat group of mines with the low grade iron ore from other mines in the State to meet the requirement of 45,000 tons of ore for the aforesaid plant annually."

D. P. MANDELIA,
Madhya Pradesh Financial Corporation

Prospects for C.P. Manganese

"As regards the prospects for the current year, the position is that at the end of December 1957, the amount of ore at ports was quite satisfactory and railings this year up to the moment have continued to be good. Consequently it would be right to say we have made a good start, but on the other hand we cannot overlook the fact that the steel industry of the United States is passing through a difficult period. How long this will last and how far it may spread, we cannot tell, but there are definite signs that the demand for our ore during the coming months of this year will not be as heavy as usual. Should the position deteriorate no further I trust that the results for 1958 will not be found unsatisfactory. Looking further ahead, 1959 must depend upon the activity of the steel industry generally and competition which may arise from new sources of supply. However, our mines are in good shape, our ore has an excellent reputation, we have a very good and long-standing connection with the principal buyers in the United Kingdom and the United States of America and our relations with the State Trading Corporation of India—with whom we are working in close co-operation—are very good; consequently I feel that we can look to the future without undue apprehension."

MAJOR A. C. HERRING,
Central Provinces Manganese Ore Co., Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 8th July 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 25th June to 8th July 1958, both days inclusive.

NEW SAMANBAGH TEA CO., LTD. Annual General Meeting, Calcutta, 9th July 1958. Dividend: Rs. 3.00 per share. Transfer books remain closed from 3rd to 9th July 1958, both days inclusive.

SHAW WALLACE AND CO., LTD. Annual General Meeting, Calcutta, 10th July 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books remain closed from 1st to 10th July 1958, both days inclusive.

METTUR INDUSTRIES LTD. Annual General Meeting, Madras, 11th July 1958. Dividend: Rs. 20.00 per share. Transfer books remain closed from 25th June to 11th July 1958, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th July 1958. Dividend: Rs. 6.00 per share. Transfer books remain closed from 9th June to 5th July 1958, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 15th July 1958. Dividend: *Nil*. Transfer books remain closed from 2nd to 15th July 1958, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 15th July 1958. Dividend: *Nil*. Transfer books remain closed from 20th June to 12th July 1958, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 17th July 1958. Dividend: 11¼ per cent. (final) free of income-tax. Transfer books remain closed from 1st to 17th July 1958, both days inclusive.

KUNCHUNPORE TEA CO., LTD. Annual General Meeting, Calcutta, 18th July 1958. Dividend: *Nil*. Transfer books will remain closed from 11th to 18th July 1958, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 18th July 1958. Dividend: *Nil*. Transfer books will remain closed from 11th to 18th July 1958, both days inclusive.

SIMPLEX MILLS CO., LTD. Annual General Meeting, Bombay, 18th July 1958. Dividend: Rs. 8.50 per share, payable on or after 24th July 1958. Transfer books remain closed from 4th to 17th July 1958, both days inclusive.

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 26th July 1958. Dividend: Rs. 12.00 per share (includes bonus of Rs. 6.00 per share), payable on and after 2nd August 1958. Transfer books remain closed from 1st to 30th June 1958, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Annual General Meeting, Calcutta, 29th July 1958. Dividend: *Nil*. Transfer books will remain closed from 21st to 29th July 1958, both days inclusive.

DUNBAR MILLS LTD. Annual General Meeting, Calcutta, 29th July 1958. Dividend: *Nil*. Transfer books will remain closed from 21st to 29th July 1958, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, Orissa, 16th August 1958. Dividend: Re. 1.50 per share or 15 per cent. Transfer books will remain closed from 21st July to 15th August 1958, both days inclusive.

CANNANORE SPINNING AND WEAVING MILLS LTD. Dividend: 12½ per cent. or Rs. 12.50 per share for the year ended 31st March 1958. Transfer books will remain closed from 18th to 30th July 1958, both days inclusive.

LAKSHMI MILLS CO., LTD. Tax-free dividend of 12 per cent. or Rs. 6.00 per ordinary share and Rs. 3.00 per "A" ordinary share, for the year ended 31st March 1958. Transfer books will remain closed from 19th July to 1st August 1958, both days inclusive.

PALANI ANDAVAR MILLS LTD. Dividend of Rs. 9.00 per "A" ordinary share and Rs. 13.50 per "B" ordinary share, for the year ended 31st December 1957. Transfer books remain closed from 30th June to 14th July 1958, both days inclusive.

COMPANY REGISTRATIONS

INDIA LIFTS PRIVATE LTD. (First Director: Mr. Jethabhai C. Patel.) Business: Lift engineers, construction engineers, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 22, Gowalia Tank Road, Bombay 26.

GHATGE AND PATIL (TRANSPORTS) PRIVATE LTD. (First Director: Mr. Ghatge Vasant Madhav.) Business: Transport of passengers and goods. Authorised capital: Rs. 10,00,000. Private company. Address: Rajaram Road, Kolhapur 2.

GLOBE INDUSTRIES AND COMMERCE PRIVATE LTD. (First Director: Mr. Ratilal Odhavji Zatakia.) Business: Manufacturers, importers and exporters of wool, rayon, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Ali Chambers, Dean Lane, Fort, Bombay.

FOREIGN EXCHANGE CRISIS

(Concluded from page 19)

exporting more, if necessary by discouraging domestic consumption. Here again India can export more only if other countries are willing to increase their imports. Moreover, restraints on domestic consumption for the purpose of releasing goods for export can cause a recession in the industry concerned if exports do not in fact take place. Similar attempts to raise domestic savings by restraining consumption can have precisely the opposite effect; consumption may well be held down, but savings will fall if production has to be curtailed as a result. What is more, the expansive momentum may be rudely brought to a halt. The present crisis in the cotton textile industry illustrates this.

It must be emphasised that the gap in foreign exchange can well be larger than the gap in domestic resources. This will happen if the total of domestically-produced investment goods, the amount of investment goods which can be brought in to fill the gap in total resources, and the amount of investment goods which can be imported against normal exports are not enough for carrying through the Plan, after allowing for depreciation and replacement. Since the amount of investment goods needed for carrying through a given investment programme can be fairly reliably estimated, this gap can also be estimated. If this gap is small in relation to the total imports in a normal year, it can be made up without serious difficulty by selective restrictions on imports.

The conclusions of this study may now be summarised:

(1) The present foreign exchange problem facing India is not just a problem of the scarcity of foreign exchange resources but a projection of the problem of total resources. These two may or may not be coterminous, though the probability is that they will not be.

(2) The foreign exchange problem cannot be solved either by cutting down imports or by expanding exports, because neither policy will be in keeping with our basic assumption and the basic need, of a moderate rise in the standard of living. Any attempt to raise the savings ratio above a marginal rate of 20 per cent. is likely to be self-defeating.

(3) It may be possible to avoid both the foreign exchange and total resources problems if a balanced programme of development is not attempted, but investment is concentrated in those lines where returns in terms of income are high, so that the target of increase in national income will still be achieved.

WORLD BANK LOANS FOR INDIAN PORTS

On 25th June 1958, the World Bank entered into formal agreements to lend $43 million for port improvements at Calcutta and Madras, two of India's largest and most important port cities. One loan of $29 million was made to the Commissioners for the Port of Calcutta and the other loan of $14 million was made to the Trustees of the Port of Madras.

The announcement of the loans was made on 16th April when they were approved by the Bank's Executive Directors. The loan agreements have since been signed in India by representatives of the respective borrowers. The Guarantee Agreements were signed by Mr. H. Dayal, *Charge d'Affaires* of the Embassy of India in Washington, on behalf of the Government of India. The loan and Guarantee Agreements were signed by Mr. Davidson Sommers, Vice-President, on behalf of the World Bank. The Bank of America, The Chase Manhattan Bank and the Irving Trust Company are participating in the two loans, without the World Bank's guarantee, for a total amount of $1,705,000.

Both the loans are for a term of 20 years and bear interest of 5½ per cent., including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation of the loans will begin in April 1963.

WORLD BANK BORROWS DEUTSCH MARKS

The International Bank for Reconstruction and Development has arranged with the Central Bank of West Germany to make its first borrowing of Deutsch marks. The amount to be borrowed is DM200 million (approximately $48 million) at 3 per cent. The period of the loan is three years and the lender is the Deutsche Dundesbank. This transaction results from the recent visit to West Germany of Eugene R. Black, President of the Bank. The Deutsch marks will be fully convertible, but the needs of the Bank to disburse this currency to its borrowers in the near future make it probable that a substantial part of the proceeds of this loan will be spent in West Germany

Although this is the first borrowing of Deutsch marks, it is the fourth loan the Bank has received from the Bundesbank and brings the total borrowed to the equivalent of $298 million, all in the past 12 months. The previous loans were of United States dollars. They are: 9th July 1957: $100 million, 1, 2 and 3 year 4¼ per cent. notes, (the first $40 million of these notes is due to mature on 11th July 1958. The Bundesbank has agreed to relend this amount in the form of 2½ per cent. notes with a term of three years); 23rd September 1957: $75 million 1, 2 and 3 year 4⅛ per cent. notes; and 14th June 1958: $75 million 1, 2 and 3 year 2½ per cent. notes.

RESULTS OF SHAW WALLACE ENCOURAGING

CALEDONIAN JUTE SUFFERS LOSS

Shaw Wallace and Co., Ltd.

THE directors of the above Company (Chairman: Mr. S. M. Smith, Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The Company's profit for the year is Rs. 37,91,964 (Rs. 27,40,855). Taxation amounts to Rs. 18,24,163 (Rs. 13,96,220) leaving a net profit of Rs. 19,67,801 (Rs. 13,44,635). To this should be added amount brought forward from last year of Rs. 3,64,354 (Rs. 3,65,280), making a profit available for appropriation of Rs. 23,32,155 (Rs. 57,09,915 including Rs. 40,00,000 transferred from general reserve). Out of this amount the following appropriations have been made or are recommended by the directors:—

Amount written off goodwill Rs. 2,000 (Rs. 39,63,686), amount written off investments Rs. 5,00,000 (*nil*) and amount transferred to general reserve Rs. 4,00,000 (Rs. 3,00,000 to investment reserve). The interim dividends paid on the cumulative preference shares on the 15th July 1957, 3 per cent. less income-tax absorbed Rs. 1,54,123 (Rs. 1,65,938), and on the 15th January 1958, 3 per cent. less income-tax absorbed Rs. 1,60,607 (Rs. 1,65,937). The directors recommend payment of a dividend of 10 (10) per cent. on the ordinary shares without any deduction of income-tax paid by the Company absorbing Rs. 7,50,000 (Rs. 7,50,000) leaving a credit balance to be carried forward to 1958 of Rs. 3,65,425 (Rs. 3,64,354).

Fertilisers.—The Company holds a leading position in the country in this field of activity and has contributed considerably towards increased agricultural production by use of fertilisers and the supply of various auxiliaries, such as agro-chemicals and spraying equipment. A widespread upcountry organisation has been built up through the years in many States of India, and close personal contact has thus been established with the agricultural community, resulting in a rapid and substantial increase in the tonnages sold.

It is the policy of the Government of India to increase agricultural output by all means available and one of the main methods is by increasing production and offtake of fertilisers. This Company is doing everything it can to assist the forward drive and, amongst other things, is a founder-member of the Fertiliser Association of India, recently formed, which it is hoped will become a powerful influence for the common good. The shortage of foreign exchange has led to a considerable widening of the gap between fertiliser requirements and its relatively low availability in the country, and every effort is being made to increase indigenous production in the future. During the year under review, the total value of fertilisers sold by the Company was Rs. 5.14 crores as compared with Rs. 3.08 crores in 1956. It had nine factories in operation throughout the country.

Superphosphates and Sulphuric Acid.—The new superphosphate factory in Madras, which went into operation in May, got off to a satisfactory start and worked to capacity for the rest of the year, producing sulphuric acid and superphosphate. Production is fully sold 12 months ahead and operations during the year 1958 should be on a satisfactory basis. It will be appreciated that the current year will see 12 months' production as against seven months' in 1957.

A decision has been taken, with the approval of Government, to increase substantially this factory's capacity and ways and means are being investigated now to achieve this, although it is unlikely that such increased capacity will be available until 1959.

Insecticides and Fungicides.—The Company, which has handled the range manufactured by Sandoz Products Private Ltd. for some years, has now also obtained the important distributorship for the greater part of India for the products of Tata-Fison Private Ltd., and a concerted drive to market the products of both manufacturers is now in progress.

Glue.—The Company is the largest manufacturer of industrial glue in the country and a satisfactory standard of production and sales was achieved during the year. Plans are in hand to increase production substantially in the very near future.

Tea.—The recession in world prices of common and medium tea, which set in after the Suez crisis, continued throughout 1957 and our tea interests made a smaller contribution to the income, though it is fortunate that a substantial quantity of the tea produced by the Companies under the Company management ranks as quality tea, which has been relatively much less affected by the decline in the market. It is rather early yet to forecast the likely trend of market conditions in 1958, though any teas with quality are bound to sell well. Companies for which this Company act as agents and managing agents in Northern India produced in 1957 a total crop of 3,02,964 maunds of tea. The area under cultivation totals 24,355 acres. These compares with 3,16,750 maunds and 24,150 acres in 1956.

Tinplate.—Early in the year the Tinplate Company of India Private Ltd., for which this Company is the managing agents, brought into operation an additional Pack Rolling Mill, raising the capacity of the plant in terms of packed tinplate to 84,000 tons, and substantial imports of steel were arranged in an attempt to satisfy the increased rolling capacity. Unfortunately, however, supplies of raw material still fell far short of requirements and since serious labour trouble also supervened, the total output for the year amounted to only 65,000 tons.

General.—It is most desirable that the company's stake in the industrial development of India should be suitably increased, so that it may contribute fully to the country's industrial progress, and projects for expansion and development are under constant examination by the Board; as opportunities arise, they will be seized, provided that the financial resources are available. If the progress visualised is to be achieved, it is of the utmost importance that the financial resources should be built up and it is for this reason that despite the increased profit, the directors have recommended maintaining the ordinary dividend at the usual 10 per cent. per annum, free of tax. The sums placed to reserve are by no means excessive, bearing in mind the commitments that the company has. The wider interests of the country are clearly best served by such a policy voluntarily pursued and the long-term interests of the Company and shareholders are also benefited by such a policy inducive of steady growth, development and progress.

Accounts in brief are as under:—

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts, after charging all expenses and providing for sales tax, show a loss of Rs. 50,051 (Rs. 4,35,398). The directors have transferred from general reserve Rs. 1,00,000 (Rs. 4,00,000) and the balance brought forward from last year was Rs. 20,580 (Rs. 6,248). There is a total balance available for distribution of Rs. 70,529 (Rs. 90,580 after taking into account Rs. 78,836 being provision for anticipated loss on raw jute written back and Rs. 40,894 being excess provision for taxation written back). The directors recommend that a dividend of Rs. 7.00 (Rs. 7.00) per share be paid on the preference capital absorbing Rs. 70,000 (Rs. 70,000) leaving to be carried forward Rs. 529 (Rs. 20,580).

Wealth tax for the year is estimated to amount to Rs. 25,000 and this has been provided for by a transfer of this sum from investment realisation surplus.

With a view to having direct contacts with overseas markets, the Board, together with the boards of other jute mill companies under the same group management, resolved to form a company under the style of Budge-Budge and Allied Jute Mills Exports (Private) Ltd. This company, having been registered, commenced business on 31st July 1957. Each of the participating jute mill companies has subscribed equally to the capital, and the Company's share is shown against "investments" in the present balance-sheet. Andrew Yule and Co., Ltd., have no interest in Budge-Budge and Allied Jute Mills Exports (Private) Ltd., but have been appointed its Secretaries or a fee of Rs. 1,000 per annum.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Runglee Rungliot Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a profit of Rs. 31,512 (Rs. 1,00,045). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 46,362 (Rs. 1,04,355) of which the directors have transferred Rs. 1,000 to development reserve. The directors have recommended payment of a dividend of 25 (35) per cent. leaving Rs. 10,362 (Rs. 20,355 after transferring Rs. 15,000 to hail reserve and Rs. 20,000 to revenue reserve) to be carried forward.

Tea crop was 1,56,960 lbs. as compared with 2,10,320 lbs. in 1956. Drought conditions from April to early June coupled with damage by pests and blights account for the lower outturn. The average selling price realised was Rs. 3.49 per lb. as against Rs. 3.06 per lb. in the previous year. Planted area remains at 341 acres.

Estimates for 1958 provide for a crop of 1,76,000 lbs. at an outlay of Rs. 5,47,832, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,40,000	Block ...	2,43,020
Reserves ...	5,01,653	Stock-in-trade	97,327
Provision for taxation ...	1,73,022	Stores ...	41,819
Liabilities ...	1,16,078	Debts, deposits and advances	88,539
Profit and loss account ...	10,362	Investments	3,16,547
		Cash ...	1,53,863
Rs.	9,41,115	Rs.	9,41,115

Phaskowa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a loss of Rs. 27,149 (profit of Rs. 54,028). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 15,000 (Rs. 3,200 from provision for taxation) from revenue reserve, there is a balance at credit of the profit and loss account amounting to Rs. 6,220 (credit of Rs. 52,699) of which the directors have transferred Rs. 5,000 (Rs. 25,000) to revenue reserve to development reserve, leaving Rs. 1,220 (Rs. 8,949 after paying a dividend of 7½ per cent. absorbing Rs. 18,750) to be carried forward.

Results for the year are disappointing due to the poor price, common to most Dooars estates, which was received for teas during the past year.

Tea crop was 2,50,404 lbs., as compared with 2,41,653 lbs. in 1956. The average selling price realised was Rs. 1.75 per lb., as against Rs. 2.23 per lb. in the previous year.

Estimates for 1958 provide for a crop of 2,56,000 lbs. at an outlay of Rs. 4,57,770 including inland freight and sale charges. Planted area remains at 347.62 acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Ahmadpur-Katwa Railway Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The gross earnings for the year amounted to Rs. 5,52,308 while the working expenses totalled Rs. 5,20,877 as compared with Rs. 5,94,474 and Rs. 4,94,586 respectively, for the previous year. The net earnings of Rs. 31,431 (Rs. 99,888) have been carried to net revenue account. Under this account, after including share transfer fees and allowing interest payable on the loan from Government and other charges there is a net receipt of Rs. 20,717 (Rs. 89,275) which, not being sufficient to meet the amount required for guaranteed interest at 3½ per cent. per annum on share capital, calls for a total subsidy of Rs. 39,623 (*nil*) in terms of the Agreement with the Government of India. Thus, the net receipt and the Government subsidy make a net profit of Rs. 60,340 (Rs. 89,275), but after providing Rs. 37,382 (Rs. 43,407) for taxation [which includes wealth tax of Rs. 6,307 (*nil*)] a balance of Rs. 22,958 (Rs. 43,407) only is available. The directors therefore recommend payment of a dividend at the rate of Rs. 2.25 (Rs. 3.31) nP per cent. per annum (less income-tax) which will require Rs. 26,571 (Rs. 42,117), the deficit of Rs. 3,613 (*nil*) being met from reserve.

Compared with the previous year the total working expenses show a net increase of Rs. 26,291 which is mainly due to loss on foodstuff.

Coaching.—The receipts under this head amounted to Rs. 4,30,081 for the carriage of 965,598 passengers as compared with Rs. 4,58,454 and 1,029,259 passengers for the previous year.

Goods.—Earnings from this source totalled Rs. 1,01,948 for 842,066 maunds of goods as against Rs. 1,31,870 for 1,158,741 maunds for the previous year. The fall in earnings in both *Coaching* and *Goods* is due to interruption in train service as a result of the unprecedented floods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,24,000	Block ...	16,35,476
Reserves ...	4,562	Stores ...	2,901
Provision for taxation ...	30,838	Debts, deposits and advances ...	62,058
Liabilities ...	7,89,405	Investments ...	2,13,895
		Cash ...	2,05,221
		Miscellaneous expenditure and losses	4,29,254
Rs.	25,48,805	Rs.	25,48,805

N.B.—Figures within brackets relate to the corresponding period of the previous year.

FOREIGN EXCHANGE SITUATION IN INDIA

"WORLD OUTSIDE WILL GIVE US THE NEEDED ASSISTANCE," AVERS MR. H. V. R. IENGAR

THE main elements of the difficult foreign exchange situation now confronting India and the measures to be adopted for solving the problem were set out by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, while addressing a meeting organised by the Progressive Group in Bombay on Monday this week. Mr. Iengar did not make any policy pronouncements but stressed that India had pursued and would continue to follow right monetary and fiscal policies with great firmness, that it did not ask for foreign assistance except under the compulsion of circumstances, that it would utilise assistance to the maximum public advantage and that it was determined to honour its obligations. He sought to distinguish the factors that have accounted for India's difficulties and place them in their proper perspective. In his opinion, "given the determination to pursue correct fiscal and monetary policies and the demonstration by the people, by disciplined endeavours, that they are behind the Government of the country in their determination to see the core of the Plan through, we are entitled to hope that the world outside will give us the needed assistance." The following is the full text of Mr. Iengar's speech:

In the last few weeks, there has been a great deal of public comment about a crisis that is said to have now developed in our foreign exchange situation. These comments have all proceeded from the fact that, according to the weekly statements of the Reserve Bank, the decline in our sterling reserves since April this year has been in the neighbourhood of Rs. 5 crores per week. Earlier this year, the rate was only Rs. 2 crores per week. The comments that were then made were jubilant; and even some business men of experience and men in public life seem to have thought that the country had somehow succeeded in meeting our foreign exchange difficulties. The tenor of recent comments has been such as to suggest that something has happened in recent weeks to introduce unexpected distortions in a situation that had become favourable. Such a view involves a misconception of the fundamentals of our situation, a misconception which leads to unwarranted oscillations of public feeling between optimism and apprehension. The plain fact is that the difficulties through which we have been passing began with the launching of the second Five-year Plan and were known to constitute one of its inherent risks. If the situation today can be described as a crisis, it is one which, whatever the ups and downs shown by weekly statistics (and there are bound to be ups and downs), will last for some time; and the country must make up its mind, both emotionally and in the ordering of its daily life, to adjust itself to it and to live with it courageously and with hope for the future.

There is nothing esoteric about the interrelation between the level of a country's external reserves and the state of its domestic economy; and it seems necessary that the subject should be publicly discussed and well understood. Ignorance leads not merely to irrational reactions but to a failure to appreciate the reasons for perfectly sound Governmental regulations. I do not think there was at any time need to treat the handling of the country's problems in the field of international finance as a 'mystique'; today all arguments point to the need for taking the public into complete confidence.

The Main Elements

I propose to set out this evening what I regard as the main elements of our foreign exchange situation. In doing so, I would like to make it clear that my object is not to make any pronouncement of policy but merely to set out, in their proper perspective, facts which are already known, though dispersed in different statements and documents. But before coming to an exposition of the current situation, it seems necessary to make a few general observations. In particular, I would like to clear a misconception that is surprisingly persistent in spite of the fact that the economic setting which might have given it any possible justification vanished several years ago.

There is a tendency to connect the level of foreign reserves with the strength of the national currency. Such a relationship had a justification during the days of the gold standard or of the gold exchange standard. As the national currency had to be redeemed in gold internally as well as externally, it was the essence of these arrangements that currency must be backed by an adequate holding of gold or foreign securities convertible into gold. Central banking under this system was largely automatic in character and there was little of monetary management. The collapse of the gold standard during the inter-war period and the experience during World War II, when there was a large increase in the monetary volume in most countries coinciding with a depletion of international reserves, led to a radical change in conception. It was increasingly realised, and is now almost universally accepted, that the main purpose of foreign exchange reserves is to enable a country to tide over unfavourable turns in its balance of payments and that the strength of a currency depends on the inherent economic strength of a country and the way it conducts its economic and monetary affairs rather than on the volume of its gold and foreign exchange backing. The general trend of central banking legislation in more recent times has been, therefore, to delink foreign reserves from the note issue and we, ourselves, have done so in an amendment put through about a couple of years ago to the Reserve Bank Act.

Issues Not to be Confused

It is necessary, therefore, in discussing the difficulties in our foreign exchange situation, not to confuse issues and to feel apprehensive about the soundness of our currency. The foundations of our economy are steadily becoming stronger day by day. Although a great deal more requires to be done, food production and the production of commercial crops have shown substantial increase since we began the first Five-year Plan. Great quantities of machinery and metals are pouring into the country; the numbers of technically trained people have been going up; and the range of our production is showing a diversification which augurs well for our becoming, within a reasonably short period, an industrial power of some magnitude. In the meanwhile, in spite of a tremendous pressure of population, the national income and the *per capita* income are both rising. In fiscal and monetary management, the authorities have shown, if I may say so, great firmness; in fact, the feeling in business circles is that fiscal policy has even passed beyond the range of firmness and austerity. In terms of the inherent economic strength of the country, the rupee is as sound as it ever was; and, indeed, all economic indicators show that the overwhelming mass of people are well aware of this. Unfortunately, there are a few people in our country who do not appreciate that our internal economic structure is, in its essential elements, growing stronger every day and, consequently, indulge in unwarranted pessimism. This is particularly surprising at a time when a distinguished member of the American administration, Mr. Douglas Dillon, is reported to have stated that the Indian rupee may within 10 or 15 years become a hard currency.

Fluctuations in Export Trade

When we talk of maintaining reserves for the purpose of meeting an imbalance in foreign trade, we mean imbalance arising out of the normal pattern of trade. Many underdeveloped countries in Latin America and Asia and even some countries like Australia which, though developed, depend upon the export of a few staple primary products, have experienced wide swings in their payments position due, as a general rule, to fluctuations in the volume and price level of their exports. Thus, variations in the volume and price of wool have caused changes in Australian export earnings from that commodity of as much as 33 per cent. in one year; variations in rubber prices have likewise caused changes amounting to 56 and 63 per cent. in the export earnings of Malaya and Indonesia, respectively; and changes in tea prices have led to a fall of over 25 per cent. in Ceylon's export earnings from that commodity. Countries in this position whose economies are predominantly based on exports of primary commodities need to keep a higher level of reserves than countries to whom exports are not of the same paramount importance.

The problem of India is structurally different in that her exports are not liable, as a rule, to variations of great magnitude, though recent developments are pointing to the need for diversification in the composition of her trade. Nevertheless, there is one element of considerable imbalance in the trade pattern, namely, the import of food. Food production in India, despite the several improvements in irrigational and other facilities, is still very much an uncertain element in our national economy. A fall of 5 per cent. in the production of food, such as has occurred in the last agricultural year, would mean a shortfall of about 3 million tons which, in turn, in the absence of special arrangements to finance food imports, means a considerable increase in the import bill. To give a few figures: the import bill in respect of food during 1951-52 was Rs. 228 crores, in 1955-56 it was only Rs. 29 crores, just about Rs. 200 crores less. In 1957-58, it rose again to Rs. 152 crores. The level of food imports is thus a major factor of instability in our balance of payments. In fact, the favourable outturn in the external payments situation in the first Plan period was largely due to the improvement in the food position in the country; and correspondingly, the recent worsening of the food position has imposed a severe strain on our balance of payments during the current Plan.

But if it was just a question of preserving a cushion against fluctuations, however erratic, in the level of food imports or the prices and volume of our exports, we would have had no particularly serious problem, no greater problem, for example, than Australia has because of the wide swings in the international price of wool, or the size of the wool clip. We would have been able to maintain a reasonable level of foreign balances; in some years, they would have come down to pay for heavy food imports or to make up the decline in exports; in other years, we may have been able to augment them. In fact, even the present level of our reserves, depleted as they are, namely, about Rs. 350 crores of gold and sterling, equals 4 months' imports on the average of the last 3 years; it compares not unfavourably with reserves which several other countries maintain and would be adequate for most ordinary situations.

Massive Development Programme

The real problem in India is that in addition to the pressure exercised on them by variations in food supply, our external reserves have been called upon to sustain a massive development programme, meaning nothing less than the rapid introduction of high level industrial technology in the country—the making of steel, of heavy machinery, including heavy electrical equipment, of machine tools, of chemicals and the like. The following figures give some idea of the impact of this programme on our balance of payments:

During 1955-56, our import bill was Rs. 751 crores; in 1956-57, it rose to Rs. 1,077 crores and in 1957-58 to Rs. 1,174 crores. This increase took place in spite of a steady fall in some items as a result of expanded domestic production; thus our raw cotton imports fell from Rs. 58 crores to Rs. 28 crores and our raw jute imports from Rs. 18 to Rs. 6 crores. The very substantial increase that took place, nevertheless, was due, apart from food, to imports of machinery and metals. From Rs. 299 crores in 1955-56, the figure went up to Rs. 442 crores in 1956-57 and to Rs. 534 crores in 1957-58, a total increase in these two years under this item alone of Rs. 378 crores. As a consequence, our sterling reserves have dropped very sharply. At the beginning of 1956-57 when the second Five-year Plan commenced, this amounted to Rs. 748 crores; in the beginning of April 1958, they were down to Rs. 267 crores. They would have dropped much more steeply if we had not had recourse to a drawing of approximately $200 million from the International Monetary Fund, to the postponement of payments for various projects by appropriate credit arrangements, and to the utilisation of U.S. Public Law 480 for the import of considerable quantities of food.

It would have required an enormous accumulation of external reserves to enable us, on our own, to finance a development programme of the magnitude that we have undertaken. Even such reserves as we did accumulate were the result of great rigours and the compulsory cutback in consumption that took place during the war—a period during which, it may be recalled, we had a famine in Bengal and lost a

few million lives by starvation. Given the basic facts of the Indian economy—a low *per capita* income, a very limited margin of saving and the rising pressure of population—there is no escape from the conclusion that large-scale industrial development would require, for some years, a good deal of external assistance—which was also historically the experience of countries which are now highly developed.

Experience of Other Countries

According to competent students of economic history, one of the major influences in the industrial revolution of the United Kingdom was the immigration of foreign settlers who brought both capital and craftsmanship. After the industrial revolution, the United Kingdom exported capital on a large scale; in the 50 years from 1825, half of this went to Continental Europe. In their turn, both France and Germany became exporters of capital, and it is these countries and the United Kingdom which were responsible for a sustained flow of capital to the United States. Japan, too, became a great industrial power with the assistance of a massive inflow of capital, a good part of it from the U.K. It is true that Russia has made gigantic strides in her industrial economy since the Revolution without the assistance of external capital investment, but two points have to be remembered in this connection. First, she inherited some elements of an industrial economy which were established between 1881 and 1913 as a result of a fairly substantial inflow of capital notably from France. Secondly, after the Revolution, the Soviet Union adopted methods for enforcing savings in consumption which would be regarded as wholly unacceptable in our country.

I am mentioning these well-known facts because their significance has not always been fully recognised in our country. There has been some tendency to think that we could achieve progress with our own strength and that it somehow involves some loss of prestige to ask for international assistance for our development programme. In the very remarkable speech which he made recently in the U.S. Senate, Senator John Kennedy said:

"It is clear that the Indian planners were somewhat optimistic about the built-in deficit and the investment necessary for bringing the plan to successful fulfilment. It is also apparent that, in the face of the serious reverses, the Government of India has preferred to lower its target, rather than to appeal to other nations for drastic increases in the levels of essential assistance. This series of cutbacks and compromises has been such as to make it impossible to paint the canvas of Indian requirements with any precision or confidence. We are all aware that India is in a period of economic crisis, but we lack a clear panorama of need."

Two Difficulties

Necessarily, much of the assistance that we can expect from abroad will take the form of loans. It is important in this context to appreciate that our external debt is moderate in relation both to our national income and to external receipts, compared to many other countries. Therefore, the economy can yet bear a considerable addition to our external obligations. But it is necessary to emphasise that these obligations have to be long-term in character. Our difficulties have been greatly aggravated by the fact that we have accumulated an excessive quantum of short-term obligations. In the short-run, our difficulties are twofold:

(*a*) we require further substantial assistance, recently estimated by the Planning Commission at Rs. 500 crores, to enable us to carry out even the core projects. This figure assumes that we shall have a reserve of Rs. 200 crores in sterling;

(*b*) we have heavy liabilities to meet between 1961-62 and 1963-64 and some means must be discovered for dealing with this problem, if a third Five-year Plan is to have a reasonable start.

From the long range point of view, taking into account the character of the development process and the role of international loans in building up a sub-structure of economic development consisting of the basic facilities of transport, irrigation and power which yield very low and slow returns in financial terms, it would be of real assistance to the development of underdeveloped countries, if international loans could be extended for comparatively lengthy periods and at relatively low rates of interest. Taking into account the long-term nature of certain imbalances in international payments, the expedient of loans repayable in local currencies has been recently employed with advantage to relieve the immediate foreign exchange incidence of international loans. While I do not by any means suggest general recourse to this expedient in international lending, it is capable of much wider application consistently with the purposes of different forms of loans from the point of view of the lender as well as the borrower.

In the situation in which we find ourselves, we must ask the question as to what steps the country should take. Theoretically, there are only four possibilities: (*a*) cutting down our development programme, (*b*) cutting down our imports, (*c*) expanding our exports and (*d*) obtaining further assistance from abroad. I am assuming, of course, that irrespective of everything else, we shall be giving the highest priority to food production so as to eliminate a factor of great instability in our import programme.

It is a common point of criticism that the Plan has been too ambitious and ought to have been framed on a more modest scale. There are people, for instance, who think that we should have planned for two steel plants instead of three, that we need not have been in a hurry about the Heavy Electrical Plant and that altogether a plan somewhat less bold would have been wise. There are even people who go so far as to think that a plan only slightly larger than the first Five-year Plan is all that the country could have afforded. At the present stage, such a discussion is purely academic. At the time the Plan was prepared, both Government and the Planning Commission and several competent economists thought that it was of the right dimensions and, indeed, the Federation of Chambers of Commerce consisting of hard-headed business men thought that it was a little too modest. What we have to do now is to assess the situation as it is today. The Plan which is being carried out consists only of the core, namely, the steel projects, the power projects, the coal projects, and the transportation. It is only Government who have detailed information about each project and who can, therefore, take a view as to the extent to which it is possible, on the ground of inadequate resources, to cut it or slow it down. In this context, it has to be remembered that a stage has probably been reached in the execution of several of these projects when to stop them would mean an enormous waste of effort and the resources that have already been put into them.

Curtailment of Imports

The most effective means of dealing immediately with a difficult foreign exchange situation is a curtailment of imports. This, in fact, is what Government have been trying to do. A heavy enough cut, however, is likely to be self-defeating, since the process of development itself may be brought to a grinding halt by a severe reduction in the imports of machinery and capital equipment. Necessarily, therefore, the main brunt of import reduction for the effective financing of the development programme must fall on imports of consumer goods or raw materials for consumer industries within the country. In considering the potentialities of this approach, it would be necessary to guard against the possibility that the maintenance of existing industrial production in the country at a minimum standard of working efficiency is not jeopardised. Moreover, with a development programme generating a large number of small new incomes, the task of restraining consumption at home and increasing the contribution of domestic resources to development is rendered more difficult. I have referred to the critical importance of food in this context. And even if food imports can be financed under special arrangements, there is a point beyond which imports of general consumer articles cannot be reduced without giving rise to further inflationary pressures. We have already witnessed substantial increases in the prices of certain imported articles; and this indicates that the possibilities of this approach have their limits.

The best method of financing an enlarged flow of imports is to maximise exports and thereby the earned receipts of foreign exchange. While, as an enunciation of a general principle, this is universally accepted, the criticism is often made that, in its practical application, we are not always giving it the paramount importance it deserves. In particular, the points are made that we are paying excessive attention to local difficulties such as shortage of domestic supplies and increase of prices for particular commodities and that, in some cases, purely domestic considerations lead to the setting up of a cost structure which make exports difficult in a competitive market. At a time when foreign exchange is the scarcest resource of the economy, encouragement of domestic consumption of articles, which could be important earn-

MONEY STILL EASY

(From Our Own Correspondent)

BOMBAY, *2nd July*

The short-term money market continued to rule easy. With the slack season in full swing, the demand for bank credit slowed down considerably, while banks' cash resources improved substantially. Interest rates showed a tendency to decline, though the general pattern of rates was more or less unchanged. In the inter-bank call money section, the common rate among the Exchange banks and big Indian banks was 3 per cent. with leaders over. Some business was reported to have passed at 2¾ per cent. as well. The corresponding rate among the smaller banks was maintained at 3 per cent. House money at call was placed at 4 to 4¼ per cent. and short-term deposits continued to fetch 4¼ to 4¾ per cent. for one to six months.

The Reserve Bank of India's statement for the week ended 27th June 1958 shows a further contraction of Rs. 9.81 crores in notes in circulation, bringing the total fall in the past three weeks to Rs. 31.48 crores. Notes held in the Banking Department are higher by Rs. 70 lakhs. The consequent fall of Rs. 9.10 crores in total notes issued is covered by a drop of Rs. 10 crores in foreign securities and a rise of Rs. 90 lakhs in rupee coin. In the Banking Department, the deposits of the Central Government are better by Rs. 8.79 crores, while those of other Governments show a fall of Rs. 1.07 crores. Deposits of banks have gone up by Rs. 4.85 crores. There has been a slight increase of Rs. 62 lakhs in foreign balances, while loans and advances to Governments show a decline of Rs. 19.97 crores. Other loans and advances are higher by Rs. 5.38 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.46 crores. Investments have gone up by Rs. 25.94 crores.

The Scheduled banks' statement for the week ended 20th June 1958 discloses a fall of Rs. 7.36 crores in demand deposits and a rise of Rs. 6.63 crores in time deposits. Borrowings from banks are also higher by Rs. 5.03 crores, while those from the Reserve Bank have declined by Rs. 2.72 crores. A further fall of Rs. 6.12 crores is noted in advances and of Rs. 2.04 crores in bills purchased and discounted. There has been no change in investments, but cash balances have risen by Rs. 13 crores.

Activity in the Gilt-edged market was dull during the week under review due to scarcity of offerings. However, the undertone remained firm on account of the good demand for short and medium-dated loans. 3 per cent. 1986 Conversion Loan was dull at Rs. 71.10, while 3 per cent. 1970-75 was in request and spurted by 15 nP to Rs. 87.45. 3 per cent. 1966-68 was unchanged at Rs. 93.05. 3 per cent. 1964 and 1963-65 gained 5 nP each to Rs. 95.55 and Rs. 95.60, respectively. 3 per cent. 1959-61 gathered 5 nP to Rs. 99.30. 3½ per cent. 1961 had buyers at Rs. 99.50. 3½ per cent. 1964 changed hands at Rs. 98.55, while 3½ per cent. 1965 was quoted at Rs. 98.40 *ex*-voucher, as against Rs. 98.40 before payment of half-yearly interest. 3½ per cent. 1967 had buyers at Rs. 97.55 and 3½ per cent. 1967 at Rs. 99.65. 3½ per cent. 1968 was on offer at Rs. 99.50, 3½ per cent. 1974 at Rs. 98.30 and 4 per cent. 1972 at Rs. 100.35.

There was a further weakening of the rupee in terms of the U.S. dollar during the week, in consonance with the trend of sterling abroad. Banks' selling rate of U.S. ready dollars rose from Rs. 476.75 to Rs. 478 per $100, before declining to Rs. 477.25 per $100. Likewise, their buying rate moved up from Rs. 473.50 to Rs. 474.50, but it shaded off to Rs. 474 per $100 towards the close. In New York, spot sterling declined from $2.80-11/16-2.80¾ to $2.80.7/32-2.80.9/32, before closing at $2.80¾-2.80.7/16. Three months' forward was marked down over the week from $2.78¾-2.78.13/16 to $2.78.11/32-2.78.13/32 and transferable sterling from 278.85-278.95 cents to 278.30-278.40 cents.

EXPORT SALE OF TEA RESUMED

(From Our Own Correspondent)

CALCUTTA, *1st July*

With the end of the port workers' strike, tea export auctions, suspended for the past two weeks, were resumed during this week. The export sale was held today, as Monday was a holiday. An internal sale is scheduled for tomorrow. Demand was fair in today's sale, and prices of quality teas improved.

Arrivals of tea into warehouses in the last two weeks were slower than usual, and this prevented congestion in warehouses. In view of this encouraging factor, it was believed that supply would not exceed demand and that prices of the best quality teas would continue to move upward. In the meantime, it was noted here that in Colombo auctions demand was strong, pushing up prices.

In 1957, world consumption of common teas totalled 1,436 million lbs. recording an increase of 116 million lbs. As against this, output in 1957 increased only by 38 million lbs. to 1,422 million lbs. During the current year, it is believed that more common teas have been produced so far. This assumption is based on the overall increase in crops. The output in South India during May 1958 was estimated at 18 million lbs., thus bringing the total output for the five months to May to 69 million lbs. representing an increase of 11 million lbs. compared to Jan.-May 1957. In North-East India, it is feared that a shortage for the superior teas might arise, in view of the drought and reduced output in June. In May, although production recorded an increase, quality was affected due to excessive rains.

BULLION DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, *2nd July*

There was a further setback in bullion prices during the week under review. The slackness in demand for both silver and gold, due to seasonal factors, and larger arrivals were the main bearish factors. The turn of the market in favour of sellers is indicated by the rise in the carry forward charges for silver in their favour from As. 14 to Re. 1 today and the narrowing of the *budli* in gold against them from As. 8 to *nil*. Further, as the closing price of forward gold (current settlement) today stood Rs. 5 below the starting rate for that settlement, sellers were obliged to pay a margin of Rs. 7 per tola.

Forward silver (July settlement) slumped from Rs. 183 to Rs. 181-3 and the August settlement (first delivery) from Rs. 183-13 to Rs. 182-3. The August settlement (second delivery) closed at Rs. 182-13, as against Rs. 184-5 a week ago.

Ready silver was marked down from Rs. 182-13 to Rs. 181-5. The floating stocks of silver are reported to be 500 bars. While the daily average arrivals (including unrefined metal) were of the order of 30 bars, the offtake was less than 7 bars per day on an average.

Gold for forward delivery (July settlement) declined from Rs. 107-7 to Rs. 105-12 and the August settlement from Rs. 106-15 to Rs. 105-12.

Ready gold was done today at the close at Rs. 106-10, as against Rs. 108-3 a week ago, the highest level touched being Rs. 108-8. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were about 4,000 tolas, the offtake was 2,500 tolas on an average.

In New York, the price of silver was unchanged at 88¾c. In London, silver held its ground, the ready metal at 75d. and forward at 74¾d. Gold staged a further rally from 249s. 11¼d. to 250s. 8¼d. but shed a part of the gain at close to 250s. 5¼d.

The following comparative table shows at a glance the trend of the market during the week under review:

	2-7-58	Highest	Lowest	25-6-58

GOOD DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *26th June*

1,588,572 lbs. were on offer in Sale No. 18, which was held on Tuesday 24th June. With the exception of a few estates which continue to have quality, teas from the highgrown estates were generally disappointing. Lower elevation estates continued to catalogue teas of rush production manufacture. The sale opened to a good demand from exporters and internal buyers. Low mediums and medium brokens were irregular, but were about steady. Similar fannings were slightly dearer. There was a useful enquiry for the good mediums at firm rates. Highgrowns were irregularly easier with the decline in quality and highgrown fannings sold rather better than the equivalent brokens. Plain and fibry sorts were the weakest feature and were neglected. Whole leaf were slightly easier. There was a renewed enquiry for tippy teas. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.45 to 1.55
Medium	1.60 to 1.75
Good medium	1.85 to 2.20
Quality	2.15 to 2.95

The average price realised in Sale No. 18 was Re. 1.90 per lb., as against Re. 1.87 in the previous sale and Re. 1.71 per lb. in the corresponding sale of 1957.

London Market:—No sale due to dock strike.

Colombo Market:—7 million lbs. strong general demand, especially fannings. Best available highgrowns substantially dearer. Others down sharply on quality. All useful liquoring fannings considerably dearer. Medium and lowgrown brokens declined 5 to 10 cents. Gulf types lower.

Export Quota:—Business has been transacted both in special and new quota and the quotation has remained fairly steady throughout the week. The latest quotation in new quota is sellers 13 nP, buyers 11 nP and business has been done at 11 nP. Special buyers 7 nP. No sellers.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 19:—1,300,000 lbs. Good demand mainly from internal buyers. Low mediums and mediums 5 to 10 nP easier. Highgrowns irregular but generally easier, following quality. Whole leaf strong demand dearer rates."

COTTON FUTURES RISE AGAIN

(From Our Own Correspondent)

BOMBAY, *2nd July*

The cotton futures market ruled distinctly firm during the week under review. The firmness reflected the optimism of operators that the Government of India would give reljef in excise duty on cloth after the Textile Inquiry Committee submitted its report. A section of traders believed that some export incentive for cotton textiles would also be forthcoming. The recent directive of the Reserve Bank to commercial banks to ease credit terms granted to the textile units was interpreted as indicting the Government's appreciation of the difficulties of the industry. There were also hopes of an export quota for cotton, at least an *ad hoc* one for China. Keen demand was reported of late from this country. It was thought that, in view of the Government's desire to promote exports as much as possible, an export quota will not take long to materialise. These considerations prompted persistent buying by mills. Investors also came forward to support the market with the result that prices staged a smart rally. The firmness of other commodity markets aided the upswing. But for reports of good rain in most of the cotton tracts, indicating the possibility of a good crop next season, and downward trend in consumption, the improvement would have been more marked. Communications from the piecegoods market continued to be discouraging.

The following table indicates the trend of prices of the contract:

(In rupees per candy of 784 lbs.)

25-6-58	*High*	*Low*	18-6-58
I.C.C. Moglai Jarilla			
(August 1958) ...	692.50	693.50	682.50	684

Trading in the spot section was, however, featureless. The volume of business was affected by heavy rains. Activity was mainly confined to staple varieties like CO2, Laxmi, Jaydhar 0394 and Jarilla. In the export section, the brisk activity noted in the past few weeks subsided. Although there were expectations of a quota for cotton, the delay in its announcement led to the demand for exportable styles like Kalyan, Wagad, Kala, etc., dropping off. Their prices, therefore, declined. A section of exporters was inclined to think that until the unutilised quota of Bengal *Deshi* and 23/32" stapling cotton, the shipment period of which had already been extended, was absorbed, further quantities would not be released for export.

In the foreign section, practically no activity was reported. Because of the increasing difficulties experienced by users of foreign cotton due to the restricted imports, importers have urged that the Government should allow the import of adequate quantities of cotton, particularly East African. Some have also suggested the conclusion of barter deals with East Africa and Sudan on the lines of the agreement signed with Egypt.

There were also reports that a part of the funds which were allocated to India under P.L. 480 and which was diverted to import of foodstuffs from the U.S. had been rediverted to cotton. This inspired belief among traders that an announcement concerning the import of American cotton, equivalent to the balance of the funds unutilised, might be made soon. There was, however, apprehension that this might rule out the possibility of importing East African cotton up to the end of August. The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are as follows:

Bengal *Deshi* 600; Berar Jarilla 710; Khandesh 800; Oomra *Deshi* 640; Vijay 870; Hubli Laxmi 1,020; Jaydhar 870.

The declining trend noted towards the close of last week in Karachi cotton futures gathered momentum and the market ruled distinctly easy during the week under review. Overseas enquiries were not encouraging and domestic spinner demand weak. The absence of buying support in the wake of persistent pressure of selling order, resulted in a break in values. N.T.R.G. July declined from Rs. 76-4 last week-end to Rs. 74.12 and the January contract dropped, over the week, As. 11-6 to Rs. 77-14. The spot section was also easy.

Easy conditions continued to prevail in Alexandria cotton futures market during the week. Activity was at a low ebb. Prices registered a decline. Barring top qualities of Menoufi, which fetched fancy prices due to scarcity of offers, premiums for other varieties were lower. The medium-staple Ashmouni June contract expired on 30th June at 67.95 tallaris. The following are the latest available quotations—in tallaris per lb.—from Alexandria (the figures in brackets being last week's closing rates):

Karnak: July 75.10 (76.20); January 75.85 (76.95). *Ashmouni*: August 67.40 (68.10).

The Liverpool cotton futures market was steady during the first half of the week under review. The steadiness was due to firm New York advices. The market, however, turned easy on Monday due to heavy liquidation which was only partly absorbed by trade buying. Easier advices from New York, following the downward trend in prices there, also imparted weakness to the market. The Sudan contract, however, continued to be steady. The latest available quotations—in pence per lb.—from Liverpool are as follows:

American Staple One Inch Staple Contract: July-August 25.15; October-November 25.65; December-January 26.00. *American Cotton Mixed Growth Contract*: July-August 25.84; October-November 26.20; December-January 26.47; *Sudan*: July-August 31.30; September-October 31.95; November-December 31.95.

The New York futures market displayed firm conditions during the early part of the week under the influence of Commission House buying and some short-covering based on the expectation that no new farm legislation would materialise during the current session of the Congress. The demand was quickly satisfied. Later, reports of improved weather in cotton belts and the unexpected drop in mid-June parity price, prompted selling in distant position with the result that the earlier gains were erased. Traders were inclined to await further Washington developments and preferred to follow sidelines.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	1-7-58	24-6-58	17-6-58
Spot	36.50	36.35	36.25
July	36.24	36.18	36.02
October	36.48	36.70	36.53
December	36.73	36.95	36.79

STAPLE FIBRE YARN CLIMBS UP

(From Our Own Correspondent)

BOMBAY, *2nd July*

The staple fibre yarn section is in the grip of bulls and prices have registered an impressive rally, notwithstanding the margin of Rs. 100 per bale on the outstanding bull position above 100 bales. The buying spree has been fanned by fears of acute shortage of yarn in the coming months. The fears are based on two considerations. First, the production of yarn by the South Indian units will suffer a setback, thanks to cut in power supply and shortage of indigenous raw staple fibre. Secondly, the Government of India has allowed exports of staple fibre yarn within a ceiling of 1.5 million lbs. (and not 150 million lbs. as was inadvertently mentioned in our last week's report). While the supply position will thus be tight, traders expect that the demand for staple fibre yarn from handlooms and powerlooms would enlarge in future, if the Government were to extend the period of foreign exchange allocations for import of art silk yarn for the current half-year to cover the next three months, that is, October-December 1958.

In sympathy with staple fibre yarn and following reduced arrivals of imported yarn in recent weeks, the art silk yarn section presents a firm trend. The aggregate quantity of yarn actually imported into Bombay port during the month of June was not more than 1,231,843 lbs. as against 2,026,851 lbs. in the previous month. Imports of staple yarn were also lower, being 145,189 lbs., as against 317,181 lbs. Cotton yarns, however, continued to rule dull, despite firmness of raw cotton prices and reports of enlarged exports in the past month. The total shipment of yarn from Bombay port was 497,200 lbs., which compares favourably with 315,595 lbs. in May.

Staple fibre yarn August delivery jumped up from Rs. 675 last week-end to Rs. 711 today. The question of commencing business in the October position will be decided by the Bombay Yarn Merchants Association and Exchange Ltd. at its meeting to be held on the 12th inst. Spot 40 x 2 Citys rallied 41 nP to Rs. 4.19. Kohinoors forged ahead from Rs. 3.84 to Rs. 4.44. Centurys spurted by 43 nP to Rs. 4.19. Among foreign yarns, 80 x 2 Paramounts advanced by 25 nP to Rs. 9.12. Fujis strengthened by 12 nP to Rs. 9.12.

Art silk yarns were well favoured at higher rates. 150 Japan climbed up from Rs. 6.59 to Rs. 6.94. 120 Japan hardened by 12 nP to Rs. 7.12. 150 Italy put on 12 nP to Rs. 6.87. 120 Italy was fully maintained at Rs. 7. Among indigenous yarns, National Rayons 120 bright cones first grade rose by 19 nP to Rs. 6.69. 150 bright cones first grade was firm at Rs. 5.62 today.

Cotton yarns, as already stated, ruled dull. Ten counts were neglected, Moderns being quoted at Rs. 13.50 and Podars at Rs. 12.62. Twenty counts were also dull. Indus were unchanged at Rs. 16.37, as also Moderns at Rs. 16.50 and Gokaks at Rs. 16.75. Thirty counts Hinds were quoted today at Rs. 19.50, same as last week. Forty counts Meenakshis came in for selling and declined by 13 nP to Rs. 25.12. Moderns were quiet at Rs. 24. Sixty counts Moderns were neglected at Rs. 60. Among 80s, Mahendras encountered selling and dropped 50 nP to Rs. 69. Moderns and Finlays were unaltered at Rs. 69.50 and Rs. 76, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	2-7-1958	25-6-1958
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Japan (per lb.)	7.12	7.00
150 Japan (per lb.)	6.94	6.69
120 Italy (per lb.)	7.00	7.00
150 Italy (per lb.)	6.87	6.75
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 August	711.00	675.00
40 x 2 Kohinoor (per lb.)	4.44	3.84
40 x 2 City (per lb.)	4.19	3.78
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	12.62	12.62
20s Modern	16.50	16.50
30s Hind	19.50	19.50
40s Minaxi	25.12	24.25
60s Modern	60.00	60.00
80s Mahendra	69.00	69.50

EXPORT DUTY ON GROUNDNUT AND CASTOR OILS CUT

(From Our Own Correspondent)

BOMBAY, *2nd July*

The expectations of oilseeds traders have proved correct. The Government of India has removed, with effect from the 1st inst., the export duty of Rs. 150 per ton on groundnut oil and of Rs. 100 per ton on castor oil. The decision, though it is welcomed, is considered to be belated. Indeed, a section of traders feels that, despite the abolition of export duty on groundnut oil, no large overseas sales can be effected, barring some business in small quantities with Burma and Middle East countries. This view is based on the wide disparity between the Indian and world prices. The shippers' quotation (exclusive of export duty) for groundnut oil in the local market is around Rs. 19.70 per quarter (c.i.f. U.K. and Continent), as against the currently ruling price of Rs. 16.34 abroad. The latter price is said to be the lowest since 1955 and it would appear that the prospects of a further drop are slender. As regards castor oil, the removal of excise duty has certainly enhanced the competitive capacity of Indian oil in world markets. It is, however, pointed out that, even with the abolition of duty, there may not be any marked increase in export business, what with competition from Brazil, especially in the U.S. The export price of commercial quality castor oil now stands at Rs. 18.67 per quarter (c.i.f. New York), whereas the rate offered by the U.S. traders is not more than Rs. 18.10. Brazil is reported to be selling castor oil at about Rs. 17.70. The U.K., the Continent and the communist countries, however, are expected to make larger purchases of Indian castor oil.

The oilseeds market, which ruled depressed during the major part of the week, sprang to activity yesterday, following the announcement of removal of export duty on groundnut oil and castor oil. There was good buying support in all the sections and prices registered handsome gains. The upward trend gathered further momentum today, although, towards the close, there was some reaction on account of profit-taking. Not only were the previous losses completely made up but today's closing rates were higher than those at the end of last week.

Groundnut August contract ruled depressed during the major part of the week under review. The quotation declined from Rs. 172.75 on the opening day of the week to Rs. 171 on the 30th June. Following the abolition of export duty on groundnut oil announced yesterday, the contract received excellent support and advanced to Rs. 173.75 today. At higher levels, profit-taking set in and the rate declined to Rs. 172.37 at the close. Over the week, Bold ready rallied 62 nP to Rs. 36.62. Coromandel and Khandesh quality, which had declined from Rs. 36.75 to Rs. 36.50 and Rs. 36.62, respectively, on Monday, recovered to Rs. 36.75 today. Groundnut oil ex-mill spurted from Rs. 19 to Rs. 19.25 yesterday, but recovered to Rs. 19.12 today on belief that no large-scale export business was possible, notwithstanding the abolition of export duty. Railway receipt was fully maintained at Rs. 18.87 in the first two sessions and, after declining to Rs. 18.62 on Monday, moved up gradually to touch Rs. 18.87 today.

Castorseed September contract encountered selling in the earlier part of the week, with the rate receding from Rs. 156 to Rs. 153.37 on Monday. The abolition of the export duty on castor oil induced fresh buying support in the contract which was pushed up to Rs. 157.37 today before finishing lower at Rs. 156.25. Ready Madras registered a gain of 90 nP to Rs. 30.25. Kanpur quality, which had gone down from Rs. 29 to Rs. 28.56, recovered to Rs. 29 today. Castor oil B.S.S. was subjected to selling pressure in the earlier part of the week and dropped from Rs. 16.75 to Rs. 16.44 on the 30th June. Thereafter, it picked up strength and moved up to touch Rs. 16.81 today. Commercial quality, after declining from Rs. 15.44 to Rs. 15.19, recovered to Rs. 15.37 yesterday and further to Rs. 15.50 today.

Linseed September contract had good support and rose from Rs. 32.69 to Rs. 32.94 today. Towards the close, however, it was lower at Rs. 32.62. Bold ready picked up 25 nP to Rs. 32.25. Linseed oil, after receding from Rs. 16.69 to Rs. 16.50, received good buying support today, the closing rate being Rs. 16.75.

Cottonseed September contract spurted from Rs. 114.50 to Rs. 115.50 today but wound up a shade easy at Rs. 115.25.

Among other seeds, kardiseed bold ready, which had suffered a setback on selling pressure earlier, evoked enlarged buying enquiries today. The rate which stood at Rs. 20.25 last week-end declined to Rs. 19.25 on the 30th June, but recovered subsequently to Rs. 20.50 today. Nigerseed Madras quality fluctuated between Rs. 29.00 and Rs. 30.50 before finishing at Rs. 30.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	2-7-1958	25-6-1958	18-6-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	172.37	171.75	168.75
Bold ready (per cwt.)	36.62	36.00	35.25
Linseed—			
Sept. 1958	32.62	32.69	32.31
Bold ready (per cwt.)	32.25	32.00	31.75

Madras (per cwt.)	30.25	30.06	30.37
Cottonseed—			
Sept. 1958	115.25	114.50	113.75
Groundnut oil**—			
Ex-mill ready (per quarter)	19.12	19.00	18.75
Castor Oil†—			
Commercial (per quarter)	15.50	15.44	15.87
Linseed oil†—			
Ready	16.75	16.69	16.37

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR WEAK

(From Our Own Correspondents)

BOMBAY, *2nd July*

The sugar market, which had ruled distinctly firm last week, has again turned bearish this week. The jobbers are eager to unload the large holdings they had accumulated earlier in the hope of realising higher prices. For they are disappointed at the Government's decision to restrict exports of sugar only to 50,000 tons during the current season. The slackness in movement of sugar to consuming centres on account of rains and the impending normal monthly release for sale in free market have also imparted weakness. The ex-mill quotations for both North Indian and Bombay-Deccan sugars are lower by a rupee per bag. Consequently, sugar prices have suffered a setback.

Arrivals of sugar into the city by rail during the week were larger than those in the previous week; they aggregated 11,800 bags, as against 7,900 bags.

Large grain sugar dropped Rs. 2 to Rs. 110-Rs. 116 per bag. Medium grain fell by a rupee to Rs. 107-Rs. 109. Small grain declined by a like amount to Rs. 105.50.

* * * *

HAPUR, *30th June*

Following the announcement of the much-awaited export policy for sugar towards the week-end by the Government of India, sugar prices which had registered a bullish trend in the last few weeks turned bearish and ex-mill delivery prices recorded a fall of As. 4-As. 6 per maund. The Government of India has decided to release 50,000 tons of sugar for export during the current season ending on 31st October 1958, while the export policy lays down that the quantity exported in any year should not exceed in the aggregate 15 per cent. of the quantity of sugar produced in the country in the season. The exports will be canalised through the Indian Sugar Mills' Association, Calcutta, which has been appointed as the exporting agency. Contrary to speculation, no provision has been made for subsidising, through an increase in excise duty or cess, exports, which, because of world prices, can only be made at a loss.

The hopes of additional levy for promoting sugar export having been belied, the ex-mill delivery prices declined towards the week-end. The earlier expectations that sugar exports would be allowed to the extent of 10 per cent. of the entire production (roughly 2 lakh tons) did not also prove correct This, too, acted as a dampening factor for sugar prices. The latest ex-mill delivery prices in the Muzaffarnagar market were: Meerut (D28) Rs. 36.87; Bijnore (E29) Rs. 36; Mansurpur (C29) Rs. 38.25; Daurala (C29) Rs. 37.75; Shamli (C29) Rs. 37.50; Modinagar (C29) Rs. 37.35; Amroha (D29) Rs. 36.12; Dhampur (B29) Rs. 36.12; Iqbalpur (C29) Rs. 37.75.

Sugar prices at Kanpur showed an immediate change following the Government's announcement of export policy. The latest prices, spot and ex-mill, respectively (per bag and per maund) were: (C29) Basti Rs. 106 and Rs. 37.50; Gola Rs. 103.50 and Rs 36.75; Gola Rs. 102.50 and Rs. 30.50; Waltergunj Rs. 102 and Rs. 36.50; Hargaon Rs. 101.75.

Fairly good demand from consuming centres accounted for an offtake of 5,000 maunds of *gur* during the week, reducing the local stocks to 70,000 maunds. The prices of dry quality improved slightly to be quoted at Rs. 20.75 per maund. *Kotha* dry-wet quality was quoted at Rs. 18.75-Rs. 19.50.

The fairly heavy rains received during the week has proved very beneficial to the standing cane crops.

Demand for *Chaku gur* remained poor during the week in the Muzaffarnagar market and prices were mostly unchanged. Dry quality *gur* was quoted at Rs. 21.50-Rs. 22 per maund. *Shakker dara* gained half a point per maund on good buying enquiry from Punjab and Rajasthan.

Khandsari prices improved by Re. 1 per maund to be quoted at Rs. 32-Rs. 35.50 per maund.

Future *gur* prices which had recorded sharp gains earlier in the week, influenced by revival of early sugar export prospects, declined towards the week-end, following heavy rains and on the announcement of sugar export policy. Fagun delivery opened at Rs. 13.49 on last Monday and touched in successive sessions the highest at Rs. 14.19, but declined to Rs. 13.63 today.

BLACK PEPPER ADVANCES

(Messrs. Parekh and Co.)

BOMBAY, *2nd July*

Following buying at advanced prices by New York, Malabar black pepper showed a rising tendency during the week. New York was reported to have paid $0.25 to $0.26 for early July. Alleppey improved to Rs. 637½, while garbled in ready at Cochin was done at Rs. 110. There were short-covering and bull buying for July and August deliveries at Rs. 114 and Rs. 116, respectively. Calicut was firm at Rs. 700, where exporters were buying Tellicherry pepper. Prices for white and black pepper at Singapore advanced to Str.$129 and Str.$74, respectively, under pressure of short-covering induced by small arrivals from Sarawak.

Spot in New York rose from $0.25½ to $0.27, showing tight position in ready, following some detention.

A section of the trade, which was doubtful as to the veracity of the earlier estimate of new crop

Sarawak at 10,000 tons, seemed to be now veering round the opinion that the crop would be really smaller, as pressure of new arrivals was lacking even at this time of the season.

The future of the market depends upon the buying policy of New York dealers who shall have to follow the advance in India for their requirements of black pepper, if Sarawak crop really turns out to be smaller, since Sarawak is sure to produce more white out of their black because of a high premium of about Str.$55 for white over black.

The forward market at Cochin seems to be now under the control of bulls who are not slow in exploiting even small enquiry from New York. But, if Cochin thus continues to rise above the foreign parity, exports from India will be affected. In future, in case of any reactionary downward trend in other markets, Malabar black would be then more vulnerable, owing to the present speculative long position created by bulls.

In specific delivery, July delivery improved to Rs. 650.

In the A.S.T.A., July and July-Aug-Sept. are nominally quoted at $0.26½, but without business as sellers and buyers are cautious.

Today's nominal quotations are: Ready Rs. 90 per Bengal maund, July Rs. 650-Rs. 660 per candy of 5¾ cwts.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *1st July*

The end of the port workers' strike and the lifting of import restrictions in regard to hessian by the Argentine, followed by sizable purchases by shippers for shipment to that country, boosted up sentiment in the jute goods market during the week under review, and prices of hessian constructions recorded an impressive recovery. Hessian 40" 10 oz. was raised far above the I.J.M.A. floor price, and, in sympathy, heavy goods also advanced, although B. twills had not as yet risen up to the minimum level. Earlier in the week, considerable anxiety prevailed in the market, since it was feared that the relaxation of import restrictions on hessian by the Argentine Government might not be of any utility, if the dock strike continued. This state of affairs caused depression and for a time unnerved even powerful speculators who had bought heavily following the news from Argentina.

This was soon followed by the New York report, which recorded a fall of 4 million yards to 65 million yards in the United States in burlap consumption in May, as compared to April. The average U.S. consumption in the five months to May has been 69 million yards, as against 70 million yards in the corresponding period of 1957. The decline should be attributed to the economic recession in the United States. It was noted that U.S. burlap stocks as at the end of May had declined to 240 from 242 million yards in April. Stocks at the end of May 1957 were as high as 261 million yards.

The market for jute goods opened with a declining tendency on Tuesday last in view of the selling pressure in the *fatka* market. Ready B. twills fell to Rs. 97.75 from Rs. 98.15, and hessian 40" 10 oz. to Rs. 40.65 from Rs. 40.80. Mills were sellers in the forward position, and this factor only accelerated the pace of the falling trend. On Wednesday, a further decline in prices was recorded, but the fall was checked by reports of possibility of resumption of work by port employees. B. twills ready were lower at Rs. 97.55 and hessian 40" 10 oz. at Rs. 40.70. Oct-Dec. B. twills declined to Rs. 99.90, while hessian 40" 10 oz. Oct.-Dec. gained to Rs. 40.70 from Rs. 40.60. The end of the port workers' strike soon followed, and by Friday ready B. twills had advanced to Rs. 98.05 and ready hessian 40" 10 oz. to Rs. 41.25. Fair business was done in hessian with the Argentine, and more business was anticipated. There was no trading on Saturday as well as on Monday, being public holidays, and the reopening today witnessed fully steady conditions.

Mills evinced fair interest in raw jute. In the meantime, more rains fell in jute districts, and although favourable reports of the new crop were received, raw jute prices continued to rise. Local daisee bottoms, June-July, advanced to Rs. 29 from Rs. 28.75. At one time, mills attempted to depress quotations by discounting, but sellers were reserved.

TIN MOVES UP

(From Our Own Correspondent)

CALCUTTA, *1st July*

The impressive feature during the week under review in the metal market was the smart rise in the price of tin, following good demand and limited supply. The end of the strike by port workers was hailed; unloading work was gradually improving.

From Rs. 522, tin spurted to Rs. 575. A fair quantity changed hands. The quotation in Bombay moved up further. There was no change in Singapore, and the upward trend there was attributed to pressure on supplies. Lead advanced from Rs. 63 to Rs. 65, following encouraging advices from the London Metal Exchanges. Electrolytic zinc hardened from Rs. 59 to Rs. 65.50. There was fair demand. In addition to this factor, prices in both London and New York rose, consequently on the stockpiling plan in the U.S.A. In both London and New York, copper rose, and it was reported that the increased consumption prospects in the U.S.A. as well as stockpiling requirement there would push up prices.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *1st July*

A very firm tendency prevails in the linseed market and a further rise has been recorded in all sections. The main causes are shortage of supplies, and firmness in mustard and groundnut markets. Movement of new crop seeds has been very slow in the centres and local offerings are very meagre, whilst ready supplies are negligible. An advance of Re. 1 in the price of seeds has resulted in a disproportionate advance of only As. 8 in the price of oil, further upsetting crushers' parities. Linseed oil overseas has improved slightly to £110, with Indian shippers coming nearer into line now.

The latest available quotations are: Ready Rs. 24 and July-August Rs. 24-4 per maund.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *30th June*

There has been no change in the kip market nor in the U.K., except that the importers, finding Madras adamant, have improved their prices for lightweight cow hides by a penny per pound. Arrivals are small and shippers who have orders to cover are active and this has lent a steadier tone to the market.

Arrivals of tanned buff hides have been taken up by exporters to the U.S.A. There is good inland demand for low grade tanned hides and calves.

The tanned goat and sheep skins market is steady and E.I. tanners have been operating keenly in the raw centres with the result that prices are ruling firmer.

The dock labour strike has been called off, and shippers heave a sigh of relief, as they have been put to great anxiety, and some to financial troubles.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *30th June*

Quietly steady conditions continued in the foodgrain market during the week. The Government of India has taken measures to check the rising trend in prices. It has assumed powers to seize wheat stocks under the Essential Commodities Act in U.P., Rajasthan and Madhya Pradesh. The powers have been extended to cover rice stocks in Bihar and U.P. Besides this, there has been sizable release from the Government stocks. In U.P., the State Government, aided with heavy supplies from the Centre, has increased the number of fair-price shops in the eastern part and also opened them in five big *kasal* towns of the State, as well as in some other important district headquarters. All these measures, together with fairly good rains received during the week which will enable sowings of *kharif* crops and paddy in large-scale, have halted the rising trend of grain prices.

Wheat at Hapur ruled quietly steady during the week to be quoted at Rs. 17.50 per maund for *dara* quality and at Rs. 18.75 for farm produce. Daily arrivals continued to be small at an average of 300 to 400 maunds, but some occasional wheat was also being received from Punjab. The local wheat stock was small at three *khatties* only, the corresponding figure last year being 43 *khatties* and 83 *khatties* in 1956.

Rice recorded a gain of Re. 1 per maund during the week, due to shortage of supplies. The prevailing prices were: *Basmati sela* Rs. 40 to Rs. 42.50; *mainpuri* Rs. 28.75; coarse Rs. 25.50 per maund.

Gram continued to rule steady on firm Punjab advices. Local stocks improved slightly to 48 *khatties*. Barley and *bejhar* moved up, due to poor local stocks, while *jowar* and *guwar* were steady, thanks to heavy demand for seeds. The latest prevailing prices (in rupees per maund) were: Gram 12.94 to 13.06; barley 13; *bejhar* 12.37; *jowar* 14 to 16; *guwar* 17.

Good outside demand mostly in the form of pulses accounted for steady conditions in the prices of peas and *arhar* during the week. Daily arrivals were lower, the average being 400 and 150 maunds, respectively, and local stock was put at 187 *khatties* of peas and 145 *khatties* of *arhar*. *Urd* and *moong* improved, due to poor local stocks. The prevailing week-end prices (in rupees per maund) were: Peas *dara* 11.62; white farm 12.19; peas *dal* 13; *arhar* 14.75; *arhar dal* 19; *urd* 19 to 20.50; *moong* 25; *massoor* 15.75 to 16.50.

After moving both ways in speculative bouts of buying and selling, pulses futures recorded an easy trend on bear pressure influenced by good rain reports. The latest quotations on Monday were: Peas *bhadon* Rs. 11.65; *arhar bhadon* Rs. 14.73; *urd maha* Rs. 17.

Fairly good rains have been received all over the region and prospects of *kharif* crops have brightened.

HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, *30th June*

During the week under review, the hides and skins market ruled featureless. New arrivals were not plentiful. The purchasers were not inclined to purchase inferior variety. The main transactions were effected by the local tanners.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360, 2nd grade Rs. 240 and 3rd grade Rs. 170 per score; wet salted buff, 1st grade 1 lb. 12 oz. and 2nd grade 1 lb. 10 oz. per rupee: goat, 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 265 per 100 pieces; sheep, 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces.

TEXTILES

(Concluded from page 12)

Lancashire that we should come to some sensible arrangement and come to it voluntarily. If it is not voluntary, then very serious consequences can occur throughout the whole of our world." Incidentally, Sir David emphasised that the British business men should buy more from China, so that China would have more sterling with which to buy British goods.

Speaking earlier, Mr. John Keswick, Chairman of the China Association, explained the position of Hongkong textiles. After referring to the controversy over limiting the importation of Hongkong-made textiles, he remarked: "Unfortunately, too many of Hongkong's critics have been using smear tactics." He then made the following points:

Last year's trade figures show that Britain had a surplus of £21 million in its trade with Hongkong. Every new country with a natural desire to attain economic independence immediately set up a textile industry and the efficient mills in Lancashire recognise this and meet it. Most of the imports from Hongkong are finished in the U.K. for re-export. Restricting such imports will simply drive such places as Hongkong into the finishing trade, which it is, indeed, beginning to do. Lancashire has 28 million spindles, while Hongkong has only 300,000. In Manchester, they spin but do not always toil. But, in Hongkong, they both spin and toil. The Chairman added: "I wish the people of Lancashire toiled more."

In the course of his speech, Sir Alexander Grantham, former Governor of Hongkong, stated that the people of Hongkong thought that Lancashire's campaign against them (in regard to textile imports) was entirely unjustified and extremely unfair. The Colony, according to him, has suffered more than anyone else from the U.N. embargo on trade with China on which Hongkong depends so much. Hongkong had accepted the embargoes, but had to turn to its own industrial production, even though it was facing a flood of refugees. Sir Alexander declared that the mother country should be prepared to help the people of Hongkong which is "one of the marvels of the world and is an example to the world of what could be done when a country gets rid of isms and ocracies."

Notice

BURN AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the sixty-fourth Ordinary General Meeting) of the Company will be held on Thursday, the 31st July, 1958, at 11 a.m., at the registered office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1958, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend. (The dividend, if declared, will be paid on or after the 4th August, 1958, to the Shareholders whose names are on the Company's Register on the 31st July, 1958, or to their mandatees.)
3. To appoint a Director in place of the retiring Director. In this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 261 of that Act to move the following resolution as a Special Resolution at the meeting.

   "That Mr. K. L. Ganguly, the retiring Director, who is an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company."
4. To appoint Auditors and fix their remuneration.

The Ordinary Share Register of the Company will be closed from the 23rd July, 1958 to the 31st July, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Director,
Managing Agents.

CALCUTTA, *5th July*, 1958.

State Bank of India

Statement of Affairs for the week ended 27th June 1958

Capital and Liabilities	Rs.	Rs.
CAPITAL—		
Authorised Capital— 20,00,000 shares of Rs. 100 each.	20,00,00,000	
Issued, Subscribed and Paid-up: 5,62,500 shares of Rs. 100 each.	5,62,50,000	
Reserve Fund and Other Reserves		5,62,50,000
Deposits and Other Accounts		0,62,50,000
Borrowings from Other Banking Companies, Agents, etc.		424,12,43,000
Bills Payable		
Bills for Collection being Bills Receivable as per contra		6,20,14,000
Acceptances, Endorsements and Other Obligations per contra		90,35,000
Other Liabilities (including Inter-Office Adjustments)		6,17,27,000
Total ..	Rs.	450,46,76,000

Property and Assets	Rs.	Rs.
Cash in hand and with Reserve Bank		30,18,28,000
Balances with other Banks		3,21,57,000
Money at Call and Short Notice		1,33,33,000
Investments	Rs.	
Government and other Trustee Securities	106,20,60,000	
Other Authorised Investments	10,63,00,000	
		206,83,60,000
ADVANCES:		
Loans, Cash Credits, Overdrafts, etc.	166,69,28,000	
Bills Discounted and Purchased	17,25,43,000	
		183,94,71,000
Bills Receivable being Bills for Collection as per contra		90,35,000
Constituents' Liabilities for Acceptances, Endorsements and Other Obligations per contra		75,57,000
Premises less Depreciation		1,19,74,000
Furniture and Fixtures less Depreciation		89,01,000
Other Assets (including Inter-Office Adjustments)		12,19,67,000
Total ..	Rs.	450,46,76,000

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Alliance and Lothian jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1954 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
New 1956 the dividend of Rs. 17-5 includes an interim dividend of Rs. 7-5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 3*)

reasonably have been urged against measures to prevent any further slackening of the growth of aggregate demand. However, without the expectation of timely co-operative action to improve international liquidity, Governments may well be reluctant to stimulate any real acceleration of recent rates of growth."

It may be noted, in passing, that Britain has already moved the U.S. on the question of improving international liquidity and the response from the latter has been sympathetic. This question will come up for serious consideration at the forthcoming annual meeting of the I.M.F. and the World Bank in the first week of October at New Delhi.

* * * *

No decision of immediate import to the wheat trade has emerged from the two-day meeting of the International Wheat Council held at London last week-end. This is not surprising, because the meeting was just a routine one. A notable outcome, however, was the Council's decision to request the U.N. Secretary-General to convene a conference early next year to negotiate a possible renewal or replacement of the International Wheat Agreement which is due to expire on 31st July 1959. It also decided to recommend the convening of a preliminary U.N. conference of short duration in the autumn of this year to discuss the main principles and the general form that a new Agreement should take.

The present Agreement, it will be recalled, was signed in 1956 ; it is basically the same as the one drawn up in 1949 and renewed in 1953. The aim of the Agreement is to ensure "fair" prices for wheat and to check extreme fluctuations in the market by fixing the minimum and maximum prices at which the importing and exporting members must be prepared to buy or sell, as the case may be, up to the limits of the quotas established for them. In between these two extremes, no restrictions are put on the operations of members. The maximum price at present is $2 per bushel for Manitoba No. 1 in store Fort William and the minimum is $1.50. The prices of other grades of wheat are worked out on the basis of these quotations. It may be noted here that the currently prevailing market prices for wheat are around $1.70-$1.75 per bushel.

The deliberations of the forthcoming U.N.-sponsored world wheat conference and the future of the Agreement, more especially the attitude of Britain which is expected to be invited to attend the conference, will be watched with much interest. Britain, as readers are aware, refused to rejoin the Wheat Council when the Agreement was last renewed in 1956 on the ground that the Agreement contained no provision for dealing with the wheat surplus. Since Britain is one of the world's major wheat importers, its exclusion from the Council leaves a large gap in the Agreement's coverage ; the total of quotas fixed by the Council accounts for a bare one-third of world trade in wheat.

The world today is once again faced with a huge wheat surplus. Thanks to the surplus, the problems facing the major producing countries, particularly Canada and the U.S., "are, if anything, more extensive than they were." The estimated 1958 wheat output in the U.S. is placed at an all-time record of 1,271 million bushels which represents a rise of as much as 34 per cent. as compared with the previous year's output of 948 million bushels. It is 14 per cent. above the 1947-56 average of 1,116 million bushels. The markedly large output of 1,271 million bushels, together with the substantial carryover of 895 million bushels, brings the total quantity on hand for the current marketing year (beginning on the 1st inst.) to a record of 2,166 million bushels, that is, more than 16 per cent., above the level a year ago. The substantial carryover is the result of an appreciable fall in exports of wheat from the U.S. which, during 1957-58, aggregated no more than 390 million bushels, as against the all-time peak exports of 549 million bushels in 1956-57.

Besides the U.S., the two other major producing countries—Australia and the Argentine—are also expected to have bumper wheat crops. Although the crop outlook in Canada, another major producer, has turned out to be gloomy on account of lack of rain, it is still having huge unsold stocks of wheat. Incidentally, it may be noted that the aggregate stocks in the six major exporting countries of the world on 1st April 1957 amounted to nearly 2,000 million bushels.

Viewed thus and considering reports of the generally favourable new European wheat crops, it looks as though competition in the world wheat markets will be unusually keen throughout the current season. Naturally, wheat farmers in the U.S., Canada and elsewhere view this prospect with concern. If there were to be a slump in world wheat prices, would the Council be in a position to prevent it? The answer to the poser is 'no.' For, under the Agreement as it stands at present, the question of surplus does not come within the orbit of the Council ; it is a matter left entirely to the individual countries to tackle.

* * * *

The U.S. Government's scheme of support for lead and zinc prices, as reported in these columns last week, has since been modified by the Senate Interior Committee. The modified scheme provides for Government subsidies to bridge the g

VOL. XCVII. No. 2469 BOMBAY, 12th JULY 1958 PRICE: Re. 1.50

LANCASHIRE SCORES

AT long last, the Lancashire cotton industry has won what it wanted, namely, protection against unlimited imports of cotton textiles from the Commonwealth countries. The representatives of cotton mills in India and Pakistan have finally agreed to accept a ceiling on shipments of their cloth to the U.K. The arrangement is conditional on the establishment of a similar system of limitation with Hongkong. This, however, is only a question of time, for, with India and Pakistan having yielded ground, this little Colony cannot hold out much longer. No details of the understanding have been made public, but there need be no doubt about the agreement itself. Both the Cotton Board in Manchester and Mr. Kasturbhai Lalbhai, who headed the recent delegation of Indian millowners to Britain in May last, have simultaneously confirmed it. In fact, they have stated that a document embodying the understanding will be signed by them in the near future.

Lancashire's success constitutes one more dent in the twenty-five-year old Imperial Preference system. Ironically enough, this development has taken place just a few weeks before what is described as a momentous Commonwealth Economic Conference scheduled to meet in Montreal, Canada, where the Ottawa Pact was concluded. If the dent appears to be less conspicuous than it actually is, it is because of the voluntary and unofficial character of the agreement between the parties concerned. It reflects the new spirit that animates international relations, namely, "live and let live." In fact, the dent may even prove as a safety valve through which the pressures generated by passage of time against the Imperial Preference system may be allowed to escape, provided, of course, this example is not carried too far.

It is said that perseverance always pays. Lancashire has now proved that even a bad case can be won by perseverance. Both millowners and workers in Lancashire worked hard for well over two years to win the support of their Government against unrestricted imports of cloth from countries protected by the system of Imperial Preference. Similarly, the leaders of both Conservative and Labour parties worked towards the same goal, though the means adopted by them were different. Indeed, they vied with one another in this task. Public meetings were held; processions were organised; boycott of foreign cloth was talked about and even plans were drawn up to implement the threat; not a month went by without some deputation or other from Lancashire waiting upon the British Government; India, Pakistan and Hongkong came in for a virulent attack at the hands of Lancashire trade union leaders, on the ground that they were employing cheap labour; and the Press in Britain was bombarded with letters to the editor, criticising the allegedly unsympathetic attitude of the British Government, and with reports of proceedings of the various protest meetings. This kind of high-powered campaign has gone on for over two years and has yielded a big dividend now.

In distressing contrast to what Lancashire mills did to mould public opinion in their favour and gain the support of the British Government, the Indian millowners, labour leaders and politicians did nothing to expose the unreasonable nature of Lancashire's demands. No interest was at all taken by either trade union leaders or the politicians. The Indian millowners chose to talk with Lancashire in secret, albeit with the full permission of the Government. They would tell nothing even to those sections of the Press which took an interest on this subject. They displayed a defensive, if not defeatist, attitude right from the beginning and spoke of the need for a compromise with their competitors in Britain. They never faced the issues squarely. Instead, they proceeded on the assumption that they could conveniently take shelter under a "no" by Pakistan and Hongkong to Lancashire's demands. They thought that that way they could keep their markets in Britain and yet retain its goodwill. This calculation has failed. Pakistan has agreed to toe the line meekly taken by them and both have weakened the hands of Hongkong. Thus, India, which had a good case, has lost it through mishandling by its millowners and administrators at New Delhi.

This journal has always contended that Lancashire's demand for a restriction on imports of cloth was not justified. It is true that Lancashire was once a great cotton goods producer. But most of its greatness was due to Britain's position as a great colonial power which it is not today. The world has changed a lot since the last war. And Lancashire has lost most of the political props under which it was having a sheltered existence for decades and decades. Other countries, more advantageously situated than Lancashire for making cotton goods, have successfully emerged as producers and exporters. All this is part of evolution of the world. If Britain had suffered any material setback as a result of this evolution, there could at least be a case for accommodation by other countries which have won some minor advantages. But this is not the case. Britain has, instead of suffering a setback, gained considerably. It has a variety of other means of production and sources of employment which have more than offset the shrinkage in the status and size of the Lancashire cotton industry. It has one of the highest living standards in the world. Unemployment in Britain is low, being only a small fraction (less than 2 per cent.) of its total employable labour. A gradual switch over of capital and labour employed in the cotton mill industry to new avenues is not beyond the capacity of the country.

The economic position of India, Pakistan and Hongkong is entirely different. They have more labour, less capital and fewer employment opportunities. The manufacture of cotton textiles is one of the economic activities for which they are better suited than Britain. The availability of savings is limited. Exports have to be kept up in order to earn the external resources needed to finance their development plans. What justification is there for an economically strong country like Britain to cajole and compel such economically weaker countries as India and Pakistan to accept limitations of the type now won by the Lancashire cotton industry? We see none whatever.

There might be a case for Britain placing some restrictions on imports of cloth from Commonwealth countries had there been dumping on the part of the latter. There is no convincing evidence that any one of them is guilty of that charge. So far as India is concerned, we can confidently assert that it has not resorted to dumping. Again, the type of goods which India has been exporting is mostly grey, so that its processing and finishing in Britain have been providing employment for those engaged in these activities. Even now a good part of the cloth thus finished is being re-exported. Further, not all the difficulties of Lancashire are due to the increase in imports of foreign cotton goods into Britain during the last two years. We have good reasons to feel that consumers in Britain are not with the Lancashire interests and, if a poll were taken on their demands, they would not get a favourable verdict. Even in Lancashire, there are many who are extremely critical of their mill industry's demands. It is, however, not for us to plead the cause of British consumers.

Readers may wonder why Indian millowners have agreed to accept a ceiling on their exports to Britain when India's case against it is sufficiently strong. There are several reasons, but the main ones may be briefly stated. The Indian millowners, or at least their leaders, know very well that their industry is not strong enough to retain for a long time the entire gain it has made in the British market. They are aware of the continuous efforts that are being made by the mills in Lancashire to strengthen their competitive capacity. They are also doubtful whether they can hold their own against the increasing competition offered by Hongkong in the British market. Their experience in the first quarter of 1958 goes to confirm this doubt. During this quarter, imports into Britain were higher at 116,541,000 yards, as against 103,064,000 yards and 74,892,000 yards in the first quarter of 1957 and 1956, respectively. But India's share actually declined by 9 million yards to 36.77 million yards. The chief beneficiaries were Hongkong, China and Japan. Knowing the inherent weakness of their industry, for which the Government of India's economic policies are more responsible than the shortcomings of some of the mills, the spokesmen of millowners must have thought that discretion was the better part of valour and agreed to a scheme of limitation which would secure the major part of the ground gained by them in 1956 and 1957. The passive attitude taken by them right from the beginning of the controversy fully bears out this inference.

It can be stated without fear of contradiction that the spokesmen of millowners took no step in this matter without consulting the Government of India. Their understanding with Lancashire millowners has both the approval and the blessings of the Government. Accordingly, they cannot be accused of having sacrificed the larger interests of India in order to safeguard those of their industry. The main reasons why the Government of India decided to let the millowners negotiate with Lancashire interests and reach a "mutual" agreement have yet to be publicly stated. But they are easily

discernible. First, the British Government had made strong but informal representations to the Government of India to do something in this matter. No less than two British Tory Prime Ministers, Sir Anthony Eden and Mr. Harold Macmillan, had spoken to Mr. Nehru, India's Prime Minister, about this question. Secondly, the British Government had forced Japan and China to accept a ceiling on their exports of cotton cloth to the U.K. Will it be in keeping with the spirit of India's foreign policy to ignore this development and insist upon the privileges of Commonwealth membership? Thirdly, it is not in the very nature of Mr. Nehru's Government to take any aggressive stand on issues of this nature. Mr. Nehru is as much against economic wars as political wars. The policy of his Government is one of international co-operation and friendly relationship with all. And, fourthly, India needs the help of Britain in many respects. The latter is the single largest buyer of quite a few of India's export goods, besides being a supplier of a large proportion of capital goods needed by it for implementing its plan for economic development. Again, right now, India is in need of a large credit to tide over its foreign exchange difficulties. At this juncture, it is certainly not good diplomacy to quarrel with Britain over the market for a few million yards of cloth. Thus, the very foreign exchange difficulties, which suggest that it is foolish for India to surrender a part of its export trade, seem to have turned out to be one of the important causes for the concession shown to Lancashire.

A last point that we should like to make is this. It has often been stated by Lancashire interests—both capital and labour—that the Conservative Government has done little to protect them against continuing imports from the Commonwealth countries. Such a criticism is unwarranted, for, from behind the scenes, that Government has exerted its influence over the Indian Government to the utmost in order to bring about the present settlement. The British Government has, of course, consistently refused to intervene directly and openly by placing restrictions on imports from the Commonwealth as was suggested by its cotton interests. But it knew better than the Lancashire millowners and their spokesmen or the trade unions and their champions as to how to safeguard the interests of Lancashire without jeopardising the larger interests of Britain and its relationship with the Commonwealth. We have no doubt whatever that Mr. Macmillan and his colleagues have played their cards well.

WORLD ECONOMIC TRENDS

MOST observers are now reconciled to a somewhat slower pace of progress for world economy. The recession in the U.S. has already given a major jolt to ideas of uninterrupted progress. It is no doubt recognised everywhere that the built-in stabilisers in the U.S. economy and in the national economies of other countries are sufficiently strong to prevent the repetition of the economic catastrophe of the 'thirties. Even so, the slight decline in business and industrial activity, which began last year both in the U.S. and in several other countries, has induced a not unwholesome sense of realism in economic discussions. No longer does it seem right to speak of higher and higher levels of economic activity, as if each stage must necessarily lead to something higher. On the other hand, it is being increasingly realised that each stage of progress has to be consolidated and some setback, wherever it occurs, fully covered, before further progress can take place. This trend in economic thinking is at variance with that in early post-war years when men were inclined to feel that the economic path was strewn with roses and roses all the way. But the corrective, which had to come anyway, has come now.

In retrospect, the beginning of the present decline in industrial activity in many countries, as the U.N.'s *World Economic Survey 1957* points out, could be said to have rung out the period of economic boom. The *Survey* notes that the general economic expansion following the Korean conflict lost most of its momentum in the course of 1957 and all industrial countries foresee a further slackening in economic activity in 1958, if not actual declines in output. It is held that the slower pace of economic progress in the advanced industrial countries which has become evident now ends the boom phase of the production cycle which commenced in 1954, accelerated in 1955, maintained its advance, although at a slower pace, in 1956, and reached its zenith before the close of 1957.

The important conclusions emerging from the *Survey* are: (1) The slackening in aggregate demand is due to a pronounced decline in the rate of expansion in fixed investment and a slowing down in personal consumption, especially of durables. (2) Idle capacity had been accumulating in some of the industrial countries even prior to the onset of recession. (3) The vulnerability of countries to any reversal in dollar balances of payments may be greater than during previous post-war recessions. (4) Although commodity prices declined markedly in 1957, the worsening of the balance of trade of underdeveloped countries was caused more by expansion in their imports than by a reduction in their export earnings. (5) The output of consumer goods in the centrally planned economies increased more than that of producer goods.

In 1957, there was a decline in national product and, in the second half of the year, there was also a decline in industrial output. The *Survey* attributes the slackening in demand to a decline in fixed investment and a slowing down in personal consumption, especially of durables. Idle capacity tended to accumulate, thereby depressing investment outlays. The *Survey* discloses that there was an increase in idle capacity both in W. Germany and in the U.K. even during 1956 and that this rose further in 1957. Estimates for the U.S. indicate that there was an even more pronounced lag in demand behind productive capacity than in these two countries. Does this mean that the anti-inflationary measures taken last year such as higher bank rates, tightening of credit restrictions and a determined drive to secure budget surpluses were initiated by the Governments of these countries at the wrong time? The *Survey*, in so far as one can make out from its summary, is silent on this question. But it will be interesting to recall that, when these measures were put into effect, some critics did assert that they would soon bring about a recession, which would be found more uncomfortable than the inflation that was sought to be checked by the authorities of these countries. Events have proved these critics to be right to a considerable extent.

Now to return to the trends in the past year. Foreign trade followed the same course as production. By 1957, the foreign trade boom was slackening rapidly and, in the last quarter of the year, there was little or no advance in volume over the corresponding quarter of 1956. During the last quarter of 1956 and the first nine months of 1957, the rest of the world began losing gold and dollar reserves to the U.S. for the first time since 1951. The net inflow of funds into the U.S. was, however, reversed during the last quarter of 1957 when the recession in that nation began to manifest itself. This reversal was in marked contrast to the previous experience of cyclical downturn in the U.S., which had usually been accompanied by a deterioration in the dollar balances of the rest of the world. The explanation for this difference in the U.S.'s experience in balance of payments, it is stated, is to be found in a decline in the share of the recession-sensitive commodities in U.S. imports and in the slackening of economic activity in the rest of the world, with a consequent weakening in the demand for goods from the U.S.

The decline in activity in industrially advanced countries had, of course, its inevitable repercussions on the economies of nations dependent on exports of primary commodities. There was less demand for the export commodities which are, in most cases, vital for sustaining the economies of the primary producers. Export prices fell, and in the context of the rise in prices of manufactured goods which these countries generally import, the balance of payments position suffered a setback. The rise in the import bill of the exporters of primary commodities was, however, due only in part to the higher cost of imported manufactures, for it was largely due to an absolute increase in the volume of imports which reflected an "expansion in demand associated in some countries with internal inflationary conditions and in others with growing expenditures on economic development." This situation was mitigated to some extent by increased inflow of capital from both private and official sources in the U.S. and elsewhere. On the whole, the official gold and foreign exchange resources of the primary producers declined by more than 4 per cent. in 1957, in contrast to an increase of 2 per cent. witnessed in 1956.

Although the balance of payments position of primary producers was unsatisfactory, it is noteworthy that there were notable gains in production except in the agricultural sector. Among the metals, copper output was 2 per cent. higher, lead 5 per cent., zinc 8 per cent., iron ore 16 per cent., coal 6 per cent., petroleum 7 per cent., and electricity 9 per cent. The output of cotton textiles rose by 6 per cent., cement by 9 per cent. and steel by 12 per cent. In the agricultural sector, the wheat crop was barely maintained. But rice output was 3 per cent. lower and cotton about one per cent. less. Production of sugar and wool was larger than in the previous year. There was a fairly general expansion in *gross* domestic product, followed by appreciable increases in *real per capita* incomes. It is gratifying to note that, in a majority of these countries, consumption grew faster than population. And, if in some countries, *per capita* income was not maintained, it was chiefly because of such factors as crop failures, governmental anti-inflationary measures and deterioration in terms of trade. The *Survey* holds out no great hope for the primary produce exporting countries. The outlook for 1958, according to it, is "far from reassuring." This is evident from the fact that many of these countries are stil sugering from inflation and that balance of payments difficulties which have, in fact, compelled them to prune investment programmes. A typical example of this trend is India.

The centrally planned economies have come out rather well in the *Survey*, though it can never be ascertained at what cost their re- of these countries are still suffering from inall these countries, the targets set for industrial production in 1957, it is stated, were exceeded, partly because the targets themselves were modest and partly because improvements were achieved in the supply of raw materials and the utilisation of capacity. The output of consumer goods rose faster than producer goods in some of the minor countries of the group, but not so in the major countries, that is, Russia and China. In the sphere of producer goods, the output of electricity, coal, crude oil and ferrous metals moved up, though at a lower rate than in 1956. It is significant that the plans for the current calendar year envisage a higher rate of increase for producer goods than for consumer goods, though they provide for an overall lower rate of growth of industrial production. Agricultural output increased in some countries, chiefly because of better weather conditions. In the U.S.S.R., the current year's plan calls for a 17 per cent. increase in farm output.

A significant feature of developments in the centrally planned economies is the increase in their foreign trade. The value of their external trade increased by 12 per cent., as compared with a 9 per cent. increase in industrial production and 7 per cent. increase in aggregate output. But the increase in the trade of this group of countries with the rest of the world was not significantly higher than the increase in their total trade. Thus, in 1956, the trade of these countries with the outside world had increased by 20 per cent., as against an increase of 9 per cent. in their total trade, but, in 1957, the respective percentage increases were 15 and 12. They, however, established larger trade connections with certain countries, especially in the underdeveloped areas of Asia, Latin America and North Africa. An important change in the geographical pattern of their trade during 1957 was an increase of 58 per cent. in their trade with the Middle East. On the other hand, their trade with Latin America as a whole fell by 25 per cent. W. Europe's trade with the centrally planned economies rose by only 10 per cent.

Despite the increase in trade and industrial production, there was a general slowing down in investment activities in the centrally planned economies, as was the case with most of the free countries. In the U.S.S.R., the rate of increase in fixed investment fell from 17 per cent. in 1956 to 12 per cent. in 1957, and in China from 62 per cent. to 11 per cent. A decline in such investment was also witnessed in Bulgaria, Hungary and Rumania. Fixed investment, however, rose by 6 per cent., fixed investment was Union. Thus, in 1957, whereas national income rose by 6 per cent., fixed investment was increased by 12 per cent. This suggests, as the *Survey* itself points out, a relative shift in the allocation of resources in favour of accumulation. It should be obvious to those who are familiar with totalitarian economies that such a shift could be more easily enforced in these countries than in the free world.

IS BRITAIN IN A MOOD TO GIVE A BIG LOAN TO INDIA?

INTEREST RATES POLICY—OUTLOOK FOR OILS

THURSDAY, 5 P.M.

THIS has been a week of falling values for the city markets, the only exception being oilseeds. In shares, there has been a slight reaction in almost all counters, their closing rates showing a net loss over the week. The main reason for this setback is profit-taking. Knowledgeable circles, however, say that the basic trend is still bullish, the decline during the week being only a passing phase. The downward trend in bullion continues unchecked for the reasons mentioned in this column last week. Among commodities, cotton is down, but oilseeds are higher all round. The fall in cotton prices, despite the relief given in excise duties on coarse and medium counts, is attributed to the delay in the announcement of further export quotas and favourable weather for raising new crop. The abolition of export duties on all the remaining oil and oilseeds and encouraging overseas demand for linseed oil have given a further fillip to prices in the oil and oilseeds market. It is, however, a moot point whether the present trend can be maintained, as the domestic prices of most of the oils are out of line with world prices.

MARKET GOSSIP

The short-term money market has become a true mirror of the growing slackening economic activity in the country. The volume of floating funds with banks is expanding, while the demand for accommodation from them has fallen. It is stated that deliveries to India of capital goods against orders placed with Western countries have accelerated, but this has so far not had any effect on bankers' commercial advances. Inter-bank call money rate has fallen to 2½-2¾ per cent. The bidding for short-term deposits is less keen and the interest rates have begun to show signs of softening. Active canvassing for State loans is going on by the respective Governments. The lists for these open on Tuesday next. State Ministers have been meeting the bankers in order to ensure their maximum help and co-operation. Apparently, they do not want to take any chances. Several banks have announced their readiness to advance funds on liberal terms to those who wish to take up the new loans. The Reserve Bank, too, has been pulling up the Gilt-edged market by raising its selling rates for some of the Government of India loans. If the present easy money conditions continue, as they are very likely to do, the Reserve Bank may gradually bring down the yields on Government securities. This possibility is quoted in favour of higher prices for equities as well as fixed-yield shares, several of which are still offering a return of 5.75 per cent. to 7½ per cent. tax-free.

India is probably the only country in the world to maintain cheap money conditions when faced with an acute balance of payments problem. It appears that the authorities have not paid adequate thought to the implications of this policy to the level of external reserves. Even today it is more advantageous for one to keep money in Britain and West Germany than bring it to India. With rumours of devaluation persisting in foreign countries, despite their repudiation in no uncertain language by both the Finance Minister and the Prime Minister, the temptation to delay the bringing in into the country of export proceeds and other receipts is only strengthened by the policy of low interest rates. Is it not ironical that the Socialist Government of India should grudge paying a decent rate of interest on the savings of its own citizens but pay with great eagerness anything from 5 to 7 per cent. to the people of foreign countries? In this respect, the bankers and industrialists, too, are not different from the Government. They are willing to pay even up to 10 per cent. to foreigners, as, for instance, in the case of deferred payment arrangements, but strongly agitate for concerted action when deposit rates tend to go up even by a fraction. Some of them forget all their criticisms against controls by the State and plead for a statutory regulation of interest rates. And yet they want the people to save more and expect the monetised sector of the economy to expand fast. Every business man pleads for and aims at a bigger margin of profit. But, if people with some savings want a little more value for their money, it is resented. This is, indeed, a strange country, with contradictory ambitions.

• • • •

The foreign exchange crisis confronting India is the subject of talk not only in this country but also abroad. A week ago, the *Financial Times*, London, for instance, highlighted India's difficulties by an editorial comment and a special article from its Calcutta correspondent. In the previous week, the London *Economist* and the *Manchester Guardian* made brief but interesting references to the problem. As usual, these references are highly critical of India's policies, but they are refreshing in one respect. They suggest, some implicitly and others explicitly, that India requires to be helped by Britain to get over its foreign exchange difficulties. After critically analysing the causes for India's present plight in a tone which is by no means complimentary to the authorities of this country, the *Financial Times* ends its article on a note of sympathy for India and with a plea for a large loan by the British Government. The relevant portion of the article reads thus:

"India is now caught in a vicious circle. In order to raise funds for investment and to keep down internal spending, taxation rates are extremely high. This raises the cost structure of industry—and so harms exports—and at the same time frightens away the foreign capital which is essential to the success of the Plan. Import cuts imposed in an effort to reduce the drain on foreign exchange affect the efficiency of industry and postpone the moment of solvency. This dilemma is by no means peculiar to India, but it is intensified by the strongly socialist tone of Indian political life.

"Almost certainly, imports will have to be cut back still further. In addition, further injections of foreign capital will be required—probably to the tune of some £400 million, between now and 1961—if India is not to default on her present debts. And, undoubtedly, the great bulk of this capital will have to come from public rather than private sources. This poses a problem for the U.K. At present, India is a major source of weakness for the sterling area. On the other hand, the political dangers in the West which would arise from a breakdown of the Indian economy—if India were to become a second Indonesia, for example—can hardly be overstated. However, if the U.K. Government were to decide to advance India a loan, there would be a very strong case for ensuring that a substantial part of the proceeds should go to finance imports from the U.K. There is at present a growing amount of excess capacity in the U.K. industry, much of which could be used to meet India's needs —and at lower prices than some of the U.S. goods which India is at present committed to buying under the terms of the recent Export-Import Bank loan."

The *Financial Times* is a journal which can be said to reflect, generally speaking, the views of the British business community. Since it is said that, owing to import restrictions, Britain has already lost about £35 million worth of trade with India in the first four months of this year alone, it is only but natural that the British business community should be in favour of sizable assistance from its Government to India. We have contended on more than one occasion in the past one year that, as this country is the largest customer of Britain, it requires special treatment at the hands of the latter. It is gratifying to find that this view is beginning to be appreciated by business men in the U.K.

This, however, does not necessarily mean that the City of London holds the same view. This writer happened to be in London only a month ago and found the City of London—the hard core of British bankers—more pessimistic about the future of India than a year ago. This does not mean that it is unsympathetic towards India; only, it will require a lot more effort and convincing action on the part of the authorities here to show that they are taking India to its economic goal along right lines. Moreover, the City of London seems to think that Britain has not much surplus to spare for financing economic development of all the underdeveloped parts of the Commonwealth on the scale attempted by India and that, for political reasons, it cannot give any massive assistance to this country and deny it for the other members of the Commonwealth, as, for instance, Pakistan, Malaya and Ghana. The consensus of opinion in the City of London is that the chances of India getting a large loan direct from the British Government are still as remote as they were a year ago. The Bank of England may not refuse an overdraft to the Reserve Bank of India, but an overdraft is essentially a short-term arrangement repayable, say, in six or nine months. Such an extremely short-term loan is not going to solve our problem. It is, however, suggested that India could borrow from the open market in London by floating a medium- or long- term loan, but an important prerequisite for this is the securing of trusteeship status for the loan, an issue over which no agreement could be reached between the two countries, despite prolonged negotiations. India's approach to this question, it seems to us, is by no means in consonance with the status of a borrower. It sounds too idealistic and less practical.

The British Treasury and the Bank of England may question the contention that Britain has a surplus capacity which could be utilised for supplying the goods needed by India on credit. They may also argue that a part of the improvement in the sterling area's dollar reserves is due to postponement of Britain's liabilities to the U.S. and that any big loan to India on top of the measures taken in the past few days to avert a recession in the U.K. will add to the danger of a strong revival of inflation. It now remains to be seen whether the British business community will be successful in altering the conservative views of the City of London in favour of this country.

In any case, while the Indian authorities should not relax their efforts at getting large-scale assistance from Britain, it would be advisable on the part of the public not to entertain optimistic expectations, lest there should be room for disappointment later. The Indian authorities also should not delude themselves by thinking, as some are prone to do—*vide* the speech of Mr. H. V. R. Iengar last week under the auspices of the Progressive Group—that there is great admiration for India in foreign countries for the fiscal and monetary policies pursued by it in the past two or three years and that it is this admiration which is encouraging them to invest in India. The aforesaid quotation from the *Financial Times* itself should dispel any such illusions. If some great countries have helped India and are willing to do so further, it is not on the ground that India has followed wise fiscal and monetary policies—a claim disputed by many international bankers—but because they are anxious to see that democracy in India survives. In fine, it is the cold war that is actually helping India.

• • • •

The latest announcement of the immediate abolition of export duty on groundnuts, linseed, nigerseed, kardiseed, sesamum and sesamum oil is one more indication of the Government of India's anxiety to boost exports with a view to augmenting foreign exchange earnings. It was only last week, it will be recalled, that the Government removed the export duty on groundnut oil and castor oil. This concession closely followed the releases of export quotas for H.P.S. groundnut oilcake (30,000 tons), linseed oilcake (5,000 tons) and kardiseed (5,000 tons) a fortnight earlier, and export quotas for groundnut oil (20,000 tons) and H.P.S. groundnuts (10,000 tons) granted on 4th June.

It is difficult to estimate the total foreign exchange that will be earned as a result of the aforesaid measures. This much, however, can be said, and that is that the outlook for export trade in oilseeds and oils today is not so favourable as it was a year ago. The world output of oils and fats in 1958 is expected to remain at the high level attained last year (26.78 million tons, as against 25.87 million tons in 1956). In the case of edible oils, in particular, the production is expected to be actually higher. At the same time, the world demand for all oils has been running at a lower level. Consequently, the world prices of oilseeds and oils have all along been ruling low. In India, however, these commodities, barring linseed oil, have been commanding relatively better prices, so that the disparity between them and the world prices is substantially against this country, the abolition of export duties notwithstanding. To take, for instance, groundnut oil. The shipper's quotation (exclusive of export duty) for this oil in the local market is around Rs. 20 per quarter (c.i.f. U.K. and Continent), as against the currently ruling price of Rs. 16.30 for Nigerian oil and Rs. 16 for Chinese oil. The low level of world prices is due to the abundance of sellers over buyers. It is accordingly felt that no large overseas sales can be effected, barring some business in small quantities with Burma and Middle East countries.

As regards castor oil, although the removal of export duty has enhanced the competitive capacity of Indian oil in world markets, no marked rise in exports is considered likely, since Brazil is reported to be contemplating a downward revision in price. The export price of Indian castor oil commercial quality now stands at Rs. 18.75 per quarter (c.i.f. New York), as against Rs. 17.70 quoted by Brazil. Brazil is reported to have recently made large sales of castor oil to the U.S. and France. Nevertheless, the U.K. and some communist countries are expected to purchase sizable quantities of Indian oil. The prospects for linseed oil exports, however, appear to be somewhat better, thanks to the marked fall in world linseed crop in 1957 and setback to the current year's production in Canada and the U.S., following reduction in acreage and damage caused by unfavourable weather. It is said that the U.K. and Australia are interested in buying Indian linseed oil at about Rs. 1,503 per ton. Business involving about 600 tons has already been put through with Australia. It may be noted here that the aggregate exports of linseed oil during the first six months of 1958 amounted to nearly 13,000 tons and traders feel that the entire balance of the estimated surplus of 60,000 tons will be exported in the current half-year.

Judging from Press reports, an insidious move seems to be afoot to force the Kerala Government to re-examine its recent agreement with the Gwalior Rayon Silk Manufacturing Company Ltd. for the establishment of a rayon pulp factory in Kerala. The agreement, which we had examined last week and commended as a very sensible and realistic document, appears to have failed to find favour with some of the high priests of India's Communist Party. The Central Secretariat of the Party is reported to have disapproved of the "concessions" granted to the Company on the grounds that they are contrary to the Communist ideology and that they take away, according to it, some of the "legitimate rights" of workers. It appears that the Communist-controlled A.I.T.U.C. is thinking of publicly denouncing the agreement as infringing the rights of workers.

These reports seem to have sparked some re- actions in Cabinet circles at Trivandrum also. The State's Law Minister, Mr. V. R. Krishna Iyer, is reported to have stated at New Delhi before his departure for Stockholm to attend the Peace Conference that, if there were any provisions in the agreement with the Company capable of adverse interpretation, it was a matter for re-examination by the Kerala Government and further discussion with the other party. Is this an indication of a possible change in the attitude of the Kerala Government, which had showed much commendable realism in this particular instance? If so, one can not but feel disappointed that one's worst fear about the Communists are assuming the contour of reality. It is, indeed, unfortunate that, even before the ink has dried, there have been talks of re-examining and changing the provisions of the agreement.

Two provisions to which particular objection seems to have been taken are the ones that lay down that bonus will be related not to the Company's profits or earnings, but to efficiency and productivity and that the Company will have the right to discharge a worker on account of inefficiency or lack of work or other valid reasons. We do not find anything unusual in the provision

(Continued on page 87)

EQUITIES COLOURLESS

TREND ERRATICALLY LOWER

(From Our Own Correspondents)

BOMBAY, 10*th July*

THE sustained buoyancy in the share market noted in the previous weeks failed to be maintained during the week under review. Profit-taking at every rise made the trend somewhat erratically downward in most scrips, though selected counters yet managed to score small gains over the week. The announcement on Thursday evening last of the Government's acceptance of the Textile Enquiry Committee's interim recommendations for rationalisation of excise duties on various varieties of cloth to help the industry dispose of the accumulated cloth failed to have any notable effect on textile shares, as it had generally been expected that the Committee would make some favourable recommendations and had, therefore, been discounted in prices. The result of the Committee's recommendations is that excise duties on coarse and medium varieties stand reduced and those on fine and superfine cloth slightly increased. Though the mills producing coarse and medium varieties of cloth stand to benefit considerably, the shares of the mills belonging to this group did not respond very favourably. Another factor which chilled the enthusiasm of the operators was the rumour that the bonus issue of the Indian Iron and Steel Company, Ltd. might be postponed till next year. Settlement considerations also restricted trading.

In the steel section, Tata Ordinaries moved up early in the week from Rs. 163.50 to Rs. 166.75 and thereafter moved irregularly lower to touch Rs. 163.50 today. At the close again, there was a mild recovery to Rs. 164.25. The new shares gained over the week 75 nP to Rs. 162. Indian Irons advanced from Rs. 23.04 to Rs. 22.60, but profit-taking and rumours about postponement of bonus issue brought the shares down to Rs. 22.96 at the close today.

In the textile section, the proximity of dividend announcement pushed up Bombay Dyeings from Rs. 58.20 to Rs. 58.90, but the shares retreated to Rs. 57.90 on Tuesday. At the lower levels, there was fresh support to lift the shares to Rs. 58.70 at the close. Centurys were erratic early in the week moving between Rs. 460 and Rs. 449.50, but rallied to close at the week's highest level of Rs. 460.25, a gain of Rs. 3.25 over the week. After improving from Rs. 270.50 to Rs. 272.25, reflecting the relief which the mills would derive from the cut in excise duty, Kohinoors failed to sustain the rise and gave way to close at Rs. 268.25. Central Indias provided a feature with a spurt from Rs. 96 to Rs. 111, but retreated to Rs. 100.25. Finlays lost over the week Rs. 4 to Rs. 275 and Gokaks Re. 1.50 to Rs. 151.50. Indu Ordinaries shed 36 nP to Rs. 9.96, while Indore Malwas gained Rs. 2.50 to Rs. 113.50. Minervas declined by Re. 1.50 to Rs. 65, Models by Re. 1.25 to Rs. 170 and Mysore Spinnings 50 nP to Rs. 91. New Greats were marked down by Rs. 2 to Rs. 208, while Podars advanced by Rs. 5 to Rs. 145. Shree Niwas Cottons shed a rupee to Rs. 155. Simplex moved between Rs. 179.50 and Rs. 176.50, but closed at Rs. 179 with a gain of Rs. 2. Standards were also done Rs. 2 higher at Rs. 425. Svadeshis were a shade better at Rs. 190, while Tata Mills were dull at Rs. 41.

Bank shares were steady with small gains in most counters. Barodas continued to be in favour and rose further by Re. 1.50 to Rs. 120.50. Central Indias came in for support and were done Re. 1.50 higher at Rs. 55, while their new shares were unchanged at Rs. 57.50. Bank of Indias were a fraction better at Rs. 134.25 and their new shares at Rs. 136. United Commercials dropped 30 nP to Rs. 61.50.

In the insurance section, New Indias staged a retreat from Rs. 47.50 to Rs. 45.25. British India Generals were done 28 nP higher at Rs. 15.52, while Jupiters changed hands 64 nP lower at Rs. 7.12.

Electricity shares were featureless and activity was restricted. Ahmedabad Electrics, however, gained over the week 30 nP to Rs. 95.80, while Bombay Suburbans were unchanged at Rs. 107.50. Surat Electrics lost Re. 1.50 to Rs. 110.50. Tata Hydros were a shade better at Rs. 119.75, while Tata Powers shed Rs. 10 to Rs. 1,227.50. Andhra Valleys improved by Rs. 5 to Rs. 1,145.

Sugar shares were easy with a sizable drop in prices. Belapurs gave way from Rs. 262 to Rs. 257 and closed at Rs. 258. Phaltans fell by Rs. 2.75 to Rs. 156.25 and Walchandnagars by Rs. 6.75 to Rs. 281.25. Ravalgaon Sugars provided an exception with a rise of Rs. 3.75 to Rs. 134. Notwithstanding the increase in cement prices, cement shares gave way. A.C.Cs. declined from Rs. 158.50 to Rs. 155.25 before closing at Rs. 156. Their new shares dropped Rs. 2.75 to Rs. 149.25. Digvijays were also marked down from Rs. 159.25 to Rs. 157. While Orissa Cements gained 28 nP to Rs. 13.68, Jaipur Udyogs were unchanged at Rs. 13.92 and Ashoka Cements declined by 24 nP to Rs. 9.76.

Engineering shares met with heavy profit-taking, Alcocks dropping over the week Rs. 7.50 to Rs. 258.75. Tata Locomotives slumped from Rs. 180 to Rs. 173. Premier Constructions were dull at Rs. 205. Larsen and Toubros shed 20 nP to Rs. 17.80 and Mahindras 8 nP to Rs. 19.24. Structural Engineerings were marked down by Rs. 7.50 to Rs. 210, while Cooper Engineerings were picked up Rs. 12 higher at Rs. 100 and Brady Engineerings Rs. 3.80 better at Rs. 55. In the mining group, Shivrajpurs were dull at Rs. 92.50. Indian Coppers shed 10 nP to Rs. 3.60 and B.B. Petrols 6 nP to Rs. 2.22.

Scindias were erratic, but gained 16 nP over the week to Rs. 18.84. Great Easterns were unchanged at Rs. 24.72. Premier Automobiles were a rupee lower at Rs. 90, while Hindustan Motors were maintained at Rs. 7.85.

In the miscellaneous group, Bombay Burmahs (old) advanced from Rs. 592 to Rs. 596 early in the week, but slipped back to Rs. 582 today. The closing was, however, better at Rs. 586. The Partly-paids lost Rs. 5 to Rs. 215. National Rayons gave way from Rs. 238.75 to Rs. 232.75 before closing at Rs. 234.25. Gwalior Rayons closed at Rs. 14, with a gain of 20 nP, following the declaration of an interim dividend of As. 8 per share for the year ending 31st March 1959. Tata Oils were steady at Rs. 43.25, while Tata Chemicals were lower by 32 nP at Rs. 16.64. Hindustan Levers were quiet at Rs. 23.52. Wimcos were marked down by Rs. 5 to Rs. 179.

Calcutta Stock Exchange

CALCUTTA, 9*th July*

Greater buying support based on optimism relating to the country's economic outlook, and the announcement of rationalisation of the excise duties on cotton textiles designed to bring a healthy production pattern and to increasing sales of cloth, were the main factors which resulted in a near-buoyancy on the Calcutta Stock Exchange during the week under review. Activity broadened and prices rose impressively. The hectic nature of activity gave the impression as though the bear phase was over and the bullish trend had firmly set in. Second thoughts, however, compelled many operators from reading too much into the present bullish phase. For the country was going through a difficult foreign exchange position and if the anticipated help from foreign countries did not materialise, the inevitable import cuts would naturally affect the progress of many industries. It was at the same time hoped that the several export promotion steps being taken by Government in respect of consumer goods, small-scale industry, products, and farm produce would be crowned with success and the country enabled to import more raw materials and spare parts. Likewise, the possibility of India succeeding in case she floated a loan in London to finance imports from the U.K. was noted with satisfaction, and for a time operators' attention was diverted from the fall of Rs. 10 crores to Rs. 199.68 crores in the sterling balances in the week ended 27th June. Sentiment in speculative Indian Irons was assisted by continued rumours of an imminent bonus issue of shares, but on Monday received a setback when lower production figures for the second quarter were announced.

More shares changed hands in the cotton textiles section at advancing rates with preference being shown to shares of mills producing more coarse and medium cloth than fine. Elgin Mills scored to Rs. 13.50 from Rs. 12.06 and Cawnpores to Rs. 5.00 from Rs. 4.30. Jayshrees opened at Rs. 7.19 and gained to Rs. 8.12. New Victorias were done at Rs. 1.84, as against Re. 1.44 early in the week.

There were features in the coal section also in view of the advancing output in the private sector collieries and the possibility of Government asking them to make up the shortfall in the public sector collieries in order to achieve the target fixed under the Second Plan. New Beerbhooms were fractionally better at Rs. 15.37 following a good working report and maintenance of dividend at 7.5 per cent. for the year ended October last. Pench Valleys were lifted to Rs. 21 from Rs. 20.50, while Bengals were well held at Rs. 236. At Rs. 18.75, Amalgamateds gained by 50 nP. Western Bengal hardened to Rs. 6.50 from Rs. 6.25.

Jute shares were shown good interest in the belief that, despite the fall in business in heavy goods, the current accounting period would show improved results. Gains of the week were reduced during profit-taking yesterday, although closing levels for the week as a whole were higher on balance. Anglo-Indias, after advancing to Rs. 177 from Rs. 158, closed at Rs. 170. Kinnisons were at one time as high as Rs. 127, as against Rs. 155 previously, but closed at Rs. 126. Indias were better at Rs. 134, as were Ganges at Rs. 56. Alliances moved up to Rs. 85 from Rs. 81, Gourepores to Rs. 273 from Rs. 263, Birlas to Rs. 18.44 from Rs. 17.50, and Kamarhatties to Rs. 105 from Rs. 98.50.

In the engineering section, Indian Irons opened at Rs. 22.84 and by the week-end had advanced to Rs. 23.42. On Monday, the price reacted to Rs. 23.25. The recession was a corrective, but was precipitated by the publication of lower production figures for the second quarter to 30th June. The output of steel ingots amounted to 121,988 tons, as against 133,563 tons, finished steel 75,734 tons (80,124) and saleable steel 25,280 tons (26,287), while pig iron, at 214,469 tons, represented an increase of 14,630 tons. The decline in output was due to interruption of production by expansion plans. Although the rumours of possible capitalisation of the share premium reserve fund were strong yesterday, the price was lower at Rs. 23.25. It was considered in some circles that it was too early to talk of bonus issue and these circles preferred to await the working results before any news of issue of bonus shares.

Miscellaneous industrials were fully steady. Indian Coppers closed higher on balance at Rs. 3.70. India Steamships rose to Rs. 12.06 from Rs. 11.84 on interested support. Titaghur Papers were higher at Rs. 39.50. Indian Aluminiums were a strong feature with a rise to Rs. 15.81 from Rs. 14.31. The upward trend in Indian Oxygens continued unabated and touched a high of Rs. 19.87, the proximity of dividend serving as an additional incentive.

Madras Stock Exchange

MADRAS, 8*th July*

The Madras Stock Exchange continued to depict a firm trend during the major part of the week under review. Textile shares met with sustained buying support induced by expectations of enlarged demand for yarn from powerlooms and a larger offtake of mill-made cloth following the reduction in excise duty on cloth produced by powerlooms and coarse and medium varieties of mill-made cloth. The statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that the Government was thinking of providing export incentives in the form of export credits, freight and parcel-post concessions and reduction in export duties and cesses was responsible for the firmness of planting shares. Sugar and cement shares also were favoured. The restoration of the power cut in Madras State and the calling off of the strike in Buckingham and Carnatic Mills favourably influenced trading sentiment. Towards the close of the week, however, a reaction set in in the planting section, following profit-taking in selected planting shares, and some of the earlier gains were wiped out. Certain textile shares also came in for selling.

A notable development of the week was the introduction of trading in ten shares on the forward list with effect from the 4th inst. Fortnightly clearing with facilities for carryover of business and the establishment of a clearing house were the main features of this settlement trading. The facilities now afforded are expected to create a free market in these shares. There was lively trading in all the shares during the inaugural session.

Among tea shares in the planting section, Coonoors firmed up by 50 nP to Rs. 21.00, Cottanads hardened by 25 nP to Rs. 15.00 and Devasholas by a like amount to Rs. 18.75. Kalasas advanced by 20 nP to Rs. 15.80, Chembras improved by 18 nP to Rs. 4.18. Blue Mountains were better by 10 nP at Rs. 3.30 and Talayars by a like amount at Rs. 9.00. Periakaramalais put on 9 nP to Rs. 4.54.

Among coffee shares, Savamalais rallied Re. 1 to Rs. 5.95 *cum-div.* Kumergodes firmed up by 40 nP to Rs. 11.30. Rajendras advanced by 35 nP to Rs. 12.35. Anaparais put on 11 nP to Rs. 4.96. Sheveroys were better by 7 nP at Rs. 2.20. Balmadies gathered 5 nP to Rs. 3.50. Amalgamateds were steady at Rs. 12.25. Bababudins were unchanged at Rs. 12.35. Mysore Coffees were fully steady at Rs. 3.45.

Rubber shares met with good support on expectation that an upward revision of rubber price might be made in the near future. Peninsulars firmed up by 75 nP to Rs. 18.25. Midlands rallied by 60 nP to Rs. 17.60, Rajagiris advanced by 55 nP to Rs. 16.80, Cochin Malabars by 38 nP to Rs. 5.13 and Vaikundams by 37 nP to Rs. 21.12. Kailas were better by 18 nP at Rs. 4.90 *cum-div.* and T.R. & Ts. by 15 nP at Rs. 6.80. Tropicals were unchanged at Rs. 19.50, Thamarapallys at Rs. 24.00. Pullangodes were a shade easy at Rs. 1.75 *cum-div.* The Directors have recommended a final dividend of 4 per cent. on the ordinary shares of the Company.

Textile shares encountered firm support. Coimbatore Pioneers spurted by Rs. 14 to Rs. 245, *cum-div.* Coimbatore Cottons firmed up by Rs. 9 to Rs. 145, Metturs by Rs. 7 to Rs. 354 *cum-div.*, Vasanthas by Rs. 4 to Rs. 231.50 and Dhanalakshmis by a like amount to Rs. 174. Buckinghams improved by Rs. 3 to Rs. 171 and Rajalakshmis by a like amount to Rs. 78, *cum-div.* Radhakrishnas and Bangalore Woollens gathered Rs. 2 each to Rs. 132 and Rs. 164, respectively. K. Rajendras put on Re. 1.50 to Rs. 73.50.

In the miscellaneous section, cement shares provided a bright spot Orissa Cements firmed by 64 nP to Rs. 14.70 *cum-div.* Travancore Cements rallied 30 nP to Rs. 10.20. Dalmia Cements strengthened by 20 nP to Rs. 11 and India Cements by a like amount to Rs. 28, *cum-div.* Andhra Cements were, however, lower by 25 nP at Rs. 12. Ashok Leylands gathered 35 nP to Rs. 5.25 *ex-div.*

INDIAN CABLE'S NEW ISSUE

The Indian Cable Company, Ltd., proposes to issue 828,848 ordinary shares of Rs. 10 each at par. The new shares will be offered to the holders of ordinary and participating preference shares in the proportion of one new ordinary share for every two shares, ordinary or preference, held by them on 11th June. The price of Rs. 10 per share is payable in full on acceptance on or before 26th July 1958. The new ordinary shares will rank *pari passu* with the existing ordinary shares in all respects, except that they will not participate in any dividend for the year ended 31st March 1958.

The proceeds of the new issue will be used to finance the Company's expansion programme. Any shortfall in the amount required for such purpose is expected to be met out of the profits retained in the business and bank borrowings.

NEWS IN BRIEF

THE State Trading Corporation of India has arranged to import virgin metal mercury and supply the same to actual users.

The cheque system was inaugurated in the Savings Bank section of the General Post Office, Hyderabad, on the 2nd inst., with a view to giving a new fillip to the small savings drive.

The U.S. Government has deferred repayment by India of the sum of $3.5 million being the instalment on the 1957 wheat loan, which fell due on the 1st inst. It has done so to help India tide over the foreign exchange crisis.

The Government of Kerala proposes to start a State-owned rubber estate. It has requested the Rubber Board to submit a suitable scheme. A sum of Rs. 1 lakh has already been allotted for the purpose in the current year's budget.

A team of three officials and a non-official representing the flour processing industry in India left for the U.S.A. on the 9th inst. The visit has been sponsored by the Oregon Wheat Growers' League and the Millers' National Federation of the U.S. in co-operation with the U.S. Department of Agriculture.

A delegation, sponsored by the Government of India and led by Sir Jehangir Gandhy, will shortly visit the U.S.A., in order to study management courses conducted by American universities, with a view to incorporating some of the new techniques adopted there in the management courses in India.

As a result of the discussions held between a delegation from the Government of India and the representatives of the Government of Sweden, an agreement has been reached for the avoidance of double taxation between the two countries. The agreement will now have to be ratified by the two countries, after which it will become effective in India for the assessment year 1959-60 in Sweden for the taxes payable for the year 1958.

The Customs Reorganisation Committee (Chairman: Mr. F. C. Badhwar) appointed by the Government of India to conduct a comprehensive enquiry into the procedures and organisation of the Customs Department and to suggest reforms and improvements to meet modern conditions, concluded its three-day session in Bombay on the 5th inst. The Committee held discussions with the representatives of chambers of commerce and trade associations on the difficulties experienced by them in the administration of customs regulations.

Established shippers, mineowner exporters and the State Trading Corporation will be allotted export quotas for manganese ore for the period July 1958 to June 1959. The quotas will be equal to those issued to them in 1957-58. The last date for submitting applications for quota is the 20th inst. The small quota holders will be encouraged to form co-operative societies or limited companies, provided the aggregate of their individual allotments is not less than 25,000 tons. They will be given an additional bonus allotment of 10 per cent. of the total quota.

Messrs. Devidayal Stainless Steel Industries (Private) Limited, a leading factory in Bombay manufacturing stainless steel articles, and many other small factories engaged in the same activity, are still closed due to non-availability of raw material, namely, stainless steel sheets. Devidayals closed their factory on 9th June 1958, resulting in unemployment for more than 500 workers; many other factories have followed suit and as a result of this, thousands of workers have been rendered jobless. The Government has so far neither issued the licences for April-September 1957 nor paid any heed to the request of the Engineering Association of India for freezing the existing and incoming stocks and diverting the same to the actual users to help them keep the factories running for at least a few months. The whole stainless steel trade and industry are eagerly awaiting the announcement of the Government's import policy.

During May 1958, the consumer price index number for working class for Bombay City (base: year ended June 1934=100) decreased by two points to 387, that for Ahmedabad City (base: year ended July 1927=100) advanced by two points to 263, that for Sholapur City (base: year ended January 1928=100) remained stationary at 295, that for Jalgaon City (base: year ended August 1939=100) increased by eight points to 430, that for Nanded (base: year ended July 1944=100) increased by four points to 215 and that for Aurangabad (base: year ended July 1944=100) decreased by three points to 174. The fall in the index number for Bombay was due to a fall in the food and miscellaneous groups, while the rise in the index number for Ahmedabad and Nanded was due to a rise in the food group. The Sholapur index remained stationary, as the effect of the fall in the food group was counterbalanced by the effect of the rise in the miscellaneous group. The rise in the Jalgaon index was due to a rise in the food, clothing and miscellaneous groups, while the fall in the Aurangabad index was due to a fall in the food group.

The National Chemical Laboratory, Poona, has worked out a new process to produce Vitamin 'C' (Ascorbic Acid) in India. Pilot plant work was carried out on a 10-lb. scale and the results obtained in laboratory experiments were found to be reproducible. The yield of Vitamin 'C' from sorbitol was approximately 42-46 per cent. of theory. The final product was found to conform to the specifications of the Indian, British and U.S. Pharmacopoeias. Imported D-sorbitol is the starting material for the synthesis. Pilot plant work on the preparation of sorbitol from glucose which is indigenously available is in progress. The process is based on the original Reichstein procedure which has been modified to improve the conversion yields. During the first 10 months of 1957, India imported 63,133 lbs. of Vitamin 'C'. On this basis annual requirements of Vitamin 'C' may be estimated at about 75,000 lbs.

• • • •

From Abroad

The U.S. Government has lent the Indonesian Government $8 million to build new roads in Sumatra.

The Belgian Bank rate was reduced by ½ per cent. to 3½ per cent. with effect from the 3rd inst. This follows the earlier reduction in June when the rate was cut from 4½ per cent. to 4 per cent.

The Pakistan Government is reported to have approved of a Rs. 1-crore plan to develop Karachi's airport, in order to enable it to take in giant jet airliners. The scheme includes construction of a 10,500-feet long runway at the airport.

An agreement which seeks to give the Japanese Arabian Oil Company offshore oilrights in an area between Kuwait and Saudi Arabia was signed by the Company's President Mr. Taro Yamashita and by Kuwait's ruler, Sheikh Amdulla al Salim al Subah, on the 5th inst.

The estimated number of families in Canada's ten provinces increased by nearly 4 per cent. in 1957 to 3,849,000. This was more than 17 per cent. larger than the 1951 total of 3,282,400. The average family size in 1957 was 3.8 persons, unchanged from the preceding year but slightly larger than the 1951 average of 3.7.

A permanent exhibition organised by the British Institute of Packaging was officially opened in London on the 1st inst. The exhibits include aluminium foil and collapsible tubes, moulding powder with special heat-resisting properties, automatic vacuum forming machines for the high speed production of containers, strapping machines and boxes in cardboard and plywood.

The Port of Colombo will be nationalised with effect from 1st August 1958, in accordance with the decision of Parliament. Known as the Government Port Cargo Corporation, the new authority will start functioning on that day. Port facilities will be closed for private operators from the 25th inst., to enable the Corporation to take over charge from them.

Forty trade unions in the shipbuilding and ship repairing industries in Britain have put forward a plea for a substantial increase in wages for 250,000 manual workers. The employers are expected to refer the plea to local associations for consideration. This demand follows a similar claim presented to engineering employers for about three million workers.

Sales in retail stores in the U.S. during May 1958 are estimated at $17,400 million which are slightly above the previous month and about the same as in May of 1957. Sales of durable goods increased by one per cent. A more moderate change was noted in the non-durable goods category. Retailers' inventories at the end of May are estimated at $24,400 million, about the same as a year before. Manufacturing and trade inventories at the end of May are placed at a book value of $87,200 million, about $3,800 million lower than at the close of May 1957.

The Council of the O.E.E.C. has approved of the renewal of the European Payments Union for a further year from 30th June 1958. Accordingly, the creditor countries among the 17 members of the O.E.E.C. will continue to offer facilities for settlement of 25 per cent. of monthly deficits in credit, and the debtor will continue to pay 75 per cent. of monthly deficits in gold. Meanwhile, the Union is understood to have deferred, for the time being, a decision on the renewal of the French special credit facilities and the E.P.U. loan to France.

A new motor accessory announced by a British firm consists of what is virtually a miniature pressure gauge mounted in a valve cap. With this accessory, the motorist can pump his tyres to the correct pressure, then replace his four valve caps with four of the new devices. A red plunger in the cap pops out to indicate that the pressure is correct but, should the pressure fall 3 lbs. or more, the plunger sinks in, indicating at a glance that the pressure is too low. The whole device is no wider than an ordinary valve cap, is less than one inch long, and is no more cumbersome than the ordinary cap. It is made for a variety of pressures to suit all makes of car.

The Steel Corporation of Pakistan, which is expected to commence operations in May 1959, will issue $1,920,000 in the form of ordinary shares and secure $840,000 through short-term bank loans. The German firm which supplies the new mill and technical advisers has agreed to accept partial payment for the equipment by taking shares in the company. The International Finance Corporation, Washington, has decided to invest $630,000 in the Corporation. The I.F.C's investment will be in 7 per cent. 10-year notes maturing on 30th September 1968. The Corporation will also receive additional contingent interest, payable in rupees, depending on earnings, and an option to subscribe at par to ordinary shares of the Steel Corporation to the extent of 50 per cent. of its investment.

Fourteen shipping companies, including Japanese, American, British and Dutch lines, have constituted themselves into a conference for the carriage of cargo from Singapore and Malayan ports to the West Coast of India, Bombay, Karachi, Persian Gulf ports and ports via Bombay. This new conference will offer a 10 per cent. deferred rebate to those shippers who limit their shipments to vessels owned by members of the conference. The members of the new conference are: American President Lines, Blue Funnel Line, British India Steam Navigation, Everett Star Line, Hoegh Line, Japan India-Pakistan Line, Java Pacific Line, Maersk Line, Mitsui Steamship Company, Nippon Yusen Kaisha, Osaka Shoesen Kaisha, Peninsular and Oriental Steam Navigation Company, Royal Interocean Lines and Yamashita Kisen Kaisha.

A new British duplicating machine, capable of reproducing large plans, and described as the first of its kind ever produced, is likely to win big export orders, especially from the clothing industry. Although it will be useful to any manufacturer who has to produce large plans, it is expected to be in particular demand in the clothing industry, where very long, wide, and identical patterns are repeatedly used. The first major export order has come from the Cutting Room Appliance Corp., of New York, which sells to the U.S. and Canadian clothing industries. The machine is known as a continuous duplicator, and the present model takes a copy up to 38 inch wide and of any length. The conventional methods of preproducing plans are by hand tracing, carbon paper, or photographic systems. The new machine is basically a spirit duplicator; mechanically operated, it is simple to use, cheap to run, and can produce about 50 copies of any plan as required.

PERSONAL

MR. Vishnu Sahay, I.C.S., has been appointed Secretary to the Planning Commission, in addition to his duties as Cabinet Secretary.

Mr. Charles S. Thomas has been appointed President and member of the Board of Directors of Trans World Airlines Inc. *vice* Mr. Warren Lee Pierson.

Mr. Harold G. Tufty, a former journalist and American Information Officer in Madras from 1955 to March 1958, has assumed duties as Information Officer of the Office of the U.S.I.S., Bombay, from this week.

Dr. Helmut Wakeham, consultant to the Director of the Ahmedabad Textile Industry's Research Association (A.T.I.R.A.), has left for the United States after completing a two-year assignment under the U.S. Technical Co-operation Mission.

Commodore Lele will succeed Mr. C. R. Reddi as the Managing Director of Hindustan Shipyard, Visakhapatnam. Mr. Reddi is expected to be appointed Port Administrator *vice* Mr. S. Nanjundaiah, whose term has been extended twice and who is likely to retire shortly.

Sir Henry Spurrier, Chairman and Managing Director of Messrs. Leyland Motors Ltd., and Mr. A. E. Pearce, a Director of Qualeart Ltd., Derby, have been appointed part-time members of the British Iron and Steel Board with effect from 1st June 1958. Sir Henry has relinquished the chairmanship of Messrs. Scammel Lorries Ltd. He is succeeded by Mr. Walter West, formerly Vice-Chairman and Deputy Managing Director of the Company.

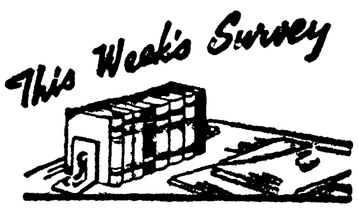
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 15th July

Japanese Competition in India

Japanese competition in India is so keen and extends to so wide a field that the Government of India while perfectly willing to do its best to remove all difficulties should be wary enough not to take any step which might adversely affect the position of any of the Indian industries injured, some of which, it is no exaggeration to say, are threatened with extinction by exceptional external competition. Let us refer to Japanese competition in hosiery. The hosiery manufacturing industry of India, considered today as one of the most progressive branches of the textile industry, involves an investment of about three crores of rupees, finding employment for about 25,000 workmen. The productive capacity of it—roughly 34 lakh dozens per year—has been severely curtailed by the recent dumping of Japanese hosiery brought about by the abnormal depreciation in the rate of exchange. This has hit the industry so hard that 75 per cent. of the machinery has become idle, while Japanese imports of cotton underwear to India has increased by 97 per cent. If Japan realises the essentially protective nature of India's tariff policy and is guided by it in the negotiations at Simla next month, then the visit of the delegation will be beneficial to both countries.



RIHAND DAM

THE verdict on the Rihand dam, given by the U.P. Government's Economy Committee, is disturbing to a degree. Criticising the upward revision of the estimated cost of the scheme by Rs. 11 crores to Rs. 46 crores, the Committee observes that even now the increase in the cost could be reduced by half through suitable regulation of spending. It questions the wisdom of the Irrigation Department's arrangement under which it maintains a large team of officers and supervisors though the work has been entrusted to a "very responsible firm." As an instance of wasteful expenditure, it has cited the maintenance of a fleet of 500 heavy vehicles and 109 cars by the Department. It points out that the estimated annual income of Rs. 2.2 crores from the dam would hardly suffice payment of interest of 2 per cent. on the proposed capital investment even after providing only 3 per cent. thereon by way of depreciation. In order to ward off this eventuality, the Power Department would be compelled to increase the rates for supply of power. It adds: "The outcome will be that our power supply would be very expensive, rather uneconomical, thereby defeating the object of construction of the dam, that is, the supply of cheap power."

All this must be very disconcerting to those who look forward to playing a part in the industrialisation of the Rihand region. It must be remembered that the Rihand project envisages the setting up of five generating sets, each of 50,000 kw. capacity. Large-scale industrial development, including the production of aluminium, paper, textiles, fertilisers and plastics is expected to take place in the region covered by the dam. But industrial enterprises, planned to be set up in the region, cannot possibly work successfully, if the cost of power goes up. This is true particularly of certain industries which are large consumers of power and in which power figures prominently as an element of cost. For instance, aluminium, as is well known, is an industry, the economics of which is determined by the availability of cheap power. It would appear that a leading Indian House has its blueprint ready for the establishment of an aluminium enterprise in the Rihand region. The management's plans are in an advanced stage of execution. One can imagine the plight of a management which, after it has made all arrangements for establishing an enterprise by taking into account the availability of cheap power, finds that power costs are likely to go up. Clearly, if the Rihand project is to fulfil the high hopes of its sponsors and also of those who have looked forward to the utilisation of its facilities for industrialisation of the region, the authorities should ensure that the cost of supply of power is kept at a minimum. Indeed, this applies to all multi-purpose projects, the investment on which would be a national asset only if they made available water and power facilities, the basis of agriculture and industry, at an economic price.

ROLE OF BUSINESS MEN

If Mr. P. N. Talukdar, the retiring President of the Bengal National Chamber of Commerce and Industry, felt constrained to break the traditional reticence of the businessman and do some plain speaking, it was not, as Mr. Morarji Desai had alleged, because business men in this country were congenitally prone to make complaints, but because he felt that the commercial community he represented was more sinned against and the most misunderstood section of the people. He was not indulging in puerile naivete when he observed that, despite all that was said to the contrary, it appeared that the undercurrent of feeling was still there, in both administrative and political circles, that the role assigned to the private sector in the planned frame was not so much an integral part of it, standing on its own merits, as a mere concession, grudgingly made under sheer pressure of exigencies. Business men, from this angle, appear to continue to exist only through mere sufferance. Yet they are expected not only to exist but to push on vigorously towards the realisation of the targets assigned to them. While the political air has been blowing hot and cold upon them, it has also been their experience, at times, to be patted on the back for the fulfilment of their task and even applauded for their role as being an important one. The psychological background of the current atmosphere, as Mr. Talukdar rightly pointed out, is hardly one over which the Indian mercantile community could feel either fully reassured or satisfied. Indeed, Indian business men today have a sore feeling that their status and prestige as responsible citizens of India are being made to suffer, though they have been bearing the greatest strain and shouldering the heaviest burden in the task of promoting economic development of the country. A reorientation of the outlook in respect of the commercial community, based on mutual respect and confidence, as the President pointed out, is overdue if business men are to give their best towards the building up of the country.

Mr. Talukdar also drew the attention of the Government to the necessity of making certain suitable changes in its actions and policies. He thus underlined the need for tackling the economic problems of the country with a restrained enthusiasm and a more realistic appraisal of the situation. He pointed out that the utmost limit of the taxable capacity had already been reached and that there was a strong case for scaling down the existing high rates of taxation, nay, for even abolishing some of the novel Kaldorian experiments in taxation introduced during the last two years.

As the cumulative effect of the Government's fiscal policy based on the elaborate and all-comprehensive tax structure, private industry in India found itself in a very unenviable position. It was constrained to live constantly on aids and loans from Government and semi-Government sources, largely because the internal capital market was now practically under Government control and because possibilities of self-financing had been severely restricted by an unprecedented range of new levies and limitations on corporate enterprise. This policy of the Government, Mr. Talukdar maintained, was at least partly responsible for the inability of corporate enterprises to tap other sources of development finance. He, therefore, felt that the approach of the Government to the problem of development finance called for re-examination. The potentiality of development through taxation appeared to have exhausted itself. The law of diminishing returns, he pointed out, applied as much to the field of taxation as elsewhere and higher and higher rates of taxation could not bring proportionately greater and greater yields. He, therefore, strongly urged that Governmental thinking on Plan finance must of necessity adjust itself to this basic fact.

Emphasising the need for a stable industrial policy, such as would raise Government attitude towards nationalisation above all doubts and misgivings, Mr. Talukdar said that, though the industrial policy statement did much to clear misunderstandings, it still left much in the region of the undefined. Private enterprise could not certainly settle down to constructive work with the necessary zeal and confidence so long as the Damocles' sword of nationalisation hung over its head. The issue recently came to the fore following the discussions on the investment policy of the Life Insurance Corporation. Although the Prime Minister, Mr. Nehru, had given the assurance that the Government had no intention of nationalising industries by "back-stairs," he stated that the L.I.C. had to take into consideration the broad policies of the Government. This, according to Mr. Talukdar, left the position rather vague and over which those engaged in private industry could not but feel concerned. He feared, not without reason, that the Corporation might very well tend to develop into a monitor of private industries with the vast investment resources at its disposal. Such a trend, he rightly emphasised, could hardly be justified at present, as Government had ample powers under the Company Law to regulate joint-stock enterprises. The erstwhile President of the Bengal National Chamber also voiced the misgivings of business men about the expanding activities of the State Trading Corporation. The Corporation, he said, had now gone beyond its original purpose of establishing trade links with communist countries and had been actually displacing long-established channels of trade. Rumours about further extension of the field of activity of the S.T.C. had created a sense of uncertainty and insecurity among the established traders. He, therefore, urged for a clear demarcation of the fields of activity of the Corporation.

Referring to industrial relations, Mr. Talukdar averred that they had deteriorated considerably in recent months, as was evident from the spate of strikes in various industries and even essential services. It has not been proved beyond doubt that industrial unrest was often the result not so much of the conditions of service, the standard of wages and other amenities, but of the anxiety of political parties to gain control over the labour movement. Underlining the need for a stable wage policy, he added that frequent revisions of the wage structure, whether as a result of industrial awards or otherwise, had as much disruptive effect on production as increases in taxation. It must be recognised that increases in wages, if they were to mean real additions to purchasing power in terms of goods and services, must come through increased productivity. Otherwise, if higher wages only meant higher costs, which were passed on to consumers in the form of higher prices, and if such higher prices became the basis for fresh demands for higher wages, one would be only witnessing the spectacle of wages and prices chasing each other in a vicious spiral and nobody would be the better as a result. An industrial truce, as he rightly stressed, is one of the essential stabilisers that the economy needs at the present stage of its development.

CONCESSIONAL RETURN TICKETS

During the period from July 15, 1958 to September 15, 1958 (both days inclusive), concessional return tickets for I, II and III Class Passengers at 1½ single journey fares will be issued both in local and through booking subject to the following conditions :—

Return tickets will be issued between stations over 300 miles apart. In the case of stations situated short of 301 miles, when two single journey fares are more than the return fare for 301 miles, return tickets will be issued charging fares as for 301 miles.

The period of availability of return tickets will be as under and will be reckoned from the midnight of the date of issue :—

301 — 500 miles	.. ..	20 days
501 — 750 „	.. ..	25 „
751 and above	.. ..	30 „

When advance booking is permissible, the period of availability will be calculated from the midnight of the day on which the outward journey is to be commenced. The period of availability will not be extended on any account nor refund of fare on any unused portion of a ticket allowed.

The return tickets will not, however, under any circumstances, be available for completion of return journey after the midnight of September 30, 1958.

No break of journey will be permitted on the return journey, but break of journey will be allowed on the outward journey according to the normal rules as for holders of ordinary single journey tickets.

The return halves of the concessional return tickets should be dated before commencement of the return journey in any of the following ways :—

(a) At the booking window by the booking clerk by dating press.

(b) By the ticket collector at the gate in ink or in indelible pencil.

(c) By the passenger himself in ink or indelible pencil.

Passengers holding return halves without being so dated will be charged as under :—

(1) Difference between two single journey fares for the entire distance and the concessional fare already paid

PLUS

(2) Excess charges equal to the amount due under item (1) above subject to a maximum of Rs. 5 per ticket. Children over 3 years and under 12 years of age will be charged half the concessional fare.

Full particulars can be had from the Station Masters concerned.

CENTRAL AND WESTERN RAILWAYS

TAX BURDEN AND ECONOMIC DEMOCRACY

Few would remain unimpressed by the way in which Mr. K. R. P. Shroff, President of the Stock Exchange, Bombay, surveyed the economic trends in India when he addressed the annual general meeting of the Exchange held on Friday last week. Just as a medical expert correctly diagnoses the nature of a disease, Mr. Shroff very accurately described what exactly was wrong with the body economic. The array of facts and figures which he cited vividly brings out how the shortsighted policy of piling up taxes, duties and imports has made private saving (personal and corporate) well-nigh impossible. Such a decline in the rate of savings, as he rightly declared, has reduced the capital market to a shadow, accelerated the fall in equity prices, and contributed in a large measure to the stagnation of the investment market. How else can one explain the investment slump with its serious repercussions on the long-term capital market?

The all-India average index of variable dividend industrial securities (base: 1949-50=100) for the week ended 28th June 1958 stood at 99.6—it was as low as 95.9 in January 1958—as against the peak of 127.4 in March 1957. The setback in new issue activity is reflected in the marked drop in the capital issues sanctioned from Rs. 230 crores in 1956 to Rs. 153 crores in 1957. During 1957, big flotations were few and far between, and many of these were by existing concerns which issued "right" shares at relatively low premia in order to make the offers attractive to investors.

Mr. Shroff declared that the weight of new taxes had been back-breaking and that, as a result, the margin of savings had narrowed down to the point of extinction—in not a few cases actual dissaving had taken place—the propensity of the individual to save and invest badly damaged, and the capacity of joint-stock enterprise for self-financing through ploughing back of profits adversely affected. The total five-year yield of the tax measures so far adopted by the Central Government is estimated at Rs. 725 crores, as against the maximum limit of additional taxation amounting to Rs. 225 crores originally indicated by the Planning Commission. This is bad enough. But what is worse is that a large part of the tax effort already made, as the Commission itself frankly admits, has been absorbed by defence, non-development expenditure and development expenditure outside the Plan. In fact, over the entire Plan period, the massive taxation measures now in force are expected to make only a negligible contribution of Rs. 45 crores towards covering the original gap of Rs. 400 crores in resources. Drawing attention to this aspect, Mr. Shroff made special mention of the lag in resources and observed:

"The lag in resources has necessitated heavy deficit financing and, notwithstanding curtailment of Plan outlays in certain directions, it is proposed that further measures be taken to raise additional resources. In reality, the cost of the Plan has gone up considerably though the financial ceiling remains at Rs. 4,800 crores. With the foreign exchange reserves on the verge of exhaustion and an extremely tight import policy in operation, no latitude is left for any manœuvring on the foreign exchange front. Admitting that the scope for fresh taxation is strictly limited, the Planning Commission has nevertheless suggested additional taxation in the rest of the second Plan period to the extent of Rs. 100 crores. And so the rake's progress continues. Taxation beyond a point enters directly into costs and prices and, instead of damping inflation, it gives another twist to the spiral, with the result that each fresh bout of taxation widens, instead of narrowing, the uncovered gap. Ultimately, the rise in costs and prices reduces the size of the Plan to the limits of the available resources, but the incidence is spread most unevenly over the different sections of the community, and this is a major cause of dislocation and distress."

No impartial observer will disagree with these observations of Mr. Shroff, as also with his statement that "concentration of economic

4¼ PER CENT
BOMBAY STATE DEVELOPMENT LOAN, 1970
ISSUED AT PAR
AND
4¼ PER CENT
BOMBAY STATE DEVELOPMENT LOAN, 1971
ISSUED AT Rs. 99.75 PER CENT

OPEN ON THE 15TH JULY 1958

The loans will be closed as soon as total amount of approximately Rs. 1000 lakhs has been subscribed, and in any case not later than the close of business on the 19th July 1958.

The applications for the loans will be received at—

(a) the office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore

(b) the branches of the State Bank of India within the State of Bombay except at Bombay and Nagpur and at places mentioned in (c) below

(c) the branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay

(d) the Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks

(e) Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE RECEIVING OFFICES MENTIONED ABOVE.

DELEGATION OF FINANCIAL POWERS

SIGNIFICANCE OF THE NEW REFORM

From Our Special Correspondent

NEW DELHI, *8th July*

DELHI LETTER

THE actual outlay, it may be recalled, on account of the Central and State Plans together in 1956-57 was Rs. 670 crores, as against the budgeted provision of Rs. 830 crores. In 1957-58, it was Rs. 845 crores, as against the budgeted provision of Rs. 965 crores. The shortfall in Plan expenditures was there in spite of heavy additional taxation which, it was thought, the initial budget provision warranted. It may be felt that this shortfall was a blessing in disguise, for, otherwise, deficit financing by the Centre and the States in the said two years might well have reached the enormous figure of Rs. 1,000 crores. But that is not how the Comptroller and Auditor General would take it to be. In his view—expressed in an appendix to the Audit Report (civil), 1955—"unspent appropriations may result in immobilising resources which could, with advantage, be utilised on projects other than those included in the year's budget estimates, or in accelerating some projects capable of more speedy execution." This view may well be repeated with still greater force as far as the first two years of the second Plan are concerned.

Resources

Such a view would assume that adequate resources were in fact available but that appropriations were allowed, for some reason or other, to lapse. If this assumption is supposed to be valid, how can such lapses of appropriations be brought within reasonable dimensions? The Report of the Public Accounts Committee (1957-58) on Budget Estimates and Financial Control recommended as follows:

"*Ad-hoc* provisions, in the absence of full detailed estimates (for Plan schemes), cannot be encouraged. Left with a choice between *ad-hoc* provision of this nature and no provision at all in the beginning but supplementary demand late in the year, the Committee have suggested the need of making a small provision enough to cover the expenses of survey, preparation of the detailed estimates and preliminary expenses. Government can, in the course of the year, as a result of this preparatory work, come before Parliament for a supplementary grant. This will ensure that no project is taken up for execution unless its details have been worked out fully."

This would be a more straightforward way of doing things and have the effect of eliminating or at least reducing the initial inflation in budget estimates on account of schemes which may not, after all, be actually taken up for execution in the budget year for lack of definite blueprints. The Public Accounts Committee's recommendation, it is gratifying to note, has now been accepted by the Government of India. According to a Press note, just issued by the Department of Expenditure of the Ministry of Finance, no lump-sum provision will be entered in the budget for major schemes for which adequate details are not available. Where a new scheme is definitely to be taken up, for which details enabling budget provision are not available, such budget provision will be limited to the requirements for preliminary expenses and initial outlay such as collection of material, skeleton staff, etc. After further details of the scheme are available, provision will be made in supplementary estimates and administrative Ministries will then be free to sanction expenditure to individual schemes upto a monetary limit of Rs. 50 lakhs. Schemes whose cost exceeds this limit will have to be referred to the Ministry of Finance for sanction.

Appropriations

Quite apart from the practice (now done away with) of asking for *ad-hoc* lump provisions, there has been the practice of asking for large appropriations for big projects included in the Budget on the basis of the mere expectations of the Ministries concerned. The Public Accounts Committee had recommended that, in such cases, the Finance Ministry should be satisfied on the basis of details available that there was reasonable expectation of expenditure materialising to the extent proposed, before sums were provided in the budget estimates. The relevant Government decision, just taken, is that, in the case of very big projects, approval will be accorded in stages for different sections of a project or with reference to changing conditions and administrative Ministries will then be free to sanction expenditure to individual schemes, again subject to a limit of Rs. 50 lakhs. Here, again, schemes over this limit will have to be referred to the Ministry of Finance for sanction.

The Government's decisions, it is claimed, involve delegation to the administrative Ministries of greater financial powers which have so far been exercised by the Ministry of Finance. These decisions, it is further stated, have been taken mainly with a view to facilitating the execution of Plan schemes and removing administrative delays. But the decisions would also mean that, by doing away with the practice of large appropriations or *ad-hoc* lump provisions where full details are not available, they could bring about the abandonment or postponement of some schemes and thus bring the budget estimates in line with the estimated availability of resources and the feasibility of executing approved projects. It would thus appear that the Finance Ministry's hands have been strengthened in so far as budget estimates are concerned, while, at the same time, the hands of the administrative Ministries have also been strengthened through a delegation of financial powers in so far as the actual execution of approved schemes is concerned, although such delegated powers are limited in terms of a monetary ceiling.

Salutary Condition

Even this limited delegation of financial powers is further limited by a salutary condition that, in the case of provisions for pay of officers and establishment, administrative Ministries cannot exceed the budget without the approval of the Finance Ministry. The Finance Ministry's approval cannot, of course, be taken for granted because its Economy Division and the Organisation and Methods Division of the Ministry of Home Affairs would come into the picture.

Two other salutary restrictions form part of the Government's decision. The first restriction is that administrative Ministries will not have the power to reappropriate between subheads under which provision is made for individual schemes and projects without the concurrence of the Finance Ministry. And the second restriction is that the Ministries will not have power to create posts carrying pay above a specified limit, or to revise scales of pay without prior concurrence of the Finance Ministry. The net result of the present reform is that detailed expenditure control, after the budget has been sanctioned, will no longer be a part of the function of the Department of Expenditure of the Ministry of Finance. Otherwise, the powers of this Department have been strengthened and streamlined.

SURVEY

(Concluded from previous page)

power by accumulation of investments whether in the hands of a few statutory monopolies or in the person of the State involves consequences which are no less dangerous in their ultimate significance. The nation's economic progress, as the Stock Exchange President rightly averred, is substantially governed by the productive flow of capital into joint-stock enterprise, the most efficient form of organisation for large-scale production. "Stocks, shares and debentures," to quote Mr. Shroff again, "are titles to joint-stock property and represent the most perfect form of wealth for mobilising and pooling together the savings of the small and the big in a common endeavour." It is needless to say that, the broader the distribution of stocks, shares and debentures, the more broadbased and diversified is the ownership of the means of production. If, therefore, the economic system of India is not to degenerate into State capitalism of one type or another but grow into a genuine economic democracy, the trend must be, as Mr. Shroff very pertinently stressed, for democratic ownership of corporate wealth and widespread ownership of stocks, shares and debentures. It is to be hoped that the powers-that-be will so reorient their economic policies as to ensure such a trend.

INDUSTRIAL VIEWPOINT

RESULTS OF F.B.I. SURVEY

From Our Own Correspondent

LONDON, *5th July*

LONDON LETTER

THE Federation of British Industries has just recently published the results of the replies to a questionnaire it put out to over 500 of its members about their state of business at the end of May. Over 400 firms of every sort and size have replied, and, in the assessment of these replies, one must bear in mind that the small firms and the large firms both count exactly the same. Thus, if a firm with 10,000 employees reports that new orders are down, and another firm with 200 employees reports that they are up, then these two firms will, in the F.B.I's assessment, cancel each other out. Nevertheless, as a broad picture of how industry sees the present state of trade, the survey is quite interesting. Briefly, the position seems to be that, whereas during the winter months industrial activity was going down, in the three months to the end of May it has been marking time. In the earlier period, 45 per cent. of the firms reported that new orders were down and in the later period 41 per cent. so reported. On the other hand, in the earlier period, the highest proportion of firms reported that output was up and, in the later period, the highest proportion reported that there was no change. As regards the balance between home and export trade over the past nine months, there has again been no significant change and the numbers employed in over 50 per cent. of the cases also remains the same. The highest proportion of firms also report that profit margins are down, but more report that in the earlier period than the later one.

Output and Capacity

The F.B.I. also attempted to assess the relation between current industrial output and capacity, but here they hit a difficulty which has existed ever since the early days of the war when Government Departments wished to discover what surplus capacity firms had. The difficulty is that capacity is often related to the number of employees available and the type of worn to be done. A firm can report that it is working at full capacity when its machines are fully occupied but it might find that it can still take on additional orders by working overtime. Moreover, there is an unconscious bias in a progressive firm to assume that it is working below capacity and could always do more. So, when the F.B.I. enquired of its members what their present level of output was in relation to capacity, it wisely decided to leave each firm to make its own definition of those terms. It is not surprising that the general assessment by industry was that it could do more work if more business was available!

But another special question was even more interesting. It asked whether the business felt more or less optimistic about the general economic situation than it did three months ago. Again, the highest number of replies came from the firms that were neither more nor less optimistic than they were three months ago. But a third of the firms were more pessimistic, and only about a fifth were more optimistic. So from this one would conclude that, while firms considered their general level of activity was much the same now as it was three months ago, they were inclined to be rather more pessimistic now. It does not, of course, follow that that is, indeed, the trend of business.

Capital Authorisations

More significant is the fact that about half the firms report that their proposed capital expenditure authorisations are about the same now as earlier in the year, both in respect of building and plant. But it is interesting to notice that a rather higher proportion of firms have got higher capital authorisation and presumably will spend more on investment next year. This does not accord with the general thinking that the outlook is more pessimistic!

Against this one must note that about half the firms found their order books were lower now than they were three months ago, but, since they had also succeeded in reducing their stocks of raw materials and keeping their work in progress down, it meant they had a healthy back-

AMERICAN LETTER

PRESIDENT UNDER HEAVY STRAIN

MORE CHEERFUL NEWS ON ECONOMIC TRENDS

From Our Special Correspondent

NEW YORK, *1st July*

THE outlook for the United States is not only being debated, but it is debatable. Not that anything serious is going to happen to the U.S. economy. It will run along at a pace which is unsatisfactory to the relatively few unemployed and highly satisfactory to others. The most debatable element in the U.S. picture today is Washington leadership, or rather the lack of it. As intimated in previous despatches, this state of affairs has had economic and political repercussions.

President Eisenhower's luck seems to have run out. Insiders concede that, after his heart attack during the first term of the Chief Executive, he had every intention to go to his farm in Virginia and forget politics. Then, however, the President was at the height of popular adulation. Various powerful groups, including his advisers headed by Mr. Sherman Adams persuaded him to change his mind.

Since that time, the Administration had three bad breaks. The first was Sputnik which undermined confidence in the defence programme, justly or otherwise. The second was the business slump. In this area, no Government official has yet said whether Washington is prepared to fight the recession or to fight the inevitable inflation of the future. The only statement by Cabinet members, in various versions, has been "if we wait long enough, everything will straighten itself out."

The third and the worst blow to the President has been the affair Adams. It is by no means settled. The popular feeling is that, regardless of the facts and/or allegations, Mr. Adams' usefulness has been destroyed and he should have moved out of the White House weeks ago. The President's pathetic explanation is "I need him."

He probably never said a truer word. All his military life, Mr. Eisenhower depended on a chief of staff, or the equivalent thereof. He was picked to head the Allied invasion of Europe for his ability to pick able chiefs of staff in all fields and for his diplomacy and personality, not necessarily for his leadership.

The President probably would be quite helpless without Sherman Adams next to him. The most seasoned observers of the Washington scene assert that no President ever depended so much on any subordinate as Mr. Eisenhower does on Mr. Adams. He needs him and he seems to be unable to cope with the realities of the situation as the public sees them. The charges by Mr. Fox may be absurd lies and falsehoods, but the esteem of Mr. Adams has been destroyed just the same.

The fourth crisis the Eisenhower Administration is facing is the one in Lebanon. The riots may easily turn into open hostilities, if not a major war for which the U.S. would be woefully unprepared at this time. Under such accumulating strain, the President's health may not stand up much longer. Thus, worse rather than better news may be expected so far as official Washington is concerned. As one leading correspondent put it, the U.S. Government "is in disarray."

Economically, the news has been more cheerful. In the first half of the year, the stock market has shown a much better recovery than business, generally. June was the fourth month this year to have shown a gain in stocks, more specifically, stock prices.

Forecasts are still far apart. In the heavy industries, notably steel, no sizable upturn is expected this year, although orders are increasing gradually. There is much caution in the air, though, regarding prices. Although steel wages are going up automatically, effective 1st July, U.S. Steel, the pace setter, is holding back on price increases, but for how long?

The National Association of Purchasing Agents, in its monthly report, does not anticipate any major improvement in business until late this year or early in 1959. More cheerful opinions ventured are that inventories are a lessening problem as well as being an important factor in holding the price line; that employment remains stable in various industries and, through June, production and new orders were better than in any previous month. A poll of reporting agents showed that last month 39 per cent. of them reported increased orders.

There are still many plus signs in the U.S. economy. The nation's food bill this year will amount to a whopping $79,000 million, as compared with $75,000 million in 1957. The supermarkets alone have annual sales of $25,000 million. Although these food outlets are food retailing specialists, they handle also 10 per cent. of non-edible items. This increase is not inflationary. Unit sales, as a matter of fact, are higher, owing to lower selling prices on some items.

Personal incomes in the U.S. stood at the annual rate of $344,300 million in June 1958, as compared with $343,200 million in June, 1957. Construction activity is also expanding. Building permits issued last month in 217 cities aggregated $647.8 million, against $560.6 million in the like 1957 period. About 3 per cent. has to be deducted as an allowance for price increases.

The latest employment figures are slightly over 64 million, as compared with 65.2 million employed a year ago. Unemployment was given at 4.9 million, against 2.7 million 12 months previously. Most of that is in the heavy industries, such as steel, automobiles and appliances.

Farmers in the U.S. are sitting on top of the world because of higher prices. Western ranchers, waxing prosperous on the cattle boom, refer to the recession as "that thing back East." Even in the West, prosperity and gloom live next to each other. The gloom is apparent in the mining regions adjacent to the prosperous mining areas. If one gets away from mines and factories, most farmers are living better than they did practically any time since the last war.

Consumers of whatever walk of life are simply scared, owing to the lack of leadership in Washington and by the recession talk which is widely played by the newspapers and other media of communication. Auto dealers are, of course, still in the dumps. As I said in previous despatches, the industry is largely to blame for this state of affairs. I do believe that automotive management has lost touch with what the public really wants. The average American car is too expensive to buy and too expensive to operate. That is what the public is saying by staying away from the automobile showrooms.

There are no signs that industrial expenditures for plant and equipment will increase materially in the near future. In other words, they will remain substantially below that of previous years. But, in this area, outlays are still quite sizable.

To sum up—the U.S. economy is still quite strong despite distress signs in some directions. The real dangers are political, both domestic and international. It is a psychological rather than a deep-rooted economic crisis, since the basic forward momentum continues, even though it is at a slower pace than in previous years. A full-fledged war over control of Middle Eastern oil without which Europe could hardly exist, could provide a dramatic turning point in world affairs. But will it happen? That is as big an enigma as the situation in the United States.—*All Rights Reserved.*

DON'T THEY LOOK CUTE ?

DON'T they look cute in their bright, gay dresses? In an era of mounting prices everywhere, Daddy is happy that RAYON, the wonder fabric that looks and feels like silk, costs so little.

We were the first to set up a plant in India for manufacturing rayon in 1950. Our production is constantly on the increase and it is helping to keep thousands of weaving establishments humming all the year round in many towns and villages of India. We now produce yarn in finer and bleached varieties, and also make available *coloured yarn* for the first time in our country. In pioneering the rayon industry in India and in fostering these new developments, we are happy that we continue to play a vital role in the developing economy of our country.

TR606

CREDIT RESTRICTIONS RELAXED IN U.K.

SPECIAL DEPOSIT SCHEME TO BE INTRODUCED

CLOSE on the heels of successive cuts in Bank rate and the grant of larger initial allowances to industries, the British Government took last week another step calculated to promote larger investments in industries by relaxing to a limited extent the control on borrowing through banks and capital market. The two main changes are: (1) the abolition of the ceiling on total bank advances by the end of this month and (2) the modification of the capital issues control through an amendment of the Control on Borrowing Order. Announcing these measures in the House of Commons, Mr. Heathcoat Amory, the Chancellor of the Exchequer, emphasised that the Government was determined not to return to inflationary conditions, but said it was now clearly right to encourage such sound development as is within the country's capacity.

While abolishing the ceiling on total bank advances, the Government proposes to exercise control on bank advances through normal monetary measures. If, however, these measures were found insufficient to secure the necessary control over the credit system, they will be reinforced by a new arrangement, under which the Bank of England will restrict the liquidity of the banking system by calling for special deposits. It will be recalled that, in September last the then Chancellor of the Exchequer (Mr. Peter Thorneycroft) found it necessary that the average level of bank advances during the subsequent 12 months should be held at the average level for the preceding 12 months. The banks gave the assurance to comply with the Government's requirement and they have so far stuck to their undertaking. The developments during the last few months have shown that there is a case for gradual relaxation of bank credit control and, accordingly, the present Chancellor has decided to do away with the ceiling on bank credit at the end of this month. He has, however, stressed in his letter to the Governor of the Bank of England, the importance which he attaches, in the present circumstances, "to the provision of credit for export business, whether in the ordinary course of business or through medium-term financing under E.C.G.D. guarantee." He has also reemphasised the hope which he expressed in his Budget statement that "projects for sound development in areas where unemployment is substantially above the average should not be held back by lack of credit or finance."

Temporary Measure

The special deposits scheme, which will be used, if necessary, to reinforce the existing machinery of interest rates and open market operations is, however, only a temporary expedient, pending the recommendations of the Radcliffe Committee. The British Government does not wish to make any permanent changes in the methods of influencing the volume of bank lending till the Committee submits its report. Accordingly, the Chancellor had asked the Governor of the Bank of England (Mr. Cameron Cobbold) to suggest, as a temporary measure, an alternative to the "official requests" frequently made to banks to restrict advances. Recognising the irksome nature of these requests, the Chancellor had stated, in the course of his letter to Mr. Cobbold, as follows:

"Both the Bank of England and the banking organisations have repeatedly impressed upon H.M. Government that the method of 'official requests' made to the banks several times in recent years to restrict total advances, although it has proved efficacious for short periods, hampers the efficient working of the banking system and is thus damaging both to the banks and to the public interest if carried on for too long or too frequently renewed."

The outcome of this request is the special deposits scheme. The broad outline of the scheme contained in Mr. Cobbold's reply to the Chancellor is as follows:

"When it appeared necessary, in support of other monetary measures, to restrict the liquidity of the banking system and thus the ability of the banks to extend credit, the Bank of England would call for special deposits to be made with them by the banks. Such deposits would carry interest based on the current Treasury Bill rate. They would not qualify for inclusion in the banks' liquid assets. There would be provision for partial release by agreement with the Bank of England when justified by special considerations.

"The banks would continue to maintain their usual minimum ratios between liquid assets and total deposits.

"Calls would be made on each group of banks separately, the amount being related to the total gross deposits of each group at a specified date with monthly adjustments to take account of variations in the deposits of each bank. The ratio of a call to total deposits would not necessarily be the same for each group."

Control of Borrowing Order

The second change in the official credit policy is, as stated at the outset, the "adjustments in the scope of the capital issues control" and the consequent amendment by the Treasury of the Control of Borrowing Order. Briefly summarised, the new regulations are:

(1) Control of Borrowing Order is amended to prevent new money being raised outside the control by artificial devices.

(2) Capitalisation issues are exempted from control except those involving issues of redeemable securities.

(3) Exemption limit for borrowing is raised from £10,000 to £50,000.

(4) C.I.C. may now approve investment for production of essential goods and services and exports, and for saving imports and earning foreign exchange even if they are not immediately urgent.

(5) Consent will not be given for borrowing to finance speculative buying of shares, materials and real property.

(6) Approval may be given to applications from investment trusts and unit trusts, with reservations where significant purchases of foreign securities are proposed.

(7) Approval may be given to applications by hire purchase finance companies; to investment in the Commonwealth likely to strengthen the sterling area's balance of payments; and to investment in areas of persistent unemployment in the U.K.

The statement of principles which provided the basic guidance to the Capital Issues Committee was enunciated in September 1951 by Mr. Butler who was the Chancellor of Exchequer then. That guidance has since been modified from time to time by statements and requests by successive Chancellors on specific points reflecting developments in economic and financial policy. While retaining the main principles governing the work of the C.I.C., Mr. Amory, the present Chancellor, has made only one modification, that is in respect of the criterion of urgency. Referring to this, in his letter to the Chairman of the C.I.C., Mr. Amory says:

"I now consider that the Committee can justifiably take a longer view and regard as eligible for consent an application for a purpose which may not be immediately urgent, but which anticipates the future growth of requirements, bearing in mind that a primary objective is to stimulate production of exports, saving of imports and earning of foreign exchange. For the time being I do not consider that the criterion of immediate urgency should be relaxed where one of those elements is not present."

Measures Welcomed

The aforesaid relaxations in credit control were generally anticipated, but the timing of the Chancellor's announcement came as a surprise to the city of London. The relaxation in credit restrictions has been welcomed by industrialists. Commenting on these latest measures, the Federation of British Industries observed that it was encouraged by the Government's view that some expansion was now possible without reviving the dangers of inflation. It was of the view that the particular changes announced were well chosen. The President of the National Union of Manufacturers said that this was excellent news, particularly for the smaller firms which were peculiarly dependent on the banks for their capital and had in many ways borne the main brunt of the credit squeeze.

The members of the House of Commons belonging to all parties also welcomed the relaxation measures, though Mr. Harold Wilson, Opposition member, qualified his reactions by observing that the Government was very slowly responding to the Opposition's pressure to recognise that the problem the Government was facing was not inflation but a recession. Mr. Wilson claimed that the Government had after all conceded the Opposition demand in May 1956 for the introduction of the special deposit scheme. He, however, added that the relaxations had come at a time when industries were working very much below capacity and the removal of the credit restriction was a meaningless gesture. He went on to criticise the Government for not having rescinded two more restrictive measures, namely, the emergency cuts in the nationalised industries' investment programme implemented last September and the abolition of investment allowances.

The relaxation of curbs on bank credit is considered as helpful from the long-term point of view, though no far-reaching changes are expected to take place in the pattern of bank advances in the immediate future. For the demand for bank credit has recorded a marked fall in recent months for two reasons: (1) the high cost of borrowing and (2) the fall in prices which has enabled existing borrowers to manage with smaller loans. To the extent that borrowing had been restricted on account of quantitative controls, the present relaxation may, however, be expected to increase bank lending. Also, the relaxation of qualitative restrictions will enable banks, to a large extent, to choose the type of projects to which they can lend. But barring these, no substantial expansion in bank credit is expected, because the liquidity position of most banks is said to be such that they cannot increase their lendings to any sizable extent without liquidating their gilt-edged investments.

CANADIAN AID ABROAD

Financial assistance made available by Canada to overseas countries from 1945 to 1958 totals more than $4,300 million, according to the Department of External Affairs reports in an addendum to a Reference Paper published in May 1958. More than half of this amount was in outright grants, the remainder in loans which have been partly repaid. Not included in the total to date are contributions for membership assessments in international agencies and programmes. Omitted, for instance, is an amount of $910,000 for Canada's contribution to the United Nations Emergency Force in Egypt for 1957 and 1958. The biggest single amount—$1,567,000,000—represents military aid for Canada's European partners in the North Atlantic Alliance. This figure includes expenditures on military equipment shipped to Europe, the training of European air crew in this country and Canada's share for construction of airfields, communications, oil pipelines and the like in Europe.

The largest single loan, $1,185,000,000, went to the United Kingdom soon after the second World War. Other reconstruction loans were made to Belgium, nationalist China, Czechoslovakia, France, The Netherlands, Indonesia, Norway and Russia. The Soviet Union is among countries which have fully repaid the loans to them.

The most recent reconstruction loan—$1,000,000—was for a Canadian hand in clearance of the Suez Canal after the 1956 military intervention in Egypt by Israel, Britain and France. It was made to the U.N. and has not yet been repaid. Canada has given nearly $200,000,000 to the Colombo Plan for economic development in South and South-East Asia. This does not include $35,000,000 loans for purchase of Canadian wheat and flour by India, Pakistan and Ceylon. Last year, Canada contributed nearly $13,000,000 for transportation and care of Hungarian refugees coming to Canada. The amount in the previous year for this purpose was more than $10,000,000.

CANADA'S GROSS NATIONAL PRODUCT

With a slackening rate of growth in almost all sectors of economic activity, and even a decline in some sectors, Canada's gross national product (G.N.P.) in 1957, at $31.07 billion, was 3.6 per cent. more than in 1956; in both 1955 and 1956, the increase had been 11 per cent. Almost all of the rise in 1957 represented higher income for labour; corporate profits dropped sharply. Farm output declined from $1.5 billion in 1956 to $1.1 billion in 1957, while the value of non-farm production rose by 5 per cent. As final product prices continued to advance—although there was some decline in prices of basic commodities—the total volume of production was unchanged from the previous year.

Private demand for consumer goods and services, especially for non-durables, advanced considerably during the year, but its rate of increase slowed down in the fourth quarter, when the growth of personal income almost ceased, owing to a slight decline in labour income and to lower farm income. The reduced rate of growth in consumer expenditure was more than offset by a marked decline in business spending for machinery and equipment and a reduction of inventories, so that G.N.P. in the fourth quarter was below the third quarter rate. On a year-to-year basis, business expenditures for plant and equipment advanced from $5.2 billion to $5.9 billion, or by 13.5 per cent.; the annual increase in inventories, however, was relatively small.

STERLING AREA RESERVES RISE AGAIN

The gold and dollar reserves of the sterling area rose by $37,000,000 in June and stood at $3,076 million on 30th June, 1958. This was the result after paying $26,500,000 to the European Payments Union (E.P.U.) in respect of May, and $2,500,000 to creditors of the Union in bilateral settlements. On the provisional figures for the month, the United Kingdom had a deficit of £25,000,000 with E.P.U., including £1,900,000 of interest on the accumulated debit balance with the Union. This will fall to be settled in July as to 75 per cent. in gold or dollars, and as to 25 per cent. by increase in the debt to the Union.

It was expected in London that the rise in the reserves in June would not be as great as in previous months, because seasonal pressures were now beginning to move against the pound as a result of the normal increase at this time of year in the Sterling Area's demand for dollars to meet commercial purchases.

ENFORCEMENT OF ANTI-TRUST LAWS IN UNITED STATES—II

By Victor R. Hansen

ASSISTANT ATTORNEY GENERAL OF THE UNITED STATES

[This is the second of two articles describing enforcement of anti-trust laws against illegal business practices in U.S. domestic commerce and international trade. The first article appeared in our last issue, vide page 9—ED.]

ENFORCEMENT of anti-trust laws is a fluid programme that must constantly adapt itself to the requirements of the American economy as it develops and changes. In other words, anti-trust enforcement must keep in tune with the times.

In recent years, the status of our country's scientific research resources has become a matter of deep concern to all Americans. It represents a challenge that will require our best efforts. Therefore, I would like to discuss the role that anti-trust enforcement has played and will continue to play in helping to support our country's research and development resources. Our nation's research and development effort is the product of the combined activities of industry, the universities and the Government. The National Science Foundation estimates that 72 per cent. of our scientific research is performed by industry. Since World War II, industrial research has had an extensive growth. In 1956, total expenditures for industrial research and development reached $6,100 million.

The future promises to bring a rapid acceleration in the growth of America's industrial research. According to the most recent McGraw-Hill survey of business spending plans, industry expects to boost its research and development outlays from the 1957 record of $7,281 million to $8,295 million this year—a 14 per cent. rise—and to $9,850 million by 1961—35 per cent. above the 1957 level. It is expected that at least 12 per cent. of the 1961 sales volume for manufacturing as a whole will be in new products not made in 1957.

Industrial research appears to find its greatest stimulus in the changing nature of competition. The growth of industrial research in the United States has resulted mainly from the growing importance of technological competition to satisfy the needs and wants of the market. Formerly, industries generally competed for markets that seemed clearly limited by consumer's needs, and these needs varied little. Industrial research, therefore, was regarded by industry generally as a luxury which produced occasional innovations. Today, because industrial research has become a deliberate instrument of economic development, industries compete constantly to create new wants and new markets.

A Powerful Competitive Lever

Industrial research has become one of the more important elements in the dynamics of present-day competition. It is becoming increasingly evident that competition, in fact, begins in the laboratory. This kind of competition has been called "the new competition" and "the quiet competition of the laboratory." In the words of an important business executive, it "is no longer like the frosting on a cake but is a critical element in the diet." Industrial research by competitors can challenge the market position of a company by the development of different raw materials and more efficient processes to manufacture the same product, and by the development of different products to perform the same function. Industrial research can also be a powerful competitive lever for growth by producing new products to perform new functions, and by finding new uses for existing products.

Industry's accomplishments in the research and development area have been extensive and varied. But industry could have an even better record of achievement in this area were it not for some restraints imposed upon its growth by companies charged with violations of the anti-trust laws.

In our experience, thus far, we have found very few instances where companies have agreed directly to restrict their research activities. The usual case involves illegal agreements or practices which are designed to bolster the commercial positions of the companies involved in the products which they manufacture and sell. Such agreements or practices, however, may have the effect of eliminating commercial incentives to spend large sums for research or to acquire promising inventions.

If I had to categorise the main areas of anti-trust violations which have disclosed restraints on industrial research, I would list them as patent abuses, division of fields among companies, and monopoly in the manufacture and sale of products. Companies tend to engage in research only in areas which would give them a particular commercial advantage.

Research

There is very little point generally in a firm's doing much in the research area, when, because of illegal agreement or practice, its developments will not be its own, when it cannot fully benefit from the commercialisation of its discoveries, or when it has a monopoly or dominant position in the market. A firm usually cannot benefit from the commercialisation of its research discoveries in a particular area when it has entered into agreements which give to another company the right to exploit its inventions in this area.

The Anti-trust Division has taken definite measures to try to eliminate impediments to technological competition. It is our belief that the removal of such restraints will provide a climate in which our nation's industrial research resources can be expanded. Wherever possible, both in consent decrees and in relief proposals made to the courts, we have sought to strike down the vehicles by which the growth of such research is inhibited. And where illegal monopoly conditions have existed, we have sought to encourage the entry of competitors by positive relief measures in decrees.

These provisions, among other things, have made available to industry the significant patents and worthwhile technology. Again, as a result of anti-trust enforcement in this area, many companies have changed their policies voluntarily with a corresponding beneficial effect on the growth of industrial research. We know from experience that anti-trust enforcement has helped considerably to create an atmosphere which encourages the growth of industrial research and technological competition. We shall continue to devote our enforcement energies toward restraints affecting industrial research. Such an enforcement policy, we hope, will help to protect our research resources, which are fast becoming our most vital national resource.

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, June 24, 1958

PRESS NOTE

4 1/4 per cent Uttar Pradesh State Development Loan, 1970

THE GOVERNMENT OF UTTAR PRADESH are floating a loan of Rs. 7 crores in order to finance their irrigation works, electricity projects and other State development schemes. The main terms of the loan are that the issue price will be Rs. 99.50 for every Rs. 100 of the loan applied for. The loan will have a currency of 12 years from 15th July, 1958 and will be repaid at par on 15th July, 1970, will bear interest at the rate of 4¼ per cent. per annum from 15th July, 1958 payable half-yearly on 15th January and 15th July and is subject to income-tax. Subscriptions for the loan can be made in the form of cash or cheque or of securities of 3 per cent. U.P. Loan, 1958 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and subtreasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-4604/X—88-1958, dated June 24, 1958, copies of which, along with the application form, are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue Position.—The revenue receipts and expenditure and the surpluses for the last fourteen years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus(+)
1944-45	2,747	2,330	+417
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3,876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,626	5,626	...
1950-51	5,189	5,184	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	..
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,171	9,751	+420

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds.—The balances at the credit of the various reserve funds at the end of 1957-58 were 116 lakhs in the U.P. Road Fund, 49 lakhs in the Hospital Fund, 102 lakhs in the Famine Relief Fund, 1,144 lakhs in the Revenue Reserve Fund, 9 lakhs in the Sugar Research and Labour Housing Fund, 2,607 lakhs in Zamindari Abolition Fund, 59 lakhs in the Depreciation Reserve Fund—Irrigation, 170 lakhs in the Depreciation Reserve Fund—Government Bus Services, 392 lakhs in the Depreciation Reserve Fund—Electricity, 19 lakhs in the Contingency Reserve Fund—Electricity and 76 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,743 lakhs.

Debt Position.—On March 31, 1958 the debt of Uttar Pradesh Government amounted to 18,821 lakhs consisting of 1,005 lakhs representing the consolidated debt due to the Central Government and 12,863 lakhs taken from that Government for development purposes and 681 lakhs for Relief and Rehabilitation Schemes plus 4,029 lakhs representing the amount of public loans floated by this Government from time to time plus 151 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 73 lakhs from the Reserve Bank of India and 19 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 4,539 lakhs and Rehabilitation Grant Bonds of the value of Rs. 452 lakhs, the liability on account of which will be met, by annual instalments, from the extra revenue from Zamindari Abolition over a period of 40 years and 25 years respectively. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds are invested in Government of India Securities.

Assets of the Government.—Against the outstanding debt of 18,821 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells and Hydro-electric Grid, Electric Supply Undertakings, Cement Factory and Government Bus Services, in which about 16,374 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to Rs. 4,016 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

FOOT-NOTE.—The accounts for 1957-58 have not yet been closed finally. The figures for 1957-58 mentioned in the Press Note are based on the March (Preliminary) 1958 Accounts.

EXCISE DUTY ON MILL CLOTH REDUCED

FURTHER RELIEF OF RS. 5.5 CRORES GRANTED

SOON after we went to press last week, the Government of India announced modifications in the levy of excise duty on mill-made cotton piecegoods with a view to helping the mills to overcome the crisis facing it due to accumulation of heavy stocks. The modifications are in accordance with the recommendation made by the Committee of Enquiry (Cotton Textiles) in its interim report submitted to the Government recently. The revised rates of excise duty per square yard (excluding the additional excise duty and the handloom cess) which have been enforced with effect from the 4th inst. are as follows:

Coarse cloth: A new basic rate of excise duty on all varieties of cloth at 4 nP *plus* a surcharge of ½ nP, if the cloth is bleached, 3 nP if shrink-proof and 1½ nP if processed in any other way; hitherto, there was only an excise duty of 3 nP on coarse *dhotis* and *saris* and 6 nP on other varieties.

Medium cloth: A basic rate of 5 nP on lower medium cloth (counts between 17 and 25) and 6 nP on higher medium cloth (26-35 counts) *plus* the same surcharges as on coarse cloth for bleached (½ nP), shrink-proof (3 nP) and other processed cloth (1½ nP); the duty so far had been only at 7 nP on *dhotis* and *saris* and 9 nP on other varieties.

Fine cloth: A basic rate of 18.5 nP *plus* the surcharges for processing as in the case of coarse and medium; hitherto, there was only one excise duty of 17 nP.

Superfine cloth: A basic rate of 24½ nP *plus* the surcharges for processing on the same scale as for coarse and medium; this cloth was until recently bearing a levy of 22 nP only.

In the case of all varieties, the surcharge for processing will be at the maximum rate where the cloth has undergone more than one processing, that is, the surcharges will not be levied with cumulative effect. The excise duty on coarse *dhotis* and *saris* lying packed in bales as on the 3rd inst. will be charged at the rate of 3 nP per square yard, if the duty is paid on or before 30th September next.

Quantum of Relief

The aforesaid description will show that the excise duty on coarse and medium cloth has been reduced, while that on fine and superfine cloth enhanced. The revision is expected to ensure a fair and equitable incidence of levy on the different varieties of cloth, bringing it as close as practicable to an *ad valorem* levy by the introduction of differential rates for processed varieties over and above the basic rate. As a result of the revision, there is expected to be a revenue loss of Rs. 5.5 crores to the central exchequer annually. It is calculated that the increase in excise duty on fine and superfine categories of cloth will yield about Rs. 2 crores more per annum, so that the reduction in the incidence of duty on coarse and medium counts comes to Rs. 7.5 crores.

This is the third instalment of relief in excise duties after they had been pushed up sharply in September 1956. The first relief came in December 1957 and the second in March 1958. On the first occasion, the relief was confined only to medium; on the second occasion, all varieties were given relief. With the latest relief, the total revenue surrendered by the Government is of the order of Rs. 20.5 crores, but this still falls short of the new burden imposed on the industry in September 1956 by Rs. 14.5 crores. It is also necessary to add that the whole of the relief so far given will not go to enhance the profit margin of the industry, for a good part of it will have to be passed on to the consumer in order to encourage him to take up more cloth.

While the rationalisation of excise duty on mill cloth thus is to be welcomed, it must be said that even the revised duties are heavier than they were before the steep increases effected on 1st September 1956. On the basis of the production pattern in 1957, the annual revenue proceeds derived by the Central Government by way of excise duty (Rs. 39.20 crores) and handloom cess (Rs. 7.50 crores) are estimated at Rs. 46.70 crores, as against the revenue of Rs. 28.18 crores in 1955-56. The Government of India could have reduced the excise duty on cloth at least to the extent it was increased on 1st September 1956, so that the cotton mill industry could raise its contribution to the national income substantially and compete effectively in the export markets based on the strength of its domestic markets.

The need for reducing the incidence of excise levy on mill-made cloth to the extent indicated above is all the greater, considering that the industry is now in the grip of a cost inflation, thanks to the all-round rise in wages and in the prices of raw materials and stores, not to mention machinery. Moreover, the grounds on which the excise duties were stepped up in September 1956 have ceased to exist since long ago. The Government had then clearly stated that the duties were raised not for revenue considerations but with a view to averting a shortage of cloth in the country and to encouraging the mills to sell for export rather than for domestic consumption. Today, instead of a shortage, there is a glut of cloth and exports are falling not because the domestic market is more attractive than export markets but because of a slackness in world trade in textiles as a whole. The problem is not one of keeping down domestic consumption but one of raising it, so that the offtake can improve.

Cost Inflation Severe

How severe has been the aforesaid cost inflation is well brought out by the Indian Cotton Mills' Federation in its memorandum to the Cotton Textiles Enquiry Committee. According to the Federation, the wages of cotton mill workers have increased from time to time since 1947 without due attention being paid to workloads or productivity. The average basic wage of a worker in a Bombay mill in May 1958 was Rs. 50.14, as against Rs. 49.56 in 1957 and Rs. 34.50 in 1946. Similarly, the average dearness allowance for 26 working days was higher at Rs. 80.40, as against Rs. 74 in 1957 and Rs. 35.37 in 1946. Apart from rise in wages, the mill workers have been granted other benefits such as bonus, employees' provident fund, retrenchment and lay-off compensation, gratuity, State insurance scheme, paid festival holidays and improvement in working conditions. The cumulative burden of these benefits per worker per month is put at Rs. 34.70. The total monthly earnings of a worker in May 1958 thus aggregated Rs. 165.24 which compare favourably even with those in industries such as engineering, petroleum, electrical machinery, manufacturing and basic metal industries which require employment of highly skilled labour. "Wage increases," says the Federation, "have been granted by the mills on a liberal scale in agreement with the unions and also under modifications of awards by Industrial Tribunal. It is unfortunate that the productivity of the worker has not increased and wages are not being related to workloads." Proceeding, the Federation observes:

> "Wage rates in the U.K. and the U.S.A. are very much higher than in India, but their wage costs per yard of cloth or per lb. of yarn are comparable and, in some cases, even less than ours. Our greatest competitors in the export markets are Japan and Hong Kong. As compared to Japan, cost of wages per yard is at least 50 per cent. higher. The cost of wages in Hong Kong is very much lower. The wages of our workers can be maintained at the present level, and even increased, only through an increase in productivity, that is, by rationalisation of labour complement."

In this connection, the Federation has put forward five suggestions. First, the workers' unions must be requested to co-operate with the management in adjusting the workloads on a more rational basis, thus reducing the complement of workers. Secondly, the mills should be allowed not to fill natural vacancies, the retirement age of 55 being considered a natural vacancy. Thirdly, the provisions of the Industrial Disputes Act relating to payment of retrenchment compensation require to be so suitably amended as to provide relief to mills which are in financial difficulties due to accumulation of stocks and, therefore, not in a position to work. Finally, wherever there is gratuity provided for workers either voluntarily or under an award of the court, it should not be compulsory for mills to pay retrenchment compensation as well.

Further, the Federation has drawn attention to the rise in the price of furnace oil. This oil today costs Rs. 146.35 per ton (delivered in mills), as against Rs. 63.00 in June 1949 and Rs. 48.81 in January 1946. The furnace oil consuming mills are at a disadvantage—of as much as Rs. 50 per ton—considering the cost of burning an equivalent quantity of coal. It is, therefore, urged that the Government should pass on to the cotton mills the benefit of the reduction of Rs. 13.91 per ton in the price of furnace oil effected by oil companies.

The Federation has also drawn attention to the additional burden of Rs. 2 crores on mills in Bombay State alone as a result of the withdrawal by the State Government of the concessions in the form of either free of sales tax or at lower rates allowed in respect of raw materials, stores, machinery, etc., following the replacement of sales tax by additional excise duty which has actually increased the total revenue as is shown below:

The sales tax collection of all States, according to the Finance Commission, amounted to Rs. 19.76 crores. This amount was inclusive of sales tax on powerloom cloth at the same rate as mill cloth, and sales tax on handloom cloth, even though this may have been on a lower scale. Now that the handloom cloth has been altogether exempted and powerloom cloth is subjected to comparatively lower rates, the burden on mill cloth would have gone up even if a total collection of the same order as Rs. 19.76 crores was aimed at. But, according to the calculations made by the Federation, the revenue from additional excise duty on a production of the order of 1957 would amount to Rs. 22.27 crores on mill cloth alone.

The Federation has suggested that the State Governments concerned should be persuaded to restore the above-mentioned concessions, as also to charge sales tax only on such percentage of the price of ready-made garments, tents and tarpaulins as represents the addition to the value of cloth in its conversion into its final state.

Millowner's Reaction

To revert to the latest revision in excise duty on cloth. Commenting on the revision, Mr. Naval H. Tata, Chairman of Tata Mills, has made the following remarks:

> "We are grateful to the Government for responding to the mounting appeals from the textile industry to reconsider the crushing impost of excise and its repercussions on this industry. It is true that this is the third dose of concession granted to the industry and it is certainly in the interest of the industry to have it.
>
> "Further reductions are particularly negatived by the extra charge on bleached and processed cloth. Moreover, the benefits will have to be shared with the consumers, if the result is to be quicker offtake and reduction in cloth stocks. If the benefit is not shared with the consumer, then obviously there is no incentive to merchants to buy more cloth. The present reduction, even if entirely retained by the mills, will not enable the losing mills to make up any loss and it is certainly not enough to enable the closed mills to restart work. To such unfortunate mills, it is not merely the question of excise but need for labour rationalisation and relief from various forms of State Government taxation."

There is considerable force in these remarks of Mr. Tata. The industry's need for rehabilitation and modernisation is very great. But the difficulty is one of finance. In its memorandum, the Federation points out that Bombay mills alone have spent over Rs. 33 crores in the period 1947-56 over rehabilitation and, even with expenditure on this scale, the industry's need is about Rs. 150 crores for the next 15-year period, according to the returns from mills submitted to the Bombay Cotton Mill Industry's Rehabilitation Commission which has been appointed to go into this question. The need of mills from other centres would be more or less on the same scale. Surely, the industry cannot undertake a plan of investment on this scale, on the basis of profits which it was making in the last few years. The need to allow the industry to rehabilitate very quickly must not be forgotten by the various authorities and the tribunals who are continuously endeavouring to mop up its "excessive profits" by taxes, levies, and wage increases, and the mills must be allowed to make and retain profits on a much larger scale than what they have been doing so far, so that this premier industry may at least be on par with other established industries in regard to its profits, and may quicken the pace of modernisation.

"BOMBAY COTTON ANNUAL" 1956-57

The latest issue of this well-known annual (published by Mr. C. M. Parikh, Secretary, the East India Cotton Association Ltd., the Cotton Exchange, Marwari Bazar, Bombay 2. Price: Rs. 5) is, as usual, a comprehensive and authoritative compendium of all matters relating to the cotton trade in India. It contains statistical tables of crops, exports, imports, prices, stocks, consumption, Government notifications, etc. This publication should prove of valuable use to all those having anything to do with cotton, raw or manufactured.

FALL IN TEXTILE EXPORTS PERSISTS

NEW THREAT TO COTTON MILLS FROM HONG KONG'S RAYON INDUSTRY

From A Special Correspondent

MANCHESTER, 1st *July*

MANCHESTER LETTER

MONTHLY returns have so far this year indicated only too forcibly the steady decline in export trade in British-made textiles. If proof were needed that this downward trend is still continuing, the May figures were a further reminder. Earnings from cotton yarns and manufactured goods alone over the first five months amounted to £33,679,246, a drop of more than £5,000,000 as compared with the same period last year.

In every section of the trade, overseas shipments show a reduction on the level recorded in 1957. Cotton yarn exports for the five months aggregated 12,624,545 lbs., as against 16,676,699 lbs., the value being £2,000,000 lower at £5,332,000. Cotton cloth shipments to the end of May were 181,753,000 square yards, as against 199,068,000 square yards, the earnings in this case also being £2,000,000 down at £24,023,000. The recession in overseas trade in the man-made fibres section is equally discouraging. For the five months, exports of rayon and synthetic fibre yarns totalled 15,417,238 lbs., as against 19,588,547 lbs. last year. The value of these goods was £500,000 lower at £6,347,000. In piecegoods made from rayon and synthetic fibres, shipments amounted to 43,184,000 square yards, as against 48,618,000 square yards and earnings were again £500,000 lower at £6,612,000.

Losses in cotton yarn exports have been suffered mainly in sales to India, Pakistan, Canada and several European countries, while slight gains have been recorded in trade with Australia and New Zealand. Smaller quantities of man-made fibre yarns have been sent to India, Australia and the Continent. No substantial change has been recorded in shipments of cotton cloth to particular destinations and the variation in sales over the past three years has been comparatively narrow. In the man-made fibre fabric section, however, there has lately been a decline in shipments to South Africa and Cyprus, offset to some extent by improved exports to Rhodesia and Nyasaland.

No Fall in Imports

While exports are steadily shrinking, the quantity of goods imported remains remarkably steady. As compared with a year ago, the figures are almost identical, arrivals of cotton grey cloth being 155,073,000 square yards for the five months, as against 157,989,000 square yards. Finished cotton fabric imports have risen from 19,737,000 square yards to 20,314,000 square yards. Rayon cloth arrivals are a little lower at 24,061,000 square yards, as against 26,644,000 square yards in 1957 and 35,659,000 square yards in the first five months of 1956.

A significant feature of cotton grey cloth imports this year has been the continued rise in arrivals from Hong Kong. To the end of May, these amounted to 40,397,000 square yards at a cost of £3,125,500. In the same period last year, Hong Kong sent only 24,000,000 square yards, valued at less than £2,000,000. Imports from India have declined from 81,814,000 square yards in the first five months of 1957 to 56,119,000 square yards this year. China's emergence as a supplier is also a sharp reminder of Eastern competition, imports so far being 30,723,000 square yards, as against less than 6,500,000 square yards at this stage last year. Although cotton yarn imports in 1958 show practically no change compared with the 1957 level at 5,923,000 lbs., there has been a sharp increase in the quantity of rayon yarn purchased from abroad. To the end of May, these imports amounted to 4,509,000 lbs., as against 1,415,000 lbs. a year ago.

More Import Views

The amount of imported cotton cloth retained for use in this country is now equal to 10 weeks' production a year by Lancashire mills, yet the annual amount saved per head of population by using Asiatic cloth instead of Lancashire-made is less than the cost of 20 cigarettes. This was stated by Mr. Lionel F. Cockcroft at the annual meetinng of the Ticking Group of the Manchester Chamber of Commerce, of which he is Chairman. Retained imports were now running at about 300,000,000 yards, or about 18 to 20 per cent. of home consumption. Spread over a population of 50 millions this represented an annual intake per head of six yards of foreign cloth. "If the price difference is sixpence a yard, the net saving per head per annum is three shillings—less than the cost of 20 cigarettes." Against this had to be weighed the "violent disruption" now being suffered, the anxiety, the cost of unemployment, pay, loss of Exchequer revenue and the wearing away of communal assets in the cotton towns. "The equation does not balance as I see it," said Mr. Cockcroft.

In the past 3½ years, over the industry as a whole, 317 mills had closed. Some were outmoded with probably little future, but some at least were good mills. It seemed clear that substantial areas of the cotton belt and of the cotton industry—perhaps others soon—were being sacrificed on the alter of the "greatest good" theory.

Threat to Rayon

Warning of the likelihood of a new threat to the Lancashire textile industry from Hong Kong was given in Manchester by Mr. Stanley L. Mason, the new Chairman of the Rayon Weaving Association, representing nearly 300 firms. Hong Kong was already turning to spun rayon, he told the annual meeting. Over 1,500,000 yards had been imported for processing and re-export over the last six months at prices which made it only a matter of time before these fabrics were imported for retention in the home market, if nothing was done to stop it. "And we should not forget that the growing production of Japanese synthetic fibres will eventually become available to the Hong Kong manufacturers," he said. "We can no longer, therefore, stand on the sidelines and cheer on our cotton colleagues in their struggle with the Government, as if we were little more than spectators. We are now becoming indirectly involved ourselves and the time has come for direct action complementary to that of the cotton interests."

Mr. Mason said that, although the cotton side of the textile industry had up to now borne the brunt of the unrestricted flow of Asiatic fabrics into this country, firms on the man-made fibres side had also been affected indirectly. Many firms, unable to find an outlet for their cotton production, had turned to rayon and had added to the overproduction of rayon fabrics. Rayon firms had also suffered from the resulting depression of prices.

Another Mill Closes

The latest casualty in the long list of Lancashire cotton mills which have ceased production is the Dove Spinning Company, Ltd., of Deane, Bolton. The directors have decided to close the mill, "owing to the unfavourable state of trade and the uncertain future outlook of the cotton trade." The mill, which dates back to 1904, contained more than 100,000 spindles, of which 95,000 were mule spindles.

Cotton Futures Trading

Doubts whether world trading conditions for raw cotton in the foreseeable future would enable futures markets to resume their traditional function have been expressed by Mr. William T. Winterbottom, Chairman of Fine Spinners and Doublers, Ltd., the £25,000,000 Manchester-based textile combine. In his annual report, Mr. Winterbottom said that the failure of the Liverpool futures market to provide adequate hedging facilities for American type cotton followed from the export policy of the United States.

"When private trading in raw cotton was restored in this country, our company gave the reopened Liverpool futures market all possible support through a futures section of our raw cotton subsidiary, Deltapine Ltd.," Mr. Winterbottom continued. "During the year, the conclusion was reached that the results no longer justified the cost and it was decided to close it down. We retain our membership of the Liverpool Clearing Association and the New York Cotton Exchange so that advantage can promptly be taken of any change in conditions."

Lack of hedging facilities forced a substantial risk on all traders in raw cotton and cotton goods, he added, as it took six weeks or more to secure supplies of some types of cotton from the country of origin. Alternative disadvantages were the inability to secure supplies when demand arose and the carrying of unsaleable goods for an indefinite period. The spinners, Mr. Winterbottom said, being the first link in the chain, with machinery to be kept occupied, were particularly vulnerable. The existence of such hazards emphasised the commercial attractions of man-made fibres where simplicity of trading provided, in contrast to cotton, a most powerful incentive to their use.—*All Rights Reserved.*

WORLD COTTON SITUATION

OUTLOOK FOR THE NEXT SEASON

A SIGNIFICANT development of the 1956-57 world cotton season was that it witnessed the end of the rapid build-up of cotton surplus. Stocks, in fact, declined during the season by over a million bales. Statistically, the same situation has persisted during the present season, that is, 1957-58, with total disappearance exceeding production by an even wider margin. However, certain adverse factors have also emerged. After several years of continuous expansion, world consumption is now declining and competition from substitute fibres and materials, particularly the newer synthetics, continues to be a very real threat to cotton in many countries. In many producing countries revenues have been materially affected by the reduction in both the volume and value of cotton exports. In contrast with last season, when the improvement in the cotton situation was assisted by the marked increase in consumption, the present reduction in stocks is entirely the result of lower production brought about by control of acreage. An equilibrium under these circumstances, according to the International Cotton Advisory Commitee, Washington, is an "artificial one" and there is still a long way to go to solve the cotton surplus problem.

In its annual review of the world cotton situation in the 1957-58 season, now rapidly drawing to a close, the Committee recalls that the stock position at the beginning of the present season gave cause for some satisfaction. Heavy exports last season has enabled the U.S. to reduce its carryover by over three million bales to 11.3 million bales of 478 lbs. each without causing any undue increase in stocks in other net exporting countries and importing countries had increased their carryover.

Production in 1957-58, though less than in the last season in the U.S., was maintained in the rest of the world. Acreage allotment in the U.S. was virtually unchanged from the 1956-57 level but, with over 3 million acres having entered the Soil Bank, only 13.6 million were finally harvested, as compared with 15.6 million in 1956-57. The only major reduction in acreage in the free world outside the U.S. appears to have been in Brazil, where plantings were probably influenced by the poor yields obtained in the previous two seasons. Acreage was only slightly lower in the Sudan, Peru and in Pakistan. On the other hand, there has been a noticeable increase in cotton acreage in Mexico, Egypt and British East Africa.

The present season was a fairly good one from the point of view of yield. After an early promise of record yields in the U.S., adverse weather caused a reduction in average to 390 lbs. per acre which is less than that in either of the two previous seasons, but still much above average. There was, however, a marked increase in yield in many of the other cotton-growing countries where the average was near an all-time maximum and considerably higher than the pre-war level.

Production

Production in the U.S. this season declined to 10.9 million bales, over 2 million bales less than in the last season and, barring 1950-51, the smallest crop since the end of the war. Production controls in that country was instrumental in achieving a better equilibrium between world supply and demand. Aggregate production in other free world countries, presently estimated at 16.4 million bales, set a new record and was 400,000 bales higher than in 1956-57. The increase was mainly in two countries—Mexico and Egypt.

One of the outstanding features of the post-Korean period has been the steadily rising trend in world cotton consumption, with the less developed countries featuring prominently in the expansion of cotton textile production. In the last five years, world consumption has increased by an average rate of nearly a million and a half bales per year, culminating in a record of 42 million bales last season. In contrast to the general trend, the textile industry in the U.S. has been in a recessionary phase since the spring of 1956 and cotton consumption during the present season in that country, estimated at no more than 8 million bales, will be near the minimum for the post-war period and *per capita* offtake will be less than in the late thirties. In explaining the present downturn, inventory policy seems to have been a major consideration but of longer-term significance is the shift in the pattern of consumer spending. Also, cotton, and cotton's most important competitor, rayon, are meeting strong competition from the newer synthetics and other substitute materials. Primarily as a result of increased imports of textiles, consumption in Canada, it is estimated, will fall to near its lowest level for the post-war period. In most other countries, consumption was unmistakably higher in 1956-57 and, in general, this set the trend for the opening months of the present season. However, there are signs of excess textile production, inventories have been rising, and consumption has moved lower in several countries. The rising trend in consumption has recently been reversed. In view of the uncertain nature of the textile industry any estimate of world consumption at this time is only tentative. The Committee estimates, on the basis of facts available at present, that consumption would decline this season by about half a million bales.

Last season demonstrated the benefits of more realistic cotton prices. World consumption showed a marked increase and importers were induced to augment their depleted stocks which boosted free world exports to a record 14.3 million bales. Recently, however, the pendulum has swung the other way. Consumption has turned downward and importing countries may cover a part of their requirements out of existing stocks. The payments situation in several large importing countries has deteriorated and there is still some degree of uncertainty over the future trend of prices. All this points to a sizable reduction in foreign trade this season. Aggregate free world exports are estimated at roughly 12.5 million bales.

Prospects for Next Season

As regards the prospects for the next season, it is difficult to forecast the trend, more particularly, of the demand for cotton. As far as supply is concerned, the basic fact is that disappearance has continued to exceed production by a wider margin than in 1956-57 and the world carryover on 1st August this season will be the smallest for several years. In the U.S., stocks are expected to fall to under 9 million bales, with no longer any real surplus of the higher grades. Aggregate stocks in other countries will be unchanged at roughly 12 million bales, with any increase in stocks in exporting countries just about offsetting the expected reduction in importers' stocks.

World production next season will be influenced, to a large extent, by what happens in the United States. With approximately 5 million acres in the Soil Bank, production should again decline unless reduced acreage is offset by a noticeable improvement in yield per acre. One thing, according to the Committee, is certain, that there will be a further marked reduction in supply in the U.S. next season. Elsewhere, there is apparently no lack of enthusiasm for cotton growing. Also, the long-term trend is towards higher yields in most countries. Cotton acreage outside the United States will be maintained at a relatively high level and, with a larger carryover, there is a good chance that supply in these countries will be in line with the present season.

Consumption prospects in many countries, at least during the first half of next season, do not seem to be favourable. Production curtailment, which have been going on this season, could eventually spark a recovery in the U.S. textile industry but this depends in no small degree on what happens to the rest of the economy.

The outlook for Asia depends, to a large extent, on Government policy in Japan and the situation, observes the Committee, would have to alter radically for "textile production to go completely unrestricted next season." An improvement in the inventory situation in India should precede any resumption of the long-term upward trend in cotton consumption. The level of world trade in raw cotton next season will be related primarily to consumption needs and in this respect the situation may not be so favourable as in 1956-57.

SUDAN COTTON

The latest estimate of the Sudan cotton crop for the current (1957-58) season indicates a sharp fall in production, as compared with that in the previous season. The current crop is estimated at only about 43 per cent. of last season's crop. The following table gives the estimated variety-wise break up of the current season's crop:

(In bales of 420 lbs.)

OFFERS COMPLETE BANKING SERVICE THROUGH A NETWORK OF 50 OFFICES SPREAD OVER ANDHRA PRADESH, BOMBAY, MADRAS AND MYSORE STATES

Head Office: **HYDERABAD (Andhra Pradesh)**

Our 3-Year Cash Certificates available in denominations of Rs. 100/-, Rs. 500/-, Rs. 1,000/- and Rs. 5,000/- (issue price Rs. 90.50 nP. for Rs. 100/-) offer attractive yield of 3½ per cent. per annum and constitute a safe and profitable investment for all.

Our Thrift Deposit Plan offers a systematic savings scheme, and can be subscribed in small monthly instalments of Rs. 5/- or multiples thereof.

Safe Deposit Locker facilities for protecting valuables from Fire, Theft and Burglary are available in air conditioned vaults at our Main Office; also in our Branches at City Branch (Pathergatti, Hyderabad), Sultan Bazaar (Hyderabad), Mahbubgunj (Hyderabad), Aurangabad, Bhir, Bidar, Dharmabad, Gulbarga, Jalna, Khammameth, Kothagudium, Latur, Nizamabad, Nalgonda, Nanded, Parbhani, Raichur, Tandur, Warangal and Yadagiri.

Foreign Exchange Business of all types undertaken.

PARTICULARS OF OTHER SERVICES AND RECENTLY ENHANCED RATES FOR DEPOSITS MAY BE ASCERTAINED FROM ANY OFFICE OF THE BANK.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN—MR. H. CHISWELL JONES, O.B.E.

THE twentyfifth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, 17th July, at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. H. Chiswell Jones, O.B.E., which has already been circulated to members:—

Sales

Sales for the year improved by just under half a crore to Rs. 612 lakhs compared with Rs. 567 lakhs last year. The increase is partly due to a rise in the price of tinplate early in the year but principally to our ability to attract to the full extent permitted by raw material availability, the new demand growing within the country.

Particularly noteworthy, in view of the tinplate situation, is our success in selling products not made from this scarce material, e.g., rigid and collapsible tubes for toilet and pharmaceutical packs, Roll Seal pilferproof and other closures for bottles, industrial components, diothene bags, closing machinery and advertising media. Sales of these products increased by 38% and now constitute a significant portion of our total output.

As tinplate has been made freely available for export goods, it has been possible to continue our export promotion efforts. In this context we must comment on the valuable co-operation we have had from the Government of India and the Engineering Export Promotion Council. This should be reflected in our performance in the current year, albeit not spectacularly, since the high cost of tinplate in India prices our products out of the more severely competitive markets of South-East and West Asia.

In the current year, under the stimulus of continuing national investment in development and the shortage of imported goods, consumer demand for indigenous products will increase. Whilst it is certain that raw material scarcity will prevent us meeting market requirements in full, we have been convinced, in the course of the many representations we have made in Delhi, that the Government of India appreciates the importance of maintaining steady supplies of packaging materials, which are a key factor in ensuring the ready supply of consumer goods, so essential for the achievement of price stability.

Raw Materials

The foreign exchange crisis adversely affected not only our principal material tinplate, of which a substantial percentage has to be imported, but also many subsidiary but important materials which, while largely manufactured or processed here, have important basic constituents which are not produced indigenously.

Our stocks of tinplate plus the limited import licences granted enabled us to meet all requirements up to the end of March. Since then there has been a deterioration in the indigenous supply position due to shortage of tinplate bars. As a result our stocks are now well below normal levels and we are passing through a critical phase involving loss of operational efficiency at our factories and affecting our ability to supply all our customers' requirements on time.

We have asked for additional import licences to make good the shortfall in local supplies and we anticipate that the position will be less critical later in the year. So far as indigenous production is concerned it is expected that the tinplate bar position will improve when Tata's expansion programme is completed.

Apart from the increase in the price of tinplate already mentioned, the prices of many other raw materials have substantially increased. Aluminium for the manufacture of Roll Seal pilferproof closures is now being produced in India and we should be able to secure adequate supplies to meet the growing demands for these closures. The price however is substantially higher than the material we have hitherto imported.

Developments

The Government of India have approved the long-term credit offered by our Consultants to cover the supply of plant and machinery required for plastics development and plant, machinery and spares for our metal container manufacturing equipment. Licences have been granted by Government to cover our operations in the plastics field embracing injection moulding and polyethylene extrusion and printing. Additional plant has been ordered and will be installed this year.

The new offices for the Calcutta Branch have been completed and occupied and the new factory is nearing completion. We propose, subject to Government permission, to build a new factory at Faridabad to replace the present Delhi factory which is on a short-term lease and has proved to be too small for our requirements.

Our range of machinery manufacture has been expanded to include double seaming machines for the canning industry which have hitherto been imported.

Board Changes

Since 1942, I have held the combined office of Chairman and Managing Director. I have been feeling for sometime that the increasing complexities of business in a planned economy, the economic problems and the difficulty of raw material shortages demand more and more time and study. A responsibility of this character is incompatible with the day-to-day operations of the Company and, from the 1st April this year, I have resigned the office of Managing Director in order to concentrate my attention on the office of full-time Chairman.

The Board have appointed Mr. R. W. Westbrook as Managing Director and Mr. H. K. S. Lindsay as Deputy Managing Director. Both gentlemen have wide knowledge and experience of the Company's affairs having served the Indian Company for more than 20 years. Mr. Westbrook has been a Director since 1946 and Mr. Lindsay since 1951.

Mr. W. R. Davis, M.B.E., retired in April 1958 after 25 years' service. He served the Company from its inception with enthusiasm, great loyalty and remarkable engineering skill. We owe much to his outstanding work and he will be widely missed.

The Board has been greatly strengthened by two new Directors who have joined us since our last Meeting. Sardar H. S. Malik, C.I.E., O.B.E., has had an outstanding record in the Government, serving over a long period in many countries overseas and, lately, before his recent retirement, as Ambassador to France.

Mr. K. C. Mahindra joined the Board in January this year. As one of India's leading industrialists, he needs little introduction and we are fortunate, indeed, to have secured his services.

Their wide experience and mature judgment will be of the utmost value to the Board.

Employee Relations

Our joint consultation arrangements through our Works' Committees have continued to develop most satisfactorily. We believe that this is of importance in the context of the currently much discussed question of employee participation in management. In certain publicised instances, participation is apparently to be superimposed from the top downwards. We have been building, on a broad base, a real body of knowledge and experience which, it is increasingly evident, is making consideration of the Company's problem by our employees a meaningful, instead of a superficial, matter.

To help our employees to realise the extent of the progress made on the vast Government projects initiated under the second Five-year Plan we arranged, as an experiment, a number of three-day sightseeing tours of Government projects in Eastern and Western India. Those participating were drawn from all sections of our factories and offices and the tours have been most successful not only educationally but in providing the opportunity for executives, staff and workers to get better acquainted.

Staff

The problems involved in the successful operation of an industrial enterprise today are manifold and the task of officers and staff is made more difficult with shortages, controls, the search for and development of substitute materials, the unremitting fight against rising costs, and other factors of a frustrating nature. This has been an arduous year for them all and I thank each one most warmly for their loyal support and the contribution they have made to another successful year.

25th Year

This year marks our 25th anniversary and, on such occasions, it is customary to look back, although, at the present time, with India engaged in a breathtaking struggle to raise the living standards of her vast population, the future holds greater significance than the past.

Nevertheless, I think it is appropriate briefly to review our achievements and the policy which has inspired them since your Company's modest beginning in 1933. Then, such packers of consumer goods as existed, welcomed us warmly for hitherto their products had been at a heavy disadvantage *vis-a-vis* imported goods packed in superior containers. The availability of high class lithographed packages, equal to those available elsewhere in the world, enabled many Indian manufacturers' products to obtain proper recognition for the first time. Our enterprise did more than help the few existing packers, it greatly stimulated demand and made it possible for many new suppliers of consumer goods to compete successfully in a market previously dominated by imported goods. Subsequently, many world-famous manufacturers sent their products to India in bulk for repacking and later, under the stimulus of import restrictions, undertook local manufacture. We can, I feel, claim quite fairly that our enterprise was the instrument which made possible the creation and subsequent growth of a wide range of new industries. Today, we serve more than 1,000 factories employing an estimated 80,000 people and marketing goods to the value of over Rs. 100 crores. Adequately to serve and service this great industry—in the development of which we have played a major part—our own activities have expanded from one small factory employing 35 people to five factories and six ancillary establishments employing over 5,000 people.

In the field of industrial relations, we have sought to provide the finest possible working conditions and have developed a successful system of joint consultation. We have instituted welfare and benevolent schemes and have provided extensive recreational facilities. We are one of the few industrial establishments in India with a scale of pay for every occupation. All operatives participate in our Production Bonus Scheme and all employees share in our annual Prosperity Bonus.

Our personnel policy has been to promote from within the organisation and, through our training schemes in India and abroad, to provide every opportunity for advancement at all levels. We have, as a result, over the years been well served by a loyal and hard-working team of outstanding men, many of whom have risen from modest beginnings to positions of high responsibility.

Our sales policy has been to keep prices low and obtain a satisfactory return on our investment by a high volume of turnover. For the last decade, we have kept constantly before us the need to combat rising costs by increased volume and improved production methods which we have financed principally by retained profits until high taxation rendered this well-nigh impossible.

Thus, we have not only provided facilities to meet growing demand but have played an active part in stimulating that demand. In all this we have been supremely well served by our Consultants. The Metal Box Company Limited, and through them, by our Associates in the container making industry throughout the world. We were very happy in February to receive a visit from Mr. D. Ducat, Managing Director of The Metal Box Company Limited, London, and following a tour of our factories, discuss with

(Continued on page 87)

PLANTATION INDUSTRY IN KERALA

UNAMBIGUOUS EXEMPTION FROM CEILING ON LAND NEEDED

THE plantation industry of Kerala is greatly worried about the possible effects of the Agrarian Relations Bill 1957 which is now on the anvil of the State Legislative Assembly. It is true that the Bill provides for the exemption of land under plantation crops (tea, coffee, rubber and cardamom) from the purview of the ceiling of land holdings. But the value of this exemption is dubious because of other clauses. Indeed, it is feared that the Bill will mean the gradual withering away of the plantation industry, unless sub-section (2) of Clause 62, the principal clause in the Bill, is so amended as to make the exemption provided under it real.

That the fears of the plantation industry are not at all exaggerated will be clearly evident from a perusal of Clause 62 (2) of the Bill. The sub-clause is ambiguously worded. Thus, it says:

"Nothing contained in sub-section (1)—this is the clause that provides for the imposition of a ceiling—shall prevent a person from holding plantations admeasuring more than a ceiling area, provided that he does not hold any other land except the site of his dwelling house and the land required for the convenient enjoyment of the dwelling house (for the purpose of this section, 'person' shall include family)."

Now there arises the question as to who shall be deemed to be the 'person' on company-owned plantations. Sub-clause (2) of Clause 61 defines the term 'plantation' as follows:

"Plantation means any land used immediately before 18th December 1957 principally for growing tea, coffee, rubber or cardamom or such kind of special crops as may be specified by the Government by notification in the *Gazette*."

The explanatory clauses and definitions cover as many as 44 sub-clauses under Chapter II in the Bill and the purpose of defining 'plantation' outside these is not clear. The plantation industry points out that the definition, if accepted as it is, will place an operative limitation on the expansion of the industry. According to it, the replacement and expansion of plantations, a vital need for the healthy maintenance and growth of the industry, will be barred by the definition by taking away the benefit of exemption provided under Clause 62(2). Unless, therefore, the definition is modified, a prospective ceiling on plantations is implicit in Clause 61(2). Surely, any imposition of a ceiling will not only prohibit future planting but also cause deterioration in the existing holdings.

More Disquieting

Such a development is all the more disquieting, considering that the plantation industry is the largest industry of Kerala and its dynamic growth is one of the very few avenues open to the State for augmenting its revenues, increasing employment and utilising beneficially the land on hill ranges. The plantations are established on lands which fall under various categories of ownership or possession. Among these are certain forms of tenancies which, it is said, may well fall within the scope of sub-clauses 3, 5 and 6 of Clause 3. Yet the plantations are specifically denied the exemption given under Chapter II to various forms of tenancies by sub-clause 7 of Clause 3. In other words, this will mean that the plantations will be denied the fixity of tenure offered to other tenants.

It will not be out of place to recall here that, a century ago, the hill ranges backing against the eastern borders of the present Kerala State were malarious jungles and inhospitable weather-beaten ghats. The opening up of these hills to the arts of planters of tea, coffee, rubber and cardamoms was the most consequential economic change that took place in the history of this mountainous State. The planting community really opened up this hitherto unproductive region with immense benefits to the economy of the countryside. Nothing can, therefore, be more destructive than the dismemberment of the plantation industry. Viewed thus, the need for suitably modifying the Agrarian Relations Bill so as to ensure an orderly and healthy growth of plantations can be easily appreciated. In other words, the clauses and sub-clauses of the Bill must be so revised and drafted as to make the exemption of plantations real and not illusory. In making this request to the Kerala Government, the planters are not making any unreasonable demands; they are only suggesting that the exemption from ceiling which has been conceded in principle should be granted both in spirit and in letter. Accordingly, their suggestion is that the Bill should be so modified as to provide for:

"The exemption of land on which plantation crops are raised and such land as form part of or within plantations or reserved for the *bona fide* requirements of plantations for their expansion, communication, fuel clearing, nurseries, wind belts, reserves, labour housing, gardening and raising of foodgrains for their labour; and the fixity of tenure of such holdings."

It is an economic truism that there is a significant relationship between the size of holdings and productivity and that the yield-to-size relationship is almost a law of efficient agricultural production. Take the instance of the coffee industry. The Coffee Board's figures relating to the average size of holdings and production of coffee during the period 1946-51 reveal that the average per-acre yield for holdings between 25 and 50 acres was no more than 1.12 cwt., while the same for holdings over 200 acres was as much as 2.28 cwts. The six-year averages (1945-50) are given below:

Size of holdings (in acres)	Yield per acre (in cwts.)		
	Arabica	Robusta	Total
25-50	1.05	1.38	1.12
50-100	1.15	2.12	1.35
100-150	1.54	2.32	1.66
150-200	1.80	2.38	1.88

Taking the Coffee Board's figures as the basis of study for 1953-54, it will be seen that the holdings of 50 acres and less accounted for 41 per cent. of the total acreage, but their share in the aggregate production was only 23 per cent. The average yield per acre for these holdings was just 152 lbs., which compares very unfavourably with 368 lbs. for holdings of 100 acres and over. In the middle were holdings of between 50 and 100 acres covering 9 per cent. of the coffee acreage, the share in production being only 7 per cent. These averages do not, of course, give an indication of the exception which always exists. But it is worth noting that the largest coffee company produced in 1956-57 over 1,000 lbs. per acre, as against the average of 342 lbs. for the industry as a whole.

What is true of coffee is also true of tea and rubber in the yield differentials between small holdings and large economically viable estates. Apart from the relatively larger per-acre yield, the larger holdings are economically sounder than small holdings. For they can support a more efficient managerial structure and meet the exacting demands of intensive production more efficiently than small holdings. It is common knowledge that the base of a sound agricultural economy is higher production per unit of area and labour. Since the plantation industry is a prominent exemplifier of efficient large-scale production, it should certainly not be discouraged or disrupted by any measure affecting the size of holdings. Besides the owners or shareholders in this industry, there are the interests of workers who ought to get a decent wage and a minimum of amenities. It may be noted here that the plantation industry in Kerala supports about 250,000 steadily employed workers and their dependents.

(*Concluded from next column*)

The need for earning more and more foreign exchange has assumed much importance of late and the merits of rationalisation should be judged from this point of view also. Surely, the trade union leaders must be aware of all this. It is, therefore, to be regretted that they have all joined hands to thwart the attempt of mills to improve their competitive position. If, however, the position of labour is so serious, as is made out to be in the resolution, the labour leaders should have requested the *Ad-hoc* Committee on Jute Industry, on which the workers are represented, to expedite its work.

Consequent on the steady decline in raw jute prices in Pakistan for some time, the prices of jute yarns and cloth have been reduced in Dundee by about £5 per ton with effect from the 5th inst. This reduction affects several medium, heavy and fine rove yarns.

RATIONALISATION OF JUTE MILLS

WORKERS RESIST INDUSTRY'S PROGRAMME

WHILE the problems of the jute industry, with particular reference to rationalisation and closure of mills, are to be discussed at the first meeting of the Industrial Committee on Jute at Calcutta on 1st and 2nd August 1958, the various labour unions with different political affiliations have already joined together to oppose "arbitrary rationalisation" in the industry. At a meeting held on Sunday last, attended by about 300 trade union workers—representing the four Central trade union organisations, namely, the All-India Trade Union Congress, the Indian National Trade Union Congress, the Hind Mazdoor Sabha and the United Trade Union Congress—the labour leaders are said to have supported, in the name of over 200,000 workers employed in 108 jute mills, the demand for stopping "arbitrary rationalisation" till the tripartite committees at the State and all-India levels complete their work.

The meeting, in the course of a resolution adopted by it, expressed grave concern over the mass retrenchment of labour and overall reduction in employment potential resulting from the arbitrary rationalisation policy. It was pointed out in the resolution that in recent months 16 jute mills had been closed in West Bengal. It was alleged that this was a deliberate measure of rationalisation aimed at earning maximum profit out of the modernised mills with a reduced complement of labour. It was further alleged that practices, such as compelling workers to resign, arbitrarily declaring them medically unfit, increasing the workload even on existing old machinery, leaving vacant permanent posts unfilled and appointing more and more temporary hands, were followed by mills. One speaker went so far as to say that the rationalisation scheme of the Indian Jute Mills Association was detrimental to the country's interest and aggravated the unemployment problem of the State. Another speaker said that the retrenchment or reduction of employment potential during the last ten years had involved about 100,000 workers. The meeting adopted a resolution demanding that, pending the final recommendations of the *Ad-hoc* Committee of the State Government and of the Industrial Committee for Jute, no further measure of rationalisation should be introduced in any form and the *status quo* should be maintained. It also urged the workers to "resist unitedly any attempt by employers to impose rationalisation measures" in the meantime.

It was felt by the trade union leaders that a revision of wage structure in the jute industry, including the questions of dearness allowance and bonus, was long overdue. Accordingly, a resolution demanding the revision of wages and allowances through a scientific system by setting up a wage board for the industry as early as possible was adopted.

The meeting also suggested some measures to the Government to stabilise the jute industry's position. Among them were: State purchase and warehousing of raw jute, guarantee of fair price to jute growers, diversification of production, taking over of the export trade in jute goods by the State Trading Corporation, and the appointment of a commission to enquire into the managerial and financial sides of the industry. In other words, the trade unions wanted the Government to take over the trading part of the industry, leaving the cultivation of raw jute to the growers and the manufacturing of jute goods to the mills.

Such unanimous demands by the leaders of the workers of the jute industry are surprising, especially when the future of the whole industry and of the workers themselves rests on the success of the modernisation and rationalisation programmes of the mills. As Mr. J. I. Jamieson, Chairman of the Indian Jute Mills Association, pointed out recently, modernisation and rationalisation of the industry were not to be looked upon as an internal development, independent of external influences, but as something without which it was impossible "to maintain our position as the world's leading producer of heavy duty packaging materials." Being an export industry, on which India relies largely for foreign exchange earnings, and encountering, as it is, very severe competition abroad, it cannot hope to survive without re-equipping the mills and streamlining the production techniques, so as to place Indian mills on par with competitors.

PROGRESS OF SHIPBUILDING

INDIA'S EFFORTS TO ACQUIRE ADDITIONAL TONNAGE

ESTABLISHED by the far-sighted endeavour of Indian shipowners, the Visakhapatnam Shipyard, now owned by the Government-sponsored Hindustan Shipyard Private Ltd., has played a notable role in the development of Indian shipping. It is true that it has had its share of teething troubles and its costs are on the high side. Nevertheless, it represents India's determined efforts at building ships for its merchant marine. Considering that India, which has virtually lost its ancient maritime traditions, had to commence from scratch the manufacture of modern ships, the progress achieved by the Visakhapatnam Shipyard is indeed commendable. This unit, therefore, deserved the tributes paid to it by the Union Minister for Transport and Communications, Mr. S. K. Patil, when he presided over the celebrations at Visakhapatnam Shipyard, to mark the completion of 100,000 g.r.t. built by this enterprise.

It may be recalled that the foundation-stone of the Shipyard was laid on 21st June 1941 by Dr. Rajendra Prasad. The original design prepared by Sir Alexander Gibb and Partners envisaged the provision of eight slipways on which ships could be built. It will thus be seen that the period of the early growth of the Shipyard synchronised with war years when it was difficult to import essential equipment. The first stage of the construction of the Shipyard was completed only in 1945. The keel for the first ocean-going 8,000-ton steamship was laid in June 1946. By 1952, the Shipyard had built eight ships. The Government took over the Shipyard in March 1952, for which purpose it formed a new Government company, entitled Hindusthan Shipyard Private Ltd., in which the Government holds 78 per cent. of the share capital and the Scindia Company 22 per cent. The Government, after taking over the Shipyard, sanctioned a Rs. 2-crore development programme which constitutes the first phase. The second phase of development is now under the consideration of the Government. The Shipyard is now equipped with four large slipways and adequate workshops and jetty. Except for a few foreign technicians, the Shipyard is manned entirely by Indian personnel. It has so far built a total of 19 ocean-going vessels, besides smaller craft of various kinds. 12 steamships, four diesel ships and one passenger-*cum*-cargo vessel.

Problems Facing Shipyard

A reference to the problems which the Shipyard faced was made by Mr. C. K. Reddi, officiating Managing Director, who welcomed the Minister at the function held to commemorate the completion of 100,000 g.r.t. He said that the two chief difficulties were lack of adequate technical personnel and difficulties in procuring materials in time, many of which had to be imported from abroad. In view of the present acute foreign exchange position, the Shipyard, Mr. Reddi stated, was making concerted efforts at using as much indigenous material as possible. Even so, the problem of foreign exchange would remain unless the main engines which involved substantial foreign exchange at present were manufactured in India. In his address, Mr. Patil recalled the ancient maritime glory of India and how the country was trying to regain it. He paid tributes to the late Mr. Walchand Hirachand and the late Mr. Narottam Morarjee for unremitting efforts—he said these efforts were "almost a saga of perseverance and sacrifice"—at establishing the Scindia Steam Navigation Company, Ltd., and the Visakhapatnam Shipyard.

As regards the proposal for establishing a second shipyard, he said that the report of the Committee, which had been appointed to go into this question, would be received soon. With the establishment of the second shipyard in the West Coast—Cochin, as readers are aware, has been recommended as a suitable site by the British team of experts who examined this issue—Mr. Patil said the costs of construction would go down. It remains to be seen whether the second shipyard would be within the private or public sector. The Government, in its part, has made it clear that it is not averse to ownership and management of the second shipyard by private enterprise. Be that as it may, it is encouraging to note that a welcome assurance was given to private enterprise by the Minister who declared that "it shall be the duty and consideration of Government for all time that so far as Indian shipping is concerned, the Indian Government will go wholeheartedly to support private enterprise, so that it can be free in order that shipping comes up."

Irrespective of whether the development of shipping and shipbuilding takes place in the public or private sector, there is one problem which the country faces today. It is the problem of technical personnel to construct ships and man them. As regards construction, much experience has been gained by the men who have worked in the Visakhapatnam Shipyard. They should provide the nucleus of trained men who will, in their turn, impart the benefit of their knowledge and experience to recruits to the second shipyard. For expansion of shipping services, the country requires a large number of technical men. In this connection, as Mr. Patil pointed out, even today 55 per cent. of ratings to man India's ships come from Pakistan. It is necessary that a large number of ratings should be trained so that they can man the ships that will come into use in the next few years.

Second Plan

Some light on the Government's efforts to procure additional tonnage for Indian shipping was thrown by Mr. Patil at a Press conference held at Visakhapatnam. It may be mentioned here that, at the beginning of the first Plan, India had a tonnage of 390,707 g.r.t. The target under the first Plan was to add 215,000 g.r.t., after allowing for obsolescence to the extent of 60,000 g.r.t., thus increasing the total tonnage to over 600,000. This target, with some time lag, was accomplished, despite the fact that tonnage scrapped was larger than was estimated at the time the Plan was drawn up. Under the second Plan, it is proposed to add about 300,000 g.r.t. after allowing for the obsolescence of 90,000 g.r.t., thereby raising the total tonnage to 900,000. It has been computed that, after taking into account the tonnage for which orders have been placed, India has still to acquire some 128,000 g.r.t. in order to reach the target set under the Plan.

Against this background, it is gratifying to be told by Mr. Patil that the Government is keen on increasing shipping tonnage very rapidly. He said that the present period was the best time for buying more ships inasmuch as prices of ships were at their lowest levels. Because of recession in the West, some two million tons of shipping had been laid off. This had indirectly affected the world price of ships. He did not regard foreign exchange as a hindrance, because India had received various offers of credit for acquiring ships. He said that the Government was negotiating with Japanese shipbuilding interests about utilising their idle capacity. This proposal was to add to India's tonnage over and above the target fixed under the Plan. The Government was also interested in the purchase of cargo ships of 10,000 tons. Mr. Patil revealed that the Government had given up the idea of purchasing American "Liberty" ships, in view of the fact that better or faster ships were available elsewhere. He felt that India could charter ships with the ultimate object of owning them. The Government, according to Mr. Patil, has received two offers from abroad which would enable India to buy 20 ships. It is to be hoped that these efforts will be pursued vigorously so that the total tonnage at the end of the second Plan not only reaches but exceeds the 900,000-ton target fixed under it.

INDO-U.S. SERVICE

Inaugurating the Scindia Steam Navigation Company's direct service between India and the U.S., Mr. S. K. Patil, the Union Minister for Transport and Communications, said, at Calcutta last week, that the Government was pledged to the rapid progress of the country's shipping industry. He stated that the Government had entered the field of shipping not to compete with the private sector, but to assist it. The Chairman of the Company, Mr. Dharamsey M. Khatau, said that the new service marked an important step forward in the history of the Company's achievements. The new vessels, he said, would take 22 days to reach the first port in the U.S. from Cochin. Thanking the American people for the help given to India both in money and material in the past, he said that it was high time that Indians established most cordial relations with them. And shipping, he added, was one of the quickest ways of doing it.

BOMBAY'S ROAD PLAN

GOVERNMENT'S EFFORTS REVIEWED

BEING a premier industrial region, the Bombay State has necessarily to devote considerable attention to expanding and improving its road system. It cannot maintain, much less enhance, its importance as an industrial State unless it has an extensive network of roads within the State and also establishes road-links with other major cities in India. From this point of view, it is noteworthy that the State Government is not unaware of the problem of road construction, though the amount set apart and actual construction of roads are less than what one would expect from a State of Bombay's size and national importance. It must, however, be admitted that much progress in road construction, as Mr. D. S. Desai, Minister for Public Works, pointed out last week, in the course of his comprehensive address on the subject at the Society of Goodwill and Culture, has been made in recent years.

In the Bombay State, the period of the first Plan witnessed the construction or improvement of 1,740 miles of roads, including the cement concreting of 600 miles and the construction of 30 major bridges. Actual expenditure during the period was Rs. 30 crores. At the end of the first Plan period, work was in progress on 2,850 miles of roads. It would, however, appear that the financial provision made for road development under the second Plan will not enable all the works in progress to be completed. During the second Plan period, the Bombay State, as is well known, was enlarged by the addition of new areas. The plans for different regions of the State were integrated into a Rs. 20.8-crore plan for the entire State. The break-up of the plan in terms of expenditure in different areas shows that the old Bombay State areas will receive Rs. 11.15 crores, Saurashtra Rs. 5.50 crores, Vidarbha Rs. 1.89 crore, Marathwada Rs. 1.57 crore and Kutch Rs. 0.57 crore. In addition to this expenditure, a special programme, at a cost of Rs. 2.50 crores, has been drawn up for Vidarbha areas.

Sugar and Cane

The Bombay State is an important producer of sugarcane and sugar. Appropriately enough, the authorities have devoted special attention to communications in sugar factory areas. Mr. Desai said that a large programme costing about Rs. 3.37 crores has been drawn up in consultation with the management of the factories. This programme visualises (i) construction of modernised surfaced road up to the nearest railway station from a factory, (ii) construction of modernised surfaced roads which are passing through a group of factories and (iii) internal roads which will help in bringing the cane produce to feed the factories. In this connection, the Minister said: "Lately, I have come across public demand for concreting lengths of important roads passing through sugarcane areas. This is under active consideration of the Government and wherever possible, this Government would provide concrete surface roads, subject to the limitation of funds." Apart from these schemes, the Government anticipates some funds under the Central Road Fund Scheme. Under this scheme, the Government proposes to take up for construction the missing links on roads, important bridges where commercial traffic is dislocated for six months of the year and such other links as would develop the forest areas and also such through roads as would bring about quicker integration of the component areas.

The three notable schemes of road construction in the State are the Bombay-Konkan-Goa road, the Eastern and Western Express Highways and the Ghodbunder-Manor Section of the National Highway No. 8. The importance of the Bombay-Konkan-Goa road will become clear when it is realised that the road carries heavy traffic, particularly during the monsoon when the sea route is completely suspended for a period of about four months. The total expenditure incurred on the road upto the end of March 1958 is Rs. 78.25 lakhs, as against the estimated outlay of about Rs. 510 lakhs. No less important than the Bombay-Konkan-Goa road is the Express Highways. In order to relieve traffic congestion on the Bombay-Thana Road which, at present, is the only highway leading to and from Bombay, the authorities decided to construct two highways—one running parallel to the Bombay-Thana Road on the east of the Central Railway to be named "Eastern Express Highway" and the other running parallel to the

(Continued on page 67)

NEW PRODUCTS AND PROCESSES

Production of Cellulose By Ultrasonic Irradiation

THE production of entirely defibrated cellulose by means of ultrasonic irradiation has now reached an advanced stage of development where it is ready for commercial application. The operation of the process depends on the use of a special ultrasonic generator unit which has been developed in Switzerland. The special generator employs a series of several hundreds of "sound chambers and swingers." The unit is said to have an exceptionally high efficiency of operation and yet to use far less power than normal ultrasonic generators of equivalent power. The process should enable the defibrination of cellulose to be carried out in only a fraction of a second instead of the relatively long periods of time required if chemical processing is used. At the same time, the use of the development in the viscose and plastics industries is expected in some applications, to confer similar advantages.

Oil-well Logging

A new device that can be used for oil-well logging has been developed by Dutch scientists. The system depends on the use of a device for generating radio-active radiations below ground inside the actual well drilling itself. Its operation depends on the fact that the hydrogen in the oil produces a type of atomic particle known as "slow neutron," when it is bombarded with other neutrons generated by the device. A special comparative technique is used to eliminate the fact that water which may also be present in the oil well contains hydrogen and may emit radioactive radiation. The cost of the new device which will enable the oil-bearing layers of the well to be exactly determined, is expected to be about £5,000. The same device can be adapted, its developers claim, to produce cheap, safe and mobile radiation sources for use in laboratories and industrial plants. The safety of such units compared with radioisotope sources of similar power depends on the fact that they can be switched off when they are not in use, whereas radioactive sources such as radium-barium, or caesium have to be stored in heavily shielded containers. A single small unit about 18 inches high and 2 inches across can, it is claimed, produce radiation equivalent to 50 times that produced by a gram of radium-barium.

New Use for Coal

Investigations into a novel use for coal wastes from mines are currently being carried out. The object of the experiments is to extract commercially usable quantities of alumina at an economic price. Preliminary reports of the experiments suggest that the process used may well prove successful. The operation of the process depends on the use of a leaching technique to extract the iron and aluminium sulphates to produce alumina and iron oxide of a quality and quantity which can be used commercially. The leaching process depends on the use of a high-strength sulphuric acid. The technique is expected to yield cheap aluminium and iron from the normally unusable coal mine wastes. At the same time, the estimated cheapness of the process depends on the fact that a very high proportion of the acid used can be recovered without the use of complex and expensive extraction procedures.

Chlorinated Turpentine

In a search for new and more toxic insecticides, based on cheap and indigenous raw materials, a new insecticide, chlorinated turpentine, has been developed at the Regional Research Laboratory, Hyderabad. The raw materials, chlorine and turpentine oil, required for this product, are abundantly available in India. The process consists in chlorinating the turpentine oil in a reaction vessel at low temperature by bubbling the chlorine gas through the turpentine oil. The absorption of gas is quite fast. A viscous product containing about 68 per cent. chlorine is obtained in this way. A pilot unit set up at the laboratory is working satisfactorily and no difficulty is contemplated in arranging large-scale production. Chlorinated turpentine so obtained is a viscous product, insoluble in water but soluble in common organic solvents including kerosene. It can be easily emulsified with water. Insecticidal formulations can be prepared in the form of solution in kerosene oil, water dispersible pastes and powders. Chlorinated turpentine tested against house flies and mosquitoes at a dosage of 50 mg./sq. ft. showed 80 per cent. mortality during the first two weeks and 75 per cent. during next two. A dosage of 25 mg./sq. ft. on water, tested against mosquito larvae gave 100 per cent. mortality after 24 hours. 6 per cent. chlorinated turpentine in white oil injected into the body cavity of a cockroach at the rate of 1 ml./40 gm. of body weight of the pest produced knock-down effect in 5-7 minutes and cent per cent mortality in 24 hours.

Chlorinated turpentine has also been tested for contact poison action against stored grain pests where a mortality of 76-100 per cent. has been recorded after 24 hours. A composition containing 5 per cent. chlorinated turpentine, 3 per cent. pine oil and 0.001 per cent. pyrethrum in kerosene oil has been tested in various houses against house flies, mosquitoes, cockroaches, bugs, fleas, bettles, lice, cattle ticks and termite and has given high knock-down and mortality in all cases. Chlorinated turpentine compares favourably with D.D.T. when tested under similar conditions and appears to be a promising insecticide. The process of manufacture can be adopted by the existing insecticide manufacturing units. Independent production units can also be set up. Parties desirous of undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi.

PROFITS OF NEW INDIA LOWER

DIVIDEND, HOWEVER, MAINTAINED

THE results of working of the New India Assurance Company, Ltd. (Managing Director: Mr. B. K. Shah) during the year ended 31st December 1957 reveal that, although the economic conditions during the year was none too favourable, the Company could achieve a satisfactory increase in premium income. Profits, however, received a setback mainly because of adverse claims experience on foreign reinsurances. The operational results were further affected by the strains and stresses which arose as a result of the nationalisation of life business. The Company's organisation and administration were completely disrupted and disorganised. These strains have been responsible for the increase in the management expenses. Despite the fall in profit, the Company has been able to maintain the dividend at Rs. 3 per share, free of income-tax.

The most notable feature of the working of the Company is the steady and continuous increase in premium income. From a modest figure of Rs. 1.38 crores in 1948, it rose to Rs. 4.97 crores in 1955, crossed the Rs. 5-crore mark in 1956 and rose further to Rs. 6.30 crores in the year under review. The increase in premium in 1957 has been shared by all the three departments. Foreign business brought in the major part of the premium income. Out of the total premium income of Rs. 630 lakhs, foreign business accounted for Rs. 465 lakhs and Indian business Rs. 165 lakhs. The following table brings out the salient features of the working of the Company during the four years ended 31st December 1957:

(In lakhs of rupees)

	1957	1956	1955	1954
Premium Income:				
Fire Department	324.4	289.7	274.1	250.3
Miscellaneous Department ..	164.0	144.1	108.9	85.5
Marine Department	141.9	130.0	114.5	100.7
Total of all Departments ..	630.3	563.8	497.5	436.5
Funds:				
Fire Department	205.0	188.0	181.0	168.0
Miscellaneous Department ..	102.0	92.0	74.0	62.0
Marine Department ..	176.0	165.0	156.0	141.8
Total of all Departments ..	483.0	445.0	411.0	371.8
Free Reserves:				
Capital Reserve	51.6			
General Reserve	100.0	100.0	100.0	85.0
Premium on Shares	36.2	36.2	36.2	36.2
Dividend Equalisation Reserve	22.0	22.0	20.0	20.0
Exchange Reserve	5.0	5.0	5.0	9.9
Investment Reserve ..	22.0	22.0	9.0	9.0
Total ..	236.8	185.2	170.2	160.7

The results of the fire department were adversely affected during the year by a sharp increase in the ratio of claims to the net premium from 37.6 per cent. in 1956 to 43.9 per cent. This was primarily due to adverse claims experience of Fire Treaty Reinsurance from abroad, which in the past had contributed substantially to the profits of the Company's fire department and also because of adverse experience on direct business in certain foreign countries. The claims experience of other departments, however, showed a slight improvement with the percentage in the miscellaneous department going down from 53.00 to 52.1 and in the marine department from 76.7 to 71.5

As regards commission and expense ratio, not much variation was recorded during the year. It was 45.7 per cent. in the fire department, the same as in the previous year, 36.5 per cent. in the miscellaneous department, as against 33.9 per cent., and 25.6 per cent. in the marine department, as compared with 25.4 per cent.

The following table indicates the comparative position of outgo during the years 1956 and 1957:

Department	Percentage of			
	Claims		Commission and expenses of management	
	1956	1957	1956	1957
Fire	37.6	43.9	45.7	45.7
Miscellaneous ..	53.0	52.1	33.9	36.5
Marine	76.7	71.5	25.4	25.6

The reserves for unexpired risks have been maintained at 41.4 per cent. of the premium income in the fire department, 40 per cent. in the miscellaneous department and 100 per cent. in the marine department. Besides these reserves, provision has also been made for additional reserves in all the three departments, to the tune of Rs. 70,81,192 in the fire department, Rs. 36,42,022 in the miscellaneous department and Rs. 34.08,770 in the marine department.

The underwriting profit of the fire department declined from Rs. 46.1 lakhs to Rs. 21.1 lakhs. The miscellaneous department has, however, helped, to some extent, to mitigate the decrease in profits of the fire department. It contributed a surplus of Rs. 12.1 lakhs to the profits of the Company, as against Rs. 4 lakhs last year. The practice of providing 100 per cent. premium reserves for the marine business has resulted in a strain of Rs. 12.0 lakhs which, as in the past, has affected the earnings of the department. Because of a relative reduction in claims and expenses, however, a deficit of only Rs. 0.5 lakh is taken to the profit and loss account, as compared to a deficit of Rs. 5.3 lakhs last year.

Total profits transferred to the profit and loss account amounted to Rs. 32.7 lakhs, Rs. 21.1 lakhs from the fire department and Rs. 12.1 lakhs from the miscellaneous department less a deficit of Rs. 5 lakhs transferred from the marine department. Adding to this amount Rs. 9.9 lakhs being the income received during the year on investments and accounting for other adjustments, there was available a total of Rs. 41.3 lakhs, as against a sum of Rs. 54.4 lakhs last year. Provision for taxation absorbed Rs. 12.0 lakhs and, out of the balance, the Directors have transferred Rs. 1.1 lakh to the reserve for doubtful debts and Rs. 5.5 lakhs to the exchange reserve. The payment of a dividend of Rs. 3 per share on 712,106 shares will absorb Rs. 21.3 lakhs, leaving Rs. 1.4 lakh to be carried forward.

The Company's Rs. 15-paid-up ordinary shares are being currently quoted on the Bombay Stock Exchange at Rs. 47.25 *cum-div.* On an *ex-div.* basis, and on the basis of the dividend of Rs. 3 per share for the year under review, the yield works out to 6.35 per cent. per annum, free of income-tax.

(Concluded from next column)

called upon to base their conclusions on one year's loss experience. The agreement to revise rates over three-year periods, though commendable in its insistence on justice to consumers, was, in Mr. Setalvad's view, likely to prove disastrous to the insurance industry. Downward revisions, based each time on the experience of a couple of years, would, he emphasised, only have the effect of crippling or even destroying small and medium sized units, without doing justice to all types of consumers either. He insisted that experience for a minimum of 10 years should, therefore, be taken into account in revising each item on the tariff.

Proceeding, the Chairman dealt with another feature of tariffs, namely, the large number of specially rated risks appearing in the regional tariffs. Special rates were granted for a variety of reasons, one of which, apparently, was that the risk was better than others of its type. There was nothing wrong in the practice if the risk would not fit into any tariff classification. To grant special rates because the risk was better than others of its type, according to Mr. Setalvad, negatived the very idea of a tariff. The tariff laid down the standard rate for the standard construction and/or occupation and any departure for the better from these latter standards, should not, normally earn any special recognition in the shape of lower rates. To hold otherwise should logically mean that each risk must have a separate rate because it was inconceivable that any two risks should be exactly identical or uniform in every single particulars with the tariff requirements. If this logic were followed, he pointed out, there was no reason why special rates should not be granted for every slight deviation from the tariff. He suggested that, except in special circumstances, the consideration of special rates should be the exception rather than the rule and efforts should be made to apply the tariff rates to all risks which could fit into tariff classifications. Surely, as he himself pointed out, if there were many risks of a standard better than the tariff standard, this fact would be reflected in the experience and the rates would inevitably come down. He, therefore, appealed for the application of the tariffs wherever possible, leaving special rates to be granted only in those cases where exceptional circumstances warranted such a departure.

REVISION OF FIRE TARIFF RATE

GENERAL CUT OPPOSED

THE view that the revision of fire tariff rate, if at all a revision was to be made, should be confined for the time being to those few items in which experience had been favourable over a fairly long period, was expressed by Mr. B. K. Setalvad, Chairman of the Tariff Committee of the General Insurance Council of the Insurance Association of India, in his address to the 7th annual general meeting of the Council held in Bombay on 27th June. Since 1955, when it was agreed that a revision of tariff should be made after three years, the Chairman added, there was a change for the worse in the financial commitments of insurance companies. The last three years, in particular, witnessed a rise in the demands of insurance employees, and a consequent increase in the cost of administration. There was also an all-round increase in prices which had the result of increasing the cost of claims settlement and other expenses. General insurers were, therefore, facing difficulties even without any reduction in rates, particularly as the marine and miscellaneous sections were unremunerative and had, of necessity, to be subsidised by the profits of the fire section.

Mr. Setalvad said that at present the hope of making a reasonable profit in the marine section was illusory. He referred to certain uninformed criticism of the marine rates and the seeming anomalies in the rating structure. The rate and the rating structure, he pointed out, were the inevitable result of the efforts of Indian insurers to meet international competition and to make Indian insurance gradually grow to the stature of other international markets. As an instance, he pointed to the complaint that the marine rates for sendings to overseas countries were considerably lower than those for shipments to Indian coast ports. It was not realised, he said, that the latter rates were based on experience and were by no means unconscionable. The reason why rates for overseas sendings were low was that any sendings overseas might be covered at the other end, where cover was available at lower rates. Insurers in India must, therefore, be prepared either to quote competitive rates or be content to allow all overseas business to depart from the Indian market. Indian insurers, Mr. Setalvad added, could not even arrive at an agreement to charge rates commensurate with the experience with so near a neighbour as Ceylon. Efforts made to evolve a tariff applicable to sending from Ceylon to India and *vice versa* proved infructuous because insurance interests in Ceylon indicated quite clearly that they would not be able to carry the rates suggested. Their reason was that Lloyd's and other overseas insurers were willing to write business at much lower rates. In these circumstances, Mr. Setalvad averred, marine business would continue to run at a loss. Motor insurance, he said, was unprofitable in almost every part of the world and India was no exception. Rates for motor insurance have been substantially increased in practically every market. And with the rising cost of repairs and spare parts, it was futile, according to him, to expect that it would even contribute substantially, or at all, to the overall profits. It was in this context, the Chairman averred, that the question of revision of fire tariff should be considered. In any discussion of the subject, he emphasised, the fact that the profits in the fire section must of necessity subsidise the other two sections should never be lost sight of. It appeared that the authorities desired that Indian insurers should offer all types of cover offered in the international markets, at comparable rates. This would mean little or no profits in the marine section and the authorities must, therefore, be prepared to permit comparatively high profits in the fire section. "It is no use castigating this attitude as profiteering at the cost of the Indian consumer," he pointed out, "if it is desired that the influence of Indian insurance should be felt outside the confines of this country." The revisions in fire tariff rate, Mr. Setalvad maintained, should, therefore, be confined to those items which had shown favourable results over a long period. In other words, there should be no general revision based on the experience of one or two years. As no comprehensive system of collecting statistics existed till 1956, the rating committees in the various regions, which had been asked to recommend revisions, had indulged in mere guesswork. They were practically

International Panorama of Progress

Oasis for modern skypower

CALTEX
PETROLEUM PRODUCTS

Centuries ago, plodding caravans formed the link that joined peoples, made nations great. Today a new dimension in transportation—the air—has shrunk distances, brought the citizens of the world closer. By touching down at modern oases for refueling, giant transports traverse the earth, bringing increased commerce and other advantages of the air age wherever they go. Progressive airlines know that quality petroleum products are indispensable for economical, dependable operation. Caltex aviation fuels and lubricants send perishable cargoes to market...machine parts to industry...passengers to far-off places—faster than ever before. Through the power of petroleum, Caltex is playing its part in establishing a new pattern of prosperity in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

INTERNATIONAL IMPACT OF U.S. RECESSION

ALL-ROUND FALL IN ECONOMIC ACTIVITY

IT was only last week that we posed the question in our Market Gossip columns whether the present signs of recovery in world commodity prices would gather momentum in the near future. We emphasised then that the trend of prices depended on the economic conditions not only in the U.S. but also in Europe. This aspect has been well brought out by the Research and Planning Division of the United Nations Economic Commission for Europe (E.C.E.) in its interesting study of the international impact of the U.S. recession published in the E.C.E's current *Economic Bulletin*. The study is quite comprehensive, in that it covers a review of the common and differentiating features of the three post-war recessions, an analysis of "the recession behaviour of imports and exports," and assessment of prospects for 1958-59. The chief conclusion of the E.C.E. Secretariat is that, if the West European countries want to play a leading role in a revival of world economic activity, they will need to adopt policy measures designed to equalise the relative strength of the major W. European currencies, effectively pool the gold and dollar holdings of individual countries through payments arrangements, and co-ordinate national policies of expansion.

The E.C.E. review of the three post-war recessions reveals four common features. First, in each of the recessions, a decline in exports appears to have been a contributory factor. Secondly, changes in inventory accumulation have been important elements. Thirdly, all the three recessions conform to the rule that a widespread fall in economic activity does not set in without a preceding restriction on the supply of credit. Finally, a tightening of monetary policy, intended to counteract the inflationary tendencies, seems to have played a role in the early stages of all the three recessions, initiating the reversal of economic expansion.

Various Features

The E.C.E. Secretariat refers to the differentiating features of the recessions. These are summed up as follows:

Whereas in 1948-49 and in the present recession, credit policies were relaxed only after the downturn in activity was a clearly established fact, in 1953-54, credit was gradually eased from May 1953—two months before the decline in industrial production began—though after a drastic rise in interest rates in the preceding month. For that reason, it may be assumed that, if Federal orders and expenditures had not been reduced appreciably in 1953 and in 1954, in consequence of the reduced intensity of operations in Korea and the subsequent armistice, total activity would have declined but little in that period. A number of factors worked together to call forth the 1948-49 downturn. One rather general and important element was presumably that, through the rapid expansion of civilian production since 1946, the post-war backlog of accumulated demand for durable consumers' and producers' goods was gradually being reduced. Thus, market conditions were changing in such a way as to induce expectations of a reversal of the rising trend of prices. This was quite probably an important factor influencing private fixed investment, which started falling in volume well before manufacturing production. Residential construction reached its maximum in the second quarter of 1948 and other private fixed investment declined after the third quarter, the rise in construction contracts awards having stopped by the end of 1947. The changed price expectations may in part have been the product of tighter credit conditions, which may, in addition, directly have restricted investment through the decreased availability of finance.

The 1948-49 recession was in the nature of a brief adjustment to the disappearance of post-war scarcities in major markets possibly provoked and, to some extent, intensified through mildly restrictive credit policies and the 1953-54 recession was largely the product of declining Federal expenditures. The present recession, however, appears to exhibit the main characteristics of a typical business downturn. The downturn followed after a long period of rising investment, during which its composition changed towards shorter-term investment with residential construction declining already from the middle of 1955. The fall in the output of durable manufactures occurred earlier and was much steeper than for non-durable manufactures. Finally, there was a considerable delay between the start of the decline in industrial production and the end of net inventory accumulation.

Like the two earlier recessions, the present one was preceded by a tightening of credit. But, whereas in 1948, as has been mentioned, credit restriction was relatively moderate and in 1953 it was speedily reversed at the first signs of a downturn in activity, the restriction of credit in the present recession was strong and was maintained long after it had become abundantly clear that activity was declining. Indeed, the present recession is another example of a downturn called forth through persistent central bank action. The free reserves of Federal Reserve member banks—that is, excess reserves minus borrowings at the central banks—were reduced drastically from the middle of 1954 and became negative from August 1955. After temporary relief in the last part of 1956, bank liquidity was again reduced and maintained at low levels through the major part of 1957. Only in the last quarter of 1957 was remedial action taken, allowing free reserves to become slightly positive at the beginning of 1958. This development was reflected in both short- and long-term market rates, which rose from the middle of 1954 to the late months of 1957. In the three years 1955 to 1957, Federal Reserve discount rates were raised no less than seven times, the last time in August 1957.

In the opinion of the E.C.E. Secretariat, the slowing down of economic expansion which took place after 1955 was not the necessary result of a scarcity of productive resources. Private fixed capital investment has in the post-war period proceeded at a high rate on which the two earlier recessions had only a small and brief impact. Though unemployment fell from 1954 to 1955, it remained in both 1956 and 1957 well above the levels of 1952 and 1953 and left scope for significant further expansions of employment and output. Thus, both the material and human resources were available for the continuation of economic expansion after 1955, and its slowing down, as well as the later decline in activity, must be judged a consequence primarily of the restrictive policies pursued by the monetary authorities. In spite of the margin available for expansion of output, cost-inflation persisted and was a major factor motivating the monetary policies pursued.

Industrial Investment

But, while the expansion of productive capacity through investment creates the possibility for further growth of output, it does at the same time increase the sensitivity of the economy to depressive factors by tending to depress the profitability of further investment. Assuming that the economy in 1955 operated at close to full capacity levels, the E.C.E. Secretariat estimates that the subsequent additions to capacity and recent declines in activity created idle capacity to the extent of some 20 to 25 per cent. at the beginning of this year. Industrial production changed little from the end of 1955 through the third quarter of 1957, while industrial investment proceeded at a high rate. Thus, even a resumption of production at the previous maximum levels would have hardly sufficed to call forth a renewed expansion of industrial investment to the levels of 1957 in circumstances in which actual sales, especially in manufacturing sectors, fell considerably short of expectations.

The decline in total domestic final expenditures by the end of 1958 is expected to be of the order of at about $10 billion. Such a decline, it is stated, would most probably be accompanied by an inventory disinvestment not in excess of some $5 to 6 billion. And, since inventories have already been reduced by about $3 billion, it is assumed that inventory decumulation will have come to an end by the fourth quarter of 1958. The decline in gross national product from its highest rate would then amount to slightly more than 3 per cent. and its level would not differ significantly from that which obtained in the first quarter of this year. Since, however, it is probable that both the decrease in inventory decumulation and the major part of the rise in Federal expenditures will occur in the second half of the year, it may well be that activity will continue to fall in the coming months, followed by a feeble recovery in the autumn. Such a development would probably imply a level of industrial production about 10 per cent. below that of the first three quarters of last year.

The E.C.E. Secretariat alludes to the restrictive credit policies which have been partly responsible for the present recession, as for its two predecessors. These policies, according to it, were imposed with the aim of counteracting inflationary tendencies. But, whereas in 1948, the main element in such tendencies was demand pressures in commodity markets, in 1952 and even more this time, rising money wages were the main factor. Because the present recession has had a severe impact on the output of steel and automobiles—two industries, the trade unions of which play a dominating role in wage developments—it is expected that the tendency for wages to rise will be very much weakened. The rise in food prices in the United States may be reversed later this year, in consequence of increasing supplies of livestock products, and the markets for industrial materials will presumably remain weak. It is, therefore, considered quite probable that Federal Reserve policies will prove to have been successful in the sense that prices of consumers' goods will be lower by late 1958 than they were twelve months earlier, even though, in the process, economic welfare will have been adversely affected in a large part of the western world.

Prospects for 1958-59

Summing up the prospects for United States imports in late 1958, the E.C.E. Secretariat observes:

"Imports of crude and manufactured foodstuffs may show a certain increase in volume terms, but, largely through the effect of lower coffee prices, there may occur a decline in the value of these imports as compared with 1957. Experience indicates a very high sensitivity of imports of finished manufactures to changes in manufacturing output; and the decline may be put at 10 per cent., due allowance having been made for the expected increase in motor car imports from Europe. The detailed examination made of the prospects for non-food crude and semi-finished materials suggests a reduction in imports of ores and metals by 15 per cent. below the 1957 level, and in value terms probably by more, despite the greater stability of bauxite and iron-ore imports. Imports of crude materials of agricultural origin might fall slightly less in volume terms but, since prices are extremely sensitive to a falling off in demand, the dollar outlays are likely to fall as much as for metals. Experience has shown that the U.S. imports of forestry products are very sensitive to fluctuations in economic activity and, in this sector also, an appreciable reduction in 1958 imports may be expected. Imports of petroleum and products, on the other hand, may fall only moderately.

"The reduction in total U.S. imports below the previous year's level will on these hypotheses reach 10 to 15 per cent. in 1958, the higher figure relating to the value. The reduction in imports may thus become more pronounced, both in volume and in value terms, than in the 1953-54 recession, and in volume terms very much greater than in the 1948-49 recession. Moreover, it should not be forgotten that, already during the second half of 1957, the export proceeds of primary producing countries were tending to fall as a result of declining prices. Since prices of manufactures continued to increase, there occurred a deterioration in the terms of trade of these countries that is expected to continue through 1958. The impact of the decline in imports on the main supplying areas is also likely to exhibit important differences from the situation during the earlier recessions."

Dollar Earnings

According to the E.C.E. Secretariat, both in 1949 and in 1954, the overseas sterling area, particularly Oceania, suffered the greatest losses in dollar earnings and were followed by Western Europe, while imports from the American Continent, including certain non-sterling dependent overseas territories, were better maintained. This time, the value of U.S. imports from the Latin American republics is likely to fall substantially, due mainly to an expected decline in the price of coffee and possibly of sugar (neither being closely related to the fall in the U.S. activity) and to a reduction in imports of most non-ferrous ores and metals. The non-sterling dependent overseas territories in Latin America, on the other hand—exporting bauxite, petroleum products and certain foodstuffs—may have better experience. But Canada is likely to be more affected by the present recession than by the earlier ones. While the U.S. imports of iron ore may be better maintained, there will occur significant reductions in imports of aluminium, nickel and other non-ferrous metals, forestry products and petroleum, several of which had resisted the earlier post-war recessions.

As regards imports from the overseas sterling area, it is said that they increased at a high rate during the second half of 1957. This was, however, largely due to the discontinuation of a diversion of petroleum exports from certain sterling countries to Europe during the Suez crisis and, in general, a postponement of imports due to the shortage of shipping and high freight rates in the first half of 1957. But the cocoa price increase and the accelerated imports of bauxite also boosted the value of imports from sterling countries. The outlook for these imports in 1958 is expected to be relatively more favourable than during the preceding recessions; wool imports fell already in 1957 and, even if there is a further drop, this is not likely to be of the magnitude experienced in the earlier recessions. Similarly, rubber imports may in value terms fall less than in either 1949 or 1954.

The E.C.E. Secretariat is inclined to feel that imports from Western Europe will drop, on account of the reduced imports of manufactures. Also, imports of metals, including steel, and forestry products from Western Europe will be affected. However, the volume of paper and pulp exports to the U.S. could probably be maintained, but only by substantial price concessions.

Thus, it seems likely that the effects of the present downturn in economic activity on U.S. imports will be more evenly spread over both commodities and exporting countries than in either 1949 or 1954. Since during the earlier recessions, Western Europe and the sterling area were the areas most seriously affected, this difference might indicate somewhat better relative prospects for Europe. This relative improvement may, however, prove illusory, since there had already in 1957 been a pressure on dollar reserves in both areas.

U.S. Capital Exports

Past experience yields only inconclusive evidence on which to project the flow of private U.S. capital exports in 1958. Certainly, these exports may have achieved in 1956 and early 1957 levels which would not have been maintained even in the absence of a business downturn. Direct investment formed the bulk of this large flow both in 1956 and in 1957. The E.C.E. Secretariat, therefore, stresses that the prospects for the year ahead must depend, to a large extent (and in contrast with the 1949 and 1954 situation), on what happens to the level of direct investment. On the basis of past experience, one would expect this to fall, and the events of the last half of 1957 lend support to this assumption. The very high level of direct investment in 1956 and 1957 leaves scope for a severe fall.

Proceeding, the E.C.E. Secretariat points out that general business expectations and activity levels in Canada and in Latin America—and hence U.S. investments in those areas—will be closely geared to developments in the U.S. In Western Europe, the short-term outlook has lately deteriorated, though by no means as drastically as in the U.S., and to the economic uncertainties have recently been added political ones. Moreover, though the formation of the European Economic Community will continue to provide scope and inducement for U.S. direct investment in Europe, the fairly long period contemplated for the establishment of the Common Market probably means that these investment plans are not, in general, regarded as overwhelmingly urgent. The effects of the narrowing of markets and financial resources in consequence of an economic setback both in the U.S. and in Western Europe may well, therefore, cause temporary postponement of some planned investments.

The E.C.E. Secretariat estimates that the U.S. imports by the end of this year may well have declined by some $2 billion at an annual rate. While no estimate proper can be made of the decline in private capital exports to be expected, a fall of some $1 billion is well within the realm of probability. With the remaining categories of dollar supply but little affected, the total dollar supply might thus fall by $3 billion or more than 10 per cent.

Foreign Reserves

The rise in total foreign reserves, which had gone on since the middle of 1952, came to a halt towards the end of 1956. During the period both of rise and of subsequent stagnation in reserves, developments differed widely between countries. Western Germany and Venezuela together accounted for about three-quarters of the rise from end-1952 to end-1957 in the reserves of countries other than the U.S. Over the same period, countries other than these three increased their combined reserves by little more than 5 per cent., whereas the value of world trade rose by about 35 per cent. In consequence, the international liquidity position of most countries may be judged to be fairly sensitive to a decline in the supply of dollars from the U.S. In this connection, the Secretariat makes the following observations:

"The fall in international liquidity could have far more serious effects on world activity levels than could be expected in consequence of the mere income effect of the decline in U.S. purchases of goods and services from the rest of the world. In fact, the cut in dollar supplies brought about by the shrinkage of U.S. capital exports is primarily of importance only in its effect on the international liquidity of other countries. Already a number of primary-exporting countries, particularly in Asia and Latin America, have, in the course of 1957, suffered considerable losses of reserves, and as the decline in the outflow of dollars from the U.S. proceeds, more and more countries will come to the point where the decline in liquidity induces policy measures to protect reserves. Only if such measures take the form of direct controls or other special interventions designed specifically to improve the balance of payments with the U.S. will a tendency towards a cumulative contraction in world trade and payments be averted. If —as appears likely to be the case—the policies adopted are either contractionary monetary policies or non-discriminatory controls, contraction will spread through the international economy. This development is already under way."

It is against this background that the Secretariat emphasises that it would serve the interests of the U.S. itself to take part in arrangements designed to alleviate the impact of the recession on international liquidity. In the light of the extent to which the recession has been allowed to progress, such arrangements would be needed even if domestic action were to be taken in the near future to raise demand in the U.S. Failing agreement by the U.S. to steps of this kind, serious consideration should be given to the possibilities and scope for concerted action by the industrialised countries of Western Europe to maintain high levels of output and trade in the international economy outside the U.S. Considered as an economic unit, Western Europe is, the E.C.E. Secretariat declares, in a relatively favourable position for pursuing expansive policies in the face of a U.S. recession. While Western Europe's share of total dollar supplies is about 30 per cent., its share in the relatively stable items, services and payments on government account is much larger. In addition, Western Europe has experienced an appreciable improvement in its terms of trade in consequence of the fall in primary goods prices relative to those of manufactures and thereby obtained a certain margin for economic expansion.

ENGINEERING

(*Concluded from page 62*)

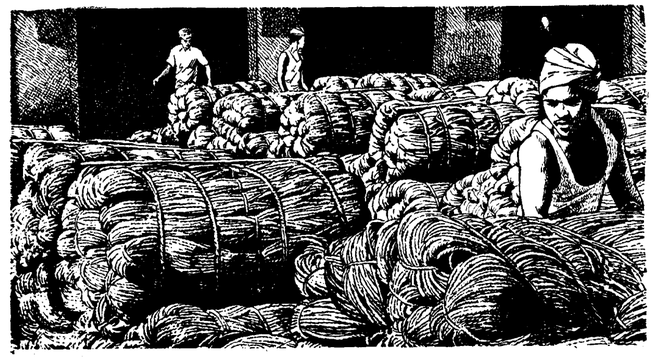
Bandra-Ghodbunder Road west of the Western Railway main line to be named "Western Express Highway." The Eastern Express Highway will be 14.5 miles in length and the Western 20 miles.

The three important National Highways in the State are the Bombay-Poona, the Bombay-Agra and the Bombay-Ahmedabad-Delhi roads. As regards the Bombay-Ahmedabad-Delhi Road, it is proposed to provide a separate direct access via Ghodbunder. The prerequisite for the introduction of the proposed alignment is a direct and all-weather communication from Bombay to Ahmedabad. The proposed direct route reduces the present distance by 22 miles. The present route from Bombay to Ahmedabad is via Thana and this Bombay-Thana section of Bombay-Agra Road is extremely crowded and serves as an outlet from Bombay for four main roads, namely, the Bombay-Agra, the Bombay-Poona, the Bombay-Ahmedabad and the Bombay-Konkan-Goa roads. The proposed alignment of National Highway No. 8 along the Borivli-Ghodbunder-Manor-Ahmedabad road is totally independent of the existing road via Thana-Bhivandi-Manor, giving an extra outlet which can be considered of importance from the strategic point of view also. After completion of the road, it will give a direct approach to fertile areas around Bassein which is the production centre of fruits and vegetables.

Of particular importance to road transport is the creation of facilities for the movement of heavy traffic and truck-trailer combination. In Bombay State, a vehicle with laden weight of 19,000 lbs. can ply on all important roads. It is the intention of the State Government, according to Mr. Desai, to increase the laden weight limit of trucks to 27,000 lbs. But the chief bottleneck in translating this intention into practice is the weakness of the cross drainage works. It would appear that these works are not capable of taking heavy weight. This means that the necessary permission to increase the laden weight limit cannot be given unless the cross drainage works are suitably strengthened. It is, therefore, gratifying to be told that the Government has decided to examine all such works in all important roads and to take measures designed to strengthen them. It is to be hoped that this examination will be completed without delay and the appropriate repairs or reconstruction of the works carried out in the interests of transport of heavy traffic.

PC-438

How banking serves the COIR INDUSTRY



INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

Current Accounts – Demand Drafts – Telegraphic Transfers – Investments – Letters of Credit – Bill Collection – Deposits – Loans and Overdrafts – Confidential Credit Reports, etc.

* * *

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

PAPER INDUSTRY IN INDIA

TARIFF COMMISSION TO CONSIDER QUESTION OF FAIR PRICE

THE paper industry is again in the news. Apparently, the Government and the industrialists have failed to see eye to eye on the question of fixing a fair price for paper and paperboard. The issue, therefore, is expected to be referred to the Tariff Commission for consideration. This decision is reported to have been taken at a meeting held recently under the auspices of the Ministry of Commerce and Industry at New Delhi, following a series of complaints received by the Government that there has, of late, been a sizable increase in the prices of paper. Presided over by Mr. B. B. Saksena, Joint Secretary of the Ministry, the meeting was attended by the representatives of both the Indian Paper Makers' Association and the Indian Paper Mills' Association.

Pending the reference to the Tariff Commission, the Government has reiterated its plea to individual units not to raise their price of paper beyond 2 nP over and above the rate allowed for Government purchases. There had, however, been a rise in the price of paper even before this meeting to the extent of 3.5 nP per lb. The industry has been informed, we are told, that, in case the decision on the Tariff Commission's recommendations was delayed beyond three months, they would be free to charge an additional 3.5 nP per pound until a final decision was taken by the Government.

The position of retail prices has been worse still. This is attributed to lack of proper control on the part of manufacturers over the prices charged by the dealers but it is difficult to see what they could have done in this matter. However, in order to check this unhealthy trend, a sub-committee was set up at the meeting. This Committee will examine from time to time the complaints received from the public about overcharging by retail dealers. Such cases, after scrutiny by the Committee, would be brought to the notice of the paper mill concerned for necessary action.

At the meeting, the Government held the view that the paper industry could afford to limit its increase to the permitted 2 nP, particularly because of the phenomenal progress in production it has made in the past. It was pointed out to the manufacturers' representatives that the production of paper had gone up by 100 per cent. since 1948 when the Tariff Commission last enquired into the industry's position. Moreover, the mills had been modernised and the manufacturing technique improved. The Government, therefore, maintained that the industry should be able to effect a reduction in production costs. It should be possible for the industry, according to the Government, to pass on the benefit of this reduction to consumers.

The representatives of the industry, however, stressed that an increase in price was inevitable to enable the industry to stand on its own feet. They felt that the difference between the prices at which the paper was sold to the Director-General of Supplies and Disposals and the price for the general public did not provide a reasonable margin of profit. It was pointed out further that conditions in the industry differed from State to State. Accordingly, they are said to have suggested that individual mills should be asked whether they would accept the recommendation that no increase could be made beyond the rise of 2 nP per lb. allowed by the D.G.S. & D.

There is thus a marked divergence of opinion between the Government and the manufacturers of paper over the question of fair price. In this context, it will not be out of place to examine the industry's position, with particular reference to the pattern of consumption, the capacity of the industry and the changes in cost of production. It must be noted at the outset that the demand for paper is moving up by as much as 10 per cent. every year, thanks to the rapid industrial progress, steady increase in literacy and gradual improvement in the general standard of living. The demand for paper is expected to reach 350,000 tons by 1960-61. It is gratifying to note that the industry, despite heavy odds, has been making great strides during recent years. The table below shows the trend of production and installed capacity in the industry during the ten-year period 1947 to 1957:

(In '000 tons)

	Installed capacity (total)	Production				
		Total	Printing and writing	Wrapping	Special varieties	Boards
1947	105.00	93.10	52.78	16.85	5.32	18.16
1948	105.00	97.91	50.38	17.39	12.91	17.23
1949	110.00	103.21	59.48	12.88	11.90	18.94
1950	118.90	108.91	70.15	14.62	5.20	18.95
1951	137.00	131.92	79.26	25.49	3.12	24.05
1952	147.50	137.51	91.43	21.54	2.82	21.72
1953	151.00	139.70	92.03	21.14	3.42	19.51
1954	153.70	155.33	102.88	24.16	4.79	23.51
1955	186.20	184.88	119.50	28.32	5.60	31.46
1956	211.90	193.40	122.99	30.92	5.77	33.72
1957	252.00	210.13	126.52	38.02	7.20	38.40

Production of paper and paperboard touched a peak level of 210,310 tons in 1957. The installed capacity also shot up to a record level of 252,000 tons in 1957. It is expected that construction of two new paper units and expansion of one of the existing units will be completed during the current calendar year. The production of newsprint was firmly established last year; currently it is running at 12,000 tons per annum. It is claimed that, during last year, regular production of moisture-proof heat sealing grade of cellulose film was established for the first time. The quality of the product is said to have been found satisfactory by cigarette manufacturers and it is expected that over 50 per cent. of the industry's needs will be met by local production. Other types of paper manufactured for the first time in the country include the experimental production of grease-proof and cable papers and regular production of cheque paper. Thus, there has been an all-round improvement in quantity as well as variety of paper manufactured in this country.

Despite the steady progress thus registered, all is not well with the industry. To begin with, it is a matter for considerable concern that, while the installed capacity of the industry continued to expand, the actual production was lagging behind. Thus, in 1957, about 16.0 per cent. of the total capacity was lying idle, as against 8.7 per cent. and 0.7 per cent in 1956 and 1955, respectively.

It is unfortunate that there should have been a decline in the extent of utilisation of capacity even while the demand has been steadily moving upwards. This is mainly due, according to paper manufacturers, to the fact that the selling price of paper has been maintained relatively at a steady level while the cost of production has been going up. As was emphasised by Mr. J. F. Brierly, the erstwhile President of the Indian Paper Makers' Association, at the annual meeting of the Association held at Calcutta a few weeks ago, there was a steady rise in prices of fuel and raw materials since paper was decontrolled in 1950. The price of coal, of which about 3½ tons are consumed for the manufacture of each ton of paper, rose by nearly 30 per cent., the price of hosiery cuttings moved up by as much as 80 per cent., rosin by 48 per cent. and china-clay by 60 per cent. Labour costs, too, we are told, increased by 30 per cent. on account of increased wage rates and expenditure on additional amenities. As against these increases, the price of white printing paper was allowed to be raised by only 12 per cent. above the level ruling in 1950. There was, however, an increase of 16 per cent. since March 1955, but this was the result of the imposition of excise duty. Added to this, there were the higher direct taxes. The cumulative impact of these adverse factors led to a substantial rise in the production cost, which, in the absence of a rise in the receipts, impaired the incentive for expansion.

The position of the paper industry is further complicated by the fact that the Government purchases nearly 30 to 40 per cent. of the domestic production. It is said that the price set by the Government for its purchases barely covers the production costs. Another factor that prevents an easy solution of the question of prices seems to be the different degrees of trials and tribulations to which the industry is subjected in the various States. To give an instance, the recent enhancement in the electricity duty payable by mills in West Bengal, it is estimated, would cost the paper industry no less than 1 nP per lb. Again, many State Governments have been indiscriminately raising the royalty on forest produce, which in turn has pushed up the industry's cost of raw material. As a result of such measures the price of paper is bound to differ from State to State. It is to be hoped that a realistic assessment of the relative impact of these forces will be made by the Tariff Commission, when the question comes up for its consideration.

WORLD RICE EXPORTS

World rice exports in the first quarter of 1958—as indicated by the figures of the main shipping countries—were running at a level below that of a year earlier, according to the Commonwealth Economic Committee's latest issue of its rice supplement published in London. Exports from Burma, in particular, showed a sharp fall, the report adds.

Estimates of world production (excluding China and the Soviet Union) have now been revised downwards to 122 million tons, as against 128.5 million tons in 1956-57. The final estimate of the rice crop in India puts production at 36.50 million tons, which is over 5 million tons less than that of 1956-57. Outturn in Formosa in 1957-58, despite a fall in the area under rice, was at a post-war record level of 2.36 million tons. The report states that in the first quarter of this year shipments from Burma fell from 472,000 to 330,000 tons; those from Thailand from 434,000 to 413,000 tons; and those from the United States from 278,000 to 140,000 tons.

Analysing the Burmese exports during the first quarter of this year, the report notes that, though India was the main outlet, as in 1957, shipments declined from about 168,000 tons to about 117,000 tons. Ceylon remained an important market, though here, too, the shipments were substantially reduced from about 81,000 tons to 54,000 tons. Exports to Pakistan, on the other hand, rose from 6,900 tons in January-March 1957 to over 36,000 tons. Malaya and Singapore were the chief markets for Thailand's exports, though shipments were reduced from about 154,000 tons to some 138,000 tons. Exports to Hong Kong declined from 78,000 tons to 62,000 tons, while those to Ceylon fell from over 33,000 tons to 200 tons. Elsewhere in Asia, the report notes, the substantial shipments to Japan and the Philippines in the previous year were reduced to negligible proportions in January-April 1958, but those to Indonesia rose from over 92,000 tons to 121,000 tons. Deliveries from British Borneo rose from over 11,000 tons to over 21,000 tons. Exports from South Viet-Nam included 28,000 tons to Indonesia, the largest shipment to this outlet for some years. Malaya and Singapore, which took no rice from South Viet-Nam in January-April 1957—and only 5,800 tons during the whole year—accounted for over 30,000 tons. The United States' export figures for the first quarter of 1958 include Pakistan as the main outlet, taking over 65,000 tons, as compared with 21,000 tons in the same period of the previous year.

EXPORTS OF SWEDISH BUTTER TO THE U.K.

Sweden has decided to limit its butter exports to Great Britain to 8,000 tons, i.e., 75 per cent. of its average annual pre-war exports of butter to that country, over the 12-month period ending 20th May 1959. This has been the gist of the reply sent by the Swedish Government to the note submitted by the U.K. on 16th March 1958, on the question of dumping of butter into Britain. The measure has been taken pending joint action to arrive at a better balance on the British butter market. Sweden has rejected the British assertion that Swedish butter exports *per se* have seriously affected the New Zealand dairy industry and strongly opposed any discriminatory measures against its exports. Sweden has, however, expressed its willingness to co-operate positively in any joint action to reach a solution of the present difficulties confronting the international butter market. If, however, the joint action proposed fails to materialise, says the Swedish Government, it will have to reconsider the case of the cut-down in exports. It has added that the question of future Swedish butter exports, like other trade problems, may be brought up for discussion during the forthcoming negotiations for an Anglo-Swedish trade agreement after 31st December 1958.

The 39th Lausanne National Fair is scheduled to be held from 13th to 28th September 1958. It is one of the two most important economic events in Switzerland, the other being the Basle Fair. The fair concentrates within its 1,320,000 square feet of exhibition space the main products of the country's different economic branches. Held each autumn, the Lausanne Fair attracts over 2,300 exhibitors from the various parts of the country. The number of visitors, we are told, averages some 800,000 each year, exclusive of foreign visitors who represented some 68 countries last year.

METAL BOX EARNS RECORD PROFIT

OUTLOOK DEPENDS ON TINPLATE SUPPLY

TO promote an enterprise and run it successfully for a quarter of a century against many vicissitudes is by no means an easy task. If, along with this, the enterprise serves as an instrument for the creation and subsequent growth of a wide range of new industries, it is certainly a creditable achievement of which the *entrepreneurs* can justifiably feel proud. The Metal Box Company of India, Ltd., provides a notable example of this type. Established in 1933 on a modest scale with one small factory employing 35 people, the Company has expanded itself to possess five factories and six ancillary establishments, all providing employment to over 5,000 people. It also serves today more than 1,000 other factories employing about 80,000 people and marketing a large variety of consumer goods of the value of over Rs. 100 crores, by providing them with first-class, scientifically prepared packaging materials.

Recounting the achievements of the Company and the policy which has inspired them during the last 25 years, Mr. H. Chiswell Jones, O.B.E., Chairman of the Company, says, in his review of the year ended 31st March 1958, appended to the accounts for the year:

"I think it is appropriate briefly to review our achievements and the policy which has inspired them since your Company's modest beginning in 1933. Then, such packers of consumer goods as existed, welcomed us warmly, for hitherto their products had been at a heavy disadvantage *vis-a-vis* imported goods packed in superior containers. The availability of high class lithographed packages, equal to those available elsewhere in the world, enabled many Indian manufacturers' products to obtain proper recognition for the first time. Our enterprise did more than help the few existing packers, it greatly stimulated demand and made it possible for many new suppliers of consumer goods to compete successfully in a market previously dominated by imported goods. Subsequently, many world-famous manufacturers sent their products to India in bulk for repacking and later, under the stimulus of import restrictions, undertook local manufacture. We can, I feel, claim quite fairly that our enterprise was the instrument which made possible the creation and subsequent growth of a wide range of new industries. ... Our sales policy has been to keep prices low and obtain a satisfactory return on our investment by a high volume of turnover. For the last decade we have kept constantly before us the need to combat rising costs by increased volume and improved production methods which we have financed principally by retained profits until high taxation rendered this well-nigh impossible."

As if to crown the efforts of these 25 years, the Company has achieved record results in the twenty-fifth year of its working. Sales reached a peak of Rs. 6.12 crores, representing an increase of Rs. 45 lakhs over the previous year. It is noteworthy that the Company's turnover (as indicated by the sale proceeds) has grown substantially from Rs. 2.72 crores in 1949-50, the year of its conversion into a public limited company, to Rs. 6.12 crores in 1957-58. The gross profit has set up a fresh record of Rs. 88.38 lakhs in the year under review, an increase of Rs. 9 lakhs over 1956-57. It is twice as much as that (of Rs. 43.01 lakhs) earned in 1949-50. After raising the provisions for depreciation and taxation slightly, as the comparative table appearing at the bottom shows, the net profit for the year under review has gone up from Rs. 28.86 lakhs to Rs. 36.34 lakhs. It should be noted here that the actual provision for taxation for the year under review amounts to Rs. 41.50 lakhs, out of which a sum of Rs. 39 lakhs has been set aside from the year's profit and the balance of Rs. 2.50 lakhs has been drawn from the surplus in the taxation reserves built up in the previous years.

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	6,11.79	5,66.76	4,94.55	3,48.69
Other income	11.62	9.78	8.06	2.95
Stocks of finished goods	6.45	7.43	7.01	8.06
Raw materials consumed	3,41.96	3,27.60	2,76.55	1,91.08
Other expenses	1,91.98	1,70.04	1,48.99	1,17.46
Gross profit	88.38	79.32	75.12	45.66
Provision for—				
Depreciation	18.04	12.46	11.28	9.75
Taxation	39.00	38 00	31 00	13.25
Net profit	36.34	28.86	32.84	22.66
To reserves*	14.22	7.81	11.01	5.64
Dividends—				
6% cum. preference (taxable)	1.24	1.33	1.33	1.33
Ordinary	20.58† (17½%)	20.12 (17½%)	18.99 (16½%)	14.37 (12½%)
Carry forward	16.65	16.34	16.24	14.45

* Include provision for doubtful debts.
† Includes additional dividend of Rs. 46,000 for 1955-56.

It is noteworthy that almost the entire increase in net profit has been utilised to strengthen the reserves. Thus, the transfer to the general reserve has been raised from Rs. 6.50 lakhs to Rs. 10 lakhs. In order to comply with the provisions of the Finance Act 1958, a sum of Rs. 2 lakhs has been set aside to the development rebate reserve; this sum will cover adequately 75 per cent. of the rebate to which the Company will be entitled. The provision for doubtful debts has been stepped up from Rs. 81,478 to Rs. 2.22 lakhs. These appropriations do not permit of an increase in the distribution to ordinary shareholders, except by digging into the previous years' surplus. The dividend has, therefore, been merely maintained for the second year in succession at 17½ per cent., to which level it had been raised in three successive stages from 10 per cent. for 1953-54. In addition, the Directors have recommended the payment of an additional dividend of 4 nP per share for the year 1955-56, in order to escape the penal provisions of section 23A of the Indian Income-tax Act, the actual dividend required to be distributed for such purpose being only 3.53 nP per share. It is stated that it will not be necessary to pay any additional dividend in respect of the years 1956-57 and 1957-58 on this score.

The increase in sales is due partly to a rise, early in the year, in the price of tinplate, the principal material required for the Company's products, but mainly to the Company's "ability to attract, to the full extent permitted by raw material availability, the new demand growing within the country." It is noteworthy that, in view of the acute tinplate situation, brought about by shortage of foreign exchange in the country, the Company has made successful attempts at manufacturing products other than those made from tinplate, namely, rigid and collapsible tubes for toilet and pharmaceutical packs, roll seal pilferproof and other closures for bottles, industrial components, diothene bags, closing machinery and advertising media. The sales of these articles are said to have increased by 38 per cent. and now contribute a significant portion of the Company's total output.

The import restriction on tinplate and other basic components required for many other important materials is reflected in the drop in the Company's purchases of raw materials during the year from Rs. 3.73 crores to Rs. 3.09 crores and in its stocks from Rs. 1.78 crore to Rs. 1.45 crore. The Company's stocks of tinplate on hand, along with the limited import licences granted, enabled it to meet all its requirements up to the end of March 1958. Since then, there has been a deterioration in the supply position.

The Company made additions to its gross bloc during 1957-58 to the value of Rs. 23.22 lakhs, bringing the total gross value of fixed assets at the end of the year to Rs. 284.28 lakhs. The depreciation provided so far is Rs. 101.16 lakhs, so that the net block stands at Rs. 183.11 lakhs. The other assets amount to Rs. 251.14 lakhs, of which the stock-in-trade alone accounts for Rs. 151.67 lakhs. As against these assets, secured loans, current liabilities and provision for taxation aggregates Rs. 143.62 lakhs. The net assets thus amount to Rs. 290.63 lakhs, represented by a paid-up capital of Rs. 145 lakhs and reserves and surplus aggregating Rs. 145.63 lakhs.

The Government of India has approved of the long-term credit offered by the Company's consultants, the Metal Box Company, Ltd., London, to cover the supply of plant and machinery required for plastics development and plant, machinery and spares for the metal container manufacturing equipment. It may be noted here that the Company has been granted a licence to extend its operations to the plastics field embracing injection moulding and polyethylene extrusion and printing. Additional plant has been ordered and will be installed this year. The Company's range of machinery manufacture has been expanded to include double seaming machines for the canning industry; these machines were being imported hitherto.

The outlook for the current year depends on the supply of tinplate and other raw materials and the prices thereof. Referring to these important aspects, the Company's Chairman says:

"There has been a deterioration in the indigenous supply position due to shortage of tin-

INDORE MALWA MILLS

DIVIDEND CURTAILED

THE results shown by the Indore Malwa United Mills Ltd. (Chairman, Board of Directors: Mr. Kudilal G. Seksaria, Bombay) for the year ended 31st December 1957 provide one more instance of the unenviable position in which the cotton textile industry has been placed since September 1956. The general slackness in the demand for cloth and yarn brought about, by heavy taxation on consumption and the consequent decline in price levels, accentuated further by higher manufacturing and other expenses, have told heavily on the Company's profit-earning capacity. To be brief, its working during the year under review has resulted in a loss of Rs. 8.39 lakhs. This is in distressing contrast to the gross profit of Rs. 24.02 lakhs made in 1956 and the still better profit of Rs. 27.93 lakhs earned in 1955. The latter, namely, Rs. 27.93 lakhs, it may be noted, was a new record since 1945. The precipitous decline in the Company's fortunes during the short span of two years bears testimony to the artificial depression in the textile industry created by the Government.

After taking into account the remuneration to the Committee of whole-time Directors and depreciation, there is a net loss of Rs. 14.40 lakhs, as against a net profit of Rs. 8.89 lakhs in the previous year. The provision for depreciation has been lowered from Rs. 6.59 lakhs to Rs. 5.51 lakhs, consequent on the benefit of development rebate amounting to Rs. 44,250. This sum, which represents the development rebate for 1957, has been transferred to development reserve account. Despite the heavy loss incurred, the Directors have proposed a dividend of 6 per cent. for the year under review by transferring a sum of Rs. 3 lakhs from the dividend equalisation reserve. The Company, it may be noted, had paid a dividend of 11 per cent. for the previous year, 9 per cent. for 1955 and 6 per cent. per annum for all the three preceding years. After adjusting the small surplus from the previous year and the sum of Rs. 3 lakhs realised as profit from sale of machinery, the loss that has been carried forward amounts to Rs. 11.77 lakhs.

The following comparative table brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sales of cloth, yarn and waste	2,69.20	2,57.26	2,95.22	2,49.18
Closing stocks of cloth, yarn, cotton and waste	92.17	78.89	60.77	84.20
Cotton, stores, etc., consumed	1,65.06	1,56.69	1,84 41	1,58.93
Other expenses	1,14.05	1,05.51	1,02.05	96.68
Gross profit (+) or loss (—)	—8.39	+24.02	+27.93	+6.78
Agents' commission	0.00	1.84	2.62	0.88
Depreciation	5.51	6.59	9.78	3.16
Provision for taxation	..	7.20	8.00	..
Net profit (+) or loss (—)	—14.40	+8.89	+7.53	+2.94
Profit on sale of machinery	3.00	..	..	..
Transfer from bonus provision	..	0.16	..	..
Transfer from dividend equalisation reserve	3.00	..	..	..
To reserves	0.44	3.58	3.00	..
Dividend	3.00 (6%)	5.50 (11%)	4.50 (9%)	3.00 (6%)
Carry forward	—11.77	0.07	0.09	0.06

It will be seen from the above table that, though sale proceeds of cloth, yarn and waste have shown a modest rise of Rs. 1.94 lakhs, the improvement has been more than offset by the sharp rise of Rs. 8.37 lakhs in the cost of cotton, stores, etc., consumed and by the increase of Rs. 8.54 lakhs in other expenses. Of the latter item, wages, salaries, bonus, etc., alone have accounted for a rise of Rs. 5.78 lakhs, that is, from Rs. 68.34 lakhs to Rs. 74.12 lakhs.

The Company's latest balance-sheet as at 31st December 1957 shows its paid-up capital at Rs. 50 lakhs in ordinary shares of Rs. 100 each. Of this amount, as much as Rs. 30 lakhs represent the amount capitalised out of reserves in September 1948. The reserves and surplus are now small and aggregate only Rs. 6.95 lakhs. The current liabilities stand at Rs. 169.91 lakhs and include a provision of Rs. 24.32 lakhs for taxation, in addition to secured loans of Rs. 88.89 lakhs and unsecured loans of Rs. 22.65 lakhs. The gross block of Rs. 159.76 lakhs has been written down to a book value of Rs. 38.44 lakhs. The current assets aggregate Rs. 188.41 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 18.50 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 110 *cum-div.* On an *ex-div.* basis and on the basis of the latest dividend, the yield works out to 5.77 per cent. per annum, free of income-tax.

KAMANI ENGINEERING CORPORATION LTD.

MR. R. H. KAMANI'S SPEECH

THE Annual General Meeting of the Kamani Engineering Corporation Ltd. was held in Bombay on 30th June 1958. The following is the text of the speech of Mr. R. H. Kamani, Chairman of the Company, delivered on the occasion:

"GENTLEMEN,

"The report and accounts for the year ended 30th September 1957 have been already in your hands and, with your permission, I propose to take them as read.

"I shall first deal with the accounts. The profit of the year under review is Rs. 6,23,599. After deducting therefrom Rs. 3,49,037 for depreciation, Rs. 25,000 for taxation, Rs. 40,000 for gratuity and Rs. 25.000 for doubtful debts, the amount available, together with Rs. 36,664 brought forward from last year. comes to Rs. 2,21,226. Out of this, your Directors have recommended to dispose of Rs. 1.65,000 for payment of dividend on 5½ per cent. (less income-tax) cumulative preference shares due for the years ended 30th September 1956 and 1957 at the rate of Rs. 5.50 nP per share, free of tax, as there would be no assessable income for the year under report. The balance being Rs. 56.226 has been carried over to next year's account.

"Recently certain State Governments and project authorities have issued tenders for supply of transmission line towers, traction structures for railway electrification, communication masts and sub-station structures which are due to come up for consideration. It is understood that consideration for import of finished towers is being shown by the State Ministers and project authorities concerned, as in their opinion the fabricators in India will not be able to fulfil the delivery schedule due to shortage of steel and thus the power programme undertaken by the said authorities will be delayed. In the context of this impression, the Company represented its case to the Government of India directly and through the Association. The attention of the Government has been particularly drawn to the fact that, although this industry has more than adequate capacity available to meet the requirements, it finds itself solely dependent on the timely supply of steel sections in required form over which it has no control. It has been suggested that the situation as arising above can be solved by import of steel by the Government of India rather than by import of towers. The import of steel would not only ensure utilisation of the indigenous capacity but also would result in saving of foreign exchange to the extent of difference between the price of steel and finished materials which may work out to about Rs. 2½ crores, on the tender under consideration as stated above. The total quantity involved in the said tenders is approximately 25,000 to 26.000 tons. I hope the Government of India will take proper steps in this direction and assist the indigenous industries as they did in the past. You must have noticed from the Directors' report that the production of towers during the year under review has been increased by 1,099 tons as compared to the previous year. During the current year the production has been stepped up appreciably.

"The satisfactory progress is being maintained in the construction of transmission and distribution lines. It was necessary to start work of construction at five places simultaneously with a view to executing orders in time.

"As the railways have postponed their development programmes, because of foreign exchange difficulties, they stopped import of wagon parts in the country. The situation thus created has forced the Company to close the wagon assembly plant at Okha. Retrenchment and rehabilitation task of more than 600 workers employed by the Company at Okha Works was completed smoothly.

"With the speeding up of community development programme in the country, it is expected that the demand for road-roller chassis is bound to go up.

"During the year under report the agency business maintained steady progress. The private sectors, which have very little place in the second Five-year Plan for their expansion scheme, have to postpone their requirements of capital goods due to change in the import policy of the Government arising from foreign exchange crisis. Import of the capital goods required for such schemes is allowed by the Government on deferred payment terms stipulated by the Government which has only limited scope. Under the circumstances, it would be rather difficult to push on sale of the Company's agency activities in private sectors. The Company has now to depend upon its agency business coming from the Government and such private sectors which are included under the Government second Five-year Plan.

"Before I conclude, I wish to convey my appreciation to the employees of the Company for their sincere work.

"With these words, I move the following resolution and I commend to you the report and accounts for adoption:

'RESOLVED that the audited profit and loss, account and balance-sheet for the year ended 30th September 1957 and the reports of the Board of Directors and the auditors, now before the meeting, be and are hereby adopted.'"

Points From The Chair

Finance for Tea Industry

"ASSAM'S economy is vitally linked up with the tea industry and no lending institution operating in the State can ignore this aspect altogether. The Indian section of the tea industry in the State is in urgent need of long-term finance for the replacement and renovation of machinery and equipment and also for replantation, to keep pace with the competitive market. World production of tea is steadily increasing and at the same time production costs are mounting. Indian teas are facing keen competition in the international market and the competition will be still harder with the rapid expansion of the tea-growing areas in Africa. The outlook for tea depends to a large extent on the quality tea and if the trade in our country is to flourish, producers must find economic balance between higher yields and the production of quality teas. Our Corporation is anxious to render all possible assistance to the industry, but are unable to do so, first, for the reason that the commercial and co-operative banks, who are financing most of the gardens against crop hypothecation, are reluctant to release the title deeds in favour of the Corporation and, secondly, the Corporation with its limited resources cannot afford to undertake the responsibility of providing long-term finance in abundant measure to the tea industry, unless it is successful in raising additional funds. The only effective means for augmenting the resources of the Corporation is to issue debentures and bonds with the approval of the Reserve Bank of India and the State Government. Although the Act provides that payment of interest on such debentures and bonds would be guaranteed by the State Government, yet in view of the prevailing stringent condition of the money market, the response from the public is expected to be poor and the success of the issue cannot, therefore, be regarded as fully assured without direct support from Governmental institutions. However, the Plantation Enquiry Commission are of opinion that the financial difficulties of the Indian section of the industry can only be removed by the State Bank of India by providing finance in an abundant measure. While the State Bank of India are considering the question of hypothecation finance to the tea gardens, this Corporation will continue to meet the needs for long-term finance, provided its resources permit it to do so."

J. P. CHALIHA,
Assam Financial Corporation.

Magna Carta for Foreign Capital

"We are often asked why we persistently adhere to the principle of financing extensive development projects—particularly abroad—out of our own resources, even when circumstances would permit us to approach the money market. To a certain extent, the question is no doubt justified. However, it does not take into account the fact that our factories abroad are not entirely independent units, but part of a whole. The consequence is that outsiders could only be induced to risk their capital to a limited extent. Even for us the very considerable investments of our Company, which are spread all over the globe, represent a risk which is by no means limited to the funds supplied by Basle. In view of the violence which characterises the political and ideological differences of the present time, there is no need for me to elaborate the nature of these risks. Unfortunately the hazards of new industrial developments are increasing, particularly in the so-called underdeveloped countries, the very territories where increasing Government pressure is being exerted to induce us to establish and expand our industrial activities. Taking the overall view, there can be no doubt that the major industries of the Western world must do their part in the industrial development of these countries. That is being done, and industrialisation is going ahead rapidly with the help of leading international concerns. Realisation of the risks involved for private enterprise has led to a movement to re-establish the principle of the inviolability of private property and to incorporate this principle in an international Magna Carta. At the same time, a valuable effort is being made to establish the principle of equality between national and foreign interests in bilateral agreements."

DR. ROBERT KAPPELI,
Ciba Limited, Basle.

COMPANY MEETINGS AND DIVIDENDS

FORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 29th July 1958. Transfer books will remain closed from 21st to 29th July 1958, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th July 1958. Transfer books will remain closed from 16th to 30th July 1958, both days inclusive.

SHREENIVAS COTTON MILLS LTD. Annual General Meeting, Bombay, 30th July 1958. Dividend: Rs. 8.00 per share, payable on and after 25th July 1958. Transfer books will remain closed from 3rd to 30th July 1958, both days inclusive.

DHARAMSI MORARJEE CHEMICAL CO., LTD. Annual General Meeting, Bombay, 12th August 1958. Dividend: Rs. 5.00 per share, payable on and from 16th August 1958. Transfer books remain closed from 26th June to 21st July 1958, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 13th August 1958. Dividend: Re. 1.00 per share, free of income-tax. Transfer books will remain closed from 21st July to 13th August 1958, both days inclusive.

BALLY JUTE CO., LTD. Annual General Meeting, Calcutta, 13th August 1958. Dividend: Rs. 6.00 per share, free of income-tax. Transfer books will remain closed from 21st July to 13th August 1958, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Dividend of 20 per cent. or Rs. 2.00 per share, for the year ended 31st December 1957.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Dividend of 20 per cent. or Rs. 2.00 per share, for the year ended 31st December 1957.

CHOONABHUTTI TEA CO., LTD. Dividend of Rs. 20.00 per ordinary share, for the year ended 31st December 1957.

BASMATIA TEA CO., LTD. Dividend of Re. 1.75 per share, for the year ended 31st December 1957.

KAILAS RUBBER CO., LTD. Final dividend of 15 per cent. or Re. 0.30 per share (making a total of 25 per cent. or Re. 0.50 per share) for the year ended 28th February 1958.

NILGIRI TEA ESTATES LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 31st March 1958.

INDIA CEMENTS LTD. Final dividend of 5 per cent. or Re. 1.25 per share on the ordinary shares (making a total of 9 per cent. or Rs. 2.25 per share) for the half-year ended 31st March 1958. Transfer books will remain closed from 18th July to 6th August 1958, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Final dividend of 4½ per cent. on the ordinary shares (making a total of 8¾ per cent.), for the year ended 31st March 1958. Transfer books will remain closed from 2nd to 27th August 1958, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Dividend of 20 per cent. or Rs. 20.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 17th to 30th July 1958, both days inclusive.

COTTANAD PLANTATIONS LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1957. Transfer books will remain closed from 21st to 29th July 1958, both days inclusive.

NILAMBUR RUBBER CO., LTD. Dividend of 15 per per cent. or Re. 1.50 per share, for the year ended 31st December 1957. Transfer books will remain closed from 21st to 29th July 1958, both days inclusive.

SAVAMALAI ESTATES LTD. The Annual General Meeting of the Company has been postponed to 30th July 1958.

COORG TEA CO., LTD. Final dividend of 10 per cent. or Re. 0.50 per share (making a total of 20 per cent. or Re. 1.00 per share) for the year ended 31st March 1958. Transfer books will remain closed from 18th August to 1st September 1958, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Dividend of 20 per cent. or Rs. 2.00 per ordinary share, for the year ended 31st March 1958. Transfer books remain closed from 12th to 26th July 1958, both days inclusive.

COMPANY REGISTRATIONS

AHMEDABAD CONSTRUCTION AND CEMENT CONCRETE MANUFACTURING CO. PRIVATE LTD. (Managing Director: Kalyanbhai Manilal Shah.) Business: Construction of buildings, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 252, Gashparekh's Pole, Jain Road, Ahmedabad.

HIT AND HITS PRIVATE LTD. (First Director: Mr. K. S. Sukhija.) Business: Producers and exhibitors of cinematographic films, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Flat No. 601-602, 'Sukhasagar,' 6th Floor, Sandhurst Bridge, Bombay 7.

J. H. INDUSTRIES PRIVATE LTD. (First Director: Srimati Jyoti Hariprasad Trivedi.) Business: General traders. Authorised capital: Rs. 5,00,000. Private company. Address: 'Krishna Nivas,' 3rd Floor, Queens Road and Charni Road Junction, Bombay 4.

T. C. G. INDUSTRIES PRIVATE LTD. (First Director: Mr. Lekhraj Gupta.) Iron founders, mechanical and electrical engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Registered office of the company will be situated in the State of Bombay.

RESULTS OF BOWREAH AND DUNBAR MILLS DISAPPOINTING

BALANOOR AND DEVON TEA REPEAT DIVIDEND

Bowreah Cotton Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show, without providing for depreciation, a profit of Rs. 1,16,501 (Rs. 2,25,528) to which has to be added the credit balance brought forward from the last account, viz., Rs. 743 (debit balance of Rs. 23,47,373) making a total of Rs. 1,17,244 (credit of Rs. 743 after transferring Rs. 21,22,415 from reserves and Rs. 173 from reserve for taxation) which, the directors recommend, should be carried forward to the next account.

During the period, the mills have been completely electrified. Looking to the extremely difficult trading conditions in which the Indian cotton textile industry is working, the results for the year under review are not very unsatisfactory.

There is a glut of coarse and medium varieties in the market partly because of high prices. The heavy excise duty on cloth created an excessive stock of manufactured goods within the industry. Although a reduction in the excise duty on cloth has recently been announced, this has not yet been followed by any substantial improvement in the offtake of cloth from the mills. The matter is under the active consideration of the Government and it is hoped that some solution for betterment of the industry might come as envisaged in the Indian Labour Conference held at Naini Tal.

The benefit in the excise duty at the rate of 6 pies per square yard on the excess production ceased from 1st January, 1958. Depreciation for the year as well as in respect of the previous years could not be provided because of inadequacy of profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,00,000	Block ...	71,03,186
Reserves ...	1,50,000	Stock-in-trade	59,42,363
Liabilities ...	1,29,80,344	Stores and spare parts	16,04,442
Profit and loss account ...	1,17,244	Other assets	890
		Debts, deposits and advances ...	20,13,562
		Investments	52,603
		Cash ...	1,30,542
	Rs. 1,68,47,588		Rs. 1,68,47,588

Dunbar Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show, without providing for depreciation, a loss of Rs. 5,65,158 (profit of Rs. 3,26,385 after providing Rs. 4,27,508 for depreciation) from which has to be reduced the credit balance brought forward from the last account of Rs. 3,50,335 (credit of Rs. 1,37,950) leaving a debit balance of Rs. 2,14,823 (credit of Rs. 4,64,335). After deducting the amount transferred from reserve for taxation of Rs. 28,581 (*nil*), there is a debit balance of Rs. 1,86,242 (credit balance of Rs. 3,50,335 after paying a dividend on ordinary shares at Rs. 6 per share, absorbing Rs. 1,14,000) to be carried forward to the next account.

After the last year's strike, on the question of bonus issue for the year 1955, the Company has not yet reached its normal working and previous efficiency. Due to extremely difficult trading conditions in which the Indian cotton textile industry is working, the results for the year under review are not satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,00,000	Block ...	66,64,796
Debentures	25,00,000	Stock-in-trade	64,49,699
Reserves*	24,30,708	Stores and spare parts	15,60,442
Liabilities ...	1,01,95,479	Other assets	3,150
		Debts, deposits and advances ...	20,27,700
		Investments	55,603
		Cash ...	2,10,572
		Miscellaneous expenditure and losses	54,225
	Rs. 1,70,26,187		Rs. 1,70,26,187

*Reserves are shown after deducting Rs. 1,86,409 being the debit balance in the profit and loss account.

Balanoor Tea and Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies (Private) Ltd., Bangalore) present the audited accounts of the Company for the year ended 31st March 1958.

The Company's working for the year under report resulted in a profit of Rs 3,09,672 (Rs. 3,67,648) to which is added the balance brought forward from last year of Rs. 9,740 (Rs. 48,715), making a total of Rs. 3,19,412 (Rs. 4,16,363). The dividend on preference shares at 7½ per cent. per annum absorbed Rs. 18,750 (Rs. 18,750). Ten per cent. of the net profits due to the managing agents absorb Rs. 30,650 (Rs. 45,550). The directors have transferred to taxation reserve Rs. 70,000 (*nil*). The dividend on ordinary shares at 17½ (17½) per cent. absorbs Rs. 1,92,323 (Rs. 1,92,323). The directors propose to carry forward to next year's account, the balance of Rs. 7,689 (Rs. 9,740).

Crop and estimate.—Tea crop during the year was 4,56,080 lbs. as against the previous year's crop of 4,29,554 lbs. All in cost of production was 139 cts. and the average sale price realised 162 cts. Estimate for the next year is placed at 4,50,000 lbs. Coffee crop during the year was 2,497 cwts. as against the previous year's crop of 1,578 cwts. Estimate for the next year is placed at 3,400 cwts. Rubber crop was 36,387 lbs. as against the previous year's crop of 38,555 lbs. Estimate for the next year is placed at 38,000 lbs.

New planting.—Planting of rubber in the Malabar lands has progressed satisfactorily. One hundred acres were planted with budded rubber and another 100 acres have been made ready for the next season. The Company's estates are well maintained.

General.—The planting industry is being called upon to bear an increasing burden under salaries, wages, bonus, provident fund and welfare and amenities. As between the accounts of last year and this year's the increase under these heads is over Rs. 1,46,000. Even with an increase in the tea crop by over 27,000 lbs., the cost of tea per pound has gone up. Hence the net profits of the Company in spite of larger tea and coffee crops has been lower.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,48,990	Block ...	13,14,011
Reserves ...	5,36,010	Stock-in-trade	4,82,650
Provision for taxation ...	1,52,194	Stores and spare parts	1,09,653

Devon Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies (Private) Ltd., Bangalore) present the audited accounts of the Company for the year ended 31st March 1958.

The Company's working for the year under report resulted in a profit of Rs. 1,32,574 (Rs. 2,03,391) to which is added the balance brought forward from last year of Rs. 49,406 (Rs. 50,039) making a total of Rs. 1,81,980 (Rs 2,53,430). The dividend on preference shares at 7½ per cent. per annum absorbed Rs. 15,000 (Rs. 15,000). Ten per cent. of the net profits due to the managing agents will absorb Rs. 13,208 (Rs. 20,339). The directors have transferred to taxation reserve Rs. 30,000 (Rs. 90,000). The dividend on ordinary shares at 17½ (17½) per cent. will absorb Rs. 78,685 (Rs. 78,685). The directors propose to carry forward to next year's account the balance of Rs. 45,087 (Rs. 49,406).

Crop and estimate.—Tea crop during the year was 3,02,589 lbs. as against the previous year's crop of 2,78,379 lbs. All in cost of production was 141 cts. and the average sale price realised 167 cts. per lb. Estimate for the next year is placed at 2,75,000 lbs. Coffee crop during the year was 887 cwts. as against the previous year's crop of 598 cwts. Estimate for the next year is placed at 1,600 cwts.

New planting.—Planting of rubber in the Malabar lands has progressed satisfactorily. One hundred acres were planted with budded rubber and another 100 acres have been made ready for the next season. The Company's estates are well maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,49,630	Block ...	7,97,578
Reserves ...	3,55,370	Stock-in-trade	2,49,448
Provision for taxation ...	80,865	Stores and spare parts	70,333
Liabilities ...	2,07,901	Debts, deposits and advances ...	1,13,606
Profit and loss account ...	45,087	Investments	11,440
		Cash ...	96,448
	Rs. 13,38,853		Rs. 13,38,853

Rajalakshmi Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. B. Rangaswamy Naidu and Sons, Uppilipalayam) submit the audited accounts of the Company for the year ended 31st December 1957.

After deducting all working expenses and interest and providing Rs. 3,60,992 (Rs. 3,10,929) for depreciation, the year's working has resulted in a net profit of Rs. 1,88,328 (Rs. 3,91,352). Out of this, Rs. 2,043 (Rs. 3,516) has been expended by way of donations, leaving a balance of Rs. 1,86,285 (Rs. 3,87,836). With Rs. 5,070 (Rs. 11,081), the balance of profit brought forward from last year, there is a sum of Rs. 1,91,355 (Rs. 2,43,070 after paying Rs. 2,45,847 as bonus and including Rs 90,000 transferred from dividend equalisation reserve) to the credit of the profit and loss account and the directors recommend to dispose of this amount as follows:—

To transfer to machinery replacement reserve Rs. 41,914 (*nil*), to pay a tax-free dividend of 6¼ per cent. to the preference shareholders absorbing Rs. 13,000 (Rs. 13,000) and to pay a tax-free dividend of 9 (15) per cent. to the equity shareholders absorbing Rs. 1,36,441 (Rs. 2,25,000).

The sum of Rs. 1,03,836, under provision for taxes has been transferred to machinery replacement reserve as it is presumed that there will not be any liability for income-tax.

The low profit for the year of account is mostly due to the relatively high prices of cotton and the poor margin of profit in the sale of yarn. This feature seems to be common for all textile concerns in respect of the year 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,53,275	Block ...	43,74,945
Reserves ...	30,55,750	Stock-in-trade	13,13,823
Liabilities ...	21,57,684	Stores ...	2,28,030
		Debts, deposits and advances ...	8,97,232
		Investments	35,274
		Cash ...	5,17,404
	Rs. 73,66,709		Rs. 73,66,709

Binod Mills Co., Ltd.

The directors of the above Company (President: Mr. Lalchand B. Sethi, Indore) submitted the audited accounts of the Company for the year ended 31st December 1957.

The year's working after providing Rs. 6,84,352 (Rs. 6,47,968) for normal depreciation and adding a sum of Rs. 1,07,933 (Rs. 1,80,930) brought forward from last year's account shows a profit of Rs. 2,42,676 (Rs. 9,52,933 after providing Rs. 6,00,000 for taxation and Rs. 5,00,000 for arrears of depreciation in the past.) From this Rs. 1,00,000 (Rs. 1,25,000) having been transferred to investment reserve and adding Rs. 3,00,000 (*nil*) from dividend equalisation reserve, the total comes to Rs. 4,42,676 (Rs. 8,27,933) which the directors disposed off as under:—

To payment of a dividend at Rs. 6 (Rs. 12) per share absorbing Rs. 3,60,000 (Rs. 7,20,000) and leaving a balance to be carried forward to next year's account of Rs. 82,676 (Rs. 1,07,933).

The result of the year under report has not been satisfactory as it was an year of stress and strain for the industry. The unfavourable conditions in the cloth market, mention about which was made in the last report, continued throughout the year.

Income-tax assessments have been finalised up to the calendar year 1952. Appeals are pending against some of the completed assessments as reported last year. After transferring Rs. 10 lakhs to general reserve, provision for taxation as at 31st December 1957, stands at Rs. 4,96,338 which in the opinion of the Board is quite adequate.

During the year under report, cloth exports were made of 29,40,869 yards through exporters and 2,93,110 yards direct by the Company which were of the total value of Rs. 15,64,380. The Company is trying to increase the export of cloth and create a demand of its products in the foreign markets but the export demand is also on the decline.

The Central Power House, Indore, started supply of electric power only from January 1958. Out of 900 kw. which was agreed to be supplied, about 750 kw. has been switched on and the balance will be used in the near future. The agreement with the Madhya Pradesh Electricity has been finalised.

Spinning Machinery from Japan.—The spinning machinery ordered from Japan was received during the year under report and most of it has been erected. The local Mazdoor Sangh took out a temporary injunction to stop the erection of the remaining two Simplex Frames. The Industrial Court later on vacated the injunction and permitted the Company to proceed with the erection, but the Labour Union has again applied for review. The attitude of the Labour Union is not helpful and they are trying to create unfavourable atmosphere. The automatic reaching-in machines which have been erected could not be worked as the Union demanded higher wages than paid in Bombay and other centres, and which being unremunerative, machines are lying idle. During the year under report, machinery and equipment worth Rs. 14,86,999 has been received and installed in the Mills.

As reported last year, an application for loan of Rs. 10,00,000 on the security of the fixed assets of the Deepchand Mills Unit and the Power Substations of both Binod and Deepchand Mills was made to the Madhya Pradesh Financial Corporation, Indore, and the same was received. The expenses on new machinery and other capital items during the year under report amounted to about Rs. 26,97,333 resulting in paucity of funds for routine working which was partly met by selling or pledging with banks the securities held by the Company and by raising long and short-term loans. The Company has made an application to the National Industrial Development Corporation, Bombay, for a further loan of Rs. 25,00,000 which is under their consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Block ...	94,67,301
Reserves ...	42,46,655	Stock-in-trade	91,43,128

Liabilities ...	1,37,63,557	Debts, deposits and advances ...	26,76,214
Profit and loss account ...	82,676	Investments	12,15,912
		Cash ...	2,40,423
	Rs. 2,45,89,226		Rs. 2,45,89,226

Calcutta Gas Co. (Proprietary) Ltd.

The directors of the above Company (Secretaries: Messrs. Soorajmull Nagarmull, Calcutta) submitted the audited accounts of the Company for the year ended 30th September 1957.

The accounts show a profit of Rs. 8,11,251 (Rs. 8,07,991) which together with a sum of Rs. 33,430 (Rs. 22,189) being the balance brought forward from the last year, leaves a profit of Rs. 8,44,681 (Rs. 8,30,180).

A sum of Rs. 5,87,658 being the dividend pertaining to the Company from the subsidiary Company for the year ending 30th June, 1956 (free of tax) has been taken credit of in the accounts of the Company. It will be observed that a sum of Rs. 3,59,000 (Rs. 2,25,000) has already been provided in the accounts for taxation and Rs. 11,000 (*nil*) has been provided for wealth tax leaving a profit of Rs. 4,74,681 (Rs. 6,05,180) which the directors recommend to be disbursed as follows:—

To payment of a dividend on 30,000 5½ per cent. taxable redeemable preference shares for the year ended 30th September, 1957 (less income-tax) absorbing Rs. 1,13,025 (Rs. 1,21,688), to payment of a dividend at 5 (6) per cent. on 6,50,000 'A' and 'B' ordinary shares for the year ended 30th September, 1957, free of tax, absorbing Rs. 3,25,000 (Rs. 3,90,000) and to carry forward Rs. 36,656 (Rs. 33,430 after writing off Rs. 17,172 being preliminary expenses).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	95,00,000	Block ...	325
Debentures ...	30,00,000	Debts, deposits and advances ...	27,25,509
Reserves ...	1,00,000	Investments	1,16,15,599
Provision for taxation ...	5,96,770	Cash ...	8,53,425
Liabilities ...	20,61,432	Miscellaneous expenditure and losses	1,00,000
Profit and loss account ...	36,656		
	Rs. 1,52,94,858		Rs. 1,52,94,858

Harinagar Sugar Mills Ltd.

The directors of the above Company (Chairman: Shri Narayanlal Bansilal, Bombay) submitted the audited accounts of the Company for the year ended 30th September 1957.

The accounts show a net profit of Rs. 1,77,192 (Rs. 4,53,317) which includes the profits earned by the farms. This together with the carry-over of Rs. 19,236 (Rs. 9,806) makes a total of Rs. 1,96,427 (Rs. 3,69,236 which includes Rs. 1,79,680 being amount transferred from depreciation reserve and excludes Rs. 2,73,567 transferred to development reserve) which the directors have appropriated as under:—

To provision for taxation Rs. 1,00,000 (Rs. 50,000) and to dividend at 7½ (7½) per cent. free of income-tax absorbing Rs. 75,000 (Rs. 75,000) leaving a balance of Rs. 21,427 (Rs. 19,236 after placing Rs. 2,00,000 to investment reserve and Rs. 25,000 to bad and doubtful debts reserve) which is proposed to be carried to next year.

During the 1956-57 season the factory crushed about 45,87,700 (46,33,000) maunds of sugarcane and produced 1,42,740 (1,59,845) bags of sugar. The sugar recovery obtained, viz., 9 (9.49) per cent., was far below expectations. The workers of the factory frequently resorted to illegal slow-down strikes which resulted in very poor working of the factory on the whole, and this has also contributed towards the extremely poor recovery obtained this year, and increased cost of sugar production.

The Harinagar cane farms have earned an income of Rs. 2,00,537 during the year. The cane crop was less than expected due to adverse climatic conditions and attack of cane diseases. The title deeds of farm lands are being transferred in the name of the Company and hence they could not be made available to the auditors.

The Shangrila Food Products Ltd., suffered loss during the year ended 31st March 1957. Looking to the financial position of the Company, the directors have decided to forego the interest due to the Company on the loans advanced to the said subsidiary, for the period 1st October 1956 to 30th September 1957.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	10,08,514
Reserves ...	17,94,926	Stock of sugar ...	29,71,065

	Rs. 1,47,99,762		Rs. 1,47,99,762

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

NELLIMARLA JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Annual General Meeting of the Members of NELLIMARLA JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday the 30th day of July, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the 13 months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. B. L. Bajoria, the Director retiring by rotation at the Meeting.

   And in this connection to consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act 1956:—

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "Associate" of the Managing Agents within the meaning of the Act and that, therefore, he can only be re-appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution:—

   "That Mr. S. K. Mukherjee be and is hereby re-appointed a Director whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 16th to 30th July, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & Co., LTD.,

C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *27th June*, 1958.

Note:—Payment of the proposed dividends, if declared, will be made on or after 11th August, 1958, only to those members whose names are registered in the Books of the Company on 30th July, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Mr. S. K. Mukherjee was appointed by the Board as an Additional Director in August 1957 and vacates office at this Annual General Meeting under Article No. 114 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in Item No. 5 of the above Notice is intended to effect the re-appointment of Mr. Mukherjee as a Director liable to retirement by rotation.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED
TIRUCHIRAPALLI

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Annual General Body Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Tennur, Tiruchirapalli, on Wednesday the 27th August, 1958, at 4 p.m., to transact the usual business and special business as per notice individually posted to shareholders.

The Register of Members and the Transfer Books of the Company will be closed from 2nd August 1958 to 27th August 1958 (both days inclusive).

The Directors at their meeting held on 30th June 1958 have recommended the payment of the following dividends to the members for the year ended 31st March 1958:

4¾ per cent. tax-free final dividend on Ordinary shares, which with the 4½ per cent. interim dividend already paid makes a total dividend of 8¾ per cent. for the year and also the usual tax-free final dividends of 2¾ per cent. on I and II Preference shares. The dividends, if sanctioned at the General Meeting, will be paid on and after 27th August 1958 to those members whose names stand in the Register of Members on 27th August 1958 or to holders of dividend mandates.

Members are requested to intimate change of address, if any.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself, a proxy need not be a member of the Company.

By Order of the Board,

SESHASAYEE BROTHERS PRIVATE LIMITED,
Managing Agents and Chief Engineers.

TIRUCHIRAPALLI, *30th June*, 1958.

MONEY RATES DECLINE

(From Our Own Correspondent)

BOMBAY, *9th July*

The short-term money market ruled extremely easy. There was a plethora of funds. The repayment of bank credits gathered further momentum, while the demand for money remained poor. This state of affairs encouraged the banks to offer lower interest rates for inter-bank transactions. Thus, inter-bank call money among larger Indian banks and exchange banks was quoted at 2½ to 2¾ per cent. and among the smaller Indian banks at 2¾ per cent. House money at call was offered 4 to 4¼ per cent., but borrowers were not as keen as they were before. Short-term deposits fetched 4 to 4¼ per cent. for one to six months.

An expansion of Rs. 7.08 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 4th July 1958, in contrast to the successive contraction aggregating Rs. 31.48 crores in the previous three weeks. Notes held in the Banking Department are lower by Rs. 5.77 crores. The resulting rise of Rs. 1.31 crores in total notes issued is covered by an increase of Rs. 2.02 crores in rupee securities and a small fall of Rs. 72 lakhs in rupee coin. While there is no change in foreign securities, balances held abroad (in the Banking Department) have fallen by Rs. 7.01 crores. The National Agricultural Credit (Long-term Operations) Fund which had remained unchanged since 5th July 1957 at Rs. 20 crores has gone up by Rs. 5 crores during the week under review. The National Agricultural Credit (stabilisation) Fund has also risen by Rs. 1 crore to Rs. 3 crores, the first change since 5th July 1957. Deposits of the Central Government have shrunk by Rs. 8.17 crores, while those of other Governments show an increase of Rs. 7 crores. Deposits of banks have declined by Rs. 6.75 crores. Loans and advances to Governments are higher by Rs. 4.34 crores, while other loans and advances have gone down by Rs. 1.74 crores, mainly due to the decline of Rs. 1.94 crores in advances to Scheduled banks against usance bills.

The Scheduled Banks statement for the week ended 27th June 1958 shows a substantial rise of Rs. 10.96 crores in demand deposits and a small decline of Rs. 1.57 crores. Borrowings from banks have gone up by Rs. 1.85 crores and those from the Reserve Bank by Rs. 2.24 crores, while those from the State Bank of India have declined by Rs. 1.06 crores. Advances show an increase of Rs. 5.94 crores, while bills purchased and discounted have declined by Rs. 9.17 crores. Investments have been strengthened by Rs. 2.75 crores. Cash balances have expanded by Rs. 7.57 crores and balances with other banks by Rs. 5.45 crores.

The Gilt-edged market continued to rule steady, with good demand for short and medium dated issues and a rise in prices over a wide front. 3 per cent. 1986 Conversion Loan was dull at Rs. 71.10, while 3 per cent. 1970-75 was in demand and rose by 5 nP to Rs. 87.50. 3 per cent. 1966-68 were unchanged at Rs. 93.05. 3 per cent. 1964 gathered 5 nP to Rs. 95.60, while 3 per cent. 1963-65 was maintained at Rs. 95.60. 3 per cent. 1959-61 was in demand 5 nP higher at Rs. 99.35, as also 3 per cent. 1958 at Rs. 99.85. 2½ per cent. 1961 had buyers 5 nP higher at Rs. 95.70, 2¾ per cent. 1960 at Rs. 98.20 and 2¾ per cent. 1962 at Rs. 95.40. 3½ per cent. 1962 was taken 5 nP higher to Rs. 98.05, as also 3½ per cent. 1961 to Rs. 99.55. 3½ per cent. 1963 staged a marked rise of 15 nP to Rs. 99.05 and 3½ per cent. 1964 gained 5 nP to Rs. 98.70. 3½ per cent. 1965, the sale of which was resumed last week by the Reserve Bank after payment of half-yearly interest at Rs. 98.40, was put up by 5 nP to Rs. 98.45. 3½ per cent. 1967, 3¾ per cent. 1967 and 3¾ per cent. 1968 each gained 5 nP to Rs. 97.60, Rs. 99.70 and Rs. 99.55, respectively. The Reserve Bank raised its selling price for 3¾ per cent. 1968 from Rs. 99.50 to Rs. 99.55. Among the State loans, short-dated securities were in request.

The slight recovery in sterling abroad was reflected in the improvement of rupee in terms of the U.S. dollars. Banks' selling rate declined from Rs. 477.25 to Rs. 476.50 before closing at Rs. 477 per $100. Similarly, their buying rate moved down from Rs. 474 to Rs. 473.25, but rose slightly again to Rs. 473.75 per $100. In New York, spot sterling advanced from $2.80⅞-2.80.7/16 to $2.80.27/32-2.80.29/32, before falling again to $2.80⅛-2.80.9/16. Three months' forward gained over the week from $2.78.11/32-2.78.13/32 to $2.78.11/16-2.78⅜. Transferable sterling looked up from 278.30-278.40 to 278.50-278.60 cents, but dropped to 278.35-278.45 cents.

TRADING IN KIPS PATCHY

(From Our Own Correspondent)

MADRAS, *7th July*

Trading in kips with the U.K. was patchy during the week under review, because importers' buying was selective. Emphasis continued to be on fifths selection in cow hides, fourths in cow calf and thirds in buff calf. As shippers had earlier orders on hand, they were not willing to make further sales. There were a few enquiries for cow hides medium weights also.

Arrivals of kips were restricted and clearance was moderate. Prices ruled firm. Inland demand for lower selections in cow hides and calves was good.

In the tanned goat skins section, prices ruled firm for light and medium weight skins and quiet for heavier average. The tanned sheep market remained unchanged.

Shipments during June were: 1,210 bales tanned cow hides, 97 cow calf, 3 buffs, 189 buff calf, 557 goat, 293 sheep to the U.K.: 2 bales cow, 10 cow calf, 525 goat, 87 sheep to the Continent; 62 bales buffs, 61 buff calf, 71 goat to the U.S.A.; 143 bales sheep to Japan.

BULLION DEPRESSED

(From Our Own Correspondent)

BOMBAY, *9th July*

The bullion market ruled easy for yet another week, with a further break in prices of both the metals. Fresh arrivals of large quantities of unrefined silver in almost all the bullion markets in the country, possibility of large consignments of Tibetan coins in the near future, a marked shrinkage in demand due to seasonal factors and reports of an increase in the smuggling of gold have all combined together to depress bullion prices. Silver was particularly subjected to heavy bear pressure. As the closing rate of forward silver (*Shravan* first settlement) on Monday stood Rs. 7 below the starting rate of Rs. 188-6 for that settlement, sellers had to pay a margin of Rs. 500 per bar on their outstanding sales.

Forward silver (*Ashad* settlement) moved down from Rs. 181-3 to Rs. 180-10 before settlement ran out at Rs. 181-1. The *Shravan* settlement (first delivery) reacted from Rs. 182-3 to Rs. 179-10, but gained ground to close at Rs. 181. The second delivery was marked down from Rs. 182-13 to Rs. 181-7.

Ready silver dipped from Rs. 181-5 to Rs. 178-10, before staging a recovery to Rs. 180. The floating stocks of silver are reported to be 600 bars. The daily average arrivals (including unrefined metal) were 50 bars, while the offtake was less than 10 bars.

Forward gold (*Shravan* first delivery) improved slightly early in the week from Rs. 105-12 to Rs. 106-4, but slumped to Rs. 104-11 yesterday. Today, however, it improved to Rs. 105-1 before finishing at Rs. 104-14.

Ready gold shed over the week Re. 1-4, that is from Rs. 106-10 to Rs. 105-6. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas per day, on an average.

The price of silver was unchanged in New York at 88⅛c and in London at 75*d.* for spot and 74⅛*d.* for forward. Gold, however, relapsed from 250*s.* 5½*d.* to 249*s.* 11½*d.*, thus offsetting the gain recorded in the previous week.

The following comparative table shows at a glance the trend of the market during the week under review:

	9-7-58	Highest	Lowest	2-7-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	105 6	107 0	105 1	106 10

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

TIN RISES FURTHER

(From Our Own Correspondent)

CALCUTTA, *8th July*

There was a further rise in tin price during the week under review in the metal market. At one time, the price was as high as Rs. 580 before closing at Rs. 573, as against the opening rate of Rs. 565. Consumers did not follow up the rise, as they thought that, with the easing of conditions in port, the price would decline in the near future, especially when the trend on the London Metal Exchange was downward. Electrolytic zinc declined from Rs. 67 to Rs. 66 in anticipation of easy supply position. Lead was unchanged at Rs. 66. An order from Government was anticipated.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *7th July*

The general tone of the linseed market remained firm during the week. The main cause was shortage of supplies from upcountry centres. Crushers were still showing meagre interest, owing to lack of parity with oil prices. Trading was rather dull on the whole. In the oil section, offtake continued to be dull and sellers were hesitant. Shippers were not showing much interest at prevailing rates, as the U.K. markets were still dull.

The latest quotations are: Ready Rs. 24 and July-August Rs. 24-2 per maund.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *7th July*

During the week under review, the hides and skins market ruled steady. New arrivals were not as considerable as those in the previous week. The main purchasers were the local tanners. The Madras dealers were less active.

The latest available quotations are: Wet salted cow 1st grade Rs. 300 to Rs. 310 and 2nd grade Rs 250 to Rs. 270 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 11 ozs. per rupee: goat 1st grade Rs. 280 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 320 and 2nd grade Rs. 275 per 100 pieces.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *9th July*

Despite the announcement by the Government of India of a cut in excise duty on mill-made cloth, the cotton futures market ruled easy during the week. This was because the reduction, though welcomed, was considered inadequate. It was too early to assess the effect of the reduction in duty on cloth offtake and the demand for raw cotton, but the general feeling was that unless further reliefs or fresh incentives were forthcoming the industry would find it difficult to tide over the present crisis. Another factor which imparted weakness to the market was the statement of Mr. Morarji Desai at Calcutta that exports would be of real help to the country but that no sooner an export quota was granted than speculation raised the prices. Traders noted this statement as significant and interpreted it bearishly. It was construed as meaning, by implication, that, as long as cotton futures prices were high, no export quota would be released. Bulls who had made purchases in anticipation of a quota and had continued to hold on to their commitments, were thus unnerved and became eager to liquidate their holdings. Weather reports also influenced the sentiment of operators. News of beneficial rains in most cotton tracts and satisfactory crop progress prompted heavy selling by spot and upcountry interests. Over the week, prices came down markedly. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	9-7-58	*High*	*Low*	2-7-58
I.C.C. Moglai Jarilla				
August 1958 ...	684.75	694.50	683.25	692.50

The spot market reported better activity. This was attributed to the expectation of better offtake of piecegoods as a consequence of the reduction in duty. But business continued to be confined to staple styles such as Jaydhar, Khamgaon, Laxmi and Jarilla.

The export section was moderately active. Purchases were made in Kala, Wagad and *Deshi* varieties. Export inquiries were reported from Japan and Germany and China.

In the foreign section, early in the week, some prominent Ahmedabad and Bombay mills made sizable purchases of American cotton, subject to the availability of import licences. Importers were concerned over the delay in the announcement of an import allocation for U.S. cotton. There were also rumours that an import allocation for 30,000 bales of sterling area cotton of stapling 1.3/16" and above would be made soon.

The scheme currently under the consideration of the Government, under which exporters would be permitted to use a percentage of their foreign exchange earnings for importing essential raw materials, if it included cotton also, would, it was thought, be of interest to mills as it would enable them to obtain additional supplies of foreign cotton. Details of this scheme and its exact scope were awaited.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri, the figures in brackets being last week's closing quotations:

Bengal *Deshi* 600 (600); Berar Jarilla 720 (710); Khandesh 810 (800); Vijay 885 (870); Hubli Laxmi 1,030 (1,020); Jaydhar 880 (870).

The Karachi cotton futures market ruled distinctly firm during the week under review. The firmness was aided by brisk demand from abroad and encouraging domestic spinner inquirles. China was reported to be interested in Pakistan cotton. This induced some speculative buying. I.C.T.R.G. July firmed up from Rs. 74-12 to Rs. 77-13 on special support based on tender considerations. The January contract advanced by As. 12 to Rs. 78-10. The spot section also ruled firm. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 62; Punjab *Deshi* 59; 4F Roller 68-3; S.G. 74-3; 289F N.T. Roller 79-11; S.G. 90-11; 289F Punjab Roller 84-11; S.G. 97.3.

Cotton futures values in the Alexandria market recorded modest gains during the week. There was fairly good demand from overseas countries. China and Spain were reported to have purchased sizable quantities of Dendera and Giza 30 whose prices as a result improved. Rates were, however, held in check by reports of favourable weather and satisfactory crop progress in both Upper and Lower Egypt. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end rates:

Karnak: July 75.35 (79.10); November 76.10 (75.85). *Ashmouni:* August 67.35 (67.40); November 68.25 (68.15).

Total export sales from the beginning of the season till 15th June aggregated 755,022 bales, comprising 196,748 bales of Karnak, 205,557 bales of Menufi, 68,014 bales of Giza 30, 253,932 bales of Ashmouni and 30,771 bales of others, as compared with 617,645 bales last year made up of 243,152 bales of Karnak, 94,124 bales of Menufi, 105,498 bales of Giza 30, 170,275 bales of Ashmouni and 4,596 bales of other varieties.

Easy conditions prevailed on the Liverpool Cotton Exchange during the week under review. There was a sizable volume of hedge selling and some liquidation which was only partially absorbed by mill fixation. The volume of business was, however, small and trading inactive, with inter-month switchings forming the bulk of the dealings. Traders were awaiting the first U.S. acreage report for the new season. Sudan contracts were neglected. Values tended to look down. The following the the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: July-August 24.99; October-November 25.10; Decem-

ber-January 25.45. *American Cotton Mixed Growth Contract*: July-August 25.65; October-November 25.65; December-January 25.90. *Sudan*: July-August 31.25; September-October 31.90; November-December 31.90.

The New York cotton futures market ruled fully steady during the week under review. Barring the July contract, which encountered selling, most other positions met with good support from local and New Orleans operators. Traders were awaiting further developments in farm legislation. Towards the end of the week, attention was focussed on the first acreage report for the new season published yesterday. According to the estimate of the Crop Reporting Board of the U.S. Department of Agriculture, the area under cultivation on 1st July was 12,402,000 acres which was 88 per cent. of last year's planted acreage of 14,066,000 and, compared with 14,224,000 acres reported at this time last year. The lower estimate reflects larger entries of acreage into the Soil Bank this year plus allowance for abandonment of planted acreage. The first condition report and production estimate will be issued on 8th August.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	8-7-58	1-7-58	24-6-58
Spot	36.50	36.50	36.35
July	36.14	36.24	36.18
October	36.60	36.48	36.70
December	36.85	36.73	36.95

* * * * *

Following the modifications in the levy of excise duty on mill-made cotton cloth, the rates of compounded duty for powerlooms have been revised. The revised rates per powerloom, per shift, per month are as follows:

	If all powerlooms are employed in the manufacture of medium and/or coarse fabrics	If one or more powerlooms are employed in the manufacture of superfine and/or fine fabrics
	Rs.	Rs.
Where not more than 4 powerlooms are employed	*Nil*	*Nil*
5 to 9 powerlooms.	20	25
10 to 24 ,, ...	25	35
25 to 50 ,, ...	30	80
51 to 100 ,, ...	35	80
101 to 300 ,, ...	40	90

If more than nine powerlooms but not more than 24 are employed by or on behalf of the same person, no duty shall be payable in respect of the first four looms. If more than nine looms but not more than 24 are employed, no duty shall be payable (*a*) in respect of the first four looms and (*b*), in respect of the next five looms, in excess of Rs. 20 per loom, per shift, per month, if employed in the manufacture only of medium and/or coarse fabrics, or Rs. 25 if one or more looms are employed in the manufacture of superfine and/or fine cloth.

The downward revision in excise duty on powerlooms announced in March 1958, it will be recalled, made no distinction between coarse and medium cloth and fine and superfine counts. The distinction has been introduced under the latest system. Hereafter, the rates of compounded duty fixed in March are applicable only to fine and superfine cloth. For coarse and medium varieties, a new schedule of rates has been drawn up and these rates are substantially lower than those falling on powerlooms turning out fine and superfine cloth. The compounded levy system for powerlooms applies only to units with less than 300 looms. Those units which have more than this number are on a par with the mill sector and enjoy no protection relatively to it.

ART SILK YARN IMPORTS LIBERALISED

(From Our Own Correspondent)

BOMBAY, *9th July*

A notable development of the week in so far as the yarn market is concerned relates to the liberalisation of the import policy governing art silk yarn. The licence holders are allowed to utilise their import licences issued for the current half-year for importing 120 and 150 deniers high viscose rayon yarn up to 50 per cent. of the face value of licences and 120 and 150 deniers acetate rayon yarn up to 25 per cent. The customs authorities will accept such licences for clearance and it is not necessary for the licensees to submit the licences to the licensing authority for specific endorsement to this effect.

The aforesaid decision of the Government would appear to have been prompted by the need to alleviate acute shortage of supplies which has led to an appreciable rise in prices. The currently ruling average price of 120 deniers and 150 deniers of rayon yarn is as high as Rs. 6.50 per lb., whereas the ex-mill quotations are Rs. 3.88 and Rs. 3.56, respectively. Some art silk weaving mills are reported to be exploiting the situation arising from scarcity of yarn supplies. It is alleged that these mills prepare invoices of exports of art silk fabrics at a level much higher than the actual value of exports with a view to securing larger import licences for yarn under the special export promotion scheme. The yarn so imported is then sold openly in the market, instead of being consumed within the mills for weaving cloth. It is further said that some units are charging a premium of as much as 25 to 50 per cent. on import licences and, what is worse, even forward contracts have been entered into in respect of prospective licences. All these, it is said, have caused much hardship to the yarn traders. The Bombay Yarn Merchants Association and Exchange Ltd. is meeting the Union Minister for Commerce and Industry during the latter's visit to Bombay on the 19th inst., in order to impress upon him the need for taking corrective measures to stop the unsocial activity indulged in by a section of the industry.

Thanks to the liberalisation of imports, art silk yarn prices suffered a setback during the week under review. National Rayons 120 bright cones first grade went down by 19 nP to Rs. 650. 150 bright cones first grade dropped 12 nP to Rs. 550. Among imported yarns, 150 Japan fell by 25 nP to Rs. 6.69. 150 Italy receded by 12 nP to Rs. 6.75. 120 Japan declined by 6 nP to Rs. 7.06. 120 Italy was dull at Rs. 7.

The staple fibre yarn section ruled bearish during the week under review, in contrast to the bearish trend noted last week. Offtake from consuming centres was at a low ebb and the prices offered were lower. Even reports that the mills spinning staple fibre yarn had sent circulars to dealers that, as the supply of staple fibre from the Nagda Factory had been poor, they would be able to supply yarn only subject to availability of fibre supplies, did not have any effect. It is said that the indigenous manufacturer of staple fibre is not able to supply even 50 per cent. of the total requirement of the spinning mills. "This," to quote a report, "has created considerable disappointment and resentment among the spinners, since absolutely no import licences are granted for staple fibre." 40 x 2 staple fibre yarn August delivery moved down from Rs. 711 last week-end to Rs. 696 today before finishing at Rs. 698. 40 x 2 New Greats dropped 13 nP to Rs. 3.56. Citys and Centurys both fell from Rs. 4.19 to Rs. 4.03. Kohinoors slumped by 35 nP to Rs. 4.09. Foreign yarns met with good buying support and registered a rise in prices. 80 x 2 Paramounts and Fujis both advanced by 13 nP to Rs. 19.25.

Cotton yarns continued to rule dull, thanks to bearish advices from the cotton market and reports of continued poor export business with overseas countries. The downward revision in the excise duty on powerlooms announced by the Central Government this week failed to impart strength to the market. Ten counts Moderns were neglected at Rs. 13.50, as also Podars at Rs. 12.62. Twenty counts Indus were unchanged at Rs. 16.27, Moderns at Rs. 16.50 and Gokaks at Rs. 16.75. Thirty counts Hinds shed 6 nP to Rs. 19.44. Forty counts Meenakshis declined by 6 nP to Rs. 25.06. Moderns were quiet at Rs. 24. Sixty counts Moderns were done at Rs. 60, same as last week, Raghuvamshis at Rs. 57 and Finlays at Rs. 61. Eighty counts Finlays met with special buying support and advanced from Rs. 76 to Rs. 77.50. Mahendras and Moderns were unchanged at Rs. 69 and Rs. 69.50, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	9-7-1958	2-7-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	7.06	7.12
150 Japan (per lb.)	6.69	6.94
120 Italy (per lb.)	7.00	7.00
150 Italy (per lb.)	6.75	6.87
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 August	698.00	711.00
40 x 2 Kohinoor (per lb.)	4.09	4.44
40 x 2 City (per lb.)	4.03	4.10
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.62
20s Modern	16.37	16.50
30s Hind	19.44	19.50
40s Mitraxi	25.06	25.12
60s Modern	60.00	60.00
80s Mahendra	69.00	69.00

HEDGE TRADING IN NEW CROP OILSEEDS CONTRACTS

(From Our Own Correspondent)

BOMBAY, *9th July*

Oilseeds traders are eagerly awaiting the commencement of hedge trading in new crop contracts, barring linseed, with effect from Saturday, the 12th inst. The decision to this effect has already been taken by the Bombay Oilseeds and Oils Exchange Ltd. Business in linseed May will be permitted only after the changes in rules and regulations regarding the contract as proposed by the Exchange are approved by the Forward Markets Commission. Meanwhile, the Commission is reported to be considering the question of modifying the margin policy applicable to groundnut forward delivery. The margin system, it will be recalled, was introduced early this year with the object of preventing any possible shooting up of prices of groundnuts and groundnut oil. It was, however, not until 11th April that the margin—at the rate of Rs. 25 per candy on all purchases of groundnuts above Rs. 165 per candy—was actually enforced. The price fixed for margin, namely, Rs. 165, is considered by the trade as very low. It is not surprising that the actual quotations have all along been ruling higher than the aforesaid level. In view of this and considering that the Central Government has allowed exports of H.P.S. groundnuts and groundnut oil, traders opine that the price for the enforcement of margin in the new crop contract should be fixed higher than Rs. 165 per candy.

Pending the commencement of hedge trading in new crop oilseeds contracts, the market ruled dull during the major part of the week under review. Transactions put through were restricted and values moved narrowly. Yesterday and today, however, the market picked up strength and there was a recovery in values. Groundnut oil prices registered a distinct improvement, following large purchases by two leading *vanaspati* manufacturers. The castorseed section was somewhat active on hopes of export business in castor oil. A section of trade felt that the prospect for exports were slender, excepting some small sales of oil to Burma and Middle East countries. The gap between the currently ruling price abroad and the shipper's quotation is quite wide—as much as Rs. 3 per quarter—and this would widen further if the Brazilian quotation for castor oil were to be revised downward, as is rumoured. Linseed oil was well supported by export houses. Britain was said to have bought about 200 tons at Rs. 1,493 (£112) per ton and it was reported that Australia was interested in Indian linseed oil.

Groundnut August contract, which stood at Rs. 172.37 last week-end, gradually moved up to touch Rs. 174.37 today. At higher levels, profit-taking set in and the contract declined to Rs. 174.12. Bold ready was subjected to selling and fell from Rs. 36.62 to Rs. 35.87 on the opening day. After recovering to Rs. 36.12 on the following day, it eased again to Rs. 36 on the 5th inst. Thereafter, it gradually recovered, today's closing rate being Rs. 36.50. Over the week, Coromandel and Khandesh quality both dropped 13 nP to Rs. 36.62. Groundnut oil ex-mill ruled dull at Rs. 19 in the first four sessions of the week, but spurted on good buying support to touch Rs. 19.25 today. Railway receipt, which was neglected at Rs. 18.81 till the close on Monday, picked up strength and improved to Rs. 19 today.

Castorseed September contract was depressed in the first three sessions of the week, the rate declining from Rs. 156.25 to Rs. 155 on Saturday. After recovering to Rs. 155.75 on Monday, it eased to Rs. 150.37 yesterday. Today, the contract met with enlarged buying enquiries and rose to Rs. 156.25 before finishing at Rs. 155.87. Over the week, ready Madras recorded a gain of 31 nP to Rs. 30.56. Kanpur quality advanced by 37 nP to Rs. 39.37. Castor oil B.S.S. was on request at Rs. 17 today, as against Rs. 16.81 on Wednesday last week. Commercial quality, which had gone down to Rs. 15.50 to Rs. 15.37 on Tuesday, recovered to Rs. 15.56 yesterday, but it wound up the week lower at Rs. 15.50.

Linseed September contract opened the week at Rs. 32.56, as against Rs. 32.62 last week-end. After rising to Rs. 32.81 on the following day, it declined to Rs. 32.62 on the 5th inst. After fluctuating between Rs. 32.87 and Rs. 32.37, it finished at Rs. 32.25 today. Bold ready receded from Rs. 32.25 to Rs. 31.75 on the opening day and, after moving narrowly, picked up considerable strength today, the closing rate being Rs. 32.62. Linseed oil moved down to Rs. 16.50 on the 4th inst. Thereafter, it gradually recovered to touch Rs. 16.87 today.

Cottonseed September contract ruled firm despite weak advices from the cotton market. It opened the week at Rs. 115 and, after declining to Rs. 114.50 on Saturday, it improved to Rs. 116.50 on Monday. It again eased to Rs. 115.50 yesterday, but spurted to Rs. 117.25 today before finishing at Rs. 116.75.

Kardiseed bold ready ruled dull at Rs. 19.50 till yesterday, as against Rs. 20.50 last week-end. Today, it evoked excellent buying support and firmed up to Rs. 30.50. Nigerseed Madras quality was well supported, the value rising from Rs. 30 last week-end to Rs. 30.50 yesterday. There was, however, some reaction today, the closing rate being Rs. 30.25.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	9-7-1958	2-7-1958	25-6-1958
Groundnut—	Rs.	Rs.	Rs.
August 1958	174.12	172.37	171.75

SUGAR STEADY

(From Our Own Correspondents)

BOMBAY, *9th July*

Despite a further drop of Re. 1 per bag in the ex-mill prices of Bombay-Deccan sugar, the sugar market presented a fully steady trend during the week under review. The steadiness was due to the delay in the announcement of the normal monthly release of sugar for sale in free market. Arrivals of sugar by rail were low, being 8,000 bags, as against 11,800 bags in the previous week. Consequently, sugar prices in the Bombay market tended to move up.

Large grain sugar spurted by a rupee to Rs. 110-Rs. 117 per bag. Small grain gained 50 nP to Rs. 106. Medium grain was firm at Rs. 107-Rs. 109.

The ex-mill quotations of sugar in Bombay-Deccan, as already stated, have suffered a further fall of Re. 1 per bag during the week. Traders feel that the bottom has been reached and that the rates will be held around the present levels.

* * * *

HAPUR, *7th July*

Ruling quiet in the earlier part of the week following the announcement of the Union Government's export policy for sugar, the sugar market registered sharp gains in the later sessions, due to good buying support from Punjab and Rajasthan. The production of crystal sugar this year was put at 19.75 lakh tons, besides the carryover of 4.3 lakh tons, and added to this is the increase in production of *khandsari* sugar. The year is expected to close with a substantial carryover. U.P.'s sugar production in 1957-58 is put at 256.18 lakh maunds, as against 294.18 lakh maunds in 1956-57; the fall in production is attributed mainly to poor cane crop.

Sugar prices in the Muzaffarnagar market, after recording a fall of 25 nP to 50 nP per maund in the earlier part of the week following the announcement of export policy, improved by 37 nP to 62 nP per maund towards the week-end. Good outside demand and poor stock position, as the current quota had already been sold out, were the main bullish factors. Traders were anxiously waiting the release of fresh quota. The continuous advance in *khandsari* and *gur* prices also imparted strength. The latest ex-mill delivery prices were:—Rampur (B29) Rs. 38.37; Buland (C29) Rs. 38; Rohana (B29) Rs. 39; Mansurpur (E29) Rs. 37.12; Amroha (D29) Rs. 36.81; Meerut (D28) Rs. 37.50; Bijnore (E29) Rs. 36.56.

Sugar prices in the Kanpur market improved, following good outside demand. The latest prevailing spot and ex-mill delivery prices (per bag and per maund) were:—C29 Basti Rs. 106, Rs. 37.50; Gola Rs. 103.50, Rs. 36.50; Waltergunj Rs. 102, Rs. 36.50; Burhwal Rs. 102, Rs. 36.69.

Brisk demand from consuming areas accounted for a rise of over Re. 1 per maund in the prices of *khandsari* during the week. Quotations were Rs. 34 to Rs. 36.50 per maund according to quality.

Fairly good demand in the wake of fast dwindling stocks here and in other markets accounted for gains in the ready prices of *gur*. Most of the stocks being in one hand also acted as a bullish factor. The local stock was put at 57,000 maunds and prevailing prices are:—Dry quality upto Rs. 21; kotha dry-wet Rs. 19.50 to Rs. 20.37 per maund.

Fairly good rains have been received over this area and the cane crop is progressing satisfactorily.

Gur prices also ruled firm in the Muzaffarnagar market, due to good demand from Punjab and Rajasthan. Sharp rise in future prices also acted as a bullish factor. *Shakker dara* and *masala* advanced by about Re. 1.25 per maund to be quoted at Rs. 24 and Rs. 26.50, respectively.

Future *gur* prices spurted to touch new heights. Fagun delivery opened at Rs. 13.62 on Monday last and was quoted today at the highest of the week at Rs. 14.54. The trend of the market was still bullish.

BLACK PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, *9th July*

Malabar black pepper ruled very steady, with sellers scarce, following rumours that New Delhi was going to introduce in the near future some system of inducement certificate for boosting exports of commodities and manufactured goods.

Alleppey was quoted at Rs. 637½. Ready garbled at Cochin was done at Rs. 108.75, while there were buyers for July and August at Rs. 110.62 and Rs. 112.50, respectively. Tellicherry peppers at Calicut were in demand at round about Rs. 675.

One of the important London operators was reported bidding a sizable quantity at about 210s. (A.S.T.A. terms). New York spot was listed at $0.27¼ with stock position getting tight in view of the smaller shipment of 40 tons during May from India and 975 tons from Singapore. Shipment during June from all origins were reported to be not more than 700 tons. It is now only a question of time when New York will appear as buyer in the producing market for its autumn requirements, as stocks with grinders are reported very small, as they have been buying hand to mouth.

Sarawak in Singapore remained steady at Str. $73. With the dwindling of stock of Lampong together with arrivals from Sarawak lagging behind, Singapore is reported to be very steady with more chances of market going up on the appearance of autumn demand from Europe and the U.S.A.

With bilateral arrangement between India and China for buying Indian cotton, tobacco and pepper to the extent of Rs. 2 crores within the next six months in exchange of chemicals and other industrial raw materials, it will be no wonder if China appears as a buyer for Malabar black in the near future.

In specific delivery, July is quoted at Rs. 630, while A.S.T.A. business is next to nothing. July-Aug.-Sept. is nominally quoted at $0.26½.

Today's nominal quotations are: Ready Rs. 89 per Bengal maund and July Rs. 627-Rs. 637 per candy of 5¼ cwts.

TEA DECLINES

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *5th July*

There was 1,336,008 lbs. on offer in Sale No. 19, which was held on Tuesday 1st July. Teas from the high grown estates again showed a decline in quality and the appearance of teas from the lower elevation estates was again very disappointing. The sale opened to a good demand which emanated mainly from the internal buyers. Low mediums and mediums were 5 to 10 naye paise easier. High growns were irregular, but were much easier following quality. Whole leaf teas met a good demand and sold at dearer rates. Fannings were again the weakest feature of the sale and many invoices had to be withdrawn. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.45 to 1.55
Medium	1.55 to 1.70
Good medium	1.75 to 2.10
Quality	2.05 to 2.75

The average price realised in Sale No 19 was Re. 1.78 per lb., as against Re. 1.90 per lb. in the previous sale and Re. 1.70 per lb. in the corresponding sale of 1957.

Dust Sale 'N':—There was 1,130,087 lbs. on offer in Dust Sale 'N', which was held on Thursday 3rd July. This large quantity met a strong demand. Fibry and poorer sorts were rather irregular on last week's quotations. However, medium liquoring teas were five to ten naye paise dearer. High growns met with a little competition, and were fully firm.

London Market—Sale of 1st July 1958:—Irregular slightly easier.

Sale of 2nd July 1958:—irregular best steady others two pence down.

Colombo Market—Sale of 30th June 1958:—7 million. Quieter demand. Quality plain highgrowns much lower. Mediums barely steady. Lowgrowns three to five cents lower. Fannings good demand.

Sale of 1st July 1958:—Strong demand firm.

Calcutta Market—Export:—Good general demand. Useful liquoring kinds advanced irregularly. Plainer sorts about steady. C.T.C. strongest feature and considerably dearer.

Internal:—12,000 new seasons dust. Fair demand at prices below valuation. C.T.C. strongest Darjeelings irregular. 7,600 old seasons dust. Very strong. Middle East types 8 nP dearer.

Export Duty:—The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3.41 per lb., as against Rs. 3.50 per lb. in force from 1st June 1958. There is no change in the existing rate of duty of 38 nP per lb.

Export Quota:—With the termination of special quota, the market has remained fairly quiet throughout the week, but a certain amount of business has been transacted in new quota at 12½ nP. Today's quotation is sellers 12 nP. Buyers 12 nP.

Forthcoming Auctions:—Sale No. 20 will be held on Tuesday, 8th July 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale 20*:—1,200,000 lbs. Improved general demand. Low medium and medium brokens and fannings irregularly 5 to 10 nP dearer. Highgrowns less demand 10 to 15 nP lower. Better enquiry for fannings grades."

QUALITY TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, *8th July*

Quality teas continued to attract the attention of buyers both during yesterday's export sales and last week's internal auctions. The rise in prices particularly during yesterday was impressive. Such a trend clearly indicated that buyers anticipated tightness in supply of the superior teas—an expectation assisted by the lower crop in Ceylon and North India. As a result, quality teas were keenly bid yesterday with best Assam C.T.C. B.P. rising from Rs. 3 to Rs. 3.50 last week to Rs. 4.00 to Rs. 4.50. Clean black pekoe was quoted at Rs. 2.40 to Rs. 2.50, as against Rs. 2.35 to Rs. 2.45 a week ago, and medium B.P. Rs. 2.20 to Rs. 2.30, as against Rs. 2.10 to Rs. 2.20, while plain B.P. was between Re. 1.84 and Re. 1.87, as against Re. 1.82 to Re. 1.88 a week ago.

It was noted that tea stocks in the United Kingdom in the week to 27th June amounted to only 97¼ million lbs., representing a decline of 8 million lbs. over the previous week. That explained the greater interest shown by British buyers in auctions here. An easier trend, however, prevailed in the last auctions in Mincing Lane when North Indian teas were offered. This was so because the offerings comprised the residue of the old season's crop. The disposal of these had been delayed in view of the London dock workers' strike.

According to an announcement made in New Delhi, there is no change in the existing rate of export duty of 38 nP per lb. for July.

It was expected that the supply of common teas this season would be considerably in excess of demand. Consequently, prices for commons did not rise in the last week's internal auctions held after the resumption of work in the port.

In the said internal auctions, dusts on offer amounted to 19,887 chests including 12,201 of new season's manufacture. The new season's teas met with fair general demand, but valuations were not always reached. The exception to this general trend was provided by C.T.C. Assams which were a strong feature. Some lines of Darjeelings advanced impressively, although most other lots of Darjeelings recorded an irregular trend.

Support was accorded for the old season's teas by Middle East buyers. Exportable teas were a strong feature. The poorer kinds rose by 14 nP and the best by 8 nP. C.T.C. Assams were easier. The quotations were: Best Assam C.T.C. Rs. 3.00 to Rs. 3.30, medium Assam C.T.C. Rs. 2.30 to Rs. 2.60, medium Assam grainy dust Re. 1.80 to Re. 1.90 (nominal), and medium Dooars Re. 1.74 to Re. 1.78.

During yesterday's export sales, offerings aggregated 29,399 chests, of which only 39 chests were of the old season's manufacture. The plainest teas recorded an easier tendency. The market was irregularly easier early in the sale. However, as the sale progressed, demand improved and most teas were raised in strong demand. Keen competition was offered to the whole leaf grades and prices rose with the less attractive teas being steady. Impressive rises were recorded by Orthodox Assams showing an improvement in quality with non-Dooars being a strong feature. C.T.C. grades advanced above valuations. In Darjeelings, the flavoury teas met with strong demand while the poorer types were lower than valuations. Tippy teas were firm. Quotations not included in the first paragraph were: Best Assam C.T.C. fannings Rs. 5.00 to Rs. 5.50, plain fannings Re. 1.94 to Rs. 2.00, and medium fannings Rs. 2.40 to Rs. 2.50, as against Rs. 4.00 to Rs. 5.00, Re. 1.90 to Rs. 2.00, and Rs. 2.30 to Rs 250, respectively, in the previous sale.

FOODGRAINS LOOK UP

(From Our Own Correspondent)

HAPUR, *7th July*

Steady to firm conditions continued to prevail in the foodgrains market during the week under review. In order to counteract shortage of foodgrains and rise in prices in various States, the Government of India is despatching a large quantity of foodgrains, estimated at about 300,000 tons monthly. West Bengal is getting the largest quota of nearly 90,000 tons, while Bihar and Bombay come next with about 50,000 tons each. U.P.'s quota has been stepped up to 40,000 tons, while Assam, Rajasthan and Madhya Pradesh are getting smaller quantities. Punjab is self-sufficient, while South India as a whole is surplus. The Government of India has a comfortable stock position of nearly 1.5 million tons and another 1.2 million tons are expected from abroad.

Wheat at Hapur recorded further fractional gains to touch the peak of Rs. 18.75 per maund for average quality and Rs. 19.50 for farm produce. Daily arrivals from producing areas continued to be small, the average being 200 maunds, which were insufficient to meet the day-to-day requirements of the locality. But, besides this, unauthorised wheat was reaching here occassionally from Punjab via Delhi by road. Local wheat stock continued unchanged at 3 *khatties*, as against 43 *khatties* in the corresponding period last year and 83 *khatties* two years before. The U.P. State Government has increased the number of fair-price shops and about 150 such shops have been opened during the week in west and central U.P. towns.

Rice continued to rule steady during the week, due to shortage of supplies. Sowings of the paddy crop which had received good rains is in full swing. The prevailing prices of rice were:—*Basmati sela* Rs. 40 to Rs. 42.50 and *mainpuri* Rs. 29.

Firm advices from Punjab accounted for further slight gains in gram prices during the week and local stock position continued unchanged. Barley and *bejhar* hardened in sympathy. *Jowar* and *guwar* ruled quiet and demand was reported fairly good for seeds after the rains. The week-end prevailing prices (in rupees per maund) were: Gram 13 to 13.44; barley 13.12; *bejhar* 12.62; *jowar* 13.25; *guwar white* 16.75.

The pulses section also presented a steady trend during the week, although demand from outside destinations was small and loading restricted. The bullish trend of the futures section was the main supporting factor, despite larger local stocks. Daily arrivals of peas aggregated about 300 to 400 maunds, while those of *arhar* averaged about 100 maunds. The latest prevailing prices on Monday were:—Peas *dara* Rs. 11.75; white Rs. 12.75 to Rs. 13.25; *peas dal* Rs. 13.44; *arhar* 14.75; *arhar dal* Rs. 18.75;*urd* Rs. 19.25 to Rs. 21; *moong* Rs. 25.25.

Pulses futures spurted to touch new heights on vigorous bull support. In order to curb the bullish tendency in *arhar bhadon*, the local Chamber has decided to increase the deposit on every fresh buying transaction from Rs. 75 to Rs. 400.

COMPANY AFFAIRS

(Concluded from page 70)

plate bars. As a result, our stocks are now well below normal levels and we are passing through a critical phase involving loss of operational efficiency at our factories and affecting our ability to supply all our customers' requirements on time.

"We have asked for additional import licences to make good the shortfall in local supplies and we anticipate that the position will be less critical later in the year. So far as indigenous production is concerned it is expected that the tinplate bar position will improve when Tata's expansion programme is completed.

"Apart from the increase in the price of tinplate already mentioned, the prices of many other raw materials have substantially increased.

"Aluminium for the manufacture of roll seal pilferproof closures is now being produced in India and we should be able to secure adequate supplies to meet the growing demands for these closures. The price, however, is substantially higher than the material we have hitherto imported."

The Government of India has, however, freely made available tinplate for export goods. This has enabled the Company to continue its export promotion efforts. This will be reflected in the current year's performance, though not spectacularly, as the high cost of tinplate in India has rendered the products less competitive in South-East and West Asia.

The Company's shares of Rs. 10 each are being currently quoted at Rs. 29.44 *cum-div.* (final 11¼ per cent). On an *ex-div.* basis, the yield on the shares works out to 6.1 per cent. per annum, free of income-tax.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. cd.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

(z) Clive Mills have paid dividend at As. 10½ on bonus-shares, for the year 1955. * Including bonus. (k) Investments.
‡ Less Income-tax.
M—Managed by the Board of Directors. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 10 each.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share.

MARKET GOSSIP

(*Concluded from page 47*)

relating bonus to productivity or efficiency, as against profits. In fact, bonus related to productivity is sounder in principle, because it correlates bonus and work turnover. As regards the Company's right to discharge workers, it is laid down that workers will be dismissed for valid reasons, subject to the provisions contained in the standing orders of the Company, consistent with the Statutes in force. What more is required for workers, it is difficult to understand. If the Company felt it necessary to get certain express assurances from the Government, which might appear unsavoury to certain political sections, it is because the Company is taking no mean risks.

* * * *

It looks as though it will be more difficult to get a motor car than hitherto. This, at any rate, is the impression one gets after perusing the Press reports on the proceedings of the conference of automobile manufacturers with the Special Secretary to the Union Ministry of Commerce and Industry, Mr. L. K. Jha, held at New Delhi on Saturday last. As disclos

VOL. XCVII. No. 2470 BOMBAY, 19th JULY 1958 PRICE: Re. 1.50

GOVERNMENT'S IDEOLOGY COSTS INDIA RS.200 CRORES OF FOREIGN EXCHANGE

IDEOLOGICAL predilections and official delays have together been responsible for the slow progress of prospecting for, and exploitation of, mineral oil reserves in India. This is the inescapable conclusion to which one comes who cares to read the painstaking analysis of the oil problems which the Estimates Committee has presented in its report on the Department of Mines and Fuel Oil Division. All this is the more regrettable because the failure to exploit oil reserves to the full, or to exploit them promptly enough, has meant much avoidable waste of foreign exchange resources. Thus, for five long years, the Government shilly-shallied and procrastinated, though it was open to it to reach a workable agreement with the Assam Oil Company over the exploitation and transport of oil in Assam. The Estimates Committee points out that it is "unfortunate that, as a result of the delay in reaching an agreement for five years, the country has had to import petroleum products of the value of about Rs. 40-50 crores a year which might have been manufactured with the Nahorkatiya crude," besides losing the royalty and other charges through "non-exploitation of the fields."

Clearly, the country, on the basis of the Estimates Committee's calculations, has lost about Rs. 200 crores in foreign exchange, because the Government could not take an early decision on the issue of collaboration with the foreign Company. And yet, when one comes to think of it, the foreign exchange lost is by no means a small sum, considering that, for only half this amount, the Government is making strenuous efforts to get the help of foreign Governments. It is all a case of inexcusable neglect of what is near in an anxious pursuit of the far away. The folly of overlooking the opportunities in sight for acquiring and conserving foreign exchange has had to be paid for by depleting valuable foreign exchange reserves, leading to incredibly harsh import restrictions.

It looks as though the authorities in New Delhi have not yet realised their costly mistake. An agreement has no doubt been concluded with the Assam Oil Company for mining the crude, but not for refining it. The Government has taken upon itself the task of setting up refineries and finishing the crude oil. This is going to result in further delay in the utilisation of oil that has been discovered in Assam which, in turn, will mean further drain on the already depleted foreign exchange resources. The Government, as is well known, is now negotiating with Rumanian oil interests for the establishment of the first oil refinery in the public sector near Gauhati. The Indian team, now in Bucharest, is believed to be engaged in settling the details of a barter plan with Rumania for exchange of Indian goods for Rumanian oil equipment. It is not clear whether Rumania has all the equipment which India will need. In any case, it must be obvious that the diversion of Indian goods to Rumania will mean reduced export surplus, and, to this extent, reduced earnings from export to other countries. Thus, no great relief on the foreign exchange front can be expected from the deal.

What makes it particularly necessary that the Government's mineral oil policy should be free from ideological bias is that, in terms of money, equipment and men, India has to rely on foreign countries for the exploitation of oil resources. Because the Government is wedded to a policy which implies a great deal of State participation in oil industry, though its own resources in men and material are limited, no great progress has been possible in exploration and exploitation of oil. The total expenditure on operational work, according to the Estimates Committee, "has so far been Rs. 1.8 crore, as against Rs. 8.5 crores recommended by the Soviet oil experts for the two years." The Committee points out that the "progress in regard to the survey and exploration of even the potentially oil-bearing areas in the country has been very tardy and has fallen short of the targets recommended by the Soviet oil experts." Appropriately enough, it suggests that the "co-operation of the private sector may also be obtained in the task of exploration of oil," though it qualifies this suggestion by the remark that such co-operation must be sought within the framework of the Industrial Policy Resolution. If this policy stands in the way of securing the services of the private sector, whether Indian or foreign, it deserves to be suitably modified in the interests of a more rapid exploration of India's oil reserves.

A further consideration which points to the need for a suitable modification of the Government's oil policy is that immense resources with large foreign exchange component will continue to be needed for increasing domestic production of oil to meet the growing demand for it and for making suitable, efficient marketing arrangements. A non-official estimate places the total expenditure required to mobilise indigenous oil resources at Rs. 1,500 crores until 1976. Such an expenditure, as the Committee itself recognises, may "strain" the country's financial capacity. Indeed, it may prove an unbearable burden. It is not as if such expenditure is unnecessary, for it will help save large foreign exchange amounts which will otherwise be spent on importing oil. The Committee has suggested the imposition of a cess on oil, in order to raise a development fund. But even this measure cannot give the Government all the money it would need. Nor can it find the foreign exchange part. Bearing this in mind, the Committee has urged that the "feasibility of obtaining loans from the World Bank or other U.N. agencies or other sources for developing oil resources in the public sector might also be considered." Although such an effort deserves to be made, it is well to remember that the U.N. specialised agencies and the international credit institutions are always chary of granting aid to projects which can normally attract private foreign capital.

It should thus be clear that, without some substantial, if not radical, modification in the official oil policy, it may be extremely difficult for the Government to raise financial resources on a scale the exploration of oil reserves and marketing would demand. Indeed, if the Government had not been deflected by ideological bias, it might have made a better showing on the oil front. More oil areas might have been prospected, more oil located and more refineries set up. In this connection, it is disconcerting to read what the Estimates Committee has to say on the issue of licences for prospecting oil. The Committee understands that applications made by oil concerns for licences or lease have not received attention from the Government for long periods. For the last 3½ years, the Government has adhered to its policy of not granting new licences. It is stated that none of the oil concerns seems to be aware of the Government's policy. It may be pure speculation as to how much oil has been left undiscovered because the Government has consistently set its face against the issue of licences to private prospectors. But there is no doubt that the position would have been far better than it is now. The Committee rightly insists that the question of exploration and prospecting and even mining of oil has to be viewed from "practical considerations and expediency." Emphasising the need for a "liberal" policy, it points out that, at present, the "resources and know-how of the Oil and Natural Gas Commission are limited and not all its personnel are sufficiently experienced." Accordingly, it recommends that "private concerns, to the extent possible, be given licences to undertake exploration work." Surely, what the country needs is oil, and no an ideologically exhilarating "oil" policy. To ignore this consideration is to condemn the country to continued dependence on imported oil and expenditure of foreign exchange, and, in the event of foreign exchange not being available, to oil shortage which must mean reduced industrial production, lower availability of transport and higher prices for consumers.

proved that there could be serious misdirection of capital in the absence of technical know-how. Appropriately enough, the United Nations' first efforts were directed towards evolving a machinery for effective dissemination of technical knowledge, skill and experience. This is, perhaps, the most significant development in international economic co-operation in recent years. The U.N. Technical Assistance Committee (T.A.C.) has rendered much useful service by directing the energies of the various U.N. specialised agencies to channels where they could be of maximum benefit to countries which receive the necessary assistance. It is gratifying to note that, in 1957, according to the latest annual report of the T.A.C., there was not only an increase in the number of beneficiaries from the U.N. Technical Assistance Programme but also a considerable expansion in the number of projects undertaken under its auspices. It is hardly surprising that more than one delegate at the Committee's meeting, which commenced at Geneva last month, paid tribute to the good work done by the Committee and expressed a keen desire to see further expansion in the assistance rendered by the U.N.'s specialists.

The 1957 programme, according to the report, reached a record level of operations, involving an expenditure of $31.5 million, as against about $30.5 million in 1956; expenditure on direct field operations was $25.8 million, as compared with $25.3 million in the previous year. The number of contributing governments increased from 77 to 84 and of countries and territories which benefited from technical assistance from 103 to 132. A regional break-up of field expenditure indicates that Asia and the Far East accounted for 32.6 per cent., Latin America for 28.0 per cent., Middle East for 19.2 per cent., Africa for 11.3 per cent., Europe for 7.2 per cent., and others for 1.7 per cent. It will thus be seen that Asia and the Far East accounted for the single largest share of the programme. This is in keeping with not only the size and population of the region but also the urgency of their need for economic development. At the aforesaid meeting of the Committee, the view was expressed that Africa received only 11 per cent. of total assistance, as compared with 28 per cent. by Latin America and 32 per cent. by Asia and the Far East. There is no doubt that Africa's claims for assistance are genuine. Even so, technical assistance can go only to territories where it is wanted and where the necessary facilities for its effective utilisation exist. It is to be hoped that African Governments will help create conditions which will induce a larger flow of technical assistance.

An analysis of the type of assistance rendered reveals that the cost of providing experts accounted for 74.2 per cent., of fellowships 15.9 per cent., and of equipment and supplies 9.9 per cent. The number of experts provided increased perceptibly by 167 to 2,513, whereas the number of fellowships declined by 67 to 2,061. At the Geneva meeting of the Technical Assistance Committee, some concern was expressed over the latter, namely, the fall in the number of fellowships. Mr. Keenleyside, Director-General of Technical Assistance Administration, explained that the reason for this decrease was that fewer applications had been received from the governments concerned. Be that as it may, the report reveals that experts have travelled far from their homes to distant countries. Thus, pasture and livestock experts from Australia served in India, Libya, Uruguay, Ecuador, Peru, Chile and Yugoslavia and geologists from Belgium were assigned to Indonesia, Tanganyika and Malaya. The fall in the number of fellowships is attributed to the cut applied to the 1957 programme, though it is more than offset by the awards (scholarships) made by the participating organisations. How wide was the range of equipment made available to recipient countries will become clear when it is remembered that, among others, geological equipment was provided for phosphate production in Jordan, electronics equipment for the Indian Statistical Institute, road-testing equipment for Laos, field equipment for the desert locust control project in Middle and North-east Africa. In this connection, it is noteworthy that private and public agencies have been pressed into service by the Administration. Thus, the Administration, according to Mr. Keenleyside, has entered into contracts with seven agencies—three private firms, two universities and two public services (l'Electricite de France and the U.S. Geological Survey)—which have rendered assistance to several countries, including Indonesia, Malaya and Turkey.

A host of U.N. specialised agencies participate in the Technical Assistance programme, the major share being borne by the U.N. Technical Assistance Administration (22 per cent.), International Labour Organisation (10.7 per cent.), Food and Agricultural Organisation (28.9 per cent.), World Health Organisation (17.6 per cent.) and U.N. Educational, Scientific and Cultural Organisation (14.2 per cent.). It is, of course, difficult to classify the assistance rendered by the Committee. A broad classification made in the report, however, indicates that projects connected with agricultural production accounted for 23.9 per cent. and with industrial production for 9.3 per cent., auxiliary services to industry and agriculture for 8.1 per cent., health services for 16.9 per cent., and assistance rendered to governments in the formulation of development plans for 14.0 per cent. The activities in the agricultural field, it is stated, were designed to increase the production of food and other crops, to make better and more efficient use of land and water resources, and to develop forestry, fisheries, livestock production and agriculture in general, including storage, marketing and distribution of agricultural commodities. The group of projects entitled "industrial production" included the development of large and medium size manufacturing, processing and mining industries, industrial productivity as well as small-scale and cottage industries. No less important than these services was the provision of assistance to governments in the formulation of development plans. This field included all assistance provided to governments in basic economic surveys, surveys of natural resources and manpower and meteorological surveys; in different fields of statistics; in preparation of development plans; and in public administration. The importance of this assistance should become clear from the fact that even relatively well-developed countries are apt to make mistakes in planning which cost the country dear in terms of money or cause considerable disappointment when the overambitious plans cannot be fully implemented.

A notable feature of the report is the description of the results of the Committee's attempt at evaluating its programme of technical assistance. Such evaluation is at all times a difficult task, and, where technical assistance is concerned, it raises intractable issues. After all, the imparting of technical skill to the various countries or of the rendering of technical assistance, as the report itself recognises, often results in intangible gains which are not capable of direct measurement. Further, the aim of the Committee was not so much to evaluate the actual results of individual projects as to evaluate how favourable, or otherwise, have been the conditions for the programme to produce good results. It is thus the evaluation of indirect gains that was aimed at. This has been done through ascertaining the views of the recipient countries themselves. The scheme of evaluation covered 38 countries which together received some 80 per cent. of the total value of the programme. Of the 38 governments consulted, 37 indicated satisfaction with the present procedure for programme planning. They were also appreciative of the annual opportunity to review the programmes in their countries. At the same time, they pointed out some adverse factors which affect programmes, of which the most serious was said to be the "financial stagnation and uncertainty" of the programmes. Clearly, a programme, the continuity of which can be readily taken for granted, has greater chances of success, in that it will evoke the necessary respect and support from both governments and people. Some assurance of continuity is, therefore, vital to the success of the programmes of technical assistance. This is also clear from the fact that 24 countries expressed a general preference for long-term experts. It was generally felt that a minimum of two years for an assignment was essential, while three to five years was considered desirable for long-range projects such as survey of natural resources or training programmes. As regards fellowships, all governments testified that trainees sent abroad for study generally brought back a wider outlook and a knowledge of more efficient methods of doing their jobs. Finally, there was general agreement that a larger volume of equipment and supplies would add to the effectiveness of technical assistance programme.

In evaluating a technical expert's services, it cannot be too strongly emphasised that he renders the best service who makes himself superfluous to the country within a reasonable period. The report quotes a statement to the effect that an expert "is a man whose job is successful only when he is no longer necessary." It adds: "His business is to guide and advise, to train and demonstrate, to hand over and disappear. How effectively he can fulfil this function will depend—apart, of course, from his own ability as an expert—on the quality of the national counterpart assigned to him by the government." A case-by-case analysis of 1,097 experts shows that, for 834 experts, representing three-quarters of the total number, national counterparts were specifically assigned by the governments concerned. The report rightly commends this trend towards increased provision of counterparts to experts. It, however, admits that, in many countries, it is difficult to find counterparts. Although special efforts are needed to remove the basic causes for the absence of suitable counterparts, it should be clear that the whole problem is tied up with wider dissemination of technical education and training in underdeveloped countries.

Meanwhile, there can be no denying the fact that the presence of technical experts in many of the underdeveloped countries is already creating, though only slowly, the conditions for the growth of a consciousness of the need for, and importance of, material improvement. As the report points out, the intensive discussions and exchange of ideas that are constantly going on among the 25,000 individual experts serving under the technical assistance programme and the officials and the public in the underdeveloped countries have been a "potent factor in creating a dynamic outlook in those countries." Nevertheless, the far-reaching improvement in planning and performance which have characterised the development of the programme afford "no excuse for complacency." Obviously, much remains to be done, and what particularly requires to be stressed is that the underdeveloped countries themselves have to do a lot before and after getting external assistance. Such assistance, valuable as it is, cannot solve all problems of development.

FREE WORLD TRADE

WORLD trade is now passing through an admittedly dull period in its career, thanks primarily to the U.S. recession, the fall in commodity prices and the virtual end of the boom in W. European economy. The present period of recession, though difficult, may prove to be a temporary phase. In any case, it should not obscure the fact that, since 1948, free world trade has moved up by 85 per cent. and free world output by 60 per cent. Both the U.S. and the U.K. have done much to keep free world trade moving, though opinions will always differ as to whether they have done as much as they should or could do. There are several immediate problems. The most pressing of them is the building up of foreign exchange reserves. At the end of 1957, total reserves (gold, dollars and sterling) of the world outside the Soviet bloc represented only 32 per cent. of the world trade, as against 69 per cent. in 1938; if the U.S. gold stock and the U.S. trade were excluded, the percentages would be 25 and 42. The sterling area has a particularly difficult role to play in world trade. After all, 40 per cent. of world trade is financed by sterling. From this point of view, it is encouraging to note that the U.K.'s external reserves, which in a way represent the reserves for the sterling area as a whole, climbed to a total of $3,076 million at the end of June last, the highest level in the last seven years.

Nevertheless, it should be obvious that no effort should be spared in the task of raising the level of free world economy. In this connection, the analysis of the problem, presented by Mr. D. Heathcoat Amory, Britain's Chancellor of the Exchequer, in the course of his recent address to the American Chamber of Commerce in London, makes interesting reading. He listed what he thought were the four major economic problems—(1) the risk of an economic setback in one part of the world multiplying itself into a world-wide slump, (2) fluctuations in commodity prices which might threaten the Western world at its most vulnerable points, (3) the need to find international capital for many vast and essential developments, and (4) what to do about various man-made obstacles to free world trade. Clearly, agreed trade and economic policies in the free world can do much to help place its trade on a firmer basis. A common economic strategy, as Mr. Amory pointed out, calls for not only the closest consultation but also the right spirit in which every nation approaches the task of maintaining interdependence. Free world trade, or free world economy for that matter, has to pull together or fall apart.

PEACE OR WAR RESTS WITH RUSSIA

U.K. ECONOMIST ADVOCATES DEVALUATION OF INDIAN RUPEE

THURSDAY, 5 P.M.

THE grave political developments in West Asia—the military *coup d'etat* in Iraq resulting in the overthrow of monarchy which was friendly to the Western world and the landing of U.S. marines in Lebanon to strengthen the pro-Western regime—have shaken the share markets severely and engendered a bullish fervour in commodities as well as bullion. The fall in the leading equities is sizable and modest in others. In most of the counters, the gains made in two weeks have been wiped out in two days. The bulls in shares have become a little nervous, while the bears have been emboldened to challenge them. It seems that this tendency will gain further momentum, if Russia decides to translate into action its threat to the U.S. and the U.K. It is crystal clear that the action taken by the U.S. in Lebanon, with the concurrence of Britain, is designed to check the growing influence of Russia over the highly strategic areas in West Asia. If Russia chooses to retaliate, the Western powers are sure to take up the challenge. The issues are now different from those that followed the sudden nationalisation of the Suez Canal by Egypt. The U.S. and the U.K. will not, therefore, oblige Russia by retracing their steps, until and unless their basic objectives are served. Accordingly, whether the present complications in the oily sands of West Asia will lead to a world war is a question to which the answer is in the hands of Russia.

MARKET GOSSIP

Reading between the lines of statements made by Russian statesmen, it looks as though Russia will not precipitate a war. The Soviet leaders are clever enough to realise that a world conflagration is a gamble in which they may lose more than they can gain and that, in such a situation, discretion is the better part of valour. They also know that, by not retaliating violently and by continuing to pose as the champions of peace and a scrupulous respector of U.N. rules, they can win a further psychological victory in the uncommitted countries of Asia. Apparently, the U.S. Government and its allies must have come to the regrettable conclusion that they would have to face the risk of letting the Soviets have this victory rather than see themselves gradually pushed out from this strategic part of the world through the clever machinations of Russia.

It is, of course, extremely risky to predict the final outcome of the present tense situation in the Arab world. But a world war seems unlikely. It would, therefore, be a waste of our precious space, especially in these days of newsprint scarcity, to speculate on the effects of a world war on Indian economy. Suffice it to say that the reaction of the share and the commodity markets to the Middle East crisis is justified. It is only an action of caution. A war at this juncture will be a real disaster to India, for it will upset its plan for raising the living standards of its people. Even a limited war in the Middle East will isolate India from the rest of the world and put its economy to a severe strain.

* * * *

The results of all State loans are now available. The response to them has been far greater than expected. Total subscriptions, including conversions, amounted to Rs. 62.47 crores, as against Rs. 47.50 crores invited. Of these, cash alone aggregated Rs. 56.23 crores, the share of conversions being Rs. 6.24 crores out of Rs. 8.52 crores outstanding. Given below are the full particulars of the response which each of the ten States has had:

(In crores of rupees)

State	Amount Invited	Amount Subscribed			Allotment %
		Total	Cash	Conversion	
Bombay	10.00	13.95	12.73	1.22	76
Madhya Pradesh ..	2.00	3.10	2.71	0.39	66
Madras	5.00	6.03	5.16	0.87	89
Mysore	5.00	7.11	7.11	—	77
Rajasthan	2.50	2.97	2.97	—	92
Andhra	5.00	6.37	6.37	—	88
Kerala	3.00	4.10	3.49	0.61	75
U.P.	7.00	10.72	7.57	3.15	61
W. Bengal	5.00	5.12	5.12	—	100
Orissa*	3.00	3.00	3.00	—	100
Total ..	47.50	62.47	56.23	6.24	

* Assumed, in the absence of details.

N.B.—All loans carry interest at 4½ per cent. and are repayable in 1970. Only Bombay gave an option by offering a loan repayable in 1971, in addition to the one in 1970. Of these, the preference was for the 1970 loan, which attracted Rs. 8.26 crores, as against Rs. 5.69 crores by the other.

Judging from the allotment, the U.P. loan was the biggest success, followed by Madhya Pradesh, Kerala, Bombay, Mysore, Andhra, Madras and Rajasthan. It is surprising that West Bengal and Orissa should have lagged behind. At least Orissa is understandable, because it is still an underdeveloped State, but not West Bengal which has, in Calcutta, as big a capital market as Bombay.

The success of the State loans reflects, to a considerable degree, the contraction in the investment and trading activities of the private sector. It is because of the slackness in the latter sector that funds available with banks for investment have increased.

The State loans have had only a temporary effect on the short-term money market. For a couple of days, the inter-bank call money fetched a higher rate of 2¾ to 3 per cent., as against 2½ per cent. prior to the opening of the lists. But today money became easier again, with inter-bank rate retreating to 2½ per cent. A part of the unabsorbed amount with the Reserve Bank on account of the State loans has already returned to the market and the balance will be back in the next few days. With no large outlet for the floating funds in the offing, it looks as though money will become easier still. It seems that conditions are propitious for reviving the Central Government's short-term borrowing by Treasury Bills, the issue of which was suspended in April 1956 and could not be resumed all along, owing to continued stringency in the money market.

* * * *

The persistence of rumours regarding the prospect of devaluation of the rupee, despite vigorous official denials, probably reflects a mood of the public in which it is unable to see any other way out of the economic impasse. The foreign exchange situation, it is now increasingly realised, is bad in all conscience. Soft words butter no economic parsnips. And, notwithstanding all the encouraging things which have been said of India's economic future, there is no denying the fact that the present situation contains many intractable issues, particularly on the foreign exchange front. It is this fact which, more than any other, continues to give weight to rumours of devaluation of the rupee. Maybe, devaluation is a counsel of economic despair. At the same time, it is well to recognise that, given the present conditions, nothing short of very substantial foreign aid will help the Government to defend the value of the rupee for long. All the other chief means of such defence have already been adopted. Imports have been cut to the barest minimum. Export incentives are being provided. The law relating to reserve requirements for Indian currency has been so amended as to leave virtually little scope for further amendment. Despite these measures, the drain on foreign exchange continues. Fears have been expressed that, before the end of the current calendar year, they will have been drawn down to dangerously low levels. In any case, no further tinkering with currency reserve requirements will provide any solution for India's foreign exchange problem. Foreign exchange has to be received or earned.

In view of the continuing strain on India's external resources, it is hardly surprising that the issue of devaluation of the rupee continues to be a topic of discussion, especially in the foreign Press. It has, for instance, attracted the attention of the well-known commentator "Lombard" of the London *Financial Times*. He points out that, "with the pressure imposed on reserves by the serious gap in current account payment being accentuated by an extensive flight of capital, it has recently begun to look as though the Indian authorities might soon find themselves compelled to allow the rupee to move down to a lower level through sheer lack of resources for defending the existing parity." He recognises that the efforts India is making to enlist foreign aid may soon bring this country additional resources to enable it to carry on for another year or so without devaluing its currency. But the question before the Indian authorities, after obtaining stop-gap aid, according to "Lombard," is whether "the maintenance of the present parity is going to assist or impede the efforts they will necessarily be making during the next few years to re-establish the country's general payments position on a satisfactory basis." According to him, there would appear to be a distinct possibility that, by lowering the value of the rupee, the authorities would materially reduce the weight of some of the factors that have played a major part in keeping foreign exchange outgoings so far ahead of receipts.

Discussing some of these factors, "Lombard" feels that *one of the main reasons why imports of* capital goods for the development programmes have been running so far ahead of schedule is to be found in the widespread belief within India that the exchange value of the currency will ultimately be cut. *It may*, however, be wondered whether this line of reasoning is altogether correct, considering that the imports of capital goods are strictly governed by the capital issues control and import control regulations. Again, devaluation fears, according to "Lombard," have been to a large extent responsible for the "recent serious flight of capital from India." Even here, it may not be correct to contend that there has been "serious flight" of capital. It is true that capital has not been flowing in. But this is because of the unhelpful economic and fiscal policies of the Government. However, some short-term capital may have gone out or have been prevented from coming in, thanks to the lower level of interest rates in this country. Be that as it may, "Lombard's" contention is that reduction in the value of the rupee would strengthen the balance of payments position. In this connection, he says:

"But, above all, it appears almost certain that a reduction in the value of the rupee would do much to strengthen the current account side of the balance of payments. It is true that, as imports have already been whittled down to exclude everything but bare essentials, raising the rupee cost of goods purchased abroad could not be counted upon to bring new savings in foreign exchange. But it is difficult to believe that sales abroad would not derive a powerful stimulus from the resulting trimming back of export prices. For the upward pressure imposed on costs of production by the inflation of the past few years must be to a considerable extent to blame for the fact that India's exports have given such a poor performance in the 1950's—whereas between 1950 and 1957 the exports of other countries increased in terms of dollars by some 80 per cent. on average, India's expansion was no more than about 20 per cent. A cut in the value of the rupee could, therefore, provide India with relief from her payments troubles in three directions—help that would be to a substantial extent of a lasting kind. Bearing in mind that the exceptionally rapid growth of inflationary pressures in India since the mid-1950's has probably thrown the rupee basically out of alignment with other £ area currencies, it is surely a move that India ought to consider seriously."

Against this background of widespread discussion on the prospect of the devaluation of the rupee, much interest naturally attaches to the efforts which are being made by India to get financial aid from abroad. It would appear that Mr. B. K. Nehru, Secretary, Ministry of Finance, has submitted to the U.K. Government a memorandum giving details of India's foreign exchange needs. This memorandum is reported to be under the consideration of the Government. On the same mission, Mr. Nehru has gone to Washington where he will endeavour to interest the Administration in India's foreign exchange requirements. The Union Minister for Finance, Mr. Morarji Desai, will be in London towards the close of next month on his way to the Commonwealth Conference, at Montreal. He is bound to utilise the opportunity to plead with Britain India's case for aid. It is also not unlikely that the threads of these discussions will be taken up at the forthcoming meeting of the International Monetary Fund and the World Bank in New Delhi. It remains to be seen whether, and if so how far, these efforts will bear fruit in the shape of financial assistance to India.

* * * *

Exports of Indian rayon fabrics have registered a remarkable expansion of late. The aggregate quantity of fabrics actually shipped during the first half of the current calendar year was as much as 3,746,666 yards (valued at Rs. 85.13 lakhs), which compares very favourably with 1,457,346 yards (Rs. 27.44 lakhs) in the corresponding period of 1957 and 2,810,109 yards (Rs. 51.22 lakhs) in the whole of 1957.

The notable improvement in exports of rayon fabrics is all the more creditable, considering the keen competition offered by the other rayon goods manufacturing countries, especially Japan. The improvement must be attributed in no small measure to the special steps taken by the Silk and Rayon Textiles Export Promotion Council. These include rayon fabrics export promotion scheme, appointment of overseas representatives, organisation of exhibitions and showroom displays, and Press and other publicity.

The special export promotion scheme, it will be recalled, was recommended by the Council to the Government of India sometime in 1956 and, after being approved by the latter, was initiated in January 1957. Under the scheme, the exporters of rayon fabrics are given import licences for 100 per cent. of f.o.b. value of goods exported, except in respect of *saris*, where the percentage is lower at 66⅔.

The aforesaid details will reveal that the object of rayon fabrics export promotion scheme is to recover at least a part of the foreign exchange which is spent on imports of rayon yarn. This point was stressed by Mr. D. N. Shroff, Chairman of the Council, at a Press conference held in the city yesterday. The scheme, Mr. Shroff declared, had enabled the rayon industry "to earn as much foreign exchange as possible and necessary through its exports to enable the industry to run itself, depending as it does upon imports for its own raw materials to a considerable extent; there is, therefore, *no net foreign exchange earning expected.*" The scheme would appear to have been quite popular, as is evident from the large value of import licences received against exports of rayon fabrics. The total value up to 10th July amounts to Rs. 207.95 lakhs, of which established exporters account for Rs. 95.36 lakhs (including Rs. 25 lakhs granted against customs clearance only) and prospective exporters for Rs. 111.59 lakhs.

The scheme has thus been serving a double purpose—to boost exports of rayon fabrics and to meet a part of the yarn requirements of the weaving units without any fresh commitment of foreign exchange. Assuming that all the import licences are utilised for yarn and taking the average price of yarn (including nylon yarn) as Rs. 2.75 per lb., the total quantity of yarn imported since the scheme was initiated may be estimated at about 7.56 million lbs. While the success of the scheme is a matter for satisfaction, there are complaints of certain malpractices indulged in by a section of rayon industry and trade such as over-invoicing and export of non-rayon goods. It is alleged, for instance, that some rayon weaving mills prepare invoices of exports of fabrics at a level much higher than the actual value of exports, with a view to securing larger import licences for yarn. The yarn so imported is then sold openly in the market, instead of being consumed within the mills for weaving fabrics. It is further said that some units are actually selling import licences at a premium of 25 to 50 per cent. and, what is worse, even forward contracts are being entered into in respect of prospective licences. All this is very disquieting. Such undesirable practices, if not checked, will prove detrimental to the export trade in rayon goods. It is certainly encouraging to be told by the Council's Chairman that effective counter-measures are being devised and will be put into operation, including, if necessary, a compulsory pre-shipment inspection of goods by the Council.

EQUITIES SLUMP

BEAR PRESSURE ON WAR SCARE

(From Our Own Correspondents)

BOMBAY, 17*th July*

THE dramatic political developments in Iraq leading to the dethronement and assassination of the King on Monday, the subsequent movement of American troops to Lebanon and the march of Soviet troops to the Turkish border today caused a bearish reaction in the share market since yesterday afternoon. Such quick changes in the international political situation took the bulls unawares, who had been dominating the market for some weeks past, and induced a heavy unloading of their holdings. The bears too exploited the situation and hammered down the market. Fears about the outlook for industries, particularly those which depend on foreign countries for raw materials, and adverse repercussions on India's exports in the event of a world war were responsible for the bearish mentality. The net loss in values over the week has wiped out the gains made in the previous two weeks.

Earlier in the week, the trend was erratically upward. Contrary to general expectations, the last day of business for the previous settlement witnessed brisk activity on buying fervour in select scrips and bear covering, with the result that equities touched new high levels. The new account also started on a firm note, with a further advance in prices. At higher levels, the bulls became a little cautious and preferred to book their profit. After an initial spurt yesterday, there was a heavy drop in prices due to mounting tension in West Asia, but, at the close, the bears hastened to cover their sales and consequently equities managed to regain a part of their earlier loss. Today, however, prices staged a fresh retreat.

In the steel section, Tata Ordinaries jumped up from Rs. 164.25 to Rs. 168.50 early in the week, but declined to a low of Rs. 164.75 on Tuesday. After gaining ground to Rs. 168.75 yesterday morning, the shares collapsed to Rs. 159.50 today before closing at Rs. 160.25. The new shares, at Rs. 160, suffered a loss of Rs. 2 over the week. Despite the uncertainty about the issue of bonus shares, Indian Irons were pushed up from Rs. 22.96 to Rs. 23.68, but the bear pressure in the last two days brought them down to Rs. 22.52 today. The closing was done at Rs. 22.64.

In the textile section, Bombay Dyeings moved up from Rs. 58.70 to Rs. 60.10, but gave way to a low of Rs. 56.70, before closing a fraction better at Rs. 56.80. Centurys dropped from the week's peak of Rs. 475.25 to Rs. 448, but the closing rate today, at Rs. 448.50, represented a loss of only Rs. 11.75 over the week. Kohinoors closed at Rs. 269.50, as against Rs. 268.25 a week ago, after touching a high of Rs. 285. Central Indias lost Rs. 7.25 to Rs. 93, while Finlays were unchanged at Rs. 275. Gokaks were lower by Rs. 149 and Indu Ordinaries by 36 nP to Rs. 9.60. Indore Malwas moved down from Rs. 113.50 to Rs. 111.50 and Khataus from Rs. 190 to Rs. 182.50, while New Greats gained Rs. 2 to Rs. 210. Podars were on balance lower by Rs. 6 at Rs. 139 and Shree Niwas Cottons by Rs. 2 at Rs. 153. Simplex advanced from Rs. 179 to Rs. 184, but gave way to close at Rs. 178. A decline of Rs. 5 to Rs. 420 is noted in Standards and of Rs. 10 to Rs. 180 in Svadeshis. Tata Mills shed Re. 1.50 to Rs. 39.50.

Bank shares presented a mixed pattern. Barodas improved from Rs. 120.50 to Rs. 122, before going down to Rs. 121. Centrals lost Re. 1.20 to Rs. 53.80, while their new shares were unchanged at Rs. 57.50. Bank of Indias were a fraction better at Rs. 134.50, while Punjab Nationals declined by Rs. 2.50 to Rs. 58.50. Union Banks were done at Rs. 7.28 *ex*-right, as against Rs. 8.44 *cum*-right last week. United Commercials changed hands 50 nP lower at Rs. 61.

In the electricity section, Ahmedabad Electrics were 20 nP lower at Rs. 95.60 and Bombay Suburbans were done 75 nP lower at Rs. 106.75. Tata Hydros recorded a gain of Re. 1.25 to Rs. 121 and Andhra Valleys Rs. 12.50 to Rs. 1,157.50, while Tata Powers shed Rs. 7.50 to Rs. 1,220.

Sugar shares moved in sympathy with the general trend. Belapurs, which hardened from Rs. 258 to Rs. 264.50, relapsed to Rs. 255 at the close. Phaltans lost Rs. 4.25 over the week to Rs. 152. Walchandnagars dropped Rs. 3.75 to Rs. 277.50. Cement shares provided no exception. Associated Cements crept up from Rs. 156 to Rs. 159 before slumping to Rs. 153. Their new shares were, however, unchanged at Rs. 149.25. Digvijays shed Rs. 2.50 to Rs. 154.50 and Jaipurs 16 nP to Rs. 13.76. In the engineering group, Alcock Ashdowns were hammered down from Rs. 258.75 to Rs. 245. Tata Locomotives closed at Rs. 166 with a loss of Rs. 7 over the week, after touching a high of Rs. 177.25. Larsen and Toubros were a shade quiet at Rs. 17.76. Premier Constructions lost no less than Rs. 12 to Rs. 193. Among minings, Shivrajpurs were fairly steady at Rs. 92. Indian Coppers recorded a gain of 14 nP at Rs. 3.74.

In the shipping group, Scindias rose from Rs. 18.84 to Rs. 19.36, before giving way to Rs. 18.24. Great Easterns suffered a loss of Re. 1.16 to Rs. 23.56. Among automobiles, Premier Automobiles moved down from Rs. 90 to Rs. 88.50 and Hindusthan Motors lost 32 nP to Rs. 7.56.

In the miscellaneous group, Bombay Burmahs (old) were the worst affected. After an initial rise from Rs. 586 to Rs. 607, the shares slumped to Rs. 564.50 at the close today. The partly-paids, however, showed no change at Rs. 215. National Rayons finished at Rs. 224.75, after moving up from Rs. 234.25 to Rs. 238. Gwalior Rayons were done at Rs. 13.76, a loss of 24 nP over the week. Tata Chemicals were marked down by 64 nP to Rs. 16, while Dhrangadhra Chemicals were unchanged at Rs. 110. Their new shares, however, gained Re. 1.50 to Rs. 104 and Hindustan Levers 28 nP to Rs. 23.80. Tata Oils dropped by Rs. 2.25 to Rs. 40 and Voltas by Rs. 3 to Rs. 126.50. Wimcos were a shade lower at Rs. 178.

* * * *

Calcutta Stock Exchange

CALCUTTA, 16*th July*

The week under review on the Calcutta Stock Exchange commenced on an easy tone following profit-taking and heavy unloading of speculative Indian Irons. However, buying support came forth soon and, as the week progressed, all-round gains were recorded. An encouraging outlook was taken by operators in the belief that foreign aid would be available in time, and that the import restrictions of raw materials and spare parts might be relaxed. In this connection, the attempts now being made by the All-India Manufacturers' Association to get a steel loan from the U.S. were noted with satisfaction. It should, however, be noted that the week's gains were mainly on account of speculative activity. For it was believed that investment support would gradually be forthcoming. With the rationalisation of the excise duties on textiles, an increase in cement retention prices and expectations of increased prices for coal and of relief to common tea producers, the market would appear to have come to believe that the authorities were fully appreciative of the difficulties facing these industries. The report that the Government was considering the question of reducing export duties and cesses and internal freight rates in respect of manufactured goods for export also contributed its share in improving sentiment. It should be noted that, despite the uncertainty in regard to the issue of bonus shares by Indian Irons and to steel retention prices, there was no selling pressure. However, some anxiety was felt over the increase in prices of essential commodities and employment situation. Added to this was the dramatic political development in the Middle East since Monday.

Coals responded to selective enquiries and prices improved. It was considered certain that private collieries' target for output would be raised. East Indians, on interested support, improved to Rs. 21.25 from Rs. 20.06, and Pench Valleys to Rs. 22.87 from Rs. 21.00. Central Indias shot up to Rs. 8.25 from Rs. 7.81. At Rs. 57.62, Khatras Jherriahs were better, as were Amalgamateds at Rs. 18.81. While Raneegunges were unchanged at Rs. 12.50.

Jutes accounted for some features. Stocks of jute goods with mills had no doubt shown a large increase, but the view that foreign demand would increase in the near future attracted support to jute shares. Alliances picked Re. 1.50 at Rs. 86.50. Northbrooks were supported to rise from Rs. 16.56 to Rs. 17 and Birlas from Rs. 18.12 to Rs. 18.37. At Rs. 98, Aucklands gained two points.

In the mining section, Indian Coppers rose further to Rs. 3.80. A dividend of 18 per cent. or 24 nP per unit of share for 1957, as against 20 per cent. in 1956, has been recommended by the Directors of Indian Copper Corporation Ltd. From Rs. 12.44, Karanpura Developments rose to Rs. 13 and Orissa Minerals to Rs. 25.87.

Earlier, Indian Irons, among engineerings, receded to Rs. 22.90 from Rs. 23.30, but recovered to close at Rs. 23.36. Burn & Cos. had buyers at Rs. 343, as against Rs. 335 previously. Despite a decline in the Company's profit for the year to April last, the dividend has been maintained at 20 per cent. On expectations of higher dividend, Texmacos improved to Rs. 20.50 from Rs. 19.60.

* * * *

Madras Stock Exchange

MADRAS, 15*th July*

The Madras Stock Exchange depicted an easy trend during the week under review. Textiles shares lacked support, despite the Government of India's decision to abolish quantitative restrictions on yarn exported by mills during the current licensing period. For, it was felt that the decision might not lead to any marked rise in overseas sales of yarn, on account of severe competition from Japan, China and Pakistan. Plantation shares also lacked support, thanks to the delay in the official announcement of tax relief for tea exports and to the none too encouraging dividend news. Coffee shares, however, were well supported on expectation of better working results. Bank shares, as well as miscellaneous industrials, generally tended to look down.

Among tea shares in the planting section, Twyfords declined by 40 nP to Rs. 13.80. United Nilgiris eased by 12 nP to Rs. 16.50. Emerald Valleys shed 10 nP to Rs. 7.25. Kil Kotagiris lost a like amount to Rs. 5.80. Blue mountains and Chandramalais softened by 5 nP each to Rs. 3.33 and Rs. 3.35 respectively. Peermades were quoted 10 nP lower at Rs. 19.30. Nilgiris were neglected at Rs. 8.50 *cum-div*. Devasholas, however, were better by 25 nP at Rs. 19.00 *cum-div*. The Directors have recommended a final dividend of 10 per cent. (making a total of 17½ per cent. for 1957) for the year ended 31st December 1957, as against 25 per cent. for the previous year.

The announcement of a lower dividend of 10 per cent. on ordinary shares for the year ended February 1958, as against 15 per cent. for the previous year, by the Directors of the Cochin Malabar Estates Ltd. induced selling in rubber shares. The dividend was below market expectations. The shares of this company declined by 8 nP to Rs. 5.05 *cum-div*. Highlands fell by 40 nP to Rs. 12.90 *cum-div*. Mercaras eased by 25 nP to Rs. 7.50. Velimalais were on offer 10 nP lower at Rs. 5.75. Pullangodes shed 5 nP to Rs. 1.70 *cum-div*., Malankaras and Nilamburs, on the other hand, received special buying support and improved by 60 nP and 25 nP to Rs. 18.10 and Rs. 14.25 *cum-div*., respectively. Coffee shares, as already stated, evoked good buying. Anaparas firmed up by 39 nP to Rs. 5.35. Consolidated Coffees gained 30 nP to Rs. 27.70 and Kumergodes a like amount to Rs. 11.60.

Several textile shares came in for selling. Coimbatore Spinnings fell by Re. 1.50 to Rs. 51.50. Anglo-French, Buckinghams and Rajendras eased by a rupee each to Rs. 80.00, Rs. 170.00 and Rs. 72.50, respectively. Ranga Vilas lost a like amount to Rs. 62.00. Lakshmis A and Loyals shed 75 nP each, the former to Rs. 50.50 and the latter to Rs. 34.50. Maduras were quoted 25 nP lower at Rs. 35.50.

In the miscellaneous section, Mettur Chemicals were done 20 nP lower at Rs. 11.40. Travancore Cements declined by a like amount to Rs. 10.00. Mysore Chemicals and Fertilisers were quoted 15 nP lower at Rs. 7.50. Andhra Cements decreased by 10 nP to Rs. 11.90, Dalmia Cement by 5 nP to Rs. 10.95. Hindustan Levers were quiet at Rs. 23.84, as also Mysore Papers at Rs. 17.30 *cum-div*. and Spencers at Rs. 18.50. Textools, however, gained Rs. 2 to Rs. 186.00. Rallis put on 50 nP to Rs. 33.25.

APPEAL TO READERS

Owing to great scarcity and high cost of glazed newsprint on which this journal is printed, we have found it necessary to curtail the number of pages. The choice before us was to cut either our special features or the space devoted to statistics, shares and stock quotations. We have chosen the latter. From this issue onwards and until the newsprint supply position improves, we have decided to publish our list of share and stock quotations only once a fortnight. We greatly regret this inconvenience to our readers and sincerely hope that they will bear with us in these difficult times and continue to extend to us the support they have given us all along.—EDITOR.

THE
CENTRAL BANK OF INDIA
LIMITED

Profits for the half-year ended 30th June, 1958

The Net Profit of the Central Bank of India, Limited, for the half-year ended 30th June, 1958, subject to audit, including the sum of Rs. 18,44,046/05 brought forward from the last year's account, amounts to Rs. 60,49,492/49 which the Directors have resolved to dispose of as follows :

To pay an *ad-interim* dividend at the rate of 12 per cent. per annum free of income-tax (i.e., Rs. 1·50 per share) for the half-year ended 30th June, 1958	Rs. 18,87,255/00
To carry forward to next half-year's account subject to provision for taxation ..	Rs. 41,62,237/49
	Rs. 60,49,492/49

HONGKONG AND SHANGHAI BANKING CORPORATION

The Board of Directors of the Hongkong and Shanghai Banking Corporation has declared an interim dividend of £1-2-6 per share free of Hong Kong Corporation profits tax payable 11th August. Transfer Books will be closed from 25th July to 9th August (both days inclusive).

NEWS IN BRIEF

A LOAN of Rs. 2 crores has been granted by the Centre to the Madhya Pradesh Government for financing a scheme to ensure adequate supply of drinking water in the urban areas of the State.

India has been designated as one of the 13 member-countries of the International Atomic Energy Agency Board of Governors for 1958-59; the other countries are Australia, Belgium, Brazil, Canada, Denmark, France, Japan, Poland, the Union of South Africa, the U.S.S.R., the U.K. and the U.S.

The Union Government has asked the automobile manufacturers to instruct their dealers and sub-dealers to maintain order registers indicating all the orders booked for motor cars, so that the orders may be fulfilled strictly chronologically. This measure is designed to ensure a proper distribution of the available stocks of cars.

A bilateral agreement seeking to renew the trade arrangements between India and Afghanistan for a further period of one year was signed by the Government representatives of the two countries at Kabul last week. Under the agreement, the two Governments have agreed to encourage promotion of mutual trade and achievement of a balance of trade between them.

The exports of *maida*, *suji* and *rawa* from the North to the Southern States of Andhra Pradesh, Madras, Mysore and Kerala have been restricted by the Government of India with a view to arresting the rise in prices in the North. In order to meet the requirements of the Southern Zone. the Central Government is making special arrangements to supply wheat products milled out of imported wheat to the States.

The total output of iron ore during the month of April 1958 was 485,000 tons, as against 510,000 tons in the preceding month. The largest output was reported from Orissa and Bihar, with 195,000 tons and 174,000 tons, respectively. Among the minor producing States, Mysore, Andhra Pradesh and Bombay accounted for 57,000 tons, 15,000 tons and 14,000 tons, respectively. During the month, 284,000 tons of iron ore were despatched to the iron and steel plants and 155,000 tons to the export market.

The latest review of the position regarding the supply of electricity in the Bombay-Poona region has revealed the availability of a small block of electric power for distribution to industrial consumers. The Government of Bombay is accordingly prepared to entertain applications for sanctioning loads to consumers whose requirements fall in high priority categories, preferably from those who have already installed machinery. The applications for new loads may be made to the Assistant Secretary to the Government of Bombay, Industries and Co-operation Department, Old Secretariat Building, Bombay 1, through the supply companies concerned.

A scheme to provide market research assistance to individual small-scale manufacturers has been started by the Small Industries Service Institutes at New Delhi, Calcutta, Bombay and Madras, in addition to their other functions. The scheme is called the "Manufacturers' Distribution Aid Surveys." These surveys, it is said, will help the small-scale manufacturers in determining major distribution centres for their products and establishing contacts with important wholesale and retail dealers. The dealers' and consumers' reactions to the price, technical quality and design of the products will also be obtained and furnished.

The ways and means of developing the village oil industry in Kerala State were discussed at a recent conference of the oil inspectors working under the State *Khadi* and Village Industries Commission held at Trivandrum. The Conference called upon those engaged in village oil industry in the State to form themselves into co-operatives and avail themselves of the financial aid given for the development of the industry in the State. The industry employs 1,000 families at present and it is expected to employ 5,000 families when it is developed. For the year 1958-59, the All-India *Khadi* and Village Industries Commission has allotted to this State Rs. 1.23 lakh as grant and Rs. 3.28 lakhs as loan for the development of the oil industry.

The Development Council for Food Processing Industries set up recently by the Government of India to watch the progress of these industries and recommend measures for their development held its first meeting in New Delhi on Tuesday this week, Mr. A. C. Khanna, Chairman of the Council, presiding. The Council, which has been constituted under the Industries (Development and Regulation) Act, will, among other things, recommend targets of production and co-ordinate production programmes. It will review the progress of the industries from time to time and suggest norms of efficiency, in order to eliminate waste, obtain maximum production, improve quality and reduce cost. Arrangements for better marketing and distribution of the products of these industries will also be recommended by the Council. The other functions include promotion of standardisation of collection and formulation of statistics.

India had an adverse balance of trade to the extent of Rs. 23.87 crores during the month of March 1958, as against Rs. 24.74 crores in the previous month, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) accounted for Rs. 46.26 crores, re-exports for Rs. 0.47 crore and imports for Rs. 70.56 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 30 lakhs, while those of current coins (excluding gold coins) were negligible. There were no exports of gold. Imports of currency notes aggregated Rs. 2.66 crores, gold Rs. 4 lakhs, and current coins (excluding gold coins) Rs. 0.4 lakh.

From Abroad

Production of woolclip in Australia during 1958-59 is expected to be lower by 42 million lbs. at 1,386 million lbs. The drop in production is attributed to drought.

The Australian Agricultural Council has agreed to an increase of 4*d*. (Australian) per bushel in the guaranteed price of wheat under a new five-year stabilisation plan.

Production of steel ingots in Canada declined by 11 per cent. to 2,325,229 tons and of pig iron by 17 per cent. to 1,594,249 tons in the first half of 1958, as compared with the corresponding half of 1957.

U.S. exports of merchandise during May 1958 aggregated $1,644 million, representing a rise of 7 per cent. as compared with the previous month. The figure is, however, lower than that for the corresponding period of last year by 9 per cent.

Special $1-silver pieces are being struck by the Royal Canadian Mint in Ottawa to commemorate the gold rush and the centenary of British Columbia as a Crown Colony. The new pieces are struck from an alloy of 800 parts silver and 200 parts copper.

Discussions were held at Karachi last week between two directors of the Krupps steel organisation in West Germany and the Chairman of the Pakistani Industrial Development Corporation on the question of setting up the first steel mill in the country.

The total value of wholesale trade in the U.S. during the month of May 1958 was of the order of $9,400 million, which represents a rise of 2 per cent. over the previous month. It was, however, lower by 7 per cent. as compared with the value of trade in May 1957.

The British Government granted to the Colonial territories a total of £17,308,000 for development projects and £1,250,000 for research schemes during the financial year ended 31st March 1957. This brings the total amount approved by the British Government for development projects and research in the past 12 years to £156,000,000.

The chemical industry in Czechoslovakia is buying machinery and equipment from Austrian manufacturers. Czechoslovakia has embarked on an ambitious programme of expansion of this industry under its new plan covering the period until 1965. Rapid development is also envisaged for such industries as synthetic rubber, plastics and nitrate.

The Chrysler Corporation, Detroit, has completed arrangements for a revolving credit of $150 million with 115 banks throughout the U.S. Under the terms of the credit which expires on 30th September 1961, Chryslers will pay interest at the prime commercial bank rate in effect at the time of any borrowings on the basis of 90-day notes.

The U.S. Securities and Exchange Commission has reported a continuing increase in the net working capital of American corporations in the first quarter of this year. The working capital, which represents the companies' current assets less current liabilities, rose from $113,500 million at the end of last year to $114,800 million at the close of the first quarter of 1958.

The agricultural research workers at Hoytville, Ohio, are using the male sex hormone, testosterone, to hasten growth in cattle. It is said that, when the hormone was put in cattle with a female hormone, stilbœstrol, a growth rate of one-quarter pound per day resulted. Stilbœstrol has been used for several years to speed the growth rate of cattle. Implantation is made in pellet form behind the animal's ear.

Japan is planning a new trade drive in South America to be spearheaded by a floating fair at the end of this year. The new 10,477-ton freighter *Atlas Maru*, which will have all the appearance of an exhibition hall, is expected to carry abroad almost every important Japanese product for export. The Japan Industry Floating Fair will visit 12 South and Central American ports between December 1958 and May 1959.

The five-year social and economic development plan 1958-62 launched by the Government of Mauritius entails a total capital expenditure of £15.75 million. The plan covers a wide range of projects, including irrigation, power supply, food production and tourism. The agricultural programme includes schemes for expansion of food production and development of tea industry. The public works programme calls for a big expansion of irrigation works.

British aviation exports have risen in value by almost 1,000 per cent. since 1946, while aero-engine sales have increased twenty-fivefold. In the past three years, aviation exports have risen by 134 per cent. and aero-engine exports by 116 per cent. The British aircraft industry is thus earning in oversea currency a fraction less than £5 every second, day and night, which amounts to nearly £18,000 every hour, or £1,000,000 every 56 hours. In the first five months of this year, aviation exports achieved a record £64,000,000, an annual rate of £155,000,000.

A United States company distributing sheet and structural steels—the Rolled Steel Corporation of Skokie, Illinois—has developed a method which, it is claimed, will effectively protect shipments of metal from moisture. The method, developed as a result of a moisture condensation study, protects shipments from damage from the time they are received at the warehouse until they are delivered to buyers. The Company's warehouse uses two-forced air space heaters that prevent moisture condensation and create an air flow throughout the entire warehouse storage space. All moisture that may be injurious to stored steel is removed by this dehumidifying system.

A new Zero-energy reactor—"Horace"—is now in operation at the British Atomic Weapons Research Establishment at Aldermaston, Berkshire. It consists of an arrangement of enriched reactor fuel in ordinary water. The reactor is used for investigating different types of reactor core arrangements and the use of different materials as "reflectors," that is, to reflect neutrons, which may otherwise escape back in to the core. A second reactor, which will be used for research with neutrons and for the production of special isotopes, is expected to be ready for operation in the autumn of this year. When the later unit is completed, the U.K. will have 35 reactors, either in operation or under construction for research, testing and power production.

PERSONAL

SIR Percival Griffiths, Adviser, Indian Tea Association, London, has been invited by the Government of India for consultations regarding exports of tea.

Mr. T. Parasuram, Deputy Secretary in the Union Ministry of Transport and Communications, has been appointed General Manager of the Bombay Port Trust to assist the Port Trust Chairman.

Mr. Shriman Narayan, General Secretary of the Indian National Congress and the Chief Editor of the A.I.C.C. *Economic Review* till now, has taken over charge as a Member of the Planning Commission with effect from the 15th inst.

Dr. M. J. Van der Ploeg, Deputy President of K.L.M., has resigned, owing to conflict of views with other high executives. Dr. Van der Ploeg was mainly responsible for the introduction of K.L.M. shares on Wall Street.

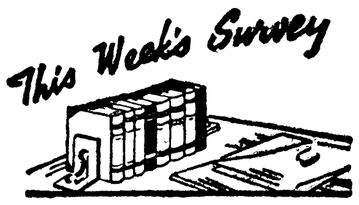
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 22*nd July*

The New Cotton Duties

Since the imposition of the new duties Mr. G. D. Birla has given an interesting interview to the Press, in the course of which he stressed the need for an enquiry into the methods of work in Japan and in other countries so as to bring the Indian industry up to the level of other efficient mills in the world. Mr. Birla has further observed that it would be a great tragedy if Indian mills did not "take advantage of the protection already granted and fortify their position to such an extent as to enable them to supply cloth at as cheap a rate as is done by the Japanese producers." None would be gladder, surely, than the Bombay millowners at an early fulfilment of the sentiments to which Mr. Birla has given expression. There can be no doubt that an investigation into the methods of work carried on in foreign countries, notably in Japan, would be of considerable value to the indigenous industry, especially on the technical side. But Mr. Kajiji sapiently sounds a note of warning that any such investigation should not be made an excuse for delaying certain essential reforms in the internal management of the industry, which have been pointed out from time to time and which can be put into force without any investigation of the kind referred to by Mr. Birla—provided, of course, that there is the will on the part of mill agents to do so. The recent report on economic conditions in Japan prepared by the Commercial Counsellor and the Acting Commercial Secretary to the British Embassy in Tokio bears ample testimony to the unity of purpose and effort among Japan's industrialists. Such unity of purpose and effort is badly needed in the Indian mill industry, especially in Bombay. Although the industry in Bombay has been considering for a long time past the need of a co-operative effort in the direction of grouping of mills for specialisation in particular kinds of cloth, and in joint buying and marketing also, it has been noticed that no substantial progress has so far been made in these matters. The same old methods of buying and selling are still practised.



CONTROL OF L. I. C.'S INVESTMENTS

ELSEWHERE in this issue is published a detailed summary of an article from the latest issue of the *Tata Quarterly*. The article discusses certain basic principles that should govern the investment of life insurance funds and lays down certain policy criteria for the Life Insurance Corporation. Although we find ourselves in agreement with many of the points made therein, we could not concur with the stand taken by the *Quarterly* on the question whether some formula comparable to Section 27A of the Indian Insurance Act should be prescribed by the Government as a means of ensuring that the L.I.C. does adhere to sound principles and act with due caution in its investment. The *Quarterly* maintains that any formula which tends to be rigid and seeks to give a particular, predetermined shape to the investment portfolio carried by the L.I.C. would, on balance, be undesirable. A permanent formula governing the investment pattern would, according to it, be unduly restrictive of the scope which the L.I.C. should have for the exercise of its skill and enterprise as an investor.

Section 27A of the Indian Insurance Act, as amended in 1950, provided that a minimum of 25 per cent. of investments should be in Government securities, another 25 per cent. in Government or other approved securities and that the balance should consist of "approved investments." The principal categories of approved investments were municipal securities, ordinary shares of a company which had paid dividend of not less than 4 per cent. for seven preceding years; preference shares of a company which had paid dividend on its ordinary shares for five preceding years; debentures secured by a first charge on the immovable property or plant of a company, provided the book value or the market value, whichever was less, of such property or plant was more than three times the value of such debentures.

This certainly is a rigid formula and obviously the *Quarterly* does not favour the section being made strictly applicable to the Corporation. According to it, the general guidance which the Government may, through a policy statement, choose to provide need not lay down rigid specific limits for the amounts to be invested in different kinds of scrips and securities. Since the Corporation would, in its own interest, need to build up a diversified portfolio of profitable investment, the *Quarterly* points out, "the purposes of public surveillance may be expected to be reasonably served through publicity and there should be no need for legal control."

We find it difficult to reconcile ourselves to such a view. A policy of leaving the L.I.C. free to work out its own pattern of investments, within the broad framework of the general guidance provided by the Government, would be nothing short of opening the door wide open to the kind of dangers which have been witnessed in the case of the L.I.C.'s investments in Mundhra shares. If one does not want a repetition of such a mistake, Section 27A of the Indian Insurance Act, or some provision comparable to that, should be made applicable to the L.I.C. It is no doubt true that, by this, the L.I.C.'s scope for showing its skill as an investor will be restricted. But it will be safer to do so. Even within the limitations imposed by legislation there will be enough scope for the L.I.C. to show its resourcefulness and business acumen as an investor and to serve the interests of policyholders profitably.

In taking the stand it has, the *Quarterly* seems to have had in its mind the practice obtaining in Britain. It points out in a footnote to the article, that in Britain there are no Government regulations regarding investment by life insurance companies. It also gives a comparative table of the percentage distribution of assets of the life insurance companies in India, the U.K. and the U.S. Conditions in India are, however, different from those obtaining in either Britain or the U.S. and it is not, therefore, feasible nor safe to copy them without substantial or radical modifications. In the U.S., where there is more life assurance in force than in all the rest of the world, about 60 years ago, following scandals regarding investment of life insurance funds, the Legislature intervened and the problem of due control and responsibility for investment was solved legislatively. The system seems to have worked satisfactorily by and large, though even today there are serious complaints of mismanagement of life funds against some insurance companies in that country and, therefore, suggestions for further restrictions on the investments of all insurance companies are being voiced by a section of the public. Britain, however, has been happily free from any such problem and there is minimum legislative control in that country. The principle followed by insurance companies in that country is expressed in the aphorism "do as you like, but show what you do," and this has stood the test of time. In India, where insurance is still in its infancy and where a unique experiment of State management of insurance is being tried, it is essential that adequate safeguards should be provided to protect the policyholders' money. Legislation laying down the pattern of investment for the L.I.C. would be the best safeguard. General guidance by the Government alone is not enough.

To think that publicity regarding investments would be sufficient inducement for the Corporation to pursue constructive policies and sufficient safeguard against improper policies is, in our view, to indulge in wishful thinking. When the question of propriety of a particular investment arises, the Press and other organs of public opinion might speak with many voices. Which of them should be taken as representing the consensus opinion of the people? If, therefore, Parliament, as the real owners of the Corporation, lays down a formula, the L.I.C. can be called into question for any deviation therefrom and the outcome, good or bad, of adherence to it would be the responsibility of Parliament. In our opinion, therefore, there is no reason why Section 27A of the Indian Insurance Act or a modified version of it embodying its spirit, should not be made applicable to the L.I.C. The fact that the L.I.C. is a Government-owned Corporation does not warrant its being given unlimited or extensive freedom in the disposition of funds which are entrusted to it as trust money. Officials, who after all have to manage the affairs of the Corporation, have less stake in the Corporation than the managements of life companies before nationalisation and are not less likely to go wrong than private individuals. Moreover, if the *Quarterly's* suggestion were to be heeded, it would mean giving a blank cheque to a politician (the Finance Minister) or a group of politicians, a dangerous thing to do in a young democracy which has neither established sound traditions of its own nor is prepared to accept the traditions of other mature democracies in the world. Again, any *post-mortem* of the L.I.C.'s investments will be of little value, for the damage will have been already done.

We do agree with the *Quarterly* when it points out that the Corporation should try in some measure to relieve the acute shortage of risk capital for new enterprises. But we do not see eye to eye with it on the question of how this could be done. It points out that the Corporation should be ready to move off the beaten tract and take calculated business risks by supplying the risk capital for new ventures. To us it seems that a better and more prudent policy would be for the Corporation to refrain from such direct participation and to remain content with subscribing to the share capital of institutions such as the I.C.I.C. and I.F.C. which are primarily meant for providing capital for new ventures and thereby help them find the capital for new industries.

ADVERTISING

Much commendable progress has been made in this country in the technique of advertising, thanks to the lead given by some of the large industrial houses and the wealth of knowledge and skill brought to bear on their work by the agency firms. Back in the mind of an average Indian consumer, however, is a vague and uncomfortable suspicion that the money spent on advertising comes from his pocket, and to that extent, is an unjustifiable draft on his slender purse. This erroneous impression needs to be corrected in the interests of both advertiser and consumer. The fallacy in his reasoning lies in the fact that he does not realise that, in India, for one consumer of a product, there are probably ten, hundred, thousand or more "potential" consumers who, if they could be persuaded to buy, would provide the basis for mass market, mass production and reduced costs The lay consumer is, of course, to be pardoned for his ignorance of the economics of advertising. But similar ignorance, which is to be found in the ranks of some of the manufacturers, is inexcusable folly. And yet, the fact remains that many manufacturers are apt to think that advertising is a costly luxury, an item of cost which could be cut without serious consequences to their production and profit. In the interests of national economy, they indeed deserve to be saved from themselves. It is gratifying to note that the Indian Society of Advertisers, according to its new President, Mr. Chinubhai Kilachand, will soon undertake a campaign for bringing home to potential and actual advertisers the importance of advertising. Presiding over the annual meeting of the Society, held this week in Bombay, Mr. Kilachand revealed, in the course of his very admirable survey of advertising problems, that the Society Plans to launch upon an ambitious programme of "Advertising Advertising." We wish this campaign all the success it so richly deserves.

In the West, where the importance of advertising is better understood and appreciated, there is evidence of a renewed interest in advertising techniques. It is now realised that the formation of the European Common Market which, many observers feel, cannot be long delayed, would mean a large and rich market of 250 million consumers, worth competing for by the national manufacturers of different countries both inside and outside the Common Market area. Relatively speaking, India with its 370 million people, is a larger market than even the European Common Market, though it is, of course, less rich than Western Europe. But its value to a manufacturer is not inconsiderable, and, with the passage of time, must increase, rather than diminish. India's economic plans envisage a rising standard of living of the common people. These plans, as Mr. Kilachand pointed out, mean a "higher standard of life, greater personal incomes, greater *per capita* consumption and a thousandfold increase in the production of consumer goods." He added: "Even such minor articles of personal consumption as washing soap or a daily newspaper are today luxuries except for a small percentage of the population. From this, we can well imagine the enormous scope that lies ahead of us for increasing and diversifying production for the greater development of consumer goods."

Advertising has a significant role to play in India's efforts at increasing its export trade, never more vital than now. Whether it is the continued maintenance of trade in traditional exports, many of which face competition from rival producers from other countries, or the exploration of markets for India's new lines of manufactures, such as a wide range of engineering goods, advertising in foreign countries can do a great deal to create and sustain an interest in Indian products. Mr. Chinubhai rightly emphasised that export promotion efforts should be "accompanied by an intensive advertising of Indian products in countries where there is a demand for a potential demand for these." Appropriately enough, he stressed that the time had come to plan an institutional "Buy Indian Goods" advertising campaign in the major potential foreign markets of Indian merchandise. Such a campaign, if supplemented by advertising by individual manufacturers, would go a long way towards building up an expanding foreign market for Indian goods. Indian embassies often report that visitors to Indian stalls in exhibitions and fairs in foreign countries express agreeable surprise over the fact that India does make the goods exhibited there. This means that the scope for advertising and publicity is large, and the reward for effort is bound to be great. It is true that price and quality are important factors in determining export trade. In fact, no advertising is a substitute for superior quality and competitive price. But those factors do not, by themselves, convert a potential market into a real market. They have to be supplemented by effective sales promotion of which advertising is a vital part. This is particularly important in a foreign market where producers from different countries are continuously trying to influence the consumer's choice.

KERALA PLANTATIONS

The latest reports received from the plantation areas in Kerala indicate that, despite persistent official denials, the law and order situation in most plantations is far from satisfactory. In fact, it has not improved to any appreciable extent from what it was a year ago, when, following the ascendancy of the Communists to power in Kerala, the plantations witnessed an orgy of violence. It is true that the police is more frequently present now, after an incident, than was the case formerly and the culprits have been convicted in a few cases, but violent incidents continue to occur. Plantation estates, being far removed from the settled, populous centres and situated in inaccessible areas, miles away from police outposts, are in a very vulnerable position. The authorities in Kerala obviously do not seem to believe in the maxim that prevention is better than cure. Some perfunctory action is, no doubt, taken when an incident occurs but nothing is done to prevent it.

Here are some random samples, gathered from responsible and informed quarters, of the kind of incidents taking place in the plantations. Early in May last, in a tea estate four miles from Vandiperiyar, a field conductor had his arm chopped off. In another estate nearby, a mob attacked a group of newly engaged watchers and two were killed. Another scene of violence was an estate six miles north-east of Pathanamthitta. A mob 300 strong attacked workers' quarters, hurling stones and brickbats. About 14 persons were injured. The eventual arrival of a police party put a stop to further violence. In another estate, about 60 miles north, men of two rival unions clashed and 25 persons were injured.

A matter of serious concern to plantation owners is that the workers are being initiated into a new cult of insubordination and incendiarism. They are prompted to participate in unauthorised meetings and demonstrations and in insulting the management. Long before an assault on a manager or loyal employees takes place, threats are freely made at labour meetings and the actual commission of the offence follows.

Such a state of affairs is hardly conducive to the proper functioning of the plantation industry. The Communist Government of Kerala would be well advised to take positive and immediate measures to ensure that the feeling of insecurity is removed and normalcy restored.

SUEZ FINANCIAL COMPANY

What was known for many decades as the International Suez Canal Company has ceased to exist, its place having been taken by a new-style investment trust, called the Suez Financial Company. This is the result of the deliberations at the former Company's last meeting held in Paris on the 4th inst. Mr. Georges-Picot, Chairman of the Company, presided over the meeting, which was attended by about 1,200 shareholders representing 260,000 shares and the U.K. Government assessor representing the Government's holding. The meeting approved of the compensation agreement with the Government of Egypt, as well as certain juridical modifications to the Company's articles rendered necessary by the agreement.

The terms of compensation were first initiated in Rome in April last and these have since been completed by negotiations in Paris and Cairo. Accordingly, the former Company has abandoned all claims on its assets in Egypt which in turn will have no claims over the Company's assets outside the country. Egypt will not demand the Canal dues of £5 million paid in London during the summer of 1956 and since blocked by the British Government. It will pay a total compensation of £23 million in six annual instalments over the period 1959-64. the payment being made in francs and sterling (not less than 40 per cent. sterling) with a dollar exchange rate guaranteed. It has also agreed to make advance payment of the first two instalments (about £8 million) as soon as the British Government unblocks Egypt's frozen sterling balances.

The total compensation of £23 million obtained by the Company from the Egyptian Government may be less than what the Company had a right to expect, but the only alternative to acceptance was, as Mr. Georges-Picot said, to take the case to international arbitration. Such a step would have greatly delayed any hope of a distribution to shareholders.

The compensation amount of £23 million, together with (1) the payment by Egypt of £5 million in Canal dues blocked in London, (2) the old Company's assets of over £50 million and (3) the sum of £17 million belonging to the investment subsidiary (*Societe D'Investissement Mobilier*) set up two years ago from the profits of working the Canal, brings the combined resources of the new Suez Canal Company to more than £95 million (Rs. 126.7 crores). Of this stock, the French shareholders (mostly very small) account for about 50 per cent. and the British Government for 35 per cent. Now that the Company has become a French investment trust, the question of continuing U.K. Government participation naturally arises. Alluding to this, Mr. Georges-Picot stated that he had no knowledge of that Government's plans, but he hardly thought that it would dispose of its shares in advance of the first compensation payment or of an Anglo-Egyptian financial agreement.

An interesting question that now emerges pertains to the future operations of the Suez Financial Company. The Board of the Company, it may be noted, is authorised to invest assets in any financial, commercial, industrial, mining, real estate or investment undertaking, "particularly with a view to furthering activities of an international nature conducive to an increase in commercial exchanges between nations." Some sizable investments have already been made in Canada and French North Africa. Three considerations, it is said, seem likely to govern the future investment policy of the Company. They are: (1) the spread of investment throughout the world to be related to the location of the Company's shareholders, (2) a preference for long-term growth projects, including Saharan and Canadian oil, and (3) the need for adequate short-term revenue to guarantee the shareholders' interest. The general policy of the Company may, of course, continue to be to spread its investments very roughly in accordance with the structure of shareholding. It may be noted here that, as at the end of last year, 35 per cent. of the assets outside Egypt had been invested in the sterling area, 25 per cent. in the dollar area and 40 per cent. in the franc area (Europe).

QUALITY CONTROL OF LEATHER

A new scheme for quality control of leather, formulated by the Leather Export Promotion Council, Madras, was officially inaugurated by Mr. K. B. Lall, I.C.S., Joint Secretary, Ministry of Commerce and Industry and Director-General of Foreign Trade, Government of India, in Madras on the 17th inst. The scheme is on a voluntary basis under which exporters are required to furnish full details of goods awaiting export regarding marks, tannage, chemical standard of the leather. This measure is expected to ensure that the consignments shipped conform to the quality as understood by the marks under which they are exported, and to help arrest production and export of sub-standard goods. Nevertheless, it is felt that it may not go to the root of eliminating the use of adulterants in tannages in the tanneries or preventing exports of substandard merchandise; nor has it the approval of importers overseas who have their own terms of purchase. In order to augment the resources of the Council for implementing the scheme and for other developmental activities, a contribution of Re. 1 per bale of tanned goat and sheep skins and 50 nP on tanned hides and calves will be made by the exporters, before a shipment.

ECONOMIC RECESSION IN U.S. HALTED

By S. V. Rayan

THE latest reports from the U.S. clearly suggest that the economic recession in that country which began ten months ago has been successfully halted. Convincing evidence of it is provided by the main economic indicators pointing to a distinct improvement in the position. Industrial production, for instance, has been moving forward. After continuously declining from a peak of 146 in June, July and August 1957 to 126 in April 1958, the Federal Reserve Index of industrial production (seasonally adjusted, 1947-49=100) improved by a point to 127 in May 1958. The figure for June may show a further small rise, as almost all industries, including steel and automobiles, the worst sufferers in the recession, were reported to be faring better. Steel mill operations in the past month averaged 20 per cent. above May; they rose to as high as 65 per cent. of the industry's rated capacity by mid-June, as against 55 per cent. in the third week of May and a low of 47.1 per cent. in the week ended 22nd April 1958. This industry, it may be noted in passing, had operated at a record high of 102.6 per cent. of rated capacity, or an annual rate of 131.7 million tons, in the week ended 22nd December 1956. Perceptible gains have been reported in the output of automobiles and trucks. Small but significant rises have taken place in the production of petroleum and electricity, as well as in freightcar loadings. During three out of four weeks in June, they were at the highest for 1958. Housing construction has gathered momentum. Outlays on highways, hospitals, schools, etc., have markedly increased. Reflective of this trend is the report that new construction contracts outstanding at the end of May 1958 stood at a record high level.

Personal incomes in May rose for the third month in succession. At the annual rate of $344.3 billion (a billion=a thousand million), they are down by only 1 per cent. as compared with the peak reached in August last and $2.6 billion above the trough of February 1958. There are signs that a further rise in personal incomes is likely. Consumer spending is running at a high level. Retail sales aggregating $16.6 billion in May 1958 represent a rise of $100 million from April and preliminary reports suggest that June must have seen a further expansion in them. These sales in April itself were 3 per cent. above the lows in February-March. For the first time since August 1957, manufacturers' sales, too, rose in May 1958. Inventories (stock-in-trade) are being rapidly depleted, thereby improving the prospects of the economy sustaining a higher level of production.

Finally, employment is steadily rising. Despite the addition of two million to the labour force during June, when youths complete their studies in schools and colleges and seek a career, the increase in the unemployed was only 533,000. A much larger addition had been feared earlier. It is true that the total number of unemployed at the end of June was the highest in seventeen years, but, when allowance is made for the annual rise in employable people, it is seen that the proportion of labour force out of work to the total is lower for the second month running. There has been an increase of over a million in June in the number of people at work to 64,981,000. It is noteworthy that a part of this addition has occurred in manufacturing industries and most of it is of more than seasonal nature. A major indicator which has not yet moved upward is capital investment. The latest figures are for the first quarter of 1958; they reveal a sharp fall from the final quarter of 1957. But American observers say that, though business spending on plant and equipment will continue to fall this year, the rate of decline will be slower in the coming months. Nevertheless, the continued reaction to the capital spending boom of 1955-57 will be a drag on recovery.

Thus, there are unmistakable signs that a modest upward trend is taking place in the U.S. economy. This, however, does not mean that it is well set for reaching the 1957 peak levels. They still seem to be too distant, though a few observers are optimistic enough to feel that it may happen early next year. Whether a sudden change in the international political situation such as the one in the Middle East this week resulting in a second Korea can bring these levels nearer is a question which is beyond the reckoning of an economic analyst. Barring such fortuitous factors, the chances are that the recovery from recession will be a gradual affair.

It must be remembered that the addition to the labour force in the U.S. is at the rate of two million per annum and there is even now unemployed labour of a little over five million persons. This means that, between now and next July, jobs must be found for at least five million people, if a reasonably full level of employment is to be ensured. Not an easy task by any means, but officials and non-officials in the U.S. are fully seized of the problem. The facts that they have succeeded in preventing the recession from developing into a full-fledged depression and that, basically, the economy is in a sounder position than before, warrant the confident belief that the task is not beyond the capacity and ingenuity of this great democratic country. In fact, during my stay in the U.S. during April and May 1958, I found no pessimism about the long-term problem of finding employment for its growing population.

The foregoing is a brief account of the latest economic situation in the U.S. It is a cheerful picture on the whole. The pessimists, who predicted, towards the close of 1957 and early this year, a repetition of the 1929-30 economic crisis, have fortunately been disproved by the events in the past three months. It is not that they were unaware of the well-known "built-in stabilisers" which make a world of difference between the U.S. of 1929-30 and the U.S. of today. But they were sceptical of the efficacy of these stabilisers. They wondered whether they would be sufficient and strong enough to deter a depression. While it is a little too early to assert categorically that they were utterly wrong about their misgivings, it would seem that they had terribly underrated (*a*) the value of the built-in stabilisers, (*b*) the efficiency of the U.S. Administration in energising them and (*c*) the ability of U.S. business men to push up sales in a buyers' market.

What are the built-in stabilisers? This question may be briefly answered for the benefit of those who are not aware of them. The following are the main built-in stabilisers in the U.S. economy:

1. Social security system, especially unemployment insurance which helps to maintain retail sales.
2. Control over credit and money supply through the Federal Reserve (Bank) system. Federal Reserve monetary policy can be a powerful instrument, against both inflation and deflation.
3. Minimum-wage legislation.
4. Collective bargaining agreements which cover, directly or indirectly, wages and working conditions of the great majority of workers.
5. Insurance of small bank deposits and home mortgages.
6. The farm price support programme, which exerts a stabilising influence by helping to maintain the purchasing power of farmers and discouraging disorderly marketing and price slashing.
7. Control over stock markets and securities transactions.
8. Provision for expansion of public works during a contraction of private economic activities.
9. Readiness of Congress to counteract a decline in economic activities by fiscal measures, including deficit spending.
10. Development of business statistics, dissemination of information on economic changes and outlook in the nation.

These stabilisers can be operated either way, that is, to prevent either a boom or a depression. And it is significant that, in the past twelve months or so, they have been used with considerable effect for both the purposes. It will be recalled that it was only in August 1957 that the Federal Reserve discount rate was pushed up to a high of 3½ per cent., with a view to restraining inflation.

Let us now see how the built-in stabilisers worked against the latest recession which was deeper and more prolonged than the 1948-49 and 1953-54 recessions. Not all the stabilisers, of course, act automatically. Most of them have to be put into force by the Administration. Their effectiveness, therefore, depends upon the economic prescience of the Government and its advisers. The pessimists had thought that the U.S. Government would not act in time and that, even if it did, its actions might not be vigorous enough to prevent a serious slump. Although one can debate endlessly on the question whether the U.S. Administration was overcautious and slow in taking corrective measures during the past twelve months, it seems to me, in retrospect, that it has been impressively successful in bringing the recession under control. Professor James Angell of Columbia University, who predicted, in his testimony to the Senate Finance committee early in April, that the U.S. was headed for "a major depression," admitted two and a half months later that the chances of a depression were "practically zero." Great credit for transforming the situation in such a manner as to convince this distinguished economist thus undoubtedly goes to the U.S. Government and its economic advisers. They made the built-in stabilisers "work heroically."

It was stated earlier that one of the remarkable features of the recession was the high level of personal incomes. It was remarkable because these incomes were running at a level which was only one per cent. below the peak in 1957, despite a marked fall in the key component, namely, wages and salaries, at an annual rate of $8,000 million. The explanation for this is to be found in the increased Government transfer payments—unemployment insurance, social security, veteran benefits, etc., amounting to no less than $5,000 million. These payments are expected to grow further in the coming months because of expanded unemployment insurance and of the increase of $1,500 million in the salaries payable by the Federal Government to post office employees, civil service workers and armed forces with effect from June last.

Unemployment insurance in the U.S. is a State subject. The quantum of compensation payable varies from State to State, from as high as 26 weeks' pay to as low as 6 weeks' pay. The Federal Government, with the consent of the Congress, decided to encourage States to pay unemployment insurance for a 50 per cent. longer period and offered to finance such payments in the form of repayable loans. This meant that workers who were entitled to get unemployment insurance for 26 weeks would receive it for 39 weeks or nine months. It was thought at the time that, as most of the States might be reluctant to get indebted to the Federal Government on this score, this measure might not be of much use. But it is now said that most of them have agreed to extend the unemployment compensation as authorised by the Congress. According to the Secretary of Labour, 30 million of the 43 million workers enjoying security against unemployment live in the States which have agreed to accept Federal help. Three more States have decided to fall in line, but they will foot the bill themselves. About 60 per cent. of the 1,560,000 workers who have exhausted their right to benefit are in the States which had already expressed their consent to co-operate with the Federal Government. About two-fifths of the labour force in the U.S. are, however, not covered by unemployment benefits. They are mostly employed in small firms, farms, or in self-employed occupations such as law, medicine and shopkeeping. They have so far been not adversely affected very much, but, if they happen to suffer, the Congress may enact special legislation to cover them too.

One of the economic sectors which have not suffered from the recession is farming. Farm incomes, thanks to the U.S. Government's policy of feather-bedding farmers, and helped by better livestock prices, have been running higher by a little over $1,000 million.

Among the other measures initiated by the U.S. authorities for checking recession, the following must be mentioned:

Successive reduction in the Federal Reserve discount rate from 3½ to 3 per cent. in November to 2½ per cent. in January, to 2¼ per cent. early in March and finally to 1¾ per cent. in the latter half of April; relaxation in reserve requirements of banks, in two stages, and in stock exchange margins; easier credit for house-building purposes; an increase of nearly $2,000 million in the expenditure on road building and increased defence expenditure which is expected to rise by $1,000 million a quarter until the middle of 1959.

As a result of all these measures, and a sharp fall in tax collections brought about by a reduction in business profits, the U.S. Government's budget for the year beginning from 1st July 1958 is expected to end in a deficit of over $11,000 million, the largest amount of deficit financing since World War II, as against a nominal surplus expected in January last. Indeed, even in the year 1957-58 which has just ended, the U.S. is said to have finished with $3,900 million in red. In other words, the U.S. Government will have incurred a deficit of well over $15,000 million by the end of June 1959, in its efforts to pull up the economy from the trough of recession. Will not such heavy outpouring of money into the pockets of people lead to another bout of inflation? This question has already started worrying the U.S. Treasury officials, the Federal Reserve Bank and the International Monetary Fund. It would, indeed, not be surprising if in another six or nine months the scare of recession were to yield place to a fear of inflation.

NEW WEAPONS FOR OLD

From Our Own Correspondent

LONDON, 11*th July*

LONDON LETTER

ALTHOUGH the banks co-operated loyally in Mr. Heathcote Amory's credit squeeze, they never ceased leaving the Chancellor of the Exchequer in no doubt at all that his chosen technique of restricting advances made no appeal to them whatsoever. Although indeed the banks at no time reached the average figure of the previous 12 months which was their ordained ceiling for advances, they had, of course, to bring continuous pressure on their clients regardless of the merits of the case to avoid any risk of overlending.

The Chancellor was therefore delighted to end the credit squeeze at the beginning of this month—incidentally his statement of policy linked up with a further small rise in the gold and dollar reserves to a new high level of $3,076 million on the 30th June—and to announce that he was making arrangements with the banking system for some different techniques for future use. His letter to the Governor of the Bank of England accepted the view that it was damaging to the efficient working of the banking system to use the method of official requests to restrict total bank advances. He asked the Governor for an alternative scheme pending the report of the Radcliffe Committee which is enquiring into the working of the banking and credit system. By return of post came the Governor's reply that he had, in consultation with the clearing banks, devised an alternative weapon.

Now the idea of an alternative weapon is to supplement the traditional weapons of Bank Rate plus open market operations. The latter, in which the Bank of England buys or sells securities on the stock market, varies the total volume of funds on which the banks base their advances. But it has long been recognised that these traditional weapons have disadvantages if carried beyond a certain point, and require some means of supplement. After the war, the Government devised the system of Treasury Deposits. This was generally regarded as a means whereby the Treasury could make more or less forced loans from the banks in lieu of issuing Treasury Bills. The banks would be required to advance so much money to the Treasury in exchange for which they received a receipt carrying interest around the Treasury Bill rate level. But in fact the system also had the merit of enabling the Treasury and the Bank of England to control the liquidity of the joint-stock banks.

Because it savoured of a forced loan, the system was wound up but the new weapon which is being put into the Bank's armoury is in effect almost identical. This weapon is the power being given to the Bank of England to call for special deposits to be made with it by the banks. Such deposits would carry interest based on the Treasury Bill rate but since they would not rank as "cash at bank" the joint-stock banks could not regard them as part of the liquid assets which would, of course, have been reduced by the amount of the deposit. And such restriction of their liquid assets would force the banks in turn to reduce their deposits, which means, among other things, their advances. But the banks would have a much greater liberty of action than at present over the manner they achieved the desired ratio between their cash and their deposits, a ratio nowadays held at 8 per cent. The practical affect would, of course, be to oblige the banks to restrict advances substantially; but, since they would not be under any direct contract to do so, they would act with the feeling of being their own masters and free to arrange their credit affairs as was most convenient to them, subject only to the overriding need to preserve their cash liquidity ratio.

The system is not new to the world's banking systems and in an amended form has been used in other countries. But it is interesting to note that, in effect, it is a revival of the old Treasury deposit system and that the main criticism which is being made against it is the same that used to be made against that system, namely, that the Government of the day could use this new technique as a means of cheap borrowing while keeping everybody else short!

How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a *current account* with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A *savings bank account* enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

I.M.F. ON EXCHANGE RESTRICTIONS

FURTHER PROGRESS MADE IN EXTENDING CURRENCY TRANSFERABILITY

MUCH significance attaches to the forthcoming annual meeting of the International Monetary Fund scheduled to be held at New Delhi early in October next. This is so for two reasons. First, it is the first time since its inception that the Fund is holding the annual meeting in an Asian country, and that in India. Secondly, the meeting promises to be a more interesting one than its predecessors, in that it may discuss the adoption of special measures designed to set right the persistent serious disequilibrium in world trade and payments. One of the papers which will form the basis of the discussions will be the Fund's ninth annual report on exchange restrictions made public a few days ago.

It is gratifying to find from the Report that, in the past year (beginning from April 1957), the Governments of the member-countries generally seemed determined to cope with the balance of payments difficulties with a minimum, or only temporary, resort to intensification of restrictions where such retrogression could not be avoided. Many countries, we are told, were able to avoid reimposing restrictions. Indeed, some further progress was made in extending currency transferability, decreasing reliance on bilateral payments arrangements and reducing discrimination. A number of countries continued to consolidate the progress made in earlier years in removing restrictions. If the progress in the sphere of exchange control relaxation has not been more marked, it is because of other unfavourable factors. There was, for instance, the general downward pressure on raw material prices which placed severe strains on the less developed countries. Further, serious balance of payments problems confronted a number of countries, thanks to continued price inflation and excessive imports to meet the needs of heavy development expenditure. What was worse, in the latter part of 1957, the economic boom, which had caused sharp increases in production in world trade, gave way to either a less spectacular rise or—notably in the U.S.—to recession. Superimposed on all these forces was the strong speculative exchange pressure on certain currencies in August 1957. This had to be met by firm actions and statements of policy by the Governments concerned.

Role of I.M.F.

Special mention must be made here of the ways and means in which the I.M.F. has sought to help countries in all areas to avoid increased use of restrictions. Among them, three stand out prominently—(1) provision of technical assistance, (2) changes, with Fund concurrence, in par values and effective exchange rates, and (3) use of Fund's resources. The Fund officials have actively assisted countries requiring advice in connection with their stabilisation programmes and the simplification of their exchange rate structures. This has taken the form of frequent discussions in the field with the governments concerned and provision of Fund officials as technical advisers for periods of six months or more. In the 12 months ended 28th February 1958, drawings on the Fund by 20 countries aggregated $888 million; this followed drawings amounting to $708 million in the preceding three months, December 1956 through February 1957. These figures do not include the $997 million available at the end of February 1958 under stand-by arrangements with nine countries.

External Convertibility

The period since April 1957, particularly the opening months of the current calendar year, witnessed, according to the I.M.F. Report, a significant strengthening of most internationally traded currencies. There was a marked improvement in the rates at which transferable currencies could be exchanged for convertible currencies in free markets, as well as an improvement in other rates against the dollar, especially for the currencies of Western Europe. In fact, the rates in these free markets began to approximate the rates in official markets. In this respect, there was continued progress towards what is commonly called external convertibility. The currencies of Britain and W. Germany have continued to be fully convertible among all non-dollar countries. The other 10 countries participating in the West European multilateral exchange arbitrage arrangement have facilities by which holdings of their currencies by residents of other countries are transferable throughout a substantial part of the non-dollar world. The use of this system has been increased. Nevertheless, the present position, as the Report itself candidly admits, still falls short of formal external convertibility. For some countries have been able to relax restrictions only to a limited extent. This is attributed to two factors. First, the earlier relaxations have left only restrictions of a protective nature. Secondly, the nature of economic trends has tended to become more complex as a result of the aforesaid unfavourable factors.

The progress in the extension of currency transferability as noted above has been accompanied in most cases by reduced reliance on bilateral arrangements. Generally, the substantial progress made in this direction during 1956 continued throughout the world in 1957 and, in the first few months of 1958, particularly in Belgium-Luxembourg, Burma, Italy, Japan, the Netherlands and Yugoslavia. It must be said to the credit of the I.M.F. that it has continued to work with its members to achieve reduced reliance on bilateralism. During 1957, a large number of bilateral payments arrangements were allowed to lapse, payments being placed on a transferable currency basis; this movement is still in progress.

It is, however, unfortunate that, for the world as a whole, there does not appear to have been any marked change in the use of quantitative restrictions on imports or import payments. In most countries, a number of such restrictions are still maintained partly for balance of payments reasons but increasingly for other motives, particularly protection. Summing up the whole position, the I.M.F. Report observes:

"Discrimination in trade and payments against countries in the dollar area is still an important aspect of the restrictive system of many countries, although significant progress in its reduction has been made in recent years; some Western European countries, particularly, made some reductions during the past year. Discrimination has been largely eliminated with respect to industrial raw materials and, to a considerable extent, capital goods, and progress has been made in reducing discrimination on foodstuffs. It remains important, however, for manufactured consumer goods."

India is one of the countries which have reduced exchange allocations for imports, as their balance of payments positions deteriorated and reserves declined considerably. The important changes effected by this country are indicated below:

Abolition of the basic foreign exchange allowance for travel abroad for pleasure or personal convenience;

reduction in import quotas for over 500 items described as relatively less essential to India's economic needs;

business trips permitted only when absolutely necessary, ban on foreign exchange for correspondence courses as well as for courses like academic, legal or language studies, accounting, social sciences, and drawing and painting;

withdrawal of the general permission given to residents in India to acquire sterling shares in the London market;

removal of facilities for remitting sterling and rupees to foreign countries by money orders;

ban on transfer of assets exceeding Rs. 2 lakhs per family by Indian nationals and persons domiciled in India emigrating to a sterling area country; and

discontinuance of the open general licences covering imports from all countries with effect from 1st July 1957.

Multiple Currency Practices

Alluding to multiple currency practices, the I.M.F. Report says that some countries eliminated or simplified them, while others extended their application during the year under review. It will be recalled that, at its meeting held in June 1957, the Executive Board of the I.M.F. reaffirmed as its ultimate objective the unification of the complex multiple rate systems. It is encouraging to be told that, since then, several countries have introduced modifications in their complex systems and these have been approved of by the Fund. During 1957, some systems, although still rather complex, were simplified. The Fund, therefore, did not object to their temporary continuance. It, however, urged the countries concerned to take further steps towards simplification.

The Fund has applied more rigorous standards to other complex multiple rate systems which were not simplified or which were further complicated, and, instead of giving approval to certain changes in multiple rate systems, it has preferred to remain in consultation with the countries concerned, with a view to agreeing on a plan for rate simplification. The Fund has given technical assistance to countries which have undertaken plans of exchange simplification or unification involving programmes in the fiscal and monetary field—for example, Bolivia, Colombia, Indonesia, and Paraguay.

A few countries with less complex multiple rate systems, such as Ecuador and Nicaragua, were able to reduce further the number of their rates, and Finland abolished its deviations from a unitary rate system when it changed its par value in September 1957. Most of the countries which introduced exchange reforms either during the period under review or at an earlier date have pursued policies that have made possible the maintenance of their simplified or unified exchange systems. In most countries where all exchange transactions have been channelled through free markets, such as Chile and Peru, the exchange rates in these markets depreciated over the past year. The extent of the depreciation varied greatly because of different trends in domestic monetary conditions and in the balance of payments.

A number of the multiple rate systems, especially those adopted by countries exporting primary products, have been under strain as a result of a decline in prices for their main export products. The ensuing exchange difficulties have frequently arisen at a time when the domestic monetary situation was not yet stabilised or was still under inflationary pressure because the necessary adjustments in the economy had not been completed. For these reasons, some countries, such as Afghanistan and Argentina, have introduced additional multiple exchange rates.

Advance Deposits

During the year 1957, a number of countries increased sharply the use of regulations requiring advance deposits as a prerequisite for obtaining import and/or exchange licences. Commenting on this feature, the Report says:

"In one country, Chile, the advance deposit requirement reached 1,500 per cent. for the highest category of luxury imports and the deposit is not refundable for 60 days. Nine other countries (Argentina, Colombia, Ecuador, Greece, Indonesia, Nicaragua, Paraguay, the Philippine Republic, and Uruguay) have some advance deposit requirements of 100 per cent. or more. This device can have temporary restrictive effects on the demand for imports, and its premature withdrawal can cause overimportation. In actual practice, the restrictiveness of the device may, however, be negligible because of the easy availability of credit. Its growing use as a means of restraining imports is shown by the fact that, during 1957, at least 11 countries in various parts of the world expanded in one way or another the scope of their advance deposit requirements. This device was, however, abandoned by Finland."

In the opinion of the I.M.F., in contrast to formal external convertibility, there is no assurance under the present arrangements that the free exchange rates for West European currencies will be maintained within the Fund margins. These rates are so close to the official quotations that the problem of broken cross rates in the currencies is considered to be no longer important and it is said that switch trade based on differences in rates has ceased to be profitable.

There are two other developments to which the I.M.F. report has drawn attention. The first one relates to the freedom of capital movements. Generally, this did not materially increase in the period under review, so that the position now is much the same as it was at the beginning of 1957. A notable exception is Western Germany, where, as a result of a series of relaxation measures, residents are now free to export capital in any form, including the purchase of securities anywhere in the world. The second development relates to the significant decrease in discrimination against those countries regarded as being outside the recognised currency groups, namely, convertible (dollar area), transferable and liberal. Originally, it was customary for a residual group to be treated as such and the countries in it to receive special treatment on a case-by-case basis.

The I.M.F. Report concludes the review of recent developments in exchange restrictions with a brief reference to the position obtaining at the time of writing the Report. The world, it says, is faced by pressures associated with falling raw material prices and by concern about a possible delay in economic recovery in the U.S. It no doubt points out that an increased use of restrictions and the further complication of exchange rate systems suggest themselves to some as means of meeting these changed conditions, but, at the same time, asserts that there is a strong built-in resistance against the reintroduction of restrictions abolished in the past. Indeed, the Fund claims that several countries are determined to define their existing levels of relaxation, even under adverse conditions and that "such countries have found the Fund to be a ready ally, willing to provide assistance for the implementation of policies to achieve the maximum possible freedom for world trade and payments." It is to be hoped that this note of optimism will prove correct and the progress towards convertibility of currencies, one of the fundamental objectives of the I.M.F., will be more speedy and solid in the coming years.

BANK PROFITS DECLINE

The effect of credit restrictions on banks since the middle of 1957 and of the high cost of interest-bearing deposits, is fully reflected in the financial results of banks for the first half of the current year. So far four Scheduled banks have made their results public. All of them have suffered a setback in their profits for the half-year ended 30th June 1958, as compared with those for the corresponding six months of 1957. What is more noteworthy is that, in the case of three of the "Big Five," the profits are even lower than those earned in the first six months of 1956, when the level of bank credit and their deposit resources were at a much lower level.

Central Bank of India

The net profit of the Central Bank of India Ltd., for the six months ended 30th June 1958, subject to audit, amounts to Rs. 42.05 lakhs, which shows a drop of Rs. 5.45 lakhs and Rs. 2.30 lakhs from that earned in the corresponding periods of 1957 and 1956, respectively. After bringing in the surplus of Rs. 18.44 lakhs from the previous year (as against Rs. 18.23 lakhs a year ago), the Directors have maintained the interim distribution at Rs. 1.50 per share or 12 per cent. per annum, free of income-tax, for the half-year, absorbing Rs. 18.87 lakhs. This leaves Rs. 41.62 lakhs, subject to taxation, to be carried forward to the next half-year's account, the corresponding figure for 1957 being Rs. 46.86 lakhs.

Bank of India

The working of the Bank of India Ltd. during the six months ended 30th June 1958 has resulted in a profit of Rs. 33.14 lakhs, which does not compare well with that of Rs. 42.34 lakhs in the first half of 1957 and of Rs. 39.66 lakhs in the corresponding period of 1956. The Directors have repeated the dividend at Rs. 3 per share, or 12 per cent. per annum, free of income-tax, which absorbs Rs. 18 lakhs, leaving to be carried forward Rs. 31.16 lakhs (subject to taxation), including Rs. 16.02 lakhs brought in from 1957.

Bank of Baroda

The Bank of Baroda Ltd. has earned a profit (subject to audit) of Rs. 13.39 lakhs in the first half of this year, as against Rs. 15.65 lakhs in the corresponding period of 1957, to which level it had risen from Rs. 14.66 lakhs earned in the six months ended June 1956. The Directors have not announced the interim dividend, as is usual, along with the announcement of the half-yearly profit. It is stated that they are considering the question and that their decision will be announced early next month.

Dena Bank

The profit of the Devkaran Nanjee Banking Company, Ltd., has also declined from Rs. 8.45 lakhs for the half-year ended 30th June 1957 to Rs. 7.61 lakhs in the six months under review. It is, however, Rs. 1.40 lakhs higher than that earned in the first half of 1956. The interim dividend is being maintained at Re. 1.25 per share of Rs. 50 each, free of income-tax. This requires Rs. 1.25 lakhs, leaving a surplus (subject to provision for taxation) of Rs. 9.16 lakhs. This includes the sum of Rs. 2.80 lakhs brought in from 1957.

The Reserve Bank of India had, in terms of Sections 46A and 46B of the Reserve Bank of India Act, established in 1956, two funds, namely, the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund. The amounts to their credit as on the 30th June 1958 were Rs. 25 crores and Rs. 3 crores, respectively. During the year 1957-58 a sum of Rs. 603.68 lakhs was sanctioned out of the Long-term Operations Fund to the State Governments for contribution to the share capital of co-operative credit institutions and Rs. 772.00 lakhs to the State Co-operative Banks as medium-term loans, as compared with Rs. 289.70 lakhs and Rs. 330.53 lakhs, respectively, sanctioned up to 30th June 1957. The State Governments have drawn during the year Rs. 583.40 lakhs against the amount sanctioned to them and the total amount outstanding as on 30th June 1958 stood at Rs. 743.85 lakhs. Medium-term loans have been drawn by State Co-operative Banks to the extent of Rs. 279.65 lakhs, the outstandings as on 30th June 1958 being Rs. 338.65 lakhs. No occasion has so far arisen for operating upon the National Agricultural Credit (Stabilisation) Fund.

HANDLOOMS AND POWERLOOMS

T.N.C.C. IS DOING A DISSERVICE TO WEAVERS AND SOCIETY ALIKE

THE Executive Committee of the Tamil Nad Congress Committee has declared itself not in favour of the India Government's policy of the gradual introduction of powerlooms in the place of handlooms. It is unfortunate that ever since the Kanungo Committee's report was published, the All-India Handloom Board and the organised handloom interests in some of the States have declared their uncompromising opposition to the Committee's proposal for the gradual introduction of powerlooms as a decentralised cottage industry. That Committee, which fully recognised the place of the handlooms in the Indian economy, was anxious to secure for the handloom weavers an increasing share in meeting the country's requirements of cloth and at the same time to evolve a programme by which the earnings of the weavers could be improved. To achieve the former, the Committee suggested a freezing of the mills' output at the level of 5,000 million yards (except for cloth manufactured solely for export), while leaving the field free to the handlooms and the decentralised powerlooms to meet the expanding internal demand for cloth. In regard to the latter, the Committee favoured two measures: first, the handloom weavers should be provided with work for 300 days in the year as against an average of 200 working days at present; second, the Committee favoured the gradual replacement of handlooms by powerlooms, which would immensely raise the productivity of the weaver. The Committee estimated that this process might involve the displacement of about 1.25 lakh workers over six years, but felt that it would not be difficult to absorb about 20,000 workers a year in other occupations. The picture drawn of lakhs of weavers being rendered idle by the introduction of powerlooms is totally unrelated to reality. The Union Minister for Commerce and Industry has made it perfectly clear that the Government does not wish to create any unemployment by introducing powerlooms and that the process will be so gradual as to cause minimum of distress.

The Vital Question

The vital question which the spokesmen of the handloom weavers have to answer is whether they would like to perpetuate handloom weaving as a permanently depressed occupation, depending on heavy subsidies and based on low wages, or they would agree to the gradual switchover to improved methods, which would secure for the weavers higher incomes. A weaver's output on the ordinary handloom is six yards a day, while on a powerloom he can turn out in one eight-hour shift as much as 30 yards. All over the country we have embarked on a programme of rural electrification. The extension of electric power to the countryside offers for the first time the means to raise the productivity of persons working in their cottages by the adoption of improved tools worked by power.

Much is said about the success of Japan's cottage industries but it is not always remembered that most of these industries are based on the use of power at home to work the most modern machinery. An unreasoning opposition to powerlooms out of the fear that each powerloom will render superfluous 20 handlooms proceeds not only on a misreading of the Government's policy but also on a shortsighted miscalculation of the handloom weaver's interests. The advocates of the handloom are too much obsessed with the idea of a fixed unexpanding market. They do not realise that technological progress when applied even to cottage industries, helps to improve efficiency and reduce costs and thereby stimulates demand. In order to discourage weavers from taking advantage of a scheme which enables them to acquire improved tools on very liberal terms is to do them a disservice.

As the Government's plan is to introduce the powerlooms through weavers' co-operatives, it should be possible so to phase the programme that there is no unhealthy competition between powerlooms and handlooms and that the benefit of the increased production by powerlooms is shared not only by those directly working on them but by the members of the co-operatives as a whole. It is the duty of public-spirited leaders of the weavers to explain to them the long-term gains from the adoption of powerlooms and to facilitate a smooth change-over to improved methods of production as the key to a better life.

It was announced from New Delhi that the Government of India had approved, in January 1957, schemes from five States for the installation of 6,055 powerlooms in the financial year 1957-58. It was also stated that schemes from some other States were under scrutiny. It is not known whether the Madras and Andhra Governments submitted any proposals for the introduction of powerlooms, taking advantage of the very liberal financial concessions offered by the Union Government. It is unfortunate that organised handloom interests in both the States have been uncompromisingly opposed to the introduction of powerlooms in any form. As both the Central and State Governments have taken the view that no decision regarding powerlooms should be forced on the handloom weavers, there is a danger of the Andhra and Madras States denying themselves the benefit of the India Government's offer, while other States forge ahead with the help of loans and grants from the Centre.

Grossly Exaggerated

It has been made abundantly clear by the Central Government that there is no likelihood of powerlooms causing unemployment among weavers and that the whole programme will be so phased that full employment for all the existing handlooms is provided. If the handlooms are to be replaced some time or other by powerlooms, which can raise the productivity of the weaver by five times that on an ordinary loom, it is difficult to think of a better scheme for the purpose than the one which the Government of India has evolved. Powerlooms are to be installed only in co-operatives. The Centre will give loans upto 87½ per cent. of the share capital of each weaver and provide loans to meet the cost of powerlooms, electric motors, etc., as well as for working capital. The programme has envisaged installation of 35,000 powerlooms during the years 1956-57 and 1957-58. Spokesmen of the handloom weavers who have expressed a fear that each powerloom will displace 20 handlooms have not only grossly exaggerated the potentialities of the powerloom, but have also underrated the scope for increased consumption of cloth in India. According to official estimates, handlooms in the country will not be able to meet all the 2,500 million yards of cloth that have been reserved for them in the second Plan. Spokesmen for the handlooms have contended, on the other hand, that the handlooms can meet almost the entire cloth needs of the country.

The basic divergence between the two views has been due to the fact that, while the Government has estimated the total number of handlooms at 1.28 million, the weavers' spokesmen have estimated it at 2.8 million. Whatever the precise number—and only an accurate national census can determine it—it is farfetched to argue that the production of the handlooms can be seriously affected by the addition of powerlooms whose total annual output will not exceed 200 million yards. Handloom weavers in Madras and Andhra would be well advised to think afresh and not oppose the controlled installation of powerlooms, which alone will help to increase their earnings and raise their standard of living.

With the Government of India's new textile policy assigning an annual total of 300 million yards to handlooms using ambar charka yarn within the annual increase of 1,700 million yards targeted by the end of the second Plan, handspinning has been raised from an act of faith to a major item of national economic programme. The second Five-year Plan has forced discussion of handlooms in terms of values and costs and the Ambar Charka Enquiry Committee did extremely useful work in giving a detailed cost analysis of the ambar charka programme on the basis of both unit production and total expenditure involved in the Plan budget. The starting point was the target of 300 million yards to be attained in 1961—now modified to 150 million yards—fixed for handlooms using ambar charka yarn out of the increment of 1,700 million yards in the country's textile production. On the basis of an annual output of 720 yards of cloth with yarn produced from each charka, 420,000 charkas will be required to reach the original target of 300 million yards per annum by 1960-61. The training programme for spinners and the annual phasing of charka installation would plan that, in the fifth year, 420,000 installed charkas would yield an annual yarn output of 84 million lbs. and cloth output of 302 million yards, valued at about Rs. 37.80 crores providing employment to 840,000 spinners, 56,000 weavers and 112,000 weavers' assistants from 1960-61 onwards. The wages paid to spinners would amount to Rs. 14.18 crores and to weavers and their assistants Rs. 7.50 crores, while the subsidy paid on sales of cloth would total Rs. 9.45 crores every year.

Returns on Investment

In calculating the returns on investment in the spinning programme, the following estimates would be relevant:—

	Rs. (crores)
(a) Towards installation of 420,000 sets of charkas	5.60
(b) Cost of training 840,000 spinners	9.50
(c) Working capital for production and marketing	30.24
(d) Workshops, finishing centres, organisational overheads, etc.	1.50
Rs.	46.84

The total capital outlay on the spinning programme would thus be of the order of Rs. 47.50 crores to which must be added the recurring expenses towards subsidy of Rs. 21 lakhs on the charkas. On the basis of figures relating to wages for spinning contained in the Enquiry Committee Report, detailed investigations show that, in 1960-61, the annual value added by the process of manufacture under the ambar charka programme would be Rs. 12.24 crores, as against the capital outlay of Rs. 47 crores. This would establish a capital output ratio of 0.28 which is much lower than the output coefficient of 0.45-0.56 prevalent in spinning mills. This brings out the unsuspected feature that, in spite of the prodigious absorption of manpower, ambar charkas operating behind the reservations enforced by national policy would still be capital-intensive, that is, making relatively higher use of capital to obtain specific output.

Economic Evaluation

The debates and discussions regarding ambar spinning can by no means be regarded as having yet established final conclusions. In the economic evaluation of the scheme of ambar spinning, the following points would stand out for emphasis:

(a) Spinning by ambar charka cannot claim the merit of economising capital which, according to contemporary economic thinking, might justify adoption of inferior technique in backward economies suffering from scarcity of capital and persistence of unemployed labour. Being capital-intensive, the ambar charka returns less output per unit of investment and should therefore be considered as wasting scarce capital, which hurts the national economy. The waste of capital combined with unproductivity of labour in our cottage enterprises would render a significant proportion of the nation's investments definitely unwise and uneconomic.

(b) The surplus value created per day by the worker using the ambar charka has been calculated by the Ambar Charka Enquiry Committee at 2 annas 2 pies and subsidising it to even the submarginal wage level of nine annas per day as planned would involve doling out 6 annas 10 pies per day, which would be the deficit per worker. The effect of distributing wages against work not done or output not emerging would be inflationary, as purchasing power would be released in the rural economy, without a corresponding creation or provision of consumer goods.

Huge areas of wild scrubland in the north of New Zealand are now being turned into fertile pastures for the production of wool, meat and dairy products. This is part of a scheme which began after the war, when the Government looked for new farming country for the settlement of returning servicemen. In Northland, it was estimated that more than 600,000 acres of virgin land remained, much of it being suitable for grassland farming. There was plenty of rain—sometimes too much, when heavy sub-tropical downpours eroded the hillsides—and a warm climate in which grass could grow all the year round. Using bull-dozers and what are known as "super-giant" disc to clear the scrub, the Lands Department has been working on a plan to sow 10,000 acres of grass every year and prepare a further 10,000 acres for sowing the following season. It also builds houses, wool-sheds and farm buildings, and arranges for the stocking of the newly-won pastures. With 83,000 sheep and more than 16,000 cattle, the Department is the biggest farmer in Northland. Many settlers have been established, and more will follow.

CLOTH IMPORT CONTROVERSY PERSISTS

SHORT-TIME WORKING IN MILLS BECOMING MORE WIDESPREAD

From A Special Correspondent

MANCHESTER, *8th July*

MANCHESTER LETTER

AFTER a week in which the imported cloth controversy has reached a height of fresh discussion and argument, Lancashire traders are still not much nearer a solution to this problem. Hardly a day has elapsed without the industry making the headlines in the national Press. Beginning with the much-publicised debate in the House of Commons and angry repercussions from trade leaders and organisations, there have been suggestions that a mass demonstration from the mill towns should be held in London, another conference between the Prime Minister and his advisers with the representatives of the Cotton Board has taken place, while the acceptance of a ceiling level of shipments to the United Kingdom by India and Pakistan has raised hopes that some similar "understanding" will be achieved in future negotiations with Hongkong.

Lancashire reactions to the Commons debate on the situation in the cotton industry were a mixture of hope and disappointment. A Cotton Board spokesman said that people, who were discouraged because they had expected some positive form of Government help on the question of cloth imports, should remember that industry-to-industry talks were still going on with Eastern competitors for a voluntary agreement. The Board hoped to be able to make a progress report shortly. But some Lancashire millowners were critical of the Government's refusal to lend any sort of support to the principle of enforcing a limitation on cloth imports. It was argued that this would weaken Lancashire's hand in voluntary negotiations with the Eastern millowners, since they would now be reassured that they need have no fears of an enforced limitation, if the protracted efforts at negotiating a "gentleman's agreement" broke down.

Plan of Campaign

Meanwhile, leaders of the Lancashire and Merseyside Industrial Development Association have discussed their plan of campaign once the Government's Distribution of Industry (Industrial Finance) Bill goes on to the statute book. This is designed to provide assistance for districts with persistently high unemployment which are outside the boundaries of the scheduled Development Areas.

The problem facing the Development Association is that of deciding which parts of Lancashire have the most pressing needs. One of the worst-hit areas, the weaving belt of North-East Lancashire, is already scheduled as a Development Area. The first area recommended by the Industrial Development Association for assistance under the new proposals is likely to be right outside the traditional cotton region—Furness, in North Lancashire. Applications are expected to follow on behalf of other parts of Lancashire.

Widespread Short-time

A statistical review by the Cotton Board underlined the Commons' warnings about the deteriorating situation in the industry. The Board said that short-time working was becoming more widespread and more mills had closed down permanently. In the home market, demand had been slack, with sales of summer garments affected by the poor weather. On the export side, shipments so far this year had been well below last year's level. "There is no reason to expect any improvement in the near future," said the Board.

Yarn output in May was 14 per cent. less than in November last year and cloth output in April was 12 per cent. down on the figures for six months earlier. Imports of cotton piecegoods increased from 105 million square yards in the final quarter of 1957 to 117 million yards in the first three months of 1958. In April and May, another 59 million yards arrived. The review comments: "Imports during the first quarter were, in fact, slightly in excess of exports, but this can be attributed in part to the extremely heavy imports of Chinese cloth which, owing to quota restrictions, will not be repeated."

Employers' Case

An official statement issued by Mr. J. D. Greenwood, Chairman of the Cotton Spinners' and Manufacturers' Association, said: "There will be dismay and resentment throughout the cotton industry at the Government's negative attitude in yesterday's debate. The statement by the President of the Board of Trade was neither helpful or hopeful and empty expressions of concern about the industry without any positive policy to solve its most urgent problem get us nowhere. Whilst everyone hopes for a successful outcome of the recent negotiations with India and Pakistan, the Government cannot evade its direct responsibility towards the masses of operatives and employers in Lancashire whose livelihood depends on cotton and who face great distress in the next few years unless reasonably protected against the unrestricted flooding of the home market by textiles from Eastern countries, including Hongkong. Attempts to substitute other trades could only touch the fringe of the problem and no responsible Government could afford, from a national viewpoint, to permit the disintegration of one of our greatest basic industries.

"The Government now appears to have gone back even on the assurances given by previous Ministers that, when the situation became serious enough, some action would have to be taken. With hundreds of mills already closed and tens of thousands of operatives put out of employment, surely the time has come for definite action."

Support for Hongkong

Shrinking exports and dumping of duty-free Indian cloth, rather than "slave-labour conditions" in Hongkong, were blamed for the plight of the Lancashire textile industry by Mr. Kenneth O. Boardman, Chairman of Boardman Marden, the Manchester spinning and weaving group. Because of its miniature size and standing, Hongkong had been made the "whipping boy" for Lancashire's misfortunes, mainly, according to its critics, because the operatives in the Colony worked longer hours than Lancashire workers, said Mr. Boardman in his annual statement to shareholders. "The facts are, however, that the recent loss of exports and the dumping of duty-free Indian cloth are more important causes of Lancashire's troubles."

During visits to Hongkong, he said, he had found nothing to substantiate the British-made claims that slave-labour conditions existed in the textile mills. On the contrary, most of the Hongkong mills he had visited were more clean, efficient and modern than the majority of Lancashire mills. The operatives were well fed and their housing conditions compared extremely well with any in the East. The average daily wage of a textile worker was 11*s*.—not 2*s*. 6*d*., as a Labour M.P. had recently alleged. Out of this sum, he paid 2*s*. 3*d*. a day for food and received free housing and medical treatment.

Mr. Boardman said that exports of Lancashire cloth in 1957 were almost 350,000,000 square yards less than in 1953 and practically the whole of the loss could be attributed to the Anglo-Japanese pact of 1954 which opened the way to increased Japanese exports to the Colonies. India was still the largest textile exporter to this country and her subsidised cloth continued to arrive here duty-free in spite of the duty of 33⅓ per cent. imposed by India on Lancashire material. "A limitation of Indian cloth is not sufficient; we should be given the opportunity to export our cloth to India where a healthy market exists for our quality production."

Mr. Boardman said that he was convinced that it had been the Conservative plan considerably to reduce the size of the cotton industry. There might have been some logic in this view five years ago when there were a great number of inefficient units in the trade, but the stage had now been reached where efficient firms were being forced out of business. Orders were desperately needed by a large number of mills which were affected by imports in "a last ditch effort to avoid closing their doors for ever.

"A small adjustment to the Japanese agreement in Lancashire's favour and improved terms of trade with India is all that is needed to enable our industry to regain its equilibrium, an industry which is more efficient than its critics would lead one to believe," he declared.

Average Export Earnings

Statistics gathered from every corner of the globe by the Cotton Board make its quarterly review a mine of information. The latest issue underlines the current phase of inactivity which seems to spread across all continents and affect the cotton and man-made fibre industries in every country.

There are naturally some areas where the depression is less severe than others, but total output averaged about 2 per cent. lower in the first quarter this year as compared with the final three months of 1957 and was 5 per cent. below corresponding production in the first quarter last year. France was the only major producer whose output increased over the comparable period in 1957. Equally so, international trade in cotton goods continued to shrink and, in practically all exporting countries, shipments were below the levels attained in the first three months of 1957. Italy and Switzerland were the only exceptions.

Steady Prices

Although exports of cotton cloth from the United Kingdom have shown a pronounced decline over the past decade, the average price obtained for shipments has remained remarkably steady. In 1951, when the mills in Lancashire were working at a higher rate than at any time since the war, earnings from cloth exports amounted to 36.7d. per square yard. Two years later, the value had dropped to 29.8d., but, subsequently, the average price obtained had remained virtually unaltered at around 30d. per square yard. Last year, the average was 31.6d. and, in the first quarter of 1958, it was 31.4d.

A similar trend occurred in the average value of cotton yarn exported, which reached a peak of 119.3d. per lb. in 1952. In the following four years, the average remained about 100d. per lb., rising in 1957 to 107.2d. The average in the first quarter this year was 102d. per lb.

Rough Guide

A rough guide to the quantity of foreign cloth retained for home distribution can be obtained from the Cotton Board's figures. The complicated position of Commonwealth countries, however, precludes any definite statement being made on this point. Out of the quarterly average arrivals of 104,000,000 square yards of foreign cloth last year, only 23,600,000 yards per quarter were for processing and re-export, plus any supplies from India and Hongkong which were so used.

The ratio appeared to alter substantially in the first quarter of this year, when total imports of cotton cloth amounted to 116,540,000 square yards and only 17,400,000 yards were earmarked for re-export. The Board, however, points out that this figure did not take into account the large amount of Chinese cloth which entered bonded warehouses during the period. It forecast that, on removal, a substantial amount of this fabric would be processed in this country and shipped abroad.—*All Rights Reserved.*

PLIGHT OF COTTON TEXTILE INDUSTRY IN NORTH INDIA

ELEVEN MILLS IN VIDARBHA TO CLOSE DOWN SHORTLY

COMMENTING on the rationalisation of excise duty on mill-made cotton piecegoods, we observed in these columns last week that the revised duties were heavier than they were before the steep increases effected on 1st September 1956. The disquieting effect of such heavy burden of excise is particularly felt by the mills situated in the Vidarbha region. All these mills have put up notices of closure with effect from 11th August next, as a result of which 31,000 workers will be unemployed. This was announced by Mr. R. V. Deshmukh, Chairman of the Vidarbha Textile Mills Association, at a Press conference in Nagpur on the 9th inst.

The Nagpur mills' decision to close down is the result of an acute *malaise* suffered by them which, in turn, is attributed to several factors. They are: steep rise in manufacturing and labour costs; abnormally high and discriminatory excise duties; substantial fall in demand for cloth and poor offtake and the consequent locking up of finances; intensive competition from purely spinning mills in respect of yarn sales; steep fall in cloth and yarn prices, high wage cost, owing to employment of surplus labour and labour resistance to introduction of reasonable rationalisation and other efficient methods of production; high incidence of sporadic strikes; poor labour productivity; high overhead costs due to idle machinery resulting from widely varying absenteeism of workers; increase in prices of raw materials, mill stores, machinery, coal, etc., and in power cost; heavy incidence of sales tax; and working of mills under strained resources and losses. The aggregate loss incurred by the 11 mills during the last five years is estimated at Rs. 3.23 crores, representing more than 76 per cent. of the paid-up capital of Rs. 4.23 crores. The Vidarbha mills produce almost entirely coarse and medium cloth and yarn; the total accumulated stocks at the end of April amounted to 35.03 million yards (23,355 bales) of cloth and 4.50 million lbs. of yarn.

Mills in U.P.

Conditions more or less similar exist in the cotton mill industry of Uttar Pradesh too. In its memorandum submitted to the Cotton Textiles Enquiry Committee, the Employers' Association of Northern India, Kanpur, points out that the legislative, fiscal and operational measures have not only retarded the further expansion of the industry in the U.P. but also placed it in a deplorably sad state of affairs. The Association has given the following statement (culled from the Kanpur Cotton Mills Rationalisation Enquiry Committee) which indicates the additional burdens imposed every year on an average cotton mill in Kanpur as compared with its counterpart in Bombay City:

	Rs.
Additional freight charges on cotton	2,59,000
Higher price paid for cotton from Broach area at Rs. 5 per bale or Rs. 10 per candy on 16,000 bales ...	80,000
Additional charges for carrying larger cotton stocks based on 6,000 bales (interest at 5 per cent. on Rs. 24 lakhs—Rs. 400 per bale)	1,20,000
Commission obtained by local cotton brokers from their principals in Bombay on sales of cotton to local mills at Rs. 5 per bale	1,57,000
Higher electricity charges	6,17,436
Increased overheads based on 295 working days, as compared with 309 days in Bombay	61,800
Loss of profit based on 14 days' production	2,00,000
Higher insurance rates on buildings, machinery and stocks based on value of Rs. 1.10 crore	18,000
Additional railway freight, insurance and octroi duty charges on spare parts, mill stores and machinery ...	1,50,000
Higher profit margin available to Bombay mills on exports based on 22½ per cent. of production at 6 nP per yard	6,39,844
Reduced profit margin on 2½ per cent. of production exported by Kanpur mills at 3 nP per yard.	33,000
Total ...	23,36,080

Proceeding, the Association has drawn attention to the high wage structure in Kanpur mills. The Association alludes next to the handicap of the U.P. mills being compelled to hold considerably large stocks of cloth. The total stocks lying with the mills at the end of April were of the order of 124 million yards, which represent more than 5½ months' average production of cloth in the State. The mounting stocks of cloth have caused untold hardship to mills, especially to the marginal units, inasmuch as the carrying of stocks entail a financial burden, not to speak of the pressure on their storage space. Surely, the financial condition of the industry cannot be expected to be such as to enable the units in it to be operated.

Stress and Strain

How severe have been the stress and strain to which the U.P. mills are subjected has been well brought out by the Association in its memorandum. It is thus stated that, Out of the total number of 29 mills in U.P., as many as 16 mills have already succumbed to the strain of heavy drainage on their limited resources and have been forced to suspend operations. Of a total of 867,784 spindles installed in the textile mills in U.P., 283,816 are reported to be not working. Similarly, of an installed capacity of 13,674 looms in U.P., 3,463 looms are idle. Even in regard to the ten mills of Kanpur, only seven are working, five mills are running at a loss, two mills are shown to have made negligible profits and the profits of the rest have been fast dwindling to extinction during the past three years. With the persistence of this trend any further, there is the likelihood of a few more mills which were once on the top of efficiency also falling on the marginal line of production in U.P. There are also possibilities of a further unit or two closing and another couple of units being able to work only intermittently, should the present state of affairs continue.

The position is said to have been rendered worse by the increase in the working finance required by cotton mills for keeping up their production; the total of the working capital requirements of a unit with 50,000 spindles and 1,000 looms running on two-shift basis is put at Rs. 2 crores. Even if the mills decide to keep on running at a loss without having with them the financial resources available, it is stated, they will not be able to maintain production, because there is no possibility of securing extra finance from any other source in U.P. except through banks. In the case of banks, too, several of them have recently started the application of restrictive policy in respect of financial assistance. In view of all these, the Association has urged that, if the mills are to carry on their operations, the working capital requirements must be fully met on the basis of securities available with mills by allowing, if necessary, up to 100 per cent. advance on floating stocks and extending usance bill facilities of 60 to 90 days.

Fall in Sale Prices

While the production cost of Kanpur mills has been steadily rising, the sale prices of products have been continually falling, so much so that the medium and coarse count mills have not only to pay excise and sales tax over and above the 15 per cent. increase in the price of cotton and wages but also to reduce further the prices of their products at their own cost. The following table clearly shows that the mills, after absorbing the extra rise in various imposts, have been experiencing falling prices since 1956:

	Dhotis Rs.	*Saris* Rs.
September 1956	N.A.	9.31
March 1957	8.67	8.95
September 1957	8.36	8.71
March 1958	7.78	8.16

The foregoing account clearly emphasises the need for providing speedy assistance to the U.P. cotton mills. The Employers' Association of Northern India has put forward several suggestions designed to help rehabilitate the medium and coarse count mills. One of the most important suggestions relates to excise duty and sales tax and this covers the following:

Immediate reduction of the combined excise levy on medium and coarse count cloth to half of its present burden;

assessment of excise duty on *ad-valorem* basis, as it was in force up to 1952-53 on fine and superfine counts, the rate of duty, along with other imposts on medium count cloth being so fixed that no goods falling under this category will bear more than 10 per cent. of duty;

discontinuance of the existing system of excise duty on the basis of square yards;

fixation of *ad-valorem* excise duty on fine and superfine cloth at such a level as would increase sufficiently the gap between the sale price of medium count cloth and coarse varieties, on the one hand, and those of fine and superfine cloth, on the other; and

uniformity in the levy of excise duty and sales tax on handloom and powerloom production.

All the aforesaid suggestions, it must be mentioned here, were made before the latest modifications in the excise duties.

Other Suggestions

The other suggestions relate to import of foreign cotton only against exports of at least 1½ times value of cloth, grant of direct import quotas for dyes, chemicals and stores to mills, cut in railway freight on export sales of textiles by the interior mills to 25 per cent. of the existing rates, and reduction in electric charges of interior mills to the level prevailing in Bombay. The Association has also made four other recommendations. First, working capital requirements of the interior mills should be fully assured by the State Bank on a low margin of 5 to 10 per cent. at Reserve Bank rate of interest, on the security available with the units concerned which will be more than sufficient to ensure full safety to such advances. Still, however, if any loss is suffered, the Government of India should guarantee the same to be made good out of the funds realised from the sales tax collections. Secondly, in the matter of rehabilitation finance, the National Industries Development Corporation should sanction loans by accepting even second charge on the mortgage of block and should advance the full requirements of rehabilitation even in those cases where blocks and other assets have been mortgaged as first charge with bankers. The N.I.D.C. should also make suitable arrangements to guarantee deferred payments. Funds should be earmarked and made available on priority basis first to the medium and coarse counts mills in the interior which have suffered most due to no fault of theirs, so as to enable them to catch up with the economy of fine and superfine count mills. Thirdly, all quality and production control measures should be discontinued forthwith and quota system abolished for prints and *dhotis*. Fourthly, steps must be taken to ensure easy availability, on priority basis, of wagons for supplying raw materials and coal to those mills situated in the interior and for the transportation of finished products from the mills to the consuming centres and to the ports.

We have no doubt that all these suggestions will be carefully considered by the Cotton Textiles Enquiry Committee. It is for this Expert Committee to decide which of them deserve to be accepted and which are to be rejected. Suffice it for us to add that, in the U.P.'s economy, the cotton textile industry is important and, therefore, deserves to be maintained in a healthy and profitable condition.

WOOL MARKETING SEASON 1957-58

During the past season (July 1957—June 1958) wool prices have shared in a widespread decline in world commodity prices over the past year and, although final figures are still awaited, it is already apparent that results to producers will show a considerable reduction on the previous season. Up to recent date, for example, the average price paid for Australian wool this season was 63.39*d.* per lb., as compared with 80.64*d.* in 1956-57, a reduction of 21 per cent.

The reduction in the world price of wool is principally due to the fact that consumption of the commodity in the principal countries where manufacture takes place has shown a marked falling off in the season under review. In the six months from July to December last, wool consumption in the six large manufacturing countries, which together absorb the greater part of the world's exported wool, declined by an average of 12½ per cent., ranging from 10 per cent. in Japan and France to 14 per cent. in the United Kingdom and no less than 24 per cent. in the U.S.A. According to figures issued by the Commonwealth Economic Committee, this was followed in the first quarter of 1958 by a further average fall of 3 per cent., for slight improvements in Britain and the U.S.A. were more than offset by reductions in West Germany, Japan, Italy and Belgium, that for Japan being especially marked.

Against such a background of reduced world consumption, it is gratifying to record that Commonwealth wool clips, which provide the larger part of the world's exportable supply of the commodity, have been substantially cleared from the market, and indications are that held-over supplies will be of not more than average dimensions. Limited quantities of wool have been bought-in under reserve price schemes operated by the wool producers of New Zealand and South Africa, but these are of negligible proportions when measured against the output of these countries. Reliable signs of a general uplift in demand for the products of the industry are still awaited in manufacturing centres, but the season appears to have witnessed a considerable reduction in the working stocks. Wool at today's prices is also a more attractive proposition to importers who know that the 1958-59 Australian clip—the largest clip in the world—is likely to show a reduction in volume as compared with the 1957-58 clip, owing to drought during the growing season.

INDORE MALWA UNITED MILLS LTD.

CHAIRMAN, MR. K. G. SEKSARIA'S REVIEW OF COTTON MILLS' PROBLEMS

CAUTIOUS OPTIMISM IN INDUSTRY'S FUTURE

SPEAKING at the Fifty-first Annual General Meeting of the Indore Malwa United Mills, Limited, held in Bombay on 14th July 1958, Mr. Kudilal Govindram Seksaria, Chairman, felt that the worst was over in the textile industry and struck a note of cautious optimism and faith in the industry's future.

The following is the full text of Mr. Seksaria's speech:

'GENTLEMEN,

"I welcome you to the fifty-first annual general meeting of the Company. The Directors' report and the annual accounts of the Company for the year ended 31st December 1957 have been in your hands for some time and, with your permission, I take them as read.

"I share your disappointment at the results of your Company, which are no exception to the general crisis that gripped the industry last year. You will remember that in my speech last year I had already drawn your attention to the increase in excise duty levied on cloth from 1st September 1956 and had expressed my fear that unless the demand and offtake of cloth improved substantially, the burden of excise duty and high prices of raw cotton would tell heavily upon the results of your Company in the year 1957. The situation has, however, deteriorated much more than anticipated with the result that the textile industry, in general, has experienced a serious crisis last year. You are all aware that twenty-six mills have completely closed down and thirty-seven mills have partially closed. The number of casualties—total or partial closure of mills—tells only half the story. Many mills are making serious losses. In Baroda, seven mills are making losses, the average loss being Re. 1-8 per loom shift. The loss sustained by eleven mills in Nagpur area works out to Rs. 2 to Rs. 5 per loom per shift, with the result that recently there has been a very alarming announcement from the Chairman of the Textile Mills' Association, Nagpur, that all the nine textile mills of Vidarbha region and two of Mahakoshal area, Madhya Pradesh, are to close down from 11th August. The average loss in industry of your area was Rs. 4 per loom per shift. Practically all the mills in Saurashtra, Madhya Pradesh, Rajasthan and West Bengal report heavy losses. The position is not happy even in Bombay State. About thirty mills in Bombay and ten mills in Ahmedabad are working in loss.

Rise in Stocks

"The steep increase in excise duty since September 1956 led to complete demoralisation of cloth trade throughout the year, with the result that the accumulation of cloth stocks with the mills reached peak level during November-December 1957. Your mills also had stocks of 9,057 bales in December 1957 as against 7,290 bales in December 1956.

"The consumer's resistance to purchase of cloth is obviously due to his lower purchasing power and high taxation, though, in fact, the cloth prices today are actually lower than those in December 1955. The increase in excise duty, unfortunately, coincided with inflationary tendencies in foodgrains, with the result that the Indian consumer was left in very difficult circumstances. As in all underdeveloped countries, the high food prices inevitably mean reduced offtake of other consumer goods. While the decline in agricultural production in certain regions has meant reduced income in rural population, the rising spiral of living index in cities has also hit hard the urban classes.

"The industry was all along combating a great rise in cost structure. The price of cotton was higher than that in 1956. The cost of stores and accessories also shot up high. Even the fuel and power cost was higher. Cotton and wages alone account for 80 per cent. of the manufacturing charges, and in both these respects the producer had to pay heavily.

"The labour cost also sharply went up due to increase in dearness allowance and other direct or indirect benefits conferred on the workers by law or otherwise. Unfortunately, the textile industry in your area has to pay higher wages than the highest prevailing in any other region and at the same time has to maintain a very high mustral strength, the combined effect of which is that the manufacturing cost in respect of wages in Madhya Pradesh is extremely high. As regards dearness allowance, though the cost of living at Indore is much cheaper, the industry is paying a much higher allowance than what is necessary.

Increase in State and Local Taxes

"Besides the heavy taxation imposed by the Central Government, even the State Governments and local authorities did not lag behind to burden the industry. They increased the existing levies or imposed fresh levies on the industry at a stage when it was passing through a crisis. Following the replacement of sales tax on cloth by additional excise duty, the State Governments, including the Madhya Pradesh Government, have withdrawn the concessions which were available to the industry in regard to purchase of its requirements of machinery, raw materials, stores, etc., free of sales tax. The Madhya Pradesh Electricity Board forced an increase of 5 per cent. in the tariff schedule for power supply to the mills. The State Government also increased additional excise duty on power generated or consumed by the mills. The municipalities too came forward with increase in various octroi and property duties. In the Indore centre particularly, the octroi duty on coal was raised from Re. 1-1 to Re. 1-5-9 per ton. Property tax also has been more than doubled.

"As regards your Company, the manufacturing cost has gone up by Rs. 29½ lakhs, the major increase being Rs. 20 lakhs in cotton, Rs. 5¾ lakhs in wages and Rs. 3 lakhs in stores. This has meant larger finance required by the Company and has resulted into substantial increase in our borrowings. The secured debts have increased by about Rs. 24 lakhs and unsecured debts by about Rs. 8 lakhs. The interest charges, as a result, have gone up by Rs. 2,22,000.

Conditions in Madhya Pradesh

"Talking of the conditions of the textile industry of Madhya Pradesh, in particular, we have to take into account certain other handicaps also, to which I had drawn your attention in my speech last year. The bottleneck of transport continues to pose a serious problem. For this reason your mills are constrained to store larger reserves of cotton and stores, which means larger investment and higher interest and insurance charges. Besides, being an upcountry mill, your mills cannot take an appreciable advantage of exports of cloth also due to additional transport expenses. The benefit can, however, accrue to your mills, if, in this context, the recommendation already submitted to the Government about the special freight rates applicable for exportable cloth is considered.

"Realising the difficulties of the industry, the Government did reduce the rates of excise duty in December 1957 and March 1958. But, as the same were found to be quite inadequate, the Government has further slashed excise duty recently, ten days back, on coarse and medium varieties, with a view to providing immediate relief to the industry. The revised rates, as you are all aware, have been adopted on the basis of the recommendations of the Textile Enquiry Committee which submitted its interim report to the Government only two days before the announcement. The revision is particularly significant in its value of rationalisation, as it ensures a fair and equitable incidence of the levy on the different varieties of cloth, bringing it as close as practicable to *ad-valorem* basis. The medium variety has been split into two categories and you should be happy that your mills will be benefited most on account of the fact that most of their production consists of lower category of the medium count, where the reduction in duty is maximum. It is, however, felt that the third successive reduction in excise duty alone, which brings the total relief given in a period of seven months to around Rs. 20 crores, may not be enough. But other concerted measures, namely, reduction in labour cost, suitable amendment in the provisions of the Industrial Disputes Act relating to the payment of retrenchment compensation, positive assistance to mills in introducing efficiency methods of work, particularly in centres where labour complements are very high, grant of liberal loans to the industry by N.I.D.C. and I.F.C. for rehabilitation and modernisation of mill machinery and easing of credit facilities by banking institutions, etc., etc., are necessary. All these issues and various others have been well elaborated in various memoranda submitted by various States' Millowners' Associations to the Textile Enquiry Committee and particularly in a recent statement made by Mr. Krishnaraj M. D. Thackersey, Vice-Chairman of the Indian Cotton Mills' Federation.

A Silver Lining

"There is, however, a silver lining to the dark cloud and I feel that the worst is over. In the context of the recommendations of the Textile Enquiry Committee, let us hope that the Government is all out to do its best in restoring the lost confidence in the basic and the premier industry of India. I, therefore, feel that a large number of suggestions recommended to the Government are going to be sympathetically considered.

"There is a great task lying ahead of the Government—the task of bettering the standard of living of the masses of our country. In any underdeveloped country it means a great many trials and tribulations. Under such critical circumstances, we are, however, fortunate enough to have Shri Morarji Desai as our Finance Minister who is a person of great integrity and has capacity for drive and energy. I, personally, have great regard and admiration for him for his practical approach to the problems and for his courage to shoulder the burden of bold decisions. Since his assumption of the office of the Finance Minister, you will observe, the Stock Exchange, which is a barometer of the industrial weather, has been quite cheerful and buoyant. It is a positive evidence of the restoration of public confidence, which had been shattered for sometime past and there now seems to be an all-round feeling that, despite all the rough weather created by developmental plans and foreign exchange difficulties, he will steer the ship of Indian economy to the shores of industrial progress. I, therefore, have all the reason to conclude my speech with a firm note of cautious optimism and faith in the future of industry.

"On behalf of the Board of Directors and on my own, I wish to thank all the officers, technicians and employees, both at the head office and in the mills, for the good work they have put in during the year."

TRADE WITH WEST ASIA

Addressing the Advertising Club, Calcutta, after his recent tour of East Africa and West Asia, Mr. S. N. Banerjee, Managing Director, Clarion Advertising Services Private Ltd., said that one came back from these countries deeply impressed by the fact that a more systematic, businesslike and scientific approach to marketing and advertising would give Indian exporters much bigger results than they had been able to achieve so far. Thanks to the peculiar position that most of the oil-bearing regions now occupy in the world economic set-up, the people in West Asia, though comparable to Indians in terms of literacy, were nonetheless better potential buyers. The countries in West Asia were, said Mr. Banerjee, in the throes of great changes. Many of them were receiving aid in the shape of financial assistance, technical help, etc., from other advanced countries. And these advanced manufacturing countries were India's competitors. India might underestimate the competition in the foreign markets only at its peril. Though the peoples in these regions were full of friendliness towards India, they did not as yet know the advance that this country had registered in developing manufacturing industries.

Enlightened manufacturers and exporters in India were, in the opinion of Mr. Banerjee, becoming increasingly aware of the need to study the export market themselves, to choose the right agent, to offer service after sales, to offer competitive commission terms, to ensure that all complaints that jeopardise our export trade were removed. The time had now come, Mr. Banerjee observed, when such efforts must go hand in hand with a more sustained and bolder advertising programme in the export markets.

EXPORT TRADE IN INDIAN SUGAR

PRICES OFFERED BY OVERSEAS BUYERS LOW

THREE weeks have elapsed since the Union President promulgated the Sugar Export Promotion Ordinance, 1958. Empowered by this Ordinance, the Government of India announced the release of 50,000 tons of sugar for export during the current season ending 31st October next. Since then, the Indian Sugar Mills' Association, Calcutta, the agency appointed for effecting exports, has been contacting buyers in overseas countries. It is reported that export business involving about 12,400 tons, or nearly 25 per cent. of the quota, has already been put through and that further sales have been suspended for the present in the hope of realising better prices. Enquiries made in sugar circles reveal that the entire quantity of 50,000 tons could easily be sold by the end of the current season, though actual shipment of some quantity may not be effected in time.

Of the 12,400 tons already sold, the Sudan Government has purchased 9,000 tons of D29 grade at Rs. 426.67 (£32) f.o.b. Bombay; shipment is expected to take place from Bombay and/or Kandla in August-September. The balance of 3,400 tons, has been sold to Malaya. Of this quantity, D29 grade accounts for 2,500 tons, the f.o.b. price being Rs. 433.33 (£32 10s.) and C29 grade for 900 tons, the f.o.b. price being Rs. 44 (£33). Barring about 200 tons which will be shipped from Madras, the whole quantity will be exported through Calcutta.

Price Advantage

The overseas buyers' quotation for D grade sugar is low, being around Rs. 427 (£32) per ton f.o.b. Bombay, as against the average ex-mill price of as much as Rs. 1,060 (including transport charges) in Bombay. On this basis, the loss on exports of sugar will work out to Rs. 633 per ton. Excluding the full remission of excise duty (Rs. 291.20 per ton) and cane cess (Rs. 50.90 per ton), the net loss on the sale of every ton of sugar comes to nearly Rs. 291. In other words, the buyer of Indian sugar in foreign countries enjoys a price advantage of 68 per cent.—the difference between the f.o.b. price and the ex-mill price—*vis-a-vis* the Indian consumer. Allowance must, of course, be made for insurance and freight charges.

Be that as it may, the aggregate export quota of 50,000 tons is distributed among the different mills on the basis of 2½ per cent. of production during 1957-58. Out of the quota, the mills in the State of Uttar Pradesh account for the major portion, their total amounting to about 23,651 tons or 45 per cent. The share of Bombay comes to 8,049 tons or 16 per cent. and of Bihar to 6,928 tons or 14 per cent. The following table gives the estimated production of sugar during 1957-58 and export quotas allotted to mills in the different States:

(In tons)

States	Production	Export quota
Uttar Pradesh	943,974	23,651
Bombay	319,877	8,049
Bihar	275,056	6,928
Andhra	153,842	3,898
Punjab	81,974	2,102
Mysore	76,064	1,930
Madras	57,550	1,491
Madhya Pradesh	33,844	898
Rajasthan	16,055	453
Kerala	8,283	259
West Bengal	5,575	191
Orissa	3,903	150
Total ..	1,974,997	50,000

Prospective Buyers

Owing to its geographical position, India has easy access to a number of sugar-importing countries. These include Burma, Ceylon and countries of East and West Asia, East Africa, and Far East. It will be recalled that, out of the 152,911 tons of sugar exported during the period from 1st January 1957 to 31st March 1958, East Africa accounted for 41,756 tons, East Asia for 34,447 tons, West Asia for 29,972 tons, the Far East for 25,933 tons, Burma and Ceylon for 19,801 tons, and London for 1,002 tons. The destination-wise shipments of sugar from Bombay and Calcutta are shown below:

(In tons)

Countries	Bombay	Calcutta	Total
China	..	33,624	33,624
Nairobi	..	26,909	26,909
Sudan	9,259	5,588	14,847
Penang	..	13,586	13,586
Basrah	13,085	..	13,085
Rangoon	..	11,643	11,643
Colombo	2,754	5,404	8,158
Aden	5,902	2,148	8,050
Sweetenham ..	..	7,251	7,251
Singapore	..	5,096	5,096
Bahrein	2,637	..	2,637
Zanzibar	2,545	..	2,545
Jeddah	1,247	..	1,247
Umsaid	1,169	..	1,169
London	..	1,002	1,002
Dubai	841	..	841
North Vietnam ..	..	823	823
Muscat	398	..	398
Grand Total ..	39,837	113,074	152,911

The aforesaid neighbouring countries are greatly in deficit of sugar supplies. Together, they import every year about 1.2 million tons of sugar. This quantity represents 10 per cent. of the world aggregate exports of approximately 12 million tons. The estimated annual imports—in thousand tons—made by the various neighbouring markets are: Iran: 210; Malaya (including Singapore): 126; Iraq: 126; Mainland China: 100; Sudan: 95; Pakistan: 84; Israel: 77; British East Africa (including Zanzibar): 69; Saudi Arabia and other nearby countries: 63; Thailand: 37; Viet Nam: 32; Ceylon: 32; Afghanistan: 20; Aden: 20; and Burma: 19.

Wide Disparity

The total exports of sugar from India to these countries during the 15 months ended March 1958, as already stated, amounted to 152,911 tons, the foreign exchange earned being Rs. 12 crores. The average export price of sugar thus comes to a little over Rs. 785 per ton, whereas the current foreign buyer's quotation is Rs. 427 (f.o.b. Bombay), or a difference of as much as Rs. 358. This wide difference must be attributed to the world-wide slump in sugar prices. Spot Cuban raw sugar in the New York market is now quoted at 3.40 cents per lb. (f.o.b. Cuba), as against 6.85 cents touched in April 1957. Refined sugar in the London market stands at about £30½, as against £53½ a year before.

The low level of sugar prices is expected to continue throughout the current year. This view is based on the ground that, statistically, sugar will remain in ample supply, while demand is unlikely to improve much, because customers see little point in building up stocks. The estimated total world output of sugar in 1957-58 is placed at 46.02 million tons (raw value) which is 3.04 million tons higher as compared with 42.98 million tons in 1956-57. The rise in production has not been matched by a corresponding improvement in consumption. Taking the average annual increase in consumption as 1.4 million tons, the total world consumption in 1957-58 may be estimated at about 43 million tons. The conclusion naturally follows that, so long as the rate of world production of sugar is maintained higher than that of consumption, the price of this commodity will continue to rule low, unless some countries, especially Cuba, attempt to restrict production or to hold off stocks or the International Sugar Council takes measures for regulating exports from member-nations. Viewed thus, the chances of India selling sugar at profitable rates are very remote.

SUGAR IN ASSAM

Assam will join the ranks of sugar-producing States from 15th November next when the first co-operative sugar mill at Barau Bamungaon in Jorhat will commence crushing of cane. There are at present no sugar factories in Assam and the State has all along been depending on other States for sugar supplies. The co-operative sugar mill is practically completed. The estimated cost of the mill is put at about Rs. 1.16 crore. It is expected to provide employment to 650 workers. The mill has four crushers with an aggregate daily cane-crushing capacity of 911 tons. Assuming the average duration of the season to be 120 days and the recovery 10 per cent., the total production of sugar may be estimated at about 11,000 tons per annum. In order to ensure an adequate supply of sugarcane to the mill, the State Government is reported to be devoting utmost attention to the development of cane cultivation in the Golaghat Sub-division where the soil is said to be suitable for the purpose.

COAL IN THIRD PLAN

TENTATIVE TARGET OF 100 MILLION TONS FIXED

THE Coal Council of India, at its meeting held in New Delhi on the 8th inst. under the chairmanship of Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel and Chairman of the Council, approved of a tentative target of 100 million tons for coal production for the purposes of preparatory planning under the third Five-year Plan. This target represents an additional output of 40 million tons during the third Plan period, as against 22 million tons, or nearly double that fixed for the current Plan period. The basis on which the Council has fixed this tentative target is not known, but it was stated that, in the opinion of the Council, this target was not only within the realm of achievement but was also the minimum, having regard to the estimated view of the country's requirements between now and the end of the next Plan period.

It is a patent fact that, despite the efforts of India to keep pace with other countries in respect of developing other sources of power, coal will continue to be the major source of energy in the country for a long time to come. The Minister, therefore, stressed the need for using the available resources of coal to the best advantage for industrial development and for this purpose, he added, the numerous problems connected with production, conservation, treatment, transport and efficient utilisation of coal should receive very careful attention.

It will be remembered that the need for maintaining coal production at a much higher level during the third Plan period was recognised by the Council at its previous meeting held in December last. Though it did not commit itself at that time to any target figure, it discusssd steps that would have to be taken from then onwards, as part of the requisite forward planning, which included collection of data for providing new coal reserves and meeting the requirements of technical manpower. With a view to enabling the Council to proceed on a planned and comprehensive basis, a number of committees were set up by the Council to go into the various aspects of coal production and conservation. Among them were: a committee on assessment of resources, one on production and preparation, a committee of requirements and utilisation and one on transportation. The Committees have already submitted their reports and recommendations to the Council.

Reviewing the work done by the various committees since its last meeting, the Minister referred in particular to the standard procedures for qualitative and quantitative estimates of coal resources in the country, manpower requirements assessed and a plan for training technicians and subordinate personnel drawn up by these committees.

Order of Priorities

The Council broadly agreed to an order of priorities for geological surveys, mapping and drilling of coal-bearing areas. These priorities are related to those areas which are *prima facie* suitable for development during the third Plan period. Another important matter discussed by the Council was the region-wise break-up of the tentative target of 100 million tons, but the tentative figures of region-wise allocation have not been disclosed. It was, however, recognised by the Council that the Central coalfields would increasingly contribute to the future coal production in the country by way of new development. The final region-wise allocation would, it is stated, depend on such factors as the probable centres of consumption, the overall requirements of these centres, the grades of coal that can be mined and the pattern of rail transport.

The achievement of the target which is, no doubt, tentative, is not an easy one. There are many obstacles in the way. The first is that relating to productivity. The output per man-shift (O.M.S.) in India is as low as 0.41 ton and the Council recognised the need for increasing it considerably. The increase in output was closely linked with the cost of production and manpower requirements and, unless an improvement was effected on this by increased mechanisation on the part of colliery-owners and better efforts on the part of labour, the Coal Council felt, the most economical use of resources would not be achieved.

The second problem is shortage of technical manpower at every stage. The Committee of the Council on production and preparation went into this question and made an assessment of

STOCKS OF JUTE GOODS MOUNT UP

PRODUCTION, HOWEVER, DECLINES

THE slightly steadier trend in gunny prices witnessed towards the close of last week, after an earlier setback, seems to be inconsistent with the disquieting statistical position of jute mills at the end of June, announced during the week. Thus, on the 12th inst., ready hessian 40"×10 oz. closed at Rs. 40.80 per 100 yards, as against Rs. 40.60 on the 10th inst. and B. twills at Rs. 96.80, a rise of 15 nP in two days, in spite of reports that the stocks with mills at the end of June had risen by no less than 21,900 tons, probably the sharpest monthly increase in recent times. This behaviour of the jute market is attributed to speculative activity and the fair amount of enquiries from overseas. Moreover, the accumulation of stocks with mills had been anticipated and discounted in prices earlier. There are hopes that the stocks of hessian would fall further, following an improvement in shipments to the Argentine and that business activity in the U.S. might pick up, now that the worst of the economic recession in that country is believed to be over.

A disquieting feature of the June-end stocks is that, notwithstanding a drop of 12,500 tons in output during the month, the stocks have gone up by 21,900 tons, as compared with those a month before. Though a rise in stocks was expected, as already pointed out, on account of the dock strike, the official figures of stocks indicate that the position is somewhat disquieting, as it is; more so because it has occurred in the face of lower production. With the aforesaid rise, the stocks with mills have almost consistently maintained an upward trend since November last, when they came down to a low of 71,000 tons, and are at the highest level since July 1956.

The increase in stocks during June is shared by hessian and sacking, the former accounting for 6,000 tons, at 31,000 tons, a record since August 1957. The stocks of sacking constituting about 65.5 per cent. of the total of 87,900 tons represent an increase of 16,100 tons over the month. The stocks of "other manufactures," which had declined from 16,900 tons (at the end of April) to 15,200 tons at the close of May, have further gone down by 200 tons to 15,100 tons, as the following comparative table shows:

Stocks of Jute Goods

(In tons)

	As on 30th June, 1958	As on 31st May, 1958	As on 30th Apr., 1958	As on 30th June, 1957
Hessian	31,000	25,000	20,400	42,400
Sacking	87,900	71,800	60,200	64,800
Others	15,100	15,300	16,900	8,800
Total ..	134,000	112,100	97,500	116,000

Over the year, the stocks at the end of June show a rise of 18,000 tons, shared mainly by sacking and "other manufactures." While hessian stocks have declined by 11,400 tons, sackings are higher by 23,100 tons and "other manufactures" by 6,300 tons. Comparing the jute year-end stocks, the stocks at the close of 1957-58 happen to be the highest since 1946-47, when they stood at 175,900 tons. At the close of 1952-53, no doubt, the stocks (133,800 tons) were near the 1957-58 figures.

It may, however, be noted that the rise in stocks at the end of last month would have been more but for the decline in output to the tune of 12,500 tons. This drop has reversed the upward trend in production noted during the previous two months and has brought the monthly output (82,400 tons) to the lowest level since August 1957. The fall in production was the result of a fall in the number of hours worked from 214.5 (in May 1958) to 195. The following comparative table shows the variety-wise variations in output:

Jute Goods: Production

(In tons)

	June, 1958	May, 1958	April, 1958	June, 1957
Hessian	31,300	34,200	30,900	32,300
Sacking	45,900	53,700	50,600	42,300
Others	5,200	7,000	6,500	5,500
Total ..	82,400	94,900	88,000	80,100

The fall in total output during June has more than offset the expansion in production in the previous month, the decline being shared by all classes of manufactures. Thus, hessian output is lower by 2,900 tons, sacking by 7,800 tons and "other manufactures" by 1,800 tons.

The total output for the jute year 1957-58 (July to June) aggregates 1,056,200 tons, an increase of 31,000 tons over the year, thus partially making good the drop in the previous year. As will be seen from the following comparative table of yearly output, barring the year 1955-56, the output in 1957-58 constitutes the highest since the partition:

(In tons)

Year	Hessian	Sacking	Others	Total
1947-48	481,800	520,400	32,400	1,034,600
1948-49	433,700	576,900	29,000	1,039,600
1949-50	285,400	504,800	34,400	824,600
1950-51	329,700	493,000	35,200	857,900
1951-52	309,500	606,700	28,800	945,000
1952-53	347,000	510,500	33,400	891,500
1953-54	390,400	444,800	30,500	865,700
1954-55	399,200	557,500	38,100	994,800
1955-56	403,000	622,900	69,100	1,095,000
1956-57	428,300	526,800	70,100	1,025,200
1957-58	391,700	596,700	67,800	1,056,200

It will be seen from the table that the rise in production during 1957-58 is mainly accounted for by sacking which has gone up by 69,900 tons, while hessian output is lower by 36,600 tons and "other manufactures" by 2,300 tons.

As stated earlier, the accumulation of stocks during June is due partly to the dock strike and partly to the ban on imports of hessian by the Argentine earlier in the month. This is reflected in the following figures of gross shipments based on shipping bills presented:

(In tons)

	Bags	Cloth	Total
Hessian—			
June 1958	2,081.2	18,331.8	20,413.0
May 1958	2,693.3	28,593.7	31,287.0
June 1957	1,811.0	30,708.8	32,519.8
Sacking—			
June 1958	17,038.7	274.6	17,313.3
May 1958	26,281.3	931.1	27,212.4
June 1957	25,392.0	1,533.1	26,925.1

The shipments of hessian can be expected to increase this month, now that the Argentine has removed the ban. The consumption by the U.S. is also expected to improve, but that depends on the expansion of business activity there.

The large stocks of sacking is causing the mills a lot of worry because their financing will be somewhat difficult, in view of the none too encouraging demand from overseas. Any prospect of expansion in overseas enquiry for sacking has of late been dimmed by the complaints received from Australian consumers about the quality of Indian sacks. Unless, therefore, the I.J.M.A. follows up its circular to mills drawing their attention to the need for improving the quality of their sacking by more vigorous efforts and has the wholehearted co-operation of all its members in such efforts, this heavy packing material is likely to face keener competition from substitutes.

A NEW COMPETITOR FOR JUTE BAGS

A new high-strength paper that stretches to absorb shocks instead of tearing has been developed by the West Virginia Pulp and Paper Company, New York. Called Clupak, the paper is being used in grocery bags that can be dropped more than 20 times without breaking when filled with an average load of groceries.

The new paper is the same as present kraft papers, except for the way in which the fibres of the stretchable paper are inter-twined to provide elasticity. Fibres of ordinary kraft paper are "matted" to form a felt. When the paper is strained, the fibres separate. In Clupak paper the same fibres are twisted and pushed together. Because of this construction, it is claimed that sacks made of the new paper can withstand two to three times more strain and shock than sacks made of regular kraft paper.

Clupak was developed from a process patented by Sanford Cluett, of Cluett, Peabody and Company. It will be licensed to paper manufacturers by Clupak, Inc., a new company organised jointly by West Virginia Pulp and Paper Company and Cluett, Peabody and Company.

STRANGE ELEMENTS IN INCOME-TAX LAW–I

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

DURING a week-end holiday, I had a lot of time on my hand. Being at loose ends and having nothing particular to do, I picked up a book on Income-tax—my pet hobby—and began to analyse its basic constituent parts. Probing deep and reading behind and between lines, I found that it had all the elements and frailties of human nature, its failings and foibles—I never knew it could blend within its narrow compass of 67 sections so many 'elements.' Let me take you through my discovery.

If you read the Income-tax Law, not as a lawyer does it—splitting hairs over construction: not as an accountant does it, trying to assess the tax liability in figures—not as a taxpayer understands it: "Providence giveth and the tax collector taketh away," but read it, as a cynic would, between lines, you will behold the following 'elements' which constitute the Income-tax Law. You will then understand the present unpopularity of the law and the popularity of experts who will show the way of tax avoidance.

Vague Element

The charging section taxes income. What is income? The Law nowhere defines it, with the result that 'income,' the subject matter of taxation, is left as vague as space or as spacious as an ocean. Within its ambit it can swallow not only income, but capital, if needs be.

Fiction Element

Not being satisfied with such a large amount of vagueness about the subject matter of the tax, the law has armed itself with another weapon—namely, creating various fictions of law. The Indian Income-tax Act abounds in such fictions—so much so that at times one feels one is moving in the ghost-land of fiction rather than walking on the *terra firma* of realities.

A thing is deemed to be what in fact it is not. Tax is thus levied, not on "what it is" but on "what it is not." To point out a few instances of such fictions, let me give the following:

If it is not income, it is deemed to be income.

If income does not accrue, it is deemed to accrue.

If it does not accrue in India, it is deemed to accrue in India.

If it is not received, it is deemed to be received.

If it is not income, but capital, it is deemed nonetheless to be income.

If it is not yours, it is deemed to be yours.

If it is not an income of the year, it is still deemed to be income of the year.

There is thus fiction as regards income, as regards capital, as regards ownership, as regards time, as regards place, as regards receipt. The only fiction that the Legislature conveniently forgot to enact was the fiction of payment. If they had enacted this fiction, it would have been the best of possible worlds to live in and die—a real tax-free existence. So far as payment is concerned you cannot pay your taxes with a smile; no, the blokes want *hard cash*!

Vicarious Element

There is a vicarious element also in the Act.

If you have an income and you are a non-resident, you cannot be taxed on your foreign income. But does that deter the Government? No. "If I can't tax you," says the Government, "I will tax your wife on what you send here for her maintenance! It shall be deemed to be the income of the wife." Can you beat this element of vicarious liability on a wife for the sins of the husband earning income abroad and keeping his wife inland?

When a tax is assessed on a registered firm and one of the partners happens to be a non-resident, the assessment is levied on the firm as if it was the non-resident partner.

Where there is a succession and the predecessor cannot be found, the tax on the predecessor may be recovered from the successor.

You have thus vicarious liabilities imposed on you, not because you have an income, but because somebody related to you or allied to you in business has it or had it.

Arbitrary Element

There is an arbitrary element too! If you do not submit a return, or if you submit a return, but fail to respond to any requisitions the Income-tax Officer might choose to issue, he can estimate your income. He need have no materials, except a pure guess—a leap in the dark. Section 23(4) is a powerful weapon that can be wielded arbitrarily.

Opinion Element

There is also an opinion element embodied in the Act.

If, in the opinion of the Income-tax officer, the accounts do not show true profits, he can compute the profits according to his own opinion and ideas of what true profits in a business should be. Again, if in his opinion, certain remuneration is excessive, he can disallow the excess and allow only such as he thinks reasonable.

Although an allowance is admissible under Section 10(2), yet if it be an allowance or perquisite to a director or a person having 20 per cent. controlling interest, the I.T.O. can, under Section 10(4A), disallow such payments as he may in his opinion deem excessive.

You may well ask: is an officer sitting in his chair competent to adjudicate on the reasonableness or otherwise of business needs? Who else can be a better judge of this than the person who earns the income? Well, that may be true but the law recognises only the opinion of its own officers as valid, for is not the Government a sleeping, but dominant, partner in your earnings? It is a dictating partner, too, for it tells you what profit you ought to have made to determine its share in taxes.

Iniquitous Element

This element can only be supported on the oft-repeated plea that equity and income-tax are strangers. I would, after reading the tax laws recently enacted, say, they are positive enemies.

Take an instance where an asset is transferred by an individual to his minor child or wife without adequate consideration. This transfer may be held to be inadequate for tax purposes, for the husband retains, it is argued, the overlordship over these assets, although transferred. Similarly, if the minor or wife is taken as a partner in a firm where husband is a partner, the share of the minor or the wife is added to the income of the father or the husband as the case may be. These are instances where the husband gives a share to the wife. But should the theory still hold where the wife gives a share to her husband in the partnership that has devolved on her by inheritance from her father? It is the wife's business as of right—not the husband's. Here, the husband is a mere invitee, not an owner—yet the consequences are exactly the same as if the husband was the host and the wife the invitee. It is a very iniquitous element to require the wife's own share to be aggregated with her husband for tax purposes. But that exactly is the result of Section 16(3).

Uncertain Element

The uncertain element peeps out prominently in Section 23A of the Act. A company under this Act is required to distribute 45 or 60 per cent. of the assessable income depending upon the nature of its business, if it is one in which the public are not interested to the extent of 50 per cent. of the capital of the company. What it is required to distribute is not the profits made but assessable profits less taxes. Now assessable profits depend upon the adjudication of the income-tax officer. He may disallow a number of admissible expenditure items—he may disallow remuneration paid as excessive—he may disallow bad debts. You can never pre-determine his mind, yet the law wants you to determine this and distribute 60 per cent. of this uncertain amount. Once the assessable income outstrips the factual profit, and it does so invariably in practice—the distribution of 60 per cent. of the factual profit will not suffice. It will have fallen short of the requisite statutory percentage, with the result that you are in for a penal tax, namely, eight annas in a rupee on undistributed profits. This tax has to be paid for the non-ability to gauge the uncertain element, namely, how the Income-tax Officer's mind is going to react as regards the disallowables in your profit and loss account. This element is as uncertain as a toss of the coin—heads or tails.

Fanciful Element

There is a fanciful element, too, namely, a distinction—an artificial one—between a registered firm and unregistered firm. It is a distinction drawn without a difference. If it is a firm and it applies for registration to the Income-tax Officer and he is satisfied about the genuineness, he will register it—with the result that partnership is taxed not at an aggregate rate of the total income of the firm as an entity but the partner pays tax on his share in the firm at his own individual rate. Genuineness alone is not the criterion—a legal defect in the deed may result in non-registration or acts outside the terms of the deed, e.g., interest charged at a rate higher than the one provided for in the deed, or only a part of the profits is distributed among the partners, the balance being carried to reserve account. Non-registration would result in the shares being lumped up and taxed at the rate applicable to the total income of the firm—a pure fiction and a fancy.

On the other hand, if the firm does not offer itself for registration, it will not always be allowed to do so and get away with the benefit of non-registration. If the Income-tax Officer finds that, by non-registration, the parters individually and in the aggregate derive a benefit, the Income-tax Officer will yet treat the firm as registered and proceed to tax the partner's share at individual rates. This is highly fanciful distinction in law which can only be justified on the ground of expediency—not equity.

Bad Logic

Logic is not always the strong point of law. Take for illustration the case of a registered firm's tax. It is a tax levied on the firm for the privilege it enjoys of being taxed on its profits, not at an aggregate rate applicable to a firm, but at the individual rate of partners on their share in the firm.

A registered firm and an unregistered firm are both primarily a firm and their computation of income is made on similar basis. Therefore, where income is the measure, not a subject of a tax, the two incomes must not differ. Yet, when you come to taxing a registered firm, you find that, whereas in the case of an unregistered firm you determine the profit after taking the last year's carry forward of loss into account, in the case of a registered firm you ignore it, on the specious ground that the same has been allocated among the partners. Herein you have a case of bad logic.

One more flagrant instance of bad logic may be given. Take a registered firm. It has made a default for which a penalty is to be levied. A penalty is levied for concealment at one and a half times the tax sought to be avoided. This presupposes that it has income and such income is liable to be taxed. But a registered firm is an entity, it is liable to be charged, but tax is to be recovered from partners. There being no tax payable, there can be no element of evading tax. To get over the loophole, the law enacts that such a firm in default should be treated as an unregistered firm and tax computed on that basis and recovered proportionately from each partner. Now first, the tax sought to be avoided is the tax on a registered firm's profit at partner's individual rates and not at the integrated rate of partnership. Yet the logic, the rationale and the reasoning are brushed aside and you are punished for what you are not as if you are what you are not. Strange reasoning. Illogicality *in excelsis*!

Bias Element

The irrationality of the Act does not stop there. It has invaded more fields. Let us take the right of appeal. Normally, it is understood that, in an appeal to the Appellate Assistant Commissioner, he gives his decision on the grounds raised in an appeal. Either he accepts or rejects—mostly he does the latter! But the trend of recent decisions and case law as laid down is that, when you go in an appeal in one year, the Appellate Assistant Commissioner is not estopped from giving a finding not germane to the grounds of appeal raised, but may travel outside it. On such a finding, the Income-tax Officer can proceed against the self-same assessments for these earlier years irrespective of time limitation. He can even proceed against someone who was not a party to any proceeding on the basis of such finding—also without regard to time limitation!

The right of appeal is hedged in with serious repercussions and consequences which make the right of appeal almost a mockery. The consequence of old and closed assessment being opened up makes a right of appeal an illusory and ill-logical one. An assessee goes to get justice on an issue in one year, not to get his old time-barred assessment reopened. But that exactly is the scope of the section—says authoritative legal opinion. And it might happen that you are one of the unlucky ones and the Appellate Assistant Commissioner's lynx eyes might espy something he can lay his fingers upon as escaped income or under-assessed income. The Appellate Assistant Commissioner has also been given the right of enhancement. This is another deterrent. But has he been given the right to give relief if he feels the assessee has been wrongly assessed and he richly deserves a relief—a relief he has overlooked? No—this is beyond him. The scales of justice are thus weighed and tipped against the assessee—not the Income-tax Department. Does this not manifest a bias element?

Impossible Element

Under the Act, you may be deemed to be an agent of a non-resident, if you are an employee, agent, or person through whom the non-resident is in the receipt of income. Under Section 18A, every assessee having an income over Rs. 6,000 has to pay an advance tax or estimate his income. How can a *mere agent* estimate his principal's income? Yet, if he doesn't, he is penalised as if he could. Which non-resident principal will tell his employee or agent what his income is and, if he does not, how is the agent at this end to make a payment. And payment out of what? He may have no funds of the non-resident under his control. Well, suppose he pays his tax, how is he to recover? The law provides an indemnity—against non-resident claiming funds spent as tax, but what if he has no funds and pays out of his own which he must? Does the Government reimburse him if he fails to recover from the non-resident? No. This is how this section may act—an impossible position for the agent, yet he has to grin and bear, for there is no alternative.

Best of Two Worlds' Elements

Of the two worlds of alternative, the law provides a device of selecting one—not one which is better—but which is worse. It is Hobson's choice that the law offers to the assessee.

Life insurance assessment proceeds on double-barrel basis—not which is less of the two but greater of the two. It says life insurance assessment will proceed on either gross income less quantified expenses or adjusted surplus whichever is more every year.

Even the quantum under two heads is to be determined arbitrarily under a formula, namely, interest and other income less quantified expenses—not actual, mind you! Incomings are actual, while outgoings will be quantified according to a certain formula—not real. If fictional is deducted from the factual, the resultant cannot be factual; it will be only fictional. This is one alternative. Take the other adjusted surplus. This adjusted surplus is to be reduced by 80 per cent., for it is believed that, in the surplus, the element of taxable income may not be more than 20 per cent. Hence the deduction. These two are to be compared and whichever is greater is taken as the income for taxation.

Normally, one must have thought that it is the "net income" that is charged to tax, not gross income under the Charging Section. Here one is charged not on the gross income—it is true—but neither on net income—but a hybrid third which is neither fish nor flesh nor good red herring. This is an element which can truly be termed from the tax gatherers' point of view—the best of both worlds' element.

(To be continued)

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

CONTINUING INCREASE IN WORLD OUTPUT OF AUTOMOBILES

EUROPE GAINS MARKET FOR SMALL VEHICLES IN THE UNITED STATES

[The total number of motor vehicles in all countries has risen by about 5 per cent. annually, compound, since before World War II, reaching 107 million early this year, and the growth continues. The boom now being enjoyed by European makers contrasts with the slump in the motor industry in the U.S.A., which surprisingly is now a major importer of small European cars. For the first time, the U.S.A. this year will account for less than half the world's output of motor vehicles. In Europe the economics of the trade will be fundamentally affected by the proposed formation of the European Common Market and the Free Trade Area, while another development is the growth of new production facilities in several countries. Motor vehicles account for one-third of the volume of the oil industry's sales, and more research is needed into the many factors influencing the growth in numbers and use.]

THE motor vehicle, like each of the other major forms of transportation, makes its own peculiar impact upon society. It brings a new degree of mobility, new economic and social possibilities and new opportunities for better living. It is inevitable, therefore, that its production and use should assume an increasingly important economic significance in our modern world. Indeed, everywhere, motor transport shows every sign of continuing the spectacular growth which has been one of the decisive economic influences of the past half-century. And the industries associated with it and especially the suppliers of fuel and lubricants have every reason to reckon with an expanding market. Within the motor industry, however, there are various factors making for gradual change, not least in the geographical pattern of the industry, hitherto characterised by the great predominance of the U.S.A., with Western Europe accounting for most of the balance of output. In contrast to the present sharp recession in the U.S. motor trade, the motor industries of the U.K., Western Germany, France and Italy are experiencing boom conditions, and new vehicle production capacity is being created in other countries. While U.S. motor vehicle production in 1958 is expected to fall below the combined production of the other manufacturing countries for the first time, the small economy car of European origin is enjoying record sales in the U.S. The proposed formation of the European Common Market and Free Trade Area will affect the economics of European motor manufacture in future years, as well as stimulating the vehicle market considerably.

The development of motor transport in the main areas of the world is shown by the figures in Table I, derived from the annual surveys of *The American Automobile*. The total number of passenger cars has more than doubled, from 36.2 million at the beginning of World War II to 82.3 million early this year, with the number of commercial vehicles rising at an even sharper rate over this period, from 8.4 to 24.9 million. Taking all vehicles together, the average annual rate of increase has been about 5 per cent., compound, during 1940-58, with last year's increase 5.6 per cent. In the past five years the number of vehicles increased by 28 per cent. in North America—where there is a high degree of saturation—and by 74 per cent. in the remainder of the free world, and if these trends should continue, the free world's total will rise from 103 million early in 1958 to 146 million early in 1963 and 212 million by 1968.

United States' Position

In addition to cars, lorries and buses, *The American Automobile* estimates that there were, early this year, some 19 million motor cycles, scooters and powered bicycles and 9.3 million farm tractors. So altogether, there was a grand total of 135.5 million non-stationary motors in use on land in the world as a whole. An outstanding feature is that over 66 million motor vehicles, or 62 per cent. of the world total, are in the U.S.A., where there is now more than one vehicle for every three persons. More and more car-owning families in the U.S.A.—17 per cent. of the total in 1957 against 11 per cent. in 1950—possess more than one car, and the growing tendency for teenagers to have their own car (in Texas a driving licence can be obtained at the age of 15), together with population increases and general economic growth, normally ensure a continued increase in motor vehicle sales or use. The present recession will delay the purchase of new cars and have other effects. But the attractions of car ownership are such that everywhere the market for motor vehicles, though changing in some respects, is certain to expand.

In the free world outside the U.S.A. there were, early this year, about 36.5 million vehicles, or about 10 per cent. more than a year previously (33.2 million), and nearly three times as many as early in 1940 (13.3 million). Most of these vehicles are concentrated in a few highly industrialised areas, notably in Western Europe (20.2 million), Canada (4.4 million), Australia/New Zealand (over 3 million), Japan (1.2 million) and South Africa (880,000). In Canada, Australia and New Zealand, the number of vehicles per head of the population approaches U.S. standards, but most other countries, including those of Europe, have a much lower motor density. India is a foremost example of an underdeveloped country, having an estimated 357,000 vehicles and a population of nearly 400 million, or less than one vehicle for every 1,000 people.

The figures shown for Communist countries are in the nature of estimates. Motor transport in general, and motor passenger transport in particular, has not so far figured prominently in the plans for development. Thus, in the whole of the U.S.S.R., out of an estimated total of 3.3 million motor vehicles early this year, there were only 415,000 private cars and 35,000 buses. However, car-ownership is becoming a symbol of social status and increasingly evident among the better-paid strata of society; and its attractions are the greater since cars are relatively cheap in comparison with other consumers' goods.

The output of motor vehicles in the world has fluctuated in recent years around 12 million units annually, as compared with pre-war records of about 6.3 million in 1929 and again in 1937. Last year's production of 12.4 million units (see Table II) was the second largest so far, being some 800,000 higher than in the preceding year but over 1 million below the record of 13.5 million achieved in 1955. However, owing to the recession in the U.S.A., world production went down in the early months of this year to a rate of rather less than 12 million annually. Of last year's production, about 5.7 million, or 46 per cent., represented additions to the number of vehicles on the roads, while most of the balance (6.6 million, or 54 per cent.) took the place of scrapped vehicles.

Production in the U.S.A. last year aggregated 7.2 million vehicles, as compared with 6.9 million in 1956 and with 9.2 million in the record year of 1955. In the U.S.A., the purchase of a new motor vehicle is usually postponable, while there is an oversupplied second-hand market to meet the need of a new owner. In view of the unexpectedly low demand at home, production fell in January-March 1958 to about 1,460,000. Output in the second quarter will probably be somewhat higher and there are hopes for a more marked recovery after the 1959 models appear in the autumn. Even so, it would be surprising if this year's total production would reach much more than 6 million units, including some 5 million cars. The share of the U.S.A. in world production, which was of the order of 80 per cent. before and immediately after World War II, went down to 68 per cent. in 1955, 60 per cent. in 1956 and 58 per cent. in 1957, and in the face of the rising trend elsewhere is rather less than 50 per cent. during the present recession.

Foreign Trade

A subsidiary factor influencing the recent course of production in the U.S.A. is the unfavourable development of the country's foreign trade in motor cars. Exports of cars from the U.S.A. have dwindled in recent years, partly because of the dollar shortage in importing countries, and partly because of the high cost of the large and luxurious models produced to please the American motorist. Last year, only 141,000 cars were exported, or 2.3 per cent. of the output, the U.S.A. accounting for less than one-tenth of the car exports from all countries (see Table III). Moreover, small cars, which are not locally produced on any large scale, have found favour among a section of the motoring public of the U.S.A. for reasons of economy and because they are easy to park but partly also by new fashions in car ownership. There has been a steep increase in the import of such cars to over 200,000 units in 1957. Though still representing a small share of the total market, this number is substantially more than the country's car exports. Sales of small foreign cars continue to rise and are expected to reach this year between 250,000 and 300,000 units, notwithstanding the unfavourable state of the U.S. car market, new and second-hand, in general.

The U.S.A. is, however, still the world's largest exporter of commercial vehicles, selling abroad last year 194,000 units, equivalent to 17.7 per cent. of the country's production and to 42 per cent. of the world trade in lorries and buses. It should also be kept in mind that the subsidiaries of major U.S. motor companies in Canada, the U.K. and Germany play an important part in these countries' production and exports of all types of motor vehicles.

Though the impact of the U.S. recession is now being felt to a larger or smaller degree in most industries all over Europe, the motor industries have not so far been affected. Motor vehicle production in Germany, the U.K., France and Italy increased last year by between 11 and 14 per cent. while that of the relatively small Swedish industry expanded by 35 per cent.; and the growth still continues. In each country, the boom is due partly to the continued large demand at home and partly to rising exports to other European and non-European countries, including the U.S.A. Export sales accounted last year for about half the production in Western Germany and the U.K., for about one-third of the production in Italy and Sweden, and for about a quarter of the production in France.

Owing to the relative smallness and high competitiveness of the market within each European country and to high tariff barriers, the development of vehicle production in Europe has hitherto been somewhat restricted. However, all trade barriers between the countries of the European Economic Community, i.e., France, Western Germany, Italy and Benelux, will be abolished over a transitional period of 12-15 years starting on 1st January last, and a common tariff will be established against imports from the outside world. If agreement is reached on the Free Trade Area, tariffs will gradually be abolished over a wider European area including, in particular, the U.K., Scandinavia, Switzerland and Austria. The potential significance of these changes is indicated by the fact that there are at present *ad valorem* import duties on motor vehicles ranging from 30 per cent. upwards in the U.K., France and Italy, and amounting to 17-21 per cent. in Western Germany (varying according to type) and to 15 per cent. in Sweden. Most of the non-producing countries, too have high duties (Benelux 24 per cent.) from which, however, knocked-down vehicles for local assembly are usually excluded. There are also various other forms of protection, such as high internal duties on imported vehicles, notably in France. The purchase tax in the U.K. also operates as a protection since it is charged in respect of imported vehicles on the c.i.f. price plus duty.

The new policy towards lowering tariffs will, of course, take effect only gradually. At present, neither the full geographical range nor the exact timing of tariff reductions has been decided upon. However, as the new all-Euro-

EXPLOITATION OF INDIA'S MINERAL OIL RESOURCES

ESTIMATES COMMITTEE'S SUGGESTIONS ANALYSED

THE continuing rise in the consumption of mineral oils, nearly all of which has to be imported from abroad, must mean a serious drain on India's foreign exchange resources. India hardly produces about 8 per cent. of its oil requirements, estimated at 5 million tons, though, by 1960, full exploitation of Naharkotiya oilfields will add another 2.5 million tons of crude oil, thereby meeting 40 per cent. of the requirements of 6.6 million tons in that year. It is thus clear that large imports will continue to be necessary for meeting India's oil requirements. Imports of oil and oil products were valued at Rs. 81 crores in 1956, Rs. 90 crores in 1957; they are expected to rise to Rs. 108 crores in 1958, Rs. 118 crores in 1959, Rs. 130 crores in 1960 and Rs. 142 crores in 1961. In the context of the foreign exchange shortage which, on present indications, is not likely to be relieved in the next few years, it is of the utmost importance that efforts should be made to prospect and develop the potential oil-bearing areas in the country. From this point of view, the Estimates Committee, in the course of its comprehensive review of the oil supply position in India (contained in its report on the Department of Mines and Fuel Oil Division) has rightly stressed that "the magnitude of the imports of oil required in the economic expansion of the country as well as of the foreign exchange required for the purpose would clearly indicate the importance and urgency of making determined efforts to find oil and gas in the country as sources of energy, since the alternative is to slow down the proposed rate of progress."

History of Oil

Tracing the history of the progress of oil exploration in India, the Committee reveals that the first attempts to explore oil were made by the Government of India in 1865. The Assam Oil Company started work on the Digboi wells in 1883, struck oil in 1892, and now it has about 500 oil wells which supply about 8 per cent. of India's oil requirements. To this Company also goes the credit of installing the first oil refinery 36 years ago. In 1945, the Government created the post of a petroleum geologist in the Geological Survey of India, whose staff carried out some reconnaissance and mapping in the Punjab. Ten years later, the Directorate of Natural Gas and Oil was set up. In the following year, the Oil and Natural Gas Commission (O.N.G.C.) was established with the Minister for Mines and Oil as Chairman and two other members. The functions of the Commission are:

(i) Advising the Central Government on matters relating to exploration, exploitation and refining of mineral oil and natural gas resources, (ii) undertaking geological and geophysical surveys, drilling and other prospecting operations for exploitation of mineral oil and natural gas, (iii) proving and estimating workable reserves of oil and natural gas deposits by conducting drilling and other prospecting operations independently or in conjunction with other Government or private organisations, (iv) establishing production of oil including preliminary processing and storage, (v) administering and implementing agreements with oil companies, inspecting oilfields held by private oil concerns to ensure that there is no wastage and introducing improved methods of recovery, (vi) setting up and organising geological and chemical laboratories and geophysical and engineering workshops in connection with the exploration, production or refining of oil, (vii) compiling and publication of statistics of the oil and natural gas in India and maintaining information regarding world production, trade, mining rules and other related matters and (viii) publication of journals and bulletins on matters relating to oil and gas.

Standing Committee

The O.N.G.C. which is at present a subordinate office of the Ministry of Steel, Mines and Fuel, is assisted by a Standing Committee of officials to advise the parent body on certain technical matters. The Estimates Committee feels that to be an effective advisory body the Standing Committee should be consulted on all important matters relating to the oil industry in India, such as exploration, oil and petroleum laws, exploitation, production, refining, collaboration with private concerns, agreements, prices, transport, etc. Its advice should be available to the O.N.G.C., besides the Ministry, particularly after the former is given independent status as recommended by the Committee. The Committee further suggests that the Standing Committee on Oil should be reconstituted and made broadbased so as to give representation on it not only to the various official interests concerned but also the State Governments likely to be interested and non-official members of legislatures who have studied the subject, mining interests, etc. This broadbased committee might then form sub-committees to deal with groups of allied subjects so as to make for speedy and businesslike discharge of work.

Besides the above Standing Committee, it might be desirable to form a consumers' council to protect the consumer interests of various petroleum products. The Committee, therefore, recommends that this question should be expeditiously examined. It feels that pursuant to the provisions of the Industrial Policy Resolution of 30th April 1956, which envisaged, *inter alia*, that workers and technicians should, wherever possible, be associated progressively in management, enterprises in the public sector should set an example in this respect; the Oil and Natural Gas Commission might set up a workers' council.

Intensive Programme

The suggestion that the O.N.G.C. should draw up and implement a larger and more intensive programme of oil exploration has been made by the Estimates Committee. During the period of the first Five-year Plan, the Government signed an agreement with the Stanvac for joint exploration in the West Bengal basin, with 25 per cent. Government participation in the expenditure upto a limit of Rs. 2¼ crores. The Government's share in the expenditure upto 1957-58 is estimated at Rs. 1.18 crore. In the second Five-year Plan, the programme for oil exploration in the public sector was allotted Rs. 11.5 crores which was later revised to Rs. 30.54 crores; actual expenditure incurred in the first two years of the second Plan was only Rs. 3 crores. Oil exploration involves expenditure of large financial resources. In this connection, the Committee notes that it has been estimated by a non-official that the total expenditure required to mobilise the indigenous oil resources may be of the order of Rs. 1,500 crores until 1976 on exploration and production at the rate of Rs. 40 crores per annum until 1966, rising to Rs. 85 crores and Rs. 150 crores per annum during the subsequent Plan periods.

These are very large amounts and it may strain the country's capacity to bear such expenditure. However, as against this expenditure, the expenditure incurred by the country on imports of oil has to be considered. Imports are likely to rise further to over Rs. 100 crores in the next few years though they might slightly diminish when the Nahokatiya crude starts flowing out. Considering the magnitude of imports, the country has to strive hard in order to leave no stone unturned in its attempts to explore every possible source for oil in the country. One of the main difficulties in doing so is likely to be how to find the finance required for the purpose. This is likely to be so even after giving a corporate status to the Oil and Natural Gas Commission, since it would have no source of revenue. The Committee would suggest in this connection that the feasibility of setting up an Oil Development Fund by levying a cess on petroleum products or converting a part of an existing excise duty into a cess and of assigning it to the Commission might be considered. The feasibility of obtaining loans from the World Bank or other U.N. agencies or other sources for developing the oil resources in the public sector might also be considered.

Risk Involved

There is, as is well known, considerable risk in oil exploration. In the U.S. it has been found that only one drill hole in ten holes drilled may yield oil. The Committee draws attention to the fact that success in exploration is particularly difficult to achieve in India in view of the fact that underground conditions over vast areas have not been adequately investigated. The Soviet oil experts, while emphasising the importance of geological investigations, pointed out that no country had postponed oil and gas exploration till definite results of preliminary investigations were available. Apart from the Assam and West Bengal areas where the A.O.C. and the S.V.O.C. are operating, the areas which the Soviet experts thought deserved attention from the point of view of oil exploration are: (1) the Punjab with Himachal Pradesh and Jammu and Kashmir, (2) Rajasthan, (3) Cambay-Cutch, (4) Ganga Valley, (5) South-West Bengal, (6) Andhra Coast, (7) Travancore Coast, (8) Tripura, and (9) Andamans. The O.N.G.C. has now concentrated in the Punjab the major portion of its efforts in exploration work. Actual work has, however, fallen short of the targets envisaged by the Soviet experts. The Committee has advocated more intensive work in the Punjab and also in the Cambay area. The progress of exploration in Jaisalmer (Rajasthan) is also stated to be below targets. The Committee calls attention to the view of an eminent geologist that the Ganga Valley area is "potentially oil-bearing and that, if oil is found in this area, it would be in quantities which would be commercially profitable."

Summing up its survey of exploration work carried out so far, the Committee observes that the progress of such work even in the potentially oil-bearing areas in the country has been "very tardy and has fallen far short of the targets recommended by the Soviet oil experts." Accordingly, it recommends that the O.N.G.C. should give special attention towards preparing and executing a "dynamic" programme for the surveys, mapping and exploration of oil-bearing areas in the country in as short a period as possible. It also recommends that the co-operation of the private sector may also be obtained in the task of the exploration of oil within the framework of the Industrial Policy Resolution of 30th April 1956 under which the expansion of the existing privately-owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require it is not excluded and the State has to ensure in such cases either through majority participation in the capital or otherwise, that it has requisite powers to guide the policy and control the operation of the undertakings.

Liberal Policy

A notable recommendation made by the Committee is that the policy governing the grant of licences for exploration of oil should be liberalised in the interests of more intensive exploitation of potential oil-bearing areas. These licences are issued under the Mines and Minerals (Regulation and Development) Act, 1948 and the Petroleum Concession Rules 1949. The Committee understands that applications made by oil concerns for licences or lease have not received attention from the Government for long periods and that several applications for licences are even now pending. It would appear

NEW PRODUCTS AND PROCESSES

Textile Finishes

A NEW non-ionic silicone emulsion designed for softening thermo-setting textile finishes is being introduced in the United States. In addition to providing established advantages of durable softeners, such as high tear strength, abrasion resistance, and enhancement of sewing properties, the new emulsion is said to have increased durability toward repeated dry cleaning and washing, unusual resistance to scorching, yellowing, and water spotting, and complete resistance to chlorine damage. Two important features not available in other durable softeners are also claimed—outstanding resistance to wet soiling (redeposition of soil) and improved release of soil during laundering. Other uses foreseen for the new emulsion include yarn lubrication, non-woven fabric softening, latex release and warp sizing. The emulsion is *not* a textile water repellent. Actually, the developers claim, water repellency has been eliminated deliberately because tests have indicated that such repellency is accompanied by re-soiling during washing and that durability and fast drying can be obtained in the absence of repellency.

Drip-dry Process for Dry Cleaners

A low-cost resin treatment for use by dry-cleaning establishments in imparting a crease-holding, wrinkle-resistant finish to cotton garments is being developed jointly by the National Cotton Council, the Department of Agriculture, the National Institute of Drycleaning, and several resin manufacturers in the U.S. Although cotton wash-wear garments have been available, a drawback has been the application of the finish to the cotton before it is made up into clothing, causing difficulty in sewing flat seams and pockets because of resistance to creasing. The new process, which dry cleaners may be able to use with present equipment, consists of wetting a conventional cotton garment in a solution containing a thermosetting resin, thermoplastic resin, silicone emulsion, two catalysts, and surface-active agent. The wetting is followed by shaping, pressing, drying, and curing the resin finish in a single operation, and by after-curing in a hot-air cabinet. Finally, washing and tumble-drying ready the garment for the owner. Satisfactory results are reported in tests with print cloth, denim, sateen, cord, broadcloth, gingham, corduroy, and suiting materials. The finish does not last the life of a garment but cost studies are said to show that the process can be inexpensive enough to justify periodical renewal. Once treated, a garment can be sent to a dry cleaner or can be washed readily at home.

New Oil Spray for Banana Plant Disease

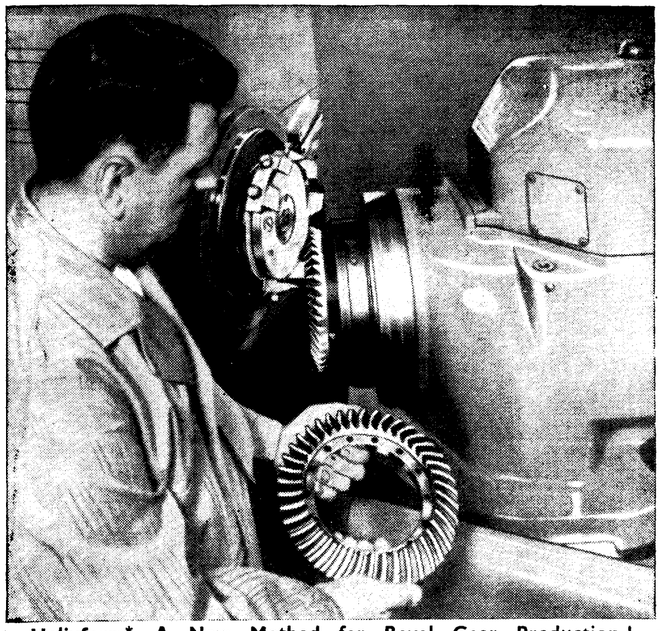
The world-wide and very destructive banana disease, sigatoka, can now be effectively controlled by a new and inexpensive method. Research scientists at the Esso Standard Oil Company of New Jersey, U.S.A., recently announced that they have developed an oil spray that stops the destructive effects of this fungus disease which attacks the leaves of banana plants. Sigatoka causes the leaves to spot, then to wither and die. The diseased plants produce smaller and fewer bananas and the fruit ripens prematurely. In extensive field tests conducted on the Caribbean Island of Jamaica, the new oil fungicide reduced the infection rate from 83 per cent. to less than 5 per cent. after two and a half months of bi-weekly spraying. Subsequent sprayings assure continued control, with no danger of the disease suddenly spreading. Less than two gallons of this oil spray per acre are needed to effectively control sigatoka, which is applied to the banana plants as fine low-volume mist, either by helicopters and airplanes, or by men on foot using a simple portable sprayer.

Wet Ground Mica

The Central Glass and Ceramic Research Institute, Calcutta, has successfully developed the know-how for obtaining from scrap mica, wet ground mica comparable in properties and performance to the imported material. In this know-how scrap mica is washed free from clay and other adhering impurities, if present, and then ground in a specially designed wood-lined edge runner type mill in the presence of water for 8-12 hours. The ground material is subjected to water-flotation and allowed to settle. The shiny flakes of mica are finally screened to different mesh sizes. The mica powder possesses all the original shine and lustre of mica. Chemical analysis and other properties are comparable with those of imported material and are within the limits laid down in A.S.T.M. and U.S. Navy specifications. The Indian paint and rubber industries have extensively tested the mica powder and found it conveniently suited to their needs.

Electronic Road

In the near future, drivers in the United States may be able to nap, read a newspaper or watch television while motoring on electronic highways in the United States, according to highway authorities now concerned with developing controlled, automatic roads to reduce accidents and tedium. When all the difficulties are solved, a driver will be able to travel to an electronic highway, push an "automatic pilot-type" button and relax and forget about travel problems as his driving at prescribed safety speeds will be handled by electronics. The electronic roads, according to technicians, will function from buried cables and strands of wire in or alongside the highway which radiate signals that can be received by tiny transistorised receivers within the car. There will be three different frequencies, one controlling the steering mechanism, another warning of obstacles ahead, while the third will announce exits from the highway to nearby cities. Once the driver leaves the controlled highway, he switches off his electronic drive and reverts to regular motoring.



Helixform*—A New Method for Bevel Gear Production !

The new No. 112 Hypoid Helixform Gear Finisher assures improved quality and increased production on spiral bevel and hypoid non-generated ring gears up to 4" in diameter, and 2½ DP. such as employed in passenger car axles.

INVESTMENT POLICY OF L.I.C.

BASIC ISSUES AND IMPLICATIONS

THE Chagla Commission's inquiry into the Life Insurance Corporation's investment in the shares of some of the Mundhra concerns had sparked in the public mind a keen interest in the investment policy of the Corporation. It had also touched off some lively discussion of the correct policy the Corporation should pursue in investing its funds. Nevertheless, the considerations which should govern the L.I.C.'s investments are still a matter for speculation and debate. No clear-cut policy statement has so far been issued by the Government on this subject. It is understood that, in the light of the findings of the Commission and taking into account some of its recommendations, the Government of India has formulated a new long-term investment policy for the L.I.C. The details of this policy are said to be under discussion between the Union Finance Ministry and the Corporation. Contrary to the earlier expectation that the new policy would be published through a Government notification, it now appears that the Government favours the course of placing it before Parliament and seeking its prior approval. In view of the topical importance of the issue, the *Tata Quarterly*, published by the Department of Economics and Statistics of the Tata Industries Private, Ltd., has done well to bring out a brief, but scientific, study of the basic principles that should govern investment of life insurance funds as a contribution to the thinking on the subject.

The study emphasises, at the outset, that the L.I.C. should have complete functional autonomy. The Corporation was set up to discharge one specific function, namely, the management and development of life insurance. Inasmuch as the Government nationalised life insurance on the plea of unsatisfactory management of certain companies, it would be entitled to advise the L.I.C. in broad terms as to what satisfactory management or expansion of insurance implies. It would be the L.I.C.'s function to work towards such objectives in the insurance business as the Government may choose to specify. But once that is done, it is pointed out, the principle of functional autonomy requires that the L.I.C should have all the freedom that is essential to discharge its functions effectively. Any further Governmental interference in the working of the L.I.C., the study emphasises, should be restricted to an area in which the L.I.C. can act without damage to its own functional interests.

Three Kinds

As regards investment to be made by the L.I.C., the Government's responsibilities would be of three kinds:

(1) Prepare a general policy statement which serves to provide general guidance to the L.I.C: Amendments to the basic policy, if made at all, should come only after due deliberation in Parliament and consultation with the L.I.C. itself.

(2) Issue special directives, in writing, relating to *ad hoc* actions which the Government wants the L.I.C. to take in certain specific cases. Such special directives should not, however, be issued frequently. The L.I.C. should not, however, be required to do anything which conflicts with its own functional interest or runs counter to the spirit of the insurance business.

(3) Review periodically the L.I.C.'s activities and express opinions. But the L.I.C. must decide for itself if any changes in its policy are called for.

What general guidance should the Government, when it draws up a policy, give to the L.I.C.? The foremost consideration, the study points out, is that the L.I.C. should operate as a business unit. An attempt must be made, it is suggested, to define both the sphere in which the L.I.C. ought to function strictly as a business unit and the scope it may have for promoting wider social purposes. As a business concern, according to the study, the L.I.C. must try to add as much as it can to its revenue without making insurance more expensive to the consumer. It can do this by (1) improving the operational efficiency and (2) securing a higher yield from its investments. For the L.I.C., therefore, working on business principle should be equated to attempting to maximise revenue and the success it attains in this should be measured by the extent to which it reduces administrative costs, on the one hand, and invests its funds profitably on the other. The policyholders' chances of getting better insurance service at cheaper costs are directly dependent on the success which the L.I.C. achieves as a business concern. In fact, the L.I.C. working on sound business principles may be alternatively defined as working with a view to safeguarding and promoting the policyholders' interests.

As far as the investment policy is concerned, working on business principle would imply an attempt to obtain maximum yield from the investments consistent with considerations of safety of the capital invested. The principal funds of the L.I.C. could be divided into the following categories: (1) Working capital, (2) investment required as reasonable cover for liabilities to policyholders, (3) the balance, being the surplus.

If any investments are to be made out of working capital, which are earmarked for current financial requirements, they need to be in easily realisable short-term investments, the test being liquidity rather than yield. The second category of funds account for the bulk of the long-term investments which the L.I.C. makes. Although it is not possible to define precisely what amount would be adequate cover for the future commitments to policyholders, conceptually, this sort of calculation, though rough, is important because all investments falling in this category must be investments which are made strictly from the business point of view.

Business Investments

These investments, representing productive assets which, in the normal business course, the L.I.C. has to build up and conserve as a reasonable set-off against the contingent liabilities, may be called "business investments" and the policy in this sphere must be governed exclusively by the policyholder's interest. This means that, in this sphere, there will be no room for investments which, however justifiable they are from the wider social point of view, are not the best available propositions from the business point of view. The principle of functional autonomy would then require that, in this sphere, the Corporation should have freedom to work out its investment programmes for itself in the light of the prevailing financial and economic conditions.

After making adequate provision for working capital and the liabilities to policyholders, the L.I.C. would find itself in possession of funds which may be considered as a surplus. Under Section 28 of the L.I.C. Act, 95 per cent. of such surplus is allocated to, or reserved for, the policyholders. The other 5 per cent. is to be utilised in such manner as the Central Government may determine. The Corporation's capacity to comply with any special directives in writing it may receive from the Government should, therefore, be considered to be limited to this 5 per cent. of the surplus. Apart from any directives which may have been received, in making investments out of this fraction of the surplus, the business viewpoint need not be uppermost; the Corporation may in this sphere allow itself to be influenced by wider social considerations. On these investments the return may be poor; to that extent the policyholders' interests may be said to have been subordinated. Even these investments must not, however, run counter to the spirit of insurance; they must not represent money thrown away.

Since the bulk of the investment constitutes "business investments," the question arises as to whether some formula comparable to the old section 27-A of the Indian Insurance Act should be prescribed by the Government as a means of ensuring that the L.I.C. does adhere to sound principles in making the investments. Any formula, according to the study, which tends to be rigid and gives a particular, predetermined shape to the L.I.C.'s investment portfolio would, on balance, be undesirable. Government control should not be required merely to enforce minimum degree of security for the funds vested in the L.I.C. Long before any extraordinary and unforeseen threat to the security of the funds occurs, the Government should be able to detect it and take necessary action on an *ad hoc* basis. On the other hand, a permanent formula governing the investment pattern would be unduly restrictive of the scope which the L.I.C. should have for the exercise of its skill and enterprise as an investor. The general guidance which the Government may, through a policy statement, choose to provide need not, therefore, lay down rigid, specific limits for the amounts to be invested in different kinds of scrips and securities.

As a business concern, the L.I.C. should work towards securing a good spread and dispersal of investments. It should try to build up a portfolio which is well distributed over (1) Government securities and industrial scrips, (2) long-term and medium-term securities, (3) fixed interest-bearing shares and debentures and variable dividend scrips. Since the Corporation, in its own interest, needs to build up a diversified portfolio of profitable investment, the purposes of public surveillance, according to the study, may be expected to be reasonably served through publicity. In other words, there is, in the opinion of the *Quarterly*, no need for legal control. The Corporation, however, should be required to give in its annual report full details, of par values, cost values and market values of different kinds of securities it holds.

Diversified Portfolio

A diversified portfolio is essential if the Corporation, in receipt of a substantial and continuous flow of new investible funds, is to find avenues of investment which satisfy the test of profitability and security. Government bonds of varying maturity periods, industrial debentures and preference shares and equities—all these have obviously separate merits of their own, and the Corporation has to combine them in a manner which, while keeping the risk of capital depreciation to the minimum, gives the best possible results in terms of the current yield on the cost. One factor, besides the size of the resources at its command, which is conducive to the Corporation's strong financial position, is its capacity to hold on to the investments it has purchased. The Corporation would rarely need to sell investments. Depreciation of investments caused by a temporary slump in market prices would not, therefore, be, for the Corporation, the concern it is for, say, banks.

This position of strength should enable the Corporation to build up a portfolio comprising investments which are safe and sound in the long run, despite temporary setbacks to their market value and also yield as good a return as is available on that class of investments. Whatever the composition of the portfolio which results, the object of the investments, when they are made, must be the yield, consistent with security in the long run. No other consideration should be brought into play in the sphere of business investments. For instance, it is pointed out, that it would not be appropriate for the Corporation to allow its choice of investments to be influenced by a conscious consideration of whether the funds are going into the public sector or the private sector. Likewise, there should be no occasion for the Corporation to make a deliberate distinction between industries included in the Five-Year Plan and those not included in it. In so far as industries covered by the Plan have, on that account, better prospects of profitable working and expansion, the Corporation would naturally find it advantageous to "prefer" investment in such industries to investment in other industries. Such "preference" would, however, arise not because the Corporation has a functional responsibility in the matter of implementing the Plan but because, consistently with its function as an investor, the Corporation would like to invest in industries with good prospects rather than in industries whose prospects are uncertain or bleak.

Profitability and Security

When investing its funds in private industry, the Corporation will have to take into consideration both profitability and security of the investments. Security should be distinguished from marketability of the scrips bought. The Corporation's strong financial position may enable it to overlook changes in conditions which affect marketability at satisfactory prices. Nonetheless, the highest importance should be given to safety in the sense that the real or intrinsic worth of the scrips must be fully equal to the price paid for them. A very important element in the security of capital is the management of the enterprises in which funds are invested. For, against threats to security of capital coming from mismanagement, the L.I.C. would be defenceless—however great be its "staying power" which enables it to overlook temporary setbacks to the fortunes of a whole industry.

While the L.I.C. must act with caution, backed by careful study of profitability of investment based on past dividend records and future prospects by a competent research staff,

RECENT ECONOMIC TRENDS IN WEST ASIA

RAPID DEVELOPMENT LEADS TO INFLATION

DESPITE continued political unrest in some country or other, the tempo of economic development in the countries of West Asia (the Middle East) as a whole is slowly but steadily gathering momentum. Fighting against heavy economic and political odds, these countries have accomplished notable advances in production and income during the past few years. The pace of industrial progress in the region has been at a more rapid rate than that in the agricultural sector, which has oscillated considerably owing to the vagaries of nature and unsettled conditions. Thanks to the intense desire of peoples and Governments for rapid economic development, there has been a rapid increase in national expenditures throughout the region in such fields as irrigation, flood control, transportation and public utilities. Public investment has admittedly moved ahead of private investment. This increasing level of expenditure has generated inflationary pressures of varying degrees in the domestic economies in this region. A detailed account of the economic trends in recent years is provided by the United Nations' Secretariat in its report, *Economic Development in the Middle East* 1956-57. Included in the report are eight countries, namely, Egypt,* Iran, Iraq, Israel, Jordan, Lebanon, Syria* and Turkey.

Referring to the impact of rising investment in these countries on their respective economies, the report observes that public expenditure outstripped ordinary sources of revenues, resulting in public deficits in most countries. The expanding national expenditures, both public and private, exceeded far above the limited domestic resources, and the consequent import surpluses were financed by different measures by the various countries. These pressures on the domestic resources arose not only as a result of collective efforts for economic and social development and for defence, but also because of a rapid population growth in practically all the countries of the region. The wholesale price indices shown below are suggestive of the economic forces working in these countries:

(1953=100)

	1954	1955	1956	1957
Egypt	97	99	110	119*
Iraq	96	97	104	108†
Iran	111	107	115	112‡
Israel	118	124	131	151§
Jordan	88	97	94	101
Lebanon	98	93	98	102†
Syria	96	97	102	99°
Turkey	111	119	142	164¶

* January to June.
† September.
‡ August.
§ October.
° January to October.
¶ May.

Against this general background, the report furnishes a succinct survey of developments in the individual countries of the region.

Egypt

Taking Egypt first, the report says that a substantial proportion of excess demand generated in the economy, in the wake of mounting developmental expenditure, was met from imports. As a result, the large sterling balances, which accrued during the war, continued to dwindle; successive drawings brought down these balances from over 400 million Egyptian pounds in 1945 to about 66 million Egyptian pounds by the end of August 1957. The report warns against a continued dependence on imports to mop up excess demand, as "sooner or later the flow of imports will have to be curtailed." A basic adjustment, however, was made, according to the report, in 1957, when exports were increased by some 4.5 million Egyptian pounds in the first half of the year, as compared with 1956, and imports were drastically reduced by 16 million Egyptian pounds. The policy of reducing imports was facilitated greatly by a reduction in deficit spending. This has led to a sharp reduction in the development expenditure from 45.9 million Egyptian pounds in 1956 to 28.3 million Egyptian pounds budgeted for 1957. The report further says that the depletion of sterling balances would have hit the economy hard but for the fresh source of outside finance in the form of dues from Suez Canal and the sanction of a large loan by the Soviet Union.

Iran

In refreshing contrast to Egypt, Iran experienced relatively stable conditions. The instability that hit the economy in the wake of nationalisation of petroleum production in 1951, had been overcome during the period of 1954-57, following the satisfactory settlement of the nationalisation dispute with Britain. Large grants from the U.S. and the steady flow of oil revenue at a rising pace enabled the country to find its feet again and settle down to the great task of raising the living standards of its people. Deficit spending was greatly reduced, despite the large increase in investment resulting from the new seven-year development programme. Foreign exchange proceeds multiplied, facilitating the import of large quantities of investment and consumer goods. The domestic production also expanded. Both these factors had a stabilising effect on price levels. Referring to the immediate future, the report says that there is a possibility of a moderate rise in prices as investments are expected to increase in both the private and public sectors. Further, there has been a gradual fall in foreign aid and there is no guarantee that it will continue even at the current low level. As against this, however, there are the rising income from petroleum and the large investments in industries which in turn will add to the supply of domestic goods.

Iraq

The chief disinflationary force in Iraq, according to the report, was a large and growing import surplus. This was made possible by rising oil revenue receivable in foreign exchange. While the imports continued to expand from 57 million Iraqi dinars in 1953 to 88 million Iraqi dinars in 1956, exports registered a downfall which were 11 million Iraqi dinars in 1956 as against 17 million Iraqi dinars in 1953. There was also a moderate increase in domestic industrial production. The report adds that this was brought about without excessive rise in costs because of transfer of labour from agriculture to industry. The U.N. report has drawn attention to the fact that the development allocations for the Six-year (1955-60) Plan are expected to rise sharply from 61 million Iraqi dinars in 1955-56 to an annual average of more than 90 million Iraqi dinars in the later years of the Plan. It warns that Iraq will be faced with a serious problem of inflation when it moves into higher stages of economic development. This warning is based on the ground that, though large sums of foreign exchange may be available, imports alone may not suffice to satisfy all the requirements of a growing economic activity.

Israel and Jordan

Israel is one of the worst sufferers of inflation, for it has been trying to carry out a stupendous task of economic development, besides a mounting volume of defence expenditure. The U.N. report recalls that Israel, since its establishment, has been confronted with the major tasks of building up its production facilities, maintaining a relatively high standard of living for a rapidly increasing population, and meeting the large requirements for current Government outlays for defence and settlement of immigrants. The country's substantial efforts to perform these tasks against a background of very limited natural resources have inevitably brought about strong inflationary pressures, despite the heavy reliance of the economy upon foreign resource, largely unrequited, and upon imports.

The inflationary process characterising the Israeli economy, the report points out, makes it increasingly difficult for the country to achieve a level of consumption which is properly related to the income produced in the country itself. The reckoning of import prices on the official rate of exchange, which is considerably lower than the market rate, amounts to a subsidy on imported consumer goods and on exports comprising imported raw materials and this tends to distort the relationship of cost, wages and prices. Without further external financial aid, the report adds, it is doubtful whether the progress so far achieved could even be maintained, especially in the face of a further possibly substantial inflow of immigrants.

The problem confronting Jordan is one of finding employment opportunities for its large surplus labour force and of preventing a fall in the standard of living. These twin objectives are largely conditioned by the level of agricultural production and the amount of foreign aid and loans which it can muster. Hitherto large financial assistance received from foreign countries has enabled it to import the goods needed by it. Imports, it may be noted, amounted to more than one-third of the national income, on an average. The import price levels therefore influence the domestic price levels to a considerable extent. There has no doubt been some expansion in the domestic production, particularly in industry, without any marked cost increases because of the existence of a large pool of unemployed labour. The report, however, adds that vigorous measures for liquidating unemployment on a large scale may give rise to serious inflationary pressures, unless it is possible to rely on external sources for financing substantial import surpluses. Whether, and to what extent, the new federation with Iraq will contribute to the solution of this problem, it is too early to determine at this stage.

*Wherever the terms Syria and Egypt are used, reference is to the northern and southern regions of the United Arab Republic. The latter was not established until after the period covered by the report.

In Lebanon also, the large proportion of imports to national income, amounting to about one-third, acted as a brake on price increases beyond the world price level. The import surpluses, financed to a considerable extent by a continuous flow of private capital, increased by about 65 per cent. in the four-year period 1953-56. Together with fiscal surpluses, they enabled the country to meet the rapidly rising demand without appreciable pressure on the price structure. A good part of the capital that entered the country came from the large number of Lebanese *emigres* spread all over the world; many of them regularly remit funds for the support of their families at home. Large amounts of capital also came from neighbouring countries for the purpose of investment in real estate or commercial and financial activities, or simply to await favourable opportunities.

Lebanon and Syria

Budget surpluses have been a feature of Lebanon for several years but these surpluses have been reducing in absolute amount as well as in proportion to the receipts during 1956 and 1957. In 1955, the excess of fiscal income over expenditure was 46.62 million Lebanese pounds or 26 per cent. of receipts, and dwindled to 29.65 million Lebanese pounds in 1956 or 15.4 per cent. of receipts. In 1957, it stood at 29 million Lebanese pounds or 12.5 per cent. of receipts. The report points out that the amount of development commitments so far incurred by the Government for the next few years is approaching the limit of whatever surpluses might still form in the future without tapping new sources of revenue. More commitments over the level already reached might thus cause inflationary pressures.

A contrast, however, was provided by Syria, where the excess demand generated by large outlays on development, education and defence was counterbalanced to a considerable extent by a rapid expansion in domestic production. This is attributed primarily to an increase in the cultivated area, to generally good harvests and to high prices fetched by cotton and wheat exports. The domestic supply of goods, however, was supplemented by imports, made possible by expanding exports, private capital inflow and oil transit royalties. The speculative scare that accompanied the Suez crisis in 1956 was set at rest in 1957. Agricultural production shot up in 1957 while other sectors of the economy either remained stable or fell slightly. Full data for 1957 are not yet available, but from what the report says, it looks as though the revenue from oil must have fallen, due to the partial interruption of the flow through the pipelines. The capital inflow also must have suffered a setback, owing to disturbed political conditions.

Turkey

Turkey figures last in the U.N. report under reference. It recalls that, in addition to the mounting public expenditure on development and defence, private consumption and private investment increased at a rapid rate from 1953 to 1956. Pressures on the price level were aggravated by the easing of credit restrictions in general, substantial budget deficits and the methods of financing guaranteed prices for agricultural products. The rise in prices, however, was tempered to a great extent by substantial import surplus in the form of foreign loans and grants. The report reveals that there has been a decline in exports, resulting in an adverse balance of payments situation. Consequently, there was a tightening of imports. This further aggravated the upward pressure on domestic prices. The Turkish authorities, according to the report, are desirous of taking effective measures to remedy the situation, such as control of the volume and direction of credit, restriction of banking operations in real estate and inventory building, and contraction of investment expenditure of all State enterprises. While the U.N. Secretariat considers that many of these measures will help in the promotion of growth at a more stable price level, it feels that the Turkish Government is facing the problem of having to complete a number of projects which are still under construction and which require a further considerable amount of investment resources.

It will be seen from the foregoing account that almost every one of the West Asian countries is either facing serious balance of payments and inflationary problems or is about to face them, as all of them have been trying to expand the tempo and pace of economic growth beyond the readily available real resources. The political instability in this region, it is clear, is only making matters worse.

TATA OIL MILLS MAINTAINS PROFIT

HIGHER COST OF PRODUCTION AFFECTS PROFIT MARGIN

THE recommendation of the Directors of the Tata Oil Mills Company, Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay), to maintain the dividend on the ordinary shares of the Company at 10 per cent., or Rs. 2.50 per share of Rs. 25 each, for the year ended 31st March 1958, is fully justified by the results of the Company for the year under review. For the gross profit, at Rs. 35.25 lakhs, is only a fraction higher, as against Rs. 34.50 lakhs for 1956-57, to which level it had declined from Rs. 47.32 lakhs for 1955-56, while the net profit, after providing for managing agents' commission, depreciation, taxation and employees' gratuity, has actually dropped from Rs. 10.89 lakhs to Rs. 8.95 lakhs. It is noteworthy that the fall in net profit is much less than that (from Rs. 15.18 lakhs to Rs. 10.89 lakhs) noted in the previous year.

The Directors, however, point out in their latest report that the net profits for the past two years are not strictly comparable, because in the previous year a part of the provision for taxation, amounting to Rs. 2.15 lakhs, was charged to the appropriation account as reserve for taxation. This was due to the fact that the new income-tax and wealth-tax proposals had not been passed by Parliament at the time of the publication of the report and accounts for 1956-57. If, therefore, the aforesaid reserve for taxation (Rs. 2.15 lakhs) had been charged to the profit and loss account, the net profit for 1956-57 would have been Rs. 8.74 lakhs, as against Rs. 8.95 lakhs for the year under review. Even so, there is no case for even a partial restoration of the cut in dividend made last year from 12 per cent. to 10 per cent.

The salient features of the profit and loss and appropriation accounts of the Company for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	6,16.70	6,62.64	5,63.10	4,58.39
Other income	16.48	10.88	10.63	9.40
Stocks of finished products	51.83	72.61	66.62	44.51
Materials and stores consumed	3,42.69	4,18.04	3,30.83	2,66.33
Expenses	2,42.77	2,03.98	1,90.07	1,72.48
Gross profit	35.25	34.50	47.32	21.15
Managing Agents' commission	2.68	2.71	4.03	1.48
Provision for—				
Depreciation	10.80	10.30	11.75	9.70
Taxation	11.62	9.10	14.86	3.28
Employees' gratuity	1.20	1.50	1.50	0.50
Net profit	8.95	10.89	15.18	6.21
Excess provision written back	..	..	0.20	0.77
To reserves	1.07	2.90	6.00	..
Dividends—				
4½ per cent. preference	0.92	0.99	0.99	1.34
Ordinary	7.01	7.01	8.41	5.61
	(10%)	(10%)	(12%)	(8%)
Carry forward	0.05	0.10	0.11	0.13

The decline in sale proceeds for 1957-58 shown in the table is not due to any fall in sales of the Company's own products. On the contrary, the sales of the Company's products had gone up from Rs. 5.48 crores to Rs. 6.11 crores which to some extent was due to increase in selling prices of laundry soap and toilet products. The shrinkage in total sales is, therefore, accounted for by imported chemicals which have declined from Rs. 114.29 lakhs to Rs. 5.40 lakhs. Till 1956-57, the Company was importing the bulk of soda ash and caustic soda and selling them on its own account, while in the year under review, these chemicals were imported by the State Trading Corporation and sold by the Company on an agency basis. Such a change in sales procedure in respect of the above two chemicals and the expansion in the sales of Tata Chemicals' products are cumulatively responsible for the sharp rise in sales agency commission from Rs. 5.94 lakhs to Rs. 10.97 lakhs (included in "other income"). The absence of imports of chemicals by the Company is also reflected in the decline in materials (raw and in process) and stores consumed.

The results of the Company would have been much better but for the rise in cost of production and a reduction in profit margin on account of the increase in prices of vegetable oils (the prices of coconut, mowra and groundnut oils were on an average 8 per cent. higher than in the previous year), the upward revision in excise duty on these oils, the higher wage bill and interest charges. The rise in the last three items of expenses is reflected in the increase of nearly Rs. 39 lakhs in expenses. The rise in manufacturing costs was only partially offset by an increase in the selling prices of laundry soap and toilet products.

Supplies of copra, mowra and groundnut seeds were adequate for crushing at the Company's Bombay factory, while at Tatapuram, crushing was affected partly because of the scarcity of seeds and partly because it was more economical, as in the previous year, to buy groundnut oil from the producing centres. Production of both laundry and toilet soaps was more or less maintained at the previous year's levels, while sales showed a modest improvement, despite keen competition. Sales of glycerine were slightly higher than in 1956-57. While the output of vanaspati showed a substantial rise, prices were on the whole unremunerative. Realisations, however, covered all costs and a part of the general overheads. Sales of toilet products and industrial perfumes were about 10 per cent. higher.

There has been no notable change in the overall financial position of the Company. The share capital is unchanged at Rs. 99.96 lakhs. With the addition of Rs. 1.07 lakhs to the development reserve from the year's profit and the transfer of Rs. 2.15 lakhs from reserve for taxation to provision for taxation, the reserves and surplus stand at Rs. 35.94 lakhs (including the sum of Rs. 14.94 lakhs in share premium account). Loans and deposits are lower at Rs. 167.15 lakhs, as against Rs. 174.40 lakhs, while the current liabilities are almost unchanged at Rs. 91.83 lakhs. Provision for taxation has risen from Rs. 27.93 lakhs to Rs. 41.05 lakhs. There has been an increase of Rs. 15.46 lakhs in gross block (including Rs. 2.77 lakhs on unerected machinery), as against Rs. 23.31 lakhs in 1956-57. No major project was undertaken, but, the expenditure was spread over a large number of relatively minor items, consisting mainly of replacements and renewals. With this addition, the gross block as at the end of the year stands at Rs. 225.05 lakhs, on which the total depreciation provided so far amounts to Rs. 137.40 lakhs. The other assets aggregate Rs. 348.29 lakhs, of which stock-in-trade and stores alone account for Rs. 221.35 lakhs.

The Rs. 25 paid-up ordinary shares of the Company are being currently quoted at Rs. 42.25 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.3 per cent. per annum, free of income-tax.

LARSEN AND TOUBRO STEPS UP DIVIDEND AGAIN

The Directors' report and audited accounts of Messrs. Larsen and Toubro Ltd. (Managing Agents: L. & T. (Management) Private Ltd., Bombay) for the year ended 31st March 1958 indicate that the Company has had another year of successful trading, with the sales turnover and gross profit establishing fresh record levels, thanks to the further expansion in the Company's manufacturing facilities at its factory in Powal, Bombay. The turnover has jumped up from Rs. 3.27 crores to Rs. 3.93 crores and the gross profit from Rs. 21.76 lakhs to Rs. 28.43 lakhs. With this rise, the gross profit has maintained its upward trend almost unbroken since 1948-49.

Consequent on the sizable rise in profit, the Managing Agents' commission has gone up from Rs. 1.89 lakhs to Rs. 2.42 lakhs and provision for taxation has been raised from Rs. 9.40 lakhs to Rs. 12 lakhs of which Rs. 40,000 is accounted for by wealth tax. The provision for depreciation, too, has been raised from Rs. 2.58 lakhs to Rs. 3.73 lakhs. After setting aside Rs. 45,000 for staff gratuity, as against Rs. 1.90 lakhs in the previous year, the net profit amounts to Rs. 9.83 lakhs, which represents an increase of Rs. 3.84 lakhs over that for 1956-57. The net profit has been supplemented by a sum of Rs. 2.20 lakhs, made up of Rs. 1.90 lakhs being the amount set aside last year for gratuity reserve now written back and Rs. 30,000 from the provision for taxes. After writing off Rs. 1.83 lakhs towards expenses relating to previous years, the Directors have transferred Rs. 1 lakh to dividend equalisation reserve (same as in the previous year) and Rs. 2 lakhs (as against *nil* a year ago) to the general reserve. A sum of Rs. 68,511 has also been set aside as development rebate.

These allocations still leave sufficient amount at the disposal of the Directors to step up the dividend on the ordinary capital from 10 per cent. to 12.5 per cent. and that, too, on a higher capital. The Directors have recommended a dividend of Re. 1.25 per share, free of income-tax, on 450,000 shares raised in January 1957 by a fresh issue of 50,000 shares and a *pro rata* dividend at Re. 1.25 per share per annum on a further 50,000 shares issued in January 1958.

The following comparative table shows the progress of the Company's working during the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sales, services, etc.	3,93.29	3,27.14	2,70.96	2,09.44
Other income	12.81	13.45	11.63	11.30
Expenses	2,80.10	4,02.83	3,15.64	2,04.73
Gross profit	28.43	21.76	18.48	16.01
Managing Agents' commission	2.42	1.89	1.62	1.34
Provision for—				
Depreciation	3.73	2.58	2.25	2.57
Taxation	12.00	9.40	6.63	5.00
Retiring gratuity	0.45	1.90	..	..
Net profit	9.83	5.99	7.98	7.09
Excess provision written back	2.20	1.12	1.50	..
Expenses of previous years written off	1.83	0.67	1.07	..
To reserves	3.68	1.58	4.00	2.75
Dividends—				
5 per cent. preference	0.75	0.75	0.75	0.75
Ordinary	5.78	4.12	3.62	3.50
	(12.5%)	(10%)	(10%)	(10%)
Carry forward	0.26	0.27	0.29	0.25

Of the rise in the Company's turnover, sales accounted for Rs. 52.51 lakhs, servicing and service fees for Rs. 2.49 lakhs and contracting charges for Rs. 11.15 lakhs. The expansion in sales has been achieved, despite the sharp decline in purchases of trading goods from Rs. 3.23 crores to Rs. 2.01 crores, evidently due to import restrictions. This has, however, been made good by running down the stocks (including work-in-progress) from Rs. 2.01 crores to Rs. 1.13 crore. While expenses on purchases have sharply fallen, other expenses have gone up from Rs. 75.55 lakhs to Rs. 85.72 lakhs.

As already indicated, the paid-up capital of the Company has been raised during the year by the issue of 50,000 ordinary shares, bringing the total paid-up capital to Rs. 65 lakhs. As against this, the reserves and surplus aggregate Rs. 15.27 lakhs. Loans and current liabilities and provisions aggregate Rs. 179.16 lakhs. There has been an addition of Rs. 12.10 lakhs to the gross block bringing the total value at the end of the year to Rs. 44.29 lakhs. This stands written down to Rs. 24.20 lakhs. The current assets aggregating Rs. 233.06 lakhs exceed the current liabilities and provisions by a large margin of Rs. 53.90 lakhs.

During the year under review, the Company further developed its manufacturing facilities at Powai; the construction of an additional workshop capable of handling heavy equipment was commenced and further workshop machinery and tools were acquired. With the increased manufacturing facilities now available, the Directors hope to maintain the turnover, in spite of reduced imports, and view the future with confidence.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 17.76 *cum-div.* On an *ex-div.* basis, the latest dividend provides an attractive yield of 7.57 per cent. per annum, free of income-tax.

SIMPLEX MILLS

In consonance with the general trend of cotton mill earnings during the past year, the profit of Simplex Mills Company, Ltd. (Agents: Messrs. Forbes, Forbes Campbell and Co. Private Ltd., Bombay) for the year ended 31st March 1958 has suffered a setback, though the extent of decline is much less than that in the case of many other mills. Compared to the steep fall suffered by the Company itself in 1956-57, the decline in the year under review is negligible. Thus, the gross profit has dropped from Rs. 13.30 lakhs in 1956-57 to Rs. 11.80 lakhs; the decline in the previous year was no less than Rs. 16.47 lakhs (from Rs. 29.77 lakhs). The net profit is, however, a shade better at Rs. 5.96 lakhs, as against Rs. 5.16 lakhs earned in the previous year, mainly due to the cut in the provision for taxation from Rs. 4.31 lakhs to Rs. 1.58 lakhs. The provision for depreciation has been raised from Rs. 2.78 lakhs to Rs. 3.43 lakhs.

The entire net profit for the year under review has been transferred to the reserves. Of this, a sum of Rs. 3.26 lakhs, being the portion of the profit which it is estimated is not taxable, has been credited to general reserve No. 2, a new account, as separate from the existing general reserve (general reserve No. 1). The Directors have also created a development reserve by setting aside Rs. 2.70 lakhs. Consequent on the depletion of profit entirely, the Directors have not withheld the distribution to the shareholders; they have, on the contrary, maintained the dividend at 17 per cent., to which level it had been pruned from 24 per cent. a year ago. The entire sum required for this purpose, namely, Rs. 7.14 lakhs, is proposed to be drawn from the general reserve No. 1, while in the previous year only a sum of Rs. 1.10 lakhs had to be drawn from the dividend equalisation fund to supplement the profit available for payment of a 17 per cent. dividend.

It may not be out of place to mention a point of interest to the shareholders of the Company. While creating a separate general reserve No. 2, the Directors have segregated in the general reserve No. 1 all profits which had already been taxed and kept in various reserves. Thus, they have transferred to general reserve No. 1, the outstanding balance of Rs. 1.20 lakhs in the reserve fund, the entire sum of Rs. 26.88 lakhs kept in the machinery renewal and reserve account and of Rs. 3.90 lakhs from the dividend equalisation fund, aggregating in all Rs. 31.98 lakhs. These taxed profits are thus available, if required, for payment of non-taxable dividends in future.

The following comparative table shows the progress of the Company in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds (gross)	2,86.76	2,96.24	2,88.14	2,54.14
Other income	6.81	5.01	3.94	0.48
Consumption of cotton, staple fibre, etc.	1,54.75	1,56.23	1,16.58	1,33.06
Other expenses	1,46.88	1,42.21	1,24.05	1,21.42
Gross profit	11.80	13.30	29.77	12.09
Agents' commission	0.83	1.05	5.39	1.90
Provision for—				
Depreciation	3.43	2.78	5.43	2.85
Taxation	1.58	4.31	7.07	2.00
Net profit	5.96	5.16	10.88	5.34
Transfer from reserves	7.14	1.10	..	3.00
To reserves	5.96	..	10.08	8.40
Dividend	7.14	7.14	(24%)	(20%)
	(17%)	(17%)	0.96	0.16
Carry forward	0.08	0.08		

With the transfers made from and to the profit and loss account mentioned above, the reserves and surplus of the Company stand at Rs. 30.59 lakhs, as against a paid-up capital of Rs. 42 lakhs. Loans from banks and current liabilities amount to Rs. 111.51 lakhs and Rs. 37.06 lakhs, respectively. The provision for taxation stands at Rs. 3.36 lakhs. The gross block of the value of Rs. 195.86 lakhs, including additions to the tune of Rs. 75.25 lakhs made during the year, has been written down to Rs. 116.02 lakhs. The other assets aggregate Rs. 112.26 lakhs, the bulk of which (Rs. 69.84 lakhs) is accounted for by stock-in-trade, do not cover the liabilities adequately.

Notwithstanding the many difficulties, the Company is said to have made satisfactory progress in its programme of rehabilitation and expansion.

The Company's Rs. 50 paid-up shares are being currently quoted at Rs. 179 *cum-div.* On an *ex-div.* basis, the latest dividend on the shares provides a yield of just 5 per cent. per annum, free of income-tax.

STERLING GENERAL INSURANCE CO., LTD.

A notable feature of the working of the Sterling General Insurance Company Ltd. (General Manager: M. N. Seth) during the year ended 31st December 1957 is that the Company's net premium crossed the Rs. 50-lakh mark and stood at Rs. 55.01 lakhs, as compared with Rs. 47.64 lakhs in 1957. The gross premium, at Rs. 1.04 crore, was Rs. 16.14 lakhs higher than the previous year's figure of Rs. 88.22 lakhs. The total underwriting profit aggregated Rs. 3.08 lakhs, made up of Rs. 3.03 lakhs in the fire department and Rs. 5,288 in the marine department. The miscellaneous section, however, worked at a loss of Rs. 2.60 lakhs. The Directors have recommended a dividend of 5 per cent., as against 4 per cent. paid in 1956. Along with the rise in premium income, the claims and expense ratios also have gone up, the former from 44.6 per cent. to 55.1 per cent. and the latter from 26.7 per cent. to 31.1 per cent. Higher claims ratio was due mainly to the heavy incidence of losses in the motor accident department, wherein the general experience of other insurers has also not been favourable of late. As a result of the taking over of life insurance business by the Life Insurance Corporation, the entire load of overriding expenses has fallen on the general department of the company, the full impact of which has been borne for the first time during the year under report. This accounts for the rise in expense ratio.

The net premium income in the fire department increased from Rs. 11.10 lakhs to Rs. 12.71 lakhs. Claims paid and outstanding amounted to Rs. 3.83 lakhs, and expenses of management to Rs. 4.14 lakhs. After providing Rs. 5.08 lakhs (40 per cent. of the net premium income) as reserves for unexpired risks and Rs. 64,000 as additional reserves, a sum of Rs. 3.03 lakhs has been transferred to the profit and loss account.

The net premium in the marine department aggregated Rs. 4.60 lakhs, as compared with Rs. 4.32 lakhs in the previous year. Claims paid and outstanding accounted for Rs. 2.80 lakhs and expenses of management for Rs. 1.82 lakhs. After providing Rs. 1,83,980 (40 per cent. of net premium) as reserves for unexpired risks and Rs. 1,60,000 as additional reserves, there was an underwriting profit of Rs. 5,288.

In the miscellaneous department, gross premium booked aggregated Rs. 67.91 lakhs (Rs. 57.51 lakhs in 1956), yielding a net premium income of Rs. 37.7 lakhs (Rs. 32.22 lakhs in 1956). Claims paid and outstanding amounted to Rs. 23.70 lakhs. Expenses of management aggregated Rs. 11.12 lakhs. After earmarking Rs. 15.08 lakhs (40 per cent. of net premium income) as reserves for unexpired risks and Rs. 80,000 as additional reserves, a deficit of Rs. 2.60 lakhs has been transferred to the profit and loss account.

The underwriting profit from the fire and marine account, together with income from other sources, made in all Rs. 4.26 lakhs. After adjusting Rs. 2.60 lakhs, being loss transferred from the miscellaneous account, and providing for other adjustments, a sum of Rs. 1,20,620 has been transferred to the profit and loss appropriation account. This, together with Rs. 1,589 brought forward from last year, made available Rs. 1,22,209. Provision for taxation absorbs Rs. 56,000. The payment of a dividend of 5 per cent. will absorb Rs. 62,113, leaving Rs. 4,096 to be carried over to next year.

The satisfactory financial position of the Company is reflected in its capital and reserves. Apart from a capital of Rs. 13.44 lakhs, the Company has departmental reserves aggregating Rs. 25.04 lakhs, made up of fire fund Rs. 5.73 lakhs, marine fund Rs. 3.44 lakhs and miscellaneous fund Rs. 15.87 lakhs. Besides, the Company has an investment reserve of Rs. 59,179 and reserve for bad and doubtful debts of Rs. 52,098.

COAL

(*Concluded from page 104*)

manpower requirements for the investigation, the planning and the development stage. The Committee's assessment was generally accepted by the Council. It was realised that the requirements of holders of mining degrees and diplomas and of subordinate ranks of technical personnel would be of a very large order. This requirement could not be met, unless the existing facilities in schools and colleges were expanded and, in addition, the enrolment for the evening mining classes run in the coalfields of the State Governments was made on a much higher scale than at present. As regards training for subordinate categories of technical personnel, it was felt that an integrated approach was necessary, so that the needs of not only the coal industry but other mining industries as well would be covered.

The Council emphasised that the training schemes should cater to the needs of both the private and public sectors and that the practical field training should be integrated with theoretical instruction. Among the other steps suggested in order to increase the output of these technicians were: (1) increase in the number of stipends and (2) provision of more hostel facilities. In view of the urgency of this problem and the extent of forward planning necessary, a small committee of officers was set up by the Council to go into the question.

(*Concluded from next column*)

raw sugar output was exported, the figures for 1957, being approximately 57 per cent. for export and 43 per cent. for Australian consumption. The British Commonwealth Sugar Agreement has again been extended for another year; and it will therefore continue in operation to the end of 1965. The present International Sugar Agreement expires at the end of 1958. It is expected that the United Nations Organisation will convene a conference about September to consider the extension of the Agreement for a further period."

SIR DENYS LOWSON,
Australian Estates Co., Ltd., London.

Points From The Chair

Re-appraisal of Economic Problems

"WE have reached a stage in the affairs of the world where a re-appraisal of political and economic problems is being forced on those responsible for shaping national policies. The surge of re-building of commodity stocks, factories, power plants and houses has largely expended itself. Those countries whose welfare is largely dependent upon the export of primary products have suffered a reduction of income causing them to review their industrial and social development programmes. The renewal and expansion of industrial plant and equipment together with housing in Europe and other areas affected by the Second World War has mainly been completed. In North America and to a lesser extent in the U.K., the reorientation of defence programmes from 'conventional' to nuclear arms has freed industrial capacity for other uses at the same time as the need for, or the ability to buy, capital equipment and consumer durable goods has declined. These changing circumstances have led to a slowing down of manufacturing activity and the appearance of pockets of unemployment in industrialised centres. Government has hesitated to apply the recognised economic correctives to such conditions for fear of stimulating inflation further. For some years, full to overfull employment in various centres has enabled trade unions to exact wage increases without comparable production increases. In some countries there has been an annual round of increases; in others, like the U.S.A., guaranteed wage increases have been granted extending over two or three years. Such agreements have contributed to the continuing price inflation at a time of declining industrial activity. Trade union leaders throughout the world are having to re-appraise their conduct no less than the politicians."

H. J. VENNILS,
Indian and General Investment Trust Ltd., London

The Textile Crisis

"You will remember that in my speech last year I had already drawn your attention to the increase in excise duty levied on cloth from 1st September 1956 and had expressed my fear that, unless the demand and offtake of cloth improved substantially, the burden of excise duty and high prices of raw cotton would tell heavily upon the results of your Company in the year 1957. The situation has, however, deteriorated much more than anticipated with the result that the textile industry, in general, has experienced a serious crisis last year. You are all aware that 26 mills have completely closed down and 37 mills have partially closed. The number of casualties—total or partial closure of mills—tells only half the story. Many mills are making serious losses. In Baroda, seven mills are making losses, the average loss being Re. 1-8 per loom shift. The loss sustained by 11 mills in Nagpur area works out to Rs. 2 to Rs. 5 per loom per shift, with the result that recently there has been a very alarming announcement from the Chairman of the Textile Mills Association, Nagpur, that all the nine textile mills of Vidarbha region and two of Mahakoshal area, Madhya Pradesh, are to close down from 11th August. The average loss in industry of your area was Rs. 4 per loom per shift. Practically all the mills in Saurashtra, Madhya Pradesh, Rajasthan and West Bengal report heavy losses. The position is not happy even in Bombay State. About 30 mills in Bombay and 10 mills in Ahmedabad are working in loss."

K. G. SEKSARIA,
Indore Malwa United Mills Ltd.

European Trade

"Last year reference was made to the increasing competition which will arise as a result of the closer integration of the six major countries of Western Europe in a common market. We must not overlook that this common market is now in being, having come into existence on 1st January this year. So far as the Dunlop Group is concerned, we have large factories in both France and Germany and selling companies and branches in the other participating countries. We are confident, therefore, that we shall be able to obtain a reasonable share of the benefits which should accrue from this new conception of European trade. The outcome of the negotiations to associate Britain and other members of the Organisation for European Economic Co-operation with these six countries through a Free Trade Area remains in doubt, and at this stage it is not possible to forecast whether, or on what terms, this association will eventually take place. The present uncertainty thus makes it impossible as yet, to forecast the impact of these developments on the fortunes of the Dunlop Group, as a whole, but studies on the many different and complex aspects which are likely to be involved have been and are continuing to be carried out energetically. We are making our own examination of these problems and have also taken advantage of the facilities in market and economic research available on this subject."

G. E. BEHARRELL,
Dunlop Rubber Co., Ltd., London.

Sugar in Australia

"Raw sugar produced in Australia in 1957 rose by about 62,000 tons to 1,290,000 tons, the second highest output on record, being exceeded only by the 1954 season's outturn. Queensland production was 1,254,000 tons compared with 1,184,000 tons in 1956. Southern Queensland suffered a prolonged drought right through 1957; but the poor crops in this area were more than balanced by the good season and high sugar content of cane in the remaining sugar areas where our two mills are situated. A somewhat higher proportion of the

FORT GLOSTER DOUBLES DIVIDEND

PROFIT OF NEW BEERBHOOM COAL HIGHER

Fort Gloster Industries Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit of Rs. 23,12,670 (Rs. 11,47,910) to which has to be added the balance brought forward from the previous account, namely, Rs. 2,45,413 (Rs. 1,80,415) giving a total of Rs. 25,58,083 (Rs. 13,28,325). From this has to be deducted the following:—Provision for depreciation Rs. 7,48,816 (Rs. 5,67,912), transfer to debentures sinking fund Rs. 1,75,000 (Rs. 1,75,000), development rebate reserve fund Rs. 2,69,917 (*nil*) and Wealth Tax for Assessment Years 1957-58 and 1958-59 Rs. 1,07,687 (*nil*) leaving for disposal Rs. 12,56,663 (Rs. 5,88,413). On 31st January 1958 the following interim dividends were declared:—Dividend on 7 per cent. cumulative first preference shares at Rs. 3.50 nP per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 49,000) and dividend on 5 per cent. cumulative second preference shares at 2.50 nP per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 17,500). From the balance of Rs. 11,90,163 (Rs. 5,21,913) the directors recommend the following appropriations:—

To transfer to general reserve Rs. 4,50,000 (*nil*), to paying the final dividend on 7 per cent. cumulative first preference shares at Rs. 3.50 nP per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 49,000), to paying the final dividend on 5 per cent. cumulative second preference shares at Rs. 2.50 nP per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 17,500), to paying the dividend on 21,000 ordinary shares at Rs. 20 (Rs. 10) per share without any deduction for income-tax payable by the Company Rs. 4,20,000 (Rs. 2,10,000) and to carry forward Rs. 2,53,663 (Rs. 2,45,413).

In compliance with the working time agreement of the Indian Jute Mills Association, the Mills continued working for 48 hours per week throughout the year under review with the 12½ per cent. of the total looms sealed.

The electrification of the Mills was completed and the modernisation scheme was partially carried out. The Company has benefited by both these schemes.

The jute industry, being one of the predominant Export Industries, has to work on very competitive lines. This has indeed attracted the attention of the Government whose timely help in the shape of loans for modernisation has enabled the industry to improve its working. As such, the industry, it seems, will slowly be in a position to stand competition in the world markets.

That the country is now in a position to grow within her borders and supply a major portion of the jute crop is an additional advantage for the competitiveness of the Industry. Nevertheless, it is hoped that efforts will continue by all concerned for the regular supply of jute which alone will eventually ensure a stable and well-founded Industry.

Trading conditions continued to be difficult but it is encouraging that the country's trade delegations going abroad from time to time are taking a special interest in exploring the possibilities of new markets for Indian goods. Such being the case, the directors look forward to a fillip to the sales of the Industry's products which, however, is to be watched.

Being one of the largest foreign-exchange earners for the country, it is hoped that the Government will continue to take care that the cost of production will not be allowed to increase so that the Industry will be able to compete effectively in the world markets.

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1957.

The accounts show a profit, after charging all expenses, of Rs. 5,03,195 (Rs. 2,22,544). Out of this amount taxation provision requires Rs. 2,90,000 (Rs. 1,17,000). [*Less*: excess provision for taxation in previous years, now written back Rs. 50,000 (*nil*)] of Rs. 2,40,000 (Rs. 1,17,000) leaving a balance of Rs. 2,63,195 (Rs. 1,05,544). The balance brought forward from last year was Rs. 53,598 (Rs. 94,383) making a total available for appropriation of Rs. 3,16,793 (Rs. 1,99,927). The directors have transferred to capital reserve Rs. 36,209 (*nil*) and to reserve for bad and doubtful debts Rs. 50,051 (*nil*) leaving a balance of Rs. 2,30,533 (Rs. 1,99,927). The following interim dividends were paid on 19th November, 1957 3½ per cent. on preference shares absorbing Rs. 7,000 (Rs. 7,000) and 37 nP (As. 6) per ordinary share absorbing Rs. 65,721 (Rs. 66,609). The directors now recommend payment of final dividends on preference shares at 3½ per cent. absorbing Rs. 7,000 (Rs. 7,000) and on ordinary shares at 38 (37) nP per share absorbing Rs. 67,496 (Rs. 65,720) leaving a balance to be carried forward of Rs. 83,316 (Rs. 53,598). Wealth tax in respect of the years ended 31st October, 1956 and 31st October, 1957 is estimated to amount to Rs. 44,000 and this has been provided for by transfer from capital reserve.

Raisings for the year ended 31st October, 1957, totalled 5,30,672 tons compared with 4,48,242 tons in the previous year and 4,79,087 tons in the year ended 31st October, 1955. Despatches, which included purchased coal, totalled 5,29,938 tons compared with 4,55,573 tons and 4,81,599 tons in the two previous years respectively.

The award of the Labour Appellate Tribunal was implemented as from July, 1957, when a compensatory increase in the statutory selling price was put into effect, although the resultant increased payments to employees had to be made retrospective to 26th May, 1956.

Amar Dye-Chem Ltd.

The directors of the above Company (Managing Agents: Messrs. Amritlal and Co., Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account discloses that after providing for the usual working expenses, there remains a net profit, subject to depreciation on fixed assets, as under:—The net profit for 1957 amounts to Rs. 86,945 (Rs. 2,890) to which is added the amount brought forward from last year's account of Rs. 54,539 (Rs. 88,525) and royalty written back Rs. 9,627 (*nil*) making a total of Rs. 1,51,111 (Rs. 91,415). The directors recommend that this amount of Rs. 1,51,111 (Rs. 54,539 after providing Rs. 36,876 as taxation for the previous year) be carried forward to the next year.

The Directors presume that the results of the year shall be considered satisfactory, in view of the fact, that the Company had to disburse an enormous amount of Rs. 12,87,000 on customs duty alone during the year under review, on imports of the raw materials of the C.I.F. value of Rs. 35,85,000. Whilst there is some exemption on duty for certain items of raw materials, most of those that the Company has to utilise for production have not yet been so favoured. It will be noticed that the gains and profits of the Company as against those of the Government work out in the ratio of 1 : 15.

During the year, the directors developed serious differences with the Technical Collaborators Messrs. Hilton-Davis Chemical Company. The Collaborators have, however, thought it fit to sell their interests to Messrs. A.C.N.A.—A Division of Montecatini of Italy and demanded a release of all their obligations, which has been passed subject to the approval of the Government. The above incident has created a saving in the actual amount of Rs. 9,627.84 for royalty for 1956 and much bigger amount for 1957.

The directors have decided to appoint Messrs. A.C.N.A. who have bought over the stock of Hilton-Davis for financial participation, as technical advisers and the negotiations therefor are almost completed. Government approval is now awaited. A.C.N.A. shall also undertake to furnish technical assistance and know-how for the Company's future expansion programmes. As A.C.N.A. are one of the big and experienced manufacturers of dyestuffs in Europe, and quite familiar with the conditions existing in this country, the company will have the benefit of sound and economical technical guidance in future at comparatively much lower cost.

The Directors inform that notwithstanding serious handicaps, the Company has been able to extend its range of manufacture of dyes from five types of Amarthols in the beginning of the year to eleven types at the end thereof and from one or two types of Fast Bases to eleven types thereof. Appreciable progress is also made in the range of manufacture of Stabilised Azoics for printing and in that of the Optical Whitener.

The sales of the Company during the last year have not been quite satisfactory due to heavy stocks in the market of imported materials and hence the production had also to be curtailed. Besides large stocks of imported raw materials ordered out in expectation to meet the anticipated demand, remained unutilised and thus burdened the Company in its infant state with interest and insurance expenses. But this situation has changed considerably now with stricter import restrictions and depleting stocks of importers and the Company expects to expand its sales considerably this year and consequently show better results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	79,97,750	Block ...	67,15,920
Liabilities ...	64,93,887	Stock of finished goods ...	26,53,914

Rs.	1,46,42,748	Rs.	1,46,42,748

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1957.

After charging all expenses the accounts show a profit of Rs. 47,367 (Rs. 5,25,194). The balance brought forward from last year was Rs. 1,10,020 (Rs. 55,826) making a total available for appropriation of Rs. 1,57,387 (Rs. 5,81,020). The directors recommend payment of dividends on preference shares at 7 per cent. per annum absorbing Rs. 21,000 (Rs. 21,000) and on ordinary shares at Rs. 5 (Rs. 7.50) per share absorbing Rs. 1,00,000 (Rs. 1,50,000) leaving a balance to be carried forward of Rs. 36,387 (Rs. 1,10,020 after providing Rs. 3,00,000 for taxation).

The amount of jute exported to India from Pakistan again decreased and, in spite of increases in freight rates, the Company's earnings from the carriage of jute were considerably less than in previous years. During the year 70,908 tons of coal were carried from Calcutta to East Pakistan stations as compared with 61,913 tons carried in 1956.

As was forecast in the directors' report last year, the possibility of extending the Company's service elsewhere has been examined, as a result of which it has been decided to operate between Calcutta and inland ports of Assam, and the first flotilla is now loading cargo for Gauhati. Assam traffic will at first occupy a small part of the fleet only, but it is hoped that in time it will be possible for more craft to be transferred to this route. In the meantime the arrangements under which coal is carried in the Company's vessels from Calcutta to East Pakistan will continue and space will be offered for such jute as is required to be carried from Pakistan to India.

Accounts in brief are as under:—

Dharamsi Morarji Chemical Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Dharamsi Morarji and Co., Bombay) present the audited accounts of the company for the year ended 31st December 1957.

The profit for the year after providing for bonus to employees, managing agents' remuneration and depreciation for the current year and arrears of depreciation of the previous years and taxation amounted to Rs. 3,44,919 (Rs. 86,895). Adding thereto the balance brought forward from the previous year's accounts of Rs. 5,474 (Rs. 728) the amount available for disposal is Rs. 3,50,393 (Rs. 87,623). From this amount, the directors propose the following appropriations:—

To reserve for plant rehabilitation Rs. 30,000 (*nil*), to gratuity reserve Rs. 28,000 (*nil*) and to general reserve Rs. 1,50,000 (*nil*) leaving a balance of Rs. 1,42,393 (Rs. 87,623). The directors recommend payment of a dividend at the rate of Rs. 5 (Rs. 3) per share on 27,383 shares of the Company which will absorb Rs. 1,36,915 (Rs. 82,149) leaving to be carried forward Rs. 5,478 (Rs. 5,474).

As a result of favourable trading conditions, the sales and profit for the year 1957 shows a substantial increase from that achieved during the previous years.

The directors have thought it fit, this year, to set apart a sum of Rs. 30,000 towards reserve for plant rehabilitation. This sum is by no means sufficient to take care of the enormous increase in the cost of plant and machinery required for replacement and modernisation, but a valuable start will have been made. As the shareholders are aware, no surplus was available in the past years to create a reserve of this nature.

Expansion and Modernisation.—The directors have decided to put up a *Continuous Superphosphate Plant*, which will enable the Company to increase its rated capacity for production of *Superphosphate* by 1,200 tons per month to 3,600 tons a month. They have also decided to scrap the existing 35-ton *Chamber Plant* and the 10-ton *Contact Plant* and erect in their place one *Contact Plant* of 50 tons daily rated capacity, for the manufacture of *Sulphuric Acid*. The approval of the Government of India, under the Industries (Development and Regulations) Act, 1951, to both these schemes has been obtained; since the close of the year, the import licences required for the import of the essential component parts of these plants have also been received.

A major portion of both the plants will be got fabricated indigenously. The directors are confident that by this action considerable saving of foreign exchange to the benefit of the country and economies in total capital outlay to the benefit of the Company, would be effected. The schemes of expansion and modernisation are expected to be completed by the middle of 1959.

Bonus to Employees.—A provision for payment of bonus equivalent to three months' basic wages or salaries to the employees of the Company for the year 1957 has been made in the accounts of the year. The Board of directors wish to take this opportunity to express their appreciation of the hard and loyal services rendered by one and all employees during the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,69,150	Block ...	16,45,966
Reserves ...	4,50,000	Stock-in-trade	9,03,207

Liabilities ...	21,20,166	Investments	15,243
Profit and loss account ...	5,478	Cash ...	7,880
		Miscellaneous expenditure and losses	1,94,456
Rs.	42,59,957	Rs.	42,59,957

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit, after charging all expenses, of Rs. 1,49,954 (Rs. 5,54,496) of which the provision for taxation requires Rs. 74,000 (Rs. 2,65,000). The balance brought forward from last year was Rs. 62,822 (Rs. 43,305). The directors have transferred from reserve for repairs Rs. 50,000 (*nil*) making a total amount available for distribution of Rs. 1,88,776 (Rs. 3,32,801). An interim dividend of 60 (75) nP per share was paid on 16th December, 1957 absorbing Rs. 84,493 (Rs. 1,05,617) and the directors now recommend that a final dividend of 60 (75) nP per share be paid absorbing Rs. 84,493 (Rs. 1,05,617), leaving a balance to be carried forward of Rs. 19,790 (Rs. 62,822 after transferring Rs. 58,745 to fleet depreciation and insurance reserve). The sum of Rs. 1,971 has been transferred from investment realisation surplus to meet a small loss on the sale of investments. Rs. 25,551 being the profit on the sale of block assets, has been transferred to capital reserve.

Freight earned was satisfactory but expenses, particularly on repairs, showed a considerable increase compared with the previous year. With the current import restrictions, it is not considered likely that freight earnings in the immediate future will again reach the level of 1957. As a result of these restrictions, there is keen competition for the available lighterage business in the port; for this reason, in addition to the four new lighters referred to in last year's report as being particularly suitable for import cargo, orders for a further four similar craft were placed during the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,08,220	Block ...	35,61,083
Reserves ...	24,92,283	Stores ...	1,27,447
Provision for taxation ...	61,379	Debts, deposits and advances ...	7,93,982
Liabilities ...	9,32,871	Investments	1,50,000
Profit and loss account ...	19,790	Cash ...	2,82,031
Rs.	49,14,543	Rs.	49,14,543

Okayti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1957.

The accounts disclose a profit of Rs. 1,930 (Rs. 1,269). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 11,973 (Rs. 13,844), of which the directors have transferred Rs. 10,000 (*nil*) to revenue reserve, leaving Rs. 1,973 (Rs. 10,344 after paying a dividend of 1 per cent. on the preference shares absorbing Rs. 3,500) to be carried forward.

Crop weighed out at 1,49,376 lbs. as compared with 1,76,000 lbs. estimated and 1,83,154 lbs. in 1956. The shortfall in crop is attributed to unfavourable climatic conditions, hail damage and the ravages of pests and blights which are estimated to have resulted in the loss of 16,000 lbs., 18,400 lbs., and 6,800 lbs. made tea respectively. The average selling price was Rs. 3.90 per lb. as against Rs. 3.06 per lb. in the previous year.

Estimates for 1958 provide for a crop of 1,80,000 lbs. at an outlay of Rs. 5,71,000, including inland freight and sale charges.

4. To appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 14th August to 3rd September 1958 (both days inclusive).

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a *Proxy need not be a member of the Company.*

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
P. B. No. 570,
GANDHI NAGAR P. O.,
BANGALORE 9, *4th July*, 1958.

N.B.—The Board of Directors have recommended payment of dividend at 10 per cent. or Re. 1 on every share of Rs. 10 for the year.

The Dividend when declared will be made payable at the Bank of Mysore, Ltd., Bangalore, or its Branches on and after the 13th September 1958.

The Dividend Warrants will be posted to those shareholders whose names stand on the Register on 14th August 1958.

BOMBAY FIRE AND GENERAL'S BUSINESS EXPANDS

OVERALL WORKING, HOWEVER, SHOWS LOSS

THE audited accounts of the Bombay Fire and General Insurance Company, Ltd. (General Manager: Mr. K. K. Dastur, Bombay) for the year ended 31st December 1957 indicate that the Company has had another year of expanding business in all its three departments, fire, marine and miscellaneous. The combined net premium income for the year amounts to Rs. 18.82 lakhs, which compares favourably with Rs. 15.47 lakhs for the preceding year. The increase over the year is as much as Rs. 3.35 lakhs or 21.4 per cent. This is the second year in succession when the total premium income has recorded an increase, the rise in the previous year having been of the order of Rs. 3.10 lakhs.

Along with the expansion in business, claims, commission and expenses of management have also increased and that too to a larger extent than the rise in premium income, resulting in a small loss of Rs. 30,197. Nevertheless, the distribution to shareholders has been maintained at Rs. 3 per share on the Rs. 40 paid-up shares and at 75 nP per share on the Rs. 10 paid-up shares. This is being done by drawing on the previous year's surplus.

The following comparative table shows the progress of the Company during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Fire				
Net premium	10.82	9.52	8.38	8.81
Claims	4.10	2.77	1.68	1.83
Commission, expenses and foreign taxes	6.11	5.18	4.63	4.64
Fire fund	5.57	4.92	4.35	4.50
Marine				
Net premium	4.46	3.42	2.16	2.57
Claims	2.33	1.75	1.25	1.26
Commission, expenses and foreign taxes	1.65	1.51	1.13	0.98
Marine fund	4.46	3.42	2.16	2.57
Miscellaneous				
Net premium	3.54	2.52	1.83	1.85
Claims	1.80	1.14	0.72	0.69
Commission, expenses and foreign taxes	1.60	1.30	0.94	0.96
Miscellaneous fund	1.78	1.27	0.93	0.94

The net premium income of the fire department shows a rise of Rs. 1.30 lakh to Rs. 10.82 lakhs, but this has been more than offset by the increase of Rs. 1.33 lakh in claims (to Rs. 4.10 lakhs) and of Rs. 0.93 lakh in commission, expenses of management (to Rs. 6.11 lakhs). The claims loss represents 37.88 per cent. of the premium income, as against only 29.12 per cent. in 1956. The ratio of commission, expenses, etc. has also gone up from 54.40 per cent. to 56.46 per cent. After setting aside Rs. 5.57 lakhs, that is, over 50 per cent. of the premium income to the fire fund, the working of the department shows a profit of no more than Rs. 10,178, as against Rs. 1.10 lakh in the previous year.

A similar trend is disclosed in the marine and miscellaneous departments and both of them continue to show losses, though the loss in marine insurance has been considerably reduced. The net premium income from marine business has gone up from Rs. 3.42 lakhs to Rs. 4.46 lakhs and claims losses from Rs. 1.75 lakh (51.46 per cent.) to Rs. 2.33 lakhs (52.16 per cent.). Expenses of management, together with commission and foreign taxes, aggregate Rs. 1.65 lakh or 37.13 per cent., having gone up from Rs. 1.51 lakh or 37.6 per cent. After setting aside Rs. 4.46 lakhs or 100 per cent. of the premium income for marine fund, the accounts show a loss of Rs. 44,879, the deficit having declined from Rs. 1.05 lakh.

The net premium income of the miscellaneous department, at Rs. 3.54 lakhs, is higher by Rs. 1.02 lakh. At the same time, claims loss also has risen from Rs. 1.14 lakh (45.40 per cent.) to Rs. 1.80 lakh (51.02 per cent.). Expenses, commission, etc., show a slight rise from Rs. 1.51 lakh to Rs. 1.60 lakh, but, in terms of the premium income, the expense ratio has gone up sharply from 37.60 per cent to 45.32 per cent. The miscellaneous reserve is maintained at 50 per cent. of the premium income, but this has been done by drawing Rs. 33,834 from the profit and loss account, as against Rs. 25,653 in the previous year.

After closing the departmental accounts, the profit and loss account shows a debit balance of Rs. 30,197 which compares favourably with a surplus of Rs. 14,186 for 1956. Deducting this loss from the previous year's surplus of Rs. 2.38 lakhs brought in, the disposable sum amounts to Rs. 2.08 lakhs. No provision for taxation has been made, while a sum of Rs. 83,924 was set aside a year ago for this purpose. The dividend distribution absorbs Rs. 31,467, leaving a surplus of Rs. 1.76 lakh to be carried forward.

As a result of the year's operations, the Company's total funds have increased by Rs. 1.58 lakh. While the paid-up capital is unchanged at Rs. 4.20 lakhs, the reserve for unexpired risks has been strengthened from Rs. 9.45 lakhs to Rs. 11.64 lakhs. Additional reserve and general contingency reserve are unchanged at Rs. 17,500 and Rs. 5.50 lakhs, respectively.

ENGINEERING

(*Concluded from page* 112)

that the Government is now engaged in revising the relevant Rules. In this connection, the Committee regrets to observe that the Petroleum Concession Rules have not still been finalised. The policy not to grant licences has been in force for nearly 3½ years and, what is more, none of the oil concerns seems to be aware of it. The Committee feels that the question of exploration and prospecting and even mining of oil has to be viewed from "practical considerations and expediency."

Refineries

Reviewing the refining capacity in the country, the Committee notes that the oldest oil refinery situated at Digboi, with a crude oil intake of 0.35 million ton a year, produces a number of oil products including kerosene and diesel oil. The refineries owned by Standard-Vacuum, Burmah-Shell and Caltex went into production in 1954, 1955 and 1957 respectively, their aggregate capacity being 4.37 million tons. India's current requirements are just over 5 million tons. As a result of the discovery of oil at Nahorkatiya, two refineries are likely to be set up shortly; their estimated capacity would be about 2 million tons. The demand for petroleum products, it is stated, is increasing at the rate of 10 per cent. annually. It is thus evident that the problem of meeting the demand (besides that of finding the crude) is "urgent and has to be continuously faced." Referring to the formation of Oil India Private Ltd. to exploit oil reserves in Assam—the Government's agreement with the Assam Oil Co., Ltd., provides for one-third investment by the Government and two-thirds investment by the A.O.C. in the Company—the Committee considers it "unfortunate that, as a result of the delay in reaching an agreement for five years, the country has had to import petroleum products of the value of Rs. 40-50 crores a year which might have been manufactured with the Nahorkatiya crude"; besides, it has lost the royalty and other charges as a result of non-exploitation of the fields.

The Committee understands that two proposals were received from Indian *entrepreneurs* one from Madras and the other from Bhavnagar for establishing refineries in India. Of these, the former proposal was rejected by the Government since it had "several drawbacks." As regards the proposal for setting up a refinery at Bhavnagar with a capacity of 1.2 million tons at a cost of Rs. 12 crores, the then Government of Saurashtra had agreed to extend all possible facilities to the sponsors who, in their turn, had obtained promises of technical and financial aid from a French firm and also promised to use Indian crude oil if it became available. The refinery was intended to be kerosene-intensive. Its working would have meant an annual saving of foreign exchange to the extent of Rs. 6 crores. In the light of these facts, the Committee has suggested that "the consideration of the proposal to set up a refinery in the private sector may be expedited, keeping in view the provisions of the Industrial Policy Resolution."

Notices

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

DIVIDEND NO. 32

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-fourth Annual General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 24th September, 1958 at 11-30 a.m., the Directors will recommend payment of a Dividend (No. 32) for the year ended 31st December, 1957 of 18 per cent. (4.32 pence, i.e., 24 Naye Paise per unit of stock) free of Income-tax payable by the Company in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 6th October, 1958, to all members registered in the books of the Company at the close of business on the 6th August, 1958.

The Registers of Members will be closed from the 7th August to the 23rd August, 1958, both days inclusive.

The nett profit for the year ended 31st December, 1957 was £252,215 (against £272,157 for previous year), after providing £175,000 for depreciation (£175,000 last year), £522,534 for Taxation (against £885,027), £175,000 for General Reserve (against £175,000). With £114,980 brought in from 1956, there is an available balance of £367,195 (against £389,240). After providing £246,834 for proposed Dividend of 18 per cent. free of Income-tax payable by the Company (Dividends No. 30 (Int.) of 6⅝ per cent. and No. 31 (Final) of 13⅛ per cent. free of tax last year—£274,260) the balance carried forward is £120,361 (against £114,980 brought in from previous year).

By Order of the Board,
G. A. CARVER,
Secretary.

GOOD RESPONSE TO STATE LOANS

(From Our Own Correspondent)

BOMBAY, *16th July*

Barring a slight pull during the last two days due to subscriptions to various State loans which opened their lists yesterday, the short-term money market continued to rule easy. The lists for all the State loans, except that of Orissa, were closed during the course of yesterday and today, with some of them being heavily oversubscribed. The effect of this was, however, felt in the inter-bank call money section, where the interest rate recorded a sudden jump.

Earlier in the week under review, inter-bank call money was done among Exchange banks and big Indian banks at 2½ per cent., some small transactions were done even at 2¼ per cent. In the last two days, however, the rate hardened to 2¾-3 per cent. House money at call was unchanged at 4 to 4¼ per cent. with very little business reported even at these rates. Short-term deposits were quoted at 4 to 4¼ per cent. for one to six months.

As the Reserve Bank of India statement for the week ended 11th July 1958 has not been received up to the time of writing, we are unable to include in this report our customary analysis of the trends in note issue, external assets, etc.

The Scheduled banks' statement for the week ended 4th July 1958 shows a sharp fall of Rs. 6.83 crores in demand deposits and a rise of Rs. 1.79 crores in time deposits. Inter-bank borrowings have also recorded a sizable increase of Rs. 5.99 crores, while borrowings from the Reserve Bank are lower by Rs. 1.54 crores. For the second week in succession, advances have gone up, but the extent of rise—Rs. 1.41 crore—is much less than that in the previous week. Bills purchased and discounted are lower by Rs. 90 lakhs. An increase of Rs. 12.13 crores is noted in investments; this is on top of an addition to the tune of Rs. 2.75 crores in the previous week. Cash balances, including balances with other banks, have shrunk by Rs. 8.04 crores.

The borrowing programme of the States has proved to be a success, all the loans, except that of Orissa, having been closed, as stated above, in the course of yesterday and today. Of the nine loans which have been closed so far, Madras, Andhra Pradesh and West Bengal loans have been "fully subscribed," while those of Bombay, U.P., Kerala, Madhya Pradesh, Mysore and Rajasthan have been "oversubscribed." At the time of writing this report, the approximate amount of subscriptions and the allotments pertaining to only five State loans have been published. They are as follows (the figures in brackets being the amounts called for):

(*In crores of rupees*)

4¼ per cent. Bombay 1970	8.26	(10.00)
4¼ per cent. Bombay 1971	5.69	
4½ per cent. Madhya Pradesh 1970	3.10	(2.00)
4½ per cent. Madras 1970	6.03	(5.00)
4½ per cent. Mysore 1970	7.11	(5.00)
4½ per cent. Rajasthan 1970	2.97	(2.50)

Applications for conversions to Bombay, Madhya Pradesh and Madras loans amounted to Rs. 1.22 crores, Rs. 39 lakhs and Rs. 87 lakhs, respectively.

All conversion applications for Bombay, Madhya Pradesh and Madras loans and cash applications up to and including Rs. 10,000 for all the above loans will receive full allotment. Subscribers in cash for amounts over Rs. 10,000 will receive allotment approximately as follows, subject to a minimum allotment of Rs. 10,000:—

Bombay	76 per cent.
Madhya Pradesh	66 per cent.
Madras	89 per cent.
Mysore	77 per cent.
Rajasthan	92 per cent.

The Gilt-edged market continued to rule firm, with a further rise in prices, on good demand for short and medium-dated loans. Turnover, however, remained restricted owing to scarcity of stocks. 3 per cent. 1986 Conversion Loan was neglected at Rs. 71.10. 3 per cent. 1970-75 continued to be in demand and gained a further 10 nP to Rs. 87.60. 3 per cent. 1966-68 gathered 5 nP to Rs. 93.10, as also 3 per cent. 1964 to Rs. 95.65. 3 per cent. 1963-65 picked up 5 nP to Rs. 95.65, but it attracted sellers at that level. 3 per cent. 1959-61 had buyers 5 nP higher at Rs. 99.40. 2¾ per cent. 1960 shot up by 15 nP to Rs. 98.35, due to half-yearly payment of interest. 3½ per cent. 1961 gathered 10 nP to Rs. 99.65 and 3½ per cent. 1963 5 nP to Rs. 99.10. 3½ per cent. 1964 rose by 15 nP to Rs. 98.85. 3½ per cent. 1965 also gained 5 nP to Rs. 98.50, following the rise in Reserve Bank's selling price.

The rupee developed fresh weakness in terms of the U.S. dollar, following the setback in sterling. Banks' selling rate of ready dollars rose from Rs. 477 to Rs. 477.75 per $100 and their buying rate from Rs. 473.75 to Rs. 474.50 per $100. In New York, spot sterling dropped from $2.80½-2.80.9/16 to $2.80.1/16-2.80¼ and three months' forward from $2.78.11/16-2.78¾ to $2.78¼-2.78.9/32. Transferable sterling weakened from 278.50-278.60 cents to 277.70-277.80 cents.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, *15th July*

Easier conditions prevailed in the metal market during the week under review, following expectations of increased availability of materials. There were also hopes that more imports might be permitted. It was thought that the various export promotion schemes and measures would result in more imports of essential industrial raw materials such as non-ferrous metals. In this connection, note was taken of the approach which the All-India Manufacturers' Association had made to get private loans from the National Association of Manufacturers in the United States for importing steel in order to relieve shortages up to 1961. Tin opened at Rs. 571, sagged to Rs. 555 and recovered to close at Rs. 561. There was fair demand, and supplies here also attracted attention from upcountry buyers on account of the Bombay quotation being higher than here. The lower trend in copper on the London Metal Exchange was noted here. In New York also, the trend was downward in copper. Locally, lead closed at Rs. 66, after being lower at Rs. 65. Excepting for some Government demand, there was hardly anything else to note. Electrolytic zinc opened at Rs. 67 and gave way to Rs. 63 before closing at Rs. 65.00. Demand was dull.

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, *16th July*

The bullion market staged a smart recovery during the latter part of the week under review. The dramatic political developments in the Middle East, namely, the military coup in Iraq, overthrowing the monarchy, and the landing of U.S. Marines in Lebanon, revived the bullish trend, as it was felt that one result of these developments would be a sharp fall in the quantum of gold available for smuggling into India. The demand for ready gold also picked up in the last two days. Silver, too, gained ground in sympathy, despite the poor offtake and persistent reports about prospect of fresh arrivals of Tibetan coins.

Early in the week, gold slumped to the lowest level in the past 15 months on nervous selling, following reports of large offerings by a former princely State. Silver also relapsed in sympathy. Thereafter, the market ruled fairly steady, but the fluctuations were confined to a narrow range. The sudden deterioration in political conditions in the Middle East, however, gave a fresh stimulus towards the close, as stated earlier.

Silver for forward delivery (*Shravan* First delivery) gave way from Rs. 181 to Rs. 179-8 on Thursday last. After an improvement to Rs. 180-13, it retreated to Rs. 179-14, but gathered fresh strength to touch a high of Rs. 183-4 today. The closing was, however, a fraction lower at Rs. 182-8. The *Shravan* Second delivery closed at Rs. 183-2, as against Rs. 181-8 a week ago.

Ready silver first slumped from Rs. 180 to Rs. 178-8, and then moved up to Rs. 182-4. The closing was done at Rs. 181-8. The floating stocks of silver have increased from 600 bars to 700 bars. The daily average arrivals were 45 bars (including unrefined metal), while the offtake was on an average 10 bars per day.

Forward gold (*Shravan* First delivery) gave way from Rs. 104-14 to Rs. 103-12 earlier in the week, but slowly moved forward to touch Rs. 104-11 on Monday. The recovery gathered considerable momentum both yesterday and today, with forward gold closing at a high of Rs. 106-13. *Shravan* Second delivery improved over the week from Rs. 105 to Rs. 106-10.

Ready gold finished at a high of Rs. 107-7, after having reacted from Rs. 105-6 to Rs. 104-9. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 3,500 tolas and the offtake was also of the same order.

In New York silver continued to be quoted at 88½c. There was no change in London prices either, spot silver being quoted at 75*d.* and forward at 74¾*d.* Gold, on the other hand, staged a spurt from 249*s.* 11½*d.* to 250*s.* 7¾*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	10-7-58	Highest	Lowest	9-7-58

LINSEED CLIMBS UP

(Messrs. A. Bradley & Co.)

CALCUTTA, *14th July*

There was a considerable advance in the price of linseed and linseed oils during the week, following removal of export duties on linseed, groundnut and other edible seeds and oils. Prices locally advanced by a rupee per maund. There was quite a sharp rise in the price of linseed oilcake from Rs. 13 per maund last week to Rs. 14 today.

At present, immediate prospects of export are poor, as the current advance in prices has put Indian values out of parity in relation to values from other linseed-producing countries. Some business, however, has been put through by Calcutta shippers to Australia at around £120 per ton for bulk shipment. Local crushers are very active and there has been an appreciable increase in the volume of business with a daily turnover averaging 150-200 tons. Business in the oil market, however, is less brisk with neither shippers nor local consumers following the present rise.

The latest quotations are: Ready Rs. 25-2 and July-August Rs. 25-4 per maund.

TRADING IN NEW CROP COTTON FUTURES

(From Our Own Correspondent)

BOMBAY, *16th July*

New crop business in cotton futures commenced in Bombay on Monday, permission for trading having been obtained from the Forward Markets Commission. The basis of the new contract, I.C.C. March 1959, remains unchanged, namely M. G. Moglai Jarilla 25/32". But for minor changes in By-Law 55, the contract is practically the same as the current one. The new contract began its career at Rs. 671.25, and, after moving in a narrow range between Rs. 674 and Rs. 671, closed at Rs. 671.50 the same day. Trading was featureless and turnover very limited. The contract, however, picked up strength yesterday. This was due to heavy bull buying following renewed export quota rumours and optimism regarding the forthcoming visit of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, to the City to discuss with representatives of the mill industry further measures to meet the textile crisis. The news of the disquieting developments in West Asia had a bullish influence on the market. The firmness of other commodity markets was another helpful factor. Influenced by these, the contract made further gains today, though it eased towards the close.

The maturing August contract, after having ruled easy during the earlier part of the week, encountered good support yesterday. The earlier easiness was due to heavy selling, especially by Ahmedabad and Akola operators. This was attributed to the prolonged delay in the announcement of export quota, and the mounting volume of cloth stocks with mills as a result of slow offtake of cloth. Reports that a number of mills in Vidarbha was about to close down and that, consequently, demand for raw cotton would be further affected and favourable weather news, indicating the possibility of a better crop in the new season, adversely affected sentiment. However, renewed export quota rumours and other bullish factors mentioned above induced a recovery yesterday which persisted today also. The closing was a shade lower.

I.C.C. Moglai Jarilla (August 1958) commenced the week at Rs. 685.50 and after declining to Rs. 678 on Monday improved to Rs. 687.50 today. It, however, closed lower at Rs. 683.50.

I.C.C. Moglai Jarilla (March 1959) opened on Monday at Rs. 671.25 and firmed up to Rs. 680 yesterday. After commencing at Rs. 688 today, the contract declined to Rs. 682, but closed slightly higher at Rs. 683.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	16-7-58	*High*	*Low*	9-7-58
I.C.C. Moglai Jarilla (August 1958)	683.50	687.50	678	684.75
I.C.C. Moglai Jarilla (March 1959)	683.25	688	671	671.25*

*On 14th July 1958.

Weather reports in general are satisfactory. Broach and Surat report general rainfall all over the districts; sowings have been completed and germination is satisfactory. In Berar, Khandesh and M.P. there have been small rains and some more would be welcome; sowings are near completion in most places. In the Punjab, the crop is making satisfactory progress with regular supply of canal water at most places; immediate rainfall, however, is said to be necessary for proper nourishment, especially in the unirrigated areas.

In the spot section, activity was fairly well maintained. Fearing a scarcity of good quality cotton, should the Government further delay the import quota announcement, mills made substantial purchases to meet their immediate requirements. Nearly all the popular varieties attracted attention. Popular varieties such as Vijay, Laxmi, Surat, Khamgaon, Jarilla, Kalyan were in demand.

In the export section, shippers showed keen interest in C.P., *Deshi* and its price hardened due to shortage of stocks.

In the foreign section, interest was noted for U.S. styles. Early in the week, about three to four thousand bales of American cotton Good Middling 1-5/32" were purchased by Bombay and Ahmedabad mills at prices ranging from Rs. 1,425 to Rs. 1,445, subject to the availability of import licences. Total business already done, subject to the availability of import licences, is placed at 40,000 bales.

There is much disappointment that the import allocation for the remaining 30,000 bales of sterling area cotton has not so far been released. Mills manufacturing fine and superfine cloth consequently fear that they will have to face acute scarcity of raw materials.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 600; Berar Jarilla 725; Khandesh 790; Vijay 885; Hubli Laxmi 1,040.

The Karachi cotton futures market depicted a divergent trend during the week under review. While the maturing July contract was a shade easy, the distant January contract ruled firm. The firmness of the latter was due to speculative support prompted by good export inquiries, mainly from China. Switchover of purchases from the expiring contract to the distant January contract and selling on tender consideration were responsible for the easiness of the former. Towards the close of the week, however, the contract encountered support and the earlier losses were made up. The closing rate was a shade higher than last week, at Rs. 77-13. The January contract firmed up from Rs. 78-10 last week to Rs. 79-8 yesterday.

The spot section was active and prices improved. Sind *Deshi* and Punjab was quoted Rs. 2 and As. 8 higher at Rs. 64 and Rs. 59-8 respectively. Exports from the commencement of the sea-

son till 26th June aggregated 578,541 bales as compared with 701,698 bales during the same period last season. The following are the latest available quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4 F. Roller 69-3; S.G. 75-3; Punjab Roller 73-3; S.G. 79-11; 289 F.N.T. Roller 80-11; S.G. 91-11; 289 F Punjab Roller 85-11; S.G. 98-3.

Easy conditions prevailed in the Alexandria cotton futures market during the week under review. Brisk enquiries from China and Spain, evident in the past few weeks, subsided. Reports of favourable weather and satisfactory crop progress induced selling with the result that prices suffered a break. Export sales from the commencement of the season till the 15th June were of the order of 755,022 bales. Actual shipments till the 11th inst. amounted to 557,849 bales, leaving a balance of 197,173 bales to be shipped.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end rates:

Karnak: July 75.10 (75.35); November 76.15 (76.10). *Ashmouni*: August 67.25 (67.35); November 68.10 (68.25).

A mixed trend was witnessed on the Liverpool Cotton Exchange during the week. While the near deliveries of both the American and American type contracts ruled fully steady the more distant positions were easy. The steadiness of the former was due to mill fixation and speculative support prompted by strong New York advices. Hedge selling and liquidation, based on the expectation of a possible higher subsidy rates for cotton exports from the U.S., was responsible for the weakness of the latter. Trading in Sudan contract was inactive and prices remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closings:

American cotton one inch staple contract: July-August 25.00 (24.99); October-November 25.20 (25.10); December-January 25.40 (25.45); March-April 25.60 (25.75). *American cotton mixed growth contract*: July-August 25.70 (25.65); October-November 25.75 (25.65); December-January 25.95 (25.9). *Sudan*: July-August 31.25 (31.25); September-October 31.90 (31.90); November-December 31.90 (31.90).

Cotton futures values in New York scored handsome gains during the week on improved trade and commission house buying influenced by news of unwanted showers in certain cotton belts and heavier boll weevil infestation in the southern gulf coast areas. The first official acreage report, published on the 8th inst., failed to produce any immediate influence on prices as it was more or less in line with trade expectations. Traders were awaiting further Washington developments on new cotton legislation.

The price support for current crop extra long staple cotton has been cut by U.S. Department of Agriculture to an average of 53.95 cents per lb. which is 65 per cent. of parity, as against 59.70 cents or 75 per cent. of parity previously.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	15-7-58	8-7-58	1-7-58
Spot	36.50	36.50	36.50
July	—	36.14	36.24
October	36.84	36.60	36.48
December	37.01	36.85	36.73

ART SILK YARN ADVANCES

(From Our Own Correspondent)

BOMBAY, 16*th July*

The bearish trend noted in the rayon yarn section last week-end gathered considerable momentum during the week under review, and values suffered a further marked fall. There was selling pressure induced by fears of enlarged supplies of yarn in the market. The fears were based on the decision of the Government of India, announced last week, to allow licence holders to utilise their import licences issued for the current half year for importing 120 and 150 deniers high viscose rayon yarn upto 50 per cent. of the face value of licences and 120 and 150 deniers acetate rayon yarn up to 25 per cent. The Government was also reported to have recently issued import licences to the extent of Rs. 3 crores (including Rs. 1.25 crore worth of licence to units in Bombay), to actual users for the current licensing period. The quantity of yarn imported against these licences was expected to start arriving early in September next. In addition to these imports, traders expect that there would be large imports against licences granted under the special Export Promotion Scheme. In contrast to art silk yarn, staple fibre yarn ruled strong, thanks to depleting floating stocks. There would have been an appreciable drop in prices but for rumours of the Government allowing imports of raw staple fibre in moderate quantities to actual consumers in India.

A development of import to the cotton yarn trade is the Government of India's decision to discontinue the existing system of allocating their export quotas for cotton yarn to mills on the basis of their production. Accordingly, the mills are now allowed to export as much yarn as they can freely do so without quantitative restrictions during the current licensing period, that is, July to December 1958. It will be open to the mills to get an advance export licence themselves or to nominate exporters for specific quantities. In the latter case, the names of such nominees and the quantities for which they are nominated are required to be reported to the office of the export trade control authority concerned. This decision, however, did not have any effect on the market, because it was felt that it might not lead to any significant rise in export business with overseas countries, owing to keen competition from countries like Japan, China and Pakistan.

Imported art silk yarns encountered selling pressure and suffered a setback to prices. 120 Japan climbed down from Rs. 7.06 last week-end to Rs. 6.50 today. 150 Japan dropped 44 nP to Rs. 6.25. 120 Italy fell by 50 nP to Rs. 6.50. 150 Italy shed a like amount to Rs. 6.25. Indigenous yarns also came in for selling. National Rayons 150 bright cones first grade receded by 44 nP to Rs. 5.06. 120 bright cones first grade declined by 13 nP to Rs. 6.37.

In the staple fibre yarn section, 40×2 August delivery met with good buying support and advanced by Rs. 9 to Rs. 707. Among spot yarns (40×2), New Greats were well supported, its rate improving from Rs. 3.56 to Rs. 3.81. Citys were done at Rs. 4, Centurys at Rs. 4.09 and Kohinoors at Rs. 4.02. Foreign yarns (80×2), however, were subjected to selling, Paramounts and Fujis both shedding 13 nP to Rs. 9.12.

Among cotton yarns, ten counts Moderns were dull at Rs. 13.50, as also Podars at Rs. 12.62. Twenty counts Indus were done at Rs. 16.37, same as last week. Similarly, Moderns were unchanged at Rs. 16.50 and Gokaks at Rs. 16.75. Thirty counts Hinds were subjected to selling and eased by 7 nP to Rs. 19.37. Forty counts Meenakshis, however, were well supported and the price moved up from Rs. 25.06 to Rs. 25.37. Among sixty counts, Raghuvamshis shed 15 nP to Rs. 56.50. Finlays were dull at Rs. 61. Eighty counts were well supported, Moderns and Finlays rising by 50 nP to Rs. 70 and Rs. 77, respectively. Mahendras were firm at Rs. 69.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	16-7-1958	9-7-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.50	7.06
150 Japan (per lb.)	6.25	6.69
120 Italy (per lb.)	6.50	7.00
150 Italy (per lb.)	6.25	6.75
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	707.00	698.00
40×2 Kohinoor (per lb.)	4.09	4.09
40×2 City (per lb.)	4.00	4.03
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.62
20s Modern	16.50	16.50
30s Hind	19.37	19.44
40s Minaxi	25.37	25.06
60s Finlay	61.00	61.00
80s Mahendra	69.00	69.00

OILSEEDS FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 16*th July*

Hedge trading in new crop oilseeds contracts barring linseed commenced on Saturday this week. Groundnut February 1959 delivery is subjected to a special margin system. The margin payable is fixed at Rs. 15 per candy, if the closing price exceeds Rs. 165 per candy—the marginal rate—and at Rs. 25 when the rate is higher than Rs. 175; hitherto, there was only one uniform rate of margin, namely, Rs. 25 per candy on all purchases above Rs. 165. The margin must be paid by every member on the total of the net long position of his own account and that of every client of his. If, at any time more than one hedge contract are running, the margin shall be payable when the closing price of either of such contracts is above the marginal line and, for the purpose of payment, the total of the long position will be determined after allowing set off of his or each of his client's short position in one contract against such member's or each of his client's long position in the other contract. The provision of By-law 296A in respect of payment of ordinary margin shall not apply in respect of groundnut whenever the price of the February contract rules above the marginal line.

Despite the operation of margins, the groundnut section ruled distinctly firm. The firmness was aided by the abolition of excise duty on groundnuts early this week. There were reports that a leading *vanaspati* manufacturer had purchased a large quantity of groundnut oil. This factor, together with reports that the Government of Burma had invited tenders for groundnut oil supplies before the 23rd inst., induced good support to groundnuts and groundnut oil. As a consequence, prices registered an impressive rally. In sympathy with groundnuts, and following encouraging overseas demand for linseed oil, the linseed section also ruled buoyant and there was a marked increase in prices. Export business involving a sizable quantity of linseed oil was put through with U.K. at £115 10*s.* per ton. There were reports that Australia continued to show interest in buying Indian linseed oil. Demand from other countries was also expected to broaden, what with unfavourable crop conditions in Canada and somewhat obscure position in Argentina. The castorseed section also presented a very firm trend, despite the Government's continued refusal to allow export of castorseed. The chief inspiring factor was the expectation of enlarged demand for Indian castor oil from foreign countries, thanks to lower Brazilian crop and deterioration in international political situation. There were unconfirmed rumours of export business having been put through with Russia. Cottonseed met with good buying support. Kardiseed and nigerseed were firm on buying enquiries encouraged by removal of export duty.

Groundnut August 1958 contract which stood at Rs. 174.12 last week-end evoked excellent buying orders and moved up to touch the highest level of Rs. 187.75 today. At this level, profit-taking set in and the contract finished lower at Rs. 185. Business in new crop groundnut February 1959 contract commenced at Rs. 165.25 on Saturday. The contract was somewhat subdued on the opening day, as also on Monday. Subsequently, however, it recovered and firmed up to touch Rs. 169 today before closing at Rs. 168. Over the week, bold ready registered a gain of Rs. 1.37 to Rs. 37.87. Coromandel and Khandesh quality both spurted from Rs. 36.62 to Rs. 38.75. Groundnut oil ex-mill picked up Re. 1.25 to Rs. 20.50. Railway receipt put on a rupee to Rs. 20.

Castorseed September 1958 contract attracted good attention of operators and forged ahead from Rs. 155.87 to Rs. 165.50 today. Towards the close, however, it was subjected to nervous unloading by bulls and dropped to Rs. 162.50. Castorseed May 1959 delivery commenced at Rs. 149.25 and moved up gradually to Rs. 164.75 today before closing lower at Rs. 162.50. Ready Madras strengthened from Rs. 30.56 last week-end to Rs. 32.75 today and Kanpur quality from Rs. 29.37 to Rs. 31. Castor oil B.S.S. moved up 75 nP to Rs. 17.75. Commercial quality rallied 87 nP to Rs. 16.37.

Linseed September 1958 contract had many buyers, its closing rate today being Rs. 35.19 as against Rs. 33.44 on Wednesday last. Business in linseed May 1959 contract will be permitted, as already reported last week, only after the changes in rules and regulations regarding the contract as proposed by the Bombay Oilseeds and Oils Exchange Ltd. are approved by the Forward Markets Commission. Bold ready was well supported, the quotation spurting from Rs. 33.25 to Rs. 34.87. Linseed oil ready elicited excellent support from shippers and climbed up from Rs. 16.87 last week-end to Rs. 18.25 today.

Cottonseed September 1958 contract strengthened from Rs. 116.75 to Rs. 122.50 today before finishing lower at Rs. 120.25. February 1959 delivery commenced at Rs. 108.50. After declining to Rs. 104.50 the same day, on account of selling pressure, the contract recovered gradually to touch a high of Rs. 109 today. At the close, however, it receded to Rs. 107.50, owing to profit-taking.

Kardiseed reacted bullishly to the Government's abolition of export duty. It was done at Rs. 22 today, as against Rs. 20.50 last week-end. Similarly, nigerseed Madras' quality met with good buying support, the quotation advancing from Rs. 30.25 to Rs. 32.25 on the 14th inst. It was, however, lower at Rs. 32 yesterday. This rate was maintained today also.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	16-7-1958	9-7-1958	2-7-1958
	Rs.	Rs.	Rs.

MONTHLY SUGAR RELEASE

(From Our Own Correspondents)

BOMBAY, 16*th July*

Despite the normal monthly release of 170,000 tons of sugar announced this week, the sugar market ruled fully steady. For actual arrivals of sugar into the market were negligible, thanks to dislocation of rail traffic due to heavy rains; the arrivals aggregated just 1,400 bags, as against 8,000 bags in the previous week and 11,800 bags in the week before that. Consequently, sugar prices were held steady.

Small grain sugar rose by 50 nP to Rs. 106.50 per bag. Medium grain hardened by a like amount to Rs. 107.50-Rs. 109. Large grain was done at Rs. 110-Rs. 116.

The Indian Sugar Mills Association, Calcutta, has sold for export about 12,400 tons of sugar, the bulk of which, amounting to 9,000 tons, is accounted for by Sudan, the balance being the quantity sold to Malaya. The Association has suspended further sales in expectation of realising better prices.

An unprecedented event took place in the sugarcane district of the Bombay-Deccan. It is reported that several traders in the bulk *gur* producing areas like Muzaffarnagar recently came down to Ahmednagar district and purchased *gur*. The *gur* so purchased has been transported to Muzaffarnagar either for local sales there or for using it to manufacture *khandsari* sugar.

• • • •

HAPUR, 14*th July*

Sugar prices displayed a steady trend during the week, thanks to delay in the release of fresh quota for sale in free market. The supply position, however, was reported to be easy. Current quota of almost all the factories had been sold out and it was reported that, since the Government was considering fixation of prices for all grades according to the specification of the Development Council, the next quota might be delayed for some days more.

Good support from Punjab and Rajasthan accounted for gains of about 19 nP-37 nP per maund during the week under review in the crystal sugar prices in the Muzaffarnagar market. Small grain prices improved considerably as compared to holder crystal. The latest ex-mill delivery prices there are: Rampur (B29) Rs. 38.37; Buland (C29) Rs. 38; Rohana (B29) Rs. 39.25; Mansurpur (C29) Rs. 38.62; Daurala (C29) Rs. 38.37; Amroha (D29) Rs. 37.12; Meerut (D28) Rs. 37.75; Simbhauli (E29) Rs. 37.56.

Prices of sugar in Kanpur stayed steady, due to good demand in the face of poor stocks.

Khandsari prices recorded further gains during the week, on account of good demand and in line with the firm trend of crystal sugar prices. The prevailing prices were Rs. 34 to Rs. 37 per maund according to quality.

Good demand and fully bullish trend in the futures section induced good support for *gur*, the prices of which registered a rise. Dry quality was quoted upto Rs. 23 per maund, and Kotha dry-wet quality at Rs. 21. Local stock was put at 55,000 maunds. Fairly good rains here have proved beneficial to the standing cane crop, but, in most parts of the State of U.P., cane crop has suffered due to deficient rains.

Gur and *shakker* stocks ran down further in the Muzaffarnagar market where it was put at 28,000 maunds. *Shakker* was much in request from Rajasthan and Madyha Pradesh and prices, therefore, improved by Re. 1 per maund. *Khandsari* prices were higher by about Re. 1 per maund, due to good demand from Madhya Pradesh and Gujerat. The latest prices were: *Chakku* dry-wet Rs. 22.50; dry Rs. 23.50 per maund; *khandsari* Rs. 35 and Rs. 37.

In the futures section, Fagun delivery opened at Rs. 14.54 on Monday last and touched the highest in mid-session at Rs. 15.28 when the local chamber fixed the ceiling at Rs. 15.27. Thereafter, prices reacted and touched the lowest at Rs. 14.46, but again improved and was today quoted at Rs. 14.96

BLACK PEPPER MOVES UP

(Messrs. Parekh and Co.)

BOMBAY, 16*th July*

Following deterioration in political situation in the Middle East, Malabar black pepper firmed up with sellers reserved. Sarawak in Singapore improved to Str.$77 for black and Str.$136 for white.

New York spot was listed at $0.28, while improvement in London was more pronounced, white and black pepper quoting at 31d. and 19d., respectively.

Cochin, after see-sawing between Rs. 625 and Rs. 637½, rallied to Rs. 650. Garbled in ready at Cochin was quoted lowest at Rs. 108 and highest at Rs. 110½. August delivery ruled strong at Rs. 116¼. Calicut, after dipping to Rs. 650, improved to Rs. 685.

The future of the market now depends upon the political situation in the Middle East. Pepper, which was experiencing narrow fluctuations for many months past, is now likely to be more speculative showing wide fluctuations, as dealers in New York and Europe who were waiting for lower price will be forced to cover their short sales, as well as autumn requirements, since pipelines of grinders and spice mills are running down.

In specific delivery, July, after touching Rs. 625, improved to Rs. 645. In the A.S.T.A., July-Aug-Sept. was quoted nominally at $0.27, with small business passing.

Today's nominal quotations are: Ready Rs. 92 per Bengal maund; July Rs. 640-Rs. 650 and September Rs. 656-Rs. 666 per candy of 5¼ cwts.

TEA DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 11*th July*

1,205,440 lbs. were offered in sale No. 20 which was held on Tuesday, 8th July. Although the quality of the teas was generally inferior, there were still some usefull descriptions on offer. The appearance of the teas was generally satisfactory for the time of year. The sale opened to an improved general demand. Low medium and medium brokens and fannings came to a better market, and these were irregularly 5 to 10 nP dearer. Good medium teas received some competition and these types were also dearer. The high grown teas met with less demand, and were 10 to 15 nP lower. A feature of the sale was the useful demand for all fannings grades. Whole leaf types were generally easier. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.50 to 1.65
Medium	1.65 to 1.80
Good medium	1.85 to 2.25
Quality	2.10 to 2.70

London Markets:—Best steady others weaker.

Colombo Market:—*Sale of 7th July* 1958:—Strong demand. Limited selection high and medium brokens and fannings. Others generally easier.

Sale of 8th July 1958:—Stalky sorts lower; others good demand firm.

Export Quota:—A fair amount of business has been transacted over the week with business going through, at 12½ nP and 12 nP. Today's quotations are sellers 12 nP and buyers at 11 nP. Probable business at 11½ nP.

Forthcoming Auctions:—Sale No. 21 will be held on Tuesday, 15th July and Dust Sale 'O' will be held on Thursday, 17th July 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 21:—1,100,000 lbs. Slightly improved quality. Low mediums and mediums 5 to 15 nP dearer, following quality. Poorer, high-growns about steady. Others dearer. Whole leaf strong."

QUALITY TEAS RISE

(From Our Own Correspondent)

CALCUTTA, 15*th July*

A further rise in prices was recorded in quality teas, excepting C.T.C., in the export auction held yesterday. There was no internal sales last week. There were reports that Dooars teas received keen attention in Mincing Lane's auctions last week when catalogues included the first of new season's teas.

Offerings during the export sales held here yesterday aggregated 23,380 packages. There was a good general demand, and non-Dooars being in short supply, were dearer. Bright liquoring Assams and orthodox fanning grades were the strongest features. C.T.C. Assams met with less demand and eased. Clear plains, although stalky, were steady. "Teas for price" hardened. Keen competition was offered to stylish whole leaf grades. Darjeelings were irregular, but tippy teas were steady. The following are the quotations with those of a week ago in brackets:

Best Assam C.T.C. Fannings Rs. 4.80 to 5.00 (Rs. 5.00 to 5.50); Best Assams C.T.C. B.P. Rs. 4.40 to 4.80 (Rs. 4.50 to 5.00); Clear Black Pekoe Rs. 2.40 to 2.50 (same); Medium Fannings Rs. 2.50 to 2.70 (Rs. 2.40 to 2.50); Medium B.P. Rs. 2.30 to 2.50 (Rs. 2.20 to 2.30); Plain B.P. Rs. 1.84 to Rs. 1.88 (same); Plain Fannings Rs. 2.00 to 2.10 (Rs. 1.94 to 2.00).

A tea sale was held in Chittagong on 9th July. Offerings were 2,294 chests of dust and 88 chests in supplement and 9,162 chests of leaf grades. Leaf, which showed a considerable improvement in quality, was in strong demand. Keen competition was offered to the best liquoring varieties and tippy teas, prices of which improved impressively. As the sales progressed, however, demand weakened, and prices closed at As. 1½ to 2 above last rates. Polished green teas realised Rs. 3-3 to Rs. 3-6-6. Fair prices were realised by unpolished teas too.

Dusts improved by As. 2, plain Sylhet dust being quoted at Rs. 2-6 per lb.

23rd July has been fixed as the date for the next sale

JUTE GOODS MOVE NARROWLY

(From Our Own Correspondent)

CALCUTTA, 15*th July*

In the absence of fair genuine business, prices of both jute goods and raw jute moved within narrow limits during the week under review. The publication of lower shipment figures for the month of June and higher stock figures as at the end of the month naturally depressed sentiment for jute goods. B. twills were throughout quoted much below the I.J.M.A. floor, and the closure was lower on balance. On the other hand, hessian 40" 10 oz. was above the floor, although the tendency for the price was to move down. As a result of the dock workers' strike last month several consignments had been held up. Reflecting this position, sacking shipped aggregated only 17,000 tons, as against 27,000 tons in May, and gunny 20,000 tons, as against 31,000 tons. After the strike, several delayed shipments have been cleared and Argentina has purchased a fair quantity of hessian. Stocks at the end of June were higher at 134,000 tons, as against 112,100 tons as at the end of May. Sacking alone increased by 16,100 tons, and hessian by 6,000 tons, while there was a small reduction of 200 tons in miscellaneous construction.

Since consignments to Argentina have so far amounted to only a fair quantity, it is expected that in this month hessian stock would record a reduction; but that the entire increase of 6,000 tons could not be erased without more American interest. As regards heavy goods the outlook is yet uncertain, and the Australian complaints regarding deterioration of quality have no doubt affected sentiment. It is to be hoped that mills would take prompt action on these complaints. Overall stocks represented about six weeks' production.

On Tuesday last, prices of both heavy goods and hessian construction sagged, following publication of high stock figures. Had it not been for the port workers' strike, there should not have been any increase in hessian stocks, and, although heavy goods were not doing well even in the first half of June, overall stocks would have got balanced. The increase in stocks had been expected, however, the announcement of such a large increase as 21,900 tons affected sentiment in market. Also, in view of good purchases by buyers on behalf of Argentina towards the end of the month, such an increase as 6,000 tons in hessian stocks was no doubt a disagreeable surprise. Hessian 40"×10 oz. gave way to Rs. 40.90 from Rs. 41.00 on Monday and ready B. twills to Rs. 97.75 from Rs. 97.00. The decline would have been felt more had it not been for some support accorded by speculative elements. On Wednesday, prices for the above two representative constructions declined to Rs. 40.80 and Rs. 97.70, respectively, in the absence of substantial interest being displayed by foreign buyers. On the next day, there was selling pressure, and ready hessian 40"×10 oz. weakened to Rs. 40.60 and B. twills to Rs. 96.65. At these lower levels, some covering business was done, and on Friday hessian 40"×10 oz. improved to Rs. 40.95 and B. twills to Rs. 97.15. Over the week-end, however, there was again selling pressure, and prices at Rs. 40.80 and Rs 96.80 were depressed. At this stage, business was done with overseas buyers, and, as a result, hessian 40"×10 oz. rose to Rs. 41.25 yesterday and ready B. twills to Rs. 97.30.

Easiness in goods was reflected in raw jute, although the decline in raw jute prices was only nominal. Thus, Assam Northern Bottoms closed at Rs. 26.00 (August-Sept.), as against Rs. 26.25 early in the week. From Rs. 28.50, local Daissee Bottoms gave way to Rs. 28.25. The monsoon is still unkind to this part of the country, and the intermittent showers have been far from adequate to filling up dried tanks and streams. Early delivery new crop commanded a premium, and if adequate rains did not fall in the near future it is feared raw jute prices will be raised to levels uneconomic to mills. The latest quotations of raw jute are:

	Middles Rs.	Bottoms Rs.	Delivery
Pakistani:			
District ...	31.00	28.00	Aug to Sept.
Northern ...	31.00	28.00	,,
Indian:

Jungli ...	25.50	23.00	,,
Daissee ...	31.00	28.50	Sept. to Oct
Uttar Pradesh	25.50	23.00	Aug. to Sept
Daissee mesta ...	26.25	23.75	Sept. to Oct.
Bimli f.a.q.	Rs. 22.00		Oct. to Nov.

Pucca bales 1st marks Rs. 160.00 ready per bale.

SELECTIVE BUYING IN HIDES

(From Our Own Correspondent)

MADRAS, 14*th July*

Arrivals of tanned cow hides were restricted and of calf skins poor. Shipment business was difficult, as Madras prices were out of line with U.K. importers' ideas, and buying was selective and for items which were in short supply. Demand persisted for 5-5½ lbs. average cow hides fourths, fifths and inferior selections and 8-8½ lbs. and 10-12 lbs. fifths, as well as lower ends of buff calf and cow calf. There was good call for lower grade cow hides for inland trade and shippers were not able to meet U.K. demand on account of price disparity. Buff hides were taken up mostly for export to the U.S.A.

In the tanned skins section, prices ruled steady. There were more enquiries for light weight goat skins than for other weights, as well as for fifths selection in medium sheep skins.

HIDES SUPPLIES SHORT

(From Our Own Correspondent)

KANPUR, 14*th July*

The hides and skins market rules steady. There is a shortage of supply due to the hot season. It is expected that, with the expected advent of the rains, the position will be eased. The main purchasers are the local tanners. The Madras dealers and the country tanners were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 350 and 2nd grade Rs. 250 per score; wet salted buff 1st grade 1 lb. 6 oz. and 2nd grade 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 300 to Rs. 275 and 2nd grade Rs. 200 to Rs. 260 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 14*th July*

The foodgrains market continued firm during the week under review also. The Government of India, in order to check the rise in prices of wheat in the North, has restricted the export of wheat products—*maida*, *suji* and *rawa*—from North to Andhra Pradesh, Madras, Mysore and Kerala. The three wheat northern zones could till now export these commodities freely to the south. The Union Food Minister has toured the eastern U.P.'s scarcity areas and has assured the State Government that the Centre would meet their foodgrain requirements.

Wheat at Hapur touched a new high of Rs. 21 per maund for average quality and upto Rs. 21.50 per maund for farm produce. Local wheat stock ran down by two *khatties* during the week and was put at one *khatti* only. Daily arrivals were small, the average being 200 maunds. Stricter vigilance on the border accounted for a fall in wheat arrivals from Punjab side. Rains in west U.P. have been scattered and the *kharif* crop prospects are still uncertain.

Rice registered further gains during the week, due to shortage of supplies and in line with the bullish trend of all grain prices. The State Food Minister has warned hoarders that, if wheat stocks are not unloaded at reasonable prices, the Government will take stricter measures.

Gram recorded an appreciable advance during the week on firm Punjab advices and fractional gains were also recorded in the prices of other coarse grains. The week-end prices on Monday were: Rice *basmati* Rs. 41 to Rs. 44; gram Rs. 14.50; barley Rs. 14.25; *bejhar* Rs. 13.50; *jowar* Rs. 14; *guwar* white Rs. 16.75.

Pulses touched new heights mostly influenced by continued bullish trend of futures prices. Ready *arhar* was much in request and stocks were running down. Arrivals of peas were at an average of 100 maunds daily, while those of *arhar* were nominal. *Urd* and *moong* were also steady in sympathy. The prevailing prices (in rupees per maund) were: Peas *dara* 12.75; farm quality 13.75 to 14.50; peas *dal* 14.75; *arhar* 16.50; *arhar dal* 21; *urd* 19.50 to 21; *moong* 25.50; *massoor* 17.

In order to curb the bullish trend of pulses futures, the local Chamber fixed the ceiling prices of peas *bhadon* at Rs. 12.73 and *arhar bhadon* at Rs. 16.61.

WORLD OUTPUT OF AUTOMOBILES

(*Concluded from page 111*)

pean market emerges, production will no doubt be concentrated in fewer, larger and more economic units and there will be less room for uneconomic assembly operations. *The American Automobile* forecasts that, if the Free Trade Area materialises, an output of 500,000 cars per year may become the economic minimum for a European manufacturer; at present, only one European manufacturer—*Volkswagen*—has an out approaching this size. Production in Europe may then enjoy similar economies of scale as are now usual in the U.S.A. Allowing for lower labour costs in Europe, and for the absence of the dollar handicap in the export markets, the competitiveness of Europe's motor industry will be enhanced.

These trends have a special significance for the future investment of the motor industry in general. The main U.S. manufacturers, aware of the potential competitive strength of production in Europe, are likely to enlarge their European holdings while one or other of the "Big Three"—General Motors, Ford and Chrysler—may consider producing a small economy car in their own country; the production of the "Rambler" by American Motors has led the way. To be competitive with imports, such production would have to be on a substantial scale and see a big local market ahead which is not yet in sight. If successful, it would rob European producers of some of their present valuable market in North America and might create new competition for them in other markets. But notwithstanding the rising imports of small European cars and criticisms about the increasing extravagances and consequent high cost of the U.S. automobile, American motorists in general still want a big car, with families choosing a small car for their additional cars. For their U.S. plants in 1959, the "Big Three" will, of course, continue production on traditional U.S. lines—there is talk of even bigger cars than hitherto.

A noteworthy development is the creation, or expansion, of the production of motor vehicles in importing countries. Sweden has now become a producer and exporter of some significance; Japan has now virtually reached self-sufficiency and Australia is moving in the same direction. Motor vehicle production was established last year for the first time in Brazil, Argentina and China, and all these industries are designed to expand.

The U.S.S.R. is the world's second largest producer of motor vehicles (after the U.S.A.) though a relatively small producer of cars. Last year, production in the U.S.S.R. increased by 3 per cent. and in the whole Communist world by 6 per cent. There are small exports of Russian and Czech cars to a few European countries and, of course, to China. But very few find their way to other countries and given the absence of servicing organisations, motor vehicles are unlikely to play any part in the Communist trade offensive in the underdeveloped countries.

Motor vehicles consume more than one-third of the free world's demand for petroleum products, and any significant changes in engine type, or size, has varying but possibly far-reaching effects upon the oil industry. No less important are changes of habits by motor vehicle users. For example, there is little doubt that the growing tendency in the U.S.A. to use aircraft for medium and long-distance journeys within the country and to hire a car for use at destination reduces the total consumption of gasoline, while the increasing tendency to spend holidays abroad has the same local effect but possibly a contrary effect elsewhere. Also, the tendency in the U.S. to have a small car as a second car may mean that in total a family's consumption of gasoline may be less than if only one big car was in use. On the other hand, a third car in a family (and there are an increasing number) is usually a second-hand car for use by teenagers, and consumption of that vehicle will be high. The erection of new shopping centres outside the main crowded cities in the U.S.A. and the decline in passenger railway travel are but two other developments whose net effects upon the consumption of motor fuels it is difficult to measure. Indeed, in the U.S.A. and elsewhere there is a need for much more research into the effect of the many technical social and fiscal factors that influence the growth in numbers and the use of the motor vehicle which, without doubt, is one of the most potent manifestations of our machine age.—*By arrangement with "Petroleum Press Service."*

INSURANCE

(*Concluded from page 114*)

it should also have opportunities to show enterprise and reasonable boldness. As the Corporation has large funds at its disposal for its business investments, about Rs. 50 lakhs a week, the average net yield on such a large portfolio would be lower than it could be on a portfolio of a smaller size. Under such conditions of diminishing returns, the Corporation would have to make special effort and exhibit initiative in order to discover new avenues of investment which, consistent with security, offer the prospects of capital appreciation, even though the immediate yield may not be attractive. It would be desirable if the Corporation earmarks a portion of its funds for investment in new companies. The radical socio-economic changes of recent times have aggravated the paucity of risk capital and the Corporation, it is suggested, should try, in some measure, to fill the void. In other words, subject to the condition that the schemes drawn up are sound and that there is reasonable assurance that funds will not be improperly used, the Corporation should be ready to move off the beaten track and take calculated business risk.

As regards the question of the L.I.C.'s relations with the share market, it is pointed out that the L.I.C. is interested in the share market in the sense that it will be advantageous to the Corporation if purchases are made when prices are low. On the other hand, conditions in the market would themselves be affected by large-scale purchases or sales by the Corporation. There is no reason for the Corporation to seek to influence the course of prices in the market; its transactions should be governed solely with reference to what it wants to carry in its portfolio. It had been suggested, at the time of the Chagla Commission inquiry, that, inasmuch as market stability was a desirable thing for the Corporation as an investor, it would be justified in seeking to promote stability through its own operations in the market. This, the study points out, might sound plausible, but is faulty reasoning, for market stability is an advantage to an investor if he finds it; it ceases to be an advantage if he has to put down his own money to bring it about. It would be a losing proposition and most unbusinesslike for the Corporation to operate with the notion that it is, in some way, responsible for maintaining stability, howsoever it is defined, in the investment market.

Another important principle which the Corporation should observe is to avoid getting involved in the operation and management of an industrial concern. Section 27-A of the Indian Insurance Act had debarred any private insurance company from acquiring more than 10 per cent. of the subscribed capital of any one concern. This principle, the study emphasises, is as important to the L.I.C. as it was to private insurers, as it must maintain its position as a wholly financial institution and must not take on responsibilities which are not germane to its function. All advantages of having a specialised functional body are compromised if additional functions are thrust upon it. From this it follows that the L.I.C. must scrupulously avoid "cornering" any shares even at the Government's bidding. It would be a travesty of functional autonomy, the *Quarterly* points out, for the L.I.C. to be asked to purchase a company's share in that number and with that objective.

Notice

PRESIDENCY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the above Company has sanctioned the payment of an Interim Dividend in respect of the year ending 31st July, 1958, at the rate of 15 nP (Naye Paise Fifteen only) on each Ordinary Share payable on or after 14th August, 1958, to those persons (or their Mandatees) whose names appear in the Company's Register of Members on 14th August, 1958, as the registered holders of such shares.

The Share Transfer Registers of the Company will be closed from 31st July, 1958 to 14th August, 1958, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

McLEOD HOUSE,
3, NETAJI SUBHAS ROAD,
CALCUTTA-1, *9th July*, 1958.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2471 BOMBAY, 26th JULY 1958 PRICE: Re. 1.50

HOW TO AVERT DEVALUATION

WITH India's foreign exchange reserves declining fast and with the gap in the external reserves remaining wide, the authorities at New Delhi are considering all available possibilities of solving the problem. The one solution which they have decided not to adopt is devaluation of the rupee. They are, however, not averse to following the system of compensatory transactions, that is, export of goods at a sacrifice, the loss involved being compensated by a profit on imports of goods that are scarce in the country. One may say that, in actual practice, this amounts to a partial or selective devaluation of the rupee. The force of this argument cannot be denied and, if the system of compensatory transactions is applied to a large variety of goods, it might *ultimately* force the hands of the authorities to an outright devaluation of the rupee. In their anxiety to push up exports, the authorities should not overlook this danger.

There is, however, one merit in this new system. It is that imports of capital goods and defence equipment, as also food and certain essential raw materials, can be insured against the disadvantages of devaluation, namely, high capital cost. The assumption here is, of course, that the authorities will be successful in holding the cost of living and the prices of domestic raw materials at least at the present levels. But the system of compensatory transactions or something similar to that adopted in the case of sugar and cotton textile exports will, however, tend to make this task more difficult than it already is. In drawing attention to this fact, we are not suggesting that a devaluation of the rupee is the right remedy. We are only making the point that the extent to which a high cost producer like this country can resort to artificial means for stimulating exports is strictly limited and will prove self-defeating if carried too far.

No country can avoid devaluation by talking against it but only by resolute action which will (1) bring down costs and prices and (2) contain expenditure within the available resources. Such an action will naturally be politically unpopular. If our politicians do not have the courage to initiate right policies and the influence to evoke the necessary co-operation from the public, especially the working class, for implementing these policies, the outcome will be what everyone would like to avoid, namely, devaluation. There are as yet no convincing signs that the authorities are willing to go the whole hog in this direction. The efforts that are being made to get foreign loans are commendable and necessary, but they, by themselves, cannot sustain the rupee for long. The loans, if given, have to be repaid with interest. The export potential of the country has, therefore, to be developed and strengthened on sound lines. This requires realistic policies in regard to replacement and renewal of industrial equipment, with first priority to export industries, higher productivity per worker, and larger output of food and raw materials. The fiscal policy of the Government has to be changed with a definite bias for investors and *entrepreneurs*. Encouragement to foreign private capital is required. The industrial policy has to be suitably modified. Introduction of automatic and other more efficient modern machinery should be liberally allowed and the policies which stand in the way at present must be set aside. Workers, too, require incentive; only, their remuneration should bear a better relation to their output than at present.

In the sphere of agriculture, irrigation facilities should be fully utilised, instead of allowing a part of them go waste as is the case at present. Expropriatory land reforms such as ceiling on holdings, uneconomic compulsory rentals for owners and one-sided, unconditional fixity of tenures should yield place to measures that will attract capital for agriculture from individuals. This does not mean that reasonable safeguards to protect the interests of tenants and to check usury are not necessary. What is sought to be done now is based on ideological considerations and goes far beyond this necessity. The result is conflict in rural areas and fall in production. Some think that it is the delay in the implementation of these ideological measures that has been responsible for the decline in agricultural output. This is a false argument designed to cover the inefficiency of the Administration in providing the basic services needed by agriculture such as water, fertiliser, credit at reasonable rates of interest, roads, transport, storage accommodation, stable prices and marketing facilities. There has been a lot of empty talk, pious resolutions, unutilised research but no vigorous action.

India's creditworthiness in foreign countries is judged not by its declarations alone nor by the volume of external debt which it has now. Its economic policies and the efficiency of its administration not only at the Centre but also in all the States are also taken into account. That all is not well with India in these respects is common knowledge. There is urgent need for heart-searching and fresh thinking on the part of the powers-that-be. In this connection, we would like to commend to their attention the following observations of one of India's ex-Finance Ministers and eminent economists, Dr. John Matthai. In an article to the *Hindustan Times*, New Delhi, early this week, he says:

> "..... The intellectual frustration and loss of enthusiasm which prevail in this country in such marked contrast with the spirit of 10 years ago is a result partly of the unrealistic character of our policy in many fields. Ministers make fighting speeches in defence of the second Five-year Plan, but the facts constitute intractable proof of the growing gulf between resources and targets. When ministers are afraid of telling the truth which the facts proclaim every day, they do a disservice to the country and demoralise the people.
>
> "The lack of realism which characterises our economic policy is also illustrated by the compromises we are compelled to make with the devices of an old-world economy, out of respect not for economic realities but for the slogans of a period now past and beyond recall. The alleged success of handspinning and prohibition in the light of actual experience will hardly bear analysis; but we dare not say so. The weight of the dead hand still lies heavily upon us.
>
> "The spirit of individual initiative and enterprise which, in the final analysis, determines the progress of an economy, by whatever label it is called, is kept in check by ill-conceived fiscal and executive measures. There is little room for self-reliance and the forward-looking spirit, when enterprise throughout the economy is pushed down to the dead level of a bureaucracy not distinguished for energy and foresight.
>
> "We are a newly independent people. A newly-independent nation, like a newly rich individual, is apt to show certain traits of exhibitionism in what it attempts to do. It is a temptation to a nation which has attained independence for the first time to make the world believe that it is as good as its older and more advanced neighbours. A little heart-searching will enable us to see that, in parts of our developmental programme, our motives are a good deal mixed. Desire for real progress and desire for mere prestige are often inextricably lumped together. The effect in a time of scarce resources and baffled hopes is to spread a spirit of disillusionment and disbelief in the Government's intentions. This is fundamentally a time for fresh thinking and for exploring new ways of dealing with the country's problems. But a stale leadership and an irremovable Government will not help us to achieve it."

We can say without fear of contradiction that many thoughtful people in seats of power in foreign countries from which India is seeking both men and money are holding similar views. We are, of course, having in mind here the democratic countries. But opinion even in Soviet Russia and its friendly neighbours does not appear to be different. It will be recalled that Mr. Khrushchev, when he was in India in the company of Marshal Bulganin about three years ago, made it clear that he was by no means an admirer of India's policy of prohibition or that pertaining to handlooms and other cottage industries. The powers-that-be in this country may think that all this is wrong and quote in favour of their view the large-scale assistance which India has already received from the U.S. and other foreign countries, including Russia, and the speeches made by some foreign politicians and economists eulogising the Government of India on its achievements during the past 10 years. But they will be just deluding themselves by hugging that view, for the fundamental factor that has induced other countries to help India is political and not admiration for the economic policies pursued by them. It is necessary to stress this point, because some of our leaders honestly seem to believe that there is nothing wrong with our economic policies and that the rupee is one of the soundest currencies in the world. The proof of the pudding is in the eating. If the rupee is that strong, why should the Government resort to artificial methods for stimulating exports?

If, therefore, devaluation of the rupee is to be averted, if talks of devaluation are to be silenced, and if Mr. Morarji Desai's forthcoming mission to Britain and America is to yield real success (in the form of long-term loans, inste-

of short-term overdrafts as is forecast at present), the Government of India must demonstrate to the public in this country and abroad that it has done fresh thinking and that its leadership is not stale, but vigorous and dynamic. One way of doing so would be to introduce an interim budget at the forthcoming session of Parliament, embodying changes in fiscal and economic policies on the lines indicated above. The time when the Government can attract capital and effort from within the country and abroad by making speeches and fervent appeals has gone. What is required is action. Surely, we are not asking for the impossible.

STATES AND SECOND PLAN

ADMINISTRATIVE shortcomings and increase in non-development expenditure continue by and large to dog the efforts of the State Governments in playing the role allotted to them under the second Five-year Plan. This conclusion emerges from the somewhat brief, though statistically satisfying, document entitled *State Development Plans—Review of Progress*, issued by the Planning Commission. If this verdict is not flattering to the State Governments, nobody is to blame but they themselves. Surely, it is in their power to avoid the pitfalls to which their attention has been drawn from time to time both by the Centre and by many impartial observers. Now that the country is in the third year of the second Plan period, one would expect that the States would have fulfilled about 60 per cent. of the Plan targets. Actually, in many States, actual performance has been well below 50 per cent. Even if one allows that the "percentage" method of assessing the progress is an unsatisfactory standard—in many sectors of planning, end-results are often more telling than what earlier years can show—it seems undeniable that the States have to speed up the rate of fulfilment of targets if they are not to be accused of having played the truant.

A State-wise analysis of the cumulative totals of the Plan outlay during the first three years of the Plan shows that Madras tops the list with 60 per cent. of the total Plan outlay. Punjab has fulfilled 56 per cent., West Bengal 53 per cent., and Bombay 50 per cent. The total outlay (Rs. in crores) during the first three years ending 1958-59 with the total contemplated outlay under the second Plan in brackets for different States are: Andhra 89.57 (174.77); Assam 31.48 (57.94); Bihar 83 (190.22); Bombay 175.00 (350.22); Kerala 40.00 (87.00); Madhya Pradesh 76.16 (190.89); Madras 90.85 (152.26); Mysore 55.00 (145.13); Orissa 51.53 (99.97); Punjab 92.00 (162.68); Rajasthan 52.19 (105.27); U.P. 133.00 (253.10); W. Bengal 83.66 (157.67); Jammu and Kashmir 14.79 (33.92). The Commission feels that Madras, Orissa, Punjab and Rajasthan should have no difficulty in reaching the target of expenditure under the second Plan, while Bombay should be able to reach 95 per cent. of the target and Mysore 75 per cent. But doubts have been expressed about Andhra's ability to reach the target. A similar view has been expressed in regard to Kerala and Bihar. Strenuous efforts must be made by these States in order to raise and spend the resources for purposes of implementing the Plan. Nor should it be forgotten that expenditure is not the same as physical achievement and what really ought to matter is the fulfilment of physical targets, rather than mere spending.

In nearly all the States, there is a gap between the Plan outlay and their resources. This gap varies from State to State. The gap (Rs. in crores) in different States is: Andhra 12.13; Assam 40.6; Bihar 113; Bombay 143; Kerala 39.4; Madhya Pradesh 143; Madras 73.3; Mysore 95; Orissa 89; Punjab 116; Rajasthan 77.9; U.P. 139; and W. Bengal 86. What is necessary is that not only should some contribution be made to fill this gap but additional resources found for bridging the overall gap of Rs. 400 crores in domestic resources assumed in the total outlay on the Plan. But the actual position is that only a few States have made fiscal efforts which are likely to bring in additional revenue in keeping with the targets assigned to them. For instance, the fresh taxes so far imposed in Bihar are likely to yield an additional revenue of Rs. 12.8 crores over the five-year period, as against the target of Rs. 28.3 crores set for it. The U.P., too, has apparently failed to make substantial efforts, considering that its new taxes will yield only an additional Rs. 31 crores, as compared with the target of Rs. 46 crores. At the other end of the scale are States like Andhra and Kerala, which have imposed taxes that are likely to bring in additional revenue in excess of the targets set for them. Thus, Andhra and Kerala will realise Rs. 17.2 crores and Rs. 12 crores over the five-year period, as compared with the targets of Rs. 11.3 crores and Rs. 8.6 crores, respectively. Similarly, Madras has imposed fresh taxes of the order of Rs. 16 crores for the five-year period, as against a target of Rs. 12.6 crores; the corresponding figures for Mysore are Rs. 11.4 crores and Rs. 9 crores. Rajasthan, too, has done so, the corresponding figures being Rs. 10.4 crores and Rs. 9 crores. The performance of Orissa is also similar, the new taxes imposed being Rs. 11.3 crores, as against a target of Rs. 8 crores. For other States, the revenue anticipated over the five-year period from their new taxes and the targets set for them within brackets (Rs. in crores) are: Bombay 21 (23); Madhya Pradesh 11.2 (23.0); and the Punjab 15.6 (23).

How vital it is that the States should make special efforts for mobilising resources was brought out by the Planning Commission in its report on the appraisal of the Plan published in May last. During the first three years, the outlay on the Plan by the Centre and the States has been of the order of Rs. 1,424 crores and Rs. 1,032 crores, respectively. The revised allocations of outlay on the Plan for the Centre and the States are Rs. 2,593 crores and Rs. 2,207 crores, respectively, making in all a total of Rs. 4,800 crores. The aggregate yield from the measures of additional taxation adopted so far by the Centre is estimated at Rs. 725 crores over the five-year period, representing an increase of about Rs. 500 crores over the target of Rs. 225 crores set under the Plan. So far as the States are concerned, a similar target, namely, Rs. 225 crores, was set for them. But additional taxation measures over the five-year period are expected to yield only Rs. 173 crores or Rs. 52 crores below the target. Thus, while the Centre has exceeded the target by a very wide margin, the States collectively have lagged far behind the target.

Be that as it may, the five-year yield of the additional tax measures adopted in these three years by the Centre and the States is placed at Rs. 900 crores which, in itself, meets more than fully the target of Rs. 450 crores in the Plan plus the uncovered gap of Rs. 400 crores. Only, all this tax effort, massive as it has been, has availed the Plan nothing. This is because the revenue raised by new tax measures has been absorbed by defence, non-development expenditure and some development expenditure outside the Plan. The result is that the original gap of Rs. 400 crores in resources remains more or less uncovered. This means that fresh efforts have to be made to raise additional revenue. The Centre cannot, however, do much in the matter of new taxation. For, as the Commission itself admitted, the "scope for additional taxation at the Centre is, if anything, very limited." It added: "The effort already undertaken has been large and the current rates of direct as well as indirect taxation are high. The problem for the immediate future is to see how the various changes in tax structure which have been adopted with a view to enlarging the tax base and reducing the scope for tax evasion work out in practice, and to adapt and improve upon the system in a way that ensures a fair share to the public exchequer without impairing the incentive on the part of the taxpayer to work and to save." This consideration suggests that it is the States, not the Centre, which should make additional efforts at raising new revenue.

It is true that the sources of taxation available to the States, although they are not small in number, are not capable of yielding large revenue. Even so, the fact remains that they have not fully exploited the sources open to them. Thus, the estimated yield from general sales tax and tax on motor spirit and diesel oil over the five-year period is only Rs. 90.2 crores (general sales tax Rs. 83.2 crores and tax on motor spirit and diesel oil Rs. 7 crores), as against the target of Rs. 112 crores from this source. A good part of this shortfall may be due to failure on the part of State Governments effectively to enforce sales tax. Again, land revenue, betterment levy and irrigation rates, it was originally computed, would yield an additional Rs. 64 crores. But they are now expected to bring in only Rs. 11.8 crores. Similarly, the yield from agricultural income-tax will yield only Rs. 7.5 crores, as compared with the target of Rs. 12.0 crores. From all this, it should be clear that the States have to concentrate on increasing their income through increased exploitation of such sources as land revenue, irrigation rates and betterment levy. This implies that they should create the necessary agricultural and irrigational facilities and also induce the farmers to utilise them so that agricultural income moves up through increased production.

Nor can the States overlook the imperative need for keeping non-development expenditure to a minimum. From this point of view, It is somewhat disturbing to note that the Commission's report on State Development Plans leaves no doubt that unproductive expenditure has increased in several States. An increase in non-Plan expenditure is indicated by the Commission's review of Kerala's performance under the Plan. This is also true of Madhya Pradesh and Mysore. Referring to W. Bengal's finances, the Commission is constrained to point out that the "increase in revenue resources due to taxation has not been made available for the Plan expenditure and, unless measures are taken either by reducing expenditure outside the Plan and/or by raising further resources through taxation, the State's contribution on revenue account will lag far behind the target agreed to under the Plan." Economy in expenditure is a vital consideration as much for the States as for the Centre. Within the obvious limitations imposed by such obstacles as the need for meeting the demands of their relatively low-paid employees, the States should endeavour to keep within bounds their expenditure on non-development schemes.

Much leeway has to be made up in nearly all States in the matter of raising agricultural production. Food output lags far behind the targets set for it in individual States. Achievement in additional food production (in lakh tons) in the first two years of the Plan with the cumulative five-year target in such production for different States are: Andhra 3.65 (14.86); Assam 1.21 (3.78); Bihar 3.69 (15.0); Kerala 0.34 (2.76); Madhya Pradesh 2.30 (14.61); Madras 5.98 (13.7); Mysore 1.49 (5.91); Orissa 1.23 (9.39); Punjab 2.84 (14.4); Rajasthan 1.27 (8.07); U.P. 5.35 (24.0); W. Bengal 2.11 (9.32). The failure of agricultural output to move up in accordance with the schedule of targets should be attributed partly to unfavourable weather conditions and partly to the fact that seed farms and necessary facilities for the utilisation of irrigation water were not created promptly enough. Thus, in Andhra, because of heavy rainfall and breaches in channels and tributaries, actual irrigation under the Tungabhadra project was only 24,300 acres, although water was available for 116,000 acres. In Bombay, as against the created irrigation potential for 64,000 acres, the actual area irrigated in 1957-58 was only 2,000 acres. This was because the "water stated to be ready for irrigation was often not usable owing to lack of adequate channels or other defects in the canal system." Explaining the shortfall in food output (in relation to the target) in Madhya Pradesh, the Commission points out that there was "(1) delay in the setting up of seed farms, (2) delay in the creation as well as non-utilisation of irrigation potential already created, (3) lack of adequate attention to the implementation of the programme of green manure, and (4) absence of a scheme for the development of local manurial resources." The second Plan target for additional irrigation in Rajasthan was 963,000 acres; actual irrigation in 1956-57 was 22,000 acres and, in 1957-58, it is expected to be 94,000 acres. The delay in the utilisation of benefits of irrigation is attributed to such factors as the "delay in completion of construction work on the tanks or the canals, in the construction of railway crossings and in rock cutting in the canal system, and in construction of field channels." Actual irrigation in the U.P. in 1957-58 is 10.81 lakh acres, as against the total irrigation potential of 25.44 lakh acres, the reasons for the shortfall being "absence of field channels, lack of realisation on the part of the farmers about the benefits of the use of water and lack of proper crop pattern."

It is a pity that the State Governments have failed to realise the importance of ensuring prompt utilisation of irrigation potential which has been created at such heavy sacrifice on the part of the taxpayer. Any failure to benefit from irrigation potential, so created, is a national waste of capital resources. Such failure could be traced to inadequate planning of details and lack of coordination between the different departments such as agriculture and public works. Agricultural departments in the States deserve to be toned up and put in charge of the best administrators available to them. Without such reorganisation, and the necessary drive and planning, all schemes for stepping up food and farm output are bound to remain vague and pious aspirations.

FEAR OF WAR HAS RECEDED

TREASURY BILLS—STATE LOANS—COMMODITY TRENDS—POUND STERLING

THURSDAY, 5 P.M.

MARKET GOSSIP

HAPPILY, the much-feared war in West Asia has not materialised. Shortly after we went to press last week came the news of British troop landings in Jordan in response to the request of the king of Jordan. So, the Americans and the British have acted swiftly and prevented the revolt in Iraq from spreading to the rest of the Arab world. There would have been far more serious complications in West Asia but for their timely action. As was anticipated in these columns last week, the Russians have had the good sense not to go beyond their verbal protests and threats. Consequently, the dark war clouds that had darkened the blue skies of West Asia have been scattered, though not completely blown over. All the big powers have now agreed to talk the matter over under the auspices of the U.N. Security Council. With the war scare thus over, the share markets have resumed their upward trend. Most of the popular counters have come up to very near the peak levels established just before the Iraqi army staged a revolt; quite a few of them have actually crossed those levels. Among the other markets, bullion is less buoyant. Commodities, though still bullish, are now quoted well below the highest levels touched earlier this week, as will be shown presently.

• • • •

The short-term money market is very easy. The surfeit of funds with banks is heavy. The inter-bank call money rate is 2½ per cent. and the rate for House money repayable on demand has fallen well below 4 per cent. The big banks are unwilling to pay more than 3½ per cent. for this money, though some of the banks in the medium range are still taking it at 4½ per cent. The latter are probably a little short of funds, having financed State loans rather heavily. Once a part of these advances is repaid, they too may not be anxious to give the rate now offered by them. All banks, however, are keen to take definite term deposits from one to six months at 3½ to 4 per cent.

The Government of India has done well to revive the issue of Treasury Bills of 91 days' usance. This will provide an opportunity to banks to invest a portion of their surplus funds at rates equivalent to inter-bank call money rate, instead of keeping them with the Reserve Bank free of interest. The scheduled banks' balances with the Reserve Bank are now well over Rs. 95 crores, a sum far above the statutory requirements. The amount invited is only a modest sum of Rs. 1 crore. Apparently, the authorities first want to test the market before increasing the size of the tender.

It will be conducive to a healthy capital market, if banks keep a part of their funds always invested in short-term Government obligations. In recent years, the banks have not had a real short-term liquid asset. Next to cash, their second line of defence has been Government securities. And whenever they wanted more cash to meet the demand for money from trade, they had to liquidate a part of their Gilt-edged holdings which in turn disturbed the Gilt-edged market or led to a sharp increase in the Reserve Bank's holdings of Government securities. This is by no means an ideal arrangement.

Now that the money market is favourable again for reintroducing Treasury Bills after a break of two years and four months, efforts must be made to ensure that they do not happen to be a short-lived affair. This will be possible only if there is understanding between the banks and the Reserve Bank of India. The latter should not try to drive too hard a bargain when money is cheap and force the yield on Treasury Bills to so low a level as to make them very unattractive to banks. Or, that is, the banks, on their part, must be willing to earning a little less on Treasury Bills than on Government securities or comparable investments when money is in good demand; instead, they must regularly carry some Bills in their portfolio during good and bad times as a second line of defence. Until the Treasury Bill system is soundly re-established, the Government, too, need not be in a hurry to drain the market of the surplus funds by making a fresh issue of long-term loans.

Although short-term interest rates have tended to fall, there has not yet been a reduction in the banks' interest rates for commercial loans and advances. Some of the big Indian banks, however, have lowered their rate of interest for demand loans against Government securities from 5½ per cent. to 4½ per cent. This action has been taken presumably to encourage the dealers in Government securities to borrow and raise their turnover in the Gilt-edged market. The former rate was so high that it was not worthwhile for the dealers to indulge in this business. But, now with prospects of a steady rise in the value of Government securities, the reduction in bank interest offers the dealers a good incentive to carry larger blocks of securities in the hope of earning at least some profit, as against nothing until very recently. The result will be a livelier Gilt-edged market which in turn is good for the Reserve Bank and the Governments, both Central and States.

The Gilt-edged market has been fairly brisk during the past few days. The new State loans have not depressed the market. On the contrary, some of them are quoting at a slight premium. Only the loans of Andhra, Uttar Pradesh, Orissa and, to some extent, Mysore are quoted at a discount. Of these four, the discount was heavier in the case of Andhra and U.P. loans at one time. In the initial days, the discount on the Andhra loan was as heavy as twelve annas and on the Uttar Pradesh even a rupee. Apparently, there must have been heavy canvassing for them by their respective State Governments. It is said that a few big banks—only one of them, according to some—enabled the investors harassed by the State officials to apply for these new loans on a slender margin of 2 or 2½ per cent. and that the banks later disposed of the loans in the open market at a discount of about 1 per cent., keeping for itself a clear profit of 1 to 1½ per cent. Barring these two instances, there does not seem to have been any excessive canvassing for the other State loans.

• • • •

The bullish fervour in commodities, which was engendered last week by grave political developments in West Asia, continues unabated, with prices moving up further. The rise in prices has been shared practically by all commodities—foodgrains, sugar, oils and oilseeds, metals, chemicals, and spices. The general feeling among traders is that the West Asian situation, though it may not immediately lead to a world conflagration, will stimulate foreign demand for Indian goods, on the one hand, and delay imports from abroad, on the other. Thanks to this feeling and to the increasing emphasis on export promotion laid by several Central Government Ministers in their speeches recently, the speculative interests have naturally become more active in the commodity markets and been pushing up values since the *coup d'etat* in Iraq on Monday, the 14th inst., as will be seen from the table on this page.

It will be noted that the latest rates are somewhat below the highest levels recorded earlier. This is due to profit-taking induced by fears of official intervention. The authorities have already taken some measures to prevent the markets from getting into the grip of speculators who are always prone to exploit war-scare and push up prices. The steps taken by them include imposition of ban on forward trading in coarse grains, pulses, *khandsari* (brown sugar) and *gur*, raising of the margin on Scheduled bank advances to traders against sugar (from 35 per cent. to 45 per cent.) and a stern warning to market men against enhancing prices by the Union Food Minister. The Central Government is credited with the idea of stopping futures trading in *gur* and banning purchases of wheat by flour mills in the open market. Meanwhile, the Forward Markets Commission has issued a warning against illegal trading in non-transferable specific delivery contracts in sugar and *khandsari* and threatened to take more stringent steps of regulation, if such activities are not stopped. The Commission is said to have warned the traders in oilseeds also against speculative transactions; some feel that the Commission may intervene and take such measures as tightening of margin rules in groundnuts and even suspend forward trading in oilseeds, if need be.

While the steps taken by the authorities to prevent unbridled speculation in essential commodities are quite welcome, there is no gainsaying the fact that they will not be effective, if the firmness of commodity prices abroad gathers further momentum. To take, for instance, linseed oil. It is stated that the U.K., which was not prepared to pay more than Rs. 1,510 per ton for Indian oil a fortnight ago, is now interested in buying at Rs. 1,600; some bids have been reported even at Rs. 1,656. Similarly, the U.K. quotation for Indian castor oil has advanced from Rs. 1,427 before the West Asian developments to about Rs. 1,507 at the time of writing. With regard to sugar, world prices have tended to move up, though they are still very much below the domestic *ex*-mill prices. Spot Cuban raw sugar in the New York market is now quoted at 3.85 cents per lb. (f.o.b. Cuba), as against 3.40 cents a fortnight ago. Refined sugar in the London market stands at about £34½ per ton, as against £30½. Following this recovery in world prices, the disparity between them and the Indian price (after allowing for the full remission of excise duty and cane cess) has narrowed down to some extent.

The trend of commodity prices in India in future will depend on the state of the world markets. The trend of these markets, in turn, will be influenced more by political developments rather than by the natural forces of supply and demand. If the political situation continues to remain unsettled and if a shooting war were to develop, the economy of the world is bound to be put under increasing pressure of military expenditure and stockpiling by Governments and industries. Such a pressure will give a fresh boost to commodity prices the world over. The advance in prices so far has been of a precautionary, or psychological, nature, without any substantial upswing in trade demand. Stressing this point, the London *Financial Times* observes:

"In recent weeks, with the slack summer season here and the uncertain industrial outlook in Europe and the U.S., manufacturers have wisely continued with their policy of working on small stocks. They are obviously reluctant to change their attitude and, like everyone else, are waiting until the situation in the Middle East becomes clearer. This would seem to be the right thing to do. The fact that stocks are now so low, however, makes the present position particularly precarious, for it could lead to some sharp rises in prices, if the threat to shipping increased."

Barring the effect on commodity prices, the political tension in West Asia has not had, and probably will not have, any repercussion on the world oil front. The new regime in Iraq has clearly stated that it will maintain the oil supply without interference. The new Government of Iraq has already told the Western countries that it has no intention of nationalising the oil companies in Iraq. Its spokesmen have told the West: "You get your oil, we get our pounds." This attitude is only as it should be, considering that oil forms the main basis of Iraq's economy and the only source of finance for the country's economic development. Even if there were to be any dislocation in supply, it would by itself not have much impact on the world oil supplies. The U.S. Government is already taking steps to give effect to the emergency oil plans without delay should the need arise. The Government and oil company officials are inclined to believe that Venezuelan oil supplies can be readily increased in an emergency.

• • • •

The £ sterling has not escaped the influences of the turn of political events in the Middle East, or what may be described in short, the Iraq crisis. The initial reaction of the £ sterling was bearish in terms of the U.S. dollar and many other Continental currencies. The selling, which started on Monday last week (the 14th inst.) in the foreign exchange market immediately after news of the *coup d'etat* in Iraq was received, caused a setback to the £ in terms of the U.S. dollar from $2.80.9/16-2.80.11/16 on the eve of the crisis to a low of $2.79.15/16-2.80.1/16 at the close of Wednesday, the 16th inst. The price would have fallen well below the parity level but for the intervention, as is usually the case on such occasions, of the Exchange Equalisation Account to support the £ sterling. A similar setback was witnessed in terms of several other Continental currencies, though the extent of decline varied from currency to currency. After the initial flare-up, the political situation calmed down and has remained so during the last few days. Consequently, not only has the selling in £ sterling subsided but there has actually been a recovery, though, till yesterday, the initial loss has not been fully recovered—in some cases, there has been no recovery at all—as will be observed from the comparative table of spot rates of sterling in terms of U.S. dollar and a few Continental currencies:

Currency	Closing on 12-7-1958	Lowest	Closing on 23-7-1958
U.S.	2.80 5/16–80 7/16	2.79 15/16–80 1/16	2.80 1/16–80 3/16
French Fr.	1,174½–75	1,172½–72½	1,173½–74
Swiss	12.21½–21½	12.17–17½	12.19–19
Belgium	139.52½–27½	138.97½–139–02½	139.05–139.10
Dutch Gldr.	10.56½–57	10.56¼–56½	10.56¼–56½
W. German DM.	11.67½–68½	11.67½–67½	11.67½–67½

It may be interesting to note here that the fall in £ sterling in terms of other currencies was not so great as was witnessed during the Suez crisis. There are two reasons for this: (1) the present tension in the Middle East, which has now eased a bit, cannot be compared with the Suez crisis; and (2) the £ sterling had already gone down in terms of other currencies in the weeks preceding the Iraq crisis due to seasonal stresses. The effect of last week's selling was only to bring down the rates in some cases very close to the official support levels. As compared with the heavy pressure to which the £ was subjected during the Suez crisis, last week's recession was very mild and, to that extent, it reflected the confidence reposed in the £ sterling. This is further indicated by the recovery which started in the middle of last week.

To a large extent, the initial bearish reaction of the £ sterling to the Iraq crisis, or in other words, the hardening of other currencies in terms of the £, was due to speculative activity. In recent months, it would appear, the various currency markets on the Continent had taken an optimistic view of the long-term outlook for sterling, in view of the substantial additions made to the reserves of the sterling area. This confidence had encouraged the foreign exchange dealers in London and abroad to buy sterling and go short in certain Continental countries when sterling became cheaper due to seasonal factors; their idea was to make a good profit over a short period. But the Iraq crisis took them unawares and upset their apple-cart. They did not want to take further risks. Consequently, they preferred to adjust their positions. What is, however, noteworthy is that the initial reaction of the currency markets to the Iraq crisis did not lead to any heavy liquidation of sterling by anybody other than the aforesaid speculators. But, after their operations were over, the £ sterling recovered again.

SHARE MARKET BULLISH

SMART RISE IN CENTURYS

(From Our Own Correspondents)

BOMBAY, *24th July*

THE setback in share prices noted last week, following the Iraq crisis, proved to be a short-lived affair. In the absence of any further adverse developments in the Middle East, equities staged a smart recovery during the week under review. The recovery was helped by the fact that the market was in a well-liquidated position after the panicky selling by bulls last week. As confidence returned, speculative buying also enlarged and many "bears," who had hammered down the market only a few days before, were caught unawares and were forced to cover. Activity was particularly more brisk today and share prices flared up under the leadership of Centurys, which announced a right issue at par in the ratio of one share for every eight shares held by the existing shareholders as on 15th September 1958.

The favourable turn of events in the Middle East, at least in bringing about a feeling that an outbreak of war was not imminent, revived hopes in the market of more foreign aid to implement India's development plan by way of further advance payments of pension commitments from Britain and of overdraft facilities by the same country. The extremely easy condition in the money market was also a bullish factor. The gains over the week were marked and widespread which very nearly wiped out the loss since the Iraq crisis.

In the steel section, Tata Ordinaries rallied from Rs. 160.25 to Rs. 165.50 and after a slight recession to Rs. 164, revived to Rs. 169. The closing was done at Rs. 167.50. The new shares gained over the week Rs 5.25 to Rs. 165.25. Indian Irons advanced from Rs. 22.64 to Rs. 23.40, but reacted to Rs. 23.08, yesterday. Subsequently, the shares staged a smart recovery to Rs. 23.64 and closed at Rs. 23.60.

In the textile section, Century shares were in the limelight, with a sharp jump from Rs. 448.50 to Rs. 470.00 on Monday last. After a decline to Rs. 463, the shares boomed to a high of Rs. 480 today on the announcement of a one-to-eight scrip issue. The closing was a shade lower at Rs. 478. Bombay Dyeings scored over the week a gain of Rs. 2.90 at Rs. 59.70. Kohinoors attracted good support and shot up from Rs. 269.50 to Rs. 285. Central Indias gained Rs. 4 over the week to Rs. 97. Finlays rose by Rs. 10 to Rs. 285, Gokaks by Rs. 3 to Rs. 152 and Indu Ordinaries by 52 nP to Rs. 10.12. Indore Malwas were higher by Rs. 2.50 at Rs. 114 and Khataus by Rs. 6.25 at Rs. 188.75. New Greats changed hands Rs. 5 higher at Rs. 215. A rise of Rs. 4 to Rs. 157 was recorded in Shree Niwas Cottons and of Rs. 7 to Rs. 185 in Simplex. Standards hardened by Rs. 8.30 to Rs. 432.50 and Svadeshis by Rs. 12.50 to Rs. 192.50. Swans were dearer by Rs. 5 at Rs. 370.

Bank shares were steady. Barodas were taken up Rs. 2 higher at Rs. 123. Centrals gained Re. 1 to Rs. 54.80 and their new shares 50 nP to Rs. 58. Bank of Indias were a fraction better at Rs. 135, as also their new shares at Rs. 136.50. Punjab Nationals put on 50 nP to Rs. 59 and United Commercials gained a like amount to Rs. 61.50.

In the insurance section, New Indias were done a shade higher at Rs. 46.50. New Greats had business at Rs. 19.76 and Industrial and Prudentials at Rs. 30. Indian Mercantiles dropped a rupee to Rs. 47, while Vulcan Insurances hardened by 60 nP to Rs. 18.24.

Some gains were recorded in the electricity section also. Ahmedabad Electrics put on a fraction to Rs. 95.70 and Bombay Suburbans 50 nP to Rs. 107.25, as also Tata Hydros to Rs. 121.50. Andhra Valleys moved up by Rs. 22.50 to Rs. 1,180 and Tata Powers by Rs. 6 to Rs. 1,225.

Sugar shares also participated in the general rise, Belapurs gathering strength from Rs. 255 to Rs. 263.50. Phaltans moved up by Rs. 2.75 to Rs. 154.75 and Walchandnagars by Rs. 3.75 to Rs. 281.25. Cement shares proved no exception. Associated Cements rallied from Rs. 153 to Rs. 156.50, while their new shares were unchanged at Rs. 149.25. Digvijays were maintained at Rs. 154.50. Orissa Cements gained 16 nP to Rs. 13.88, Dalmia Cements a like amount, to Rs. 11.16 and Jaipur Udyogs 40 nP to Rs. 14.16. Among engineerings, Alcock Ashdowns scored a smart gain of Rs. 11.25 to Rs. 256.25. Tata Locomotives gained ground from Rs. 166 to Rs. 173.25. Larsen and Toubros were better by 28 nP at Rs. 18.04 and Premier Constructions by Rs. 9.25 at Rs. 202.25. In the mining group, Shivrajpurs were higher by Re. 1.50 at Rs. 93.50. Indian Coppers put on 24 nP to Rs. 3.98 and B.B. Petrols 10 nP to Rs. 2.28.

Shipping shares were well supported and scored smart gains, Scindias moving up from Rs. 18.24 to Rs. 19.56 before closing at Rs. 19.48. Great Easterns rose over the week Re. 1.16 to Rs. 24.72. In the automobile group, Hindustan Motors were better by 32 nP at Rs. 7.88 and Premier Automobiles by Rs. 3.70 at Rs. 92.20.

In the miscellaneous group, Bombay Burmahs (old) rallied from Rs. 564.50 to Rs. 585.50, but closed a shade lower at Rs. 582.50. The partly paid-ups rose by no more than Re. 1.50 to Rs. 216.50. National Rayons were taken up at Rs. 233.75, as against Rs. 224.75 a week ago. Gwalior Rayons also gained from Rs. 13.76 to Rs. 14. Tata Chemicals were picked up 56 nP higher at Rs. 16.56, while Dhrangadhra Chemicals were a rupee lower at Rs. 109 and Hindustan Levers were unchanged at Rs. 23.80. Amar Dyes were steady at Rs. 120. Greaves Cottons (new) were done at Rs. 98.50. Tata Oils advanced by Re. 1.75 to Rs. 41.75. Killick Industries were a shade quiet at Rs. 145 and Wimcos dropped Re. 1.50 to Rs. 176.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, *23rd July*

The week under review on the Calcutta Stock Exchange commenced on a depressing note, in view of the uncertain political situation in the Middle East. The fear that, if a world war resulted, India's economic progress, as well as prospects of further foreign aid, would be affected, was predominant in operators' minds. However, on second thoughts, it was realised that the U.S.S.R. was exercising great diplomacy and that a world conflagration was not to its interest. Following this line of thought, a recovery set in on Monday to react again yesterday. Since the recent uptrend on the Stock Exchange was mainly speculative, it was not surprising that weak holders became anxious and began selling in an attempt to lessen commitments. The absence of any official decision so far on measures to boost up exports caused doubts in the market as to whether incentives would after all be provided. It was realised that without incentive exports could hardly be increased. It was hoped, however, that, as a result of the Finance Minister's forthcoming visit to the U.S.A. and the U.K., the foreign exchange problem would partially be solved.

In contrast to the general trend, jute shares were keenly sought for throughout the week, and several scrips recorded smart gains. Fair buying of hessian on U.S. account, prospects of more buying by Argentine and sizable gains in prices of jute goods attracted buying in this section. The good working results of some mills published this week, it was thought, reflected the general improvement in the position of the industry as a whole. Howrah Jute Mills Co., Ltd., for instance, had at the end of March 1956 a debit balance of Rs. 24,66,402. By the end of March last, this large deficit was not only wiped out but a small surplus of Rs. 32,775 was carried forward after paying all arrears of dividend on preference shares. The ordinary dividend has been passed over. The shares of the Company naturally received more attention this week and were supported to rise to Rs. 18.50 from Rs. 16.56. Fort Glosters added 11 points to Rs. 371, following a satisfactory working report for the year ended March last. The dividend has been doubled to 20 per cent. The profit was high at Rs. 10.11 lakhs, as against Rs. 4.08 lakhs. The Directors reported good progress on the modernisation scheme. Belvederes advanced to Rs. 117 from Rs. 110 on keen buying. Megnas improved by Rs. 9 to Rs. 130. Alliances were marked up to Rs. 90, as were Deltas to Rs. 127. Kelvins were fully steady at Rs. 202. Birlas touched a high of Rs. 19.44.

Among cotton textiles, Elgin Mills were unchanged at Rs. 13.50, while Kesorams receded to Rs. 11 from Rs. 11.75.

Coal shares accounted for a decline in the volume of business. Support was selective, and yesterday a reaction set in. Pench Valleys closed at Rs. 22, as against Rs. 22.87 earlier. Burrakurs receded to Rs. 21.00 from Rs. 21.50, but Raneegunges were fractionally better at Rs. 13. New Beerbhooms were maintained at Rs. 16.25.

Engineering shares gave way earlier, but subsequently recovered. Indian Irons fell to Rs. 22.80 from Rs. 23.60 to recover to Rs. 23.50 on Monday, but since then lost to Rs. 23.26. Guest Keens were unchanged at Rs. 30.62, but Texmacos gained to Rs. 20.95 from Rs. 20.30.

Among minings, Indian Coppers, after changing hands at Rs. 3.79, lost to Rs. 3.57. In the sugar section, Balrampores moved down to Rs. 8.25 from Rs. 8.31, while Darbhangas were better at Rs. 16.69.

Orient Papers were a strong feature and hardened to Rs. 33.10 from Rs. 32.30, while Titaghurs receded to Rs. 39.87 from Rs. 40.19 on profit-taking. Sirpurs were firm at Rs. 12.00.

Generally, miscellaneous shares were quiet, in view of fears of import cuts of raw materials. Rohtas Industries lost to Rs. 21.87 before recovering to Rs. 22.62. Indian Aluminiums were lower at Rs. 15. Indian Oxygens, on the other hand, hardened to Rs. 20.25.

Madras Stock Exchange

MADRAS, *22nd July*

Easy conditions prevailed on the Madras Stock Exchange during the major part of the week under review, thanks to tense West Asian situation and apprehensions of the second Plan being jeopardised. Tea and coffee shares encountered selling on fears that exports might be adversely affected. The announcement of lower dividend by the Emerald Valley Estates was another unhelpful factor. Rubber shares, however, ruled strong on hopes of an upward revision in rubber prices and firm advices from the Singapore rubber market. In the absence of encouraging news from yarn and cloth markets, textile shares were subdued. The sugar and electric sections presented a quiet trend. The miscellaneous section was active with good investment support in several scrips.

Tea shares came in for selling and suffered a decline in prices. Stanes Amalgamateds dropped 30 nP to Rs. 13.50. Haileyburias fell by 25 nP to Rs. 19.50 and Emerald Valleys by 20 nP to Rs. 7.05 *cum-div.* The Directors of the Company have recommended a dividend of 6 per cent. for the year ended 31st December 1957, as against 10 per cent. for the previous year. Nonsuch softened by 15 nP to Rs. 22.60. Periakaramalais shed 10 nP to Rs. 4.37. Chembras were lower by 9 nP at Rs. 4.16 and Blue Mountains by 6 nP at Rs. 3.27. Devasholas, however, received special support and improved by 50 nP to Rs. 19.50 *cum-div.* Devons gathered 12 nP to Rs. 16.62. Among coffee shares, Coffee Lands were marked down by 45 nP to Rs. 30.80. Consolidated Coffees receded by 20 nP to Rs. 27.50. Sangameshwars lost 20 nP to Rs. 2.65 *cum-div.*, Savamalais 10 nP to Rs. 5.85 *cum-div.* Bababudins softened 5 nP to Rs. 12.20. Anaparas, however, gained 5 nP to Rs. 5.40 and Ouchterlonys 2 nP to Rs. 5.15. Rubber shares, as already stated, ruled strong. Malankaras firmed up by 52 nP to Rs. 18.62. Midlands rallied 25 nP to Rs. 12.00. Travancores advanced by a like amount to Rs. 15.25. Tropicals hardened by 27 nP at Rs. 19.87. Nilamburs were quoted 25 nP higher at Rs. 14.50, *cum-div.* Cochin-Malabars picked up 18 nP to Rs. 5.23 *cum-div.*

In the textile section, Bangalore Woollens dropped Rs. 5 to Rs. 160. Vijaymohinis slipped down by Rs. 2 to Rs. 79.00. Metturs were on offer a rupee lower at Rs. 333 *ex-div.* Pankajas shed a like amount to Rs. 43.00. Maduras eased by 50 nP to Rs. 35.00 and Travanore Rayons by 15 nP to Rs. 14.20. Cambodias were quoted 10 nP lower at Rs. 9. Coimbatore Cottons were dull at Rs. 145, as also Kotharis at Rs. 10.50 and Rajapalayams at Rs. 129.00. Buckinghams, however, gathered Rs. 2 to Rs. 172. Ranga Vilas and Virudnagars gained a rupee each to Rs. 63 and Rs. 30.75, respectively. Loyals put on 50 nP to Rs. 35.

E.I.Ds, among sugar shares, lost ground and eased by 15 nP to Rs. 28.20. Travancores were quoted 10 nP lower at Rs. 10.30. Deccans were quiet at Rs. 8.62 and United Breweries at Rs. 221.00. But Kirlampudies rose by 50 nP at Rs. 42.50 on special support.

In the miscellaneous section, Textools advanced by Rs. 5 to Rs. 191.00. Rallis firmed up by Rs. 3.25 to Rs. 36.50. India Steam Rollings were absorbed 50 nP higher at Rs. 12.50. Mysore Stonewares were done higher at Rs. 12.50 as against Rs. 12. India Cements (Rs. 25 paid-up) gained 35 nP to Rs. 28.60 *cum-div.* Mysore Papers rose by 20 nP to Rs. 17.50 *cum-div.* Mettur Chemicals, however, encountered selling and were marked down by 30 nP to Rs. 11.10 *cum-div.* Aluminium Industries declined by 20 nP to Rs. 16.20, Travancore Cements by 15 nP to Rs. 9.85 and F.A.C.Ts by 10 nP to Rs. 6.35. Andhra Cements softened by 5 nP to Rs. 11.85. Hindustan Levers were unchanged at Rs. 23.84 as also Mysore Tobaccos at Rs. 12.62.

Notice

THE PUNJAB NATIONAL BANK LIMITED
'Shree Niwas'
8, UNDERHILL ROAD, CIVIL LINES, DELHI

NOTICE OF INTERIM DIVIDEND

THE DIRECTORS OF THE PUNJAB National Bank Limited, Delhi, have decided to pay an Interim Dividend for the current year at the rate of Rs. 2.50 per share, free of income-tax. The dividend will be payable at the Registered Office of the Bank at Delhi on or after 1st September, 1958 to the shareholders whose names stand on the Register of Members of the Bank as on 26th August, 1958.

The Transfer Books and Register of Members of the Company will remain closed from 21st August, 1958 to 26th August, 1958 (both days inclusive).

By Order of the General Board of Directors,
A. M. WALKER,
General Manager.

Dated: 19th *July*, 1958.

Note: The shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

NEWS IN BRIEF

THE Scindia Steam Navigation Company has placed an order with Japan for a ship of 12,500 deadweight tons with a speed of 17 knots, under the Indo-Japanese Yen Agreement.

Quota licences for the import of X-ray films will be granted to established importers by the Government of India during the current half-year April-September 1958, on the basis of a quota of 75 per cent. general and 75 per cent. soft.

The Government of India has banned futures trading in *khandsari* sugar. This decision is a sequel to the need for checking the upward trend in prices. The outstanding contracts entered into on or before the 18th inst., are required to be cleared at the rates prevailing at the close of business on the 18th inst.

A New Delhi firm will set up shortly a new factory to manufacture 60,000 electric meters and 30,000 switchgears per year. The firm has already secured the collaboration of a Czechoslovakian concern which has agreed to supply the requisite machinery on a deferred payment basis.

The Punjab Government has decided to complete the work of consolidation of holdings by 1960-61, instead of extending it to the third Plan as originally decided. The Government is expected to recruit 4,000 additional revenue staff for this purpose, subject to the approval of the Planning Commission.

The Government of India has announced grant of full excise duty rebate of Rs. 112 per ton on castorseed oil exported from India, as against 11/14ths of duty hitherto admissible. Full rebate of excise duty, it may be noted, is already admissible on exports of linseed oil and tobacco-seed oil.

The Union Government has banned forward contracts and non-transferable specific delivery contracts for the sale and purchase of *Jowar, bajra*, maize, *ragi*, small millets, *tur* (*arhar*), *urad*, or *mash, mung, moth, masur, kulthi*, peas and *lakh* or *khesari*. The present measure is designed to check the upward trend in prices.

The U.P. Cabinet is reported to have rejected the suggestion for reintroduction of food rationing in the State on the ground that rationing even on a restricted scale in the urban areas will take at least four to six months to be implemented successfully and as such will not solve the present problem of scarcity of food.

The Indian Agricultural Research Institute has undertaken a soil conservation survey in the catchment areas of six river valley projects, namely. Bhakra Nangal, Hirakud, Machkund, Kosi, Damodar Valley and Chambal. The total area covered is 78,000 square miles. Surveys have also been plannned for the non-watershed areas of Burdwan, Nasik and Shimoga (Mysore).

The trade agreement between India and Indonesia, initially signed in 1953 and extended from time to time, has been further extended upto 31st December 1958. It may be noted that, during the year 1957, India exported to Indonesia goods worth Rs. 5.7 crores, while imports from that country aggregated Rs. 3.8 crores. Exports from India generally include cotton textiles and yarn, jute goods, tobacco, linseed oil, sports goods, rubber tyres and tubes, diesel engines, textile machinery and electrical equipments. Notable among the imports from Indonesia are copra and coconut oil, essential oils, spices, betelnuts, timber, tin, rubber, hides and skins and tanning materials.

From Abroad

The U.K. Government has agreed to lend British Guiana a sum of £5.5 million upto the end of 1959 for financing its 1956-60 development programme.

The aggregate exports of wheat from Canada in the current crop year ending 31st July is estimated at a little over 300 million bushels, as against 261.8 million bushels in 1956-57.

The United States has paid its full contribution to the regular United Nations budget for 1958 with a cheque for $16,562,250. The U.S. contribution this year is 32.51 per cent. of the U.N. budget.

The Government of Ghana will shortly establish an international broadcasting system. The project involves a capital outlay of approximately £1,098,400. French and English will be the first two languages used in foreign broadcasts. The system will ultimately have four transmitters.

An Anglo-Portuguese atomic energy agreement was signed at London last week. It provides for co-operation in the study and development of the peaceful uses of atomic energy. The U.K. has concluded similar agreements with Sweden and Germany.

The aggregate value of goods and services in the U.S. during the second quarter of 1958 remained steady at the first quarter's level of $425.800 million. This represents a fall of nearly 4½ per cent. from the peak annual rate of $445,600 million in the third quarter of 1957.

The Studebaker-Packard Corporation of the U.S. has decided to concentrate next year on the production of smaller cars with less chrome, reduced horse-power and lower top speeds. The Corporation is expected to turn out 100,000 smaller cars which will resemble American Motors' Rambler.

The U.S. Development Loan Fund has granted a loan of $40 million to the Persian Seven-year Plan Organisation. The loan will be repaid in 12 instalments and bears interest at 3.5 per cent. per annum. Persia has asked for another loan of $45 million from the World Bank. A decision to this effect will be taken after an on-the-spot survey by the Bank's experts.

West Germany proposes to construct, under a seven-year roads plan, over 1,000 miles of superhighways at a cost of £300 million, which will be met by the Bank for Public Works. The programme is expected to ease internal West German transport difficulties at certain key points and also established new links for inter-European traffic.

A preliminary agreement has been reached between two New York concerns, namely, Corn Products Refining Company, and Best Foods, for their merger into a new Corporation. One share in this new Company will be exchanged for each share of the Corn Products Common and 1 and 6/10 share of the new stock will be exchanged for each share of Best Foods stock.

A new device to move a ship sideways, backward or forward has been invented by Vickers-Armstrongs (Shipbuilders), U.K. The equipment is so conceived as to improve manoeuvrability of the vessel in confined waters and thus minimise the danger of damage under such conditions. The system, in essence, consists of circular steel castings arranged across and through the vessel at the bow and stem at an approximate depth below the water-line. Propeller assemblies are fitted within the castings.

Austria has under consideration a plan to enter the U.S. bond market in October or early in November next. The issue will be for $30 million which will be spent chiefly for the implementation of electric power projects. Meanwhile, it is learnt that six New York commercial banks have agreed to grant a medium-term credit of $12 million to a syndicate of Austrian banks at 5½ per cent. interest for meeting a part of the outlay on the Salzburg-Vienna super-highway now under construction.

A $16-million passenger reservation system, believed to be the largest interconnecting electronic data processing system ever built for one industry, has been ordered by the United Airlines, one of America's major airlines. It will be installed by the Tele-Register Corporation of Stamford, Connecticut, by 1960. As a result of the system, more than 2,500 ticket agents in 208 offices throughout the United States will be able to get almost instantaneous information on all flights. The system will permit making 80 per cent. of all reservations in less than a second. The new system uses inexpensive telephone lines over which digital data will be sent at a rate of more than 1,300 words a minute. This is 15 times faster than the prevailing system.

Participants from 56 countries, including India, have registered for the ninth International Congress on Home Economics to be held at the University of Maryland, near Washington, from the 28th inst., to 2nd August. More than half of the 1,000 expected registrants are expected to go from outside the U.S. Among the other countries to be represented at the Congress are Ghana, Iran, Iraq, Israel, Jordan, Nepal, Nigeria, Pakistan and Turkey. The participants will study problems the families face under present-day economic and social conditions. They will try to determine which of these problems can be alleviated by education in home economics and how home economics education and services can be developed for special conditions in each country.

A five-point programme is being advocated by the leading U.S. aluminium producers, with a view to dealing with long-range trade and supply problems of aluminium companies in the free world. This programme, it is claimed, will go a long way towards combating Russian selling in world markets. The programme proposes the channelling of surplus aluminium to areas where it is most needed, collaboration between producers in allied nations to solve common problems, limits on imports of metal into the U.S. in times of surplus, a study of the possibility of anti-dumping legislation, and collaboration between Government and industry in combating the Soviet economic offensive.

PERSONAL

MR. C. R. Pattabhiraman, M.P., has been appointed a Director of the Neiveli Lignite Corporation (Private) Limited.

Mr. Sankalchand G. Shah has been elected President of the Bombay Yarn Merchants' Association and Exchange Ltd. for the year 1958-59.

Mr. W. R. Crocker, till recently Australian High Commissioner in Canada, has been appointed High Commissioner for Australia in India, *vice* Mr. P. R. Heydon.

Mr. Lyuben Popov has been appointed Envoy Extraordinary and Minister Plenipotentiary of the People's Republic of Bulgaria to India, *vice* Mr. Ivan Petro Daskalov.

Mr. Ratilal M. Gandhi, Mr. Shivakumar Bhuwalka and Mr. A. B. Argo have been elected President, Chairman and Vice-Chairman, respectively, of the Indian Oil and Produce Exporters' Association for the ensuing year.

Mr. J. C. Ryan, Chief Officer, Agricultural Credit Department, Reserve Bank of India, left Bombay for Port Moresby, New Guinea, to attend a technical meeting on co-operatives, organised by the F.A.O. in association with the South Pacific Commission.

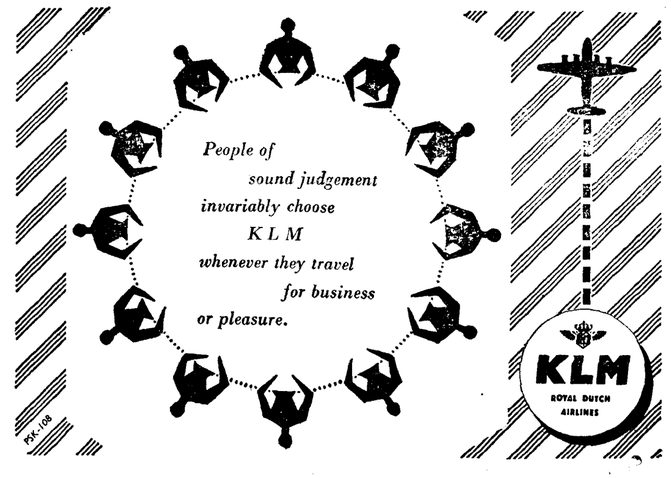
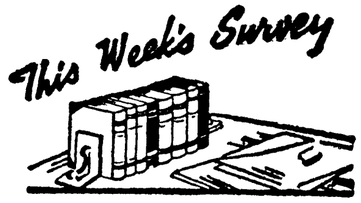
Indian Coffee Statistics

The Department of Commercial Intelligence and Statistics has issued a phamphlet dealing with Indian coffee. The coffee industry of India is confined to Southern India, comprising the Madras Presidency, Coorg, and the States of Mysore, Travancore and Cochin. The statistics dealt with in this publication are based on data furnished by coffee planters, which are received in this Department through the Director of Industries, Madras, the Director of Land Records and Agriculture, Coorg, the Mysore Darbar and the Agent to the Governor-General, Madras States. Hitherto returns relating to estates or plantations of an area smaller than 10 acres were excluded from these statistics. The number of reporting plantations in the year under review was 8,191, covering a total area of 307,219 acres, as against 3,401 plantations with an area of 284,041 acres reported in 1930-31. But the area actually under coffee in the reporting plantations in the year under review was 173,224 acres, as compared with 160,261 acres reported for plantations having an area of 10 acres and over in the preceding year. New land planted with coffee during the year amounted to 4,497 acres, while the area of old cultivation abandoned was 5,976 acres. Of the total area under coffee during 1931-32, Mysore accounted for 52 per cent., Madras 24 per cent., Coorg 22 per cent. and Cochin and Travancore together 2 per cent. The total reported production of cured coffee during the year 1931-32 was 33,734,486 lbs. as compared with 32,972,967 lbs. reported in the preceding year. The daily average number of persons employed in the plantations was returned at 103,766, of whom 59,423 were permanently employed (namely, garden labour 43,077 and outside labour 16,346) and 44,343 temporarily employed (outside labour).





QUALITY CONTROL FOR LEATHER

WITH the introduction of the scheme of quality control for leather, a major step has been taken to put India's export trade in this important foreign exchange earner on firm foundations. The scheme, which was inaugurated at Madras on the 17th inst. by Mr. K B. Lall, Joint Secretary, Ministry of Commerce and Industry, Government of India, and Director-General of Foreign Trade, was formulated by the Leather Export Promotion Council with the approval of the Government and the active support of large sections of tanners and exporters of leather. It is a voluntary scheme, in that there is no legal sanction behind it, exporters being free to decide whether or not they should be bound by this self-imposed discipline.

The main object of the scheme is to ensure that the consignments of tanned leathers tendered for export contain the quality of goods as indicated by the marks under which they are exported and as per the declaration of the exporters. It also enables the importers to know the chemical standards of the goods actually bought by them. Only vegetable tanned leathers known the world over as East Indian tanned leather come under the purview of the scheme.

The three essential elements of the scheme are registration, declaration, and sampling and analysis. Exporters who have registered themselves with the Council for the purpose of quality control bind themselves to declare the quality of the goods sent by them and the chemical content of it and allow samples to be drawn from each and every consignment for analysis by the Council so as to verify that the quality of the goods is in conformity with the declaration made by the exporter. A set of samples will be retained for further tests, if there is any dispute with regard to the quality. The exporter will have to furnish full details of the marks, the class of tannage, etc. Chemical standards of each mark will have to be given by the exporter himself. The Council will arrange due publicity for the marks and the chemical standards of leather substances in importing countries through the Indian Trade Commissioners and organisation connected with leather trade. If the goods are below the declared standard and if such lapses are repeated, the Council will cancel the registration of the marks and instruct its overseas connections to notify such cancellation to importers and blacklist them.

The scheme is obviously simple, but it has far-reaching importance. It standardises the product, thereby establishing beyond doubt the integrity of the trade. This is conducive to commanding the confidence of the importer in the quality of the goods supplied. Since leather is essentially an export item, the internal demand being small, the reputation of the products in foreign market is of the utmost importance. India's annual exports include 14 million goat skins, 15 million sheep skins, 7 million hides, kips and calf skins. Exports of tanned leathers are valued at Rs. 22 crores per year. Raw skins worth about Rs. 6 to Rs. 7 crores are also exported. Although certain grades and marks of leather have earned world-wide reputation, the lack of well-defined standards for the products has given rise to many complaints from importers. With the introduction of the quality control scheme, it should now be possible to give importers a definite idea of what they are buying under a particular mark. It is noteworthy that the foreign exporting houses, which handle a large portion of the leather exports from this country, have welcomed the scheme.

As the scheme is a voluntary undertaking, it cannot cover the exporter who has not registered himself and cannot, therefore, stand by him against any complaints regarding the quality of goods he exports. Nor can an importer have the advantage of the services offered by the scheme if he chooses to deal with an unregistered exporter. The success of the scheme obviously depends largely on the extent to which both importers and exporters co-operate with the Council in making it a success.

While quality control will certainly help enhance the reputation of the Indian product and thereby promote its exports, there is still much to be done in the field of export promotion. The Council should undertake market surveys and also station its representatives in key trade centres abroad. Trade delegations should also be sent to foreign countries for intensive study of the markets and for negotiations. The almost exclusive dependence on London auctions for the sale of Indian leather constitutes an element of instability in the industry. For instance, there was recently a near-crisis in the London market which has adversely affected the industry and its exports, though the position has improved lately, thanks to the emergence of seasonal demand. The Council should explore alternative markets elsewhere. Wider markets will also enable the realisation of better prices. Encouragement to internal uses of leather, though not attractive from the point of view of augmenting foreign exchange earnings, is a factor that will contribute to the stability of the industry in the long run.

TEXTILE INDUSTRY

The Cotton Textiles Enquiry Committee (Chairman: Mr. D. S. Joshi, I.C.S., Textile Commissioner) has submitted its final report to the Government of India. This was disclosed by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, in his speech at a meeting of the Cotton Textiles Fund Committee held in Bombay on Friday last week. The Minister did not indicate the nature of the recommendations made by the Committee. Only, he disclosed that the report was unanimous. Meanwhile, a Press report from New Delhi avers that the Government is studying the report and an official summary of the report will be published shortly.

While one has to await the publication of the report and the Government's decisions thereon, it must be stressed that the mill industry has several facets and, unless these are tackled in an integrated manner, the industry cannot be expected to come out of its present malaise. Caught between a decline in both demand and prices of cloth, on the one hand, and higher cost of manufacture, on the other, the industry is passing through one of the worst periods in its history. Exports of textiles, for instance, have suffered a distinct setback, the actual shipment during the first half of 1958 being at an annual rate of 630 million yards, as against 840 million yards in 1957. But much more disquieting than the setback in exports is the poor offtake of cloth for domestic consumption. These trends are clearly reflected in the high level of stocks of cloth with mills which are now of the order of as much as 887.85 million yards, of which unsold cloth account for 522.15 million yards and cloth sold but not lifted for 365.70 million yards. If the position in respect of stocks has not been worse, it is because of the downward trend in production. The mill output of cloth is currently ruling at an annual rate of 4,800 million yards, which compares unfavourably with the actual production of over 5,317 million yards in 1957. In physical terms, the output is down by 500 million yards per annum. If this fall had not occurred, the stocks would have exceeded 1,100 million yards.

Such heavy stocks have caused untold hardship to mills, especially to the marginal units, inasmuch as they entail a significant financial burden, not to speak of the pressure on their storage space. Mr. Lal Bahadur Shastri no doubt admitted that the unsatisfactory offtake of cloth even for the internal market was a matter for concern. He said that the Government had given relief in excise to the extent of Rs. 20 crores and would consider steps for rehabilitating the industry in the light of the recommendations made by the Enquiry Committee. He, however, declared that he did not appreciate the dissatisfaction expressed by millowners over the recent revision in excise duties and categorically assured that there was no question whatever of any further cut in excise duties.

The Minister is, of course, welcome to his views. It is, however, necessary to add that economic laws operate irrespective of official fiats. The cotton textile industry consists of a large number of units of varying strength. If production is to be maintained at the optimum rate, the burden of taxation must be so designed as to enable the marginal units also to function profitably. Our submission is that, if this criterion is followed, it will be seen that there is need for further relief to the industry. Even the revised duties are considerably heavier than they were before the steep increases effected on 1st September 1956. The least the Government can do, therefore, is to restore the excise duties to the levels that existed before T.T.K.'s attack on the industry. Considerations of revenue to the Government are no doubt important these days, but are not considerations of employment and an equitable return to shareholders equally important? Moreover, it is an illusion to think that a high level of revenue can be sustained for ever on the basis of a tax burden that sets in motion the law of diminishing returns. If what has happened during the last 20 months or so in the cotton mill industry has not exposed this illusion to the authorities at New Delhi, there is, we are afraid, little hope for this industry.

It is, no doubt, wrong to contend, as Mr. Shastri rightly observed, that "excise duty alone holds the key to the problems" of the textile industry. But there is no gainsaying the fact that, in the present context of a steep rise in food prices and the fall in the purchasing power of the rupee in terms of essentials of life, the high level of excise duty acts as a drag on the propensity to consume more cloth. The propensity can be enhanced only if the price of cloth is brought down to a reasonable level and energetic steps taken to raise the competitive ability of the mill industry. If the Government is unwilling to forgo its share of revenue from the industry, it must, in fairness to investors and employees, show a way out. The industry, as is well known, is suffering from compulsory cost inflation, due, among others, to the low efficiency of equipment, most of which is old and outmoded, as well as direct and indirect labour costs. When such is the state of affairs, how can the industry be expected to augment production and reduce prices? At no time in the history of the Indian mill industry was there so urgent a need for modernising equipment and rationalising the methods of production as it is today. The Enquiry Committee is understood to have put forward special suggestions bearing on this question and it is gratifying to be told by Mr. Shastri that these suggestions would receive the prompt attention of the Government.

Both Mr. Lal Bahadur Shastri and Mr. Morarji Desai have been contending that several cotton mills have been mismanaged in various ways and that the Government cannot be expected to go to their rescue. This is a very pertinent contention. Such mills ought to be allowed to go to the wall if they cannot be salvaged in the usual way, without asking the taxpayer to foot the bill. But this is a question of separating sheep from goats, for which the Government has ample powers. Surely, not all the mills which are in difficulties today are badly managed or equipped.

In the course of his speech, the Minister for Commerce and Industry commended the work of the Cotton Textiles Fund Committee for the development of the industry, particularly in regard to exports and technological research. The capital outlay on the industry is Rs. 110 crores, which produces goods worth Rs. 440 crores per annum and provides employment to over 900,000 persons direct and many others indirectly. Surely, the importance of sustaining such a vital industry by technological research aims at improving the quality and reducing the cost of production is, as Mr. Shastri pertinently remarked, evident and assumes special significance in the context of India's export trade. The Committee has taken over under its ægis the Ahmedabad Textile Industries Research Association and has also set up two textile research association—one at Bombay and the other at Coimbatore. There is a proposal for establishing a similar institute somewhere in the North and Kanpur is mentioned as a venue for the same.

The Committee has also done good work in the field of export promotion. The setting up of an Inspectorate to inspect textiles going abroad is a right step. The industry is working this scheme voluntarily and in an increasing manner. The total quantity of cloth inspected during 1957 is believed to be about 5.4 million yards, as against 2.5 million yards in 1956. Expressing appreciation of the progress of the scheme, Mr. Shastri did well to emphasise the need for devoting "a great deal of attention" to market research both inside and outside the country. To quote him:

"... our exports can increase only if we are able to offer to other countries what is required by them. In fact, we have to endeavour to anticipate such requirements and to cater to them. In this field, therefore, constant vigilance and intimate contact with the conditions abroad are essential."

There is considerable force in these observations and it must be said to the credit of the Cotton Textiles Fund Committee that it is giving consideration to this matter. It cannot be too strongly stressed here that whatever the Committee does for the development of the textile industry will not be of any avail unless the Government adopts a more constructive policy in regard to modernisation of equipment and rationalisation of production.

CEYLON'S TAXES

If imitation is the sincerest form of flattery, Ceylon apparently holds India in high fiscal esteem, considering that it has now introduced nearly all the new tax measures which India has adopted in recent years. Without even waiting to see how the new taxes work in actual practice in India, Ceylon's Finance Minister, Mr. Stanley de Zoysa, has proposed the introduction of taxes on wealth, expenditure and gifts. Obviously, Kaldorian inspiration lies at the root of Ceylon's fiscal experimentation. But it may be wondered whether a country of Ceylon's size and relative economic backwardness should tread a fiscal path from which the more powerful countries in the West have so far turned their faces. After all, only a few countries have expenditure tax on their tax statute and fewer still have combined it with gift and wealth taxes. What makes all this departure by Ceylon from its own traditions in public finance particularly deplorable is that the new taxes are expected to bring in a revenue of only Rs. 20 million, which makes only a very modest contribution in bridging the Rs. 484-million gap between revenue and expenditure. The new fiscal game is not worth the revenue candle.

Ceylon's revenue and expenditure for the year commencing 1st October next are placed respectively at Rs. 1,310.7 million and Rs. 1,795.3 million (inclusive of capital expenditure of Rs. 432.3 million), the deficit thus being Rs. 484.6 million. The Finance Minister expects that customary foreign aid will bring in Rs. 50 million and aid from the Soviet Union and China another Rs. 50 million. Domestic borrowings are expected to yield Rs. 160 million and the new taxes Rs. 20 million. All this makes a total of Rs. 280 million which will still leave a gap of about Rs. 200 million. The Finance Minister would not disclose how he proposed to cover the deficit. But he indicated that he had already commenced "negotiations for finance from certain other sources" and "certain arrangements" had already been arrived at. It would appear from talks in the lobby that financial aid or assistance was expected from the U.S. and Canada which the Finance Minister visited recently for purposes of negotiating substantial loans.

The taxation proposals involve revision of income-tax, introduction of tax on wealth, expenditure and gifts and readjustment of duties designed to reduce import of expensive cars, jewellery, carpets, racehorses and dogs. In the field of business taxation, the present dual system of income-tax and profits tax will be replaced by a uniform tax on company profits. On individual income, free allowance given ranges from Rs. 2,000 per adult to Rs. 8,000 for a family unit of six persons. The slab rate in excess of this allowance rises from 5 per cent. for the first slab of Rs. 1,500 to 60 per cent. in the highest margin. The wealth tax scheme exempts from tax the first slab of Rs. 1 lakh of income from properties, subjecting the next Rs. 5 lakhs to ½ per cent., the next Rs. 5 lakhs to 1 per cent. and the balance to 2 per cent. The scheme of expenditure tax contemplates a tax-free allowance of Rs. 8,000 in addition to a basic allowance of Rs. 3,000 per family, the maximum possible allowance being Rs. 35,000. Expenditure above this allowance will be taxed on a slab system at rates ranging from 20 per cent. to 240 per cent. Exemptions include business expenses, investment outlays, medical facilities and expenses connected with marriage, birth and funeral. Unlike in India, there seems to be no limit to the allowable amount of expenditure under these heads. Gifts aggregating Rs. 2,000 a year are exempt from tax but others are taxed on a slab system ranging from 5 to 100 per cent.

In the context of the need for conserving foreign exchange, the Finance Minister has rightly proposed measures which are designed to discourage imports of luxury articles. The duty on imitation jewellery, fruit produce and certain other luxury goods has been raised. The changes include increase in the duty on fancy dogs from Rs. 12.50 to Rs. 50, on racehorses to Rs. 5,000 per horse, on carpets from 40 per cent. preferential and 50 per cent. general to 100 per cent. preferential and 110 per cent. general. He proposed to raise the duty on luxury cars with landed cost above Rs. 10,000 to a "prohibitive" level in the expectation that their importation would cease altogether. The duty on petrol has been raised by 10 cents a gallon. The export duties on tea and rubber remain unchanged. But the Finance Minister announced that the recent reliefs granted to industries were purely temporary and detailed proposals would be placed before the House shortly.

DIFFICULTIES OF INDUSTRIALISTS

In the course of a constructive speech which Mr. B. D. Garware, President, Maharashtra Chamber of Commerce, made at the dinner meeting held in honour of Mr. Lal Bahadur Shastri in Bombay the other day, he put forward some valuable suggestions for removing the handicaps confronting the business community. One such suggestion relates to the creation of a suitable machinery to enable the private sector to set up industries without much difficulty and loss of time. Instances are not wanting to prove the hardships caused to parties venturing to establish new industries as a result of bureaucratic delay and lethargy. The time lag between the preparation of a scheme for starting an industry and the actual commencement of operations is very wide. Mr. Garware did well to urge that, once a scheme was approved, the Central and State Governments should accord priority for all facilities such as licences for construction, raw materials, electric power supply, telephone and various other essential services.

Mr. Garware made a pointed reference to the difficulty experienced by several industries in getting adequate supplies of raw materials and requested Mr. Shastri to liberalise imports. Among the specific items he mentioned were gum-arabic, acid salicylic, citronella oil, carbon black powder, cocoa beans, oil and heat-resistant types of rubber such as neoprene or acrylonitrile, essential raw materials used by the plastics and dyestuff industries, and steel strip for the manufacture of razor blades. Most of the items mentioned are not being produced in India and, if the industries depending on these are not assured of adequate and regular supplies of the same, they will not be able to maintain a high level of output the importance of which can be scarcely overemphasised in the present context of unemployment and inflationary trends in the economy. It is gratifying to note that, in his reply, Mr. Shastri assured the Chamber that the Government would sympathetically examine the question and try to allocate as much foreign exchange as possible to raw materials.

Another notable suggestion made by Mr. Garware relates to the abolition of the exemption of excise duty on the production and delivery of the first 75-125 tons of vegetable non-essential oils per year. This suggestion is quite pertinent. Although the Oilseeds Crushing Enquiry Committee (1956) opposed the setting up of new power-driven small expellers, a large number of them have been established in the last two years, thanks to the benefit of exemption from payment of excise duty on the first slab of production and delivery of oil. Since these power-driven baby expellers do not come under the purview of the Factories Act, they enjoy a distinct advantage *vis-a-vis* the more efficient bigger units. This is certainly an anomaly which must be set right, as, otherwise, there will be unfair and unhealthy competition in the oilseeds crushing industry.

THE U.N. SPECIAL FUND

A continuing paradox in the world of today is the co-existence of poverty with prosperity. Much is, however, being done in the underdeveloped countries to raise the living standards of their people. It is also undeniable that the advanced countries have lent finance and technical assistance in the task of improving the economies of the backward regions. In this connection, a significant proposal was the one made some time ago for the establishment of a Special United Nations Fund for Economic Development (S.U.N.F.E.D.). Admittedly ambitious in its conception, it was designed to secure at least $250 million per annum to be channelised for the purpose of financing part of the developmental programmes in the economically less developed countries. Although there was universal approbation for such a scheme, it fell through primarily because the advanced countries could not halt the flow of resources towards their defence programmes. It was argued that disarmament alone would release sufficient resources for implementing the S.U.N.F.E.D. scheme. Clearly, the scheme is receding into the background, if it has not already disappeared. It is, however, heartening to note that the U.N. Economic and Social Council has given general approval to a fresh proposal last week for setting up a special U.N. fund in 1959, with an initial contribution of $100 million from all member-countries. The Fund seeks to provide systematic and sustained assistance to the integrated, technical, economic and social development of the underdeveloped countries. It is not meant to supplant the S.U.N.F.E.D. but to supplement it.

It may be recalled that, at the last meeting of the U.N. General Assembly, a preparatory commission was set up under the chairmanship of Mr. M. M. Khan of Pakistan to report on the nature and scope of a special fund. The report of this Commission came up for discussion at the plenary session of the U.N. Economic and Social Council last week. Presenting the report to the Council, Mr. Khan gave an illuminating account of the functions and the broad framework of the proposed scheme. Referring to the criteria for the allocation of resources, the Commission has recommended assistance to major projects in the less developed countries, so that this limited fund would not spread its resources over a large number of relatively small undertakings. It has emphasised that the largest possible freedom of choice be left to the Fund in the matter of assisting individual projects.

With a view to ensuring judicious execution of the scheme, the Commission has recommended the establishment of an Administrative Council, consisting of well developed countries, the representation being based on the contribution they make to the Fund, and all underdeveloped countries of the U.N., due regard being paid to reasonable geographic distribution. There will also be a Director-General appointed by the Secretary-General in consultation with the Administrative Council. Besides, there will be a committee of experts which will consist of the Secretary-General, the Executive Chairman of the Technical Assistance Board and the President of the World Bank or their appointed representatives. This Committee is expected to assist and advise the Director-General in evaluating requests for aid.

In subsequent discussion at the Council, Mr. J. M. A. H. Luns of the Netherlands paid a tribute to the Government of the United States for requesting Congressional authorisation to contribute 38,000,000 dollars towards the Special Fund and the Expanded Technical Assistance Programme. Mr. Luns said that, if the total resources of these two bodies reached 100 million dollars, 40 million dollars could be used for the normal technical assistance operations and 60 million dollars for the Special Fund. He added that the Fund should preserve its identity and should be considered a first step towards future ideal. Mr. A. Pelt, Secretary-General of the World Federation of United Nations Associations proposed that small investors all over the world be given a chance to participate in the development of underdeveloped countries. He believed that very important sums would be put together for investment, if the channels were open to small investors to put in their money against reasonable equity percentage. He suggested that the Secretary-General, President of the World Bank and President of the International Monetary Fund together should designate experts to explore this idea. The other participants also spoke highly of the proposed Fund and approved of the recommendations of the Committee.

While the major part of the contribution to the Special Fund will come from the developed countries, the underdeveloped member-countries of the U.N. have also to make a contribution to it. In view of the acute foreign exchange difficulty experienced by most of the latter group of nations, it was suggested, appropriately in our view, by the Indian representative who attended the meeting of the Council that these nations should be allowed to pay their subscriptions in local currency. The Russian delegate suggested that the Fund's help should not be confined only to the member-countries but also to non-member-countries, for he contended that, if some nations were not members of the U.N., it was no fault of theirs. Apparently, he had in mind Communist China. The reaction of the Council to these suggestions is not known. All that we are told is that the report of the Preparatory Commission has been referred to the Social Council's Economic Committee for a detailed review.

FOOD PROCESSING INDUSTRIES

EXTENSIVE IDLE CAPACITY

From Our Special Correspondent

NEW DELHI, *22nd July*

DELHI LETTER

THE progress and problems of the more important food processing industries were reviewed last week by Mr. Manubhai Shah, Minister for Industry, at the first meeting of their Development Council last week. Of these industries, fruit preservation accounted, in 1957, for a total production of Rs. 3.2 crores in value terms. The biscuit industry with 39 units accounted for Rs. 5.5 crores' worth of output, the confectionary industry with 42 units for Rs. 4.0 crores; the flour milling industry with 62 units for Rs. 35.0 crores; the aerated waters industry with 41 units for Rs. 2.5 crores; and the other food industries (chocolate, cocoa powder, liquid glucose, dextrose powder and milk powder) with 12 units in all for Rs. 1.0 crore.

In quantity terms, the output of the biscuit industry was just 17.3 thousand tons, as against its annual installed capacity of 30.3 thousand tons; that of the confectionery industry was 11 thousand tons, as against its capacity of 50 thousand tons; that of the flour milling industry 7.3 lakh tons against its capacity of 18.6 lakh tons; that of the liquid glucose industry 3.4 thousand tons against its capacity of 12.4 thousand tons; that of the dextrose powder industry a mere 542 tons against its capacity of 6,200 tons; and that of the aerated waters industry 9.1 lakh gross bottles as against its installed capacity of 24.6 lakh gross bottles. It was the same story in the case of chocolate, cocoa powder and milk powder industries which produced in the year 321 tons, 172 tons and 495 tons, respectively, as against their installed capacities of 1,362 tons, 438 tons and 1,500 tons respectively. The progress of these industries in terms of actual production was thus highly unsatisfactory and was an index of the misdirection of capital resources into lines not warranted by consumption habits in the country.

This problem of idle capacities in some food industries could conceivably be solved by producing more and exporting it if possible. It is here that Mr. Manubhai Shah's reference to export promotion is pertinent. In the case of biscuit industry (which now has export possibilities, thanks to the recent improvement in quality of Indian biscuits), a scheme has been finalised by Government for drawback of excise duty on sugar and *vanaspati* used in the manufacture of biscuits meant for export. In the same way, a scheme for the drawback of excise duty on sugar used in the manufacture of confectionery meant for export has been finalised. The confectionery manufacturers would also be permitted to import raw materials to the extent of 25 per cent. of f.o.b. value of the exports of four different types of confectionery and they would also have the benefit of a scheme for the replenishment of tinplate used in the export of confectionery and biscuits.

From Mr. Manubhai Shah's review, it is also found that the progress of fruit and vegetable preservation industry has been particularly disappointing in terms of export by which much store was laid in the second Plan. The 1957 export by this industry was just 1,763 tons (valued at Rs. 31 lakhs), as against the 1960 target of 11,000 tons of annual export. It would thus appear that even an industry specifically earmarked for export promotion has failed to come up to expectations. And so a subsidy scheme on tinplate has just been brought into operation. This is in addition to the reductions of Rs. 100 per ton in the price of cans just given effect to by the Metal Box Company of India Ltd. Both the subsidy and the price reduction would bring down the price of open top cans by Rs. 87 per thousand cans. A rebate of excise duty on sugar contained in the fruit products meant for export is also now given. A drawback of Rs. 60 per ton of tinplate used in the exported canned fruit products and a replenishment quota of 133⅓ per cent. on the quantity of tinplate so consumed are also being sanctioned.

It cannot be said that these incentives for export promotion of food products can be a substitute for any lack of quality in the estimation of foreign consumers. In the matter of eating, it may be supposed that the first consideration with foreign consumers would be the quality of canned products and not the price thereof. Mr. Manubhai Shah has, therefore, appropriately urged on the industry to adhere most carefully to standards of quality and timely delivery. The Minister's other reference to the need for a small rise in internal prices in order to subsidise exports and for diversion of a part of the indigenous production to foreign markets may be in line with the present policies governing export promotion in general. But it looks as though such an approach would be still less applicable to export of food products than to export of sugar, for example. For one thing, food processing industries are working far below capacity because they are unable to expand the domestic market for their products. A rise in their prices may only reduce that market without probably leading to any substantial increase in exports. It is difficult to see how the foreign consumer would relish what the Indian consumer does not do to any significant extent in so far as quality is concerned.

AUTOMOBILE TYRE INDUSTRY

The four expansion schemes of the automobile tyre manufacturing industry now being implemented together envisage the creation of an additional annual capacity of 859,200 tyres, as against the present capacity of 1,050,000 tyres. Of this addition, a capacity of 559,200 tyres is expected to be reached by the end of the second Plan period and the balance after 1961. The bulk of the projected additional capacity—amounting to 594,400 tyres—is accounted for by the setting up of two new factories, one in Bombay and the other in Madras. The remaining part of the capacity, that is, 274,800 tyres, represents the expansion of the existing units at Shahganj, near Calcutta, and Bombay. In addition to the four schemes, the Government of India has approved of two other schemes with a total capacity of 420,000 tyres. As a result of the implementation of all these schemes, the aggregate capacity of the automobile tyre industry will come to two million tyres, as against the estimated domestic requirement of 1.8 million (1960-61).

AMERICAN LETTER

U.S.-CANADA RAPPROCHEMENT

MR. ROCKEFELLER IN THE LIMELIGHT

From Our Special Correspondent

NEW YORK, *15th July*

PRESIDENT Eisenhower's luck has not yet returned. The fantastic story of Bernard Goldfine, the gift-giving millionaire from Boston, continued to unfold in Congressional hearings. The story becomes more complicated every day. It does not make any sense whatever for a man to carry three-quarters of a million dollars in uncashed cheques, implicating various recipients, including Sherman Adams, assistant to President Eisenhower.

It is an almost unbelievable yarn. The chief investigator of the Congressional Committee is accused of wiretapping Mr. Goldfine's hotel suite, documents are missing and nobody knows where they are, and Mr. Goldfine refuses to answer questions about some $776,000 in cheques drawn by his various companies, never cashed and dating, in some instances, back to 1941.

In the midst of all this confusion, President Eisenhower and Secretary of State Dulles visited Ottawa. Mr. Sherman Adams was scheduled to go, too, but was finally left behind. The hottest point of dispute was U.S. policy in foreign trade. In the first place, Canada has long objected to the U.S. method of exporting agricultural surpluses under a Government subsidy programme. Secondly, it was obnoxious to Canadians, as it is to many Americans, that Washington ordained to the effect that foreign subsidiaries of American companies may not do business with Red China at all. This has long been considered an imperialistic infringement on the sovereignty of the countries in which U.S. companies operate. So far as Canada is concerned, this dictum has been changed following the President's visit.

Another tangible result of the President's visit was the establishment of a joint Canada-United States Committee on Joint Defence. It is another Committee, to be sure, but Alaska's admission to Statehood and its adjacency to Canada, would seem to make this committee rather useful as a practical matter.

The Congress is about to wind up its current session. The lawmakers have their eyes on the home front in preparation for the Congressional elections this fall. General expectations are that the Democrats will be gaining and the Republicans will be losing. A good friend of India is very much in the limelight these days—Nelson A. Rockefeller.

Either by prearrangement, or otherwise, Paul W. Williams resigned last week his post as United States Attorney. He announced he would seek the Republican nomination for Governor of New York. Forty-eight hours later he issued a statement, relinquishing the eighty-one New York County votes. An immediate result of this action was to strengthen the hand of Mr. Rockefeller who is also in the gubernatorial race. His only declared opponent is Leonard W. Hall, former Chairman of the Republican National Committee.

So far, Mr. Rockefeller is out in front and he might win over Mr. Averill Harriman, present Governor of New York, a post which has frequently opened the gates to the White House, in due course. Mr. Harriman is slowly approaching 70 years of age and his record is not particularly brilliant, even though he has avoided many pitfalls of others who are less richly endowed with worldly possessions.

It may be ironical that the political race for the governorship of New York would be fought between two very rich families, the Harrimans and the Rockefellers. This time, Mr. Rockefeller's chances may be better, unless there is a country-wide anti-Republican swing, just for the sake of emotion and disregarding personalities and records.

On the economic scene, more Americans were out of work during the month of June than at any time since August 1941. But the unemployed percentage of the total labour force dropped for the second month in a row. Thus, some economists felt the recession was on the wane. Federal Reserve people who were quite pessimistic just a few weeks ago, have also adopted a more hopeful attitude. The active monetary ease has been abandoned in favour of keeping bank reserves at an even keel, for the time being. The official line still includes the "fight against inflation." As economic conditions improve, this means, inevitably, a return to tighter money.

A major reason for the remarkable stability in these months of economic recession was the set of stabilisers in the form of Federal and State unemployment insurance benefits. It kept personal incomes at a high level despite wholesale layoffs in the automotive and other industries. In fact, personal income today is about $1,000 million higher, at an annual rate, than it was 12 months ago.

Farm prices are also on the sunny side of the economic picture. They dropped a bit recently, but they are still about 10 per cent. higher than they were a year ago.

Tourism is also flourishing. Travel agencies cannot find enough space for all the pleasure and leisure seekers who desire travelling in this country and abroad.

One of the phenomena of this recession has been rising living costs and increasing stock prices. In the first half of July, the New York Stock Exchange registered continually new highs for the year which are approaching the previous all-time highs. Since the stock market is supposed to appraise future economic development in its price structure, there is considerable optimism that the bottom of the recession has been passed. By the same token, another cycle of inflation may be approaching.

INTERNATIONAL FLOW OF PRIVATE CAPITAL

PETROLEUM INDUSTRY ACCOUNTS FOR LARGEST INVESTMENT

A SURVEY of the international flow of private capital during 1957 conducted by the United Nations Organisation reveals that the export of capital continued to run at a post-war record level, though the trend suffered slight setback in the second half of the year. The data obtained from the principal capital-exporting countries show that the upward trend in capital exports, which began in 1956, continued in 1957 also, reaching a post-war peak in the second quarter of the year. Subsequently, the exports of capital began to decline and, in the second half of the year, they dropped below the 1956 volume. Despite this setback, they were higher than those in the pre-1956 period. The summary of the United Nations' report, released by the United Nations' Information Centre, New Delhi, does not, however, give the figure of total international exports of capital for the past year.

One of the main features of the capital exports during 1957 from the main creditor nations was that, while there was a larger flow of capital from the U.S., the U.K., the Netherlands and West Germany, the outflow from Switzerland and Canada declined, but this did not offset the increases from the former four countries. A break-up of export figures shows that the U.S. continued to maintain its position as the world's largest exporter of long-term capital, with a total of $2,700 million, an increase of $300 million over the preceding year. The U.K. ranked second, supplying the equivalent of about $900 million. The other important suppliers of private long-term capital were Belgium-Luxembourg (5,900 million B. francs in the first six months of 1957 or $118 million), Federal Republic of Germany ($188 million in the whole of 1957) and the Netherlands ($128 million). As stated above, the outflow of capital from Switzerland and Canada, two other main exporting countries, declined to $99 million (one-third of the 1956 volume) and $76 million (about three-fifths of the previous year's exports), respectively.

Investment in Petroleum Industry

The United Nations' survey shows that direct investments, undoubtedly, continued to provide the bulk of private capital exports and that the bulk of these investments went into the petroleum industry. As in previous years, about 50 per cent. of the U.S. direct foreign investments in 1957 were made in the petroleum industry in various countries, thus showing the exceptional importance of the petroleum industry as a source of foreign investments. This is also confirmed by the statistics of the capital receiving countries, which include Canada, Venezuela, and India, and from data relating to Australia, Southern Italy and other countries.

No figures are available of the direct investments of foreign capital in manufacturing industries during 1957, but the U.N. report points out that there can be little doubt that, as in the previous years, the bulk of these investments went to developed and semi-developed countries. There are indications, the U.N. report adds, that direct investments in some underdeveloped countries increased, particularly in Latin America.

South and East Asia Neglected

Considerable investments were made in the Belgian Congo and British East Africa, but these were in consumer goods industries. Brazil, India and Mexico were, however, able to attract foreign investments in heavy industries. Canada continued to be the largest importer of private long-term capital. The main importers of long-term capital among the underdeveloped countries, according to the U.N. report, were Venezuela, Brazil, Mexico and Cuba in the Western hemisphere, Rhodesia and Nyasaland and the Colonial territories in the British Commonwealth, and Italy and Greece in Southern Europe. It is somewhat discouraging to find that very little private capital went to the South and East Asian countries; in some cases, the U.N. report points out, there was even a net outflow of capital from these areas. Though the summary of the U.N. report does not give any reason for this slackness in foreign capital flow into these areas or for the outflow of capital, it must obviously be due to the political uncertainties in these countries and the unwise economic policies followed by several of them.

Among the developed countries, the Federal Republic of Germany (W. Germany) increased substantially its inflow of private long-term capital for investment in private industries during 1957. Despite this, West Germany turned out to be a net exporter of capital, as against a net importer in the previous year. A substantial increase of capital imports took place in France also, while the inflow of private long-term capital into the U.S. declined considerably.

I.F.C.'S INVESTMENT IN BRAZIL

The International Finance Corporation, the American Overseas Finance Company and the Chase International Investment Corporation, have signed an agreement to invest in the aggregate a sum of $3.50 million in the expansion project of the Willys-Overland do Brazil, S.A., Brazilian manufacturer of jeep vehicles, including Willys station wagons. The majority ownership of the Company is now held by more than 15,000 Brazilian stockholders, while a large minority interest is owned by Willys Motors Inc. of Toledo, Ohio (a subsidiary of Kaiser Industries Corporation).

The Company's expansion programme will cost $22 million, which is financed by many sources, both Brazilian and Foreign. The I.F.C.'s share of the new investment amounts to $2.45 million and will be in 7 per cent. notes, repayable from 1962 to 1965. The A.O.F.C. and the Chase International Investment Corporation will take $1.05 million in similar notes maturing in 1961 and 1962. These investments, aggregating $3.5 million, also carry a share in the Company's profits, payable either in cruzeiros or in 8 per cent. participating preferred stock.

About 70 per cent. of all freight in Brazil is transported by road and many parts of the interior of the country have no other means of communication or transportation.

WORLD BANK LOAN TO CEYLON

The World Bank has approved of a loan equivalent to $7.4 million to Ceylon. The funds will help to finance a thermal power project to increase the supplies of power in south-western Ceylon, which is the centre of economic activity and contains nearly half the country's population. Manufacturers Trust Company and the Bank of America will participate in the loan, without the World Bank's guarantee, to the extent of $717,000, representing the first five maturities which fall due between 1st November 1961 and 1st November 1963.

The project for which the Bank's loan is being made forms part of an integrated electric power system which is operated by the Department of Government Electric Undertakings (D.G.E.U.). It consists of the construction of a 25,000 kilowatt thermal electric plant at Grandpass, a district of the city of Colombo, the capital. The transmission system will also be extended and distribution facilities in Colombo will be expanded.

The estimated cost of the Grandpass thermal project is $11.1 million. The Bank's loan will pay for imported equipment and services. The purchase of all major items of imported equipment and materials and the award of all major construction contracts will be on the basis of international competitive bidding. The power plant should be in operation by the beginning of 1962.

The Bank loan will be for a term of 20 years and bear interest of 5¾ per cent., including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation will begin 1st November 1961.

MORE BANK PROFITS SHOW A FALL

The results of working of a few more banks during the half-year ended 30th June 1958, released this week, confirm the general downward pattern of earnings disclosed by the leading big banks.

Punjab National Bank

The net profit (subject to audit) of the Punjab National Bank Ltd., one of the "Big Five," for the half-year under review, after providing Rs. 3.35 lakhs for payment of gratuity and making necessary provision for contingencies, amounted to Rs. 41.67 lakhs, as compared with Rs. 56.72 lakhs earned in the corresponding period of 1957 and Rs. 46.88 lakhs in the first six months of 1956. The Directors have declared an ad-interim dividend of Rs. 2.50 per share of Rs. 25 each, free of income-tax, same as that paid for the corresponding six months of 1957.

The Bank's deposits as on 30th June 1958 exceeded Rs. 131 crores, as against Rs. 124 crores at the end of December last and Rs. 177 crores on 30th June 1957. The Bank has 356 offices in India, Burma and Pakistan.

Indian Overseas Bank

The net profit of the Indian Overseas Bank Ltd. (subject to audit) amounted to Rs. 14.02 lakhs, which does not compare well with that of Rs. 15.78 lakhs for the corresponding six months of 1957 and of Rs. 14.93 lakhs for January-June 1956.

Andhra Bank Ltd.

The Andhra Bank Ltd. has earned a net profit (subject to audit) of Rs. 5.10 lakhs, which represents a fall of Rs. 1 lakh from that earned in the first half of 1957. It also shows a slight decline from Rs. 5.79 lakhs for the half-year ended June 1956. After bringing in the surplus of Rs. 1,910 from the previous year, the profit available for appropriation is Rs. 5.12 lakhs. The Directors have pruned the interim dividend from 8 per cent. per annum to 5 per cent. per annum, free of income-tax.

Pandyan Bank Ltd.

The Pandyan Bank Ltd., Madurai, has earned a profit of Rs. 2.01 lakhs during the half-year ended 30th June 1958, as compared with Rs. 1.70 lakh in the corresponding six months of 1957. This small increase is in refreshing contrast to the experience of many other banks, the earnings of which have declined.

The total resources of the Bank as on 30th June show an expansion from Rs. 3.28 crores (at the end of December 1957) to Rs. 3.69 crores. Deposits have maintained their upward trend, with a further rise from Rs. 2.74 crores to Rs. 2.97 crores. Advances stand at Rs. 2.05 crores, as against Rs. 1.72 crore at the end of 1957, Investments at Rs. 67 lakhs (Rs. 69 lakhs) and cash balances at over Rs. 60 lakhs (Rs. 53 lakhs).

TWO-ANNA COINS TO BE WITHDRAWN

The Union Government will call in all pie coins, half-pice coins and yellow nickel-brass two-anna coins with effect from 1st January 1959. From that date, the three coins will cease to be legal tender. They will, however, be accepted from the public till 30th June 1959, at all offices of the Reserve Bank of India, all agency banks of the Reserve Bank of India conducting Government business and all Government treasuries and sub-treasuries. Moreover, until further notice, these three coins will be accepted at the Issue Department of the Reserve Bank of India at Bombay, Calcutta, Madras, Kanpur, New Delhi, Bangalore and Nagpur.

A notification to this effect has been published in a *Gazette of India Extraordinary*.

While there is no great hurry, the public will be well advised to part with these three varieties of coins they may have in their possession as early as possible, well before the end of the calendar year 1958. Afterwards, there will still be facilities for exchange, but only at the places mentioned above.

Very few pie and half-pice coins are in active circulation. The demonetisation of these two coins is only a *de jure* recognition of a *de facto* position. The yellow nickel-brass two-anna coins have been subject to counterfeiting in certain parts of the country. Their demonetisation should end the confusion the public experiences in choosing the genuine from the bad coins.

Other coins, i.e., the grey cupro-nickel two-anna, the anna, the half-anna and the pice pieces are not being affected. Nor are the higher coins, i.e., the rupee, the half-rupee and the quarter-rupee being affected.

SIDELIGHTS ON U.S. ECONOMIC RECESSION—I

By S. V. Rayan

IN our last issue, the latest economic trends in the U.S. were discussed. The view was expressed that the recession had come to an end and that a gradual recovery had set in. In this article I propose to look back at the effects of the recession on certain sectors of the U.S. economy. Before doing so, I should like to discredit the view held by a few that last week's mild armed intervention in West Asia by the U.S. is an indirect result of the economic recession. The meaning implied here is that the U.S. Government has embarked on this adventure in order to stave off a serious slump which was in the offing. Nothing can be further from the truth than this mischievous insinuation which even the Soviet propagandists have not advanced. It is utter foolishness to think that, in this nuclear age, there are in the U.S. policymakers who will not hesitate to engineer a war or carry the world to the brink of war in order to reverse a downward trend in their domestic economy.

The U.S. is a nation of hard-working, practical-minded people. They are thorough and efficient. They do not sleep over a problem, nor indulge in only tall talk; they act swiftly, once they get to know the bearings. The way in which that nation has acted during the past six months to stem the recession is a tribute to the versatility of a modern free economy, not the type which Karl Marx criticised but one in which the Government and the people's representatives take an active interest and give a helping hand in times of emergency. It is not suggested that there was no talk but only action. Indeed, if there was one topic which was more talked about than the weather during the first half of 1958, it was recession. There were endless debates in the Press and on platforms, not to mention radio and television, on whether it was only a recession or a deep-seated slump, whether taxes should be cut and if so which, and whether wages, prices and profits should be controlled. The debates were of a high order, providing as they did a rich fare for students of economics. The differences of opinion on the nature of recession and the types of remedies to be followed were sharp. For those in the U.S. who have a taste for economics, there could not have been a dull moment during the past six or seven months.

The public discussions on falling economic activity were both deep and widespread. They had a tremendous impact on politicians and administrators. A notable feature was the fact that Congressmen moved faster than the Administration in proposing measures aimed at bringing an early end to the recession. Not only did the Congress vote quickly on the proposals put forward by the Administration but, on several occasions, went beyond those proposals. In the first five months of 1958, the Congress increased the public debt ceiling to $280 billion, voted $1.8 billion extra for the highway programme, urged the Administration to speed up spending on public works, rushed through a $1.8 billion housing Bill, stepped up the defence expenditure by nearly $2 billion, sanctioned an increase in postal rates, favoured a rise in the pay of postal workers and military personnel, authorised $1.5 billion for expanding inland water transport and harbour facilities, voted a freeze on farm price supports, sanctioned larger loan-money for local public works and bigger benefit payments to the unemployed, and quietly acceded to the President's plea for extending the Reciprocal Trade Agreement Act, after considerable opposition in the initial stages. Indeed, the Congress in its anxiety to lift business out of the doldrums was so enthusiastic of speeding up expenditure on public works that President Eisenhower had to veto some of them for fear of aggravating the risk of inflation again. Thus, he refused to allow the expenditure for expanding river and harbour facilities and vetoed the proposal for freezing farm price supports.

Many prominent economists and business men favoured a reduction in both direct and indirect taxation. Dr. Arthur F. Burns, a former Chairman of the Council of Economic Advisers and a highly respected economist, was strongly of the opinion, as early as in March, that taxes should be lowered at once by $5 billion a year. He gave top priority to this remedy among the cures for the recession. He said: "There is nothing wrong (in our economy) that could not be corrected in large part by vigorous business enterprise." And he thought that a reduction in tax burden would be the surest way of stimulating enterprise among business men. He was strongly supported by the noted British economist, Colin Clark, who contended that excessive taxation in the U.S. was the root cause of the persistent fall in the value of the dollar.

The Administration, however, stuck to its position. While not denying the need for tax reform, it consistently maintained that the time was not opportune for taking that step. The Secretary for Treasury, Mr. Anderson, was all along stoutly opposed to tax reduction and he finally succeeded in his attempts at convincing the Congress and at least a section of business men that a tax cut, on top of the various Government spendings estimated to result in a budget deficit of $11 billion, would constitute a big inflationary risk which the U.S. could not and need not take, and that the measures already initiated would turn the recession into recovery.

There are, however, many still in the U.S. who feel that a stimulus to the economy through tax remission is a better solution, than Government pouring billions of dollars into the nation's spending stream. The *Guaranty Survey*, published by the Guaranty Trust Company of New York, for instance, argues in its latest issue thus:

"Unfortunately, the general tone of current comment affords little encouragement for the hope that public opinion as a whole has awakened from the dream of perpetual boom under governmental auspices. The immediate need for tax cuts, more Treasury spending, easier money, higher farm price supports, and other forms of political intervention may have diminished. Yet the underlying faith in the ability and duty of Government to manœuvre four million business concerns and 170 million individual consumers into forms of behaviour that will add up to continuous full employment seems as strong as ever."

Proceeding, the *Survey* adds:

"If business is now on the high road to re-

TECHNOLOGICAL RESEARCH

POWER HOUSE OF A NEW CAPITALISM

By Sumner H. Slichter

LAMONT PROFESSOR OF ECONOMICS, HARVARD UNIVERSITY

[Modern economic theory must take fuller account of technological research, which has introduced fundamental changes into the operation of the industrial economy. The contribution of technological research in negating stagnation and in counteracting diminishing demand has only recently been fully recognised. The article on this page is an excerpt from a paper prepared for the conference on research and development and its impact on the economy, held under the auspices of the national Science Foundation in Washington, D.C.—ED.]

WITHIN the last 30 years, technological research in the United States has become a large activity that introduces fundamental changes into the operation of the economy. Measured in terms of the number of scientists and engineers devoting full time to technological research, this activity is more than five times large as it was in 1930, and measured by the ratio of research expenditures to the gross national product, it is about 13 times as large. In 1956, the annual budget of technological research, according to estimates of the National Science Foundation, was about $9,000 million a year. Research is growing through the current recession (as it grew steadily during the much deeper depression of the 1930s), and, in 1958, research outlays will undoubtedly be well above $10,000 million.

Technological research has three characteristics that give it far-reaching economic significance. The first of these characteristics is that it greatly increases the capacity of the economy to raise the demand for goods. It is obvious that technological research increases the capacity of the economy to raise productivity. Less obvious, and indeed generally overlooked, is the fact that research gives the economy the capacity to bring about planned increases in the demand for goods—both by creating new demands for consumption goods and by creating new investment opportunities.

A second characteristic that gives technological research far-reaching significance is the fact that much of it is a profitable activity as well as a useful activity. There are, of course, research areas of the greatest usefulness that cannot be carried on for profit and that must be done either by non-profit institutions or by the Government or by private industry under Government contract.

Within the last half century, however, the fund of technological understanding has become sufficient, so that many projects, particularly at the development level, can be pursued for gain. This means that many research programmes can be determined by the economic calculus—by the balancing of expected gains against expected losses. The importance of this fact is that it draws into research far greater resources than would otherwise be available for it.

Industry of Discovery

The part of technological research that can be carried on for profit should be regarded as an industry—the industry of discovery. Its product is knowledge. Slightly more than half of the research and development work now being conducted in U.S. private laboratories is financed by private funds for the purpose of making a profit. Thus, the National Science Foundation estimates that, in 1956, $3400 million of the $6,500 million research budget of private laboratories was financed by industry's own funds and $3,100 million by the Federal Government.

A third significant characteristic of research is the fact that an increase in its output does not tend to reduce the marginal value of its product; on the contrary, it tends to increase the marginal value. Hence, the greater the output of research, the stronger tends to be the demand for still more output.

This peculiarity of research is a result of the fact that its output is knowledge. One may think of knowledge as consisting of a body of tested propositions. When two things are known, there is a possibility of seeing significant relationships between them which will yield practical applications. The larger the number of tested propositions, the more numerous are the cases in which the addition of a new tested proposition to old propositions will yield new useful applications and, in addition, will suggest hypotheses useful in adding still more tested propositions to the body of knowledge.

Thus, the greater the body of existing knowledge, the greater is likely to be the value of the new discoveries. All of this is particularly important for that part of research that is pursued for profit—the industry of discovery. Unlike other industries, the industry of discovery produces against a rising schedule of marginal utility, not a diminishing schedule. The most important effects of technological research upon the capacity of the economy to grow stem from its effects upon the demand for goods, not from its effects upon the capacity of the economy to produce goods, though the latter effects are obviously of great importance.

Technological research affects both the demand for consumer goods and the demand for capital goods. It affects *the demand for consumer goods* by developing new kinds and varieties of consumer goods that people desire to incorporate into their standard of consumption. People acquire these additional goods by going into debt, by drawing on accumulated savings, or simply by saving a smaller proportion out of any given income.

Keynes Not Borne Out

As a result, rising *per capita* incomes in the United States have not produced a drop in the ratio of incomes that has been saved. In the American economy, personal consumption expenditures have always been an important income-determining influence—in contrast with the theory of Lord Maynard Keynes, who held that consumption expenditures are a stable function of real *per capita* national income. If the view of Keynes were correct, consumption expenditures would be merely income-determined; not income-determining. It would, of course, be a mistake to ascribe dynamic standards of consumption solely to the attractive products made possible by technological research—though, in recent years, this source of dynamic consumption standards has been growing rapidly. But specialised technological research, as I have pointed out, had very limited importance until about 25 years ago, and consumers have been a dynamic influence in the United States since time immemorial.

Most of the American population has been motivated by strong desires to get ahead, and this ambition has made all aspects of life in the United States, including consumption, strongly competitive. Various features of the American environment have stimulated ambition and competition—the absence of tradition and social stratification, the rapid growth of population (especially until the end of the nineteenth century), and the abundance of economic opportunities created by the immense resources awaiting development. But, as the rate of population growth has dropped and as natural resources have become more fully developed, technological change has become a more important source of opportunity, keeping vigorous the strong, ambitious and competitive spirit of early days.

A little more than half a century ago, there was widespread belief that, with the filling up of the Continent and with the passing of the frontier, the United States would become like Europe with a stratified society in which a class struggle would emerge. But this has not happened, largely because of the accelerating rate of technological change beginning about the middle of the nineteenth century.

More Efficient

Of course, the accelerating rate of technological change did not depend to a large extent upon full-time specialised research workers until about the second quarter of the twentieth century. In the earlier days, much important research was done by brilliant self-trained men ("inventors") and more important work was done by technically trained men but they were, for the most part, operating men interested in research problems rather than full-time research men. The recent development of full-time specialised research must be regarded simply as a far more efficient method of doing what industry had previously been doing on a fairly substantial scale.

Between 1929 and 1956, the proportion of disposable income spent by Americans on user-operated transportation, household appliances, boats, pleasure craft, sporting equipment, radio and television receivers, and radio and television repairs increased from 9.13 per cent. to 12.7 per cent. Much of the success of these parts of industry in getting a large share of incomes after taxes must be explained by the development of products and services for which specialised technological research is responsible. Thus, technological development has helped to hold down savings in the face of raising *per capita* incomes.

Technological research affects *the demand for capital goods* in two ways—partly by developing new consumer goods that require new plants and equipment for their manufacture, and partly by the development of new processes and new equipment that represent investment opportunities. The capacity of technological research to create investment opportunities reminds us of how unsatisfactory have been the economists' theories of investment.

Economists have pretty much taken the volume of investment opportunities as given and have had little to say about the determinants of the volume of investment opportunities. There have been a few observations about the effects of undeveloped natural resources and the growth of population upon the supply of investment opportunities. It did not occur to Keynes, any more than it has occurred to most other econo-

THE STERLING GENERAL
INSURANCE COMPANY LIMITED
NEW DELHI

Another year of remarkable progress

The fourteenth Annual General Meeting of the Sterling General Insurance Company Limited was held on the 18th July, 1958, when the Accounts of the Company for the year ended 31st December, 1957, were passed. The following is an extract from the Directors' Report.

Rapid Increase in Gross and Net Premiums

The gross premium booked during the year amounted to Rs. 1,04,36,280 (Rs. 88,22,136 in 1956) and the net premium amounted to Rs. 55,01,062 (Rs. 47,64,124 in 1956) registering an increase of about 18.3 per cent. and 15.5 per cent. respectively.

Reserves Exceed Rs. 25 Lakhs

The reserve for unexpired risks at the end of the year amounted to Rs. 25,04,427 showing an increase of about 16.6 per cent. over the figures at the end of the previous year, namely Rs. 21,47,916.

Increase in Profit and Dividend

After increasing the various reserves, the working of the year resulted in a net profit of Rs. 1,20,620. Adding to this Rs. 1,589 brought forward from the previous year the total profit came to Rs. 1,22,209 which has been appropriated as follows: Rs. 56,000 as provision for income-tax and Rs. 62,113 as provision for dividend to shareholders. The balance of Rs. 4,096 has been carried forward to next year.

All-round Progress

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 16 lakhs and the net premium by over Rs. 7 lakhs over the figures of the previous year. The Reserve have increased by over Rs. 3½ lakhs and the Company has been able to declare a dividend to the shareholders at 5 per cent. free of income-tax.

Assets Exceed Rs. 83 Lakhs

The total assets of the Company amounted to Rs. 83,39,640 at the end of the year.

RECESSION IN COTTON INDUSTRY GATHERS MOMENTUM

MANPOWER SHRINKS FURTHER

From A Special Correspondent

MANCHESTER, 15*th July*

IT becomes increasingly difficult to pick up any report dealing with textile affairs and the prospects for the industry in the U.K. without reading a chronicle of threatening doom and disaster. Not only are the accounts of conditions in Lancashire gloomy in the extreme but those from textile centres abroad are all impregnated with the same apprehensive tone. Comments from individual traders with a half-century or more in textiles range from the frequent "I never remember business being so bad" to the frankly incredulous disbelief that such conditions could continue for any length of time.

MANCHESTER LETTER

One firm of Manchester stockbrokers, which as always maintained a keen interest in the industry, has described current conditions in its latest review. "The point has now been reached at which orders are coming forward at a significantly lower rate than even the reduced volume of output," this document observes, and, in the light of the stock position, there appears to be no reason to expect any significant upturn in activity before the autumn buying, due to commence in September or October."

There is, however, on this occasion a factor which has already been at work and will undoubtedly hamper the possibility of any expansion in buying later in the year. The hearing of the case against the Yarn Spinners' Association in the Restrictive Practices Court is due to commence in October. "It is possible distributors will defer purchases to the greatest possible extent in the hope of securing supplies at more advantageous prices, should the Spinners' Agreement be declared illegal," adds the survey.

Extremely Probable

On the proposed agreement between Eastern textile interests and Lancashire over the import of cloth arrivals into the United Kingdom, the opinion is ventured that any limit acceptable to Eastern producers would almost certainly be fixed at a high level. Moreover, as the report points out, it is extremely probable that such a pact would be confined to cotton piecegoods, specifically excluding either man-made fibre piecegoods or made-up goods. Such an agreement would mainly result in changing the emphasis of current competition without markedly reducing it.

Summing up the prospects facing British textile producers over the next few months, the review asserts that this is the worst recession known in the industry for many years. "That there has not been a much sharper decline in textile share prices can be ascribed to the fact that they stood at depressed levels even before the onset of the current recession and that investors consider present yields already fully discount anything which could possibly happen to dividends."

The month of May, like April, contained a holiday period which curtailed production. Both in yarn and cloth, the average weekly output was virtually identical, spinning production being rather more than 2,000,000 lbs. per week lower than during the first three months of the year. Cloth output was some 4,000,000 yards weekly below the initial quarterly average.

Far more revealing in illustrating the intensity of the current recession are the manpower totals provided by the Cotton Board, although they are more than a month in arrears. The drift away from the mills is now quite unmistakable. One of the features of 1957 was the way in which the labour force was retained by management, there being a fall of little more than 2,000 during the year.

Manpower Shrinks

Already, in five months of 1958, the situation has changed sharply for the worse. Since the end of February three months have seen nearly 12,000 workers in spinning and weaving leave the industry and manpower has now shrunk to 227,660, the lowest total since immediately after the war. When June figures are released, showing the impact of the early summer holidays, they will almost certainly bring a further marked drop in the number of available operatives.

Whereas spinning manpower actually finished 1957 at a higher level than twelve months previously, while weaving lost 3,000 workers, the fall this year has affected both the two main sections. The labour force in spinning at the end of May was 92,820, as against the peak of 99,220 at the end of January. In the same period, those available for weaving fell from 113,760 to 109,210. Manpower in doubling has dropped 2,000 so far this year—a substantial fall in ratio—but, in waste spinning, the loss has been barely 100.

Exactly twelve months have elapsed since the wage advance of 5 per cent. conceded to spinning and weaving operatives brought an expansion in business which was of substantial proportions and carried Lancashire mills into full production for several months ahead. In fact, at this time last year, the wave of buying had already been set in motion by the application for higher earnings, and the general belief that a settlement would be reached involving an increase in prices.

The repercussions from that event were highly satisfactory to producers in the early stages and the industry as a whole was well pleased with the state of order books at a time of the year when business is traditionally in the doldrums. The first signs of disappointment came when the anticipated autumn purchasing did not materialise. The lack of seasonal demand, which should have sprung up at least by October, became the straw in the wind which heralded the subsequent phase of inactivity and the later slide to depression.

Dwindling export trade has accentuated the need for a steady and profitable domestic business to be undertaken from year to year. Seasonal buying can make or break the efforts of producers to keep machinery steadily at work and provide employment for their workpeople. The lack of interest shown by distributors at the end of 1957 has culminated in empty order books and stopped machinery in the summer of 1958.

Future Buying Trends

To suggest that the future well-being of the cotton industry rests, to a large extent, on the vagaries of the British weather is not entirely an exaggeration. Pressure for supplies in the wholesale and retail houses must, in turn, bring the need for replacements and upon such a slender basis a great deal of Lancashire's future prosperity seems to depend.

At the same time, the needs of other industries which are regular users of cotton goods in a multitude of ways must be fulfilled. The business done in this connection in recent years has broadened considerably and provided specialised producers with a steady and important outlet for their goods. Variations in activity in other industries play their part in affecting the mood of the moment in the textile market, but the changes in atmosphere are not so pronounced as in the demand for apparel fabrics.

Another aspect of distributive power which has received due recognition in the past decade has been the growth of the business done in cotton and allied textiles by the larger chain stores. Purchasing by such concerns has a direct and influential bearing on the state of the industry and their operations govern a substantial proportion of productive capacity. As a result, the level of machine activity and the scope of employment in the mill towns is very much in their hands. The extent of mill combines and the power wielded by these distributors may put ideas into the heads of political leaders who are looking for means to acquire control over basic industries.

Leather Imports

Mr. H. Haygarth Jackson, Chairman of the North-West Regional Board for Industry, announced at the monthly meeting of the Board that, in his capacity as President of the United Tanners' Federation, he would be leading a deputation to Conservative Members of Parliament this week to urge that action should be taken to curb duty-free imports of leather into the United Kingdom. He pointed out that the effect of these imports was "infinitely worse" in the leather industry than similar arrivals of duty-free goods on the cotton industry.

Commenting on current unemployment returns, Mr. Jackson said that the figure in the North-West was 2.6 per cent., as against the national average of around 2 per cent., but the figure for greater Manchester was only 1.7 per cent. Although the average in the greater Manchester district gave the Board cause for satisfaction, it was disturbed at the growing unemployment in spinning and weaving in the textile industry.—*All Rights Reserved.*

WORLD COTTON STOCKS

SHRINKAGE APPRECIABLE

THE 1957-58 cotton season ending on the 31st inst., has witnessed a further decline in world cotton stocks. Unlike in the previous season when a rise in consumption led to a running down of the stocks, the fall this season has been the result not of increased consumption, but of lower production. The current season started with an aggregate carryover of about 23.1 million bales, which was 1.2 million bales of 478 lbs. each lower than at the start of the previous season. Besides lower stocks, there were also significant changes in the distribution of stocks. As a result of the exceptionally heavy exports in 1956-57, stocks in the United States at the beginning of the present season had fallen to 11.3 million bales, from 14.5 million bales a year earlier.

In contrast, however, aggregate stocks in other free world countries at the beginning of the season had increased from 7.6 million bales to 9.2 million bales. Stocks in the net exporting countries other than the U.S. rose only moderately and were still below the average of recent years. Also, the increase was predominantly in Egyptian-type cotton, in the Sudan and Egypt. Of the countries producing American-type cottons, only Pakistan was affected to any extent and even here the increase was comparatively modest. On balance, therefore, as the International Cotton Advisory Committee points out, the U.S. special export programme had no serious repercussions on the volume of cotton exports from most other countries last season, though it is true that reduced prices adversely affected foreign exchange earnings.

In the net importing countries which had been operating on minimum stocks for some considerable time, stocks showed the greatest increase, to 6.2 million bales, including cotton afloat, from 5.0 million bales a year earlier. The factors behind the change in stock policy are lower and, possibly, more stable cotton prices and an upsurge in consumption in the previous season. The more comfortable stock position in net importing countries is one of the factors which explain the expected fall in trade this season.

Stocks in the communist countries at the beginning of the season were higher. They were estimated at 2.6 million, as compared with 2.2 million bales a year earlier. Higher stocks were the result of larger imports and significantly bigger crop in the U.S.S.R.

The following table indicates the world cotton stock position.

(In million bales of 478 lbs. each)

Country	1956	1957	1958
Net exporting countries :			
United States	14.5	11.3	8.8
Others	2.6	3.0	3.5
Total ..	17.1	14.3	12.3
Net importing countries :			
United Kingdom	0.4	0.6	0.5
Western Europe	1.6	2.1	1.8
Japan	0.5	0.6	0.4
India	2.0	1.9	1.9
Others	0.3	0.4	0.5
Afloat	0.2	0.6	0.6
Total ..	5.0	6.2	5.7
Free World Total	22.1	20.5	18.0
Communist Countries	2.2	2.6	2.7
World Total ..	24.3	23.1	20.7

Disappearance has continued to exceed production during this season also but by a wider margin than in 1956-57. Consequently, world carryover stocks on 1st August 1958, estimated to aggregate 20.7 million, will be the smallest for several years, representing about six months, supply at the present annual rate of global consumption of about 41 million bales. In the United States, stocks are estimated to fall to under nine million bales divided almost equally between the Commodity Credit Corporation and private parties. Thus, in the two seasons, namely, 1956-57 and 1957-58, the U.S. has been able to liquidate about 6 million bales of surplus cotton, and stocks on 1st August will be at their lowest level since 1953. In fact, there is probably no longer any real surplus of the better qualities in the U.S.

Aggregate stocks in the net importing countries are expected to decline to about 5.7 million bales. With the textile situation generally less favourable and several of the major countries experiencing balance of payments difficulties, imports in most instances have been running under a year ago. Importers are inclined to wait until a clearer indication of the trend of consumption and prices next season emerges. In communist countries, in line with an expanding textile industry, aggregate stocks are expected to be at least equal to last season's level of 2.6 million bales or may be slightly higher at 2.7 million bales.

ALL-INDIA FINAL ESTIMATE OF COTTON

The all-India final estimate of cotton for 1957-58, issued by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, puts the area under the crop at 20,158,000 acres, as against the partially revised estimate of 19,893,600 acres for 1956-57. Production is estimated at 4,753,000 bales (of 392 lbs. each), as against 4,735,000 bales in 1956-57. There is thus an increase of 265,000 acres or 1.3 per cent. in area and 18,000 bales or 0.4 per cent. in production.

The increase in acreage has been most marked in Bombay, Punjab and Madhya Pradesh and is attributed generally to favourable weather conditions at the time of sowing. Against this increase, acreage fell mainly in Mysore and Andhra Pradesh.

Rajasthan, Madras and Punjab were chiefly responsible for the increase in production, due largely to better seasonal conditions during the growing period of the crop. This, however, was offset to a substantial extent by decreases mainly in Madhya Pradesh and Bombay.

Among different varieties of cotton, Bengals and Jarillas showed increased production, while declines were recorded in the case of Americans, Oomras and Hyderabad Gaorani. Short-staple cotton was mainly responsible for the rise in production.

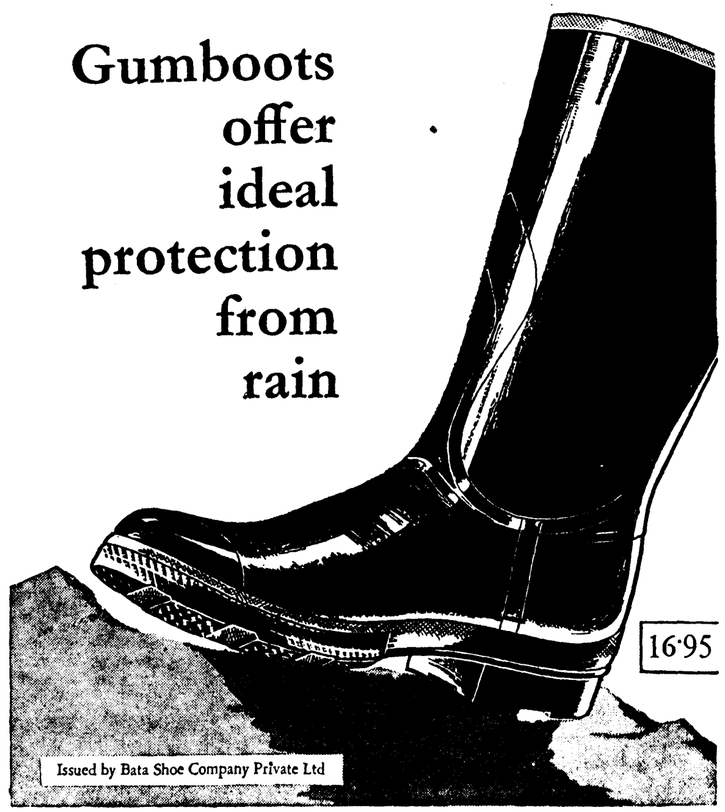
Production of cottonseed in 1957-58 is estimated at 1,664,000 tons, as against the partially revised estimate of 1,657,000 tons in 1956-57. This represents an increase of 7,000 tons or 0.4 per cent.

Official estimates of production, as is well known, are generally lower than the estimates made by the Indian Central Cotton Committee on the basis of data relating to actual utilisation of the crop. According to the relationship based on previous data between the official final estimates and the Indian Central Cotton Committee's estimates, this year's final estimate of 47.53 lakh bales would correspond to 51.68 lakh bales of the Committee's estimate. The corresponding revised estimates for 1956-57 were 47.35 lakh bales and 51.51 lakh bales, respectively.

The largest increases in area were recorded by Bombay, 10,988,000 acres in 1957-58, as against 10,333,000 acres in 1956-57; Madhya Pradesh 1,982,000 acres, as against 1,898,000 acres: Punjab 1,522,000 acres, as against 1,415,600 acres. Punjab showed the highest increase, of as much as 107,000 acres. Among the States that showed decreases were: Andhra Pradesh, from 1,014,000 acres in 1956-57 to 939,000 in 1957-58 and Mysore from 2,803,000 to 2,684,000.

In Rajasthan, production was 215,000 bales in 1957-58, as against 168,000 bales in 1956-57. In Punjab, there was an increase of 25,000 bales to 825,000 as against 800,000 in 1956-57. In Madras, production was 392,000 bales, as against 359,000 in 1956-57 and in Mysore 512,000 bales as against 451,000.

Madhya Pradesh registered a fall in production from 569,000 bales in 1956-57 to 464,000 bales in the year under report. In Bombay, production fell from 2,176,000 bales in 1956-57 to 2,130,060 bales in 1957-58.



ECONOMIC DEVELOPMENT IN INDIA

AN ESSAY BY INDIAN ECONOMIST IN THE I.M.F.

"THE technical and administrative tasks have been, by and large, faced competently, and major projects in steel, irrigation and electricity, fertilisers, locomotives, and various other fields are shaping up well. When a large development programme is under way and every section in the community is called upon to make sacrifices, economy and efficiency in administration—not only in ordinary general Government, but also in executing the development projects themselves—evoke greater response from the people in shouldering the burdens; if the community is impressed that waste in public expenditures is avoided at each stage and that beneficial schemes of development are being completed with a high degree of efficiency, additional tax burdens become acceptable as the main source of finance for the development schemes. This is adequately recognised in India, and special efforts are being made to secure economy and efficiency. There has evolved over the years a well-tried administrative system; the personnel are, by and large, competent, and, especially at the higher levels, they are comparable to those in any of the advanced countries. No less important is the thinking and response of the people; awareness of economic change itself is affecting, albeit slowly, the traditional social attitudes which have inhibited progress, and the process of development itself is in turn facilitated. The inert weight of local prejudice and tradition is gradually giving way, partly under the impact of community development schemes. The response of the people is also fostered by the approach and techniques of planning adopted; while necessarily the Plan is largely centralised, there is scope for local initiative and participation, and there is no attempt at compulsory conditioning of the people. The second Five-year Plan is crucial in the sense that, attending primarily as it does to essential requirements, such as the creation of the basic economic and social overheads and meeting such urgent needs of the people as food and clothing, it is modest in comparison with urgent requirements; but in relation to resources, it is somewhat ambitious. If the difficulties in mobilising the necessary resources for the Plan are met, in part with external assistance, and the Plan succeeds substantially, it would set the tone for the longer-term perspective and would render further growth less uncertain."

This is the final summing up in an objective analysis of economic development in India made by Dr. N. A. Sarma, Chief of the South Asia Division of the International Monetary Fund, and published in the latest *Staff Papers*, namely, that for April 1958. This contribution on India's economic development in a publication enjoying wide circulation in academic circles in the Western world is very topical, now that the United States of America and other countries are considering substantial assistance to India for the implementation of the programme of development and more so as it comes from one connected with an institution known for its independent views. The analysis covers the progress and achievements of the first Five-year Plan, the objectives underlying the second Five-year Plan, the difficulties experienced in the implementation of this latter plan and the final picture as it now exists.

As a background to the first and second Plans, the author, who has a clear grasp of economic conditions and trends in India, having been in the Research Section of the Reserve Bank of India since 1948, the Taxation Enquiry Commission (1953-54) and the Finance Commission of India (1952), provides an interesting picture of the basic features of India's economy, such as the natural resources, trend of industrialisation, national income and savings, deffence needs, foreign trade, population, employment, availability of trained personnel, land reform, community development, role of private enterprise, economic controls, and monetary and price trends. His review of these features of our economy is mostly factual, but, where he has tended to be commentative, he is inclined to be extremely cautious and rather appreciative of what the authorities have done. The value of this painstaking survey lies in the fact that one can find in one place almost all the basic data about India, and its two Plans.

Discussing the progress of the second Plan, the author has sought to explain as to why it has got into difficulties. There is nothing new in what he says. It is only a summary of the reasons given by the authorities in this country from time to time. In his comments on the fresh taxation imposed in the past two years as a part of the major reorientation of the tax structure, Dr. Sarma is diplomatic. Thus, he says:

"When taxation is thus decisively stepped up, and the tax net is widened to cover sectors which hitherto have not been reached or have been only lightly affected, and when new levies related to the valuation of assets on a current basis and scrutiny of savings in all forms are introduced, administration becomes the crux of the effectiveness of the tax system, especially as the personnel resources of the machinery for assessing and collecting taxes are already under strain. While there are administrative and other problems both in operating the new taxes and in effectively enforcing the old taxes whose incidence has been substantially increased, this major tax effort reflects the determination of the Indian authorities to subdue the emerging inflationary pressures in the economy and to raise resources for the Plan."

On the much discussed subject of foreign exchange, the author is not pessimistic. He says:

"The foreign exchange prospect for the Five-year period does not appear bleak, but it is sufficiently difficult to require from the Indian authorities the utmost caution and effort in husbanding foreign exchange resources and using them to maximum advantage. More than internal finance, the availability of foreign exchange is the determinant of the scale of the Plan."

A note of caution is struck by Dr. Sarma on the question of deficit financing. Taking a pragmatic view, he observes:

"In the circumstances prevailing in India, as development proceeds apace and the bounds of the money economy are gradually extended, it would not be a stable, but a somewhat rising, ratio of money to income that would have to be maintained as incomes rose, provided that money was still held mainly for transaction purposes. Any substantial degree of inflation is, however, the very negation of planning in finance: its most damaging effect is on the poorest and the most vulnerable sections of the community. It is likely to distort seriously the allocation of resources and, by misdirecting them into speculative and unproductive channels, to frustrate the programme of development itself.

"There is no way of precisely estimating beforehand the amount of deficit financing which might be deemed useful and which would not result in serious inflation; this is, within limits, a matter of broad judgment. Basically, as long as real resources are available and additional Government expenditure is conducive to an increase in productive activity and raises real incomes, deficit financing is useful. But there is a limit beyond which deficit financing begins to impair the economy. The extent to which this limit can be pushed depends on the degree of technical, managerial, and administrative co-ordination and efficiency that is attained and the measure of popular co-operation and willingness to submit to austerity and discipline that is forthcoming, with a view to maximising the resources available for investment. The limit is real and has to be kept in view, especially when the process of planning is essentially democratic."

Dr. Sarma has viewed the first two Five-year Plans as part of a longer term development programme. He attaches great importance to the institutional changes already set in motion through land reform, community development, growth of the co-operative movement and other policies, as they will, in his view, have significant effect on productivity in the various sectors of Indian economy. As will have been noted from the rather long quotation at the beginning of this review, the author seems to be confident of India's ability to attain its modest objectives.

WORLD SUGAR IN THE PAST TWO DECADES

CONSUMPTION RISES FASTER THAN POPULATION

A STRIKING feature of the world sugar economy in the past two decades has been the continuously expanding trend of consumption. Indeed, sugar consumption has increased at a much faster rate than the rise in population. Thus, during the period 1937-38 to 1954-55, the total quantity of sugar consumed throughout the world has gone up by as much as 37 per cent. (from 28.5 million tons to about 39.0 million tons), while the population has risen by about 22 per cent. (from 2,212 million to 2,700 million), according to the latest *Commodity Survey*, 1957, prepared by the U.S. Commission on International Commodity Trade and priced at $2.50 per copy. As in the case of most other foodstuffs, income elasticity of demand for sugar is the highest at lower levels of living and, over the aforesaid period, the increase in sugar consumption was about 80 per cent. in the less developed countries, as compared with 23 per cent. in the industrial countries.

The upward trend in world sugar consumption has, however, been lagging behind that in production. Sugar records the highest rate of production growth among the primary foodstuffs. The aggregate world production of centrifugal sugar, after remaining fairly steady during the war, rose rapidly in the post-war period, the average for the years 1953-55 (35.56 million tons) being 53 per cent. above the 1934-35 level (23.20 million tons), thereby re-establishing the annual rate of expansion of 2.4 per cent. that had characterised the year between 1900-03 and 1934-38. The increase is almost twice the average rate of population growth, but it probably overstates, as the *Survey* points out, the rate of increase in total sugar consumption, partly because of a rise in stocks and partly because of a *per capita* decline in the use of the various indigenous (non-centrifugal) forms of sugar, the output of which in 1953-55 was only about 15 per cent. above the pre-war level.

Restrictive Practices

In the opinion of the *Survey*, the rate of increase in the production of centrifugal sugar would perhaps have been even more rapid had it not been held back by various schemes of restrictive practices designed to maintain price. In the U.S., for example, controls were imposed on the acreages devoted to sugarcane cultivation during the years 1954 and 1955. Export quotas fixed under the International Sugar Agreement of 1953 also had the effect of curbing output—within the limits set for each exporting country by domestic consumption plus the allotted quota and a maximum stock equal to 20 per cent. of annual production. Even before that, Cuba had severely curtailed its sugarcane acreage in 1952, as prices fell in the post-Korean commodity slump.

The following table indicates the changes in the trend of sugar production in the different regions since the Second World War:

(Base: Pre-war = 100)

	1946-48	1953-55
North America	102	126
Western Europe	82	160
Latin America	160	184
Africa	118	183
Middle East	191	277
South and South-Eastern Asia	..	105
Oceania	87	194

It will be seen from the above table that sugar production in Western Europe and South-East Asia was seriously disrupted by the war. This decline in output was, however, offset in the early post-war years by expansion in other areas, especially Latin America. By 1953-55, the production of sugar in the industrial, centrally planned and primary exporting countries had been restored more or less to 1934-38 averages. By the same token, the proportion of beet sugar in the aggregate centrifugal output, which had declined below one-third in the early post-war years, recovered to the pre-war average of 41 per cent. There was, however, a serious lag in the South and South-East Asian region which reduced the share of this region in the world production from one-sixth to one-eighth. Within the primary exporting group, the decline was offset by relative advances in several other regions, notably South America where there was a major expansion in Brazil—a trebling of 1934-38 output—and on a smaller scale in Colombia where 1953-55 production was almost six times as great as the pre-war average. After 1951, with restrictions placed on cane acreage in Cuba, the share of the Central American-Caribbean region declined from almost a third of world output in the early post-war years to nearer the one-fifth of the total it had produced in 1934-38.

The *Survey* has given an interesting account of the trends in world sugar trade. According to it, the extensive network of marketing arrangements and agreements—with its system of quotas and preferences—has probably been an important factor tending to restore and stabilise the global pattern of production and trade. As a proportion of world imports, the share of North America and Western Europe was much the same in 1952-54 as in 1934-38—42 per cent. and 29 per cent. respectively—and a slight reduction in the Asian share was distributed among the other primary exporting countries. By 1952-54, exports from South and South-East Asia had recovered to little more than half the pre-war figure. Only the Philippines had regained the 1934-38 average. Exports from Indonesia were hardly significant, though they had accounted for about a tenth of the world total before the war. This lag, together with the expansion of consumption in many net exporting countries and the policy of encouraging—by subsidy and other means—the production of sugar, especially beet sugar, in many net importing countries, caused total imports to increase less rapidly than production. The ratio of world trade to world production, which exceeded 46 per cent. in 1934-38, was less than 40 per cent. in 1953-55. Only a part of the increment in production was consumed. However, there was a marked rise in stocks during this period, so that the decline in the ratio of trade to consumption was of minor dimensions.

Regional Analysis of Exports

The only regions in which exports of sugar expanded to a greater extent than output were Western Europe and Central America-Caribbean. In Western Europe, there were particularly large increases in exports from the U.K., the Netherlands and, on a smaller scale, Denmark. In Central America, the largest relative increases were in Mexico, Jamaica and Barbados, but it was the massive expansion (almost a doubling) in Cuba that did most to raise the region's share of world exports from one-third in 1934-38 to one-half in the post-war period. In other regions, notable increases in exports were registered in Brazil, Reunion and Mauritius.

Apart from South and South-East Asia, exports of sugar were well below pre-war levels in a number of countries of differing economic status. In Egypt and Japan, for example, exports were negligible in the first post-war decade, they declined markedly in the U.S. and Czechoslovakia and failed to regain the pre-war average in South Africa and Mozambique. These six countries accounted for 8 per cent. of world exports in 1934-38 but only 3 per cent. in 1952-54.

It may be noted here that the aggregate world exports of sugar during 1956 amounted to 12 million metric tons (raw value). The bulk of this quantity—5.39 million tons—was exported by Cuba. The other important countries exporting sugar were the Philippines (959,000 tons), Taiwan (733,000 tons), Dominican Republic (693,000 tons), Australia (685,000 tons) and Mauritius (530,000 tons). The biggest importer of sugar is the U.S. This country imported as much as 3.9 million tons in 1956, or nearly a third of the total world imports. The other chief importers of sugar were the U.K. (1.74 million tons), Japan (1.16 million tons), Canada (651,000 tons), Morocco (300,000 tons) and Iran (269,000 tons).

(Concluded from next column)

clearance of which was a necessary first operation. According to it, civil construction is coming up quickly in these areas. Recruitment of technical staff is rapidly being made. The four schools for training junior personnel such as operators, mechanics and supervisors under the Corporation have completed their first year. These schools are expected to turn out about 500 trained persons every year from the third year onwards. Stores and workshops are being built up. A great deal of the machinery needed is at the sites and further machinery is on order. The proposals for opening up more mines are in the last stages of examination and work will be started in the next few months. The railway facilities required for the projects selected for operation have been taken up and are under various stages of completion.

COAL CORPORATION'S ACTIVITIES

GOOD PROGRESS REPORTED

IT is rather difficult to share the note of confidence expressed by the National Coal Development Corporation (N.C.D.C.) in a report issued to the Press that "there is every reason to expect that the target of production for the N.C.D.C. (fixed in the second Five-year Plan) will be reached." Nearly two years have elapsed since the Corporation was set up—on 5th September 1956, to be precise—but the progress so far made in the fulfilment of the allocated target of additional coal production (12 million tons, including 1.5 million tons from Singareni) has been none too encouraging. The additional output of coal actually raised in the public sector during the first two years of the Plan was very much less than a million tons. The progress has thus been so halting that the Planning Commission clearly remarked in its *Appraisal and Prospects of the Second Five-year Plan* (May 1958) that, on the basis of present approved programmes, "the public sector will contribute about 8.5 million tons of additional production in the last year of the Plan." When it is doubtful whether even this figure will be hit, the Coal Corporation has come out with the claim that it will succeed in reaching the target of production (12 million tons). It has not put forward any points to justify its claim. All that it says is that, "by special and determined efforts for which there is considerable evidence, the usual period (five to eight years) estimated for bringing a new coal mine to the production stage could be reached." Note the qualification in parenthesis, the flexibility in the period meant for reaching the target. The Plan is for five years, but the qualification is that the achievement could be upto eight years.

The Corporation, we are told, has brought to a stage of commercial production and despatch several new mines in the virgin coal areas of Bihar and Madhya Pradesh. These include Kathara in the east Bokaro coalfields, Bachra, Gidi and Saunda in the Karanpura coalfields (Bihar), and Korba in the Korba coalfields (Madhya Pradesh). Incidentally, it may be noted that the new mines, most of which are virgin areas, together account for the bulk of the allocated production target (12 million tons), amounting to 10 million tons, the balance of 2 million tons representing the expansion of the existing collieries.

New Areas Opened

Of the new areas opened out for exploitation, the possession of the coal-bearing areas of Kathara was obtained in December 1957, of Gidi on 25th January 1958, of Saunda on 28th January and of Bachra on 28th February. The progress achieved by the Corporation in Kathara deserves special mention. During the six months since the possession of the coal-bearing areas, over one million tons of coal have been exposed and despatch actually commenced. The production target for Kathara is 1.5 million tons per annum. Regular and full-scale despatches from this area is expected to be ensured after the railway siding is completed in December next. Meanwhile, other work connected with the mine is in progress.

The aggregate production target fixed for the coal mines of Gidi, Saunda and Bachra is 3.5 million tons. In this area, where underground mines have to be opened, about 17 inclines have been driven, besides the commencement of an open cast mine in Saunda. Extraction of coal has already started in Saunda and is expected to start at Bachra in two months. The major project of Gidi with the annual production target of 1.5 million tons, will, however, reach the stage of full-scale despatch only after the construction of a bridge across the river Damodar. In Madhya Pradesh, the Korba open cast mine has already commenced production, but the full-scale despatch from this thick seam depends on the completion of the power house that is being installed in Korba by the State Electricity Board. Four inclines are being driven into the thin seam.

In addition to the opening of virgin areas, the Coal Corporation has opened up two new mines in the existing collieries under its ownership—at Kurasia in Madhya Pradesh and Bhurkunda (Karanpura) in Bihar. Actual production in both these mines is expected next month.

The Corporation points out that, until a few months ago, most of the new areas mentioned above were covered with jungle or forest the

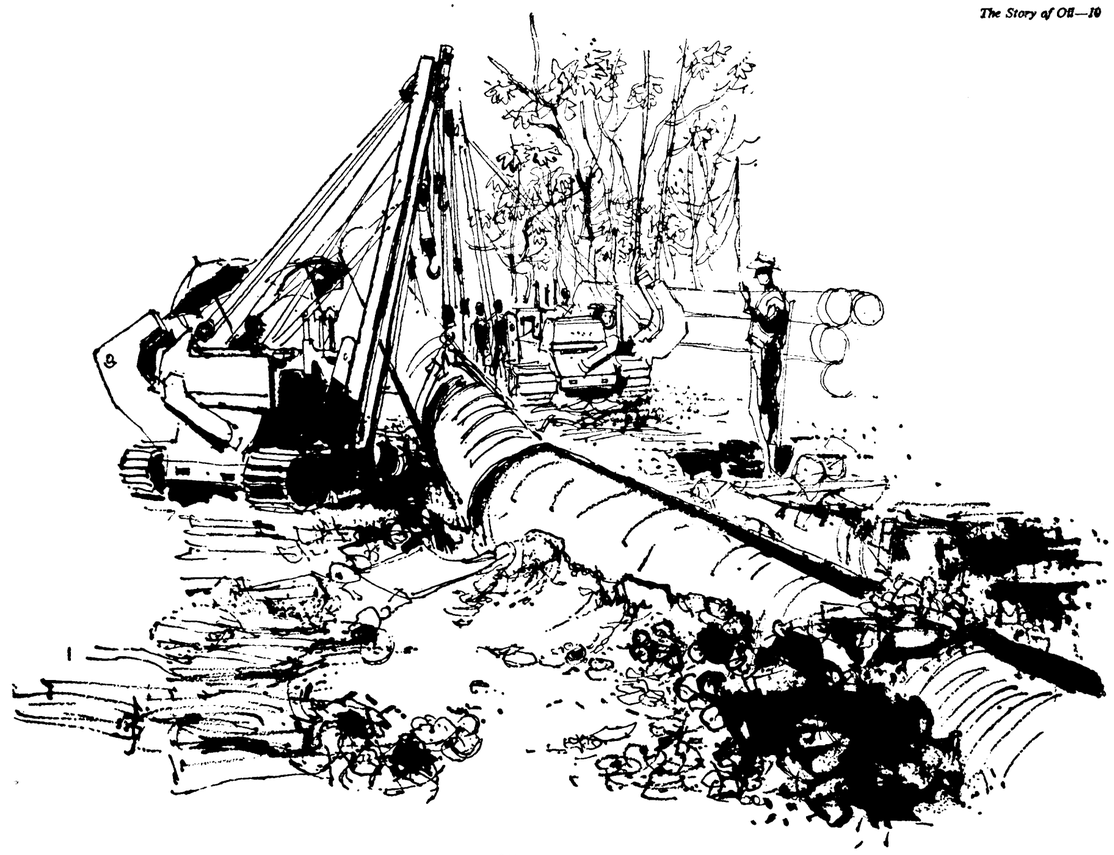
The Story of Oil—10



Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

INTERNAL CONSUMPTION OF COFFEE RISES

EXPORTS SHADE HIGHER—WORLD OUTLOOK STILL UNCERTAIN

THE internal consumption of coffee is maintaining its upward trend, but the pace of increase has slowed down a bit during the first half of the year 1958. In June 1958, the quantity of coffee released for internal sales was 2,615 tons, made up of 1,180 tons of Plantation, 538 tons of Arabica Cherry and 1,097 tons of Robusta, as compared with 2,415 tons (1,155 tons Plantation, 289 tons Arabica Cherry and 971 tons Robusta) in the previous month and 1,938 tons in the corresponding month of 1957. This brings the total releases during the first half of 1958 to 13,233 tons, as against 12,462 tons in the first six months of last year and 11,433 tons in the corresponding period of 1956.

At its half-yearly meeting held on 30th May, the Coffee Board estimated the current year's domestic consumption at about 29,000 tons. If this anticipated consumption in the current year materialises, it will represent an increase of 2,800 tons over 1957, thus maintaining the upward trend from 1953 onwards, when the quantity released for internal consumption amounted to 15,100 tons.

On the export front, the allotment out of the 1957-58 crop was raised last month from 11,684 tons to 12,930 tons, following larger receipts into the Pool. Out of this quantity, the actual export sales up to the end of June amounted to 8,130 tons, as against 7,980 tons in the corresponding period of last year out of the 1956-57 crop. The total exports out of the 1956-57 crop, it may be noted, aggregated 15,228 tons, as against an official allotment of 15,155 tons. This was a record for the last two decades.

In addition to the above export sales, a quantity of 90 tons of Plantation coffee, in lots of 10 tons, was shipped recently to London for testing market reaction. Out of this, 59 tons are reported to have been sold in auction up to the end of June. The prices fetched in April ranged from 468*s.* to 504*s.* per cwt. and in May between 460*s.* and 488*s.* per cwt. Tenders have been invited for the sale of 1,833 tons (1,071 tons Plantation, 635 tons Arabica Cherry and 127 tons Robusta Parchment) during the current month. This leaves a balance for export of 2,887 tons, including 696 tons of Arabica Cherry retained for monsooning and release in October-November. The Coffee Board is negotiating for a trial sale of 10 tons of Plantation Triage and 25 tons each of Plantation A and B in Japan.

The larger internal sales and exports during the first half of the current year were facilitated by the increase in receipts of coffee into the Pool, which received up to the end of June 1958 42,980 tons (made up of 21,137 tons of Plantation, 7,883 tons of Arabica Cherry and 13,960 tons of Robusta) of the 1957-58 crop, the comparable receipts for the previous year being 41,053 tons (the variety-wise break-up figures were 21,792 tons of Plantation, 7,077 tons of Arabica Cherry and 12,184 tons of Robusta). The receipts for a similar period a decade ago (in 1948) were 15,103 tons only, that is, a little more than a third of the current figure.

The latest revised estimate of the 1957-58 crop is 42,930 tons, made up of 29,020 tons of Arabica and 13,910 tons of Robusta, according to the Coffee Board's last monthly *News Letter*. There has been no subsequent revision of the estimate. The blossom estimates for the 1958-59 season's crop are placed at 44,235 tons, made up of 27,650 tons of Arabica and 16,585 tons of Robusta. A clearer picture of the crop can be got only in September, but the indications are, as the Coffee Board Chairman pointed out recently, that it will be over 45,000 tons and possibly nearer 50,000 tons.

If this bumper crop is achieved, India will have a much larger export surplus. With the sharp rise in the cost of living during the last few months, it is doubtful whether domestic consumption will go on increasing, and Indian coffee has to depend, to a large extent, on its internal market. As for exports, the outlook continues to be uncertain on account of the threat of overproduction in the 1958-59 season also. There is already a glut of coffee in the world and dealers are doubtful of the present price levels being maintained without a world agreement among producers to keep up the market. In spite of the efforts of the producers in the Western Hemisphere to evolve an international support scheme, the prospect of reaching an international agreement is not very bright. However, the recently formed International Coffee Study Group, enjoying great support from producers and consumers alike, can be expected to do something more far-reaching. The object of the Study Group is to see what can be done to bring some stability to coffee production, consumption and prices. In the meantime, the Western Hemisphere producers have drawn up a scheme for some sort of international control on coffee exports, with an export quota for each producing country. The U.S., the main consumer of coffee in the world, is said to be in favour of fixing an export quota, as a temporary measure. The economy of the coffee-producing countries in the Western Hemisphere depends on coffee and any scheme which seeks to stabilise it can be expected to have the support of the U.S. and many other consuming countries. But even with the support of the U.S. the scheme will not be successful, unless the co-operation of African producers is forthcoming. Hitherto, the latter have been hostile to the Western Hemisphere producers' scheme, evidently because of its restrictive nature.

WORLD RUBBER STATISTICS

World production and consumption of natural rubber showed a decline in May 1958. The preliminary figures released by the International Rubber Study Group show a drop from 130,000 tons to 127,500 tons in May and consumption from 165,000 tons to 150,000 tons. The fall in consumption is mainly due to the sharp decline in Russian imports from 22,500 tons in April to 16,500 tons and in Chinese imports from 13,000 tons to 5,750 tons.

The total production in the first five months of 1958 was 667,500 tons, a decline of 60,000 tons from the output in the corresponding period of 1957. The world consumption also dropped from 805,000 tons to 782,500 tons, the fall being attributed to the lower consumption in many countries. The U.S. consumed 50,000 tons less, evidently due to the business recession. China's consumption was lower by 4,000 tons, while Russia used 50,000 tons more.

Rubber output in India during May this year amounted to 2,503 tons, as against 1,590 tons in the previous month and 1,645 tons in May 1957. This brings the total production in the five-month period January-May 1958 to 9,049 tons, an increase of 757 tons over that (8,292 tons) in the corresponding period of 1957. Consumption by manufacturers also increased from 2,684 tons in April to 2,822 tons in May; the corresponding figure for May 1957 was 2,573 tons. The total consumption during the first five months of the year amounted to 14,052 tons, as against 12,338 tons during January-May 1957. The stocks at the end of the month aggregated 8,963 tons, having gone up from 5,274 tons a year before.

TEA OUTPUT IN INDIA

The provisional figures of tea production in South India during June 1958 show a sharp decline to 13.3 million lbs. from 15.2 million lbs. in the corresponding month of 1957. This brings the total production in the first half of the current year to 85.0 million lbs., as against 72.6 million lbs. in January-June 1957, the excess production having dwindled from 14.2 million lbs. to 12.4 million lbs. The production in North-east India up to the end of June was 107.9 million lbs., as against 111.4 million lbs. in the corresponding six months of 1957. The total Indian tea crop up to the end of June thus amounted to 192.9 million lbs., an increase of 8.9 million lbs. over the year.

IRAQ'S OIL INDUSTRY

EXTENT OF ITS IMPORTANCE ANALYSED

A SUSTAINING factor in world economy is the production of oil. Uninterrupted supply of oil is, as is well known, vital to the continued maintenance of economic activity all over the world. From this point of view, the contribution made by West Asia, which accounts for some 30 per cent. of the world oil production, is by no means a small one. How far is Iraq, the political revolution in which has hit the headlines in the press, indispensable to oil economy? A review of the position of the Iraqian oil industry reveals that it is far more important to Iraqian economy than to world oil supply. Out of the current monthly average production of 55 million tons of oil in the world, the Middle East accounts for 16.9 million tons, of which Iraq's share is 2.6 million tons. It should thus be clear that Iraq's share is by no means so large that its loss, should it occur, could not be made up by increased production from other areas. Indeed, if Iraq's oil supply were cut off, it would be possible to increase production of oil from other oil-producing countries, some of which are working below capacity. It is, however, noteworthy that such a contingency has not arisen now, for the new Government in Iraq has not so far placed any obstacle in the flow of oil. The consequences to world oil economy could, however, be serious if the entire Middle East were involved in a crisis, thereby adversely affecting oil production in the whole region.

At present, there is a surplus of oil in the world. In fact, some producers are stated to be restricting their output in order to get the surplus under control. Until last year, world consumption of oil, according to the Oil Correspondent of the London *Financial Times*, had been increasing by 6 to 7 per cent. a year. Last year, the increase was only 2 per cent. Although a recovery is expected this year, the rise in sales is likely to be 4 per cent. As a result of this slowing down in the rate of increase, oil markets until recently were weak and the output in the main producing countries had to be limited and in some even reduced. Reviewing the position of oil in Iraq, the correspondent observes that the Kirkuk field in Northern Iraq now supplies about two-thirds of the oil output in that country, as against four-fifths formerly. The output, it is stated, has been held back by the lack of pipeline capacity. This is attributed to the sabotage of pipelines in 1956. The capacity of the pipeline was, however, restored last month to the pre-Suez level of 25 million tons a year. The output from Kirkuk is accordingly scheduled to increase. Further expansion is envisaged because the Iraq Petroleum Company has undertaken to double production from its three oilfields by 1960 and to continue to increase it after that date. The output from the other major oilfield in Iraq, at Basrah in the south, has increased considerably, as oil from this field does not go through the pipelines to the Mediterranean but is shipped from Fao on the Persian Gulf. If the entire oil supply from Iraq were stopped completely, it would mean that between 2.5 million and 3 million tons per month would have to be obtained from other sources. This would represent less than 4 per cent. of the world's oil supplies and only about one-sixth of Middle East production. It seems probable, according to the correspondent, that much of the loss could easily be made up from other Middle East countries. "The principal threat to the economies of the West, therefore, lies," he says, "not in any cessation of oil production in Iraq alone but in the possibility of the conflagration spreading to the whole of the Persian Gulf." It is of the utmost importance, therefore, to world economic progress, that the crisis in Iraq should not be allowed to spread to other parts of the Middle East.

In Iraq itself, normal conditions should be restored, because if the crisis affected adversely oil production, it would mean considerable damage to that country's economy. The oil industry accounts for some 27 per cent. of Iraq's national product valued at 292 million dinars, followed by agriculture (24 per cent.), services (17 per cent.), manufacturing (12 per cent.) and wholesale and retail trade (11 per cent.). Iraq's population is increasing steadily; it moved up from 4.8 million in 1947 to 6.5 million last year. In order to support this increasing population and to raise their living standards, the Government has embarked upon a development programme which calls for an investment of some 500 million dinars over the period 1955-60. Iraq, it may be noted, has been devoting nearly 70 per cent. of its oil revenue to its development programme. Direct revenue from oil reached a total of I.D.68.8 million in 1956; it had been expected to reach I.D.80 million in 1957 but dwindled to I.D.48.9 million because of the Suez crisis and the temporary cessation of oil flow through the pipelines to the Mediterranean terminals.

The success of Iraq's development programme depends on maintenance of oil exports. Not only does the industry bring in large revenue to the State but its exports furnish the country with the much-needed foreign exchange. Indeed, foreign exchange reserves have continued to increase from year to year, though they received some setback in 1956 and 1957 because of the interruption in oil supplies. At the end of 1957, they were 120.9 million dinars, as against 138.9 million dinars at the end of 1956, 127.0 million dinars at the end of 1955 and 107.0 million dinars at the end of 1954. By far the most notable benefit from the oil industry to Iraq's national economy is the fact that it has served to keep under check inflationary pressures which, in the other countries of West Asia, have resulted from the implementation of development programmes. This has been rendered possible through the abundance of foreign currency, permitting a high level of import of consumer goods as well as of capital equipment for development projects.

MINOR IRRIGATION

Although it cannot be gainsaid that the multi-purpose projects have a significant role to play in India's agricultural economy—they promote large-scale irrigation, power generation and flood control—minor projects deserve much better attention than they have received. Minor irrigation schemes entail a comparatively small outlay, yield quick results and can be executed with local resources. These schemes are also labour-intensive. They, however, give protection only to a limited area, required periodical surveys and are subject to the vagaries of the monsoon. But given constant care, they can make an effective contribution to agricultural production. Clearly, an integrated and judicious planning is necessary for implementing and ensuring regular upkeep of these projects.

These and other related problems came up for discussion at the Regional Minor Irrigation Conference, held at Hyderabad recently. The Conference, which was attended by Ministers and officials from the States of Bombay, Madras, Mysore, Kerala and Andhra Pradesh, was presided over by Mr. A. P. Jain, Union Minister for Food and Agriculture. Mr. Jain, in the course of his speech, particularly stressed the problem of maintenance of small irrigation projects in the region. He rightly called upon the participant States to renovate within a period of five years the 25,000 odd tanks which had gone out of use in Madras, Andhra, Mysore and Kerala. It would appear that about 1,200 to 1,500 tanks are being repaired every year. Mr. Jain rightly pointed out that, at this rate, it would take about 15 years to renovate the tanks. Surely, the country cannot wait for so long a period, in order to develop its minor water resources.

The Union Minister, therefore, urged them to renovate the tanks within a period of five years. Expenditure involved in repairing the tanks is relatively small. The States should, therefore, be able to find the resources needed for implementing a more rapid programme of tank renovation. It should be remembered that India has spent about Rs. 1,200 crores on food imports in the last 10 years. A fraction of this sum would be sufficient to develop many important minor irrigation sources in the country.

Emphasising the importance of providing irrigation facilities to agriculturists, Mr. Jain stated that nearly 80 per cent. of the land was not served by reliable irrigation sources. Before the first Plan period, India was utilising only 6 per cent. of water resources; the proportion had now gone up to 10 per cent. This meant that 90 per cent. of the water resources went down to the sea. Further, many of the large irrigation works, which had been constructed, had not been fully utilised. Thus, the first Plan provided irrigation facilities which could feed 8.7 million acres but they had actually benefited only four million acres. In this context, there is an imperative need to develop minor irrigation works in which there is little time lag between the creation of irrigation facilities and their utilisation. Mr. Jain revealed that with a view to developing minor irrigation in the country, it was proposed to waive the compulsory contribution by local people for construction of minor irrigation works in the Community Development blocks and also to extend the facility of subsidy given for schemes under the Grow More Food programme to minor irrigation works in these blocks.

After a survey of the minor irrigation programmes in participating States, the Conference recommended that special efforts should be made to maintain the works already completed, to make an assessment of irrigation facilities created through these works and to take steps to accelerate the tempo of works in the current year as well as in future years. The Conference held the view that State Governments should provide for an organisation for periodical surveys of the small irrigation projects; for keeping accurate record of the works completed; and for ensuring that no individual wells fell into disuse. One, however, fails to understand whether such an elaborate organisation is worth the additional expenditure it involves. It was also proposed that a fund could be raised by the levy of special maintenance cess from beneficiaries and, if possible, from revenue budgets of the States.

The Conference felt that the maintenance of minor irrigation works could be entrusted to *panchayats* or co-operatives if they were capable of looking after them. It recommended that correct assessment of irrigation potential developed under various minor irrigation schemes and its utilisation should be made from time to time in order to ensure fulfilment of targets under various schemes. A random sample survey, it was felt, might be undertaken on an all-India basis with a view to evaluating results actually achieved. Financial requirements for works, which could be undertaken during the current year, were reviewed along with funds already provided in State budgets for Community Development and National Extension Blocks. The additional amount needed for the current year was of the order of Rs. 3 crores. The Conference recommended that the Government of India should consider allocation of funds so that progress on minor irrigation programmes for these States could be accelerated.

NEW PRODUCTS AND PROCESSES

Sun-powered Hearing Aid.

ZENITH Radio Corporation of the United States has developed a new sun-powered hearing aid, which operates through the use of solar energy stored in silicon cells. Designed for use in eyeglasses, power for the new hearing aid is supplemented by a tiny nickel-cadmium storage battery. Ordinarily, the amount of sunlight received on a slightly overcast day is enough to operate the new device. But when light is insufficient, the battery automatically cuts in to operate the instrument. A standard mercury battery may be substituted for the nickel-cadmium battery. The suggested retail price for the instrument is $250. Called the solaris, the new hearing aid is housed in a temple bar designed to fit almost all eyeglasses fronts.

Protective Paper

A range of backing and inter-leaving papers coated with special silicone and plastic finishes to provide any required degree of resistance to adhesives is being produced in Great Britain for what is said to be the first time. Available at almost a quarter the cost of conventional cloth backings, these adhesive or adhesion-resistant papers are being marketed under the name "Striplac," and are designed for the protection of all types of adhesive-coated or "sticky" commodities. The "Striplac" range can be supplied in various strengths and types of paper, printed in up to six colours with designs incorporating the product's brand name, instructions for use, or other advertising matter. It is stated that the papers can be used for the protection of sheet plastics or uncured rubber during storage and inter-factory transit, as well as of various types of asbestos and resin-impregnated products which are sticky at certain stages of manufacture. In the retail field, the papers are understood to be suitable as backings for a wide range of adhesive-coated lines including surgical dressings, tyre patches, display cards and transfers, plastic tiling and table surfacings, stick-on shoe-soles and draught-excluding strip.

New Aluminium Alloy

An aluminium alloy that is said to have a considerably better resistance to hot water than other aluminium alloys previously commercially available has been developed in Britain. The new alloy also has the advantage that it will give a satisfactory performance—from the nuclear physics point of view—when it is used inside a nuclear power-producing reactor furnace as a uranium fuel canning agent. The alloy, which is said to be easy to handle, is also very cheap to produce and should therefore offer the potentiality of widespread industrial application. At the same time, when it is used in the atomic power field it offers a number of the advantages of zirconium alloys without their high cost and handling difficulties. The alloy is based, oddly enough, on a readily available aluminium alloy containing small quantities of iron to which small amounts of nickel have been added.

New Blood Centrifuge

A new centrifuge developed by two Swedish inventors, Dr. Harry Danielsson and Mr. Folke Lundmark, and intended for simplifying blood-test investigations, has aroused great interest in medical centres all over the world. It is in use in Sweden and the U.S. Large-scale export is now planned by the Swedish industrialist Dr. Axel Wenner-Gren, who has taken over the rights of exploitation. Dr. Wenner-Gren aims to export the apparatus especially to countries with underdeveloped technical facilities. Among the advantages of the centrifuge is that it is simple in use and performs the necessary work without attendance. It is also very easy to take the readings from the machine. Oil producers believe that it will become useful as a gauge of the contents of fats in oil, and it may also find use in measuring the albumen content in milk.

BUILT TO CARRY MORE PASSENGERS

LEYLAND COMET

THE BIG CHASSIS FOR THE BIG JOB

The LEYLAND COMET is the longest wheel-base passenger chassis made in India. Its large body space accommodates at least six more passengers in every trip than any other make. Its low fuel consumption and easy maintenance have made it the ideal passenger transport vehicle everywhere. No wonder LEYLAND is the first choice in passenger transport in over 50 countries around the world.

OPERATIONAL ACTIVITIES OF I.L.O.

SPECIAL STANDARDS FOR BACKWARD COUNTRIES URGED

THE radical changes that have come over the world economic and social scene in recent years have imposed additional burdens and responsibilities on the International Labour Organisation pledged to the cause of promoting social justice throughout the world. With more and more countries joining the Organisation as members—80 countries are at present members—the field of its operation and the number and complexity of the problems it has to face have increased considerably. The changed character of the membership of the I.L.O. has necessitated a shift of emphasis in its programmes. In order to help the underdeveloped countries, for instance, it has been found necessary to assume, in addition to its traditional job of standard-setting, new activities such as technical assistance. The latter is becoming important as the gap in the levels of living standards between peoples in developed and underdeveloped countries is becoming wider and wider.

An indication of the new challenge facing the countries and the role of the I.L.O. in helping them is provided by the annual report of the Director-General presented to the 42nd session of the International Labour Conference held recently in Geneva. The report reflects a definite and conscious shift of emphasis in the I.L.O.'s activities. This, obviously, is in response to the general feeling in the underdeveloped countries that the operational activities of the I.L.O. should be further expanded and that technical assistance should be regarded as important as the standard-setting work.

New Emphasis

This feeling was voiced by Mr. R. Venkataraman, Minister for Industries and Labour in the Madras State and Government delegate, in his address to the Conference. Mr. Venkataraman put forward a vigorous plea for a new emphasis in the I.L.O.'s programme of activity. He felt that there was need for expanding the operational activities of the I.L.O., if necessary by readjusting its other programmes. The gap between the levels of living in Asia and Africa and those in more industrialised countries was widening, despite the determined efforts made by the peoples and Governments of this region to accelerate the pace of economic development. The constitution of the I.L.O. recognised that the failure of any nation to adopt humane conditions of work was an obstacle in the way of other nations which desire to improve the conditions in their own countries. When such failure arose out of sheer economic incapacity, there was a clear case, according to him, for the I.L.O. to step in with an assurance of assistance. The operational activities of the I.L.O., especially the technical assistance programme, have been very helpful to underdeveloped countries. For instance, India received assistance in organising the activities of the national employment services, in formulating the social security system, in carrying out the programme of productivity studies, in setting up a training-within-industry centre and in many other matters. From the experience of India, it was evident, Mr. Venkataraman pointed out, that apart from the need for transmission of techniques there was an equal, if not greater, need for the supply of equipment on a more liberal scale. He, therefore suggested that the supply of equipment in connection with technical assistance projects should be liberalised and made free of the current restrictions.

Standard-setting

Even in the traditional field of standard-setting, as Mr. Venkataraman pointed out, there is need for a new approach. The standards evolved by the I.L.O., particularly during the earlier years, reflect more directly the conditions prevailing in the industrialised countries and are far removed from the economic realities of the less developed regions. In other words, industrialised countries were formerly preponderant in determining the direction of I.L.O. activities. As a result, what has been adopted as international standards has often looked like the codification of the experiences of these countries. The picture, however, is very much changed today. Other less developed countries of the world have appeared on the scene and continue to appear in larger numbers. They are assuming, as the Director-General put it, a greater place in international preoccupations. If adherence to international standards is to be real, such standards should also come within the reach of the social and economic realities of these countries. To take, for instance, working hours. There is, as readers are aware, a persistent demand in some of the developed countries that the working hours be reduced from 48 to 40 or 36, a demand which underdeveloped countries like India cannot afford to concede.

The purpose of the aforesaid standards is to bring about uniformity in labour practices or at least to induce a forward direction towards such uniformity. But, when conditions are widely different in different countries, it is exceedingly difficult to formulate uniform standards. Although they might be suitable to the conditions in advanced countries, they would obviously be too high for the less developed areas. On the other hand, standards fit for the latter countries would be far too low for the former. The I.L.O. is no doubt seeking to meet this dilemma by introducing an increasing element of flexibility in the formulation of standards. But there is a limit beyond which this process cannot go without sacrificing even the semblance of uniformity. The issue should be faced more squarely and frankly. Mr. Venkataraman, therefore, suggested that earnest consideration should be given to the possibility of formulating standards on a different basis, regional or other.

A notable event of the Conference was that two new international instruments, a Convention and a Recommendation, setting new standards for employment conditions for plantation workers were adopted. The Convention, described as a plantation workers' charter, has 14 parts, several of which must be complied with by ratifying countries, others being optional. The Convention comes into force six months after the ratifications have been registered by two of a list of 35 countries selected on the basis of the importance of their plantations.

The Conference took preliminary action with a view to final discussion next year on four other instruments; three proposed draft Conventions on (1) minimum age for admission of fishermen to employment, (2) medical examination of fishermen, and (3) fishermen's articles of agreement and a Recommendation on the organisation of health services in places of employment.

It held a general discussion on hours of work, and adopted a resolution inviting the Governing Body to place the question of the reduction of hours of work on the agenda of an early session of the Conference with a view to the adoption of an international instrument.

The Conference also adopted various resolutions, among others, on occupational diseases, publication of labour laws, human rights, industrial health and safety campaigns, manpower aspects of economic development, management development, measures to promote employment and action against unemployment, expansion of international trade, labour-management relations, and increased technical assistance for the integration of indigenous populations into the economic, social and cultural life of their countries.

EARNINGS OF FACTORY WORKERS

An idea of the average annual earnings of factory workers in the leading industries in India can be had from the statistics published in the March 1958 issue of the *Monthly Abstract of Statistics* of the Central Statistical Organisation. The table reproduced below shows the average annual earnings during the two years 1955 and 1956:

Industry	Average annual earnings (in rupees) All States	
	1955	1956
Textiles	1,101.3	1,244.5
Footwear, other wearing apparel, etc.	1,101.3	1,098.1
Wood and cork except furniture	670.0	762.2
Furniture and fixtures	681.0	716.0
Paper and paper products	1,062.5	1,036.4
Printing, publishing and allied industries	1,162.1	1,188.6
Leather and leather products	836.6	756.6
Rubber and rubber products	1,368.4	1,501.7
Chemicals and chemical products	957.2	980.9
Products of petroleum and coal	1,492.9	1,686.2
Non-metallic mineral products	781.5	838.3
Basic metals	1,673.4	1,487.9
Metal products (except machinery and transport equipment	1,048.2	1,119.5
Machinery (except electrical machinery)	1,100.4	1,136.2
Electrical machinery, apparatus, etc.	1,340.0	1,314.4
Transport and transport equipment	1,429.6	1,540.1
Miscellaneous	1,209.8	1,169.9
Electricity, gas and steam	1,371.7	1,465.1
Water and sanitary services	1,041.4	1,115.9
Recreation services	1,037.0	1,227.4
Personal services	362.8	465.2
All Industries	1,178.5	1,212.7

It will be seen from the above table that the average annual earnings in 1956 were the highest in petroleum products and coal industries. Transport and transport equipment industries ranked second and rubber and rubber products third. Earnings were lowest in personal services, being only Rs. 465.20 per annum.

SAFETY AND HEALTH IN DOCK WORK

The I.L.O. has just published a code of practice relating to safety and health in dock work. (*Safety and Health in Dock Work*, I.L.O. Geneva. Price: Rs. 4. Pages: 125.) The code has been formulated with the help of a team of international experts. It is conceived not as a set of regulations, but as a guide consisting of a body of concise recommendations for the use of persons or organisations having responsibilities in the promotion of occupational safety and health in dock work. Although the code has no binding force, its value lies in the fact that it is the work of experts and embodies the knowledge and experience of many countries. It should be of value to all countries, particularly to the rapidly industrialising countries whose experience in the safety and health problems of dock work is still insufficient.

The Central Board of Trustees of the Employees' Provident Fund which consists of representatives of the Central and State Governments and employees' and workers' organisations, has decided to recommend to Government that interest at 3¼ per cent. per annum be credited to subscribers' accounts for 1958-59. The total amount of provident fund contributions for 1958-59, on which the rate of interest had to be declared, was estimated as over Rs. 46.46 crores and the net amount available as interest was Rs. 1.76 crores.

STRANGE ELEMENTS IN INCOME-TAX LAW—II

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

HERE is an illustration of heads I win and tails you lose element.

You give a loan to a constituent in course of business. You take the loan from him, similarly on reciprocal basis. Interest earned on such loan is duly accounted for on accrued basis. Unfortunately, the loan proves bad and both the principal and interest are written off. When you claim the amount as bad debt, the Department argues that such bad debts are inadmissible, for moneylending is not your business. Interest accrued and adjusted in the accounts forms part of a loan and, therefore, it is equally inadmissible. You submit that at least the interest part of the loan should be allowed, for it has already been taxed as income and income without receivability is no income; the interest income on accrued basis has created a debt which has become bad and should be allowed. The reply is: Under what section? Where is the section like Section 10 (2A) under which if a deduction is allowed on accrued basis in one year and the creditor gives a remission and you do not pay, the Act contains a specific section to tax the waiver on remission as income. So here the law provides that the State shall not lose its tax—but, if the taxpayer loses, the relief equitably due—well, never mind! The State cannot legislate for such unfortunate beings.

Fantastic Element

Let me not forget to tell you about a fantastic element something which will tickle your fancy if you are a tax-gatherer, something which will scare you out of your wits if you are the taxpayer.

Section 2(6A) which deals with artificial definition of a dividend was amended in 1955 to catch loans given to shareholders in a company governed by Section 23A. It is provided that, if a shareholder is given a loan when the company possesses accumulated profits, then notwithstanding the fact that it is a loan, it shall be regarded as if the whole loan was a distribution of dividend in his hand. The shareholder may hold only a few shares, not the whole capital, yet the whole loan will be taken as if the accumulated profits were released in his favour by the company as dividend. This is fantasy number one.

Although this profit is fictionally distributed, yet in subsequent years when this is again distributed factually to the shareholders it will again be taxed in the hands of the shareholders other than the shareholder whose loan was taxed as dividend. To illustrate this fantasy let me give figures. A company's accumulated profits, say, were Rs. 5 lakhs. Loan given to 'A', a shareholder holding one-fifth capital, is Rs. 5 lakhs. Next year, Rs. 5 lakhs are factually distributed. Rs. 4 lakhs will again be taxed in the hands of the recipient shareholders. Rs. 1 lakh will be set off against the loan of the shareholder if it is still outstanding. The fantasy is that, for taxation purposes the Department has collected tax on a distribution of Rs. 9 lakhs. So, by a magic wand, a company has been regarded to have distributed 9 lakhs when its divisible profits are only Rs. 5 lakhs. This is fantasy number two.

The shareholder who has taken the loan gets a set off against the factual dividend of the tax paid on Rs. 5 lakhs loan treated as dividend, provided the loan is still outstanding. If the loan is paid off before the declaration of next dividend, there is no loan outstanding for a set off, therefore, it legally can be taxed again. So that 'A' will be taxed on Rs. 5 lakhs fictional dividend and Rs. 1 lakh factual. This is fantasy number three.

There is yet another fantasy. Section 12(1B) provides that, on coming into operation of the Amendment Act in 1955, any loan outstanding in favour of a shareholder of a Section 23A Company will be regarded, suddenly as on 1st April 1956, as dividend in his hand, if the company then possesses accumulated undistributed profits to that extent. The loan may be an outstanding of several years—so may be the undistributed profits accumulating over several years. By a stroke of the pen—or is it a legislative genius!—the loan has become a dividend, a capital has been suddenly converted itself into an income. You can well say with Byron who wrote: "I woke up one morning and suddenly found myself to be famous"—the taxpayer can well imitate and say: "I slept a solvent overnight, woke up next morning insolvent"—not by what I had done, but what the law has done to me. This is fantasy number four.

Absurd Element

Here is a flagrant departure not only from reason but also common sense. The absurd element in the much discussed Section 23A is this.

When there is concealment, you attract penalty of 150 per cent. of the tax sought to be avoided by such *modus operandi*. Penalty certainly must be imposed for offence committed, namely, for the amount of non-disclosure. But look at the provision of Section 28(1) (c). It arms the Income-tax Officer to inflict penalty not at 150 per cent. of tax sought to be avoided on undisclosed income but 150 per cent. of the tax on the difference between the tax on income returned and income assessed. Income assessed, as will be readily realised, is made up of large number of innocent add-backs. Even 150 per cent. of the tax on these items will come to be penalised once you are attacked under Section 28(1) (c). This is absurd—why should innocent add-backs be mulcted in a fine of 150 per cent.? There is no excuse for this cussedness, except the lack of proper logical perspective in our legislators.

Under old Section 23A—a section that bristles with problems like the bristles of the porcupine—if a company has not distributed 45 or 60 per cent. of its assessable income, depending upon the nature of its business, the Income-tax Officer can deem the whole of the undistributed profit to have been distributed. This is fair but within what time? There is no time limit for passing such orders. The Income-tax Officer, like Rip Van Winkle, may wake up after 20 years and pass an order holding the then shareholders liable to pay super-tax on such dividend though such shareholders may long have ceased to be in the land of the living and their holding may be held by their great grandchildren. This is absurd you will say. But alas! it is true—at least it was too true until the Amendment Act of 1955 made substantial changes in it—changes almost beyond the recognition of the old brazen face of Section 23A.

This is not the only absurdity. Take a company registered under Section 25 of the Companies Act. This is a non-profit-making company and as such is prohibited from declaring dividends. Yet if such company falls within the definition of Section 23A of the Income-tax Act, it must distribute 60 per cent. And, if it does not, it is still penalised by levying additional tax on undistributed amounts. Such a company will also lose rebate as it declared no dividend in India and made no prescribed arrangement for deduction of tax. Similarly, electricity companies can declare dividend only out of a reasonable return prescribed after making due provisions, as required by the Electricity Act; yet, if it is a Section 23A company, it will still be penalised for not distributing 60 per cent. of the assessable income—notwithstanding that the law prohibits a certain part of such income from being distributed. Can absurdity go further?

Vindictive Element

A firm is genuine; it is registered under the Income-tax Act; assessment proceeds and, for some default in not complying with the Income-tax Officer's requisition, you invite assessment under Section 23(4), that is, a best judgment assessment. This best judgment is a misnomer. It is "no-judgment" assessment and you are first punished by estimating your profits at a figure which hardly has a resemblance with facts. This is penalty number one. For not complying with requisition, a penalty may be levied also under Section 28. This is penalty number two. As if these were not sufficient deterrents, yet another penalty could be levied, namely, cancellation of registration and assessment of a firm at an unregistered firm's rate of tax. Can vindictiveness go further—punish the assessee thrice for the same offence; yet it is there for those who can read the law between the lines. Indeed, when I come to think of it further, I find that even a fourth penalty is possible, this time under Section 18A.

Partiality Element

There is partiality element also in the Act. Under Section 4A, so far as the residence of the firm is concerned, the law provides that the firm was normally deemed to be a resident, unless the control and management of its affairs are situated wholly outside India. On the other hand, the Company is resident if the control and management of its affairs is situated wholly in India. It will be seen that, so far as the firm is concerned, the presumption is normally resident, unless it is wholly controlled outside India, whereas, in the case of a company, it is presumed to be non-resident unless the control is wholly situated in India.

Unjust Element

Where the income of an assessee is taxed both in India and elsewhere in a country with which there is reciprocal arrangement for relief, the laws provide that the assessee shall make an application for double income-tax relief within a year from the date of his being taxed in India. It may be that no action is taken in the other country to tax it and so he makes no application for a relief unless the income gets doubly taxed. But when he is actually taxed in the other country, he finds that the period of limitation to claim relief has expired. The income has been taxed in India and his application has been held time-barred for double-tax relief.

Atrocious Element

Let me conclude with an instance of atrocious element provided in the Act. Where there is an element of 'speculation' in a transaction, then speculation profit will enhance your total income—but a loss in speculation will not reduce the same. So, though you have an overall loss, yet isolating speculation loss, there is a profit, the loss will be ignored and the profit taxed. Thus, there is a tax not only on income, on capital, but also on loss. Next year, you make profit in speculation, will the last year's loss be set off against this year's speculation profit? Oh no! If there is a profit in speculation and a loss in other business and under other heads, the loss will first absorb the profit under Section 24(1). And if after this, there is yet a profit, it will be graciously allowed to be set off against the last year's carry forward of loss in speculation. It is an "atrocious element" of perverse logic. Why? The reply is that there is a widespread practice of buying losses and that the authorities cannot detect the real from the spurious. Therefore, why not regard the honest as well as the dishonest alike and herd them together for harsh treatment. The principle of the law of the Penal Code is let nine criminals escape, but let not one innocent man be convicted of an offence he has not committed. But here under the Income-tax Law the principle is inverted. Let all the ten be committed to jail since the authorities cannot say who is criminal and who is not—an instance of poetic justice indeed, if it can bear such a high-sounding denomination.

Conclusion

Faced with such elements as we have seen, no wonder the Income-tax Officer is always in his best element when he assesses a person by exercising his opinion element and by invoking vicarious, uncertain, irrational and inequitous elements to make what he says a 'fair' assessment and the poor assessee is out of his 'element,' for the remedies provided in the Act are worse than the disease. To call such assessments 'fair' is a misuse of words, to put it softly. When salt has lost its flavour, wherewith shall it be salted?

(Concluded)

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

CHEMICALS AND ALLIED INDUSTRIES

EXPORT TARGET OF RS. 70 CRORES SUGGESTED

WITH the inauguration of the Chemicals and Allied Products Export Promotion Council at Bombay on the 16th inst., by Mr. Manubhai Shah, Union Minister for Industry, one more link has been added to the chain of such councils recently constituted for stepping up exports. Faced with the mounting crisis on the foreign exchange front, India has become acutely conscious, though a little belatedly, of the need for, and the importance of, boosting exports to pay for what it buys from abroad on a fairly large scale. Viewed against this background, the exhortation made by Mr. Manubhai Shah, while inaugurating the Council, that these groups of industries should be expanded and helped to find export markets adequate enough to meet the foreign exchange required for their own needs in future, sounds pertinent in theory at least. Whether it will be practicable is a question for which the answer will depend upon the ability of the indigenous industry to compete effectively in the world markets. He suggested that the Council should set for itself an immediate target of an annual export of goods worth Rs. 70 crores to be reached in five years from now. This sounds a tall order, considering that exports of goods falling within the Council's purview are not even one-tenth of the suggested target. There is, however, tremendous scope for exporting chemicals and allied products, having regard to the geographical advantage which India has in regard to the markets in West and East Asia, as well as in Africa.

One reason why exports of chemicals and allied products have not been significant so far is, as Lala Charat Ram (Chairman of the Council) pointed out, that the emphasis hitherto has been on catering to domestic demand. But as the industries concerned have to depend on imports for their raw materials, etc., and as there is an urgent need for diversifying India's exports, the time has now come when they have to find a part of their needs of foreign exchange, by exporting a part of their production. As already stated, India is exporting at present a few crores worth in all of pharmaceuticals, fine chemicals, glass and glassware, rubber, salt, etc. Some idea of these exports can be had from the following figures, which refer to shipments made in the first 10 months of 1957:

(Value in rupees)

Pharmaceuticals and fine chemicals: Vitamins and vitamin preparations: 7,13,742; bacteriological products, sera and vaccines: 2,25,023; antibiotics: 5,55,713; opium alkaloids; cocaine, caffeine, other alkaloids and their derivatives: 7,40,446; absorbent cotton sterile: 18,48,558; botanical dry derivatives: 4,10,282; liquid extracts of liver: 1,53,598; and rauwolfia serpentina: 1,88,525.

Acids and fertilisers: sulphuric acid: 1,52,475 and crude fertilisers: 27,41,844.

Alkalis: chlorine: 84,083 and hydrogen peroxide: 57,357.

Miscellaneous chemicals: Glycerine 33,11,105; creosote oil: 1,11,619; D.D.T.: 27,378; and glucose liquid: 62,107.

Dyestuffs and intermediates: coal tar dyestuffs: 2,01,887 and metanil yellow: 20,834.

Glass and glassware: bottles, flasks, etc.: 10,26,752; glass bangles: 4,16,401; and glass mirrors: 3,56,234.

Ceramics and enamels: Chrome bricks and shapes: 2,44,991; fireclay bricks and shapes: 1,83,4[illegible]; and insulating bricks: 44,738.

Rubber: Crepe rubber sheets: 99,273; synthetic rubber and rubber substitutes: 17,400; footwear rubber solid: 64,65,103; and rubber footwear: 3,68,880.

Soaps and toileteries: Hair oil: 9,04,885; toilet powder: 3,13,078; cosmetics and toilet requisites: 1,99,120; and soaps and cleaning preparations: 8,41,113.

Paints: Ready mixed stiff and other paints: 2,08,536; varnishes: 1,53,463; enamels all sorts: 16,906; and dry pigments: 26,657.

Salt: Common salt: 58,03,160 and other kinds: 2,14,950.

Alcohols: Ethyl alcohol: 7,01,033 and others: 6,07,983.

The countries to which exports were made in 1957 include the U.K., the U.S.A., West Germany, Ceylon, Burma, Nepal, Pakistan, East African countries, Egypt, and the Far Eastern countries like Indonesia, Malaya and Thailand.

Although the chemical industry in India is comparatively young, it has shown signs of sustained growth. It has already achieved self-sufficiency, according to Mr. Manubhai Shah, in such items as hydrogen peroxide, bichromates, sulphur black, sheet glass, cement, cellulose acetate yarn, staple fibre, tyres and tubes, paints and varnishes, and inks. On the basis of the progress made hitherto and plans under implementation, self-sufficiency is expected to be attained by 1961 for soda ash, caustic soda, hydrosulphite of soda, chlorine, bleaching powder, calcium carbide, antibiotics, several pharmaceuticals and drugs, plastics such as polythene, and all types of paper, excluding newsprint. The table on this page shows the progress of production and the fall in imports of a few of the products since 1951. As will be seen from the table, the value of imports of the items which amounted to Rs. 32.18 crores in 1951 has fallen to Rs. 14.87 crores at present and is expected to come down further to Rs. 5.85 crores by 1961. This in a large measure reflects the rapid expansion taking place in the industry.

Investments

It may be noted here that the programmes of development envisaged for the chemical and pharmaceutical industries alone in the second Plan cover a capital expenditure of Rs. 132 crores, as against Rs. 26 crores in the first Plan, an increase of 500 per cent. Substantial investments are planned in the other allied industries, too. All this does not mean that India will become self-sufficient in chemicals and allied industries by the close of the second Plan period. The industries are dependent upon imported raw materials. For the manufacture of dyes, for instance, basic raw materials such as benzene, toluene and naphthalene have to be imported until the intermediates are made here. Mr. Manubhai Shah was quite aware of this position. In fact, it is this awareness that made him suggest an export target of Rs. 70 crores for the industry per annum to be hit in 1963. He pointed out, in this connection, that, although the industry depended to a great extent on indigenous raw materials, nearly 20 per cent. of its total production represented import content. The total production of these industries is running at an annual rate of Rs. 350 crores at present. Imports of part of the raw materials, accessory chemicals, spare parts and maintenance stores were of the order of Rs. 70 crores or 20 per cent. of the value of production of the industries under reference. If the target mentioned by him can be reached, the industry will be self-financing so far as foreign exchange is concerned.

What are the prospects of India attaining this target? Addressing himself to this question, Mr. Shah gave his answer in two parts. He did concede that some Indian chemical and allied products were not favourably placed in the matter of quality, price and capacity to deliver the goods. But there were a few other products in which India was in a better position than its competitors. Every effort should be made to stimulate exports of these. Elucidating this point, Mr. Shah observed:

"..... I wish to invite your attention to consider the possibilities of export of those items where our prices are lower than elsewhere and sometimes lowest in the world. For example, alcohol obtained by fermentation of molasses from the sugar industry is available in India in considerable surplus and its cost of production ex-distillery or price f.o.b. ports is very low in comparison to that even in Europe or the U.S.A. In its report, the Alcohol Committee has recommended that expansion of this industry should be organised in such a way that a target of production of 46.8 million gallons in 1961 should be reached, as against the present production of about 16 million gallons of alcohol in all forms. The Alcohol Committee's report also states that, after providing for alcohol as a raw material for various industries whose establishment is envisaged by 1961 and after meeting the needs of power alcohol to the extent of 10 million gallons for those new industries which are already taking shape, there will still be a surplus available for export of the order of 10 million gallons. If some of the plans for utilising alcohol as a raw material for chemical industries do not materialise by 1961, as they might, due to our difficult foreign exchange position, then the available surplus would be even greater. It is, therefore, of the utmost importance that steps should be taken to organise the export of as much alcohol as possible in the immediate future. A necessary requirement for this purpose is storage facility at ports for 2 million gallons of so, so that a ship can be loaded on arrival in the shortest possible time. Discussions have already taken place between our Ministry, the All-India Distillers' Association and other concerned organisations with a view to achieve this objective."

Another item of export suggested by Mr. Shah was plywood. Considering that Ceylon, Pakistan and Indonesia are close at hand, India could profitably consider the prospects of raising its production of tea-chests in order to meet the needs of these countries in competition with others. Fortunately, the Indian tea-chest making units are situated on the coast and this should facilitate their task of finding export markets. Chlorine is another product which, in the opinion of Mr. Shah, can easily become a foreign exchange earner. He gave the assurance that the Government would give refund of import duty on cylinders used in the export chlorine. Other chemicals in which successful attempts can be made are hydrogen peroxide, bichromates, glassware, alum, soap and cosmetics. But success in these products will be possible only if the highest standards of quality are developed and consistently maintained.

Cost of Production

Mr. Shah then referred to items the exports of which are handicapped by the high cost of their production and suggested the following solution:

"One way of overcoming this difficulty is to export a small percentage of total production at bare cost and less, because, incidentally, the higher quantum of production would itself help to reduce the average cost of production of a factory. In this way, it should be possible for most factories to export about 5 per cent. to 10 per cent. of their production. The Government has also come forward readily in recent months to give assistance for encouraging exports in several ways. The Council should suggest other measures also and I can assure you of our best and prompt consideration."

From what Mr. Shah said it looks as though the Government will not be averse to granting a rebate of the full amount of duty paid on imported raw materials or accessory chemicals that are required for the production of materials which are exported. In conclusion, he advised the Council to fix six-monthly targets for exports of different commodities in a realistic manner and to revise them every six months in the light of experience.

Mr. Charat Ram, Chairman of the Council, felt that there were vast potentialities for export of products covered by the Council. He pointed out that, though industrially India was still in the process of development, it had great natural resources and unique geographical location. He particularly stressed that there was considerable scope for expanding markets of these products in some of the neighbouring countries. He held the view that, because of India's proximity to these countries, merchants in the latter would naturally be able to save on the volume of stocks carried, the cost of transport, etc., by purchasing their needs from this country rather than from distant countries. He added that, as the requirements of a rapidly industrialising India were varied, it was not a mere prospect but almost a certainty that overseas countries that purchase from India would be able to pay for these by their own exports

Production and Imports of Chemicals

Item	Unit	1951		1955		1958 (estimated)		1961 (estimated)	
		Production	Import	Production	Import	Production	Import	Production	Import
1. Soda Ash	Tons	47,500 (1.4)	52,101 (1.62)	77,270 (2.37)	65,009 (1.67)	100,000 (3.00)	75,000 (1.5)	230,000 (6.9)	Nil
2. Caustic Soda	"	14,720 (0.73)	37,003 (2.14)	34,250 (1.73)	54,131 (3.2)	50,000 (2.50)	75,000 (2.25)	135,000 (4.05)	30,000 (1.35)
3. Bleaching Powder	"	3,588 (0.21)	10,073 (0.45)	2,700 (0.16)	4,593 (0.8)	5,000 (0.3)	2,000 (0.12)	15,000 (0.90)	Nil
4. Calcium Carbide	"	Nil	10,115 (0.67)	3,110 (0.25)	7,070 (0.38)	3,000 (0.24)	8,000 (0.4)	25,000 (2.00)	Nil

(b) Others, Streptomycin, Chloramphenicol, Etra-cyclins	Thousand Mill. Kg.	Nil	11.6 (8.0)	1.7 (0.3)		5.8 (1.0)		70 (12.0)	Nil
Total Value .. (Rs. crores)		15.44	32.18	29.44	37.11	46.14	14.87	81.25	5.85

The figures shown in brackets indicate value in rupees calculated on the basis of present c.i.f. prices.

MAINTAINING INDUSTRIAL PRODUCTION

LARGER IMPORTS OF RAW MATERIALS NEEDED

IN view of the continuing drain on India's foreign reserves, it is feared that imports of raw materials and intermediate goods for indigenous industries may not be maintained at about the same level as in 1957. The view in some business circles is that such imports might have to be increased rather than decreased if industrial production should be maintained at the 1957 level. There are obviously three alternatives before the Government: to restrict drastically all imports of industrial raw materials for three or six months; to seek foreign credits for financing such imports; or, to combine both these expedients by restricting imports in some lines and getting medium-term foreign credits for the purpose. Whatever be the current speculations, a clear picture may be expected to emerge only in September next on the eve of the October-December licensing period.

As the level of industrial production and the level of imports of raw materials are vaguely connected in current discussions, some specific instances would have to be considered for obtaining a concrete picture. Figures of imports of principal industrial raw materials other than steel and petroleum in two comparable periods —January-October 1956 and January-October 1957—are given below:

(In Rs. crores)

Raw materials	Jan.-Oct., 1956	Jan.-Oct., 1957	Net Change
Non-ferrous metals	29.6	38.4	+8.8
Raw cotton	46.8	45.4	—1.4
Raw jute	11.9	5.3	—6.6
Art silk yarn	15.0	12.7	—2.3
Chemical elements and compounds	20.0	27.3	+7.3
Dyeing, tanning and colouring materials	14.8	12.7	—2.1
Copra	6.4	10.8	+4.4
Wool tops	7.8	9.3	+1.5

These figures of raw material imports would have to be considered in juxtaposition with the levels of production in the respective industries using them in roughly the same comparable periods—1956 and 1957. To take non-ferrous metals first. In the metallurgical industries, outputs of non-ferrous virgin metals, semi-manufactures and alloys have, in most cases, registered increases over 1956. This is verifiable from Appendix I in the *Annual Report of the Commerce and Industry Ministry for* 1957-58. In this case, there is thus a *prima facie* correspondence between the increase in imports of non-ferrous metals and ores and the increase in outputs of industries using such imports.

Imports of Chemicals

In the case of imports of chemical elements and compounds also, there was an increase over 1956. If it is assumed that such imports were *largely* used in chemical, pharmaceutical and dyestuff industries, it is seen that, in a vast range of products, output increases have been registered over 1956 in most cases. Here, again, there is a *prima facie* correspondence between the increase in imports of chemical elements and compounds and the increase in output of industries using them.

The increase in the imports of copra, on the other hand, has not been reflected in any substantial increase in the production of soap, for example. In 1956, soap production amounted to 110.3 thousand tons, while in 1957 it was 111.6 thousand tons. In this case, therefore, it is not possible to establish a *prima facie* correspondence between the import of the raw material concerned and the output of an industry which largely uses that raw material in the sense of an increase in import leading to an increase in indigenous production. But it is possible that, as against an increase in imports of coconut oil, there might have been a fall in the availability of domestic oils for the soap industry.

Wool

In the case of wool tops, their increased imports in 1957 have resulted in increased domestic production of woollen yarn at a monthly average of 2,316 thousand lbs. in 1957 as against 2,133 thousand lbs. in 1956. But the production of woollen fabrics has slightly declined from a monthly average of 1,362 thousand yards in 1956 to 1,316 thousand yards in 1957.

In the case of raw cotton, a slight decrease in its imports in 1957 has, however, not involved any fall in the production of either cotton yarn or cotton cloth. If anyting, there has been an increase in 1957 over 1956, the respective monthly production averages being 148,341 thousand lbs. and 139,267 thousand lbs. in the case of yarn and 443,118 thousand yards and 442,215 thousand yards in the case of cloth in the respective years. On the other hand, in the case of raw jute, a fall in its imports has been accompanied by a fall in production of jute manufactures from a monthly average of 91.1 thousand tons in 1956 to 85.8 thousand tons in 1957.

On the whole, while imports of industrial raw materials have increased, in value terms, by just Rs. 10 crores in 1957 over 1956, the index of production (base 1951=100) in manufacturing industries shows an increase from 133 points in 1956 to 137 points in 1957. As compared to the index of 123 in 1955, the rate of increase in industrial production in 1957 over 1956 has been comparatively low probably because imports of industrial raw materials have not generally increased to any substantial extent. Even that increase in indigenous production must have been due to some increase in the availability of domestic supplies of raw materials.

As for spare parts and semi-manufactured intermediate goods, how far their imports have come to be substituted by domestic sources of supply is not also clear. As the industrial schemes approved in 1957 for new undertakings and for substantial expansion of old ones for manufacturing a variety of products may be expected to have come to fruition by now, domestic supplies of some spare parts and intermediate goods may have probably increased. Only the Government is in a position to examine the possibilities of ensuring adequate domestic supplies of such goods in each case. This is what appears to be taking place now and it is, therefore, not likely that any general drastic cut in imports of essential raw materials and other goods needed by Indian industries would be made. But the probability of selective cuts appears to be there.

COCOA POWDER AND CHOCOLATE INDUSTRY

The Tariff Commission is currently examining the question of continuing protection to the cocoa powder and chocolate industry beyond 31st December 1958; a public enquiry in this connection was held in Bombay on the 11th inst., Mr. C. Ramasubban, Chairman of the Commission, presiding. The industry has pleaded for protection on the ground that it depends exclusively on imports for its requirements of principal raw material, namely, cocoa beans and that, although there is no import duty, the manufacturers are not obtaining adequate foreign exchange allocation for the import of beans.

The cocoa and chocolate industry, it may be recalled, has been enjoying tariff protection since March 1947. The Commission held its last enquiry in 1956 and it recommended continuance of protection upto 31st December 1958 by levying a protective duty of 31¼ per cent. *ad valorem* on cocoa powder and 50 per cent. *ad valorem* or Re. 1 per lb., whichever was higher, on covering chocolate. The Government of India accepted this recommendation. Subsequently, the duty on cocoa powder was raised to 35 per cent. *ad valorem*.

The total domestic demand for both cocoa powder and covering chocolate was placed at 300 tons by the Tariff Commission in 1956. For the present enquiry, the Commission has received estimates of current demand ranging from 300 tons to 700 tons per annum. The Development Wing estimates the current demand at 550 tons, while the estimates of producers vary from 300 to 700 tons. The quantity available for consumption on the basis of production and imports, which declined from 488 tons in 1953 to 350 tons in 1954 and to 133 tons in 1955, rose to 236 tons in 1956 and 519 tons in 1957.

There are at present two units producing cocoa powder and chocolate, one in Bombay and the other in Poona. Besides, there is another unit in Bombay which produces only covering chocolate. The rated capacity of the two units for the production of cocoa powder was 275 tons in 1956. Since then, one of the units, namely, Cadbury Fry (India) Ltd., has reported an increase in its rated capacity. The total capacity of the two units for the manufacture of covering chocolate of the three units is 1,082 tons, as against 803.6 tons in 1956. Both the Bombay units have reported a higher capacity this time. The total production of cocoa powder was 33 tons in 1956, 159.62 tons in 1957 and 42.45 tons during January-April 1958. The production of covering chocolate has increased from 73.70 tons in 1956 to 322.72 tons in 1957. The production during January-April 1958 was 102.03 tons.

Imports of cocoa powder and covering chocolate have been banned since 1st January 1957. The imports of 36.45 tons valued at Rs. 1.59 lakh recorded in 1957 (as against 128.85 tons worth Rs. 7.8 lakhs in 1956) were apparently under licences granted during 1956.

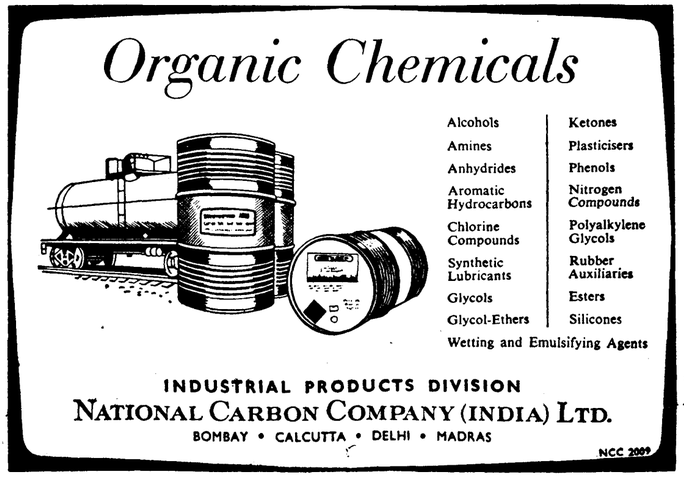
FOREIGN TRADE OF INDIA IN APRIL 1958

India had an adverse balance of trade to the extent of Rs. 18.31 crores during the month of April 1958, as against Rs. 23.87 crores in the previous month, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries namely, Nepal, Tibet, Sikkim, and Bhutan) during the month accounted for Rs. 41.42 crores, re-exports for Rs. 0.31 crores, imports for Rs. 60 crores. The total trade thus aggregated Rs. 101.73 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 16 lakhs and current coins (excluding gold coins) Rs. 2 lakhs. There were no exports of gold. Imports of currency notes aggregated Rs. 2.92 crores and gold Rs. 4 lakhs, while there were no imports of current coins (excluding gold coins).

KERALA AGRARIAN RELATIONS BILL

The Committee appointed by the Coffee Board to examine and report on the Kerala Agrarian Relations Bill, 1957 in so far as it relates to the coffee plantations, met in Bangalore on the 16th inst. While gratefully acknowledging the avowed object of the Kerala Government to exempt plantations from the purview of ceilings proposed in the Bill, the Committee expressed the view that this needs to be made clear beyond doubt and any ambiguity by making suitable amendments to relevant clauses in the Bill. The Committee has suggested that the term "plantation" may be defined as under:

"'Plantation' means any land planted with or reserved for being planted with tea, coffee, rubber, cardamom or other special crops, and includes all land within or contiguous to the plantations and which is used or reserved (a) for the sustenance of the employers and employees on the plantations, (b) for the maintenance of roads, buildings, factories, pastures, (c) or for timber, fuel trees, (d) or for any other purpose that is incidental or ancillary to the business and undertaking of planting, and (e) water sources necessary for the plantation."



DIGVIJAY CEMENT'S GOOD PERFORMANCE

PRODUCTION AND PROFIT AT RECORD LEVELS

THE year ended 31st December 1957 has proved to be one of good progress for the Shree Digvijay Cement Company, Ltd. (Managing Agents: Shree Laxmi Agents Private Ltd., Sikka, Bombay State). Its production, sales and profit have all shown a sharp rise, in refreshing contrast to the performance in 1956 when production showed only a small rise, with sales and profit actually suffering a decline. In the year under review, the output rose to 109,681 tons. Sale proceeds of cement went up by no less than Rs. 53.57 lakhs or 27.7 per cent. and so also gross profit by Rs. 9.26 lakhs or 22.7 per cent. With this increase, the gross profit of the Company has established a fresh record of Rs. 49.91 lakhs. The net profit has, however, declined by Rs. 3.52 lakhs to Rs. 17.40 lakhs, thus maintaining the downward trend for the second year in succession. The fall in net profit during the year under review is due to larger provision of Rs. 26.85 lakhs for depreciation, as against Rs. 17.03 lakhs set aside last year, as also to the provision of Rs. 3.25 lakhs for taxation for which purpose no allocation had been made a year ago.

Consequent on the shrinkage in net profit, the Directors have rather sharply cut the allocation to the general reserve from Rs. 10 lakhs to Rs. 3 lakhs. The dividend is unchanged at 9 per cent., to which level it had been raised last year from 8.5 per cent. Moreover, the latest dividend is on a high capital raised by the issue during 1956 of 45,000 ordinary shares of Rs. 100 each at a premium of Rs. 17.50 per share. In the previous year, the new shares, which were partly paid-up to the extent of Rs. 50 per share then, received *pro rata* dividend for the month of December 1956 only. Besides the ordinary shares, the Company had also offered 40,000 5 per cent. cumulative preference shares of Rs. 100 each at par (in addition to the then existing 39,940 cumulative preference shares of Rs. 100 each) and on these shares, the dividend for the year under review is in proportion to the amount paid thereon from time to time at Rs. 3.706 per share, free of income-tax.

The following comparative table shows the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds (gross)	2,46.47	1,92.90	2,10.48	1,76.90*
Closing stocks	9.72	5.03	2.81	4.48
Raw materials, stores, power, etc., consumed	1,55.64	1,01.48	90.98	96.13
Other expenses	47.35	55.95	72.47	25.88
Gross profit	49.91	40.65	47.22	45.32
Managing Agency commission ..	2.41	2.71	3.66	3.99
Provision for—				
Depreciation	26.85	17.03	18.00	18.00
Taxation	3.25	..	..	..
Net profit	17.40	20.92	25.56	23.71
Excess provision written back ..	0.04	..	..	..
To reserves	3.00	10.00	16.00	15.00
Dividends—				
5 per cent. preference ..	3.48	2.08	1.99	1.99
Ordinary	12.10	8.24	7.55	5.08
	(9%)	(9%)	(8.5%)	(8.5%)
Carry forward	2.24	3.37	2.78	2.77

* Net sales.

The Company's output of cement in 1957 jumped up from 247,174 tons to a peak of 356,855 tons. This is the sharpest rise in production during any year since the inception of the Company. The expansion in output is fully reflected in the rise of Rs. 53.57 lakhs in sale proceeds and of Rs. 54.16 lakhs in consumption of raw materials, packing materials, stores, power, etc. The other expenses, however, were brought down further and this was the real factor that contributed to the increase in profit.

There was no change in the Company's statutory selling price of cement, after its reduction by Rs. 4.50 to Rs. 53.50 per ton in September 1956. The enquiry into the fixation of fair price of cement was undertaken by the Tariff Commission and its recommendations for higher price and the acceptance thereof by the Government were published only a few weeks ago. As per the Tariff Commission's recommendation, the Company gets Rs. 56.50 per ton as the *ex*-works price with effect from 1st July 1958, which, however, is less than what the Company was getting (Rs. 58 per ton) prior to 22nd September 1956, when the cut in price was effected following the taking over of sales by the State Trading Corporation from 1st July 1956. In addition, the Company along with other units, gets the benefit from the abolition of the system of rebates allowed by cement producers in the price of cement sold to the Central and State Governments. The Company has not sold any cement to the Government since June 1956 (at least up to the end of September 1957, as seen from the Tariff Commission's report). It is not known whether it made any sales to any Government thereafter. The question of getting any extra benefit from the abolition of rebate system does not, therefore, arise in the case of this Company. With the increase in cement price (which is to remain in force till the end of June 1961) as compared with that in 1957 and with the efforts of the Company to bring its production to the full rated capacity, namely, 400,000 tons per annum, the Company can be expected to do better in the coming years, provided other things remain the same.

The Company's latest balance-sheet reflects the effects of its rapid growth. Its paid-up capition stands at Rs. 222.03 lakhs, as against Rs. 163.88 lakhs a year earlier. Its reserves and surpluses aggregate Rs. 51.19 lakhs. Besides the additional finances raised by the issue of capital, the Company's secured borrowings have gone up from Rs. 99.15 lakhs to Rs. 116.15 lakhs, though the unsecured loans have declined slightly from Rs. 7.66 lakhs to Rs. 4.60 lakhs. The other current liabilities and the provision for taxation together aggregate Rs. 51.37 lakhs. There has been an addition of Rs. 37.88 lakhs to the gross block during the year, bringing its total value to Rs. 355.78 lakhs. The depreciation allowed so far on this is Rs. 129.17 lakhs. Buildings, plant and machinery under erection amount to Rs. 27.85 lakhs. The trade investments in subsidiaries aggregate Rs. 52.34 lakhs and other current assets Rs. 138.54 lakhs.

The Company's Rs. 100 paid-up shares are being quoted at Rs. 154.50 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.2 per cent. per annum.

(*Concluded from next column*)

works reconstruction and expansion reserve, Rs. 35 lakhs in tax contingency reserve, Rs. 17 lakhs in general reserve, Rs. 38 lakhs in the reserve for Salem project and Rs. 20 lakhs in Niwar project reserve. The outstanding secured loans from banks amounting to Rs. 19.03 lakhs as on 30th April 1957 have been completely repaid. Current liabilities and provisions (including provision for taxation amounting to Rs. 125.16 lakhs) aggregate Rs. 723.60 lakhs, having gone up from Rs. 695.51 lakhs a year ago. The gross block of the value of Rs. 442.87 lakhs (including additions during the year to the extent of Rs. 36 lakhs) stands written down to Rs. 171.19 lakhs. Besides, the expenditure on uncompleted work amounts to Rs. 18.13 lakhs. The other assets amounting to Rs. 847.03 lakhs exceed the current liabilities and provisions by Rs. 123.43 lakhs.

As regards the Company's expansion programme, the Directors have some encouraging news to convey to the investors. The setting up of a silica brick works at Niwar in Madhya Pradesh is now being actively pursued. The Government of Madras has agreed to allow the Manganese Syndicate Ltd. of the U.K. to transfer its mining leases at Salem to the Company and the legal formalities are in process of finalisation to conclude the purchase of the Syndicate's interests in India. The implementation of the proposal to establish a magnesite works at Salem adjacent to the source of raw material is accordingly being actively pursued.

The Company's Rs. 100 paid-up shares are being quoted at Rs. 357 *cum-div.* On an *ex-div.* basis, the shares give a yield of 5.93 per cent. per annum, free of income-tax.

COMPANY REGISTRATIONS

HIND RECTIFIERS PRIVATE LTD. (First Director: Mr. Rameshwarprasad Nevatia.) Business: Assembling and manufacture of rectifiers apparatus, etc. Authorised capital: Rs. 30,00,000. Private Company. Address: Kamani Chambers, 1st Floor, Nicol Road, Ballard Estate, Bombay.

PETROLEUM MARKETING CORPORATION OF INDIA PRIVATE LTD. (First Director: Mr. Jal H. Mehta.) Business: Extraction, refining and dealing in petroleum, diesel oil, etc. Authorised capital: Rs. 50,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

VIKING SHIPPING SERVICES (INDIA) PRIVATE LTD. (First Director: Mr. A. T. Johannessen.) Business: Shipping, railway, forwarding and transporting agents. Authorised capital: Rs. 5,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

BURN AND COMPANY'S PROFIT DECLINES

NIWAR AND SALEM PROJECTS TO BE PURSUED

A SETBACK of Rs. 10.56 lakhs to Rs. 141.28 lakhs in the gross profit of Messrs. Burn & Co., Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) is disclosed by the audited accounts of the Company for the year ended 30th April 1958. This fall reverses the unbroken upward trend noted in the Company's profit since 1950-51, during which period it had gone up from Rs. 41.81 lakhs to a peak of Rs. 151.84 lakhs in 1956-57. It may, however, be noted that the profit for 1957-58 is higher than that for any of the years preceding 1956-57. The net profit, after providing for managing agency commission, depreciation and taxation, has declined for the second year in succession, albeit by a small extent, from Rs. 53.79 lakhs (for 1956-57) to Rs. 52.09 lakhs notwithstanding the large cut in the provision for taxation.

The provision for depreciation has been raised from Rs. 13.34 lakhs to Rs. 17.36 lakhs, evidently due to the large additions made to fixed capital expenditure, while the provision for taxation has been pruned from Rs. 70.65 lakhs to Rs. 59 lakhs. A sum of Rs. 33.27 lakhs has been added to the various reserves, as against Rs. 35.21 lakhs set aside out of the previous year's profit. The allocation to the reserves needs some explanation. A sum of Rs. 2.15 lakhs has been transferred to taxation contingency reserve (as against Rs. 9.68 lakhs last year) representing the net amount of tax payment deferred on account of double depreciation allowance. A new reserve, styled development rebate statutory reserve, has been created with an initial allocation of Rs. 68,447, representing 75 per cent. of the development rebate allowable on plant and machinery installed after 31st December 1957. Consequent on this, no addition has been made to the old development rebate reserve being the previous tax savings. The tax saving on development rebate allowable on plant and machinery installed during the first eight months of the year under review (that is, prior to 31st December 1957), amounting to Rs. 1.19 lakhs, has been added to the general development reserve, with which the old development rebate reserve has also been merged. A sum of Rs. 3.25 lakhs has been added to the reserve for works reconstruction and expansion, the allocation having been cut from Rs. 10.50 lakhs provided out of the 1956-57 profit. The reserve for Salem project created two years ago has been strengthened (after a lapse of a year) by Rs. 20 lakhs, while the transfer to the reserve for Niwar project has been reduced from Rs. 14 lakhs to Rs. 6 lakhs.

The distribution to ordinary shareholders is unchanged for the third year in succession at 20 per cent. per annum.

The following comparative table shows the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 30th April			
	1958	1957	1956	1955

* Approximate only.

The upward trend in the Company's turnover was not only maintained but the pace of increase gathered momentum during the year under review. The sharp rise in other income is accounted for by departmental orders and items used in works, which have gone up from Rs. 51.68 lakhs to Rs. 67.85 lakhs. The fall in raw materials and stores consumed is mainly due to the decline in purchases of raw and other materials. Of the rise of Rs. 41.64 lakhs in other expenses, salaries, wages and bonus alone account for Rs. 34.60 lakhs.

The Company's paid-up capital is unchanged at Rs. 112 lakhs as on 30th April 1958. The reserves and surplus aggregate no less than Rs. 200.35 lakhs, which include Rs. 81 lakhs in

(*Continued in previous column*)

SHREE NIWAS COTTON PRUNES DIVIDEND

SHARP FALL IN PROFIT

A NOTABLE example of the uneconomic working of cotton textile mills during 1957, particularly those producing medium varieties of cloth, thanks to the heavy accumulation of goods and the incidence of heavy excise duties, is provided by the Shree Niwas Cotton Mills Ltd. (Managing Agents: The Marwar Textiles (Agency) Private Ltd., Bombay). The working of the Company during the year ended 31st December 1957 has resulted in a gross profit of Rs. 11.76 lakhs, representing a drop of as much as Rs. 20.20 lakhs from that for the previous year. This is also the lowest profit earned by the Company for many years. With this fall, the managing agency remuneration has also declined from Rs. 2.73 lakhs to Rs. 50,000 and the provision for taxation from Rs. 6 lakhs to Rs. 50,000. There has been a slight increase in the provision for depreciation from Rs. 8.01 lakhs to Rs. 8.87 lakhs. After these allocations, the net profit shows a marked shrinkage from Rs. 15.22 lakhs to Rs. 1.89 lakh.

There is, however, a large sum of Rs. 6.91 lakhs brought forward from the previous year, but a substantial part of this—Rs. 5.12 lakhs to be precise—has been utilised to provide for bonus for workers for 1956. The Directors have transferred Rs. 3 lakhs from the special depreciation fund and Rs. 50,000 from the staff gratuity reserve, as, in their opinion, there is no necessity for keeping these two funds. With these transfers, the Directors have been able to recommend a dividend of 8 per cent. per annum, free of income-tax, as against 12 per cent. paid for the previous two years on the present capital, raised in 1955 by the capitalisation of Rs. 20 lakhs from the reserve fund.

The Company's performances during the last four years are compared in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds of cloth, yarn and waste	3,79.06	3,64.07	3,90.75	3,59.69*

Carry forward	0.59	6.91	1.47	1.54

* Include cotton. † Approximate only.

The Company's sales of cloth, yarn and waste rose by Rs. 15 lakhs, but this was more than offset by a rise of Rs. 19.28 lakhs in stocks of finished goods and goods in process. On the expenditure side, the consumption of raw materials and stores went up by Rs. 5.94 lakhs to Rs. 213.41 lakhs and salaries, wages, gratuities, provident fund, etc., by Rs. 3.04 lakhs to Rs. 137.57 lakhs. The figure for 1957 does not, however, include bonus payments.

The Company's paid-up capital, at Rs. 84.90 lakhs, is made up of Rs. 80 lakhs in ordinary shares and of Rs. 4.80 lakhs in 4 per cent. preference shares. Of these, as much as Rs. 56 lakhs of ordinary capital and the entire preference capital represent capitalisation of reserves. The reserves and surplus amount to Rs. 45.29 lakhs. The Company's borrowings (secured and unsecured) show a sharp rise from Rs. 96.52 lakhs to Rs. 151.49 lakhs. Of these, loans secured by stock-in-trade alone have gone up by Rs. 18.08 lakhs, reflecting the financial strain to which the Company has been subjected on account of the accumulation of cloth. The other current liabilities and provisions amount to Rs. 44.78 lakhs. The Company spent during the year Rs. 18.93 lakhs on additions to its fixed assets, bringing the total value of gross block to Rs. 127.67 lakhs at the end of the year, on which the depreciation provided so far comes to Rs. 67.74 lakhs. The other assets amount to Rs. 266.43 lakhs, of which investments in subsidiaries account for Rs. 61.69 lakhs and stock-in-trade for Rs. 137.44 lakhs.

The Rs. 100 paid-up shares of the Company are being quoted at Rs. 153.50 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.5 per cent. per annum, free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

BURN & CO., LTD. Annual General Meeting, Calcutta, 31st July 1958. Dividend: Rs. 20.00 per share, payable on or after 4th August 1958. Transfer books remain closed from 23rd to 31st July 1958, both days inclusive.

POONA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 31st July 1958. Dividend: Rs. 3.50 per share (final), payable on 4th August 1958. Transfer books remain closed from 14th to 31st July 1958, both days inclusive.

BROACH ELECTRIC SUPPLY AND DEVELOPMENT CORPORATION LTD. Annual General Meeting, Bombay, 31st July 1958. Dividend: Re. 0.50 per share, payable on 4th August 1958. Transfer books remain closed from 14th to 31st July 1958, both days inclusive.

HOOGHLY DOCKING AND ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 4th August 1958. Dividend: Rs. 5.00 per share. Transfer books remain closed from 26th July to 4th August 1958, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 6th August 1958. Dividend: Re. 0.92 per share. Transfer books will remain closed from 31st July to 6th August 1958, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 7th August 1958. Dividend: Rs. 2.50 per share. Transfer books remain closed from 24th July to 7th August 1958, both days inclusive.

HOWRAH MILLS CO., LTD. Annual General Meeting, Calcutta, 8th August 1958. Dividend: *Nil*. Transfer books remain closed from 26th July to 8th August 1958, both days inclusive.

RELIANCE MILLS CO., LTD. Annual General Meeting, Calcutta, 8th August 1958. Dividend: *Nil*. Transfer books remain closed from 26th July to 8th August 1958, both days inclusive.

RAMESHWARA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 13th August 1958. Dividend: *Nil*. Transfer books remain closed from 21st July to 13th August 1958, both days inclusive.

TATA POWER CO., LTD. Annual General Meeting, Bombay, 18th August 1958. Dividend: Rs. 80.00 per share (includes a bonus of Rs. 5.00 per share and the interim dividend of Rs. 30.00 per share). Transfer books were closed from 23rd *May* to 7th June 1958, both days inclusive.

ANDHRA VALLEY POWER SUPPLY CO., LTD. Annual General Meeting, Bombay, 19th August, 1958. Dividend: Rs. 80.00 per share (includes a bonus of Rs. 5.00 per share and the interim dividend of Rs. 30.00 per share). Transfer books were closed from 23rd May to 7th June 1958, both days inclusive.

TATA HYDRO-ELECTRIC POWER SUPPLY CO., LTD. Annual General Meeting, Bombay, 20th August 1958. Dividend: Rs. 8.00 per share (includes a bonus of Re. 0.50 per share and the interim dividend of Rs. 3.00 per share). Transfer books were closed from 23rd May to 7th June 1958, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 26th August 1958. Dividend: Rs. 275.00 per whole ordinary share (final) and Rs. 68.75 per quarter ordinary share (final), for 1957-58, payable on and after 27th August 1958. Transfer books will remain closed from 30th July to 26th August 1958, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 26th August 1958. Dividend: Rs. 250.00 per share (final), for 1957-58, payable on and after 27th August 1958. Transfer books will remain closed from 30th July to 26th August 1958, both days inclusive.

WESTERN INDIA SPINNING AND MANUFACTURING COMPANY, LTD. Annual General Meeting, Bombay, 26th August 1958. Dividend: Rs. 250.00 per share (final), for 1957-58, payable on and after 27th August 1958. Transfer books will remain closed from 30th July to 26th August 1958, both days inclusive.

TEXTILE MACHINERY CORPORATION LTD. Annual General Meeting, Belgharia, 24-Parganas, West Bengal, 28th August 1958. Dividend: Re. 1.50 per share. Transfer books will remain closed from 18th to 28th August 1958, both days inclusive.

MYSORE PAPER MILLS LTD. Annual General Meeting, Bangalore City, 3rd September 1958. Dividend: Re. 1.00 per share, payable on and after 13th September 1958. Transfer books will remain closed from 14th August to 3rd September 1958, both days inclusive.

COCHIN MALABAR ESTATES LTD. Dividend of 10 per cent. on the ordinary shares for the year ended 28th February 1958.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Final dividend of Re. 1.00 per share (making a total of 17½ per cent. or Re. 1.75 for 1957), for the year ended 31st December 1957. Transfer books will remain closed from 28th August to 8th September 1958, both days inclusive.

INDIAN STEEL ROLLING MILLS LTD. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 29th July to 12th August 1958, both days inclusive.

UDAYAGIRI RUBBER CO., LTD. Dividend of 6 per cent. or Re. 0.60 per ordinary share, for the year ended 31st December 1957. Transfer books will remain closed from 22nd to 30th August 1958, both days inclusive.

Notices

BALLY JUTE COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on the 27th June, 1958, the following Dividends were recommended to be paid for the year ended 31st March, 1958:

On Preference Shares at 7 per cent. free of Income-tax.

On Ordinary Shares at Rs. 6 per share free of Income-tax.

BIRLA BROTHERS PRIVATE LTD.,
Managing Agents.

CALCUTTA, 16*th July*, 1958.

THE BIRLA JUTE MANUFACTURING COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on the 27th June, 1958, the following Dividends were recommended to be paid for year ended 31st March, 1958:

On Preference Shares at 7½ per cent. less Income-tax.

On Second Preference Shares at 5½ per cent. free of Income-tax.

On Ordinary Shares at Re. 1 per share free of Income-tax.

BIRLA BROTHERS PRIVATE LTD.,
Managing Agents.

CALCUTTA, 16*th July*, 1958.

THE SOUTH KARANPURA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on 14th July, 1958, a Dividend of 7½ per cent. per annum was recommended to be paid for the year ended 31st August, 1957, without any deduction for Income-tax payable by the Company.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 14*th July*, 1958.

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a loss, after charging all expenses, of Rs. 30,045 (Rs. 1,012). The debit balance brought forward from the previous year was Rs. 1,08,996 (Rs. 1,07,984) making a total debit of Rs. 1,39,041 (Rs. 1,08,996). The directors have transferred from the general reserve Rs. 7,031 (Rs. 7,875) and an interim preference dividend of Rs. 6.25 (total of Rs. 7.00) per share was declared on 22nd November, 1957 absorbing Rs. 7,031 (Rs. 7,875) leaving a debit balance to be carried forward of Rs. 1,39,041 (Rs. 1,08,996).

In the directors' last report they referred to the Court's order confirming the reduction of the capital of the Company. In accordance with this order, the repayment of the preference share capital commenced on 7th December, 1957. A sum of Rs. 97,600 had not been claimed as on 31st December, 1957, and this has been shown separately in the accounts.

As a result of a further survey of the proposed 14 seam quarry area it has been decided to abandon this proposition. The project for the 15 seam quarry has however materialised satisfactorily and it was possible to start raisings at the end of the year. The scheme to work No. 10 seam with stowing has been finalised and the necessary plant has been ordered.

Accounts in brief are as under:—

HOOGHLY DOCKING PRUNES DIVIDEND

RESULTS OF TATA HYDRO-ELECTRIC COMPANIES

Hooghly Docking and Engineering Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The value of work billed during the year amounted to Rs. 1,44,20,328 against Rs. 1,24,94,195 in the previous year, an increase of about Rs. 19.26 lakhs. The gross profit, however, dropped from Rs. 11,16,507 in the previous year to Rs. 8,64,560 in the year under review, a decline, in terms of the ratio of gross profit to turnover, from 8.9 per cent. to 6.0 per cent. The net profit for the year was Rs. 1,66,847 against Rs. 2,68,176 for the previous year. The work-in-progress at the end of the year was Rs. 46,14,416 which was about Rs. 51 lakhs less than what it was at the beginning of the year. The entire property of the Company has been maintained in good order and repair throughout the period.

After charging all expenses including depreciation the profit for the year amounted to Rs. 4,60,028 (Rs. 4,98,176) to which has been added the balance brought forward from the previous year of Rs. 13,963 (Rs. 2,037) making a total of Rs. 4,73,991 (Rs. 5,00,213). Out of this there has been provided for income-tax Rs. 2,55,000 (Rs. 2,30,000) and for wealth tax Rs. 38,181 (*nil*) leaving a balance available for distribution of Rs. 1,80,810 (Rs. 2,70,213). The directors recommend that this balance be disposed of as follows:

To payment of a dividend of 10 (12½) per cent. free of tax absorbing Rs. 1,25,000 (Rs. 1,56,250), to transfer to development reserve Rs. 50,000 (Rs. 1,00,000) and carry forward the balance of Rs. 5,810 (Rs. 13,963).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	21,76,237

Profit and loss account ...	5,810		
Rs.	96,42,945	Rs.	96,42,945

Andhra Valley Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The previous period of accounts which ended on 31st March 1957 covered only nine months; care must, therefore, be taken in comparing figures of the previous nine-month period with the full 12-month year under report.

The profits, after providing for depreciation, managing agents' remuneration and taxation, amounted to Rs. 44,25,094 (Rs. 34,74,685 for nine months ended 31st March 1957). After adding amount brought forward from last year's accounts, income-tax recovered from dividend on preference shares, additional revenue of previous years and excess debits in previous year (less adjustments of Rs. 1,07,873 in respect of thermal power purchased, provision for bonus, managing agents' remuneration and licence commission in respect of previous years) of Rs. 4,79,934 (debit of Rs. 28,173), there is a total of Rs. 49,05,028 (Rs. 34,46,512). Adding to this the amount transferred from general reserve (from previous years' taxed profits) towards payment of proposed dividend on ordinary shares Rs. 9,50,000 (*nil*) the amount available for disposal is Rs. 58,55,028 (Rs. 34,46,512). The directors have made the following appropriations:—

To *ad-interim* dividend on preference shares at 7 per cent. per annum for the half-year ended 30th September 1957 Rs. 1,72,690 (*nil*), on ordinary shares at Rs. 30.00 per share Rs. 9,08,310 (*nil*), to contingencies reserve Rs. 4,57,091 (Rs. 1,81,771), to arrears of depreciation Rs. 1,26,346 (Rs. 94,873), to write-off of intangible assets Rs. 35,033 (Rs. 1,633), to reserve for additional taxes *nil* (Rs. 5,92,000), to general reserve Rs. 8,74,951 (Rs. 6,00,000), to gratuities reserve Rs. 2,06,588 (Rs. 2,43,073), to development reserve Rs. 13,55,374 (*nil*) and to proposed dividends Rs. 7,36,540 (Rs. 16,92,116). The proposed addition to dividend on ordinary shares from amount transferred from general reserve (from previous years' taxed profits) is Rs. 9,50,000 (*nil*). Thus there is a balance to be carried forward of Rs. 32,105 (Rs. 41,046).

The directors recommend the following final dividends and bonus for the year ended 31st March 1958, to be paid, if declared at the annual general meeting:—

A dividend at 7 per cent. per annum on preference shares for the half-year ended 31st March 1958 absorbing Rs. 1,72,690 (Rs. 2,59,035), a dividend of Rs. 45.00 per share on ordinary shares absorbing Rs. 13,62,465 (Rs. 14,33,081 excluding interest of Rs. 2,70,000 paid on new ordinary shares) and a bonus of Rs. 5.00 per share on ordinary shares absorbing Rs. 1,51,385 (*nil*).

Generation and Sales.—The total generation from both hydro and thermal sources for the three hydro Companies during the year was 1,631 million units, as compared with 1,419 million units for the previous 12 months. Thermal generation from Trombay was 354 million units during the year. 212 million units were purchased from Chola. Were it not for certain equipment failures, which put one of the two units at Trombay out of action for some time, Trombay would have produced considerably more energy, and purchases from Chola would have been correspondingly reduced.

The total energy sales of the three Companies were 1,626 million units, as against 1,512 million units for the previous 12 months. The energy sales of this Company during the year of report were 474 million units.

Total Revenues and Expenses.—The profit and loss account shows the following results of operations during the year under review as compared wih those of the previous nine-month period:

	1957-58 Rs.	(9 months) 1956-57 Rs.
Revenue from sales of energy ...	1,69,74,808	1,02,84,470
Revenue from other sources ...	5,86,305	4,92,175
Total gross revenue ...	1,75,61,113	1,07,76,645
Total expenses—exclusive of taxes ...	1,29,12,019	69,41,960
Balance ...	46,49,094	38,34,685
Provision for tax ...	2,24,000*	3,60,000
Net profit ...	44,25,094	34,74,685

* Wealth tax.

The coming into effect from 1st April 1957 of the amended Electricity (Supply) Act brought about two important changes: whereas previously the standard rate at which the reasonable return was calculated, used to be fixed at 5 per cent., the new formula applicable for calculating the standard rate is the Reserve Bank rate ruling at the beginning of the year plus 2, which worked out to 5½ per cent. for 1957-58. For the financial year commencing 1st April 1958, this rate will be 6 per cent.

The other change is the statutory obligation on the Company to create a development reserve by appropriation from clear profits, in respect of each accounting year a sum equal to the saving of income-tax and Corporation tax on the development rebate allowed for income-tax purposes. The Act, however, permits a licensee to project the appropriation over a period of five years. This reserve has to be deducted from the capital base but the Company is permitted to earn ½ per cent. on the appropriation to development reserve. The development reserve created for the year under report is Rs. 13,55,374.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,52,10,250	Block ...	6,67,25,686
Debentures ...	98,23,000	Capital work-in-progress ...	46,61,367

Tata Power Co., Ltd.

The directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The previous period of accounts which ended on 31st March 1957 covered only nine months; care must, therefore, be taken in comparing figures of the previous nine-month period with the full 12-month year under report.

The profits, after providing for depreciation, managing agents' remuneration and taxation, amounted to Rs. 77,03,893 (Rs. 61,86,434 for nine months ended 31st March 1957). After adding amount brought forward from last year's accounts, income-tax recovered from dividend on preference shares, additional revenue of previous years and excess debits in previous year of Rs. 9,91,653 (Rs. 1,42,207), there is a total of Rs. 86,95,546 (Rs. 63,28,641). And deducting by way of adjustments in the cost of thermal power purchased, provision for bonus and managing agents' remuneration in respect of previous year amounting to Rs. 75,074 (Rs. 53,275) the amount available for disposal is Rs. 86,20,472 (Rs. 62 75,366). The directors have made therefrom the following appropriations: An *ad-interim* dividend on preference shares at 7½ per cent. per annum for the half-year ended 30th September 1957 absorbing Rs. 3,26,138 (*nil*) and on ordinary shares at Rs. 30.00 per share Rs. 15,46,080 (*nil*). Transferred to contingencies reserve Rs. 8,12,136 (Rs. 3,33,258), to arrears of depreciation Rs. 9,516 (Rs. 7,137), to write-off of intangible assets Rs. 72,821 (Rs. 27,334), to reserve for additional taxes *nil* (Rs. 7,48,000), to deferred tax reserve *nil* (Rs. 1,50,000), to general reserve Rs. 1,38,676 (Rs. 5,00,000) to gratuities reserve Rs. 3,07,767 (Rs. 3,41,353), to reserve for special repairs *nil* (Rs. 12,00,000), to development reserve Rs. 24,74,700 (*nil*) and to proposed dividends Rs. 29,02,937 (Rs. 29,38,106) leaving Rs. 29,701 (Rs. 30,178) to be carried forward. The directors recommend the following final dividends and bonus for the year ended 31st March 1958, to be paid, if declared at the annual general meeting: A dividend at 7½ per cent. per annum on preference shares for the half-year ended 31st March 1958 absorbing Rs. 3,26,137 (Rs. 4,89,206), a dividend of Rs. 45.00 per share on ordinary shares absorbing Rs. 23,19,120 (Rs. 24,48,900 excluding interest of Rs. 4,50,000 paid on new ordinary shares) and a bonus of Rs. 5.00 per share on ordinary shares absorbing Rs. 2,57,680 (*nil*).

Total Revenues and Expenses.—The profit and loss account shows the following results of operations during the year under review as compared with those of the previous nine-month period:

	1957-58 Rs.	(9 months) 1956-57 Rs.
Revenue from sales of energy ...	2,95,51,250	1,79,58,574
Revenue from other sources ...	3,06,081	2,30,001
Total gross revenue ...	2,98,57,331	1,81,88,575
Total expenses—exclusive of taxes ...	2,17,20,438	1,17,82,141
Balance ...	81,27,893	64,06,434
Provision for tax ...	4,24,000*	2,20,000
Net profit ...	77,03,893	61,86,434

* Wealth tax.

Tata Hydro-Electric Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The previous period of accounts which ended on 31st March 1957 covered only nine months; care must, therefore, be taken in comparing figures of the previous nine-month period with the full 12-month year under report.

The profits, after providing for depreciation, managing agents' remuneration and taxation, amounted to Rs. 34,47,884 (Rs. 27,93,645 for nine months ended 31st March 1957). After adding amount brought forward from last year's accounts, amount transferred from general reserve, income-tax recovered from dividend on preference shares, additional revenue of previous years and excess debits in previous year of Rs. 5,39,333 (Rs. 1,05,859) there is a total of Rs. 39,87,217 (Rs. 28,99,504). And deducting by way of adjustments in the cost of thermal power purchased, provision for bonus and managing agents' remuneration in respect of previous year, amounting to Rs. 16,463 (Rs. 26,414) the amount available for disposal is Rs. 39,70,754 (Rs. 28,73,090). The directors have made therefrom the following appropriations to: To *ad-interim* dividend on preference shares at 7 per cent. per annum for the half-year ended 30th September 1955 absorbing Rs. 3,12,480 (*nil*) and on ordinary shares at Rs. 3.00 per share absorbing Rs. 7,20,000 (*nil*). Transferred to contingencies reserve Rs. 3,33,721 (Rs. 1,36,727), to arrears of depreciation Rs. 37,259 (Rs. 27,945), to write-off of intangible assets Rs. 82,304 (Rs. 2,591), to reserve for additional taxes *nil* (Rs. 4,43,000), to deferred tax reserve *nil* (Rs. 1,00,000), to general reserve *nil* (Rs. 3,25,000), to gratuities reserve Rs. 1,41,627 (Rs. 1,63,895), to development reserve Rs. 8,01,932 (*nil*) and to proposed dividends Rs. 15,12,480 (Rs. 16,37,520) leaving Rs. 28,951 (Rs. 36,412) to be carried forward. The directors recommend the following final dividends and bonus for the year ended 31st March 1958, to be paid, if declared at the annual general meeting: A dividend at 7 per cent. per annum on preference shares for the half-year ended 31st March 1958, absorbing Rs. 3,12,480 (Rs. 4,68,720), a dividend of Rs. 4.50 per share on ordinary shares absorbing Rs. 10,80,000 (Rs. 11,68,800 excluding interest of Rs. 1,80,000 paid on new ordinary shares) and a bonus of Re. 0.50 per share on ordinary shares absorbing Rs. 1,20,000 (*nil*).

Total Revenues and Expenses.—The profit and loss account shows the following results of operations during the year under review as compared with those of the previous nine-month period:

	1957-58 Rs.	(9 months) 1956-57 Rs.
Revenue from sales of energy ...	1,16,88,541	70,05,347
Revenue from other sources ...	8,73,956	6,99,074
Total gross revenue ...	1,25,57,497	77,04,421
Total expenses—exclusive of taxes ...	89,12,613	47,00,776
Balance ...	36,44,884	30,03,645
Provision for tax ...	1,97,000*	3,00,000
Net profit ...	34,47,884	27,03,645

* Wealth tax.

INDIAN INSURANCE COMPANIES' ASSOCIATION

OUTLOOK FOR GENERAL INSURANCE BUSINESS

THE importance of exploring new avenues of increasing the premium income, of training insurance personnel and of making people insurance-minded was stressed by Mr. P. U. Patel, Chairman of the Indian Insurance Companies' Association, while presiding over the 30th annual general meeting of the Association, held at Bombay on Thursday, 24th July, 1958. Earlier, Mr. Patel dealt at some length with the general political and economic developments, which have a direct bearing on insurance business. The future of the world political situation, he said, looked very much like an interrogation mark. Nearer home, in a reference to India's efforts at economic planning, he thought that the wisdom of the old adage that one must cut one's coat according to the size of one's cloth could never be overemphasised. He said: "Trying to run at a pace faster than your feet can carry you is a physical feat which is best avoided."

Code of Conduct

Reviewing the problems of general insurance business in the past 12 months, Mr. Patel said that the one single achievement of the revised Code of Conduct for general insurers, which came into force on 1st January 1957, had been the payment of premium in advance before assumption of risk. Apart from this achievement, it was his regret that the Code had failed to bring them any nearer their cherished goal. Mr. Patel traced the trouble to the institution of 'inspectors.' He emphasised that, if they had to build up Indian insurance on sound foundations, they must have a pattern of organisation suited to the climate of the country and the genius of the people. Indian insurance had been fortunate in having a fairly large number of highly experienced whole-time agents, known formerly as 'brokers' and now as 'inspectors,' for reasons of expediency. From this nucleus of workers, it might not be difficult to evolve a new pattern of organisation which might broadly represent a happy compromise between the British Inspectorate system and the American General Agency system. Further, Mr. Patel submitted that the entire procedure for implementing the Code must be immediately overhauled. The onus of cleaning up the trade must be thrown on the trade itself; the members selected for the job should enjoy the confidence of the Department of Insurance as well as the trade. A two-year period might be allowed for the cleaning up process to be completed. He observed: "What we need is not the adoption of the methods of a policeman but a really human approach, motivated by feelings no other than those of creating a healthy atmosphere all round."

Indian Market

As regards competition in the ranks of insurers, Mr. Patel thought it was not that the number of insurers was too large. The trouble was that there was not enough business to go round. The gross annual premium income, at Rs. 23 crores, was absurdly small, as compared with the volume of premium income even in countries smaller than India. The scramble for business led, not unnaturally, to unhealthy competition, though, with the progress of industrialisation, it was not too much to expect that the volume of business would increase. It was, however, essential that Indian insurance must explore new avenues of increasing the premium income and start issuing wider and more specialised covers for various types of risks in the future. Mr. Patel felt that there was any amount of scope for building up a very sizable premium income in departments other than fire, marine and motor and expressed the hope that this subject would receive the attention of the insurance underwriter.

The exploration of new avenues of insurance, Mr. Patel said, depended upon an adequate supply of trained personnel at all levels. It was incumbent on the trade to co-operate with the Federation of Insurance Institutes in its efforts at turning out technically qualified people in large numbers. Further, in order to strengthen the hands of trained personnel, it might be desirable to launch a concerted publicity drive, with a view to making the public more insurance-minded; for their common benefit, Indian and non-Indian insurers could join together in such a venture.

Reiterating the plea, made by his predecessors, for some relaxation in the taxation of reserves, Mr. Patel said that Indian insurance was prepared—nay, eager—to play its rightful role in the development of national economy. The relief in taxation, which insurers asked for, might involve an annual loss of only a few lakhs of rupees to the Government. But the long-term gain resulting therefrom would far outweigh the temporary loss, in that it would increase the capacity of Indian insurers to retain business on their own account and also enable them to operate more successfully in overseas territories. This would reduce the strain on, and also bring in, valuable foreign exchange.

Motor Premium Rates

In the sphere of motor insurance, where the tariff rates had been revised upwards since January last, Mr. Patel thought that their troubles were not over. Faster and bigger vehicles, congested traffic and greater claims consciousness on the part of the insuring public militated against an improvement in the position. "Unless we receive greater co-operation from the insured and the pedestrian develops a better road-sense," he said, "we cannot achieve much." The position was further complicated by the latitude which had been shown to non-tariff insurers. The Government, in disregard of the assurances given in 1950, the representation against any further extension made by the Tariff Committee in 1957 and the customary practice of giving only six-month extension, had given a twelve-month extension to non-tariff insurers, which was due to expire in December next. He hoped that, in the larger interests of Indian insurance, no further extension would be granted.

Fire Rates

Continuing, Mr. Patel referred to the proposal for a further reduction in fire premium rates, which had been reduced by about 10 per cent. in 1955. He felt that the period of two years, during which the new rates had been in force, was too short to furnish a safe guide for arriving at a decision on the proposal. Further, fire insurance followed a definite cycle in which bad years followed a good period into relentless regularity. While theoretically it might be possible to argue that every department was independent and one department should not subsidise another, it would be absolutely wrong to ignore the small size of the Indian market and to keep on reducing rates because of a modest profit most insurers were making in the fire department.

Acceptance of Policies by Banks

During the year, Mr. Patel recalled how, as a result of the interview he and two other members of the Committee of the Association had with the Chairman of the Indian Banks Association, the latter had issued a circular to member-banks recommending the acceptance, without insisting on deposits of policies by insurers who satisfied the solvency test under the Code of Conduct. While Mr. Patel was grateful to the Chairman, Mr. Bhabha, for this gesture, he could not help mentioning that, in spite of the circular, some banks had failed to appreciate insurers' difficulties. He appealed to the banks to adopt a more realistic attitude. Referring to a similar interview which the representatives of the Association had with the Managing Director of the State Bank of India, regarding exemption of Indian insurers from deposit requirements, he expressed the hope that the authorities would try to see their point of view and help Indian insurers in widening their sphere of activities.

Limitation of Expenses

In conclusion, Mr. Patel pointed out that the feeling was widely prevalent that the formula relating to limitation of expenses, prescribed under Insurance Rule 17E, was neither fair nor equitable. He said: "Making direct gross premium income as the sole criterion for judging whether a particular unit is economically run or otherwise is, in my opinion, contrary to all accepted canons." Unfortunately, the Sub-Committee of the Executive Committee of the General Insurance Council, which had been appointed to go into this question, had not submitted its report. The Sub-Committee of the Committee of the Association, which examined this subject, also failed to produce an agreed solution, and it was now left to the incoming Committee to pursue this important matter. Mr. Patel admitted that the limitation of expenses was a very healthy feature of the Insurance Act, 1950. But he submitted that there was nothing sacrosanct about a formula, which was evolved in the light of conditions obtaining then. Not even the most fervent protagonist of the present formula would claim that it was something perfect. He, therefore, considered that there was a "clear case" for re-examination of the issues, and that too without any further delay.

Notices

THE SOUTH KARANPURA COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday, the 12th August, 1958, at 11 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st August, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 29th July to the 12th August, 1958, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, *14th July*, 1958.

Note.—(*a*) A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The dividend, if declared, will be paid on or after 19th August, 1958, to those Shareholders so entitled whose names appear in the Company's books on 12th August 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

THE DHUNSERI TEA COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE Forty-Second Annual General Meeting of THE DHUNSERI TEA COMPANY, LIMITED, will be held at the Registered Office of the Company, No. 2, Dalhousie Square East, Calcutta, on Monday the 1st September, 1958, at 3-30 p.m. for the following purposes:—

(1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st December, 1957.

(2) To declare dividend on Ordinary Shares.

(3) To elect Director in place of the retiring Director.

(4) To appoint Auditors and fix their remuneration.

(5) To transact such other competent business as may be brought forward.

The Ordinary Share Transfer Books of the Company will be closed from 21st August, 1958, to 1st September, 1958, both days inclusive.

N.B.—(1) Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 21st August, 1958.

(2) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote for him, and a proxy need not be a member of the Company. The proxy must be lodged at the Registered Office of the Company, at least 48 hours before the meeting.

By Order of the Board,
S. L. DHANUKA,
Managing Director.

CALCUTTA, 21st *July*, 1958.

MONEY EASY—GILT-EDGED FIRM

(From Our Own Correspondent)

BOMBAY, 23rd *July*

With the exit of the States from the market after their loans were oversubscribed in the aggregate, the short-term money market once again became very easy during the week under review. The fall in demand and the return of funds from the Reserve Bank after allotment of State loans led to a surfeit of funds which were unlendable even at lower rates of interest. There was, therefore, a perceptible fall in interest rates. Inter-bank call money had lenders at 2½ per cent., but there were no borrowers. The rate among the small Indian banks was 2¾ per cent. There was, however, no uniform rate for house money at call and short-term deposits, the rates varying from bank to bank. Some of the banks were unwilling to pay more than 3¼ per cent., while business was reported even at 4 per cent. The rates for deposits varied from 3¾ to 4¼ per cent.

Availing of the present conditions in the short-term money market, the Reserve Bank of India has revived, after a lapse of more than two years, the system of short-term borrowing by the issue of Treasury Bills. The issue of such bills was suspended in April 1956, following the growing stringency in the money market. As pointed out in our last issue (*vide* page 91), the condition in the money market this season is propitious for this type of short-term borrowing by the Government.

The Reserve Bank of India has invited tenders for Rs. 1 crore of 91-days' Government of India Treasury Bills. Tenders will be received at the offices of the Reserve Bank at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to 11 a.m. on 29th July 1958. Successful tenderers should make payment at Bombay on 2nd August, and at other centres on 1st August. In view of the introduction of decimal coinage, the price offered for Treasury Bills should, it is stated, be expressed on the basis of 100, with not more than three decimals.

The Reserve Bank of India statement for the week ended 18th July 1958 discloses a contraction of Rs. 19.78 crores in notes in circulation, which together with the decline of Rs. 6.74 crores in the previous week, brings the total fall in two weeks to Rs. 26.52 crores. Notes held in the Banking Department have also dropped by Rs. 3.33 crores, so that the decline in total notes issued is of the order of Rs. 23.11 crores. This is covered by a decline of Rs. 25 crores in rupee securities and a rise of Rs. 1.89 crores in rupee coin. After the previous week's drop of Rs. 10 crores, foreign securities are unchanged but the drain of Rs. 3.70 crores in foreign balances (in the Banking Department) has more than offset the increase of Rs. 3.19 crores in the previous week. There has been a decline of Rs. 2.19 crores in Central Government's deposits, while other Governments' deposits are higher by Rs. 28.95 crores, due to the subscriptions to State loans. Deposits of banks are lower by Rs. 4.53 crores. Loans and advances to Governments have declined by Rs. 10.87 crores, while other loans and advances have risen by Rs. 4.54 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.77 crores. Investments show a sharp rise of Rs. 71.65 crores, part of which may be due to the Reserve Bank's own subscriptions to State loans.

A small rise of Rs. 1.27 crores in demand deposits and of Rs. 90 lakhs in time deposits is disclosed by the Scheduled banks' statement for the week ended 11th July 1958. Inter-bank borrowings have gone up by Rs. 5.37 crores, while borrowings from the Reserve Bank are lower by Rs. 1.76 crores. After a lapse of two weeks, advances have again declined by Rs. 4.40 crores and bills purchased and discounted by Rs. 3.58 crores. There has been an addition of Rs. 3.37 crores to investments. Cash balances and money at call have risen by Rs. 4.25 crores and Rs. 2.93 crores, respectively; balances with other banks are lower by Rs. 1.61 crores.

Of the ten States which were in the market last week, nine closed their lists by Wednesday, as pointed out in our last report. Orissa was the last to close its list on Thursday last. The total subscriptions for all the loans aggregated Rs. 62.67 crores, as against Rs. 47.50 crores invited. Of these, conversion accounted for Rs. 5.24 crores. The allotment to subscribers in cash over Rs. 10,000 varied from 61 per cent. to 92 per cent., except in the case of West Bengal and Orissa loans for which the allotment was full.

The Gilt-edged market ruled firm. Activity was also brisk. There was good demand for short-dated and some medium-dated issues. This, coupled with the scarcity of stocks, pushed up values all round; in some cases, the rise was rather marked. The Reserve Bank of India put up its selling prices for 3½ per cent. 1965 by 10 nP to Rs. 98.60 and of 3½ per cent. 1968 by 5 nP to Rs. 99.60.

3 per cent. 1986 Conversion Loan was on offer and shed 5 nP to Rs. 71.05. 2½ per cent. 1961 was keenly bid and jumped up by 20 nP to Rs. 95.90. 2½ per cent. 1962 rose sharply by 25 nP to Rs. 95.65 3 per cent. 1958 gained 5 nP to Rs. 99.90, also 3 per cent. 1959-61 to Rs. 99.45. 3 per cent. 1963-65 and 3 per cent. 1964 had buyers at Rs. 95.65. 3 per cent. 1966-68 was unchanged at Rs. 93.10; while 3 per cent. 1970-75 put on 15 nP to Rs. 87.75. 3½ per cent. 1962 was in demand 5 nP higher at Rs. 98.10. 3½ per cent. 1961 moved up by 5 nP to Rs. 99.70. 3½ per cent. 1963 by 15 nP to Rs. 99.25 and 3½ per cent. 1964 by 10 nP to Rs. 98.95. 3½ per cent. 1967 advanced by 20 nP to Rs. 97.80, while 3½ per cent. 1967 was unchanged at Rs. 99.70.

Among the State loans, 4½ per cent. Bombay issues were in good demand. 4½ per cent. 1969 rose by 15 nP to Rs. 100.15. Both the new loans came to command a premium over their issue prices, to command a premium over their issue prices, 4½ per cent. 1970 20 nP at Rs. 100.20 and 1971 15 nP at Rs. 99.90. Madhya Pradesh 4½ per cent. 1970 also was quoted at a premium of 10 nP at Rs. 99.10, while Andhra 4½ per cent. 1970 was placed at a discount of 50 nP at Rs. 99.

The revival of sterling abroad gave strength to the rupee also. Banks' selling rate of ready dollars dropped from Rs. 477.75 to Rs. 477.25 and their buying rate from Rs. 474.50 to Rs. 473.75 per $100. In New York, spot sterling improved from $2.80.1/16-2.80⅛ to $2.80⅛-2.80.7/16 and three months' forward from $2.78⅛-2.78.9/32 to $2.78.7/16-2.78¼. Transferable sterling closed at 277.65-277.75 cents after a decline from 277.70-277.80 cents to 276.80-276.90 cents.

WIDE MOVEMENTS IN BULLION

(From Our Own Correspondent)

BOMBAY, 23rd *July*

Trading in the bullion market continued to be mainly influenced by the political developments in West Asia during the week under review and fluctuations in prices were wide. Despite the seasonal factors which restricted the demand for both the metals, there was a flare-up in bullion prices, in continuation of the upward trend noted in the previous week, following reports that British troops had landed at Jordon and that Russian forces had moved to the Turkish border. As a result, forward gold touched a high of Rs. 108-6 on the 17th inst., having gone up from a low of Rs. 103-2 reached only a week earlier. Silver also moved in sympathy to Rs. 184-6, as against Rs. 179-8 touched a week before. Subsequently, there was a setback, in the absence of any further deterioration in the international situation. The "bulls" hastened to book their profits. Weaker advices from Calcutta and rumours to the effect that import duty on large quantity of Tibetan coins had been paid brought about a setback in prices. Today, however, there was again a recovery on short-covering; both gold and silver closed well above the week's lowest levels.

Forward silver (*Shravan* first delivery) spurted from Rs. 182-8 to Rs. 184-6 before the recession set in which took the price to a low of Rs. 181-10 yesterday. Today, however, it gained ground to Rs. 183-2 and closed at Rs. 182-12. The *Shravan* second delivery rallied from Rs. 183-2 to Rs. 185-2, but gave way to touch Rs. 182-8. The closing today was done at Rs. 183-10.

Ready silver closed the week As. 12 higher at Rs. 182-4, the highest and the lowest levels touched being Rs. 183-6 and Rs. 181-2. The floating stocks of silver are reported to be 900 bars. The daily average arrivals (including unrefined metal) were 35 bars, while the offtake was less than 10 bars.

Gold for forward delivery (*Shravan* first delivery) hardened from Rs. 106-13 to Rs. 108-6, but later receded to Rs. 105-11. In the recovery which took place today, forward gold improved to close at Rs. 106-6. The *Shravan* second delivery finished today at Rs. 106-9, after having touched a high of Rs. 108-4 and a low of Rs. 105-13. The carry-forward charges between the two deliveries, which were in favour of bulls at As. 2 week ago, turned against them and stood today at As. 3.

Ready gold was marked down over the week from Rs. 107-7 to Rs. 106-14, the highest level touched being Rs. 109. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, and the offtake was also of the same order.

In New York, silver was unchanged at 88⅝c for yet another week. London prices, too, were maintained at 75d. for spot and at 74¾d. for forward. Gold advanced from 250s. 7½d. to 250s. 11d., but fell to 250s. 6½d. following the improvement in the value of sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	23-7-58	Highest	Lowest	16-7-58

LINSEED FIRM

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 21st *July*

The linseed market ruled bullish during the week, thanks to war rumours. Prices of seed advanced steadily from Rs. 25-2 to Rs. 27-4 per maund. Attracted by spectacular rises every day sellers offered a much larger volume of supplies for July-August delivery and, with crushers keenly interested, turnover averaged 350-400 tons daily. Oilcake prices also registered a notable rise, from Rs. 14 to Rs. 15 per maund. There was renewed firmness in the oil section, greatly influenced by the recent rise in overseas prices, which has brought Indian oil into parity. Local prices advanced from Rs. 55 to Rs. 58 before reacting to Rs. 57-8, whilst bids from the U.K. commenced at £116 and rose to £122, at which price some business was transacted.

The latest available quotations were: Ready-July Rs. 26-10 and August Rs. 26-12 per maund.

COTTON FUTURES FIRM AT CLOSE

(From Our Own Correspondent)

BOMBAY, 23rd *July*

The cotton futures market depicted an easy trend during the first three days of the week under review. It however, picked up strength on Monday which gained further momentum subsequently. The earlier easiness was due to heavy liquidation of long positions in the maturing August contract. Bulls, who had made large-scale purchases earlier, in anticipation of an export quota, and were holding on to their commitments, were inclined to liquidate their holdings in view of the approaching settlement date. Operators were also inclined to switch over their purchases to the new crop contract, namely, Jarilla March, 1959 which consequently commanded a premium over the August contract. The failure of the expected export quota to materialise, reports of favourable weather and the absence of encouraging news from the piecegoods market imparted further weakness to the market. A recovery set in on Monday following brisk buying influenced by firm spot advices and the strength of other commodity markets. The trend was maintained yesterday on renewed export quota rumours and the continued firmness of spot section. The market showed further improvement today. The August contract, in particular was in the limelight.

I.C.C. Moglai Jarilla (August 1958) opened the week at Rs. 683.50 and, after declining to Rs. 672.50 on Saturday, improved to Rs. 682.50 yesterday. Commencing today at Rs. 682.50, the contract improved to Rs. 689 before closing lower at Rs. 682.75.

I.C.C. Moglai Jarilla (March 1959) opened the week at Rs. 683 and, after falling to Rs. 675 improved to Rs. 684.75 yesterday. Commencing today's session at Rs. 685, the contract gathered Re. 1.50 before finishing at Rs. 683.75.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	23-7-58	*High*	*Low*	16-7-58
I.C.C. Moglai Jarilla (August 1958)	687.75	689	672.50	683.50
I.C.C. Moglai Jarilla (March 1959)	683.75	686	675	683.25

Weather continues to be satisfactory in general and the crop is making good progress. Punjab and Rajasthan have recorded good rains which have benefited the standing crop to a large extent. A few more showers are said to be necessary in the Kalyan area in Bombay State, Ujjain area in Madhya Pradesh and parts of Rajasthan. Bright, clear weather for some time in other areas would considerably assist the growth

There was sustained mill demand in the spot market. Prices consequently hardened. Prominent mill groups, which were hitherto keeping off the market, came forward to make substantial purchases of staple varieties. The fact that new crop cotton would be available only by December and the fears of scarcity of raw cotton in view of the delay in making the import allocations, prompted mills to go in for good qualities of indigenous cottons. A number of mills renewed their purchases of staple varieties like Vijay, 197/3, Co. 2, Laxmi, Jaydhar, Rajapalayam etc.

In the export section, due to the absence of any quota announcement, activity was subdued. Certain exportable varieties received enquiries. Prices were more or less maintained.

Brisk mill demand was noted for foreign qualities, especially American cottons. A sizable volume of business was reported in U.S. styles for August-September and October-November shipments, subject to the availability of import licence. Spinners also showed interest in Egyptian and Sudan cottons. Importers were eagerly awaiting a quota announcement for U.S. and sterling area cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing quotations:

Bengal Deshi 600 (600); Berar Jarilla 735 (725); Khandesh 800 (790); Vijay 890 (885); Hubli Laxmi, 1,045 (1,040).

The Karachi cotton futures market, after having ruled firm during the first half of the week under review, turned easy towards the close. The earlier firmness was due to brisk buying on export account and encouraging demand from domestic mills. Later, due to the fear that the West Asian situation might adversely affect cotton exports from Pakistan, the erstwhile buyers turned sellers. Profit-taking and slackening of mill demand accelerated the downward trend. Nevertheless, the closing rates were still higher than last week-end quotations. N.T.R.G. July, which had closed at Rs. 77-14 last week, improved to Rs. 78-13 on the 18th inst. It, however, closed lower at Rs. 78-4 yesterday. The January contract firmed up to Rs. 80-13 before declining to Rs. 79-14 yesterday.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. The volume of business was limited and price tended to look down. Export inquiries were few. The uncertain situation in West Asia, favourable weather reports and the fact that the crops were early this season adversely affected trading sentiment. Towards the close of the week, however demand for the medium-staple Ashmouni improved and its quotations moved up. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: July 74.95; November 75.80.

Ashmouni: August 67.45; October 68.25.

In spite of the serious West Asian situation and the uncertainties regarding the U.S. export subsidy, cotton futures values in Liverpool scored handsome gains. Persistent local shortcovering and fresh buying in new crop positions of both the American and American type contracts led to a hardening of values. The upswing was aided by the firm tone in the basis of shipment offers of the U.S. and Mexican cotton. Sudan contracts were, however,

quiet and values unchanged. The latest available quotations—in pence per lb. from Liverpool—are as under:

American cotton 1" staple contract: July-August 25.10 (25.00); October-November 25.55 (25.20); December-January 25.70 (25.40); March-April 25.90 (25.60). *American cotton mixed growth contract*: July-August 25.95 (25.70); October-November 25.95 (25.75); December-January 26.25 (26.00); March-April 26.35 (26.05). Sudan: July-August 31.25 (31.25); September-October 31.90 (31.90); November-December 31.90 (31.90).

New York cotton futures market ruled easy during the week on increased hedge-selling and more profit-taking. This was attributed to slight easing of the tension in West Asia, favourable weather news and the belief in some quarters that, notwithstanding the delay, new legislation permitting high acreage and larger production would be enacted by the Congress during the current session. A further fall in prices was, however, prevented by occasional mill buying against sales of cotton piecegoods.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	23-7-58	15-7-58	8-7-58
Spot	36.50	36 50	36.50
October	36.65	36.84	36.60
December	36.87	37.01	36.85
March	37.24	—	—

YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, 23*rd July*

The yarn market presented a distinctly firm trend during the week under review and there was an all-round improvement in prices. Rayon yarns evoked good buying support induced by expectations of better demand from consuming centres. Staple fibre yarns continued to be well supported, thanks to depleting floating stocks and lack of confirmation of rumours regarding the Government allowing actual consumers to import some quantities of raw staple fibre. Cotton yarns ruled strong on hopes of better offtake by handlooms and powerlooms in the coming weeks, as well as larger export business with nearby countries. The finer count yarns were particularly sought after. It was reported that there was scarcity in supplies on account of reduction in output following the continued shortage of foreign cotton.

The Board of the Yarn Merchants' Association and Exchange Ltd. met the Union Minister for Commerce and Industry on the 19th inst. and placed before him the difficulties experienced by the yarn traders as a result of the restrictive import policy. It also brought to the Minister's notice the undesirable practices indulged in by a section of rayon industry and trade. The Board urged the Minister to consider the question sympathetically and asked the Association to submit to the Government details of the scheme contemplated by the Association for distributing imported yarn.

Both indigenous and foreign yarns recorded a rise in values. Among the former, National Rayons 150 bright cones 1st grade spurted by 31 nP to Rs. 5.37 per lb. 120 bright cones 1st grade rallied 19 nP to Rs. 6.56. Among foreign yarns, 120 Italy firmed up by 25 nP to Rs. 6.50. 150 Italy and 120 Japan both gained 12 nP to Rs. 6.62. 150 Japan hardened by a like amount to Rs. 6.37.

Staple fibre yarn (40×2) August delivery advanced by Rs. 5 to Rs. 712 per case of 200 lbs. The question of commencing business in October delivery will be decided by the Association at its meeting to be held on Monday next. In the spot section 40×2 New Greats picked up 16 nP to Rs. 3.97 per lb. Citys strengthened by 9 nP to Rs. 4.09 and Kohinoors by 6 nP to Rs. 4.15. Centurys were fully maintained at Rs. 4. Foreign yarns also moved up, 80×2 Paramounts and Fujis both rising by 13 nP to Rs. 9.25.

Finer counts cotton yarns, as already stated, met with good demand. Sixty counts Raghuvamshis climbed up by Rs. 2.50 to Rs. 59. Finlays improved by a rupee to Rs. 62. Eighty counts Moderns advanced by Rs. 2 to Rs. 72, Mahendras by Re. 1 to Rs. 70 and Finlays by 50 nP to Rs. 77.50. Among 40 counts, Minaxis hardened by 38 nP to Rs. 25.75. Moderns were done at Rs. 26 today. Thirty counts Indus rose by 38 nP to Rs. 19.75. Among 20s, Moderns gathered 25 nP to Rs. 16.75. Indus were fully maintained at Rs. 16.37, as also Gokaks at Rs. 16.75. Deals in ten counts Podars were put through higher at Rs. 12.75, as against Rs. 12.62. Moderns were firm at Rs. 13.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	23-7-1958	16-7-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6 62	6 50
150 Japan (per lb.)	6 37	6.25
120 Italy (per lb.)	6 62	6 50
150 Italy (per lb.)	6 50	6.25
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	712.00	707.00
40×2 Kohinoor (per lb.)	4 15	4.09
40×2 City (per lb.)	4.09	4.00
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 75	12 62
20s Modern	16 75	16 50
30s Hind	19 75	19 37
40s Minaxi	25.75	25 37
60s Finlay	62 00	61 00
80s Mahendra	70.00	69.00

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 23*rd July*

The oilseeds market is in the grip of bulls and prices have scaled the highest peak since the current calendar year began. The buying spree has been fanned by hopes of excellent export business in oils and oilseeds. The hopes are based on two consideration. First, there is the expectation that overseas demand for Indian oils will broaden considerably in the coming weeks, as a result of the stockpiling operations in several countries following grave political developments the world over. Secondly, the Government of India is determined to boost exports by giving all possible encouragement and assistance. The Government has announced the grant of the full excise duty rebate of Rs. 112 per ton on castor oil exported out of India, as against 11/14 of duty hitherto admissible; full rebate of duty had already been granted on exports of linseed oil and tobacco-seed oil. These factors have imparted considerable strength to the oilseeds market and prices have, as already stated, registered an impressive rise. If a more spectacular rise has not occurred, it is because of fears that the Forward Markets Commission may intervene and take such measures as tightening of margin rules in groundnuts and even closure of forward trading in order to check the rising tendency in prices. It is believed that the Commission has already given a warning against speculative transactions in oilseeds and oils.

The castorseed section ruled buoyant during the week. The bulls were persistently making large purchases, while the shorts were nervously covering their positions. With the grant of full rebate of excise duty, the gap between the prices of Indian castor oil and world prices has narrowed down. The export price of commercial quality oil now stands at Rs. 1,507 per ton at which rate the U.K. is reported to be interested in buying, until recently, the U.K. was not prepared to pay even Rs. 1,427. The groundnut section also ruled buoyant, thanks to good buying support, especially by *vanaspati* manufacturers, scarce offerings on account of tight supply position and enlarged overseas enquiries for groundnut oilcake. Linseed firmed up on bull support based on oil export prospects. It was stated that the U.K. was willing to pay for Indian linseed oil up to Rs. 1,640 per ton, as against Rs. 1,532 a few days ago. In sympathy with the general trend, cottonseed, kardiseed and nigerseed registered handsome gains.

Groundnut August 1958 contract forged ahead from Rs. 185 last week-end to Rs. 197 today. At higher level, profit-taking set in and the contract declined to Rs. 195. The net gain over the week was Rs. 10. February 1959 contract which stood at Rs. 168 last week-end climbed up to Rs. 172 yesterday, but fell to Rs. 169 today. Bold ready rallied Rs. 2.88 to Rs. 40.75. Coromandel and Khandesh quality both spurted by Rs. 2.75 to Rs. 41.50. Groundnut oil ex-mill strengthened by a rupee to Rs. 21.50. Railway receipt gained a like amount to Rs. 21.

Castorseeds September 1958 contract advanced from Rs. 162.50 to Rs. 170.25 before finishing at Rs. 168. May 1959 position rose from Rs. 162.50 to Rs. 167 today; towards the close, however, it was lower at Rs. 165. Ready Madras put on 75 nP to Rs. 33.50. Kanpur quality increased by Re. 1.25 to Rs. 32.25. Castor oil B.S.S. registered a rise of 75 nP to Rs. 18.50. Commercial quality gathered 88 nP to Rs. 17.75.

Linseed September 1958 contract moved up from Rs. 35.19 to Rs. 35.69 yesterday, but declined to Rs. 35.31 today. Bold ready which stood at Rs. 34.87 last week-end, advanced to Rs. 35.25, on Monday. Thereafter, it receded, today's closing rate being Rs. 34.87. Linseed oil ready was well supported, the quotation today standing at Rs. 18.75, as against Rs. 18.25 last week-end.

Cottonseed September 1958 contract met with good buying support and advanced from Rs. 120.25 to Rs. 125 today before finishing lower at Rs. 122.50. February 1959 contract improved from Rs. 107.50 to Rs. 109.75 today; towards the close, however, it eased to Rs. 107.75.

Among other oilseeds, kardiseed bold really spurted from Rs. 22 to Rs. 23.25 yesterday, but today, it reacted to Rs. 22.25. Nigerseed Madras quality, after rising from Rs. 32 to Rs. 33.25, finished easy at Rs. 32.75.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	23-7-1958	16-7-1958	9-7-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	195.00	185.00	174.12

SUGAR RALLIES

(From Our Own Correspondents)

BOMBAY, 23*rd July*

There has been a sharp rally in sugar prices during the week under review, notwithstanding a drop of about Rs. 3 per bag in the ex-mill quotations for North Indian sugar and the Reserve Bank's directive to the scheduled banks to put up margin on advances against sugar stocks. For the market is experiencing an acute shortage of medium and large grain sugar, thanks to the continued dislocation of rail traffic and difficulty in obtaining enough trucks in the Bombay-Deccan areas to transport sugar. The total arrivals by rail during the week amounted to a bare 1,800 bags which were only a shade higher than in the previous week but very much shorter than the demand.

Large grain sugar has spurted by Rs. 2 to Rs. 112-Rs. 116 per bag. Medium grain has gone up from Rs. 107.50-Rs. 109 to Rs. 109-Rs. 111. Small grain is quoted at Rs. 107, as against Rs. 106.50 a week ago.

The ex-mill quotations of North Indian sugar, as already stated, have toppled down by about Rs. 3 per bag. This is due to the stern warning against rising prices issued by the Union Food Ministry officials to the sugar trade associations of Kanpur, Meerut and Muzaffarnagar.

Sugar production during the month of June 1958 was 3,600 tons, bringing the total production upto 30th June 1958 to 1,967,000 tons. The corresponding figures for the 1956-57 season were 39,000 tons and 2,014,000 tons, respectively. The offtake of sugar from factories during June was 156,000 tons, as against 202,000 tons (including despatches for exports) in the corresponding month last season. This brings the total despatches from factories upto 30th June 1958 to 1,350,000 tons, as against 1,427,000 tons (including despatches for exports) a year before. The total closing stock of sugar with factories as on 30th June 1958 was 1,040,000 tons, as against 1,106,000 tons on the same date last season.

The advances which banks give against the security of sugar are now subjected to a higher margin of 45 per cent. on the value of stocks, as against 35 per cent. hitherto. A directive to this effect was issued to the banks by the Reserve Bank on Friday last week. The enhanced margin is applicable only to parties other than those manufacturing sugar and to parties manufacturing sugar in respect of such stocks as are left in the factory or mills' premises and on which excise duty has been paid. Explaining the upward revision in the margin on sugar advances, the Reserve Bank said:

"The prices of sugar have shown a rising trend during the past few months, despite the fairly comfortable supply position. In the prevailing situation, the increase in prices may have been covered by a tendency on the part of the trade and industry to withhold stocks. It is, therefore, necessary for banks to exercise caution in the grant of credit against stocks of sugar."

• • • •

HAPUR, 21*st July*

Steady to firm conditions prevailed in the sugar market during the week under review. Despite the release of a fresh quota of 170,000 tons for sale in the free market, the market showed an upward tendency and prices in ex-mill delivery section advanced by about 37 nP to Re. 1 per maund. Stockists were reported to be reluctant to sell stocks, expecting better prices in the near future. The report that the Indian Sugar Mills' Association had booked about 15,000 tons of sugar for export to East and West Asian countries also acted as a bullish factor.

Heavy demand from Punjab and Delhi and business in bulk quantity being done on that account resulted in an appreciable advance in sugar prices in the Muzaffarnagar market. The prices touched new heights. The latest prevailing ex-mill delivery prices were: Meerut (D28) Rs. 38.50; Khatauli (C29) Rs. 38.50; Deoband (C29) Rs. 38.50; Mansurpur (C29) Rs. 39; Daurala (C29) Rs. 38.81; Amroha (D29) Rs. 37.94; Bijnore (C29) Rs. 37.81; Dhampur (D29) Rs. 38.

Sugar prices in the Kanpur market improved due to renewed buying enquiry. The latest prices spot and ex-mill delivery, respectively, per bag and per maund were: (C29) Basti Rs. 107 and Rs. 38; (D29), Gola Rs. 103.50 and Rs. 36.37; Burnwal Rs. 104 and Rs. 37.06; Lakhimpur and Hargaon Rs. 102.50 and Rs. 36.81.

Good demand from consuming areas accounted for steady conditions in *khandsari* prices during the week. The Government of India have banned forward trading in *khandsari* sugar, in order to check the upward trend in prices. The latest prices were Rs. 35 to Rs. 37.25 per maund according to quality.

Slack demand due to monsoonish conditions accounted for quiet conditions in ready *gur* prices. Local stock was put at 50,000 maunds and prevailing prices were: dry Rs. 22 and *kotha* dry-wet Rs. 20.75 per maund.

Heavy rains aggregating over seven inches in the last two days have proved very beneficial to the standing cane crops in this area.

There was no demand for ready *gur* in the Muzaffarnagar market in the past week and prices were mostly unchanged. *Shakker dara* was also attracting little demand and week-end prices were Rs. 23 to Rs. 25 per maund. *Desi khandsari* prices, however, improved further on good outside support and the latest prices were Rs. 35.50 to Rs. 37.50 per maund according to quality.

Future *gur* prices turned bearish in the later part of the week on bear pressure influenced by good rains and the ban imposed by the Government of India on forward trading in coarse grains and pulses. Opening at Rs. 14.96, fagun delivery touched the highest on the same day at Rs. 15.19, but quoted today at the lowest level of the week at Rs. 14.30.

BLACK PEPPER QUIET AT CLOSE

(Messrs. Parekh & Co.)

BOMBAY, 23*rd June*

Malabar black pepper rallied further during the earlier part of the week, following news that British troops had landed in Jordan. In the later part, however, war psychosis having been cooled down, the market turned quiet and irregular, influenced by day-to-day reports from the Middle East.

Garbled ready at Cochin was done at Rs. 115 to come down to Rs. 111. The highest and the lowest for August delivery were quoted at Rs. 119.37 and Rs. 115, respectively, while October quotations were at Rs. 121.87 and Rs. 117.50. Calicut touched Rs. 720 to recede to Rs. 700, with buyers reserved.

New York spot, after touching $0.30, came down to $0.29 with lack of buying interest by grinders, in view of less tension in the Middle East. A sizable purchase of about 500 tons of Malabar black was reported by New York during the week at prices ranging from $0.26½ to $0.28, with equal quantity, if not more, from Singapore. The highest touched for black and white in London was 20d. and 33½*d.*, respectively. Singapore, after touching Str.$80 for black and Str.$139 for white under pressure of buying by New York and Continent combined with local short-covering, came down to Str.$75 and Str.$135, respectively, when buyers withdrew.

At the moment, the tendency of the market appears uncertain. Barring developments in the Middle East, prices are likely to go down, as dealers in New York and the Continent have covered their immediate requirements and are not likely to come out unless new developments take place. Short positions in all the markets stand almost covered. In some cases, they are overbought. The adjustment will take some time and, in the meantime, if the seasonal pressure from Sarawak and Lampong appears, the prices may dip further.

In specific delivery, July, after touching the highest at Rs. 662, came down to Rs. 625 under pressure of liquidation by weak bulls and accumulation of tenderable stock.

In A.S.T.A., July-Aug-Sept., after touching $0.28, came down to $0.27¼, with little interest.

In short, the future will depend upon the development in the Middle East, which, according to the Press, is not likely to flare up into a shooting war as was feared earlier.

Today's nominal quotations are: Ready Rs. 91 per Bengal maund, July Rs. 625-Rs. 635 and September Rs. 645-Rs. 655 per candy of 5¼ cwts.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 18*th July*

Offerings comprised just under 1,100,000 lbs. in sale No. 21 which was held on Tuesday, the 15th inst. The quality of all teas showed a slight improvement, particularly low medium and medium teas. The sale opened to a good general demand. Low medium and medium teas met with good competition and were 5 nP to 15 nP dearer according to quality. The poorer high grown were about steady, but the improved teas were dearer. In particular, high grown fannings were sometimes 30 nP above valuation. Whole leaf teas met a strong demand and were dearer.

The quotations were:—

	Rs.
Plain B.P.	1.50
Low medium	1.55 to 1.75
Medium	1.70 to 1.95
Good medium	1.95 to 2.20
Quality	2.00 to 2.95

There were 1,083,210 lbs. on offer in Dust Sale 'O' which was held on Thursday, the 17th inst. The large and useful selection of teas met with very strong and excited demand. All descriptions received strong competition and prices advanced by 10 nP to 15 nP for every thing. High grown teas did not meet with the same competition as the other descriptions, but were steady on last weeks rates.

London Market—Sale of 14th July 1958.—New seasons Dooars were very firm, while the remainder was irregular.

Sale of 15th July 1958.—Market ruled irregular.

Colombo Market—Sale of 14th July 1958.—Very strong demand. Dimbula Dickoya brokens much dearer. Improved Uvas dearer. Medium brokens up 10 cents. Low-growns firmer. All leaf grades lower.

Sale of 15th July 1958.—Useful liquoring sorts were dearer while others were lower.

Calcutta Market—Export.—Continued good general demand. Orthodox fannings and bright liquoring Assams strongest. Best C.T.Cs slightly easier. Plain teas about steady. Whole leaf strong. Darjeelings fair but irregular demand. Tippy teas well supported. *Internal.*—Fair but irregular demand eased towards close. Grainy exportable C.T.Cs strongest. Other C.T.Cs up to 25 nP easier. Orthodox 6 nP to 10 nP easier. Flavoury Darjeelings well supported.

Export Quota.—The week opened with business being transacted at 11¼ nP., but, although the market eased, business was done at both 11 nP and 10¾ nP. There was a further strengthening in the market and business was transacted at 11½ nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 22 was held on Tuesday, the 22nd inst., with offerings amounting to 1.5 million lbs. There was good general demand. Low mediums and mediums were fully firm and dearer. Improved quality good mediums were easier. High-growns recorded a rise of 10 nP to 15 nP."

TEA RECEDES

(From Our Own Correspondent)

CALCUTTA, 22*nd July*

Although demand was fair during yesterday's auctions, tea prices were notably lower. However, with the publication of June production figure, the statistical position of quality tea has improved. Up to the end of June, output in North-East India amounted to 107.9 million lbs., registering a decline of 3.5 million lbs. over last year.

Taking the production trends in other producing countries also into consideration, it was becoming clear that there would not be any excess in quality teas. The apprehension of shortage is coming more and more to the forefront. World consumption in 1957 was estimated at 1,400 million lbs. which was almost the same as absorption at 1,436 million lbs. Market circles believed that, providing for the increase in population and taking into consideration the improving standard of living in several underdeveloped countries, consumption in 1958 should exceed the figure for last year.

While North India's output so far has registered a decline, output in Ceylon, British East Africa, Pakistan and Indonesia has shown small increases. Ceylon's production up to end of May was, however, lower by 1.2 million lbs. at 194.5 million lbs. The largest increase was shown in South India, as, up to the end of May, output aggregated 71.7 million lbs., as against 57.5 million lbs. Market circles believed that the increase in some producing countries would be more or less equivalent to the decrease in crop in others. It was, therefore, expected that the world crop in the year would be about last year's. This analysis underlines the apprehension of shortage of quality teas during the year.

In the internal sales held last week, dusts on offer amounted to 18,190 chests, including 623 chests of old manufacture. Prices eased, although, at opening, there was good demand. Some improvement was in evidence in quality. Orthodox teas eased by 4 to 6 nP even while at opening and, towards closing, the loss had risen to 10 nP. C.T.C. Assams were irregular. Grainy traders suitable for export, however, were taken up to higher rates. Other kinds eased and a few lines were quoting 25 nP below valuations. Darjeelings received fair support, with the flavoury lots hardening. The quotations were: Best Assam C.T.C.: Rs. 2.90 to Rs. 3.20; medium Assam C.T.C.: Rs. 2.20 to Rs. 2.50; medium Assam grainy Re. 1.74 to Re. 1.80; and medium Dooars Re. 1.66 to Rs. 1.70.

Leaf offerings aggregated 192 chests, of which the new season's teas were only 51 chests.

The strongest feature of yesterday's export sales when offerings amounted to 40,711 packages, was bright liquoring Assams of orthodox manufacture, the price of which was firm to dearer. There was good general demand for other varieties also, but prices were lower. C.T.C. teas gave way by 50 nP, commons by 6 to 8 nP and non-wither leggy-cut Dooars by 10 to 15 nP. Darjeelings were fully firm, but whole leaf grades failed to attract as much attention as last week. Tippy teas were firm.

The quotations in rupees with those of a week ago in brackets were: Best Assam C.T.C. fannings: 4.40 to 4.80 (4.80 to 5.30); clean black pekoe 2.30 to 2.40 (2.40 to 2.50); best Assam C.T.C. B.P.: 4.00 to 4.40 (4.30 to 4.80); medium fannings: 2.35 to 2.50 (2.50 to 2.70); plain B.P.: 1.78 to 1.82 (1.84 to 1.88); medium B.P.: 2.20 to 2.30 (2.30 to 2.50); plain fannings 1.94 to 1.98 (2.00 to 2.10).

B. TWILLS CROSS I.J.M.A. FLOOR LEVEL

(From Our Own Correspondent)

CALCUTTA, 22*nd July*

Conditions akin to near-buoyancy were in evidence in the jute markets during the week under review. Prices of both raw jute and jute goods gained impressively. For the first time since the last several weeks, B. twills, not only reached the I.J.M.A. floor but crossed it too. The troubled Middle East situation, following the coup in Iraq, released a good amount of buying support, both speculative and genuine. Hitherto, only small business had been done on account of the United States, but, during the week, American buyers showed lively interest and took fair quantities. Such support was evidently due to fears of a world war and the need to increase stocks. In fact, it was reported earlier in the week that American consumption of burlap in the last month was only 60.4 million yards, thereby registering a decline of 4.6 million yards as compared with May. Fair support was accorded for heavy goods by Continental and other buyers. Internal buyers were also active. About 4,000 bales of sacking were bought on Government account for delivery in October.

For obvious reasons, much business was done for forward delivery. Encouraging note was taken of the grant of further licences by Argentina for import of hessian. The report from the burlap market in New York was encouraging and offtake was increasing. Only about a week back, bag manufacturers in the U.S. were hesitating to enter into commitments in the absence of any change in consumption. The month has begun well in regard to shipments. During the first ten days in July sacking shipped amounted to 11,400 tons and hessian to 20,300 tons, showing increases of 5,000 and 12,000 tons, respectively. The higher trend was expected to be maintained in the rest of the month also and the market began to take into consideration the respective welcome decline in stocks.

On Tuesday last, ready hessian 40" 10 oz. rose to as high a rate as Rs. 42.05 from Rs. 41.25 the previous day, following fair buying on Argentina account. Speculators were on their feet, as they began to purchase even earlier when they heard that more letters of credit had been opened in Argentine account. Forward quotations, however, were lower, in view of expectations of a fall in prices of the new jute. Hessian 40" 10 oz. were quoting Rs. 41.60 only. In sympathy with the upward trend in ready hessian, B. twills ready moved up to Rs. 98.15 on Tuesday last from Rs. 97.30, while, in contrast with hessian, forward rates were high, with the September goods quoting Rs. 99.40. On Wednesday, the news of revolution in Iraq imparted keen speculative interest. But for profit-taking towards the end of the day, the closing quotation for 40" 10 oz. hessian would have been even higher than Rs. 42.65 and that for B. twills than Rs. 99.30. The mills were keen sellers at the rise, and this naturally arrested the rise. The tendency of forward quotations being higher for B twills and lower for hessian ready goods continued on Wednesday also.

On Thursday, the report of steady conditions in the New York burlap market was received and, following further news on the Middle East political situation, there was excited trading in the market. Speculators were in good form and did not lose time in accepting offers, as they anticipated more addition to prices. The mills continue to unload heavy quantities in the market, and there was fair buying on overseas account too. Ready B. twills soon passed over the I.J.M.A. floor and steadied around Rs. 100.10. Ready hessian 40" x 10 oz. touched Rs. 43.35. On Friday, further business followed from overseas markets and B. twills moved up to Rs. 100.20 and hessian 40" x 10 oz. to Rs. 43.85. American and Continental buyers began to increase their activities at this stage. Towards the week-end, good business was done with the U.S.A. in hessian, the 40" x 10 oz. of which hardened further to Rs. 44.60, and October-December to Rs. 42.65. Ready B. twill rose to Rs. 101.10, with the October-December goods strengthening to Rs. 103.20. These were the highest levels for the week. Yesterday, speculators brought to bear selling pressure and, although covering for near goods continued, B. twills ready sagged to Rs. 99.85 and ready 40" 10 oz. hessian to Rs. 44.30. The speculators thought that, with various moves to settle the Middle East situation, the chances of an international conflict were receding.

The upward trend in goods led to a rise in raw jute prices. The mills accorded support. Returns of raw jute consumption by mills for the season ended last month showed that consumption aggregated 6,256,000 bales, showing an increase of 278,400 bales over the previous season. This also contributed to the gain in prices. The latest quotations for the new crop are:

	Middles	Bottom	Delivery
	Rs.	Rs.	
Pakistan:			
District	32.50	29.50	Aug.-Sept.
Northern	32.50	29.50	"

METALS FORGE AHEAD

(From Our Own Correspondent)

CALCUTTA, 22*nd July*

The Iraqi coup, the American landings in Lebanon, the British in Jordan, and the Russian manœuvres near Iran and Turkey pushed up demand as well as prices in the metal market during the week under review. Shrewd observers, however, refused to believe that the troubled Middle East situation would lead to a world conflagration. All the same, market sentiment was boosted. A smart rise in prices was also recorded in foreign markets and this also contributed to the upward trend.

Tin opened at Rs. 562 and spurted to Rs. 595. In addition to fair commercial demand, some enquiries were also received on Government account. Electrolytic zinc closed at Rs. 73, as against Rs. 66.00 earlier. An additional factor for the rise in New York was production cutback by a U.S. firm. Virgin lead hardened from Rs. 66.50 to Rs. 71. If uncertainties in the Middle East continued, it was realised here that imports would be affected. In view of recent import cuts, the country's stock is poor.

TANNERS CURTAIL OUTPUT

(From Our Own Correspondent)

MADRAS, 21*st July*

The Madras E.I. tanned skins and hides market was greatly excited, due to the serious political situation in the Middle East. Importers, however, were maintaining a cautious attitude and were resisting advance in prices demanded at origin.

Owing to labour trouble in the Ranipet area, several kip tanners have reduced their output further and are reported to be holding back their stocks for better prices.

Arrivals of kips were small and demand exceeded supplies. Madras prices ruled 2d. over U.K.

* National income at factor cost—the aggregate of all incomes earned in the production of goods and services in the course of a year including net income from abroad.

Source: *International Financial Statistics*, November 1957.

† Preliminary estimates (at 1948-49 prices) are based on the fifth issue of the annual paper on national income issued by the Central tatistical Organisation.

†† According to budget-speech of Pakistan Finance Minister.

‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1958. ‖—Interest-free for 15 years. ¶—Interest-free for first 7years.
½—Sixty instalments but inclusive of accrued interest. M—At the option of Government after three month's Not
K—On September, 1966, or later at option

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

‡ Less income-tax. (z) Clive Mills have paid dividend at Rs. 10) on bonus shares, for the year 1955. * Including bonus. (k) Investments.

f—Managed by the Board of Directors. (New Central) Jute Mills.—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. P.—Bengal Coal Co. Dividend from 1944 to 1956 are on shares of Rs. 200 each.
†—Port William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each.
for 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

SIDELIGHTS ON U.S. ECONOMIC RECESSION—I

(*Concluded from page 139*)

covery, as the optimists hope, there is obviously no need for politically administered stimulants. If the rise proves to be less rapid than might be desired, the temptation to intervene will continue and may become irresistible. Yet, in the long run, the economy will be healthier and more prosperous if the temptation is resisted and business is given time to recover under its own steam. Spontaneous recovery is the only true recovery."

The U.S. Administration is surely not opposed to the view that economic development is brought about better through the efforts of private enterprise. Nor has it ruled out the possibility of having to reduce taxation, in case its hopes do not materialise. The present Republican Administration is quite conscious of the fact that the big depression of the 'thirties took place when it was in power and that, if it were to allow a prolonged slump to take place, its chances of coming back to power would be next to nothing. It might not, therefore, hesitate to reduce taxes, if the measures already taken by it are found insufficient. It is, however, confident that business would pick up even without a reduction in taxation. Events so far show that its confidence has not been misplaced.

The Administration's point of view on this subject was admirably explained by the President's Budget Director, Mr. Maurice H. Stans, thus:

"The proper relation of Government to the growth and vigour of such an economy must necessarily be to stimulate private production and employment, not to substitute public spending for private spending, nor to extend public domination over private activity.

"So let us not overemphasise the role of the Government in bringing about economic recovery. And let us remember that, if we overdo the expenditure of money by the Government, we may find ourselves back fighting inflation again, as we were a short time ago.

"In my personal opinion, if—and I underline this word—conditions reach the point where a large-scale shot in the arm seems needed, a selective tax cut ought to come first. It could give more spending power to individuals and businesses quickly. This spending power would lead to more employment than slow public works programmes. But we should take a long, careful, calm look at conditions and give the economy a chance to show its strength before we embark on tax cutting."

The U.S. Government was so keen to prevent any further increase in the budget deficit that it even persuaded the Congress to extend for one year more the Korean-war high corporate tax rate and excise

ANOTHER REPORT ON COTTON TEXTILE INDUSTRY

OUR first reactions to the report of the Textile Inquiry Committee (Chairman: D. S. Joshi, I.C.S.) are mixed. The Committee has no doubt done its job quickly but not thoroughly. We cannot blame the Committee for it, because it was given very wide terms of reference but too short a period for investigation, contemplation and judgment. Six weeks were surely not sufficient for a comprehensive study of the type expected of it. The Committee was, of course, unwise in undertaking such a big job to be carried out within so short a period. There was, indeed, no need for it. The crucial issue to be decided was only one, that relating to the burden of excise duty. The Committee could have wound up its labours after tackling this problem. Or it could have asked for more time in order to tackle the other problems, which, in any case, have been examined by many other committees, big and small, in the past. Nothing would have been lost if it had taken a couple of months more to examine them carefully, instead of apologetically repeating, as it has done in several places, that it did not have sufficient time, or suggesting appointment of another committee to consider some of the problems.

The Committee's findings confirm some of our observations on the effects of the steep increases in excise duties in September 1956. The present imbalance in the industry is due to a large extent, to the wrong fiscal policy of the Union Government. The sharp rise in the production of coarse varieties from 572,469,000 yards in 1955 to 1,163,713,000 yards in 1957 was chiefly the outcome of the defective structure of excise duties under which better varieties were subjected to an excessive burden on the false notion that they were used only by the rich people, while the coarse varieties were treated favourably on the plea that they were the poor man's cloth. Another factor responsible for the jump in the production of coarse cloth was the labour law that made it difficult for the mills to retrench labour and reorganise production through modernisation or addition of new equipment. To keep production going somehow rather than send away workers by paying them heavy retrenchment compensation and gratuity has been the lesser of the two evils. Even assuming, for argument's sake, that labour was willing to co-operate with the management in regard to rationalisation of production, it could not have been an easy task to switch over, overnight as it were, to production of varieties which commanded better sales. In the first place, the equipment required might not have been available at a moment's notice and, secondly, not all the mills might have had the funds required for that purpose. It seems to us that the Committee has not paid adequate attention to this point while discussing the reasons for the heavier production of coarse goods.

Not only did the Government impose absurdly high rates of excise duties but went further and gave a rebate of 3.125 nP per square yard as an incentive for stepping up production above the monthly average for the first eight months of 1956. This action, we then feared, would encourage a reduction in the quality of cloth by lowering the picks, so that more yardage could be shown. The Committee's findings confirm our worst fears, for they reveal that the bulk of the rise in production in the last two years was achieved at the expense of quality. The consumer has thus paid higher prices for less durable cloth; he has been penalised both ways.

The defects in the structure of excise duties have now been corrected to a considerable extent. For this, the Committee has to be thanked by both the consumers and the manufacturers. It seems to us that the Committee deserves to be seems to us that the Committee deserves to be rationalised the excise duties in such a way as to ensure that the pattern of production will broadly conform to the demand. The Government has done well in accepting the Committee's recommendations in this regard and implementing them without any delay. Contrary to reports published in a section of the Press, the Government has actually favoured the industry by placing the basic rate of excise duty on fine and superfine goods at 18½ nP and 24½ nP, instead of at 19 nP and 25 nP, respectively, as recommended by the Committee.

Although the rearrangement of excise duties by the Committee is commendable and the reasons for doing so are convincingly set out, no explanation whatever is given as to why and how the Committee arrived at the rates of duties decided by it. This is a serious lacuna, for, in the absence of proper rationale, one gets the impression that the Committee has been arbitrary in its conclusions. The fine and superfine manufacturers are nursing a grievance that they have been unduly penalised for no fault of theirs. As they are in a minority and as most of the units are relatively better managed as compared with some units manufacturing coarse and medium counts, the Committee's decision—and the Government's action thereon—is open to the criticism that it is a case of tyranny by the majority over the minority and of placing a premium on inefficiency, imprudence and indifference. It is generally true to say that, while not all the producers of coarse and medium counts are inefficient or bad, most of the ill-managed units in the cotton mill industry are producers of coarse and medium counts. In fairness to all, therefore, the Committee ought to have explained, as the Tariff Commission, for instance, always does, its reasons for fixing the duties as it has done. The Committee was by no means an arbitrator whose award is binding on the parties to the dispute. It was only an advisory body. It would be interesting to know how the Government accepted a set of recommendations unexplained by any line of reasoning whatever.

All sections of industry and trade, as well as many impartial observers, have been suggesting that, the grounds on which the excise duties were practically doubled in September 1956 having disappeared, the incidence of these duties should revert to the pre-September (1956) level. It is surprising that the Committee has not said a word on this subject. Silence on such a vital issue by so responsible a Committee does not redound to the credit of its members. It is, indeed, regrettable to find that the Committee has not even properly recounted the explanations given by the Government's spokesmen for enhancing the excise duties nearly two years ago.

The Committee has, however, argued well the case for not altering the excise duties frequently. There will be general agreement with its suggestion that the practice of making changes in the excise duties in the middle of the financial year should normally be avoided, as it upsets the smooth functioning of the trade channel and compels mills to carry excessively large stocks of cloth. But it has failed to add that the result would be the same if the excise duties were fixed at unduly high levels even though only once at the commencement of the fiscal year. For, when an unbearably high burden is imposed, there is bound to be a continuous clamour for a reduction in such burden until it is brought down to a reasonable level. The unsettling effect of the increases in excise duties in September 1956 was due more to the drastic nature of the increases than to their occurrence in the middle of the financial year. It is needless to add that, when a clamour for a reduction in tax burden takes place, the trade will be disinclined to carry more stocks than absolutely necessary and the pipeline will continue to remain dry.

There can be no two opinions on the Committee's finding that the industry, in general, barring a few notable exceptions, has done little to study consumer preference and that this has been responsible, to a significant extent, for accumulation of stocks. Its suggestions for marketing research, as well as for improvement in the quality of cloth from the point of view of both durability and appeal, will, therefore, be widely endorsed. Equally sound are the Committee's recommendations for the abolition of those production controls which have become obsolete. But its solicitude for the consumer fails to impress us, because on the major policy issues it has given prominence to considerations of employment and relegated the interests of domestic consumers to the back. The Committee argues that faultless, good quality cloth is produced better and cheaper on automatic looms. And yet it comes to the irrational conclusion that the benefits of automatic looms are to be reserved exclusively for export markets and that, if any manufacturer were to decide to sell a part of the cloth woven on automatic looms to domestic consumers, he should levy a penalty on the latter. In other words, people in India should pay more for their cloth than is done by people in foreign countries. At the same time, their labour and production are expected to be competitive in world markets.

Several notable suggestions have been made by the Committee for tackling marginal units and badly managed concerns, for stimulating exports, and for improving the industry's competitive capacity, in general. All these bear the imprint of careful thought and constructive approach. But this does not necessarily mean that all of them are sound in theory and practice. Their pros and cons have, therefore, to be carefully examined, before venturing to express one's categorical views on them.

CEILING ON LAND IN ANDHRA

AMONG the many ill-conceived socialist measures which have been adopted in recent years, the imposition of a ceiling on land is perhaps the most disturbing. It is essentially an offshoot of the "socialist pattern" resolution by which the Congress leaders caught the country unawares at their Avadi session. Neither the State Legislatures nor the Provincial Congress Committees had given any thought to what "socialist pattern" meant. But this did not deter the leaders from getting the representatives at the Avadi session to accept it. The result is that a political philosophy which was no more than a vague aspiration has now been accepted as a policy. Since the Congress Governments in the States have now to toe the party line, they face the unpleasant prospect of having to carry out what many of them know to be impracticable measures. The "ceiling on land" legislation belongs precisely to the group of ideologically inspired reforms. It is also a measure which is imposed from above, not a reform, the demand for which has come from below. Now, Andhra is among the States which have decided to clamp down a ceiling on land-holdings.

It is hardly surprising that the Andhra Pradesh Ceiling on Holdings Bill, in an effort to simplify an admittedly complex task, has only succeeded in making it more difficult for landholders to make an effective contribution to agricultural production, besides inflicting a blow to the deep-rooted sense of attachment to land and property in the rural areas. A feature of the Bill is the departure from the recent trends towards fixation of ceilings in terms of area. What is now proposed is a direct ceiling on income from land. One thought that the much-talked-about ceiling on income, which was effectively scotched by the Prime Minister, Mr. Nehru, was dead. But it has been resurrected by the Andhra Government which has now decided to fix a definite, rigid ceiling on income from land and thereby indirectly impose a ceiling on land which one can hold. If it is wrong to impose a ceiling on income from other sources, it ought to be equally wrong to impose a ceiling on agricultural income. It has been contended that, since income from non-agricultural sources is subject to different kinds of taxes, there could be no objection to imposing a ceiling on such income. If this is so, there is a case for similar treatment of agricultural income, and not for imposition of a ceiling thereon.

Despite these considerations, the Andhra Pradesh Ceiling on Holdings Bill prescribes for a family of five members a ceiling on existing holdings which is equivalent to the area of land yielding a net annual income of Rs. 5,400. Net income, it is stated, will be treated as 50 per cent. of the gross income which would be ascertained on the basis of the average of the prices during the last 10 years. For a family of more than five members, there will be an additional allowance of Rs. 1,200 for each such member. In addition to this area, grazing lands upto one-third of the ceiling area will be allowed. The ceiling will apply to all persons including Hindu joint families, companies and firms but not to Government land or co-operative farming societies. It will include all lands used for agricultural and horticultural purposes but not land used for non-agricultural purposes. It is not clear why a distinction has been made in respect of future acquisition of land for which the ceiling has been fixed at two-thirds of the existing holdings. This is an arbitrary distinction. Apart from this, there are many disadvantages in trying to fix a ceiling on land-holdings on the basis of a specified income. Three of these at least may be mentioned here. First, it will mean placing a premium on inefficient farming. If there is to be ceiling of only Rs. 5,400 on income, why should a farmer work hard and bother to obtain higher production? Secondly, it might adversely affect the crop pattern. And, thirdly, how is a farmer to guard against a fall in the purchasing power of the rupee? Five years from now, the sum of Rs. 5,400 may not buy as much as it does now, in which case how is the farmer to maintain his standard of living?

It is noteworthy that the ceiling on land will not apply to a sugar factory which has in its ownership since 10th June 1950 (the date on which the Hyderabad Tenancy and Agricultural Lands Act came into force) land for the cultivation of sugarcane for its own use. This concession is welcome in so far as sugarcane farms established by sugar factories before 1950 are concerned. It is not known how many new sugar factories have been established in recent years. In any case, this provision will adversely affect the future of sugar industry in the Andhra region. Those who know anything about the economics of sugar production will agree that the sugar factories with large and efficient sugarcane farms of their own can produce sugar at a most economical price. Indeed, if an inquiry were made into the operation of the present sugar export scheme, it would be found that the factories which are able to export sugar with minimum loss to themselves and the country are those which own extensive and modern sugarcane farms. The Bill, by seeking to remove the scope for the establishment of new sugar factories with cane farms of their own, is thus denying the citizens of Andhra a fruitful source of gainful employment and profitable investment. This is particularly deplorable because the Andhra State, unlike U.P. or Bihar, enjoys certain natural advantages for the establishment of sugar factories on modern lines. It is true that co-operative societies are to be exempted from the ceiling on lands and that sugar factories can be established on co-operative lines. But we have our own doubts whether sugar co-operatives will be successful and as highly efficient as joint-stock companies. Besides, there is a great risk of these co-operatives ending in some form of State capitalism. There is also the danger of co-operative farming deteriorating into collective farming, thereby paving the way for the spread of communism.

Excess land—that is, land above the prescribed ceiling—will have to be surrendered to the Government. The Bill provides for payment of compensation in cash or in bonds or in both. Briefly, the compensation for excess land yielding Rs. 5,400 net income will be ten times the net income; for the next Rs. 5,400, it will be eight times the net income; for the balance of the net income, it will be five times the net income. In the case of lands surrendered by a usufructuary mortgage, the possession of the land would revert to the mortgagor who would be required to discharge the mortgage debt. In the case of land surrendered by a tenant, the possession of the land will revert to the owner who will be required to pay one year's net income to the tenant as compensation.

With refreshing candour, Mr. Kala Venkata Rao, Andhra's Revenue Minister, admitted, in the course of his recent Press conference at Hyderabad, that the problem of the land hunger of the people could not be solved by this reform. He added: "I do not think that, even by expropriating all lands in India, land hunger can be satisfied on the basis of the present-day population." What then is the use of this reform? Mr. Kala Venkata Rao felt that, if the reform was intended to get surplus land for distribution, the results would not be appreciable. But the idea of land reform was "not only the distribution of land but the abolition of disparities of income in the rural sector and the building up of a rural economy which would improve the methods and efficiency of agricultural production." If the objective is to reduce disparity in incomes, it could be better achieved through taxation. The imposition of a ceiling on income is hardly calculated to inspire confidence in rural areas where the reform is bound to be contrasted with the relative freedom which people with non-agricultural sources of income enjoy. It is thus bound to bring to the fore all the ancient conflict between "town and country."

As regards improvement in the methods of cultivation, it is well known that a large area lends itself more readily to modern agricultural practices. Thus, the Programme Evaluation Organisation of the Planning Commission, in its fifth evaluation report on the working of Community Development and N.E.S. Blocks, observes: "Our enquiry shows that quite a proportion of the cultivating households seem to have no knowledge of improved seeds; that the cultivators have taken to the use of improved seeds much more in the case of cotton and sugarcane than of wheat, paddy, potato and *jowar*; and that, among those adopting cultivators, those with larger holdings predominate." It should thus be clear that the cultivators of large land-holdings have a greater incentive for the adoption of superior agricultural practices. The report, entitled *Agricultural Legislation in India*, published by the Union Ministry of Food and Agriculture, avers that one of the greatest impediments to the introduction of technological reforms is the "defective layout and excessive fragmentation of our holdings." What Indian agriculture needs is not further fragmentation through imposition of a ceiling on land but a steady encouragement to the movement of consolidation of holdings. In this connection, it must be remembered that any ceiling on land-ownership will release large bits of land of widely assorted sizes which would make the task of consolidation more difficult than it is. The Hyderabad Land Commission on Consolidation of Holdings found that only about one-third of the owners held their land in one plot, and that, at the other extreme, about 14 per cent. of the holders held theirs in more than 10 plots each. The Commission, after a visit to other States, recorded that, "in the East Punjab and the Chattisgarh Division of Madhya Pradesh, it was not uncommon to come across a holding of 10-12 acres scattered in 30 to 40 plots." Commenting on these findings, the Union Agriculture Ministry's report observes: "Certainly, such an intensity of fragmentation cannot but impede the adoption of improved practices of agriculture. As a matter of fact, it is bound to sap the very morale of cultivators by condemning them to an uneconomic routine of life." And yet, it is precisely the much-abhored fragmentation of holdings that the ceiling on land will intensify.

The Andhra Bill has, therefore, little to commend itself to those who have the good of agriculture at heart. It is bound to interfere with increased agricultural production, to discourage the flow of capital and intelligent effort into rural areas where they are most needed, to inflict serious damage on the pattern of agricultural credit (now only insufficiently dispensed by institutional agencies), and to disrupt rural economy. Besides, it will prevent private effort in the reclamation of waste land—a sphere in which Governmental effort has always been costly and uneconomic. Above all, the Government, in trying to discharge its responsibility for the distribution of surplus land, cannot possibly avoid politically-inspired bitter criticism of gross favouritism. For every doubtful friend it gains, it will create ten certain enemies. The Government which is determined to sow the wind of dubious, ill-thought-out land reform would be well advised to know that it must be prepared to reap a whirlwind of discontent and jealousy which will undermine the very basis of democratic structure.

PLANTATION LABOUR IN KERALA

IT is hard to understand what strange logic prompted the Communist Government of Kerala not to give representation to the Association of Planters of Kerala on the State's Industrial Relations Board set up in September last year. The denial of the opportunity to the Association, the principal body of the plantation industry, which is also the largest industry in the State, to nominate representatives to state its case makes a mockery of the laudable objective of the Board, namely, promotion of healthy labour-management relations in the State. After having thus disregarded the Association's legitimate rights, unilateral decisions are sought to be taken by the Board on such vital questions as minimum wage.

The State Government also wants the Association to be bound by these decisions. What is more surprising is the Government's intention to by-pass the authority of the special Wage Revision Committee, set up by it in August last. This Committee was constituted with a view to evolving a wage structure and a formula for the payment of bonus for plantation workers. The Association was represented on this committee by three members. It is working on the subject and will examine shortly the answers to a voluminous questionnaire which it had sent to employers and trade unions. Another committee was appointed meanwhile by the State Labour Minister in December last to formulate an agreement regarding an interim increase in wages. This committee, which also contained representatives of the Association, decided upon an interim increase in wages, subject to any decisions that might be taken by a tripartite conference to be called by the Government after the receipt of the report of the Wage Revision Committee or subject to the findings of any wage board appointed by the Government of India.

Thus, when the wage question is still under consideration by the Wage Revision Committee, the Industrial Relations Board proposes to take up the question of minimum wages. The Association, according to Mr. K. L. Kershaw, its President, had protested to the Government against its intention to flout the authority of its own special committee and to prejudice its decision by a series of *fait accompli* arrived at by the Board. The Government has so far remained silent on the issue. In these circumstances, the Association, as Mr. Kershaw pointed out, is not bound by any decisions taken by the Board. Clearly, the Government's attitude is partisan in character and strikes at the root of the "tripartite" method of resolving labour problems.

SUGAR HEADING FOR TOTAL CONTROL?

COMMODITIES RETREAT—WEST EUROPE WORRIED ABOUT RECESSION

THURSDAY, 5 P.M.

SUGAR is very much in the news again and, if the logic of events is any guidance, it will not be surprising if it becomes a commodity subject to full-fledged control, from the producer to the consumer. The Government of India has now statutorily fixed the ex-factory price of sugar at Rs. 36 per maund for U.P. and North Bihar mills and at Rs. 36.50 for mills in the Punjab. These prices, according to a Press note issued by the Union Food Ministry yesterday, apply to I.S.S. D29 grade sugar, with prescribed price differentials for other grades. The controlled prices are applicable to all stocks lying with mills and no unit will be allowed to sell its released stocks at prices higher than those now fixed. The Government has also announced its decision to requisition and distribute sugar at stipulated prices on ex-factory basis, as well as to despatch sugar to outstation centres on freight-to-pay basis. Allotments will, however, be made at fixed f.o.r. destination prices to four important centres—Bombay (Rs. 39.00 per maund), Calcutta (Rs. 38.00), Kanpur (Rs. 36.75) and Delhi (Rs. 36.50). Explaining these decisions, the Food Ministry's Press note observes:

MARKET GOSSIP

"When the sugar export policy was announced on 27th June 1958, the sugar prices had already risen in expectation of a large export quota. To ensure that the prices did not go up further, the industry had assured the Government that the mills would offer to sell their released stocks freely at prices prevailing immediately before the export policy was announced. There has, however, been a general rise in prices during the last four weeks, and this rise has been particularly marked in Northern India. The Government has, therefore, decided to control the ex-factory price of sugar in the Punjab, U.P. and North Bihar."

It will be evident from the foregoing quotation that the latest move of the Government has been prompted by the need to check the rising tendency in sugar prices. The following table gives the trend of ex-mill delivery prices of a few North Indian mills:

(Rs. per maund)

	28th July 1958	23rd June, 1958 (before export policy was announced)	13th Jan. 1958
Amroha (D29)	37.50	36.06	34.50
Bijnore (C29)	37.12	36.50	34.69
Daurala (C29)	38.56	37.56	37.00
Meerut (D28)	38.15	36.87	35.00
Mansurpur (C29)	38.37	38.25	36.50
Simbhaull (E29)	38.24	36.50	35.75

It is true that the ex-mill delivery prices of sugar in North India have gone up in the last four weeks. But the extent of the rise has not been much, being of the order of 4 to 5 per cent. only. Should such a rise cause undue concern and lead to a clamping down of controls? By posing this question, we are not suggesting that the increase in sugar prices is quite justified. What we wish to emphasise is only that, when the free market forces of supply and demand operate, an advance of 4 to 5 per cent. in prices must be considered to be a natural phenomenon. This aspect would be appreciated if one were to look at the trend of other commodity prices. Although there has been a reaction in the past week, the currently ruling prices of many commodities are higher than those prevailing a few weeks ago. How then can sugar prices alone be expected to remain unchanged without being influenced by the general trend of prices?

That apart, we wonder whether the leaders of the sugar industry were wise in giving an undertaking that they would see to it that no further rise in the price of their commodity took place. Did they expect the prices to come down? Did they not know that, in a free market, prices were liable to move both ways? Having given such an undertaking, what steps did they take to see that their rank and file would honour their commitment to the Government?

It was, of course, unbusinesslike on their part to assure the Government on the lines they did. If they were wise, they would have at least made a qualification which would have safeguarded them against a modest fluctuation in prices.

How did the wise sugar magnates make this mistake? Thereby hangs a tale. It was a section of the sugar industry that wanted sugar to be exported. This section was afraid that, in case the production of sugar were to reach a total of 2.2 million tons, as was generally expected in the initial months of the season, the surplus over consumption would be so large as to depress the domestic price of sugar. In other words, it wanted to safeguard its high margin of profit and never bothered about the interests of consumers. India's urgent need for foreign exchange came in quite handy as an argument for sending out of the country 200,000 to 400,000 tons of sugar even at a heavy sacrifice. Support was sought from all sections of the industry on the plea that its export scheme was less expensive than the loss in the selling price of sugar which would take place if no sugar were exported.

But this section's calculation went wrong. Sugar production in the current season actually turned out to be a little less than in the previous season, being no more than 2,000,000 tons. At the same time, consumption has gone up, what with an addition of 5 million new mouths over the year. Meanwhile, the country's foreign exchange position deteriorated and the Government insisted that at least 50,000 tons of sugar be exported, even though the statistical position of the commodity, coupled with the uncertainty of the next season's production, did not warrant it. If the sugar industry had the interests of consumers genuinely at heart, it should have called off the scheme for exporting sugar as early as in January last, if not earlier, and advised the Government against insisting on export of sugar. Or, alternatively, it should have advocated complete control, so that the necessary surplus for export could have been found without resulting in a big rise in the price of sugar which has been going on almost right from the beginning of this year. The whole situation seems to have been badly handled right from the beginning. And the blame for it has to be borne by both the industry and the Government. Both have cared little for the domestic consumer.

To revert to the Government's latest action. Even with the fixation of controlled ex-factory prices of North Indian sugar, what guarantee is there that the consumer of sugar will be assured of adequate supplies at a reasonable price? For the wholesalers and retailers may exploit the situation by putting up their selling rates disproportionately to the prices fixed by the Government, unless the Government takes special measures to prevent such a tendency. Under the directions from the Reserve Bank, the Scheduled banks have, of course, raised the margin from 35 per cent. to 45 per cent. on their advances to traders against sugar stocks. But this step may not by itself prove adequate and effective. For the Reserve Bank is wrong in thinking that only the traders hoard and not the manufacturers. It is well known that both can collude and take advantage of any artificial scarcity for their mutual benefit. No harm would have taken place had the credit control been extended to manufacturers also, for the crushing season is already over. It is said that, of the releases made so far, as much as 320,000 tons, if not more, all still with the factories. Why are these stocks so high? Which are the factories that are still keeping such a large portion of released stocks?

Instead of jumping in for controlling the ex-mill delivery prices for North Indian sugar and taking over the work of distributing this sugar direct, the Government should have first extended the bank credit curb to include the sugar factories also, compelled the mills to exhaust their release orders within one month instead of two months, increased the quantum of releases, and ensured adequate facilities for transporting sugar from mills to consuming centres.

Both the Government and the industry want to avoid detailed controls. In fact, none wants them, excepting a few theorists. The consumer is the last who wants rationing. The traders simply hate controls. But, if such physical controls are to be avoided, there is no point in resorting to partial physical controls, for they will ultimately push the authorities to go the whole hog. It is to be hoped that better wisdom will dawn on them soon.

* * * *

The reaction in prices noted in commodity markets towards the close of last week has since gathered further momentum. In fact, the markets are currently ruling distinctly easy. The bulls who had made large purchases immediately after the West Asian crisis hit the headlines are now busy reducing their commitments. Such an attitude must be attributed partly to some of the measures taken by the Government to prevent unbridled speculation in essential commodities and partly to the recession in commodity markets abroad, following the absence of any deterioration in the political situation in West Asia.

Last week, we referred in these columns to (1) the ban on forward trading in coarse grains, pulses, *khandsari* and *gur*, (2) the raising of the margin on Scheduled bank advances to traders against sugar, and (3) the stern warning to market men by the Union Food Minister. To this list have been added three more measures. They are: (1) ban on purchases of wheat in the open market by roller flour mills in Uttar Pradesh, Madhya Pradesh, Rajasthan and Bombay; (2) ban on forward contracts and transferable specific delivery contracts for sale or purchase of barley; and (3) fixation of controlled ex-factory prices for sugar produced in U.P., North Bihar and the Punjab. The series of official measures would not have proved effective but for the downward trend in prices abroad. Latest reports from London aver that the prices of most commodities are now back to where they were before the British and American troop landings in West Asia, though the prices of some items continue to retain a part of their crisis upswing.

Considerable significance attaches to the two-day meeting of the Ministerial Council of the Organisation for European Economic Co-operation which opened in Paris on Monday last. For the decisions taken there will have a direct bearing on the course of the European economy this winter. The object of the meeting was to discuss certain aspects of the European economic situation and, in particular, the repercussions on Europe of the U.S. recession. Although full information is not available at the time of writing as to what transpired at the meeting, reports are that the Council reviewed the West European economic situation in the light of the changed circumstances and considered measures to stave off any possible economic recession in Western Europe. So far, European gold and dollar reserves have benefited from the U.S. recession. The slackening of industrial activity in Britain and the Benelux countries, though perceptible, has not assumed alarming proportions. But there have of late been indications of some anxiety about prospects for the immediate future. Even in France, where unemployment continues to be negligible and the trend of industrial production has been upward, there is a general feeling that the winter will witness a marked flattening off of the curve.

Sir David Eccles, President of the British Board of Trade, opening the discussion, warned that the U.S. recession was likely to hit Europe in the near future. He appealed to the member-countries of the O.E.E.C. to follow concerted expansionist policies, including relaxation of internal credit controls, long-term "untied" external lending on the lines of Commonwealth countries' drawing on the sterling balances and relaxations in the rules governing export credits. Sir David Eccles also drew attention to the problems of primary producers. He told the Council that the U.K. had never gone in for restrictive external policies and had assisted sterling area primary producers to the tune of £300 million in one year from the sterling balances. He urged members not to extend restrictive trade policies nor to try to protect their own position.

The Council is understood to have considered, as was generally expected, new methods of co-operation to stimulate industrial activity. Before the commencement of the meeting, there were conjectures as to whether a new high level committee would be set up. There were also talks that the West German Economic Minister would be urged to put the huge German gold reserves to good account. However, there was scepticism in some quarters if the meeting would go beyond "meaningless expression of goodwill." Whether it actually did must remain an unanswered question until the receipt of further information.

Paris was the venue of yet another meeting. This was the two-day session of the Ministerial Committee on Free Trade Area (Maudling Committee) which ended on 25th July. The meeting, in the words of Mr. Reginald Maudling, Paymaster-General of Britain, was "most successful." Not that anything of real substance was achieved at the meeting. Far from it. For the prospect of putting into force even a standby arrangement is still slender. But, as Mr. Maudling pointed out, what mattered was the signs of what was said to be "genuine constructiveness" displayed by France towards the idea of Free Trade Area.

The discussions at the meeting were provisional and the threads will be picked up at another meeting expected to take place some time in October. Mr. Maudling expects that substantial agreement will be reached at this meeting. The Committee will by then have received reports from its expert bodies on agriculture, and on the position of backward countries which will also indicate ways of avoiding deflation of trade in the Free Trade Area, a possibility very much feared by France and Italy.

EQUITIES FEATURELESS

NARROW MOVEMENTS IN PRICES

(From Our Own Correspondents)

BOMBAY, *31st July*

TRADING on the Stock Exchange was featureless during the week under review and prices displayed a slightly erratic trend after last week's sudden spurt in prices. All the favourable factors having been anticipated and discounted in prices, the "longs" preferred to toe a cautious line. The bullish trend was, therefore, not only halted but a mild corrective reaction set in this week on profit-taking. There was, however, no selling pressure and the lower levels met with resistance. End-of-account considerations and the week-end holidays this week, on the 1st and 2nd August, were also responsible for the cautious tone in the market.

The most important development of the week is the submission of the Cotton Textile Inquiry Committee's report for the Government's consideration. The Committee has recommended the specialisation of production in the mill sector, the grant of more liberal bank credit to the industry and the trade, a long-term policy for export of yarn, the stoppage of further installation of spindles (even those already licensed) after examining the merits of each case, the avoidance of sudden changes in excise duty and other fiscal measures in the middle of the financial year, and the setting up of a subcommittee for the industry as a whole for considering and laying down policies and principles governing rationalisation from time to time. The Government's decision on the recommendations of the Committee are now awaited. If, however, textile shares did not react favourably to these recommendations, it was because, in the first instance, one is not sure whether the Government would accept the Committee's recommendations. Secondly, the mills have not yet been relieved of the burden of accumulated stocks.

In the steel section, Tata Ordinaries moved up from the previous week's closing of Rs. 167.50 to Rs. 169 on Tuesday this week, but receded again to Rs. 166.50 yesterday. Today, however, they recovered to close at Rs. 168.25. The new shares were a shade better over the week at Rs. 166. Indian Irons rallied from Rs. 23.60 to Rs. 23.98. Profit-taking set in at this level and the shares receded to Rs. 23.68. Towards the close, they improved to Rs. 24.08.

Despite the publication of the report of the Textile Inquiry Committee, cotton mill shares failed to attract support. Bombay Dyeings moved down from Rs. 59.70 to Rs. 59.30 before hardening to Rs. 59.90 on Tuesday. Subsequently, there was again a setback to Rs. 59. Today, however, they rose to Rs. 59.40. Centurys were listed ex-right on Tuesday and the shares finished at Rs. 450.50 *ex*-right, as against Rs. 478 *cum*-right a week ago. Kohinoors receded from Rs. 285 to Rs. 279, before closing higher at Rs. 281. Central Indias were marked down by Rs. 2.50 to Rs. 94.50. Finlays shed a rupee to Rs. 284 and Gokaks Rs. 2 to Rs. 150. Indu Ordinaries ruled steady and closed a fraction higher at Rs. 10.20. Indore Malwas shed Rs. 6 to Rs. 108. Khataus were featureless at Rs. 189 and Models at Rs. 168.75. Morarjee Mills picked up Rs. 3 to Rs. 241. Podars were a fraction better at Rs. 140. Shree Niwas Cottons changed hands Rs. 5 better at Rs. 162. Simplex closed at Rs. 175 *ex-div.* (div. Rs. 8.50), as against Rs. 185 *cum-div.* Standards were steady at Rs. 433, while Svadeshis declined by Rs. 3 to Rs. 189.50 and Swans by Rs. 5 to Rs. 365. Tata Mills were lower by 75 nP at Rs. 39. Ahmedabad Advances gained Rs. 3.75 to Rs. 178.75.

Barring a smart rise of Rs. 1.90 to Rs. 56.70 in Centrals, bank shares were featureless. Barodas were done Re. 1 lower at Rs. 122. Bank of Indias were a fraction down at Rs. 134.75 and their new shares at Rs. 136. Punjab Nationals lost a rupee to Rs. 58 and United Commercials 50 nP to Rs. 61.

Very little activity was noted in the insurance section. New Indias were done a fraction lower at Rs. 46.25. Industrial and Prudentials changed hands at Rs. 29, as against Rs. 30 a week ago. Vulcans had business at Rs. 18.16 and British India Generals at Rs. 15.84. All-India Generals were marked down by 26 nP to Rs. 3.24.

Electricity shares were picked up at higher rates. Ahmedabad Electrics improved by 30 nP to Rs. 96, Bombay Suburbans by Re. 1 to Rs. 108.25 and Surat Electrics by 50 nP to Rs. 110.50. Tata Hydros moved up by Rs. 3 to Rs. 125. Tata Powers gathered Rs. 13.75 to Rs. 1,238.75 and Andhra Valleys Rs. 5 to Rs. 1,185.

In the sugar group, Belapurs suffered a setback from Rs. 263.50 to Rs. 260. Phaltans too lost Re. 1.75 to Rs. 153 and Changdeo 25 nP to Rs. 27.50. Bhopals were a shade better at Rs. 22.76, and Walchandnagars looked up by Re. 1.25 to Rs. 282.50. Associated Cements, among cement shares, moved narrowly between Rs. 157 and Rs. 154.75 before closing at Rs. 156.25. Their new shares were steady at Rs. 149.50. Digvijays were a fractional lower at Rs. 154.25 and Orissas at Rs. 13.96. Jaipur Udyogs provided a feature with a rise of 48 nP to Rs. 14.64.

In the engineering and mining group, Alcock Ashdowns were placed Rs. 2.50 lower at Rs. 253.75 and Premier Constructions shed Rs. 5 to Rs. 197.25. Tata Locomotives declined from Rs. 173.25 to Rs. 170, but shot up to close at Rs. 174.50. Larsen and Toubros were unchanged at Rs. 18.04, while Texmacos gained 80 nP to Rs. 21.80. Shivrajpur ruled quiet and dropped Re. 1.50 to Rs. 92, while Indian Coppers were unchanged at Rs. 3.95.

In the shipping group, Scindias gained ground from Rs. 19.48 to Rs. 19.72 and after a setback to Rs. 19.52 recovered to Rs. 19.72. Great Eastern Shippings rose by 12 nP to Rs. 24.84. Among automobiles, Premier Automobiles were steady at Rs. 92.50, while Hindustan Motors shed 12 nP to Rs. 7.76.

In the miscellaneous group, Bombay Burmahs (old) reacted from Rs. 582.50 to Rs. 571 before closing at Rs. 575. The Partly-paids were marked down by Rs. 2.75 to Rs. 215.75. National Rayons lost over the week Rs. 3.25 to Rs. 230.50. Gwalior Rayons were a fraction lower at Rs. 15.84. Tata Chemicals were lower by 24 nP at Rs. 16.52, while Dharangadhra Chemicals were steady at Rs. 109.50, as also Hindustan Levers at Rs. 23.84. Amar Dyes were a rupee lower at Rs. 119. Killick Industries had business at Rs. 144.25 and W. H. Bradys at Rs. 280. Wimcos lost Re. 1.50 to Rs. 175.

Calcutta Stock Exchange

CALCUTTA, *30th July*

The main feature of trading on the Calcutta Stock Exchange during the week under review was the strong support which jute shares and other speculative issues elicited. These recorded attractive gains over the week. The reasons for the revival of enthusiasm in jute shares were the better prospects for jute goods and the declining trend in raw jute prices following a bumper crop. The rains have so far been moderate, and it was thought that this year floods would not occur and reduce the crop. The support extended to speculative issues was consequent upon the belief that some understanding relating to West Asia would be reached among the Big Powers, thus staving off another world war, at any rate, for the time being. Generally speaking, it should be said that investment support was lagging behind in view of the economic uncertainties facing the country. Although it is generally believed that the U.S. would give more aid to India, market circles were disappointed at the speech of Mr. Morarji Desai in Nagpur at the annual meeting of the Nag-Vidarbha Chamber of Commerce, in the course of which he said that the attempts of private industry for getting tax relief were unreasonable. He also said that rationalisation and modernisation of the textile industry could have received more funds had only large dividends not been paid to shareholders. The market wondered what Mr. Desai had up his sleeves. Was it that he was preparing the investors for further control over distribution of dividends?

Coals, after remaining quiet for a time, firmed up. Prospect of an increase in output target for private collieries continued to boost up sentiment. South Karanpuras invited good support on the publication of good working results, and rose to Rs. 12.12 from Rs. 11.87. The dividend for the year ended August last amounts to 7½ per cent., as against 3½ per cent. for the previous year. Pench Valleys encountered support to recover to Rs. 22.94 from Rs. 22.00. Amalgamateds, after being lower at Rs. 19.12, put on strength and changed hands at Rs. 19.37. Burrakurs realised Rs. 21.12, as against Rs. 20.75 earlier, and Central Indias Rs. 9.25, as against Rs. 8.03.

Jute shares were the cynosure of all eyes. More corporate results announced this week, confirmed the market's view that the jute industry was passing on to better times. For the year ended March last, the dividend of the Bally Jute Co., Ltd., has been raised to 6 per cent. from 2 per cent. paid for the previous year, following the handsome increase in profits by Rs. 9.64 lakhs to Rs. 11.40 lakhs. For the year ended March last, the profit of the Birla Jute Manufacturing Company, Ltd., amounted to Rs. 27.95 lakhs, a rise of Rs. 11.17 lakhs. The dividend is unchanged at 10 per cent. The scrip changed hands at Rs. 19.75, as against Rs. 17.69. The Directors have announced a programme of modernisation up to 12 spinning stage. The following table shows the gains recorded by some of the important scrips:

	Opening Rs.	*Closing* Rs.	*Gain* Rs.
Budge Budge ...	101.00	109.00	8.00
Caledonian ...	131.00	152.00	21.00
Cheviot ...	162.00	176.00	14.00
India ...	134.50	140.00	5.50
Delta ...	127.00	134.00	7.00
Megna ...	131.00	136.00	5.00
Anglo-India ...	176.00	180.00	4.00
Kennison ...	128.00	131.00	3.00
Gourepore ...	273.00	276.00	3.00
Lawrence ...	96.00	103.00	7.00
Northbrook ...	17.25	17.75	0.50
Alliance ...	89.00	90.00	1.00
Naihatti ...	61.00	70.00	9.00

Led by speculative Indian Irons, engineering shares were fully steady. Indian Irons opened at Rs. 23.22 and by Friday had risen to Rs. 23.90. The market was closed on Monday being a public holiday. Yesterday, the shares finished lower at Rs. 23.68. Texmacos touched a high of Rs. 21.10 before lagging to Rs. 20.90. At Rs. 97, Indian Standard Wagons were higher by Re. 1, and Guest, Keen Williams recorded a smart rise to Rs. 31. Kumardhubis were, however, unchanged at Rs. 9.50.

Only limited interest was shown to tea shares. Brook Bonds hardened to Rs. 18.89 from Rs. 18.75, and Batelis to Rs. 19 from Rs. 18.69. New Dooars were unchanged at Rs. 291.

A wide range of miscellaneous industrials changed hands at advancing rates. Subsequent profit-taking, however, reduced gains. India Steamships closed at Rs. 12.19 after improving earlier to Rs. 12.31 from Rs. 12.06. Dunlop Rubbers at Rs. 28 were marked higher. Orient Papers at Rs. 34.35 recorded an impressive increase of Re. 1.35. Angelo Bros. picked up strength to quote higher at Rs. 20.12.

Among minings, Indian Coppers, after improving to Rs. 3.78 from Rs. 3.67, receded to Rs. 3.66. Karampura Developments provided an impressive feature with a steady rise to Rs. 16.37 from Rs. 13.87. They, however, gave way subsequently to Rs. 15.

Madras Stock Exchange

MADRAS, *29th July*

The Madras Stock Exchange presented a steady trend during the week under review. Planting shares met with a fair measure of support, thanks to rumours of a possible reduction in export duty on tea, expectations of better working results of coffee estates, and hopes of an upward revision in rubber prices. Trading in the textiles section was marked by buying enquiry in a few selected scrips. The report of the Cotton Textile Inquiry Committee failed to have any significant effect, as it was felt that the report did not contain any concrete proposals designed to help South Indian mills liquidate the huge yarn stocks estimated at 40,000 bales. Selected bank shares were well favoured, as also certain sugar shares.

Among tea shares in the planting section, Kalasas rallied 25 nP to Rs. 16.25. Devaholas advanced by a like amount to Rs. 19.75 *cum-div.* and Kil Kotagiris by 20 nP to Rs. 6.00. Blue Mountains were better by 8 nP at Rs. 3.35. Coorgs gained 10 nP at Rs. 11.30. Haileyburias were fully maintained at Rs. 19.50, despite the announcement of lower dividend of 15 per cent. for the year ended 31st December 1957, as compared with 25 per cent. in the previous year. Lucky Valleys were steady at Rs. 9.50 and Nilgiris at Rs. 8.50 *cum-div.* Emerald Valleys, however, declined by 25 nP to Rs. 6.80. Nonsuch softened by 15 nP to Rs. 22.45. Periakaramalais declined by 7 nP to Rs. 4.30 on fears of lower dividend.

Coffee shares were well maintained. Coffee Lands spurted by 30 nP to Rs. 31.10. Manars rose by 20 nP to Rs. 2.80. Ouchterloneys found buyers 15 nP higher at Rs. 5.30. Mysore Coffees strengthened by 12 nP to Rs. 3.62. Rajendras, Sangameshwars and Shavamalais were quoted at Rs. 12.35, Rs. 2.65 *cum-div.* and Rs. 5.85 *cum-div.* respectively, same as last week. Anaparas were steady at Rs. 5.40, Bababudins at Rs. 12.20 and Consolidated Coffees at Rs. 27.50.

Rubber shares met with support. Kalpettas rallied 75 nP to Rs. 24.75. Midlands firmed up by 30 nP to Rs. 12.30. Hindustan Levers were steady at Rs. 23.84.

INDIAN AND FOREIGN BANKS CO-OPERATE

The Indian Banks Association and the Exchange Banks' Associations have formed a new association called "Foreign Exchange Dealers' Association of India" to regulate the conduct of foreign exchange business within the framework of the exchange control regulations. Until now, foreign exchange business has been regulated by the Exchange Banks' Associations in India (at Bombay, Calcutta, Delhi, Madras and Amritsar), whose membership consists entirely of foreign banks. In view of the active participation of Indian banks in financing the country's foreign trade and the considerable expansion of their foreign exchange business, it was considered desirable to form a composite association of all authorised dealers in foreign exchange.

The new Association has applied to the Reserve Bank of India for recognition and will start functioning as soon as approval is received, and, in the meantime, all authorised dealers are being invited to join. The headquarters of the Association will be in Bombay, and local offices will be established in Calcutta, Delhi and Madras.

NEWS IN BRIEF

THE total investment in bullock-carts in India is estimated at as much as Rs. 800 crores, which is Rs. 100 crores less as compared with investment in railways.

A further quota of 5,000 tons each of nigerseed and kardiseed has been released for exports upto the period ending September 1958 and October 1958, respectively, or till the ceiling is reached, whichever is earlier.

The Central Wage Board for cement industry has, in response to a number of requests, extended the time limit for replying to the questionnaire issued by the Board, up to the 16th inst.

The Government of India is considering the question of deleting the word "private" from the nomenclature of all State-owned undertakings registered as limited companies, in order to distinguish them clearly from privately owned companies with limited liability.

Scientists from most countries of the world are expected to attend a symposium on the nature of coal scheduled to be held at Jeolgora from 9th to 11th February 1959. The symposium has been jointly sponsored by the Central Fuel Research Institute, the Institute of Fuel (India branch) and the Institution of Chemists, India.

A conference on shipbuilding and shipping will be held in Kharagpur in November 1958 under the auspices of the Naval Architecture and Marine Engineering Society, Indian Institute of Technology, Kharagpur. The problems of shipbuilding and shipping will be discussed at the conference which is the first of its kind to be held in India.

The State Bank of India has, under the provisions of Section 35 of the State Bank of India Act, 1955, obtained the sanction of the Government of India to acquire the business of the Manipur State Bank Ltd. The accounts now maintained by the Manipur State Bank Ltd. will be taken over by the State Bank of India soon after the acquisition of its business.

The Scindia Steamship Navigation Company has decided to purchase from Japan a motor vessel of 12,000 tons deadweight. Mr. T. M. Goculdas, Deputy Manager of the firm, has already gone to Japan to negotiate and finalise the order for the construction of the vessel. He is also expected to investigate the possibilities of construction of suitable ships for his company at Hong Kong.

A Rs. 7-crore scheme for setting up a national dairy farm in the Banni region of Kutch has been drawn up by the Government of Bombay. The scheme is also expected to cover some subsidiary industries such as preparation of bone manures and leather tanning. The dairy experts of the Government of India recently visited Kutch for a detailed survey for this purpose.

In order to provide training facilities regarding the methods of family planning, the Government of Bombay has sanctioned the establishment of seven family planning clinics, one each at the Grant Medical College, Bombay, B. J. Medical College, Poona, B. J. Medical College, Ahmedabad, Medical College, Baroda, Medical College, Aurangabad. Medical College, Nagpur and M. P. Shah Medical College, Jamnagar.

The Government of India has decided to locate the proposed optical glass factory at Naini, near Allahabad. The factory will be set up in collaboration with the U.S.S.R. It is expected to manufacture highly specialised glasses like lenses for cameras, telescopes and microscopes for which India is exclusively dependent on imports at present. It may be recalled that a Russian team of experts visited India six months ago to select the site for locating the factory. The team chose Naini or Durgapur as places suitable for the purpose.

The Union Government has imposed a ban on the purchase of wheat from the open market by the roller flour mills in U.P., Madhya Pradesh, Rajasthan and Bombay. The large-scale purchase by these mills, it is said, has been responsible for reducing the availability of wheat and pushing up prices. The Government will henceforth supply imported wheat to these mills on the basis of the average monthly grinding during the first six months of 1958. The allotments will be subject to the condition that the mills should sell *maida* at Rs. 20 per maund, wholemeal *atta* at Rs. 15-4 and resultant *atta* at Rs. 14.

The Indian Institute of Technology was inaugurated in Bombay on the 25th ult. by Mr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs. This is the second in the chain of four such institutes planned by the Central Government; the first one was set up at Kharagpur in 1951. The third and fourth institutes will be established in Madras and Kanpur, in the next two or three years. The special feature of the institute at Bombay is that the services of U.N.E.S.C.O. experts from the Soviet Union have been made available for running it. The Soviet Union is also supplying equipment for the specialised laboratories at the Institute.

An annual gold medal for the advancement of advertising has been instituted by The Indian Society of Advertisers which it is claimed, represents 75 per cent. of the national advertising budget in India. The award, which will be known as the Isa-Khatau Gold Medal, was announced by Mr. Dharamsey M. Khatau, well-known industrialist and a past Chairman of the Society, at a farewell dinner held recently in his honour by Mr. Chinubhai Kilachand, the present Chairman. The award is designed to recognise and honour persons connected with the Press, advertising agency business or an advertiser, for his outstanding services to or major accomplishments in advertising during the past year.

From Abroad

It is reported that Russia launched, on 24th July, a radio sounding apparatus which will measure changes in solar radiation.

West Germany has decided to grant Turkey a credit of 200 million marks (about Rs. 22.1 crores) from its balance lying with the Organisation for European Economic Co-operation.

The Dutch Government has been urged by the Social Economic Council, a national organisation, not to reduce the 48-hour week to 45-hour week for the next three to five years.

A West German automobile manufacturer, Vidal und Sohn of Hamburg, proposes to establish a unit in New South Wales, Australia, for producing commercial vehicles. Beginning as an assembler, the Company proposes to manufacture vehicles progressively.

Britain and Hungary have entered into a bilateral trade agreement under which Britain will export to Hungary chemicals, textile yarns and raw materials, vehicles, machinery, non-ferrous metals and rubber in exchange for aluminium and aluminimum products, cotton cloth, shoes, drugs and other goods.

Operations in Iraqi oilfields are proceeding undisturbed, irrespective of the political developments there. The flow of oil through the pipeline to the Mediterranean terminals, which regained the pre-Suez crisis level of 25 million tons a year only a few weeks ago, has not been interrupted.

The Government of Pakistan has decided to authorise the Commerce Ministry to arrange for barter trade with India involving sale of jute cuttings against purchase of mustard oil and coconut oil. It has also decided to allow exporters of *desi* cotton to import machinery to the extent of 10 per cent. earnings of their exports.

A campaign asking the public to boycott cheap textiles imported from the Far East has been planned in Rochdale, U.K. Protest meetings are also proposed to be held against the Government's refusal to restrict duty-free imports. A desperate situation is reported to be developing in Rochdale with its 4,000 cotton operatives working short time.

A pool for insuring of atomic risks has been established at Rotterdam. Participating in this pool are about 150 Dutch and foreign insurance companies with offices in Holland. The capacity of the pool is placed at Fls. 9.5 million for material damage and nearly Fls. 6 million for third party risks. The pool will co-operate closely with similar West European organisations.

With effect from the beginning of this month, Aluminium Limited, the major Canadian producer, has curtailed output at its Canadian smelters by 10 per cent. As a result, actual output will be of the order of 560,000 tons per annum, as against the annual rate of 620,000 tons hitherto. This quantity represents about 72 per cent. of the installed smelter capacity of 770,000 tons.

A floating exhibition of Swedish export products is to be arranged on board the Swedish Transatlantic Line *s.m.s Elgaren*, which is due to leave for South Africa early in October this year. Some 140 leading Swedish industries have announced their intention to participate in this show, which will be organised by the Gothenburg Shipping Company in collaboration with the General Export Association of Sweden.

With a view to restoring export trade and checking the current recession, the Japanese Ministry of Trade has formulated a plan designed to create additional demand through fiscal expenditures. The new plan, it is claimed, represented a change in its traditional policy of strictly adhering to balanced budget and tight money. It calls for increased fiscal investment of 80,000 million yen by April 1959 and expediting of expenditure already approved.

Exports of British radio equipment of all kinds for the first six months of 1958, provisionally valued at £21,790,000, are more than £250,000 higher than those for the same period last year. For the whole of 1957, exports reached a record level of over £43,000,000. The National Radio and Television Exhibition, to be held in London from 27th August to 6th September 1958, will further promote oversea sales of British equipment. Buyers from at least 120 countries are expected at the exhibition.

At the request of the member-nations of the General Agreement on Tariffs and Trade (G.A.T.T.), a panel of five economic experts is currently making at Geneva a study of international trade problems. Among the problems to be reviewed are the tendency for trade between the non-industrial and the industrial countries to develop more slowly than trade between the industrial countries themselves, the effects of wide fluctuations in world market prices of primary products and, consequently, on the export earnings of primary producing countries, and the effects of agricultural protectionism on the development of international trade. The report of the panel is expected to be ready for consideration at the next session of the G.A.T.T. to be held in October next.

The Joint Hull Committee of the Institute of London Underwriters and underwriters interested in hull insurance have agreed on a revised formula for "increases and decreases in value." The only change in the formula relates to decreases in value. On renewal of hull insurance, an allowance off the bulk premium may be granted which is worked out at 100 per cent. of the market total loss rate on the amount of the reduction in value. This allowance may be deducted prior to the adjustment made necessary by the application of the Hull Understandings. During the currency of the insurance policy also an allowance may be allowed for by a return of premium on the amount of reduction in value worked out at 100 per cent. of the market total loss rate. The current depression in the world shipping trades, it is said, has led to many shipowners asking for a reduction in the insured value of their vessels, with a corresponding decline in premium income for underwriters.

PERSONAL

MR. Harish C. Jain has been elected Chairman of the Board of Directors of the National Advertising Service Private Ltd.

Mr. Chunilal B. Mehta and Mr. Premchand Kedia have been elected President and Vice-President, respectively, of the Bombay Bullion Association for 1958-59.
