Mr. M. S. Dastur has been elected Chairman and Mr. B. R. Mody, Vice-Chairman of the Committee of the Indian Insurance Companies' Association, Bombay, for the year 1958. The other members of the Committee are Messrs. K. C. Desai, R. S. Mehta, K. G. Merchant, M. G. Mody, Mohanlal Velji, E. J. Poncha, T. M. Telang, P. U. Patel and Jayant S. Dalal.

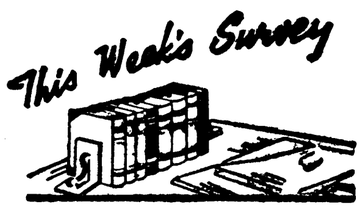
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *5th August*

First Quarter's Trade

The trade returns of British India for the month of June last, published elsewhere, enables us to review the trade of the first three months of the current fiscal year. The value of the imports, during the first quarter, decreased, as compared with the corresponding period of last year, by nine crores of rupees, or twenty-four per cent., and amounted to Rs. 28 crores. The total exports including re-exports, rose during the period by four crores of rupees, or fourteen per cent., to Rs. 34 crores. The exports of Indian merchandise during the three months records an increase of four crores of rupees, or fourteen per cent., but the re-exports remained near about the same level as in the preceding year, namely, Rs. 74 lakhs. The grand total of imports, exports and re-exports amounted to Rs. 62 crores as against Rs. 67 crores in the previous year—a decrease of five crores of rupees, or seven per cent. Imports of treasure during the three months under review—both on private and Government account—decreased by Rs. 35 lakhs to Rs. 50 lakhs. Gold bullion increased by Rs. 2 lakhs to Rs. 22 lakhs; sovereigns and other British gold coins by Rs. 38,000 to Rs. 7½ lakhs, but other coined gold dropped by Rs. 10,000 to Rs. 61,000. The value of silver imported declined by Rs. 36 lakhs to Rs. 19 lakhs and of currency notes by a lakh of rupees to the same amount. Exports of treasure increased by Rs. 5,08 lakhs to Rs. 17,88 lakhs. exports of gold alone amounting to Rs. 15,40 lakhs as against Rs. 12,41 lakhs last year.



BLACKMAIL ON SUGAR CONSUMERS

A TYPICAL instance of blackmailing consumers of sugar by politicians was provided on Friday last week when the Uttar Pradesh Vidhan Sabha adopted a Communist-sponsored non-official resolution urging the State Government to move the Centre to enhance the minimum price of sugarcane from Re. 1-7 to Re. 1-12 per maund. Coming as it does a few months after a similar resolution was passed by the Bihar Legislative Assembly, this action has imparted a fresh lease of support to the old political game that has gone on for several years in both Uttar Pradesh and Bihar. It is deplorable that the question of sugarcane price continues to be a convenient lever which the politicians of the two States have all along been using for getting elected to the State Legislatures and Parliament. Since the cane growers in these States constitute a large number and, therefore, command vast voting power, the politicians naturally find it easy to secure their votes by agitating for higher cane prices in the name of welfare of the poor peasant.

The aforesaid attitude of U.P. and Bihar politicians is highly regrettable and, if it were to gain recognition at the hands of the Central Government, it would mean that consumers all over India would have to pay more for their sugar, the price of which is already high in all conscience. Indeed, any further increase in cane price, which accounts for more than half of the production cost of sugar, will amount to holding consumers to ransom. Inasmuch as the States of U.P. and Bihar together account for well over 66 per cent. of the total production of sugar in the country, the pressure exerted by the politicians of the two States for getting higher prices for cane tantamounts to the imposition of the will of monopoly interests on nearly 70 per cent. of the sugar-consuming population. It must be remembered that higher prices for cane aggravate the inflationary forces in two ways—higher cost of living and a fall in foodgrains production consequent upon more land being diverted to sugarcane.

The plea for an upward revision in cane prices is most ill-timed, especially as the country is now trying to build up an export trade in sugar. The price of Indian sugar is twice as high as the world market price, so that what is now necessary is to enhance the competitive capacity of Indian sugar by a suitable reduction in manufacturing costs. Such a reduction can be brought about only if the heavy incidence of cane price is reduced through the adoption of the more rational system of fixing the price of cane based on both weight and quality, instead of on weight alone as at present.

It is surprising that none of the U.P. Vidhan Sabha members who participated in the debate made a reference to this aspect. The State's Agriculture Minister, Mr. Mohan Lal Gautam, no doubt vigorously opposed the resolution on the ground that the entire agricultural economy of the State would be hard hit if cane prices were enhanced, as the acreage under food crops would be affected. But his opposition was of no avail. For, when the resolution was put to vote, the Congress members remained silent. Such an attitude is certainly scandalous. The Congress legislators of Uttar Pradesh would have served the cause of cane growers better if they had voted down the resolution.

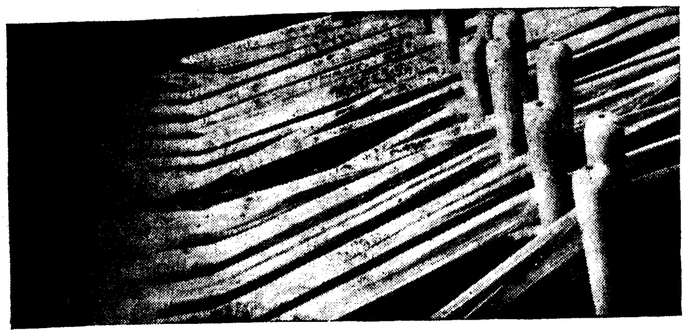
SALES TAX AND STATES' STORES POLICY

The importance of a simpler legislation for sales tax and uniform stores purchase policy by the State Governments was stressed by Mr. N. D. Sahukar, Chairman of the All-India Manufacturers Organisation, at the quarterly meeting of the Organisation, held at Bombay last week. There is no doubt whatever that, by and large, business men and industrialists find sales tax more irksome than almost any other impost. Indeed, there is hardly any business man, whether big or small, who does not regard sales tax as his most vexatious problem. This is so chiefly because of the fact that few business men understand the complex piece of sales tax legislation. Even legal advisers, as Mr. Sahukar pointed out, in effect, are often bewildered by the sales tax law. What is perhaps less widely known is that sales tax officers too are compelled to plead ignorance. Mr. Sahukar revealed that the officers "have always admitted to us in private that they are not able to understand the Sales Tax Act which they are supposed to administer." We believe that, in the interests of fiscal justice and of encouragement to the law-abiding citizen, it is necessary to simplify the whole law and procedure of sales tax. It is time that someone, like the child in the well-known fable about the king's non-existent apparel, told the truth about sales tax and exposed its meaningless complexity, thereby paving the way for a simpler law. It is not so much the burden of sales tax—heavy as it is—as the uncertainty of the burden and the ambiguity of the law that make the tax a continuous source of annoyance to the business man. It is to be hoped that the Sales Tax Enquiry Committee, appointed by the Government of Bombay, will go into this question thoroughly and suggest measures designed to simplify the law. It is heartening to note that Mr. Y. B. Chavan, the Chief Minister of Bombay, who was the chief guest at the meeting, promised to throw his weight "on the side of simple and straightforward legislation which will minimise the problems and difficulties of all concerned with sales tax in one capacity or another." This assurance augurs well for the future of the tax in this premier commercial and industrial State.

A fundamental issue pertaining to the official stores purchase policy was raised by Mr. Sahukar when he averred that some States in India were giving a 15 per cent. price preference to the products manufactured in their own States, regardless of quality; the preference shown in some cases works out to more than 50 per cent. He rightly insisted that such preference was discriminatory. It would appear that some States give this kind of preference to industries to which they have given financial assistance because it would enable them to get "some returns from their bad investment." The whole issue revolves round the question whether a State is entitled to use its stores purchase policy in a way which resembles the grant of a subsidy to the manufacturer in its domain, thereby discriminating against manufacturers from other States. If each State in India were to adopt such a policy, it would distort the production pattern in the country, if it does not also tend towards its economic Balkanisation. After all, industries gravitate to centres where they could operate with advantage. To oppose this natural trend by a costly system of preferential treatment at the State level is unwise to a degree. It is to be hoped that regional loyalties will not be allowed to interfere with the harmonious development of national economy and inter-State trade.

IDET-10

The Powerful New Detergent and Wetting Agent for All Textile Processes



In the Textile Industry, IDET-10 with its uniform efficacy and neutral character, can be used for all wet processes. It is indispensable in scouring, bleaching, dyeing and soaping processes.

IDET-10 is a synthetic organic surface-active agent, possessing powerful wetting action and detergency. It can be used in all processes which require wetting out, dispersing, emulsification, penetrating and cleaning. It is equally effective in hard water, alkaline or acid solutions.

In other industries, IDET-10 can be used for degreasing, tanning, wetting back and dyeing of leather, in the paper industry: for cooking of rag-stock, de-inking of waste-paper, washing and conditioning of felts. Also for various operations of metal processing such as corrosion inhibition, electroplating and emulsion-cutting.

PROBLEMS OF GENERAL INSURANCE

The thoughtful speech delivered by Mr. P. U. Patel, Chairman of the Indian Insurance Companies' Association, at its 30th annual general meeting, held in Bombay on 26th July, should stimulate fresh thinking on some of the main problems confronting general insurers in this country. Mr. Patel's observations and suggestions deserve to be commended to the consideration of not only the Government and insurers but also to the general public interested in the development of insurance on sound lines.

The Chairman's comment on the Code of Conduct for insurers is significant. He regretted that, apart from payment of premium in advance of the assumption of risk, the Code had failed to achieve any of its objectives. The primary reason for this, according to him, was the perpetuation of the institution of inspectors even under the revised Code. He strongly felt that this exotic institution, transplanted to this country from Britain, was not suited to conditions here. He made an interesting suggestion in this connection. According to him, from the nucleus of the fairly large number of highly experienced whole-time agents formerly called brokers and now designated inspectors, whom Indian insurance is fortunate in having, a new pattern of organisation broadly representing a happy compromise between the British inspectorate system and the American general agency system should be evolved. He also urged an immediate and thorough overhaul of the procedure for implementing the Code.

Most of the questionable dealing and unhealthy competition to prevent which the Code of Conduct was conceived, can be traced to the smallness of the insurance market in this country. For instance, the total direct gross annual premium of all insurers in the general department is roughly Rs. 23 crores. This amount is incredibly small in comparison with the premium income in countries much smaller than India. The scramble for business leads, not unnaturally, to unhealthy competition. In the absence of sufficient business to go round, the temptation to adopt methods which may not be in keeping with the spirit of the Code is not easily resisted.

The volume of business available is directly dependent on the degree of industrialisation and as the country gets industrialised the quantum of business is also likely to grow apace. But it is also essential, as Mr. Patel emphasised, to explore new avenues of increasing premium income. Insurance companies should start issuing wider and more specialised covers for various types of risks. There is wide scope for doing business in fields other than fire, motor and marine insurance. With the increasing tempo of industrial development there will be a growing demand for machinery insurance and breakdown insurance and other types of miscellaneous insurance which are sold as a matter of course in other countries. Loss of profits insurance, which has considerably advanced in recent years in the U.K., the U.S.A. and other industrialised countries, offers another profitable avenue of business for insurance companies. Two essential conditions for the expansion of insurance business are the supply of trained personnel and the existence of an awareness in the public mind of the value of insurance. While institutions such as the Federation of Insurance Institutes could, with the active support of the trade, turn out technically qualified people in sufficient numbers, planned and concerted publicity drive could do much to induce insurance-consciousness in the public. Mr. Patel rightly suggested that Indian and non-Indian insurers should join together in such a venture.

Again, his plea for a relaxation in the taxation of reserves needs to be given careful consideration. Increased percentage reserves strengthens the financial stability of the companies and enables them to retain and expand their business here and operate more successfully abroad. The temporary loss to the exchequer resulting from the tax relief will certainly be more than compensated in the long run. The Chairman strongly disapproved of granting further extension beyond 31st December 1958 to non-tariff insurers. Nor did he consider it advisable to reduce the fire tariff rates, on the basis of a very limited experience of two years, namely, 1956 and 1957, which happened to be favourable years.

Mr. Patel maintained that the formula prescribed under Insurance Rule 17E, under which the percentage of expenses permissible to companies is determined in relation to the gross premium income written direct in India, is neither fair nor equitable to the trade as a whole. In his opinion, making the direct gross premium income the sole criterion for judging whether a particular unit is economically run or otherwise is contrary to all accepted canons. The formula, he said, has caused unnecessary hardships to several insurers. To assume that a company which complies with Rule 17E is definitely better and more economically managed than another unit which fails to comply with this provision is not, Mr. Patel averred, a proposition so obvious as it looks at first sight. He called attention to the fact that there was no country which treated direct gross premium income as an index of the efficiency and economic running of an institution. Limitation of expenses, he admitted, was a healthy feature incorporated in the Insurance (Amendment) Act, 1950 and has had, on the whole, a beneficent effect. But there was, according to him, nothing sacrosanct in a formula which was evolved in the light of conditions obtaining then. If individual insurers are to be judged, and condemned, in the light of a given formula, then that formula, as Mr. Patel himself suggested, must be as fair and equitable as possible.

INDUSTRIAL PRODUCTION

Despite heavy odds, Indian industries in general continued to maintain the tempo of progress at a high pitch during the first four months of the current calendar year. There was a steady expansion of output in many industries during this period, particularly in engineering goods, metal products, machinery, electrical appliances, and apparatus and transport equipment. No less spectacular were the great strides made by industries like cement, glass and textiles (other than cotton). The index of industrial production stood at 141.7 (Base: 1951=100) for the first quarter of 1958, which compares favourably with the annual index of 122.1 in 1955, 132.6 in 1956 and 137.2 in 1957. This pace of progress might well be interpreted as a reflection of the country's rapidly strengthening industrial base. Nevertheless, the achievements were but modest in relation to the heavy responsibilities cast on the sector under the industries-oriented second Plan. In fact during the first quarter there were a few industries which suffered a setback in production. The output of automobiles, for instance, declined, presumably as a result of restricted import of components. Labour unrest only made the situation worse. The other industries which reported a decline were cotton textiles, wood screws, twist drills, grinding wheels, hurricane lanterns, etc. This is attributed to restricted demand. These adverse trends in some of the industries is traceable to the impact of the unrealistic policies pursued by the powers-that-be, the acute crisis on the foreign exchange front and the unhelpful attitude of labour resulting in the loss of no less than 1,240,000 man-days in the manufacturing sector alone for the four months in 1958. It is, however, heartening to note that, on the whole, the various industries were equal to the occasion and managed to hold their own.

Among individual industries, steel output rose from 408,630 ingot tons in the first four months of 1957 to 428,763 ingot tons in the corresponding period of the current year. The production of cement aggregated slightly over 2.2 million tons during January-April of the current year, representing an annual rate of about 6.6 million tons, as against the total production of 5.5 million tons in 1957. The installed capacity of the industry during the period under review reached an annual rate of 6.70 million tons, as against 6.63 million tons in 1957. Similarly, the output of diesel engines also made rapid strides during these four months, the total number of engines turned out being 7,530 or an annual rate of 22,590 as compared with the annual total of 16,548 in 1957. The upward trend in production was noted in electric fans as well, which was 209,000 for the first four months in 1958 or at an annual rate of 627,000, whereas it was no more than 524,400 in the previous year. Bicycles output also moved ahead to 320,000, in other words, it was running at an

BOMBAY MUNICIPAL CORPORATION
LOAN NOTIFICATION

Bombay, Dated the 25th July 1958.

4½ PER CENT LOANS 1958
REPAYABLE ON 11th AUGUST 1970.

Rs. 210 LAKHS BOMBAY MUNICIPAL LOAN OF 1958 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'A'.

Rs. 100 LAKHS BOMBAY MUNICIPAL LOAN OF 1958 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'C'.

Rs. 60 LAKHS BOMBAY MUNICIPAL LOAN OF 1958 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'D'.

And

Rs. 30 LAKHS BOMBAY MUNICIPAL LOAN OF 1958 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'E'.

1. Issue price Rs. 99.25 per cent.
2. Each Loan will bear interest at the rate of 4½ per cent per annum from 11th August 1958. Interest will be payable half-yearly on 11th February and 11th August and will be subject to Income-tax.
3. Subscriptions will be received from 10-30 a.m. on the 11th August 1958 and the lists will be closed on the 14th August 1958 or earlier as soon as it appears that the requisite amounts have been received either by private negotiations or through public applications.
4. Sinking Fund will be set aside annually and invested in such manner as may be authorised by the Government from time to time.
5. Interest will be paid in Bombay at the Head Office of the State Bank of India, Bombay, or such other Agent or Agents as may be approved by the Corporation from time to time in that behalf.
6. The Loans are raised on the security of the general revenues of the Bombay Municipal Corporation pertaining to Budgets A, C, D, and E respectively, subject in each case to any prior charges in respect of the balances of the previous loans not yet fully paid off.
7. The Loans will be issued in the form of debentures.
8. Applications for the Loans must be for Rs. 500 or for a multiple of that sum and will be received at the office of the Chief Accountant, Bombay Municipal Corporation, Municipal Head Office Building, Fort, Bombay 1.
9. Copies of the Notification and application Form may be had at the office of the Chief Accountant, Bombay Municipal Corporation, Bombay 1.

Municipal Commissioner's Office,
Bombay, 25th July 1958.

V. L. GIDWANI,
Municipal Commissioner for Greater Bombay.

MONETARY POLICY IN A RECESSION

STEPS TAKEN IN U.S. ELUCIDATED

By Alfred Hayes

PRESIDENT, FEDERAL RESERVE BANK OF NEW YORK

[This article has been adapted from an address delivered by the author to the Fifty-fifth Annual Convention of the New Jersey Bankers' Association on 22nd May 1958, a copy of which has just been received. Herein, Mr. Hayes provides a lucid exposition of the steps taken by the Federal Reserve System to arrest the economic recession and promote recovery in the U.S., as also an assessment of the results achieved. The article is of considerable interest to a wider audience than in the U.S., because the author has sought to indicate the extent to which a modern, free enterprise economy could be influenced through monetary policy, and also to bring out the necessity for the U.S. following a policy of steady economic growth, with reasonable price stability as a contribution to world prosperity. The remarks of Mr. Hayes on this subject are reassuring and show that the monetary authorities in the U.S. are quite alive to their national and international responsibilities alike.—ED.]

ABOUT seven months have passed, since the Federal Reserve System, in recognition of a fundamental change in underlying business conditions, began to substitute a policy of credit ease for one of restraint. It would seem appropriate now to take stock briefly of what monetary policy has accomplished in this period—of what it is supposed to do to combat recession and promote recovery, and of what it cannot be expected to do. Parenthetically, I am not unaware of various comments to the effect that we did not turn soon enough—that we erred in holding on too long to a policy of restraint, fighting inflation when recession was already in evidence and constituted the greater danger. Whether the timing was exactly right I shall not try to argue, but I think the important thing is that the pattern of recession had already been set by imbalances which had grown up in the preceding two or three years—imbalances in costs, prices and incomes, in the expansion of capacity in relation to current demand, in our foreign trade, and perhaps in the debt structure—and which together made a period of adjustment inevitable.

Now, let us consider what monetary policy has done to cope with this state of affairs. As you know, our influence is exercised largely through affecting the availability and cost of credit through actions affecting the supply and cost of bank reserves. Oddly enough, for a number of weeks after our policy changed, it was the fashion to say "Yes, it is true that interest rates have dropped sharply because of expectations of future developments in business conditions and Reserve policy, but *really* the Federal has done very little." Actually, open market operations were then doing their job of easing the banks' reserve position by more than offsetting the seasonal strains of the year end, and by doing much less than in other years to offset the seasonal additions to reserves early in the new year. Subsequently, these operations have been powerfully supplemented by a series of reductions in required reserve ratios (which released nearly 1.5 billion of reserves) and by three further reductions in Reserve Bank discount rates.

Adequacy

Have we gone far enough to get the desirable degree of credit ease? Well, the member banks throughout the country, instead of having net borrowed reserves of about half a billion dollars, as they did during much of last year, have had free reserves of half a billion dollars or more in the last few months—a swing of about a billion in the figure which is perhaps most frequently used as a measure of pressure, or lack of it, in the banking system. As you all know, this statistical measure represents the difference between member bank borrowings and excess reserves. With excess reserves a relatively stable quantity, the swing has been due largely to a drop in borrowings at the "discount windows" of the Reserve Banks from around $1 billion to a little over $100 million.

Perhaps, it would be well to note in passing that the total of member bank borrowings has responded as it should, in "classic" fashion, to the "Fed's" activities. At first glance, it might be thought that, with four cuts in discount rates since November, we would expect to have stimulated greater, not less, use of the "discount window," but that is not the way discounting works. Banks borrow from us mainly to cover temporary deficiencies in their reserves, and their needs for borrowing are much less frequent when bank reserves generally are not under pressure. The discount rate reductions represented support and confirmation of the open market operations and the cuts in reserve requirements which have made reserves available and have made borrowing at the "Fed" virtually unnecessary.

The most significant indication of the effectiveness of the change in Federal Reserve policy is the fact that, over and above the tremendous swing from net borrowed to free reserves, member banks had enough additional reserves to be able to expand their earning assets and their deposit liabilities by several billion dollars. In this way, the banks have used several hundred million dollars of the reserves released by the lowering of percentage reserve requirements. Thus, the fact that member bank reserves are now lower than a year ago does not mean that there has been a corresponding contraction in the money supply. On the contrary, the money supply in the form of demand deposits, seasonally adjusted, has been increasing at the rate of nearly $1 billion a month since January.

Statistics on changes in bank loans and investments since October also throw light on the profound alteration which has occurred in the banks' position. Total loans and investments have risen by $7 billion, as compared with less than $2½ billion in the corresponding period of 1956-57 and $1 billion in 1955-56. With demand for business loans shrinking, the greater part of the increase has been in investments, chiefly in United States Government securities, but with a substantial increase also in other securities and in loans to carry dealers' increased holdings of securities. Accordingly, we have witnessed a very considerable improvement in the liquidity of the banks, and along with it has come a gain in liquidity for others than banks as they have received cash directly or indirectly from the banks' security purchases. The loan-deposit ratios of banks, often looked upon as a rough measure of bank liquidity, have dropped since October from 66 per cent. to 61 per cent. in the case of the New York City banks, and from 55 per cent. to 52 per cent. in the case of banks outside New York. Granted that these loan-deposit ratios are still far above those of 1954, we have clearly made headway in restoring a good deal of the liquidity that was lost during the period of restraint—and I hope, and believe, that the banks are much better disposed now than six months ago to seek aggressively to meet all sound demands for credit.

Interest Rates

Another major result of the change in Federal Reserve policy has been its effect on interest rates and the consequent stimulus to the capital markets. As is usual in any cyclical swing in rates, short-term rates have fallen much more sharply than long-term, although even in the latter the decline has been very substantial. Undoubtedly, an important factor preventing a steeper drop in long-term rates has been the very large volume of new corporate and municipal securities that have been brought out in response to the more favourable market conditions. Of course this has been a very healthy development which we have welcomed, as the corporate financing has helped to improve business liquidity and the municipal issues have contributed to the financing of expenditures which have provided a partial offset to recessionary tendencies. Long-term interest rates, having started down from a much higher level than was reached in 1953, are still considerably above the levels reached in 1954 in spite of the sizable drop since last autumn. The significance of any particular rate level is not always the same in all circumstances, however. The important consideration in present conditions is that money and capital should be readily available; that no sound economic project should be deferred or dropped because funds are not available on reasonable terms. The necessary condition is that rates be satisfactory to borrowers and, at the same time, acceptable to investors. It is that broader complex, and not just rates as such, which we try to keep in view in the development of credit policy.

Funding of Treasury debt earlier this year probably tended, at least in some degree, to slow the rate of decline in long-term rates and, with another large refunding in immediate prospect, the Treasury now faces the difficult problem of whether to include a long-term issue. The dilemma faced by the Treasury at times like this is how best to reconcile the need for improving the maturity structure of the debt with the desire to avoid serious interference with other desirable financing.

It seems to me that the developments of recent months refute pretty effectively the old allegation that monetary policy, effective though it may be in checking a boom, is helpless to combat recession. The fact is that the banks do largely use any reserves which are made available to them to make additional loans or investments, and in so doing contribute substantially to the supply of investable funds, with marked effect on the strength of the capital markets. Naturally, I am not claiming that monetary policy alone can create eager borrowers nor that it can provide all the stimulus needed to pull the country out of a recession—but it can be of tremendous help and is, in fact, an indispensable element for resumption of economic growth.

No Electronic Computer

I would like to emphasise that there is no electronic computer to tell us exactly how far we should go in this process of easing credit conditions. After all the obtainable statistics are accumulated and studied, it is still largely judgment which the central banker must use in deciding how far or fast to move. We must at all times be mindful of the "feel" of the money and capital markets, and the geographical distribution of reserves, so that there is not undue tightness in either the money centres or in other parts of the country. Incidentally, the action of the Board of Governors in reducing central reserve city bank reserve requirements more sharply than those of reserve city bank requirements, and the latter more sharply than country bank requirements, has not only helped to reduce an inequitably wide spread between requirements, but has also tended, along with other measures, to prevent the appearance of a degree of tightness in the larger cities which would have been inconsistent with our general policy of monetary ease.

Narrow and Difficult Path

As has often been said more eloquently than I can, monetary policy must always seek to tread a narrow and at times difficult path between the objective of steady economic growth and the objective of price stability. The replies a month or two ago by the Reserve Bank Presidents to the questionnaire sent to them by Senator Byrd set forth in considerable detail reasons why we believe that these two objectives are consistent in the long run. But we also recognised that there may arise substantial inconsistencies in the short run. We have been criticised for easing money too much by some observers who believe in fighting inflation at all costs, and we have been criticised for being tardy or niggardly by those who believe we should be more mindful of the growing supply of unused human and material resources in the country.

The first group have tended to point to the continuing increase in some price indices, notably in the consumer price index, as calling for continued restraint. Yet I am quite clear in my own mind that, during recent months, the immediate dangers of recession had come to outweigh very clearly the immediate dangers of inflation, and they still outweigh them. Granted that we may again be faced with a problem of fighting inflation after we emerge from the current recession, I think it would have been inexcusable to let this consideration prevent our doing all that we could reasonably do to combat the recession and to provide an atmosphere of money and credit ease conducive to recovery. Even though there are some signs that the bottom of the recession may be near, we cannot look with equanimity on current levels of unemployment or on the possibility of an increasing spread between actual output and the country's growing resources of labour and capital equipment. Naturally I hope and expect that we in the Federal Reserve System, and the country in general, will have the sense and courage to recognise the need for a change of monetary policy when it comes.

Consumer Price Index

One serious problem is the adequacy of our statistical tools, on the basis of which important national policies must, to a considerable extent, be decided. An example is the consumer price index, which is one of the principal measures used in connection with our objective of attaining price stability. In spite of all the skill and care used in preparing this index, the question still remains whether it gives us an accurate reading as to the true cost of living for the average American family. Without attempting to go into all aspects of this subject, I might merely point out that, in the view of many economists, the index may not take sufficient account of improvements in quality; it represents a fixed "market basket" and cannot give recognition to the consumer's ability to make substitutions when certain prices rise; and it probably fails to give adequate weight to all the discounts or price reductions actually available at the retail level under present conditions. Similarly, many of our other statistical series are subject to substantial reservations.

Closely related to this matter of the adequacy of our statistical tools is another question which is often raised. Why cannot the monetary authorities forecast more effectively and anticipate needs for policy changes, instead of waiting until a business trend has become fairly obvious? The answer, I think, lies in the absence of conclusive statistical measurements even of present conditions, let alone of future conditions. Many of our statistical data tell us only what has happened some weeks previously, not what is happening now nor what will happen tomorrow. There are some so-called "lead" series which may give a clue to the future of other series, but I would stress that it is only a clue; that the statistical history of business cycles is full of false starts, both upward and downward. So there must always be an element of tentativeness in our approach. We can never go "all out" at the first suspicion of a trend, but must patiently watch and probe and reappraise, intensifying our efforts or pulling back as additional evidence becomes available.

Minimum Interference

Another problem has to do with the instruments of credit control at our disposal. By and large, the Federal Reserve System has relied on very general credit controls—control of the total money supply and aggregate bank credit—with a minimum of interference with the market's allocation of credit and resources to the various segments of the economy. This is as it should be in an economy which relies for its motivation primarily on market forces and freedom of enterprise. In keeping with this philosophy, the System has applied restraint only when the aggregate of demand was tending to exceed available supply at stable prices, and when aggregate credit demands were running ahead of savings. Yet there have been occasions when imbalances have developed in particular sectors which may have contributed strongly to ultimate imbalance of the whole economy. Such specific imbalances might involve the proportion of output going into investment as against consumption, or the proportion going into some major industry or industries, under the stimulus of unusually rapid expansion of particular types of credit. Conceivably, monetary policy might have done better to supplement its general credit controls with some more selective controls, especially in the area of consumer credit, designed to check particular distortions before they had gone too far. There exists no bureaucratic urge in the Federal Reserve System to administer such controls—quite the contrary. But it is quite possible that the supplemental use of some selective controls (over and above margin requirement regulations, which constitute the only selective control currently exercised by the System) may prove useful at times in helping to achieve our goal of steady economic growth.

I hope I have made it clear that I believe there is a great deal which monetary policy can and should do to combat recession. But, while I think our record in the past few months in this regard is pretty creditable, I have some misgivings over the tendency of the nation to place too great a burden on monetary policy—to expect too much of it. There were times during the 1955-57 boom when fiscal policy could have contributed more strongly than it did to the checking of inflationary forces. More recently, serious questions have been raised as to the extent to which fiscal policy might help in the efforts to combat recession and to promote recovery. Moreover, the actions of labour and management in the area of wages and prices can be at least as important to ultimate recovery as anything that may be done through monetary or fiscal policy.

U.S. Responsibility to the World

So far I have spoken of our economic problems as if the United States were living in an isolated world of its own. We all know how far this is from reality and how important our relationships with the rest of the world are. As a matter of fact, the rest of the world is not hesitant to accuse us, from time to time, of giving too little thought to the international effects of our internal policies. Perhaps, an extreme example of this is the advice we sometimes receive to let "a little inflation" occur in this country, so that foreign countries, with somewhat shaky exchange rates and more sharply rising unit costs, may escape a major exchange crisis. I can see no justification for such a plea. We in the Federal Reserve System are determined to do all we can to resist inflation, either slow or rapid, in this country. On the other hand, it is clear that we must do our best to avoid exporting recession to other countries. This is merely another way of saying, as has been said so often, that the most useful contribution we can make to world prosperity is to see to it that steady economic growth, with reasonable price stability, is achieved in our own country. I believe our responsibility in this regard is greater, perhaps, than it was in the last recession of 1953-54, for, at that time, Europe and other areas were surging ahead so strongly that a minor dip in our own activities was hardly felt. That momentum has recently diminished, in most foreign countries, so that they may be more sensitive than they have been in several years to economic tendencies in the United States. Fortunately, there is ground for hope that we shall not let matters go so far in this country as to constitute a serious threat to the economies of our friends abroad.

It seems to me that all of us who are interested in the development of ever stronger economic ties between the major trading nations of the world can derive a good deal of satisfaction from events of the last few months. For one thing, sterling, which was subjected to such a powerful though misguided speculative attack last summer, has made a remarkable recovery, primarily because of the United Kingdom's demonstrated determination to take such internal measures as were called for to preserve its strength as a leading international currency. I am thinking also of the tendency in recent months for the total monetary reserves of foreign countries—gold and dollars—to increase again, after a pause in their growth during 1957. Although this pause in growth reflected in part the unusual demands for American products growing out of the Suez crisis and foreign crop difficulties, a large part was simply due to excessive internal demand in many foreign countries brought about by failure to check domestic inflation. The recent tendency for foreign monetary reserves to increase is attributable, at least partly, to a more effective control of inflation in a number of major foreign countries, which we may rightly applaud.

Gold Movements

To some extent the growth of reserves abroad has taken the form of purchases of gold from the United States. These purchases have been quite heavy in the last few months, and the total so far this year has been of about the same order of magnitude as the sales of gold to the United States in all of 1957. Similar large gold movements have occurred from time to time since the war, and to me they are a decidedly healthy sign, showing that the international gold standard (a gold bullion standard, supplemented by a dollar exchange standard to the extent that dollars have been used as a reserve currency) is working as it should work. Gold and dollars are, and I am sure will continue to be, interchangeable at the present fixed price—subject only to minor handling charges in this country and the very limited swings in the London gold market. Even after the recent gold movement, the United States still holds almost $22 billion worth of gold, or 56 per cent. of the free world's monetary gold stock. It would not be in the interest of world financial stability if this country were always to gain gold at the expense of the rest of the world. We make a crucial contribution toward the effective operation of the international financial and monetary system by standing ready to sell our gold at the same price at which we bought it, and by thus keeping stable the key relation between gold and the dollar.

The strengthening of this international gold standard must always be of tremendous interest to the Federal Reserve Bank of New York, acting as we do as the principal arm of the System in holding dollar deposits, investments and gold for the central banks and international financial institutions of the world. But I believe it is of virtually equal interest to the entire System and indeed to the entire country; for there is no escaping the fact that internal stability and external stability are inextricably intertwined in every country of the free world, including the United States. I trust that we in this country will always have in mind the need for keeping our own house in order, and for pursuing policies with respect to foreign trade and investment, as well as with respect to money and credit, which will contribute to the healthy and growing world economy we all seek.

NEW INDIA ASSURANCE CO., LIMITED, BOMBAY

SUMMARY OF CHAIRMAN'S SPEECH

ADDRESSING the shareholders of the New India Assurance Company, Limited, at their Thirty-ninth Annual General Meeting held at Bombay on 31st July, 1958, Mr. A. D. Shroff, Chairman, deprecated the treatment of world peace by major powers as if it were a commodity on the bargaining counter and exhorted world statesmanship to cut itself adrift from the cult of violence and destruction.

In an analysis of world economic trends, Mr. Shroff advocated the setting up of an International Guarantee Insurance Fund on the lines of the I.M.F. or the World Bank to eliminate major political risks in lending to underdeveloped countries.

The Urgent Problem

Reviewing the trends in the Indian economy, Mr. Shroff opined that the economic crisis facing the country was, indeed, a serious one, but, under courageous and realistic leadership, it was not yet too late to meet it in an effective manner. According to him, the immediate and urgent problem was to arrange for adequate foreign aid on a long-term basis to enable India to maintain its fine record of honouring all its international obligations on due dates. For this, Mr. Shroff called for the abandonment of doctrinaire or ideological approach to the economic problems, scaling down of unrealistic planned targets and pruning down of immediate requirements to the minimum. He further added that the so-called pattern of integrated taxation had resulted in disintegrating the healthy forces, which induced savings and capital formation, and expressed the fear that, unless the structure of taxation was radically revised, private initiative and enterprise would be severely discouraged and sources of new savings and capital formation would dry up.

Turning to general insurance, Mr. Shroff stated that 1957 had been a difficult year for most insurance companies, the world over. He welcomed the strengthening of the Code of Conduct for general insurers in India and remarked that it would have salutary and far-reaching effects on the Indian market. According to him, the present administrative machinery was, however, inadequate. After a brief review of the problems facing the industry, Mr. Shroff referred to the reported directives of the Central and State Governments to institutions under their control to patronise Government-owned insurance units and the pressure said to be exercised in this regard by Government institutions or corporations as and when financial assistance was provided. He stated that Government, charged as they were with the responsibility of promoting the progress and strength of all insurance units, should not discriminate against units in the private sector. Mr. Shroff cited as a case in point the arbitrary distribution of the insurances of Government handled by the Pool of Indian insurance companies and said it would be more appropriate for Government to define on a long-term basis certain equitable standards for the distribution of "pool" business.

Working Results

Reviewing the results of the New India's operations during 1957, Mr. Shroff observed that the total premium income for the year amounted to Rs. 6.30 crores, as against Rs. 5.64 crores in 1956. He stated that profits transferred to the profit and loss account had declined from Rs. 44.8 lakhs in 1956 to Rs. 32.7 lakhs in 1957 due mostly to reasons beyond the control of the Company. He expressed the hope that, by the end of 1958, the extraordinary difficulties faced by the Company after the nationalisation of life business would be surmounted and that the Company's working would be fully integrated and stabilised. Mr. Shroff added that, as a result of the year's operations, the Company's total funds increased by Rs. 89.6 lakhs to Rs. 8.49 crores which included Rs. 51.6 lakhs received by way of compensation for the loss of life business and right of management.

(This does not purport to be a record of the proceedings of the Annual General Meeting.)

RESERVE BANK ON ECONOMIC TRENDS

PACE OF RISE IN MONEY SUPPLY SMALLER

THE rising trend of prices and the deterioration in the balance of payments position during the last few months have provided fresh black spots in the economy of the country and have caused a setback in what appeared to be an improvement in the situation. The Government of India has, no doubt, taken steps to arrest this trend by banning forward deals in commodities, enforcing restrictions on bank credit against them and by giving incentives to stimulate exports. Drawing the public attention to this changed situation, the Reserve Bank of India, in its *Report on Currency and Finance* for 1957-58, emphasises the urgent need for (1) expanding the output of foodgrains, (2) further stimulating exports, (3) mobilising adequate resources, both internal and external, and (4) continuing fiscal and monetary policies geared to the twin objectives of restraining inflationary pressures and maintaining a climate for a continued high rate of savings and investment to correct the situation.

The year 1957-58 as a whole, according to the Report, witnessed "an accentuation of some of the conspicuous stresses and strains to which the Indian economy has been subjected in recent years on account of the high tempo of activity in pursuance of the Five-year Plans." The Report adds that this was particularly so in the first half of the year, during which the price situation, as well as the balance of payments position, recorded further setbacks. In the latter part of the year, however, there was some easing of the strain, thanks to the various corrective measures taken earlier on the fiscal, monetary and foreign exchange fronts. "In fact, during this period," the Report points out, "symptoms of some slackness developed in the economy." This "favourable development" proved to be a short-lived affair and there was again a deterioration in recent months, as pointed out earlier.

Price Situation

The price situation, which had caused much concern during the years 1955-56 and 1956-57, the Report points out, showed some signs of improvement during 1957-58, though the "outlook at the close of the year was again one of some uncertainty and even anxiety." The general index number of wholesale prices rose more or less continuously till early August 1957, after which there was a steady decline till about the close of the year. Over the year 1957-58, the Economic Adviser's Weekly General Index of Wholesale Prices (base 1942-53=100) showed a slight rise of 1 per cent. to 106.1, as against an increase of 5.9 per cent. during 1956-57. "In the context of a substantial rise in Plan outlay and budgetary deficit and drastic import cuts," the Report adds, "the trend of prices during the year should be regarded as not unsatisfactory." The decline in prices from August 1957 onwards is attributed mainly to the operation of such factors as the substantial increase in agricultural output during 1956-57, disinflationary fiscal and credit measures, the marked slowing down of the growth of industrial output, larger imports of foodgrains, the adoption of food control measures, the recessionary trends abroad and the general belief in the inevitability of a cut in the Plan outlay. Prices, however, began to move up since February 1958, reflecting the shortfall in food production during 1957-58 as well as a more optimistic outlook regarding Plan outlay.

The agricultural production during 1956-57 (the latest year for which firm data are available) showed a rise of 6 per cent. The output in 1957-58, according to preliminary estimates, does not appear to be encouraging. The stocks of foodgrains with the Government are said to be currently at a much higher level than a year ago, but with the balance of payments situation continuing to be critical, the Report points out, the augmentation of food stocks through imports can be done only under special financing arrangements like those in terms of U.S.P.L. 480. In view of this, it suggests that the problem of expanding the domestic output of foodgrains is most urgent.

On the industrial front, the production in 1957 continued to rise, but the rate of increase slowed down, the rise in the average index of industrial production (base: 1951=100), at 137.2, being only 3.5 per cent., as compared with 8.6 per cent. in 1956 and 8.1 per cent. in 1955. The slowing down in the tempo of industrial production as a whole was due to a number of factors, among which were: (1) shortage of raw materials following the drastic cut in imports and (2) slackening of demand in certain sectors of industry, particularly textiles.

The monetary and banking trends were markedly different from those of 1956-57; the acute stringency which characterised the year 1956-57 gave way to easy money conditions. This radical change was the result of several measures adopted in the foreign exchange, fiscal and monetary credit spheres to alleviate the strains on the economy, as also of the phenomenal increase in the resources of banks. The slowing down of investment activity in the private sector, a flagging off in the rate of expansion in industrial production, the declining trend of commodity prices over the greater part of the year, as well as severe import restrictions, all led to a marked slowing down in the demand for credit and in the expansion of money supply.

Money Supply

There was an increase of only Rs. 75 crores in money supply with the public during 1957-58, as compared with Rs. 129 crores in 1956-57 and Rs. 264 crores in 1955-56. As in the previous year, the chief expansionist factor was the budgetary deficit in the public sector, but its effect on money supply was substantially neutralised not only by the continuing balance of payments deficit but also by a phenomenal rise in time deposits of banks. Besides, credit extension to private sector by banks slowed down this year. Scheduled bank credit recorded a rise of Rs. 63 crores, as compared with an increase of Rs. 139 crores in 1956-57. The increase in deposit resources of the Scheduled banks was as much as Rs. 276 crores, a part of which was due to a special factor, namely, accumulation of counterpart funds of imports from the U.S. under P.L.480, and partly by a shift in deposits from demand to time deposits, in view of the higher interest rates on savings and time deposits. The increase in deposit resources was utilised by banks mainly to reduce their borrowings from the Reserve Bank, by Rs. 62 crores to be precise, and to augment their holdings of gilt-edged securities (by Rs. 93 crores) and cash balances (by Rs. 47 crores).

Referring to monetary and credit policies, the Report says, the Reserve Bank continued to pursue the twin objectives of ensuring increased flow of credit to industrial and other developmental activities and of restraining undue extension of credit for speculation and non-essential purposes. The restraint on credit was sought to be achieved by raising the discount rate from 3½ to 4 per cent., by enforcing selective credit controls which were made somewhat more rigorous than before and through moral suasion. Even in the matter of use of Reserve Bank credit, the emphasis of policy was in the direction of restraint.

In the field of public finance, the Report avers, severe strains were experienced during the year under review, owing to a marked increase in expenditure, on the one hand, and a shortfall in resources, on the other. In the result, the magnitude of budgetary deficit of the Centre and the States together, at about Rs. 500 crores, was twice as large as in 1956-57. The rise in expenditure was mainly due to higher Plan outlay estimated at Rs. 861 crores (as against Rs. 635 crores in 1956-57) and to a marked rise in non-developmental expenditure, particularly defence expenditure. Borrowings from the market and small savings recorded a substantial decline from Rs. 200 crores in 1956-57 to Rs. 127 crores in 1957-58. The shortfall was mainly due to the non-entry of State Governments (with the exception of two) into the market for loans. These State Governments were to concentrate on small savings, which, however, did not bring in materially larger receipts than in the previous year. The performance of small savings in the latter part of the year is said to have been encouraging.

The balance of payments continued to show a deficit in 1957-58 and in a larger measure too than in the previous year. Even after taking into account the borrowings from the I.M.F., the deficit, as measured by the decline in foreign exchange reserves, amounted to Rs. 259.9 crores (preliminary figure), as against Rs. 221.3 crores (revised) in 1956-57. Payments for imports rose from Rs. 1,095.6 crores to Rs. 1,174.8 crores (mainly on Government account), while exports dropped from Rs. 635.1 crores to Rs. 594.5 crores. These, together with a decline in invisible receipts, raised the current account deficit from Rs. 306.8 crores to Rs. 451.1 crores.

External Assistance

External assistance has played a vital role in facilitating India's development programmes. The extent of such assistance received at the end of the first Plan amounted to Rs. 378 crores (Rs. 156 crores as grants and Rs. 222 crores as loans), of which Rs. 130 crores remained unutilised at the end of the first Plan. During the first two years of the second Plan, the amount of foreign assistance received and promised aggregated Rs. 812 crores. The estimated utilisation during 1956-57 and 1957-58 was of the order of Rs. 402 crores, leaving a balance of Rs. 540 crores for utilisation during the rest of the second Plan period.

Emphasising the fact that the main task before the country continues to be one of mobilising adequate resources, both internal and external, the Report says that the budgeted outlay on the Plan during 1958-59 is Rs. 960 crores, representing a rise of Rs. 100 crores over the year 1957-58. The budgetary deficit is, however, estimated to be smaller at Rs. 215 crores, as compared with Rs. 503 crores in the previous year. Larger credit has been taken under loans (including small savings) as well as miscellaneous receipts. Credit has also been taken for a substantially higher amount of external assistance at Rs. 300 crores, as compared with Rs. 100 crores in 1957-58. "While the expansionary effects of the budgetary operations on money supply are, therefore, likely to be of a smaller magnitude than in 1957-58," the Report observes, "the neutralising effect of the balance of payments deficit would also be smaller. That is to say, the economy would still have to be guarded against inflationary pressures." It is in this context that the Report suggests, as already said, that the fiscal and monetary policies would have to continue to be geared to the twin objectives of restraining inflationary forces and maintaining a climate for a continued high rate of savings and investment.

CORRESPONDENTS ALL OVER THE WORLD

The loan from the World Bank is expected to cover most of the foreign exchange requirements. The construction of both the power projects is already under way and is scheduled for completion by 1960.

In this connection, the following extract from the Press note issued by the World Bank indicating the importance of the D.V.C. to the Indian economy will be read with great interest:

"The Damodar Valley Corporation (D.V.C.) is a semi-autonomous organisation established in 1948 to execute a scheme for the unified development of the Damodar Valley lying north-west of Calcutta in the States of Bihar and West Bengal. D.V.C.'s activities include the provision of electric power, flood control, irrigation and drainage, land conservation and afforestation, and promotion of the health and and general welfare of the inhabitants of the Valley. Capital requirements of the D.V.C. are provided by the Central Government and by the Governments of Bihar and Bengal.

"The Damodar Valley, because of its rich mineral resources, has become the most highly industrialised region in India. In the Valley area are most of India's iron ore and about three-quarters of its coal, mica and chromite. It is the site of the two largest iron and steel mills, and a third is now being built at Durgapur. The supply of coal, iron and steel has been the basis for the establishment of a wide variety of industries in the Valley—steel fabricating plants, locomotive works, foundries, plants for the manufacture of wire, cable, pipes and machine tools, and many others. It also has aluminium and cement plants and a large fertiliser plant. The main railways running through the Valley furnish direct transportation for the raw materials and products of the rest of India; and the nearby port of Calcutta is the outlet for its foreign trade.

"Since its inception 10 years ago, the D.V.C. has embarked on a number of projects within its field of operation and Bank loans totalling $27 million, made in 1950 and 1953, have helped to finance some of them. The most significant undertakings of D.V.C. thus far have been the building of four large multipurpose dams for the storage of flood waters, electric power generation and irrigation; a 150,000-kilowatt thermal power plant at Bokaro—the largest thermal plant in South Asia; a power transmission and distribution system; an irrigation barrage at Durgapur and a canal system to irrigate about one million acres of land in the lower Valley. Some of these projects have been completed and all will be finished by the end of 1959.

"Power from the D.V.C. system is transmitted over a 1,000-mile network throughout an area extending 125 miles on each side of the Damodar River. Its chief customers are four large utilities, two State agencies which supply power for urban and rural electrification in Bihar and Bengal, two railways, and a number of large industries including the Tata Iron and Steel Company, Indian Iron and Steel Company and Chittaranjan Locomotive Works. A recent survey shows that the D.V.C. must more than triple its generating capacity—to about 700,000 kilowatts—by 1962 if it is to meet the expected demand of this rapidly growing industrial area. The projects for which the latest loan were made will partially meet this need by increasing the capacity of the D.V.C.'s system to 480,000 kilowatts; plans for more large thermal installations have already been made."

ANOTHER WORLD BANK LOAN TO INDIA

A 20-year loan for $25 million to India has been sanctioned by the World Bank for financing projects aimed at increasing the supply of electric power in the Damodar Valley. This is the third loan by the World Bank for the Damodar Valley Corporation (D.V.C.). It carries interest at 5½ per cent., including the usual 1 per cent. commission for augmenting the Bank's special reserve. The amortisation of this loan will begin on 1st August 1961.

This third loan is specifically intended to finance (a) the installation of an additional 75,000 kilowatts of generating capacity at the Bokaro thermal plant, (b) a new 150,000-kilowatt thermal power station near the Durgapur steel plant now under construction, and (c) additional transmission and distribution facilities. It is stated that the waste products from the steel mill will be used as fuel for the Durgapur power plant, thus effecting important economies for both the steel mill and the power plant. The total cost of the aforesaid projects is placed at the equivalent of $56 million.

U.S. PROVIDES RS. 26 CRORES FOR REFINANCE CORPORATION

A sum of Rs. 26 crores will be made available for loans to medium-sized industries in the private sector under an agreement signed in New Delhi on the 29th ultimo by the Governments of India and the United States. The agreement makes this new source of rupee finance available to the Indian Refinance Corporation for loans to medium-sized industries for periods of three to seven years. These loans will be for the purpose of providing increased industrial production within the private sector and will be extended primarily to those industrial concerns within the second Five-year Plan.

The U.S. contribution of Rs. 26 crores is part of the P.L. 480 proceeds from the sale of U.S. agricultural commodities. The agricultural commodities agreement between the Governments of India and the United States, signed in August 1956, provided for the rupee equivalent of $55 million (Rs. 26 crores) to be reserved for relending to private enterprise through established banking facilities under procedures agreed upon by the two Governments.

For this purpose the Refinance Corporation, a new private limited company with an issued capital of Rs. 12.5 crores, was established in June 1958. The subscriptions were made up by the Reserve Bank of India, State Bank of India, Life Insurance Corporation of India, and the larger Schedule banks of India. The purpose of the Corporation is to encourage banks to extend lending facilities for medium-term loans to medium-sized industries. Loans are to be made to industries whose total resources shall not exceed Rs. 2.5 crores, so that the maximum amount of loans under this procedure to any one industrial concern shall not exceed Rs. 50 lakhs. The total resources available to the Corporation amount to Rs. 38.5 crores comprised of U.S. contribution of Rs. 26 crores and the initial issued capital of Rs. 12.5 crores.

The agreement was signed by Mr. N. C. Sen Gupta, Joint Secretary, Ministry of Finance, and Mr. Howard E. Houston, Director of the U.S. Technical Co-operation Mission.

The Refinance Corporation will supplement, but not duplicate, the activities of the Industrial Credit and Investment Corporation of India, the Industrial Finance Corporation, and other Indian financial organisations.

FINANCING CAPITAL GOODS IMPORTS FROM WESTERN EUROPE

SOME NEW SUGGESTIONS FOR ASIA

By Franz Stolp, Munchen (West Germany)

[It seems that the problem of industrialisation of India and Asia has only just begun to receive the attention of the general public in Europe. It would have received better attention had Asian countries done a certain amount of public relations work through the Press and the platform in that part of the world. Even now it is not too late to make a beginning in this direction. Evidence of the gradual interest now being taken by the public in Europe is the article on this page. The author of this article is a bank clerk who has specialised in foreign trade, particularly in the financing of exports of capital goods. He is apparently a keen observer of economic development in underdeveloped countries. He feels that his suggestions will help India, in particular, in finding a solution for its foreign exchange problem. We publish his article for two reasons, first, to mark our appreciation of the trouble he has taken to study the problem and think out a solution, and, secondly, to provoke further thought and debate in this country and other parts of Asia on his suggestions.—ED.]

FROM the outset of the presently prevailing world-wide price slump of raw materials, it has become increasingly evident that (*a*) Asia's newly developing countries will have to adjust their imports of capital goods from industrial countries to the reasonably estimated absorbing capacity of the latter for Asian raw materials, and that (*b*) industrial countries are confronted with the alternative whether they should fit their capital-goods exports to Asia to their raw-material imports from Asia, or whether they should devise entirely new methods for increasing their raw-material imports from Asia. During this recession, furthermore, it has become quite obvious that settlement of debts, for industrial supplies and services obtained, by Asian debtor countries could no longer be expected to be effected from sales proceeds of Asian raw-material exports to *any* foreign country whatsoever, but chiefly—if not only—from receipts of such exports directed into the respective industrial *creditor* countries themselves. A barter-trade pattern has thereby taken shape in Asian-European trade relations gradually. This pattern was not new to Central European countries, such as Germany, which had boasted of rich experience in this field from the 'thirties. These time-worn operational procedures, however, are not applicable entirely today, chiefly because (*a*) multilateral-type payments, instead of bilateral-type, prevail today, and (*b*) countries with a free economy cannot afford to pay "contractually fixed" prices for raw materials today, sometimes far above the current free-market prices, as Germany did during the 'thirties.

The only realistic chance for the improvement of the present barter-trade procedures could be a joint endeavour by Asian and Western industrial countries to reach agreements, whereby the latter would purchase yearly fixed *quantities* of Asian raw materials, leaving wisely open the question of the respective prices. All schemes, ventilated particularly in Great Britain, about some kind of an "International Pool" for the long-term stockpiling of Asian raw materials, also for price-stabilisation purposes, appear entirely unrealistic in a free economy, also because of the inscrutable and unfathomable competition moves of the Soviet bloc.

First Task: International Industrial Syndicates

If the Western industrial countries, which have been engaged in capital-goods exports to Asia, should continue to carry on their trade with Asia separately, they might eventually tend adopting the proverb: "Cut the coat according to cloth," whereby—of course—Asia's industrialisation progress might be unduly thwarted. In order to by-pass this risk, which has become more critical during these months, three types of "load distribution" among Western industrial nations appear mandatory, namely:

(*a*) Wide distribution of the financial burden in connection with the grants of long-term credits to Asian countries;

(*b*) fairly uniform and standardised financial and fiscal measures for the promotion of bulk purchases of Asian raw materials, by private importers, for long-term stockpiling storage; and

(*c*) a fairly standardised procedure for the cession, by one industrial country to another, of certain portions of the active balances in Asian countries, whenever the industrial creditor country concerned cannot expect to utilise portions of these balances for imports of Asian raw materials for its own purposes.

Let us examine here the first task:

From a West German viewpoint, it appears perfectly clear that certain major industrial projects in Asia could be dealt with single-handedly by a few major W. German industrial enterprises, as far as technical and manufacturing problems are concerned, but not—and this is the crux—so far as financing problems are involved. It is in the financial field where we find the fetters which restrain some otherwise super-efficient and ambitious W. German industrial concerns from "rapturously soaring high into the skies" of gigantic industrial endeavours in Asia. First, the W. German capital market is being very efficiently exploited by many national corporations, public and private, and, secondly, W. Germany's importing capacity and absorbing power for Asian products cannot be stretched beyond a certain limit, not even with all the fine arts of the new-fangled "consumption channelling policy."

Pooling of Efforts

What applies for W. Germany, does apply—with various degrees—to other industrial countries too. The first measure of redressal of the existing inconveniences should be, the pooling of the efforts of the—interested or engaged—industrial countries in handling industrialisation projects in Asia. Various ideas have been ventilated in W. Europe about this issue during these critical months of recession. Certain particularly constructive concepts may be briefly summarised in the following terms:

(1) Under the auspices of the Organisation for European Economic Co-operation (O.E.E.C.) in Paris, and with the assistance of the Council of European Industrial Federations, a central secretariat of the several W. European national unions of manufacturers should be established in Paris. This secretariat should be charged with the promotion, on an entirely voluntary agreement basis, of the formation of *ad-hoc* international industrial syndicates, for the joint treatment basis, of the formation of *ad-hoc* international project in Asia.

(2) The respective national unions of manufacturers, associated with the said secretariat, should be charged with the task of soliciting and securing the voluntary adhesion of the greatest possible number of competent national manufacturers for each major industrial project which should have been approved, in principle, by other industrial enterprises, national or foreign.

(3) The said secretariat should furthermore attempt to make a fairly approximate estimate of the quantities of Asian raw materials which might be imported by each W. European industrial country which should engage itself in an Asian industrial project.

The main purpose of these pre-concerted efforts would be the clarification about the following problems:

(*a*) That the share of any W. European industrial country in a major Asian industrial project should be adjusted fairly well to the financial load-bearing capacity, for long-term loans, of the capital market of the respective industrial country, and

(*b*) that each of the industrial countries concerned should be materially in a position to import fairly *definite* quantities of raw materials from the Asian debtor countries every year.

An Important Ally: Japan

As already hinted before, the "absorbing capacity" of W. European industrial countries for Asian raw materials cannot be "developed" beyond a certain limit, because, for example, no "marketing efforts" in Western Europe might succeed in displacing the consumption of Brazilian coffee in favour of Indian tea, just for the purpose of improving Indian-W. European balance-of-payments relation. Also, in view of this reason, it is imperative that Japan's continuous and systematised industrial co-operation with W. European industrial countries in Asia be secured institutionally.

My main reason for most emphatically advocating this co-operation lies in the recognition of the hard fact that Japan is one of the few rare countries which are able to accept, almost exclusively, raw materials from a debtor country in settlement of industrial supplies. This remarkable situation is due chiefly to (*a*) Japan's teeming population, which guarantees a practically "unlimited absorption" to a great variety of Asian raw materials, and (*b*) Japan's limited resources of foreign currency, whereby Japan's choices for buying the needed raw materials are practically tied to its debtor countries.

In two related manners could Japan be utilised by W. European industrial countries (*a*) as a regular member of all international industrial syndicates in Asia, and (*b*) as a sub-contractor of W. European industrial firms engaged in Asia.

Second Task: Reform of the Asian Raw Material Imports

For several W. European industrial countries, the chances for increasing imports of Asian raw materials are less promising than for Japan. In view of the aforementioned concepts, the attainment of a goal appears feasible, whereby the O.E.E.C. industrial countries might agree to adopt the following uniform regulations:

(*a*) Directives should be issued, by the respective national banks of the industrial countries to the commercial banks, whereby national importers should be authorised grants of long-term credits, on the basis of fairly sizable credit limits, and at reasonably low rates of interest, appositely for bulk purchases of raw materials from Asian debtor countries, however, at the exclusive risks of the private importers concerned. These importers should be also authorised and encouraged to utilise bonds issued by Asian countries in payment of their relevant purchases, in order to simplify the amortisation of these bonds.

(*b*) Directives should be given, to the respective national revenue offices, whereby the aforesaid importers be granted deferral of payment of customs duties and all taxes on the aforesaid raw materials, until the date of sale on the inland market.

The purpose of these uniform regulations should be (*a*) the promotion of a standardised practice of continuous bulk purchases of Asian raw materials, and (*b*) the encouragement of the long-term, stockpiling storage of these materials, also with the intention of a moderate degree of relevant price-stabilisation.

Third Task: Cession of W. European Credits Against Asia

In view of the fact that certain W. European industrial countries are unable to import Asian raw materials for amounts which should fairly approach, or perhaps even match their active balances in the respective Asian countries, the re-introduction of a procedure, widely applied during the 'thirties in W. Europe, ought to be taken into consideration. This may be defined generally as a "Triangular Credit Agreement," for which I wish to give here a purely hypothetical example:

(a) W. Germany might grant to Italy a medium-term commercial credit (12-24 months) in India, to the debit of W. German rupee accounts, appositely for the purchase of Indian goods by Italy for its own consumption. The credit could be granted by means of documentary letters of credit at Indian banks.

(*b*) In this case, Italy would repay the aforesaid debt to W. Germany, by instalments, through the European Payments Union (E.P.U.). Italy's relevant debt would be bonded in a stable currency, namely, in the E.P.U. "scrip dollar," which is nominally equal to the U.S. dollar. The pertinent advantage for W. Germany would consist in the avoidance of the risk of a partial loss of the rupee's purchasing value, thanks to the purposefully anticipated utilisation of a part of W. German rupee accounts.

(*c*) Within the framework of a "Triangular Credit Agreement," Italy might engage itself (1) not to re-export the Indian goods imported on this basis, and (2) not to re-sell the said goods in Italy below the usual market prices. The pertinent advantage for Italy would consist in the saving of foreign currency (rupees) for the purchase of needed Indian goods, and in the enjoyment of a medium-term credit facility from W. Germany.

For India, the pertinent advantage would consist in the reduction of the foreign currency transfer obligation to W. Germany, and in the supplementary increase of exports to a third country (Italy).

Because of the creeping inflation practically everywhere in the world, bonds are less pre-

COTTON MILLS SWITCHING OVER TO OTHER BUSINESSES

PROTECTION FOR HOME INDUSTRY URGED

From A Special Correspondent

MANCHESTER, *22nd July*

MANCHESTER LETTER

WORLD events, no less than trade affairs, seem to conspire at the moment to hinder any possible expansion in trading in Lancashire cotton textiles. The developments in the Middle East provide customers with yet another quite legitimate reason for withholding purchases in view of the uncertain outlook, although the pessimists amongst traders might well see the need for securing supplies in case of dire emergency.

Threats of hostilities, whether localised or of wider significance, have on several occasions in the recent past provided a stimulus to buying and there is generally some wisdom in keeping reasonably well covered in the event of shortages arising from sudden and unexpected demand. Nobody would wish the present crisis in cotton trade affairs to be resolved by a clash of conflicting interests and warlike manœuvres, but such an eventuality cannot be ruled out. This is a factor which has been constantly stressed by succeeding deputations to Government departments when discussing the sharp reduction in productive capacity which has taken place in spinning and weaving mills over the past five years or so.

Although a certain amount of this machinery has been scrapped, there are still quantities lying idle, both through lack of labour and lack of orders. Should any real emergency arise, it is very doubtful whether the labour force could be regained. Many workers have left the industry, others have drifted into retirement or have merely taken up household tasks instead of going out to work. The manpower in spinning and weaving is now a little short of 100,000 below the post-war peak at the end of 1951.

Widening the Field

Not very long ago the advice offered to British cotton firms was "specialisation" as a means of remedying the many ills which beset them. Now the watchword has changed and "diversification" is all the rage.

The owners of any business of whatever type are frequently on the look-out for opportunities of widening their interests in order to avoid the accusation of "having too many eggs in one basket," but never more so than at present. Lancashire, as an industrialised county, has often been charged with its preoccupation with the cotton trade and true it is that many towns have suffered in the past and are still plagued by their concentration on textiles.

Over the years, however, some far-sighted managements have quietly branched out in other directions, and while still retaining an overwhelming dependence on textile fibres as a means of livelihood, the new subsidiaries have evened out the seemingly inevitable variations in the fortunes of the cotton trade. Lately the trend has become far more pronounced and, among the bigger groups in particular, the tendency to take control over other companies engaged in activities far removed from textiles has occasionally caused some surprise.

One case in point has been the absorption of the Accrington Brick and Tile Company by the Lancashire Cotton Corporation, a development which cut right away from this group's recent purchases. Not quite so far removed from their basic business is the Directors' decision to bid for the capital of the Yorkshire woollen firm of Smith and Calverley Ltd.

Another big textile combine which has made a practice of diversifying its interests is the Bleachers' Association, whose subsidiaries include dry cleaning firms and the manufacture and distribution of plastic goods. Mr. Philip Wright, the Chairman, may have complained at the annual meeting that weather conditions can adversely affect both textiles and plastics, a wet summer playing havoc with clearances of cotton goods and a dry spell cutting the sales of plastic rainwear, but equally so, both can gain from the other's losses, and the group thereby effects an insurance against undue dependence on either.

Hoping for the Best

An optimistic forecast of textile trading despite current slump conditions has been given in Manchester by Mr. W. T. Winterbottom, Chairman of the £25,000,000 combine, Fine Spinners and Doublers Ltd.

He told the annual meeting that, though at present trade was bad, one of the principal causes of the recession had been the severe restrictions on credit imposed last autumn. "The recent relaxation should help to stimulate buying," he declared. "Nothing spectacular in the way of an upswing can be expected but there should be a significant improvement in trade as confidence returns."

Mr. Winterbottom was also hopeful of a settlement being reached in the discussions concerning imports of cloth from Commonwealth countries which, he said, "had dragged on wearily for several years without any solid progress being made." There were now good grounds for believing that some measure of agreement had been reached and the fact that the current slump in Lancashire had affected the sales of Hong Kong cloth might have a bearing on further negotiations.

During the past year, Mr. Winterbottom added, much publicity had been given to the overseas interests of the Fine Spinners group, in particular the Delta and Pine Land Company on the Mississippi Delta, the cotton-growing and agricultural organisation. He assured stockholders that considerable land development was taking place but warned that the advantages should not be assumed to be short-term. "I am confident that, in time, these advantages will prove to be very considerable," he declared. "Rumours about the discovery of oil on the plantation are quite untrue and in any case stockholders would be informed if any important mineral deposits are found. The company owns the mineral rights on the land and is fully aware of their value if discoveries are made."

Plea Against Imports

Further reference to the "disastrous results" which the free importation of cotton goods into the United Kingdom from low wage countries must inevitably have on the Lancashire cotton trade was made by Mr. George Waddington, Chairman of James Rothwell Ltd., the Rawtenstall textile manufacturing firm, at the annual meeting in Manchester.

Expressing the "deep concern" of the Board at the attitude of the Government in permitting this situation to continue, Mr. Waddington pointed out that overseas markets protected their local industries quantitatively or by import duties, while other industries in the United Kingdom had protective duties. The British cotton industry was the only one to be faced with the importation of cloth and made-up goods without any protection whatever.

"We do not fear fair competition," he added, "but this is not fair competition. We can only hope that by representations to the Government, Ministers will realise before more loss and damage to the industry is caused, the misery which the Government's present policy must inflict on this important industrial county of Lancashire."

Weavers' Chief

Mr. J. H. Michael Grey, of Burnley, has been appointed Chairman of the Cotton Spinners' and Manufacturers' Association, succeeding Mr. John D. Greenwood who retired for health reasons. The organisation represents owners of some 1,000 Lancashire weaving mills.

Mr. Greenwood was appointed Vice-President of the Association. The appointment of Mr. Grey continues a link between his family and the Association, as his father, Sir John H. Grey, was Chairman for 17 years from 1931 to 1948 and is now President of the Association.—*All Rights Reserved.*

COTTON REDUNDANCY PLAN REJECTED

A proposal by the Lancashire cotton unions for a system of compensation payment to mill workers who become redundant when mills close or production methods change has been rejected by the millowners. The millowners indicated their unwillingness to participate in a scheme of this sort at a joint meeting with union leaders held at Manchester the other day and said that the responsibility of providing for the workers was that of the State. On the other hand, they pointed out, there was nothing to prevent individual mills paying compensation should they wish.

The eight cotton unions had submitted a detailed scheme to the employers. It asked them to contribute £200,000 a year—equal to a quarter of one per cent. of the industry's outlay in wages—to a central fund from which redundancy pay could be drawn. It quoted 13 weeks' pay for redundant operatives with more than five and less than six years in the industry, with an extra week's wage for every additional year of service up to a maximum of 50 weeks' pay.

TEXTILE INQUIRY COMMITTEE'S REPORT

MEASURES TO SOLVE INDUSTRY'S PROBLEMS

THE Cotton Textile Inquiry Committee (Chairman: Mr. D. S. Joshi), in its report published last week, has recommended an integrated programme for meeting the present textile crisis and revitalising the industry. The Committee, it may be recalled, was set up by a resolution issued by the Government of India on 29th May 1958. Under its terms of reference the Committee was required, among other things, to examine the structure of the industry, with special reference to production. management, finance, modernisation and allied problems. It was also asked to make a rapid study of the problems facing the industry and to explore and suggest remedial measures. The Committee attributes the crisis in the industry to the decline in purchasing power of the consumer, increase in the cost structure of the industry, high taxation and a significant overproduction of coarse varieties of cloth especially at a time when definite swing in consumer preference in favour of finer varieties had taken place. The "deep-rooted" reasons for the closure of mills and the distress experienced by certain sections of the industry are said to be the absence of rationalisation and modernisation of machinery and equipment, poor maintenance and repair of plants, inefficient management and low labour productivity.

As remedy, the Committee has recommended specialisation of production in the units of the mill sector, greater bank financing of both the industry and the trade in cotton textiles, avoidance of unexpected imposition of taxes and rationalisation. It has also suggested the constitution of an advisory committee representing all interests and production centres to advise the Textile Commissioner on the long-term problems of the industry. The setting up of an autonomous corporation, enjoying no discriminatory advantage, to manage units which might be taken over by the Government under the Industries (Development and Regulation) Act, is also suggested. The Committee's recommendations in respect of excise duties have already been accepted by the Government and given effect to. As regards the question of wages and dearness allowance in the industry, the Committee has left it to the consideration of the Wage Board for the Cotton Textile Industry which is now examining the question.

Although the terms of reference of the Committee extended to the entire range of the cotton textile industry, it has dealt mainly with the mill sector consisting of both composite and spinning mills. It did examine prominent representatives of the handloom industry but was not able to extend the inquiry to the "very important" powerloom sector. These two sections of the industry have, therefore, not been examined except on some issues of immediate importance having direct bearing on mill industry.

Excise Duty

The present structure of duties, according to the Committee, weighs more heavily on plain cloth and unprocessed cloth compared to the processed cloth of various descriptions. While, on the one hand, the demand for processed varieties is on the increase, the weight of excise duties on the other falls more heavily proportionately on unprocessed cloth. This has increased the difficulties of mills, mostly located in the interior equipped with processing equipment. Both on the grounds of equity and on the grounds of fairness to the mills without processing equipment, it is essential that the pattern of excise duties is changed to provide for a closer approximation to *ad-valorem* duties.

The following principles are suggested for determining the structure of cloth excise duty:—(1) The distinction between *dhotis* and *saris* and other varieties should be abolished. (2) The difference in the levels of duty on coarse and medium cloth—particularly lower medium cloth—should be small. (3) Medium cloth should be divided into two categories—medium 'A' up to an average count of 25s and medium 'B' above an average count of 25s and up to 35s. (4) Surcharges should be levied for the processes of (a) bleaching, (b) dyeing, printing, mercerising or any other chemical processes, (c) shrink-resisting processing and organdie processing.

Apart from suggesting changes in the level of excise duty, the Committee has recommended other measures to achieve a more rational diversification of production as between the different varieties. It is of the view that specialisation should be encouraged and processing facilities should be permitted to those mills lacking them at present so that they could produce better quality goods. Certain relaxations in production control such as the restrictions relating to the manufacture of ready-made garments is advocated.

On the larger question of the production capacity of the industry, the Committee feels that the *per capita* consumption at the end of the Plan is unlikely to exceed 17.5 yards, as against the original target of 18.5 yards. Since the bulk of the additional cloth production under the Plan was allocated to the handloom sector, the Committee believes that this allocation may have to be pruned down to only 2,100 million yards. On this basis, the rated capacity of the mill industry can be fixed at 5,200 million yards.

On the basis of a *per capita* consumption of 17.5 yards, according to the Committee, the three sectors of the textile industry, namely, the mill, the handloom and powerloom, will have to supply for internal consumption 7,000 million yards only by the end of the Second Five-year Plan. This will mean that the earlier allocation to the handloom sector which was to produce the entire additional requirement of cloth during the Second Plan period may have to be pruned down correspondingly.

Yarn Production

As regards yarn production, the Committee says that, at the beginning of the current calendar year, there were 13.03 million spindles in the country. This number will increase when all the outstanding licensed spindles of 1.5 million are installed.

In the context of the present conditions in the cloth trade including the handloom cloth trade, the offtake of yarn by the handlooms, the Committee maintains, may not increase at as rapid a pace as was visualised at the time of the formulation of the Second Plan. At any rate, the installation of spindles has proceeded at a faster pace than the consumption of yarn by the handlooms. This has resulted in a sizable surplus of yarn available for export without injury to the handloom industry. The representatives of the handloom industry have also agreed that the surplus yarn may be exported. The Committee considers that such export will be a healthy expedient to uninterrupted production of yarn and, therefore, strongly recommends a long-term policy for export of yarn.

It suggests that further installation of spindles even already licensed should be stopped after examining each case of outstanding licence to find out that commitments already made did not result in any handicap to an individual unit because of the cancellation.

In order to prevent overproduction of yarn in the country, the Committee feels that starting of an additional third shift by spinning mills should be avoided. It recommends that the Textile Commissioner's powers should include refusal of permission to the running of any further third shifts in existing mills or third shifts in new mills.

The Committee says that it has been represented to it with great force that cloth exports cannot be maintained even at the existing level and will continue to fall steeply unless India exports cloth produced on automatic looms. This is because overseas markets prefer flawless cloth which can be produced only on automatic looms, and other countries, including Japan and China, have equipped themselves extensively with such looms.

Additional Automatic Looms

The Committee recommends, as an experimental measure, installation of additional automatic looms up to 3,000 (a year) on condition that the entire production of such looms is exported. There should be no condition regarding guaranteed exports in relation to past performances of such mills.

The Committee recommends the following measures for dealing with the problem of closures: (1) Mills which have outmoded and obsolete machinery and are, therefore, intrinsically incapable of going into production should be scrapped and a new licence issued for starting a new mill in or near the same locality. (2) Mills which for *bona fide* reasons are in financial difficulties should be helped by financial assistance through proper channels. (3) Mills temporarily closed due to working losses should be examined one by one and given proper advice and relief. (4) Mills which suffered from mismanagement should be investigated and appropriate action taken to avoid recurrence of mismanagement and to ensure proper management by arrangements suited to each case. (5) Mills of intrisically uneconomic size, of which there are nine out of the 28 mills remaining closed, should be made economic by proper balancing or by amalgamation with some other concerns which can afford to purchase its machinery and plant.

Mills, the management of which do not respond to corrective action suggested by the advisory committee, should be taken over by an autonomous Government corporation under the Industries Act. For managing the mills taken over by the Government under the Industries Act, the Committee has suggested the setting up of an autonomous corporation with adequate capital as it feels it will not be advisable for the Government either to manage or own and manage such mills as a department of Government. The board of management of the Corporation must be so constituted as to attract experienced and public-spirited millowners, responsible labour leaders, technicians and expert managers. The Committee feels that mills managed by the Corporation must be run on model lines so that they may be in a position to offer constructive guidance. As the management of the Corporation must be efficient in normal conditions, the Committee is firmly of the opinion that it should not enjoy any discriminatory advantages compared with well run mills under private management. The treatment of labour in such mills should also be on lines approved for the rest of the industry.

In order to save marginal units from disaster, the Committee has suggested amendment of the Industries (Development and Regulation) Act to enable the Government to take over the management of any mills independently of any winding-up petition already filed in a court. The Committee has also suggested that necessary provisions should be made in relevant Acts to hasten liquidation proceedings against any mill as, otherwise, there is every risk of protraction rendering the productive capacity of the mill idle and workers unemployed.

Export Promotion

The Committee has offered a number of suggestions for export promotion. Among these is the licensing of an additional 3,000 automatic looms on the condition that their entire output is exported. Automatisation and rationalisation are considered vital if costs are to be lowered to competitive levels. Others are: (1) Five per cent. of the foreign exchange earnings of each mill may be made available to that unit for importing plant, dyes and chemicals. This concession should be allowed for a period of five years. (2) Rail freight rates should be revised to facilitate export of cloth from textile mills situated in the upcountry areas to port towns. (3) Processing concerns should be placed on par with composite mills. (4) Mills may be allowed to produce varieties like *lungis* and handkerchiefs for export to those countries where the import of handlooms are banned. (5) Ceilings for the export of particular varieties of cloth such as pull-through cloth and mesh cloth should be removed. (6) Income-tax concessions may be given to mills exporting cloth on lines similar to concessions granted in other countries. (7) Procedural formalities should be simplified and lightened to the absolute minimum. (8) There should be compulsory inspection of all cloth for export and this should be achieved within a period not exceeding three years.

The Committee considers that it is high time that a uniform or standard costing system should be introduced in the textile industry with variations as may be considered necessary in particular areas or centres so that a somewhat uniform yardstick for ensuring the relative efficiency of mills be devised. Such a costing system will enable the Government to give timely warning to those units which were run uneconomically. The Committee has asked the Government to provide the adequate personnel and organisation under the Textile Commissioner for advising the industry generally on the methods of cost analysis

TREND OF SUGAR CONSUMPTION IN INDIA

ALTHOUGH "PER CAPITA" FIGURE HAS RISEN, IT IS STILL DEPLORABLY LOW

JUDGED by even the minimum nutritional standards, the rate at which sugar and the two other sweetening agents (*gur* and *khandsari*) are being consumed in India is deplorably low. Nutritional experts regard 2 ozs. per day or nearly 47 lbs. per annum as the average desirable minimum a person should have. As against this, the *per capita* consumption of sugar (including *gur* and *khandsari*) is of the order of not more than 29 lbs. per annum. Indeed, the *per capital* consumption in India is the lowest as compared with the other industrially advanced countries in the world. It is, for instance, as high as 128 lbs. in Denmark, 122 lbs. in the Netherlands and Australia, 110 lbs. in the U.K., 106 lbs. in New Zealand, 104 lbs. in the U.S., 102 lbs. in Canada, 96 lbs. in Switzerland and 69 lbs. in Germany. The figures stands very high even in countries like Cuba (96 lbs.), South Africa (95 lbs.) and Ireland (119 lbs.). It must, of course, be pointed out that a part of this high consumption in other countries is accounted for by industrial consumption.

With the higher standard of living on account of a rising national income, the consumption of sugar in India is bound to increase in the coming years. That there is no exaggeration whatever in this statement will be evident from a review of the trend of sugar consumption during the last five to six years. The *per capita* consumption of sugar (including *gur* and *khandsari*) which stood at 27.66 lbs. in 1950-51 (the base year of the first Five-year Plan) rose to 29.10 lbs. in 1956-57 (first year of the second Plan). In other words, this means that the total quantity of sugar consumed has increased at a much faster rate than the rise in population. Thus, while the population of India has risen by 7.4 per cent.—from 361 million in 1950-51 to 387.68 million in 1956-57—the aggregate consumption of sugar has advanced by as much as 15.3 per cent.—from 4.56 million tons to 5.14 million tons.

The table at the bottom gives the trend of population and sugar consumption during the seven years ended 1956-57, as also the estimates of the same for the last year of the second Plan, that is, 1960-61. It will be seen from the table that the increase in the *per capita* consumption of sugar since 1950-51 is accounted for entirely by white sugar, the quantity of which actually consumed rising from 6.70 lbs. in 1950-51 to 12.20 lbs. in 1956-57. The consumption of *gur*, on the other hand, has gone down, from 20.96 lbs. to 16.90 lbs. The percentage proportion of white sugar in the total sugar consumption during 1956-57 was higher at 41.2, as against 23.9 six years before, while that of *gur* was lower at 56.8, as against 72.9. What better proof is needed to show that consumer preference has been more and more in favour of white sugar rather than *gur*?

Scope Limited

The scope for any appreciable expansion in the present level of consumption of *gur* and *khandsari* is very limited. For, with the improvement in the living standards of the masses in the coming years, the enlarged consumer demand for sweetening agents is bound to be in favour of white sugar rather than either *gur* or *khandsari*. In fact, a rise in the purchasing power of the people will, as the Planning Commission has rightly pointed out, almost certainly be accompanied by a continuous shift in demand from *gur* and *khandsari* to white sugar. The shift during the second Plan period is expected to be of the order of 185,000 tons. On this basis, the total estimated requirements of *gur* and *khandsari* in 1960-61 may be placed at 3.63 million tons, or 60 per cent. of all the three sweetening agents; the balance of 2.42 million tons represents the consumption of white sugar.

It may be noted here that the agricultural plan aims at a production of 71 million tons of sugarcane (7.1 million tons in terms of *gur*) by 1960-61 which would, if achieved, yield about 6 million tons of *gur*, *khandsari* and sugar, after deducting 15-16 per cent. for chewing and planting purposes. A total consumption of this quantity will mean a consumption by every adult of about 1.68 oz. per day. Even this, as the Commission rightly says, is not a high level—nutritional experts regard 2 ozs. per day as the desirable minimum—nor does it represent any very great advance over present consumption.

The relatively larger rate of increase in the consumption of white sugar *vis-a-vis gur* noted in recent years would have been more marked but for the continuously rising trend of prices, particularly in those of white sugar. The average wholesale price of sugar (excluding sales tax at six pies in the rupee and town duty at nine pies per maund) in Bombay, for instance, now stands at about Rs. 41, as against Rs. 33 in 1950-51. Such a marked rise in prices must be attributed in large measure to the steep upward revision in Union excise duty. Every maund of sugar is now subjected to a duty of Rs. 8.25 (excluding the additional Central excise of Rs. 2.43 in lieu of sales taxes), as against Rs. 2.75 in 1950-51. It is this heavy incidence of taxation that has been having an inhibiting effect on sugar consumption. If, therefore, the consumption of sugar is to increase in proportion to the improvement in the purchasing power of the community, it is imperative that the tax burden must be reduced. Equally imperative is the need for lowering the cost of sugarcane which accounts for as much as 60 per cent. of the cost of sugar production.

SUGARCANE IN U.P.

The intensive sugarcane development scheme launched by the U.P. Government about two years ago is said to have registered much progress. The claim seems to be justified to some extent. The aggregate production of sugarcane in the U.P. during 1957-58, amounting to 3.30 million tons (in terms of raw sugar), shows a rise of over 16 per cent. as compared with 1955-56 when output was 3.48 million tons. As against this, the area devoted to cane has gone up by 13.1 per cent., that is, from 2.62 million acres in 1955-56 to 2.92 million acres. Consequently, the per-acre yield of raw sugar has recorded a small rise, the figure for 1957-58 being 1.11 ton, as against 1.08 ton two years before. Nevertheless, the present yield is still very much lower than the all-India average of 1.34 ton. In fact, it is practically nothing as compared with a little over 5 tons of white sugar per acre produced by most of the sugarcane plantations in the Deccan.

Thanks to the improvement in cane production, the sugar factories, especially in the eastern districts, which generally close their crushing operations by the end of March, continued crushing for a considerably longer time during the current season. It is stated that the top-dressing drive introduced by the Cane Development Department about a few years back is stated to have been very beneficial to the cane crop. The cultivators who were hesitant now appear to have been convinced of the superiority of cultural operations, so much so that the Department has this year fixed a target of top-dressing 1,115,000 acres of cane crop in the State. The ratoon crop has also been targetted to be top-dressed at the rate of two maunds per acre with ammonium sulphate and efforts are being made by the Department that at least one-third of the total area of ratoon should also be top-dressed this year.

Population and Sugar Consumption

Year	Population (millions)	Consumption (lakh tons)				*Per capita* consumption, *gur* and sugar (lbs.)		
		White sugar	*Khandsari*	*Gur*	Total	White sugar	*Gur*	Total
1950-51	361	10.79	1.25	32.54	44.58	6.70	20.96	27.66
1951-52	366	11.74	1.00	32.40	45.14	7.18	20.45	27.63
1952-53	371	16.63	0.91	28.77	46.30	10.04	17.91	27.95
1953-54	375	18.22	1.00	29.00	48.22	10.92	17.88	28.80
1954-55	380	18.50	1.00	28.50	48.00	10.90	16.00	26.00
1955-56	383	19.00	1.00	29.00	50.00	11.40	16.89	28.29
1956-57	388	21.20	1.00	29.20	51.40	12.20	16.90	29.10

PRODUCTIVITY IN COAL MINES

SLIGHTLY BETTER, BUT STILL VERY POOR

THE productivity of workers employed in coal mines has registered a slight improvement during the last two years. The output per man-shift for all workers employed above and underground during 1957 was 0.41 ton, as against 0.38 ton in 1956 and 0.37 ton in 1955. While the improvement is welcome, the fact remains that the level of productivity in India is negligible as compared with that in Western countries. The overall output per man-shift is as high as 6.66 tons in the U.S., 1.21 ton in the U.K., 1.11 ton in Germany, 0.90 ton in France and 0.74 ton in Belgium.

The rise in productivity of coal workers noted in the past two years has not been proportionate to the increase in wages and emoluments given in accordance with the Industrial Tribunal. In the Jharia coal mines, for example, the average weekly earning of underground miners and loaders in the month of January 1958 was as high as Rs. 21.09, which compares favourably with the average of Rs. 20.46 in 1957, Rs. 17.37 in 1956 and Rs. 14.20 in 1955. Similarly, in the Raniganj mines, the weekly earning was Rs. 20.25; the corresponding figures for the above-mentioned years were Rs. 19.33, Rs. 15.73 and Rs. 14.91, respectively. It may be noted here that the average daily number of workers employed in the coal mines during January 1958 was 366,342, as against 348,056 in the corresponding month of 1957. The increase is accounted for by all categories of workers except surface workers.

Employment and Man-shifts

The following table shows the employment in coal mines and the total number of man-shifts worked during January 1958, as compared with January 1957 and the whole of the past six years:

	Underground	Open workings	Surface	Total
Average daily number of workers employed				
1952	183,353	28,148	129,237	341,738
1953	181,973	28,866	126,957	337,796
1954	181,280	28,457	122,583	332,320
1955	187,593	30,161	122,861	340,615
1956	187,068	29,823	116,499	333,390
1957	200,192	33,880	115,804	349,676
January 1957 ..	197,505	34,006	116,545	348,056
January 1958 ..	209,383	41,846	115,113	366,342
Total number of man-shifts worked				
1952	4,495,347	721,057	3,167,940	8,384,344
1953	4,487,810	715,464	3,132,308	8,335,582
1954	4,544,272	710,991	3,702,085	8,333,348
1955	4,676,441	755,674	3,062,497	8,494,612
1956	4,805,901	766,569	2,990,136	8,562,606
1957	5,108,006	884,725	2,950,657	8,923,388
January 1957 ..	5,153,904	880,958	3,039,380	9,074,242
January 1958 ..	5,490,986	1,091,287	3,016,077	9,598,350

To revert to productivity of workers. The low level of productivity must be attributed partly to the general lack of interest among miners and partly to inadequate mechanisation, adoption of bad and old mining methods. Alluding to this subject, Mr. M. K. Bose, the erstwhile President of the Indian Mine Managers' Association, declared, in the course of his speech at the annual meeting of the Association held at Jharia recently, that all the efficiency of organisation, economy in materials, ingenuity of machinery designers, and improvement in layouts could not compensate for the general lack of interest among workers. Mr. Bose emphasised, and rightly so, that "however hard a score of staff men may plan and strive, the ultimate result must be far short of the best, so long as the attitude of the labour force remains one of indifference." Surely, productivity cannot be augmented even through the introduction of the most up-to-date machinery and scientific mining methods and techniques unless the workers eschew their attitude of indifference and take sufficient interest in the work entrusted to them. The problem to be studied and solved, therefore, pertains to the question as to why workers are indifferent, and why they do not put forth their best. It is the duty of employers to solve this human problem. They will do well to appoint a team of experts who can trace the causes and suggest remedies.

INTERNATIONAL TEA STATISTICS

WORLD SUPPLY IN 1957 SLIGHTLY BELOW ABSORPTION

FOR the first time in the past four years, world absorption of tea exceeded the supply during 1957, according to the International Tea Committee's *Bulletin of Statistics*, June 1958, the twelfth post-war issue of the *Bulletin*. The total supply amounted to a record level of 1,422 million lbs., exceeding the previous year's figure of 1,384 million lbs. by 38 million lbs. With this rise, the upward trend in supply has been maintained for the fifth year in succession, during which period, the supply has expanded by no less than 255 million lbs. The total absorption during 1957 was of the order of 1,436 million lbs., an increase of 116 million lbs. over the year, in distinct contrast to the fall of 26 million lbs. noted in the previous year. The result was a shortfall of 14 million lbs. in supply, in contrast to the excess of 64 million lbs. in 1956. Taking the post-war period as a whole, while the world supply of this beverage shows a rise of 489 million lbs., the absorption has gone up 498 million lbs.

The comprehensive picture of world supply and absorption for the periods 1922 to 1939 and 1946 to 1957 is the most notable addition to the *Bulletin*. The figure of world supply is not equivalent to world production; it excludes production for local consumption in China, Japan and certain other countries (for most of which adequate statistics are not available) and takes into account only exports from these countries. "Absorption," excludes consumption of locally-produced tea in China, Japan, etc., and takes into account only imports into these countries.

Main Producers

The total output of tea in the four main producing and exporting countries, namely, India, Pakistan, Ceylon and Indonesia aggregated 1,223 million lbs., an increase of 17 million lbs. over that in 1956. Production in African countries amounted to 54 million lbs., same as in the previous year. Exports from other countries rose from 124 million lbs. to 145 million lbs. As is well known, the bulk of the world supply of tea is absorbed by countries other than the major producing countries. Thus, the total absorption by importing countries aggregated 1,108 million lbs. in 1957, having risen from 1,053 million lbs. in the previous year, and that by exporting countries 328 million lbs., as compared with 267 million lbs. Among the exporting countries, India, Pakistan, Ceylon and Indonesia accounted for a (domestic) consumption of 316 million lbs., as against 255 million lbs. in 1956. The shortfall of supply below consumption was thus 14 million lbs., as against an excess of 64 million lbs. in 1956 and a high of 68 million lbs. in 1954. The following comparative table shows the changes in the supply and absorption of tea during the last four years, as compared with the position in 1946:

World Supply and Absorption of Tea
(In million lbs.)

	1946	1954	1955	1956	1957
SUPPLY					
Total Production:					
India, Pakistan, Ceylon, Indonesia	875	1,176	1,208	1,206	1,223
Kenya, Uganda, Tanganyika, Nyasaland	30	45	48	54	54
Exports only:					
China	15	35	55	58	60
Rest of Eastern Asia	9	73	52	49	54
Rest of Africa	2	13	14	17	18
Other Countries	1	13	1	2	13

India, Pakistan, Ceylon, Indonesia	194	223	299	255	316
Kenya, Uganda, Tanganyika, Nyasaland	5	8	9	9	8
Others (imports only)	..	2	3	2	4
Total	199	233	311	267	328
Total Absorption	938	1,286	1,346	1,320	1,436
Balance:					
Excess of Supply over Absorption (in year)	—5	+68	+33	+64	—14

A country-wise analysis of the output of tea shows that Indian production was lower at 675.70 million lbs., as compared with that of 680.61 million lbs. in the previous year, thus reversing the upward trend noted since 1952. Output in Pakistan, which had risen sharply in 1956 from 52.48 million lbs. to 55.04 million lbs., also dropped to 46.11 million lbs., while Ceylon raised its output from 375.58 million lbs. to 397.77 million lbs. and Indonesia from 94.65 million lbs. to 103.04 million lbs. Among the East African countries, Kenya raised its output from 21.27 million lbs. to 22.02 million lbs., Uganda from 6.8 million lbs. to 8.02 million lbs. and Tanganyika from 5.45 million lbs. to 18.09 million lbs. In another important producing country in East Africa, namely, Mozambique, the output, however, was lower at 12.96 million lbs., as against 14.53 million lbs. in 1956.

Exports Fall

Total exports of tea from the producing countries in 1957 aggregated 1,093 million lbs., representing a decline of 48 million lbs. from the peak of 1,141 million lbs. touched in 1956. The fall is mainly due to the decline of 82.4 million lbs. to 437.4 million lbs. in the exports from India and of 14 million lbs. to 7.8 million lbs. from Pakistan. Ceylon increased its exports by 20 million lbs. to a high of 368.1 million lbs and Indonesia by 5.1 million lbs. to 85.6 million lbs. Almost every other producing country raised its exports; the most notable among them were China, the exports of which rose from 56 million lbs. to 60 million lbs. Formosa's exports of tea advanced from 23.5 million lbs. to 26.4 million lbs., Japan's from 21.8 million lbs. to 23.6 million lbs. and Kenya's from 16.7 million lbs. to 18.1 million lbs.

Consumption Higher

The total quantity of tea imported for consumption by various countries aggregated a peak of 1,158.4 million lbs., as compared with 1,036.7 million lbs. in 1956, as will be seen from the following country-wise analysis for the last four years:

Tea Imports for Consumption
(In thousand lbs.)

Countries	1954	1955	1956	1957
U.K. and Ireland	529,445	489,705	501,990	585,841
U.S.S.R.	..	..	10,200	20,300
Rest of Europe	53,500	51,100	62,800	61,000

Bombay Branch:
23-25, Mahatma Gandhi Road, Bombay 1.
G. DODDS, *Manager.*

As usual, U.K. and Ireland top the list of consuming countries, accounting for 50.6 per cent. of the total imports in 1957.

Separate figures of domestic consumption during 1957 for a number of producing countries are not available, notable among which are India and Pakistan. In 1956, for which data are available, India consumed 193.6 million lbs. and Pakistan 30.6 million lbs. Ceylon raised its internal consumption from 14.6 million lbs. in 1956 to 23.8 million lbs. in 1957.

The average price realised in London auctions for tea of all countries during 1957 was 4*s*. 5.22*d*. per lb., having successively declined from 5*s*. 3.29*d*. per lb. fetched in 1954. The average price realised for North Indian tea was 4*s*. 8.57*d*. per lb., as against 5*s*. 1.05*d*. per lb. in 1956 and 5*s*. 4.03*d*. per lb. in 1954. The average price of South India tea was 3*s*. 9.07*d*. per lb., as against 4*s*. 3.11*d*. per lb. in 1956 and 5*s*. 2.43*d*. per lb. in 1954. Ceylonese tea, which always fetches a higher price than Indian tea because of its better quality, realised in 1957 an average price of 4*s*. 10.18*d*. per lb., but it represents a sharp fall from that of 5*s*. 6.22*d*. obtained in the previous year.

LEAVE SALARY TO PLANTATION WORKERS

The Government of India is reported to have decided to amend the Plantation Act 1951, with a view to overcoming the difficulty experienced in the calculation of leave salary payable to workers and bringing the provisions relating to this in line with those of the Factories Act of 1948. The Act, as it is, does not specify the period over which the average daily wage should be calculated, thus causing difficulty in calculating wages for the leave period, whereas Section 80 of the Factories Act provides for the calculation of the average daily wage on the basis of earnings of workers during the month immediately preceding the leave.

A proposal to amend the Plantation Labour Act, with a view to bringing its provisions in conformity with those of the Factories Act, was discussed by the Industrial Committee on Plantations a few months ago, but no decision was arrived at due to sharp differences of opinion between the representatives of employers and workers. The representatives of employers suggested that leave wages should be paid on a flat-rate basis, as calculation of the average wage in individual cases would cause needless complications. It was contended by the workers' representatives that this system would cause hardship to piece-rate workers. They pointed out that the I.L.O. Convention provided for payment of wages during the leave period at a rate not less than the workers' remuneration or such remuneration as might be prescribed by national laws or regulations, collective agreement or arbitration award, etc.

The Government, it is stated, proposes to amend the Act to provide payment of leave salary to workers other than those paid on piece rates at a flat-rate of minimum daily wage and to the piece-rate workers at the average daily wage calculated over the preceding one month.

OUTLOOK FOR NATURAL RUBBER

Natural rubber production during the next five years will probably range between 1,900,000 tons and 1,960,000 tons during the period 1958-62, according to Mr. H. C. Bugbee, President, Natural Rubber Bureau, U.S. Since World War II Malayan estates have pursued an active replanting policy and the replanted areas coming into bearing during the next five years will be reflected in higher production figures. At the end of 1956, Malaya had 415,000 acres of immature, untapped trees which will have the effect of increasing its present production rate of 630,000 tons per annum to some 740,000 tons by 1962.

The chaotic political situation in Indonesia will probably cause a decline in Indonesian production which could partially offset the increase in Malaya and hence the conservative estimates of total natural production through 1962. Of course, if even a measure of stability could be restored, Indonesian production might be maintained at its current rate for some years to come.

In Malaya, the average per acre per annum yields for all estates is some 500 lbs., but large-scale field trials made by the Malayan Rubber Research Institute have provided mean annual yields of 1,500 lbs. to 2,000 lbs. per acre from selected clones over a period of 10 years of continuous alternate day tapping. More recent plantings with newer clones indicate that a 2,500-lb. yield is attainable.

Just as many tappers are required to tap a fixed number of low yielding trees as are required for the same number of high yielders. General charges including depreciation, management and office salaries, rents, welfare benefits, etc. on a low yielding estates are pretty much the same as on a high yielding unit of comparable area. It is evident, therefore, that costs per pound on the low yield estate may amount to as much as twice that on a high yield property, despite the fact that substantial costs are involved for the high yield estate in replanting and, of course, a six-year wait while the new trees reach maturity.

In this connection the head of one of the large American plantation groups recently came up with a prediction that if Malaya continued with its present programme of replanting it will have doubled its current production rate by 1980.

SECTION 20 OF THE INCOME-TAX ACT

SOME IDIOSYNCRASIES OF THE DIVIDEND CERTIFICATE

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

SECTION 20 of the Income-tax Act requires every company to furnish the shareholder receiving dividends a certificate to the effect that the company has paid or will pay income-tax on the profits which are distributed, besides specifying such other particulars as may be prescribed.

Rule 14 of the Income-tax Act prescribes the particulars. But before coming to that, let me refer to the purpose for which a certificate is necessary. The certificate is required to enable the shareholder to get a refund of income-tax paid by the company which is deemed to have been paid on his behalf, if his tax on total income is less than the credit given under Section 18(5) by grossing up dividend under Section 16(2). It may also be necessary to get credit against the tax payable by an assessee on his dividends.

Section 18(5) briefly provides for treating any payment of tax deducted or deemed to be deducted at source as payment made by such person and credit shall be given to him in the following year in his assessment.

Section 16(2) provides that, for purpose of inclusion in the total income of an assessee, dividend shall be increased to such an amount as would, if income-tax were deducted therefrom, be equal to the amount of dividend.

These are the following three exceptions:—

(i) any profits and gains of the company not included in its total income;

(ii) any income of the company on which it has not to pay tax;

(iii) any amount attributable to allowance made in computing profits.

Such amounts forming part of dividend will not be eligible for grossing up, for the simple reason that they have not borne any tax.

The reason why this grossing up of dividend is provided under Section 16(2) is the theory that, when a company pays income-tax, it is regarded as equivalent to payment made by it on behalf of the shareholders.

This is the underlying scheme of the Act which necessitates a production of a certificate to warrant grossing up of dividends. If the company, therefore, distributes profits which have borne tax, there is the process of grossing up of dividend and giving the shareholder credit for the tax paid by the company. If the company does not pay tax on profits, for example, if the profits are agricultural and as such exempted from payment of income-tax, naturally the Government cannot gross up such part of the dividend as have been declared out of the agricultural income of the company. There may be profits; yet the profits, though not exempted, are profits on which no tax is payable, e.g., profits exempted under Section 15C, etc. It may also be that profits have neither been exempted nor have they borne tax by being made not taxable, but may be profits which under specific allowance like depreciation, development rebate, etc., have been allowed in excess of what the company has provided in the accounts. The result is that, to the extent of such excess, profits have been utilised for distribution as dividend and have not borne tax. Such proportion must not, therefore, be eligible for grossing up.

With this preliminary explanation, let us proceed to study the form prescribed under Rule 14 referred to above. There are two forms—Form I and Form II—of the certificate which has to be furnished by the principal officer of a company under Section 20, the form to be used depending upon the character of dividend. I propose to confine myself to the latter part of Form II, as the controversies are only over that part. For the purpose of ready reference, I reproduce below the relevant portion of the second form:

"I/We certify—

"1. that the total amount of dividends declared at the aforesaid meeting was Rs.

"2. that the details of the profits and gains of the company for the aforesaid year are as under:—

(a) amount not liable to be included in the total income of the company for income-tax purposes is—

(i) representing allowances due in the computation of income under the Income-tax Act in excess of the provision, if any, made in the company's accounts (footnote†);

(ii) amount assessable to agricultural income-tax by any State Government;

(iii) other amounts exempt from income-tax;

(b) amount liable to be included in total income for income-tax purposes but on which income-tax is not payable, viz.,

(i) amount on which income-tax or agricultural income-tax was paid or is payable in Pakistan;

(ii) other amounts exempt from income-tax;

(c) amount liable to be included in total income on which income-tax is payable:

(d) total profits and gains;

(e) percentage of taxable profits to total profits (percentage of entry (c) to entry (d));

(f) percentage of agricultural profits to total profits (percentage of entry 2(a)(ii) to entry (d));

"3. that the percentage stated in paragraph 2(e) therefore represents the percentage of the said dividend which has come out of taxable profits;

"4. that income-tax on the profits and gains of the company chargeable to income-tax (item (c)) of paragraph (2) has been/will be paid by me/us to the Government of India;

"5. that agricultural income-tax (including super-tax) chargeable at the rate or rates of..... on agricultural profits (item (a)(ii)) of paragraph (2) has been/will be paid by me/us to the State Government."

Rule 14 falls into two parts:

(1) cases where dividends declared in respect of a year of account have been paid wholly out of profits of the year;

(2) cases where the dividends declared in respect of a year of account have been paid partly out of profits of that year and partly out of accumulated profits or reserves of earlier years or wholly out of such accumulated profits or reserves.

Where profits have wholly borne tax, the dividend will be grossed up 100 per cent. But where part of the dividend is traceable to profits or allowances which have not borne tax, percentage of the difference between the taxable profits and non-taxable profits embedded in the dividend is required to be given, in order to enable proper grossing up under Section 16(2).

The certificate under Form I requires a company to give details of its profit and loss as under:—

(a) Amounts not liable to be included in the total income of the company, namely, (i) amount representing allowances due in computation of income under the Income-tax Act in excess of the provision, if any, made in company's accounts. These allowances, the footnote explains, are allowances of depreciation, development rebate, etc., in excess of amount, if any, provided by the company in its accounts; (ii) amount assessable to agricultural income-tax by State Government; and (iii) other amounts exempt from income-tax. The footnote requires here to state capital gains (if any) made during 1st April 1948 to 31st March 1956.

(b) Amounts liable to be included in total income for income-tax purposes but on which income-tax is not payable, namely, (i) amount on which income-tax or agricultural income-tax was paid or is payable in Pakistan; (ii) other amounts exempt from income-tax; the footnote states that, under this head, should be shown income exempted under Section 15C; tax-free interest on securities.

(c) Amount liable to be included in total income on which income-tax is payable.

(d) Total profits and gains.

(e) Percentage of taxable profits to total profits (percentage of entry (c) to entry (d)). And

(f) percentage of agricultural profits to total profits (percentage of entry 2(a)(iii) to entry (d)).

The percentage stated in clause (e) therefore represents the percentage of the said dividend which has come out of taxable profits.

These are the requirements of the certificate to be given under Section 20 as read with Rule 14.

Now let me examine the controversy that is raging over the scope of each one of the requirements.

†Here must be entered the allowances due or received in the income-tax assessment for the relevant years such as depreciation allowance, development rebate, etc., in excess of amount, if any, provided therefor in the company's accounts for relevant year.

The first is that, in determining excess, must you compare the depreciation allowance for the year and the provision made in the account for that one year or must you take the cumulative figures for both? Since under Section 10(2)(vi) depreciation carried forward on account of there being no profits or insufficient profits, becomes for Section 10 a deduction for one year, it is clear that depreciation allowance is not depreciation allowance of one year, but past years also, if they have not been absorbed by profits and carried forward. If this be right, then it follows that provisions to be compared, in accordance with the principle of comparing the like with the like, must necessarily be cumulative provisions hitherto made. Where there is an excess, the same should enter the computation of the percentage, for such excess has not borne tax but is utilised as profits available for dividend. This will be clear from the following illustration:

A company's profit is, say, Rs. 100 and depreciation provided is Rs. 5 as adopted in the books. Therefore, the net profit as shown in the account will be Rs. 95. If the Department allowed Rs. 5 under the Act, there would be no difficulty, for Rs. 95 will be wholly taxable. But suppose the Department allows under the Act Rs. 7. Then, the assessable profit will be Rs. 93 and actual distributable profit will be Rs. 95, made up of Rs. 93 taxable and, Rs. 2 not taxable. Therefore, when Rs. 95 is distributed, grossing up will be only on Rs. 93 not on Rs. 2, that is to say, it will not be 100 per cent., though from the shareholder's point of view the whole profit, namely Rs. 95, has been distributed.

Another view that is canvassed is whether the shareholder is entitled to 100 per cent. grossing up if the dividend is equal or less than the assessable income of the company less the tax thereon. The Department in such a case will have recovered the tax from the company on a sum greater than the tax on sums distributed as dividend and therefore grossing up 100 per cent. of such dividend will not be wrong. The idea is not only plausible but also catching; but its very simplicity is deceptive for it hides some fallacies. Let us examine it. A company, again let us assume, makes a profit of Rs. 100. The depreciation allowed is Rs. 7, whereas what is charged is only Rs. 5. Further, let us assume that Rs. 8 represent disallowables, i.e., inadmissible expenses. The assessable income is, therefore, Rs. 95+5+8=108−7=101. When Rs. 101 is the assessable income and the income as per account is Rs. 95 and supposing Rs. 95 is distributed, is grossing up at 100 per cent. correct? According to the aforesaid view, since Rs. 95 are less than Rs. 101, the assessable income, 100 per cent. grossing up is justified. Let us test its validity. Credit is to be given for profits that have been distributed, not on profits which are not and cannot be distributed. Distributable profits are factual, assessable profits are only statutory, not real. Therefore the fact that tax is levied on a profit is no justification for grossing up. Justification can come only if it be and is distributed. Therefore Rs. 8, representing inadmissible expenditure, cannot and must not be treated as eligible for grossing up, for Rs. 8 are not profit and cannot be distributed, for they represent profits already disbursed as expenses but which are inadmissible. The Government is not entitled to give the shareholder a credit for such taxes on amounts paid out and as such they do not and cannot be reflected in dividends.

Next, there remains the assessable income which is Rs. 101. Deduct from it Rs. 8 for inadmissible expenses. There is a balance of Rs. 93. And if you distribute Rs. 95, you will be distributing Rs. 93 profits which have borne tax and Rs. 2 that has not borne tax. Since in the factual distribution, there is Rs. 2 distributed out of non-taxable profit, there should be no grossing up on Rs. 2. In other words, the percentage of grossing up will not be 100 per cent. but 97.8 per cent. only. Therefore, the view that 100 per cent. grossing up is justified is clearly wrong.

Another controversy pertains to the scope of interpretation of Clauses (c) and (d). Some say that, under Clause (c), a company has to show the total income as will be computed for income-tax purposes and under Clause (d) total profits and gains. The proper view seems to be that Clause (d) requires statement of total profits and gains of the company as per books. Clause (c), on the other hand, requires to show the amount liable to be included in the total income on which income-tax is payable, which, in other words, means, excluding any items like agricultural income, etc., on which no tax is payable. Let us, again, illustrate it thus: say profit is Rs. 95 (Rs. 100−5 for depreciation). Suppose out of it, 10 per cent. is agricultural income, the disclosure under Clause (c) will be Rs. 85.50 and under Clause (d) it will be Rs. 95, thereby clearly showing that, of the 100 per cent. of profit shown under Clause (d), only 90 per cent. is taxable. Therefore the grossing up will be based on 90 per cent., and not on 100 per cent.

There is yet another controversy as regards Part II of the certificate and it is this: where the dividend declared is higher than the assessable profits, must it be presumed that the excess dividend comes out from reserves or accumulated profits of one or more preceding year or years? The controversy here is as regards the presumption under the rule. Is it, therefore, statutorily enforceable, irrespective of the resolution of the company or is it a presumption, where the company's resolution is silent, as to the year out of which the dividend is declared? A company under Company Law can declare a dividend out of current year's profit. It can declare dividend partly out of current year and partly out of reserves built from the past years' profits. It can also declare a dividend entirely out of a particular year's profit credited to reserves and carry forward the current year's balance either unappropriated or appropriated to reserve account. A company has no mind. One cannot, therefore, enter into the question of its motive. Its mind is reflected in the language of its resolution, which is not only binding on the shareholders, but also on the Income-tax Department. When, therefore a company expressly says in its resolution that a dividend of so and so be declared out of reserves created out of past profits and, if such a resolution is passed, the dividend must be regarded to have been declared out of the profit of the specified year, notwithstanding the fact that the company had made a profit in the year under reference which it has resolved not to distribute but carry forward.

Another view that is canvassed is this: a company by its resolution may expressly state that the dividend it declares is a dividend out of the taxable profits of the company only, in which event the opinion states that the shareholders are entitled to 100 per cent. grossing up, notwithstanding the fact that its divisible profit fund consists partly of taxable and partly of non-taxable profits. This view seems to be based on two recognised principles of law: one that the company's resolution that it declares dividend out of its taxable profits only is binding not only upon the company, but also on the Income-tax Department; and the other, that where there is a mixed fund, capital and revenue, the assessee is deemed to have drawn upon the fund which is most advantageous to him from the taxation point of view. While, therefore, the adumbrated view seems plausible and attractive, it does not appear to fit in with the statutory requirement of the form of prescribed certificate, nor does it seem free from difficulties of adoption.

The profit as shown by the profit and loss account of a company is a profit made up both of taxable and non-taxable profits. Isolating taxable profits is possible by carrying non-taxable profits to a separate and identifiable fund. Where this is done, it is possible for the company to pass a resolution declaring dividend out of the taxable fund only. But, where the funds are mixed up, a mere resolution that the company has drawn upon taxable fund only and not the non-taxable one, does not seem to suffice. Because one reaction of such a resolution will be to examine whether the company has in fact acted upon its resolution as such, namely, tapped only the fund made up of taxed profits and left the untaxed profits intact and whole. If the resolution is not in conformity or consonance with the accounts, the Income-tax Department may well say that the resolution has not been given effect to. Apart from this, this manner of treatment must entail constant recomputation of the percentage of taxable to non-taxable profits carried forward, for every time the profit fund is drawn upon the percentage of taxed to untaxed profits would change. If this were permissible, there should be a distinct provision in the certificate relating to earlier profits used for the purpose of declaring current dividend and thereby altering the previous computed percentage. There is no such provision found in the certificate required to be given where past profits are drawn upon for dividend.

It is to be hoped that this article will throw light on the controversy that is raging between the taxpayers and tax-gatherers. The Central Board of Revenue, however, is sitting 'mum' over the whole affair, perhaps enjoying the sport.

The fact that there is room for too much diversity of opinions itself suggests that the form is not happily worded and, secondly, that the Central Board of Revenue should issue, at an early date, clear and explicit instructions as to the true implications of the controversial clauses in the certificate or to amend the form itself, if it is found deficient in carrying out the true intention of its framers.

INDUSTRIAL CONGESTION IN BOMBAY CITY

A Study Group of Experts has been constituted by the Government of Bombay to examine and propose specific measures for solving a number of problems arising, mainly, out of industrial congestion in Bombay City and its suburbs. The Group consists of five panels, one each for housing finance, building materials, land and open space and other community requirements, industrial location and communication and traffic. The Group has already invited suggestions from among associations, industrialists and others interested in these problems. The Group will submit a report to the Government after a detailed study of the various suggestions. In the course of an "at home" arranged by the Group recently, with Mr. Y. B. Chavan, Chief Minister, as guest of honour, Mr. S. G. Barve, Secretary, Public Works Department and Chairman of the Study Group, dwelt at length on the scope and progress of the work assigned to the Group.

According to Mr. Barve, the problems that have arisen as the result of over-concentration of industry in the city and its suburban areas relate to overcrowding, shortage of housing accommodation, lack of open spaces and congestion of traffic. While the city's population has increased in recent years beyond all previous anticipation, the recommendations contained in the Master Plan for Greater Bombay, published over a decade ago, were not acted upon in the meantime. Further, contrary to the recommendation of the Master Plan, a large number of industrial units have expanded and even fresh units established. As for the housing problem, the total number of tenements being construted through the agency of both the public and private sectors is far short of the needs of the city's growing population. While there is need for construction of 300,000 tenements so as to meet the housing needs of the city's population, only 55,000 tenements were constructed during the last six to seven years. A large number of houses in the city are in a dilapidated condition and are due to be demolished in the course of the next 10 years and that has further aggravated the housing problem. The other problems are traffic congestion and very negligible area of open space available in the city.

U.K.'S STEEL EXPORTS

Although deliveries of steel to both the export and the home trade continue at a lower level than a year ago, as has just been announced by the Iron and Steel Board in London, the United Kingdom has maintained its share in a declining world market. The main decline in exports in the first five months of this year has been in sheet, tinplate and light sections, but exports of some forms of tube have been higher. Imports of scrap and pig iron and steel, excepting sheet and strip steel, have been heavily reduced, so that the margin between the value of imports and exports of steel and steel-making materials is wider now than it was a year ago. Whereas in the first five months of last year the margin—representing excess of exports over imports—was £15,500,000, in the same period this year it was £19,500,000. To get a true picture of a "balance of trade" for the industry, it is thus necessary to offset the reduction in imports against the fall in exports. Over the post-war period as a whole, the value of steel exports has been approximately equal to the value of steel imports together with imports of steel-making raw materials. But to complete the picture, it would be necessary to take account of indirect steel exports, in the form of articles made from steel. If these are included, a large export surplus is shown.

The decline in international trade during the first quarter of 1958 was specially marked in tinplate and in steel sections, but the United Kingdom improved its share of trade in these products somewhat, and also in tubes and pipes. British exports of iron and steel products in the first five months of this year—at a monthly average rate of 247,900 tons—were almost evenly divided between Commonwealth and other destinations, and the main Commonwealth recipients (monthly averages in thousand tons) were Canada 16.2, New Zealand 15.7, India 11.9 and South Africa 9.8.

MILITARY ENGINEER SERVICES

SCOPE FOR IMPROVEMENT INDICATED

BESIDES being an important limb of India's national defence, the Military Engineer Services (M.E.S.), one of the oldest services in the country, has had a very distinguished past which justifies the hope that it will continue to play an important role in economic reconstruction. The M.E.S. has made a very significant contribution to national economy through the many construction works which it has executed either directly or indirectly through contractors. It is true that many of these works were undertaken for strategic considerations. Even so, they have conferred much benefit on the civil population. Some of the lines on which the M.E.S. can increase its usefulness to the community as well as the defence which it is meant to aid have been indicated in the comprehensive report on the M.E.S. by the Estimates Committee.

The functions of the M.E.S. are varied and many. It is responsible for all capital works services for the Army, the Navy and the Air Force and Ordnance factories and defence works, including such services as roads, electrical and mechanical installations and water-supply. It procures and holds stores for all engineering works. It also renders assistance to civil authorities in the maintenance of essential services in the event of an internal emergency. The budget for the M.E.S. varies from year to year, depending upon the works which it undertakes. In 1956-57, its budget aggregated Rs. 27.8 crores, though actual expenditure was only Rs. 25.3 crores. In previous years too, expenditure fell short of the budgeted amount. The Estimates Committee has viewed with concern "such recurring overbudgeting which is contrary to sound finance." According to the Committee, there has been a "lack of proper planning and an inadequate appreciation of the various preliminaries to the execution of works on the part of the authorities concerned."

Establishment

A point to which the Committee has drawn special attention is the increase in establishment charges. It points out that, in 1955-56, such charges constituted 13.03 per cent. of the workload, as against 12.09 per cent. in 1954-55 and 11.59 per cent. in 1953-54. In the Central Public Works Department and in the Railways, the relevant percentages in 1955-56 were lower at 9.50 and 5.0, respectively. The higher percentage in the M.E.S. is attributed to the fact that establishment is sanctioned on the basis of anticipated work-load which does not always materialise. In this connection, the Committee recommends that a "systematic and scientific assessment of the staff position with reference to their achievements and future programme should be carried out periodically, and efforts be made to achieve the maximum economies that could be effected in all directions even to the extent of suitably reorganising the structure of the organisation." While we have no doubt that this recommendation should be implemented, it is, perhaps, necessary to observe that the "percentage" yardstick should be applied with a certain discrimination to the M.E.S. which has frequently to undertake engineering works out of strategic considerations which can brook no delay and in which costs, however important, cannot be the sole determining factor. In the strategic engineering sphere in which the M.E.S. functions, there ought to be a reasonable degree of freedom for sacrificing cost considerations in the interests of expeditious completion of works.

Charges

Discussing the question of departmental charges levied by the M.E.S., the Committee points out that these charges are levied at the rate of 14 per cent. for works done for the Air Force, the Navy, the Ordnance factories and at the rate of 24½ per cent. for works done for other bodies like the C.P.W.D., the State Governments and the cantonment Boards. The Committee learns that the C.P.W.D. levies departmental charges on a slab system ranging from 9¾ per cent. for works costing Rs. 5 lakhs and above to 17¼ per cent. for works costing Rs. 40,000 and below, and that the railways levy 12½ per cent. on the total cost of the work (wage and materials) including the cost of land, except where a rate higher than 12½ per cent. is charged to Government departments on a reciprocal basis. The Committee was informed that in the case of the Navy, the Air Force and the Ordnance factories, the charges consisted of 11 per cent. establishment charges, 1½ per cent. audit and 1½ per cent. T. & P. charges and were adjusted by a block transfer made at the end of the year, and were revised in the case of wide fluctuations in the actual establishment charges. As regards the higher charges levied for works done for other bodies, the representatives of the Ministry agreed that it was a high percentage and stated that the charges were being reduced to 15 per cent. The Committee does not appreciate the need for the levy of departmental charges by the M.E.S. on works executed for any of the Defence Services. Even as regards the levy of departmental charges, among the works services of the Government of India and the States, the Committee suggests that the feasibility of doing away with the system should be considered. If, however, it is not possible to abolish this system altogether it should at least be kept at a uniform and minimum basis.

Contractors

At present, most of the M.E.S. works are executed through contractors and a smaller proportion through departmentally employed labour. Departmental execution is resorted to only in cases like routine maintenance of a petty nature, urgent maintenance where contracts are not available at competitive and reasonable rates and where there are special difficulties in giving the work to contractors. About 8 per cent. of the "original" work and 32 per cent. of the "maintenance" work have been carried out departmentally and the rest through contractors. The Committee has suggested increased departmental execution of works, in order to eliminate the "middleman's profit." It admits that departmental execution is costlier at present. But it argues that there is no reason why "it should continue to be so." It adds:

"If the contractor adheres to the specifications and yet could complete the work at a lower cost and earn a good percentage of profit, there do not seem to be insuperable difficulties in reducing the present high cost of departmental execution. If, on the other hand, the quality of contractual work is not up to the required standards, it would mean that Government is not getting the value for the money spent. As regards the argument that departmental officers will not be able to extract as much work from labour as contractors, it would seem that the suggestion is either that labour is exploited by the contractors or that the efficiency of the Department is not up to the mark. In either case, the position is unsatisfactory. Therefore, while agreeing that much would depend on labour leadership, the extent of development of civic sense and the willingness to give a full measure of outturn, the Committee would recommend that opportunities must be taken every now and then to undertake departmental execution of works in suitable cases and standards must be set not only of quality of work, but also of efficiency of organisation, economy and fair deal to labour."

But one wonders whether, in the long run, departmental execution will not impose too heavy a burden on the taxpayer. Private contractors turn out work at lower cost. Indeed, many of them could do the work at still lower cost if prompt payment of their bills could be ensured. Perhaps, the chief reason why the quality of the work of contractors is not always up to the mark is that private contractors who have a reputation to maintain are not always employed. From this point of view, there is a great deal to be said in favour of wider publicity for tender notices which the Committee has rightly advocated. The M.E.S. Review Committee, appointed in 1955 for reviewing the work of the M.E.S., recommended that, in cases of work of Rs. 1 lakh and over, the advertisement of invitations to tender should appear at least once in one local language paper and twice in English papers and if the value of the work exceeded Rs. 10 lakhs, it should be advertised in other larger towns also. While agreeing generally with this view, the Committee recommends that, in order to create keener competition, Indian language paper should be used to a greater extent as a medium of publicity in all cases of contracts big or small; in cases of works of more than Rs. 10 lakhs in value, advertisements should be made in the important language papers of other regions also. The authorities, we would like to add, will also do well to consider whether they should not advertise the tenders in financial and commercial journals which command a circulation among the leading engineering firms and contractors.

Research

An important suggestion made by the Committee is that the problems requiring research should be sent up for study to such institutions as the Central Building Research Institute, Roorkee, the College of Military Engineering, Kirkee, and the Central Road Research Institute. The establishment of a close liaison between the M.E.S. and the research organisations will be to their mutual advantage. Further, since the M.E.S.'s activities are spread over a wide area, the study of the problems which it encounters might conceivably lead to important results of great benefit to the entire country.

METALLIC MINERALS

During 1957, India produced, according to the Indian Bureau of Mines, metallic minerals valued at Rs. 28.5 crores, as against Rs. 28 crores in 1956. Of the total value, ferrous group of minerals accounted for Rs. 18.5 crores while the minerals of the non-ferrous group accounted for Rs. 10 crores.

The output of chromite was higher by nearly 26,000 tons. Almost the entire increase in the production of chromite was from Cuttack and Keonjhar districts of Orissa State. The higher production was the result of the higher demand and the improved shipment facilities made available to the principal producers during the year.

The production of iron-ore maintained a steady upward trend and reached a peak figure of 5.1 million tons, representing an increase of nearly 160,000 tons over the production during the preceding year. The significant improvement in the internal as well as external demand for iron-ore was reflected in higher production of iron-ore during the year. The output of manganese ore during 1957 was 1.57 million tons, showing a fall of 119,000 tons compared to the previous year. The fall in production was reported mainly in the States of Andhra Pradesh and Madhya Pradesh. Andhra Pradesh produces mostly low grade ore and it was reported that, due to the accumulation of stocks, mining operations were suspended during the latter half of 1957 by some principal producing units. Much of the fall in production in the State of Madhya Pradesh was due to the inadequacy of transport facilities. The mine-owners generally adjusted their production in relation to the export allotments and supply of wagons.

The value of output of minerals of non-ferrous group was lower by Rs. 90 lakhs in 1957, as compared to the previous year. This was the result of lower production of gold and ilmenite and the lower price of copper-ore mined. The output of gold during 1957 was 30,000 fine ozs. less compared to the previous year. The main reason for the fall in production of gold was the fall in the average grade of ore mined during 1957.

The higher production of copper-ore was due to the development programme carried out by the Indian Copper Corporation Limited in respect of their mines. In view of the increased demand for non-ferrous metals in India, development work at Zawar Mines and mills was taken by the Metal Corporation of India Limited. As a result of this, higher quantity of lead and zinc ores was produced and milled during the year 1957 and there was also an increase in the smelter production of silver.

GHANA LAUNCHES OWN AIRLINE

The independent State of Ghana has launched its own airline. To be known as the Ghana Airways, it will operate domestic, regional and international services for the transport of passengers, mail and freight. Incorporated at Accra with a nominal capital of £400,000, sixty per cent. of the capital has been provided by the Government of Ghana and 40 per cent. by the B.O.A.C.

The new company has entered into a seven years' agreement with the B.O.A.C. for the operation of "pooled" services between Ghana and the U.K. with aircraft on charter from the B.O.A.C. bearing the Ghana livery. Initially, beginning 16th July, the Ghana Airways will operate a once-weekly Stratocruiser service between Accra and London. As traffic increases, it is planned to raise the number of Ghana Airways services until parity of frequency is reached with the B.O.A.C. which operates four services a week between the two capitals at present. In due course, Britannias will be used both in the B.O.A.C. and the Ghana Airways liveries. The Ghana Airways will also take over all of the existing domestic and some of the regional services from West African Airways Corporation on or about 1st October. The aircraft on charter to the Ghana Airways will be operated by the B.O.A.C. flying and cabin staff. The training of Ghanian nationals to take over the management, administration, flying and engineering sides of the airline will be undertaken by the B.O.A.C. In the first place, however, a number of Europeans employed by the B.O.A.C. will be seconded to Ghana Airways.

ROADS IN THE REVISED PLAN

PROVISION INADEQUATE

By B. V. Vagh

EXECUTIVE VICE-PRESIDENT, I.R.T.D.A.

THE revised allocations in the public sector in the second Plan in comparison with those in the original Plan are as follows:

(In crores of rupees)

Item	Original Plan	Revised Plan
Agricultural and community development	568	510
Irrigation and power	913	820
Village and small industries	200	160
Industries and minerals	690	790
Transport and communications	1,385	1,340
Social service	945	810
Miscellaneous	99	70
Total	4,800	4,500

These allocations show two facts, (i) an increase of Rs. 100 crores for industries and minerals, and (ii) a small cut, in comparison with the cuts in other items, for transport and communications. Both these facts show the importance attached, rightly of course, by the Planning Commission to these two items, since our current needs are to develop industries and to provide sufficient transport for them.

What is necessary to see is whether the provision for transport is commensurate with the provision for industries. *Prima facie* this is not so, since for an *increase* of about 14.5 per cent. in the allotment for industries from Rs. 690 to Rs. 790 crores the allotment for transport and communications has been *decreased* by about 3.25 per cent. from Rs. 1,385 to Rs. 1,340 crores. The implications of this will be obvious when it is remembered that the original allotment for transport was considered and is even today considered inadequate by many.

Excluding a sum of Rs. 225 crores to be made available to the railways from their depreciation fund and a sum of about Rs. 25 crores to be made available to roads from the Central Road Fund, the break-down of the allocation for transport and communications is as follows:

(In crores of rupees)

Item	Original Plan	Revised Plan
Railways	900	896
Shipping, ports and harbours	92	104
Roads and road transport	262	229
Civil aviation, posts and telegraphs, broadcasting, etc.	131	111
Total	1,385	1,340

It will be seen that, on the transport side, the railway allotment is practically the same as before, being Rs. 896 crores as against Rs. 900 crores, the allotment for shipping, ports and harbours has been raised by Rs. 12 crores from Rs. 92 to Rs. 104 crores, while that for roads and road transport has been reduced by Rs. 33 crores from Rs. 262 to Rs. 229 crores! In other words, while rail and water transport have been provided for to the extent possible, roads and road transport have been cut. This must make strange reading, in the face of official announcements during the past two years to the effect that, next to the railways, road transport has to be developed for the implementation of the second Plan.

It has been estimated that the gap in the long-distance transport capacity of the country to be made good by road transport is about 40 million tons per annum by the year 1960-61. To meet this, the country will need at least about 60,000 more trucks than are likely to be available and about 15,000 trailers. Besides, through communication will have to be provided either by making diversions or by providing ferries at about 56 points on our National Highways where bridges are missing.

There should be no difficulty about trailers which are manufactured locally. All they need is an incentive by Government by issuing permits for them freely on important routes. There should also be no difficulty about providing diversions and ferries on National Highways since it has been estimated that about Rs. 12 crores can be spared for roads by the year 1960-61 from the surplus in the cement account of the State Trading Corporation and this amount is likely to be sufficient for this work. The main difficulty will be about the foreign exchange required to produce about 60,000 more trucks. Here, the least the Government can do is to examine the possibility of diverting to road transport either in part or full the anticipated saving of about Rs. 48 crores in the railway's original requirements of about Rs. 425 crores of foreign exchange.—*All Rights Reserved.*

NEW PRODUCTS AND PROCESSES

New Technique in Heart-Valve Surgery

THE U.S. Public Health Service has announced the development of a technique that permits precise evaluation of results of heart-valve surgery while the operation is in progress. The method, it is said, can be used on various heart valves whose openings have been clogged by congenital defects or rheumatic fever. The technique was developed by a team of surgeons at the National Heart Institute in Washington. It gives the surgeon a better idea of how well the valve's function has been restored and whether to enlarge the valve opening during the operation.

X-Ray Microscope

A new X-ray microscope has been perfected in the United States which will enable scientists to study the interior structure of opaque objects and materials and quickly identify their chemical composition. It can penetrate dense materials that cannot be studied with standard light microscopes or even with electron miscroscopes. The manufacturer says that it should be especially useful in the metallurgical, paper, textile, plastic and food industries, and in the medical-biological field. It will be effective, for example, in showing the interiors of biological specimens such as lung tissues, when a pathologist wishes to identify silicon and observe its distribution in the study of silicosis.

Non-Sinkable Boats

A new blend of rubber and plastic developed in the United States may become an important material for small boat construction. It is claimed that it makes a practically unsinkable boat hull. Developed by the United States Rubber Company and called Royalite, the material is of a five-ply construction built around a cellular or honeycombed centre. In recent tests a motor boat made of the material was repeatedly run into a floating oil drum at high speed without sustaining damage of any kind. A boat made of the material cannot sink even when swamped, it is claimed, since the cellular construction provides great reserve buoyancy. The United States Rubber Company will not manufacture boats made of Royalite, but will fabricate hulls, decks and other parts to the specifications of boat manufacturers.

Electronic History Book

An electronic history book has been made by the International Business Machines Corporation of the United States. It is an electronic computer that can answer historical questions in 10 languages. Thousands of the major events of the world's history dating from the fourth century B.C. down to the present are recorded in the computer's "memory" in 10 languages. When a card bearing the date of a certain year is inserted in the machine, it tells the major historical events of that year. The answers are given in less than two-thirds of a second and are typed out by an electric typewriter. The machine answers questions on historical dates in English, French, Italian, Dutch, Spanish, Swedish, Portuguese, German, Russian and Interlingua, a universal language that can readily be understood by many people, regardless of their own national language.

Automatic Postal Clerk

A new electronic machine that reads typewritten addresses on envelopes and then automatically sorts them according to the city and state to which they are to be sent has been developed in the U.S. The machine, still in the experimental stage but already tested in a post office, was developed by the Intelligent Machines Research Corporation of Alexandria, Virginia. In a fraction of a second the machine reads the bottom, or city and state line of an address by sensing the length and location of letter strokes. This enables it to analyse the writing and identify the letters of which it is composed. The machine can read various sizes of types by means of a so-called "comparator circuit," which adjusts itself for each envelope, according to the height of the first letter of the first word in the address. At present the machine cannot read handwritten addresses. Eventually, however, it is believed that it will be developed to the point where it will be able to read a "significant" number of such addresses.

Ultra-sound Technique for Eye Diseases

A new technique for more accurate diagnosis of certain eye diseases was demonstrated recently at the American Medical Association meeting in San Francisco. The technique involves the use of an instrument producing high frequency sound waves which can "see" through totally opaque eye tissue. Dr. Gilbert Baum of Port Chester, New York, showed pictures illustrating diseases within eyes that cannot be seen by the light of X-rays. These included a tumour obscured by a cataract, foreign bodies invisible to X-rays, and a detached retina obscured by a hemorrhage in the back of the eye. In the past, there were no instruments for examining the areas behind the eye to surmise what diseases might be present. With the new ultra-sound instrument the correct diagnosis may be obtained and proper treatment given. The device operates like this: a burst of high-frequency sound is transmitted, which, when it strikes an object in its path, sets up a return echo. This ultrasonic echo is picked up by a special microphone which converts the sound into electrical energy. The electrical energy then is converted into light similar to the way a television receiver works. To obtain an overall view of the eye, the transmitter and receiver are moved in a sweeping motion over the eye. As the echoes come back from different portions of the eye, they are sent into a radar receiver, which then displays the eye's interior.

Notices

DUNCAN BROTHERS & COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Friday, 22nd August, 1958, at 11-00 a.m., for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1957.
2. To confirm the interim dividend paid on the Preference shares and to declare a dividend on the Ordinary shares and a final dividend on the Preference shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

As Ordinary Resolutions

5. "That the consent of the Central Government having been received, with effect from 1st October, 1958, Mr. J. A. Duncan, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such in accordance with the terms specified in the Agreement dated 16th September 1957 made between the Company of the one part and Mr. Duncan of the other part as purported to be modified and amended by a Supplemental Agreement to be entered into between the Company and Mr. Duncan, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the Directors be and are hereby authorised to enter into the Supplemental Agreement with Mr. Duncan in terms of the said draft."
6. "That Mr. L. T. Carmichael be and is hereby appointed a Director of the Company with effect from 1st October 1958."

The Share Transfer books of the Company will be closed from 14th to 22nd August, 1958, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,

DUNCAN BROTHERS & CO., LTD.,
S. H. DAVIES,
Director.

CALCUTTA, *24th July*, 1958.

Note.—A member of the Company who is entitled to attend and vote at the above Meeting may appoint one or more proxies to attend and vote instead of himself. A proxy need not be a member of the Company.

A blank form of proxy is enclosed which should reach the Company not later than 19th August, 1958.

BURMAH-SHELL REFINERIES LTD.

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5½ per cent. Debentures 1965-69 will be closed for transfers from 16th August 1958 to 31st August 1958, both days inclusive.

P. A. ENGINEER,
Secretary and Treasurer,
State Bank of India,
Agents for Burmah-Shell Refineries Ltd., for the management of the Debentures.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, *1st August*, 1958.

INVESTMENT OF LIFE FUNDS IN THE U.K.

INSURANCE COMPANIES HAVE NO DOMINANT CONTROL OVER INDUSTRY

DESPITE the creditable performance of British insurers in the management and expansion of business as well as the investment of funds, they too have not been free from criticisms of a sort, often politically-motivated. Proposals have been made, in certain quarters, for the political control of insurance companies and their investments on the ground that they do exercise a dominant influence on industry. That this *contention has no basis* in facts and that the extent of control over industry exercised by insurance companies is less than what is made out to be, was convincingly brought out by Mr. L. Ginsburg, Investment Manager of the Legal and General Assurance Society, in the course of a lecture delivered recently in London. Marshalling an array of facts and figures, Mr. Ginsburg argued that not only did insurance companies exert no great influence on industry at present but that the relative importance of insurance investment in ordinary shares of companies, though increasing, was unlikely to become dominant for a very long time to come.

In 1957, Mr. Ginsburg observed, the U.K. funds of British life insurance offices increased by rather less than £300 million. Personal savings as a whole increased by £1,620 millions. Broadly, therefore, personal savings through the medium of life insurance represented 20 per cent. of the total in this category. Of the total national savings, including company savings, and the savings of the Government, of £4,000 million, the £300 million of life insurance represented about 7.5 per cent.

During the decade or so since the end of the war, the world-wide investment assets of British insurance companies increased from £2,500 million to £4,800 million. On 31st December 1956, the balance-sheet values of the investment assets of all companies established in the U.K. aggregated £4,790 million. This figure also includes the overseas investments, a very considerable part of which is required to be held in connection with overseas business, mainly non-life. The major categories into which the investments fall are made up of £1,225 million in British Government securities, £1,024 million in debentures and preference shares and £770 million in ordinary shares. It is mainly on account of the investment in ordinary shares—and the steady increase in the amount so invested—that the opinion is expressed that British insurance is playing a dominant part in providing industry with risk capital. The total value, on 31st December 1956, of all ordinary shares quoted on the London Stock Exchange has been estimated at £9,110 million. Thus life insurance companies' holdings of £770 million, while significant, could not be regarded as dominant. It represents only 8½ per cent. of the total. Life insurance companies' investments in preference shares aggregated £300 million, against the aggregate nominal value of preference shares quoted on the London Stock Exchange of £1,250 million. This is a much more significant portion; but it should be borne in mind that the preference shareholder has, in general, only a very limited voice in the control of industry.

Control of Industry

Independent confirmation of the extent or otherwise of insurance investment control is available from the results of an investigation carried out by Messrs. Clayton and Osborn of Liverpool University. They examined the share registers of a number of the largest companies whose shares are quoted on the London Stock Exchange. Their sample represented more than 50 per cent. of the aggregate asset worth of all companies so quoted. The investigation disclosed that, on the average, some 6 per cent. of the ordinary share capital was held by insurance companies and 13 per cent. of the preference capital. Of the 71 largest companies—those with net asset values exceeding £15 million, in only three cases did the insurance companies' holdings of ordinary shares exceed 15 per cent. Of these three, two were steel companies' shares recently underwritten and re-issued on denationalisation and which could be regarded as special cases.

These facts lead to the conclusion that the voice of the insurance companies in British industry is by no means dominant at present. Judging from the current trend of investment in ordinary shares, it is unlikely, according to Mr. Ginsburg, for it to become dominant in future. About ten years ago the amount invested in ordinary shares was £270 million and this represented only 4 per cent. of the aggregate value of all ordinary shares quoted on the London Stock Exchange. Now it is near about 8½ per cent. The average annual amount invested by the life insurance companies in ordinary shares during the period 1954 to 1956 was about £90 million; during the period 1951 to 1953 it was only £40 million (1954 13.6 per cent.; 1955 14.6 per cent.; 1956 15.4 per cent.) The relative importance of insurance investment in ordinary shares is thus increasing although in absolute terms it is by no means dominant.

No Uniform Standards

The investment policy followed by various companies in Britain does not conform to any set standards. In other words, there is no uniformity, the spread of investment within different categories of investments varying widely between different companies. There is an essential difference in the investment of funds by life and non-life departments. In the former, the liabilities are predominantly of a long-term nature, the funds have grown steadily for many years. It follows, therefore, that massive liquidity is not an important feature of the life department assets. On the other hand, so far as the non-life (or general) funds are concerned, both the nature of the contract and the nature of the risks make it essential to hold substantial funds readily available or convertible into cash. The principle of long-term accumulation of premiums is an essential aspect of the life fund and the maintenance of an adequate rate of interests on the fund becomes of the highest importance. In the general fund, accumulation proceeds at a very much slower rate, and interest earnings are no more than incidental to underwriting profits.

These differences in principle are reflected in the respective investment portfolios. Roughly, the life funds represent in the aggregate some 80 per cent. of the total assets of British insurance companies. The following table shows how the spread of life assets in the different categories of investments varies among 42 of the leading companies which together represent some 90 per cent. of the total business.

Percentage of total Life Assets 1956	Number of companies					
	British Government Securities	Debentures	Preference	Ordinary	Mortgages and loans	Property
0–5 ..	..	2	9	1	1	18
5–10 ..	1	12	19	3	6	13
10–15 ..	10	9	12	10	9	8
15–20 ..	7	11	2	11	8	2
20–25 ..	5	6	..	11	7	..
25–30 ..	6	..	..	3	5	1
30–35 ..	7	1	..	1	3	..
Over 35 ..	6	1	..	2	3	..
Total ..	42	42	42	42	42	42

It will be seen from the above table that the percentages in the various categories vary widely and that there is no discernible pattern which might be taken to represent a common standard of investment policy.

A closer look at the table shows that, so far as British Government securities are concerned, ten companies hold between them 10 per cent. and 15 per cent. of their assets in this category, while 13 hold over 30 per cent. Fourteen companies have less than 10 per cent. in debentures whereas six have between them 20 per cent. and 25 per cent.; one company has actually more than 35 per cent. in this group. Preference shares are a relatively small group and here there is some degree of uniformity. All the offices except two have less than 15 per cent. of their assets invested in preference shares.

As regards the ordinary shares, there is a vaguely discernible degree of uniformity. In the 10-15 per cent. group, there are 10 companies, in the 15-20 per cent. group there are 11 and a further 11 companies hold between 20 per cent. and 25 per cent. in this category. There are two offices with over 35 per cent. of their funds in ordinary shares while one office has less than 5 per cent.

As regards mortgages and loans on policies, the extent of the inconsistency is quite striking. There is no evidence whatsoever of a common pattern. There is, in fact, an exact balance between those offices which regard mortgages as eminently suitable for the investment of their funds and those which regard them as eminently unsuitable. This of course makes for what is called healthy market. Property investment is a highly specialised field and only a very few companies invest a significant portion of their funds in this category.

Freedom of Investment

There is, thus, sufficient manifestation of freedom of investment for insurance companies. There is no statutory interference. The principle followed is freedom with publicity. Publicity, however, is by no means normal. All companies are required to make annual returns to the Board of Trade in standard form showing details of the business transacted. On the occasion of a valuation of the life department liabilities, very considerable detail is required to be given, sufficient in fact to enable any one unconnected with the company in question to make an independent estimate of life liabilities. These returns and the audited accounts of the company are scrutinised by the national and financial press and are subjected to much comment. This publicity is designed to provide an adequate measure of protection to the insuring public.

The freedom would, however, be unreal if the companies interpreted it to mean freedom to eliminate competition. The competition nevertheless is intense in all fields and so far as investments are concerned, as noted above, there is little or no uniformity with any common standard. It is held that if investment policy conformed to a uniformly accepted pattern, it would contain within itself the seeds of its own destruction. If any one type of investment were regarded as unquestionably the only suitable medium for investing life insurance funds, the effect of continuing demand on limited supply would soon become evident. The imbalance between demand and supply would correct itself when the excess demand forced yields to a level unattractive as compared with other avenues of investment. Freedom of investment, therefore, has what might be called built-in correctors. These would come into operation whenever the pattern of investment policy appears to be moving in one direction only.

Although in arriving at their investment decision, the insurance offices act in complete independence of each other there does exist an organisation called the Investment Protection Committee of the British Insurance Association on which representatives of the companies meet from time to time to discuss matters of common interest in regard to existing investments. But the discussion of the investment merits of particular securities or of new issues is expressly excluded at the meetings of the Investment Protection Committee. The I.P.C.'s attitude towards any problem which comes to it for consideration is not determined by its own sectional advantage. Where there is apparently a conflict of interest between different classes of investors, regard is had only to the equity of any proposed arrangement. The I.P.C. is not interested in seeking a solution to any problem which merely gives the maximum advantage to the greatest number of insurance investors.

WORLD COMMODITY PROBLEMS

INSTABILITY IN PRICES—UNDERDEVELOPED COUNTRIES HARD HIT

THE erratic character of the movement of commodity prices has been a major stumbling block in the smooth flow of international trade. Instability in commodity prices has naturally been causing serious concern to the producing as well as the consuming countries of the world. At any rate, the advanced countries, with their broad-based economic structure, have been in a position to withstand the effects of changing fortunes of a few commodities. The problem, however, is vital to the underdeveloped countries, for, they depend for the bulk of their earnings of foreign exchange on the export of one or two commodities; all the eggs are put in one basket, as it were. What is more, as has been highlighted by the *U.N. Commodity Survey* 1957, despite the notable degree of post-war economic development, the dependence of underdeveloped countries on a few key commodities has not been lessened in recent years. It is as great as it was two decades ago. In more than half of the 36 countries covered by the *Survey*, the leading export commodity accounted for over 50 per cent. of aggregate export proceeds in 1936-38 and 1953-55, and three main exports for over 75 per cent. in 1936-38 and over 80 per cent. in 1953-55.

The commodity markets continued to experience wide fluctuations in 1956 and 1957. The declining trend manifested itself in the first half of 1956, though interrupted by the Suez crisis which brought in its train hectic inventory buying, resumed early in 1957; by the end of 1957, the price index of primary commodities in international trade had declined to the lowest level since the outbreak of hostilities in Korea. The price index of manufactured goods, on the contrary, was gradually climbing up. Consequently, the terms of exchange between primary commodities and manufactured goods became progressively less favourable to the former and by the end of 1957 had declined to the lowest level of the pre-war period. Thus, although in 1957 the aggregate exports of primary producing countries were still about 3 per cent. higher than a year earlier, the number of countries that failed to maintain export earnings rose from 30 per cent. of the total in 1956—accounting for a fifth of all exports—to 36 per cent. in 1957—accounting for a third of all exports. The average rate of export earnings declined further in the first quarter of 1958 which was 5 per cent. below the total for the year 1957. This declining trend in the export earnings of primary products, in the face of mounting expenditure on imports of manufactured goods and capital goods, has thrown the economies of the underdeveloped countries out of gear.

Problem of Instability

Viewed against this background, the concern expressed by many countries in the course of the plenary session of the Economic and Social Council which met at Geneva recently, regarding the problem of commodity instability and its inevitable impact on the underdeveloped countries, is understandable. Mr. Philippe De Seynes, the Under-Secretary for Economic and Social Affairs, in his statement on international commodity problems, pertinently pointed out the hazards to which an underdeveloped country is subjected in the face of fluctuations in commodity prices. He observed that the commodity question fell into two major parts, one relating to the internal structure of production in underdeveloped countries, and the other to the instability of external markets. According to him, the first aspect is concerned with the lack of diversification in the economies of underdeveloped countries. He pointed out that a developed economy with a diversified structure of production, not only spread the risks of any adverse factor but it tended to "reduce the likelihood of any snowballing effect from unfavourable influences." He felt that one of the most important built-in stabilisers inherent in any highly developed economy was the extensive diversification of its national output.

Mr. De Seynes contrasted this with the picture of an underdeveloped country. The underdeveloped economy, he averred, was so highly specialised in the production of a few key commodities as to provide almost no opportunity for spreading of risks or checking the cumulative force of any adverse influence upon the economy as a whole. He observed:

"Relatively small changes in world markets might spell the difference in underdeveloped countries between prosperity and depression, between inflation and deflation, between adequate foreign exchange reserves and the need to resort to trade and exchange restrictions. Even relatively moderate changes in commodity prices might mean the difference between a rising and a falling capacity to import, between balanced budgets and Government deficits between rising and falling levels of consumption and investment."

It is obvious that the problem of internal instability can be solved only by ensuring diversification of the economy. Mr. De Seynes made it clear that the remedy, therefore, was bound to be of a long-term character and relatively slow in making itself felt.

As regards the second aspect of the commodity problem, namely, instability of external markets, Mr. De Seynes emphasised the need for rectifying instability in commodity prices. He particularly highlighted the poor plight of the less advanced countries in this respect. Proceeding, he observed:

"First, there seems to be a peculiar and unhealthy asymmetry in the world's attitude towards the problems of stability as between developed and underdeveloped countries. We have long since come to recognise that large-scale unemployment is not an acceptable price for keeping an industrial economy in balance, but we still seem to attach only secondary importance to commodity instability for the economies of underdeveloped countries. Second, the world seems not to have realised that economic stability in the highly developed countries is by no means a sufficient condition for stability in the demand for primary products. As the post-war experience has abundantly shown, even small shifts in demand for final products in industrial countries, or small changes in investment in inventories can have profound effects upon the export earnings and incomes of many primary producing countries."

Need for International Action

Can this problem of commodity instability be cured at a national level? It cannot be gainsaid that the advanced countries in the course of the war and post-war periods, evolved a number of built-in-stabilisers to put a check on the declining rate of economic activity during a recession. Both the developed and underdeveloped countries also instituted measures designed to compensate primary producers for falling sales. But Mr. De Seynes rightly asserted that it was not within the easy means of underdeveloped countries to give sustained assistance of this sort; and that, no such national programmes could compensate countries for the loss in foreign exchange earnings and reserves during a recession. He felt that, as suggested by the Secretary General in the course of his statement on the world economic situation, the individual countries had a responsibility to husband their reserves in periods of rising earnings to tide them over when conditions became less favourable. He felt, however, that the underdeveloped economies were too poor to undertake such measures. He stressed that the problem of commodity stability could not be left entirely to the primary producing countries to shoulder; and that it must be recognised not only as a national but also as an international problem of first importance.

The question naturally arises whether an international body like the U.N. Commission on International Commodity Trade would be capable of delivering the goods. The answer can by no means be in the negative; for the U.N., confronted as it has been with ever so many problems, made significant progress, though moderate, in the field commodity stabilisation. As. Mr. De Seynes said, a fairly active programme was under way. Three international commodity programmes—on wheat, sugar and tin—are in operation; and a fourth, on olive oil, was awaiting ratification. He disclosed in this context, the current activities of the U.N. in this regard. To quote him:

(*a*) The present International Sugar Agreement, which has been in operation for a period of almost five years, expires at the end of this year. Acting in accordance with the procedures laid down by this Council, the Secretary-General is convening in Geneva on 22nd September a United Nations conference to negotiate the terms of a new agreement in the light of the experience gained during the period of the present arrangement.

(*b*) The present International Wheat Agreement expires in July 1959 and the Governments principally concerned are considering whether a new form of agreement could be developed which would cover a larger proportion of the world trade in wheat and also take into account the surpluses which now exist. The International Wheat Council has recently asked the United Nations to convene a conference on a wide basis to consider the principles that might be formulated and adopted as a basis for such a new agreement.

(*c*) After negotiations extending over a long period, and agreement acceptable to the principal countries concerned with olive oil has been formulated. At present, the agreement lacks the adherence of sufficient importing countries. When this has been received, arrangements will be made, in conjunction with F.A.O., for a meeting to set up an Olive Oil Council to deal with international trade in this commodity.

(*d*) At the request of the I.C.C.I.C.A., the Secretary-General at the end of last year consulted the major importing and exporting countries of certain non-ferrous metals. On the basis of these "soundings" it has now been decided to proceed with certain exploratory meetings which will afford an opportunity for inter-Governmental consideration as to whether further action is desirable. I am happy to announce that, thanks to the collaboration of the Government of the United Kingdom and Northern Ireland, the Secretary-General is convening in London on 8th September an inter-governmental meeting on copper and on 11th September, another to consider problems arising in international trade in lead and zinc."

Organisational Aspects

Proceeding, Mr. De Seynes conceded that it took a decade to negotiate only four commodity agreements; in the meantime, however, commodity markets proved to be extremely vulnerable to small changes in supply and demand conditions. He admitted, however, the time was ripe for evolving ways and means to strengthen its commodity stabilisation programmes. He rightly focussed his attention in this connection on the organisational aspect of the Commission, with a view to widening its scope and enabling it to function successfully. In this connection, he observed:

"I venture now to offer certain comments, therefore, in the hope that they may stimulate a fresh approach. The Commission on International Commodity Trade has been in existence for only a few years. It has not achieved, and perhaps cannot achieve, all that some may have hoped from its establishment. At present its effectiveness is also limited by the absence of two major trading countries. Yet it has weathered some of its early difficulties and has provided a forum to which Governments have brought various problems arising in the commodity field. It has also regularly provided the Council with a concise review of the current commodity situation so that the Council can tie international trade problems to other international problems with which it is concerned. Moreover, I might add, in this connection, that the commodity-by-commodity approach, while it has produced some practical results, needs perhaps to be supplemented by opportunities for general discussion of principles."

Further, Mr. De Seynes urged that the Commission should work in close collaboration with other inter-governmental bodies working in the commodity field and particularly with the F.A.O. He asked for adequate resources for the work of the Commission. Another significant point to which he referred was the necessity for the various Governments to send expert delegations to participate in the deliberations of the Commission. Finally, he emphasised the significance of active participation and support of the countries of major importance in international trade.

In subsequent discussion at the plenary session, the U.K. and the U.S. expressed the hope that the terms of reference of the Commission would be so modified as to enable the two countries to participate in its work. Several other speakers emphasised the vital importance to the underdeveloped countries of stable and adequate prices for their primary exports and called for measures towards that end. Mr. D. Scott Fox of the U.K. said that the problems were so diverse that no one single solution could be the remedy. The U.K. expressed its readiness to examine within a competent organisation, such as G.A.T.T. (General Agreement for Tariffs and Trade) or special international meetings, the measures to be taken but believed that one could proceed product by product and keep an account of consumers' interests as well as that of producers. He further declared that all major producers must co-operate, notably the Soviet Union. Mr. C. H. Philips of the U.S. declared that the only possible long-term solution was the diversification of products exported by the underdeveloped countries. The U.S. believed in freest possible economy but recognised the need for certain control measures. These should principally be meant to eliminate excessive short-term fluctuations of prices and should not tamper with the general market tendencies. Mr. Arnaldo Vasconcellos of Brazil said that every unfavourable development in world coffee prices gravely affected Brazilian efforts in the sphere of industrialisation. He called not only for remedial international agreements but also for special financing, particularly by the International Monetary Fund.

Mr. M. C. S. Chen of China commented on the complexity of the problem involving disposal

RESULTS OF TWO JARDINE HENDERSON JUTE MILLS BETTER

HOWRAH EARNS A PROFIT—RELIANCE REDUCES LOSS

THE jute industry as a whole has had a more favourable period during 1957 than in the previous year, with the result that many units were able to show better working results. The good progress made in the rationalisation and modernisation (which of late is being opposed by labour) and the more stable market situation in respect of raw jute were the main factors responsible for the improvement in the working of mills, despite a setback in the production of the industry as a whole. This does not mean that the mills were out of the woods. Many a unit were running at a loss and had to reduce their losses by selling its loom-hours in part or whole to other units. Two typical instances of such improved working, either by converting the previous year's loss into a profit or by reducing the deficit, are provided by the accounts (for the year ended 31st March 1958) of the Howrah Mills Company, Ltd. and the Reliance Jute Mills Company, Ltd., both under the management of Messrs. Jardine Henderson Ltd., Calcutta

The Howrah Mills has earned a gross profit of Rs. 23.61 lakhs for the year under review, as against a loss of Rs. 13.83 lakhs for the previous year. It also compares well with a meagre profit of Rs. 1.04 lakh earned in the 12 months ended March 1956. The provision for depreciation has been raised from Rs. 10.33 lakhs to Rs. 14.10 lakhs, due to the large additions made in recent years, and the Directors say that the depreciation charge is bound to remain a substantial one for a few years more. After setting aside a small sum of Rs. 60,385 for wealth tax, the net profit amounts to Rs. 8.41 lakhs, as compared with the loss of Rs. 24.66 lakhs for 1956-57.

The net profit of Rs. 8.41 lakhs of the Howrah is supplemented by a sum of Rs. 34.50 lakhs, being the balance standing to the credit of the machinery renewal reserve account on the completion of modernisation programme which was embarked upon in 1952. After wiping out the deficit of Rs. 24.66 lakhs brought forward from 1956-57, the Directors have strengthened the general reserve of the Company by an addition of Rs. 14.24 lakhs. They have also felt justified, having regard to the continuance of reasonably satisfactory working of the Company, in recommending the payment of the dividends on the preference shares for the two years ended 31st March 1958. The payment of preference dividends has not left any surplus to resume payment of dividend on ordinary shares, which has had to be suspended for the second year in succession, after distributing a modest dividend of 5 per cent. per annum for the year ended March 1956, to which level it was reduced from 12½ per cent. paid for the preceding two years.

The Reliance Jute continues to suffer a loss, though its loss for the year under review has been reduced substantially to Rs. 4.78 lakhs from Rs. 21.51 lakhs, to which level it had gone up in 1956-57 from Rs. 10.62 lakhs earned in 1955-56. The provision for depreciation has been cut from Rs. 5.22 lakhs to Rs. 2.03 lakhs, so that the net loss is of the order of Rs. 7.31 lakhs, as against Rs. 27.23 lakhs. With this, the accumulated loss carried forward amounts to Rs. 46.27 lakhs, all within the last three years, as will be seen from the table at the foot of the page. Consequently, the preference dividend is being held over for the third year in succession, let alone the ordinary dividend which has not been paid since September 1953.

In addition to the general factors, the change in the fortunes of the Howrah Mills is due to other favourable factors also, namely, (1) the steady supply of good class white jute, Daisee-Tossa and Mesta from Assam, North and West Bengal, Orissa and the best local areas, following the setting up of jute buying agencies, resulting in a reduction in wastage percentage in the mills and an improvement in efficiency, and (2) the reorganisation of the system of working on a triple-shift basis, following the purchase, with effect from 9th September 1957, of 12,960 loom-hours per week from the Reliance Jute Mills. The original purchase covered a period of six months and a further purchase has been effected for a period of six months to 8th September 1958 at the rate of 50 nP per loom hour.

As stated in the previous year's report, the Reliance Jute Mills had to cease production on 4th September 1957, as the Company was unable at any time to work its full permissible complement of looms. The cessation of production effectively stopped the losses incurred by the Company up to date of sale of its loom-hours. Despite the incidence of compensation payments to workers whose employment could not be continued, the Company was earning profits by the end of the year under review from the sale of loom-hours to other companies under the same management. The profit and loss account of the Company for the year under review shows that the income from sale of loom-hours alone amounts to Rs. 8.55 lakhs, which has gone to reduce the year's loss considerably.

An idea of the financial positions of the two companies can be had from the following synopses of their latest balance-sheets:

	Howrah	Reliance
	Rs.	Rs.
Capital	91,87,500	69,50,000
Reserves and surplus	28,32,775	4,67,720

Cash	2,87,099	66,581
Debit balance	..	46,26,698
	Rs. 2,65,33,031	1,25,74,999

The Directors of the Howrah Mills are cautiously optimistic about the outlook for the industry, in general, and the Company, in particular, during the current year. Thus, they observe in their latest report:

"Increased availability of raw jute and the realisation by the market that the current year's crop would prove comparatively plentiful has resulted in raw jute prices being maintained at a level at which it has generally been possible in recent months to buy jute and simultaneously sell goods at a profit. While this is a welcome change from the situation which has confronted this Company for some time past, it will be appreciated that the industry, being largely dependent, as it is, on the export of its products for its prosperity and indeed for its survival, is particularly vulnerable to any general recession in the volume of foreign trade throughout the world. Although the overall hessian stock position is sound, the gradual rise in stocks of sacking goods which has been taking place for some months in consequence of increased production of these qualities points to a measure of present overproduction and the necessity of finding new outlets for these goods. Stocks of sacking qualities are higher than they were a year ago, but they do not appear as yet to have approached a level at which they are likely to constitute a danger to the price structure of the market.

"A favourable factor in this connection is the setting up of a recognised futures market under the ægis of the East India Jute and Hessian Exchange, Ltd., which is recognised by the Government of India under the Forward Contracts (Regulation) Act, 1952... Reference has already been made to the industry's vulnerability to a general recession in world trade, but against this can be set the undoubtedly favourable effects of the increased availability within India of raw jute of adequate quality and, provided the fibre is available during the coming season in the quantity and of the quality presaged by the satisfactory crop reports received up to the date of this report, there seems no reason why the mills should not continue to operate on a reasonably profitable basis."

Commenting on the present financial position of the Reliance Jute Mills, and the efforts being made by the management to resume work, the Directors state:

"The Company's indebtedness to its bankers has been repaid with the liquidation of stocks of raw jute, finished goods and material in process and it is meanwhile being financed by the Managing Agents, to whom the Company's indebtedness amounted as at 31st March last to Rs. 19,95,000 exclusive of accrued interest. While this indebtedness has meanwhile been slightly reduced by repayments out of subsequent profits, it will be clear that some considerable time must elapse before the Company's finances are sufficiently restored to justify the submission to shareholders of any scheme for reconstruction of the Company's capital as adumbrated in the report of the Directors for the year ended 31st March 1957.

"Your Directors continue to keep before them the feasibility of a resumption of work in the Company's own mill, but it will be appreciated that the financial position presents a formidable impediment unless the manufacturing profits are likely to be substantial."

The Directors add that since this is not the case on the basis of the present prices and potential working costs, it seems probable that further sales of loom-hours must be contemplated, unless market conditions improve substantially in the near future, which seems an "unlikely contingency." They have taken the necessary steps to protect the Company's property, plant and stores, while the mill is closed.

MAHINDRA AND MAHINDRA'S NEW ISSUE

The Directors of Mahindra and Mahindra Ltd. have decided to increase the paid-up capital of the Company from Rs. 80 lakhs to Rs. 1.87 crore by the issue of 770,000 ordinary shares of the face value of Rs. 10 each and 30,000 redeemable cumulative preference shares of Rs. 100 each. The preference shares, which will carry a dividend of 6½ per cent. per annum, without deduction of income-tax, are redeemable after the year 1968 but before 1973 at Rs. 100 each in such instalments as the Company may declare from 1st June 1968.

The new 770,000 ordinary shares and 30,000 preference shares to be issued will qualify proportionately for dividends for the year ending 31st October 1958, and in all other respects, rank *pari passu* with the existing ordinary and preference shares, respectively, of the Company.

The present paid-up capital of the Company is made up of 550,000 ordinary shares of Rs. 10 each fully paid-up and 25,000 6 per cent. tax-free redeemable preference shares of Rs. 100 each.

The additional capital to be raised by the Company, for which the consent of the Controller of Capital Issue has been obtained, is for the purpose of financing the Company's programme of increasing the production of jeeps and integrated development.

REFUND OF CURRENT DEPOSITS

The procedure for obtaining refund of balance of deposits made by Companies, following the suspension of the current profits deposit scheme from 1st April 1958, has been explained by the Government of India in the course of a Press note issued by the Ministry of Finance. The Press note says:

"A company will apply for refund to the particular office of the Reserve Bank of India or its agency in which the deposit was originally made. It will furnish full particulars regarding date of deposit, amount deposited, refund due, etc., along with the latest memorandum of deposit obtained from the Bank. In cases of non-availability of the memorandum of deposit due to loss, etc., a duplicate memorandum must be obtained.

"On receipt of the application, the Bank will verify that the securities and/or cash deposits claimed by a company are actually held in Government account. On being satisfied, the Bank will allow the refund due with interest up to the date of refund. The securities will we returned in physical form duly endorsed in favour of the companies.

"If a company has made a deposit under section 10(2b) of the Income-tax Act in any bank, treasury, or sub-treasury in contravention of the provisions of rule 2(3) of the Income-tax Allowances (Current Profits Deposit) Rules, 1957, such a company should take steps to get the amount transferred to the nearest branch or agency of the Reserve Bank of India, from where alone a refund would be obtainable on production of a memorandum of deposit."

ORISSA CEMENT EARNS RECORD PROFIT

NEW PROJECTS MAKING GOOD PROGRESS

A SUBSTANTIAL expansion in production of cement and higher sale realisation thereof, without any increase in statutory selling price, mainly contributed to the sharp rise in the profit of the Orissa Cement Ltd. (Managing Agents: Dalmia Agencies Private Ltd., Orissa) for the year ended 31st December 1957. The output of cement has risen from 190,173 tons to a record high of 286,971 tons and the gross profit has moved up from Rs. 47.73 lakhs to Rs. 65 lakhs, the highest level touched so far in the history of the Company. This increase in profit is in refreshing contrast to the setback suffered in the previous year from Rs. 60.67 lakhs. With this rise in gross profit, the Managing Agents' commission, too, is higher at Rs. 6.06 lakhs, as against Rs. 3.75 lakhs for the previous year. In view of the sizable increase in capital expenditure made during the year, the provision for depreciation has been more than doubled from Rs. 8.99 lakhs to Rs. 19.49 lakhs. This has also meant a large initial saving in tax, the provision for which has been cut from Rs. 15.50 lakhs to Rs. 6 lakhs. The net profit, after providing for gratuity, thus amounts to Rs. 33.13 lakhs, a rise of Rs. 13.84 lakhs over the year.

The net profit for the year under review is supplemented by a sum of Rs. 11.20 lakhs, being the excess provision made in previous years for electric energy now written back. No additions have been made to the reserves, despite the large sum of Rs. 55.35 lakhs (including the surplus of Rs. 11.02 lakhs brought in from the previous year) available for appropriation, except for a sum of Rs. 1 lakh for bad and doubtful reserve. The dividend on ordinary shares is proposed to be raised from 12½ per cent. to 15 per cent., which still leaves a large surplus of Rs. 37.56 lakhs to be carried forward.

The following comparative table shows the progress of the Company in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds (including internal consumption)	202.82	188.85	185.54	138.58

Ordinary	15.00 (15%)	12.50 (12½%)	8.48 (12½%)	5.09 (7½%)
Carry forward	37.56	11.02	6.08	—18.45

The Company's balance-sheet as on 31st December 1957 shows that its paid-up capital is unchanged at Rs. 1.40 crores. The reserves and surplus aggregate Rs. 69 lakhs, which are made up of an initial depreciation reserve of Rs. 31.41 lakhs, a small reserve of about Rs. 3,000 for bad and doubtful debts and the surplus of Rs. 37.56 lakhs transferred from the profit and loss account. There is thus practically no reserve belonging to the shareholders and the Company has not so far set aside anything to the shareholders' reserves. Its borrowings (secured and unsecured) have enlarged considerably from Rs. 71.54 lakhs to Rs. 164.07 lakhs. Of these, secured loan from bank amounts to Rs. 43.05 lakhs (as against Rs. 4.30 lakhs) and that from the Industrial Finance Corporation of India accounts for Rs. 1 crore, having risen from Rs. 65 lakhs a year before. The small outstanding balance of Rs. 2.24 lakhs due to the Orissa Government has been repaid. The unsecured loans amounting to Rs. 21.01 lakhs are from the Managing Agents and from Dalmia Cement (Bharat) Ltd. The current liabilities and provisions aggregate Rs. 100.80 lakhs, of which provision for taxation accounts for Rs. 24.97 lakhs. The gross block as on 31st December last stands at Rs. 3.26 crores, including Rs. 1.17 crore expended during the year. In addition, expenses on construction in progress, in connection with the refractory plant and extension to the cement plant and other constructions, and payments for machinery in transit amount to Rs. 1.16 crore and these have not been capitalised. The total capital expenditure up to the end of the year thus amounts to Rs. 4.42 crores. The depreciation provided on the capitalised expenditure aggregates Rs. 1.18 crore. The Company's investments (at cost) stand at Rs. 30.33 lakhs (including Rs. 14.40 lakhs in the partnership of the Magnesite Corporation of India Ltd., Dalmia Cement Ltd. and Orissa Cement Ltd., a reference to which is made below). The other current assets aggregate Rs. 120.44 lakhs.

In addition to the amount of Rs. 1.17 crore spent during 1957 and of Rs. 1.16 crore on works-in-progress, the Company is likely to spend a further sum of Rs. 1 crore during the current year on its refractory works. In order to meet a part of the finances required for the purpose, the Company had, a few weeks ago, made a right issue of Rs. 50 lakhs in ordinary shares to the existing shareholders in the ratio of one share for every two ordinary shares held. The balance of the funds required is expected to be met out of borrowings.

The Company's expansion programme, to which a reference was made by the Chairman in his speech at the last annual general meeting, has a considerable bearing on the outlook for the Company. Referring to this programme, which is said to have made good progress, the Directors observe:

"The extended cement plant was put into operation early in 1957, as indicated in the last report of the Directors. The usual teething troubles are being gradually overcome. The working of the plant has appreciably improved and the production now is satisfactory. As expected, the fireclay and silica bricks section of the newly established refractory works has been put into commission in April 1958. The construction of the basic bricks plant is in progress. It is expected to go into production by the end of this year... The refractory works of your Company is at present the only one of its kind in India to serve the requirement of refractories for various industries, particularly the steel works, which used to be imported so far. This is expected to save foreign exchange to the tune of about Rs. 2 crores every year. The works is already booked with a good deal of orders from different consumers.

"To ensure continued supply of dead burnt magnesite which will be required in appreciable quantities for manufacture of refractories, your Company has entered into a partnership with Dalmia Cement Limited and the Magnesite Corporation of India Ltd. The partnership firm, named Dalmia Magnesite Corporation, is setting up a plant near Salem (Madras State) for the manufacture of dead burnt magnesite. Considerable progress has been made in the establshment of this plant and it is expected to go into production before the end of the current year. There is considerable demand for dead burnt magnesite both inside the country and also in export markets.

"A reference was made in the Chairman's speech last year to Dalmia Iron and Steel Limited, sponsored by your Company jointly with Dalmia Cement (Bharat) Limited. The plant for manufacture of steel castings set up by Dalmia Iron and Steel Limited has gone into production, while the manufacture of spun cast iron pipes is expected to commence before the end of the year. Your Company is now assured of regular and timely supply of steel castings and grinding media which would be greatly helpful in the efficient and smooth working of both the Cement and Refractory Works at Rajgangpur."

The Directors' report was signed before the announcement of the higher cement prices on the recommendation of the Tariff Commission. The Directors, therefore, observe that the industry expects a reasonable increase in the retention prices of cement to compensate the increased cost of production. "The improved production and increased retention price for cement and earning from refractory works," they add, "all indicate good prospects and future for your Company." The Government of India has since then announced an increase of Re. 1 to Rs. 55.50 per ton in the *ex*-factory price of cement produced by this Company.

SANGAMESHWAR COFFEE ESTATES LTD. Dividend of 9 per cent. on the ordinary shares, for the year ended 31st March 1958. Transfer books remain closed from 29th July to 5th August 1958, both days inclusive.

STANDARD COAL MAINTAINS DIVIDEND

ADVERSE CONDITIONS AFFECT RAMESHWARA JUTE

Standard Coal Co., Ltd.

THE directors of the above Company (Secretaries: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account after providing for all charges and making provision of Rs. 33,505 (Rs. 30,029) for taxation and Rs. 1,000 (Rs. 1,000) for depreciation shows a profit of Rs. 47,379 (Rs. 40,064). To which is added the balance brought forward from the previous year of Rs. 17,411 (Rs. 17,347) and the amount transferred from general reserve of Rs. 25.000 (Rs. 70,000 being excess provision for taxation) making a total available of Rs. 89,790 (Rs. 1,27,411). The directors propose to dispose of this amount as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum, without any deduction for income-tax payable by the Company Rs. 80,000 (Rs. 80,000) and by carrying forward Rs. 9,790. (Rs. 17,411 after placing Rs. 30,000 to general reserve)

The dividends on investments in the accounts are the total actually received during the year. The additional purchases made during the year have not yielded income in some cases until the current year. Expenditure of non-recurring nature amounting to Rs. 15,447 (being cost of share transfer stamps Rs. 13,114 on shares purchased during the year and Rs. 2,333 being brokerage on sale of investments) are included in these accounts.

Due to the smallness of profit for the year under review, Messrs. F. W. Heilgers & Co., Private) Limited have not charged expenses for rent and establishment for the period from 1st February to 31st December 1957, incurred on behalf of this Company.

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,50,000 for which no quotation is available. The totol of the market value of the investments as at 31st December, 1957, for which quotations are available together with unquoted investments as valued by the directors amounts to Rs. 17,80,649.

General.—As reported earlier, the Company has changed its business to that of an investment Company and the managing agents resigned with effect from 31st January, 1957. In pursuance of the Special Resolution passed at the General Meeting of the Company held on 25th April, 1958, Messrs. F. W. Heilgers & Co. (Private) Limited were appointed secretaries of the Company with effect from 1st May, 1958, at a remuneration of Rs. 500 per mensem.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	1,41,060

Provision for wealth tax	7,505	Cash ...	3,05,312
Liabilities ...	2,63,956		
Profit and loss account ...	9,790		
Rs.	24,93,544	Rs.	24,93,544

Rameshwara Jute Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Muktapur, P.O. Samastipur, Darbhanga) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit of Rs. 2,59,557. After providing Rs. 85,575 for depreciation, a net profit of Rs. 1,73,982 is left in the profit and loss account which has been adjusted against the loss of Rs. 8,81,539 brought forward from the previous year. Thus, a net debit balance of Rs. 7,07,557 is being carried forward to the next year.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 165 looms on double shift basis throughout the year under review.

The total number of working hours to be recovered as on 31st March 1958 under the working time agreement is 878, the small increase, as compared with the figure of last year, being *inter-alia* due to hours lost on account of short mill closure.

In spite of the agreement reached with the workers last year, their attitude was far from satisfactory and, therefore, relations with them remained strained throughout the year. Indiscipline was prevalent amongst the workers, the extreme of which was observed when the Spinning-incharge and a Sardar were assaulted immediately after the re-opening of the mills last year. The workers also resorted to an illegal strike which resulted in the mills losing 13 working days. In view of these conditions, a memorandum was submitted to the Labour Department of the State Government in which it has been made clear that the mills cannot function efficiently under such conditions. It is, therefore, hoped that the State Government would intervene and settle the numerous outstanding disputes between the management and the labour and thereby create favourable conditions for the smooth working of the mills.

On account of this unsatisfactory attitude of the labour, the profit for the year is comparatively poor. The directors have again to point out the unsatisfactory condition of the mill machinery and the great deal of expenditure, which is required to keep it in operation, has also adversely affected the profits.

After providing depreciation as above, there still remains a sum of approximately Rs. 12,00,000 as unabsorbed depreciation till 31st March 1958. There is also a further contingent liability of Rs. 3,15,000 in respect of arrears of cumulative preference dividend upto 31st March 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,00,000	Block ...	20,56,234
Reserves ...	10,324	Stock-in-trade	17,44,365
Liabilities ...	24,29,649	Stores, spare parts, etc.	4,24,512
		Debts, deposits and advances ...	93,680
		Investments	72,369
		Cash ...	41,256
		Profit and loss account ...	7,07,557
Rs.	51,39,973	Rs.	51,39,973

Jubbulpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the consolidated audited accounts of the Company) for the year ended 31st March 1958.

On account of the satisfactory working results of the Undertaking for the year under review, and in accordance with the provisions of the Electricity (Supply) Act, 1948, it is necessary to make a reduction in the charges for electricity and in this connection, it is proposed to reduce the light and fan rate from 4 annas 9 pies per unit to 4 annas 3 pies per unit, with retrospective effect from the 1st April 1958.

A comparative schedule of sales and revenue for the past three years is as hereunder:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st March 1956	24,320,543	28,18,837
31st March 1957	28,096,180	28,68,845
31st March 1958	32,108,866	35,87,927

The net revenue for the year ended 31st March 1958, after providing for taxation, depreciation and all other charges amounts to Rs. 7,33,146 (Rs. 5,88,020). From this has been deducted a sum of Rs. 4,24,169 (Rs. 20,385) in respect of the following reserve allocations in accordance with the provisions of the Electricity (Supply) Act, 1948:—To contingencies reserve Rs. 51,495 (Rs. 20,385), to development reserve Rs. 2,89,700 (*nil*), to tariffs and dividends control reserve Rs. 41,487 (*nil*) and to rebate to consumers Rs. 41,487 (*nil*). There remains a balance of profits amounting to Rs. 3,08,977 (Rs. 5,27,635) to which is added Rs. 27,407 (Rs. 27,581) brought forward from the previous year making a total of Rs. 3,36,384 (Rs. 5,55,216). After setting aside Rs. 1,00,000 (Rs. 1,15,850) to general reserve there is left a sum of Rs. 2,36,384 (Rs. 4,39,366) which the directors recommend should be dealt with as follows:—

Payment of a dividend at the rate of 8 (8) per cent. per annum without deduction of tax Rs. 1,79,964 (Rs. 1,79,964) and an additional payment of Re. 0.12 (Re. 0.12) per share without deduction of tax Rs. 26,995 (Rs. 26,995) leaving to be carried forward to next year Rs. 29,425 (Rs. 27,407 after paying Rs. 1,80,000 as bonus in respect of previous year and also provision for taxation of Rs. 25,000 for previous year).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,49,700	Block ...	62,47,678
Reserves ...	25,37,546	Capital work-in-progress	1,27,334
Provision for taxation ...	1,08,172	Stores, spare parts and loose tools	8,90,186
Liabilities ...	39,67,243	Debts, deposits and advances ...	13,09,542
Profit and loss account ...	29,425	Investments	1,72,507
		Cash ...	1,44,839
Rs.	88,92,086	Rs.	88,92,086

Bareilly Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts for the year ended 31st March 1958.

Although it is likely that negotiations for a limited bulk supply with the State Government will shortly be concluded, load development is such that it is necessary to consider installing additional generating plant at a cost of approximately Rs. 37 lakhs, but as negotiations are proceeding with the State and Central Governments in regard to essential amendments to the Electricity (Supply) Act, 1948, to facilitate the raising of capital, no action can be taken in regard to ordering plant at the present time.

Normal progress has been maintained as indicated in the following schedule:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st December 1954 ...	8,372,646	15,55,000
31st December 1955 ...	9,503,786	17,74,998
31st March 1957 (15 months)	13,482,476	24,20,037
31st March 1958 ...	12,786,688	21,42,376

The net revenue for the year ended 31st March 1958 after providing for all charges amounts to Rs. 2,90,798 (Rs. 4,24,228). From this has been deducted a sum of Rs. 1,57,022 (Rs. 27,985) in respect of the following reserve allocations in accordance with the provisions of the Electricity (Supply) Act, 1948:—To contingencies reserve Rs. 30,114 (Rs. 27,985), to development reserve Rs. 93,680 (*nil*), to tariffs and dividends control reserve Rs. 16,614 (*nil*) and to rebate to consumers Rs. 16,614 (*nil*). There remains a balance of profits amounting to Rs. 1,33,775 (Rs. 3,96,243) to which is added Rs. 17,368 (Rs. 19,748) brought forward from the previous year making a total of Rs. 1,51,143 (Rs. 4,15,991). After setting aside Rs. 34,332 (Rs. 38,623) to reserve for redemption of debentures and Rs. 20,000 (Rs. 1,90,000) to general reserve, there is left a sum of Rs. 96,811 (Rs. 1,87,368) which the directors recommend should be dealt with as follows:—

To payment of a dividend at the rate of 10 (12½) per cent. per annum without deduction of tax Rs. 80,000 (Rs. 1,00,000) and carrying forward to next year Rs. 16,811 (Rs. 17,368 after paying Rs. 70,000 as bonus in respect of the previous year).

Accounts in brief are as under:—

Liabilities	Rs	Assets	Rs
Capital ...	8,00,000	Block ...	32,25,478
Debentures	5,00,000	Stores, spare parts and loose tools	6,11,724

Rs.	48,32,911	Rs.	48,32,911

Bagalkot Cement Co., Ltd.

The directors of the above Company (Managing Agents: Tendulkar Industries Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

After meeting all expenses of operation and management, and after providing for depreciation and payment of wealth tax and bonus to employees, the working of the Company shows a profit of Rs. 6,43,211 (Rs. 6,77,649) which, by adding Rs. 10,568 (Rs. 488) being amount brought forward from last year's account, comes to Rs. 6,53,779 Rs. 6,92,759 including Rs. 14,622 being amount transferred from reserve for rehabilitation and expansion. The directors recommend that the following appropriations be made:—

To provision for proposed dividend at 6 (6) per cent. without deduction of income-tax on the paid-up capital of the Company as at 31st December 1957, [no dividend shall be paid on new shares allotted and paid for in the year 1958] Rs. 5,03,000 (Rs. 4,38,000), to provision for part repayment of guaranteed dividend account to the Government of Bombay Rs. 1,50,000 (Rs. 1,43,168) and balance to be carried forward to next year Rs. 779 (Rs. 10,568 after paying income-tax of Rs. 1,01,023 in respect of previous year).

Production and despatches.—Production of clinker and cement during the year was upto the rated capacity of the plant, namely, 1,00,027 tons of clinker and 1,04,530 tons of cement. The despatch of cement amounted to 1,05,129 tons.

Expansion.—The Company was granted in September 1957, by the Government of India, through the T.C.M. Aid Programme, foreign exchange facilities for purchase of machinery from abroad for expansion of the Company's Cement Plant at Bagalkot by an additional manufacturing capacity of 100.000 tons of cement a year. Early this year, the Company placed firm orders for supply of the required cement plant and electrical equipment, with Messrs. Krupps and Messrs. Siemens, in Western Germany, who had supplied the original plant and equipment to the Company. The machinery is scheduled to be delivered before the end of October 1958.

Tariff Commission.—The Government of India referred to the Tariff Commission in the year 1957, the case of the Cement industry in India for a revision of prices. The Commission, thereupon, instituted an exhaustive enquiry into the operational costs of individual factories, through their own Cost Accountants. The manufacturers were given an opportunity to present their case in person before the Commission in January 1958. The Tariff Commission has since submitted its recommendations to the Government of India and the decision of the Government in respect of revision of prices allowed to the producers is shortly expected.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	83,92,587	Block ...	1,06,80,731
Provision for wealth tax	76.783	Stock-in-trade	3,63,417
Liabilities	59,71,023	Stores, spares and loose tools ...	15,50.373
Profit and loss account ...	779	Debts, deposits and advances ...	11,77,374
		Investments	9,225
		Cash ...	98,668
		Miscellaneous expenditure and losses	5,62,384
Rs.	1,44,41.172	Rs.	1,44,41.172

N.B.—Figures within brackets relate to the corresponding period of the previous year.

THE BHARAT LINE LIMITED

CHAIRMAN, MR. C. R. SRINIVASAN'S SPEECH

THE Twelfth Ordinary General Meeting of the shareholders of the Bharat Line Ltd., was held on 26th July 1958 at Kundan Kunj, Bhavnagar. The following is the speech of Mr. C. R. Srinivasan, Chairman, read in his absence by Mr. Bhogilal M. Shah, one of the Directors of the Company:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twelfth ordinary general meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss account have been in your hands for some time now. I trust, I have your permission to take them as read.

"The results achieved during the year under report reflect great credit on the management; not merely have they achieved economy without sacrifice of efficiency but, with a smaller tonnage afloat, the freight earnings have been larger. In part, no doubt, this is due to the remunerative rates conceded by the Government after a long spell of sustained agitation. It cannot be claimed yet that economic rates are now prevailing; but still they are better than what they were previously and we may be thankful for small mercies.

"There has been a catastrophic fall in freight rates the world over, brought about by mounting slump in trade. I am not sure we have passed the peak of this depression yet. The American recession has now begun to flatten out and its impact is registering in different degrees in different parts of the world. But, luckily for the Company, with its emphasis on coastal trade, this new force has found no play in a protected market and the needs of our expanding economy have given us strength and stamina to withstand its backwash.

Reaching Tonnage Target

"Indeed, our problem today is how to reach the tonnage target we have set for the second Five-year Plan. Now is the time to pick up bargains in the second-hand market and your Company, which kept itself free of any commitments when costs were high, is now well placed to take advantage of the tide. Frankly, we are on the look-out for good pickings and I believe we shall get them. Government have been ready and willing to help us over finance and in the past we have availed ourselves of the offer as and when need or occasion arose. But, obviously, there is a limit to borrowing and a hard core of equity capital must be maintained to stagger our expansion programme.

"It is here, I regret to say, a climate of confidence is still missing in the investment market. You are aware that taxation was stepped up on a wide front last year and its results have not been of a heartening character. Indeed, I would go so far as to say that such short-term gain, as might have accrued, is on a long view difficult to justify if one takes note of the continued depressing and disturbing conditions in the money market. The success of the second Five-year Plan can only be assured if it carries the willing and wholehearted co-operation of the people. I wonder, if people are not tried too high and their patience giving out.

Dividend Policy

"Shareholders are aware that this Company has throughout pursued a cautious and conservative policy in the distribution of dividends from profits earned. A modest dividend is all that has been vouchsafed so far to the shareholder, in the hope that his interests are better served by the build-up of sizable reserves. In due course, he would have had the advantage of these reserves transmitted to him in terms of bonus issue which, incidentally, would have reinforced the capital structure of the Company.

"Unfortunately, we found ourselves seriously handicapped, when we took up this matter for examination, by the levy of penal taxes on bonus issues which it is difficult to justify on any rational grounds. Surely, a 30 per cent. tax on bonus issues from accumulated reserves already subjected to tax, is not the best way to induce companies to add to their reserves, nor resist the pressure from shareholders for higher dividends. A dividend tax has also been levied on rates beyond prescribed levels; surely, this would not have been necessary if companies were allowed freedom to function in their enlightened self-interest.

"Your Directors, after giving anxious thought to all implications, have now come to the conclusion that it is necessary and urgent to recover the goodwill and confidence of the shareholders, especially in the present context, when we are setting our hands to more ambitious programmes of expansion. To this end, it has been decided to step up the dividend from last year's level of six per cent. and give not merely the same six per cent. but also add to the dividend a further six per cent. by way of bonus. The Company can afford to pay this on current earnings and maintain it also on our present assessment of future profits. The transfer of Rs. 15 lakhs to the dividend equalisation reserve is a measure of abundant caution to serve the same purpose.

"I believe this step should relieve the anxiety of our shareholders and protect the mobile value of their investments. To this end again, as you will see from the notice and agenda of the general meeting, shares are being sub-divided into ten-rupee shares and articles of association amended to conform to the regulations prescribed by the Bombay Stock Exchange. Both these steps are being taken entirely in the interests of shareholders and I hope will meet with their ready approval.

Shipping Bill

"There is one other matter that I should like to refer to before I close. An Indian Shipping Bill has been introduced in Parliament which naturally has provoked interest in shipping circles at the moment, and will in due course engage the attention of the public also as its implications are understood. No doubt, a consolidation measure in respect of shipping was necessary and desirable to ensure future progress; but the Bill that has been tabled goes counter to the policy Government had deliberately set out ten years back—a policy which had public sanction not merely on sentimental grounds but on national interest also.

"In a country with its own and adjacent coastline of nearly 4,000 miles, the merchant navy has an important role to play in times of emergency and it is not merely a question of tonnage but trained personnel. Difficulties of foreign exchange are perhaps sought to be covered by broadening the definition of an Indian ship. I am afraid this is really asking for trouble both in times of peace and war, and in the result we shall probably lose more than we gain. If there is shortage of funds at the moment, this is not the way to cover it. Better go slow and build firm than move fast and repent at leisure.

Government Can Do More

"It is not as though Indian shipowners are allergic to suggestions of expansion. They have shown themselves ready and willing to do their best within the limits of their opportunities and resources. If Government want them to cover by forced marches the neglect of centuries, it is for the Government to find ways and means to stimulate and sustain them. I am free to confess that Government have done much, and in the matter of depreciation allowances and exemption from particular taxes, shown themselves alive to their responsibilities; but I maintain that they can do much more. It is not as though we are suggesting something Governments in other countries have hesitated to do either.

"A special committee of the Indian National Steamship Owners' Association has submitted a memorandum on the new Bill covering many points of interest and importance which I hope and trust will register in the right quarters. As a vital issue of fundamental and far-reaching importance is involved, I hope shipping interests will continue to take suitable and sufficient steps to educate the public also in this matter.

"And now I shall conclude with recording my appreciation of the co-operation I have received from my colleagues on the Board as well as from the management. May I also bear testimony to the good work of the staff both ashore and afloat.

"I now formally move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1957, already duly sent to the shareholders, be and are hereby adopted."

SWISS CHEMICAL INDUSTRY

CONSEQUENCES OF EUROPEAN INTEGRATION

By the Correspondent of Swiss Bank Corporation Bulletin

A GRAPHIC portrayal of the vastness and complexity of the problems of structural transformation the European integration project has already forced the Swiss chemical industry to tackle in dead earnest, was given by Dr. Robert Käppeli and Dr. Arthur Wilhelm, Chairman and Vice-Chairman respectively of Ciba Limited, Basle, in addressing the general meeting of shareholders of the concern in April.

Precisely the same kind of problems will confront other staple Swiss export industries, indeed all the great industries of all the leading countries of Europe outside the Common Market of Six.

Since the discovery of synthetic dyes about one hundred years ago, the Swiss chemical industry, by systematic high-grade specialisation, has established markets all over the world for the sale of its products, of which between 80 per cent. and 90 per cent. are exported. The chemical industry now accounts for about 17 per cent. of the total value of all exports from Switzerland. In 1956, the value of exports per worker in the Swiss chemical industry was Sw.fcs. 37.700 as against fcs. 22.000 in the watch industry, fcs. 13.700 in the textile industry and fcs. 9500 in the machine industry. In 1956, the total number of persons employed in the Swiss chemical industry was about 28,000.

By far the major part of all these industries is destined for sale abroad. Moreover, the most important export markets of the Swiss chemical industry in 1956 were the countries of the Common Market of Six: Germany with fcs. 107 millions, Italy with fcs. 88 millions, France with fcs. 85 millions accounting for altogether 27.7 per cent. of the total exports of the Swiss chemical industry while Great Britain with fcs. 61 millions accounted for 6 per cent. and the U.S.A. with fcs. 45 millions for only 4.4 per cent. of the whole.

Should access to the Common Market of Six be seriously impeded—as would be the case if the Free Trade Area of Seventeen were not to come into being—not only the whole Swiss chemical industry and the other staple export industries of Switzerland but also those of the other O.E.E.C. countries would suffer grave dislocation.

For cogent reasons, the major part of the total production of the Swiss chemical industry is accounted for by four great concerns, all headquartered in Basle. All have specialised consistently to an ever-increasing degree. Traditionally, each of the four has devoted its main activities in research to different fields of investigation. In the pharmaceutical field, Ciba specialises on the treatment of ailments of the heart, blood vessels and organs of circulation and on the making of hormones, J. R. Geigy AG on making preparations for dealing with bacterial infections, rheumatism, and arthritis and in making anticoagulates. F. Hoffmann-La Roche & Co. AG makes vitamine preparations and Sandoz AG chiefly conducts research on vegetable remedies for cardiac and circulatory disorders and for derangements of the nervous system. On the production side jointly-owned manufacturing facilities have been established in certain important territories.

All of the raw materials processed by the Swiss chemical industry have to be imported. Between 80 per cent. and 90 per cent. of the resulting products must be marketed outside Switzerland. So that, in reality, the Swiss chemical industry is engaged in exporting the achievement of its scientific research and the skill of its workers. To hold markets in other countries, the Swiss chemical industry must offer not only many products not yet obtainable from other countries—that is, must consistently achieve success in research faster than its competitors—but must also offer many staple products such as dyestuffs at competitive prices.

All this implies: (1) continuous expenditure of huge sums on research and (2) ready access to all export markets without the handicap of prohibitive customs duties or serious quantitative import restrictions.

Estimates show that the total amount spent on research at home and abroad by the Swiss chemical industry is altogether not less than fcs. 100 millions a year. Expenditure on research by the entire chemical industry of North America in 1957 has been estimated at $127 millions. According to these figures, the expenditure on research by the pharmaceutical industry of the U.S.A. amounted to about 7.3 per cent. of sales. In Switzerland, only Ciba publishes figures on both sales and expenditure on pharmaceutical research. These show that in 1957, the ratio was 7.2 per cent., i.e., practically the same as in the pharmaceutical industry of the U.S.A. Total expenditure on research by Ciba increased from fcs. 21.5 millions in 1949 (of which fcs. 13.3 millions was for research on pharmaceuticals) to fcs. 52.5 millions in 1957 of which fcs. 34.0 millions was on pharmaceuticals. In the same period the cost of research on plastics increased from fcs. 2.5 millions to fcs. 9.2 millions.

As the result of the policy pursued, the total sales of Ciba in all countries of the world rose from fcs. 509 millions in 1948 to fcs. 891 millions in 1957. If the present rate of increase were to continue, Ciba sales would exceed fcs. 1,000 millions in 1959, which would be an increase of 100 per cent. over those of 1949. "Since the war, the market for scientifically-developed medicines has experienced a degree of expansion that can only be described as enormous," declared Dr. Käppeli. The export of pharmaceuticals from Switzerland rose from fcs. 194 millions in 1947 to fcs. 527 millions in 1957. "As yet there is no foreseeable end to this development."

All branches of the Ciba concern, at home and abroad, shared in the increase as here shown:

(In millions of Swiss fr. nos)

Years	World sales	Dyes	Pharmaceuticals and cosmetics	Plastics	Sales of the Basle parent house
1949 ..	500	261	204	35	207
1951 ..	599	306	234	59	261
1953 ..	660	292	283	75	236
1955 ..	783	295	378	110	295
1957 ..	891	323	421	147	342

Net profits increased from fcs. 22.5 millions in 1956 to fcs. 23.5 millions in 1957. These figures are indicative of the trend of development of all the leading Swiss firms and show that, up till now, the Swiss chemical industry has stood on a firm foundation.

To assure the perpetuity of markets, however, the Swiss chemical industry has had to export capital on a considerable scale for the establishment of affiliates and participations in countries where there was always a inherent risk of markets being lost through the sudden rise of customs duties to prohibitive levels. Measured by value, Europe is the chief market of the chemical industry. Next in order of importance is North America. Ciba has affiliates in Great Britain, France, Germany, Italy, Spain, the U.S.A., Argentina, Australia, Brazil, India, Japan and Pakistan. Where the advantages of collaboration were substantial, two or more of the Basle concerns have gone into partnership abroad to build up their manufacturing organisations abroad, the selling, however, being done independently by each company. For example, at the new works at Toms River in New Jersey, whose chief task is the marking of vat dyes, Ciba has contributed the major share of the funds necessary to finance this project, that is about 50 per cent. of the total investment, Geigy 25.5 per cent. and Sandoz 24.8 per cent.

Among the chief advantages of this worldwide spread in manufacturing and marketing are:

1. In countries where manufacturing affiliates have been established, an increase of customs duties does not put Swiss firms at the disadvantage, because manufacturing is carried on inside the market.

2. Research can be kept concentrated chiefly in Basle.

3. A setback in trade in one market is usually offset by an upswing of trade elsewhere.

4. Overseas markets can be supplied from countries manufacturing most advantageously.

Explaining the significance of Ciba's investments at home and abroad, Dr. Käppeli said: "The reports of our resources and earnings are based exclusively on the accounts of the parent company. Participations and affiliates figure in the balance-sheet only as far as their capital and their liabilities towards Basle are concerned. Their earnings appear only in so far as they are transmitted to the parent company.

"By applying uniform accounting principles to all the companies that make up Ciba organisation, we obtain a consolidated balance-sheet. By applying uniform standards of valuation, we arrive at a total of Ciba assets at the end of 1957 exceeding 1000 million francs by a considerable margin. This amount, which should not in any circumstances be identified with the total assets in the sense of an ordinary balance-sheet, has increased by fcs. 437 millions or 45 per cent. since 1951."

Ciba, although the largest, is but one of the four great concerns of the chemical industry of Basle.

Obviously the great manufacturing and merchandising organisations built up by the Swiss chemical industry all over the world is bound to be adversely affected by the creation of the Common Market of Six, to which the major part of its exports are sold, unless the O.E.E.C. countries succeed in forming the Free Trade Area of Seventeen. Because, from 1-1-59, the countries of the Common Market of Six will lower their customs duties among one another by 10 per cent. and continue lowering them by stages, while after 1961 the group will have a new common tariff, in most cases higher than before, to all outside countries, unless the Free Trade Area of Seventeen comes into being.

If the Free Trade Area of Seventeen were not ultimately formed, the resulting loss of a great part of the European market would be very serious. To build up an equivalent market overseas would take many years.

Exactly the same prospect faces the leading industries of all eleven O.E.E.C. countries, unless a Free Trade Area of Seventeen can be formed.

Even if the economic integration of all Europe is achieved, the problems arising from the formation of a Free Trade Area of Seventeen would still be immense, because of the enormous amount of investment capital required to carry through the economic transformation involved. No exact figure for the all-European needs can be given. But the Swiss chemical industry is already at grips with that problem. "Under the conditions existing today," declared Dr. Käppeli, "we have to finance our investment programme out of our own resources. Of course it would be possible to raise additional funds by increasing our share capital, a measure that might sooner or later recommend itself for other reasons. . . Our consolidated statements however show that the increase by 437 million francs since 1951 in the total of funds invested in the Ciba organisation—representing the growth of our assets—contains only 11 per cent. of outside money. . ." The question is whether the vast costs of transformation could be provided fast enough by self-financing.

This explains the policy of Ciba towards its shareholders in the last few years. Despite the immense gains in current trading, the dividend to be declared for 1957 is the same as in 1956, namely, fcs. 90 per share, that is, 18 per cent. of the nominal value of Ciba common stock, but representing a yield to the investor of only 1.62 per cent. at the present market price of the shares.

Ciba at all events is conserving its strength in order that the huge demands for investment capital integration is certain to make will, as far as feasible, be provided by self-financing.—*Swiss Bank Corporation Bulletin.*

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 30*th July*

There has been nothing new in the short-term money market. The trend is easy again. Funds with inter-banks are growing while demand for them is slack. In other words, the traditional slack season is in full swing. In the inter-bank call money section, lenders were over. In the absence of any borrowers, inter-bank call money was nominally quoted at 2½ per cent. among the Exchange banks and large Indian banks. The rate among the smaller Indian banks was 2¾ per cent. House money at call and short-term deposits for one to six months were both quoted at 3½ to 4 per cent.

The easier conditions in the money market are fully reflected in the stepping up of the Treasury Bill borrowing from Rs. 1 crore to Rs. 2 crores for next week. The response to the tenders for the 91-day Treasury Bills for Rs. 1 crore invited this week was not as good as is warranted by the present market conditions. The total amount offered was only Rs. 1.60 crore. Tenders at Rs. 99.484 and above were accepted in full and those at Rs. 99.275 allotted approximately 80 per cent. Lower tenders were rejected. Total amount accepted was 1 crore, the average rate of accepted tenders being Rs. 2.726 per cent. per annum. As already stated, tenders for Rs. 2 crores have been invited for next week. They will be received up to the close of business on Monday, 4th August. Successful tenderers should make payment on Friday, 8th August.

The Bombay Municipal Corporation has announced its borrowing programme. The total sum to be borrowed is Rs. 4 crores, carrying interest at 4½ per cent. and is repayable in August 1970. The issue price is Rs. 99.25 per cent. The lists for public subscriptions will open on 11th August and will be closed on or before 14th August.

A further contraction of Rs. 15.83 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 25th July 1958. This brings the aggregate fall in active notes in the past three weeks to Rs. 42.35 crores. Notes held in the Banking Department are also lower by Rs. 2.38 crores, so that the decline in total notes issued is Rs. 18.21 crores. As against this, there has been a fall of Rs. 5 crores in foreign securities and of Rs. 15 crores in rupee securities. Rupee coin is higher by Rs. 1.79 crore. In the Banking Department, the Central Government's deposits have been augmented by Rs. 19.07 crores, while those of other Governments have shrunk by Rs. 13.13 crores. Deposits of banks have gone up by Rs. 13.39 crores. The decline of Rs. 5 crores in foreign securities (in the Issue Department) has been offset to some extent by a rise of Rs. 2.02 crores in balances held abroad. Loans and advances to Government are lower by Rs. 4.49 crores and other loans and advances by Rs. 6.62 crores, of which advances to Scheduled banks against usance bills account for Rs. 4.83 crores.

The Scheduled banks' statement for the week ended 18th July 1958 reflect the effect of banks' subscriptions to the various State loans. Their cash balances have shrunk by Rs. 14.20 crores and money at call and short notice by Rs. 3.82 crores. At the same time, investments have gone up by Rs. 11.46 crores and advances by Rs. 6.32 crores. Bills purchased and discounted are, however, lower by Rs. 4.04 crores. Banks' demand deposits have declined by Rs. 1.65 crore, while their time deposits have risen by Rs. 3.34 crores. Borrowings from banks have fallen by Rs. 3.04 crores, while borrowings from the Reserve Bank are higher by Rs. 3.70 crores and those from the State Bank by Rs. 1.01 crore.

The Gilt-edged market continued to rule firm, with a further hardening of prices. There was keen demand from institutional investors for short and medium-dated issues. 3 per cent. 1986 Conversion Loan hardened by 5 nP to Rs. 71.10. 3 per cent. 1970-75 gathered 5 nP to Rs. 87.80 and 3 per cent. 1966-68 by 10 nP to Rs. 93.20. 3 per cent. 1964 firmed up by 10 nP to Rs. 95.75 and 3 per cent. 1963-65 gained no less than 15 nP to Rs. 95.80. 3 per cent. 1959-61 was marked up by 5 nP to Rs. 99.50. 3½ per cent. 1962 picked up 10 nP to Rs. 98.20, 3½ per cent. 1963 by 5 nP to Rs. 99.30 and 3½ per cent. 1965 hardened by 5 nP to Rs. 98.65, after the Reserve Bank went off the market for this issue during the week. 3½ per cent. 1967, of which the Reserve Bank is a seller, was put up by 5 nP to Rs. 97.85. Among the State loans, short-dated issues, as well as the 4½ per cent. new loans, were in demand. Good business was done in Bombay loans, 4½ per cent. 1969 and 1970 gaining 15 nP each to Rs. 100.30 and Rs. 100.35, respectively. 4½ per cent. 1971 gained 5 nP to Rs. 99.95. West Bengal 4 per cent. 1963 gathered 10 nP to Rs. 99.50 and 3 per cent. 1959 a like amount to Rs. 98.80. 3 per cent. 1960 shot up by 60 nP to Rs. 98.20 and 4 per cent. 1963 by 10 nP to Rs. 99.55. Andhra 4½ per cent. 1970 was placed 30 nP higher at Rs. 99.30. U.P. 4 per cent. 1963 and 1964 put on 15 nP each to Rs. 99.50 and Rs. 99.30, respectively.

In the foreign exchange market, the rupee held its ground over the week, in consonance with the steady trend displayed by sterling abroad. Banks' selling rate of U.S. ready dollars was unchanged at Rs. 477.25 and their buying rate at Rs. 473.75 per $100. In New York, spot sterling gained from $2.80⅝-2.80.7/16 to $2.80½-2.80.9/16 before closing at $2.80.7/16-2.80⅝. Three months' forward picked up from $2.78.7/16-2.78½ to $2.78.9/16-2.78⅝ and transferable sterling from 277.65-277.75 cents to 277.90-278 cents.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 30*th July*

Bullion prices suffered a fresh setback during the week under review, thus carrying further the downward trend noted during the previous week. The war jitters having come to an end for the time being at least, bears managed to gain the upper hand, particularly in silver. The fall in demand in the ready section, the large arrivals of Tibetan coins in up-country centres (the bulk of which are said to be smuggled coins) and the increase in floating stocks were all factors which induced the "bulls" to liquidate their positions. Gold also ruled quiet in sympathy, with no appreciable expansion in demand.

As the closing price for silver forward (*Shravan* First delivery) on Monday stood at more than Rs. 7 below the official starting rate of Rs. 188-6 for that settlement, the bears had to pay a margin of Rs. 500 per bar on their outstanding sales.

Forward silver (*Shravan* First delivery) gave way from Rs. 182-12 to Rs. 180-1 before recovering at the close to Rs. 180-11. The second delivery was marked down from Rs. 183-10 to Rs. 181, but closed a shade better at Rs. 181-12.

Ready silver finished with a loss of Re. 1-8 over the week at Rs. 180-12. The floating stocks of silver are estimated at 1,000 bars. The daily average arrivals were 30 bars including unrefined metal, while the offtake was less than 10 bars per day on an average.

Gold for forward delivery (*Shravan* First delivery) declined from Rs. 106-6 to Rs. 105-1, but closed at Rs. 105-4. The second delivery shed Re. 1-2 over the week to Rs. 105-7. The carry forward charges which were As. 3 against bulls at the close of the previous week, turned in their favour for a day. But again they stood against buyers at the close of the week.

Ready gold declined from Rs. 106-14 to Rs. 105-15 over the week. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was slightly lower at 2,500 tolas per day.

In New York, silver remained unchanged at 88.5/8c., as also in London at 75*d.* for spot and 74⅛*d.* for forward. Gold improved early in the week from 250*s.* 6½*d.* to 250*s.* 7½*d.*, but dropped to 250*s.* 3*d.* yesterday.

The following comparative table shows at a glance the trend of the market during the week under review:

	30-7-58	Highest	Lowest	23-7-58

BASE METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, 29*th July*

A reaction in prices of base metals was witnessed during the week under review. Such a trend followed lessening of apprehensions of a possible world war. Overseas advices, on the other hand, were firm. Unlike Calcutta and Bombay, the upward trend in New York and London following the recent dramatic developments in Iraq was slow and cautious.

Tin opened at Rs. 590 and receded to Rs. 574.00. The recent rise was mainly speculative and hence such an abrupt recession. The rate in Bombay was higher than in Calcutta. Government demand for a good tonnage was not without difficulty. Advices from London indicated that sellers were keeping back some quantity or reserve, in view of the uncertainty caused by the Middle East situation. Electrolytic zinc closed quiet at Rs. 68.00, after opening at Rs. 71.50. There was fair demand, as consumers desired to cover as much as possible, in view of the uncertain import policy, which, it was feared, might reflect the acute foreign exchange shortage. At Rs. 70.50, lead was lower by 50 nP. Great anxiety was entertained in the market over the present low level of copper stocks. It was felt that the Middle East situation was responsible for the suspension of issue of permits for copper by the Controller of Non-ferrous Metals.

LINSEED DECLINES

(Messrs. A. Bradley and Co.)

CALCUTTA, 29*th July*

The excitement of the previous week has been followed by a reaction in linseed prices during the week under review. Trading has been somewhat dull and stagnant. The price of seeds has dropped by about Re. 1 per maund. At the prevailing level, sellers are reserved and daily turnover is small. Oilcake prices have also declined to the extent of about Re. 1 per maund. In the oil market, although prices have suffered a setback trading has been very limited with shippers practically out of the market. Overseas markets are quiet at around £115.

The latest quotations are: Ready-July and August Rs. 25-12 per maund.

COTTON FUTURES REACT

(From Our Own Correspondent)

BOMBAY, 30*th July*

The cotton futures market ruled distinctly easy during the week under review. It started on a weak note due to fears that the tendering differences in respect of the maturing August contract would be fixed higher in view of the firmness of spot prices. The rates fixed on Thursday by the Special Committee constituted under By-law 55 of the E.I.C.A. was, however, lower than expected. The bullish interpretation of the rates prompted fresh support and the contract strengthened. But this proved short-lived as selling emerged on Saturday. A section of the trade which was dissatisfied with the rates appealed against the decision of the Committee. They held that the rates were in favour of bulls. Since they were much lower than those prevailing in the spot market and also in view of the firmness of the spot market, the tendering of cotton would be discouraged. Certain jobbers and some traders refrained from doing business for a couple of hours on Friday as a protest against the decision of the Committee. About 10 appeals were lodged with the Board of the E.I.C.A. At a special meeting yesterday, the E.I.C.A. decided upon an upward revision of rates of all descriptions tenderable against the maturing contract. This touched off fresh liquidation today with the result that prices suffered a sharp break. The new crop contract, namely, I.C.C. March 1959, also reacted sharply. The weakness of the latter, reports of favourable weather and satisfactory crop progress and the improved statistical position of cotton were responsible for its easiness. The market also failed to derive any inspiration from the recommendations of the Textile Inquiry Committee published on Saturday.

I.C.C. Moglai Jarilla August 1958 opened the week lower at Rs. 686.50 and, after having risen to Rs. 688.50 the next day, declined to Rs. 679.50 yesterday. Commencing today's session at Rs. 673, the contract gathered one rupee before reacting to Rs. 670.80. The closing was, however, a shade higher at Rs. 673.50. The net loss over the week was Rs. 14.25.

I.C.C. Moglai Jarilla March 1959 began the week's trading at Rs. 683. It declined on persistent selling to Rs. 676.50 yesterday. Opening lower at Rs. 675 today, the contract improved by Rs. 2.50 before declining to Rs. 674.50. It, however, finished a rupee higher at Rs. 675.50. The net loss over the week was Rs. 8.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	30-7-58	*High*	*Low*	23-7-58
I.C.C. Moglai Jarilla (August 1958) ...	673.50	688.50	670.80	687.75
I.C.C. Moglai Jarilla (March 1959) ...	675.50	682	674.50	683.75

Weather reports in general are satisfactory. The Punjab had partly cloudy and partly clear weather which helped the plants to progress well. Rains so far have been satisfactory and at intervals they will be very helpful. Khandesh, Berar, parts of Madhya Bharat and the Gaorani tract of Moglai require bright clear weather for some time. The crop condition in general is satisfactory. Saurashtra requires immediate good rains; the crop, however, has been making good progress. Hubli area in the Mysore State had an initial good spell of rains and an immediate break in the weather is essential. Bellary, however, requires good soaking rains.

In the spot section, staple varieties continued to receive attention of mills. Prices ruled firm early in the week although, towards the close, there was a slight decline, influenced mainly by the weakness of the futures section. Varieties which received the attention of spinners were Vijay, Laxmi, Surti, Co2 197/3, etc.

In the export section, shippers did not show much interest in exportable styles, because of the delay in the announcement of an export quota. Attention was mainly centred around C.P. *Deshi*, Zoda and pickings.

In the foreign section, there was good demand for all foreign varieties. This was attributed to the fear of mills that in case the Government delayed further the import allocation, there would be acute scarcity of cotton. Importers were eagerly awaiting permission for importing U.S. and East African cotton.

The E.I.C.A. has given permission for trading in the delivery contracts on "on call" basis. Trading has also been permitted in 320F and 216F varieties for December delivery on the basis of Fine 27/32" and Fine 13/16", respectively.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end rates:

Bengal *Deshi*: 600 (600); Berar Jarilla 725 (735); Khandesh 790 (800); Vijay 875 (890); Hubli Laxmi 1,025 (1,045).

In spite of the reported decision of the Pakistan Government to provide export incentive to cotton, Karachi cotton futures market ruled easy during the week under review. This was due to weak New York advices and slack export demand. Domestic mill demand was also not encouraging. News of good rains and progress of crop imparted additional weakness to the market. N.T.R.G. January declined from Rs. 79-14 to Rs. 79-8. The July contract went off the board on 24th at Rs. 79. The spot market was quiet. Prices tended to decline.

Exports of cotton from the commencement of the season, namely, 1st September 1958, till 17th

of July, aggregated 598,944 bales, as compared with 725,769 bales in the same period last season.

Fully steady conditions prevailed in the Alexandria cotton futures market during the week. The steadiness was influenced by better export enquiries. Traders were, however, not inclined to take a bullish view of the future in view of the favourable weather and satisfactory crop progress. Higher levels, therefore, met with resistance and prices tended to remain steady. Karnak July contract expired on the 26th inst. at 75.70 tallaris. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 76.10; January 76.35. *Ashmouni*: August 67.15; October 68.30.

The Liverpool cotton futures market depicted an easy trend during the week under review. The easiness was due to lower New York advices and speculative selling in anticipation of new cotton legislation in the United States providing for larger cotton acreage and lower support prices. Although there was occasional mill fixation, it was not sufficient to absorb the offerings. Both the American and American type contracts declined. Sudan contracts, however, ruled steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: July-August 24.70; October-November 25.10. *Sudan*: July-August 31.25.

Cotton futures values on the New York Cotton Exchange drifted downwards during the week. Heavy selling by New Orleans interest and scattered hedging and commission house liquidation met with only limited support. The selling was due mainly to the impression in certain trade quarters that the Farm Bill might be approved by the Senate without much modification. A part of the selling was attributed to reports of favourable weather over most cotton tracts.

The U.S. Department of Agriculture has announced that there would be no increase in the subsidy rate of cotton for the present. Meanwhile entries into the 1957 cotton loan during the week ended 18th July were only eight bales, making the season's total 3,658,504 bales. Repossessions during the week were 73,711 bales, the season's total being 970,788 bales. The net loan stocks thus work out to 2,687,716 bales. The Department of Agriculture has announced its sixth export sale under the 1958-59 disposal programme involving 16,560 bales of Government cotton at 28.48 cents per lb. for basis middling 1" cotton. Export should take effect from 1st August. Total sales under this programme aggregate 690,264 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	29-7-58	22-7-58	15-7-58
Spot	36.45	36.50	36.50
October	36.27	36.65	36.84
December	36.53	36.87	37.01
March	36.90	37.24	—

STAPLE FIBRE YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 30*th July*

The yarn market ruled irregular during the week under review. Thus, staple fibre yarn continued to rule firm, while rayon yarn was depressed and cotton yarn quiet. The firmness of staple fibre yarn was aided by shortages of supply and enlarged offtake from consuming centres which reported improvement in local and overseas demand in fabrics. Rayon yarns encountered selling, thanks to poor enquiries from handloom and powerloom weaving interests. Cotton yarns were quiet; transactions put through were limited and prices moved narrowly.

An event of the week was the commencement of business in October delivery staple fibre yarn (40 x 2) yesterday. The Board of the Yarn Merchants' Association and Exchange Ltd. has fixed Rs. 800 per bale of 200 lbs. as the ceiling above which deals are prohibited. It has also imposed a margin of Rs. 50 per bale on the net outstanding purchases or sales of yarns exceeding 100 bales of any trader on each day. If any person fails to give delivery when the contract expires, he will have to pay a penalty of Rs. 10 per bale.

Staple fibre yarn 40 x 2 August delivery met with good buying support and advanced by Rs. 15 to Rs. 727. October delivery was firm at Rs. 752 today. Business in this contract commenced yesterday at Rs. 751. In the spot section, 40 x 2 Centurys rallied 12 nP to Rs. 4.12. Citys and Kohinoors rose by 10 nP each to Rs. 4.19 and Rs. 4.25 respectively. New Greats were done today at Rs. 3.94. Prices of imported yarns were fully maintained at last week's levels, 80 x 2 Paramounts and Fujis both being quoted at Rs. 9.25. The rayon yarn section, as already stated, ruled depressed. 120 Japan dropped 18 nP to Rs. 6.44. 150 Japan receded by 13 nP to Rs. 6.50. 120 Italy fell by 12 nP to Rs. 6.50. 150 Italy was neglected at Rs. 6.50, same as last week. Indigenous yarns suffered a fall in prices. National Rayons 120 bright cones first grade moved down from Rs. 6.56 to Rs. 6.12. 150 bright cones first grade decreased by 31 nP to Rs. 5.06.

In the cotton yarn section, 10 counts were dull, Moderns being quoted at Rs. 13.50 and Podars at Rs. 12.75. Twenty counts Indus were unchanged at Rs. 16.37, as also Moderns and Gokaks at Rs. 16.75. Thirty counts Hinds were done at Rs. 19.75, same as last week. Among forty counts, Moderns declined by 25 nP to Rs. 25.75. Minaxis were quiet at Rs. 25.75. Sixty counts Raghuvanshis and Finlays were dull, the former at Rs. 59 and the latter at Rs. 62. Eighty counts, however, met with good buying support. Mahendras rallied Rs. 2 to Rs. 72. Moderns gained 50 nP to Rs. 72.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	30-7-1958	23-7-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.44	6.62
150 Japan (per lb.)	6.50	6.37
120 Italy (per lb.)	6.50	6.62
150 Italy (per lb.)	6.50	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 August	727.00	712.00
40 × 2 October	752.00	751.00*
40 × 2 Kohinoor (per lb.)	4.25	4.15
40 × 2 City (per lb.)	4.19	4.09
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.75	12.75
20s Modern	16.75	16.75
30s Hind	19.75	19.75
40s Minaxi	25.75	25.75
60s Finlay	62.00	62.00
80s Mahendra	72.00	70.00

* Rate at which business commenced yesterday.

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 30*th July*

The firm trend noted in the oilseeds market last week abated during the week under review. In fact, the market put on a distinctly easy appearance. The easiness was due to the reduction in international political tension and fears of official intervention to check the rising tendency in prices. There were rumours that the Forward Markets Commission might direct the Board of the Oilseeds Exchange to impose the margin in castorseeds and raise the margin in groundnuts. These rumours, together with lower advices from overseas markets, made the bull operators diffident. Further, the technical considerations following the recent spectacular rise in prices of oils and oilseeds evoked profit-taking. There was also hedge selling in new crop contracts.

The groundnut section ruled weak, thanks to continued profit-taking operations and offering of new crop groundnuts from Saurashtra and Hyderabad. The castorseed section was depressed, as there was heavy long liquidation; new crop contracts were particularly weak. Trading in the linseed section was marked by predominance of sellers. Operators were generally inclined to reduce their commitments on fears of slackness in overseas demand for Indian linseed oil; these fears were based on reports of beneficial weather conditions in Argentina and lower cables from London. The U.K.'s quotation of linseed oil was around Rs. 1,533 per ton, as against Rs. 1,655 a few days ago. Even the grant of additional export quota of 10,000 tons of linseed oilcake announced on Friday did not have any effect. In sympathy with the general trend and following drop in cotton prices, cottonseeds encountered selling and prices suffered a setback. Kardiseed and nigerseed lacked support, notwithstanding the grant of further export quotas of 5,000 tons each.

The Board of the Bombay Oilseeds and Oils Exchange Ltd. has addressed a communication to the Chief Controller of Exports regarding the procedure governing exports of groundnut oil and H.P.S. groundnuts. Referring to the validity for shipment up to the end of September 1958, the Board points out that it is not possible to combine business in H.P.S. kernels owing to end of season and monsoon in India. It has also drawn attention to fears expressed by foreign buyers over the contamination of weevils in H.P.S. kernels during transit. As regards groundnut oil, it is felt that export business is not immediately possible on account of end-of-season and lower foreign prices. The Board has, therefore, urged the Government to extend shipping period for groundnut oil until the end of December 1958 and for H.P.S. for U.K. until the end of February 1959.

Groundnut August 1958 contract, which stood at Rs. 195 at the close of last week, was subjected to selling pressure and declined to Rs. 190.75 on Friday. After recovering to Rs. 196 yesterday, it dropped to Rs. 193 today. The net loss over the week was thus Rs. 2. February 1959 contract fell from Rs. 169 to Rs. 165.50. Bold ready receded by 50 nP to Rs. 40.25. Khandesh quality declined by a like amount to Rs. 41. Coromandel slipped down by 75 nP to Rs. 40.75. Groundnut oil ex-mill fell by 63 nP to Rs. 20.87. Railway receipt lost 25 nP to Rs. 20.75.

Castorseed September 1958 contract was marked down from Rs. 168 last week-end to Rs. 160.25; towards the close, it was a shade higher at Rs. 160.75. May 1959 contract was freely on offer at Rs. 159 today, as against Rs. 165 on Wednesday last. Ready Madras dropped Re. 1.25 to Rs. 32.25. Kanpur quality shed a similar amount of Rs. 31. Castor oil B.S.S. moved down from Rs. 18.50 to Rs. 17.81 and Commercial quality from Rs. 17.25 to Rs. 16.37.

Linseed September 1958 contract encountered selling and declined from Rs. 35.31 last week-end to Rs. 34.50 today. Bold ready receded by 87 nP to Rs. 34. Linseed oil eased by a rupee to Rs. 17.75.

Cottonseed September 1958 contract evoked some support in the earlier sessions and improved from Rs. 122.50 to Rs. 123.50, but gave way subsequently, today's closing rate being Rs. 121. February 1959 contract was subjected to selling pressure, the quotation moving down from Rs. 107.75 to Rs. 103.50.

Among other oilseeds, kardiseed bold ready which stood distinctly firm at Rs. 23 on the opening day, as against Rs. 22.25 last week-end, came in for selling and receded to Rs. 22.50 yesterday. Today, however, it was well supported at Rs. 23. Nigerseed Madras quality improved from Rs. 32.75 to Rs. 33.75 on 26th inst. and, after declining to Rs. 33.37 yesterday, it finished higher at Rs. 33.50 today.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	30-7-1958	23-7-1958	16-7-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	193.00	195.00	185.00
Feb. 1959	165.50	169.00	168.00
Bold ready (per cwt.)	40.25	40.75	37.87

Ready	17.75	18.75	18.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR MOVES DOWN

(From Our Own Correspondents)

BOMBAY, 30*th July*

The stern warning against rising sugar prices issued by the Union Food Ministry would appear to have had the desired effect. Not only has the rising tendency been checked but the prices have actually tended to move down. The ex-mill quotations for Bombay-Deccan and North Indian sugars have declined by a rupee per bag on an average. Some sugar traders are inclined to feel that the speculative holding and buying of sugar has been halted and that conditions are becoming quite normal. It is believed that, as the ex-mill quotations in the whole of South India have reached the bottom, they will not go down still further, especially with the appearance of the normal post-monsoon demand in sight.

Arrivals of sugar by rail into the market was quite considerable; they aggregated about 23,000 bags, as against 1,800 bags in the previous week.

Large grain sugar receded by Rs. 2 to Rs. 110-Rs. 115.50 per bag. Medium grain declined from Rs. 109-Rs. 111 to Rs. 107.50-Rs. 109. Small grain was lower at Rs. 106, as against Rs. 106.50.

The production and despatches of indigenous sugar up to 15th July 1958 amounted to 1,967,000 tons and 1,425,000 tons, respectively, as against 2,018,000 tons and 1,493,000 tons, respectively, in the corresponding period of last year. The stocks with the factories on 15th July 1958 stood at 966,000 tons.

• • • •

The Bombay Sugar Merchants' Association has protested against the recent directive of the Reserve Bank to the scheduled banks to enhance the margin on advances given against security of sugar from 35 per cent. of the value of stocks to 45 per cent. In a communication addressed to the Reserve Bank Governor and the Union Ministers for Food and Finance, the Association points out that the credit curb is unjustified, since it applies only to stocks held by merchants and not by manufacturers who, it alleges, hold sugar. "The mills," to quote it, "being sure of disposing of their sugar, raise the selling prices progressively, while the merchants are compelled to pay higher rates demanded by them." According to the Association, as a result of the rise in margin, the merchants will not be able to hold sufficient stocks at consuming centres, and this, in turn, will lead to scarcity conditions in these centres. The Association's suggestion for checking the rising tendency in prices is compulsion on sugar mills to sell and despatch their allotted quotas of sugar within four weeks. It has also urged adequate supply of wagons for moving sugar promptly.

• • • •

HAPUR, 28*th July*

The ex-mill delivery prices of sugar ruled quietly easy during the week, following the directive issued by the President of the Indian Sugar Mills Association to sugar factories to honour the pledge by selling sugar at the average price from 23rd to 27th June. Prices of some varieties declined by 19 nP to 62 nP per maund. Demand from Punjab and Delhi was reported to be brisk and business in bulk quantity was done with these destinations. Although the supply position is easy, the Government's decision to export 50,000 tons of sugar has been exploited by some interests to push up prices.

While some of the factories in the Muzaffarnagar market are selling sugar at the average price agreed with the Government, other factories are not co-operating with the Association and have stopped their sales. Business in heavy quantity of Jagadhri, Iqbalpur, Deoband, Khatauli and Seohara factories was done with Punjab and Delhi side, while business done with other destinations in Saurashtra, Rajasthan and Gujerat was moderate. Following were the latest ex-mill delivery rates: Khatauli (B29) Rs. 38.75; Deoband (C29) Rs. 37.87; Iqbalpur (A29) Rs. 39.50; Rampur (B29) Rs. 38.37; Mansurpur (D29) Rs. 38.37; Daurala (C29) Rs. 38.56; Amroha (D29) Rs. 37.50; Bijnore (E29) Rs. 37.12; Meerut (D29) Rs. 38.15; Simbhauli (B29) Rs. 38.24; Bulandshar (E29) Rs. 38.12.

Sugar prices eased fractionally in the Kanpur market, following the directive by the Indian Mills Sugar Association to honour their commitments to the Government. Despatches from factories showed an improvement, particularly to metre-gauge railway destinations. The following are the latest prevailing spot and ex-mill rates respectively (per bag and per maund) C29-Basti Rs. 107 and Rs. 38; Gola Rs. 104.25 and Rs. 37.25; Waltergunj Rs. 103.50 and Rs. 36.75; Burhwal Rs. 103.75 and Rs. 37; Hargaon and Lakhimpur Rs. 103.75 and Rs. 36.87.

Khandsari prices continued steady, due to good demand. The prevailing prices were Rs. 35.50 to Rs. 37.50 per maund.

Ready *gur* prices suffered minor losses during the week. Dry quality was quoted at Rs. 22 and dry-*kotha* wet at Rs. 20.25. Despatches during the week were small at 2,000 maunds, due to rains, and local stock was put at 48,000 maunds. Heavy rains during the week has proved beneficial to the standing cane crops. In the State Vidhan Sabha, a non-official resolution has been passed recommending to the Centre to increase cane price to Re. 1.75 per maund.

Ready *gur* prices ruled quiet in the Muzaffarnagar market where stocks were put at 15,000 maunds only. There was good enquiry for *shakker dara* from Rajasthan and revival of demand from Northern areas accounted for steady conditions in *khandsari* prices.

Future *gur* prices ruled quietly both ways. *Fagun* opened at Rs. 14.17 on last Monday and after touching the highest and lowest at Rs. 14.40 and Rs. 14.08, was today quoted at Rs. 14.16.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 30*th July*

Following improvement in political situation in the Middle East, Malabar black pepper ruled quiet during the week, with foreign enquiries almost absent. New York reduced its indication to about $0.26½.

Prices for ungarbled at Alleppey and Cochin were hovering round Rs. 650, with sellers more anxious to meet buyers. Calicut was also reported to be quiet at Rs. 690.

In the hedge market at Cochin, August delivery moved between Rs. 115 and Rs. 115.62, while October delivery from Rs. 117.50 to Rs. 118.12.

Singapore was quiet with black and white quoting Str. $76 and Str. $132, respectively.

In specific delivery, September moved down from Rs. 665 to Rs. 640, with undertone quiet, in view of the accumulation of tenderable stock and local demand not so encouraging.

Barring any new development in the Middle East, the future of the market appears to be uncertain, tending more towards lower prices, if foreign buying does not show improvement in the coming month. The supply picture from Sarawak and Lampong is very hazy, and that is a supporting factor.

New business in A.S.T.A. is conspicuous by its absence, and whatever done is by way of short-covering only. August-September is nominally quoted at $0.27.

Today's nominal quotations are: Ready Rs. 91 per Bengal maund and July Rs. 620.30 and September Rs. 640.50 per candy of 5¼ cwts.

DEMAND FOR TEA IMPROVES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 24*th July*

The offerings aggregated 1,058,636 lbs. in sale No. 22 which was held on Tuesday, 22nd July. The quality of all teas showed a further improvement. Both exporters and internal buyers competed for the improved teas. The sale opened to a good general demand. Low medium and medium types met with some competition and were fully firm and dearer with the improved quality. Good mediums met with less support and were easier to purchase. High grown teas sold well and were 10 to 15 nP dearer. Whole leaf teas were irregular, but at times dearer on last rates.

The following are the quotations:—

	Rs.
Plain B.P.	1.55
Low medium	1.60 to 1.75
Medium	1.75 to 1.95
Good medium	1.95 to 2.15
Quality	2.10 to 3.20

London Market: *Sale of 21st July* 1958.—Good demand, following quality.

Sale of 22nd July 1958.—About steady.

Colombo Market: *Sale of 21st July* 1958.—6.5 million lbs. Coloury mediums dearer. Fannings steady; other sorts lower. Lowgrowns speculative demand 50c. decline.

Sale of 22nd July 1958.—Good demand. Stalky broken mixeds and powdery dusts lower. All other sorts firm.

Calcutta Market: *Export.*—Less demand owing to unsettled Middle East conditions. Market, except for few bright liquoring orthodox invoices, declined irregularly. C.T.Cs weakest feature and were up to 50 nP easier.

Internal.—17,600 chests only. Fair demand at again easier rates. Orthodox 6 to 10 nP easier. C.T.C. irregular, but generally 20 nP easier with considerable withdrawals.

Export Quota.—The market remained steady throughout the week, and a fair volume of business was transacted at 11¼ nP.

Forthcoming Auctions.—Sale No. 23 will be held on Tuesday, 29th July and Dust Sale "P" will be held on Thursday, 31st July 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 23 was held on Tuesday, the 29th inst., when 1.25 million lbs. were offered. There was fair general demand but at easier rates. Low mediums and mediums were lower by 5 to 10 nP. Good mediums evoked little demand and declined by 10 to 15 nP. Highgrowns were steady."

TEA EASIER

(From Our Own Correspondent)

CALCUTTA, 29*th July*

An easier trend was in evidence during last week's tea sales for domestic consumption. Such a trend clearly indicated the view among buyers that, as the supply of common teas in this year would be far in excess of last year's, there would be no difficulty in meeting requirements at any time. Such a view has also been confirmed by the trend in export auctions.

Market circles suggested producers' fears of excess supply in common teas as being common to all producing countries. For the world output has so far aggregated 451.5 million lbs., registering an increase of 14.5 million lbs. as compared with the corresponding period of last year. They, therefore, considered that it would be a nice idea, if the proposal for an international agreement limiting exports and acreage could be revived.

Present developments did not indicate that there would be any fall in tea exports to the Middle East countries.

Dusts on offer during last week's sales for internal consumption amounted to 17,353 chests, the quality of which was quite useful. C.T.C. Assams recorded an irregular tendency. The price at opening was lower by 20 nP. A subsequent firmer tendency was short-lived and the price, when closed, was lower by 35 nP. As a result, withdrawals were heavy. Orthodox teas eased by 6 to 10 nP. On keen competition, the better liquoring blackish grades showed the least decline, while non-withered Doars fell by 10 nP. The quotations were: Best Assam C.T.C. Rs. 2.70 to Rs. 3.00; medium Assam C.T.C. Rs. 2.20 to Rs. 2.40; medium Dooars Rs. 1.64 to Rs. 1.66; and Medium Assam grainy dust Re. 1.68 to Re. 1.72.

Leaf offerings aggregated 325 chests. Quality was generally of a residue description.

Export quota changed hands at 11½ nP, but, towards the close, sellers demanded 12 nP.

JUTE GOODS MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 29*th July*

Perceptibly owing to the lessening of world political tension, bulls elected to take profit and, as a result, prices of jute goods were marked down during the week under review. While hessian 40"×10 oz. was always above the I.J.M.A. floor, B. twills declined to much below the minimum price. Moreover, there was selling pressure in the *fatka* and, as is always the case in such a situation, weak holders unloaded as much as possible in a hurry to take profits before the declining trend took prices to levels lower than those at which they had purchased. Overseas buying was also poor, although it was anticipated that Americans would show more interest. For it was noted that U.S. burlap stocks at the end of June were lower at 232.4 million yards, as against 252.1 million yards a year ago and 240.4 million yards at the end of May 1958. The economic recession in the United States has been abated, and it was thought that burlap manufacturers there could no longer afford buying burlap on a hand-to-mouth basis. After the Middle East crisis, the U.S.A. bought a good quantity which pushed up the prices of hessian for some time in the last week. Latest reports from the New York burlap market indicated profit-taking following earlier active short-covering.

In the meantime, buyers on behalf of Argentina continued to accord fair support, but overseas buying as a whole was not by such a measure as to sustain prices. There was no doubt that this month's shipments would be substantially higher than last month's, thereby facilitating a welcome decline in stocks, discounting for which should be said to have been completed. Up to 15th July, hessian shipments amounted to 25,000 tons and sacking 15,000 tons, as against 10,000 and 9,000 tons, respectively, in the previous month. Note was taken of the rejection of a Communist-sponsored resolution in the West Bengal Assembly recommending the Centre to take over the foreign trade in tea and jute goods. It was good that the proposal was nipped in the bud, suggesting that the Assembly members possessed full knowledge of the delicateness of the foreign trade in these two commodities.

The market opened on a quiet tendency on Tuesday last and, following speculative unloading and selling in the *fatka*, prices were marked down. Some interest in hessian was shown on behalf of the United States. Hessian 40"×10 oz. ready fell to Rs. 43.55 from Rs. 44.30, and ready B. twills to Rs. 98.60 from Rs. 99.85. More selling followed in the *fatka* and, although some business was done in both hessian and heavy goods, prices declined on the next day too. Hessian 40"×10 oz. was priced at Rs. 43.40 and B. twills at Rs. 98.30. On Thursday, any good effect that might have developed on prices following some sales in both hessian and sacking on overseas account and some covering demand was nullified by profit-taking by bulls. This pushed down the price of hessian 40"×10 oz. to Rs. 42.80 and that of B. twills to Rs. 97.80 on Friday. Although speculators continued to sell and this continued to depress prices, mills met some demand for both hessian and sacking for forward delivery. This arrested the pace of the downward trend and, in fact, pushed up ready hessian 40"×10 oz. to Rs. 43.00 and ready B. twills to Rs. 98.50. Subsequently, the recovery continued and the prices for the above two representative constructions gained further to Rs. 43.05 and Rs. 98.75, respectively.

Since the last report, more rains have fallen in several jute districts and the difficulty felt recently in view of paucity of steeping water is gradually disappearing. This has enabled commencement of harvesting operations in the districts where harvesting had been delayed. The quality of the crop is expected to be excellent and the crop higher. In the next week or two, raw jute will commence reaching marketing centres and mills' areas in greater quantities. The expectations in this regard and the weaker advices from the jute goods market pushed down raw jute prices. Assam Northern bottoms declined from Rs. 27.25 to Rs. 26.50 August-Sept. and local daissee bottoms from Rs. 29.75 to Rs. 29.25 Sept.-Oct. The undertone was quiet, with buyers pushing down prices and sellers not keen in discounting.

BUYERS OF HIDES RESERVED

(From Our Own Correspondent)

MADRAS, 28*th July*

There has been no notable change in the Madras market. Sellers were quoting firm prices, but importers did not seem excited or show their anxiety to buy at sellers' levels. There were a few sales at last week's prices, but the quantities were small.

Arrivals of kips were moderate, clearances good at unchanged prices. Demand for lower grades for local consumption was good.

There was more demand for top grades in lightweight goat than for lower grades. As sellers had plenty of contracts to execute, they were quoting 3*d.* to 6*d.* more which the importers ignored. There were a few orders for 8/9 and 11/12 lbs. average also. Demand for common tannages goat and sheep was poor, and for semi-prime sheep fifths exceeding good.

HIDES FIRM

(From Our Own Correspondent)

KANPUR, 28*th July*

During the week under review, the hides and skins market was firm. Supplies were less ample, thanks to rainy season and transport bottleneck. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 250, and 3rd grade Rs. 150 per score; wet salted buff 1st grade 1 lb. 60 ozs. and 2nd grade 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 300 to Rs. 280 and 2nd grade Rs. 270 to Rs. 250 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 28*th July*

Quiet conditions prevailed in the foodgrains market during the week under review, due mainly to the recent measures taken by the Government to check the upward trend in prices. Banning forward deals in coarse grains and pulses resulted in a break in the prices of these cereals, while the latest order banning purchase of wheat by roller flour mills in U.P., Madhya Pradesh, Rajasthan and Bombay is calculated to help easing wheat prices as the millers were by far the biggest purchasers in the open market. The mills in these areas will be supplied wheat directly by the Government from imported stocks, as is the case in the eastern and southern regions.

Wheat prices at Hapur ruled quiet during the week at almost unchanged level of Rs. 20 per maund for average quality and Rs. 21 for farm produce. Daily arrivals during the week were small at an average of 100 to 150 maunds and local stock is unchanged at one *khatti*. Wheat prices also showed a downward trend in other areas of U.P., thanks to heavy stocks moved by the Centre for sale through fair-price shops. The State Government has also seized heavy stocks with flour mills as an anti-hoarding measure. Heavy rains during the week are now followed by clear weather and the condition of the *kharif* crop is satisfactory. Rice prices also ruled quiet, thanks to better supply position and the recent heavy rains which have proved beneficial to standing paddy crop and enabled large-scale sowings of *munji* crop. Prevailing prices were: *Basmati sela* Rs. 40 to Rs. 42.50, mainpuri Rs. 29 and coarse quality Rs. 25.50 per maund.

Gram prices also eased slightly towards the week-end and gram is now being sent to east U.P. on State Government account, while some arrivals here were also reported from Punjab and local stock ran down by one *khatti* to 45 *khatties*. Barley and *bejhar* prices ruled quietly steady due to good consumer demand as the early maize crop is not expected before a month. *Jowar* and *guwar* prices were quoted slightly lower and week-end prices (in rupees per maund) were: Gram Punjabi 14.50, barley 14, *bejhar* 13.25, *jowar* 13.25, *guwar* white 16; stocks: Gram 45, *bejhar* 10, barley 2, *bajra* 2, and *jowar* 7 *khatties*.

Good buying enquiry for peas from east U.P. and *arhar* and its *dal* from Madras side accounted for quietly steady conditions in the prices of these pulses, although prices recorded a sagging tendency following the ban imposed on forward trading in pulses on 17th July by the Government of India. Local stocks ran down by 8 *khatties* of peas and 3 *khatties* of *arhar* during the week to 171 and 121 *khatties*, respectively. Prevailing prices were: Peas *dara* Rs. 12.50, *khatti* Rs. 12.50, peas white Rs. 13.25, peas *dal* Rs. 14.12, *arhar* Rs. 16.50, *arhar dal* Rs. 21, *urd* Rs. 18.75 to Rs. 20, *moong* Rs. 25, *massoor* small Rs. 16.25 per maund.

SURVEY

(*Concluded from page 179*)

annual rate of 960,000 or 170,000 above the level reached in 1957. The production of bicycles in 1958 might thus be expected to exceed the original target of 8,95,000 laid down in the second Plan; the target, however, was recently raised to 1,350,000.

More or less the same trend was maintained in many of the other modern industries. Machine tools, for instance, continued to step up its production during the four months under review, and accounted for Rs. 1.36 crore or an annual rate of Rs. 4.08 crores, as against the total value of Rs. 2.5 crores in 1957. There was a marked increase in the turnover of power-driven pumps which was of the order of 25,400 for the first four months of 1958, as against 63,600 in the whole of 1957. The output of electric motors was 191,400 h.p., the figure for 1957 being 469,200 h.p. About 64,000 radio receivers were produced during the period under review, the aggregate output last year being 190,000. The number of sewing machines manufactured was 64,900, as against 166,600 in the whole of 1957.

Considerable progress has been recorded in many of the important chemical and allied industries like caustic soda, soda ash, paper and paper board, power alcohol and sulphuric acid. Production of coal has been running at an annual rate of 45.6 million tons during the four months ended April this year, as against 43.5 million tons for 1957. Among metal industries, aluminium has shown a rise, production being 2,755 tons for the four months under review or 8,265 tons per annum, as against 7,771 tons in 1957.

FINANCING CAPITAL GOODS IMPORTS

(*Concluded from page 184*)

ferred by foreign creditors than shares of stock which, being "property quotas," increase in value parallel to the gradual augmentation of the real property market values which they represent. (Take this example for a long-term debt settled by bonds: In W. Germany, the yearly "devaluation coefficient" of the DM., or, the yearly loss of the currency is about 3 per cent. This means that 100 DM., loaned today, for repayment in 40 years, might be worth only 1 (one) DM. in purchasing value after 33 years.)

Of course, bonds cannot be avoided entirely in Asian-W. European economic relations, and therefore two principal precautionary considerations are under study in W. Europe, namely, (*a*) A "gold clause" should be inserted in Asian bonds, whereby the amount of money bonded in each single Asian debenture shall be expressed also in a definite quantity of pure gold, indicated in grammes. The Asian debtor will have to pay, at the maturity of the bond, the counter-value, at the free market price, of the quantity of gold indicated on the respective bond. Another idea, mentioned before, would be (*b*) to obligate W. European importers of Asian raw material to utilise preferably Asian debentures for the payment of their imports.

Recommendation for Joint Asian Action

The most urgent task not only for India, but also for all Asian countries associated with the Colombo Plan, S.E.A.T.O., and E.C.A.F.E., and including Japan, should be the establishment of a permanent institutional contact with the O.E.E.C. in Paris. A special delegation of Asian countries should strenuously endeavour to strive there for the adoption, by the O.E.E.C. industrial countries, of the aforementioned principles for the "distribution of the load" in their export—and import—transactions with Asia. The United States and Canada have been associated with the O.E.E.C. right from its inception.

Two very strong arguments could be used by Asian delegates at the O.E.E.C.:

(*a*) "Asia is an immeasurably great reservoir of industrial *orders* for W. European industrial countries which should desire to maintain a long-term full-employment in the heavy industry, and with that, secure safer chances for the "pursuit of happiness."

(*b*) "It is assuredly in the common interest of the entire O.E.E.C. Community of Nations that none of the industrial member countries shall overburden itself financially in connection with any Asian industrialisation project, lest its ability to assist other countries might be impaired. Therefore, all O.E.E.C. industrial countries should see to it, that their shares of engagement be fairly equitable both in (1) Asian industrialisation projects, and (2) in the correlated bulk purchases of Asian raw materials."

The old argument about the "moral obligation of the rich countries to help the poor ones" does not seem effective enough to me in view of the prevailing materialistic outlook on life in W. Europe.

The present recession, which has begun already to "pinch" certain sections of W. European heavy industry, usually engaged in exports of capital goods, seems to me as the psychologically most fitting and appropriate moment for Asian diplomats and economic experts to broach these issues at the O.E.E.C. in Paris *jointly* and immediately. Resistance against a "joint *démarche*" of Asian delegations at the O.E.E.C. in Paris would be extremely difficult. Finally, I would recommend that the said Asian delegations at the O.E.E.C. submit a proposal for an "Asian Industrialisation Conference," to be arranged and held in Paris within the O.E.E.C., *in this autumn*, in order *to outline*, at least, the aforesaid general concepts and related ideas, and to attempt to lay down the general concepts for a future course of action; leaving wisely to the future the elaboration of the various technical details, and their gradual implementation. To put it more bluntly: the free nations of Asia should exact the fullest recognition of their sovereignty from all W. European countries, including the "former colonial powers," by discussing and debating the aforementioned issues with these countries on a footing of *real*—and not only of apparent—equality.

COMMERCE AND INDUSTRY

(*Concluded from page 196*)

of surpluses, introduction of synthetic products, overproduction, etc. He complained of Soviet competition, saying that the Soviet Union, which was not a party to international accords, disposed of vast stocks, e.g., of wheat, and disrupted the traditional market patterns. The representative of the Food and Agriculture Organisation pointed to such difficulties as directly opposing interests which caused consumers to seek guarantees against increase in prices while producers sought guarantees of exactly the opposite. Mr. Gordon Williams of the International Monetary Fund declared that the commodity problem was frequently at the base of balance of payment difficulties. The Fund attempted to remedy this through credits and technical aid. This was not granted automatically but after a close examination of the requesting countries' fiscal policies. He, however, called for suggestions for improvements of the Fund's operations. The I.M.F. cannot, of course, waive its right to examine each case on its merits. What is necessary is that such examination should be carried out expeditiously before the necessary assistance is given.

Notice

THE BENGAL PAPER MILL CO. LTD.

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the One hundred and thirty-fourth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Wednesday, the 20th August 1958, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1957, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare dividends and to transact other ordinary general business of the Company.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 6th August to 20th August, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 21*st July*, 1958.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2473 BOMBAY, 9th AUGUST 1958 PRICE: Re. 1·50

11 AUG 1958 PUBLIC DEPARTMENT

FRESH THINKING ON FOOD NEEDED

ALL is not quiet on the food front. Prices of food articles are creeping up. A partial, if not a complete, explanation for the recent labour unrest in the country is the increase in food prices. The index number of wholesale prices of food articles (Base: 1952-53=100) was 117.9 for the week ended 12th July 1958, as against 110.7 a year ago, the corresponding index numbers for cereals being 109.1 and 104.0. Food prices have risen faster than "all commodities" which shows how the former are out of step with the general trend in prices. The index number of all commodities has moved up over the relevant period by a little over six points to 114.4. What makes the rise in food prices particularly disturbing is that it has occurred, despite the fact that arrangements for large imports of foodgrains have been successfully completed and measures restricting bank credit to foodgrain trade have been consistently followed. Imports aggregated 3.5 million tons in 1957, as against 1.6 million tons in 1956. There is a two-million-ton import programme for this year. Not long ago, buffer stocks were estimated at 1.5 million tons. All this has not prevented food prices from rising.

A modest rise in food prices is not necessarily a matter for alarm. But the increase that has now taken place is certainly not modest, especially considering that nearly all of it has been compressed into a period of two months. Further, it has occurred on top of a 10 per cent. rise that had taken place in the twelve months ended 14th July 1957. Thus, over a period of two years, the cost of food has gone up by 16 to 17 per cent. The situation deserves to be watched, in order that it may not deteriorate further. An appropriate measure has been the banning of forward trading in coarse grains in that important market, Hapur. At the same time, it must be remembered that no tinkering with the forward market mechanism can help bring down prices. After all, prices in the forward market reflect, but do not create, conditions of availability of supplies, pressure of demand and future prospects. A permanent solution must be sought through augmenting supplies which, in the context of the continuing foreign exchange shortage, could only mean increased reliance on improving domestic output of foodgrains.

It is here that the Government's policy has failed to carry conviction to the people. The official agricultural policy has often come under fire of Press and Parliamentary criticism. And, despite all the expert attention it has received, it still remains an endless round of conferences and expert committees and eloquent talk. If proof of the policy is a progressive rise in production, it is yet to be proved. It has been infinitely easier to revise targets than to reach them. The original target of 10 million tons by way of additional production over the 1955-56 level of 65 million tons of foodgrains was revised to 15.5 million tons to be reached by the end of the second Plan. This would mean a production target of 80.5 million tons to be reached by stages in 1960-61. Some planners felt hurt when the Asoka Mehta Committee said that it would be possible to reach only a lower target, namely, 77.5 million tons, as against the estimated demand for 79 million tons by 1960-61. In the absence of resolute measures to improve agricultural production, even the modest target contemplated by the Asoka Mehta Committee might become unattainable. It may be noted here that the output of foodgrains in 1957-58 is expected to be much lower than even in 1956-57 when it aggregated 68.7 million tons.

Against this background, it is gratifying to note that the Union Ministry of Agriculture is working out a scheme for mobilising the services of technical personnel in the Central and State Governments in the cause of increased agricultural production in the next *rabi* season. While this is a step in the right direction, it may be wondered whether it will yield significant results. One's experience hitherto does not warrant the acceptance of this programme at its face value. That apart, there are not enough technical men to go round. Even the Community Development areas have complained of paucity of trained personnel for leadership and guidance. Further, what these men can achieve is strictly limited in the absence of other facilities. The problem of raising agricultural production is essentially one of implementing an integrated programme in which provision of irrigation facilities, fertilisers and improved seeds all play a determining role. For instance, the failure to provide field channels promptly enough has meant considerable loss in output in areas which are otherwise well supplied with irrigation potential. In this connection, Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, quoted recently some telling statistics. He pointed out how, by the end of the second Five-year Plan, Rs. 788 crores would have been spent on irrigation. He added: "It is obvious that, if utilisation is to proceed according to the old ideas—that is, if it is left to the people entirely and is spread over 10 to 15 years—the nation will be losing Rs. 30 to 40 crores a year in interest alone and three to four times that amount in output." All instances of unutilised irrigation potential—and there are many such—are a national waste which is bound to give a further fillip to inflationary pressure. The State Governments should, therefore, lose no time in taking effective measures designed to ensure that all the irrigation potential which has been created is fully utilised.

Further, special attention deserves to be devoted towards making fertilisers and organic manure available in larger quantities in rural areas. In this connection, we commend to the State Governments and local authorities the scheme for producing organic manures, outlined by Mr. M. S. Sivaraman, Adviser, Programme Administration, Planning Commission. Mr. Sivaraman, who, besides possessing practical experience as an administrator, is a painstaking student of Indian agriculture, has pointed out that one of the main reasons for the general low level of agricultural production in India is the widespread deficiency of soil nitrogen; of all the commonly available sources of nitrogen, green manure and rural composts have great possibilities of rapid development. His scheme involves the distribution of green manure seeds and cultivation of green manure plants without sacrificing any crop. Nitrogenous fertilisers are no doubt useful, but the country's capacity to produce them on the scale needed by it is not there and will take a long time to be created. The present supply of chemical fertilisers is hardly sufficient for one-fourth of the irrigated area of about 60 million acres. In distinct contrast to this, green manure is easily raised and, when applied, could increase yields by 20 to 40 per cent. The chief reason for the slow progress in the development of green manuring is inadequate supply of green manure seeds. Mr. Sivaraman advocates concentration of effort on the production of extra plant materials which are quick growing and adaptable to varied conditions of soil and climate. He has himself found such plants as will answer this description.

While there are thus many details of agricultural programme which deserve notice and implementation, the main thing is to place agricultural production, in general, and food production, in particular, on a war footing. The Central and State Governments have unfortunately given the impression that they lack a sense of urgency in their task. Peasants too lack enthusiasm. Ideological land reforms, which force the rich landlords out of the villages and prevent the inflow of capital and intelligent interest into them, have been largely responsible for the apathy to agricultural production now afflicting the rural areas. Be that as it may, Indian agriculture, as Mr. C. D. Deshmukh rightly pointed out a few days ago, needs thorough reorientation. He has suggested the setting up of a National Food Production Council, fixation of production targets at the basic village level and the creation of necessary organisation to reach the targets. These are not the stray thoughts of an arm-chair politician—in fact, he has stressed the need for a non-political approach—but of a man who combines in himself a sense of detachment with intimate knowledge of men and affairs. It is, however, well to remember that no agricultural policy can succeed without the active co-operation of the millions of peasant-proprietors in the country. But this cannot be secured through mere well-intentioned appeals. It would require a price policy which, even if did not bring in a good return to the farmer, would at least ensure fair minimum prices for his produce. Reasonable stability in farm prices and some assurance of minimum security of return on the effort and capital put in are the *sine qua non* of a wise agricultural policy.

VALUE OF TOURISM

ALTHOUGH travel has for long been regarded as part of liberal education, tourism as an industry catering to the needs of travellers is of recent origin. It is now recognised all the world over that tourism is an industry with rich potentialities for invisible exports. Nor is its human appeal less important, considering that it widens international contacts and understanding. The rapid growth of communications and the development of fast-moving modes of transport have given a fillip to tourism which it never received in the less hectic past. Gone are the days when, even in a romance, it took eighty days to travel round the world; in less than as many hours, a globe-trotter goes around the world about his business. The progress in means of communication has been pressed into service in all countries for promoting tourist industry which has stimulated numerous ancillary services such as hoteliering, publication of tourist literature and manufacture of souvenirs, an essentially small-scale industry.

India, however, arrived late in the general race for attracting tourist traffic, the first con-

scious effort at promoting tourism having been made by the Sargent Committee in 1945. Since then, many measures have been taken, all designed to develop tourist industry, including the setting up of a tourist division as part of the Ministry of Transport and Communications and of tourist offices in India and abroad. The goal of the Government's tourist policy is to attract foreign tourists and promote internal tourism. By and large, it has paid rich enough dividends, especially considering that India's efforts in the field are of recent nature. The number of foreign tourists who visited India has quadrupled in six years, from 20,000 in 1951 to 80,000 in 1957. In 1951, the foreign exchange earned from tourism was no more than Rs. 7.7 crores. By 1955, it had risen to Rs. 10.1 crores and by 1956 to Rs. 15.45 crores; last year, it improved still further to Rs. 16 crores. It has thus exceeded the target of Rs. 11.57 crores set for 1958 under the second Plan. In fact, it is already higher than the target of Rs. 15.31 crores set for 1960.

Nevertheless, India's income through tourism is far less than what it could be. It does not form even 3 per cent. of its export earnings. There is wide scope for increasing the income, thanks to the large number of places of scenic beauty and historical interest India possesses. Appropriately enough, the Union Minister for Transport and Communications, Mr. S. K. Patil, inaugurating the first meeting of the Tourist Development Council, held at Srinagar last week, emphasised that our objective should be to make this country "attractive and magnetic, in fact a tourist paradise." Clearly, a great deal depends upon provision of comforts for tourists, external publicity and guidance to visitors. The tourist organisation of the Union Ministry of Transport and Communications now consists of four secretariat sections and one research unit in the tourist traffic division, 15 well-established tourist offices in India and seven tourist offices abroad. Tourist material, published by the Government, includes books, pamphlets, folders, maps and posters in several European and Indian languages. There are now about 25 recognised travel agents, four excursion agents and 12 *shikar* agents. The system of guide training course, according to the Ministry's annual report, has proved "very effective." If this is so, there is no reason why short-term courses should not be given to certain selected members of the staff on the railways, airlines and large motor transport organisations, so that they could provide additional guidance to foreign tourists.

To revert to the meeting of the Tourist Development Council. The Council recommended a fair deal, for both home and foreign tourists, more concentrated effort on developing selected tourist spots as against spending available resources too thinly over a large number of places, block reservation in regional rest houses for tourists, greater procedural and functional facilities for *shikar* parties to be decided by a conference to be convened shortly, and drawing up of a calendar of events with fixed time festivals marked on it for the information of tourists. The Council also discussed the salient recommendations of the Hotel Standards and Rate Structure Committee regarding classification of hotels, rate control and funds for giving loans to hotel industry. It is noteworthy that the Council suggested relaxation of prohibition rules, provision of Indian cultural and entertainment shows in hotels in place of Western floor shows, organisation of more youth hostels and popularisation of certain colourful festivals, such as the "Dussara" in Mysore and "Almond Blossom" festival in Kashmir. These suggestions, if implemented, will certainly make India more attractive to foreign tourists.

There are two specific issues which deserve to be kept under constant scrutiny, namely, customs formalities for foreign tourists and cost of internal tours. Customs formalities have a way of multiplying themselves into an interminable round of inconvenient form-filling and irksome interrogation. It is, however, gratifying to note that the Government has been prompt in implementing the recommendations of the Special Committee which examined the question of simplification of entry formalities for tourists. It would appear that, in pursuance of the recommendations of this Committee, the baggage rules for tourists have been further liberalised with effect from 1st January last. This aspect of tourism should be examined from time to time, in order to ensure that the tourist does not encounter unusual difficulties on his entry into this country. If they are to be effective, the customs formalities should compare favourably with Western countries with which India has to compete. As regards the cost of tours, it is well to remember that India is a vast country so that sightseeing involves not only travelling over long distances but frequent halts. The railway fares in India are fortunately low, as compared with those in many foreign countries. But the cost of boarding and lodging in many centres is disproportionately high. An all-India sample survey, conducted three years ago, revealed that the average expenditure per tourist per day was approximately Rs. 61.9, of which boarding and lodging accounted for Rs. 34. It should be possible to reduce the item of cost represented by boarding and lodging. And, if this were done, it might perhaps induce more tourists to come with their families. What is necessary is to ensure maximum comfort at minimum cost, or alternatively, to provide two or three classes of boarding and lodging to suit the purse of the different income-groups of foreign tourists. It is also essential that, in standards of cleanliness and hygiene, lodging, boarding and means of travel should be high and pleasant. In this respect, not all places of tourist interest in India compare favourably with those in Europe or America.

Finally, it cannot be too strongly emphasised that internal tourism has a great role to play in the development of tourist industry. For one thing, internal tourism is a unifying force in a country of India's continental size and divergent regional culture-patterns. It has thus a national significance, in that it will make for that "emotional integration" the absence of which is mainly responsible for excessive regional loyalty and fissiparous tendencies. As the Estimates Committee, in its report on "Passenger Amenities," rightly said: "In order that the people living in different areas may capture the spirit of the common culture and see clearly the unity behind this outward diversity, frequent intermingling of the people of different areas is very necessary. Travel thus becomes a part of the national education and a great binding force amongst the people living in different areas and speaking different languages. Unless a man sees for himself the snow-clad Himalayas in the North and the confluence of three oceans at Kanya Kumari, unless he has visited all the important places of religious and historical interest, which are interspersed throughout the length and breadth of the country and has observed the modes of living of the people in different areas, he cannot be truly said to have imbibed fully the spirit of the cultural heritage of this great country." Secondly, it has an economic significance which is derived from the fact that it will enable the tourist industry to help supplement its income from foreign tourists which will necessarily be small till India is able to attract a larger number of visitors from abroad. It is comomn knowledge that export markets of an industry are well sustained if that industry has a good, strong domestic market. This criterion is true of the tourist industry, too. Appropriately enough, internal tourism has been left to the States which can be trusted to publicise their respective centres of tourist interest. Even so, there is some need for all-India co-ordination of their efforts.

ROAD TRANSPORT

A COMMENDABLE feature of the Government's transport policy is the increasing attention the authorities are giving to road transport. Although a great deal remains to be done, particularly in the matter of providing relief in taxation of motor vehicles, there is no doubt that, by and large, the Government's policy has been redesigned to give a fillip to motor transport. The amendment to the Motor Vehicles Act removing restrictions on road transport, the amendment of the State Bank Act permitting advances for purposes of hire-purchase of vehicles and the appointment of the Inter-State Transport Commission are among the constructive measures adopted by the Government. The setting up of the Road Transport Reorganisation Committee (Chairman: Mr. M. R. Masani) which is now engaged in collecting evidence and memoranda from various industrial and trade organisations and individuals interested in road transport, also reflects the Government's keen desire to ensure that the organisation of road transport receives the benefit of expert probe.

Meanwhile, it is gratifying to note that, in the interest of proper and planned development of transport and to ensure co-ordination between the various modes of transport, on the one hand, and the Central and State transport policies, on the other, the Government has decided to set up three new transport bodies. They are the Transport Development Council, the Road and Inland Water Transport Advisory Committee, and the Central Transport Co-ordination Committee. The Council, of which the Union Minister of Transport and Communications will be the Chairman, is a high-level body which will advise the Government of India on all matters of policy relating to roads and road and water transport. The membership of the Council will be restricted to the Transport Ministers of the States, the heads of the Union territories, the Union Ministers of Transport and Communications, Railways, Commerce and Industry and certain other Union Ministers. The Road and Inland Water Transport Advisory Committee, with the Minister of State in the Ministry of Transport and Communications as its Chairman and other official and non-official members, will discuss problems relating to roads and road and inland transport and make recommendations to the Council. The Central Transport Co-ordination Committee, which takes the place of the existing Standing Committee of the Central Board of Transport, will deal with the day-to-day transport problems. The new set-up, it is to be hoped, will be a prelude to a dynamic transport policy.

It is now widely recognised that no transport policy which does not include a bold programme of development of road transport will be of any avail to the country. The demand for goods transport, short-distance as well as long-distance, is increasing at a fast pace and available transport facilities are limited. It is difficult to estimate precisely the magnitude of the demand for transport in the next few years. At one time, it was believed that the demand could be placed at about 200 million tons at the end of the second Plan period. Since then, the estimate has been revised upwards. In this connection, Mr. L. P. Misra, General Manager, Hindusthan Motors Ltd., has estimated that, even if the second Plan were not fully implemented, the total annual lift would expand to about 270 million tons. Mr. Misra, in the course of a memorandum submitted to the Road Transport Reorganisation Committee, has estimated that the railways might carry 180 million tons at the end of the second Plan or even 200 million tons through increased efficiency. He adds: "The road, coastal and inland water transport carry at present only about 30 million tons, leaving a gap according to my calculations of at least 50 million tons which can be handled only on roads."

Mr. Misra's notable suggestions for the improvement of road transport include the setting up of a Ministry for Transport in each State and the appointment of a representative of State Transport Commissioner for each district. Permits for public carriers should be of two types, one available for the whole State and the other for inter-State operations; the duration for each permit should be at least eight years. There should be no restriction on the issue of "private permits," for no private party "will think of wasting Rs. 25,000 to Rs. 30,000 over a vehicle if he cannot find remunerative work for it." No undue emphasis should be placed on the "viability" of public carriers; the owner-drivers or owners of only two or three vehicles should not be debarred from allotment of permits. This is because it is easier for a person to acquire one vehicle and operate it than to arrange for large finance for 20 vehicles. A large viable unit of 20 vehicles would need Rs. 7 to Rs. 8 lakhs. It would not be easy to secure this sum. Even if it were possible for a unit to secure the necessary finance, it would be subject to many taxes, including wealth tax, from which the owner-driver would be relatively free.

Road transport is an industry which, if it is given the necessary facilities and the right treatment, could grow very fast. The Central and State Governments will do well to take note of the suggestions made by Mr. Misra. They will also do well to examine the constructive suggestions made by the Madras State Lorry Owners' Association, at its last annual meeting. The Association pleaded for the abolition of double taxation on inter-State transport and for the publication of motor transport regulations in regional languages. It also stressed the need for provision of weighbridges in important towns and district borders, so that lorry drivers can have the loaded vehicles weighed before commencing their journey. The Association deplored that the owners were "under the thumb of the brokers for getting the load for their lorries" and that the latter were charging heavy commission. It called for urgent action in regulating the licensing of booking and forwarding agents for which there is provision in the Motor Vehicles Amendment Act. Since the lorry-owners know where the tyre pinches, their grievances should be removed in the interests of rapid development of road transport.

MOBILISING PEOPLE'S GOLD RESERVES

RAW COTTON—TIN—COPPER

MARKET GOSSIP

THURSDAY, 5 P.M.

THE subject of mobilising the hoarded wealth of Indian people in gold and silver for the purpose of economic development has been talked about for a long time. It was a favourite theme with the academicians and a section of politicians before World War II, when India was exporting large quantities of gold following Britain's departure from the gold standard. The "prosperity" during the war and post-war years had led the people almost to forget it. Then came the plans for economic development, disclosing a large gap between the resources required and the resources readily available. This steadily dragged the subject to the forefront again. In recent years, some of the bullion dealers, notably Mr. Shantilal Sonavala, belonging to the well-known firm of Messrs. Motilal Vijbhucandas, have seriously canvassed the idea of issuing a "gold loan." The central feature of their suggestion is that the Government must borrow from the people the gold held by them and use it for importing capital goods and essential raw materials from abroad. For a long time, no one paid any serious attention to this suggestion, as it was rather woolly and sounded almost impracticable. But in the past one year, some began to take notice of it. Prime Minister Nehru himself at one time was reported to have said that there was nothing wrong with the proposal, provided some practical method could be found for implementing it.

During the past two months, there has been far more discussion of the subject than at any time during the past two decades. Three factors have been responsible for the tremendous interest shown in it.

The first is the acute shortage of foreign exchange. The fact that, in the next seven months, India will have to find some Rs. 200 crores of foreign exchange and as much as Rs. 550 crores before the close of the second Plan period, has made it worthwhile to consider even the most nebulous proposition. "Something is better than nothing." This is the spirit that has imparted great value to an idea which none of any importance bothered to consider two years ago.

The second factor is an estimate made by the Reserve Bank of India three months ago of gold and silver held by the people of this country. In the absence of any reliable estimate of these hoards, it was perfectly understandable if not much importance was attached in the past by responsible sections of public opinion to the proposal for issuing a gold loan. Incidentally, it seems reasonable to infer that the foreign exchange difficulties themselves must have spurred the Reserve Bank to make an estimate of the hoarded wealth. Its study is only a rough effort. The Bank itself does not claim perfection. Nevertheless, it has gone about the task in a systematic manner and its conclusions are fairly convincing.

The Reserve Bank's study has confirmed the general impression that savings in the form of gold and silver are vast. According to this estimate, published in the April (1958) issue of the Bank's monthly *Bulletin*, private stocks of gold must be in the neighbourhood of 105 million ounces which at the average price for 1957-58 of Rs. 289 per ounce in India would be equivalent to Rs. 3,035 crores. And at the present international price of gold (Rs. 167 per ounce), it would be equal to Rs. 1,750 crores or $3,500 million. Now, a general argument is that, even if 10 or 15 per cent. of this estimated hoard were to be mobilised, it would bring foreign exchange of the order of Rs. 175 crores or Rs. 265 crores. Stated thus, the proposition sounds attractive in the context of the present foreign exchange shortage. It is no wonder, therefore, that several responsible people have publicly extended their support to it.

The Reserve Bank's study places the stocks of silver held by the Government and the public at 4,235 million ounces, valued (on the basis of the 1957-58 average price of Rs. 4.9 per ounce) at Rs. 2,075 crores. By far the entire amount of these stocks is believed to be in private hands. Notwithstanding this sizable amount, none has so far proposed that the white metal too should be stimulated to move out of the hoards into productive channels. This is probably because it is not easy to sell silver abroad and the need of the hour is foreign exchange.

The third factor responsible for creating great interest in the idea of attracting gold out of the hoards is the example set by France, considered to be the biggest gold-hoarding nation in the world. As readers are aware, for the second time in the current decade, France has issued a gold loan. The first attempt was made in 1952 which yielded 1.25 million ounces, or 35 tons, of gold. Although this was not considered a success, the experiment was repeated in the second half of June this year (*vide* page 10 of *Commerce* dated 5th July 1958).

The second attempt of France is said to have been a considerable success. The list for gold loan closed on 12th July 1958. It is reported to have fetched gold of the value of at least $200 million, a sum sufficient to avert external bankruptcy. Although the gold collected is said to be only about 2 per cent. of the stocks believed to be held by the people in France, it is nearly four times as much as the gold collected in 1952. Besides gold tendered against this loan, cash subscriptions were of the order of $420 million.

There is some similarity between France and India. Both are hoarders of gold; both are short of foreign exchange; and both are suffering from inflation. There are no doubt some differences in regard to the causes of these developments in the two countries. But the end results are considered as sufficient ground for trying the French recipe. If France could try this solution, why not India? So runs the argument.

So far, the suggestion for a gold loan has been publicly supported by the following prominent persons:

(1) Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research, New Delhi. This eminent economist has only endorsed the idea, but has not put forward, so far as we are aware, any concrete scheme for implementing it.

(2) Mr. Chunilal Bhaichand Mehta, President of the Bombay Bullion Association Ltd. Mr. Mehta voiced his views at the annual meeting of the Association held three weeks ago. The main features of his suggestions are: the gold loan should contain a definite promise to repay in gold; in order to convince the ignorant people and make the loan definitely attractive, a gold coin, called gold mohur, weighing one tola, with 99.5 fineness, should be minted and displayed prominently in all the centres where the State Bank has an office; interest at the rate of 3 per cent. per annum, free of income-tax, should be given; no questions should be asked of the persons tendering gold against this loan as to wherefrom and how they got this wealth; and all investments in gold should be exempt from all forms of taxation, including wealth tax.

(3) Mr. A. D. Shroff, a prominent economist-*cum*-business man, who is acknowledged as an able adviser on financial matters. Mr. Shroff does not seem to have done any detailed thinking on the method of mobilising gold. In a speech at the Rotary Club, Bombay, last week, he, however, favoured the issue of gold certificates, free of all taxes and with a definite assurance that the value of the certificates at the time of repayment would be proportionate to the price of gold in relation to the prevailing price of commodities.

(4) Mr. H. T. Parekh, an economist, investment specialist and currently Deputy General Manager of the Industrial Credit and Investment Corporation. In an article to the recent Special Number of our contemporary, *Economic Weekly*, Mr. Parekh has advocated issue of Gold Deposit Certificates as a scheme for attracting small savings in gold. His idea is not to attract the gold which represents hidden wealth but that gold which constitutes the genuine savings of the upper and the lower middle class people. He, too, wants the gold certificates to be free from all taxes and strongly advocates that the certificates should be easily transferable and marketable. But he favours a limit being placed on the quantum of gold certificates which one can hold in the same manner as in the case of existing schemes of small savings.

Besides the aforesaid four that we know of, the latest issue of the *Economic Weekly* carries an article on the subject of mobilising hoarded gold by one who has chosen to remain anonymous. The main theme of his suggestion is to permit exports of gold by merchants at prices that can be realised in the world market, the exporter in India being allowed to use the foreign exchange proceeds for importing essential goods which are now scarce and can fetch a price that will not only compensate his loss on gold exports but also leave a sizable margin of profits. He feels that at a price people in India will disgorge gold as they did between 1932 and 1939. A feature of this suggestion is that the Government does not come into the picture, except to the extent of specifying the goods that can be imported against gold exports. There is no question of issuing a gold loan and, therefore, no repayment in gold later on. Since only essential imports are to be allowed under his scheme, he contends that it will help keep up production and employment and thereby serve the ends which the second Plan has in view.

None of the above persons has made any estimate of the gold that could be obtained by the steps advocated by them. Not even a guess has been made by them.

There are some pessimists who feel that the chances of success for a gold loan are very limited. Their grounds for holding this view are as follows:

Unlike in France, gold in India is bought more for purposes of jewellery and ornament than as store of value, though it undoubtedly serves that function, too. With the vast majority of people in India, gold has a religious function also, which is not the case in France. Consequently, a gold loan designed to be a hedge against inflation may not have the same attraction in India as it has had in France.

Again, the percentage of private gold stocks in India representing black market, or tax-evaded, money is not as large as many people believe. Even if there is a sizable amount on this score, that gold may not prefer to come to the surface for lack of confidence in official promises. There is a serious misgiving that, in a socialist State, the undertakings given by the present Government may not be honoured by its successors. The talk of ceilings on income and wealth, coupled with the imposition of confiscatory taxation, has already undermined the confidence of investors. Further, with the steady growth in the influence of the Communist Party in India, such assurances have less value than would be the case otherwise. It must be remembered that the relatively better success of the latest gold loan in France is most probably due to the fact that it was issued by a pronouncedly rightist Government and that at a time when the leftist forces in that country had become extremely weak.

In France, gold hoards are believed to be held chiefly in the form of bullion, while in India the yellow metal is mostly in the form of jewellery, ornaments, utensils, images of gods and goddesses, etc. Held in this manner, gold exercises greater sentimental attachment over a person than when it is kept in the form of bars. Another difference as compared with France is that gold holdings are thinly distributed over a larger number of people. Yet another difference is that gold in India is mostly with women who will be more reluctant than men when it comes to the question of parting with it. Moreover, women in India prefer to keep in their possession a part of their family savings in gold as a hedge against the vagaries and vices of their menfolk. Against this background, if even in France only 2 per cent. of gold hoards could be attracted, what chances are there of getting any sizable amount from the gold hoards in this country? Even 2 per cent. would bring only about Rs. 35 crores (in terms of world price), on the basis of the aforesaid estimate of the Reserve Bank.

There is an impression among some persons who claim to know the mind of the people better than the officials or the politicians that the Government should not issue a gold loan, as it would seriously undermine public confidence. Their argument is that such an action might be interpreted by the common people to mean that the Government of India has become bankrupt. They further contend that it might even produce the reverse of the results expected by the advocates of gold loan, in that the people, instead of exchanging their solid gold holdings for paper bonds, might start buying more gold. While it is hard to tell how far this assessment of the people's mind is correct, it seems to us that the apprehension could be easily exaggerated. The Indian people today are not that backward. It may be mentioned here that similar fears, expressed at the time when nickel replaced silver in the coinage system, as well as when one-rupee paper currency notes were issued instead of the silver rupee coin, did not materialise. Some politicians and critics of the Government may try to make political capital out of it, as was done by them (they are mostly in power today) in the past, but, when the novelty wears off, people will get accustomed to gold certificates. This fear need not, therefore, stand in the way of the Government trying the experiment.

The real point that deserves to be considered is whether the Government should saddle posterity with the responsibility of finding gold—a distinctly scarce commodity—to repay a gold loan that may be issued now. No wise Government will undertake a commitment the fulfilment of which is extremely difficult, if not impossible. If the gold collected from the people is merely kept with the Reserve Bank of India and included in its published reserves without being spent, it will, of course, be easy to meet the obligation. But that is only one of the objectives. The other, but the most important, objective is to use the mobilised gold outside the country for payment of imports.

Two arguments are mentioned against the aforesaid contention. One is that at no time will all the gold certificates be cashed. The Government can, therefore, manage even with a small gold reserve. The risk here is too great to be taken with a sense of equanimity by a country the external reserves of which are next to nothing. The second argument is that, in 15 years' time, India will have overcome its balance of payments problem and actually enjoy a surplus on external trade account which can be used for importing gold in order to retire the gold certificates. In its long history, India has been both an exporter and importer of gold. There is no reason to believe that this history will not repeat itself. This argument sounds more like an astrological prediction than one based on solid grounds. It is too nebulous a ground to enable any responsible Government to incur a definite commitment.

If, therefore, a gold loan is to be issued, the Government will be well advised to follow the French example. It must not commit itself to repay the loan only in gold, but retain an option to retire the loan in the cash equivalent of the gold to be determined on the basis of commodity price index. If it is felt that a gold loan on this basis will not appeal to the people, it may be made a little more attractive by providing for the payment of interest on the loan in gold or its rupee equivalent on a predetermined basis. If a loan on this basis does not succeed, there is no alternative to it.

* * * *

The long-awaited export quota for cotton has at last been announced. The Government of India notified last night its decision to release for export 30,000 bales of Bengal *Deshi* cotton and 20,000 bales of old crop cotton of the 1956-57 and earlier seasons having a stapling length of not more than 25/32" on a first-come-first-served basis. The atmosphere of suspense and anxiety that has so long prevailed on the import front has also been cleared with the simultaneous announcement of an import quota for 30,000 bales of cotton stapling 1.3/16" and above and 40,000 bales of cotton stapling 1.1/16" and above, both from soft currency areas.

The export quota has been greatly welcomed by the trade. The market was quick to react to the news. Bengal *Deshi* prices firmed up by Rs. 15 per candy from Rs. 605 to Rs. 620. There is, however, some disappointment in certain quarters because the quantity of Bengal *Deshi* allowed has fallen short of expectations. This disappointment was reflected in the forward market today where the Jarilla March 1959 contract came down by Rs. 4.50, as compared with yesterday's closing. The trade was expecting a larger quantity, in view of the

EQUITIES QUIET

TATA LOCOS STAGE A SPURT

(From Our Own Correspondents)

BOMBAY, *7th August*

THE share market was in an indecisive mood for yet another week. This is interpreted to mean that the bullish forces which had pushed up the market for sometime past have exhausted themselves in the absence of any sustained encouragement, while the bears are unable to turn the market in their favour. Equities were, no doubt, subjected to alternate bouts of buying and selling during the week under review, but prices did not show a definite trend. On balance, there was a minor loss over a wide front. The market is anxiously awaiting the announcement of the dividends of the Tata Iron and Steel Company and the Indian Iron and Steel Company, for which the former had already closed its books and the latter will close them from 18th to 27th inst. Textile shares were subdued in the absence of any encouraging reports from cloth markets.

Tata Steel Ordinaries were marked down from Rs. 168.25 to Rs. 166, but they soon gained ground to touch Rs. 167.50. Today, however, heavy selling brought the shares down to Rs. 165, only to recover to Rs. 167 at the close. The new shares lost over the week Re. 1.50 to Rs. 164.50. Indian Irons moved between Rs. 24.28 and Rs. 23.72 before closing at Rs. 23.92 with a loss of 16 nP over the week.

In the textile section, Bombay Dyeings declined from Rs. 59.40 to Rs. 58.30 on Tuesday. Thereafter, they fluctuated between Rs. 58.80 and Rs. 58.30 and closed at Rs. 58.70. Centurys receded from Rs. 450.50 to Rs. 441.50 before finishing at Rs. 445. Kohinoors lost over the week Rs. 3 to Rs. 278. Central Indias provided an exception to the general trend with a sharp rise of Rs. 6.50 to Rs. 101. Finlays also gained a rupee to Rs. 285. Indu Ordinaries were a shade quiet at Rs. 10.12. While Indore Malwas were unchanged at Rs. 108, New Greats dropped Rs. 5 to Rs. 215. Shree Niwas Cottons were lower by a rupee at Rs. 101. Simplex were stagnant at Rs. 175, while Standards shed Rs. 5 to Rs. 428. Svadeshis declined by Re. 1.75 to Rs. 187.75 and Swans by Rs. 5 to Rs. 360, but Tata Mills were unchanged at Rs. 39.

Minor variations were noted in bank shares. Barodas were a shade better at Rs. 122.50 and Centrals at Rs. 57. Bank of Indias were done at Rs. 131 *ex-div.* (div. Rs. 3), as against Rs. 134.75 *cum-div.* and their new shares at Rs. 134 *ex-div.*, as against Rs. 136 *cum-div.* United Commercials were done 50 nP higher at Rs. 61.50.

In the insurance section, New Indias staged a spurt from Rs. 46.25 *cum-div.* to Rs. 45 *ex-div.* which represents an increase of Re. 1.75 on a *cum-div.* basis. Vulcans changed hands 44 nP higher at Rs. 18.60.

Electricity shares ruled quiet. Ahmedabad Electrics dropping 30 nP to Rs. 95.70. Bombay Suburbans were unchanged at Rs. 100.25, while Surat Electrics were down by 75 nP to Rs. 109.75. Tata Hydros shed a rupee to Rs. 124 and Tata Powers Rs. 6.25 to Rs. 1,232.50. Andhra Valleys gained a fraction to Rs. 1,188.75.

Sugar shares ruled steady. Belapurs moved up from Rs. 260 to Rs. 262.50, but closed at Rs. 262. Phaltans gained over the week Re. 1 to Rs. 154 and Walchandnagars were a fraction better at Rs. 283. Cement shares were featureless and the undertone was quiet. Associated Cements were brought down from Rs. 156.25 to Rs. 154, but picked up to close at Rs. 155.25. Their new shares were a fraction lower at Rs. 148.75. Digvijays were unchanged at Rs. 154.25, while Orissa Cements gained 20 nP to Rs. 14.16. Jaipur Udyogs lost 16 nP to Rs. 14.48, while India Cements were done at Rs. 30, as against Rs. 28.50 previously.

In the engineering and mining group, Alcock Ashdowns lost Rs. 6.25 to Rs. 247.50. Tata Locomotives provided the highlight of the week with a rise of Rs. 7 to Rs. 181.50 on keen support in anticipation of a higher dividend. Premier Constructions were done Re. 1.75 lower at Rs. 195.50. Larsen and Toubros had business 28 nP lower at Rs. 17.76. Shivrajpurs showed no change at Rs. 92, while Indian Coppers gained 10 nP to Rs. 4.08. In the shipping group, Great Easterns were prominent with a sharp jump from Rs. 24.84 to Rs. 26.30, while Scindias shed on balance 12 nP to Rs. 19.60.

Bombay Burmahs (old), among miscellaneous industrials, gave way from Rs. 575 to Rs. 560, but closed a shade better at Rs. 565. National Rayons declined from Rs. 230.50 to Rs. 227.25 and finished at Rs. 229. Tata Chemicals lost 24 nP to Rs. 16.08, but Tata Oils were maintained at Rs. 41.50. Hindustan Levers were listless at Rs. 23.76 and Killicks at Rs. 144.50. Wimcos were done Re. 1.50 lower at Rs. 173.50.

Calcutta Stock Exchange

CALCUTTA, *6th August*

Slightly buoyant conditions prevailed on the Calcutta Stock Exchange during the week under review on speculative support and keen buying in Indian Irons. The main premise on which bulls extended their support to Indian Irons was the expectation that a dividend of 10 per cent. on the shares would soon be announced and that this dividend would also apply to the increased capital. This expectation followed the decision of the Directors of the Company to close the ordinary share register and transfer books from 18th to 28th August. The Directors also stated that an announcement relating to the dividend for the year ended 31st March 1958, as well as to the date of the annual meeting of shareholders, would be made subsequently. Also, the recent rumour with regard to the possibility of capitalising the share premium reserve for a bonus issue was revived. An announcement from New Delhi regarding the new retention prices was considered imminent. The proximity of the T.I.S.Co. dividend also contributed to keen speculation, although there were reports from Jamshedpur about labour fomenting fresh trouble there. The enthusiasm spread to other prominent counters.

After an early slackness in demand, trading in jute shares gathered momentum and the more prominent counters added modest gains. Alliances were taken to as high as Rs. 101 from Rs. 88.50. Barnagores elicited support to move to Rs. 109 from Rs. 105.50. At Rs. 60, Ganges gained Rs. 3, and on interested buying, Chitavalsahs picked up to Rs. 16.87 from Rs. 15.31. Budge Budges were fully steady after having risen to Rs. 116 from Rs. 105, while Kamarhatties sagged to close at Rs. 117 after having earlier improved to Rs. 120 from Rs. 108. Cheviots changed hands at Rs. 180, against Rs. 173 earlier. Unions firmed up to Rs. 153.80 from Rs. 144 and Kanknarrahs were marked up to Rs. 70 from Rs. 58.

Coals continued to advance. Bengals were in keen demand, and put on six points to Rs. 243. From Rs. 16, New Beerbhooms advanced to Rs. 17.12. Pench Valleys were equally a strong feature and, on active trading, met with buyers even at Rs. 24.06, as against Rs. 22.94 earlier. Dhemo Mains hardened to Rs. 8.12 from Rs. 7.62 before closing at Rs. 7.75. Central Indias were better at Rs. 8.31.

Under the leadership of Indian Irons, engineering shares were fully steady. Indian Irons opened at Rs. 23.73, and by Monday reached a high of Rs. 24.61. Subsequently, a reaction set in, and the rate sagged slightly to Rs. 24.32. Texmacos, after changing hands at Rs. 21.30, were done on an *ex-div.* basis at Rs. 20.70. Braithwaite & Cos. were fractionally better at Rs. 28.25. Jessop & Cos. improved to Rs. 20.31 from Rs. 20.00, and Hooghly Dockings to Rs. 107 from Rs. 104.00.

Several counters in the miscellaneous industrial section changed hands at advancing rates. Shares of paper mills were keenly sought. Orients reached a high of Rs. 35.50 before closing at Rs. 35.00. Sirpurs were pushed up to Rs. 13.31 from Rs. 11.37. Titaghurs were higher at Rs. 40. Indian Coppers, on reports of a spurt in copper prices on the London Metal Exchange, rose to Rs. 3.82 from Rs. 3.74. Rohtas Industries were pushed up to Rs. 24.06 from Rs. 22.69. From Rs. 12.25, India Steamships rose to Rs. 12.40. At Rs. 68, Jardine Hendersons gained Rs. 2. National Rollings moved up to Rs. 11.62 from the previous rate of Rs. 10.62. Indian Cables were at one time as high as Rs. 30.75 but closed at Rs. 29.62.

Madras Stock Exchange

MADRAS, *5th August*

Dull conditions prevailed on the Madras Stock Exchange during the week under review. In the absence of any new development, operators did not evince much interest in entering into fresh commitments. Consequently, transactions put through were limited and values moved narrowly. Despite discouraging dividend news, some planting shares met with good buying support induced by expectations of the Government announcing some special incentive measures to boost export trade in tea and coffee. In the textile section, buying was selective. Several miscellaneous industrials attracted good investment enquiry and prices hardened. Sugar and breweries and electrics were quiet.

Among tea shares in the planting section, Nonsuch advanced by 30 nP to Rs. 22.75. Parksides rallied 25 nP to Rs. 18.50. Peermades gained 18 nP to Rs. 19.60. Devasholas put on 12 nP to Rs. 19.87 *cum-div.* Nilgiris hardened by 7 nP to Rs. 8.57 *cum-div.* Haileyburias were dull at Rs. 19.50 *cum-div.* Periakaramalais encountered selling and dropped 25 nP to Rs. 4.05 *cum-div.*, reflecting the traders' disappointment over the cut in dividend to 10 per cent. for the year ended 31st March 1958, as against 35 per cent. in the previous year. Chembras also declined by 27 nP to Rs. 3.55 *cum-div.* on the announcement of lower dividend of only 10 per cent. for the year ended 31st March 1958, as against 20 per cent. last year. In the coffee group, Coffee Lands firmed up by 65 nP to Rs. 31.75. Consolidated Coffees were absorbed 40 nP higher at Rs. 27.90. Mysore Coffees rose by 11 nP to Rs. 3.73 and Ouchterlonys by 16 nP to Rs. 5.46. Among rubber shares, Kalpettas advanced by 65 nP to Rs. 25.40. Malankaras were steady at Rs. 18.62 and Nenmenys at Rs. 13.50. Nilamburs were neglected at Rs. 14.75 *cum-div.* as also Be Bes at Rs. 3.35.

In the textile section, Radhakrishnas firmed up by Rs. 8 to Rs. 140.00 *cum-div.* Bangalore Woollens rallied Rs. 3 to Rs. 164.00. Mecturs strengthened by Rs. 2 to Rs. 338. Radhakrishnas 'B' gained a like amount to Rs. 67.00 *cum-div.* Premiers and Buckinghams put on Re. 1 each to Rs. 141.00 *cum-div.* and Rs. 175.00 respectively. Loyals were quoted 75 nP higher at Rs. 35.65. Virdhunagars gathered 25 nP to Rs. 31.25. Anglo-French, however, fell by Rs. 2 to Rs. 78. Dhanalakshmis shed a like amount to Rs. 172. Coimbatore Cottons were quiet at Rs. 145 and Coimbatore Kamalas (Rs. 100 paid-up) at Rs. 102.

Among miscellaneous industrials, Mysore Electrical Industries spurted by Rs. 9 to Rs. 112 *cum-div.* following the announcement of a higher dividend of 11 per cent. for the year ended 31st March 1958, as against 8 per cent. in the previous year. Textools advanced by Rs. 2.50 to Rs. 197.50. W.I. Plywoods hardened by Rs. 7 to Rs. 125.00. India Cements (Rs. 25 paid-up) put on 30 nP to Rs. 29.75 *cum-div.* and India Cements (Rs. 5 paid-up) 25 nP to Rs. 6 *cum-div.* Indian Steel Rollings gathered 15 nP to Rs. 13.55 *cum-div.* Mysore Papers were better by 20 nP at Rs. 17.72. F.A.C.Ts, however, were dull at Rs. 6.55, as also Aspinwalls at Rs. 6.90 and Spencers at Rs. 18.25. Travancore Cements declined by 50 nP to Rs. 9.35. Mysore Tobaccos eased by 25 nP to Rs. 12.95. Aluminium Industries softened 5 nP to Rs. 16.25

T.I.S.CO. DIVIDEND

All speculations about the dividend on the ordinary shares of the Tata Iron and Steel Company, Ltd., for the year ended 31st March 1958 have been set at rest by the announcement by the Board of Directors of the Company on Thursday evening of their dividend recommendations. They have recommended a dividend of Rs. 8.25 per share on the old ordinary shares of the Company, as against Rs. 9.50 per share paid for the previous year, and a distribution of Rs. 7.56 per share on the new shares, the corresponding distribution on these shares for 1956-57 being Rs. 3.34 per share. The increase in the rate of distribution on new shares for 1957-58 is evidently due to the enhanced content of the paid-up value of these shares. It is made up of a dividend of Rs. 4.81 per share and interest of Rs. 2.75 per share out of capital, as against Rs. 2.54 and 80 nP per share, respectively, for 1956-57. The dividend part of the distribution on the new shares, as in the case of the old shares, is tax-free, while the interest, which is worked out at 4 per cent. per annum, is taxable. The aforesaid dividend is a little more than the general market expectations, which placed the dividend on old shares at Rs. 8 per share. At their current market value and on the basis of a dividend of Rs. 8.25 per share, the yield on them works out to 5 per cent.

The Company's profit for the year 1957-58 is said to have been more or less maintained at the previous year's level. The gross profit for 1956-57, it may be noted, amounted to over Rs. 12.87 crores and the net profit, after providing for Managing Agents' remuneration, depreciation, taxation and bonus to employees, stood at Rs. 6.26 crores. The Company's production of steel ingots during the year under review had gone up from 1.07 million tons to 1.10 million tons, while that of saleable steel had declined from 799,500 tons to 786,600 tons.

NEW GREAT INSURANCE

The New Great Insurance Company of India Ltd. has earned a profit of Rs. 3,75,719 for the year 1957, as compared to Rs. 3,03,678 in the previous year. The profit of the fire department is Rs. 3,67,298, as against Rs. 4,35,426 in 1956, and that of the marine department Rs. 34,043, as against a loss of Rs. 1,16,242. The miscellaneous department has made a profit of Rs. 8,569, as against a loss of Rs. 1,96,272. The Directors have decided to recommend the payment of a dividend of Rs. 2 per share, free of income-tax, raising it from Re. 1.50 per share paid for each of the previous two years.

Notice

BRIDGE & ROOF CO. (INDIA) LTD.

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the Seventy-fourth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, the 28th August 1958, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December 1957, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend and to transact other ordinary general business of the Company.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 14th August to 28th August 1958, both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO., LTD.,

D. MANSON.
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *23rd July, 1958.*

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

NEWS IN BRIEF

THE Government of Mysore has directed all departmental officials to acknowledge receipt of all letters and petitions received by them within 24 hours.

A campaign to utilise the services of 250,000 non-official workers for propagating methods of better food production during the *rabi* season has been launched in the State of Uttar Pradesh.

•

The Indian oil delegation, which went to Rumania in June last to negotiate the setting up of an oil refinery in Assam with Rumanian help, has returned and is expected to submit its report to the Government shortly.

The Import Advisory Council will meet at New Delhi on the 30th inst. to discuss the import policy for the October-March licensing period. The Export Advisory Council will meet on the following day.

The Government of India has fixed the price of tea for determining export duty at Rs. 2.88 per pound, as against Rs. 3.41 in force from 1st July 1958. There is, however, no change in the existing rate of duty of 38 nP per pound.

The Bihar Government proposes to establish an engineering college at Dhanbad at a non-recurring cost of Rs. 33.12 lakhs spread over a period of three years. The Government is expected to receive financial assistance from the Centre.

A four-man delegation of the Cotton Textile Export Promotion Council, led by Mr. C. C. Jhaveri, is expected to visit the East African countries next month with a view to exploring the possibilities of increasing exports of Indian cotton piecegoods to this region.

The Union Government has decided to discontinue protection granted to the bichromates industry with effect from 1st January 1959, on the recommendations made by the Tariff Commission. The Government has, however, stated that it will take suitable measures of assistance to the industry as suggested by the Commission.

A socio-economic sample survey of hut-dwellers in Hyderabad has recently been started under the auspices of the Indian Institute of Economics. Of the 11,000 hutments in the city, nearly 500 samples have been chosen at random for the purpose of survey, which is expected to be completed by the end of this year.

The Government of Bombay has decided to set up 284 taluka seed farms throughout the State during the current financial year at a total cost of Rs. 81.5 lakhs. The farms will have an area of 25 acres each and be equipped with necessary implements, livestock and irrigation facilities. They will undertake multiplication of improved seeds for distribution to cultivators.

The jute crop in West Bengal is reported to have been hit hard by drought. Apart from affecting the growth of jute plants, it has led to widespread pest invasion. Some preventive measures have already been taken by the Agricultural Department such as dusting and spraying of jute crop with chemicals in an area of over 100,000 acres. As a result of these measures, the situation is reported to be improving.

An eleven-member advisory committee consisting of officials and non-officials has been constituted by the Mysore Government under Section 3 of the Madras Sugar Factories Control Act, 1949, now in force in the Bellary district. The Committee will advise the Government on all matters on which consultation with the Committee was obligatory under the Act and the rules thereon as well as on matters referred to it by the Government.

The delegations of the Governments of India and Italy signed on the 2nd inst. at New Delhi a civil air transport agreement governing the operation of air services between the two countries and points beyond. The two delegations will now submit the initialled agreement to their respective Governments. The designated airlines of the two countries will have fair and equal opportunity for the operation of air services on the routes specified in the agreement.

The U.S. Department of Agriculture has announced authorisation of the purchase of some $39,136,300 worth of American foodgrains by India. The grain will be paid for in Indian rupees. The foodgrains include 467,000 metric tons of wheat or wheat flour valued at $30,136,500; 100,000 metric tons of yellow corn valued at $5 million and 100,000 metric tons of yellow grain sorghums valued at $4 million. The commodities will be delivered to India over a year beginning from 18th July 1958.

The lock-out in the Dunlop Department of the Madura Mills (Madurai, Madras) was lifted on the 1st inst. The lock-out had been declared on the previous day following a stay-in strike staged by about 1,800 workers of the Department as a protest against the decision of the management to cut eight days' wages of a few workers who were alleged to have indulged in illegal strike. The present compromise was reached as a result of the intervention of the Government Labour Officer, Madurai, who suggested restoration of the *status quo* by both the parties in view of the conciliation proceedings already started.

The Indian railways have made good progress in building up their rolling stock. Since the second Five-year Plan began, the railways have received over 1,150 locomotives, 2,500 ordinary passenger coaches, 170 electric multiple coaches and 62,000 goods wagons. The Railway Board has already approved of the purchase of rolling stock worth Rs. 370 crores, as against the total Plan allocation of Rs. 380 crores. The bulk of the purchases will be made from manufacturers in India. It is stated that the Chittaranjan Locomotive Factory has touched a new record in recent months by turning out one complete locomotive every alternate day.

From Abroad

The British Government has decided to relax many restrictions on trade with the Soviet bloc and China with effect from the 15th inst.

The International Monetary Fund has announced a stand-by credit which permits Paraguay to draw up to $1.5 million from the Fund during the next twelve months.

A French expert, Mr. G. Y. Roualt, has been sent by the International Labour Organisation to Viet-Nam to study the possibilities of vocational training, with special reference to the physically handicapped.

The U.N. Economic and Social Council has approved of a change in the terms of reference of the Economic Commission for Asia and the Far East (E.C.A.F.E.) enabling Iran to become a member of the Commission.

For the first time since the war, the number of employed in West Germany has gone up above 20 million. The total actually employed as on 30th June 1958 was 20,059,343, while the figure for the unemployed was no more than 481,151.

The U.K. has accepted the invitation of the United Nations to attend two conferences on copper, zinc and lead to be held in London in September. The conferences will review the trend of world trade in these commodities and consider whether any action should be taken.

The Government of Malaya has approved of a Bill which seeks to provide a 3- to 5-year tax holiday to pioneer industries in the country. The concession is expected to go a long way towards attracting foreign capital, besides giving a fresh impetus to investment of indigenous capital, especially in secondary industries.

France will spend as much as £155 million on oil prospecting during the current year. Of this sum, private sources will contribute £109 million. The crude oil output is expected to rise from 1.7 million metric tons to 2 million tons per annum. The production of natural gas is also expected to go up by one quarter to 550 million cubic meters.

The Soviet Union is expected to have a record sugar beet harvest in 1958, thanks to favourable weather conditions. The total area devoted to cultivation of sugar beet is put at 6.2 million acres, which represents an increase of one million acres as compared with last year. The total production for the current year is forecast at 44 to 45 million tons of beet.

The Japanese Government is drafting a legislation to stop copying of foreign designs by Japanese exporters. Under the proposed legislation, the Japanese Ministry of Trade will be authorised to name goods liable to be pirated. The manufacturers will then have to organise a design centre which would check designs of export goods on behalf of the Government.

The United States Steel Corporation, America's largest producer, has raised the prices of selected products with effect from the 31st ultimo, following the lead given by the other major companies like Republic Steel and Armco Steel. The average increase in price effected by the United States Steel is $4.25 per ton as against the increase of $4.50 effected by Armcos. Following the upward revision in steel prices, the automotive and appliances industries are contemplating to raise the prices of their own products suitably.

All the existing controls on prices and distribution of iron and steel scrap in the U.K. will be withdrawn from 1st November 1958. In the meantime, some freedom has been extended to exports of scrap with effect from the 5th inst. Licences will be granted by the Board of Trade for limited quantities to all destinations outside the Sino-Soviet bloc for those exporters who secure firm orders abroad. It is learnt that such exporters were making enquiries about the possible export markets; but the chances do not seem to be bright, in view of the plentiful supplies of scraps in the Western Europe and the U.S.

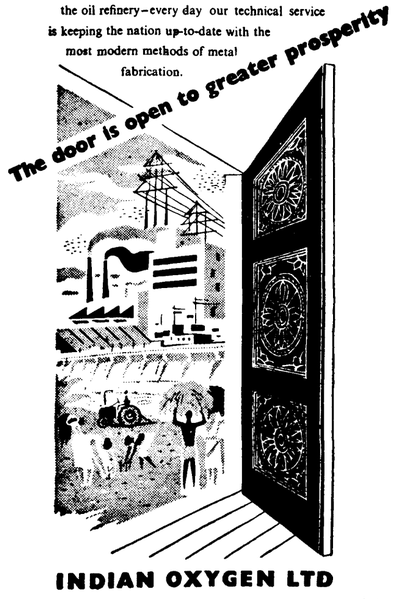
Output of crude oil in the free world declined by 2½ per cent. to about 372 million metric tons during the first half of the current calendar year, as against 381 million metric tons during the corresponding half of last year, according to *Petroleum Press Service*. Although there was an increase in the contribution of the Soviet bloc, it did not materially compensate the fall of 10 million tons in the free world supplies. Production in the U.S., Venezuela and Canada was lower by 36 million tons, but that in the Middle East rose by 24 million tons. The total world production in the first half of 1958 is placed at 433 million metric tons.

Establishment of a new multi-agency Travel Policy Committee to promote the development of international travel has been announced by the U.S. Commerce Department. Top-level representatives from the State and Commerce Departments, the Export-Import Bank, the International Cooperation Administration and six other U.S. departments and agencies comprise the new travel-promotion unit. Activities of the group will be in such fields as elimination and simplification of entry and sojourn requirements for travellers, stimulation of low cost and group travel, development of travel statistics for market research, and, in co-operation with private industry, exploration of measures to expand travel to and from the United States.

Restrictions on trade between the free world and the countries of the Communist bloc are to be relaxed. In a written reply to a House of Commons question on 30th July 1958, the Parliamentary Under-Secretary for Foreign Affairs, Mr. Ian Harvey, said that the conclusions reached by the consultative group on strategic controls on trade, which met in Paris on 18th and 19th July, had since been reported to the member Governments. "I am glad to be able to tell the House," he added, "that agreement was reached on a substantial relaxation of the embargo list." Mr. Harvey stated that, while the list was not yet available in final form, it was already clear that the British Government's objective of confining the list to items of real strategic significance had been substantially achieved. The new list would be published on 15th August and would be effective from that date.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.



INDIAN OXYGEN LTD

PERSONAL

MR. Ambalal Kilachand, a leading industrialist of Bombay, has left on a business tour of the Far Eastern countries.

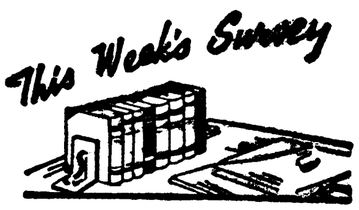
Mr. Lyuben Popov, Minister-designate of Bulgaria, presented his credentials to the President of India on the 1st inst.

Mr. Justice Kailasnath Wanchoo, Chief Justice of the Rajasthan High Court, has been appointed a Judge of the Supreme Court.

Mr. A. B. Rao, Joint Director, Railway Board, has been appointed Chief Commercial Superintendent, Southern Railway, *vice* Mr. S. K. Mukherjee.

Mr. G. D. Birla has left for Europe on a six-week business tour. At one time, it was thought that he would be visiting the U.S. also, but he has, it seems, given up the idea for the present.

Mr. B. N. Subba Rao of the Tata Institute of Fundamental Research, Bombay, has been selected for research in experimental nuclear spectroscopy in Sweden for the session 1958-59, under the Swedish Government Scholarships 1958-59.



LEATHER INDUSTRY

THE Government of India's decision, disclosed by Mr. Syed Hussain, Development Commissioner, Small-scale Industries, Ministry of Commerce and Industry, Government of India, to set up a development panel for the leather and leather goods industry, is to be greatly welcomed. The panel, when established, could develop into a central body to study the problems of this important industry. The industry, despite the fact that it is predominantly a small-scale industry, occupies a premier position in the country's economy. It has considerable scope for expansion because of the vast potential market for leather goods within the country and the wide market outside. The production of footwear of all types in 1957 is estimated at about 93.95 million pairs, which works out to only one pair per annum per every four persons. The internal demand is bound to go up as people's purchasing power increases and they become more and more conscious of the value of footwear as a necessary health safeguard.

The chief use of leather in India, as in other countries, is for the production of footwear, in the manufacture of which about two-thirds of the entire quantity of leather produced in the country is utilised. It is also required for a variety of other purposes such as the manufacture of belting, picking bands and pickers, in addition to consumer goods. The domestic demand for leather belting alone is estimated at about 350 tons a year, of which only 50 to 60 tons are produced inside the country. About 300 tons of belting, valued at about Rs. 55 to Rs. 60 lakhs, are imported annually.

The development of the leather industry has taken place in both the large-scale and small-scale sectors. The scope for efficient small-scale units is wide, considering that there are at present only 12 large-scale units manufacturing about 6.65 million pairs of footwear per annum. The balance is manufactured by small-scale units.

The industry, however, faces many problems. These problems were discussed at a seminar on leather goods industry held recently at Hyderabad. The seminar, organised by the Small Scale Industries Organisation of the Government of India, was the first of a series to be conducted subsequently. The main problems that were highlighted were: (1) Inadequate supply of raw materials, (2) lack of proper quality standards for the products, (3) inadequate facilities for training and research, (4) absence of proper marketing organisation and (5) instability of prices. It is, indeed, a strange paradox that, with the enormous cattle stock that the country possesses, there should be shortage of raw hides and skins of good quality. It is estimated that there are in the country 139.6 million cows and oxen, 41.5 million buffaloes, 47.3 million goats, 38.8 million sheep and over three million other animals. Though the total head of cattle thus number over 270 million, the annual production of raw hides and skins is of the order of only 64.5 million.

Marketing is one of the principal problems of small-scale industries, more so for the footwear industry, because the units of production are widely dispersed. In this connection, Mr. A Bhagavantha Rao, Minister for Small Industries, Andhra Pradesh, who inaugurated the Conference, suggested that the possibility of opening chain stores for the products of the industry in each district should be examined. Improved marketing methods will also help step up sales abroad.

Enforcement of proper quality standards has an important bearing on the export trade. For the standardised products would not only remove doubts about quality but would also help build up good reputation for the Indian product. Some State Governments and the National Small Industries Corporation have already taken steps for standardising production. Standard specifications for three grades of footwear for men, women and children have been drawn up. Another noteworthy measure is the scheme of quality control for leather recently adopted by the manufacturers and traders of leather. Instability in prices is largely the result of the almost exclusive dependence of the leather industry on foreign markets. Changes in fashions and economic conditions overseas rather than the quality of the product and supply determine the fortunes of the industry. For stabilising the industry, it is, therefore, necessary that the export markets should be widened and internal demand stimulated.

E. I. kips are at present exported to the U.K. and other countries for further processing. If steps are taken to process them properly within the country, it would fetch additional foreign exchange to the country in the form of higher price for the processed goods and also provide employment to many.

BALANCE-SHEET OF A STRIKE

When the illegal strike, inspired by the Communist-dominated Jamshedpur Mazdoor Union, hit the Tata Iron and Steel Company, Ltd., Jamshedpur, last May, completely paralysing the industrial heart of India for over a fortnight, it shocked the conscience of the nation. For many were surprised and not a few pained at this sad turn of events in an industrial unit traditionally responsive to the needs of its employees' needs. During the last two years, for instance, the Company had paid Rs. 67 lakhs more per year to labour without any corresponding increase in either production or profits. This concession was granted by the Company when its financial resources were strained and it had borrowed heavily for the implementation of the 2-million-ton expansion programme. That this tragic episode should have occurred in T.I.S.Co., having an enviable reputation for cordial labour-management relations and which had enjoyed three decades of uninterrupted industrial peace, was intriguing to many. But to those who had closely watched the activities of the Communists in Jamshedpur, it was perhaps not a bolt from the blue. For the Communists were of late making an all-out effort to penetrate the labour ranks in Jamshedpur and to dislodge the Tata Workers' Union which, by dint of constructive and devoted service, had earned the trust of the workers. Noting the danger signals, Mr. J. R. D. Tata, Chairman of the T.I.S.Co., in his address to the fiftieth annual general meeting of the Company held on 27th August 1957, had observed: "The Communist activities at Jamshedpur are part of a predetermined plan. Jamshedpur is one of their obvious and principal targets. For control of the growing steel and heavy engineering industries there would provide them with a strangle-hold on one of the most vital and sensitive sectors of the economy." Although the portents were there, the dramatic suddenness with which the Communist plot was put into effect was a surprise.

What gains did the strike bring to workers? The Communist leaders and the Jamshedpur Mazdoor Union who engineered the strike have obviously not calculated the gains, for there was none at all. Nor do they seem to have counted the losses suffered by the workers, the Company and the nation. Why should they? Political gain for themselves, rather than economic gain for the workers, has long been their motto.

But the Company, in a booklet entitled *Story of a Strike*, has drawn up a "balance-sheet" of the strike, a balance-sheet the credit and debit sides of which can never balance. To take the debit side, that is, losses sustained as a result of the strike. Four lives were lost. Over 114 persons were injured. The number of man-days lost was 335,000, wages lost was of the order of Rs. 24.23 lakhs, production lost was about 45,000 tons, valued at Rs. 2.7 crores. The colossal loss sustained by the Company is not the full measure of the loss. If steel has to be imported to make good the loss, the cost to the country would be much greater because of the higher import prices. On the credit side, however, no gains are listed, because there was none to workers or to the Company, not to speak of the country. But, if the lessons of this misdirected adventure prove to be a sufficient deterrent to its repetition in future, that could be taken as a chief item of asset in the country's balance-sheet.

SODA ASH INDUSTRY

The attention of both producers and consumers of soda ash is now focussed on the Tariff Commission which has taken up for consideration the question of continuing protection to the industry beyond 31st December next. A public enquiry into the question was held in Bombay on 29th July; Mr. C. Ramasubban, Chairman of the Commission, presided. The industry has asked for a five-year extension of the period of protection, as well as assistance in the form of reduction in freight rates, improvement of roads and harbour facilities, and abolition of cess on salt. As regards the quantum of protection, one of the two manufacturing units has urged for an upward revision in the existing rate of protective duty (30 per cent. *ad valorem* preferential and 40 per cent. *ad valorem* standard, keeping the tariff value at Rs. 13.50 per cwt.), while the other says that the rate may be left unchanged.

The soda ash industry, it will be recalled, has been enjoying tariff protection since 1949. During this period, the industry has registered quite a notable progress—quantitative and qualitative. The aggregate installed capacity of the industry has expanded markedly, from 61,200 tons in 1949 to as much as 115,200 tons at present. Following the expansion in capacity, actual production has also gone up. The quantity actually produced in 1957 was 92,764 tons, as against a bare 17,916 tons in 1949. Production in the first six months of 1958 was 45,899 tons. Alongside the rise in output, the quality of soda ash has also recorded an improvement. Indeed, the progress in this direction, according to Mr. C. Ramasubban, has been considerable. There are, we are told, fewer complaints now than at the time of the Tariff Commission's last enquiry (1955). The few complaints that the Commission has received relate to high moisture content, traces of insoluble matter and low alkali content.

From the foregoing brief review, it will be seen that the soda ash industry has given a good account of itself. Nevertheless, the industry is still not in a position to meet the rapidly increasing domestic demand. Thus, as against the current annual production rate of about 91,000 tons the total demand is estimated at 163,000 tons and this is expected to rise to 192,000 tons in 1959 and 236,000 tons in 1960. In view of the wide gap, the country continues to import large quantities of soda ash; the imports aggregated 84,711 tons in 1957 and 90,996 tons in 1956. Since soda ash is a basic raw material, the demand for it is, as Mr. Ramasubban rightly emphasised, bound to increase with rapid industrialisation and it is, therefore, necessary to plan ahead with a view to meeting the entire demand at a reasonable cost. To the extent indigenous production is augmented, the requirements of industries will be met and much precious foreign exchange saved.

Viewed thus and considering that the prices of imported soda ash continue to be lower than those of the indigenous product, as also the fact that the industry has undertaken an expansion programme, the plea of the industry for extention of the protection period seems to be quite justified. Of the two existing soda ash manufacturing units, the Tata Chemicals Company has plans to double its capacity by 1960-61 in stages. When it completes its programme, the Company will produce heavy ash also at the rate of 80 tons per day, the entire current production is of the light variety. The Dhrangadhra Chemicals Ltd. is raising its capacity of 30 tons a day and it expects to complete its programme by October next. Two new units are being set up, one at Porbandar in the Bombay State and the other at Mughalsarai in Uttar Pradesh. These units are expected to go into production in 1959-60. A third unit has also been licensed in Bombay.

CAPITAL ISSUES

The Reserve Bank of India deserves to be complimented for having furnished, in its latest *Report on Currency and Finance*, covering the year 1957-58, a more comprehensive account of capital raised by the corporate sector than the meagre and misleading data hitherto being published by the Government of India. Despite all the statistical data relating to capital market, the task of assessing the extent of capital formation in India during a given period has not been by any means easy. For the figures issued by the Controller of Capital Issues indicate only the consents granted for flotation of new companies and expansion of existing units. They do not give any idea of the amounts actually raised. Attention to this lacuna has been drawn time and again by many. Mr. A. D. Shroff, who was on the Finance Ministry Committee for the Control of Capital Issues for three years in the past, did so again. Addressing the second general body meeting of the Forum of Free Enterprise held in Bombay recently, Mr. Shroff reiterated his complaint that the official data relating to new capital issues were absolutely misleading, as they gave an exaggerated

picture of the actual position. Explaining his point, he said:

"Some of these applications (made by various people for starting new firms) are rejected. In some cases where applications are accepted, companies are never floated. And in some cases where companies are floated and a part of the capital is gathered, that company never gets into operation. And what I suggested to the Government in those days (about five years ago) and recently I repeated them is that the public would be interested in knowing not those exaggerated figures of capital issue but how many companies actually came into force, what was the actual amount of money subscribed by the new issues, and for the last twelve months how many companies have actually gone into production. But the Government still insists in publishing those misleading figures."

In refreshing contrast to the deplorable inaction by the Controller of Capital Issues, the Reserve Bank has made an attempt to give the right type of information for judging the progress made by the private sector in raising new capital. The information given by it is, however, incomplete, inasmuch as it does not take into account capital raised by companies about which no reports were received. Nor does it contain comparative figures for the previous year. Even so, the data made available clearly show that new issue activity during 1957 was at a somewhat lower level than in 1956. The decline was associated with a marked drop in share prices and is attributed principally to new tax measures, import curbs and disinflationary credit policy. It is, however, felt that there has been some improvement since the beginning of 1958, thanks to easy money conditions, absence of any major tax change in the 1958-59 budget and brighter prospects of foreign aid.

The aggregate capital raised by the Corporate sector during the calendar year 1957 amounted to Rs. 71 crores, excluding bonus issues of Rs. 7.51 crores and miscellaneous (for example, loans)' of Rs. 10.47 crores. The bulk of this sum—Rs. 42 crores or 59 per cent. of the total—was accounted for by companies in the private sector which raised capital with the consent of the Controller of Capital Issues. The balance of Rs. 29 crores was shared by Government companies accounting for Rs. 19 crores or 67 per cent. and by issues for which the consent of the Controller was not required, amounting to Rs. 10 crores or 14 per cent. Of the paid-up capital of Government companies, Rs. 14.34 crores represented new issues and Rs. 5.14 crores represented further issues of existing companies.

Out of the Rs. 42 crores raised by the private sector companies, Rs. 36.73 crores (or 87 per cent.) were in respect of public limited companies and the balance represented the share of private limited companies. In the case of the former, ordinary shares accounted for Rs. 27.90 crores (76 per cent.), preference shares for Rs. 4.37 crores (12 per cent.) and debentures for Rs. 4.46 crores (12 per cent.) Of the total sum of Rs. 37.39 crores raised by both public and private non-Governmental companies as share capital, issues by new companies aggregated no more than Rs. 9.69 crores, or just 26 per cent. of the total, while further issues by existing companies accounted for as much as Rs. 27.70 crores (74 per cent.). What better evidence is required to prove that capital formation in the country is at a low ebb, that savings for industrial and commercial activities are declining and that enterprise is being discouraged—all due to the pursuit of unwise economic policies by the powers-that-be?

The year 1957 witnessed a sizable decline in respect of the amount asked for and correspondingly in the amount sanctioned, after the substantial increase noted in 1956. The former amounted to Rs. 110 crores (excluding bonus and miscellaneous issues), as against Rs. 187 crores in the previous year, and the latter to Rs. 91 crores, as against Rs. 168 crores. In other words, the decline in the amount sanctioned was steeper than that in the amount asked for, so that the ratio of amount sanctioned to amount asked for fell from 89 per cent. in 1956 to 83 per cent. in 1957. Over half of the decline was in respect of Government companies. The sanctions for initial issues (that is, new companies) during the year under review aggregated Rs. 43 crores, which compare unfavourably with Rs. 80 crores in 1956. The fall was entirely on account of the public sector, so that, if such issues are excluded, initial issues by the private sector recorded, in fact, a moderate rise of Rs. 8 crores to Rs. 36 crores. But the amount actually raised was smaller, being, as already stated, only Rs. 9.69 crores.

As in the case of domestic issues so in that of foreign participation, the amount sanctioned in 1957 was lower at Rs. 45 crores, as against Rs. 49 crores in 1956. The decline was accounted for entirely by consents for World Bank loans which aggregated Rs. 32 crores, the comparable figure for the previous year being Rs. 36 crores. If these are excluded, other consents for foreign participation were virtually at the 1956 level of slightly over Rs. 13 crores.

PENCIL INDUSTRY

The pencil industry has been making steady progress for some time past, thanks chiefly to the increase in literacy and intensification of economic activities in the various spheres. Thus, production of pencils rose to 715,200 gross in 1957 from 580,800 gross in 1956 and 172,800 gross in 1952. The installed capacity also moved up from 1.12 million gross in 1954 to 1.45 million gross in 1957. Although there was thus a sizable increase in production, the major problem continues to be one of large idle capacity. This was as high as 50 per cent. in 1957, though not as large as 85 per cent. in 1952. At present, there are 18 fully developed and organised units engaged in the manufacture of pencils; new units are also coming into existence. Clearly, such expansion in its installed capacity is hardly warranted by the demand for the products. Even if the demand for pencils were to go up by 10 per cent. every year, the aggregate demand is estimated to be of the order of 900,000 gross by the end of the second Plan. This again falls short of even the present capacity of industry.

Viewed thus, the plea made by Mr. V. E. Chetti, President of the Indian Pencil Manufacturers' Association, in the course of his speech at the fourth annual general meeting of the Association, held at Madras on the 26th ultimo, for adequately regulating the pace of development in the industry on the basis of indigenous requirements and existing capacity, deserves to be given urgent consideration. He appealed to

MANAGEMENT OF STATE-OWNED COMMERCIAL UNDERTAKINGS

VIEWS OF THE FEDERATION

From Our Special Correspondent

NEW DELHI, *5th August*

DELHI LETTER

THE Committee of the Federation of Indian Chambers of Commerce and Industry has just submitted a memorandum to the Congress Parliamentary Party Committee on State Enterprises, headed by Mr. V. K. Krishna Menon. The memorandum deals in particular with the problem of accountability of State enterprises to Parliament and emphasises at the outset that, inasmuch as almost all such enterprises have exclusively the taxpayers' money as capital, they cannot but be fully accountable to Parliament. Accountability, however, is not the same thing as inviting interference in the day-to-day activities of the enterprises.

There has been some discussion, the memorandum continues, as to whether the degree of accountability should have any relationship with the type of enterprise, i.e., whether it is a corporation, a limited company or departmentally managed. In the opinion of the Committee of the Federation, it is not so much the type of the organisation as the composition of the Board of Directors or of the Chief Executive Body which, if at all, should determine the degree of accountability within, of course, the overall inherent right of Parliament to scrutinise and sit in judgment on the performance of the enterprises. For example, if the Board of Directors consists of purely official elements and the Chairman is also the Secretary or any other high official of the Government, then the degree of Ministerial interference is likely to be greater, and, to that extent, accountability to Parliament. But if, on the other hand, the Board of the Corporation or the Company is chairmanned by an eminent public man or business man and the Board also consists of a fairly large number of non-officials, then it stands to reason that the Minister and the Ministry concerned will have to eschew their normal desire to interfere in the working of such a corporation.

The Federation's memorandum next deals with the inter-linked character of accountability of State enterprises to Parliament and the capital structure of these enterprises. If the capital is entirely subscribed by the taxpayers' money, Parliament, as the representative of taxpayers, has to exercise the necessary controls and checks on the activities of the enterprises. A question has been raised as to whether Parliament should not function in the same manner as a body of shareholders does in companies in the private sector. The analogy is not on all fours, because shareholders are the taxpayers and Parliament, if at all, resembles a middle tier between the shareholders and the Board of Directors with proportionately greater responsibility than the body of shareholders and somewhat less than that of the Board of Directors. If, on the other hand, the share capital of these enterprises is thrown open to the public and proportionate representation on the Board is given to the subscribing shareholders, correspondingly larger responsibility will then devolve on the Board of Directors to a proportionate attenuation of the responsibilities of Parliament. It is in this light that the Committee of the Federation strongly endorses the suggestion made by the Estimates Committee that at least 25 per cent. of the share capital of State enterprises should be thrown open for public subscription.

The memorandum continues that not much attention has been devoted to the paramount necessity of preparing proper estimates of capital involved in the launching of various State enterprise projects; neither has serious note been taken of the way the estimates have gone on changing till the figure has gone much beyond that originally worked out. The original estimates for the three steel plants, for example, were made at Rs. 345 crores. This figure is already estimated to reach the sum of Rs. 600 crores by the time the plants go into commission. This type of capital budgeting completely undermines Parliamentary control, accountability and economic working of the undertakings.

The Committee is also of the opinion that all State undertakings, whatever their nature, should be in a position to make a reasonable amount of profit on the invested capital and such profit should be subject to the tax laws of the country. There is no reason whatsoever as to why commercial undertakings run by Government as State enterprises should not earn a reasonable margin of profit. In case, on account of some reasons of policy, Government choose to step in and control the price structure of the products in such a way that no margin of profit is left, then the State should subsidise that enterprise to that extent, so that the results of the economic working of the enterprise concerned may be seen by the public and Parliament in proper light. This will, however, apply only to cases, where the goods produced are of a purely public utility nature and which are not being produced by some undertakings in the private sector. In the latter case, prices will have to be determined by the inter-play of competitive forces and the State enterprise should be able to stand in competition with other units.

The Federation's memorandum next draws pointed attention to the following shortcomings of some of the State enterprises:

(*a*) It has been brought to the notice of the Federation that, in the constructional stage, the State enterprises suffer on account of an undue emphasis on construction of buildings. In fact, it is common knowledge that, in many undertakings, the buildings constructed remain idle for years.

(*b*) Either on account of lack of planning or co-ordination, some of the undertakings, though they have been in existence for quite a number of years, have not been able to utilise their full capacity. In fact, some of them are working as much as 40 per cent. below capacity.

(*c*) Maintenance of good industrial relations in public enterprises is of great importance for the success of the undertaking and for the fulfilment of the aspirations of labour. It is, therefore, necessary that any attempt on the part of the management of State enterprises to avoid the responsibility of an employer should be discouraged. In other words, the employees in the public sector should, on the whole, be at least on par with their counterpart in private employment.

On the subject of publication of annual reports and statements of accounts by State enterprises, the Federation's memorandum complaints rightly that, in many cases, the annual reports come to the hands of the public and Parliament only after two or three years. The memorandum, therefore, urges that these reports and accounts should give the fullest information possible on the activities and financial transactions of State undertakings and be published within not more than six months of the close of the year. In this connection, the memorandum objects to the power retained by the Central Government under section 620 of the Companies Act to exempt Government companies, i.e., companies in which not less than 51 per cent. of the share capital is held by the Central and/or State Governments from any of the sections of the Indian Companies Act which they notify. Surely, continues the memorandum, Government companies registered as private limited companies under the Companies Act should not be more "private" than the companies in the so-called private sector.

Wage for Working Journalists

An All-India Newspaper Publishers' Conference held its first session here last week. A resolution passed at the conference recorded its protest against the Working Journalists (Fixation of Rates of Wages) Ordinance and the appointment of a purely official committee under the ordinance. The conference urged upon the Government "the view that, in the interest of contentment in the industry, the Government should order a *de novo* enquiry at a State and regional level into the conditions of service of all categories of newspaper employees, including

STRENGTH THROUGH WEAKNESS

From Our Own Correspondent

LONDON, *1st August*

LONDON LETTER

BRITISH Members of Parliament are doubtful about going away at this traditional holiday time because of the Middle East political situation but this is the only problem they have on their minds—that is, if they are Government supporters. For the political pendulum has swung the Government's way again as much as anything because the air of crisis and anti-inflationary measures has died away to be replaced by the warming breezes of reflation. Indeed, on the economic front, everything looks fine and the Government are congratulating themselves on the success of their former deflationary measures whose harvest they may be pardoned for thinking they are now reaping.

But an examination of the facts of Britain's external trade shows that a very different explanation must be looked for. In the second quarter of 1957, the total imports c.i.f. were £1.048 million. The same period this year they dropped to £919 million and under 2 per cent. of that drop represents a fall in volume. The rest is entirely due to the great drop in world commodity prices. So on import account alone, without losing any significant quantity of goods, this country saved in the second quarter of this year £129 million in foreign currency.

What about the boosted exports? Exports if anything have fallen slightly in volume in the second quarter of this year but they have fallen much more in value. In April-June of 1957 they totalled £851 million plus a further £30 million of re-exports. In the same period this year, they totalled only £777 million plus £34 million in re-exports, a drop for the quarter alone of no less than £70 million. But, since imports fell by £129 million, the balance of payments improved to the tune of nearly £60 million. Indeed, in the second quarter, if allowance is made for the freight element in imports, our exports, even at their reduced level, practically equated with our imports, leaving the whole of the United Kingdom's invisible income as a net gain in the balance of payments.

World recession has, therefore, in its first stage left the United Kingdom a beneficiary through the much heavier drop in the import bill than in the export bill, but some of Britain's customers are now beginning inevitably to reduce their orders and the second half of this year may not see such a satisfactory picture. While of course when the turn comes the import bill will tend to rise faster than the export bill. However, for the time being, it is sufficient to note that Britain's improved position has been due to nothing more than world recession.

Yet that improvement can be held if European recession comes to an end quickly and the principal danger is that European countries may pursue deflationary policies too long. The British Chancellor of the Exchequer has just returned from Paris where he was Chairman of the Organisation for European Economic Co-operation Council of Ministers which considered the economic situation. The Council commented on the deflationary policies in fiscal and monetary fields which their members had firmly followed (firm in this connection means deflationary). They noted that the rise in the volume of production had slackened in most countries and that in some output had declined—not in the United Kingdom. They noted that this was an undesirable development, particularly in the repercussions on the overseas raw material producing countries. The Council then issued a recommendation that "Member Governments should now pursue policies encouraging *sustainable* economic growth: in so doing they should guard against any renewal of inflationary pressures and avoid endangering the balance of payments." The recommendation continued that "while each Government must be the judge of the methods to be employed and their timing, they should bear in mind the effect of their actions on others, and the advantages of acting in concert. The stronger O.E.E.C. countries have a special responsibility." Behind the second part of this recommendation lies the warning against deflation and the hint that countries such as Germany should have liberal importing policies.—*All Rights Reserved.*

AMERICAN LETTER

WORLD POLITICAL CRISIS ECLIPSES ECONOMIC DEVELOPMENTS

DANGER OF INFLATION REAL

From Our Special Correspondent

NEW YORK, *30th July*

THE Middle Eastern crisis has turned into a world-wide crisis. As seen from the seat of the United Nations, the world is on the brink of another war. That assumption seems to cause the universal demand for a so-called "summit" meeting which is likely to accomplish nothing, except name-calling. No meeting among top leaders of the world was ever held with so little thought and preparation.

It fits into Nikita Krushchev's self-designed pattern. He has never concealed from the United States correspondents his desire to visit New York and Washington, because he believes that his personality is such that he and the United Soviet Socialist Republics cannot lose. Some correspondents, who are known to me personally as impartial observers and who have been exposed to Mr. Krushchev, do not quarrel with his judgment.

There is no visible basis for agreement between the East and the West so far as the present crisis is concerned. It is clearly in Moscow's favour that world popular reaction was unfavourable to the presence of U.S. marines in Lebanon. It raised again the spectre of imperialism. The reasoning of the White House in proposing and accepting a U.N. summit meeting was based on the conclusion that the world-wide disadvantages not to meet with Mr. Krushchev would be greater than the disadvantages of the meeting.

Subconsciously, or otherwise, this reasoning may go back to a speech Sir Winston Churchill made in May, 1953—two months after Stalin died and while the Korean war dragged on. During a foreign policy debate in the House of Commons, he suggested "at the worst, the participants in the meeting would have established more intimate contact, and, at best, we might have a generation of peace."

It is agreed here, generally, that it will be a good thing to have at the meeting, Prime Minister Nehru, who is no stranger to the United States, and also President Nasser. The latter may discover that the U.S. and U.N. do not and will not stand in the way of goals of Arab unity, peacefully arrived at.

It may be interesting to note that the decision to land U.S. marines in Lebanon was made by President Eisenhower with support of the Joint Chiefs of Staff, while the State Department could not make up its collective mind. The episode directs a good deal of renewed criticism to the Dulles brothers, John Foster in the State Department and Allen in the Central Intelligence Agency. The travelling Secretary of State could not make up his mind and his brother and his agency knew nothing of the impending coup in Iraq, although it had been planned, apparently for several months.

One of the most respected senior commentators in the U.S., Walter Lippmann, sees this unprepared, hasty summit meeting as "a ghastly spectacle almost certain to poison the air still further." So much for that. History will tell.

In the midst of the crisis, Sherman Adams, the assistant to President Eisenhower, has gone off the front page headlines, but the case has not been forgotten. The story is now that Mr. Adams will depart "with dignity" in due course. He has become too much of a liability. In his testimony before Congressional investigators, he forgot many details of favours received from the textile magnate Goldfine of Boston, intentionally or unintentionally. The longer Mr. Adams' resignation is postponed, the greater will be the setback for the Republicans in the November elections. It is a hard decision to make for President Eisenhower who must remember the time when Adams spent nights outside the fearfully ill President's hospital door.

The stock market is turning in an unbelievable performance. In recent days and weeks, it has posted many 1958 highs. In my opinion, stocks prices reflect three major considerations. The recession is levelling out. According to preliminary estimates of the President's Council of Economic Advisors, the gross national product rose to an annual rate of $428,000 million in the second quarter of 1958 from $425,800 million in the first three months. The peak in 1957 was $445,600 million in the third quarter.

The second major consideration is inflation and the third is the possibility of war. But, war or no war, inflation seems inevitable. Congress is presently appropriating more money for defence than has been asked for by the Executive branch of the Government. Fear of unpreparedness is widespread. It takes far greater precedence over fears of inflation which is quite prevalent among professional economists and among Government officials.

The report of the President's economic advisers seemed to indicate that, in their opinion, the low point of the recession had been reached in the first quarter. It also noted that liquidation of inventories had not accelerated. Both Government and personal spending showed an upturn, it was observed.

The Department of Commerce reported "economic developments in June supplied additional evidence of firmer business conditions." Corporate earnings, with some notable exceptions, are also better than expected. The automobile industry is still a "sick giant," as was said so aptly by Walther Reuther, President of the United Automobile Workers of America. In this connection, it may be interesting to note that the largest investment company in the U.S., Massachusetts Investors Trust with total assets of more than $1,000 million, reported that it sold all of its holdings in Chrysler Corporation—130,000 shares—and had disposed of 55,000 shares of Ford Motors.

Three other significant developments must be recorded. Steel production, against all expectations, has improved and orders for machine tools in June rose to the second highest this year. Also, the wet weather presages a bumper crop which is good for farmers, but may result in surplus headaches for the country.

Until a week or so ago, rising stock prices were offset by weak bond markets—a normal development. Finally, the Federal Reserve system, which had an unwritten agreement with the U.S. Treasury that its open market operations would only concern short-term Government securities, found it necessary to abandon that policy. It bought long and intermediate issues as well. Thus, it helped stabilise prices. This move also helped popular psychology which had reacted adversely when it was announced at Washington the Federal deficit for the fiscal year ended 30th June 1958, would be $2,813,388,661, instead of the previously estimated surplus, or a small deficit of just a few hundred millions.

Both receipts and expenditures were less than estimated in the Budget Message of the President, delivered in January. Current projections are the deficit for the 1959 fiscal year may run as high as $11,500 million. All this would mean deficit financing and inflation, obviously.

Meanwhile, the rise in the cost of living has been arrested, more or less. The Government index in mid-June was only 2.9 per cent. above a year ago levels, but 23.7 per cent. higher than the 1947-49 average. This is a frightening increase for a ten-year period and justifies inflation fears of the experts.

All favourable economic developments are overshadowed, however, by the world crisis and by the planned summit meeting here in New York or elsewhere. The auspices are by no means favourable and some observers already describe the gathering as a "Middle East Munich," reminiscent of Prime Minister Chamberlain's futile attempt to secure "peace in our generation" with Adolf Hitler.—*All Rights Reserved.*

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to a rigorous international wash-test, reports on his findings. *Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'*

'SANFORIZED' on the label means better sales for you!

It's this kind of care plus our advertising plus *experience* which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) Proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

TRENDS IN BANK DEPOSITS

PERSONAL ACCOUNTS FORM THE BULK

THERE has been a general expansion in the economy of the country since 1951 consequent on the implementation of the first and second Five-year Plans. This is reflected in the increase in national output, particularly in industrial and business activity, and higher employment. These developments have also resulted in an expansion in the money supply and a widening of the monetised sector. One aspect of this progress in the monetary sector is the growth in the deposits and credits of banks. The expansionary trend in deposits has been particularly phonomenal, the rise over the last six years (1951-57) being nearly double that in the advances of banks. A good part of this rise occurred in the last two years, more particularly in 1957-58. It will, therefore, be interesting to make a study of the main trends in deposit growth and analyse the factors behind the ownership pattern and composition during the last six years. Such a study just completed by the Reserve Bank of India and published in July issue of the Bank's monthly *Bulletin* shows that (*a*) total deposits with Scheduled banks has risen by Rs. 526 crores over the six-year period, (*b*) there has been a continuous increase in the number of accounts, reflecting a rise in the banking habit, and (*c*) there has been a sharp change-over from demand to time deposits in 1956 and 1957. An analysis of the ownership of deposits reveals that personal deposits have recorded the largest rise (Rs. 177 crores) followed by Government and quasi-Government deposits (for which the data are available from 1952 only) with an increase of Rs. 163 crores and business deposits by Rs. 89 crores.

Trend of Deposit Growth

Before making a detailed study of the ownership pattern, it is worthwhile analysing the main trend of deposit growth. For purposes of convenience, the period is sub-divided into two phases. In the first phase, which lasted till about the end of 1953, there was a contraction in deposits, consequent on large imports, inventory accumulation of the Korean war period and the subsequent sharp recession in prices early in 1952. The total deposits of Scheduled banks shrunk from Rs. 821.62 crores at the end of 1951 to Rs. 814.36 crores a year later. At the end of 1953, they stood at Rs. 823.07 crores. The second phase was one of expansion. The expansion began even by the end of 1953 and is still continuing at a strident rate. The deposits touched a high of Rs. 1,347.61 crores at the end of 1957 and are currently standing at Rs. 1,527.82 crores. This period also witnessed a change in the composition of deposits, with time deposits coming to occupy an increasing share in the total deposits. The change became more marked during 1956 and 1957 and there are no signs of any change in this distinguishing feature at the time of writing. The annual rate of rise in deposits since 1953 was steady around Rs. 80 crores till 1956, but was very sharp in 1957, being of the order of Rs. 273 crores, which is more than the increase in the previous four years taken together. In the first six months of the current year, the expansion was of the order of Rs. 180 crores, or an annual rate of Rs. 360 crores.

The main factor responsible for the growth in deposits over the six-year period has been the expansionary effect of deficit financing. Up to 1956, the volume of deficit financing was either comparatively small or its expansionary effect was neutralised to some extent by a deficit in the balance of payments on private account. In 1957, while the expansionary effect of Government transactions was considerably larger than before, the neutralising influence of deficit on balance of payments on private account was somewhat smaller, owing to severe import restrictions, resulting in a larger accretion to deposits. The exceptional rise in deposits during 1957 was attributed to two other factors, namely, the accrual of the rupee counterpart funds in respect of goods supplied to India by the U.S. under P.L. 480 and, to a very small extent, to the inclusion of two banks in the second schedule to the Reserve Bank of India. Even after allowing for these two special factors, the increase in deposits during 1957 was the largest for any year.

The factors described above were in full swing in the first half of 1958 also and account for the continued growth in deposits during this period. A class-wise analysis of deposits shows that demand deposits declined in the first two years from Rs. 456.31 crores to Rs. 417.57 crores, but thereafter swelled by Rs. 148.68 crores during the rest of the period. Both savings and time deposits recorded a continuous increase throughout the period under review, the rise being Rs. 67 crores and Rs. 349 crores, respectively. It is interesting to note that about 60 per cent. (namely, Rs. 210.43 crores) of the rise in time deposits occurred in 1957 alone. Besides the large deposits held by the U.S. authorities with the State Bank of India, the rise in time deposits of business was to the tune of Rs. 45 crores. The latter amount may be attributed to the switch-over of funds from current accounts to time deposits, in order to take advantage of higher interest offered on such deposits. As a result of the aforesaid changes, the share of demand deposits to the total declined from 55.5 per cent. in 1951 to 42 per cent. in 1957, while that of time deposits rose from 26 per cent. to 43 per cent. Savings deposits were more or less unchanged at 16 to 17 per cent. till 1956, but declined a little to 15 per cent. in 1957.

Ownership of Deposits

An analysis of the ownership pattern of deposits shows, as already stated, that business deposits with Scheduled banks rose over the six-year period (1951-57) by Rs. 88.74 crores to Rs. 390.77 crores. The trend was not, however, continuously upwards. The deposits dropped by Rs. 15 crores, during the first two years, that is from Rs. 302.03 crores at the end of 1951 to Rs. 287.45 crores at the close of 1953, but rose to Rs. 352.85 crores at the end of 1955. After a decline to Rs. 338.02 crores a year later, they increased to Rs. 390.77 crores in 1957. A part of the fall in business deposits in 1956 was due to a change in the classification of deposits of insurance companies from business to Government and quasi-Government bodies consequent on the nationalisation of life insurance companies. An analysis of business deposits shows that, during the six-year period under review, while demand deposits fluctuated from year to year and rose by only Rs. 28.21 crores to Rs. 264 crores, time deposits recorded an almost continuous rise, enlarging from Rs. 64.59 crores to Rs. 126.77 crores. The rise in 1957 (by Rs. 44.69 crores) was very sharp and may be attributed to shifting of their surplus funds from current accounts to call and short-term deposits carrying higher interest rates. While consideration of higher interest rates must have been an important factor for this change-over, it could not have been the sole reason. The diminishing prospect of re-utilisation of funds in business, owing to import restrictions, slackening of activity in the private sector and similar causes, must have also contributed to the change in the character of deposits.

Personal Deposits

Personal deposits at the end of 1957 amounted to Rs. 544.02 crores, having risen continuously from Rs. 377.35 crores six years before. These deposits, as will be seen from the following table, are mainly held in savings and time deposit accounts:

(In crores of rupees)

End of	Demand	Savings	Time	Total
1951 ..	123·92 (32·8)	130·46 (34·6)	122·97 (32·6)	377·35
1952 ..	116·09 (30·3)	131·47 (34·4)	135·02 (35·3)	382·58
1953 ..	112·96 (29·2)	133·31 (34·4)	141·07 (36·4)	387·34
1954 ..	114·87 (28·0)	140·40 (34·3)	153·97 (37·7)	409·04
1955 ..	125·87 (28·5)	140·79 (32·0)	174·27 (39·5)	440·63
1956 ..	127·70 (26·2)	158·40 (32·5)	201·90 (41·3)	488·00
1957 ..	130·08 (23·5)	173·00 (31·2)	250·94 (45·3)	554·02

Note:—Figures in brackets are percentages to the total.

The steady growth in personal deposits reflects the rise in money incomes of salaried personnel and rural population, following the implementation of large development programmes. Two factors are mentioned in support of this contention. First, the rise in personal deposits was mainly in savings and time deposits, the former having gone up from Rs. 130.46 crores to Rs. 173 crores and the latter from Rs. 122.97 crores to Rs. 250.94 crores, while personal demand deposits showed only an insignificant rise of Rs. 6 crores to Rs. 130.08 crores.

Two more reasons for this trend occur to us but are not mentioned in the Reserve Bank's survey. One is the sizable liquidation of investments in equities which followed the drastic increases in the burden of taxation. Several investors must have converted their equity holdings into fixed deposits with banks. The second reason is the diversion of middle-class savings from agriculture to the haven of banks, brought about by land reforms, *kisan* troubles in the various parts of India and one-sided legislation favouring debtors in rural areas. In other words, a part of the rise in personal deposits reflects the drying up of capital and credit for agriculture.

The deposits of Government and quasi-Government bodies (for which data are available only from 1952) rose steadily from Rs. 61.77 crores to Rs. 224.94 crores, the rise in 1957 alone being Rs. 113.44 crores. This rise may partly be due to the increase in the number of statutory bodies during the last few years and partly to larger amounts of loans and grants-in-aid received from the Government under the Plan allotments, but which could not be spent. A part of the increase in 1956 was due to the inclusion of deposits of life insurance companies under this head after their nationalisation and the bulk of the rise in 1957 arose from transactions under P.L. 480.

Rise in Bank Accounts

The number of accounts with Scheduled banks increased from 3.23 million to 4.39 million, the bulk of the rise being accounted for by savings accounts which went up from 1.91 million to 2.74 million, indicating that the new accounts were opened by persons with relatively small means, as a result presumably of higher incomes, and of the extension of banking facilities in smaller places. Classification of the deposit accounts by types of deposits showed that savings bank accounts predominated over time and demand deposit accounts and accounted for over three-fifths of total number of accounts at the end of 1957. Demand deposit accounts formed 24 per cent. and time deposits over 13 per cent. of the total. It was also observed that the increase in the number of accounts had taken place under savings deposits (826,000) and time deposits (282,000) while the number of accounts under demand deposits remained at the 1951 level of over 1 million.

The average size per account under all the three types of deposits shows an increase. The average size of demand deposits, after declining from Rs. 4,486 in 1951 to Rs. 4,193 in 1953, rose to Rs. 5,332 by 1957. The size of savings bank deposits fluctuated, but, on balance, stood slightly higher at Rs. 737 in 1957, as compared with Rs. 708 in 1951. The average amount per account held in time deposits increased from Rs. 7,540 in 1951 to Rs. 9,887 in 1957.

Size-wise classification of demand deposits reveals very little change so far as business deposits are concerned. Large size accounts continued to constitute more than 50 per cent. of business deposits and medium size accounts slightly over 33 per cent. In the case of personal deposits, the bulk of them were held in small- and medium-size accounts. The deposits in medium-size accounts declined from Rs. 57.69 crores to Rs. 56.36 crores, despite the increase in the number of accounts from 25,968 to 26,860. Small accounts up to Rs. 10,000 including those below Rs. 500 increased by less than 1 per cent., while their deposit amount rose by 12 per cent. Classification of time deposits by size of accounts shows that small account holders dominated both under business and personal heads. Medium-size accounts both under personal and business deposits, however, showed a tendency to grow, particularly under the business category. Thus, the proportion of medium-size accounts to total personal and business deposit accounts rose from 17.2 per cent. to 17.7 per cent. and from 21.7 per cent. to 34.5 per cent., respectively. Large size and small size business accounts formed 7.3 per cent. and 58.1 per cent. to the total business accounts at the end of 1957, as against 9.2 per cent. and 69.2 per cent., respectively, in 1951. In the case of personal deposits also these categories of accounts showed fractional declines over the six years.

BRITAIN HELPS TURKEY

The British Government has undertaken to provide aid in sterling, to the value of $10 million, as part of a programme of economic aid to Turkey by member-countries of the Organisation for European Economic Co-operation (O.E.E.C.) and by the United States. The Turkish Government had approached the O.E.E.C. in April with a request for help in settling immediate and long-term economic difficulties.

HINDUSTHAN-PILKINGTON GLASS WORKS LTD.

SATISFACTORY PROGRESS: MAIDEN DIVIDEND DECLARED

RAILWAY FREIGHT AND TRANSPORT A SERIOUS HANDICAP: DR. N. N. LAW'S REVIEW

THE following is the speech delivered by Dr. N. N. Law, M.A., Ph.D., Chairman, Hindusthan-Pilkington Glass Works Ltd., to the shareholders at the Sixth Annual General Meeting of the Company held at Calcutta on 30th July 1958:

"GENTLEMEN,

"I have great pleasure in welcoming you to the sixth annual general meeting of the Company.

"The Directors' report and accounts for the year ended 31st October 1957, have been in your hands for some time and with your consent I take them as read.

"I cannot help prefacing my address with a brief reference to the present international situation which is causing the profoundest apprehensions in our mind. As you are aware, the recent happenings in the Middle East have created a situation which is fraught with ominous consequences and we are living through one of the most serious crises in the history of mankind, when a single unwise step may lead to a major catastrophe in the world. Such an explosive situation can at any moment be touched off by a spark, and an armed conflict in any area may easily be turned into a world conflagration. At this moment of peril, we can only look to the saner counsels of the world, their wisdom and calmness in the present confusion, for the maintenance of peace which is so essential for all of us.

Production Rising

"Turning to matters of immediate interest to us, it is satisfactory to note that both production of sheet glass and demand for it have been increasing steadily until now, and it can be confidently expected that the industry will not only fulfil its targets of production under the second Five-year Plan of 60 million sq. ft. by 1960-61, but will also exceed the target. The rather uncertain factor in the situation, however, is the growth of demand which cannot be predicted with equal assurance. The future of sheet glass is linked up with programmes of building constructions which in their turn are to no small extent dependent on industries producing other building materials such as steel, cement, timber, etc., and ultimately it depends on the growth of national income. Not supply, but the demand position will, therefore, be the crucial factor in determining the future of the industry in years to come. Though the production of sheet glass started before the Second World War, in its present form the industry may be regarded as the product of the post-war period, as the bulk of the capacity of the industry was created during this period. Although at present there happens to be a fair balance between actual production and demand, one cannot feel too sure how long such a state of affairs may continue. For one thing, if there is yet no accumulation of stocks, that is because not all the factories are yet in full production. Secondly, the virtual elimination of imports as the result of the recent drastic reduction of import quotas cannot be expected to continue indefinitely, and although the industry has at present the 70 per cent. *ad valorem* protective duty on imports, the fact that there is in some quarters a consumer preference for imported varieties has to be reckoned with. There has been a steady improvement in the quality of the Indian product recently, and the sheet glass manufactured by your Company has been acclaimed as of very high quality. It is as good as, if not better than, the imported variety, and is being used even by mirror-manufacturers.

High Rail Freights

"While, however, efforts at improving efficiency still further must continue basically, there are some extraneous factors operating on costs which the manufacturers themselves cannot control, although such factors affect them vitally. One of them is the high railway freight payable on the transport of both raw materials and finished products. The incidence of railway freight on sheet glass production is so high that unless it is put on a more realistic and reasonable basis, the industry can never hope to find its moorings, and may have to depend indefinitely on the crutch of a high protective tariff. The crucial role that railway freight plays in the cost of production of sheet glass can be readily appreciated when it is borne in mind that both the sources of raw materials for the production of sheet glass and the principal consuming centres are widely dispersed in this country, so that railway freight can indeed make or mar the industry. While factories in the U.K. obtain all their principal raw materials from within a distance of 5 to 50 miles, our factory at Asansol receives sand from a distance of 450 miles, limestone from a distance of 500 miles, and salt cakes from 1,000 miles. Imported materials like soda ash have to travel a minimum distance of 135 miles to reach the production point. Indeed, railway freight sometimes amounts to 100 per cent. or even more of the f.o.r. cost of the raw material. In the next place, the supply of railway wagons which is fitful and irregular, has proved another major headache for the industry, and also an important factor affecting the cost of production.

Special Problems

"The industry has been all along urging upon the Government and the railway authorities for recognition of its special problems and position in Indian economy and for charging more realistic rates which it can bear such as special station-to-station rates, and for the grant of an appropriate priority in the allocation of wagons, a rebate of customs duty on imported soda ash, and some other concessions. Unfortunately, although the Railway Freight Structure Committee has recently recommended some minor reliefs they have provided no immediate and effective solution for the major transport problems of the industry. On the contrary, as the Committee has recommended a general increase in freight rates, costs both on account of raw materials and marketing of finished products are calculated to go up, not only for this industry but for all industries. Furthermore, labour and material costs have been rising continually. These problems, in one form or the other, are common to all manufacturing industries in India and unless these are properly tackled, a rise in prices will be inevitable to the prejudice of the industry attaining the optimum efficiency.

"One important way of putting the industry on a rational and a more stable basis is to diversify its production. This is engaging the constant attention of your Directors and your factory has indeed opened a new chapter in the history of sheet glass production in this country by manufacturing sheet glass of both extra thin (10 to 12 oz.) and extra thick (3/16" and 7/32") varieties. Recently it has also started production of 'obscured glass.' Although the market for these varieties is still limited, the outlook is promising.

Results Satisfactory

"Turning now to the working of the Company for the year under review, you will have observed that the results were satisfactory, which enables the Company to declare a tax-free dividend of 6 per cent. It is indeed a matter of great satisfaction to your Directors that they have been able to recommend a dividend within three years of commencement of production which, by all standards, is a creditable achievement.

"Despite the fact that the production had to be suspended for about eight weeks during the year on account of periodical cold repairs to the furnace which fell due during the year, the output was 23.10 million sq. ft. against 21.50 million of the previous year. The sale proceeds have also marked slight increase and your Company's products have established a higher and more widespread reputation with the customers. In fact, the demand for our products has been more than your factory could possibly meet and our backlog of orders has been growing in volume despite the fact that the factory has by excellent performance increased its output to more than the originally estimated capacity. I am indeed very happy to inform you that recently in appreciation of this the Government of India has formally recognised your Company as having an annual installed capacity of 30 million sq. ft.

Technological Improvement

"Before I conclude I would like to convey our warmest thanks to our Technical Consultants, Messrs. Pilkington Brothers Ltd., of England, and the Managing Agents of the Company. The year under review along with the two preceding years marked an important phase of the developmental stage not only of the factory of your Company but indeed of the sheet glass industry in India. During this period numerous problems cropped up both in the production side and also in allied matters of administration *inter alia* connected with timely procurement of various raw materials of requisite quality and standard and also proper and timely despatches of the finished products for catering to the needs of markets spread over the whole country. While the problems on the technological side engaged constant attention of our Technical Consultants and all necessary steps were taken for the maintenance of the quality standard as also for the diversification of the products, the other problems on the administration side were looked after by the Managing Agents with the same promptitude to resolve them to whatever extent possible within the limitations of prevailing scarcity of materials, transport bottlenecks, etc. The combined efforts of the two have ultimately yielded the satisfactory results for which they deserve the appreciation of the Company. I would particularly like to convey our special thanks to Sir Harry Pilkington and Mr. D. V. Phelps of Messrs. Pilkington Brothers Ltd. for their personal help and guidance which has been of such invaluable assistance to us. I would also pay a special compliment to the executives and all the employees of the Company in achieving such satisfactory results within such a short time."

NOTE:—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

HINDUSTHAN MERCANTILE BANK LIMITED

Head Office:

10, CLIVE ROW, CALCUTTA-1

Chairman: **Sri M. L. JALAN**

CAPITAL

Authorised .. .. .. **Rs. 2 Crores**

P. H. KOTHARI, B.Com., LL.B., *General Manager.*

AUGMENTING EXPORTS OF TEXTILES

EQUIPMENT AND PRODUCTION METHODS MUST BE MODERNISED

JUDGING from the actual performance during the first six months, the current calendar year will witness a marked setback in India's exports of cotton textiles. The total quantity of mill-made piecegoods shipped abroad in the aforesaid six-month period was no more than 291 million yards, which compares very unfavourably with 475 million yards in the corresponding period of 1957. On this basis, the aggregate exports for the whole of 1958 will come to about 582 million yards, a quantity which is very much below the Buxton target of 1,000 million yards. The poor performance on the export front is clearly illustrative of the Indian mills' inability to face successfully the acute competition in world textile markets. This competition is due to a number of factors. A lucid account of what these factors are and how they should be counteracted by adoption of a correct policy governing export trade was given by Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, when he addressed the fourth annual general meeting of the Council held in Bombay on Thursday the 31st ultimo.

At the outset, Mr. Wadia pointed out that the drop in exports of cloth was due to the slackening of the tempo of high world trade which immediately followed the political and economic repercussions of the Suez crisis and the return to normal purchases and stocks throughout the world. The other causes responsible for the setback as listed by him may be summed up thus: removal of piecegoods from open general licence in Sudan; heavy increase in import duties in East Africa; serious effect of lower copper prices in Rhodesia; introduction of severe quota restrictions in New Zealand and Burma; low level of purchases by Australia and Canada pending the outcome of tariff inquiries; and political disturbances in Indonesia and Ceylon. On top of these, every exporting country has been trying to get as big a share as possible. Hence the stiff competition from Hong Kong, Japan, China and Russia. The last mentioned country, it is reported, has achieved considerable success in exporting more cloth to Iran by offering very liberal credit terms. Referring, in particular, to competition offered by China, Mr. Wadia said:

"So severe was the onslaught from China in price, quantity and quality that even the Japanese, who have the largest share of international trade, have been hard put to compete. While the price of our exports have fallen by 10 to 15 per cent. in the last year, China is now underquoting us by as much as another 15 per cent., making it impossible for us to sell in open competition against them. Though it may be true that a State-owned industry can sell at any price it likes both internally and for export, this should not blind us to the most serious situation which is facing our own industry."

Poorly Equipped

It is common knowledge that, in comparison with the highly modernised textile industries of Japan, China, Europe and the U.S., a large section of the Indian cotton mill industry is generally very poorly equipped. Mr. Wadia did well to stress this aspect forcefully. According to him, the methods and equipment of the Indian industry are on an average 30 to 40 years behind the times, and what the industry has is not always operated in the most efficient manner. Elucidating this aspect, Mr. Wadia made the following observations:

"Modern mills today in Europe are employing less than two operatives per 1,000 spindles from blow-room to spinning point, as compared to 12 to 15 in the average mill in India. It is no use saying that these workloads cannot be matched by our operatives, for there is already a mill built in South India recently, which employs four operatives per 1,000 spindles—proving what can be done. Even more serious is the position in weaving. In Japan, Europe and America, and I also believe in China, there is hardly a mill which is not fully equipped with automatic looms. In India, 90 per cent. of our looms are still of the Lancashire type. Whereas a weaver looks after 60 to 70 automatic looms in the advanced countries, we are still discussing whether four looms to a weaver should be universally adopted. Vast improvements can equally be made in this direction, for there are mills in India working between 30 and 40 automatic looms per operative. Prejudice against automatic looms is slowly breaking down, for there have been corresponding improvements in pay and conditions where these machines have been installed. There is no point in attempting to apportion the blame for the situation in which we find ourselves—what is vital is the ready acceptance by the industry, labour and Government that the industry must be modernised with the minimum delay, if we are to retain anything like our previous share of world markets.

"Modern machinery is not only required for reducing the cost of production but is essential for meeting the high standard of quality demanded in markets such as Europe and America. It is my personal experience that Continental buyers refuse even to discuss the purchase of any cloth not manufactured on automatic looms. No wonder our trade with European countries is negligible. For this reason alone, a vast market is cut off from us, and our trade with the U.S.A. and Canada could be multiplied many times, if we were able to offer fault-free cloth."

Re-equipment Urgent

This is, indeed, a correct assessment of the position. Unless energetic steps are taken to re-equip the machinery and equipment in mills, earnings from cotton textiles cannot but continue to decline and a time may come when they will be completely priced out of world markets. It must be said to the credit of the Textile Enquiry Committee that it has recognised this aspect and recommended that 5 per cent. of the foreign exchange earnings of each mill either by direct export or through exporters may be made available to that mill for being utilised to import plant and equipment, as well as dyes and chemicals; the concession should be allowed for a period of five years. The Committee would have done better if it had conceded the Export Promotion Council's plea for 10 per cent. allocation. Explaining the reasons which prompted the Council to put forward this suggestion, Mr. Wadia eloquently argued thus:

"Your Council recently had an opportunity of expressing its opinions and offering suggestions in this connection before the authorities, and the greatest emphasis was placed on finding a way to solve this problem in spite of the difficult foreign exchange position. We made it quite clear in our representation that it would be unrealistic to expect anything but a decline in our earnings from cotton textiles until the industry had been able to re-quip itself. Our first suggestion, therefore, which I repeat with all the emphasis at my command, is that, in order to re-equip the industry, those mills which manufacture for export should be allowed to retain 10 per cent. of the foreign exchange thus earned for the purchase of plant and machinery from abroad. The licence should be issued for machines which are not made in either sufficient quantity or quality within the country. Very important also was the recommendation that this policy should be adopted and declared effective for at least five years. This would enable mills willing to take advantage of this opportunity, to make arrangements for the immediate supply of their requirements of machinery with terms of payment spread over the years in which they earn the necessary foreign exchange. Mills which thus commit themselves would be obliged to continue to export in even greater volume, in order to make sure of living up to their contractual obligations with the machinery makers abroad.

"Neither the Government nor labour need have any misgivings about this proposal. Our total earnings of foreign exchange have been on the average Rs. 60 crores, therefore, 10 per cent. would mean only Rs. 6 crores of imported machinery. However, if our exports increased, Government would get 90 lakhs out of every crore extra earned by the industry. As it is, textile machinery imports have been on an average Rs. 9 crores and, therefore, the amount now recommended can be deemed to be most reasonable.

"As far as labour is concerned, if the entire sum of Rs. 6 crores is used for importing automatic looms at the most nine to ten thousand automatic looms could be imported per annum. The total number of workers displaced would be roughly 8-10,000 at the most, which is far less than those who have been thrown out of work by the weaker mills closing down. On the other hand, those retained to work the new looms will be earning much better wages than before."

Despite these convincing arguments, the Textile Enquiry Committee has not given any explanation as to why it has recommended a foreign rebate of only 5 per cent.

Automatic Looms

On the question of modernising equipment in cotton mills, special emphasis must be laid on the installation of automatic looms. It may be noted here that the progress of the present scheme for installation of these looms has been none too encouraging, thanks to the rigorous conditions imposed on the mills, namely, that the entire production of looms be exported and that at least 87½ per cent. of exports during any of the three years 1953, 1954 and 1955 at the choice of the mill concerned be maintained. The Textile Enquiry Committee has urged that, in the context of the present downward trend in world demand, on the one hand, and the superior position of other competing countries, on the other, efforts must be intensified by all concerned towards smoothening the process of introducing automatic looms in the country. The Committee has observed:

"We are quite clear that, for some time at any rate, the introduction of automatic looms should be related strictly to the export sector. The entire production of any such automatic looms should, therefore, be required to be exported. Some effective sanction will have to be devised for enforcing the condition in respect of mills which would not wholeheartedly co-operate in the working of the scheme.

"One approach to the introduction of automatic looms which would have a larger support from labour is that the automatic looms to be introduced for the purpose of export trade should be additional to the existing number. Such installation should be freed from the stipulation requiring at least 87½ per cent. of the past exports from the production of existing looms to be maintained. Consequently, if automatic looms are added to the existing number of looms and since there will be no guarantee of exports of the cloth produced by other looms, the condition that the product of the new automatic looms shall be entirely exported will mean that there would be some reduction in the exports of cloth produced from the existing looms. This again will mean that, to a considerable proportion, the volume of production of the newly installed automatic looms will be indirectly added to the cloth available for internal consumption. In the context of our analysis regarding the anticipated internal demand of cloth, there would be a great risk under this type of introduction of additional automatic looms of introducing great instability in internal market which should naturally be avoided."

In the opinion of the Committee, as an experimental measure, up to 3,000 additional automatic looms should be allowed to be installed on condition that the entire production of such looms is exported. There should be no condition, avers the Committee, regarding the guaranteed exports in relation to past performance of such mills.

Export Promotion

While the modernisation of the cotton mills equipment will lead to larger production of better quality cloth at a reduced price, the benefit of such production in so far as export trade is concerned will be neutralised if active measures are not taken to promote exports. Having this point in mind, the Textile Enquiry Committee has made several recommendations. They are:

Rail freight rates should be revised to facilitate export of cloth from textile mills situated in upcountry areas to port towns and transport priority afforded. The processing concerns must be placed on a par with the composite mills. The mills may be allowed to produce varieties like *lungis* and handkerchiefs for export to those countries where the import of handloom *lungis*, handkerchiefs, etc., are banned. The ceiling for exports of particular varieties of cloth, such as pull-through cloth and mesh cloth, must be removed. Income-tax concessions may be given to mills exporting cloth on lines similar to concessions granted in other countries. Procedural formalities governing preparation of independent challans for shipping of cotton textiles, refund of excise duty, drawing in duty-free samples and the like must be simplified and lightened to the absolute minimum. Compulsory inspection of all cloth for export must be achieved within a period not exceeding three years. The suggestion of the Export Promotion Council in regard to the levy of income-tax for buyers of Indian origin in places like Singapore and Mombasa requires to be examined by the appropriate authorities. Larger funds should be made available to the Export Promotion Council to open offices in other countries, so that the demand in those countries can be properly assessed and stimulated.

WORLD COTTON INDUSTRY MEETING

The annual meeting of the International Federation of Cotton and Allied Textile Industries will be held at Stockholm, Sweden, from 25th to 30th inst., at the invitation of the Swedish Cotton Textile Industry Federation. The meetings will be presided over by Mr. W. T. Winterbottom (United Kingdom), President of the International Cotton Federation. It is expected that approximately 100 delegates from West European countries, Japan, the United Arab Republic and the United States will attend.

The agenda for the meeting includes a discussion of the current cotton price and export policy of the United States Government. The Federation's Committee for European Affairs will study the practical implications of the European Economic Community (Common Market) for the cotton and allied textile industries and discuss the latest developments regarding the proposed Free Trade Area.

Various matters regarding raw cotton supplies and quality maintenance will be discussed by the Raw Cotton Merchants' Committee, including the newly proposed rules of arbitration on the basis of Micronaire readings. Trends in shipping freight rates for cotton will also be reviewed. A special technical sub-committee will report on the introduction of Tex, the new universal yarn counting system and other aspects of standardisation and fibre testing. The relationship between the producers and users of man-made fibres will also be discussed.

The Federation will continue its work on the establishment of an international model sales contract for cotton yarn and cloth and will investigate the possibilities of patenting textile designs. Progress made in the practical application of a newly devised method for measuring labour productivity in cotton spinning mills, too, will be reviewed.

On the administrative side, the Federation will consider various recommendations regarding the improvement and expansion of its statistical and administrative services.

FRENCH COTTON INDUSTRY

The French cotton industry is faced with a serious threat of recession, according to Mr. Pierre de Calan, Chairman of the French Cotton Industry Federation. Recession, he observed recently in Paris, might be prompted by the downward trend of sales or by bottlenecks in raw cotton supplies. It was not certain whether the recent decline in orders booked by the industry reflected a new trend or whether it was due to exceptional factors caused by the recent political events in France and the unfavourable weather conditions. As regards the outlook for raw cotton supplies in 1958-59, the President of the Federation said that, though no import programme had so far been drafted, the industry had received assurances from the Government that its needs would be met. He, however, felt that this would depend upon the development of France's balance of payments position.

The French cotton industry, according to him, had to face three major problems: (1) foreign exchange shortage which will affect raw cotton supplies, (2) unfavourable marketing prospects in French Union Territories and (3) increased competition through the European Common Market and Free Trade Area. The industry, the President said, was entirely opposed to the Free Trade Area Projects. He listed three reasons for this: (1) trade would be deflected to Far Eastern countries, (2) there would be no solidarity between the countries participating in the project, and (3) the Free Trade Area would mean the death of the Common Market.

MORE NIGHT SHIFTS IN LANCASHIRE MILLS

The Cardroom Workers' Amalgamation, one of the "big three" Lancashire cotton unions, is prepared to consider applications from mills for night-shift working by men on a partial basis. The decision, made at a representative meeting, opens the way to the introduction of more night-shift working in Lancashire spinning mills.

The 50,000-strong union, however, lays down certain conditions. These include the standard and cost of re-equipment in the mill, agreement on hours of work, a wage premium, and trade union membership among the night workers. According to Sir Alfred Robers, General Secretary, the decision will allow mills to introduce a night shift when it is more convenient than a day shift. For example, it will help mills which find it difficult to run two day shifts because of a shortage of women workers. They will now be able to run a day shift with women workers and night shift with men. It "will mean less rigidity and is one of the things which can help a little in meeting foreign competition."

"BUY BRITISH" CALL

As a move to focus more attention on the plight of the Lancashire textile industry and so emphasise the need for Government and public aid, the cotton trade unions of Britain have set up a special committee to decide on the best methods of publicity. The decision was taken in Manchester last week by the Legislative Council of the United Textile Factory Workers' Association. Aldermar. Harold Chorlton, President, said afterwards: "We shall consider the question from every angle."

One course which the unions are expected to persue is try to develop the campaigns started in a number of cotton towns, including Oldham, Rochdale and Bolton, to persuade housewives to buy only cotton goods which have been spun, woven and finished in Lancashire. Support for the local campaigns already started, it is claimed, has been encouraging.

The Legislative Council heard "with acclaim" the reply from Mr. Morgan Phillips, Secretary of the Labour Party, to the cotton trade unions' policy document for the future of the industry, *Plan for Cotton*. In his reply, Mr. Phillips said that the executive believed the document provided a sound basis of policy on which proposals for helping the industry could be built, but, at this stage, the executive could not commit the party or the next Labour Government to the implementation of the plan in detail.

EAST AFRICAN COTTON EXPORTS

Figures relating to shipment of East African cotton to various overseas destinations from 1st January to 5th July 1958 indicate that India was the largest buyer of East African cotton. Of a total shipment of 243,431 bales during the period, India's share amounted to 76,755 bales. This is significant, especially in view of the fact that import of this type of cotton in the current season has been very much restricted. West Germany is the second largest buyer, its offtake amounting to 74,242 bales. India and West Germany together accounted for more than 50 per cent. of the cotton exports from East Africa. The following table gives the destination-wise break-down of the shipment:

Destination—	(In bales of 400 lbs.)
Australia	120
Belgium	2,741
Ceylon	1,010
France	3,836
Holland	6,897
Hongkong	15,804
India	76,755
Italy	7,931
Japan	25,764
Newfoundland	100
Portugal	1,105
Singapore	305
South Africa	161
Switzerland	165
U.K.	17,505
W. Germany	74,242
Total	234,431

SUDAN COTTON

Exports of cotton from Sudan during the first five months of 1958 are estimated to have aggregated 217,684 bales. If this trend of exports is maintained, Sudan, it is expected, would end the current season with very low carry-over stocks. The table below indicates the stocks position of Sudan cotton as on 8th July 1958:

(In bales of 420 lbs.)

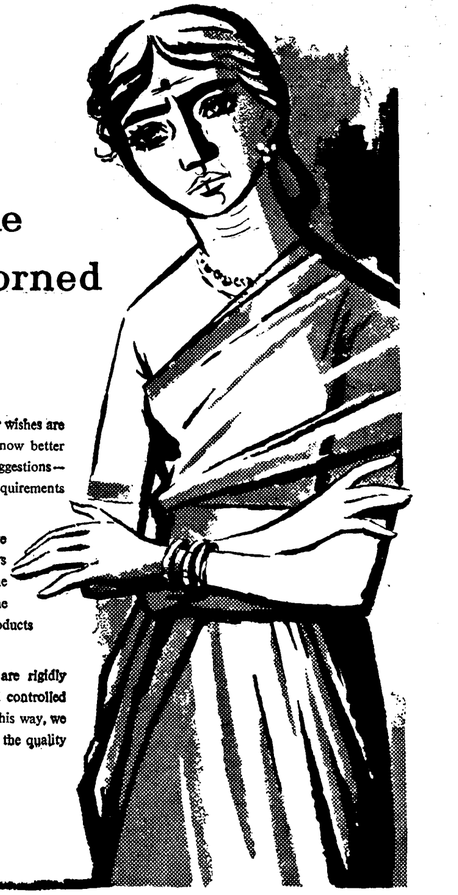
	Unsold 1957 crop	Unsold 1958 crop	Total
S.C.B. Sakels	51,295	23,713	75,008
S.G.B. Sakels Gash	2,995	3,300*	6,295
	54,290	27,013	81,303
S.G.B. Lambert	63,971	46,571	110,542
S.G.B. Lambert Gash	1,901	12,000*	13,901
AL/WL Lambert	14,342	7,200*	21,542
Private estates (estimate)	..	50,000	50,000
	80,214	115,771	195,985
Grand total	134,504	142,784	277,288

* Estimate.

The stocks held by exporters are estimated at around 70,000 bales. This would bring the total available to 347,288 bales.

COTTON CROP IN MADHYA PRADESH

Cotton crop in Madhya Pradesh in the 1957-58 season has registered a decrease of 27.4 per cent. as compared with that of the last year. The total production in the State for 1957-58 aggregated 450,500 bales, as against 620,500 bales in the previous season. It is, however, greater than the corresponding quinquennial average by 3.2 per cent. The decrease in output has been partly attributed to fall in the acreage under the crop and partly due to prolonged drought in the State in September and October last year. There has also been a decrease of 11.7 per cent. in the total area under cotton crop this year in the State. The estimated area under cotton was 1,953,800 acres as compared with 2,212,100 acres last year.



SIGNS OF SOME HEDGING IN OFFICIAL POLICY TOWARDS COTTON TRADE

WORKERS' CLAIM REJECTED

From A Special Correspondent

MANCHESTER, 29*th July*

MANCHESTER LETTER

EVIDENCE of the sharp decline in international trade in cotton goods is duly illustrated in the very disappointing figures relating to exports and imports during the second quarter of the year. Rarely, if ever, have shipments abroad been at such a low level, even during the exigencies of war-time trading. Once again, in June, imports of cloth exceeded local shipments. Just 12 months ago, this phenomenon was first noted and brought widespread comment and publicity for the industry's ills. Now the situation seems largely taken for granted and a mood of resignation at such an unhappy state of affairs predominates.

Over the first half of the year, earnings from exports of cotton yarns and manufactured goods fell from £47,047,856 to £38,681,316. Shipments of cotton cloth were nearly 30,000,000 yards lower in 1958 than 12 months ago at 207,591,000 square yards and the volume of yarn exported dropped from over 20,000,000 lbs. to 14,548,000 lbs., as the following table shows:

(Cloth in 000 sq. yds.; Yarn in 000 lbs.)

	Exports		Imports
	Cloth	Yarn	Cloth
1956			
1st quarter	120,194	9,969	74,892
2nd ,, ...	116,780	8,670	84,980
3rd ,, ...	111,510	7,500	74,190
4th ,, ...	125,660	9,650	72,320
1957			
1st quarter	120,185	10,050	108,064
2nd ,, ...	117,080	9,960	114,720
3rd ,, ...	109,580	9,200	93,510
4th ,, ...	109,020	8,430	105,000
1958			
1st quarter	116,250	8,045	116,541
2nd ,, ...	91,343	6,503	85,197

No significant change has occurred in the destinations of cotton cloth this year as compared with last. The chief falls have been recorded for the West African areas of Sierra Leone and Ghana, while both India and Pakistan have taken smaller quantities of fabric. Australia remains the chief customer with 35,944,000 sq. yards, followed by South Africa 31,327,000 sq. yards, New Zealand 16,900,000 sq. yards and Nigeria 14,044,000 sq. yards. In cotton yarn, Australia and New Zealand proved the exceptions to the rule in taking larger supplies this year, having absorbed 4,418,557 lbs. and 1,284,158 lbs., respectively.

Imports

At the end of the first quarter of the year, imports of foreign cloth were almost identical with the quantity of cotton goods shipped abroad. In the following three months, this trend did not continue and, over the half-year, the amount of grey cloth reaching Britain had declined from 195,092,000 sq. yards to 178,065,000 sq. yards. Imports of finished cotton cloth were 1,000,000 yards higher at 23,673,000 sq. yards.

Although India remains the major supplier, her shipments have fallen substantially, from 104,075,000 sq. yards to 62,927,000 sq. yards, in the first half of this year. Conversely, Hong Kong has sent practically 50,000,000 sq. yards against less than 30,000,000 sq. yards, while China has provided 31,000,000 sq. yards against less than 8,000,000 sq. yards.

Tomorrow's Action?

It is easy enough for the leaders of a political party while out of office to promise all manner of aid to groups of individuals as well as whole industries, should they be re-elected in the future. When at the helm, however, decisions become harder to take and measures which appeared effective in the past assume a more questionable aspect.

Such may well be the case when the Labour Party has the opportunity to deal with the problems of the cotton industry of the day. Already there are signs of some hedging in the official policy towards the trade, as outlined in the reply to the United Textile Factory Workers' Association on the much-discussed *Plan for Cotton* drawn up by Mr. Harold Wilson.

Although the Labour Party is said to be "fully alive to the great problems of your industry" and a future Labour Government promises to "do all in its power to halt the disastrous decline in the fortunes of the Lancashire cotton industry," few practical moves are proposed. Mr. Wilson's plan, which has the backing of the trade unions, is clearly not regarded as entirely suitable. "In view of the rapidly changing situation and the complex problems involved, the executive cannot at this stage commit the party or the next Labour Government to the implementation of 'Plan for Cotton' in detail," is the official comment.

The document itself covered numerous aspects of the present phase and the possible remedies. The chief suggestions were the establishment of Government-sponsored Commissions, one reviving control over the importation of raw cotton and its distribution, and the other regulating purchases of foreign cloth. Such proposals in themselves are sufficient to cause a radical split in the opinions held by traders. Experience of the re-established Liverpool futures market for raw cotton has been disappointing even to its most fervid admirers, and there are known to be spinners who would now be no longer averse to a return to the Raw Cotton Commission, so long as they were provided with cover—at the taxpayer's expense. There are equally those who believe that limitation of foreign cloth imports could be achieved effectively by the establishment of a trading commission, but such methods are open to controversy. The opponents of the Wilson plan are not being idle during the lifetime of the present Government and should there be a change of administration, they will be armed and ready with their counter-proposals.

No Final Pay-out

Few people other than the trade union representatives involved were surprised at the outright rejection by the cotton employers of the claim for compensation to be paid to operatives displaced by the closing of mills. To commit every firm contemplating closure to provide a "going-away gift" on the scale mentioned would merely tend to make the wavering millowners hang on a little longer to the detriment of all.

The addition of a fixed sum to the weekly wage bill, as was suggested, to provide a compensation fund, would in itself create another rise in the cost of production, making Lancashire goods less competitive than ever. In any case, as Mr. Michael Grey, Chairman of the Cotton Manufacturers' Association, said, there is nothing to prevent individual firms from distributing a bonus to their workpeople when deciding to close down. Even a general recommendation was felt to be impinging on the rights of each company to make their own decisions in such important matters.

Meanwhile, the rate of stoppages in Lancashire and surrounding countries continues unabated. The attitude of these firms towards their operatives has, in general, been to give as much notice as possible to enable alternative employment to be sought. When the mills have belonged to a group jobs have been offered in branches staying open.

Cotton From Middle East

The crisis surrounding the various countries of the Middle East, not by any means yet resolved, has focussed attention once more on an area which was at one time regarded as a possible region for trade expansion. Only a few years ago Lancashire firms were surveying the prospects for increased business with the Middle East with some degree of enthusiasm. That this trade might be two-way in scope was also a favourable factor, in view of the efforts being made throughout that part of the world to encourage cotton growing. According to the latest figures quoted by the International Cotton Advisory Committee, the total crop from the 10 leading producing countries in this area during the season now ending will be more than 3,500,000 bales.

The major supplier, Egypt, is still on Britain's "black list," while the crop failure in the Sudan has complicated the immediate situation. Recent Turkish crops have averaged about 600,000 bales, and in Syria nearly 500,000 bales have been harvested, compared with barely 150,000 bales seven years ago. In the same period, production in Iran has doubled at 280,000 bales, while, in countries such as Aden, Israel, Algeria and Morocco, crops of up to 25,000 bales have been grown. Lancashire, however, has not taken large quantities of cotton from these sources, outside the Sudan. In fact, if all these countries stopped sending supplies, the Sudan again excepted, only about 100,000 bales would have to be found elsewhere.—*All Rights Reserved.*

AUDITORS' REPORT.

We have audited the attached Balance Sheet as at 31st December, 1957, of the Elphinstone Spinning and Weaving Mills Co., Ltd., and the Profit and Loss Account of the Company annexed thereto, for the year ended on that date and report as under:

(1) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;
(2) in our opinion, proper books of account as required by law have been kept by the Company so far as appears from our examination of these books;
(3) the Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;
(4) In our opinion and to the best of our information and according to the explanations given to us, the said accounts read with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required and give a true and fair view—
(i) in the case of Balance Sheet of the state of the Company's affairs as on 31st December, 1957, and
(ii) in the case of the Profit and Loss Account of the Loss for the year ended 31st December, 1957.

S. B. BILLIMORIA & CO.,
Chartered Accountants.

BOMBAY, 21st July, 1958.

The above Balance Sheet to the best of our belief contains a true account of the Capital and Liabilities and of the Property and Assets of the Company.

BOMBAY, 21st July, 1958.

DEVELOPMENT OF PALM "GUR" INDUSTRY

ADEQUATE ATTENTION NOT PAID

THE claims of the palm *gur* industry for the fostering care and sympathetic treatment of the State Governments have so far been receiving inadequate attention, while the strength of these claims has been heightened by prohibition. While the number of palm trees in existence in the country is legion, the number commercially exploited is a mere fraction of it. The States mostly affected by the policy of letting the palm trees run to waste are those where they are in abundance, namely, Andhra, Madras and Kerala, and West Bengal. Prohibition, which was first introduced in the South, was, so far as the tappers who form a part of the rural population of these States were concerned, an unmitigated evil, in that it opened out, in the absence of encouragement and assistance to turn to palm *gur* production, only prospects of unemployment. Though efforts have been made by the State Governments to give relief to the tappers by organising co-operatives for the commercial production of palm gur, the efforts have not been on a scale to ensure complete success.

The potentialities of palm *gur* production to stabilise the rural economy of these States from the viewpoint of income as well as employment are great. The distinguishing feature of palm *gur* production is that it requires little capital investment on the part of the tapper. Financial considerations are thus no bar to the full exploitation of the palm trees existing in the country. Further, they enjoy an advantage over sugarcane, in that their source is perennial and, unlike sugarcane, is in no need of yearly replanting. This suggests that a profitable exploitation of the existing palm trees of various kinds, such as palmyra palm, date palm, coconut palm and sago palm, by way of *gur* production will release a part of the fertile areas now under sugarcane for the production of other crops. The matter is one which must receive the serious consideration of the Central and State Governments.

Jaggery Manufacture

In South India, the chief centres of palmyra industries are Tirunelvely, West Godavari, Coimbatore, Malabar, etc. Fibre extraction and other industries connected with palmyra are now receiving attention.

The manufacture of *jaggery* is carried on mainly by a community known as *Nadars* in Tirunelvely, by *Kalais* in West Godavari, by *Sanars* in Coimbatore and by *Tiyyas* in Malabar. Smooth trees of over ten years growth generally give sweet toddy. In Tirunelvely and West Godavari districts, tapping usually begins in February and lasts till June and in Coimbatore and Malabar from November to May. Each tapper working for about ten hours will be able to tap about 60 trees a day. For preparing *jaggery*, the sweet juice obtained from the trees is boiled down in open earthen pots over a smoky wood fire. The *jaggery* is sold to sugar refineries who send round their agents to these areas for collecting it. The outturn in West Godavari district alone is worth something like Rs. 10 lakhs. The production in the Tirunelvely and Coimbatore districts is also considerable.

Better Collection Methods

In this industry, there is a number of middlemen and brokers who come in for a good share of the profits of the industry. And it would be desirable for firms like Messrs. Parry and Co., Ltd., Madras, to devise, in their own interest, better methods of collection of *jaggery*. At present, the workers are entirely in the clutches of the brokers and private capitalists who take an unusually big share of their legitimate income.

The industry is on the whole in a fairly flourishing condition. Co-operative societies among the makers could, besides ensuring larger profits, also be helpful in arranging for supplies of fuel, lime, pans, etc. If such societies could be started in all the more important centres, the refineries would probably be prepared to have direct dealings with such societies in regard to arrangements for the supply of *jaggery*.

Malabar contains extensive coconut plantations and toddy is drawn and used for drinking while a good quantity of sweet toddy which is extracted free of any tax is converted into *jaggery* and used in the place of sugar in tea and coffee by the lower classes of people who use these beverages to a much greater extent than people of the same classes in any other district.

Coconut-palm *jaggery* is manufactured and used largely in the coastal tracts as a substitute for sugar. For tapping coconut for sweet toddy, a sum of four annas per tree per month is charged by the owner. Coconut palms are found everywhere in the district and the manufacture of *jaggery* on some scale or other exists almost in every place. Since coconut-palm tapping is likely to affect the yield of fruits, the trees are allowed to be tapped only once in three or four years. Generally, coconut palms are fit for tapping after the tenth year but the trees on the riverside become suitable earlier, that is, in the fifth or sixth year. At times, trees which do not yield nuts at the proper age are allowed to be tapped and they are found to yield better thereafter. The whole quantity manufactured is consumed locally.

Palghat and the surrounding country have extensive growth of palmyras and the *Izhuvas* extract sweet toddy from them and manufacture *jaggery*. The production in this area is so large that the firms of Messrs. Parry & Co. and Sri Ram Sugar Works of Podanur are able to draw large supplies of *jaggery* for their sugar works. The average production of *jaggery* in a year exceeds 10,000 bags.

Development Schemes

Due to the introduction of total prohibition, the palm-*gur* industry has become the only source of employment to most of the ex-tappers. In order to make the industry sufficiently remunerative to the ex-tapper members of co-operative societies, schemes costing Rs. 21.02 lakhs have been drawn up, under the second Plan of the Madras State. Subsidies are proposed to be given to the co-operative societies for running *neera* parlours, for purchasing confectionery machines, *gur*-making sets, etc. Among the schemes proposed for 1957-58 are the subsidising of two co-operative societies in Tirunelvely and Ramanathapuram districts to run two *neera* parlours by payment of Rs. 200 each for purchase of utensils, the payment of Rs. 500 each to two more societies in Chingleput and North Arcot districts for purchasing confectionery machines for manufacturing palatable products, besides continuing the two palm leaf instructors, the supply of 1,000 copies of *Tad Gud Samachar* to co-operative societies at half cost and the supply of 900 *gur*-making sets at half the cost. An expenditure of Rs. 3.93 lakhs is programmed for the year.

There is large scope for developing the palm-*gur* manufacture into a thriving cottage industry in South India for the following reasons:

1. Palmyra grows wild on waste lands in many parts;

2. it does not require manuring, or protection and can flourish on rain water;

3. skilled labour for tapping the trees is available in abundance;

4. the industry can be started with a small capital of Rs. 50 and

5. it does not require elaborate machinery the working of which will be beyond the reach of the ordinary villager. From the nutritional point of view, palm-*gur* is also superior to white sugar and contains mineral salts like potassium, calcium and phosphorus, etc., which can be easily absorbed by the human system. It has also medicinal properties.

Measures for Improvement

The Palm *Gur* Adviser to the Ministry of Agriculture, Madras, has suggested the following steps for the promotion of the industry:

(a) It is essential that the tree rent should be controlled under the Grow More Food regulation and through social propaganda by the Rural Development Board.

(b) Immediate reform of juice sharing system in the South.

(c) Compulsory utilisation of palms for *gur* production by the owners or leasing their trees for *gur* production.

(d) Prevention of cutting palms without permit.

(e) State-owned trees, lakhs of them owned by the Government, should be made available for such production without any tree rent or any other State charges.

A survey of the palmyra resources in the whole of India will be of considerable economic significance. It would help not only in the development of many new industries, but also enable the State concerned to become self-supporting in the matter of sugar supply without affecting the acreage under paddy as at present. It may even release some of the land now under sugarcane for paddy.

At the rate of one tapper per 25 trees, the full exploitation of all the palm trees in the Madras State alone would give gainful employment to 200,000 to 300,000 people for tapping the juice, in addition to an equal number of women for boiling the juice and an equal number of boys to assist. This will not only solve the problem of the ex-tappers, now out of employment by State-wide prohibition, but also increase the welfare of the agricultural community.

FINANCE FOR SINGARENI COAL MINES

CENTRE MODIFIES ITS STAND

AT long last, the Government of India has wisely modified its stand and conceded the viewpoint of Andhra Pradesh over the question of participation in the share capital of the Singareni Collieries as a condition for advancing funds to the latter for expansion. In a Press interview at Hyderabad the other day, Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, disclosed that the Central Government had agreed to give financial assistance to the collieries without insisting on majority of shares and controlling interest for it. The quantum of assistance, he said, would be sufficient to enable the collieries to attain the production target of 3.0 million tons at the end of the second Five-year Plan period (1960-61), as against the current annual output rate of 2.0 million tons. The exact amount involved is not known; that will probably depend on the cost of development. A part of the assistance will be in the form of equity capital, the balance being advanced by way of loan. The Central Government thus gets a share in the capital of the Company, though not the majority interest as it wanted once.

The above decision of the Central Government is a good compromise and reflects a welcome spirit of tolerance and understanding. It was many months ago, it will be recalled, that the Andhra Government requested the Centre to give a loan of Rs. 4 crores for meeting a portion of the capital outlay of Rs. 9 crores on the Collieries' expansion programme. The Centre expressed its unwillingness to lend the amount unless it was allowed by the State to hold two-thirds of the equity capital of the Company. This was certainly an unreasonable stand. The Singareni Collieries is a company which is not in the private sector but in the public sector, inasmuch as the State Government itself holds 80 per cent. of the share capital and has complete control over the management of the Company. The Centre was, therefore, not justified in insisting on its acquiring control from the State Government. It may be noted here that the Centre has given large-scale financial assistance to several companies in the private sector without insisting on majority of shares and controlling interest. Considering this and also the fact that the assistance sought by the State Government was for a running concern and not for a new undertaking, the persistent insistence of the Centre for a long time was untenable. Surely, the delay could have been avoided so that the State Government would have gone ahead in implementing the expansion scheme of the Company more speedily. Anyway, all is well that ends well.

Besides agreeing to give financial assistance, the Government of India has agreed to include the scheme for the expansion of the Singareni Collieries in the core of the second Plan. As a result of the decision, more than half of the anticipated assistance of Rs. 4 crores is expected to be in the shape of foreign exchange for the import of machinery from the U.S.A. While the Centre does not ask for majority or controlling shares, it will insist on a share in the capital of the Company. Revealing this, Mr. Swaran Singh said: "It is proposed to have discussions with the Andhra Pradesh Government for coming to a mutual agreement with regard to the capital structure, because the capital structure must bear some relation to the loan that can be advanced to any venture. So the capital structure will have to be altered."

The Singareni Collieries represent one of the most efficient coal-producing units in India. The Company has all along endeavoured to maintain a high level of output. The aggregate quantity of coal actually raised during 1957 is estimated at 2.0 million tons which compares favourably with 1.68 million tons in 1956, 1.53 million in 1955, 1.46 million in 1954 and 1.27 million in 1953. The Company has large coal reserves capable of being easily exploited. By giving a loan, the Centre will get a share in the fruits of the Collieries' effort by way of interest. The general layout and mining methods adopted in the Collieries are, it is claimed, reasonably good and every effort is being made to provide amenities for both individual and collective needs of workers at all levels. More than anything, the normal atmosphere of heavy smoke coming out of chimneys and a feeling of congestion which prevails in, say, Bihar or West Bengal coalfields are not found in the Singareni Collieries.

Because of their location almost at the top of the South Peninsula which has no coalfields worth the name, the development of Singareni Collieries deserves, and is given, a high priority. To the extent the output of these collieries is raised, the responsibility of the railways to carry coal from Bengal and Bihar to consumers in the Deccan and the far-away South will be reduced. What is more, the cost of coal to consumers in these regions will be lower by about Rs. 40 per ton, a sizable saving, indeed, these days when industries consuming coal are faced with the problem of high production cost.

The production of coal in the Singareni Collieries, as already noted, has registered a notable improvement in the past two years. This has occurred without any addition to the labour force; about 30,000 persons are said to be working in the mines at present. One may ask whether the expansion of the Collieries will lead to additional employment. The answer to the poser will depend on the nature of the expansion scheme undertaken, the details of which are not available. If stress is laid more on mechanisation of mines, the scope for large additional employment is limited. But, generally speaking, it may be stated that, in regard to a basic industry like coal, what matters more is production at an economic cost and additional employment is secondary.

TECHNICAL PERSONNEL FOR COAL INDUSTRY

If the coal production target of 100 million tons tentatively fixed in the third Five-year Plan were to be hit successfully, 400 additional geologists, 2,060 drilling engineers and 3,000 mining managers would be required. This is the opinion expressed by the Expert Committee of the Coal Council of India on production and preparation. In order to overcome the shortage in technical personnel, the Committee is reported to have made several important recommendations. These cover introduction of a mining engineering course in all engineering colleges, provision of facilities for young Indian students to study mining engineering in foreign universities, obtaining the service of mining engineers and teachers from abroad, and adoption of a system of granting certificates in mining for a three-year course at the Indian School of Mines, Dhanbad, with a view to turning out more trained personnel.

The Government of India has already decided to embark on a programme of training the requisite personnel well in advance. Four training schools are being opened at Giridih, Kargali, Talchar and Kuralia—all in the coal-producing areas of Bihar, West Bengal and Madhya Pradesh.

Besides the emphasis on technical personnel, the Expert Committee has also urged the need for procuring 150 more drills for stepping up coal output from 60 million tons in the second Plan to 100 million tons in third Plan. It has suggested drilling operations in the newly selected areas in Bihar, West Bengal, Assam, Uttar Pradesh, Madhya Pradesh, Bombay, Andhra and Madras.

A meeting of the Committee on Coal Mining Interests was held at Calcutta on Monday this week, with Mr. Gulzarilal Nanda, Union Minister for Labour, Employment and Planning, presiding. The Committee unanimously recommended the extension of the period of operation of the L.A.T. award up to May 1959. The Committee further proposed that a standing tripartite committee be appointed early to deal with the labour problems in the coal industry. It may be noted that the award of the Labour Appellate Tribunal, published on 29th January 1957, provided for a rise in minimum wages to colliery workers over the award of the All-India Industrial Tribunal (Colliery Disputes) published on 2nd May 1956. It awarded, *inter alia*, equal wages to male and female workers and raised the basic minimum wage from Rs. 69-1 to Rs. 78-4 per month.

INDUSTRIAL COMMITTEE ON JUTE MEETS

MR. NANDA EXPLAINS EMPLOYMENT AND WAGE POLICIES

INAUGURATING the two-day session of the first meeting of the Industrial Committee on Jute in Calcutta on the 1st inst., Mr. Gulzarilal Nanda, Union Minister for Planning, Labour and Employment, explained the policies to be followed in respect of employment and wages in industries, with particular reference to the jute industry, in the context of the country's present serious economic emergency. The Industrial Committee on Jute was set up by the Union Labour Ministry and the meeting was convened in pursuance of the recommendation of the Indian Labour Conference held at Naini Tal, to the effect that measures to deal with the problems of jute industry should be considered at an early date. The main items on the agenda for the meeting were: (1) closure of some jute mills, (2) rationalisation in the jute industry, (3) reduction of employment of women in the industry and revision of wage structure. The decisions of the Committee as a result of the two-day discussions are not available at the time of writing.

Speaking on the closure of jute mills, Mr. Gulzarilal Nanda said that this phenomenon was not peculiar to the jute industry, but was being encountered in various industries in different parts of India. The subject was discussed at the Naini Tal Labour Conference, as a result of which it had been decided that whether a unit was physically capable of being placed on an economic footing had to be decided by an enquiry into the circumstances of each case. If a unit was so found to be capable of being placed on an economic footing, it must be brought back to working order after removing the defects and deficiencies, through the collaboration of the Government, industry and labour. "In certain cases," Mr. Nanda said, "the load of past neglect and mismanagement will have to be removed by a process of quick liquidation." In this connection, the Minister drew attention to the suggestions made by the Textile Inquiry Committee on rehabilitation of cotton mills which had a general application to all industries.

Under the scheme of rationalisation, the quota of production of closed units was being transferred to other units under the same management or those located in the same neighbourhood, for the purpose of more economic operation. This scheme is worked in such a manner that the impact of rationalisation on the workers has been reduced to the minimum. Every possible safeguard has been taken by the industry and the West Bengal Government to ensure that not a single worker is thrown out of employment. According to a memorandum of the I.J.M.A. on this subject, the reduction in the labour complements has been mostly achieved through natural wastage, superannuation of old workers, inducement to permanent hands to retire, offer of alternative employment and absorption in leave vacancies or in the vacancies caused by natural wastage in other departments. The State Government has laid down a policy under which prior reference to the Government is necessary before any measure of rationalisation is initiated. The Government insists that not a single worker should be thrown out of employment in consequence of this process. It has also set up an *Ad Hoc* Committee for the implementation of this policy in which all the interests, Government, employers and labour, are represented.

Notwithstanding these precautions and the faithful implementation of the policy by the industry, the unions are still obstructing the progress of rationalisation. In fact, the representatives of all the labour unions, in a joint statement issued recently, opposed the programme of rationalisation and demanded its suspension, on the ground that it is leading to unemployment. Referring to this agitation, the Union Labour Minister posed two questions: (1) Was it that all these safeguards had in practice not fully satisfied the legitimate needs of the workers? and (2) was there a residual impact of the programme which had generated this discontent and which, therefore, merited study and attention? Apparently, the Union Labour Minister doubts that the programme is being carried out to the detriment of workers.

It may be pointed out, in this connection, that, in reply to the joint statement made by the labour unions which were all represented on the *Ad Hoc* Committee, the West Bengal Government recently issued a statement in which it drew pointed attention to the fact that the provision of certain facilities to those workers who were provided with alternative employment, as well as the terms of compensation to those who were unwilling to accept alternative employment, carried the unanimous consent of the *Ad Hoc* Committee. In other words, the unions had agreed to the present scheme of rationalisation. The State Government also stated that, in view of the fact that steps have been taken to ensure the policy of no retrenchment due to rationalisation, the question of suspending the scheme did not really arise. It appealed to the labour representatives on the Committee to give their co-operation, so that satisfactory arrangements for the continuance of the policy might be completed. It is thus clear that labour's opposition to rationalisation is an afterthought and is unwarranted. Alluding to this controversy, Mr. Nanda said that modernisation and rationalisation generally led to shrinkage in employment for the time being, but he agreed that there was no alternative to rationalisation and any attempt to avoid this would mean unemployment for a much larger number a little later.

Referring to the decline in number of women workers engaged in the jute industry, Mr. Nanda said that the Government had precise figures in respect of this. There was, however, some difference of opinion about the circumstances which led to this fall in employment. The real question for consideration in this context was whether any improvement could be brought about or, at any rate, ensure that women workers not at work were saved from hardships arising out of unemployment.

In reply to the demand that the wage structure of the industry should be brought under review by a wage board, Mr. Nanda said that the matter had to be considered on merits, in relation to a number of factors. Workers would have a fair remuneration. Even if it was established that the present time was not opportune for an elaborate wage enquiry, the Minister added, it would have to be undertaken sooner or later. But a revision of the wage structure was a time-consuming process. May be, there were certain directions in which the workers could be helped without waiting for recourse to such a lengthy procedure. Whatever possibilities there were should be explored on the basis of mutual goodwill. In this context, Mr. Nanda reminded all concerned of one thing. And that was the paramount need for stepping up capital formation and accelerating the rate of investment in the country for the sake of expanding employment opportunities and for a better level of living in the years to come. This would involve some sacrifices, which he wanted all concerned to share equitably. The rigour of these sacrifices would diminish if care was taken that the human and material sources available were used effectively and honestly in the national interest.

Explaining the human aspect of the employment situation, Mr. Nanda said:

"Whatever we do or decide to do at any level and in any sphere we must keep this background in view. Any immediate gain of any section, which runs counter to the overall requirements of the present situation, will recoil on everybody. With this safeguard, the most obvious aim of our efforts is that the employment in the country should expand in many directions. It should not contract in any region of industry as a whole. A single person thrown out of employment should be a matter of concern for all of us. This is the human aspect. The social and economic importance of this consideration will be realised when we find that we are beset with a very difficult unemployment problem in the country and that we are

BRITISH OVERSEAS AIRWAYS CORPORATION

THE BRITISH INDIA GENERAL INSURANCE COMPANY, LIMITED

(INCORPORATED IN INDIA)

HEAD OFFICE:—MEHTA HOUSE, APOLLO STREET, BOMBAY

Chairman: JAL H. MEHTA *General Manager:* M. S. DASTUR

RESULTS OF BRITISH OVERSEAS AIRWAYS CORPORATION

LARGE-SCALE EXPANSION CONTEMPLATED

ALTHOUGH the British Overseas Airways Corporation (B.O.A.C.) was able to record a sizable improvement in total revenue in 1957-58, the increase in expenditure which accompanied the rise in revenue had a depressing effect on the Corporation's profit. Thus, the B.O.A.C.'s total revenue increased from £49.04 million to £53.53 million and its expenditure from £46.46 million to £53.40 million, so that the profit on operations declined from £2.54 million to a mere £129.122. The loss on the operations of the associated companies (£590,748, as against £767.895) and the payment of interest on capital employed on current operations (£2.38 million, as against £1.47 million) together served to convert the net profit of £303,352 earned in 1956-57 into a loss of £2.84 million in 1957-58. It is, however, gratifying to note that the capacity produced increased by 18.6 per cent. and the cost per unit of output declined from 39.6d. in 1956-57 to 38.7d. in 1957-58.

Explaining the factors which led to the loss in the B.O.A.C.'s operations, the Chairman of the Corporation, Sir Gerard d'Erlanger, in the course of the Corporation's annual report, points out that, in addition to the consequences of the delays in delivery of the Britannias, the fall in prices of primary commodities and the North American business recession had their adverse effect. Further, thanks to the emergence of independent States in Africa, the results of the Corporation's services to Africa have been progressively affected by the diminution of British Cabotage rights, entitling the Corporation to cater to the whole of the first class and tourist traffic available for carriage between the U.K. and U.K. territories. Again, another factor which adversely affected the year's results was the permission given to the British independent companies to operate their colonial coach class services with Viscount aircraft.

Question of Capital

A feature of the B.O.A.C.'s financial arrangement with the U.K. Government is that the Corporation has to pay interest on its capital whether or not a profit is earned. In this connection, the Chairman has drawn attention to the fact that many of the B.O.A.C.'s overseas competitors "normally have a material proportion of their capital in equity form which does not attract a dividend unless profits are available." He adds: "Moreover, the B.O.A.C. has been subject to the added disadvantage whenever they have been called upon to introduce a new British type of aircraft into service. It has fallen to the Corporation since the war to eliminate the teething troubles of successive types of long-distance British transport aircraft. There is no other country in the world which expects its airlines to bear the additional expense entailed by this work of developing a new aircraft to make it fit for competitive service and for export." He, therefore, suggests that the Corporation should be afforded some form of financial assistance at least for its service to the wider national interests of the export markets, if not in satisfaction of its legitimate claim to compensation for the additional costs which it has to bear as compared with its competitors.

These handicaps, however, have not deterred the Corporation from embarking upon a policy of considerable expansion. Nevertheless, the Chairman recognises that the present time is not opportune for engaging in the more speculative forms of exploratory development. In the immediate future, expansion plans will be primarily devoted to markets with an immediate potential for expansion. Orders for the expansion and modernisation of fleet include 19 Comet 4 (1958), 15 Boeing 707 (1959) and 35 Vickers V.C. 10 (1963). The Corporation's total capital commitments, as on 31st March 1958, were £104 million. This, it is stated, is the highest rate of investment in the life of the Corporation. The Chairman claims that, with modern aircraft of this value at its disposal, the competitive strength of the Corporation will be "formidable."

Statistics published by the International Civil Aviation Organisation show that the air transport industry has been expanding at a rate of approximately 15½ per cent. per annum each year over the last six years. For a variety of reasons beyond its control, it is stated, the Corporation's own rate of growth in the same period has been somewhat slower until this year, mainly due to inadequacy of suitable aircraft and a determined effort is now to be made to remedy this state of affairs. As a first measure, the Corporation plans to introduce Comet 4 aircraft into service before the end of 1958, most probably on the North Atlantic route. Delivery of the Comet 4 to the Corporation is scheduled to begin in September and by December the aircraft should be in service. The capacity provided over the Atlantic by the Corporation's Boeing 707 fleet in its first full year of operation will be three times as great as the capacity provided by all the Corporation's aircraft on these routes in 1957-58. The B.O.A.C., as stated already, has on order 35 Vickers V.C. 10 aircraft. These aircraft are destined primarily for service on the Corporation's Eastern and African routes but developments in the design of the aircraft have given it a non-stop trans-Atlantic performance. As a result, the Corporation will be able to supplement its North Atlantic capacity with V.C. 10s as necessary, and it will enjoy the advantages that derive from the flexibility of operation provided by an aircraft capable of world-wide application.

WILLYS' NEW JEEP

The U.S. Post Office Department has purchased 90 "forward control 'Jeep' FC-170" trucks at a price of $279,993.35. Equipped with power tail gates, the trucks will be used mainly for the pick-up and delivery of mail boxes that need servicing or repainting. The boxes will be lifted on and off the truck beds by the tail gates. In addition, 62 of the trucks will have snow ploughs and will be used in northern cities for the removal of snow around post offices. The other 28 trucks will go to southern cities. All 90 trucks will have platform stake bodies and will be painted red, white and blue. Delivery will start in October. The first unit was developed and tested by the post office in Minneapolis.

The FC-170 "Jeep" truck has a gross vehicle weight of 7,000 pounds. It is powered by a six-cylinder L-head Hurricane engine, produced by Willys Motors, world's largest manufacturer of four-wheel drive vehicles.

NEW REFRACTORIES PLANT IN MADRAS STATE

The well-known engineering company, Messrs. Burn & Co., Ltd., has taken over, as from 1st August, the Indian assets of The Magnesite Syndicate Limited, Salem, a firm which has been mining crude magnesite ore and making a light calcined product for chemical industries for over 50 years. With this change, Burn & Co., Ltd., has undertaken to put up in Salem a modern refractory works manufacturing high grade refractories from magnesite, while continuing to work the existing mines and the calcining plant hitherto run there by The Magnesite Syndicate Limited. With the starting of the new plant in Salem, Burn's refractory works in West Bengal would concentrate wholly on the manufacture of silica refractories. This combined project will push up refractory production and save the country a considerable amount of foreign exchange. After the Salem plant goes into production Burn's refractory and ceramic works will be operating in the States of West Bengal, Bihar, Madhya Pradesh and Madras.

(Concluded from next column)

prices, weakening the competitive strength of the Indian product in international market. He said that the Council had often urged the Union Government for sufficient incentives to the industry to promote exports. But the Government seemed "callous" and sometimes it appeared that there was complete absence of co-ordination between different departments of the Union Government. He felt that, if the Government was serious about export promotion, it should consider an immediate reduction of steel prices by at least 40 per cent. A rebate in income-tax liability, rationalisation of shipping freights for engineering goods, concessional railway freight and facilities for quicker despatch and credit facilities at lower interest rates were among some of the incentives suggested. In the interest of expansion in exports of engineering goods, the Government, it is to be hoped, will expedite the consideration of the points raised by Mr. Kirloskar and also announce its decisions early enough so that the declining trend in exports could be reversed soon.

SHORTAGE IN STEEL

NEED FOR AID TO PROCESSING INDUSTRIES

INDIA, as is well known, has necessarily to rely on imported steel, in order to bridge the gap between its estimated output of 1.3 million tons and its demand for some 3.5 to 4 million tons. At present, the minimum requirements of steel for the "core" projects of the second Five-year Plan are being met by credits and loans from the World Bank and certain foreign countries, including the U.S. and the U.S.S.R. Nevertheless, there is an acute shortage in steel which adversely affects the working of the steel-consuming industries. In this connection, Mr. P. L. Master, President of the Steel Importers' Association of India, in the course of his speech at the annual general meeting of the Association, held recently at Calcutta, pointed out that the "unfilled gap between the increasing demand and decreasing supply of steel has resulted in the closure of some processing units and in reducing total productive capacity."

Since April 1957 there has been a complete ban on the import of prime steel. This policy, according to Mr. Master, causes great hardship to several enterprises, particularly small-scale and cottage industries. These units do not qualify for the "actual user" licences and have always depended on imported steel—a source which has "virtually dried up." Mr. Master pleaded for a reasonable import quota for the trade, so that it can cater to the needs of small-scale users of steel. As regards the policy of issuing actual users' licences, he felt that the arrangement involved a certain waste of foreign exchange. This was because individual consumers had to pay higher prices for their small requirements. If these requirements were "bulked together by the steel control authorities and imported through established importers by issuing tenders in the usual manner, there will be a saving of at least 10 per cent. in foreign exchange expenditure."

An important point made by Mr. Master was that the export possibilities for Indian steel could be easily exaggerated. Mr. Master said that "those who have been thinking in terms of export of steel are perhaps more impressed by the need to find a solution for the expected gap between the production of our steel and the offtake of steel by the processing industries than by an appreciation of the possibilities of market for our steel exports." He rightly asserted that it would be wiser to tackle the possibilities of markets for India's steel manufactures instead of trying to sell steel. This was because India would have to compete with powerful rivals in foreign markets where they had well-built trade connections. Further, not many of India's markets, such as the countries in South-East Asia and Middle East, are in a position to consume much steel.

Engineering Exports

There is considerable force in Mr. Master's contention that India will do well to concentrate on the exports of steel manufactures for which some markets have been recently built up by Indian manufacturers. India's exports include electric fans, sewing machines, diesel engines, drums, lanterns, buckets, bolts, nuts, hinges and enamelware. What is necessary is to encourage the exports of these items. From this point of view, it is somewhat deplorable that Mr. S. L. Kirloskar, Chairman of the Engineering Export Promotion Council, should have found it necessary to complain of the Union Government's "apathetic" attitude to India's engineering industry. This, according to Mr. Kirloskar, had been one of the factors responsible for the recent decline in the exports of engineering goods. Addressing a Press conference in Calcutta, Mr. Kirloskar said that exports had fallen by Rs. 28 crores during the quarter ended June 1958, compared to the corresponding period last year. If this trend continued, he said, there would be a shortfall of Rs. 100 crores in exports during the year ended March 1959.

Mr. Kirloskar enumerated several reasons for the decline in exports of engineering goods, the principal one being the fact that import restrictions had made the home market more economic to the industry than export. Among other factors were delay in the supply of raw material, particularly steel, and its prices which were stated to be "out of tune" with world

(Continued in previous column)

NEW PRODUCTS AND PROCESSES

New Light-weight Drainage Pump

A SUBMERSIBLE drainage pump weighing no more than 86 lbs. but with the same capacity as pumps twice that size is now being put on the international market by the Stockholm export firm, Svenska Motorborr. Being of very compact design and easily carried by one man, it is claimed to be a most handy tool for all kinds of construction work where water has to be coped with. It is easily applicable and allows freer space at narrow and jammed working sites. Designed and built by the Wedaverken, a subsidiary of the well-known Bofors Group specialising in light alloy equipment, the new pump is called "Weda L3." The sturdy outer housing of corrosion-resistant hydronalium alloy has a diameter of only 270 mm. and a height of 470 mm. and is provided with double handles, which makes it easy to carry and place in position. The pump is driven by a built-in 5½ h.p. three-phase motor, completely protected from water by double sealing. It is cooled by the pump water, and, when idling, by air blown through by the impeller. As an extra safeguard there is a tempswitch, which automatically protects the motor from overheating if the pump, for instance, is sunk in deep mud. This light pump has an astonishing capacity. Against a head of 5 metres it pumps out approximately 1,000 litres per minute (220 Imp. gal./min.) and against a head of 25 metres about 250 litres (55 Imp. gal./min.). For higher heads, for instance, in mines, at tunnelling jobs, etc., two or more "Wedas" can easily be coupled in series by means of a special coupling device. Moreover, the pump is said to handle mud, sand and solid particles up to 5 mm. without difficulty. The Svenska Motorborr Company, which in recent years have scored notable international success with their portable "Pionjar" motor drills and breakers and claiming to lead the world in this field, report that the entire output of "Weda" pumps has so far been rapidly absorbed by the Scandinavian market. The new product having already found a good response also among foreign contractor-equipment firms—a noted presentation was made at this year's Hanover Fair—the production is now to be considerably extended.

Synthetic Rubber Compound

Increased motor tyre tread wear and resistance to cracking has been made possible by the development of a process for producing a "homogenised" synthetic rubber compound in the United States. Additionally, claim its developers, the new compound will be of interest to makers of a wide variety of rubber goods, including soles and heels, moulded mechanical and sporting goods, industrial rolls. It is also thought to be of value to the electric wire coating industry because of low water absorption and good electrical insulating properties. The compound is said to be a blend of variety of carbon blacks "ultra-dispersed" in various general purpose butadiene-styrene synthetic rubbers. In the usual ready-made mixes of synthetic rubber and carbon black (called masterbatches), chemical emulsifying and dispersing agents are used to mix a carbon black dispersion into a rubber latex. Additional foreign material is introduced when salts are used to coagulate the two components. In the new process, masterbatches are mechanically mixed by specially designed machinery, with use of non-rubber agents kept to a minimum. The process is said to homogenise the rubber and carbon black, providing better carbon black dispersion and a stronger bond between the carbon and the rubber. Because the masterbatch contains no added dispersing agents, coagulating salts or other water soluble materials, it is said to have lower water absorption and greatly improved electrical insulating properties.

Measurement of Fumes and Dust

A new U.K. system for sampling exhaust gases from industrial plants for fumes and dust which can also be used for control purposes is now being made available commercially. The unit, which is both compact and yet flexible in layout, provides very accurate measurements with extremely rapid operation. It can be operated by a single man. The gas is sampled by means of a stainless steel probe which faces into the stream of flowing gas, the sample of gas being drawn into the probe at the same velocity and in the same direction as the flow of gas. The gas is then fed into a filter unit containing a "throw-away" filter composed of graded glass fibres. The actual filter is enclosed inside a stainless steel container which can be rapidly detached from the device and weighed in a chemical balance. Filter changing can be carried out, it is claimed, in ten seconds. At the same time, the filter pads will filter iron oxide fumes from corrosive gases at 300 degrees Centigrade at a rate of three cubic feet per minute. The device was originally developed by the British Iron and Steel Research Association.

Odourless Bleaching

Chemical compounds which are used for bleaching fabrics during dry cleaning usually have an odour that is undesirable. A new compound developed for this purpose is said, however, to be quite odourless. At the same time, experiments have shown that it can be used for the treatment of even the most delicate fabrics. The material, which is being made at present in only experimental quantities, is designed for use in either by dry bleaches or cleansers. Its bleaching action is said to be fully as efficient as that of other compounds normally used for this purpose. The compound, developed by the Electrochemicals Department of E.I. du Pont de Nemours and Co., Wilmington, Delaware, U.S. is also called "Oxone" monoperpulphate.

BULLOCK POWER TURNED INTO ELECTRIC ENERGY

DETAILS OF A UNIQUE EXPERIMENT

[A unique experiment in the production of electric energy by harnessing bullock power was demonstrated, towards the close of last month, in Khanpur, a village 18 miles from New Delhi, which the Prime Minister, Mr. Nehru, visited. The experiment was conducted by Mr. L. Stevens, an American Management Consultant, with the assistance of prominent U.S. industrial firms and technicians and the co-operation of the Government of India and the Ford Foundation. Besides the generation of electric energy by the use of bullock power, the Khanpur project includes bullock-drawn pump, power-equipped carpentry and blacksmithy shop and improved brick-making process. In view of the rich potentiality of this project for the reconstruction of India's rural regions, the following article, which describes the whole project, is of great importance.—ED.]

PRODUCTION of electricity by bullock power was proved both possible and practical in an experiment successfully culminated last month in Khanpur, a small village 18 miles outside of New Delhi. The experiment also showed a new type of pump by which bullocks can lift at least double and possibly more water than by the Persian wheel or other types of lift irrigation in common use. In the demonstration, which was given on 25th July, enough electricity was generated by bullocks operating a specially designed generator, to turn power equipment in a small modern woodworking shop set up in the experimental village, and to light houses and street lamps throughout the village.

The bullock-generated power is a result of research and experimentation initiated and conducted over the past several years by Mr. Leigh Stevens, American Management Consultant, with the assistance of prominent U.S. industrial firms and U.S. technicians working with the co-operation in India of the Indian Government. The Ford Foundation has provided supplementary financial assistance to the project. Mr. Stevens was the industry member of the International Study Team on Small Industry Development in India in 1954.

The bullock-generated power is one of the four aspects of an extensive research and demonstration project conducted for the last four months in Khanpur. Other parts of the experiment directed by Mr. Stevens and the result of similar long-term collaboration of U.S. engineering firms and specialists include:

(1) A specially designed bullock-drawn pump, which has the capacity under village conditions, to lift at least double or possibly more water than the Persian wheel, the traditional and common type of lift irrigation in use in India; and which can give domestic water-supply for a village. (2) A power-equipped carpentry and blacksmithy shop designed to increase village production, income and employment, by using power from the bullock-drawn generator. (3) An improved brick-making process which produces, from common Indian clays, bricks 2 upto 10 times as hard as those produced by traditional Indian methods at a low cost. These are suitable for paving. Vitrified floor tiles can also be produced.

Tested in the U.S.

Experimentation in India on all these projects has followed development and satisfactory preliminary testing in the U.S. and was begun at Khanpur in March of this year, when Mr. Stevens arrived in India with a team of four technicians, and with the equipment to be tested under typical Indian village conditions. Khanpur was selected by the Ministry of Community Development which has been most helpful in many of the arrangements for the project. Besides Mr. Stevens, the U.S. team includes Mr. Tracy Park, mechanical engineer; Mr. Kenneth Evans, a ceramics expert; Mr. Wilbert Hassell, a blacksmith technician from North Carolina. The team has been assisted by Indian engineers and technicians assigned by the Small Scale Industries Board and the Ministry of Community Development. A U.S. photographer, Mr. Eric Meacher, has made a continuing visual record of all stages of the work, so that training and instruction may be carried on in the future. If the pump-generator equipment proves useful in India, Mr. Stevens plans to make it available to the people of India as his contribution to the advancement of Indian village people. The pump-generator equipment has been specifically designed so that it can be reproduced at reasonable cost in India, by Indian manufacturers.

The experiment had its origin in 1953, when an International Study Team on Small Industries came to India at the request of the Ministry of Commerce and Industry and with sponsorship of The Ford Foundation. As the industry member of that team, Mr. Leigh Stevens interested himself while in India with four of the problems facing village people. These were (1) shortage of water for irrigation and for household use; (2) need for rural electrification, especially for powering small village industries; (3) need for improved techniques in small industries to raise production, income and employment; and (4) need for better quality bricks for construction of houses and roads. When Mr. Stevens returned to the U.S., he started research with his own resources to work out some solution of these problems, and received substantial voluntary help and co-operation from leading U.S. industries.

High-efficiency Bullock-drawn Pump

A high-efficiency bullock-drawn pump unit has been developed which, Indian tests show, lifts double or more water per hour than the traditional Persian wheel or "charsa" type of lift irrigation. The pump unit was designed by the Tennessee Gas Transmission Company of Houston, Texas. The experimental model used at Khanpur, was prepared by the Tennessee Company as a public service to India, in voluntary collaboration with Mr. Stevens' project. The pump unit as installed at Khanpur is in essentially three parts: (1) the pump itself, (2) a vertical drive shaft, (3) the driving mechanism. The pump itself is what is called technically, a positive displacement rotary pump, similar in principle to that used by the oil industry for transfer of petroleum products at refineries, tank farms and docks.

The unique feature of the pump apparatus is the driving mechanism which converts bullock power to high rotary speeds. The mechanism consists of two draw bars turned by bullocks walking in a circle, and thereby revolving a series of chains and sprockets. The purpose of this mechanism is to convert bullock power, moving at the draw bars at less than 2 r.p.m. (revolutions per minute), to 150 r.p.m., the desired speed for turning the pump, by means of the series of chains and sprockets. This drive principle is similar to that of a bicycle in which pedals (here the bullock-drawn bars) turn a large sprocket connected by a chain to a small sprocket in turn connected to the rear wheel. In the pump-driving mechanism, two stages of sprockets are used—the first set converting the 2 r.p.m. bullock speed to 20 r.p.m., and the second converting the 20 r.p.m. to the 150 r.p.m. desired to turn the pump attached below the vertical shaft. For the electric generator, a third further increase in speed is achieved by belts in the same driving mechanism, converting the 150 r.p.m. to 1,320 r.p.m.—the speed of the generator.

After the experimental pump unit was designed and developed by the Texas Gas Transmission Company, it was tested under field conditions in the United States. These field tests were conducted at Prairie View, Texas, with the co-operation of the Prairie View Agricultural College, one of the leading agricultural and engineering colleges for negroes in the U.S. Bullocks were found there which had been trained to walk in circles to turn a rural cane-crushing machine. The tests were successful, and it was believed that Indian bullocks could be used with equal success. In the testing in Khanpur, adjustments in the sprocket ratios have had to be made because of the varying speeds of different kinds and conditions of bullocks found in villages. The pump mechanism can be drawn by a minimum of two up to a maximum of eight bullocks. Tests are still in progress on the optimum number of bullocks desirable. It is expected that ultimately two pairs of bullocks would be found sufficient. In the United States during the test only one pair was used. Even if three pairs have to be used, it will be still worthwhile.

A bullock-driven Persian wheel or a "charsa" type lift irrigation, usually delivers 40-50 gallons per minute. The well on which the experimental pump was installed was a two-charsa well, delivering 95 gallons per minute. In experiments at this same well, the test pump has delivered 150 gallons per minute. The pump as installed has a lift capacity of 300 gallons per minute. A capacity of 300 gallons per minute is considerably above the capacity of the common village well. In the Khanpur installation, therefore, an auxiliary tank (open *kutcha* well) has been built immediately next to the well and connected with it by underground siphon piping. This tank is at least twice the capacity of the well and together with the well provides the necessary flow for the high-efficiency pump. The tank fills and empties through the well, by means of the siphon piping. The high-efficiency pump, when set over the well, is turned on when both well and tank are full. By running eight hours, for example, it can drain both tank and well and be out of use while tank and well are refilling themselves from below.

Water Supply

The pump is a positive pressure pump and is capable of lifting water to a height of at least 300 feet. While this is not necessary for traditional irrigation practices in India, it does however make it possible to pump water above the surface of the land, which the present Persian wheel or charsa ordinarily do not do. The test pump, therefore, makes possible domestic water supply systems for villages, and also water storage for irrigation where this is desirable.

For demonstration purposes in Khanpur, these two types of storage reservoirs have been constructed. One is a domestic water-supply tank built of brick above ground (at a cost of Rs. 900 excluding labour), of (U.S.) 24,000 gallons capacity. This is sufficient to supply the entire village at twice the villagers' present rate of water consumption, and the village is to be piped and fitted with water taps. The taps to be used are of a self-closing variety brought especially for the purpose from the U.S., but can be duplicated by Indian manufacture. (Because in Khanpur, the irrigation well is some distance from the village, the domestic water-supply tank will be filled from one of the village drinking water wells by means of a pump powered by the bullock-drawn generator, or a separate small model of the high-efficiency bullock-drawn pump.)

The second type of water reservoir which has been constructed, for demonstration purposes, is an irrigation reservoir next to the irrigation well itself. This reservoir has been built of brick, above ground, with 540,000 (U.S.) gallons capacity (equivalent to 20 acre-inches), using local labour and local brick. The brick cost of this reservoir is about Rs. 2,000, excluding labour. This type of irrigation reservoir is not essential, but has been built as a demonstration to show the possibility of "smoother" and more flexible irrigation. It can be filled at night, for example, so that irrigation can be done at any time without running the pump. Arrangement has been made so that as many as four farmers can draw irrigation water at the same time, with correct measurement of the amounts drawn off by each.

Electric Generator

As the pump unit was being developed in the U.S., it became clear that the same driving mechanism (of draw bars plus the chain and sprocket system) could be used to turn a power generator, if a suitable generating device could be designed. Mr. Stevens appealed for design assistance to the General Electric Company of New York, one of the largest manufacturers of electrical equipment in the United States. The Company, as a public service, assigned a top group of its engineers to design a generator suitable for the purpose. Since the speed of bullocks is highly variable, the principal problem was to design a generator capable of producing power under constant pressure as the bullock speed varied. The generator finally designed is fitted to the capacities of bullocks, and produces constant voltage even though the speed of bullocks may be uneven. The generator is turned by bullocks pulling the same draw bars as for the pump. The pump is simply switched off and the generator switched on, to divert the bullock power to producing electricity rather than lifting water. The driving mechanism which can be used for both the generator and the pump has led to a misunderstanding in a section of the Press that water performs some function in moving the generator. It is not so.

The same two series of sprockets and chain are used, with a belt added for a third stage. By this third stage, the 150 r.p.m. used to turn the pump is stepped up to 1,320 r.p.m., the average speed of the generator. The generator was, like the pump, tested at the Prairie View Agricultural College in Texas, before being brought to India. The generator is capable of delivering 4½ kw. of power, in 125 volt D.C. current. Tests are still in progress to determine the optimum number of bullocks desirable to produce enough power for village lighting and small industry. The generator, in its practical uses and significance in rural areas, may remind many people from the U.S. of the small gasoline-driven "Delco" or similar small power plant long used in farm homes in the U.S. before the advent there of widespread rural electrification. This test bullock-driven generator has the capacity to produce, however, about four times as much power as did a medium-sized "Delco" or other plant of the kind.

Potentialities

Since the cost of bringing electricity to Indian villages by present power and transmission systems is now estimated at about Rs. 60,000 per village, the implications of widespread use of a bullock-powered generator are considerable, for electrifying rural India rapidly, and at a cost low enough to be borne largely by the villagers themselves. The 4½-kw. bullock-powered generator produces sufficient power to operate a small village industry using power equipment and employing 20 to 50 workers. For demonstration purposes a power woodworking shop has been erected in Khanpur to be run by the bullock-drawn generator. It has also power to light a village of 150 houses, with one 25-watt bulb in each house, and 15 100-watt street lamps. Khanpur is being experimentally wired for this purpose. The generator does *not* supply sufficient power for all village householders to use electric household appliances, even radios, which are heavy power consumers. If owned and operated for a single family for their use alone, it would, however, provide enough power for a single household's appliances, including cooking.

Power is generated only when the generator is turned by the bullocks. It is, however, necessary to store power in storage batteries to balance out the load. Storage batteries will be installed in Khanpur for demonstration purposes. The mechanical distribution and control of the power generated by bullocks presented some special problems. At the request of Mr. Stevens, the Smith Meeker Corporation of New York, leading builders of control and switchboard equipment for atomic submarines, designed and contributed, as a public service, the simplified electric switchboard which has been installed in Khanpur. The electric distribution system throughout the village has been built according to the specifications of the Indian Central P.W.D.

The market price to the village, of the combination pump and generator unit, with its driving mechanism, is estimated to be about Rs. 25,000, when manufactured in India, and possibly as low as Rs. 15,000, if mass produced. In this connection, our Delhi correspondent writes: "I had originally worked out the cost for a single well system for irrigating 50 acres at Rs. 10,000. If the equipment is mass produced in India, the entire capital outlay (including pump, masonry and *kutcha* wells, bullocks, storage reservoir, etc.) would come to Rs. 25,000 for irrigating 100 acres for two or three crops. Mr. Stevens seems to have a plan for sponsoring a large-scale factory for manufacturing pump, generator, etc., at the cost he has estimated. I have estimated, at a conservative estimate, additional food and commercial crop production from 100 acres of hitherto dry lands at Rs. 26,000. After deducting costs of cultivation (including water rate) the value of net produce will be Rs. 8,000. Operating (including depreciation) expenses will come to Rs. 8,000 per year which can be fully covered by water rates of Rs. 50 per acre for the first crop and Rs. 25 per acre for the second and third crops."

Since the pump and generator make it possible for a village to install a village water-supply and power system, each village would have to work out through their own *panchayats* or other local bodies, how they might own, operate and charge for these public services for the benefit of the village. In charge of the installation and of the experimental research with the pump and generator is Mr. Tracy Park, Mechanical Engineer, of the Tennessee Gas Transmission Company of Houston, Texas, which is donating Mr. Park's services to this project as a contribution to India. Mr. Park, who took his mechanical engineering training at Rice Institute in Houston, Texas, and served as engineering officer in the U.S. Navy during the war, has been with the Tennessee Gas Transmission Company since 1949. He is now the Company's assistant compressor superintendent of gas transmission. The Tennessee Gas Transmission Company is one of the largest U.S. firms devoted to the transmission of natural gas from Texas throughout the eastern United States and Canada, and to the production of oil and gas and allied products.

In estimating the future implications and possibilities of bullock-powered appliances, it is interesting to note that the combined potential power of the bullock of India is probably greater than the installed public utility power now available in the U.S.A. (124 million kw.), and that it is susceptible to very rapid development by means of devices of this kind. Of course, the larger part of this bullock power will be required for ploughing and carting purposes. It is the idle surplus that has to be taken into account here.

Carpentry and Smithy Shops

To illustrate possible and valuable village uses of power generated by bullocks, a power-operated wood-working shop and smithy has been erected for experimental and demonstration purposes in Khanpur. The wood-working shop, a brick and wood structure 78 ft. by 44 ft., is designed for up to 50 workers. It contains six pieces of power-driven wood-working equipment —a metal and wood-turning lathe, a wood ripsaw, a sharper, a drill press, a handsaw and a wood joiner, plus small handpower tools, such as an electric handsaw, bench grinder, and half-inch electric drill. Although all equipment, except the lathe, was procured in the U.S. at a total cost of about $3,000, it is generally reproducible or available through Indian manufacture. With this equipment, the shop can handle virtually any wood-working operation. The shop can turn out finished wood parts of all kinds—furniture parts, assembly pieces for cart wheels, etc., to the total value of about Rs. 2,000-3,000 a day, with about 50 employees.

The construction of the shop is of special interest. It is made almost wholly of brick and wood, virtually without steel of any kind. The structure is a laminated arched truss of wood, made after a design recommended for farm buildings by the U.S. Department of Agriculture. It will stand up under winds of hurricane velocity, and affords adequate light and ventilation to the shop below. The roofing material itself is corrugated asbestos. The shop and roof was built by Indian village carpenters, under direction of the project. The cost of the building, exclusive of land, is approximately Rs. 15,000. This is known to be on the high side. The duplication cost will be much less.

Adjacent to the wood-working shop is a smithy, an open building 20 ft. by 25 ft. It is designed to do the iron work on bullock-cart wheels that will be manufactured by the wood-workers, and tool repair and general smithy work. The cost of the building, without equipment, is about Rs. 2,000. The smithy is fitted with tools—some of them 25 to 30 years old—brought from a village smithy in North Carolina: forge, anvil, steel shears, tyre upset and tyre and hand roller. There is no power equipment. In charge of the erection, equipment and operation of both the wood-working shop and the smithy is Mr. Wilbert M. Hassell, son of a master wheelwright of Rocky Mount, North Carolina. Mr. Hassell now owns and operates a plumbing and welding business in Rocky Mount. He was trained by his father, now 70 years of age, as a blacksmith and wheelwright, and maker of wooden wheels.

Improved Brick Kiln

India's shortage of both wood and steel as construction materials makes the production of high quality and vitrified bricks, for both building and paving, an important industry for India's development. Bricks made by traditional local methods are very porous and absorb water excessively, and they are also relatively soft and breakable. Mr. Stevens believed, however, that harder bricks could be made by better kilning methods.

In the U.S., Mr. Stevens, with the assistance of the President of the U.S. Steel Company, located the Metropolitan Brick Company of Ohio, to test Indian clays in their laboratories. About 300 or more pounds of clay were shipped from India to the Company in Ohio at Mr. Stevens' request, for experimental purposes. Tests with improved kilning processes showed that Indian clays can be made into very hard and far superior bricks, by using a kiln of the standard periodic down-draft type common in the U.S. and many countries throughout the world. In Khanpur, therefore, as a demonstration, a brick kiln of this periodic down-draft type has been built. All local materials and equipment have been used in the construction, with the exception of two highly accurate U.S. pyrometers needed for testing purposes. There is no power equipment. The kiln is designed to employ 25 persons, and aside from using bullocks to grind the clay, only hand operations will be used. The total duplication cost of the improved kiln is about Rs. 90,000. This is, again, known to be an overestimate which includes provision for Rs. 50,000 of working capital.

The essential feature of the improved kiln is the higher firing temperatures it makes possible, and which will produce bricks of great hardness and durability. Low grade coal is the fuel used. The kiln will produce, on completion, three important building and paving materials:

(1) Regular building bricks (face brick) of medium hardness, which have only 4 to 5 per cent. absorption as compared with the 12 to 15 per cent. absorption of common locally made brick, and which are more than three times as hard as the local brick. This improved brick can be used for home building, and since it does not absorb water, and thus prevents rains from soaking through, it would greatly lessen the interior wall-damping which occurs now in monsoon season. Also since the brick is much stronger, the walls need not be so thick. Moreover, the bricks need not be given a cement or stucco coating as must now be done with *desi* brick. This can mean lower building costs as well as a saving on cement.

(2) Paving bricks which are fired at such high temperatures that they are vitrified to a point harder than steel and have only a residual (2 per cent.) absorption. This type of vitrified paving brick was long widely used in the U.S. for paving streets and roads since it can withstand the wear of steel-tyred wheels and heavy traffic. These paving bricks can offer a valuable substitute to cement for road-building purposes in India, where cement is both scarce and costly. Since, with the proper kiln, they can be produced anywhere in India, these paving bricks could also provide a local material, produced by local labour, for building hard-surface roads throughout the country.

(3) Vitrified floor tiles. These tiles are of natural clay colour, and vitrified by high temperature firing to an even greater hardness than the paving brick. They offer a durable easily available flooring material for all-purpose construction, at a lower cost than cement. In Central and South America where such vitrified floor tiles are widely used, they have proved impervious to humidity and termite conditions similar to those in India. The highly vitrified surface does not absorb dirt.

The improved kiln is reproducible anywhere in India, using wholly Indian materials and labour. In charge of the erection and operation of the brick kiln is Mr. Kenneth E. Evans, a ceramics specialist from the U.S. Burnite Corporation of Hutchinson, Kansas, from which he is now on leave. Mr. Evans, who has spent over 30 years in ceramics work in many countries after completing training in the Missouri School of Mines and Metallurgy, lived from 1939 to 1953 in India as Chief Engineer for Bengal Potteries Ltd., Calcutta.

Experimentation on all the phases of the project will be continued throughout the next several months. Methods are being worked out whereby the desired pump and generator equipment may be manufactured in India. It is likely that American private enterprise will come into this field.

GROWTH OF GENERAL INSURANCE

EXPANSION FAILS TO KEEP PACE WITH RISE IN INDUSTRIAL PRODUCTION

THE expansion of general insurance business in India during the period 1951 to 1956 has not kept pace with the increase in industrial production, according to the *Indian Insurance Yearbook*, 1957, just published. The Controller of Insurance, Government of India, reports in this latest issue of the *Yearbook* that the volume of insurance business remained more or less the same during the periods 1951 to 1954 and that only in 1955 the rate of expansion kept pace with industrial production. But this trend was not maintained in 1956. Thus the general index number of industrial production (base: 1951=100) stood at 133.00 in 1956, whereas the index number of insurance business in India (1951=100) stood at 118.8. In 1955, the index number of insurance stood at 122.4 and that of industrial production at 122.1. The following table compares the growth of insurance business with the rise in industrial production:

Expansion of General Insurance Business

Years	Index number of insurance business	Index number of industrial production
1951	100.0	100.0
1952	104.4	103.6
1953	97.2	105.6
1954	101.6	112.9
1955	122.4	122.1
1956 (provisional)	118.8	133.0

Nevertheless, the volume of business in 1956 showed an improvement over that in 1955. The net premium income from business written in India by Indian and non-Indian insurers aggregated Rs. 15.82 crores, as against Rs. 14.40 crores in 1955. This was made up of Rs. 6.28 crores in the fire department, Rs. 3.61 crores in the marine department and Rs. 5.93 crores in the miscellaneous department. The following table gives the net premium income from business written in India:

Net Premium Income (All Insurers)

(In crores of rupees)

Class of business	In India		
	Indian insurers	Non-Indian insurers	Total
Net Premium:			
Fire—			
1955	2.77	2.85	5.62
1956	3.30	2.98	6.28
Marine—			
1955	1.47	1.93	3.40
1956	1.65	1.96	3.61
Miscellaneous—			
1955	3.34	2.04	5.38
1956	3.94	1.99	5.93
Total—			
1955	7.58	6.82	14.40
1956	8.89	6.93	15.82

The net premium income of Indian insurers from business written in India in 1956 aggregated Rs. 8.90 crores, made up of Rs. 3.30 from fire insurance, Rs. 1.65 crore from marine insurance and Rs. 3.94 crores from miscellaneous insurance. Net premium income of non-Indian insurers aggregated Rs. 6.93 crores comprising Rs. 2.98 crores in the fire department, Rs. 1.96 crore in the marine department and Rs. 1.99 crore in the miscellaneous department.

The net premium income of Indian insurers outside India was of the order of Rs. 10.35 crores of which fire, marine and miscellaneous insurance accounted for Rs. 6.14 crores, Rs. 1.90 crore and Rs. 2.32 crores, respectively. Total net premium income from business written within and outside India, therefore, aggregated Rs. 19.25 crores, of which the shares of fire, marine and miscellaneous accounts were Rs. 9.44 crores, Rs. 3.55 crores and Rs. 6.26 crores, respectively. The following table gives the net premium income of Indian insurers in 1956:

Net Premium Income (Indian Insurers)

(In crores of rupees)

	In India	Outside India	Total
Fire—			
1955	2.77	5.76	8.53
1956	3.30	6.14	9.44
Marine—			
1955	1.47	1.91	3.39
1956	1.65	1.90	3.55
Miscellaneous—			
1955	3.34	1.91	5.25
1956	3.94	2.32	6.26
Total—			
1955	7.58	9.59	17.17
1956	8.89	10.35	19.24

Income from foreign business continued to account for the major part of the net premium income of Indian insurers. Thus in 1956, net premium income from foreign business was Rs. 10.35 crores as compared with Rs. 8.90 crores from business in India, the corresponding figures for 1955 being Rs. 9.59 crores and Rs. 7.58 crores.

Gross premium income also showed improvement during the year under review. Gross premium income of both Indian and non-Indian insurers advanced from Rs. 23.09 crores in 1955 to Rs. 24.76 crores in 1956. All the three departments shared the increase. The gross premium income of Indian insurers in the three departments stood at Rs. 15.18 crores, as against Rs. 13.77 crores in 1955. An increase in gross premium income was also reported by non-Indian insurers, though to a lesser extent. Their gross premium income in 1956 was of the order of Rs. 9.58 crores, as compared with Rs. 9.32 crores in 1955.

It is interesting to note the progress of fire, marine and miscellaneous insurance during the period 1951 to 1956. The year 1951 was a good year for fire insurance business in India. Both gross and net premium income in India of Indian and non-Indian insurers, however, decreased during the years 1952 and 1953. These started rising from 1954 and the premium income of Indian insurers in 1956 exceeded the 1951 level. The proportion of gross premium written direct in India by Indian insurers to the total gross premium written direct in India has been steadily increasing from the year 1954 onwards. A similar trend is also noticeable in the case of net premium income in India. The net premium income outside India of Indian insurers has steadily increased over the six years from 1951-56. The gross premium income outside India of Indian insurers also recorded a continuous rise except for the year 1952. The net premium income outside India has been considerably more than the gross premium income outside India, the estimated ratio for the year being nearly 3 to 1. The net premium income in India, however, was only about half the gross premium income in India.

Gross and net premium income in the marine department of both Indian and non-Indian insurers touched the lowest level in 1953. Both gross and net premium incomes have increased steadily thereafter. While the net premium income in India of Indian insurers exceeded the 1951 level in 1954, the gross premium income in and outside India exceeded the 1951 level in 1954 and 1955 respectively. The premium income of non-Indian insurers in India, however, is still below their 1951 level. The proportion of the gross and net premium income from business written in India by Indian insurers to the corresponding total premium income from the business written in India also recorded a continuous increase over the six years. The net premium income outside India of Indian insurers varied between 76 and 124 per cent. of the gross premium income outside India. In India, the net premium income of Indian insurers varied between 43 and 51 per cent. of the gross premium income, while it varied between 69 and 74 per cent. for non-Indian insurers.

The trend of miscellaneous insurance has, on the whole, been progressive during the period 1951-56. As in other classes of insurance business, the share of Indian insurers in the total gross and net premium income in India has also increased during the years 1951-56. The net premium income in India of both Indian and non-Indian insurers was less than their gross premium income, the proportion being about four-fifths for Indian and nine-tenths for non-Indian insurers. The net premium income outside India of Indian insurers, however, was slightly more than their gross premium income outside India.

The claims experience of all insurers in the various departments did not show any significant change. It is, however, noteworthy that claims experience in the marine department showed a slight improvement. The claims ratio declined from 67 per cent. in 1955 to 61 per cent. in 1956. The ratio in the fire and miscellaneous departments remained virtually unchanged at 32 per cent. and 47 per cent. respectively. The U.K. insurers were able to operate on a lower claims ratio than Indian insurers, especially in the fire and marine departments. The ratio in these two departments for U.K. insurers were 22 per cent. and 41 per cent., as compared with 35 per cent. and 70 per cent. for Indian insurers.

The following table gives the claims ratio, the commission ratio and the expense ratio of general insurers in 1956, expressed as percentages of net premium income, along with those for 1955:

Claims, Commissions and Expenses

(Percentage of net premium income in 1956)*

	Claims ratio	Commission ratio	Expense ratio
Fire—			
All insurers	32 (31)	15 (16)	34 (34)
Indian insurers	35 (35)	17 (19)	29 (30)
U.K. insurers	22 (18)	8 (7)	45 (41)
Marine—			
All insurers	61 (67)	6 (7)	28 (27)
Indian insurers	70 (72)	2 (4)	27 (26)
U.K. insurers	41 (44)	13 (13)	29 (25)
Miscellaneous—			
All insurers	47 (47)	17 (16)	27 (27)
Indian insurers	49 (50)	17 (15)	26 (30)
U.K. (insurers)	42 (37)	10 (15)	32 (30)

* Figures in brackets refer to 1954.

The expense ratio of all insurers, as will be seen from the above table, also remained more or less unchanged at the 1955 level.

The total assets of the general insurance business of Indian insurers amounted to Rs. 42.44 crores on 31st December 1956, as against Rs. 41.65 crores on 31st December 1955 and Rs. 38.71 crores on 31st December 1954. Of this, 19.9 per cent. were invested in securities of the Government and other public authorities, 5.3 per cent. in foreign Government securities, 20.5 per cent. in the shares and debentures of Indian companies, and 1.9 per cent. in land and house property and the rest in other categories of investments. The following table gives the distribution of assets of Indian insurers:

Assets (Indian Insurers)

(In lakhs of rupees)

	1956		1955	
	Amount	Percentage	Amount	Percentage
Central Government securities	687	16.2	724	17.4
State Government securities	180	4.1	115	2.8
British and foreign Government securities	226	5.3	254	6.1
Municipal, Port and Improvement Trust securities	25	0.6	28	0.7
Debentures of Indian Cos.	147	3.5	150	3.6
Preference shares of Indian Cos.	202	4.7	204	4.9
Ordinary shares of Indian Cos.	521	12.3	446	10.7
Land and house property	82	1.9	74	1.8
Deposit, cash and stamps	805	19.0	670	16.1
Loans on mortgage of property	38	0.9	46	1.1
Loans on stocks and shares	14	0.3	10	0.2
Other loans	61	1.4	77	1.8
Agents' balances, outstanding premiums, amounts due from other insurers, etc.	987	23.3	10,56	25.4
Miscellaneous	319	7.5	311	7.4
Total	42,44	100	41,65	100

Total assets in India in respect of the general insurance business of non-Indian insurers amounted to Rs. 11.75 crores of which 22.6 per cent. were invested in securities of Government and public authorities, 23.4 per cent. in shares and debentures of Indian companies, 3.3 per cent. in land and house property, 19.4 per cent. in deposits, cash and stamps, 8.3 per cent. in miscellaneous assets. The balance of 23 per cent. represented such items as agents' balances and outstanding premiums.

The Controller of Insurance has expressed concern over the increasing number of defaulters in respect of the submission of accounts. The *Yearbook* records that 58 insurers (39 Indian and 19 non-Indian) did not furnish their accounts returns for the year ended 31st December 1956 within the statutory time-limit. The corresponding figures for the two preceding years were 33 (28 Indian and 5 non-Indian) insurers in respect of 1955 accounts and 29 (25 Indian and 4 non-Indian) insurers in respect of 1954 accounts.

On 31st December 1957, according to the *Yearbook*, there were 189 companies registered under the Insurance Act, 1938, for transacting one or more classes of general insurance business of which 91 were Indian and 98 non-Indian. Of these, 49 Indian and 37 non-Indian insurers were registered for all the three classes of insurance business, 13 Indian and 22 non-Indian insurers were registered for two of the three classes and the rest (29 Indian and 39 non-Indian) were registered for only one class. These figures exclude the Life Insurance Corporation of India. Of the Indian insurers, those registered in Bombay State, numbering 51, accounted for about 63 per cent. of the total premium income while about 70 per cent. of the premium income in India of the non-Indian insurers went to insurers constituted in the United Kingdom, numbering 66.

OILS AND OILSEEDS IN INDIA

MR. RAMDAS KILACHAND ON THEIR PROBLEMS

VEGETABLE oilseeds play a vital role in the economy of India, for they are largely used as fat in the diet of the people and provide raw material for many oil-based industries. What is more, they are a fairly good foreign-exchange earner. They account for nearly 5 per cent. of India's total exports. During 1955-56, India's exports of oils and seeds were of the value of Rs. 34 crores. In 1956-57, they fetched Rs. 26.8 crores of foreign exchange. In the 12 months ended March 1958, the foreign exchange earnings from this source were relatively small, being no more than Rs. 16.0 crores, a decline of 40 per cent. and 53 per cent. as compared with 1956-57 and 1955-56, respectively. This fall was largely due to the recession in world trade in general, the retention of export duties by the Government at relatively high levels in the face of a growing buyers' market, the increase in domestic consumption and the failure of domestic production to rise to the high level reached in 1954-55, though it was better than in 1955-56. In recent months, however, the Government of India has shown a better appreciation of the world markets and taken energetic measures to stimulate exports of this commodity. It is rather too early to assess the results of this action. Much will depend upon the strength of the domestic demand, the size of the new crop and the trend of world markets.

India is one of the foremost producers of oilseeds, perhaps standing third in order of preference to China and the U.S.A. It must be admitted, however, that no other country in the world produces as many varieties of oilseeds on a commercial scale as India. Nearly 8.5 per cent. of the cultivated area in the country is devoted to oilseeds. At the commencement of the first Plan, the area under the five major oilseeds was nearly 26.5 million acres and production was of the order of 5.20 million tons. Production in 1955-56 stood at 5.7 million tons, which exceeded the target of 5.5 million tons set in the first Plan. The area under this crop then was 29.8 million acres. In 1956-57, the acreage exceeded 30 million, but production was no more than 6.1 million tons.

Yield Per Acre

A distressing feature of oilseeds production in India is the failure of the yield per acre to go up in consonance with the rise in the area devoted to the crop. Pointed attention to this defect was drawn by Mr. Ramdas Kilachand, the popular President of the Bombay Oilseeds and Oils Exchange, in his speech on the occasion of the thirtieth annual meeting of the Exchange held on 31st July 1958. He observed:

"The average area under the major oilseeds for India for three years 1936 to 1939 was 21 million acres. The acreage for 1957-58 was nearly 30 million acres. This means that there has been an increase in acreage of almost 50 per cent., as, before the Partition, the acreage under major oilseeds was mostly confined to the areas covered by the present Indian Union. The average production, according to Government estimates, for three years 1936-39 was 4.8 million tons. The estimate for 1957-58 is 6 million tons, which means that the yield has not been commensurate with the increased acreage. Apart from this, according to the trade, the Government's estimates are rather optimistic. For instance, against the Government's official estimate of 4.2 million tons of groundnuts in shells for 1957-58, the trade estimate of production is not more than 3.3 million tons. All this means that there has not been any significant increase in the production of oilseeds, in spite of the increased acreage, although there has been increased production of cotton, tobacco, jute, etc., more or less according to the Plan. The Government must therefore turn its attention to finding out why there has not been any significant rise in production of oilseeds. It may be mentioned that, in the case of India, the per-acre yield for different oilseeds is 40 to 50 per cent. lower as compared with foreign countries. It is very necessary to make efforts immediately for increasing production of oilseeds by increasing per-acre yield."

In making this suggestion, Mr. Ramdas was not unaware of the steps that have already been taken by the Indian Central Oilseeds Committee in this direction. Only, he was not satisfied with the response from the State Governments to the various research schemes sponsored by the Committee. He stressed that the States should take more energetic steps for securing a higher yield of oilseeds per acre.

Mr. Ramdas felt that the target fixed in the second Plan should be raised from 7.5 million tons for the five major oilseeds—groundnuts, linseed, castorseed, sesamum, and rape and mustard—to 8.5 million tons. In the light of the country's experience so far, it is doubtful whether it will be possible to attain this target in the next two years. But, judged from the growing domestic needs for fats and oils and the urgency of exports, the target of 8.5 million tons is by no means unduly high. It could be achieved if the yield per acre were to improve. Viewed thus, the importance of bringing about an increase in the yield per acre of these vital cash-*cum*-food crops cannot be underestimated.

Shipping Problem

In the opinion of Mr. Ramdas, India should strive to export oils and oilseeds of the value of Rs. 55 to Rs. 60 crores, as against Rs. 16 crores in 1957-58 and Rs. 34 crores in 1955-56. If this big target is to be hit, it is, of course, necessary that India should produce more oilseeds. Besides, there are also other things to be done. These refer to shipping and railway freight rates and the Government's export policy. A brief reference to each of these subjects was made by Mr. Ramdas. Alluding to shipping difficulties, he observed:

"At present, Indian exporters have to rely on steamers provided by Conference Lines like the Karmahom Conference on the West Coast. These Conferences have what is known as the system of rebate. The result of this system has been that the Indian shippers have been handicapped in concluding business on quite a few occasions which business could have been put through if they were free to ship these commodities by any steamer of their choice or of the foreign buyer. The practice adopted by the Karmahom Conference of giving rebate to shippers on condition that they ship *all* their goods through their steamers has come in the way of increasing India's export trade. Export is a very competitive trade and exporters take into account for calculation of their profit, which is, indeed very small, the rebate available to them. Having shipped a part of their goods, whether oilseeds, oils and oilcakes or other cargo such as textiles, manganese ore, etc., through the Conference steamers, it becomes difficult for the shippers to go outside the Conference Lines for fear of losing rebate on all kinds of cargo which, if forfeited, results in a loss. The shippers, therefore, generally cannot take the risk of shipping goods through non-Conference steamers. This situation has created such difficulties that even where Indian exporters have entered into f.o.b. contracts and where the choice of the steamers in such contracts is always that of the foreign buyers, the Indian exporters has been penalised by the Conference Lines by forfeiting his steamers. The system of rebate does not exist on the Madras Coast for major oilseeds and oils, as the Conference has not freight rates for them. The system of quoting net freight for all cargo is very necessary for promotion of exports. I, therefore, urge the Government to use its good offices with the Shipping Conference to see that the rebate system is done away with."

The foregoing demand seems to be reasonable. It is to be hoped that the shipping companies themselves will do something in this matter, without waiting for the Government to tell them what to do. We feel that the members of the Karmahom Conference will be well advised to get in touch with the oil and oilseeds interests in order to arrive at a mutually satisfactory agreement.

On the subject of railway freight, Mr. Ramdas pleaded for a concession in rates on export consignments, as recommended by the Export Promotion Committee.

Export Policy

A stable export policy should be the objective of the Government, said Mr. Ramdas. By "stable" he meant a long-range policy which would not be subjected to frequent changes which adversely affect those who are in the trade. Explaining the advantages of such a policy, he remarked:

"If there is a long-range export policy, the present dictation on the part of the foreign buyers will disappear. India will be able to earn better prices which means larger foreign exchange receipts. It will also help in keeping the internal prices steady, since there will not be any rush to sell abroad and purchase here goods, as the merchants would be in a position to spread both these over a longer period. Another point that the Government should bear in mind is that the announcement of export policy should be timely and, as far as possible, this policy should be announced for different oilseeds, oils and oilcakes simultaneously."

The plea for a stable and well-integrated export policy is not irrelevant; nor is it unjustified. The only difficulty in the way of such a policy is the fluctuation in the size of the domestic crop, while the domestic demand for fats and oils is steadily upward. Until, therefore, production of the commodity is stepped up to a substantially high level, the Government will find it hard to reconcile the domestic requirements with export needs. Since the price of vegetable oils has an important bearing on the cost of living of the people, it is necessary to ensure that it does not shoot up to unreasonably high levels. Accordingly, the demand of Mr. Ramdas cannot be readily conceded by the powers-that-be.

Minor Oilseeds

One way of reducing the magnitude of this problem is to take such measures as would curtail the domestic demand for vegetable oils. The oil-based industries like *vanaspati*, paints, varnishes and soap, which consume the major edible oils, may be persuaded to switch on to cottonseed and other minor oils, some of which are non-edible. Stressing this point, Mr. Ramdas endorsed the step taken by the Government for setting up a committee to investigate and report on greater utilisation of cottonseed for extraction of its oil. It may be noted here that, on an average, India produces 1.6 million tons of cottonseed, capable of yielding 0.2 million tons of oil. But at present, only a small quantity of this oil is being produced. Mr. Ramdas shared the popularly held view that, if this source were fully tapped, there would be good scope for increasing the exports of highly-prized vegetable oils such as groundnut oil. He appealed to the Government to give suitable help to industrial consumers of oils by way of a rebate on excise duties and such assistance as might be necessary for collection of the minor oilseeds.

Another problem that troubles the industry, according to Mr. Ramdas, relates to sales tax. He called for the abolition of this tax on oils and oilseeds and for introducing excise duties in lieu thereof. This is a commendable suggestion, in view of the fact that oilseeds and oils account for an inter-State trade of a very large magnitude and are important items of export. Mr. Ramdas's argument is that, if this reform could be applied to cotton textiles, sugar and tobacco, why not extend it to oilseeds and oils as well.

FOREIGN TRADE OF INDIA

India had an adverse balance of trade to the extent of Rs. 18.62 crores during the month of May 1958, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts. Exports of merchandise (excluding transit trade with Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) aggregated Rs. 44.08 crores and re-exports Rs. 0.63 crore while imports amounted to Rs. 63.29 crores. Exports of currency notes accounted for Rs. 57 lakhs while those of current coins (excluding gold coins) were negligible. There was no export of gold. Imports of currency notes were of the order of Rs. 7.71 crores, gold Rs. 4 lakhs and those of current coins negligible.

During the first five months of this year India had an adverse balance of trade to the tune of Rs. 96.27 crores. Total exports during the five months amounted to Rs. 226.38 crores, re-exports to Rs. 3.49 crores and imports to Rs. 326.14 crores.

Nearly 200 small-scale industries have now been provided factory accommodation in the industrial estates in different parts of the country. Of these, 46 factory buildings are in the Guindy industrial estate in Madras, 35 each in Okhla in Delhi and Cuttack in Orissa, 34 in the Rajkot industrial estate in Bombay, 34 in the estates at Palghat and Quilon in Kerala and 15 in the industrial estate at Naini in Uttar Pradesh.

The number of industrial estates that have so far been completed is 11. Twenty-three more estates are to be completed shortly and will be ready for occupation.

SHARP RISE IN PROFIT OF BIRLA JUTE

CEMENT PLANT TO GO INTO PRODUCTION SHORTLY

REGISTERED in 1919, the Birla Jute Manufacturing Company, Ltd. (Managing Agents: Birla Brothers Private Ltd., Calcutta), had confined its activities only to manufacture of jute goods for over three and a half decades. During the last few years, however, it has extended its field to other lines of manufacture. In 1954, it set up a factory to produce calcium carbide; this factory went into actual production in November 1954. A staple fibre spinning plant was erected last year and it started production in March 1957. The latest line of activity to be added is the manufacture of cement at Satna, Madhya Pradesh. This is expected to commence production by the end of 1958. The diversion of the activities may be due to the fact that the fortunes of jute mills are uncertain, depending on many unreliable factors. The Directors must have thought it wise not to confine the Company's activities to the manufacture of jute goods alone. As it is, the main source of the Company's earnings is the jute mill section, but it can be expected that, in course of time, the staple fibre plant and the cement factory may eclipse the original activity of the Company. When that happens, the existing name of the Company may prove to be a misnomer.

Indeed, the truth of the above statement has already begun to emerge, as is evident from the accounts of the Company for the year ended 31st March 1958. The gross profit (before making adjustments for common income and expenses) has risen sharply from Rs. 22.17 lakhs to Rs. 42.15 lakhs. A breakdown of this total shows that the jute mill section accounts for Rs. 28.52 lakhs, as against Rs. 16.05 lakhs in 1956-57, and the calcium carbide factory for Rs. 7.75 lakhs, as against Rs. 6.14 lakhs. The profit of the staple fibre spinning department, which went into production early in the year under review, amounts to Rs. 6.03 lakhs, as against a negligible loss of Rs. 2,448 in 1956-57. The working of the cement department, which is yet to go into production, has suffered a small loss of Rs. 15,435.

The gross profit of all the departments, *after taking into account the common expenses and income*, aggregates Rs. 44.68 lakhs, having gone up from Rs. 27.01 lakhs earned in 1956-57. This rise has more than made good the successive fall (of Rs. 12.07 lakhs in the aggregate) noted in the previous two years. The profit for the year under review, it may be noted in passing, is the highest earned since 1952-53 when it amounted to Rs. 51.91 lakhs.

The following comparative table gives an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds of—				
Jute goods	3,87.50	3,95.13	3,88.18	3,47.66

To reserves	6.64	...	...	7.00
Dividends—				
Preference	6.59	5.35	2.07	1.31
Ordinary	9.13	9.13	9.13	9.13
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.24	2.67	4.37	8.13

The bulk of the increase in net profit has been conserved by transferring Rs. 6 lakhs to the dividend equalisation fund and Rs. 63,705 to the development rebate reserve accounts of the various departments, while no allocations were made to the reserves last year. The dividend is unchanged at 10 per cent., a level which is being maintained on the present capital for the fifth year in succession after the capitalisation of Rs. 60.84 lakhs from the general reserve in January 1954. This dividend is equivalent to 30 per cent. on the old capital, a rate which had been paid for three successive years prior to the capitalisation mentioned above.

The Directors point out in their report that, despite the difficult trading conditions during the year, the working of the jute mills department showed an improvement. They have, however, decided that, in view of the keen competition in the industry, the competitive position of the Company should be strengthened by modernising the mill machinery up to the spinning stage by installing the latest type of equipment which would also result in economy in labour. The Company has applied for the necessary loan assistance from the N.I.D.C. to finance the modernisation programme, which will cost about Rs. 80 lakhs. Orders for the new machinery will be placed as soon as the loan is sanctioned.

The calcium carbide factory worked to full capacity during the year under review. Orders have been placed for a new furnace which will raise the production capacity of this plant from 10 to 25 tons per day. The new furnace is expected to go into production by the end of 1959.

The staple fibre plant, which went into production in March 1957, worked satisfactorily during the year. The Company has decided to enter into an agreement with the Jayshree Textiles Ltd., Rishra, an associate of the Managing Agents, for the sale of staple fibre yarn to the latter, the quantity of goods so sold not exceeding 400,000 lbs. in any one financial year.

As already stated, the Company's latest venture is the manufacture of cement. Considerable progress is said to have been made in the erection of the plant at Satna. All machinery and equipment have been delivered at site and the plant is now expected, according to the Directors, to go into production by December 1958. Meanwhile, quarrying operations for the limestone have been started.

The Company's balance-sheet as on 31st March 1958 shows that the large paid-up capital amounting to Rs. 2.16 crores (of which preference shares account for Rs. 1.24 crore) is supplemented by reserves and surplus aggregating Rs. 2.26 crores. The secured loans from banks stand at Rs. 74.77 lakhs, as against *nil* a year before and unsecured loans have gone up from Rs. 4.50 lakhs to Rs. 17.98 lakhs. The Company has entered into an agreement with the Managing Agents for the supply of short-term credits, with or without security, for a period of five years from 1st March 1958, carrying interest at a rate mutually agreed upon from time to time. The amount of such borrowing as on 31st March 1958 is Rs. 10.02 lakhs (including accrued interest). The rate of interest on this borrowing is at present 6 per cent. per annum. To revert to the balance-sheet. The current liabilities and provisions aggregate Rs. 65.60 lakhs. The capital expenditure made during the year amounts to Rs. 46.40 lakhs, of which a sum of Rs. 17.70 lakhs is on jute mills, Rs. 8.85 lakhs on staple fibre spinning plants and Rs. 19.41 lakhs on cement factory. This brings the total capital expenditure up to the end of the year to Rs. 4.09 crores, on which the depreciation provided amounts to Rs. 1.67 crore. The expenditure on buildings and machinery in course of construction and erection amounts to Rs. 1.73 crore, all in respect of the cement factory. Investments (at book value) aggregate Rs. 76.85 lakhs, of which all but a small sum of Rs. 1.63 lakhs are in shares and debentures of other joint-stock companies. The other assets amount to over Rs. 1.07 crore.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 19.56 *cum-div.* On an *ex-div.* basis the yield works out to 5.4 per cent. per annum, free of income-tax.

(Concluded from next column)

of Rs. 1.55 lakh on development account, representing the expenditure on opening of 139 acres of new clearings and on maintenance of 795 acres of immature clearings. An area of 55 acres was replanted during the year, bringing the total immature replanted area to 657.99 acres or 9.28 per cent. of the planted area. The total area under mature rubber (both seedlings and budded) is 5,639.11 acres and under immature rubber 1,452.67 acres. The crop for 1958-59 is estimated at 2,010,000 lbs. at an f.o.b. cost of 123.89 cents per lb.

The Company's ordinary shares are on the forward list of the Madras Stock Exchange and are being currently quoted at Rs. 5.26 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6 per cent. per annum.

COCHIN MALABAR'S OUTPUT HIGHER

NET PROFIT, HOWEVER, FALLS

IT is common knowledge that, though the demand for rubber in India is considerably greater than production, the efforts of plantations to increase their output are not being amply rewarded by way of better earnings. This is due to the mounting cost of production, with no commensurate increase in the price realised, and the crippling tax burden. A striking example of this state of affairs is provided by the results of the Cochin Malabar Estates Ltd., under the able management of Messrs. Peirce Leslie & Co., Ltd., Calicut, for the year ended 28th February 1958. The Company's output of rubber during the year staged an impressive increase of 234,427 lbs. to a record high of 1,999,213 lbs. But, because the cost of production went up by 11.7 cents to 127.2 cents per lb., as against which the average price realised was up by no more than 6.4 cents to 181.0 cents per lb., the gross profit for the year, at Rs. 11.58 lakhs, is only a shade better than that for 1956-57 (Rs. 11.52 lakhs). In fact, this increase is negligible, being no more than Rs. 6,000.

Notwithstanding the meagre rise in profit, the Company has had to set aside a larger (incommensurate with the increase in profit) sum for taxation, the amount provided for this purpose is Rs. 5.45 lakhs, as against Rs. 3.70 lakhs in the previous year. The provision for depreciation has also been raised from Rs. 1.18 lakh to Rs. 1.48 lakh. These larger essential provisions have reduced the net profit of the Company from Rs. 5.81 lakhs to Rs. 3.78 lakhs, which is only a little more than half the net profit earned two years before. Consequent on the sharp fall in net profit, the allocation to the general reserve has been pruned by more than half from Rs. 3.50 lakhs to Rs. 1.47 lakh. The dividend on ordinary shares has been reduced from 15 per cent. to 10 per cent. per annum. The total amount distributed to these shareholders is, however, the same as in the previous year, as the size of the ordinary capital was increased last year by a third (that is, by Rs. 8.97 lakhs) through capitalisation of reserves.

The following comparative table shows the progress made by the Company in recent years:

(In rupees)

	For the year ended February			
	1958	1957	1956	1955
Sale proceeds	37,79,089	37,70,066	24,88,425	19,99,888
Closing stocks	12,97,069	5,93,259	8,61,092	2,79,060
Expenses	33,92,953	24,12,770	17,37,486	13,58,351
Gross profit	11,57,002	11,51,928	13,92,512	8,98,560
Managing Agents' remuneration	86,431	82,698	42,679	40,704
Depreciation	1,48,340	1,18,199	1,13,188	80,955
Taxation	5,45,000	3,70,000	5,20,130	2,73,423
Net profit	3,78,131	5,81,031	7,16,520	4,94,478
Refund of agricultural income-tax, etc. ...	4,170	38,112	...	...
To reserves	1,47,003	3,50,000	3,00,000	2,00,000
Dividends—				
7% preference ...	7,931	7,931	7,931	7,931
Ordinary ...	2,69,128	2,69,128	4,48,547	2,69,128
	(10%)	(15%)	(25%)	(15%)
Carry forward	29,944	71,795	79,711	1,19,669
Crop harvested (in lbs.) ...	1,999,213	1,764,786	1,853,088	1,510,886
Cost of production per lb..	Cents 127.21	Cents 116.5	Cents 92.5	As. 14.24
Average price realised per lb.	181.02	174.6	164.3	23.18

It will be noted that the Company has not benefited to the full extent from the higher production during 1957-58. Thus, while sale proceeds are only slightly higher, the closing stocks have gone up substantially. In terms of quantity, the stocks as at the close of the year amount to 736,010 lbs., as compared with 364,585 lbs. a year before. Expenses have risen by no less than Rs. 9.80 lakhs, of which purchase of latex accounts for Rs. 3.96 lakhs and salaries, wages and loans for Rs. 3.81 lakhs. It will be interesting (or rather distressing) to note that, during the last three years alone, the margin between the cost of production and the average price realised has considerably narrowed down; this is due to the fact that costs have moved faster than the selling price.

The Company's balance-sheet as on 28th February 1958 shows that, after the capitalisation of Rs. 8.97 lakhs during the year and with the addition of Rs. 1.47 lakh from the year's profit, the reserves and surplus stand at Rs. 17.30 lakhs, as against a paid-up capital of Rs. 28.05 lakhs. Loans, current liabilities and provisions (of which provision for taxation amounts to Rs. 8.46 lakhs) aggregate Rs. 25.22 lakhs. The gross block of the value of Rs. 56.38 lakhs stands written down to Rs. 49.60 lakhs. The other assets amount to Rs. 20.97 lakhs.

During the year, the Company spent a sum

(Continued in previous column)

ELPHINSTONE MILL SUFFERS A LOSS

EVEN PREFERENCE DIVIDEND HELD OVER

FOR the first time since 1941, the dividend on the 7 per cent. preference shares of the Elphinstone Spinning and Weaving Mills Company, Ltd., has fallen in arrears for the year ended 31st December 1957. This itself is sufficient to prove the unremunerative working of the Company during the year, as a result of the heavy incidence of excise duty and the increase in production costs. The dividend on ordinary shares has inevitably had to be skipped over after a lapse of three years, the previous year for which it was done being 1953. A dividend of 6 per cent. was paid for 1954 and 10 per cent. for the following two years.

The Company has suffered a loss of Rs. 8,252 on trading account, as compared with a gross profit of Rs. 12.77 lakhs for the previous year, to which level it had dwindled from Rs. 15.73 lakhs for 1955. Though the Company has had fluctuating fortunes during the last thirty-eight years of its history, this is, perhaps, the first time in recent years that it has suffered an actual loss.

A sum of Rs. 2.98 lakhs has been set aside for depreciation, as against Rs. 1.88 lakh in the previous year. Excepting for a sum of Rs. 46,614 for wealth tax in respect of 1956, no provision for income-tax and other corporate taxes has been made, while, in the previous year, the allocation for this purpose amounted to Rs. 5.50 lakhs. After these essential allocations, the Company's loss for the year comes to Rs. 3.53 lakhs, as against a net profit of Rs. 5.39 lakhs. The loss has been considerably reduced to Rs. 99,089, by writing back Rs. 1.58 lakh being excess provisions made in the previous years and adjusting the surplus of Rs. 95,787 brought in from 1956. This loss is being carried forward.

The progress of the Company during the last three years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,73.13	1,79.73	1,86.82	1,77.81
Closing stocks	76.72	55.50	45.80	63.21

* Provision for wealth tax for 1956.

Commenting on the trading conditions which prevailed during the year and the outlook for the current year, the Directors observe in their latest report as follows:

"The falling prices of cloth during the year, heavy excise duties on all varieties of mill-made cloth and increase in manufacturing charges were mainly responsible for the unsatisfactory results. Cost of cotton, stores, power and fuel went up during the year. Higher dearness allowance had to be paid to the workers on account of the consumer price index number for working class in Bombay having gone higher compared to previous years. Besides, higher interest charges had to be borne by the Company as a result of heavy accumulations of stocks caused by extremely difficult trading conditions during the year.

"A substantial portion of the steep increase in excise duties effected in September 1956 had to be borne by the Company resulting in unremunerative working and, although the Government have recently effected some adjustments and reductions in excise duties, the steps taken were rather belated, causing substantial damage to the industry in the intervening period. The changes have not had any appreciably favourable effect on the cloth trade at present and it is still to be seen how the markets would react hereafter. It is to be hoped, however, that a good crop in the current year would prove helpful in some measure to ease the stagnant conditions obtaining in the trade at present."

The paid-up capital of the Company is unchanged at Rs. 55 lakhs, which is supplemented by reserves (after adjusting the loss from the profit and loss account) amounting to Rs. 15.72 lakhs. The Company's borrowings from bank against hypothecation of stock-in-trade, stores and spares have gone up from Rs. 26.39 lakhs to Rs. 60.55 lakhs. Other loans and current liabilities and provisions aggregate Rs. 37.19 lakhs. The additions to the fixed assets made during the year amount to Rs. 12.71 lakhs, including instalment of machinery ordered by the Company for renovation and received during the year, amounting to Rs. 10.87 lakhs, most of which were put into commission during the year. The gross block of the value of Rs. 133.15 lakhs at the end of the year stands written down to Rs. 51.94 lakhs. The other assets aggregate Rs. 95.52 lakhs and do not adequately cover the liabilities and provisions.

The Directors observe that the new ring frames, dyeing plant and drawing frames received during the year or since the close of the year have all been put into production and they hope that these additions will enable the Company to show improved results in future.

Points From The Chair

Expansion of Shipping

"IN a country with its own and adjacent coastline of nearly 4,000 miles, the merchant navy has an important role to play in times of emergency and it is not merely a question of tonnage but trained personnel. Difficulties of foreign exchange are perhaps sought to be covered by broadening the definition of an Indian ship. I am afraid this is really asking for trouble both in times of peace and war, and in the result we shall *probably lose more than we gain. If there is short*age of funds at the moment, this is not the way to cover it. Better go slow and build firm than move fast and repent at leisure. It is not as though Indian shipowners are allergic to suggestions of expansion. They have shown themselves ready and willing to do their best within the limits of their opportunities and resources. If Government want them to cover by forced marches the neglect of centuries, it is for the Government to find ways and means to stimulate and sustain them. I am free to confess that Government have done much, and in the matter of depreciation allowances and exemption from particular taxes, shown themselves alive to their responsibilities; but I maintain that they can do much more. It is not as though we are suggesting something Governments in other countries have hesitated to do either."

C. R. SRINIVASAN,
The Bharat Line Limited

Employee Shareholders

"In the first place, in a modern industrial concern, there should no longer be the traditional opposition of capital and labour. In Germany, the majority of investors are, after all, people who work themselves at some stage of the production process. In other words, what we want to do is to promote mutual understanding and a common interest among those groupings on which our undertaking rests: shareholders, employees and management. Secondly, we want to give our employees a further opportunity of sharing in the profits of our Company. An idea, in other words, which is similar to that underlying the bonus on results introduced with your approval in 1949. We want to make all our employees more strongly aware, as far as possible, that the principal efficiency index for a company is the profit it makes, and that the funds used for investment purposes and the accumulation of reserves do not only benefit the shareholders but also the whole of the company's labour force by strengthening the security of employment. It is now true that you, as shareholders, no longer face in our employees, as you used to, an adversary opposed to dividend distribution, but a mighty partner who shares your justified expectations."

DR. ING. E.h H. REUTER,
Demag AG., Duisburg

Sheet Glass Industry

"The industry has been all along urging upon the Government and the railway authorities for recognition of its special problems and position in Indian economy and for charging far more realistic rates which it can bear such as special station-to-station rates, and for the grant of an appropriate priority in the allocation of wagons, a rebate of customs duty on imported soda ash, and some other concessions. Unfortunately, although the Railway Freight Structure Committee has recently recommended some minor reliefs, they have provided no immediate and effective solution for the major transport problems of the industry. On the contrary, as the Committee has recommended a general increase in freight rates, costs both on account of raw materials and marketing of finished products are calculated to go up not only for this industry but for all industries. Furthermore, labour and material costs have been rising continually. These problems, in one form or other, are common to all manufacturing industries in India and unless these are properly tackled, a rise in prices will be inevitable to the prejudice of the industry attaining the optimum efficiency. One important way of putting the industry on a rational and a more stable basis is to diversify its production. This is engaging the constant attention of your Directors and your factory has indeed opened a new chapter in the history of sheet glass production in this country by manufacturing sheet glass of both extra thin (10 to 12 oz.) and extra thick (3/16" and 3/72") varieties. Recently it has also started production of obscured glass. Although the market for these varieties is still limited, the outlook is promising."

DR. N. N. LAW,
Hindusthan-Pilington Glass Works Ltd.

COMPANY MEETINGS AND DIVIDENDS

BADRA COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 16th August 1958. Dividend: 17½ per cent. Transfer books will remain closed from 11th to 16th August 1958, both days inclusive.

KADUR COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 16th August 1958. Dividend: 7½ per cent. Transfer books will remain closed from 11th to 16th August 1958, both days inclusive.

CAUVERY SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Madras, 19th August 1958. Dividend: 9 per cent. or Re. 0.90 per share. Transfer books remain closed from 4th to 19th August 1958, both days inclusive.

BENGAL PAPER MILLS LTD. Annual General Meeting, Calcutta, 20th August 1958. Dividend: Rs. 3.12 per share (includes interim dividend of Re. 1.50 per share). Transfer books remain closed from 6th to 20th August 1958, both days inclusive.

POLYCHEM LTD. Annual General Meeting, Bombay, 20th August 1958. Dividend: *Nil*. Transfer books remain closed from 29th July to 20th August 1958, both days inclusive.

CHAMONG TEA CO., LTD. Annual General Meeting, Calcutta, 21st August 1958. Dividend: *Nil*. Transfer books will remain closed from 18th to 21st August 1958, both days inclusive.

SOOM TEA CO., LTD. Annual General Meeting, Calcutta, 21st August 1958. Dividend: Rs. 3.50 per share. Transfer books will remain closed from 12th to 21st August 1958, both days inclusive.

CLEVEDON TEA CO., LTD. Annual General Meeting, Calcutta, 22nd August 1958. Dividend: 10 per cent. Transfer books will remain closed from 16th to 22nd August 1958, both days inclusive.

RUNGAMATTEE TEA CO., LTD. Annual General Meeting, Calcutta, 22nd August 1958. Dividend: 7½ per cent. or Rs. 3.75 per share. Transfer books will remain closed from 12th to 22nd August 1958, both days inclusive.

DUNCAN BROTHERS & CO., LTD. Annual General Meeting, Calcutta, 22nd August 1958. Dividend: Rs. 11.00 per share. Transfer books will remain closed from 14th to 22nd August 1958, both days inclusive.

TEEN ALI TEA CO., LTD. Annual General Meeting, Calcutta, 22nd August 1958. Transfer books will remain closed from 15th to 22nd August 1958, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 25th August 1958. Transfer books will remain closed from 18th to 25th August 1958, both days inclusive.

ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 30th August 1958. Dividend: *Nil*. Transfer books will remain closed from 21st to 30th August 1958, both days inclusive.

KIRLAMPUDI SUGAR MILLS LTD. Annual General Meeting, Pithapuram (East Godavari District), 30th August 1958. Dividend: *Nil*. Transfer books will remain closed from 18th August to 1st September 1958, both days inclusive.

DHUNSERI TEA CO., LTD. Annual General Meeting, Calcutta, 1st September 1958. Dividend: 20 per cent. or Rs. 2.00 per share. Transfer books will remain closed from 21st August to 1st September 1958, both days inclusive.

CHEMBRA PEAK ESTATES LTD. Dividend of 10 per cent. for the year ended 31st March 1958. Transfer books will remain closed from 18th to 30th August 1958, both days inclusive.

SRI VENKATESA MILLS LTD. Dividend of 20 per cent. or Rs. 10.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 12th to 28th August 1958, both days inclusive.

HAILEYBURIA TEA ESTATES LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1957. Transfer books will remain closed from 25th August to 7th September 1958, both days inclusive.

TWYFORD TEA CO., LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1957. Transfer books will remain closed from 25th August to 7th September 1958, both days inclusive.

VIJAYALAKSHMI MILLS LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st December 1957. Transfer books will remain closed from 13th to 27th August 1958, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Interim dividend of 4 per cent. on ordinary shares for the year ending 31st December 1958. Transfer books will remain closed from 13th to 30th August 1958, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Interim dividend of 5 per cent. on the ordinary shares, for the year ending 30th September 1958. Transfer books will remain closed from 16th to 30th August 1958, both days inclusive.

PERIAKARAMALAI TEA AND PRODUCE CO., LTD. Dividend of 10 per cent. for the year ended 31st March 1958. Transfer books will remain closed from 2nd to 13th September 1958, both days inclusive.

COONOOR TEA ESTATES CO., LTD. Interim dividend of 10 per cent. or Re. 1.00 per share, for the year ending 30th September 1958. Transfer books will remain closed from 19th to 25th August 1958, both days inclusive.

BALLY JUTE RAISES DIVIDEND

ENGO TEA SUFFERS LOSS

Bally Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1958.

The accounts show a profit of Rs. 13,23,681 (Rs. 3,36,232) including the balance of Rs. 66,674 (Rs. 65,302) brought forward from the previous year. After providing Rs. 1,17,743 (Rs. 93,544) for depreciation and Rs. 6,75,000 (*nil*) for taxation for the year and after transferring Rs. 1,50,000 (*nil*) to the general reserve account and Rs. 2,715 (*nil*) to the development rebate reserve account, there remains an available balance of Rs. 3,78,223 (Rs. 2,46,674 including forfeited dividends of Rs. 3,986) which the directors recommend should be dealt with in the following manner:—

In paying a dividend on 20,000 cumulative preference shares at 7 per cent. per annum free of income-tax for the year absorbing Rs. 1,40,000 (Rs. 1,40,000), in paying a dividend on 20,000 ordinary shares at Rs. 6 (Rs. 2) per share [6 per cent. per annum] free of income-tax for the year absorbing Rs. 1,20,000 (Rs. 40,000) and in carrying forward the balance of Rs. 1,18,223 (Rs. 66,674).

The directors are glad to report that, in spite of trading conditions remaining difficult during the year, the working results show some improvement over the previous year, which has made it possible for them to recommend a higher dividend on the ordinary shares. The working results for the current year should show still better results provided the present favourable trading conditions continue.

The directors have also decided that, in view of the keen competition in the jute industry, the competitive position of the Company should be further strengthened by modernising the mill machinery upto the spinning stage by installing the latest type of equipments, which would also result in economy in labour. The Government of India are assisting the Jute industry in modernising the mills by granting loans through the National Industrial Development Corporation Private Ltd. This company has also, therefore, applied to the N.I.D.C. for the necessary loan assistance. Orders for the new machinery will be placed as soon as this loan is sanctioned. The total amount that will be required to complete the modernisation scheme is about Rs. 55 lakhs.

Relations with labour remain cordial and satisfactory during the year. The mill was nominated by the Government of India as one of the units in the Jute industry, where experiment of the scheme of "Participation of Labour in Management" should be carried out and the directors are glad to report that a beginning with this scheme has been made with satisfactory results so far.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Liabilities ...	16,19,791	Debts, deposits and advances ...	8,07,989
Profit and loss account ...	1,18,223	Investments ...	5,79,038
		Cash ...	43,494
Rs.	88,52,624	Rs.	88,52,624

Nilambur Rubber Co., Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Kozhikode) present the audited accounts of the Company for the year ended 31st December 1957.

The Company's working for the year under review, after providing for depreciation, Company's contribution to provident fund, and debenture interest and income-tax thereon, resulted in a profit of Rs. 72,666 (Rs. 82,661) to which is added the balance brought forward from last year of Rs. 4,271 (Rs. 5,110) making a total of Rs. 76,937 (Rs. 87,771). Provision for taxation absorbs Rs. 16,000 (Rs. 20,000), transfer to debenture redemption reserve Rs. 15,000 (Rs. 15,000) and leasehold redemption reserve Rs. 1,500 (Rs. 1,500) leaving a balance of Rs. 44,437 (Rs. 46,271 after transferring Rs. 5,000 to reserve for bad and doubtful debts. The directors recommend the following appropriations:—6 per cent. tax-free dividend on preference shares absorbing Rs. 12,000 (Rs. 12,000) and 15 (15) per cent. tax-free dividend on ordinary shares absorbing Rs. 30,000 (Rs. 30,000) leaving a balance of Rs. 2,437 (Rs. 4,271) to be carried forward to the next year.

Crop.—The crop harvested from Nilambur estate was 1,09,744 pounds and from Glencoorg estate was 92,000 pounds. The cost of production was 85.12 cents per pound; for Nilambur estate and 65.47 cents per pound; for Glencoorg estate.

Working.—The rise in labour wages as mentioned in the previous report and consequent increase in the cost of production have adversely affected the profit position of the Company, though the crop harvested during the year under report has exceeded the previous year's figure by 17,034 lbs. There has also been considerable labour trouble in Glencoorg Estate during April 1957; but despite these disconcerting factors, the directors feel that the working results have been maintained at a satisfactory level.

The unsold stock of rubber shown in the accounts as on 31st December 1957 except some scrap, has been valued at the prices since realised. The average sale price of rubber realised for 1957 works out to 151 cents per lb. including excise duty.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	8,29,542
Debentures ...	1,00,000	Stock-in-trade ...	96,634
Reserves ...	3,06,590	Stores and loose tools, ...	13,028
Provision for taxation ...	30,230	Debts, deposits and advances ...	40,237
Liabilities ...	1,53,170	Investments ...	100
Profit and loss account ...	2,437	Cash ...	12,796
Rs.	9,92,327	Rs.	9,92,337

Engo Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the ended 31st December 1957.

The accounts show a loss, after charging all expenses of Rs. 37,721 (Rs. 13,173) to which has to be added the debit balance brought forward from last year of Rs. 30,748 (Rs. 18,522) making a total of Rs. 68,469 (Rs. 31,700). Excess tax provisions in previous years amounting to Rs. 5,000 (*nil*) have been transferred to the credit of profit and loss account leaving a debit balance to be carried forward of Rs. 63,469 (Rs. 31,700).

The general drop in the level of prices obtained for teas in 1957 accounted in the main for the disappointing results. The West Bengal Entry Tax was again a contributory factor costing the Company Rs. 14,774, whilst the extension of the Employees Provident Fund Act to cover all tea garden workers resulted in an additional cost of Rs. 6,421.

A crop of 2,944 maunds was secured and sold at an average price of Re. 1.67 per lb. This compares with a crop of 2,454 maunds manufactured in season 1956 which sold at an average price of Re. 1.96 per lb.

Estimates for the current season have been framed for a crop of 3,250 maunds to cost Rs. 5,06,898 and it is considered likely that a crop in the region of the estimated amount will be obtained provided normal conditions prevail.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,20,000	Block ...	1,87,961
Reserves* ...	2,00,531	Stock of tea	1,74,895
Provision for taxation ...	19,044	Stores and loose tools etc. ...	66,313
Liabilities ...	1,88,899	Debts, deposits and advances ...	62,598
		Investments	2,001
		Cash ...	34,706
Rs.	5,28,474	Rs.	5,28,474

*Reserves are shown after deducting the debit balance of Rs. 63,469 in the profit and loss account.

Walford Transport Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ending 31st December 1957.

After writing off Rs. 64,134 (Rs. 74,808) for depreciation and setting aside Rs. 5,17,650 (Rs. 5,04,000) for taxes, the available profit for the year is Rs. 4,28,336 (Rs. 4,09,749) including Rs. 1,66,813 (Rs. 1,34,493) brought forward from the last account. It is recommended that this sum be dealt with as follows:—

Payment of a dividend of 12 (12) per cent. per annum, free of income-tax, on 2,10,200 preferred ordinary shares, absorbing Rs. 25,224 (Rs. 25,224), payment of a dividend of 14 (14) per cent. per annum, free of income tax, on 8,40,800 ordinary shares, absorbing Rs. 1,17,712 (Rs. 1,17,712), transfer to contingency reserve of Rs. 1,50,000 (Rs. 1,00,000), [thereby bringing it to Rs. 9,50,000] and carry forward Rs. 1,35,400 (Rs. 1,66,813).

The total turnover for 1957 reached a new record level at Rs. 2.22 crores compared to Rs. 2.08 crores in 1956, or an increase of 7 per cent. and 1.27 crores in 1955 or an increase of 75 per cent. inspite of which the profit increase was not proportionate, mainly due to reduction in dealer margin by manufacturers on Government directive enforced in February last year (as already reported), coupled with competition which existed on certain lines. The reduction in margin was as much as 42 per cent. in the case of private cars and 57 per cent. on commercial vehicles. The Company is subjected to all the types of taxes under the Statute and the tax burden is heaviest and takes away more than 67 per cent. of current earnings, thus restricting the scope of dividend and provision for expansion programme.

The Company had Jeep franchise for West Bengal, Assam and Orissa. Effective 1st of February, 1958, Messrs. Mahindra & Mahindra Ltd. have made other arrangements for Jeep distribution in Orissa. This was anticipated for some time. This territory is, therefore, lost to the Company. The activities are thus now confined to West Bengal and Assam only. In order to strengthen and develop the present operating territories, it was decided to open two additional Branches. These would start functioning shortly and would call for extra capital investment, stocks, etc.

The ratio of paid up capital to turnover in 1957, was less than 5 per cent. It was possible to handle this large volume to earn a reasonable quantum of profit only by utilising the reserves built up in previous years, supplemented by substantial bank overdraft. As in previous years, it has been found necessary to further strengthen the reserve. Allocations have accordingly been made with the above objective in view.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,51,000	Block ...	4,18,202
Reserves ...	21,67,472	Stock-in-trade	33,87,492

Liabilities ...	19,13,191	Work-in-progress ...	60,194
Profit and loss account ...	1,35,400	Goods-in-transit ...	41,940
		Debts, deposits and advances ...	18,85,023
		Investments	46,250
		Cash ...	1,28,590
Rs.	59,90,974	Rs.	59,90,974

Investa Machine Tools and Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Investa Industrial Corporation Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December, 1957.

The working of the Company for the year under review showed an improvement over the previous year. After providing for depreciation of Rs. 1,10,109, there is a net profit of Rs. 1,634. Deducting this sum from the accumulated losses of the previous years amounting to Rs. 7,95,915, a loss of Rs. 7,94,281 is carried forward. Sales and production during the year were higher than during the previous year, being Rs. 16.08 and Rs. 15.76 lakhs respectively, as compared to Rs. 13.29 and Rs. 12.94 lakhs respectively during the previous year.

In view of the difficult financial position of the Company, The Investment Corporation of India Ltd., have agreed to make the loan advanced by them to the Company free of interest with effect from the 1st January, 1957.

Machine Tools: The production and sales of machine tools during the year were better than during the previous year. 147 machines valued at Rs. 12.70 lakhs were delivered, which compares with 129 machines of the value of Rs. 8.94 lakhs delivered during the previous year. The value of machine tools produced during the year showed an increase of 45 per cent. over that of the previous year. Steady progress was maintained on the development of three sizes of radial and column drilling machines despite a number of difficulties, particularly the supply of special steels.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	21,29,896
Provision for taxation ...	420	Stock-in-trade	4,89,731
Liabilities ...	27,33,349	Stores and loose tools	9,54,312
		Work-in-progress ...	5,51,126
		Debts, deposits and advances ...	3,05,142
		Investments	486
		Cash ...	8,795
		Profit and loss account ...	7,94,281
Rs.	52,33,769	Rs.	52,33,769

Poobong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1957.

The accounts disclose a loss of Rs. 1,85,120 (Rs. 1,47,845). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 96,181 (*nil*) from depreciation reserve, Rs. 55,000 (Rs. 1,10,000) from revenue reserve and Rs. 23,386 (*nil*) from buildings and machinery reserve, there is a balance at credit of the profit and loss account amounting to Rs. 3,694 (Rs. 759) which it is proposed to carry forward. Depredation by pests and blights allied to unfavourable weather conditions resulted in a low crop; this main factor, combined with continued high labour costs, higher prices of foodstuffs sold to labour at concessionary rates and increased expenditure on measures to combat pests and blights caused the unfavourable result on the season's working.

Crop was 1,13,533 lbs. as compared with 1,55,846 lbs. in 1956. The average selling price realised was Rs. 2.86 per lb. as against Rs. 2.35 per lb. in the previous year. Planted area remains at 500.43 acres.

Estimates for 1958 provide for a crop of 1,76,000 lbs. at an outlay of Rs. 5,62,874, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,91,264
Reserves ...	95,000	Stock-in-trade	48,290
Provision for taxation ...	9,823	Stores and supplies ...	55,900
Liabilities ...	1,14,460	Debts, deposits and advances ...	25,622
Profit and loss account ...	3,694	Cash ...	1,901

Notices

NATIONAL MACHINERY MANUFACTURERS LIMITED

Post Box No. 3, Kalwe, Thana

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Tenth Annual General Meeting of National Machinery Manufacturers Limited will be held at the Registered Office of the Company, Kalwe, Thana, on 27th August 1958, at 11.00 a.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December 1957.
2. To elect a Director in place of Mr. J. A. Andrew who retires by rotation but who, being eligible, offers himself for re-election.
3. To elect a Director in place of Mr. Krishnaraj M. D. Thackersey, who retires by rotation but who, being eligible, offers himself for re-election.
4. To elect a Director in place of Mr. Kasturbhai Lalbhai, who retires by rotation but who, being eligible, offers himself for re-election.
5. To elect a Director in place of Mr. Navnitlal Shodhan who ceases to hold office under Article 134 of the Articles of Association and who, being eligible, offers himself for re-election.
6. To elect a Director in place of Lala Bharat Ram who ceases to hold office under Article 134 of the Articles of Association and who, being eligible, offers himself for re-election.
7. To consider and, if thought fit, to pass the following Resolution:

"RESOLVED THAT pursuant to the provisions of Section 294 of the Companies Act, 1956, the Company hereby approves of the appointment of Messrs. Surendrakumar & Co. (Private) Ltd. as the Sole Selling Agents of the Company for sale of Spare Parts and Conversion Materials for Spinning Machinery produced or supplied by the Company in the territories comprised of Greater Bombay (excluding the group of Mills controlled by Messrs. Nowrosjee Wadia and Sons Private Ltd.) and the districts of (1) Thana, (2) Aurangabad, (3) Bhir, (4) East Khandesh, (5) Nanded, (6) Osmanabad, (7) Parbani, (8) Dangs, (9) Kolaba, (10) Nasik, (11) Ratnagiri, (12) West Khandesh, (13) Akola, (14) Amravati, (15) Bhandara, (16) Buldana, (17) Chanda, (18) Nagpur, (19) Wardha, (20) Yeotmal, (21) Ahmednagar, (22) Kolhapur, (23) Poona, (24) Satara North, (25) Satara South, (26) Sholapur, (27) Belgaum, (28) Dharwar, (29) Bijapur, (30) North Kanara, (31) Gulbarga, (32) Raichur, (33) Warangal and (34) Hyderabad, for a period of five years from 1st April 1958, to 31st March 1963, upon the terms and conditions recorded in the Letter of Appointment dated the 9th day of July 1958, addressed by the Company to the said Agents."

8. To consider and, if thought fit, to pass the following Resolution:

"RESOLVED THAT pursuant to the provisions of Section 294 of the Companies Act, 1956, the Company hereby approves of the appointment of Messrs. Nachmo Company as the Sole Selling Agents of the Company for Spare Parts and Conversion Materials for Spinning Machinery produced or supplied by the Company in the territories comprised of the States of Rajasthan and Madhya Pradesh and the districts of (1) Ahmedabad, (2) Banaskantha, (3) Baroda, (4) Broach, (5) Kaira, (6) Mehsana, (7) Panch Mahals, (8) Sabarkantha, (9) Amreli, (10) Gohilwad, (11) Halar, (12) Kutch, (13) Madhya Saurashtra, (14) Sorath, (15) Zalawad and (16) Surat, for a period of five years, from 1st April 1958, to 31st March 1963, upon the terms and conditions recorded in the Letter of Appointment dated the 9th day of July 1958, addressed by the Company to the said Agents."

9. To consider and, if thought fit, to pass the following Resolution:

"RESOLVED THAT pursuant to the provisions of Section 294 of the Companies Act, 1956, the Company hereby approves of the appointment of The Sizing Materials Company, Ltd., as the Sole Selling Agents of the Company for sale of Spare Parts and Conversion Materials for Spinning Machinery produced or supplied by the Company in the territories comprised of the States of Madras (except the group of Mills managed by A. & F. Harvey Ltd.), Kerala, the Punjab and Uttar Pradesh and the districts of (1) Bangalore, (2) Mysore, (3) Bellary, (4) Kurnool, (5) Anantapur, (6) Guntur, (7) East Godavari and (8) Chittoor, for a period of five years from 1st April 1958, to 31st March 1963, upon the terms and conditions recorded in the Letter of Appointment dated the 9th day of July 1958, addressed by the Company to the said Agents."

10. To appoint Auditors for the current year and fix their remuneration.

By Order of the Board,

For NATIONAL MACHINERY MANUFACTURERS LTD.

J. C. MORTON,
Managing Director.

THANA, *9th July* 1958.

Note: (*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Transfer Books of the Company will be closed from 11th August 1958, to 26th August 1958, both days inclusive.

(*c*) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 7, 8 and 9 set out above are annexed hereto.

EXPLANATORY STATEMENT

As required by Section 173 of the Companies Act, 1956, the following material facts relating to the items Nos. 7, 8 and 9 mentioned in the accompanying Notice are set out.

As you are aware, Indian Textile Engineers (Private) Ltd. have been appointed the Sole Selling Agents for the whole of India of all the Company's products for a period of five years with effect from the 1st January 1957, and their appointment was approved by the Company at its Extraordinary General Meeting held on the 28th of June 1957. The said Sole Selling Agents had in their turn appointed the three concerns mentioned in the said items Nos. 7, 8 and 9 as their sub-agents for sale of only Spare Parts and Conversion Materials for spinning machinery in certain territories assigned to them respectively. The Company requested the said Sole Selling Agents to relinquish their right as Sole Selling Agents in respect of sales of Spare Parts and Conversion Materials produced and/or supplied by the Company, and to allow the Company to appoint the said three sub-agents as the direct Sole Selling Agents of the Company for the said respective territories in respect of the said products of the Company. The said Sole Selling Agents have been good enough to concede the above request of the Company and to relinquish their Sole Selling Agency in the said territories in respect of the Spare Parts and Conversion Materials with effect from the 1st January 1958.

Your Board have accordingly appointed the said three concerns as Sole Selling Agents for sale of Spare Parts and Conversion Materials for the respective territories assigned to them for a period of five years commencing from the 1st of April 1958. The terms and conditions on which these appointments have been made are recorded in three separate letters all dated the 9th day of July 1958, addressed by the Company to the said three concerns. The material terms of their appointment are as under:

1. The said three concerns shall not sell or otherwise deal in any of the Spare Parts or Conversion Materials produced and/or supplied by any other concern.

2. They will sell the above products only at prices listed by the Company and on terms and conditions laid down by the Company from time to time.

3. The Company shall pay to The Sizing Materials Company Ltd., and Messrs. Surendrakumar & Co. (Private) Ltd., a commission of 5½ per cent. and to the Nachmo Company, 5½ per cent., of the invoiced value f.o.r. Thana, in respect of orders placed by the customers in the respective territories confined to them.

Copies of the above letters of appointment may be inspected at the Registered Office of the Company between the hours of 11 a.m. and 1-30 p.m. on any working day.

By Order of the Board,
For NATIONAL MACHINERY MANUFACTURERS LTD.,
J. C. MORTON,
Managing Director.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Mettur Dam R.S.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, at Mettur Dam R.S. on Saturday the 30th August 1958, at 4 p.m., to transact the usual business and special business as per notice individually posted to members.

The Register of Members and Transfer Books of the Company will be closed from 20th August to 30th August 1958, both days inclusive.

The Directors have recommended payment of a final dividend of 3 per cent. tax-free on Preference Shares and 5 per cent. tax-free on Ordinary Shares making a total dividend of 6 per cent. tax-free and 8⅓ per cent. tax-free for the year ended 31st March 1958.

KANPUR, *31st July* 1958.

Notices

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS held on the 6th August 1958, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 25th September 1958, the payment of a final dividend for the year ended 31st March 1958, of 3% (free of Income Tax) on the issued Ordinary shares, payable on the 27th September 1958.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,32,12,486.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1958, were paid on the 28th September 1957 and the 8th April 1958 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 2,64,566 to Capital Reserves, Rs. 3,03,239 to Development Rebate Reserve, Rs. 20,00,000 to Fixed Asset and Stock Replacement Reserve and Rs. 1,32,282 to General Reserve, the amount carried forward will be Rs. 24,04,558.

The Directors also declared a first interim dividend of 2% (free of Income Tax) in respect of the year to 31st March 1959, payable on the 27th September 1958.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 25th September 1958 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 27th September 1958. The share transfer books of the Company will be closed from the 8th September to the 25th September 1958, both days inclusive, and transfers received in order at the registered office of the Company up to the 6th September 1958 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,

J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA, *7th August* 1958.

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd., will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, at 4 p.m. on Monday the 15th September 1958, to transact the following business:—

(1) To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st December 1957.

(2) To declare Dividend recommended by the Directors.

(3) (*a*) To appoint a Director in place of Mr. K. P. Goenka, who retires by rotation and being eligible offers himself for re-election.

(*b*) To appoint a Director in place of Rai Bahadur Moongtulal Tapuriah, who retires by rotation and having attained the age of 71 years, is not eligible for re-election, unless his appointment is approved by a resolution of the Company in General meeting specifically declaring that the age limit shall not apply to him.

In this connection, to consider and if thought fit to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed separately as required by Section 173 of the said Act.

To be proposed as an Ordinary Resolution.

"That the restrictions as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Rai Bahadur Moongtulal Tapuriah who has attained the age of 71 years and that he be and is hereby re-elected as a Director of the Company whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

(4) To appoint Auditors and fix their remuneration.

(5) To transact any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 6th September to 15th September 1958, both days inclusive.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries and Treasurers.

CALCUTTA, 31*st July* 1958.

Note:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The dividends if declared will be paid on or after 1st October 1958, to those shareholders whose names appear on the Company's Books on 15th September 1958 or to their mandatees. No application for dividend warrants will be necessary.

Explanatory Statement Under Section 173

In the special notice given to the Company of the resolution under Item No. 3(b) of the above notice it has been stated that the services of Rai Bahadur Moongtulal Tapuriah have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company being associated with it since the inception, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries and Treasurers.

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Ordinary General Meeting of the Shareholders of Sri Krishnarajendra Mills, Ltd., will be held at the Registered Office of the Company, Bangalore Road, Mysore, on Saturday the 30th August 1958, at 3.30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts of the Company for the year ended 31st March 1958.
2. To declare a Dividend.
3. To elect Directors:—

   (*i*) To appoint a Director in place of Dharmaprakasha Sri L. S. Venkaji Rao who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

   (ii) To appoint a Director in place of Sri K. Subba Rao Ramaswamy, M.Sc., who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

   (iii) To appoint a Director in place of Sri D. B. Viswambhariah who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.
4. To appoint Auditors for the current year and fix their remuneration.

Messrs. C. S. Ramiah, C. S. Venkatamuniah Setty, Bangalore-2, have given notice of the following resolution to be moved in the Annual General Meeting of the Company:—

"That Messrs. Brahmayya & Co., Chartered Accountants, Bangalore, be appointed the sole Auditors of this Company to hold office until the conclusion of the next Annual General Meeting."

5. To consider and if thought fit to pass the Special Resolutions separately posted to the shareholders, with or without modification.

Explanatory statement concerning these Special Resolutions as required by Section 173 of the Companies Act has also been posted to them.

The Share Transfer Books of the Company will be closed from 23rd August 1958 to 30th August 1958.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

By Order of the Board,

L. KANDASWAMY,
General Manager.

MYSORE, 13*th July* 1958.

N.B.—(1) The final dividend when declared, will be made payable at the Bank of Mysore, Ltd., Mysore, on and after 15th September 1958. The dividend warrants will be posted to those shareholders whose names stand on the Register of Members of the Company on 23rd August 1958.

(2) Under Section 257 of the Companies Act, 1956. Notice of candidature for the Office of the Director is to be left at the Registered Office of the Company in writing, at least fourteen days before the date of the Meeting.

(3) Shareholders are requested to immediately advise the Company of any change in their address.

STANDARD JUTE COMPANY, LTD.
AND

KINNISON JUTE MILLS CO. LTD.,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

CALCUTTA, 1*st August*, 1958.

TREASURY BILLS FARE BETTER

(From Our Own Correspondent)

BOMBAY, 6*th August*

The short-term money market ruled easy during the major part of the week under review, but towards the close a slightly hardening tendency was noted. This was due to good demand for money, particularly from Calcutta, from institutions for investment in Government securities and banks' subscriptions to Treasury Bills. The result was a slight rise in inter-bank call-money rate to 2¾ per cent. from 2½ per cent. quoted earlier in the week. In fact, early in the week some business was reported even at 2¾ per cent. House money at call was placed at 3½ to 4 per cent. throughout the week. Short-term deposits for one to six months also commanded the same rates.

There was a better response to Treasury Bill tenders this week than last week. As against an invitation for Rs. 2 crores, the total amount offered was Rs. 3.56 crores. Tenders at Rs. 99.335 and above were accepted in full and those at Rs. 99.319 were allotted approximately 62 per cent. Lower tenders were rejected. The amount accepted was Rs. 2 crores, the average rate of accepted tenders being Rs. 2.651 per cent. per annum, as against Rs. 2.726 per cent. in the previous week.

Consequent on the encouraging response, the Reserve Bank of India has again stepped up the tender amount for next week to Rs. 3 crores. Tenders for this amount will be accepted up to the close of business on Monday, 11th August. Successful tenderers should make payment on 16th August.

A slight contraction of Rs. 1.93 crore in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 1st August 1958. Notes held in the Banking Department, are also lower by Rs. 2.92 crores, so that the fall in total notes issued is Rs. 4.85 crores. Foreign securities have further declined by Rs. 5 crores, while balances held abroad have gone up by Rs. 53 lakhs, so that the net decline is Rs. 4.47 crores. The total of foreign assets now stands at Rs. 192.73 crores. Deposits of the Central Government have fallen by Rs. 9.90 crores and those of other Governments by Rs. 4.26 crores. Deposits of banks have gone up by Rs. 1.88 crore. Loans and advances to Governments are lower by Rs. 3.54 crores. No notable change is seen in other loans and advances. Advances to Scheduled banks against usance bills stand reduced by Rs. 86 lakhs, the total outstanding borrowings of banks under this head being Rs. 6.94 crores, as against Rs. 31.87 crores a year ago.

The Scheduled banks' statement for the week ended 25th July 1958 shows a substantial rise of Rs. 16.59 crores in demand deposits and of Rs. 9.22 crores in time deposits. Inter-bank borrowings are also higher by Rs. 2.83 crores. Borrowings from the Reserve Bank have been reduced by Rs. 5.68 crores and those from the State Bank by Rs. 72 lakhs. Advances have declined by Rs. 11.79 crores, while bills purchased and discounted have risen by Rs. 2.12 crores. A marked rise of Rs. 22.41 crores is noted in investments and of Rs. 18.27 crores in cash balances. Money at call and short notice too have risen by Rs. 2.40 crores.

Conditions akin to boom prevailed in the Gilt-edged market. There was a sharp rise in prices over a wide front. The demand was for all, short, medium and some of the long-dated issues, particularly from institutional investors. The scarcity of stocks and the increase in selling prices of some of the securities by the Reserve Bank of India enlivened sentiment. State loans too were keenly sought after. The undertone at the close was very firm. 3 per cent. 1986 Conversion Loan jumped up by 15 nP to Rs. 71.25. 3 per cent. 1970-75 improved by 20 nP to Rs. 88, 3 per cent. 1966-68 by 10 nP to Rs. 93.30, 3 per cent. 1964 by 25 nP to Rs. 96 and 3 per cent. 1963-65 by 10 nP to Rs. 95.90. 3½ per cent. 1962 was marked up by 10 nP to Rs. 98.30. 3½ per cent. 1961 gathered 10 nP to Rs. 99.80 and 3½ per cent. 1963 15 nP to Rs. 99.50. A rise of 20 nP to Rs. 99.25 was recorded in 3½ per cent. 1964 and of 25 nP to Rs. 98.90 in 3½ per cent. 1965. 3½ per cent. 1967 was put up by the Reserve Bank to Rs. 98.05 the rise over the week being 20 nP. 3½ per cent. 1967 gained 10 nP to Rs. 98.05. The Reserve Bank stepped up its selling rate of 3½ per cent. 1968 from Rs. 99.60 to Rs. 99.70. In the State loans section, good business was reported in 1967 to 1969 loans, as well as in 4½ per cent. new issues. Bombay 4½ per cent. 1969 and 1970 rose by 20 nP each to Rs. 100.50 and 1971 by 5 nP to Rs. 100. Madras 4 per cent. 1967 and 1968 advanced by 15 nP and 20 nP, respectively, to Rs. 98.05. Andhra 1967 and 1968 improved by 5 nP and 10 nP, respectively, to Rs. 97.85 and 4½ per cent. 1970 by 20 nP to Rs. 99.50. U.P. 1967 hardened by 15 nP to Rs. 98, 1968 by 20 nP to Rs. 98 and 4½ per cent. 1970 by 5 nP to Rs. 99.50.

In consonance with the strength of sterling abroad, the rupee also gained some strength, banks' selling rate declining from Rs. 477.25 to Rs. 476.75 per $100 and their buying rate from Rs. 473.75 to Rs. 473.50 per $100. In New York, spot sterling moved up from $2.80-7/16—2.80¼ to $2.80-11/16—2.80⅞ and three months' forward from $2.78-9/16—2.78⅝ to $2.78-29/32—2.78-31/32. Transferable sterling gained from 277.90—278 cents to 278.10—278.20 cents.

SLOW CLEARANCE IN HIDES

(From Our Own Correspondent)

MADRAS, 4*th August*

Arrivals of E.I. tanned cow hides and calves have been small and clearance slow because sellers quote stiff prices out of line with U.K. importers' bids. Shippers naturally quote higher levels, with the result that booking orders for shipment has been difficult. In view of the August holidays, it is likely that trading during August will be small with the U.K. There is good demand for buff calf thirds and inferiors from the U.K., but stocks with tanners are in short supply. In view of the persistent demand for buff calf skins for export, tanners are likely to turn their attention to buy raw buff calf skins during the new season which starts from September onwards.

There has been no change in the tanned skins section. Arrivals of common tannages are small and clearance moderate.

Shipments during July 1958 were 2,870 bales cow, 239 cow calf, 11 buffs, 310 buff calf, 1,154 goat and 530 sheep to the U.K; 14 bales cow, 13 cow calf, 4 buff calf, 745 goat and 194 sheep to Continent; 84 bales buff, 35 buff calf and 77 goat to the U.S.A; 3 bales goat and 158 sheep to Japan.

BULLION HARDENS

(From Our Own Correspondent)

BOMBAY, 6*th August*

The bullion market presented a better tone during the week under review, and prices under the lead of silver staged a recovery from the previous week's low levels. The improvement was mainly due to speculative support prompted by expectations that the inflow of Tibetan coins would dwindle consequent on reports of political unrest in Tibet. Good support from Delhi and Calcutta operators also strengthened bullish sentiment and this forced the bears to cover their sales.

Gold also moved up slightly in sympathy with silver, as also on reports of good offtake in the ready section and of seizure of large quantity of contraband gold from a ship. Towards the close, there was a reaction in silver, which affected gold also to some extent.

Forward silver (*Shravan* First delivery) moved up from Rs. 180-12 to Rs. 181-7 before the settlement ran out at Rs. 181-6. The Second delivery advanced from Rs. 181-12 to Rs. 184-10 before declining to Rs. 183-6 today. The closing was, however, done at Rs. 183-12. Business in *Bhadrapad* settlement began on Saturday at Rs. 184 and closed today at Rs. 184-8.

Ready silver gained over the week Rs. 2-4 to Rs. 183-0. The floating stocks of silver are reported to be 1,000 bars. The daily average arrivals were 40 bars (including unrefined metal), while the offtake was of the order of 10 to 15 bars.

Gold for forward delivery (*Shravan* Second delivery) gained from Rs. 105-7 to Rs. 106-4 before receding to Rs. 105-10. At the close there was again a recovery to Rs. 106. Business in *Bhadrapad* settlement has not yet commenced.

Ready gold hardened from Rs. 105-15 to Rs. 106-9, but finished a fraction lower at Rs. 106-6. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,500 tolas and the offtake was also of the same order.

In New York, silver was unchanged at 88.5/8c. In London, too, spot silver was maintained at 75d. and forward at 74⅛d. Gold declined slightly from 250s. 3d. to 250s. 2d.

The following comparative table shows at a glance the trend of the market during the week under review:

	6-8-58	Highest	Lowest	30-7-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

* 29th August settlement.
† 30th August settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

LINSEED DULL

(Messrs. A. Bradley and Co.)

BOMBAY, 4*th August*

Linseed prices moved within narrow limits during the week under review. Conditions were generally dull, although the undertone of the market remained steady. A somewhat easier opening was short-lived and an initial loss of about As. 8 per maund in the price of seeds was gradually recovered towards the close. Only small quantities changed hands and crushers on the whole did not show much interest. The local oil market remained firm mainly owing to shortage of stocks, but enquiries were scarce. There was small demand from shippers covering against previous sales. The overseas market was inactive and prices were more or less unchanged at around £115.

The latest quotation for ready and August is Rs. 25-12 per maund.

HIDES EASY

(From Our Own Correspondent)

KANPUR, 4*th August*

During the week under review, the hides and skins market was easy. New arrivals were considerable, barring sheep and lower category cow. The main purchasers were the local tanners and country dealers. The Madras dealers were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 350, 2nd grade Rs. 200 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 1 lb. 7 ozs. and 2nd grade 1 lb. 11 ozs. per rupee; goat 1st grade Rs. 300 to Rs. 275 and 2nd grade Rs. 270 to Rs. 260 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

COTTON FUTURES RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, 6*th August*

The cotton futures market ruled distinctly easy in the early part of the week under review but picked up strength yesterday which persisted today also. The earlier easiness was due to heavy pre-tender day liquidation in the maturing August contract which was prompted by the upward revision in room rates. Even the small volume of tenders (1,300 bales) issued on Saturday, the first tender day, failed to have any marked influence on the price trend. The market succumbed to heavy local and upcountry selling on Monday, thanks to reports of favourable weather in most cotton tracts and fears of delay in the release of export quota. Yesterday's recovery was attributed to the bullish survey results. Out of 600 lots surveyed, 200 lots of Jaydhar A and B, were rejected which gave rise to hopes that tenders of this variety would be smaller in the coming tender days. Low levels also attracted buying from bulls and spot houses. Fresh rumours that, in view of the better crop prospects and fairly comfortable stock position, the Government of India might issue an export quota shortly, too, aided the sentiment of operators favourably. There was, therefore, a notable recovery in values, although today's closing rates were lower than those a week ago.

I.C.C. Moglai Jarilla August 1958 opened the week at Rs. 670, as against the previous close of Rs. 673.50, and declined, under pressure of selling, to Rs. 660.25 on Monday. The contract improved to Rs. 672.25 yesterday. Opening at Rs. 665.50 today, it rose to Rs. 670 at the close. The net loss over the week was Rs. 3.50. Tenders issued on the 4th inst., the second notice day, were 550 bales, bringing the total issued to date to 1,850 bales, comprising 550 bales of Jaydhar A, 500 bales of Jaydhar B, 350 bales of Buri American, 150 bales of Madhya Pradesh Jarilla, 100 bales of Laxmi A, 50 bales of Khandesh Jarilla, 50 bales of Vijay, 50 bales of 320F and 50 bales of Cambodia.

I.C.C. Moglai Jarilla March 1959 commenced the week at Rs. 674.50 and, after declining to Rs. 669 on Monday, recovered to Rs. 672.75 yesterday. Opening at Rs. 672 today, the contract improved, the closing rate being Rs. 674.50. The net loss over the week was Re. 1.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	6-8-58	*High*	*Low*	30-7-58
I.C.C. Moglai Jarilla (August 1958) ...	670	673.50	663	673.50
I.C.C. Moglai Jarilla (March 1959) ...	674.50	674.50	669	675.50

In the spot section, mill activity was at a low ebb. Prices showed a declining trend. Nevertheless, finer varieties of cotton continued to attract attention of spinners on fears of further delay in the grant of permission for imports of East African and U.S. cotton. Listless conditions prevailed in the export section. However, small business was reported in Bengals. Exporters were disappointed over the prolonged delay in the release of export quota. The foreign section was inactive in the absence of any announcement regarding the import of sterling and dollar area cotton. The Government of India's prolonged silence over the issue has intrigued the mills and the trade alike. Imports permitted so far in the season have been below requirements and mills are said to be facing shortage of good quality cotton.

The following are the latest available spot rates—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end quotation:

Bengal *Deshi* 600 (600); Berar Jarilla 720 (725); Khandesh 790 (790); Vijay 860 (875); Hubli Laxmi 1,020 (1,025); Jaydhar 930 (935).

The Karachi cotton futures market ruled easy during the early part of the week but gained strength towards the close. The earlier easiness was due to slackness in export demand and favourable weather news. Consequently, prices tended to fall. The market picked up strength in the later sessions, thanks to revival of export enquiries, purchases by domestic spinners and expectations of Pakistan Government giving incentive on exports of cotton. All these factors prompted sizable buying, with the result that prices moved up. Most of the earlier losses were made up. N.T.R.G. January, after declining from Rs. 79-8 to Rs. 77-15-6 on 31st July, recovered to Rs. 79-4-6. March contract eased to Rs. 98-5-6 but firmed up to Rs. 79-10-6 towards the close.

Trading in the Alexandria cotton futures market was featureless during the week under review. In the absence of fresh incentives, buying interest was at a low ebb. Favourable weather news indicates the possibility of a good crop and weaker export advices led to some selling which brought out about a fall in prices. The medium staple Ashmouni contracts, however, received special support. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 76.05; January 76.10.
Ashmouni: August 67.35; October 68.30.

Cotton futures values on the Liverpool Cotton Exchange suffered a mild setback during the week, due to light hedge selling and long liquidation. Lower New York advices and the bleak cotton consumption outlook were the influencing factors. Scattered mill fixings and short covering failed to

lift values. The July-August contracts of the American cotton and mixed growth contracts expired on the 31st inst. Sudan contracts, however, met with support and values moved up. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 24.95; December-January 25.07; March-April 25.25. *American cotton mixed growth contract:* October-November 25.33; December-January 25.60; March-April 25.60. *Sudan:* September-October 31.65; November-December 31.65; January-February 31.65.

Easy conditions prevailed in the New York cotton futures market during the week under review. The easiness was due partly to the Senate's passing of the Farm Bill providing for higher acreage and lower support prices for the 1959 crop. It was expected that the House of Representatives, which was studying the Bill, would pass it with only minor changes, as opposition to it was waning. Improved crop prospects also imparted weakness to the market. A private estimate placed the crop at 11,283,000 bales. A marked fall in prices was, however, prevented by some speculative buying based on rumours of possible veto of the Farm Bill and expectation of a higher final loan rate for cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	5-8-58	29-7-58	22-7-58
Spot	36.45	36.45	36.50
October	36.22	36.27	36.65
December	36.55	36.53	36.87
March	36.80	36.90	37.24

YARNS STEADY

(From Our Own Correspondent)

BOMBAY, *6th August*

Steady trend was in evidence in the yarn market during the week under review. Rayon yarns were generally well supported. Arrivals of imported yarn continued to be low. The quantity actually imported into the Bombay port during the month of July was not more than 1.48 million lbs., which was, of course, higher than 1.23 million lbs. imported in the previous month. A section of the trade expects that arrivals of several types of foreign yarn will be heavier in the coming weeks as a result of the purchases made in recent months and also the fact that the actual users who had recently been granted import licences have already placed orders with foreign firms. In the case of staple fibre yarn, prices were, more or less, unchanged, despite reports that several mills had curtailed spinning and that some of them were quoted higher prices. Cotton yarn continued to rule dull, thanks to low offtake by handlooms and powerlooms. Even reports of enlarged exports in the past month (July) failed to have any effect. The total shipment of yarn from Bombay port in that month was 800,400 lbs., as against 497,400 lbs. in June and 315,595 lbs. in May.

In the rayon yarn section, 150 Italy attracted very good attention of operators and spurted by 96 nP to Rs. 6.62. 120 Italy firmed up from Rs. 6.50 to Rs. 7. 120 Japan, however, was done lower at Rs. 6.37, as against Rs. 6.44 last week-end, and 150 Japan at Rs. 6.44, as against Rs. 6.50. Among indigenous yarns, National Rayons 150 bright cones first grade strengthened by 13 nP to Rs. 5.19. 120 bright cones first grade gathered 7 nP to Rs. 6.19.

Staple fibre yarn 40 x 2 August delivery advanced by a rupee to Rs. 728. October delivery was fully maintained at Rs. 752. In the spot section, 40 x 2 New Greats rallied 9 nP to Rs. 4.03. Citys rose from Rs. 4.19 to Rs. 4.20. Kohinoors were firmed at Rs. 4.24 and Centurys at Rs. 4.12. Among imported yarns, 80 x 2 Paramounts put on 12 nP to Rs. 9.37. Fujis was fully steady at Rs. 9.25.

In the cotton yarn section, ten counts Moderns were unchanged at Rs. 13.50. Podars declined by 13 nP to Rs. 12.62. Twenty counts Indus were well supported, their quotation advancing from Rs. 16.37 to Rs. 16.62. Gokaks hardened by 12 nP to Rs. 16.87. Moderns were fully maintained at Rs. 16.75. Thirty counts Hinds were done at Rs. 19.75, same as last week. Forty counts Minaxis were subjected to selling and fell by 31 nP to Rs. 25.44. Moderns were dull at Rs. 25.75. Sixty counts Raghuvamshis were on offer at Rs. 67.25, as against Rs. 62. Moderns, however, were done higher by a rupee at Rs. 60. Eighty counts Moderns declined by 50 nP to Rs. 72. Mahendras were unchanged at Rs. 72.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	6-8-1958	30-7-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.37	6.44
150 Japan (per lb.)	6.44	6.50
120 Italy (per lb.)	7.00	6.50
150 Italy (per lb.)	6.62	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 August	728.00	727.00
40 x 2 October	752.00	752.00
40 x 2 Kohinoor (per lb.)	4.24	4.25
40 x 2 City (per lb.)	4.20	4.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.75
20s Modern	16.75	16.75
30s Hind	19.75	19.75
40s Minaxi	25.44	25.75
50s Finlay	61.25	62.00
60s Mahendra	72.00	72.00

OILSEEDS IRREGULAR

(From Our Own Correspondent)

BOMBAY, *6th August*

After opening the week quiet, the oilseeds market depicted a firm trend on Saturday, but staged a relapse in the subsequent two sessions. Today, however, the market ruled better. The firmness on Saturday was aided by rumours of large castor oil purchases by Russia and of a reduction in freight rates to the United States by some shipping companies. These rumours led to heavy replacement buying. There was also bear covering in new crop castorseeds and groundnuts, following absence of rains in North Gujerat and Saurashtra. Consequently, prices of oils and oilseeds registered handsome gains. The upward trend was halted in the subsequent two sessions, thanks to unloading by bulls on reports of beneficial rains, increased offerings by upcountry dealers and discouraging U.K. advices regarding castor, linseed and groundnut oils.

The Government of India has decided to release a quota of 5,000 tons of rape-mustard oil for export up to the end of September 1958. A detailed licensing procedure is being notified by the Export Trade Control authorities at the ports.

Groundnut August 1958 contract opened the week at Rs. 192, as against Rs. 193 last week-end, and firmed up to Rs. 193 on Saturday. After receding to Rs. 190 yesterday, it recovered today to Rs. 193 before finishing at Rs. 192. February 1959 contract opened at Rs. 165 and, after improving to Rs. 166.50, declined to Rs. 162.25. Today, it rose to Rs. 166.25 before winding up a shade easy at Rs. 166. Over the week, bold ready dropped 38 nP to Rs. 38.87. Coromandel and Khandesh quality both receded from Rs. 41 to Rs. 39.50. Groundnut oil ex-mill moved down by 51 nP to Rs. 20.36. Railway receipt fell by 63 nP to Rs. 20.12.

Castorseed September 1958 contract, which stood at Rs. 161 on the opening day, as against Rs. 160.75 last week-end, evoked good buying support and advanced to Rs. 163.75 on Saturday. Subsequently, it encountered selling and declined to Rs. 160 yesterday. Today, however, there was recovery and the contract increased to Rs. 162 before finishing at Rs. 161.25. May 1959 contract was quoted today at Rs. 157, as against Rs. 159 on Wednesday last week. Ready Madras declined by 25 nP to Rs. 32. Kanpur quality lost a like amount to Rs. 30.75. Castor oil B.S.S. receded from Rs. 17.94 on Saturday to Rs. 17.75 yesterday, but recovered to Rs. 17.81 today. Commercial quality, after easing from Rs. 16.56 to Rs. 16.37, finished today at Rs. 16.44.

Linseed September 1958 contract began the week at Rs. 34.31, as against Rs. 34.50 last week-end. After advancing to Rs. 34.75, it declined to Rs. 33.81 yesterday and recovered to Rs. 34.25 today. Towards the close, however, it was a shade easy at Rs. 34.19. Over the week, ready Madras was lower by 25 nP, today's closing rate being Rs. 33.75. Kanpur quality shed a like amount to Rs. 32.50. Linseed oil declined from Rs. 17.75 to Rs. 17.50.

Cottonseed September 1958 contract, which stood at Rs. 121 last week-end, spurted to Rs. 122.50 on Saturday. Thereafter, it declined to touch Rs. 120.50 at the close today. February 1959 contract suffered a fall of Re. 1, today's closing rate being Rs. 102.50.

Among other oilseeds, kardiseed bold ready was subjected to selling and fell by Re. 1.50 to Rs. 21.50. Nigerseed Madras quality, which remained firm at Rs. 34.25 throughout the week, came in for heavy selling today and wound up at Rs. 33.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	6-8-1958	30-7-1958	23-7-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	192.00	193.00	195.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR STEADY

(From Our Own Correspondents)

BOMBAY, *6th August*

The Union Food Ministry's lightning action, on 31st July, clamping down control on the ex-mill sugar prices in the North, has stunned the sugar trade. In fact, a feeling of depression is said to be prevailing in terminal markets. The sugar produced in the Deccan and South India is, however, not subjected to control, since the ex-mill prices in these regions have been far below those considered fair by the Government. Trade circles feel that any imposition of control on sugar will create trouble for both traders and consumers, resulting in a grave dislocation of the normal trade channels. Meanwhile, a delegation of the Indian Sugar Mills' Association is waiting on the Union Food Ministry officials to discuss the situation and to find a solution to the present impasse.

The imposition of controls on North Indian sugar factories had no effect on the local sugar market. The currently ruling prices of all grains are practically the same as those a week ago. Small grain is done at Rs. 106.50 per bag, medium grain at Rs. 107-Rs. 109 and large grain at Rs. 110-Rs. 115.50.

Arrivals of sugar by rail into the market during the week aggregated 9,600 bags, as against 23,000 bags in the previous week.

* * * *

HAPUR, *4th August*

The Union Government has decided to control the price of sugar produced in Punjab, U.P. and North Bihar. The controlled ex-factory price fixed for U.P. and North Bihar factories is Rs. 36 per maund and for factories in the Punjab Rs. 36.50 per maund. These prices will apply to I.S.S.I. D-29 grade with prescribed price differentials for other grades. The Government has also decided to requisition and distribute at fixed prices on ex-factory basis as well as for despatch to out-station centres on freight-to-pay basis. Allotment to the following important centres will be made at fixed f.o.r. destination prices: Delhi Rs. 36.50; Kanpur Rs. 36.75; Calcutta Rs. 38; Bombay Rs. 39 per maund.

Following the imposition of control, fresh deals in sugar have come to a standstill here as well as in the Muzaffarnagar market. Traders are awaiting detailed information before finalising fresh commitments.

Khandsari ruled quiet during the week. Trading was slack, due to incessant rains and prices were Rs. 35.50 to Rs. 37 per maund.

Ready *gur* turned quiet during the week. Despatches were small at 3,000 maunds due to rains, and local stock was now put at 46,000 maunds. Heavy rains have proved beneficial to the standing cane crop, but easterly winds have resulted in the revival of pests in cane crops in some areas. Demand for *gur* was mostly from Punjab side and despatches were by road. Prevailing prices were:—Kotha dry Rs. 22 and dry-wet Rs. 20 per maund.

Enquiry for ready *gur* was poor in the Muzaffarnagar market where stocks were only about 12,000 maunds. Prices were mostly unchanged *Chaku kotha* being quoted at Rs. 21.75 to Rs. 22, dry at Rs. 23, *pansera* wet-dry at Rs. 20.25 to Rs. 20.75, *shakker dara* at Rs. 24 to Rs. 25.

Gur fagun moved both ways during the week. Opening at Rs. 14.13, the delivery touched the highest of the week at Rs. 14.17 the same day, and declined to the lowest of the week at Rs. 13.75 on Thursday. It, however, improved to Rs. 13.97 today.

BLACK PEPPER LOWER

(Messrs. Parekh and Co.)

BOMBAY, *6th August*

After moving narrowly, Malabar black pepper turned easy towards the close of the week under pressure of heavy tender of about 3,000 bags against Shravan (31st July) delivery. Large local stock proved to be a depressing factor. Absence of demand from both Europe and the U.S.A. in all the producing countries made growers a bit uneasy. They were anxious to meet buyers to attract business, but, so far, without result, as foreign buyers preferred to await development on political and economic fronts.

Alleppey and Cochin were sellers for ungarbled at Rs. 625. Garbled ready was quiet, with sellers at Rs. 108, the highest being Rs. 112.50. August delivery on the Exchange moved down from Rs. 114.37 to Rs. 110.25, while October from Rs. 116.87 to Rs. 111.87. Calicut was seller at Rs. 655. Business of about 200 tons with China failed to support the market.

Singapore reduced its price for black Sarawak from Str.$76 to Str.$74 and white from Str.$132 to Str.$128, for want of business. Enquiries from Europe and the U.S.A. were discouraging.

Spot in New York was nominally quoted at $0.28. Dealers there were reported to be willing to give concession to buyers, in view of lower offers from producing centres.

The future for Malabar black pepper at the moment appears uncertain, as the erstwhile bulls are now slowly realising that the heavy stock in Bombay will continue to exert pressure on the specific delivery. This, in turn, will reflect on the forward market at Cochin forcing growers to lower their prices for ungarbled in both Tellicherry and Travancore-Cochin area. However, much will depend upon foreign demand, particularly from New York where dealers have still to cover for their autumn requirements.

Today's nominal quotations are: Ready Rs. 87 to Rs. 88 per Bengal maund: September Rs. 610 to Rs. 620 per candy of 5½ cwts.

TEA PRICES RECEDE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 1st *August*

The twenty-third export sale was held on 29th July, with offerings amounting to 1,248,220 pounds. The quality of all teas continued to be useful, particularly from the high-grown estates. In sympathy with other markets, demand was much quieter and the sale opened to only a fair general enquiry at easier rates. There was a weaker tendency as the sale progressed. Low medium and medium descriptions were 5-10 nP lower, except for black leaf types which were steady. Good medium teas met with only limited demand and were 10-15 nP lower than last rates. There was some enquiry for highgrown teas at rates which were barely steady.

A few quality teas sold well. Whole leaf types met with less competition and were irregularly 5-10 nP easier.

The quotations were: Plain B.P. Re. 1.50; low medium Re. 1.55 to Re. 1.70; medium Re. 1.75 to Re. 1.85; good medium Re. 1.90 to Rs. 2.05 and quality Rs. 2.15 to Rs. 3.15.

About 1,051,488 lbs. of dust were offered in dust sale 'P' which was held on Thursday, 31st July. After opening quietly, a good general demand developed. There was a good selection of teas on offer, and buyers competed well for the improved mediums, which were firm and occasionally dearer on last week's rates. Other descriptions met with good support at lower rates, and these declined sometimes by 5 to 8 nP. Black grainy dusts met with some competition and sold well.

Export Quota:—The market was generally steady throughout the week, business being transacted at 11 nP. The latest quotation is sellers 11¼ nP, with probable buyers at the same rate.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 24 was held on Tuesday, the 5th inst. Offerings aggregated 875,000 lbs. There was fair general demand. Good mediums were firm and quality highgrowns strong. Clean coloury fannings were the strongest feature. Low mediums and mediums, however, were easier by 5 to 10 nP."

GOOD EXPORT DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *5th August*

While yesterday's export sales attracted better demand at lower prices, last week's internal sales met with good demand at irregular levels.

Dusts on offer during last week's auction amounted to 20,326 chests, the quality of which was well maintained. Non-withered Dooars and all orthodox teas were fully steady on good general demand. Among Assam teas, those with improved liquors were keenly sought, while the plainer lots gave way by 6 to 10 nP. Dooars and commons realised higher prices. Among the large quantity of C.T.C. Assam teas on offer, the selected lots of the best liquorings were firm, while the rest declined by 25 to 35 nP. There were heavy withdrawals. There was good demand for Darjeelings, although irregular. The quotations, with those of the previous sales in brackets, were: Best Assam C.T.C. Rs. 2.55 to Rs. 2.85 (Rs. 2.70 to Rs. 3.00) Assam C.T.C. Rs. 2.00 to Rs. 2.20 (Rs. 2.20 to Rs. 2.40), Medium Assam grainy dust Re. 1.68 to Re. 1.72 (same) and medium Dooars Re. 1.66 to Re. 1.68 (Re. 1.64 to Re. 1.68).

Export offerings yesterdays aggregated 48,741 chests. A strong feature in an otherwise easier market was the best bright liquoring orthodox Assams, prices of which improved. Commonest sorts were about steady, but commons eased by 4 to 8 nP. A few of the best lots of C.T.Cs met with good demand, but all the same prices realised were below valuations. The balance of the C.T.Cs declined by 30 nP. Medium Assams dropped by 10 to 20 nP, and O.Fs and B.O.Ps were 30 nP lower than valuations. Withdrawals of C.T.Cs were heavy, but of non-withered and legg-cut Dooars were light. The latter eased by 10 to 20 nP. There was little competition for whole leaf grades, the higher-priced lots of which eased by 20 nP and others by 10 nP.

The quotations with last week's in brackets were: Best Assam C.T.C. fannings Rs. 3.80 to Rs. 4.10 (Rs. 4.10 to Rs. 4.50); best Assam C.T.C. B.P. Rs. 3.50 to Rs. 3.70 (Rs. 3.80 to Rs. 4.00); medium fannings Rs. 2.10 to Rs. 2.20 (Rs. 2.20 to Rs. 2.40); clear black pekoe Rs. 2.10 to Rs. 2.15 (Rs. 2.15 to Rs. 2.25); medium B.P. Re. 1.95 to Rs. 2.00 (Rs. 2.05 to Rs. 2.15); plain fannings Re. 1.78 to Re. 1.82 (Re. 1.84 to Re. 1.88) and plain B.P. Re. 1.66 to Re. 1.70 (Re. 1.70 to Re. 1.74).

Export quota changed hands at 11 nP, with few buyers.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *5th August*

A marked rise in prices of jute goods was the feature in the jute markets during the week under review, and ready B. twills, which in the last week had moved down much below the I.J.M.A. floor level, recovered impressively to cross it on keen speculative support. Although some business was put through with overseas shippers in both heavy goods and hessian constructions, the volume was insufficient to justify this week's uptrend. Earlier in the week, overseas interest declined by such a measure that it was thought that the lessening of tension among the Big Powers over the West Asian situation encouraged them to revert to a hand-to-mouth policy. Subsequently, of course, shippers did not show more interest, but, as stated, the rise was more due to speculative activities.

Another reason for the rise in prices of goods was the improvement in fibre prices. Not only mills purchased fair quantities of raw jute, although expectations of a higher crop for the current season continued. There were reports of damage to crop due to widespread incidence of semilooper and hairy-caterpillar on the plants in several districts—a development caused by protracted drought. The Agriculture Department stated that it took prompt measures for dusting and spraying as a result of which the crop in most of the seriously infested tracts has been protected. Recently, there had been more rains, which have improved the position relating to retting facilities. In lower West Bengal rains have been inadequate and the drought would put down crop there to 75 per cent. of the normal.

Trade and industry circles so far have had nothing to complain against the official futures trading, functioning since April last. The activities in the futures market have shown that it has withstood the aim for which it was commenced. The progress report by the East Indian Jute and Hessian Exchange Ltd. for the three months ended June shows that it has been set up on a firm foundation. The strict by-laws prevent overtrading and speculation is limited.

On Tuesday last, speculative activity in the *futka* pushed up price of jute goods. Some business with overseas buyers was also done. Ready B. twills were fully steady after having crossed over the I.J.M.A. floor level and quoting at Rs. 100.25. Ready hessian 40" 10 oz. was also higher at Rs. 43.60. Mills took the opportunity to conclude sales for as much quantity as possible, and most of these deals were for shipment between October and December. Soon, speculative elements booked their profits. This together with the tendency of mills to sell as much as possible affected sentiment. Had it not been for this, Wednesday's closing quotations for B. twills and hessian 40" 10 oz. would have been higher than Rs. 100.60 and Rs. 43.85, respectively. On the next day, prices fluctuated, due to due date manipulations in the *futka*. Thereafter a quiet tendency set in, taking B. twills down to Rs. 100.05 and hessian 40" 10 oz. to Rs. 43.80. On Friday, some covering demand was in evidence. B. twills were marked higher at Rs. 100.15 and hessian 40" 10 oz. at Rs. 43.90. Over the week-end, prices for the above two representative constructions were pushed up to Rs. 100.60 and Rs. 44.10, respectively, following the hardening of fibre prices. Yesterday B. twills spurted to Rs. 101.10 and hessian 10" 10 oz. to Rs. 44.55 following apprehensions of a further rise in raw jute prices.

Fair business was put through in the fibre market. Sellers were reserved, and prices for most varieties gained by 50 nP. There was a rumour circulating in the market of the possibility of Government permitting exports of limited quantity of the mesta variety. It was reported that overseas interests were keen on India resuming exports of raw jute at least on a token basis, if only to bring down prices in Pakistan. However, the possibility is considered remote, as even now the crop cannot be estimated with any certainty. Further, there will be no surplus of the mesta varieties. Other inferior varieties like *jurgli*, can be exported, but it is doubtful whether foreign manufacturers would be interested in such a low variety as *jurgli*. In the last two or three days, heavy rains have occurred, and for the first time in this season reports of flooding have been received from some jute districts. The latest quotations for the different variety of raw jute are:

BASE METALS RECEDE FURTHER

(From Our Own Correspondent)

CALCUTTA, *5th August*

A further recession in base metal prices was recorded during the week under review, following improved outlook in international political situation. However, it was thought that the latest development of the Russian Prime Minister's meeting with Mr. Mao-Se-Tung of China and the subsequent joint *communique* were indications of a stiffer Russian attitude towards the West and that hopes of a summit meeting of the heads of Governments was now receding from the possibility point. In this view, market circles held that an upward trend in prices was in store.

Industrial consumers continued to meet with acute shortage in copper, and, without sufficient copper, alloy-makers could not naturally buy the other metals offering. This was also a cause for this week's downward trend. Note was taken of the report that issue of permits for copper, suspended for some time now, would be resumed by the Controller very soon. Another report noted cheerfully by market and industry circles was that the Government was making arrangement for short-term credit from the United Kingdom, and that, therefore, the apprehended import curbs on raw material in the three months ending December would not come to pass. In the meantime, market reports from London and New York revealed the gradually rising trend. The higher trend in London was attributed to expectations of liberalisation of trade between the West and the U.S.S.R. and that in the U.S.A. to expectations of increased building activity and of increased demand of automobiles, both of which would push up demand for copper. So it would appear that India would have to pay heavily for not having stocked copper when prices in world markets were more advantageous.

Tin opened here at Rs. 572 and closed lower at Rs. 566. Demand was little. The increase in the floor price in London to above £730 was attributed to the recent decision of the International Tin Council to raise the restriction on tin exports from member-countries by 8 per cent. to 48 per cent. from October to December. This restriction, it was thought, would not affect world supplies so long as Russia remained outside the Tin Agreement and continued to export as much as there was demand. Lead was unchanged at Rs. 70 while electrolytic zinc dropped to Rs. 66.50 from Rs. 67.50, following lesser demand for alloy-making, in view of the paucity of copper stocks.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *4th August*

Quiet conditions prevailed in the foodgrains market during the past week. Arrivals were restricted due to incessant heavy rains. The various measures taken by the Government, including ban on purchase of wheat by roller mills in the open market and seizure of all wheat stocks with such mills in U.P., unnerved stockists. Wheat ruled quiet at almost unchanged price level of Rs. 20 per maund for average quality and the farm quality was quoted between Rs. 20.62 and Rs. 21 per maund. Arrivals during the week were small and local wheat stock continued unchanged at one *khatti*.

Arrangements are nearing completion for the opening of fair price shops to sell wheat here also. Heavy rains during the week have badly damaged *sawani* crops here.

Rice ruled quietly steady during the week. The paddy crop was reported to be progressing satisfactorily. Prevailing prices of rice were:—*basmati* Rs. 41 to Rs. 43, mainpuri Rs. 29.75 and coarse quality Rs. 26 per maund.

Two main factors were responsible for the quiet trend in coarse grain and pulse prices. First, after the ban on forward deals in grains and pulses, stockists started unloading their stocks, as bull manipulation in futures had been responsible to a considerable extent for boosting spot prices. The second factor related to good rains.

Barley and *bejhar* were mostly unchanged, while *jowar* and *guwar* were depressed owing to poor demand. Good outside demand and easy loading facilities accounted for steady conditions in peas and *arhar*. Stocks were fast dwindling. Other pulses were also steady in sympathy. The week-end prices (in rupees per maund) were:—gram *punjabi* 14.50; barley 14; *bejhar* 13.25; *jowar* 13; *guwar* white 15.50; peas *dara* 12.75; white 13.25; peas *dal* 14.50; *arhar* 16.62, *arhar dal* 21.75; *urd* 18.75 to 20; *moong* 25; *massoor* 16.37.

Notice

THE PULLANGODE RUBBER AND PRODUCE CO., LTD.

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Wednesday the 3rd September 1958 at the Registered Office of the Company at Fort Cochin to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1958 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect a Director.

Note:—As Mr. F. A. Murphy is an employee of the Managing Agents, Messrs. Aspinwall & Co., Ltd., a Special Resolution of the Company is necessary for his re-election. Special Notice of the following Special Resolution for his re-election as required by Section 261 is hereby given.

"Resolved that Mr. F. A. Murphy, an employee of Messrs. Aspinwall & Co., Ltd., Managing Agents of this Company, be and is hereby re-elected as a Director of the Company."

4. To appoint Auditors.

The Transfer Books and Register of Members of the Company will remain closed from 19th August 1958 to 5th September 1958 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

(By Order of the Board)

THE PULLANGODE RUBBER & PRODUCE CO., LTD.,
per pro. ASPINWALL & CO., LTD.,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, *5th August* 1958.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (s) Clive Mills have paid dividend at Rs. 104 on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Kort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page 211*)

better crop prospects, large carryover stocks and the urgency of earning more foreign exchange. The Cotton Buyers' Association had even urged, in a telegram addressed to the Union Minister for Commerce and Industry, to release 50,000 bales of Bengal *Deshi*, 25,000 bales of old crop cotton of 25/32" staple and below and 5,000 bales of Coconada cotton. The demand has been only partly met. Perhaps, considerations of the probable impact on the domestic price level of cotton weighed with the Government in deciding not to issue a bigger quota. With the present quota, the total quantity of cotton released so far in the current season adds up to 300,000 bales, made up of 180,000 bales of Bengal *Deshi*, 20,000 bales of old crop cotton of staple length 25/32" and below, 85,000 bales of cotton of all varieties of staple length 23/32" and below and 15,000 bales of cotton of staple length ¾" and below.

Importers heaved a sigh of relief at Government's decision to permit 70,000 bales of cotton to be brought from soft currency areas. Of late, there has been much anxiety among spinners over the delay in the import quota announcement. There was apprehension that this would prove disastrous, especially because of the rapidly dwindling stocks of foreign cotton which, at the end of June, were hardly sufficient for 2½ months' consumption. The quantity now permitted will go a long way towards meeting the requirements of mills spinning fine and superfine counts. Details of the cottons that could be imported under this staple-length stipulation are not known at present. But past experience indicates that these will be mainly Sudan-Egyptians and Peruvians.

The quota for the 40,000 bales of cotton of staple length 1.1/16" and above from the soft currency area came as a surprise, for the trade was expecting a quota not for East African cotton but for U.S. cotton. The fact that the purchase authorisation under P.L. 480 has not so far been issued by the U.S. Government, which in turn may perhaps be due to shortage of long

EXPORT PROMOTION—NEED FOR REALISM

THE meeting of the Central Advisory Council of Industries held at New Delhi on the 7th inst. seemed more like that of the Export Advisory Council, for the most important problem that held the stage pertained to exports. This is not surprising, because the whole trend of industrial production depends upon availability of raw materials, stores, and capital goods. A stage has been reached in India's economy when the pace of industrial development is conditioned by its ability to pay for imports of essentials. Hence the importance of exports. A lot of discussion has already taken place on this subject and what was said at this week's meeting by either officials or non-officials contained nothing new. As usual, stress was laid on promoting exports even at the cost of domestic consumption. The industrialists advocated liberal concessions in taxation and railway freight and rewards to those who succeed in exporting more, in the form of special privilege for importing plant and machinery, stores and raw materials. The Finance Minister, Mr. Morarji Desai, candidly ruled out relief in income taxation, as the Government needed all the money it could get, but the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, promised to consider favourably the question of rewards. As regards concession in railway freights, he said that the Railway Board was rather critical but his reply gave one the impression that each specific case would be considered on its merits and that exports would be given high priority in regard to allocation of wagons and their movement to ports.

While this is undoubtedly the right approach, care should be exercised to see that too much favouritism is not shown to those who export at the expense of deserving manufacturers who produce for domestic consumption. Mr. Shastri recalled the example of Japan and the U.K., which, in the early post-war period, gave high priority to exports, even though there was, for internal consumption, rationing or a long queue of customers. "In our conditions today," averred Mr. Shastri, "we can no longer afford to export only what is surplus to the economy." This is easier said than done, as there are serious limitations to an export drive. The old industries like jute and cotton, in which India has natural advantages over its competitors, have been allowed to languish. The blame for this is to be laid mainly at the doors of the Government. But for the crippling tax burden and unimaginative policy in regard to modernisation, these industries would have been in a position to give a better account of themselves than they are able to do now. The Government has all along laid stress on employment and not on consumption. Yet these industries are expected to compete successfully with countries where consumers' interests come before those of workers. In brief, India's stress is on men, while in other countries it is on machines. It cannot hope to win and sustain export markets so long as this policy is pursued.

The examples of Britain and Japan were mentioned by Mr. Shastri. He did well to do so. But, at the same time, he should pause for a while and reflect on what these countries did for promoting exports, besides tightening their belts. Neither of these countries placed fetters on the re-equipment of their industries as India has done. We would like Mr. Shastri to look up the plan of the late Sir Stafford Cripps for modernising the textile industries of India. That was a plan by the Socialists and not the Conservatives. The essence of that Plan was positive incentives, including relief in taxation, for modernisation and integration into big units. In contrast to this, mills in India, be they cotton, or jute, can modernise themselves and introduce automatic machinery only at the sweet will and pleasure of labour leaders and by agreeing to submit themselves to impractical conditions.

It is disquieting to find that the authorities have begun to take a defeatist attitude in so far as these two export industries are concerned. It looks as though they have almost come to the conclusion that there is not much that can be done to stimulate exports of jute and cotton textiles. Apparently, so strong are their bonds with popular but uneconomic fads that they are unable to break away from them. There is, however, no cause for such defeatism or fatalistic resignation. If Japan, which has also an acute population problem and which does not grow a single ounce of cotton, can find export markets for its cotton goods to the tune of 1,200 million yards, over and above exports of rayon and synthetic fabrics, why should not India, which is almost self-sufficient in raw cotton, be in a position to find export markets for at least 1,000 million yards of cotton textiles? What is it that has prevented India from attaining this objective? We have always felt that the objective is not unrealistic. The Indian cotton mills can do the job, provided the shackles of controls on modernisation and introduction of automatic looms are lifted, the trade unions are debarred from exercising their veto on progress and a reasonable amount of financial and fiscal assistance is rendered by the Government. A similar policy is needed for the jute industry also.

Another vital foreign exchange earner is tea. As in the case of jute and cotton, the Government's policies are not only depriving this industry of its vitality at a steady rate but also providing its competitors with a protective umbrella. The following extract from the speech of Mr. Stanfield, a spokesman of planters in the Madras State, delivered this week, is quite relevant to this discussion:

> "There has been and still is a misconceived idea that the plantation industry has vast financial resources which can be tapped without end and that profits are indicated by the high dividends declared. It is not realised by those who refer to these matters so glibly that there is, in fact, little reserve of liquid capital available and that the assets of a company now mainly represent the capital value of the estates themselves together with their stock-in-trade. It is also not appreciated that a high dividend based on the value of shares issued at parity in no way represents the return obtained on the current market rate of such shares and that profits made in the past have been largely utilised in improvements and additions to the capital value of the properties in the form of machinery, buildings, new extensions, etc.... Legislation has provided for a vast programme of rehabilitation under the Plantations Labour Act and companies are hard pressed to find the capital needed to carry out the commitments demanded of them. Where in the past finance for capital improvements was made available from profits, little now is left after taxation.... State taxation is almost on a par with that of the Central Government on other industries, with the disadvantage that no depreciation allowance is made on their main asset, the tea bush itself."

Numerous representations have been made by the tea industry for relief in taxation particularly through a substantial reduction in export duty. But its plea has not evoked sufficient response from the Government. Barring nominal concessions, nothing has been done to safeguard the short- and long-term interests of this vital export industry. It is, of course, necessary to diversify India's export trade both commodity-wise and country-wise. But such diversification should not mean neglect of either the established export industries or the proved markets. Government spokesmen have, of course, repeatedly stated that their policies do not suffer from this defect. We do not say that such is their deliberate intention, but the results of their actions unfortunately do not support their contention. In their anxiety to augment the Government's revenue, they are unconsciously sterilising the geese that lay golden eggs. The reliefs when given are found to be either inadequate or belated.

To the slogan "Industrialise or perish" a new one has been added. It is: "Export or perish." Slogans have their own value but by themselves they cannot solve anything. On the contrary, they may cloud one's vision for clear thinking if indulged in too much. Mr. Shastri's decision to meet each industry separately and fix an export target after ascertaining its position is sound. It is, however, to be hoped that the outcome of these meetings will be realistic. The vast majority of Indian industries came into being mainly to cater to the needs of domestic markets. This is particularly the case with almost all the modern industries. Many of them are still in their adolescence, if not infancy. They cannot suddenly adapt themselves to meet the exacting needs of export markets. They will require new techniques and new equipment all of which cannot be found within the country. Further, in several cases, their operations are mostly of assembling nature, in that not all the processes of manufacture are carried out here. The scope for such manufacturers to compete with the more advanced countries is extremely limited. Even such major industries as cement and sugar were meant only for domestic purposes. And they are able to export their products only with some form of sacrifice by the taxpayer. If the country is not to pay a heavy price for earning foreign exchange, as it is now doing in the case of sugar, to mention one instance, heroic decisions and ambitious targets for these industries should be avoided. Care must be taken to ensure that diversion of goods meant for domestic consumption does not lead to higher prices within the country. Failure to do so will defeat the whole object. Even as it is, inflation, combined with heavy taxation on consumption of almost everything and creation of vested interests in several sectors of the economy for political reasons, has undermined the competitive capacity of our industries. It would, of course, be a blessing in disguise, if the urgency

of promoting exports were to help remove the blind spots of the powers-that-be.

The most important solution to the foreign exchange problem lies in increasing the production of food and some of the commercial crops in the country. If, for instance, imports of foodgrains can be reduced by at least half, a saving of no less than Rs. 75 crores can be effected in the foreign exchange requirements. Similarly, if exports of cotton, vegetable oils, etc., can be stepped up through higher domestic production, an infinitely larger amount of foreign exchange can be found than through exports of some of the manufactured goods of modern industries. It would, therefore, pay the country richer dividends if the energy and resources that are proposed to be expended on some dubious export promotion measures were diverted to the sphere of agricultural production.

THE ELEVENTH YEAR

THE eleventh year of India's Independence, which ended last Friday, had more than its share of strains and stresses in the political and economic spheres. The country might, of course, congratulate itself on the fact that international developments, like the latest West Asian crisis, did not lead to a conflict which would have jeopardised India's political and economic security and also on the fact that fissiparous tendencies within the country did not become more menacing than in the recent past. But "co-existence" internally, to which the country has been compelled to adhere by the turn of events in Kerala, is already causing country-wide anxiety, for it is becoming clearer with every passing day that a democratic country must be prepared for complete annihilation of all it holds dear, if it acquiesces in the rule of those who are wedded to extremist political ideology of communism. An entirely different, though less dangerous, development is the emergence of inflationary forces which threaten to disrupt the price structure in the economy, cause damage to the country's export effort and throw the Plan into a state of desrepair. The only silver lining to the economic cloud is that the authorities have shown a certain awareness of the real situation which is reflected in the Government's decision to have another look at the second Plan. It remains to be seen whether the re-appraisal of the Plan, carried out in May last, is sufficiently realistic to enable the country to implement its revised version in which the total outlay is maintained at Rs. 4,800 crores, though it implies some scaling down in physical terms.

Despite the stresses and strains and irrespective of whether one chooses to blame them on a capricious monsoon, or an unwise Government or indisciplined labour, it is gratifying to note that the country's national income has continued to rise. At constant (1948-49) prices, the preliminary estimate of national income for 1956-57 is placed at Rs. 11,010 crores, as compared with Rs. 10,480 crores for 1955-56 and Rs. 9,100 crores for 1951-52, the first year of the first Plan. The rate of increase was 5.1 per cent. in 1956-57, as compared with 1.9 per cent. in 1955-56. The *per capita* national income rose by 3.8 per cent. to Rs. 284.0. Estimates of national income for 1957-58 are not yet available. But, in view of the fact that agricultural output which accounts for 47 per cent. of national income is known to have fallen, it is extremely unlikely that national income for 1957-58 will show any sizable increase, if it records any rise at all.

Indeed, at present, agriculture is—to borrow a term from medical terminology—the septic focus of India's body economic. It is the decline in agricultural production or its failure to expand with the rise in demand that lies at the root of a host of economic problems such as rise in prices and India's inability to improve export earnings. The output of foodgrains in 1957-58, as indicated by provisional estimates, is not expected to reach the level of 1956-57 when it was 68.7 million tons. This explains the rise in the prices of food articles and the current nation-wide agitation for a halt in the rise of food prices. The index number of wholesale prices (Base: 1952-53=100) was 115.0 in July 1958, as compared with 106.0 in the beginning of the year. Although the July level shows only a rise of three points over the August 1957 level (112.0), it must be remembered that there has been an uninterrupted rise in the last six or seven months, the cumulative increase being quite marked. The index number of food articles illustrates even better the general upward trend in prices. It was 118.4 in July 1958, as against 102.5 in January last and 112.1 in August 1957 and 108.5 in September 1957. Although prices have fluctuated since September last, they have on the whole shown a marked tendency to rise, especially since the commencement of 1958. The index numbers of certain representative commodities for June 1958, the latest month for which breakdown data are available, as compared with the index numbers for January 1958 in brackets are: rice 111 (101); wheat 93 (86); *jowar* 100 (103); *bajra* 123 (114); gram 74 (64); other pulses 101 (80); milk 121 (101); groundnut oil 103 (98); sugar 119 (117); *gur* 128 (106) and tea 171 (162). Since prices of several commodities have risen further since June last, it is hardly surprising that many sections of population should have joined the agitation for a curb on price levels. There is no doubt that the agitation would have gained greater momentum if the authorities had not been prompt in adopting stringent measures of selective credit control which have been responsible to some extent for holding in check the increase in prices.

In contrast with agricultural production, industrial output has been somewhat satisfactory, though the position differs from industry to industry and there have been significant declines in certain industries in recent months. The index number of industrial production (Base: 1951=100) which stood at 142.0 in August 1957 moved up to 150.4 in November 1957 but declined to 137.1 in March 1958. India's premier industry, the textile industry, is passing through a critical period. Several units have had to close down, and many units continued to report decline in profits and even losses. Labour unrest, the curbs on imports of raw materials and heavy taxation are among the causes which have led to setback in production and profits. Perhaps, the most disturbing development during the year was the increase in indiscipline amongst workers and the unjustified politically inspired strikes. This naturally serves as a damper to many ardent spirits who were eagerly looking forward to liberal schemes for greater participation of labour in management. On the whole, while many enlightened managements have been prepared to take labour into confidence, the workers and some of their leaders have shown scant regard for democratic principles and the good of the community.

Although it is undeniable that the long-term prospects for industrial enterprises are bright in the sense that they have a large and growing domestic market, the fact remains that there is a crisis in confidence among genuine *enterpreneur* investors, as distinct from the speculators in share markets. This is so, despite the notable support lent by the industrial credit institutions such as the Industrial Finance Corporation and the State Finance Corporations, to which group belongs the Refinance Corporation (for purposes of providing medium-term credit) established a few days ago. It is the loss of confidence generated by the Government's economic policy and high taxation, together with the continuing foreign exchange crisis, that is largely responsible for the inadequate supply of capital to the industrial sector. The Reserve Bank rightly attributed the decline in investible funds to "diminished capacity to save and less willingness to invest." The difficult foreign exchange position has continued to hold up plans for expansion even in many industrial sectors included in the Plan.

In the sphere of taxation, the commendable measures include the replacement of sales tax by excise duty in respect of some articles, the reduction or abolition of export duties, the reliefs granted to Section 23A companies and the increase in development rebate for shipping companies. As against these concessions must be set down the maintenance of personal and corporate taxation at high levels and the enactment of a whole new series of tax laws—the Wealth Tax Act and the Expenditure Tax Act both of which received the President's assent in September last and the Gift Tax Act passed in the current fiscal year. Income-tax continues to make heavy inroads into personal and corporate incomes. Between 1950-51 and 1956-57, the number of assessments has increased from 4·72 million to 5.80 million, the income assessed from Rs. 575 crores to Rs. 936 crores and the tax assessed from Rs. 155 crores to Rs. 217 crores. Individuals and companies account for the major portion of the tax assessed; in 1956-57, they accounted for 40.43 per cent. and 50.09 per cent., respectively. Taxation at present impinges upon classes of persons who alone appreciate the virtues of saving and investment and also upon companies which alone possess the necessary technical and managerial talent for improving and diversifying production. The maintenance of high taxation—apart from the Government's doctrinaire economic policy—is the basic cause of the failure of the country's economy to move forward to higher levels.

CHINA'S ECONOMIC OFFENSIVE

PEACEFUL co-existence of free aid Communist countries is proving a little more difficult in the economic sphere than in the political. Red China's economic offensive in South-East Asian markets illustrates how easily a Communist State can make heavy inroads into the trade established by other countries through honest and painstaking effort. Nearly all free countries are bound to suffer from the high-pressure salesmanship pursued by Red China in South-East Asian countries. India's export trade in cotton textiles has already suffered a setback. In his speech as Chairman of the Textile Export Promotion Council, Mr. Neville N. Wadia revealed that, "while the prices of our exports have fallen by 10 per cent. to 15 per cent. in the last year, China is now underquoting us by as much as another 15 per cent., making it impossible for us to sell in open competition against them." But this is not the only pointer to the shape of economic things to come. Already many countries, notably Japan, have found China a more formidable competitor than they had previously thought.

China's exports to South-East Asia, it is computed, rose from next to nothing in 1949 to $229 million in 1955 and still further to $319 million in 1956; last year, they were somewhat lower at $309.8 million. Imports from China are entering the markets in nearly all South-East Asian countries. In Singapore and Malaya, between 1955 and 1957, total Chinese imports increased from $37.8 million to $52.2 million, in Hong Kong from $157.1 million to $197.9 million, in Indonesia from $9.9 million to $21.3 million and in Burma from $2.3 million to $5.1 million. Most of the goods exported from China are consumer goods, so that they compete effectively with exports from Japan and India.

There are several factors which make it difficult for other countries to counter China's economic offensive. In the first place, no profit motive apparently enters into the deals concluded by China with other countries. No sacrifice is too great for gaining an export market. "Underquoting" is done in so cavalier a fashion that many observers wonder whether there is such a thing as cost considerations in Chinese economy. Secondly, if even underquoting does not help, China is prepared to extend liberal credit terms. It looks as though neither the Government nor its creation, the Bank of China, has any respect for interest rates, creditworthiness of clients or any of those factors which cause endless worry to bankers in the free world. China sold 72,000 yards of textiles and 25,000 tons of rice to Indonesia on a 10-year credit at 2½ per cent. Cambodia has been granted a $25-million credit against which it has received cement, raw silk, rolled steel, cotton cloth and cotton yarn. Under this scheme, China will use a part of the proceeds of the sale for building up factories in Cambodia. Thirdly, China has found in the 13 million Chinese residents in South-East Asia—many of them are the merchant class in the region—loyal supporters of Chinese economic offensive.

Again, a totalitarian regime is under no obligation to explain to its people the losses it may incur on its foreign trade. Often, strategic considerations, such as the need to obtain commodities and defence equipment, induce a totalitarian Government to sell its goods at a sacrifice. Above all, in China, as in all other totalitarian countries, there are no labour laws of the kind which prevails in free countries. Sweated labour is employed on a large scale. Though the wages paid are high in terms of money, they bear no relation whatever to the high cost of living. There is also some forced labour in these countries. Clearly, free countries cannot compete on equal lines with Communist States.

It would, however, be wrong to dub all China's competition as a politically inspired offensive. There are some features in China's economic strength which are above reproach. Its industries have modern equipment. Thus, its textile industry has a relatively larger proportion of automatic looms than India. Again, China is prepared to impose upon itself some self-denial in order to export its goods. It has been willing to export its cloth at a time when its own citizens are to be content with a blue uniform. Despite all these commendable features, it is undeniable that there are elements in the present economic offensive which betray tactics of high-pressure salesmanship and can be traced only to political motives. If this trend persists, it may become necessary for other countries to take up the question at international levels, so that China may be prevented from adopting a policy of uninterrupted dumping.

MORE ON MOBILISING PEOPLE'S GOLD RESERVES

WILL WORLD BANK HELP IN THIS TASK?

WEDNESDAY, 5 P.M.

MARKET GOSSIP

ARSON in Ahmedabad, riots in Jaipur and Baroda, unruly behaviour of students and one-day strike by tramway workers in Calcutta, decision of T.I.S.Co. workers in Jamshedpur to ask for higher dearness allowance, continued disturbances and Communists' threat of civil war in Kerala, bullying tactics and border violations by Pakistan, revival of the demand for a ceiling on all incomes by a section of Congress men—these are some of the disturbing developments in India on the eve of its eleventh independence anniversary. But none of these developments seems to have worried the share markets very much. Their tone on the eve of Independence Day celebrations is actually firm, reflecting robust confidence. They seem to share the view of the Central Government Ministers that, basically, India's economic position is sound. They firmly believe that foreign countries are bound to rescue India from the foreign exchange trouble. They are hoping that, in the next budget, Mr. Morarji Desai will give some more relief in taxation. His remark at the ninth meeting of the Central Advisory Council of Industries held at New Delhi a week ago that he could not give any concessions in income-tax or other taxes in order to stimulate exports and that the Government's need for more revenue remained undiminished has been ignored. The easier money conditions and the gradual fall in the yield on Government securities have helped the markets to sustain their bullish fervour. The decision of Indian Iron to repeat the dividend at Re. 1 per share on the whole of the increased capital for 1957-58, as also the dividend results of T.I.S.Co., has been received with a great degree of satisfaction. The share markets seem to be bent upon taking a rosy view of the future, brushing aside the current difficulties as a passing phase.

* * * *

The subject of mobilising people's gold reserves for meeting, in part, the gap in external resources required for the second Plan was discussed in these columns last week. We propose to resume that discussion, as there are a few more points to be considered.

Should a gold loan, assuming it has to be issued, be so designed as to attract genuine savings only or hidden wealth also? Those who favour only the former do so on the ground that a person who has evaded taxation on part or even the whole of his income will never have the courage to disclose such wealth. There is, of course, a lot of force in this argument, but, if a declaration were to be made by the Government that no questions would be asked, a part at least of the wealth in hiding may be brought to the surface and put to productive use. If the proposed loan were to be on the French model—that is, gold-*cum*-cash loan—even the black market money which is not in the form of gold may find its way into the loan. To the extent it does, the inflationary pressure will be eased, bringing in its wake a fall in the prices of bullion and commodities as well. If no provision for subscriptions in cash is made and if, at the same time, an amnesty is given to those who tender gold against the loan, there is a possibility of black market money seeking its way into the loan through the yellow metal. If this happens, it will lead to a rise in the price of gold which in turn will attract more contraband gold and, consequently, an increase in the indirect dissipation of foreign exchange resources.

If the gold loan has only the modest object of serving as an instrument for collecting small savings held in the form of gold, the result may not be sizable enough to serve effectively the purpose in view. It may be that some among the rich, as well as middle class, people who have invested in gold with the twin object of meeting the social need and protecting their savings against a fall in their purchasing power, may come forward to take advantage of the scheme, for it will bring them some return on their investment and reduce either the risks of loss through theft or the cost of keeping the precious metal in safe custody or of insurance against loss. There must surely be several families having jewellery in excess of their needs and diligent enough to appreciate the advantages of the scheme. But the quantity of gold that can be collected in this way may not be, as already stated, large enough to make any significant contribution to mitigate the foreign exchange difficulty.

In a national emergency such as this and taking a realistic view of the situation, there is no reason why the black market money should not be given a promise of reprieve. It is not necessary to keep the loan open for ever. It can be closed after giving sufficient time for investors to respond. It is true that this will have an adverse psychological effect on the honest people. But their spirits can be buoyed up and a sense of consolation created among them by reducing the present excessive burden of taxation. As the flow of black market money into the exchequer will raise the resources for investment, it should be possible to lighten the tax burden at least to some extent. This will also yield the incidental advantage of stimulating enterprise and gainful economic growth.

Whether a gold loan must at all be issued is a question which can be better decided by the Government than by non-officials. The latter can judge the availability of gold for such investment only from the estimate made by the Reserve Bank. But the Government must by now be having additional information unavailable to others. Under the Wealth Tax Act, the Income-tax Department should have collected information on the wealth held by individuals and institutions. We are given to understand that several rich assessees have declared their wealth, including holdings in jewellery and other precious metals, to the Government. Almost all princes and large moneyed people are reported to have disclosed their wealth, for failure to do so would have provided a ground for the Government to search their premises and other places, including safe deposit vaults in banks. That the Government would not hesitate to do so, if found necessary, was gently hinted at by the former Finance Minister in Parliament. It must be remembered that the penalty for non-compliance with the provisions of the Wealth Tax Act is pretty heavy. The Government can thus get an idea of gold held by rich people subject to wealth tax. This information should help them decide whether or not gold loan could be issued. Incidentally, it could make use of that information for persuading persons known to be holding large amounts of gold to take up a sizable sum of gold loan. It is quite possible that a large number of them will respond favourably to such persuasion.

Another fruitful source of gold supply may be found in temples, *mutts*, etc. Some of the temples are reported to have large stocks of precious metals and stones. Recently, a sizable quantity of gold belonging to one of the temples in Rajasthan was reported to have been sold in the Bombay market. The Government can persuade the trustees of these institutions to accept gold certificates in exchange for their treasure. This is a safer form of protecting the wealth of the temples, *mutts*, etc., which are otherwise exposed to the risk of theft by dacoits. Besides, the temples will also be making an effective contribution to the economic development of India. Their income, too, will rise, as the treasures do not earn any interest.

A suggestion which is worth serious consideration by the authorities is that the help of the World Bank should be sought for attracting the gold held by the people. The World Bank should be requested by the Government of India to guarantee the repayment of the gold loan in gold. Such a guarantee may induce people to respond to the gold loan better than otherwise, as they will feel assured of getting back their gold. Supposing that the duration of the loan is 15 years, the World Bank will have no liability to incur during this period. And it is possible that, during the interval, India will have overcome its foreign exchange difficulty and be in a position to honour the commitment without having to invoke the guarantee of the World Bank. In case this assumption does not turn out to be correct, all that the World Bank will have to do is to give a dollar loan to India, say, for a period of 10 or 15 years from the date on which the proposed gold loan falls due, by which time India should surely be in a position to muster enough foreign exchange to repay the Bank. With the dollars obtained from the Bank, the Government of India can get gold from the U.S. and redeem its loan. Or alternatively, the gold loan may be renewed with the guarantee of the World Bank, in which case only a small percentage of the holders may ask for repayment, a contingency which should be within the capacity of the country to meet. The World Bank may have, of course, to be paid a commission for the guarantee, but the cost is worthwhile.

If the Indian Government succeeds in bringing to the surface gold of the order of Rs. 200 crores in this manner, the dollar commitment will be about $400 million. The World Bank will not have to find this amount right now. Fifteen years hence, when the gold loan of India falls due, it might have to provide only a part of this sum, if the gold loan were to be renewed. Even if it were to be called upon to pay the entire amount, it should not be difficult for it to do so, for it might be in a more affluent position than it is today.

A guarantee on the lines suggested by us will enable the World Bank to have the satisfaction of having helped a nation of 380 million people to mobilise its hoarded wealth and use such wealth for its economic development, which is one of the objectives of the Bank as provided in its charter. Perhaps, the Bank will be able to help several other countries on these lines and thereby improve international liquidity, the inadequacy of which is retarding the growth of world trade. The risk for the World Bank on such a venture is small, provided it exercises the usual caution of seeing to it that a country obtaining this help wisely invests the proceeds of the precious metals obtained from its people. The Government of India, too, loses little by this experiment. Neither its sovereignty nor its prestige is compromised in any way. The World Bank's guarantee is obtained only to inspire greater confidence among those who have kept their savings in gold. On the contrary, the Government of India could show to the rest of the world that it has left no stone unturned for finding the resources required for implementing its plans for economic progress. One of the less known criticisms on India in New York and London is that it has done little to harness the precious metals held by its people. This criticism can be effectively answered if the aforesaid suggestion is implemented.

The suggestion that exports of gold be allowed as a compensatory transaction (*vide* our last issue) has great merit in it. But its success does not seem to be fully assured. The assumption that large quantities of gold will be disgorged at a price is doubtful. The India of today is not comparable with the India of 1933 to 1939. Then it was a period of Great Depression and people had to sell their savings in gold for meeting their day-to-day needs. Agricultural incomes were low and credit was not easily available, as farmers had already become steeped in debt. They had, therefore, to sell whatever little gold they had even to carry on farming. Millions of middle class people had to part with their gold, in order to educate their children, marry their daughters, etc. Such conditions do not exist at present. There are no unsaleable agricultural surpluses and all those farmers who have land and can till it are getting a good price for their produce. There is, of course, a lot of unemployment, but this is confined mainly to those who have hardly any gold to sell. All this does not mean that there is no distress selling of gold even now. There has always been some distress selling by those whose economic fortunes suffer an adverse turn. There may also be some shrewd investors in gold who will have the prudence to cash their investments when they get a good profit. Accordingly, some gold will certainly be forthcoming, but it is doubtful whether it will be large enough to serve the purpose which everyone has in view now.

Flotation of gold loan on the French model, preferably with the World Bank's guarantee, therefore, seems to be a better proposition, as compared with allowing exports of gold on the principle of compensatory transaction.

Such a step, however, must be taken in conjunction with, if not preceded by, two more steps. The first step should aim at making gold hoarding a less attractive proposition by making other forms of investment such as shares, securities and housing more attractive. In this connection, the following extract from the latest *Share Market Report* of Messrs. Place, Siddons and Gough, Calcutta, deserves to be brought to the notice of the Government and the public alike:

> "The steep depreciation in share prices in recent years has not made the solution of this problem (of mobilising hoarded gold) any easier. Those who chose gold as a store of value in preference to income-yielding investments have reason to congratulate themselves on their astuteness in selecting an appreciating asset, which yielded them capital gains at a time when more modern forms of investment brought disastrous capital losses to their holders. Responsibility for this rests on the high level of corporate and personal taxation in this country which has penalised productive investment and encouraged hoarding. It will be necessary to undo this evil before people can be persuaded that it would be a good idea to surrender their gold to the Government in exchange for bonds or to sell their hoarded gold and invest the proceeds in industrial shares."

The second step should be adoption of some intelligent measures for effectively preventing smuggling of gold. There is a possibility of gold loan resulting in higher market prices for gold. It must be remembered that, on the basis of parity with commodity prices before the war, gold today is undervalued to the tune of Rs. 45 to Rs. 50 per tola. So, if prices of gold go up, it should not surprise anyone. And, when it does, smuggling of the metal will tend to increase and cause a drain on the foreign exchange resources of the country. It has been suggested by some that one of the effective ways of deterring smugglers is to offer an attractive prize to the carriers who bring the contraband gold to India on behalf of their employers. Another suggestion is that the authorities should stop purchases of rupee notes against sterling payments. By doing so, they will make it extremely difficult for smugglers to repatriate the rupee proceeds of their gold sales in the country which they now easily do by smuggling the rupee notes out of the country and then presenting them through banks in their country. The sterling which they get through such conversion is used again for replenishing their stocks of gold used for smuggling.

If the flow of contraband gold into India were to be more effectively checked than now, the price of gold in the internal market might move up to levels which are in parity with commodity prices. But such high levels may make the yellow metal

SHARE MARKETS STEADY

STEELS AND SUGARS BUOYANT

(From Our Own Correspondents)

BOMBAY, 13*th August*

THE highlight of the week's trading on the Stock Exchange was the sharp rise in Indian Irons on hectic speculative buying, particularly by Calcutta operators, during the last three days. The keen buying was induced by expectations that the Company would be able to maintain the dividend for the year ended 31st March 1958 on the increased capital doubled during the year by a scrip-for-scrip new issue. These anticipations proved correct when the Directors announced yesterday their decision to recommend a dividend of 10 per cent. on the higher capital. The announcement gave a fresh base to the bullish fervour today and pushed up the price of the scrip further. There were, however, some in Bombay who had gone "short" in this scrip on doubts about the ability of the Company to repeat the dividend on the doubled capital. Following the announcement of the dividend, therefore, the "shorts" covered their positions. The old expectation of a bonus issue from out of the share premium account gained fresh strength after the dividend announcement. This, coupled with renewed support to Tata Steels and a few other first class counters, kept the market sentiment steady, in contrast to the quiet tone noted in the previous week. There were strong expectations that the retention prices for steel would be raised in the near future. On the whole, the sentiment about steel shares is bullish even at the time of writing.

To trace the movements during the week. Tata Ordinaries advanced from Rs. 167 to Rs. 170.50 before closing at Rs. 169.25. The new shares gained no less than Rs. 2 to Rs. 166.50. Indian Irons shaded off early in the week from Rs. 23.92 to Rs. 23.80, but gained ground to touch a high of Rs. 24.80 today. The closing was done at Rs. 24.64.

The textile section did not follow the rise in steels. Bombay Dyeings, after a decline from Rs. 58.70 to Rs. 58.30, crept up to Rs. 59.70, but closed lower again at Rs. 59.20. Centurys were featureless, moving within a narrow range between Rs 48.50 and Rs. 441 and closed at Rs. 445, with no change over the week. Kohinoors were erratic, moving between Rs. 281.50 and Rs. 277, before closing at Rs. 278.50. Central Indias were a shade higher at Rs. 101.50. Edward Textiles gained Rs. 2.50 to Rs. 262.50 and Finlays Rs. 3 to Rs. 288. Indu Ordinaries shed 12 nP to Rs. 10, while Indore Malwas were dull at Rs. 108.25. New Greats were unchanged at Rs. 215. While Podars dropped Rs. 5 to Rs. 135, Shree Niwas Cottons gathered Rs. 2 to Rs. 163. Simplex were stagnant at Rs. 175. Standards were done Rs. 2 higher at Rs. 430. Svadeshis crossed the Rs. 200-mark and touched Rs. 201.25. At the close, they were placed lower at Rs. 199. Swans gained Re. 1.25 to Rs. 361.25, while Tata Mills lost a rupee to Rs. 38. Ahmedabad Advances declined by Rs. 2.50 to Rs. 176.25 and Dawns by Rs. 10.20 to Rs. 85, while Phoenix Mills were done Rs. 3.75 higher at Rs. 128.75

Bank shares fetched higher prices, while Barodas were unchanged over the week at Rs. 122.50, Centrals gained 50 nP to Rs. 57.50 and their new shares Rs. 2.30 to Rs. 60.30. Bank of Indias were done Re. 1.50 higher at Rs. 132.50 and Jaipurs 25 nP better at Rs. 36.75. Punjab Nationals gained Re. 1.50 to Rs. 59.50 and United Commercials Re. 1 to Rs. 62.50.

In the insurance section, New Indias were marked up by a rupee to Rs. 46 and New Greats were done Re. 1.76 higher at Rs. 21.52, following the increase in dividend from Re. 1.50 to Rs. 2 per share. Vulcans gathered strength from Rs. 18.16 to Rs. 18.60.

In the electricity group, Ahmedabad Electrics were a fraction lower at Rs. 95.60, while Bombay Suburbans picked up 25 nP to Rs. 108.50. Surat Electrics gained 75 nP to Rs. 110. Tata Hydros were higher by 50 nP at Rs. 124.50. Tata Powers changed hands Rs. 7.50 higher at Rs. 1,240 and Andhra Valleys were marked up from Rs. 1,188.75 to Rs. 1,196.25.

Sugar shares were in the forefront, Belapurs jumping up from Rs. 262 to Rs. 270. Bhopals gained 92 nP to Rs. 23.64 and Phaltans Rs. 5.25 to Rs. 159.25. Walchandnagars were higher by 75 nP at Rs 283.75. In the cement group, Associated Cements moved up from Rs. 155.25 to Rs. 157, but closed lower at Rs. 156. Their new shares put on Re. 1 to Rs. 149.75. Digvijay Cements provided a feature with a rise of Rs. 2.25 to Rs. 156.50. Orissa Cements were up by 16 nP at Rs. 14.32 and Jaipur Udyogs by 12 nP at Rs. 14.60. India Cements were, however, marked down by 75 nP to Rs. 29.25. Among engineering and mining shares, Alcock Ashdowns rallied from Rs. 247.50 to Rs. 257.50. Tata Locomotives were erratic, moving between Rs. 181.50 and Rs. 186, due to uncertainty about the dividend, and closed at Rs. 183. Premier Constructions advanced by Rs. 3 to Rs. 198.50. Larsen and Toubros were done Re. 1.04 higher at Rs. 18.80 and Texmacos gained 40 nP to Rs. 22.12. Voltas rose by a rupee to Rs 128. Shivrajpurs provided another feature with a sharp rise of Rs. 4.50 to Rs. 96.50. Indian Coppers were taken 16 nP higher at Rs. 4.24. B.B. Petrols gained 10 nP to Rs. 2.26.

In the shipping group, Scindias were keenly sought and rose from Rs 49.60 to Rs. 20.24. The closing was done at Rs. 20. Great Easterns were a shade quiet at Rs. 26.20. Their new shares lost 28 nP to Rs. 17.28, while Bharat Lines advanced by Re. 1.68 to Re. 13. Among automobiles, Hindustan Motors were unchanged at Rs. 7.60, while Premier Automobiles were a fraction lower at Rs. 87.20.

Among miscellaneous industrials, Bombay Burmahs (old) moved erratically upward and finished with a gain of Rs. 4.50 at Rs. 569.50. National Rayons were dull, closing at Rs. 223.50, as against Rs. 229 a week ago. Gwalior Rayons changed hands 12 nP higher at Rs. 14.40. Tata Chemicals were up by 20 nP at Rs. 16.23, while Tata Oils had business 50 nP lower at Rs. 41. Wimcos were a shade quiet at Rs. 173.

* * * *

Madras Stock Exchange

MADRAS, 12*th August*

Barring the planting section which was fairly active, the Madras Stock Exchange presented a dull appearance during the week under review. Tea shares met with good buying on hopes of higher dividend. Coffee shares received investment support and prices hardened further. Rubber shares were also well favoured. Trading in textile shares, however, continued to be subdued, thanks to continued poor yarn and cloth offtake. Sugars and breweries were quiet. In the miscellaneous section, prices tended to recede in thin dealings.

Among tea shares, Chandramalais firmed up by 50 nP to Rs. 3.80. Parksides rallied 35 nP to Rs. 19.85. Peermades strengthened by 27 nP to Rs. 19.87. Coorgs found buyers 20 nP higher at 11.50. Periakaramalais put on 7 nP to Rs. 4.12. Devasholas were firm at Rs. 19.87. Nilgiris at Rs. 8.57, Talayars at Rs. 9.05 and Waterfalls at Rs. 3.40. Malabar Agriculturals, however, encounted selling and shed 25 nP to Rs. 8.50. Kil Kotagiris eased by 12 nP to Rs. 5.88. In the coffee group, Coffee Lands spurted by 65 nP to Rs. 32.40. Shevroys advanced by 60 nP to Rs. 2.80. Ouchterlonys were better by 3 nP at Rs. 5.49. Among rubber shares, Malankaras put on 38 nP to Rs. 19.00. Puthuthottams were marked up by 35 nP to Rs. 3.55. Kailas found buyers 10 nP higher at Rs. 5.10. Rajagiris gained 3 nP to Rs. 16.90. Highlands were fully maintained at Rs. 12.00 and Vaikundams at Rs. 21.25. Cochin-Malabars, however, declined by 7 nP to Rs. 5.18 and Tirumbadis by 2 nP to Re. 1.73.

In the textile section, Bangalore Woollens evoked good support, thanks to the announcement of an interim dividend of 4 per cent. on the ordinary shares for the year ended 31st March 1958. The quotation improved from Rs. 164 to Rs. 165. Buckinghams advanced by Rs. 3 to Rs. 178. Radhakrishnas hardened by Rs. 2 to Rs. 142.00. Coimbatore Spinnings put on 75 nP to Rs. 53.75. Pankajas gathered 50 nP to Rs. 42.00. Coimbatore Cottons were fully steady at Rs. 145.00, as also Dhanalakshmis at Rs. 172.00, Kasturis at Rs. 24.75 and Rajendras at Rs. 72.50. Metturs were done at Rs. 338.00, Mysore Silk at Re. 1.30 and Premiers at Rs. 141. Rajalakshmis, Ranga Vilas and Vasanthas were unchanged at Rs. 73.00, Rs. 63 and Rs. 231.50 respectively. Lakshmis, however, lost Re. 1 to Rs 102.00. Maduras eased by 50 nP to Rs. 33.50. Janardanas shed a like amount to Rs. 75.50. Cambodias softened by 25 nP to Rs. 8.75 and Loyals by 35 nP to Rs. 35.35.

The sugar section was quiet. Andhra Sugars were neglected at Rs. 17.00 and Travancores at Rs. 10.25. Deccans dropped 5 nP to Rs. 8.60. E.I.D., however, put on 10 nP to Rs. 28.35.

In the miscellaneous section, several shares tended to recede. India Cements dropped 50 nP to Rs. 29.25. Mysore Papers declined by 22 nP to Rs. 17.50. F.A.C.Ts shed 15 nP to Rs. 6.40. Spencers were dull at Rs. 18.25, Aluminium Industries at Rs. 16.25 and Mysore Chemicals and Fertilisers at Rs. 7.50. Rallis, on the other hand, spurted by Rs. 2.75 to Rs. 42.00 on special support. Indian Steel Rollings found buyers 20 nP higher at Rs. 13.75 and Andhra Cements 5 nP higher at Rs. 12.15. Parrys Confectioneries were a shade better at Rs. 3.40, as against Rs. 3.38 last week-end.

I.I.S.CO. DIVIDEND

The Board of Directors of the Indian Iron and Steel Company, Ltd., at a meeting held in Calcutta on the 12th inst., declared an interim dividend of Re. 1 for each share on the ordinary share capital for the year ended 31st March 1958, being at the rate of 10 per cent. per annum without deduction of income-tax payable by the Company. Announcing the dividend in Press note, the Managing Directors of the Company stated: "This action has been taken in order that the shareholders shall not be kept waiting for their dividend in view of the closing of the accounts for the year being delayed pending notification by the Government of the revised sales retention prices of steel."

On the basis of the dividend now announced and at the current market value of Rs. 24.64 *cum-div.*, the yield works out to a little over 4 per cent., as against 5.1 per cent. on the shares of T.I.S.Co. Some may wonder why the yield on I.I.S.Co. should be lower by as much as one per cent. The explanation lies in the fact that there is a general expectation in market circles of a bonus issue by the I.I.S.Co. Their belief is that the Company will capitalise the share premium reserve account in the not distant future. It will be recalled that the T.I.S.Co. has just issued bonus shares out of the share premium account in the ratio of one share for every five shares and that its shares came to be quoted *ex-right* from 1st July 1958. Although the T.I.S.Co. bonus issue was in commemoration of its Golden Jubilee, market circles feel that the Government cannot, in fairness to equity, refuse the request of I.I.S.Co. to capitalise its share premium account, though it may not have any jubilee to celebrate.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 13th August 1958.

NEWS IN BRIEF

THE Government of India has decided to allow exports of *vanaspati* (hydrogenated vegetable oil) without any overall ceiling upto the end of March 1959.

It is reported that the Narsinggirji Mills, Sholapur, run by the Government of Bombay as an unemployment relief scheme, has been making a profit of Rs. 60,000 per month since April 1958.

India has been included as one of the 18 new members of the United Nations Commission on International Commodity Trade. A meeting of the Commission is expected to be held in March 1959.

The Central Warehousing Corporation is understood to have finalised arrangements for the setting up of a warehouse at Kolhapur, Bombay. The proposed warehouse will consist of godowns for storage of *gur*, groundnut and essential commodities.

The post-graduate Agricultural Research Institute set up at Coimbatore was inaugurated by President Dr. Rajendra Prasad on the 10th inst. Established at a cost of Rs. 32 lakhs, this is the first regional institute, catering to students from the States of Mysore, Andhra, Kerala and Madras.

Replying to a question in the Lok Sabha this week, the Union Minister for Commerce said that the Jute Commissioner had, at the instance of the Government of India, undertaken a study of the jute industry particularly in view of the losses reported to have been sustained by some of the units. No statutory enquiry into the working of the jute mills had been ordered.

A new process for pre-treatment of cotton-seed oil has been evolved by Prof. G. R. Sheshadri of the Delhi University and his collaborators. The adoption of the process, it is claimed, will remove the pigments easily and yield a light coloured oil without any reversion of colour. This oil can be used without further treatment for manufacturing *vanaspati*. Over and above these, the soap stock obtained by this process is said to be of lighter colour which can easily be processed to yield soap.

The Kerala Government has decided to set up a research unit called the Bureau of Economic Studies at Trivandrum, in pursuance of the recommendation made by the Administrative Reforms Committee. This unit is expected to undertake expert studies on taxation proposals, effect of development schemes on the standard of living of different classes of people, general economic trends in India and other allied problems. Dr. A. Rudra of the Indian Statistical Institute has been appointed Director of the Bureau, which will be attached to the Planning and Development Department of the State Secretariat.

The total gross sea, land and air customs revenue collected in the Indian Union during the month of March 1958 aggregated Rs. 13.08 crores, as against Rs. 17.67 crores in the corresponding month of the previous year. The grand total of gross customs and Union excise revenue realised during the year ended March 1958 was Rs. 454.08 crores as compared with Rs. 366.13 crores in the previous year (1956-57). Of this amount, import duties accounted for Rs. 149.77 crores, as against Rs. 143.18 crores, export duties for Rs. 24.32 crores, as against Rs. 30.07 crores, land customs and miscellaneous for Rs. 5.09 crores, as against Rs. 3.79 crores and Union excise duties for Rs. 272.88 crores, as against Rs. 189.09 crores. The air customs collected during the year 1957-58 amounted to Rs. 2.02 crores.

The Central Glass and Ceramic Research Institute, New Delhi, has worked out a patent for utilising mica which will result in foreign exchange saving to the tune of Rs. 20 lakhs per annum. The patent is a commercial process by which waste mica can be used for insulation purposes. While 90 per cent. of the output of mica from Indian mines goes to waste in the process of mining and splicing, the country imports every year Rs. 20 lakhs worth of vermiculite for insulation in factories, boilers and studios. The new method as already led to the setting up of a factory in Rajasthan for the manufacture of mica bricks. With a production capacity of 2,500 bricks per day, this factory is expected to double the capacity in a year's time, thereby reducing substantially the import of heat-insulating material. The heat-insulating capacity of these mica bricks is very high. The use of these bricks reduces the loss of heat in industrial furnaces to such an extent that there is a resultant saving of 30 to 40 per cent. in costs on fuel.

From Abroad

The U.S. House of Representatives has voted for a permanent increase of $10,000 million in the nation's debt limit *plus* a temporary rise of $3,000 million. This will bring the permanent ceiling to $285,000 million.

The exports of motor vehicles from Italy have gone up to 85,559 during the first half of this year, which represents a 48.8 per cent. increase as compared with the first half of last year. Total production also increased during the half-year by 21.6 per cent. to 211,109.

The rubber manufacturers in the U.S. have cut the price of GR-S (synthetic) rubber from 24.10 cents to 23.25 cents per pound, free alongside New Orleans. This move is a sequel to the need for meeting increased competition from Canada, following the recent price cut by the Polymer Corporation of Canada.

The U.S. Senate Foreign Relations Committee approved, on the 7th inst., an agreement with Britain to avoid double taxation on royalties and similar payments. As a result of the agreement, payment on licences for use of patents and copyrights will not be taxable in both countries in future.

A Bill incorporating an important amendment to the Government tax proposals has been introduced in the New Zealand Parliament. The amendment seeks to permit companies to retain 60 per cent. of profits before imposition of 7*s.* in the £ retention tax. The previous limit of 50 per cent. had been strongly opposed by the commercial community.

A Bill seeking to extend the U.S. Reciprocal Trade Agreement Act by another four years has been passed by the House of Representatives. The Bill authorises the President to cut tariffs by 20 per cent. until June 1962 and by a further 20 per cent. until June 1966. The maximum reduction that can be effected in a year, however, is 10 per cent. only.

Unemployment in West Germany was down by 45,200 to 356,000 during the month of July, the lowest figure since the currency reforms in 1948. It is now well below the corresponding British figure. The number of short-time workers fell to 53,000, while that of vacancies rose by 10,000 to 256,900. Unemployment now affects only 1.8 per cent. of the total West German labour force of well over 19 million.

The prices of petroleum products have been raised in the U.K. with effect from the 8th inst. The increase effected is ¼*d.* per gallon for diesel fuel (*Derv*), burning oil and gas oil and ½*d.* per gallon for aviation turbine fuel. It is estimated that the increase in (*Derv*) prices will cost London Transport about £66,000 a year. Further, all the companies, except E.S.S.O., have enhanced the prices of their standard grade petrol by ½*d.* a gallon.

The number of unemployed in the U.S. during July 1958 was lower by 143,000 at 5,294,000, as compared with the previous month. Normally, the month of July registers a bigger drop in unemployment. The unemployed in July formed 7.3 per cent. of the total labour force, as against 6.8 per cent. in the previous month and 7.5 per cent. in April, when unemployment was at its peak. The number of employed persons rose by 198,000 to 65,179,000 during the month under review.

The number of persons unemployed in the U.K. during July was lower at 412,000, as against 429,000 in the previous month. The decline, influenced by seasonal factors, is said to be normal for this period of the year. There was a slight increase in the number of unfilled vacancies, the figure for July being 215,000. The number of those working short time fell by 29,000 to 188,000. The official figures have dispelled the fears raised by an earlier estimate of the Trade Union Congress that the unemployment figure was approaching the 500,000-mark.

PERSONAL

MR. Syed Hussein Jamil has been appointed Ambassador Extraordinary and Plenipotentiary of Iraq to India *vice* Mr. Mohammed Salim al-Radi.

Mr. T. R. Parasuraman, till recently Deputy Secretary to the Union Transport Minister, has assumed charge as General Manager of the Bombay Port Trust.

Mr. William T. Turner, U.S. Consul-General in Bombay, left on home leave last week. During his absence, Mr. Leslie C. Tihany will act as Principal Officer at the Consulate.

The Shah of Persia will pay a State visit to Britain during the first week of May next. He will be the guest of the Queen and the Duke of Edinburgh at Buckingham Palace.

Mr. Takhtmal Jain, Minister for Industries and Commerce, Madhya Pradesh, has been appointed General Secretary of the All-India Congress Committee in the place of Mr. Shriman Narayan who has joined the Planning Commission as a member.

Viscount Monckton of Brenchley, Chairman of the Midland Bank, London, has been appointed Chairman of the Iraq Petroleum Company and its associated companies in place of Admiral of the Fleet Sir John Henry Dacres Cunningham, who retired on 30th June 1958.

Dr. B. Sundara Ram Rao, Head of the Geophysics Department of Andhra University, has been deputed by the U.N.E.S.C.O. to organise post-graduate and research courses in applied geophysics in the Rangoon University under the Technical Assistance Programme.

According to Press reports, the Government of Iraq is minting a new currency which will gradually replace money now in circulation. Emergency restrictions on bank dealings will be lifted within the next few weeks. The ban on drawing of balances, however, will continue for sometime. The Government has under consideration a scheme to set up potash industry, which is expected to yield ultimately an income almost equal to that obtained from oil, as well as new tax measures to reduce inequalities in income and to raise the standard of living of the masses.

The U.S. aluminium industry has urged the Government to ban import of aluminium into the country in order to withstand competition from the Communist bloc, which, it is feared, will jeopardise the healthy development of world markets. It is pointed out that nearly 30 per cent. of the U.S. primary aluminium producing capacity is remaining idle, owing to the influx of metal from the Communist bloc at artificially low prices. The spokesmen for the industry are also reported to have discussed with the Government officials a programme envisaging international agreements to channel surplus aluminium to the less developed areas of the world, instead of to the U.S.

ROLE OF MANAGEMENT

INDIA faces the paradox of a management that is willing to become more and more enlightened and a group of labour unions which are unwilling to make a similar effort. It is needless to say that an enlightened management and unenlightened labour ill go together. Some day, both sides of industry have to develop equal capacity to appreciate their social responsibility. The fact is that, at present, managements in this country are looking further ahead than labour. Thus, while the "management" movement has made rapid strides, there is unfortunately much deterioration in labour ranks which is reflected in unjustified strikes and indulgence in violence. All this must lead to some frustration in the minds of enlightened managements, especially when they see that their good work wins so little recognition at the hands of its employees. What should a liberal and far-sighted management do in such a situation? Answering this question, Mr. M. R. Masani, M.P., in the course of a recent lecture at the Calcutta Rotary Club, urged managements to adopt a friendly but firm attitude towards trade unions. While they should be prepared to deal with stable, representative and democratic trade unions, they should avoid appeasement. Management's duty, as he rightly pointed out, is to manage and any surrender of managerial functions is bad for management and, in the long run, bad for the growth of sound trade unions.

Mr. Masani felt that there were three tasks which Indian industry had to undertake. In the first place, it should not let its case go by default but have confidence in the way of life for which it stood. In this connection, he asked why there was not in India, as in Japan, W. Germany, Britain or the U.S., a strong liberal party representing in political life the aspirations of enlightened business people. Perhaps the reason is to be found in the fact that Indian business, having for justifiable reasons, aligned itself with the Congress in the days of its struggle for political independence, had little opportunity to develop a leadership of its own. Now that the Congress has moved too far to the left, Indian business finds itself left high and dry. With few friends and many enemies, its case nearly always goes by default. It remains to be seen whether the democratic forces, with which the business community has necessarily to align itself, are sufficiently strong to throw up a new leadership, capable of defending and promoting the "free enterprise" way of life. It is of course, never too late to make a beginning in this direction. Meanwhile, it is necessary for Indian business to address itself to the other two immediate tasks to which Mr. Masani referred. It must put its house in order and win the loyalty of its managers through management training and provision of opportunities for managers to find pride in doing a good professional job.

ADVICE TO TAX COLLECTORS

Tax evasion is as old as the introduction of tax system itself. The loss of income-tax revenue to the exchequer as a result of evasion runs into several crores of rupees every year. The tendency to evade payment of tax, though it reflects human nature greatly, must be attributed in many cases either to the ignorance of people to understand the complicated tax laws or to fears of undue harassment by the departmental officials. If, therefore, tax evasion is to be reduced, if not eradicated altogether, it is imperative that the administration of tax laws must be simplified and public relations improved. This aspect was well brought out by Mr. Morarji Desai, Union Minister for Finance, when he addressed the annual meeting of Commissioners of Income-tax and Directors of Income-tax Inspection from all over India held at New Delhi last week-end.

The officials of the Department of Revenue entrusted with the administration of income-tax, wealth tax, expenditure tax, gifts tax and estate duty should, Mr. Morarji Desai declared, show consideration for the feelings of the people with whom they are dealing. He wanted them to deal with people, who would not part with money, in such a way that no grievance was left in their minds. This will be possible only if full consideration is given to the assessees' point of view and human consideration is shown in the application of the law, without putting a rigid interpretation on it. "After all," to quote him, "it must not be forgotten that laws are made for the convenience of man and society. Therefore, you (officials) should have the spirit of service as the basic principle in administering these laws."

The scheme of direct taxation evolved by the Government of India, as readers are aware, is an integrated one, with comprehensive coverage. The scheme is expected to yield during the current financial year a revenue of Rs. 241 crores which represents as much as 30 per cent. of the aggregate revenue receipts of the Union Government. When the assessees contribute so largely to the exchequer, they have a right to expect from the tax-collecting authorities courtesy and politeness. The special committee appointed by the Central Government to go into the question of administration and procedure of the Income-tax Department (Chairman: Mr. Mahavir Tyagi) must bear this in mind and lay down a code of conduct for observance by all those who are in charge of income-tax administration, so that much of the hardship and inconvenience now being caused to assessees is avoided.

INVESTMENT OF PROVIDENT FUNDS

Elsewhere in this issue is published a review of the progress of the Employees' Provident Funds Scheme since its inception in November 1952 under an Act bearing that name. As noted there, the total number of beneficiaries under the compulsory contributory provident fund scheme on 31st December 1957, including 480,000 subscribers in the tea estates in Assam who are separately covered and 380,000 under the Coal Mines Provident Funds Act, was about 3.23 million. The Government of India intends to extend the scheme to other industries and also to commercial establishments such as banks, insurance companies, hotels, studios, transport companies and general trading concerns.

As it is proposed to widen the coverage of the scheme which will bring within its fold at least another 200,000 employees by the end of the second Plan, the Government would do well to re-examine some of the provisions of the Employees' Provident Funds Act, especially those relating to the investment of provident funds, which have worked to the detriment of the beneficiaries of the scheme. At present, the Act does not permit the money collected from contributors to be invested in securities other than Central Government loans. The latter, as is common knowledge, gives a lower return than other Gilt-edged securities such as State Government securities and Municipal, Port and Improvement Trust securities. For instance, the yield, (redemption) on the 3 per cent. Government of India Loan 1959-61 issued in March 1945, calculated on the basis of the closing price on 8th August on the Bombay Stock Exchange, works out to Rs. 3.16 per cent., whereas that on the 3 per cent. Bombay Government Loan 1960 comes to Rs. 3.80. Moreover, interest on State Government securities is higher than on Government of India loans. Recently, ten State Governments issued loans carrying interest at 4½ per cent. for 12 years, whereas the Centre gave 3¾ per cent. for 10 years and 4 per cent. for 15 years. The yield on the 4½ per cent. 1970 loan of Madras, for instance, is 4.29 per cent., whereas that on the 3¾ per cent. 1968 loan of the Centre is only 3.89 per cent.

There does not appear to be any valid justification for limiting the investments of provident funds brought under the Central Government scheme to only Government of India securities. It cannot obviously be the consideration of greater security for the funds, for nobody will seriously contend that the State Governments are less credit-worthy and therefore investments in their obligations any the less secure than those in Central Government loans. Thus, the beneficiaries of the scheme stand to gain nothing from the point of view of security of investment. On the contrary, they are made to suffer, for no fault of theirs, a loss in income, because of the statutory stipulation to invest the funds only in Central Government securities giving less return and lower interest. The class of employees who suffer from this artificial distinction is not one which can afford to do so, considering that it is composed of industrial workers and salaried employees most of whom have an income of Rs. 500 and below. Those provident funds which are not brought under this special Act, it may be noted, do not suffer from this disability. There is no reason whatever why this discrimination should be made between two sets of workers. We wonder whether such discrimination is permissible under the Constitution.

Further, provident funds are not different from trust money. The laws governing the investment of trust money under the Indian Trusts Act, 1882 as amended by the Indian Trusts Amendment Acts of 1908 and 1926, are more liberal, in that they permit investment of trust money not only in the securities of Municipal bodies, Port Trusts or City Improvement Trusts but also on a first mortgage of immovable property situated in any part of the territories to which the Indian Trust Act extends. If the Government considers it not advisable to go as far as this, it should at least consider the question of making suitable amendments to the law, so that the provident funds under the control of the Central Government could invest their resources in the securities of State Governments, Municipal Corporations and Port Trusts also.

CO-OPERATIVE MOVEMENT

Although the latest review of the Co-operative Movement brought out by the Agricultural Credit Department of the Reserve Bank relates to a period which is more than two years old—the publication covers the two years from 1st July 1954 to 30th June 1956—it nevertheless gives a clear indication of the definite progress made in the sphere in recent years. The utility of the *Review* would surely have been more, if it had been published much earlier. The delay is somewhat ununderstandable, considering that the Agricultural Credit Department has been in existence for many years and gets all reports from the Registrars of Co-operative Societies in different States. It is to be hoped that this delay will be avoided in future, so that the *Review* will, by its freshness, be found more interesting and useful.

The most striking feature revealed by the *Review* is the dispassionate way in which the Department has assessed the progress of Co-operative Movement, a rather rare phenomenon not generally found even in semi-official documents. Thus, the *Review* has not merely claimed success for the Movement but also candidly admitted the lapses in certain sectors such as housing, cottage industries and land mortgage banking, as well as the continued deterioration of consumers' co-operation. Viewing the Movement as a whole, however, the *Review* expresses its confidence that the Movement has considerable vitality and, with the active implementation of the second Five-year Plan, the pace of its progress will be considerably quickened and it can soon hope to attain a place of importance among the co-operative movements of the world. In support of this view, the *Review* observes:

"... far reaching developments have followed the publication of its report of the Rural Credit Survey Committee and the acceptance of the integrated scheme of rural credit recommended by the Committee as the basis of future policy. During the period under review, broad principles on which the development of rural credit should be based have been agreed upon. Concrete plans have been drawn up and the necessary financial provision has been made. The practical problems which are likely to arise in the implementation of these programmes, have been discussed in detail and solutions have been formulated. Certain institutions such as the State Bank of India and the National Co-operative Development and Warehousing Board, as also certain National Funds such as the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund which are strategically situated in the integrated scheme of rural credit, have been brought into being. The scheme has been worked out in certain selected areas on a pilot basis and useful experience gained for the future implementation of the co-operative development plans. Arrangements have also been planned, and in several cases made, for the training of co-operative personnel on a larger scale. The stage has thus been set, as at the end of the period under review, for the Co-operative Movement to advance to a higher level of activity and a greater measure of success during the period of the second Five-year Plan."

While one would wish that the aforesaid hope will be fulfilled, it must be stressed that the Co-operative Movement is bound to be a failure if it continues to be imposed from above through direct Government participation and interference instead of being allowed to grow from within and from the bottom upward. It was only recently—in April 1958, to be precise—that the All-India Co-operative Congress drew pointed attention to the growing inroads made by the State Governments into the independent working of co-operative institutions and urged them to give up immediately their practice of placing officials at the head of institutions.

Be that as it may, the two years ended June 1956 witnessed a significant expansion in Co-operative Movement as compared with the preceding period 1952-54. The number of all societies rose by 41,000, membership (of primary societies) by 2.4 million and total working capital by Rs. 117 crores, the corresponding increases in 1952-54 being 13,000, 1.4 million and Rs. 46 crores, respectively. The actual figures relating to these items for the year ended June 1956, as compared with the previous five years, are given below:

End of June	No. of societies (in thousands)	Working capital (Rs. crores)	Membership of primary societies (in millions)
1951	181	276	13.7
1952	186	306	13.8
1953	189	327	14.3
1954	199	352	15.2
1955	219	391	16.0
1956	240	469	17.6

The foregoing table shows that, during the two years 1954-56, the Co-operative Movement covered within its fold an increasing section of the population and handled larger funds than in previous years. A notable progress, according to the *Review*, was in respect of agricultural credit societies. Not only did the number of these societies rise from 135,000 in 1953-54 to 168,000 in 1955-56, but the volume of loans advanced also went up from Rs. 29.64 crores to as much as Rs. 49.62 crores. The financial position of co-operative financing agencies strengthened further, thanks to higher level of operations, contributions to share capital from constituent societies and State partnership in certain cases. The owned funds of Central and State co-operative banks improved from Rs. 11.81 crores and Rs. 5.61 crores in 1953-54 to Rs. 15.15 crores and Rs. 7.65 crores, respectively, in 1955-56. Even as regards the disquieting feature of large overdues, the period under review witnessed some improvement; between 1953-54 and 1955-56, the proportion of overdues to the total outstanding loans granted by agricultural co-operative societies declined from 29 per cent. to 25 per cent.

There were, as already stated, certain sectors of the Co-operative Movement where experience during the period 1954-56 was not happy. Co-operative housing and co-operative organisation of cottage industries other than handloom weaving, it is stated, are two instances the performance of which has fallen short of expectations. The expansion of co-operative land mortgage banking has been slow in relation to requirements, especially when account is taken of the urgency and importance of supplying long-term agricultural credit to the countryside. Even the little progress achieved so far is largely restricted to a few States. The most depressing feature is the continued deterioration of consumers' co-operation in the country. The aggregate sales of primary consumers' stores during 1955-56 amounted to Rs. 14.17 crores (the number of societies being 6,241), as against Rs. 32.04 crores (8,251) in 1953-54 and Rs. 83.75 crores (9,579) in 1951-52.

An idea of the overall progress made by the different kinds of co-operative institutions during 1955-56, as compared with 1954-55, can be had from the following table:

	Number of institutions		Advances given during the year (Rs. crores)	
	1955-56	1954-55	1955-56	1954-55
State co-operative banks ...	24	23	67.86	50.24
Central co-operative banks ...	478	485	79.83	69.17
Agricultural credit societies ...	159,929	143,220	49.62	35.48
Grain banks	8,169	8,102	0.56	0.39
Multi-purpose societies ...	65,011	56,718	12.69	8.74
Non-agricultural credit societies.	10,003	9,348	72.06	62.12
Central mortgage banks ...	9	9	2.83	2.43
Primary land mortgage banks...	316	305	1.74	1.45
Marketing societies	12,150	11,616	15.47	13.07
Consumers' stores	7,433	7,925	...	...
Industrial societies	13,272	10,894	...	...
Milk unions	64	62	...	...
Milk societies	1,535	1,473	0.14	0.16
Housing societies	3,101	2,417	2.01	1.16

POSTS AND TELEGRAPHS

Posts and telegraphs have a vital role to play in an expanding economy. Appropriately enough, they have been assigned an important place in the second Plan. It is gratifying to note that they have made considerable progress in recent years. This is reflected in the *Annual Report of the Posts and Telegraphs Department for 1956-57*, just published. The year under review, which was the first year of the second Plan, recorded continued expansion of postal, telegraph, telephone and wireless services and an all-round increase in the volume of traffic in almost all branches. Thus, during the year under review, the number of post offices rose from 55,042 to 58,871. Similarly, the number of telephone exchanges rose from 5,830 to 6,202 and telegraph offices from 9,893 to 10,052. It is estimated that the number of postal articles carried went up to 3,262 million in 1956-57 from 2,997 million in 1955-56. The number of telegrams (including service telegrams) increased from 33.5 million to 34.5 million. Similarly, the number of effective outgoing trunk calls (excluding P. and T. service calls) moved up from 18.6 million to 20.8 million. The financial review of the Department shows a surplus of Rs. 6.20 crores, its revenue being Rs. 56.80 crores (as against Rs. 50.60 crores in 1955-56) and expenditure Rs. 50.50 crores (as against Rs. 47.20 crores in 1955-56).

On the postal side, efforts continued to be directed towards the twofold objective of expansion of postal facilities, especially in rural areas, on the one hand, and rationalisation of the mail services with a view to achieving speedier transmission, on the other. Of the new post offices opened during the year, as many as 92.5 per cent. were in rural areas. The total route mileage for mails, excluding air routes, was 253,256 miles of which 22 per cent. was covered by railways, 26 per cent. by motor services, 50 per cent. by runners and the remaining 2 per cent. by other means such as steamers, boats, mail carts, horses, camels and *ekkas*. The year also recorded a noticeable increase in the weight of mails carried over inland air routes, the total for the year under review being 10,139,947 lbs., as against 8,628,781 lbs. in the previous year. The total value of postage stamps and postal stationery issued from treasuries to post offices increased from Rs. 26.02 crores in 1955-56 to Rs. 28.35 crores in 1956-57. The number of inland money orders increased from 65 million (for a value of Rs. 231.6 crores) in 1955-56 to 67.4 million (for a value of Rs. 247.4 crores) in 1956-57. The total value of the Postal Orders carried increased from Rs. 1.76 crores in the previous year to Rs. 1.78 crores in 1956-57.

On the telecommunication side, there was a sizable expansion of the network, thanks to the growing demand for telegraph and telephone facilities generated by increasing economic activity in the country. The *Report* states that the mileage of postlines, wires, cables and cable conductors maintained for telegraph and telephones increased substantially. Of the total inland telegraph traffic, which rose from 33.5 million to 34.5 million, State telegrams accounted for 12.6 per cent., private telegrams for 86.6 per cent. and Press telegrams for 0.8 per cent. The year under review saw the introduction of printergram service for the first time in India as part of the programme to modernise the telecommunication services. It was introduced in Bombay in May 1956. Moreover, teleprinter working was introduced on 15 more routes, with a view to speeding up the transmission of telegraph traffic.

The total number of telephones in the country, according to the *Report*, was 309,000 at the end of March 1957, as against 278,000 at the beginning of the financial year. Twelve-channel carrier systems were installed between Nagpur and Bombay, Indore and Bombay, Indore and New Delhi, Bombay and Poona and Bombay and Rajkot. The Telecommunication Research Centre, which was set up towards the end of 1955-56, according to the *Report*, made rapid progress during the year under review. As regards the wireless service, the *Report* records that, during 1956-57, wireless stations at Calcutta, Bombay and Madras were provided with equipment for high power transmitters to provide better communications with ships at sea. The total number of radio receiver licences increased from 1,091,991 in 1955-56 to 1,284,041 in 1956-57, an increase of 17.6 per cent.

Another significant aspect to which the *Report* refers relates to small savings. During the year under review, 1.33 million new accounts were opened in the Post Office savings bank while 932,152 accounts were closed. The number of active accounts at the end of the year was, therefore, higher at 6.38 million, as against 5.99 million at the end of the previous year. The balance in the Bank rose from Rs. 293 crores at the end of 1955-56 to Rs. 322 crores at the end of 1956-57, an increase of 9.9 per cent. The average balance at the credit of a depositor on 31st March 1957 was Rs. 504.4, as against Rs. 490.1 at the close of the previous year. A total sum of Rs. 34.9 crores was invested in National Savings Certificates during the year under review, as compared with Rs. 29.2 crores in the previous year. Over Rs. 10 crores were invested in 1956-57 in National Plan Certificates, as against Rs. 9.9 crores during 1955-56. The Post Office Savings Banks perform a very useful function in mobilising small savings. The success of the small savings movement depends largely on the level of efficiency and adaptability of the postal services in which there is scope for further improvement. It is to be hoped that the Postal Department will continuously strive to bring the level of its banking services to that of commercial banks.

FOREIGN INVESTMENT IN INDIA

OFFICIAL POLICY AND INCENTIVES PROVIDED RECOUNTED

By A Special Correspondent

THE second Five-year Plan has placed, to a more pronounced extent than the first, stress on a suitable programme of industrialisation. The success of such a programme would depend on an efficient mustering of resources, internal as well as external, and here foreign investment has acknowledgedly an important role to play. Already, it has had a substantial part in the building up of the present economy of the country. Foreign investments in India have been steadily growing over the past years. In 1948, it stood at Rs. 287.7 crores and in 1955, it rose to Rs. 487.7 crores. Official figures up to the end of 1957 are not yet available but, according to unofficial estimates, foreign investment in India has increased by Rs. 150 crores.

The Government of India have been fully aware of the contribution that foreign investment can make to our progress and, in computing the resources for the second Five-year Plan, they have taken a sum of Rs. 100 crores as fresh foreign investment likely to materialise during that period. Consistent with the Industrial Policy Resolution of 1956, Government have adopted a number of measures designed to reassure private investors, abroad particularly, about the scope and prospects open to them. Within the framework of general policy explained below, each case is gone into on its individual merits and suitable adjustments made. To mention one instance, official policy places oil in the public sector and at the same time welcomes foreign enterprise and investment in partnership with Government as in the formation of Oil (India) Limited.

Financing From Abroad

Government have been following the policy of encouraging capital participation with Indian collaborants by foreign companies in respect of industrial enterprises that have been approved—within the framework of the Plan—by the Ministry of Commerce and Industry as being consistent with the industrial development plans of the country. In principle, the cost of capital equipment to be imported is allowed, at a minimum, to be financed from abroad. This is permitted as equity participation itself or as equity and loans combined. Over and above this minimum, while Government are of the view that to the extent possible, majority control must be in Indian hands, in suitable cases, and with due consideration to the existence of arrangements by which Indian participants can exercise effective influence on the company, particularly in the matter of development of Indian expertise and "know-how," foreign investment as bulk of the capital structure is allowed.

Assurances have been given that there would be no restrictions on the repatriation of such investment of capital or on the remittance abroad of the profits of such investments after taxes have been paid. That India has an exemplary record in permitting such remittances is well known. The main point which is examined when applications are made for capital repatriation is to ensure that there has been no *mala fide* or collusive or unjustifiable overvaluation in the transfer—a precaution that cannot be regarded but as wise in the circumstances of foreign exchange that India is in at this time. Where both Indian and foreign interests agree that foreign participation must be by loans rather than by equity capital, a suitable rate of interest is allowed. Under the recent amendments to the Income-tax Act, such loans—on specific application—can be free of income-tax.

It is of interest to mention that the Government of India recently entered into a convertibility arrangement with the U.S.A. Under this, the U.S. Government will guarantee to the American investor in India the reconvertibility into dollars of his investments in projects approved by the Government of India and of his income from them.

Technical Collaboration

Indian companies are welcome to obtain the services of foreign experts or consultants who are necessary. Such arrangements exist at Government-to-Government level as through the Colombo Plan, etc. It is recognised that the development of expertise in India is one of the important results of foreign investment and is itself likely to step up further investment. Government approval is given to payments by Indian companies to foreign collaborants towards research fees, technical services, etc. In giving such approval, the amounts to be paid, once mutually settled by the parties themselves, are generally not interfered with.

Royalty

So far as royalty is concerned, a distinction is made between the element of royalty as such, and the element of services rendered abroad by the foreign collaborant. The latter is exempt from tax. About royalty itself, Government are not committed to any particular rate, though 5 per cent. is, in practice, found to be generally the maximum rate—to the extent to which generalisation can be made in such matters—which the Indian and foreign collaborators themselves agree on. With reference, however, to specific cases where there has been adequate justification, Government have permitted royalties in excess of this percentage. There have been practically no instances where negotiations between two parties have broken down because Government declined to approve of a particular rate of royalty as being unduly high.

Taxation

The Government of India have already provided substantial tax concessions by way of incentives for the industrial development of the country. The more important of these tax concessions are, to mention briefly:

(a) Exemption from income-tax of the profits made by industrial undertakings newly established, during the first five years from the commencement of manufacturing operations.

(b) Exemption from income-tax to a shareholder in a newly established industrial company, of the dividends he receives from the company out of the profits exempt from tax in the hands of the company.

(c) Exemption from super-tax to a company for an indefinite period on the dividends it receives from an Indian company established after 31st March 1952, and engaged wholly or mainly in certain specified important industries.

(d) For all business enterprises, an outright allowance, known as "development rebate" of 25 per cent. of the cost of new plant and machinery (40 per cent. in the case of ships) in the first year of installation of the asset, thereby enabling the enterprises not only to write off the full cost over a period of years by way of depreciation allowances but also to get further tax relief on 25 per cent. of the cost.

(e) Outright deduction or amortisation over a period of five years of expenditure incurred by business undertakings on scientific, statistical or social research relating to the class of business carried on.

(f) Application of a concessional rate of super-tax in respect of dividend incomes received by a company from an Indian subsidiary company.

(g) Exemption from wealth tax for newly established industrial companies on their net worth for a period of five successive assessment years, following their incorporation.

(h) Exemption from wealth tax to individual shareholders on their investments in shares of newly established industrial companies, during a period of five successive assessment years following the establishment of the companies.

(i) Exclusion from net worth for purposes of wealth tax in the case of all companies of the value of shares held by them in other companies.

These tax concessions go to reduce substantially the incidence of tax on industrial enterprise in India. It is important to note that these concessions are available to foreigners and foreign enterprises in regard to their tax liability in India to the same extent as they are available to Indian nationals and Indian enterprises.

In addition, there are certain other incentives which are of value particularly to the foreigners:

(1) Exemption from income-tax is conferred on interest payable—

(i) by an industrial undertaking in India on moneys borrowed by it under a loan agreement with a financial institution of a foreign country, if the institution is approved by the Government of India;

(ii) by an industrial undertaking in India on

(Continued on page 282)

AUGUST FROLIC

From Our Own Correspondent

LONDON, *8th August*

THE weather during this holiday season has been so bad that it must have kept a great many people back in the City who would normally have long ago gone away. That can be the only explanation of the general activity in all branches of the Stock and Exchange Markets—a very significant contrast to the usual dullness of what is called the "silly season." And there is, after all, plenty of excuse for bullishness. First of all, the month began with the announcement of a further rise of £3 million in the gold and dollar reserves in spite of a payment of over £19 million to the European Payments Union in respect of June. It is known that the deficit for July with the E.P.U. is £18½ million and three-quarters of this will fall to be settled in August in gold or dollars. But the sum is substantially less than the amount that had to be paid over in July and, if the position *vis-a-vis* the rest of the world can be held, there should be another rise in the reserves at the end of this month.

LONDON LETTER

Trend of Reserves

This result is particularly impressive against the political drama of the past month calculated to cause a run on sterling and, of course, the fact that July is traditionally a bad month trading-wise. Whitehall and the City are very satisfied and the New York spot rate has moved up to the highest figure for a month, namely $2.81. Clearly, overseas operators are confident in sterling. It is now ten consecutive months in which the reserves have increased and their total of $3,084 million is not only $1,234 million higher than their low point of nearly a year ago, but the highest for nearly seven years!

With sterling strong and the bill rate in the City at about 4 per cent. back to the level before the Iraq crisis, it is not at all impossible that there should be a further cut in the Bank rate from the figure of 5 per cent. which was set in the middle of June. All this has helped to push up the stocks indices to new high figures. The recovery—again viewed against the background of the Middle Eastern crisis—is really most encouraging. A year ago, the industrial ordinary index stood at 200, then came the collapse of the September crisis and early this year the 1958 low point was 154. Since that time, the index has made good more than half the loss since a year ago and stands just a fraction short of 180. Government securities have done even better. A year ago, the index stood at 82.9, the low point early this year was 79.4 and, while they were a little earlier as high as 84.4, they are still very strong at 84.1. The pattern for all fixed-interest securities is similar, and the strength of Gilt-edged is no doubt due to a genuine investment demand. One of the reasons for this is, of course, the relaxation of the credit squeeze which has made bankers positively offer money to their customers. It is an almost forgotten and impressive experience from the point of view of the borrower!

Industrial Output

But, on the industrial side, there is a very much quieter picture. Since the earlier publication by the Federation of British Industry all spare capacity known on this point has been vastly supplemented by the interim reports of the National Institute of Economic and Social Research. In the metal working industries, there is an under-use of capacity of about 20 per cent. This is a realistic figure based on the comparison with the level at which the industry would be working most economically and to meet such a potential increase in demand would require a 7 per cent. increase in employment. Obviously all firms could not attract such a supply of labour, in spite of the fact that, particularly among juveniles, unemployment is increasing rapidly. Of course, averages such as the one quoted for the whole industry conceal at one end of the scale firms which are fully occupied and at the other a surplus capacity as high as 40 per cent. The general picture is not surprisingly of a very erratic pattern of business activity both as between industries and between firms in those industries. However, with the holiday season, as far as industry is concerned, in full swing, one should perhaps wait until the Autumn before attempting a more detailed assessment of the general trend of production.

GERMAN MARK IN TEN YEARS

GOLD AND FOREIGN CURRENCY COVER EXCEEDS 100 PER CENT.

By A Special Correspondent

ON 20th June 1948, currency reform took place in the three western zones of occupation in Germany. After Hitler had assumed power, he had pursued a reckless financial policy which steadily reduced the value of the "Reich Mark." Owing to the expenditure for armaments and the war, the Reich Mark was worth only a fraction of its former value after the collapse. Extreme distress held sway over Germany from 1945 to 1948. War and collapse had caused the greatest dearth of consumer goods and victuals everywhere. A large amount of money was thus met by only a small offer of goods. The result of this was the so-called "black market" with the excessive prices, especially for foodstuffs.

Thanks to the currency reform of 20th June 1948, the population of Western Germany suddenly possessed stable currency once more. At the same time rationing was abolished in the Federal Republic of Germany. Professor Erhard's clever economic policy, which did not fetter the productive forces of the Federal German Republic tied down for so long with stupid controls, resulted in an increase in the value of new "German Mark" within a very short time. On the home market, as well as on the markets of the entire world, the German mark gained the status of a stable and secure means of payment within ten years.

Two world currencies were hitherto regarded as particularly stable: the U.S. dollar and the Swiss franc. So if the German mark's career so far is to be traced, it is advisable to measure it against these currencies. Shortly, before the 1948 currency reform, a Swiss franc was worth about 25 German Reich Marks. It is, therefore, not surprising that the newly created German Mark at first enjoyed but little confidence abroad, particularly in Switzerland. Shortly after currency reform, only Swiss Frcs. 18 were paid for DM.100, i.e., DM.5.50 for one Swiss franc. The rate of exchange was similar in respect of other currencies. The German Mark was regarded as "soft currency" everywhere.

In 1949, the Federal Republic of Germany was founded. The value of its money increased in proportion to the growing internal economic and financial stability of the new State. More and more goods were produced, so that the proportion of goods and money increased the monetary value steadily. Soon Swiss Frcs. 50 were paid for DM.100, and in 1953 the rate of exchange between German and Swiss money was at par: DM.1 was worth as much as Swiss Frcs. 1.

Foreign observers viewing these first five years of the life of the new German money coined the expression "German Miracle." People in the Federal Republic of Germany do not like to hear this, because this rise was due to causes which were anything but "miraculous." Apart from the economic and financial policy and the industry of the people, the initial foreign assistance of the Marshall Plan must be mentioned here in the first place, without which the mechanism of German economy could not have slipped into gear so quickly.

In the autumn of 1954 the so-called "par rate of exchange" in respect of the Swiss franc was exceeded, and Swiss Frcs. 104 had to be paid for 100DM. Since then, the value of the German currency has increased only insignificantly *vis-a-vis* the Swiss franc. But this statement does not yet take into account the reserve of internal values which is guaranteed by the cover in precious metals. The DM. bank note has the value of a piece of genuine gold all over the world today, for the gold holdings of the Federal Bank in ingots and specie have grown more and more. In July 1954, the safes contained 1,840 million DM. gold reserves. Very soon the 2,000-million mark was exceeded. To this must be added steadily increasing reserves of foreign currencies with gold cover, and of foreign bills of exchange and cheques. While the German currency in circulation was covered by gold and foreign currency up to 90 per cent. already in 1955, complete cover was attained in 1956. In 1957, a state of affairs was reached which had never previously occurred in German history: the gold and foreign currency reserves of the Central Bank exceeded the amount of money in circulation by one quarter. This means that each German mark in the "consumer's" purse is covered by gold to the value of DM.1.25.

BRITISH BANKS' NEW VENTURE

INTEREST IN HIRE-PURCHASE COMPANIES

THE most important development in the British banking world in recent weeks is the deviation from the traditional pattern of business to the direct participation by almost all the big banks in the hire-purchase system. They have done so by taking a sizable interest in the share capital of hire-purchase finance houses. Hire-purchase system has been in vogue in many Western countries of the world, notably in the U.S., but the main point of difference between some of them is the role of banks in the financing of this business. In the U.S., banks have their own hire-purchase finance service. In Australia, bank participation in hire-purchase system is generally limited to the ownership of a substantial portion of the share capital of separate hire-purchase finance houses. In Britain, banks' interest in hire-purchase activity has, for the last twenty years, been confined only to providing credit facilities to hire-purchase finance houses, which in their turn finance directly hire-purchases by consumers.

It will be interesting to recall here that, in 1930, the Bank of England invested £250,000 in the United Dominions Trust, which has now grown to be the biggest finance house, and later on increased this investment to £500,000. The Bank's holdings were subsequently (in 1936 and 1937) disposed of to other shareholders of the U.D.T. The reason for the Bank of England's investment in U.D.T. was the belief of the then Governor of the Bank of England, Mr. (later Lord) Montagu Norman that hire-purchase system provided a stimulus to increasing consumption in a flagging economy. Although the Bank of England thus initiated the development of hire-purchase business, the commercial banks were not allowed by tradition and convention to take a direct interest in this form of credit. During the last twenty years of official restriction on participation of commercial banks in share capital of finance houses, British banks have not deviated from the traditional line of providing mere credit facilities.

Tradition Broken

The distinction of breaking the tradition goes to the Commercial Bank of Scotland, which, in 1954, acquired one of the largest hire-purchase houses, Scottish Midland Guarantee Trust, because it was felt that the time had come for commercial banks to establish closer association with hire-purchase, as it would be beneficial to banks, as well as to finance houses.

The first British bank to give a lead in this direction after the Scottish bank, was Barclays Bank, one of the "Big Five" London clearing banks. A fortnight ago, this Bank entered into an agreement with the United Dominions Trust, the biggest finance house in Britain, under which it acquired a 25 per cent. interest in the equity capital of the U.D.T. by subscribing £4 million to 1 million new ordinary shares of £1 each at £4 per share, with the consent of the Capital Issues Committee. Barclays Bank is also arranging for its Scottish affiliate the British Linen Bank, to participate in the investment. Barclays Bank will be represented on the Board of the U.D.T., but it will not participate in the conduct of the business.

The example of Barclays Bank was soon followed by two others (of the "Big Five"). Subject to the sanction of the C.I.C., the Westminster Bank and Martins Bank each agreed to take up a 20 per cent. interest in the new capital of the Mercantile Credit Company. Close on the heels of the announcement of these two alliances, the National Provincial Bank also made known its offer to purchase the shares of the North Central Wagon and Finance Company now held by the Prudential Assurance Company, Ltd., amounting to 54.7 per cent. of the total capital. The offer made by National Provincial to acquire the £1 share at £4 10*s.* each has been accepted by the Prudential.

The main points of difference between this deal and the two announced earlier is that the National Provincial is acquiring control of the finance house, but is not providing fresh capital, by this transaction at least, whereas the other three banks have not sought or gained control of the two finance houses, but are subscribing to new shares. Another point of difference is that while Barclays, Westminster and Martins are purchasing the shares of the two finance houses at a price below the market value, the National Provincial has offered a price above the market quotation.

The Midland Bank and Clydesdale and North of Scotland Bank have joined the ranks of these banks when their joint offer to purchase the entire share capital of Forward Trust, a medium-sized finance house, were accepted by the present shareholders. Another association will take place if the proposed merger of the Lloyds Bank's Scottish subsidiary, the National Bank of Scotland, and the Commercial Bank of Scotland fructifies. The latter, as already pointed out, owns the entire capital of the Scottish Midland Guarantee Trusts. Yet another link between banking and hire-purchase finance was made when two leading private banking houses of London, Samuel Montagu and Co. and Guinness Mahon and Co., joined hands with Olds Discount Co. of Nottingham. Two of the leading London merchant banks have also concluded an agreement with another of the more important finance houses to develop the business as a joint undertaking. Negotiations now carried on by some of the clearing banks, medium-sized non-clearing banks and merchant banks indicate that the incursion of commercial banking institutions into the field of hire-purchase will gather momentum. The official attitude towards this development is not unhelpful, as was the case till recently.

Impediment

The Commercial Bank of Scotland's venture in 1954 proved such a success that other British banks too would have immediately followed its footsteps but for the continuation of credit squeeze, the restriction on raising of fresh capital by finance houses and the official prejudice against mingling of ordinary commercial banking with hire-purchase financing, imposed during 1955 and 1956 as part of the Government's disinflationary measures. The way to the latest development, namely, direct participation of banks in the capital structure of finance houses, was cleared by the Government last month, when it removed the credit squeeze and dropped its prejudice against bank participation in hire-purchase business. The change in official policy was contained in the Chancellor of the Exchequer's letter to the Capital Issues Committee last month, which stated *inter alia*, that "the Treasury will be prepared to act on a recommendation in favour of an issue where the Committee considers that the raising of finance is desirable as a means of improving the stability of the hire-purchase financial system." This statement represents a reversal to the policy enunciated by Lord Norman, when he was the Governor of the Bank of England. The authorities evidently feel that hire-purchase system provides immense scope for orderly development of large and stable organisations dispensing consumer credit, though a number of restrictions on the terms of hire-purchase and other kinds of credit are still retained. It is after the aforesaid official clarification that Barclays Bank clinched its deal with the U.D.T.

A Good Opportunity for Banks

Even before the Treasury announcement about the ending of the credit squeeze, the British banks are said to have been feeling that hire-purchase is a field in which they have reasons to enter, as it offers immense scope for developing their lending business. Only the credit squeeze has been holding them up so far. The latest development, namely, the association of banks with the hire-purchase business, provides an opportunity to banks for broadening their activities, but there are no indication of banks' eagerness to go beyond the participation in the share capital of hire-purchase financing houses. They seem to have no intention, at least for the present, of engaging directly in hire-purchase business, as the American banks do. Even if they want to, they have to keep, so we are told, the two businesses separate, because of the differences in principle as well as procedure between the two, though they are somewhat akin. The present limited association itself will be of mutual advantage to banks as well as finance houses, as both will be eager to promote the interests of the other. The hire-purchase financing houses' capacity to expand their business will increase, thanks to an increase in their resources, following the increase in the size of their capital with the funds of banks.

The capacity of these finance houses depends on (1) its share capital and reserves and (2) its loan capital including deposits and borrowings from banks. The loan capital is, however, limited by the share capital and reserves. It is not considered prudent for a hire-purchase house to allow the loan capital to exceed, beyond a certain number of times, its share capital and reserves, the actual ratio depending on the size and reputation of the house concerned. Accordingly, if a bank or an insurance company invests in the share capital of a finance house, it leads to an increase in the lending capacity of the latter many times the capital invested by the bank or the insurance company. Thus, in the case of U.D.T., Barclays Bank itself is now providing it with £4 million and this sum goes to strengthen the creditworthiness of the U.D.T., by which it can get more credit, and possibly at a cheaper rate, from Barclays Bank itself or any other bank. The bank-backed finance houses will no doubt continue to take deposits from the public, without solely relying on their associated banks' credit, but they may now be able to offer more competitive rates as compared with those quoted by other finance houses. At present, most of the institutions quote one per cent. over the Bank rate for three months' deposits.

From the point of the investing bank, the amount invested holds promise of a growth investment, if the recent trend in hire-purchase business is any guide. The public, too, is likely to gain; for, with increasing competition in this line of business, cheaper credit from banks to finance houses and lower rates of interest offered on deposits from the public, the hire-purchase charges may tend to decline. The result of all these will be an expansion in the volume of hire-purchase business which in turn will stimulate the offtake of such manufactured goods as motor cars, TV sets, radios, kitchen equipment, furniture and other consumer durables.

It may be mentioned, in passing, that even before banks began to take an interest in the capital structure of finance houses, hire-purchase business in Britain has been steadily growing. The total outstanding hire-purchase credit at the end of May this year was about £500 million (as against £450 million at the end of July 1957), of which those owing to hire-purchase companies, large and small, accounted for £286 million and to shops selling household goods for £213 million. A notable feature of hire-purchase business during the current year is the increasing share of it by the finance houses; the outstanding credit owing to them has risen from £257 million at the end of 1957 to £286 million (or about 58 per cent. of the total hire-purchase debt) at the close of May 1958.

The end of credit squeeze on 31st July has given banks an opportunity to enlarge their lending operations and the consensus of opinion is that they must give thought to exploring new avenues of business. The hire-purchase system offers a useful field, but the present indications are that no major change in the existing borrowing and lending patterns of British banks can be expected in the near future.

Trade with JAPAN through

THE BANK OF TOKYO LTD.

(Incorporated in Japan)
(Liabilities of Members Limited)

The only foreign exchange bank in Japan licensed under the Foreign Exchange Bank Law.

Authorised Capital ..	Yen	10,000,000,000

PRODUCTIVITY MOVEMENT AND MANAGEMENT SCIENCE

KNOWLEDGE OF THEORY HIGHLY VALUABLE

By Manubhai Shah

UNION MINISTER OF INDUSTRY

IN recent years, there has been some awakening and keeness in the country to know more about the scientific techniques in management. This is a very healthy development which has promise of a better future for our industries and business. It is in keeping with the trend in other countries. Management science is now regularly taught in universities and institutions and numerous courses of short and medium duration for management training are held periodically. Business concerns in Europe and America regularly spare even their top-ranking executives for attending such courses. They have found that their efficiency substantially increases by the knowledge imbibed by the management by attending such courses. Our industry is obviously in great need of acquiring this knowledge.

Management in its various techniques may be a comparatively new science but in its fundamentals it is as old as the oldest history. Its principles have come to be evolved as civilisation has progressed. For example, the Scalar principle of organisation and delegation, and the exercise of management functions by the principles of exception, may be claimed to be a modern principle, yet in the Bible, which was written 2,500 years ago, we come across the passage: "Moses chose able men out of all Israel and made them heads over the people, rulers of thousands, rulers of hundreds, rulers of fifties and rulers of tens. And they judged people at all seasons. The hard cases they brought unto Moses, but for small matters they judged themselves." These are obvious principles of modern management techniques. Centuries before the Christian era, the Babylonians knew in their own simple way, of the "minimum wage rate," the Chinese knew of "labour turnover" and the Chaldeans knew of the "incentive wage plan." In our own country, Kautilya's remarkable thesis, the *Arthashastra*, written nearly 2,000 years ago, dealt not only with various aspects of political economy but also with problems of public management. In about the same period, the Greeks knew of "division of labour" and "transfer of skill." Admittedly the actual terminology used to express these various principles were then quite different from what subsists today, but the fundamentals of economics and of economic production—embodying also the fundamentals of management science—had been evolved long ago.

Industrial Management

While it is interesting to trace back to antiquity—the beginnings of all human knowledge—the body of principles which form the basis of modern management techniques can be linked to the rapid growth of industrial production in the nineteenth and twentieth centuries; to its accompanying social and economic problems; to increasing competition both within a country and on an international scale; and to the rapid strides made by science and by innovation. All these call for an amalgam of specialisation and of large-scale production, and an increasingly complex job of "management" as such, as distinct from the age-old artisan who was his own "manager." The problem of industrial management today is a direct heritage of scientific progress in the field of production.

The techniques and analytical processes of the science of management have thus grown much like the natural and physical sciences. The increasing complexity of industrial production and the ramifications of problems following thereon have started overthrowing the misplaced confidence of the hereditary managers that they knew all that was required to be known and that there was nothing that management techniques could teach them. There is happily a growing feeling everywhere that the days of industrial and business management "by guess or by God" are now gone. Today management is more than merely the mechanics of making, buying and selling. Born managers are increasingly getting fewer in number. Management by intuition or hunches or tradition or heredity is no longer considered good enough to work on.

It is true that the theory of management is not a substitute for its practice. But I am reminded of the story of the Irishman, who, after hearing a talk on the utility of gaining experience by practice, came forth with the question, "That is all very well in practice, but how will it work in theory"? In fact, one would say that an ounce of practice is worth a ton of theory, but an ounce of theory properly grasped may be a safe foundation on which to place a ton of practice and experience. We cannot disregard the importance of learning the fundamentals of the science of management, because these alone will enable the superstructure of management practice to be built and imbibed. If one does not go to a school of management or attend courses on management, then the only school open to him is what Lord Lever once characterised as the University of Hard Knocks. The cost of gaining knowledge in this manner is obviously very heavy for experience runs an expensive school. Undoubtedly, as in work, so in life, there is no substitute for experience. But proper training helps to accumulate and imbibe experience quickly and in a right selective manner.

Training in Management

We should, therefore, organise training in scientific management all over the country in order to create a class of professional managers, who would be the future leaders of industry and business. This trend has already taken shape in the countries which have advanced in technology and industry. The underdeveloped countries are fast realising that this is indispensable for their progress. We in India have so far started management education only in a small way. Business management courses have been initiated only in the Universities of Delhi, Bombay, Madras and Calcutta, and there too the facalities available fall very much short of the demand which is already in evidence. Industrial management courses have been started only by the Indian Institute of Technology, Kharagpur. Such courses are proposed to be introduced also in Technological Institutes which are projected for Madras, Bombay and Kanpur. Some short courses in management and in various subjects allied to management are being organised by certain institutions and organisations, but the volume and nature of this effort is yet much too inadequate for meeting the requirements.

The aim should be to organise training courses all over the country, to suit different levels of management, in all possible subjects which come within the purview of the science of management. In the process of organising this training, we should make use of all the various existing organisations and institutions which can undertake such courses, and we should mobilise all the available indigenous talent for conducting the courses. Simultaneously, emphasis should also be placed on the training of trainers. The subjects which I have in mind for organising such training include those like personnel administration and human relations, work study, time and motion study, job evaluation, factory planning and plant layout, materials handling, materials utilisation, production planning and control, cost control, quality control, marketing analysis and distribution.

Training in Other Countries

Such training in industrial and business management has been extensively organised in European countries and America. Between four and five million people in Europe today hold managerial positions. To equip the personnel for holding these managerial positions, hundreds of thousands of persons are being trained in European countries every year. Some of the larger corporations have their own Management Training Schemes. For the rest, there are nearly 150 full-fledged institutions meeting this demand in Western Europe alone. A number of institutions, organisations, firms of management consultants, etc., organise training courses of various durations in different subjects. In America, in 1957 alone, 300,000 executives went to schools to learn to be better bosses. The American Telephone and Telegraph Company recently put 1,800 of its executives through a four-year management training course. There are 23 Management Training Associations in America which train executives of the companies which do not have their own training programmes.

Experts hold varying opinions about the methods which should be adopted in the training. Some specialists are of the view that verbal knowledge is not effective knowledge, and they insist only on case studies or discussion conferences. Others hold that class-room method cannot be altogether dispensed with in organising the training. A happy blending of the classic and the modern methods is what is required in our country. Class-room lectures to a limited extent would be indispensable for imparting information to the trainees; case studies would be best for arousing "self-activity" and motivating individual thinking; factory visits and "guided study visits" provide training by precept and are, therefore, very effective; film shows and other audio-visual aids impart training through optical simuli and, therefore, help better retention. These are all well recognised methods. In addition, training within industry, abridged into the well-known words T.W.I., is a pattern of training which has obvious merits and is not possible to be substituted by any more satisfactory method. "On-the-job" training for the lower levels of management can best be organised in the shape of proper and willing delegation, which unfortunately is very rare in our industries. It has been well said that "it costs money to train but costs more money not to train." This fact is being increasingly realised by the management everywhere. T.W.I. methods should be intensively adopted everywhere by our industries. It is primarily at the shop floor level that one can imbibe and generate ideas for the improvement of efficiency; and the supervisors and foremen are the functionaries who can best promote and sustain this improvement.

Productivity Movement

Through the "Productivity Movement" also we are seeking to promote better management. There is perhaps hardly any other word which in recent years has been considered more closely synonymous with a nation's progress than the word "productivity." It is in fact the key to progress and, therefore, a key to our future welfare. It has been amply demonstrated that by incorporating various scientific techniques and processes, and without additional investment, it is possible to attain substantial increases in productivity. The increase in productivity helps reduction in costs of manufacture, brings out better quality which in turn stimulates expansion of markets, and leads eventually to greater profits to the industry, more wages and shorter working hours to the workers, and general improvement of living standards for the nation. I am convinced that the nation's welfare lies the productivity way, and that productivity is in effect the recipe of the millennium which we seek. With the co-operation of all shades of opinion among employers and labour, and of the existing institutions and organisations which in their respective spheres are dealing with various aspects of productivity, we have recently established the National Productivity Council. We aim at organising a network of local productivity councils all over the country in the industrial centres. Through these organisations we will launch the productivity drive, propagating productivity consciousness in the country and providing the training of services which the industry requires.

Scientific Management

Good management implies an unbiased, analytical approach. The capacity to listen and learn is as important, if not more, as the capacity to plan and give orders. Machines and equipments do not function without people to operate them and keep them in repair. And people need sympathy and help as much as leadership.

Good Management, therefore, has always meant getting effective results with people and good public relationship and public management. A good manager gets people to work with him, not primarily because he has power over them and can order them about, but because he is a kind of leader for whom they want to do their best. Because he is considerate for the men behind the job. Because he values them infinitely more than the job. Management, therefore, is the development of one's own self and the development of people and not the direction of things. Management and personnel administration are not two separate things. They are one. As it is rightly said, management is real leadership, not "drivership" or "bossism." This has to be constantly borne in mind. Through better and more scientific management, we can rapidly foster the productivity movement and help the national progress.

TRENDS IN COTTON TEXTILE INDUSTRY

PRODUCTION, EXPORTS AND STOCKS DOWN

SIX weeks have elapsed since the Government of India announced modifications in the levy of excise duties on mill-made cotton piece-goods. These modifications, together with the removal of uncertainty regarding excise duties following the Government's categorical declaration that there would not be any further revisions, may be expected to help the mills to some extent in clearing their stocks. The total quantity of cloth lying with mills at the end of July was of the order of 871 million yards, as against 848 million yards before the revision of excise duties was announced on 4th July and 990 million yards towards the close of December 1957.

The reduction of 119 million yards in stocks over the seven-month period ended July was due not so much to a rise in offtake as to the marked drop in production. Currently, the output is running well below 4,900 million yards per annum, as against 5,317 million yards produced in 1957. During the first seven months (January-July 1958), not more than 2,873 million yards of cloth are estimated to have come off the looms of mills, as compared with over 3,168 million yards in the same period last year, that is, a fall of 315 million yards.

On the export front also, the industry has been faring badly. In June-July, exports (according to preliminary estimate) were only 27 million yards per month, the lowest level for several years, in the past 10 years, to be a little more precise. The total for the seven months under review is also substantially lower, being about 319 million yards only, as against nearly 510 million yards in the comparable period of 1957. The quantity of cloth consumed within the country also has not shown any significant rise, notwithstanding the rise in population. Such a phenomenon is not surprising at all, considering the decline in consumers' capacity to spend money on cloth owing to high prices of food and the heavy incidence of excise duty on cloth.

Plight of Spinning Units

The fall in cloth production has followed a perceptible drop in yarn output. During the seven months ended July, about 966.81 million lbs. of yarn were produced, as against 1,040.70 million lbs. in the same period last year. On this basis, the total output for the whole of 1958 may be estimated at about 1,630 million lbs. which compares markedly unfavourably with the all-time peak output of 1,773 million lbs. touched last year. The position of purely spinning mills seems to have become infinitely worse than that of composite mills. Despite all the huge props given by the Central and State Governments alike, the handloom industry has failed to expand its production to the extent anticipated by the planners. This in turn has adversely affected the offtake of yarn. At the same time, the expansion in spindleage, undertaken in the hope that the handlooms will provide the necessary outlet for the increased output of yarn, has taken place according to schedule. The result is an increase in the spinning capacity as well as in stocks of unsold yarn. The position has become so bad that even a first class unit like the Madura Mills has found it necessary to resort to short-time working and seek permission to effect a cut in dearness allowance. That this should be the state of affairs in the spinning mills despite an enforced cut in production occasioned by acute shortage of power in the Madras State during the summer months, provides a striking commentary on the ill-advised cotton textile policy of the Government. The Joshi Committee, which went into this question, has accepted this pathetic position with abject resignation and coolly recommended curtailment of production by spinning units and suspension of all expansion schemes which have not yet been implemented.

The trend of mill yarn and cloth production—month by month—in the first seven months of 1958 and 1957 is indicated below:

	Cloth (million yards)		Yarn (million lbs.)	
	1958	1957	1958	1957
January	436.53	488.70	148.70	158.40
February	391.45	435.10	132.86	143.20
March	405.56	453.30	138.48	150.50
April	407.77	464.40	134.07	153.70
May	421.25	453.10	138.70	149.90
June	390.00	419.60	128.00	137.00
July	420.00	458.90	146.00	150.10
Total	2,872.56	3,168.10	966.81	1,040.70

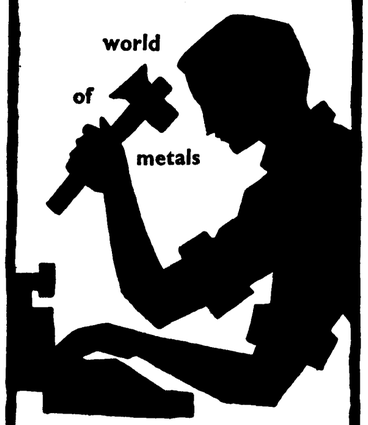
The downward trend in the production of cotton textiles during the current year has been the result of less intensive utilisation of the mills' capacity, thanks to the high cost of production, on the one hand, and drop in sales and price, on the other. The daily average number of looms run in the second and third shifts during the five months ended May 1958, for instance, was 166,039 and 39,993, as against 174,202 and 52,098, respectively, during the same period of 1957. The first shift also accounted for a smaller number of looms run, being 177,926, as against 183,899. Likewise, the daily average number of spindles run in the first, second and third shifts during the aforesaid period was lower at 10.76 million, 10.23 million and 4.27 million, which compares unfavourably with 10.98 million, 10.52 million and 4.97 million, respectively, a year before.

Employment

Consequent on the decline in the spindles and looms worked, the daily average number of workers (including *badlis*) employed suffered a fall during the period (January-April 1958), such being 910,779, as against 950,711. The fall was accounted for entirely by composite mills, the number of workers declining from 849,900 to 804,512. The number of workers employed in spinning mills rose slightly from 100,811 to 106,267 apparently because of the increase in spindleage. The following table indicates the trend of employment in the Bombay cotton mill industry:

	First shift	Second shift	Third shift	Total
January (first working day)	110,801	76,284	21,898	208,983
February	109,926	75,822	21,558	205,306
March	107,849	74,757	21,466	204,072
April	108,569	75,116	20,546	204,231
May	106,535	73,548	19,799	199,882
June	106,863	73,559	19,702	200,124
July	105,475	72,668	18,691	196,834

The whizzing wheels race with time to reach the target. He works all day long, in a world of metals. The bus on the roads, the plane up in the air, the ship on the high seas, the train on the tracks all need metals which he helps to produce. Yes, in his own way, he is shaping the nation with metals.



Innumerable are the ways we serve the country as the largest single importers of *non-ferrous metals.*

Following the less intensive utilisation of the mills' capacity, the consumption of cotton in mills has been lower. During the first five months of 1958, the quantity actually consumed was 2,036,008 bales (of 392 lbs. net each), as against 2,235,296 bales in the corresponding period of 1957. The whole of this decline was accounted for by Indian cotton, the consumption of which fell from 2,010,785 bales to 1,806,380 bales, while that of foreign cotton rose slightly from 227,641 bales to 229,628 bales.

More Coarse Cloth

The decline in the mill output of cloth so far in the current year has been shared by all the varieties, coarse, medium, fine and superfine. The production of coarse cloth during the first five months of the year amounted to 387.03 million yards, as against 481.36 million yards a year before. The output of medium, fine and superfine varieties were lower at 1,434.71 million yards, 135.11 million yards and 105.70 million yards, as against 1,526.40 million yards, 166.08 million yards and 115.72 million yards, respectively. The table below gives the month-by-month figures relating to the production of different varieties of cloth during the January-May periods of 1958 and 1957, as also during the whole of 1955, 1956 and 1957:

(In million yards)

	Coarse	Medium	Fine	Superfine	Total
Whole of 1955	572.47	3,758.63	462.30	301.07	5,094.47
Whole of 1956	718.64	3,706.61	444.04	347.29	5,306.58
Whole of 1957	1,163.71	3,502.91	383.07	267.73	5,317.42
January 1957	102.80	320.17	36.01	25.23	483.71
February 1957	94.53	286.01	32.05	22.49	435.08
March 1957	95.13	301.72	33.03	23.44	453.32
April 1957	96.29	311.72	32.81	23.66	464.88
May 1957	93.11	306.78	32.18	20.99	453.06
Total Jan.-May	481.36	1,526.40	166.08	115.71	2,289.55
January 1958	86.36	299.88	28.76	21.52	436.52
February 1958	74.20	271.74	25.94	19.57	391.45
March 1958	73.77	284.59	26.28	20.92	405.56
April 1958	73.38	286.69	26.55	21.15	407.77
May 1958	79.32	291.81	27.58	22.54	421.25
Total Jan.-May	387.03	1,434.71	135.11	105.70	2,062.55

The share of coarse varieties of cloth in the aggregate mill cloth output which had risen sharply from 11.2 per cent. in 1955 to 13.5 per cent. in 1956 and still further to 21.9 per cent. in 1957 has since tended to recede, though the level is still uncomfortably large. During the first five months of 1957, for instance, it was lower at 18.7 per cent. The appreciable increase in the production of coarse cloth last year was due to two factors, namely, defective structure of excise duties under which better varieties of cloth were subjected to an excessive burden and labour law that made it difficult for the mills to retrench labour and reorganise production through modernisation or addition of new equipment. This defect has no doubt been modified to some extent in the latest rationalisation in the structure of excise duties, but not completely eliminated. In fact, since the burden on fine and superfine cloth has been increased, the stress in the coming months may be on production of medium counts. There may, therefore, be an uncomfortably large increase in the output of medium counts and a scarcity in fine and superfine counts. Indeed, reports from the cloth market claim that, in anticipation of this development, there has already been a perceptible rise in the value of fine and superfine cloth.

TEXTILE INDUSTRY IN IRAN

It looks as though Iran may cease to be a market for Indian cotton textiles in the coming years. For this country has accorded a very important place to the development of textile industry under the Seven-year Plan. Two plants are now being erected, one on the outskirts of Teheran —this is almost completed—and the other at Shahi near the Capsian Sea which is expected to be completed in about a year. It is claimed that these are the two largest textile producing plants in West Asia, each comprising 31,000 spindles, 1,000 looms and 2,500-k.w. thermal power plant.

The machinery and equipment for the plants worth about $11 million are being supplied by the Italian firms of Nuova San Giorgia of Genoa and Officine Galileo of Florence. The plants will be operated, in the initial stage, by Italian personnel in co-operation with the textile section of the Seven-year Plan Agency. A large group of Italian engineers and workers is at present in Iran to supervise the work of erection and adjustment.

When the new plants go into operation, the installed capacity of Iran's textile industry will be higher by about 20 per cent. The number of spindles and looms now in place in Iran is 168,000 and 3,132, respectively. Iran is one of the largest cotton producers in West Asia; the annual rate of output is of the order of 285,000 bales of 478 lbs. each. The production of cloth has, however, not been sufficient to meet the entire domestic requirements, so that Iran purchases large quantities of cloth from foreign countries every year. Imports of cloth into Iran during 1957 aggregated 5.19 million yards from India, 18.29 million from Japan and 2.05 million yards from the U.K.

TEXTILE INDUSTRY IN DIFFICULTIES

"ALWAYS BUY BRITAIN'S COTTONS" CAMPAIGN LAUNCHED

From A Special Correspondent

MANCHESTER, *6th August*

MANCHESTER LETTER

IN the space of 30 years or so, circumstances in any industry can be expected to change, but there are certain aspects of the existing position in the cotton textile trade in Lancashire which bear comparison with the inter-war era. Whereas trading conditions a generation ago often bore a resemblance to the current lack of enterprise being shown by customers, the methods adopted to deal with a period of adverse trading are now by no means similar.

One of the most frequent measures used to relieve producers when business was bad in the 1920's was a spell of organised short-time working. In those days, it was possible to regulate output by a general agreement to cut production by stopping machinery for a stipulated period. This attempt at equalising supply and demand was governed by the employers' organisations with varying success, according to the severity of the particular phase of depression.

It is significant that, despite the recent ups and downs of trading activity, particularly since 1951, the question of organised short-time has never been seriously brought forward as a means of gaining relief for Lancashire producers, however bad the current trading position has been. When the first recession was encountered in 1952, there was a reluctance to adopt any arrangement which might interfere with the supply of labour, built up so carefully and energetically since the end of the war. When it became obvious that the lack of orders meant that the grip on manpower would have to be released, the situation had already got beyond the scope of any general action to curtail output. Subsequent variations in activity have not been severe enough to bring any widespread call for an overall restriction on production, although the larger mill groups have been able to adopt their own schemes of this kind by operating with a shorter week in specified mills.

Warning to Whitehall

There are some traders who believe that, given a lead, the industry could still act in unison in this matter. They contend that not only would a move of this kind enable greater equilibrium to be attained between the volume of output and the current demand but that a general closure of the mills for a specified period would have a salutary effect on the Government as indicating the depth of the depression to which the industry has sunk.

Among those who take this view is Mr. William T. Sutcliffe, Chairman of Taylor and Hartley (Textiles) Ltd., the spinning and weaving group, who made no secret of his opinions at the annual meeting last week. In an address to shareholders covering most of the main topics at present under consideration in the trade, he said that a move to organise a complete stoppage of the mills would not only curb overproduction but might indicate to the authorities in London how seriously Lancashire traders regard the situation. He also criticised the attitude of those distributors who imported foreign cloth, pointing out, not for the first time, that the whole question of arrivals of goods made abroad is in reality governed by the readiness of some firms to import them. To those who did, he gave a warning that the time might come when they would wish to buy Lancashire cloth; then they might find such supplies difficult to obtain.

At the same meeting, Mr. W. T. Shackleton, the Deputy Chairman, who will be remembered for his paper at the Cotton Board conference two years ago which first drew attention to the alarming number of mills which had closed, provided a slightly more encouraging note. While admitting the difficulties of current trading, he looked ahead, stressing the continual rise in world population. Although the clothing needs of many developing countries in the East would be met by their own rapidly expanding mill industries, world consumption of textile products should gradually increase with a rising standard of living, he believed. Amid the welter of gloom surrounding existing trends in international textile centres, this aspect of the problem is perhaps the only one which offers much ground for optimism.

British Cotton Campaign

Trade Union leaders in the cotton industry have welcomed the announcement that textiles made at Rochdale will be labelled "Spun and woven in Rochdale" as part of the campaign against Empire-made and foreign cotton goods. Mr. James Milhench, Secretary of the United Textile Factory Workers' Association, said: "It is a very good idea. It is something we have wanted for a long time. We hope the idea spreads right through the industry."

Rochdale is only one of the Lancashire towns which have launched local boycott campaigns against imported goods. Trade union leaders are to meet in Manchester to decide whether to organise a national campaign. The Colne Co-operation Society is asking the Co-operative Union, Manchester, to urge Britain's 1,000 retail societies not to handle Empire-made goods. A spokesman of the Cotton Board, which is already running a sales campaign in the home market under the slogan "Always Buy Britain's Cottons," said in Manchester that 2,000,000 leaflets prepared by the Board are to be distributed to shoppers by a large multiple stores group with more than 200 branches throughout the country.

A forecast that a small Lancashire cotton industry mission will shortly be leaving for Hong Kong is made in the annual report of the Cotton and Rayon Merchants' Association, with headquarters at Manchester. The Council of the Association, which represents 1,000 textile merchants, says that, in view of the nature of the problems to be discussed with the Hong Kong cotton industry, it has taken the unanimous view that a Lancashire merchant should be included in the delegation.

In earlier negotiations with Hong Kong millowners on the question of voluntarily limiting shipments of cotton goods to the United Kingdom, the Cotton and Rayon Merchants' Association has been represented by its Chairman, the Honorable J. S. T. Hawke.

Not "Down and Out"

The Lancashire cotton industry is far from being "down and out" and still has a major part to play in the economy of the country. This comment is made by the Manchester Chamber of Commerce in the current issue of its *Monthly Record* when it expressed the hope that, with goodwill on all sides, it will be possible to reach an agreement on the question of the volume of Empire-made cotton goods entering the United Kingdom. The Lancashire industry was passing through a very difficult phase but no amount of agitation and representation could bring any new facts before the Government. "Every Minister and official is fully aware of all that is at stake."

Through the Cotton Board, efforts were still being made to find a right solution. Many hours had been spent in conference with representatives of the Indian, Pakistani and Hong Kong cotton industries. India and Pakistan had shown their willingness to discuss a voluntary arrangement and the decision of Hong Kong was awaited. The Chamber added: "The question now being posed is: 'Will the statesmanship and fair-mindedness of all concerned and in authority produce a formula which will clear the air and avoid recourse to other measures?'"

Plant Sales Slump

Exports of textile machinery over the first half of the year have declined to even a larger degree than shipments of cotton textile products. To the end of June, the volume of plant shipped abroad was 582,840 cwts., as against 718,228 cwts. in the first half of 1957 and nearly 900,000 cwts. in the same period of the previous year. Earnings from these exports in 1958 were £20,402,461, a drop of over £4,000,000 as compared with 1956. The major decline in this branch of engineering exports has come from the reduction in shipments to India. Takings have dropped from 237,000 cwts. in the first half of 1956 to 150,000 cwts. last year and now to only 71,000 cwts. this year. Exports to Pakistan are less than half the 1957 level at barely 20,000 cwts.—*All Rights Reserved.*

COTTON AND COMPETING FIBRES

SHARE OF FORMER IN WORLD CONSUMPTION DWINDLES

DESPITE the onslaught of fierce competition from man-made fibres, the share of world textile markets held by cotton is still nearly twice as large as that of man-made fibres and wool combined. According to the estimates of the International Cotton Advisory Committee, Washington, of the 45.6 million bales of fibres consumed by the textile industry of the free world in the calendar year 1957, cotton accounted for 29.3 million bales, wool for 4.9 million bales and man-made fibres for the rest. Nevertheless, cotton's proportion in world fibre consumption continues to decline. From 77 per cent. in 1937-38, it declined to 69 per cent. in 1949 and 64.4 per cent. in 1957, while that of the man-made fibres has increased from 10 per cent. to 27 per cent. in 1949 and 25 per cent. in 1957.

Aggregate mill consumption of the major textile fibres in the world increased by 3 per cent. in 1957, as compared with 4.9 per cent. in 1956 and an average of 6.4 per cent. since 1949. In the last few years, the gain in consumption of textile fibres has been much greater than the annual rate of increase in world population which the United Nations has calculated at 1.6 per cent. for the period 1950-56. *Per capita* consumption of the major textile fibres, at about 4.7 kilograms in 1957, undoubtedly was the highest on record and compares with 3.7 kilograms in 1938. The gain in consumption of the major textile fibres in the non-communist world, about 15 per cent. since 1953, was not much below the gain of 18 per cent. in the U.N. index of industrial production.

Most of the increase in world fibre consumption since 1949 has accrued to cotton, as much as 12.9 million bales to be precise, as compared with 7.9 million bales for the man-made fibres and no change for wool. For the free world countries alone, cotton has gained 7.1 million bales, man-made fibres 6.0 million bales and wool less than half a million bales. Since 1955, cotton's increases has been 1.5 million bales, as compared with 1.1 million bales for man-made fibre and 0.4 million bales for wool.

The following tables give the share of cotton and other fibres in the global fibre consumption:

World Consumption of Textile Fibre

(In bales of 478 lbs.)

	1957	1956	1955	1949
Cotton*	29.3	28.9	27.8	22.2
*Man-made fibres	11.4	10.8	10.3	5.4
Of which :				
Rayon and acetate yarn ...	4.8	4.2	4.4	3.8
Rayon and acetate staple...	5.5	5.2	4.7	1.9
Others	1.8	1.4	1.2	0.2
Wool	4.9	4.8	4.5	4.5
Total ...	45.6	44.5	42.6	33.1

* Production taken as equivalent of consumption.

Most of the gain in consumption of man-made fibres in the last few years has been in rayon staple fibre, but rapid progress is now being made by the newer synthetic fibres (polyester fibres) such as terylene, dacron, tetoron, orlon, etc. Consumption of rayon filament yarn has failed to increase in this period. Construction of additional plants for producing man-made fibres is expected to raise the aggregate capacity in the non-communist world from 14.1 million bales in March, 1957 to 16.0 million bales by December 1958. Of the increase in capacity of 1.9 million bales, some 700,000 bales is for rayon staple fibre, nearly all in Japan, the United Kingdom and the United States. For rayon filament yarn, the expected expansion is only 300,000 bales with the only major additions in Japan and India. The largest expansion is in the newer synthetic fibres where an increase of 900,000 bales is in prospect. Much of the production of these fibres is concentrated in the United States and most of the expansion is still taking place there, but nearly all of the industrialised countries are now expanding their capacity. Substantial increases are expected in Japan, the U.K., France, Western Germany, and Canada. It is expected that capacity for producing these fibres will rise up to 3.0 million bales by the end of 1958.

Price

Reduction in cotton prices in the last two or three years has eliminated much of the former price advantage held by rayon staple. For instance, in the U.K., Middling 15/16 inch cotton was 13 pence per pound higher in price than rayon staple in 1954-55, while, in March 1958, it was only 4.1 pence per pound higher. Nevertheless, rayon staple, particularly considering that it has less waste than cotton, still has a price advantage over all but the poorest qualities of cotton. The increase this season in prices for good quality cotton has enhanced the competitive advantage of rayon staple in nearly all countries. The lowest priced rayon staple fibre is in Japan where the price declined in the last year to around 23 cents a pound. In other countries, generally, there has not been much change recently in the price of rayon staple or, for that matter, in the prices of the newer synthetics.

The question has often been asked whether lower cotton prices would halt or even reverse the trend toward man-made fibres. An examination of the relative consumption of cotton and rayon staple in several important countries of Western Europe and in Japan indicates that the reduction in the price of cotton in 1955-56 was followed by an upsurge in cotton consumption—but also by an increase, of about the same proportion, in consumption of rayon staple. The man-made fibres continue, of course, to have the advantage of a much more stable price than does cotton, which eliminates costly risks in marketing and processing. The newer synthetics are priced far higher than cotton which proves the point that price is not the only factor in inter-fibre competition.

Consumption of Man-made Fibres

Consumption of man-made fibres is of greatest relative importance in the industrial areas of Japan, Western Europe and North America. In Japan, the expansion in the consumption of man-made fibres has even exceeded the rapid rise in cotton consumption and their share of the textile market has increased from 30 to 40 per cent. since 1953, while cotton's percentage has declined from 63 per cent. to 52 per cent. Roughly, one-fourth of the entire expansion in consumption of man-made fibres in the non-communist world since 1949 has been in Japan.

Man-made fibres account for one-third of the textile market in Germany, but, with the substantial increase in cotton consumption in the last few years, cotton's percentage of the market, at a little over 50 per cent., has been maintained. In Italy, consumption of both cotton and man-made fibres has varied considerably with the fortune of the textile industry, but cotton's share of the market has continued to decline. In France, cotton consumption has increased by the same amount as the man-made fibres since 1953 but the percentage gain in man-made fibres has been much greater. In Belgium, cotton has a larger share of the textile market than in France, but cotton consumption has been only stable in recent years while rayon has gained. In the Netherlands, however, cotton consumption was at a peak in 1957, with cotton continuing to account for two-thirds of the total fibre consumption.

In the United States, there have been large gains in the consumption of the newer synthetics, despite a reduction in the total market for textiles, small gains in consumption of rayon staple and downward trends in the consumption of rayon yarn, wool and cotton. In the United Kingdom, cotton consumption has declined substantially in the last few years while consumption of rayon staple and the newer synthetics are currently at a maximum.

Cotton seems to have made its greatest advance, relative to man-made fibres, in the underdeveloped regions of the world. In these areas, cotton is favoured because of the end-use requirements, the greater difficulty of providing the capital, "know-how" and raw materials for man-made fibre industries and also to the fact that, in many countries, cotton is a basic agricultural crop. In India, for instance, cotton consumption has increased a million bales since 1949, as compared with only a hundred thousand for rayon. Cotton comprises 94 per cent. of the consumption of the major textile fibres. Outside the main manufacturing centres for man-made fibre, cotton consumption has increased between three and four times as much as consumption of man-made fibres.

SHARP FALL IN COTTON CONSUMPTION

Figures relating to mill consumption of raw cotton, compiled by the office of the Textile Commissioner, Bombay, indicate that consumption suffered a sharp setback in the month of June. At 324,757 bales, the consumption in June represents a decline of about 35,000 bales from the previous month's figure, and is the lowest in the first ten months of the current season. Indian cotton consumption during the first ten months, namely, September 1957 to June 1958 was 3,685,317 bales as compared with 3,896,441 bales during the corresponding period of the previous season. Foreign cotton consumption in the month also dropped, but to a lesser extent, from 46,379 bales in May to 42,762 bales in June. Aggregate consumption of foreign cotton during the first ten months of the season, was, however, higher at 473,004 bales, as compared with 471,819 bales consumed in the corresponding period of the previous season.

SUGAR CO-OPERATIVES IN BOMBAY

ROLE OF STATE CO-OPERATIVE BANK

AN interesting account of the progress made by the co-operative sugar factories in the Bombay State is given in the forty-sixth Annual Administration Report covering the year 1956-57 of the Bombay State Co-operative Bank Ltd. (Managing Director: Mr. G. M. Laud). The review reveals that, out of the 18 co-operative factories registered, two were in production prior to 1956-57 with a total daily cane-crushing capacity of 2,000 tons. Of the remaining 16 factories, two units (with an aggregate capacity of 1,300 tons) started crushing in 1956-57 and five units (with a total capacity of 4,800 tons) in 1957-58, so that there were in all nine co-operative units working in that year. Six more factories with a capacity of 6,000 tons in all are expected to go into production in the coming season, that is, 1958-59. This means that 15 co-operative factories will be working in the coming season. Two other units have received factory licences but not import licences and one factory is in formation. The capacity of these three units is not mentioned. Assuming that their average capacity will be 1,000 tons, the total daily cane-crushing capacity of all the 18 units will come to over 17,000 tons. On this basis and taking the duration of crushing as 120 days and recovery percentage as 11.5, the quantity of white sugar actually manufactured when all the units commence operation will be of the order of 234,600 tons per annum. This compares with 204,998 tons of sugar produced by the factories belonging to joint-stock companies in 1957-58.

The 18 units together account for 20,692 producer-members and the area to be brought within the scope of co-operative processing of cane is estimated at 52,101 acres.

State Assistance

While the progress made in the setting up of co-operative sugar factories is satisfactory, it must be said that such has been rendered possible only by the active encouragement and assistance given by the State and Central Governments. Thus, out of the fixed capital expenditure of Rs. 75 lakhs of a factory, the State Government has contributed Rs. 10 lakhs as share capital and the loan from the Industrial Finance Corporation amounts to Rs. 50 lakhs. The balance of just Rs. 15 lakhs represents the amount raised by way of share capital from the producer-members. Of this, 92 per cent. is said to have been taken up by cane growers. In other words, the cane growers' share in the capital outlay of the co-operative factories constitutes only a very small proportion, being about 19 per cent. Even of this amount, it is not known how much has come by way of borrowings from co-operatives. It is not unusual, in the case of such co-operatives, for its members to borrow money in order to subscribe to the share capital. Even the management of these factories is chiefly in the hands of the State Government officials, as witness the following extract from the Report:

"The Joint Registrar for Co-operative Sugar Factories, assisted by four Deputy Registrars, continued to be responsible for advising the Boards of Directors on matters of policies and procedure and for co-ordinating and controlling the activities of the factories. In order to ensure planned progress, a Ministerial Committee, presided over by the Finance Minister, Dr. Jivaraj Mehta, provided guidance on matters of broad policy."

Apart from making direct contribution to the share capital, securing loan from the State-controlled Industrial Finance Corporation and exercising overall administrative control, the Government of Bombay has even volunteered, in some cases, to guarantee repayment to the extent of Rs. 15 lakhs in the case of each factory the loan taken by factories owing to the inability of the members to raise additional capital. What better evidence is required to prove that the formation of sugar co-operatives marks the entry of the State into the sphere of sugar manufacture? Besides, the Bombay State Co-operative Bank, an institution in which the Bombay State Government has considerable voice, has played an important role in fostering the co-operative sugar factories. Most of these co-operatives are undercapitalised. So, the Bombay State Co-operative Bank has provided loans to meet not merely the gap in the capital resources of some units but also by way of interim finance pending sanction and receipt of additional loans from the Industrial Finance Corporation in a manner similar to the cash credit sanctioned by the Bank pending receipt of the first loan sanctioned by the Corporation. Five factories were sanctioned the credit limits and the balance outstanding with them at the close of the year 1956-57 was Rs. 125.40 lakhs. Further, the Bank has offered counter-guarantees to factories which are required to establish letters of credit for amounts payable against documents for machinery, as well as in respect of deferred payments on account of machinery.

In addition to the above forms of assistance, the Bank has made available the working capital requirements of the factories. This is done in three ways—(1) provision of clean cash credit against security of general assets for purchase of sugarcane and other accessories and for meeting working expenses; (2) grant of hypothecation credit for purchase of stores, etc., and (3) provision of funds against pledging of sugar stocks. The total loans sanctioned during 1956-57 amounted to Rs. 162 lakhs, as against Rs. 95.50 lakhs in the previous year; the sum due at the close of the year was Rs. 130.20 lakhs.

Financial Position of Co-operatives

The number of factories financed by the Bank is 14. Of these, the Pravara and Kopargaon factories, it is said, are fairly established and are in a position to meet their financial obligations in the normal manner. In the case of four factories, Rahuri, Rahata, Karegaon and Shri Ram, the delay in starting production and the increase in their capital outlay consequent on the rise in the cost of machinery have raised their commitments in respect of fixed capital expenditure which varies from Rs. 84.46 lakhs in the case of Shri Ram on account of smaller capacity to approximately Rs. 98 lakhs in the case of the other three. They went into production in 1957-58 but suffer from teething troubles. Immediately after the close of the season, they will have to meet commitments in respect of the first instalment of the Industrial Finance Corporation loan, medium-term loan of this Bank and second instalment of deferred payments. These vary between Rs. 16 lakhs and Rs. 21 lakhs. Against this, each factory is expected to strengthen its capital resources by raising additional capital to the extent of Rs. 5 lakhs, receiving deposits compulsorily from the members to the extent of Rs. 7.50 lakhs and ploughing back profit, etc., at about Rs. 13 lakhs. The surplus has been estimated on the basis that the cane price would be Rs. 45 per ton, manufacturing expenses at Rs. 15 per ton, and the excise duty and cane cess at Rs. 27 per ton, as against the sugar price of Rs. 95 per ton. Should this estimate materialise, says the Report, no major difficulty is foreshadowed. The other six factories are being erected and are expected to catch the next crushing season. The progress of the remaining two factories would, however, depend, according to the Bank, on the availability of foreign exchange.

REFINING OF SUGARCANE WAX

The National Chemical Laboratory, Poona, has evolved a new process of refining and modification of sugarcane wax. The new substitute can replace carnauba and other similar waxes to a great extent in many industrial applications. Encouraging performance reports have been received from user industries. Two sugar factories are known to be producing the crude wax; their total capacity being of the order of 600 lbs. per day during the working season.

Sugarcane wax is a constituent of press-mud or lime sludge, a by-product of sulphitation sugar factories which is at present almost going waste. Since the crude wax as recovered by solvent extraction is sticky, dark in colour and has poor solvent take-up, its applications are limited. The new process essentially consists in the oxidation of crude wax with potassium or sodium dichromate and sulphuric acid and chemical modification of the oxidised wax by preparing its esters and amide derivatives. The importance of the present work lies in oxidising, under proper conditions, the crude

STAINLESS STEEL FABRICATORS

SHORTAGE OF RAW MATERIAL TELLS ON PRODUCTION

THE depression in India's stainless steel fabricating industry gives the lie to the claim, often made by Government spokesmen, that the official import policy does not interfere with industrial production. Many units of the industry, which unfortunately depends upon imports of its essential raw material, namely, stainless steel, have either closed down or face closure, thanks to the inadequate import of stainless steel. Apart from the fact that many workers have been thrown out of their jobs, the closure of the units in the industry implies immobilisation of technical skill acquired through years of patient training. Appropriately enough, Mr. Ramanlal M. Shah, President of the All-India Stainless Steel Industries Association, in the course of a Press conference, held in Bombay last week, urged the Government to make a "more realistic approach" to the industry by ensuring adequate supplies of raw material to it.

Stainless steel is one of those new alloys which have a wide range of uses. Besides steel, it contains chromium (18 per cent.) and nickel (8 per cent.). Its valuable qualities include brightness and resistance to stain and corrosion. Its self-healing quality, it is claimed, is not possessed by any known metal, except pure silver and platinum. The nickel content in the alloy not only raises its resistance to corrosion but also makes it extremely strong and ductile, so that it can be easily welded, cold worked and shaped into different forms without heating. Apart from its use in utensilware industry, it has a large number of industrial applications. Thus, as Mr. Balram D. Nagpal, Honorary Secretary, All India Stainless Steel Industries Association, points out in his booklet, *The Story of Stainless Steel*, the alloy is used in the ship-building industry, in the food processing and packaging industry, in chemical plant, in drug laboratories, in the refrigeration, oil, rubber, photographic, sugar and vegetable processing industries. It is used in research institutes where acid-resistant articles are required. Among its other uses, mention must be made of the following:

(1) Hospital-ware including surgical instruments: hospital furniture, chart holders, trays for instruments, surgical instruments, syringes, operation tables, etc. (2) Furniture: household or office furniture or office furniture such as chairs, tables, sofa-sets, lockers door-knobs and door handles. (3) Railways: corner wash basins, latrine pans, commodes, showers, taps, seat books, hinges, chairs and coach building. (4) Military stores: trays jugs, mugs, eating trays, etc. (5) Hardware items: angles and flanges, nuts, bolts, rivets and screws. (6) Motor car industry: in the manufacture of radiator grills, window frame sections, beading and hub-caps. (7) Cycle parts and accessories. (8) Sanitary ware industry: in the manufacture of wash basins, soap containers, commodes, showers, taps, geysers, etc. (9) Rayon, textile and dyes industry: in the processing of yarn. (10) Paint industry: vats for the production of quality varnishes. (11) Stainless steel tanks: for various purposes wherever acid-resisting and wear-resisting properties are essential. (12) Electrical appliances: for kettles, heating appliances, etc.

Although India does not produce stainless steel, it has an industry which, in the course of the last 10 years, has achieved a high standard of excellence in fabricating the imported raw materials; it has also widened the range of its output. The articles produced by the industry compare favourably with those in the West. Indeed, the industry was developing a modest export trade until the shortage of raw material compelled many of its units to close down.

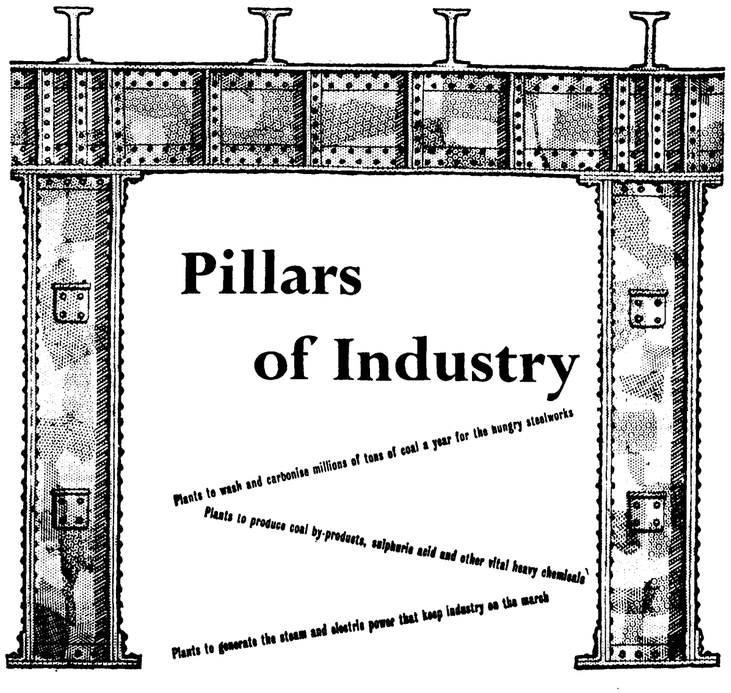
Imports of stainless steel have varied from year to year. During the period 1951 to 1957, they were (in tons): 1951—819; 1952—1,143; 1953—1,285; 1954—3,087; 1955—2,529; 1956—4,582 and 1957—3,791. If there were no restrictions on imports, the industry would be able to record increase in production year after year. It would also be able to cater to the large unsatisfied demand for its products. Because the demand for its products is growing, the industry feels that larger and larger imports would be needed in the next few years, the estimates of import requirements for 1958, 1959 and 1960 being 8,500 tons, 10,500 tons and 12,000 tons respectively. The industry's minimum import requirements at present are estimated at 4,000 tons which, at the rate of Rs. 6,000 per ton, would cost Rs. 2 to Rs. 3 crores in terms of foreign exchange. If its expansion plans were allowed, the industry would need larger imports which would correspondingly imply a higher foreign exchange expenditure. The Government, it is learnt, has relaxed the rigour of its restrictions on imports. Thus, it has decided to allow imports to actual users to the extent of 20 to 25 per cent. of their requirements (as assessed by the State Governments). This decision slighly mitigates, but does not by any means remove, the difficulties of the industry.

Generally speaking, no sector of the economy can be given exceptional treatment in a period of foreign exchange crisis. The stainless steel fabricating industry too must bear its share of the burden which the entire country has to carry because of shortage of foreign exchange. At the same time, it is well to remember that there are a few features of the industry which strengthen its claim for a more generous allotment from the general foreign exchange pool. In the first place, the industry has proved its ability to sell its products abroad. Secondly, the industry exports the scrap which remains after it has utilised the imported raw material. Such scrap, it has been computed, amounts to nearly 50 per cent. of the value of the cost of steel imported from abroad. Thirdly, stainless steel vessels, unlike copper and brass vessels, do not require tinning; there is thus no need to import tin. They also last longer than copper and brass vessels, their life being estimated at 40 years. In fact, no stainless steel scrap has come into the market so far. Because brass vessels last only five years, their use implies periodical expenditure of foreign exchange. Although it costs more to import stainless steel (about Rs. 6,000 per ton) than brass (about Rs. 2,700 per ton), the former, because of its long life, is cheaper in the long run.

Finally, the Government has plans for setting up a plant for manufacturing stainless steel. It cannot be unmindful of the need for keeping alive an industry which alone can provide a market for the raw material it may produce. And the industry cannot be kept alive without adequate supplies of imported raw material. These considerations obviously strengthen the industry's claim for a reasonable allocation of foreign exchange for purposes of augmenting the raw material it needs for its very existence.

PAKISTAN'S ENERGY RESOURCES

Rising consumption of petroleum products in Pakistan, according to the *Petroleum Press Service*, now approaches an annual rate of 2 million tons. Local oil production, all in West Pakistan, is only 300,000 tons a year. But the search for new oil, in which the Government is participating, is being carried out by a number of foreign companies in both parts of Pakistan. Some saving of foreign exchange is expected from the project of the chief marketing companies, Burmah Oil, Shell, Stanvac and Caltex, to build a jointly owned refinery large enough to meet the requirements of West Pakistan. The supply of natural gas from Sui, which began in September 1955, it is stated, has already transformed the energy picture of W. Pakistan. The reserves of gas at the Sui field are estimated at 4,500,000 million cubic feet, equivalent in calorific value to over 100 million tons of fuel oil. Two 16-inch pipelines have been laid, one running south of Karachi and one north of Multan. Out of the 25 million cubic feet a day of Sui gas sold in Karachi, less than one million is sold to domestic and commercial (as distinct from industrial) users. Industrial consumers include steel rolling, aluminium processing, cement making, glass, textile, biscuit and other factories. The rate for household purposes is Rs. 8 per 1,000 cubic feet, for commercial Rs. 4, and the industrial rate is only Rs. 2. Yet to an average household, using about 2,000 cubic feet of gas a month, the saving as compared with kerosene is 20-30 per cent. A gas field has also been discovered in East Pakistan, at Sylhet, but reserves are much smaller than at Sui, the latest assessment being 280,000 million cubic feet, equivalent to 6½ million tons of fuel oil. A fertiliser plant, with an annual capacity of 250,000 tons, to be built near the field by the Japanese group, Kobe, will take the entire Sylhet output of 19.4 million cubic feet a day.



To build such plants is a key task to which Simon-Carves bring half a century's experience, gained in every continent of the world, of engineering design, scientific research, and large-scale contracting. At the new Durgapur steelworks, at the great steelworks at Jamshedpur and Hirapur, and at many centres of chemical production Simon-Carves are applying their immense resources to India's industrial growth.

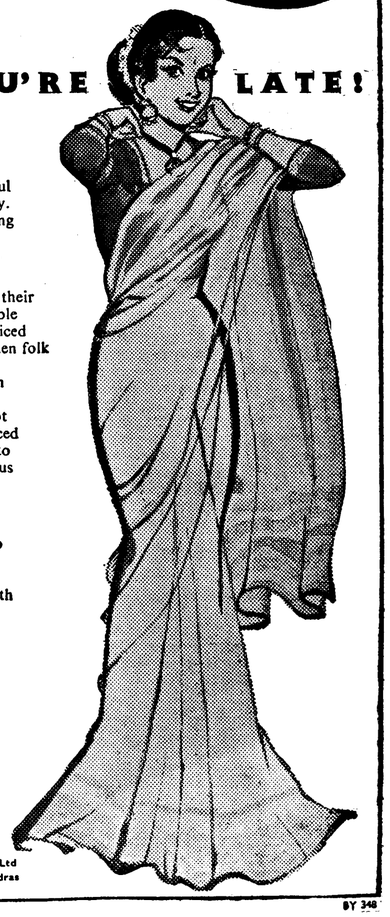
LADY, YOU'RE LATE!



Who cares! She knows that the occasion demands the most careful selection—saree—choli—jewellery. And she spares no pains in making the right choice, for charm and refinement are a family tradition.

Nearly eighty years ago when BINNY'S started manufacturing their quality cloth, it was mainly suitable for men's wear. When ladies noticed how smart and handsome their men folk looked in BINNY'S cloth, they wished they too could obtain the same *variety* and *quality* in women's wear, and they were not disappointed. BINNY'S introduced silks and union fabrics designed to suit the taste of the most fastidious women. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for these reassuring BINNY'S trade marks on the cloth they buy.

THE ENFIELD INDIA LIMITED

PRODUCTION DOUBLED IN 1957

SCOPE FOR CONTINUED EXPANSION

SRI K. R. SUNDARAM IYER'S REVIEW

PRESIDING over the Second Annual General Meeting of the Company held on Thursday, the 31st July 1958, at Tiruvottiyur, Madras, Sri K. R. Sundaram Iyer, Chairman, said:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to this Second Annual General Meeting of the Company. The Directors' Report and the Statement of Accounts for the year ended 31st December 1957 have been with you for some time and with your approval, I shall take them as read.

"While the progress so far made in the indigenous manufacture of components under the phased programme has been quite satisfactory, the Directors have, keeping in view the foreign exchange position, taken steps to accelerate the pace. Items taken up for indigenous manufacture are nearing 50 per cent. in value and include, apart from frame, petrol tank, seat, silencer, exhaust pipe, etc., other major and precision components of engine, clutch, fork and wheels. Every effort is being made to attain self-sufficiency in indigenous manufacture of almost the entire motor cycle, barring, of course, the proprietary items, in 1959 as against the original schedule of 1960. With this objective in view, acquisition of further plant and machinery has been expedited and steps are being taken to obtain the necessary finances.

Issue of Additional Capital

"In this context, I am happy to say that the issue of capital of Rs 6 lakhs made in February 1958 was fully subscribed. As the shareholders are aware, it was decided at the Extraordinary General Meeting held on the 25th June 1958, that Rs 9 lakhs of capital be issued, out of which Rs 4 lakhs of Preference Capital (7 per cent tax-free redeemable cumulative preference shares of Rs 100 each) is being offered to the existing shareholders, as arrangements were made for subscription of the balance of Rs 5 lakhs. This brings the total subscribed capital to Rs 25 lakhs.

Progress of Building Construction

"I made a reference at the last meeting to the factory building space then available and the construction in progress of further factory buildings and administrative offices. We are now operating with an area of nearly sixty thousand sq. ft. in the Work Shops and of ten thousand sq. ft. in the Administrative Offices.

Satisfactory Progress

"In an industry of this type, where progressive manufacturing is involved, during the first few years, sizable expenditure has to be incurred ahead of production in the preparation of designs, drawings and production planning. It is gratifying to note, therefore, that the profit earned during this year has enabled your Company to write off fully the revenue loss and deferred revenue expenditure carried forward from the previous year, brokerage on shares and a good portion of the preliminary expenses, and to provide for the dividend on preference shares.

Unsatisfied Demand

"Production during the year was nearly twice that of the previous year. Imported motor cycles of competitive makes were also available in large numbers. Nevertheless, your Company was not able to fully meet the demand but had to carry pending orders to be supplied in the early months of 1958.

"The rate of increase in production is being maintained and production during 1958 is expected to be about 50 per cent over that of 1957. But, even this will be considerably below the quantity your Company is presently licensed by Government under the Industries (Development and Regulation) Act. Your Directors do not under-estimate the problems and the efforts involved in building an industry of the magnitude your Company has undertaken, particularly in view of the shortage of materials and skilled man-power. Until all the components of the vehicles are made indigenously—your Company, as I have indicated earlier, is endeavouring its best to expedite it—further increase in production has to depend upon the allotment we receive from Government in the way of foreign exchange for importing components that for the time being are not available from indigenous sources. I must mention here that we have had sympathetic consideration and understanding from our Government, particularly in the context of the prevailing acute foreign exchange stringency. Your Directors are looking forward to the Government to ensure that imported materials are made available to enable production being stepped up at least to the present licensed annual quantity which will facilitate manufacture on an economic basis.

"Motor cycles and three-wheelers are the most economical form of personal and goods transport. It is not surprising, therefore, that the demand for your Company's products is increasing with the rising tempo of industrial and economic activities in the country. To cope up with the increasing demand, your Company has made an application to the Government to increase the licensed annual quantity of production, particularly as this is possible with the Company's current capacity. While stepping up the production of motor cycles, consideration of the quality of the components manufactured has always been kept in view and rigid standards of inspection are being adhered to.

Service After Sales

"Your Company attaches the greatest importance to service-after-sales. It is gratifying that your Company's Selling Agents, The Madras Motors Private Limited, have organised further points of sales and service. There are now in India over 63 points, as against 48 in the previous year. This augmented number of service points should make for more easy and speedier service to the users of Royal Enfield motor cycles and three-wheelers. The personnel at these service stations are trained at the Tiruvottiyur Factory.

Prospects for Exports

"Your Company's products were exhibited at the China exhibition and well appreciated by the Chinese trade circles. There are also enquiries for supplies of motor cycles from some of the West Asian and South-East Asian countries, exports to which have now been approved by our U.K. collaborators. Your Directors hope to fully utilise the prospects for export of motor cycles and three-wheelers. It may be too early to assess the prospects of export business. However, your Directors are alive to this need and are making the preliminary surveys and securing the necessary contacts in these countries.

New Activities

"One way to reduce the country's foreign exchange requirements is by pooling the plant, machinery and equipment resources of the various industrial units in the country in order to secure their fullest use for the common good of the various industries and the country. Though this has contributed in a large measure to economies in production in advanced Western countries, it has not so far taken practical shape in our country. Any effort in this direction involves a detailed exchange of views among the industrialists themselves for the common good of all. The All-India Ancillary Industries Exhibition has contributed a good deal to the dissemination of knowledge in this direction. I hope, there will be active co-operation between various units in the automobile industry and that the response to undertake sub-contracting work will be encouraging, so that, the facilities available are effectively and fully used. Your Company started a General Engineering Department and is accepting work from its sister concerns in the engineering industry to keep the plant and equipment facilities fully employed. We are receiving encouraging response from the State undertakings and also from the private sector. I hope in the years to come, this department will prove to be a remunerative and stabilizing source of business.

"Your Directors are doing everything possible to maintain cordial relations with the staff and workers of this Company and towards this objective are developing a scheme for management and labour consultation on important matters affecting the Company's production and also the day-to-day welfare of the employees.

"The Board of Directors convey on behalf of the Company, their gratitude to the Government of India and the Madras State Government for all the assistance and guidance which they have extended to us. We have drawn substantially on the loan sanctioned by the Industrial Finance Corporation of India during the year and, needless to say, this timely assistance has enabled us to keep up to our capital programme. I take this opportunity to express our gratitude to your Company's U.K. collaborators, The Enfield Cycle Company Ltd., Redditch, for the co-operation extended by them during the year. Your Company's Selling Agents, The Madras Motors Private Limited, are putting forth commendable efforts to popularise the use, sales and service of motor cycles and three-wheelers in the country and I convey our thanks to the Selling Agents and the dealers and sub-dealers all over the country. Before I conclude, I thank my colleagues, staff and workers, without whose efforts the results achieved during this year would not have been possible."

NOTE:—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

PUBLIC AUCTION OF PROPERTIES

In the matter of the Indian Companies Act, 1956 and in the matter of the Hyderabad Investment Syndicate Ltd.
(In members' voluntary liquidation)

PROCLAMATION OF SALE

As per the special resolution passed unanimously by the General Body Meeting of the Hyderabad Investment Syndicate Limited, on the 7th May, 1958, empowering the undersigned to exercise the powers mentioned in the Sub-Clause (2) (i) to (iv) of Section 457 and Clause (1) of Section 546 of the Companies Act 1956, the undersigned, in the best interest of the Shareholders of the Company, will sell by public auction all the assets and liabilities of the said Company and its properties *en-lot* together with its goodwill and as a going concern on Monday, the 25th August 1958, from 2 P.M. to 4 P.M.

The Company and its properties and documents of title are open for inspection at the Company's Registered Office, Hyderabad, during Office hours of the Company on all working days.

Intending purchasers may obtain all necessary particulars regarding terms and conditions of sale and Assets and Liabilities of the Company from the said office.

forward and faster goes the wheel

Road Transport in Bombay has gone far, far ahead since it was nationalised ten years ago. The Bombay State Transport, which took over the operations in 1948, is pleased to record its progress.

	1948-49	1956-57
Total mileage	52,88,206	7,16,49,450
Total number of passengers carried	58,71,238	18,48,79,056
Number of routes	150	1,880
Number of vehicles	469	2,710

But these figures do not convey the complete picture of the immense strides made. In terms of human happiness nationalisation has brought about a revolution in the amenities, comforts, regularity and courteous service provided to travellers by *ST* buses all over the State.

The energies of Bombay State Transport will continue to be bent on making road transport more and more useful to the people.

THE RUSSIAN TRADE DRIVE

MOTIVES ARE BOTH POLITICAL AND ECONOMIC

PRESSING on with its economic development, the Soviet Union is entering increasingly into trading relations with the outside world. Its foreign trade turnover—imports plus exports—rose by about one-quarter in two years to an estimated total of $8,250 million in 1957. This total, though small in relation to the country's national income, raises the U.S.S.R. to sixth place among the trading nations of the world. Although some 70 per cent. of the trade is with countries of the Communist bloc, the web of commercial transactions is being gradually extended. It is reckoned that about one-quarter of Russian trade is now with countries of the West, and the relaxation of restrictions imposed by Western countries on sales of "strategic" commodities to Communist countries may open up opportunities for further growth. From the nature of the regime, these transactions are generally based on bilateral trade and payments agreements; and, in these agreements, petroleum—mainly crude and black oils—now figures more prominently than before. The U.S.S.R. also grants "aid" in various forms—gifts or credits which enable the recipients to get technical help and capital goods from the U.S.S.R.

The motives underlying this trade drive are both political and economic, though the emphasis differs from country to country. In the Middle East, and perhaps in Asia generally, it is the political motive which is uppermost. One is reminded of Mr. Khrushchev's statement in 1955 that "We value trade least for economic reasons and most for political purposes." It is no accident therefore that Egypt and Syria have, according to an official U.S. estimate, received $760 million out of the $1,900 million of "aid" so far given or promised by the Russians. The political motive is also blatantly obvious in the suspension, at the end of May, of further aid to Yugoslavia, which had been promised a total of $465 million.

In their dealings with the Western nations, on the other hand, the Russians' dominant motive is usually the desire to secure plant and equipment of various kinds, including such items as complete chemical plants, which may be of new design, or which they do not produce, or produce in sufficient quantity. In Latin America, the purchase of foodstuffs and industrial raw materials to increase supplies of consumer goods for the Russian people conveniently runs parallel with the general political objective of embarrassing the U.S.A. But it would be wrong to imagine that the desire to trade is only on the Russian side. Manufacturers in the industrial countries, some with surplus capacity, are very keen to sell plant and other goods to the U.S.S.R., while countries in the free world with crop surpluses are anxious to be relieved of them and to get useful goods in exchange. Trading can usually override political antipathies.

Variety of Goods Offered

Besides crude oil, petroleum products, and prospecting, drilling and refining equipment, the Russians have quite a varied display of goods on offer in their shopwindow: metals, timber, grains, chemicals, machinery. In some cases, their competition is beginning to pose problems for Western exporters of these products—e.g., the aluminium producers of Canada, who recently had to cut their price from 24½ to 22½ cents a pound to meet Russian competition. A valuable weapon in the Communists' armoury is their ability to export much-sought-after gold: the Soviet Union accounts for about one-fifth of the world's output of the precious metal, and its exports rose to a record of 7.5 million ounces last year. However, it is with oil in its various aspects that this article is mainly concerned. Oil is a commodity which most countries need. The quality of Russian oil is usually good and, from the Russian's side, output can be readily adjusted to meet trading requirements, while its production and handling involves only a very small amount of labour. It is, therefore, for them, an advantageous commodity with which to trade.

Soviet oil exports to countries outside the Communist bloc have been growing steadily in recent years to an estimated total of 6 million tons in 1957. About three-quarters of this total was consigned to western Europe, and a study of recently concluded trade agreements suggests that shipments in this direction will show a sharp increase this year, even though the Russians' performance does not always match their promises.

A case in point is the three-year trade agreement signed with West Germany at the end of April. The Russians' anxiety to clinch this agreement, and so to secure specialised plant and equipment from Germany, is underlined by their accompaying promise to allow the repatriation of German nationals detained in the Soviet Union. Russia undertakes to supply 500,000 tons of crude oil this year, 700,000 tons in 1959 and a million tons in 1960, together with 300,000 tons of fuel oil, 120,000 tons of diesel oil and 10,000 tons of gasoline each year. These quantities are much in excess of the Federal Republic's 1957 imports from the Soviet Union—no crude oil, 350,000 tons of fuel oil and small quantities of other products.

France is also to take more Soviet oil. A protocol to the trade agreement of February 1957 fixes the quotas for 1958 as follows: crude oil, 600,000 tons; fuel oil, 175,000 tons; gas oil, 125,000 tons; gasoline, 100,000 tons. Apart from the last item, these figures are much in excess of actual shipments in 1957, which comprised in the main about 180,000 tons of crude petroleum, 45,000 tons of gas oil and 60,000 tons of gasoline; but this year's trade volume may not, of course, come up to expectations.

Austria, which has hitherto had to provide a million tons of crude a year to the Soviet Union by way of reparations,* also figures this year as a buyer of Russian oil products. The quantities in question include 150,000 tons of fuel oil and 20,000 tons of gasoline in 1958, rising to 200,000 tons of fuel oil and 25,000 tons of gasoline next year, and to 250,000 and 30,000 tons, respectively, in 1960. For some time, Austria has also been receiving small quantities of petroleum products from Rumania, Hungary and Czechoslovakia.

Denmark

Another European country with which the Russians are at present negotiating a new trade agreement is Denmark. Denmark has surplus dairy produce which the Russians are willing to buy and the Danish Government seems interested in importing oil from this source as a way of enabling the Russians to discharge the debt of 70-80 million kroner which resulted from the two-year agreement which expired last May. But lack of the necessary handling and storage facilities presents an obstacle, as the established companies, with more than ample supplies of their own, are unwilling to handle Russian oil. The possibility of providing additional facilities to handle Russian oil is under consideration. The result of these negotiations is awaited with no little interest, as is the outcome of the preparations which the Kremlin is alleged to be making to lavish trade offers on Turkey.

Slightly further afield, the U.S.S.R. signed a trade agreement last April with the new kingdom of Morocco by which they undertook to deliver, besides machinery, equipment, etc., 85,000 tons of crude oil, 28,000 tons of gas oil, 35,000 tons of fuel oil and 500 tons of kerosine in the 12 months to April 1959.

More striking, perhaps, are Russia's recent efforts to trade with Canada and the U.S.A. In these instances, oil does not—for obvious reasons—come into the picture, but representatives of the official Soviet export agency recently approached Canadian importers with offers to sell anthracite coal, rather similar to that at present imported from Wales.

In the U.S.A. the Soviet leaders may appear to be trying to cash in on the recession by offering to place big orders for plant and machinery—if possible on credit terms. In this, as in everything else they do, the Russians would not miss the opportunity for propaganda which a big deal, or discussions about a deal, presents. But the offer may well reflect a genuine desire to acquire, on favourable terms, much-needed, up-to-date capital goods and, if possible, technical assistance to expand and widen the range of Soviet industry.

The Russians are also seizing the opportunity offered by the trading and balance of payments difficulties of South American States—many of which are not in diplomatic relations with the Soviet Union—to increase their trade in that region. Hitherto, the Communist have generally met with little response in this area, where Catholic influence predominates and where links with the U.S.A. are usually close. But the position is changing, largely owing to the fall in world commodity prices.

The Argentine Government, for example, sent a purchasing mission to eastern Europe early this year, which signed contracts for the purchase of goods to the value of over $27 million; and, in view of the country's shortage of foreign exchange, the mission was fortunate in securing four years' credit. The purchases included $16.8 million worth of rails, oil pipes, power station equipment, etc., from Czechoslovakia, $3.4 million of capital goods (including telecommunications equipment) from Hungary and $4.7 million worth of rails, earth-moving equipment, etc., from the Soviet Union. (At this time, Argentina was the only Latin American country having a trade agreement with the U.S.S.R.). A subsequent agreement provides that Russia will supply a million tons of crude oil—400,000 tons this year and 600,000 tons in 1959—partly in discharge of outstanding debts and partly in exchange for wool and other Argentine produce. The agreed price (for crude roughly equivalent to 25° A.P.I.) was $15.86 a ton, delivered Argentina. The President has said that the Russians are also prepared to supply oil equipment in exchange for Argentine produce.

Brazil

Similarly, Brazil, which has bartered surplus coffee for Polish ships, and has lately been negotiating with a Rumanian trade mission, is now preparing to do business with the U.S.S.R. After turning down an offer of drilling and refining equipment made to Petrobras towards the end of last year, the Government has accepted in principle a Russian offer of 200,000 tons of crude oil in exchange for coffee, cocoa and cotton. The attraction of the deal to Brazil, with its tenuous foreign exchange resources, is obvious. It also pleases the Russians to get their foot in the Brazilian door—for the republic has had no diplomatic dealings with the U.S.S.R. since 1947; and they are reported to have offered to conclude similar arrangements for the supply of capital goods.

Uruguay is also overcoming her reluctance to enter into commercial relations with Russia. In June, A.N.C.A.P., the State petroleum concern, received its first shipment of Russian crude, this being part of a total of 200,000 cubic metres which the Russians are to supply in exchange for wool. As a result of this agreement, Russia temporarily displaces the U.K. as the biggest buyer of Uruguayan wool.

Among other goods which Russia has recently been buying in South America are copper wire from Chile and coffee from Colombia. The Russians have also been making unofficial approaches to Bolivia with offers of needed equipment on credit terms. And they will in coming months doubtless continue to press their suit on a number of the Latin American countries whenever a suitable opening appears.

With the continued rapid expansion of the Soviet economy—industrial production in the first quarter of 1958 was up by 11 per cent. compared with the same period of last year, while crude oil production was up by 18 per cent.—the country must be facing many bottlenecks and shortages, while harvests are not always good. Hence, the need for trade with the outside world must be expected to grow.

Oil will doubtless be among the goods which the Russians will continue to exchange for the products they require. As we have previously reported, there are very ambitious plans to expand the country's crude oil output from 98 million metric tons last year to 350-400 million by 1972 and its natural gas production from 21,400 million to 270-320,000 million cubic metres. Though the bulk of the increase, if attained, will be needed to meet the rapid expansion of requirements at home, and though the expansion will be mainly in the Ural-Volga region remote from the seaboard, sizable quantities could no doubt be spared for export outside the Communist bloc. There are, however, no signs that the Russians are trying to ruin the West's oil trade. They are hard bargainers and exact the best price they can command in the light of the prices they pay for the products received in exchange. There is no doubt, however, that they find oil very useful for sustaining that convenient marriage of economic and political objectives which their trade drive represents.—*By special arrangement with* **Petroleum Press Service**.

*The U.S.S.R. has agreed to a net 50 per cent. reduction of Austria's outstanding reparation deliveries of crude oil, which under the previous agreement would have amounted to 1,000,000 metric tons annually for the next seven years. Austria will continue to put 1,000,000 tons of Austrian crude at the U.S.S.R.'s disposal for use in East European countries, but the U.S.S.R. has undertaken to refund half this volume by supplying Austria, cost-free, with 500,000 tons of Russian crude annually via the Danube for a period of seven years, beginning 1st January 1959.

NEW PRODUCTS AND PROCESSES

Instant Rice

INSTANT rice, a new product having commercial possibilities developed by the U.S. Department of Agriculture, has been market-tested in Fresno, California. The product is an easy-to-prepare, precooked, and canned rice. About 8,000 cans were sold during the 19-week test. The California rice industry provided funds for preparation of the product. Sales averaged one-third case per store per week, about the same as for most other established grocery products. The product was most popular in stores serving customers in the medium-income bracket. Most of those who tried the new product liked its taste and thought it cooked just as well as other rices. About one in four thought the cooking instructions should be changed. Some homemakers said they had trouble getting the rice out of the can. With a few product improvements, commercial possibilities are foreseen for instant rice, particularly as an additional item for established canners.

New Device for Mobile Radio

A new type of thermally compensated crystal oscillator has recently been developed by the Automatic Telephone and Electric Company of the U.K. It is expected to be of particular interest to designers of mobile V.H.F. radio equipment where increasingly higher stabilities over wide temperature ranges are required due to the closer channel spacings. The oscillator will operate on any spot frequency between 4 and 16 megacycles per second and achieves, it is claimed, a stability of plus, or minus, five parts per million over a temperature range of minus 20° Centigrade to plus 70° Centigrade for any specified frequency. This high degree of stability is secured by what is said to be a unique method whereby the oscillator, which is essentially of a conventional type, also has a temperature-compensating network controlled by a thermistor mounted inside the crystal envelope. The complete oscillator unit is being made available as a small sub-assembly which can easily be incorporated in a wide variety of equipment during the design stage. The current consumption is no more than that of any other type of oscillator and the units are ready for operation within a minute or two of switching on.

New Resin

A new resin which can be used as a plasticiser for more rigid polyester resins has been developed by British Resin Products. The resin, called Cellobond A.2591, is said to confer a degree of flexibility in proportion to the amount of it which is used. In the case of gel coats the addition of the new resin is stated both to increase the impact resistance and to reduce any tendency to craze on impact. As a low viscosity amber coloured syrup, the resin is completely miscible with Cellobond polyester resins in any desired proportions. Its electrical properties, however, are said not to be so good as those of other Cellobond polyester resins.

Painless Dental Injections

A new anesthesia jet injector device which gives painless dental injections marks the first basic change in injection methods in the history of dentistry, according to studies made by U.S. Army Medical Service officers. The six-inch long injector shoots liquid into the tissues at a speed of about 700 feet per second. Power source is a spring-activated plunger. The injector contains six springs which are compressed by winding and released by pushing a button. In addition to the removal of pain from the operation, the new method of anesthetising eliminates the hazards of needle fracture during injection and reduces the danger of transmitting infectious hepatitis. The jet injection method has several disadvantages, the most serious being that it causes some bleeding. In 28 per cent. of the cases there was no bleeding; in 59 per cent., only slight bleeding. In 13 per cent., of the cases there was moderate to heavy bleeding which, however, was easily controlled by holding a two-inch square sterile gauge pad with pressure over the puncture for one to two minutes. The injector, single shot and hand-operated, is manufactured by R. P. Scherer Corporation of Detroit, Michigan.

Smokeless Safety Flare

An oil refinery safety flare that burns with no smoke and no visible flame has been designed by the Esso Research and Engineering Company of the United States. Refinery flares burn off gases that might otherwise cause a safety problem. The gases are released to burn harmlessly when an operating interruption occurs. While present refinery flares serve their safety function well, according to an Esso Research engineer, the smoke they produce represents "a factor, even though small, in air pollution." The new flare, said to eliminate smoke entirely, is part of the Company's continuing campaign against air pollution. A second advantage of the new flare is that the gas is burned in the base of a 38-foot stack, rather than out in the open as in conventional flares. This was done because visible flame is often misinterpreted by passers-by and nearby residents to be the result of a dangerous or wasteful operation.

EMPLOYEES' PROVIDENT FUNDS SCHEME

WORKING AND PROGRESS REVIEWED

THE Employees' Provident Funds Scheme completed nearly four and a half years of existence on 31st March 1957. During this period, it had to undergo considerable stress and strain. In addition to its teething troubles, the scheme had to face serious difficulties, as a result of its rapid extension to a large number of industries which were not well organised. The delay in payment of provident fund by non-exempted establishments and the failure of some of the exempted ones to invest their accumulations of provident fund in Central Government securities added seriously to the difficulties. Apart from this, provident fund offices, which should normally have been purely accounts offices, have had to devote much of their time and energy on legal action against defaulters, both by way of prosecution and recovery proceedings as well as in defending suits filed by several employers.

Despite these handicaps, the scheme, according to the *Report on the Working of the Employees' Provident Funds Scheme* for the year 1956-57, has made satisfactory progress. The total number of establishments brought under the Employees' Provident Funds Act 1952, by 31st December 1957, was about 6,272 having about 23.67 lakhs subscribers. The total number of employees (including those who are not members of the Fund) in the 6,272 covered establishments is estimated at about 28.95 lakhs. Thus, about 82 per cent. employees in the covered establishments are receiving the benefit of provident fund. Including the 4.8 lakh subscribers in tea estates in Assam and 3.8 lakhs under the Coal Mines Provident Fund Act, the total number of beneficiaries under the scheme of compulsory contributory provident fund comes to about 32.3 lakhs. The Employees Provident Funds Act 1952, it may be noted, applies to such factories and establishments in the industries brought under it, employing 50 or more workers. It does not apply to any factory belonging to the Government or a local authority nor to infant establishments which have not completed three years of existence.

Extent of Coverage

The Employees Provident Funds Scheme came into force on 1st November 1952. It originally applied to six industries, namely, cement, cigarettes, electrical, mechanical or general engineering, iron and steel, paper and textiles. The Act was extended to 13 industries with effect from 31st July 1956. These were, edible oils and fats, sugar, rubber and rubber products, electricity including generation, transmission and distribution thereof, tea (except in the State of Assam where the Government of Assam has instituted a separate Provident Fund Scheme for the industry, including plantations), printing, stoneware pipes, sanitary wares, electrical porcelain insulators, refractories, tiles, match factories having a production of over 5 lakh gross boxes of matches a year and sheet glass factories having an installed capacity of over 600 tons a month. From 30th September 1956, four more industries were brought under the purview of the Act. They were heavy and fine chemicals, indigo, lac, non-edible vegetable and animal oils and fats. Mineral oil refining industry was included with effect from 31st January 1957 and industrial and power alcohol and asbestos cement sheets from 30th November 1957. With effect from 31st December 1956, the scheme was extended with suitable modifications to newspaper establishments.

Non-factory Establishments

In December 1956, the Employees Provident Funds Act 1952, which applied only to factory industries, was amended by Parliament to empower Government to extend it to non-factory establishments. It is in exercise of the new powers that the benefit of compulsory, contributory provident fund under the Employees' Provident Funds Act 1952 has also been extended with effect from the 30th April 1957 to workers in plantations of tea (except in Assam where as noted above a similar Act of the State Government is already in operation), coffee, rubber, cardamom and pepper employing 50 or more workers. The provisions of the Act were extended to the employees of the oxygen, acetylene and carbon-dioxide gases industry with effect from the 31st July 1957 and to four classes of mines—manganese, gold, iron-ore and limestone—with effect from the 30th November 1957. It was extended to coffee curing establishments with effect from 30th November 1957.

During the second Five-year Plan period, it is proposed to extend the benefits of the Employees' Provident Funds Scheme to many other industries having a total strength of 10,000 workers throughout the country and also to some other industries which employ less than 10,000 workers but are well organised. The Government is also considering the question of extending the provisions of the Act to mica mines and to commercial establishments (including banks, insurance companies, hotels, studios, transport companies, general trading concerns, etc.) By covering these establishments, it is estimated that the benefits of provident fund will be extended to another 2 lakhs of employees and about Rs. 4.24 crores per annum will be the employers' and employees' contribution, taking the rate at 6¼ per cent. of basic wages, dearness allowance, etc.

The provident fund rules of the various public undertakings were examined and the Government of India was requested to bring the less beneficial provisions on par with the provisions of the Employees' Provident Funds Scheme. The State Governments have also been asked to level up the deficient provisions in the provident fund rules of the public undertakings under their control, wherever necessary. The question of deletion of section 16(1)(*a*) of the Employees' Provident Funds Act which excludes from the provisions of the Act undertakings which are owned by Government or a local authority is also under consideration.

Amendments

The Scheme was amended with effect from 31st May 1957 so as to provide for raising the basic wage limits for membership from Rs. 300 to Rs. 500 per month, including dearness allowance and cash value of food concession. Another amendment made in January last extended the scheme to cover employees in the service of a contractor hitherto (designated excluded employees) who are directly connected with any manufacturing process carried on in factory or other establishments. Amendments have also been effected with a view to liberalising the rules regarding the payment of an employers' contribution to the fund to outgoing members. A subscriber will now receive in full the employers' contribution, with interest thereon on attaining 15 years' membership. He will receive 85 per cent. of the employers' contribution where the period of membership is 10 years or more but less than 15 years; 75 per cent. where it is five years or more but less than 10 years, 50 per cent. where it is three years or more but less than five years and 25 per cent. for less than three years' membership. In case of death, permanent disability, superannuation and retrenchment, the full amount, including the employers' share, will continue to be paid. Hitherto a worker could get a full refund of the employers' contribution only after 20 years' membership and no part of the employers' share was paid to a worker with less than five years' service, provided he had not attained the age of superannuation. The employees' own contribution, with interest thereon, however, was payable in all cases.

Contributions are paid at the rate of 6¼ per cent. of the total basic wages, dearness allowance and cash value of food concession. An equal amount is paid by the employer. Total contribution, both of employers and employees, collected from employers during 1956-57 amounted to Rs. 9.95 crores, including the past accumulations received in cash. The total amount of provident fund contributions collected till the end of December 1957 was about Rs. 101.9 crores inclusive of refunds (Rs. 58.8 crores in exempted and Rs. 43.1 crores in non-exempted factories).

Rate of Contribution

There have been proposals to increase the rate of contribution to provident fund from 6¼ per cent. to 8⅓ per cent. In fact, one of the principal recommendations of the State Labour Ministers' Conference, held recently in Naini Tal, was that the rate of contribution should be raised from the existing 6¼ per cent. to 8⅓ per cent. It was also suggested that the scheme should be made applicable to industrial and commercial establishments employing between 20 and 50 persons. While no authoritative information is available as to what stand the Government of India has taken on this issue, the Government, according to a New Delhi report, has decided to shelve the question of raising the rate of contribution for the present while the question of extending the scheme to establishments employing less than 50 employees is still under consideration.

Expenses of the Employees' Provident Fund organisation, as is well known, are met from levies of administrative and inspection charges from the employers of non-exempted and exempted factories at the rate of 3 per cent. and ½ per cent., respectively, on the total amount of provident fund contributions collected in each month. They are not from the amount of provident fund nor from public revenues. A sum of Rs. 23.11 lakhs was received on account of administrative charges from non-exempted establishments and a sum of Rs. 10.44 lakhs as inspection charges from exempted establishments. The income and expenditure for the year 1956-57 were Rs. 34.49 lakhs and Rs. 20.44 lakhs respectively, the income being made up of administrative and inspection charges Rs. 33.55 lakhs, damages Rs. 0.03 lakh and interest on investments Rs. 0.91 lakh. Surplus amounts in administrative accounts are regularly invested and the interest is credited to that account. The total of administrative and inspection charges collected upto the end of December 1957, inclusive of interest, is about Rs. 1.59 crore, out of which a sum of Rs. 96.70 lakhs has been spent.

The rates of interest paid to members of the scheme have varied in the past from 3 per cent. to 3½ per cent. It was 3 per cent. in 1952-53, 1953-54 and 1954-55, 3½ per cent. in 1955-56 and 1956-57 and 3¾ per cent. in 1957-58.

Investment

The pattern of investment of the resources of the fund continued unchanged from the previous years. Ten per cent. was invested in National Plan Savings Certificates, 20 per cent. in medium-dated securities and 70 per cent. in long-dated securities. In terms of figures in 1956-57, a sum of Rs. 7.72 crores was invested in the aforesaid securities, as compared with Rs. 5.51 crores in 1955-56, Rs. 5.90 crores in 1954-55 and Rs. 5.75 crores in 1952-54, making a total of Rs. 24.88 crores since the inception of the Scheme, of which all are in Central Government securities.

It may be noted here that the Government of India has not found acceptable the suggestion of the Bombay Regional Committee to decentralise the Employees' Provident Fund. The question of decentralisation of the administration of the Scheme, also recommended by the Committee, is under the consideration of the Government. The setting up of a State Board in each State is not considered possible, in view of the Government's decision not to decentralise the Fund.

WAGE MAP

The Government of India is reported to be having under preparation a comprehensive wage map of the country. The map is intended, among other things, to help the Wage Boards constituted for different industries to assess the precise structure of wages obtaining in the country. The Boards have been considerably handicapped by the dearth of statistical data relating to wages. At the instance of the Planning Commission, the Union Ministry of Labour will launch a comprehensive wage census among India's five million workers employed in manufacturing, mining and plantation industries. Field investigators will be appointed to collect and collate data throughout the country so that a graphic picture of the wage structure can be had for official guidance. It is also proposed to compute index numbers of average wage rates for important industries both on a regional and all-India basis. Investigators will also be asked to collect sample pay-roll earnings of workers in different occupations for specific pay-peri

BICHROMATES INDUSTRY

PROTECTION TO BE WITHDRAWN

THE Government of India has decided to accept the recommendation of the Tariff Commission to the effect that protection to the bichromates industry should be discontinued with effect from 1st January 1959, on which date the protection granted to the industry in 1954 (at the then existing duty of 31½ per cent. *ad valorem*, which was raised to 35 per cent. *ad valorem* subsequently) is due to expire. Under the protective umbrella, the industry has consolidated its position, some of the major units having modernised their equipment and improved the techniques of production. The industry has thus been enabled to cater to the entire domestic demand. Besides, the quality of the products, including by-products and derivatives, it is acknowledged, has been satisfactory. Thus, the industry has made considerable headway both in terms of quantity and quality. What is more, there has been a remarkable improvement in the efficiency of production, which has brought down the costs substantially. Consequently, the industry has acquired adequate competitive capacity.

Production

The industry's progress since the last enquiry conducted by the Commission in 1953 has been particularly notable. Thus, production of sodium bichromate has gone up from 2,323 tons in 1953 to 3,482 tons in 1957. The output of potassium bichromate also has risen from 140 tons in 1953 to 201 tons in 1957. Production during the last five years has been as follows:

(In tons)

Year	Sodium bichromate	Potassium bichromate
1953	2,323	140
1954	2,996	212
1955	2,726	210
1956	3,046	218
1957	3,482	201

There are at present five units in production in the country, as against eight in 1953. These are: (1) Buckingham and Carnatic Co., Ltd., Madras; (2) Cawnpore Chemical Works Private Ltd., Kanpur; (3) Golden Chemicals Private Ltd., Bombay; (4) Chemical Industries Co. Private Ltd., Calcutta; and (5) M. L. Ghosh & Co., Calcutta. Their aggregate capacity for production of sodium bichromate and potassium bichromate is 4,546 tons per year. Commenting on the overall expansion of the industry during the last five years, the Commission observes:

"Despite the closing down of some of the units which resulted in a reduction of operative rated capacity, evidence shows that the industry has achieved a measurable progress since the last inquiry. First, the rated capacity of the units which are in production was utilised to a larger extent than before as indicated by the sustained rise in production in response to the growth of domestic demand during the last three years; secondly, two of the major producers have increased their individual capacity after the last inquiry and have taken steps to modernise their equipment with a view to improving the manufacturing process; thirdly, there has been a noticeable diversification in the pattern of production as major units in this industry and other manufacturers using bichromates have stepped up their production of by-products and derivatives."

The only by-product obtained in the production of bichromates is sodium sulphate. Its output in 1957 was 2,218 tons, which compares favourably with 1,303 tons in 1953. The main derivatives produced in the country either by manufacturers of bichromate or by the producers of fine chemicals and paints are: basic chrome tan, chromium sulphate, chromic acid, chrome salt, chrome oxide green, potash chrome alum, ammonium bichromate, sodium chromate and chromium pigments. Their aggregate annual rated capacity in the industry at present is estimated at 1,128 tons. In respect of derivatives, there has been a notable improvement in the utilisation of the installed capacity through a progressive rise in output since the last inquiry. The total production of the derivatives was to the tune of 493 tons in 1957, as against only 53 tons in 1953 It is said that, generally, production was adjusted to demand for these chemicals and, in some cases, manufacture was undertaken only against specific orders.

Demand

There is vast scope for the bichromate industry to expand, in view of the rapid increase in domestic demand for the products. The exports and imports of bicarbonates being negligible, the recent upward trend in production itself can be taken as a rough measure of the trends in demand. The Commission has placed the demand for bichromates during 1957 at 3,500 tons, which includes the demand of 1,400 tons for leather tanning, 1,200 tons for textiles, 300 tons for paints and pigments, 250 tons for potassium bichromate, and another 350 tons for other industries like wood preservation and chromic acid. The Commission has held the view that, taking the past trends into consideration, the demand for bichromates will go up to 5,000 tons a year by 1960. As regards the by-product, the current demand for sodium sulphate of 26,000 tons per annum is expected to go up to 65,000 tons per year by 1960-61. The demand for derivatives also is expected to expand considerably. The Commission has emphasised the necessity to increase the consumption of bichromates in the wood preservation industry. It has also drawn attention to the prospects of promoting the use of bichromates in the leather tanning industry. To quote the Commission:

"We are informed that India exports vegetable tanned hides and skins of the value of about Rs. 20 crores every year. These semi-finished hides are put through chrome tanning process and finished for making shoes and other articles in the importing countries. If even a part of these hides were chrome tanned and finished and skins were processed for the production of glace kid in this country, it will not only increase the demand for bichromates but will earn valuable foreign exchange for the country. The tanneries which produce these semi-finished hides are scattered in villages and depend mostly on manual labour. For encouraging small producers to adopt chrome tanning, requisite facilities should be made available either at the large producing centres of hides and skins or in the port towns from where they are exported. The Central Leather Research Institute should be in a position to afford positive assistance to small producers of hides and skins in this regard. We recommend that the Export Promotion Council for leather should take note of our observations above, and explore the possibilities of exporting chrome tanned leather and glace kid to an increased extent."

As regards the position of raw materials for bichromates industry, namely, chrome ore, soda ash, sulphuric acid and lime or limestone, the Tariff Commission has observed that generally there was hardly any difficulty as to their availability and their price. In this connection, the Commission has noted with satisfaction that, since the last enquiry, there has generally been a downward trend in the rate of consumption of raw materials per ton of bichromate which admittedly indicated an improvement in the productive efficiency.

Quality

The quality of the indigenous product, it is stated, was satisfactory and conformed to the Indian Standard Specifications. The quality of by-products and derivatives is also reported to be satisfactory. The industry has been able to step up its competitive capacity, thanks to the considerable economies effected as result of increased production. The conversion costs also have been brought down. The Commission has brought to light the fact that the domestic costs of bichromates are lower than those of the imported article by 20.8 per cent. and 19.2 per cent. for bichromates of sodium and potassium, respectively. This has been arrived at by a comparison of the fair ex-works prices of indigenous bichromates with ex-duty landed costs of imported products, as shown in the table below:

(Per cwt.)

	Sodium bichromate	Potassium bichromate
	Rs.	Rs.
C.i.f. price	69.83	89.38
Customs duty at 35 per cent. *ad valorem*..	24.27	31.27
Clearing charges	0.50	0.50
Landed cost with duty	94.10	121.10
Landed cost ex-duty	60.83	89.83

There has been a steady decline in prices of both sodium and potassium bichromates since the last enquiry. The Commission, however, has felt that the ruling prices are fairly high in relation to the costs of production. It says "The *entrepreneurs* in a developing industry which, on the one hand, enjoys a sheltered market and, on the other, regulates its output

WORLD TRADE SLACKENS

U.K., HOWEVER, IMPROVES ITS SHARE

THE trade of the free world, after expanding rapidly for five years, slackened in the last quarter of 1957 and, in the first quarter of 1958, it was 8 per cent. lower in value than a year previously. The U.K.'s share in exports of world manufactures, however, has risen slightly, after declining up to 1957. This is the substance of the note on some of the changes now taking place in Britain's export trade against the background of world trade, published in the *Bulletin for Industry*, a monthly economic review prepared by the Information Division of the British Treasury.

The fall in world trade, according to the *Bulletin*, has so far been mainly in the exports of primary producing countries, the United States and Canada. The levelling off in world industrial activity in 1957, combined with a continued growth of raw material production, led to a rapid decline in the prices of raw material commodities. Although this year the decline has been less rapid, the export prices of the primary producing countries are still very low and their export earnings are affected. But, so far, the demand of these countries for manufactured imports has remained high, at least in total, and has been financed in part by a drawing down of their reserve, e.g., sterling balances held in the U.K., by other sterling area countries. There are signs, however, that some primary producing countries are now reducing imports because of the decline in their real incomes and reserves, and this tendency seems likely to become more widespread.

Referring to Britain's exports in particular, the *Bulletin* points out that, in the first half-year, they were 5 per cent. lower in value than a year earlier; but about half the drop was a consequence of the dock strike in June. In the first five months, the fall was about 2 per cent. only, a smaller fall than for exports of all manufacturing countries taken together. The main fall was in British exports to European countries, with exports to W. Germany a notable exception. Exports to India and Japan have also fallen considerably, as a result of measures taken in those countries to conserve foreign exchange. On the other hand, exports to the dollar area have held up well; and shipments to many primary producing countries have so far remained buoyant. But shipments to some important sterling markets are now beginning to fall; and the measures taken earlier by New Zealand to cut back imports because of balance of payments difficulties are likely to have increasing effect in the next few months.

The exports which have increased most have been engineering products. Road vehicles and aircraft head the list, and, in both of these, the biggest rise is in shipments to North America. Exports of cars to the U.S.A. were 70 per cent. higher than a year earlier (other shipments have in total declined), and deliveries of aircraft to Canada four and a half times higher.

Outside the engineering group, only exports of petroleum products showed a marked upward trend. Exports of all the other main commodity groups—chemicals, textiles, metals and manufactures, solid fuels, food—were lower.

The increase in exports of engineering products has been a well-known characteristic of world trade since the war. In 1951, the group which includes machinery and transport equipment represented 33.8 per cent. of world exports of manufactures. By 1956, it had increased to 39 per cent. U.K. engineering exports increased correspondingly from 40.6 to 47 per cent. The fall in textile exports this year is also in line with long-term world trends. Textiles fell from 16 per cent. of world exports of manufactures in 1951 to 10 per cent. in 1956; their share in U.K. exports declined from 21 to 11 per cent.

Although exports from the U.K. in the first quarter of 1958 were lower than a year earlier, the U.K. share of world exports of manufactures increased from 18.5 to 19 per cent. The main reason for this larger percentage was the sharp drop in exports from North America; the U.S.A.'s share fell from 25.7 to 23 per cent., and Canada's share from 5.5 to 5.1 per cent. The increase in Britain's share was less than Japan's and Germany's, but in line with the rest of the O.E.E.C. countries. It is the first time since 1953 that the U.K.'s share has not shown a fall. But it seems likely, says the *Bulletin*, competition will grow more intense, at any rate for a while.

METTUR CHEMICAL MAINTAINS PROGRESS

OUTPUT HIGHER—EARNINGS TOO IMPROVE

THE recommendation of the Directors of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Mettur Dam, R.S.) to step up the dividend on the ordinary shares of the Company for the year ended 31st March 1958 to 8¾ per cent. from 7½ per cent. paid for the previous two years, by raising the final distribution from 3¾ per cent. to 5 per cent., is in consonance with the increased earnings for the year. Incidentally, the final dividend is 50 nP per share and not 25 nP, as was inadvertently stated in our issue of 2nd August 1958 under the feature "Company Meetings and Dividends." The percentage of final dividend, however, had been correctly stated there.

The gross profit of the Company has gone up to a fresh high of Rs. 24.86 lakhs from Rs. 20.93 lakhs, thus maintaining the upward trend since 1953, when the profit had declined from Rs. 10.17 lakhs (for 1952) to Rs. 4.30 lakhs. It will be of interest to note that, in the course of the past five years, the Company's gross profit has grown nearly sixfold. This performance must be judged against the background of the fact that this Company, along with many other South Indian industries which depend on hydro-electric power, is handicapped by the seasonal power cut in the Madras State which varies year after year depending upon the vagaries of the monsoon. During the year under review, there was a power cut of 25 per cent. extending over a period of about 4½ months. Despite this, the output of the factory was maintained at a higher level, thus contributing to the larger earnings referred to above.

While the gross profit has maintained its upward trend, the net profit has declined for the second year in succession to Rs. 5.44 lakhs from Rs. 9.65 lakhs earned in 1955-56 and Rs. 5.96 lakhs in the following year. The rise in gross profit for the year under review has been more than mopped up by the larger provision of Rs. 9.48 laks for taxation (as against Rs. 7 lakhs in respect of 1956-57) and the allocation of Rs. 2 lakhs (as against *nil*) for gratuity. The net profit for 1957-58, it may be noted in passing, is the lowest in the last three years. If, however, the provision for gratuity (which was not made in the previous years) is excluded as a charge against gross profit, the net profit will be higher by Rs. 1.48 lakhs at Rs. 7.44 lakhs. Out of the net profit, the Directors have set aside, as in the previous two years, Rs. 60,500 to the general reserve and have created a development reserve of Rs. 88,740.

The comparative table below provides an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	1,17.03	96.89	87.28	66.67

	(8¾%)	(7½%)	(7½%)	(6¼%)
Carry forward	0.30	1.11	0.08	0.06

As stated earlier, despite the power cut extending over a period of about 4½ months, the Company's production in 1957-58 is higher. The output of caustic soda amounted to 4,315 tons and of bleaching powder to 4,827 tons, as against 3,771 tons and 4,313 tons in 1956-57. There was a large offtake of the Company's output of unliquified chlorine gas as bleach liquor by the small-scale dyeing and bleaching factories. Out of the total production of 4,827 tons of bleaching powder, only 3,642 tons was of stable quality (as against 4,093 tons in 1956-57), the balance of 1,185 tons being non-stable. The shortfall in production of the former is said to be due to the fact that "a large quantity of liquid chlorine, required for production of stable bleach, was supplied to the Hindustan Insecticides Private Ltd. at Alwaye as directed by the Government of India." Thanks to the regulated import policy of the Government of India, the price of caustic soda and bleaching powder was maintained at a uniform level. The production of vegetable oil products—*vanaspati* and refined oil—was maintained at a satisfactory level of 1,746 tons, as against 1,642 tons in 1956-57, and the prices of oil fluctuated widely from Rs. 1,368 to Rs. 1,575 per ton.

Referring to the Company's expansion programme, the Directors observe, in their latest report, as follows:

"Having regard to the increasing demand for stable bleach and in the interests of self-sufficiency it has been decided to double the capacity of this plant from 16 tons to 32 tons per day, and import licence for the needed plant is awaited. Within a year from now the duplication of the plant is confidently expected. . . . The installation of 30 additional Hooker cells to step up caustic soda production to 20 tons per day was completed in February last. But, in view of the power shortage and the Madras State Electricity Board having to make certain changes in distribution arrangements to meet our full requirements of power for our expansion, it is hoped to operate the plant to full installed capacity only from October 1958.

"Your Directors are actively considering the further expansion of the plant capacity from 20 tons to 40 tons to keep in step with the developments in similar alkali factories. This will involve a capital expenditure of Rs. 80 lakhs which will also include equipment for utilising the corresponding output of chlorine. We have applied for financial assistance to the Government of India under the existing Indo-American agreement which allows the Export-Import Bank to extend such facilities. On receipt of the licences from the Government of India, the Board will take the necessary action."

The paid-up capital of the Company stands at Rs. 60.50 lakhs and reserves and surplus at Rs. 16.63 lakhs. Debentures of the value of Rs. 1 lakh were redeemed during the year, bringing the outstanding liability to Rs. 15 lakhs. The other liabilities and provisions aggregate Rs. 23.09 lakhs. The total capital expenditure during the year amounted to Rs. 10.47 lakhs, bringing the total cost to Rs. 112.62 lakhs. The written down value of the same as at the end of the year is Rs. 52.40 lakhs. The other assets aggregate Rs. 64.82 lakhs. During the year the Company applied to the Government of India for sanction to issue bonus shares from out of the premium reserve (amounting to Rs. 6.42 lakhs) at the rate of three shares for every 20 ordinary shares. The Government did not, however, sanction the proposal, on the grounds that the residual reserves would not bear a reasonable proportion to the increased paid-up capital and the Company was not considered to be undercapitalised.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 11, which includes the final dividend of As. 8 per share. On an *ex-div.* basis, the shares provide an attractive yield of 8.3 per cent. per annum, free of income-tax.

The Managing Agents' term of office expires in August 1960. But, in view of the excellent service rendered by them, the Directors have decided, appropriately enough, to recommend their reappointment for a further period of 10 years at the forthcoming annual meeting scheduled to be held on the 30th inst. It is noteworthy that, in keeping with the spirit of the times, the Managing Agents have volunteered to accept remuneration at lower rates, that is, 10 per cent. on the first Rs. 12 lakhs of profits and 5 per cent. on profits over this sum. This is, indeed, a highly commendable gesture which other managing agency houses in India will do well to emulate.

ENFIELD INDIA LTD.

ENCOURAGING RESULTS FOR 1957

THE year ended 31st December 1957 witnessed considerable progress in the working of Enfield India Limited (Managing Director: Mr. S. Sankaran, Madras). The output during the year was nearly twice that of the previous year and sales of motor cycles expanded, despite the availability of imported vehicles during the year to compete with the Company's products. The Company earned a sizable profit too, as against a negligible one in the previous year. This was sufficient to write off a substantial part of the preliminary expenses, the brokerage on shares and the balance of deferred revenue expenditure as also to pay the dividend on the 6 per cent. preference shares. No dividend on ordinary shares has been declared.

The Company's sales increased from Rs. 1.45 lakhs to Rs. 41.26 lakhs and the gross profit from Rs. 991 to Rs. 1,51,338. After raising the provision for depreciation from Rs. 9,315 to Rs. 82,496, the net profit for the year amounted to Rs. 68,842, as against a net loss of Rs. 8,324 in 1956. After utilising Rs. 18,616 towards writing off a part of the preliminary expenses, Rs. 7,266 towards writing off share brokerage and Rs. 19,134 to wipe out the balance of deferred revenue expenditure, the Directors have declared a dividend of 6 per cent. on the tax-free preference shares which absorbs Rs. 10,392, leaving a surplus of Rs. 5,110 to be carried forward.

The main activities of the Company are the manufacture of Royal Enfield motor cycles, three-wheeler chassis for auto-rickshaws, trucks, delivery vans, etc., and the manufacture of their components, ancillary and allied products, in technical collaboration with the Enfield Cycle Company, Ltd., Redditch, U.K. Its products were said to be in such good demand during the year under review that the Company was not able to meet it in full and had to carry pending orders to be supplied in the early months of 1958. The Company has made satisfactory progress in the manufacture of components under the phased programme. In view of the difficult foreign exchange position the Company has, according to its Chairman, Mr. K. R. Sundaram Iyer, whose speech at the annual general meeting of the Company held on the 31st ultimo is published on page 270 of this issue, taken steps to accelerate the pace of such manufacture, and the items taken up for the same are nearing 50 per cent. in value. Every effort is being made to attain self-sufficiency in indigenous manufacture of almost the entire motor cycle, barring, of course, the proprietary items, in 1959, as against the original schedule of 1960.

The rate of increase in the Company's production is being maintained and production during 1958 is expected to be about 50 per cent. over that in 1957. Even this quantity will be considerably below that for which the Company is now licensed by the Government. Further increase in production has to depend upon the allotment which the Company receives from the Government in the way of foreign exchange for importing components which for the time being are not available from indigenous sources. In view of the increased demand for motor cycles and three-wheelers, the Company has made an application to the Government for an increase in the licensed annual quantity of production, as this is possible within the Company's current capacity.

The Company, as the Chairman points out in his speech, has received enquiries for supply of motor vehicles from some of the West Asian and South-East Asian countries, exports to which have been approved by the Company's U.K. collaborators. The Directors hope to utilise fully the prospects for export of motor cycles and three-wheelers and are making preliminary surveys and securing the necessary contacts in these countries.

The programme of manufacture of almost the entire motor cycle out of indigenous parts involves heavy capital expenditure. In order to meet this, the Company issued, in February last, fresh capital to the tune of Rs. 6 lakhs, made up of 2,000 6 per cent. tax-free redeemable cumulative preference shares of Rs. 100 each and 40,000 ordinary shares of Rs. 10 each at par to the holders of equity shares of the Company. Subsequently, it was decided to raise a further capital of Rs. 9 lakhs, out of which 7 per cent. tax-free redeemable preference shares of Rs. 100 each to the extent of Rs. 4 lakhs are being offered to the existing shareholders, both ordinary and preference. Arrangements have been made for subscription of the balance of Rs. 5 lakhs. At the same time, the dividend on the old preference shares has been increased from 6 per cent. to 7 per cent. tax-free. This brings the total subscribed capital of the Company to Rs. 25 lakhs made up of 10,000 7 per cent. tax-free preference shares of Rs. 100 each and 150,000 ordinary shares of Rs. 10 each.

The subscribed and paid-up capital as on 31st December 1957 stood at Rs. 9.95 lakhs (less arrears of allotment money). The Company's borrowings amounted to Rs. 20.14 lakhs, of which those from the Industrial Finance Corporation of India accounted for Rs. 8.90 lakhs and from banks for Rs. 11.24 lakhs. The other liabilities aggregated Rs. 12.63 lakhs. The capital expenditure made during the year amounted to Rs. 20.88 lakhs, bringing the gross value of the fixed assets to Rs. 22.65 lakhs and the net value to Rs. 21.73 lakhs. The other assets as at the close of the year amounted to Rs. 21.03 lakhs.

(Concluded from next column)

(Continued in previous column)

BENGAL PAPER'S PROFIT RISES BY 50 PER CENT.

DIVIDEND ALSO RAISED

A DISTINCT improvement in results is disclosed by the accounts of the Bengal Paper Mill Company, Ltd., for the year ended 31st December 1957. The gross profit has recorded an increase from Rs. 14.31 lakhs to Rs. 21.57 lakhs in contrast to the substantial setback from Rs. 33.46 lakhs suffered in the previous year. The welcome improvement in profit is evidently due to larger production and the reduction in the quantity of imported wood-pulp. In 1956, due to a breakdown in the crushing plant and the consequent shortage of mill-pulp, it had become necessary to use larger imported pulp to maintain production. In the year under review, however, the quantity of imported wood-pulp is said to have returned to normal proportions.

The main beneficiary of the better results is the Government, the provision for taxation having more than doubled from Rs. 3.95 lakhs to Rs. 8.67 lakhs. The provision for depreciation has been pruned from Rs. 5.27 lakhs to Rs. 4.03 lakhs. After these essential allocations, the net profit shows a rise from Rs. 4.15 lakhs to Rs. 8.86 lakhs. The dividend on ordinary shares has been stepped up from 10 per cent. to 12½ per cent., thus restoring partially the cut made last year from 18¾ per cent. paid for 1955 to 10 per cent. The latest dividend is the same as that paid for 1954. This increase in the dividend has been made after transferring Rs. 1 lakh to the general reserve, which had not received anything in the previous year.

The following comparative table shows how fluctuating the results of the Company have been:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	2,07.60	2,02.57	1,95.60	1,77.60
Closing stocks of finished goods	2.14	3.05	4.68	0.72
Manufacturing and other expenses	1,85.35	1,87.09	1,86.24	1,58.28
Gross profit	21.57	14.31	33.46	24.99
Managing Agents' remuneration	...	0.94	2.88	1.77
Provision for—				
Depreciation	4.03	5.27	9.14	7.88
Taxation	8.67	3.95	6.25	0.80
Net profit	8.86	4.15	15.54	14.33
Reserves and provisions written back	...	...	...	0.80
Realisation on redemption of debentures	0.10	0.10	0.10	...
To reserves	1.10	0.10	5.10	7.25
Dividends—				
Preference (7% and 6%) ...	1.62	1.62	1.62	1.62
Ordinary	5.62	4.50	8.44	5.62
	(12½%)	(10%)	(18¾%)	(12½%)
Carry forward	0.57	0.05	2.02	1.84

A break-down of the Company's expenses for the year under review shows that the cost of production (excluding depreciation) declined from Rs. 155.36 lakhs to Rs. 146.12 lakhs, mainly due to the fall in consumption of raw materials from Rs. 75.17 lakhs to Rs. 64.61 lakhs. To a large extent this has been offset by the rise in other expenses from Rs. 31.73 lakhs to Rs. 39.23 lakhs, of which excise duty alone accounts for a rise of Rs. 5.93 lakhs to Rs. 25.35 lakhs.

The operations of the Company during the year under review would have been better but for some loss of production due to alterations in No. 2 machine, the fitting of a new rotor and bearings to the turbine, and a severe electrical short circuit. In addition to the alterations made to No. 2 machine, other equipment was installed for the production of high quality papers, the benefit of which, according to the Directors, will be felt from the current year. They add that the working of the mill during the current year shows further progress.

The Company's paid-up capital is unchanged at Rs. 71 lakhs, as against which the reserves and surplus stand at Rs. 37.69 lakhs. The loans and current liabilities aggregate Rs. 49.92 lakhs and provision for taxation stands at Rs. 18.63 lakhs. The gross block of the value of Rs. 214.70 lakhs has been written down to Rs. 54.05 lakhs and the capital expenditure on fixed assets under construction amounts to Rs. 10.87 lakhs. Investments and other assets aggregate Rs. 112.63 lakhs which more than adequately cover the liabilities and provisions.

The Company is one of the oldest paper makers in India, having been established in 1889, with Messrs. Balmer Lawrie & Co., Ltd., as Managing Agents. This firm ceased to be the managing agents from 15th January 1957, but, with effect from that date, it was appointed by the Board to carry on the day-to-day affairs of the Company. The Board has now sought the approval of the Central Government to appoint Messrs. Balmer Lawrie & Co., Ltd., as Secretaries and Treasurers of the Company for a period of five years from 1st January 1958.

The Rs. 25 fully paid-up shares of the Company are being quoted currently at Rs. 91.50 *cum-div.* On an *ex-div.* basis the yield on the shares works out to 3.7 per cent. per annum, free of income-tax. Such a low yield reflects the concentrated holding of the Company's shares in the hands of a few people. It is common knowledge that, in order to get control of the Company, certain interests joined together and bought its shares at high rates.

Points From The Chair

Pooling of Technical Resources

"ONE way to reduce the country's foreign exchange requirements is by pooling the plant, machinery and equipment resources of the various industrial units in the country in order to secure their fullest use for the common good of the various industries and the country. Though this has contributed in a large measure to economies in production in advanced Western countries, it has not so far taken practical shape in our country. Any effort in this direction involves a detailed exchange of views among the industrialists themselves for the common good of all. The All-India Ancillary Industries Exhibition has contributed a good deal to the dissemination of knowledge in this direction. I hope there will be active co-operation between various units in the automobile industry and that the response to undertake sub-contracting work will be encouraging, so that the facilities available are effectively and fully used."

K. R. SUNDARAM IYER,
Enfield India Ltd.

Outlook for Larsen and Toubro

"The present restrictive import licence policy cannot but have an adverse effect upon the Company's own imports and sales from stocks. However, as mentioned in the Directors' report, the Company's stocks position at the end of the year under review was satisfactory. With these stocks, supplemented by the output from the Company's own workshops, and with many good prospects of effecting imports for customers having 'actual users' licences in connection with supplies to essential projects, the Directors hope to maintain the sales turnover for the current year. It is expected that the Company's service and parts business will further expand due to reduced imports of construction and agricultural machinery, making it more than ever necessary to rehabilitate used machinery. To make up for diminishing imports, and utilise our good sales organisation, efforts are being made to secure the distribution of indigenously manufactured engineering products. These efforts have already met with some success. The Company's valuable asset in its skilled engineering personnel is increasingly being employed in the planning and execution of contracting work in collaboration with our sister concern, the Engineering Construction Corporation Private Limited. As mentioned earlier, the Company has, in the course of the year under review, put in considerable efforts to improve and expand the manufacturing facilities at Powai. The manufacturing schemes, which have been submitted to the Government and which we expect will be sanctioned during the current year, will require a fairly substantial outlay towards capital expenditure and working capital, all of which cannot be found within the present resources of the Company. It will, therefore, be necessary to increase the Company's paid-up capital to meet this situation. Subject to certain formalities being complied with, we propose shortly to issue further equity capital in the sum of Rs. 10 lakhs at par."

H. HOLCK-LARSEN,
Larsen & Toubro Ltd.

Output and Consumption of Tin

"During the first quarter of 1958 the U.S.S.R. and Poland exported 4,000 tons to Western Europe and, in addition, China is reported to have sold several hundred tons to Japan. This is approximately the same rate of exports as in the last quarter of 1957, so that it is quite possible that exports from these sources may exceed 15,000 tons during 1958. . . Despite the impact of Russian tin exports, the most important factor influencing the tin price has been the very low rate of demand in the U.S.A. as a result of the recession which started about this time last year. Evidence is conflicting regarding the probable length of this recession. There are some signs that it is levelling out and even that the level of economic activity may be beginning to rise, but I do not expect any rise to be other than gradual and protracted. Meanwhile, U.S. consumers have continued to an unusual extent to use up their stocks and to abstain from buying in the market. It is prudent, therefore, to assume that world consumption of tin in 1958 will be considerably lower than in 1957—perhaps a fall of 12 per cent. to 134,000 tons. The exports of the producing countries who are members of the International Tin Agreement have been reduced at the rate of 60,000 tons per annum until 30th September 1958. If the same rate of reduction is imposed for the last quarter of the year, as in my opinion it should be, world production will fall from 164,000 tons to 104,000 tons. The addition of, say, 16,000 tons for exports from U.S.S.R. and China makes a total of 120,000 tons. Thus, consumption should exceed production by some 14,000 tons during the year."

CLIFFORD WAITE,
Consolidated Tin Smelters Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

RUNGAMATTEE TEA CO., LTD. Annual General Meeting, Calcutta, 22nd August 1958. Dividend: Rs. 7.50 per share. Transfer books remain closed from 12th to 22nd August 1958, both days inclusive.

NILGIRI TEA ESTATES LTD. Annual General Meeting, Kullakamby, P.O., Nilgiris, 23rd August 1958. Dividend: Re. 0.60 per share or 6 per cent. Transfer books remain closed from 8th to 23rd August 1958, both days inclusive.

KAILAS RUBBER CO., LTD. Annual General Meeting, Kottayam, Kerala State, 25th August 1958. Dividend: Re. 0.50 per share or 25 per cent. (includes interim dividend of Re. 0.20 per share or 10 per cent.). Transfer books remain closed from 8th to 25th August 1958, both days inclusive.

PENCH VALLEY COAL CO., LTD. Annual General Meeting, Calcutta, 26th August 1958. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 18th to 26th August 1958, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books will remain closed from 18th to 27th August 1958, both days inclusive.

ELLENBARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1958. Dividend: *Nil.* Transfer books will remain closed from 20th to 27th August 1958, both days inclusive.

NATIONAL MACHINERY MANUFACTURERS LTD. Annual General Meeting, Kalwe, Thana, 27th August 1958. Dividend: *Nil.* Transfer books remain closed from 14th to 28th August 1958, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 28th August 1958. Dividend: Rs. 2.00 per share. Transfer books remain closed from 14th to 28th August 1958, both days inclusive.

RADHA KRISHNA MILLS LTD. Annual General Meeting, Peelamedu, Coimbatore, 28th August 1958. Dividend: Rs. 12.00 per ordinary share and Rs. 6.00 per 'B' ordinary share. Transfer books remain closed from 14th to 28th August 1958, both days inclusive.

UDAYAGIRI RUBBER CO., LTD. Annual General Meeting, Kottayam, Kerala State, 30th August 1958. Dividend: Re. 0.60 per share or 6 per cent. Transfer books will remain closed from 22nd to 30th August 1958, both days inclusive.

OGALE GLASS WORKS LTD. Annual General Meeting, Ogalewadi, 30th August 1958. Transfer books remain closed from 22nd to 30th August 1958, both days inclusive.

TWYFORD TEA CO., LTD. Annual General Meeting, Kottayam, Kerala State, 1st September 1958. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books will remain closed from 25th August to 7th September 1958, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 30th August 1958. Dividend: Rs. 4.50 per share. Transfer books will remain closed from 23rd to 30th August 1958, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, Kerala State, 3rd September 1958. Dividend: 4 per cent. Transfer books will remain closed from 19th August to 5th September 1958, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Annual General Meeting, Coonoor R.S., Nilgiris, 8th September 1958. Dividend: Re. 1.75 per share or 17½ per cent. (includes interim dividend of Re. 0.75 per share or 7½ per cent.) Transfer books will remain closed from 28th August to 8th September 1958, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 8th September 1958. Dividend: *Nil.*

NEW INDIA INVESTMENT CORPORATION LTD. Annual General Meeting, Calcutta, 15th September 1958. Transfer books will remain closed from 6th to 15th September 1958, both days inclusive.

ESTRELA BATTERIES LTD. Annual General Meeting, Bombay, 18th September 1958. Transfer books will remain closed from 23rd August to 18th September 1958, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 25th September 1958. Dividend: 7 per cent. free of income-tax for the year ended 31st March 1958 (includes first and second interim dividends of 2 per cent. each free of income-tax). Transfer books will remain closed from 8th to 25th September 1958, both days inclusive.

ANDHRA CEMENT CO., LTD. Dividend of Re. 1.00 per ordinary share or 10 per cent. for the year ended 31st December 1957. Transfer books will remain closed from 5th to 12th September 1958, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Dividend of Re. 1.20 per ordinary share or 12 per cent. and Re. 0.12 per deferred share or 12 per cent; for the year ended 31st December 1957. Transfer books will remain closed from 18th August to 4th September 1958, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Interim dividend of Re. 0.75 per share of Rs. 25 each, free of income-tax, for the half-year ended 30th June 1958, payable on or after 29th September 1958. Transfer books will remain closed from 5th to 19th September 1958, both days inclusive.

BRITISH INDIA CORPORATION LTD. Transfer books will remain closed from 23rd August to 20th September 1958, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Transfer books will remain closed from 18th to 27th August 1958, both days inclusive.

PROFIT OF PENCH VALLEY COAL LOWER

THACKERSEY GROUP MILLS SUFFER LOSS

Pench Valley Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The Company's profit for the year is Rs. 7,35,061 (Rs. 8,82,072) and after providing taxation for the year of Rs. 4,54,287 (Rs. 2,62,574) there remains a balance of Rs. 2,80,774 (Rs. 6,19,498). To this amount is to be added provision for liabilities no longer required Rs. 1,75,406 (nil), items relating to previous periods Rs. 57,838 (Rs. 60,441) and the amount brought forward from the previous year of Rs. 46,383 (Rs. 33,734) making a total of Rs. 5,60,401 (Rs. 9,33,673 including transfer from reserves of Rs. 2,20,000). From this amount is to be deducted provision for Labour Appellate Tribunal Award Rs. 1,34,136 (Rs. 3,72,290), transfer to development reserve Rs. 4,800 (*nil*) and transfer to general reserve Rs. 70,000 (*nil*) leaving an available balance of Rs. 3,51,465 (Rs. 3,61,383 after transferring Rs. 2,00,000 to contingencies reserve). Out of this the directors recommend a dividend of 20 (20) per cent. payable without any deduction for income-tax paid by the Company absorbing Rs. 3,15,000 (Rs. 3,15,000) leaving a credit balance to be carried forward of Rs. 36,465 (Rs. 46,383).

Output and despatches of steam and other grades of coal for the last three years are as follows:—

Year Ended	*Raisings* Tons	*Despatches* Tons
31st March 1958	4,80,042	4,74,880
31st March 1957	4,63,751	4,63,237
31st March 1956	4,46,745	4,54,926

Raisings and despatches show an improvement but the output of Barkui Colliery on the South Eastern Railway narrow gauge could not be fully lifted owing to inadequate supply of wagons. Since the close of the year, arrangement has been made to dispose of this stock on the broad gauge.

Capital expenditure during the year is Rs. 5,93,503 against Rs. 5,54,900 in the previous year. This includes one conveyor costing about Rs. 2,00,000. For reasons stated in the last report, a further sum of Rs. 1,34,136, being the estimated cost of Appellate Tribunal Award for the period from 1st April to 14th July 1957, has been provided for in this account.

The Coal Prices Revision Committee has yet to submit its report. The selling price of coal has, however, been increased by Re. 0.75 per ton as from 17th May 1958 to cover the extra dearness allowance payable to a colliery worker under the Award.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	17,26,000
Reserves ...	17,04,900	Capital work-in-progress	1,02,339
Provision for taxation ...	6,90,000	Stock ...	1,08,618
Liabilities ...	26,48,575	Stores and spare parts	13,88,062
Profit and loss account ...	36,465	Debts, deposits and advances ...	27,57,830
		Investments	4,07,240
		Cash ...	1,64,751
Rs.	66,54,840	Rs.	66,54,840

Hindoostan Spg. and Wvg. Mills Co., Ltd.

The directors of the above Company (Bombay) submit the audited accounts of the Company for the year ended 31st March 1958.

The year's working has resulted in a loss of Rs. 6,88,569 (profit of Rs. 11,15,125), after providing Rs. 13,57,051 (Rs. 11,67,144) and Rs. 3,47,815 (*nil*) respectively for depreciation and development rebate and Rs. 50,000 (Rs. 8,60,000) for taxation. Wealth tax in respect of 1956-57 amounting to Rs. 80,520 has been paid out of the balance of Rs. 86,061 (Rs. 608) brought forward in the last year's account, leaving a balance of Rs. 5,541. The directors have transferred a sum of Rs. 4,70,000 (*nil*) from the dividend reserve which when added to the aforesaid amount of Rs. 5,541 (Rs. 608) makes a total of Rs. 4,75,541 (total profit of Rs. 11,15,733). The directors have paid an *ad-interim* dividend at Rs. 75 (Rs. 75) per whole and Rs. 18.75 (Rs. 18.75) per quarter ordinary share, which absorbed Rs. 90,000 (Rs. 90,000). From the balance of Rs. 3,85,541 (Rs. 10,25,733) the directors recommend payment of dividend for the year ended 31st March 1958 at Rs. 45 (Rs. 45) per whole and Rs. 11.25 (Rs. 11.25) per quarter preference share, less income-tax, which will absorb Rs. 54,000 (Rs. 54,000) and a final dividend for the year ended 31st March 1958 at Rs. 275 (Rs. 275 including bonus of Rs. 25) per whole and Rs. 68.75 (Rs. 68.75 (including bonus of Rs. 6.25) per quarter ordinary share., without deduction of income-tax, which will absorb Rs. 3,30,000 (Rs. 3,30,000) leaving a balance of Rs. 1,541 (Rs. 86,061 after placing Rs. 5,55,672 to development reserve.) Deducting the above sum of Rs. 1,541 from the above loss of Rs. 6,88,569 there remains a debit balance of Rs. 6,87,028 in the profit and loss account and the same is deducted out of the general reserve as shown in the accounts.

During the year, a new Company, namely, The Cable Corporation of India Ltd., for the manufacture of Electric Cables, was floated and the directors subscribed to its capital to the extent of 5,000 shares of Rs. 100 each, considering it a good investment for the Company. The Company has also invested Rs. 50,000 in the share of Siemens Engineering & Manufacturing Co. of India Private Ltd., by subscribing 50 shares of Rs. 1,000 each fully paid-up. The prospects of this Company also are bright and in the opinion of the directors it is a sound investment.

The directors regret to inform that though the permission of the Government for the issue of bonus shares was received during the accounting year, they did not think fit to issue bonus shares as one of the conditions of the permission was that the Company should have assessable profits during the year of issue and it was very nearly impossible to know in advance under the prevailing conditions as to whether the Company was going to have any assessable profits in the year. In fact, the working of the year resulted in a loss, and hence no bonus shares could be issued.

Machinery to the value of Rs. 18,01,317 (Rs. 20,77,889) was received and most of it was erected during the year.

Trading Conditions.—The year under report was one of the worst the Indian Textile Industry had seen in recent times. The Industry had to face the double problem of rising stocks and falling prices. Mills producing grey goods of coarse and medium counts were more severely affected and unfortunately the Company's Mills produce mostly these varieties.

In September 1956 the Government drastically increased excise duty on cloth and in the case of medium varieties it was actually doubled. The reason given by the Government at the time was that this would mop up the so-called increased profits which it expected the mills to make in the following year. The heavy duty continued to be levied till December 1957 when the Government reduced it by 3 nP on medium varieties. This reduction was of very little help to units on coarse and medium varieties and the Government had to reduce the excise duty again in March 1958. But this time also the reduction on coarse and medium varieties was so meagre that it had no effect on the cloth market.

Simultaneously, in December 1957, the Government announced replacement of sales tax on cloth by additional excise duty of 3 nP and 4 nP, respectively on coarse and medium varieties, which would bring an additional revenue of Rs. 22.87 crores to the Government against Rs. 19.76 crores collected by the State Governments by way of sales tax. However, the State Governments were not satisfied with the respective shares of the additional excise duty they were to get from the Central Government and in order to increase their revenues, withdrew the concessions given to the Textile Industry in respect of sales tax on raw materials. This has further increased the burden on the Bombay Mills by about a crore of rupees.

The Industry's problems are many and varied. The cost of raw materials, namely, cotton has been rising since 1955. Bombay Mills have to pay higher and higher charges for electricity and fuel oil since 1953 and 1955 respectively. The labour cost too has gone up sharply due to rising basic wages in some cases and dearness allowance and other direct and indirect benefits conferred on workers. The rise in dearness allowance has been especially steep due to a jump in the working class cost of living index. On top of these increases in the expenses, the Central Government, the State Governments and the Local Governments, i.e., Municipalities have found the Textile Industry a convenient source of income and now and then come out with proposals of increasing the existing imposts or of fresh ones. The net result of all these factors is rising costs of manufacture of cotton textiles.

As against the rising costs of manufacture, the cloth prices during the year were not only rising but were actually falling. The agricultural population also had a bad year and owing to a sharp rise in the prices of food grains, the purchasing power of the masses was seriously affected. Therefore, there emerged a buyer's market in cloth and mills were finding it difficult to dispose of their products, especially grey goods, even at lower prices. Consequently they had to nurse large stocks of cloth with the resultant financial difficulties. Actually there have been distress sales of cloth which further aggravated the situation.

Since the beginning of the year the country's performance in the export trade is also very disappointing. Exports of cloth during the first four months have dwindled considerably and this also has a depressing effect on the domestic market.

Only recently the Union Government seems to have realised the seriousness of the situation of the Textile Industry and has appointed a Committee of Inquiry to suggest remedial measures for putting it on a sound and healthy footing. On the interim recommendations of the Committee, the Government once again revised the rates of excise duty on cloth and simultaneously rationalised the same by splitting the medium variety into two parts and by treating grey, bleached and processed goods as distinct classes for purposes of the duty. The basic rates on coarse, lower medium and higher medium varieties are now 4 nP, 5 nP and 6 nP respectively. This relief thus given by the Government is very welcome. It is also hoped that the Government will consider the final recommendations of the Committee and take necessary steps at a very early date.

Accounts in brief are as under:—

Indian Manufacturing Co., Ltd.

The directors of the above Company submit the audited accounts of the Company for the year ended 31st March 1958.

The year's working has resulted in a loss of Rs. 1,20,387 (profit of Rs. 8,68,708) after providing Rs. 10,92,611 (Rs. 9,09,157) and Rs. 2,90,180 (*nil*) respectively for depreciation and development rebate and Rs. 62,000 (*nil*) for taxation. Wealth tax in respect of 1956-57 amounting to Rs. 63,789 has been paid out of the balance of Rs. 75,722 (Rs. 4,386) brought forward in the last year's account, leaving a balance of Rs. 11,933. The directors have transferred a sum of Rs. 3,25,000 (*nil*) from the dividend reserve, which, when added to the aforesaid amount of Rs. 11,933 makes a total of Rs. 3,36,933 (Rs. 9,41,709).

The directors have paid an ad-interim dividend at Rs. 75 (Rs. 75) per whole and Rs. 37.50 (Rs. 37.50) per half ordinary share, which absorbed Rs. 67,500 (Rs. 67,500). From the balance of Rs. 2,69,433 (Rs. 8,74,209) the directors recommend payment of dividend for the year ended 31st March 1958 at Rs. 45 (Rs. 45) per whole and Rs. 22.50 (Rs. 22.50) per half preference share, less income-tax, which will absorb Rs. 40,500 (Rs. 40,500) and a final dividend for the year ended 31st March 1958 at Rs. 250 (Rs. 250 including bonus of Rs. 25) per whole and Rs. 125 (Rs. 125 including bonus of Rs. 12.50) per half ordinary share, without deduction of income-tax, which will absorb Rs. 2,25,000 (Rs. 2,25,000) leaving a balance of Rs. 3,933 (Rs. 75,722 after placing Rs. 5,32,987 to development reserve. Deducting the above sum of Rs. 3,933 from the above loss of Rs. 1,20,387 there remains a debit balance of Rs. 1,16,454 in the profit and loss account and the same is deducted out of the general reserve as shown in the accounts.

During the year a new Company, namely, Cable Corporation of India Ltd., for the manufacture of Electric Cables, was floated and the directors subscribed to its capital to the extent of 5,000 share of Rs. 100 each, considering it a good investment for the Company. The Company has also invested Rs. 50,000 in the shares of Siemens Engineering & Manufacturing Co. of India Private Ltd., by subscribing 50 shares of Rs. 1,000 each fully paid-up. The prospects of this Company also are bright and in the opinion of the directors, it is a sound investment.

The directors regret to inform that though the permission of the Government for the issue of bonus shares was received during the accounting year, they did not think fit to issue bonus shares as one of the conditions of the permission was that the Company should have assessable profits during the year of issue and it was very nearly impossible to know in advance under the prevailing conditions as to whether the Company was going to have any assessable profits in the year. In fact, the working of the year resulted in a loss, and hence no bonus shares could be issued.

Western India Spg. and Mfg. Co., Ltd.

The directors of the above Company (Bombay) submit the audited accounts of the Company for the year ended 31st March 1958.

The year's working has resulted in a loss of Rs. 20,70,898 (profit of Rs. 9,34,394) after providing Rs. 13,82,689 (Rs. 9,77,556) and Rs. 6,97,309 (*nil*) respectively for depreciation and development rebate and Rs. 80,000 (*nil*) for taxation. Wealth tax in respect of 1956-57 amounting to Rs. 73,808 has been paid out of the balance of Rs. 93,935 (Rs. 4,524) brought forward from the last year's account, leaving a balance of Rs. 20,127. The directors have transferred a sum of Rs. 4,25,000 (*nil*) from the dividend reserve which when added to the aforesaid amount of Rs. 20,127 makes a total Rs. 4,45,127 (Rs. 10,62,533). The directors have paid an *ad-interim* dividend at Rs. 75 (Rs. 75) per ordinary share, which absorbed Rs. 90,000 (Rs. 90,000). From the balance of Rs. 3,55,127 (Rs. 9,72,533) the directors recommend payment of dividend for the year ended 31st March 1958 at Rs. 45 (Rs. 45) per preference share, less income-tax, which will absorb Rs. 54,000 (Rs. 54,000) and a final dividend for the year ended 31st March 1958 at Rs. 250 (Rs. 250) per ordinary share, without deduction of income-tax, which will absorb Rs. 3,00,000 (Rs. 3,00,000) leaving a balance of Rs. 1,127 (Rs. 93,935 after placing Rs. 5,24,598 to development reserve). Deducting the above sum of Rs. 1,127 from the above loss of Rs. 20,70,898 there remains a debit balance of Rs. 20,69,771 in the profit and loss account and the same is deducted out of the general reserve as shown in the accounts.

During the year, a new Company, namely, The Cable Corporation of India, Ltd., for the manufacture of Electric Cables, was floated and the directors subscribed to its capital to the extent of 5,000 shares of Rs. 100 each, considering it a good investment for the Company. The Company has also invested Rs. 50,000 in the shares of Siemens Engineering & Manufacturing Co., of India Private Ltd., by subscribing 50 shares of Rs. 1,000 each fully paid up. The prospects of this Company also are bright and in the opinion of the directors it is a sound investment.

The directors regret to inform that though the permission of the Government for the issue of bonus shares was received during the accounting year, they did not think fit to issue bonus shares as one of the conditions of the permission was that the Company should have assessable profits during the year of issue and it was very nearly impossible to know in advance under the prevailing conditions as to whether the Company was going to have any assessable profits in the year. In fact, the working of the year resulted in a loss and hence no bonus shares could be issued.

Nellimarla Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the thirteen months ended 31st July 1957.

The profit for the period after providing for depreciation Rs. 1,20,586 and taxation Rs. 3,30,000 including wealth tax, amounts to Rs. 2,17,021 to which must be added the credit balance brought forward from the previous half-year of Rs. 1,29,411 and overprovision of liabilities written back Rs. 21,402 making a total of Rs. 3,67,834. From this amount is deducted the amount transferred to development reserve of Rs. 55,572 leaving a balance of Rs. 3,12,262. The interim dividends for the period ended 31st July 1957, declared by the directors on 12th December 1957, on 5,000 preference shares at Rs. 3 per share absorbed Rs. 15,000 and on 2,62,500 ordinary shares at Re. 0.50 nP per share absorbed Rs. 1,31,250 leaving an available balance of Rs. 1,66,012. This amount the directors recommend should be distributed as follows:—

To final dividend on 5,000 preference shares at Rs. 3.50 nP per share for the period ended 31st July 1957 absorbing Rs. 17,500 and to final dividend on 2,62,500 ordinary shares at Re. 0.40 nP per share for the period ended 31st July 1957 absorbing Rs. 1,05,000 leaving to be carried forward Rs. 43,512.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July, 1957, have been valued at market rates.

The Mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. Trading conditions were fair during the period.

Plans for the modernisation of the mills were finalised during the period and installation commenced during April 1958, of the first stage of modernisation amounting to approximately Rs. 12 lakhs, and this should be completed by September 1958. The second stage of modernisation which includes sacking weft spinning machinery and the balance of the sacking warp spinning machinery should be completed by June, 1959.

Labour relations have been difficult and this has affected the working efficiency of the mill. A number of stoppages have taken place causing a loss of production amounting to 7 days in which the mills remained closed. There has been no noticeable improvement in the position.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Chitavalsah Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the thirteen months ended 31st July 1957.

The profit for the period after providing for depreciation Rs. 3,10,684 and taxation Rs. 4,80,000 including wealth tax, amounts to Rs. 5,15,114 to which must be added the credit balance brought forward from the previous half-year of Rs. 1,01,027 and difference due to introduction of Naye Paise, on paying the dividend on ordinary shares for the half-year ended 30th June 1956, on the basis of 62 nP per share being equal to As. 10 per share of Rs. 1,508 making a total of Rs. 6,17,649. From this must be deducted the amount transferred to development reserve Rs. 1,75,000 leaving a balance of Rs. 4,42,649. The interim dividends for the period ended 31st July, 1957, declared by the directors on 12th December 1957, on 5,000 preference shares at Rs. 3.50 nP per share absorbed Rs. 17,500 and on 3,01,500 ordinary shares at Re. 0.60 nP per share absorbed Rs. 1,80,900 leaving an available balance of Rs. 2,44,249. This amount the directors recommend should be distributed as follows:—

To final dividend on 5,000 preference shares at Rs. 4.08 nP per share for the period ended 31st July 1957 absorbing Rs. 20,400 and to final dividend on 3,01,500 ordinary shares at Re. 0.50 nP per share for the period ended 31st July 1957 absorbing Rs. 1,50,750 leaving to be carried forward of Rs. 73,099.

Jute stocks are shown at or under cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July, 1957, have been valued at market rates.

The Mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. Trading conditions were fair during the period.

Plans for the modernisation of the mills were finalised during the period and installation commenced during January 1958, of the first stage of modernisation amounting to approximately Rs. 13 lakhs, and this should be completed by July, 1958. The second stage of modernisation of sacking weft spinning machinery and the balance of the sacking warp spinning machinery should be completed by June, 1959.

Accounts in brief were as under:—

*Includes wealth tax amounting to Rs. 64,000.

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts, after charging all expenses, providing for sales tax and writing back provision for anticipated loss on jute made during the previous year, show a profit of Rs. 1,23,781 (loss of Rs. 1,21,195) and the balance brought forward from last year was Rs. 1,330 (Rs. 2,525) making a total available for distribution of Rs. 1,25,111 (credit of Rs. 25,830 after transferring Rs. 1,20,000 from general reserve and Rs. 24,500 from dividend equalisation fund). The directors recommend that the following dividends be paid—on preference capital at Rs. 7.00 (Rs. 3.50) per share absorbing Rs. 49,000 (Rs. 24,500) and on ordinary capital at Rs. 2.50 (*nil*) per share absorbing Rs. 70,000 (*nil*) leaving a balance to be carried forward of Rs. 6,111 (Rs. 1,330). Wealth tax for the year is estimated to amount to Rs. 29,000 and this has been provided for by a transfer of this sum from general reserve.

With a view to having direct contacts with overseas markets, the Board together with the Boards of other jute mill companies under the same group management resolved to form a Company under the style of Budge-Budge and Allied Jute Mills Exports (Private) Ltd. This Company, having been registered commenced business on 31st July 1957. Each of the participating jute mill Companies has subscribed equally to the capital. Andrew Yule & Co., Ltd., have no interest in Budge-Budge & Allied Jute Mills Exports (Private) Ltd., but have been appointed its secretaries on a fee of Rs. 1,000 per annum.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period continued to be difficult owing to the disparity between prices of raw jute and those of manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	44,56,080
Reserves ...	26,27,123	Stock-in-trade	17,11,610

Rs.	80,75,466	Rs.	80,75,466

South Karanpura Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st August 1957.

These accounts have been drawn up in conformity with the Companies Act, 1956.

Raisings and Despatches.—187,703 tons of coal were raised and 186,382 tons were despatched during this period compared with 168,281 tons raised and 181,663 tons despatched during the previous year. Underground mining progressed satisfactorily and compensated for the drop in output from the quarries which are slowly reaching exhaustion.

Labour Awards.—During this year an agreement was reached at a triparite conference between Government, workers and the industry to implement the provisions of the All-India Industrial Tribunal (Colliery) Disputes. A price increase was granted on the 8th of July, 1957, to cover the additional cost of this Award and this price increase contained an element to compensate employers for the payment of arrears from 26th May, 1956 to 8th July, 1957. The appeal which the industry preferred against the above Award in the Supreme Court has now been withdrawn.

The profit and loss account after providing for all charges and making provision of Rs. 1,11,561 (*nil*) for taxation, Rs. 25,000 (*nil*) for wealth tax and Rs. 1,00,835 (Rs. 1,05,443) for depreciation shows a profit of Rs. 2,10,133 (Rs. 73,600), to which is added the balance brought forward from the previous year of Rs. 10,407 (debit Rs. 51,533) less—directors' commission Rs. 613. After adding the amount transferred from general reserve of Rs. 70,000 (Rs. 60,190 excess tax refund), there is a total of Rs. 2,89,927 (Rs. 82,257). From this there has been transferred to tax contingency reserve Rs. 15,300 (*nil*), development rebate reserve Rs. 3,200 (Rs. 600) and provision for payments under Appellate Award Rs. 1,31,438 (*nil*) leaving a balance available of Rs. 1,39,989 (Rs. 71,657 after transferring Rs. 10,000 to general reserve). This amount the directors propose to dispose of as follows:—

By payment of a dividend at the rate of 7½ (3½) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 1,31,250 (Rs. 61,250) and by carrying forward Rs. 8,739 (Rs. 10,407).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Block ...	24,66,819
Reserves ...	10,37,541	Stores, spare parts and loose tools	1,61,956
Provision for taxation ...	1,13,284	Stock-in-trade	30,534
Provision for wealth tax	25,000	Debts, deposits and advances ...	9,27,988
Liabilities ...	8,14,776	Investments	6,281
Profit and loss account ...	8,739	Cash ...	1,55,762
Rs.	37,49,340	Rs.	37,49,340

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit, after charging all expenses, of Rs. 3,15,988 (Rs. 3,31,101) of which taxation provision requires Rs. 2,10,000 (Rs. 1,58,000) leaving a balance of Rs. 1,05,988 (Rs. 1,73,101). With the balance brought forward from last year of Rs. 52,200 (Rs. 49,299), there is a total amount available for appropriation of Rs. 1,58,188 (Rs. 2,37,400 including Rs. 15,000 being excess provision for taxation in previous years written back) The directors have transferred to general reserve Rs. 20,000 (Rs. 75,000) leaving a final balance of Rs. 1,38,188 (Rs. 1,62,400). The following interim dividends were paid on 17th December 1957, Rs. 2.50 (Rs. 2.50) per preference share absorbing Rs. 10,000 (Rs. 10,000) and Re. 0.75 (Re. 0.87) per ordinary share absorbing Rs. 30,000 (Rs. 35,000). The directors now recommend that the following final dividends be paid—Rs. 2.50 (Rs. 2.50) per preference share absorbing Rs. 10,000 (Rs. 10,000) and Re. 1.00 (Re. 1.38) per ordinary share absorbing Rs. 40,000 (Rs. 55,200) leaving a balance to be carried forward of Rs. 48,188 (Rs. 52,200). Wealth tax in respect of the year ended 31st December 1957, is estimated to amount to Rs. 6,500 and this has been provided for by transfer from investment realisation surplus.

Raisings for the year were 78,937 tons compared with 81,904 tons in the previous year, whilst despatches totalled 76,326 tons as against 85,142 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,80,000	Block ...	9,25,221
Reserves ...	9,25,098	Stock of coal	66,058
Provision for taxation ...	8,032	Stores and spare parts	40,635
Provision for wealth tax	12,800	Debts, deposits and advances ...	2,94,915
Liabilities ...	3,86,000	Investments	3,26,814
Profit and loss account ...	48,188	Cash ...	4,06,475
Rs.	20,60,118	Rs.	20,60,118

N.B.—Figures within brackets relate to the corresponding period of the previous year.

FOREIGN INVESTMENT IN INDIA

(*Concluded from page 260*)

moneys borrowed or debt incurred by it abroad in respect of purchases of plant and machinery from abroad, if the transaction is approved by the Government of India.

(2) Exemption from income taxation to a technician of foreign nationality employed by an undertaking in India in respect of the remuneration received by him for services rendered as such technician during a period of 365 days from the date of his arrival in India. Further, if the contract of service is approved by the Government of India before commencement of the technician's service in India, the exemption is continued for a further period, so that he does not have to pay tax on his Indian remuneration during the financial year of his arrival in India and the two succeeding financial years.

One problem of practical importance which has also been a source of great misgiving to investors abroad has been the absence of any agreements between India and the foreign countries for avoidance of double taxation, and the uncertainty of their getting adequate relief in their own country. One serious difficulty faced by the Indian Government in the conclusion of agreements for the purpose was the unwillingness of the industrially and economically advanced countries to depart from the pattern of the agreements they had already concluded with countries of equal industrial and economic status, and the inability of India, with her poor and underdeveloped economy, to subscribe to that pattern. Recently, a delegation of senior officials of the Government of India visited a number of European countries. As a result of their efforts, there has been a genuine appreciation abroad of India's point of view. Agreements at official level have recently been reached with West Germany and Sweden and are awaiting ratification. Agreements with some other countries of Europe are in various stages of finalisation.

GERMAN MARK IN TEN YEARS

(*Concluded from page 261*)

currency must not, however, make light of the fact that great problems still remain to be mastered in the Federal Republic of Germany in the sphere of financial and economic policy. German economy is faced with important tasks: the means for an extensive social reform (the first part of which was the recent reform of annuities and pensions), for foreign debts and restitution payments to Israel have to be provided. The work of reconstruction in Germany as well as the integration of refugees and the elimination of other consequences of the war, of course, still necessitate the use of public funds, and the defence measures which are to safeguard liberty and wealth are not the least item that requires large sums.

But the German mark—like many currencies all over the world—is endangered by certain inflationary tendencies. The alternate rise in wages and prices play as much a part in this as some fluctuations in the trade cycles which are particularly critical in the case of a country like Germany which depends very much on export. Although the purchasing power has not by a long way diminished to the extent it has in various other countries, it is noticeable that the hard German mark has not relieved German finance politicians of serious worries. Today, as 10 years ago, it is rather a matter of putting into practice the supreme principle of any financial and monetary policy, namely, to secure for the workers a stable means of payment increasing in value.

SUGAR

(*Concluded from page 267*)

wax in order to obtain oxidised wax of sufficiently high acid value and further chemical modification of the oxidised wax so obtained, to give waxes possessing the required properties like solvent take-up.

The modified waxes as such (for example, ester wax for manufacture of carbon papers) or in suitable mixtures (for example, amide wax+ester wax for polishing creams) can be used in various industries. Mixture of modified wax, together with nitric acid treated crude wax, can also be used for some purposes (mixture of amide+nitric acid treated wax in polishing creams).

Carnauba, montan and other similar waxes are used in the production of leather and floor polishes, carbon papers, printing inks, etc., Imports of montan, carnauba and other waxes of mineral and vegetable origin (other than paraffin wax) during the year 1957 were valued at about Rs. 8.5 lakhs; of these, carnauba constituted the major item, its imports being 1,676 cwts. valued at Rs. 6.62 lakhs. These waxes or their satisfactory substitutes are not known to be produced in the country. In addition to the above imports, wax compositions valued at Rs. 10 lakhs are also imported.

An average Indian sugar factory crushes 1,000 tons of sugarcane per day for a season of 120-150 days. On the basis of 1 per cent. pressmud on cane and 7-15 per cent. wax in the press mud, a minimum of 96 tons of crude wax can be recovered at an average sugar factory. Of the 180 sugar factories working at present, nearly 150 are sulphitation factories and it would be possible to recover nearly 14,000 tons of crude wax from their press-mud. The by-product basic chromium sulphate is expected to find a ready market for tanning purposes. The equipment required is simple and can be fabricated locally.

COMMERCE AND INDUSTRY

(*Concluded from page 276*)

in relation to domestic demand are tempted to maintain the selling prices of their products at fairly high levels, thus reaping financial benefits that are out of proportion to their fair ex-works prices. We are anxious that, in the case of such industries, and, particularly bichromates, whose products are primarily used as raw materials by other industries, selling prices should bear a fair relation to their costs, because they enter into costs of production of consuming industries, thus creating a chain reaction on the general level of prices in the country." Accordingly, it has rightly recommended that the producers of bichromates should bring down their prices in fair relation to their costs.

Another significant point to which the Commission has referred is the scope for promoting exports of bichromates. Although exports have been hitherto negligible, the industry is now in a more favourable position to enter the export market. According to the Commission, the economies effected in the cost of production, together with the provision of refund of duty on imported raw materials under the Customs Duties Drawback (Bichromates) Rules, 1957, the industry should improve the competitive position of Indian bichromates in export markets. Dilating upon this aspect, the Commission has observed:

"We are aware of the present situation in which the industry which sells all its products in the domestic market and earns a high margin of profit, has little or no inducement to develop the export market where the margin of profit is comparatively small. But we feel that the producers in an industry which has enjoyed protection for over a decade and has the benefit of a sheltered market should take a much broader view of their role in the economy of the country." The industry has been urged to realise that the development of export business will lead to an increase in output which will bring about further reduction in costs of production; as a result, its overall margin of profit on its scales in the domestic as well as export markets will be higher than what it is at present. It is to be hoped that the producers of bichromates, as the Commission itself has pointed out, will be guided by their own enlightened interest and make every effort to develop the export market thereby benefiting themselves as well as the national economy. The Government has, it may be noted, specified bichromates as one of the articles of export from India in their current trade agreements with China, Finland, Greece, Hungary, Norway and Sweden. Appropriately enough, the Tariff Commission has recommended that the industry should explore the possibilities of promoting exports of bichromates to these and other markets.

Notices

DALMIA CEMENT (BHARAT) LTD.

DALMIAPURAM

NOTICE IS HEREBY GIVEN THAT THE SIXTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT DALMIAPURAM, (DISTT. TIRUCHIRAPALLI, MADRAS STATE), on Thursday the 4th day of September, 1958, at 11.00 a.m., to transact the following business:—

1. To receive and adopt the audited Balance Sheet and Profit and Loss Account and Appropriation Account for the year ended 31st December 1957, the Report of the Directors and the Auditors thereon, and to declare dividend. (The Directors have recommended a dividend of 7 per cent. on Preference Shares, 12 per cent. on Ordinary Shares and 12 per cent. on Deferred Shares free of Income-tax.)
2. To elect a Director in place of retiring Director Shri Kamalnayan Bajaj.
3. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., retiring Auditors, are eligible for re-appointment.
4. To consider, and if thought fit to pass, with or without modification, the following Ordinary Resolution:—

   "RESOLVED that the number of Directors on the Board of the Company be increased to Six."
5. To elect two Directors in case the Ordinary Resolution increasing the number of Directors on the Board is passed.
6. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 18th August to 4th September, 1958, both days inclusive. The dividend when sanctioned, will be paid to those shareholders whose names would appear in the Register of Members on 4th September, 1958.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

1st August, 1958.

EXPLANATORY STATEMENT

Item No. 4 and 5 of the Agenda:

Sarvashri Raja J. Rameshwar Rao and N. Ramasami Ayyar were appointed by the Board last year as additional Directors and under Section 260 of the Companies Act, 1956, they hold office only upto the date of the ensuing Annual General Meeting. The Directors have felt the need to strengthen the Board by a permanent increase in the number of Directors from four to six. A formal Resolution is, therefore, being placed for consideration of the Shareholders. If the proposal is agreed to, the Meeting will proceed to elect two Directors to make up the increased strength of the Board.

THE TWYFORD TEA COMPANY LIMITED, KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Forty-third Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, on Monday the 1st September, 1958, at 11 a.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1957, to declare a dividend, to elect two Directors, to elect Auditors and to fix their remuneration, etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will stand closed from 25th August to 7th September, 1958, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents.

KOTTAYAM, *6th August*, 1958.

THE HAILEYBURIA TEA ESTATES LIMITED, KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, on Saturday the 30th August, 1958, at 11 a.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1957, to declare a dividend on Equity Shares, to elect a Director, to elect Auditors and to fix their remuneration, etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 25th August to 7th September, 1958, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents.

KOTTAYAM, *6th August*, 1958.

INTER-BANK MONEY RATE LOWER

(*From Our Own Correspondent*)

BOMBAY, 13*th August*

The hardening tendency in the inter-bank call money rate noted in the previous week persisted during the major part of the week under review, but, towards the close, there was a reversal of the trend. The diversion of funds to last week's Treasury Bills which was payable by Friday last and the subscriptions to the Rs. 4-crore Bombay Municipal loan to the tune of Rs. 8.5 crores on Monday had mopped up a large part of the floating funds. Consequently, inter-bank call money, which was done at 2¾ per cent. among the Exchange banks and larger Indian banks in the previous week, was bid up to 3 per cent. on Monday. During the past two days, however, the flow of Municipal money and other funds back to banks made the position comfortable. The result was that banks were not only not borrowers but some of them turned out to be lenders. Consequently, inter-bank call money declined to 2¼-2¾ per cent. during the week under review. The rate among the smaller Indian banks, which stood at 3 per cent. early in the week, dropped to 2¾ to 3 per cent. There was no change in the rates for house money at call and short-term deposits for one to six months, which continued to be quoted at 3½ to 4 per cent.

The response to the 91-day Treasury Bills this week was far more encouraging than in the previous two weeks. Thus, as against an invitation for Rs. 3 crores, the amount offered aggregated over Rs. 5.54 crores. Tenders at Rs. 99.355 and above were accepted in full, while lower tenders were rejected. The total amount accepted was Rs. 3 crores, the average rate of acceptance of tenders was Rs. 2.513 per cent. per annum, as against

tory crop progress in most of the cotton producing countries accentuated the downward trend of prices. Sudan contracts also eased as a result of the reduction in Sudan reserve prices.

The following are the latest available quotations—in pence per lb.—from Alexandria:

American cotton one inch staple contract: October-November 24.73; December-January 24.85; March-April 24.98; May-June 25.03. *American cotton mixed growths contract*: October-November 25.33; December-January 25.35; March-April 25.40; May-June 25.40. *Sudan*: September-October, November-December, January-February 31.40.

The most important development of the week, in so far as the New York cotton market is concerned, was the publication, on the 8th inst., of the U.S. Agriculture Department's first estimate of the new (1958-59) season's cotton crop. The Department estimated the crop at 11,583,000 bales (of 500 lbs. each), as compared with last season's final outturn of 10,964,000 bales. The yield per acre is placed at 466 lbs., the highest on record, as against 388 lbs. in the previous season. The official estimate was larger than market expectation which was around 11,250,000 bales.

The "higher-than-expected" crop estimate and optimism that the House of Representatives would approve of the Farm Bill brought forth active selling. Consequently, cotton futures declined. Even the announcement of a higher final loan rate of 81 per cent. for the 1958 crop, as against 78 per cent. for the 1957 crop, failed to lift up values.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	12-8-58	5-8-58	29-7-58
Spot	36.40	36.45	36.45

December	36.02	36.55	36.53
March	36.25	36.80	36.90

SUGAR MOVES DOWN

(From Our Own Correspondents)

BOMBAY, 13*th August*

The imposition of controls on ex-mill sugar prices in the North and the latest normal monthly release of 165,000 tons for sale in the free market have checked the upward trend in sugar prices. Several leading sugar factories in North India are reported to have made sales involving substantial quantities at controlled prices. These sales, coupled with the liquidation by holders of released stocks, have led to a drop in sugar prices. Consequently, the ex-mill prices of South Indian sugar have suffered a further fall of Re. 1.50 per bag and the mills seem to be still keen on selling at lower rates.

Thanks to the downward revision in ex-mill prices and to increased arrivals in the wake of slack demand, the prices of sugar in the local market have tended to recede. Large grain sugar has declined from Rs. 110-115.50 to Rs. 109-114. Medium grain is lower at Rs. 107-108, as against Rs. 107-109, and small grain at Rs. 106, as against Rs. 106.50. As the demand for spot sugar is rather slack at present, these quotations are nominal and it is considered likely that the rates may fall by a rupee or so per bag.

Arrivals of sugar into the market by rail during the week, as already stated, were larger than in the previous week, owing to improved transport position; they aggregated 20,100 bags, the figure for the previous week being 9,600 bags.

• • • •

HAPUR, 11*th August*

Following the Government of India's decision to control crystal sugar in U.P., Punjab and North Bihar, trading in sugar came to a standstill and both wholesale and retail prices declined. The Government released a fresh quota for 1.65 lakh tons for free sale but at the controlled prices in the above three States. The release eased the supply position further and sugar was quoted at Rs. 100 per bag wholesale and Rs. 37.50 per maund retail. The production and despatches of indigenous sugar amounted to 19.67 lakh tons and 15.21 lakh tons up to 31st July in the current season, as against 20.19 lakh tons and 15.90 lakh tons, respectively, in the corresponding period of last year. Stocks with factories on that date stood at 8.78 lakh tons.

No fresh deals in sugar were recorded during the major part of the week in the Muzaffarnagar sugar market. Towards the week-end, however, some factories started their sales after the release of fresh quota of 1.65 lakh tons and business was reported to have been done for Saurashtra, Gujerat and Punjab destinations at the following prices:

Shamli (C-29) at Rs. 36.37 for 2,400 bags mill delivery; Amroha (D29) at Rs. 36 for 600 bags mill delivery, and Rohanana (C29) at Rs. 37 to Rs. 37.12 for 600 bags ex-Muzaffarnagar.

Practically all the factories on this line have started effecting deliveries to buyers at the controlled price against goods sold to them at higher rates prior to the imposition of control. The Government is using a liberal policy in granting tenders and sugar prices have declined considerably, due to dearth of buyers even without any premium.

Sentiment in sugar was depressed in the Kanpur market, following the release of monthly quota of 1.65 lakh tons for sale in the open market, but there was no deal in the ex-factory section, as the market was still in a state of suspense over the price control. Though the outstanding bargains were being squared up by mills, some confusion still persisted about second and third hand deals. The latest ex-mill controlled sugar was quoted at Rs. 36-12 per maund, while spot per bag (C29) Basti was done at Rs. 103-8, Gola at Rs. 102-8, (D29) Gola and Burhwal at Rs. 102-4, Waltergunj at Rs. 102, and Lakhimpur, Tulsipur, Hargaon and Bajrampur at Rs. 101-12.

With the imposition of control on crystal sugar, *khandsari* prices also declined by Rs. 1.50 per maund to be quoted now at Rs. 33 to Rs. 35.50 per maund.

Bearish conditions were witnessed in the ready *gur* market during the week, as dry quality stocks were nearly exhausted and demand for wet quality was dormant. Local stock was put at 43,000 maunds, as against 35,500 maunds a year before. *Gur* prices in the Southern markets were reported more favourable for outside buying. The standing cane crop was in fairly good condition and prices of *gur* here were: Dry Rs. 21.50, and *kotha* dry-wet Rs. 19.25 per maund.

Demand for ready *gur* was negligible in the Muzaffarnagar market during the past week and very little business was done for Punjab and Rajasthan. On account of lack of support, *Chakku* quality declined by 75 nP to 50 nP per maund. Shakker *dara* lost Re. 1 per maund and *khandsari* was quoted between Rs. 32 and Rs. 35.50 per maund.

Futures *gur* ruled quiet. *Fagun* opened at Rs. 13.96 last Monday and, after touching the highest during mid-session at Rs. 14 and the lowest at Rs. 13.80, was quoted today at Rs. 13.86.

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 13*th August*

There was no development of import to the yarn market during the week under review. Staple fibre yarns moved irregularly on alternate bouts of selling and buying. Reports regarding the possible revision of the Government's import policy for staple fibre were conflicting. Thus, one section of the trade was expecting that the Government would grant limited licences to actual users for the import of fibre, while another section felt that the continued foreign exchange difficulty might not allow the Government to permit any imports. Thanks to such uncertainties, operators were not inclined to enter into fresh large commitments. Transactions put through, as a consequence, were limited with values moving generally downward. Rayon yarns were easy on fears of enlarged arrivals of imported yarn following the improvement in the world political situation. Cotton yarns continued to rule bearish. Enquiries from consuming centres were poor and there were reports that several spinning units in South India which had large stocks of yarn lying unsold were contemplating to sell at reduced prices. Indigenous rayon yarns came in for selling and suffered a setback. National Rayons 120 bright cones first grade climbed down from Rs. 6.19 to Rs. 5.94. 150 bright cones first grade dropped 10 nP to Rs. 5.09. 150 Italy declined by 6 nP to Rs. 6.56. 120 Italy was neglected at Rs. 7. 150 Japan, however, evoked good buying inquiries and hardened by 12 nP to Rs. 6.56. 120 Japan was also well supported, the rate improving by 7 nP to Rs. 6.44.

Staple fibre yarn 40x2 August delivery met with support and strengthened by Rs. 2 to Rs. 730, while October delivery lost a rupee to Rs. 751. Spot Citys fell by 8 nP to Rs. 4.12. Centurys eased by 6 nP to Rs. 4.06 and Kohinoors by 5 nP to Rs. 4.19. New Greats were quiet at Rs. 4.03. Among imported yarns, 80×2 Fujis were bought higher at Rs. 9.37, as against Rs. 9.25 last week.

In the cotton yarn section, forty counts came in for selling. Moderns receded by 25 nP to Rs. 25.50 and Minaxis by 13 nP to Rs. 25.31. Among sixty counts, Raghuvamshis dropped a rupee to Rs. 59. Finlays shed 25 nP to Rs. 61. Eighty counts Mahendras and Moderns were both quiet at Rs. 72. Thirty counts Hinds were done at Rs. 19.75, same as last week. Among twenty counts, Gokaks declined by 12 nP to Rs. 16.75. Moderns were dull at Rs. 16.75. Indores, however, had some enquiries and advanced by 13 nP to Rs. 16.25. Among 10 counts, Podars gathered 6 nP to Rs. 12.68, while Moderns were unchanged at Rs. 13.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	13-8-1958	6-8-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.44	6.37
150 Japan (per lb.)	6.56	6.44
120 Italy (per lb.)	7.00	7.00
150 Italy (per lb.)	6.56	6.62
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	730.00	728.00
40×2 October	751.00	752.00
40×2 Kohinoor (per lb.)	4.19	4.24
40×2 City (per lb.)	4.12	4.20
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.68	12.62
20s Modern	16.75	16.75
30s Hind	19.75	19.75
40s Minaxi	25.31	25.44
60s Finlay	61.00	61.25
80s Mahendra	72.00	72.00

• • • •

A plea for the grant of import licences for art silk yarn to established traders was put forward by Mr. Gordhandas Jadavji, the retiring President of the Bombay Yarn Merchants Association and Exchange Ltd., when he addressed the annual meeting of the Association held yesterday. The continued imposition of a ban on art silk yarn imports by established traders, Mr. Gordhandas declared, had resulted in shortage of supplies and increase in prices. He drew particular attention to the hardship caused to the handlooms and small consumers such as lace and tape manufacturers who, he said, were not getting their day-to-day requirements of yarn at reasonable prices. Referring to cotton yarns, he suggested the formulation of a scheme which would allow exporters to utilise a part of the foreign exchange to import raw materials.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 13*th August*

Barring the groundnut section which ruled firm, the oilseeds market presented an easy trend during the week under review. In particular, castorseeds were depressed, thanks to bearish overseas advices. As there were no fresh export sales in castor oil, the operators were not inclined to make large purchases, while bears were eager to sell. Consequently, prices suffered a setback. Even reports of unfavourable castorseed crop prospects in Brazil, the world's biggest producer, failed to have any effect. Trading in the linseed section was restricted with values moving downward, owing to lack of export business in linseed oil. There were, of course, enquiries from shippers but at lower rates. There would have been a marked fall in prices but for hopes of enlarged demand from foreign countries and increase in U.K. quotation for linseed oil from £111 to £113-£114. Cottonseeds ruled dull, although, despite bearish advices from the cotton market, prices did not show any tendency to drop. Groundnuts, as already stated, were firm. The firmness was aided by increased purchases of groundnut oil by *vanaspati* manufacturers in the wake of tight supply position. It was reported that an important bull operator was holding tight in the maturing August contract.

Groundnut August 1958 contract, which stood at Rs. 192 at the close of last week met with good buying support and firmed up to Rs. 195.50 on the 9th inst. At higher levels, profit-taking set in and the contract receded to touch Rs. 193 today. February 1959 contract, after advancing from Rs. 164.25 to 165.75, receded to Rs. 163.25 today. Bold ready spurted from Rs. 38.87 to Rs. 39.25 on Saturday. Today, however, it was lower at Rs. 39. Coromandel and Khandesh quality were both quoted today at Rs. 39.37, as against Rs. 39 on the opening day. Quotations for these were higher still at Rs. 39.75 on the 9th inst. Over the week, groundnut oil ex-mill registered a rise of 39 nP to Rs. 20.75. Railway receipt strengthened by 38 nP to Rs. 20.50.

Castorseed September 1958 contract opened the week at Rs. 161.25, same as last week, and, after improving to Rs. 162.12 the same day, it was subjected to selling pressure and moved down to Rs. 156.50 today before finishing at Rs. 156.62. May 1959 contract, which stood at Rs. 157 last week-end, improved to Rs. 159.25 on Friday, but subsequently encountered selling and declined to Rs. 155.50 on Monday. Today, however, it was higher at Rs. 156.37. Ready Madras dropped 38 nP to Rs. 31.62. Kanpur quality fell by a like amount to Rs. 30.37. Castor oil B.S.S. receded by 31 nP to Rs. 17.50. Commercial quality was quoted today at Rs. 16.25, as against Rs. 16.44 at the close of last week.

Linseed September 1958 contract encountered selling and dropped 59 nP to Rs. 33.62. Bold ready declined by 13 nP to Rs. 33.62. Linseed oil, which stood at Rs. 17.62 on the 8th inst., as against Rs. 17.50 last week-end, eased to Rs. 17.50 today.

Cottonseed September 1958 contract was neglected at Rs. 120 today, as against Rs. 120.50 last week. February 1959 contract advanced from Rs. 102.50 to Rs. 103.75 on the 8th inst. Thereafter, it declined to Rs. 103 today before finishing at Rs. 103.25.

Among other seeds, kardiseed bold ready suffered a loss of Re. 1 over the week, today's closing rate being Rs. 20.50. Nigerseed Madras quality was well supported in the earlier sessions, the rate rising from Rs. 33 to Rs. 34.50 on Monday. Today, however, it was subjected to selling pressure and fell to Rs. 33.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	13-8-1958	6-8-1958	30-7-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	193.00	192.00	192.00
Feb. 1959	163.25	166.00	165.50
Bold ready (per cwt.)	39.00	38.87	40.25
Linseed—			
Sept. 1958	33.62	34.19	34.50
Bold ready (per cwt.)	33.62	33.75	34.00
Castorseed—			
Sept. 1958	156.62	161.25	160.75
May 1959	156.37	157.00	159.00
Madras (per cwt.)	31.62	32.00	32.25
Cottonseed—			
Sept. 1958	120.00	120.50	121.00
Sept. 1959	103.25	102.50	103.50
*Groundnut oil**—			
Ex-mill ready (per quarter) ..	20.75	20.36	20.37
Castor oil†—			
Commercial (per quarter) ..	16.25	16.44	16.37
Linseed oil†—			
Ready	17.50	17.50	17.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 13*th August*

During the earlier part of the week, Malabar black pepper showed small recovery, following sizable purchases for August shipment by New York at around $0.26. In the later part, however, on the withdrawal of buying support by the U.S.A., the market turned quiet with undertone uncertain. Bulls at Cochin were reported to be trying to rig up the prices, but, for lack of support, they were unable to push up. Growers, too, appeared to be of two minds. They showed anxiety to shade their prices when buying was withdrawn. Though weight of arrivals from Sarawak was lacking, the fear of impending pressure of selling by Lampong was responsible for the present state of doldrums at Singapore.

Ungarbled in Alleppey and Cochin, after showing a rise to Rs. 650, were quoted at Rs. 637½. The volume of trading in the forward market was restricted, except switching from August to October. October was down to Rs. 113, after improving to Rs. 115. Calicut was quoting Rs. 660. Small improvement in Singapore following European buying was noticed. Presently, white was quoted at Str. $130 and Black at Str. $75, with apathy on the part of buyers.

Reduction of freight from Singapore to New York made Lampong pepper cheaper than Malabar. Improvement in the political situation discouraged bulk buying by New York, reflecting uncertainty in the producing countries. The statistical chart showed poor taking of Malabar by the U.S.A. But for buying by Russia and East European countries, the overall picture of export of Malabar black would have shown a steeper fall.

The future of the market appeared to be dependent on Lampong, in view of smallness of arrivals of Sarawak pepper. During the coming months, there is every likelihood of competition bewteen Lampong and Malabar. The attitude of the Indonesian Government and their selling policy of Lampong and Muntok are likely to shape the future world pepper prices.

In specific delivery, September is moving narrowly with undercurrent uncertain, as there is pressure of tenderable stock in the local market. Business in A.S.T.A. is conspicuous by its absence, nominal quotation for August-September being $0.26½.

Today's nominal quotations are: Ready Rs. 36 per Bengal maund and September Rs. 600-Rs. 610 per candy of 5¼ cwts.

TEAS IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 7*th August*

Offerings in sale No. 24 which was held on Tuesday, 5th August, aggregated only 3,77,302 lbs. The quality of most teas, particularly highgrowns, showed a further improvement. The leaf appearance was generally satisfactory for the time of year. In spite of the small offerings, the sale opened to only a fair general demand, and the market was rather irregular. Low medium and medium teas were 5 to 10 nP easier. The strongest features of the sale were clean black leaf fannings with colouury liquors and these types were occasionally dearer. Good medium teas were firm, with a few invoices selling above valuation. Highgrown teas with quality met a useful demand and prices were irregularly 10 to 15 nP dearer. Whole leaf teas met with less support and were generally much easier. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.50
Low medium	1.55 to 1.65
Medium	1.70 to 1.80
Good medium	1.90 to 2.05
Quality	2.25 to 3.40

Internal:—Improved general demand. Black leaf orthodox strongest feature. C.T.Cs irregular with exportable types in good demand.

Export Quota:—The market has remained steady throughout the week with a fair quantity of business going through at 11 nP. There are large sellers at 11¼ nP. The latest quotation is sellers 11¼ nP, buyers at 11 nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 25:—818,000 lbs. Useful but irregular demand. Best liquoring highgrowns dearer, but below best easier. Low medium and medium 5 to 10 nP easier, except clean leaf sweet liquoring mediums which are dearer. Whole leaf easier."

EXPORT TEAS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 12*th August*

Conditions were visibly better during yesterday's export sales following an improvement in demand. Prices also gained. Offerings amounted to 47,886 packages. Strong competition was offered to a few of the best C.T.C. teas on offer, but most other lots of this category declined by 10 to 30 nP and the poorer second grades did not evoke interest. Although plain brokens opened easier, a firming tendency gradually set in and towards the close a net gain was recorded. Fannings in this category rose by 4 to 6 nP. Medium orthodox Assams were featureless, while the best bright liquoring varieties rose impressively, following keener demand. The brighter liquoring orthodox Dooars received more attention while non-wither Legg cut teas gave way by 10 to 15 nP. Leaf grades eased by 10 to 15 nP, while the cheapest lots improved. Darjeelings were keenly sought but because of a decline in quality, prices realised were lower. Tippy teas sold well. The quotations, with those of a week ago were: Best Assam C.T.C. fannings Rs. 3.80 to Rs. 4.20 (Rs. 3.80 to Rs. 4.10), best Assam C.T.C. B.P. Rs. 3.50 to Rs. 3.80 (Rs. 3.50 to Rs. 3.70), clean black pekoe Rs. 2.10 to Rs. 2.15 (same), medium fannings Rs. 2.05 to Rs. 2.15 (same), medium fannings Rs. 2.05 to Rs. 2.15 (Rs. 2.10 to Rs. 2.20), plain B.P. Re. 1.66 to Re. 1.70 (same), plain fannings Re. 1.84 to Re. 1.88 (Re. 1.78 to Re. 1.82), and medium B.P. Re. 1.90 to Rs. 2.00 (Re. 1.95 to Rs. 2.00).

Although during last week's auctions for internal consumption prices as a whole were easier, there were keen bids for exportable orthodox varieties possessing black leaf appearance the price of which tended dearer. Dusts on offer amounted to 20,027 chests. Among other orthodox grades, the useful liquoring powdery kinds met with good demand, but realised prices below valuations. Other orthodox teas gave way by 4 to 8 nP, although demand was fair. Among C.T.C. Assams, thinner liquoring teas eased by 20 nP and plainer kinds by 10 nP, while stronger liquoring kinds realised higher prices. Darjeelings with flavour were steady. The quotations with those of a week ago were: Best Assam C.T.C. Rs. 2.55 to Rs. 2.85 (same), medium Assam C.T.C. Rs. 2.10 to Rs. 2.30 (Rs. 2.00 to Rs. 2.20), medium Assam grainy dust Re. 1.68 to Re. 1.72 (same) and medium Dooars Re. 1.68 (Re. 1.66 to Re. 1.68) per lb.

No business was done in export quota with sellers demanding 11½ nP, but buyers offering 11 nP.

Leaf on offer was a meagre quantity of 367 chests.

On strong general demand, prices in the tea auctions held in Chittagong on 6th August recorded gains. Leaf grades on offer amounted to 8,995 chests and dusts 2,185 chests with a supplement of 85 chests. Whole leaf grades rose by As. 2, the better liquoring teas and tippy teas met with keen competition and non-wither Dooars were about firm, while the thinner liquoring brokens eased by an anna to As. 2 and fanning grades lost by half anna. Green teas totalling 800 chests were firm. The quotations were O.F. Rs. 2-11, P.F. Rs. 2-8 to Rs. 2-8-6, O.F. Rs. 2-13 to Rs. 2-13-6, B.O.P. Rs. 2-9-6 to Rs. 2-10, and B.P.S. Rs. 2-8.

Dusts realised higher prices with the non-wither lots and the better liquorings selling As. 1½ above valuations.

The date for the next sales is 20th August, when offerings will amount to 11,359 chests of leaf and 3,159 chests of dusts.

JUTE GOODS SHED EARLIER GAINS

(From Our Own Correspondent)

CALCUTTA, 12*th August*

Jute goods remained firm during the earlier part of the week under review, in consonance with the trend of raw jute prices during the period, but sagged thereafter following the publication of stock figures on Friday last. Although the stocks as at the end of July, at 122,200 tons, registered a welcome decline of 11,800 tons, the extent of the fall was below the earlier expectations, and hence the decline in prices. Stocks of hessian, at 19,900 tons, was lower by 11,100 tons and miscellaneous constructions, at 12,400 tons, by 2,700 tons. Sacking goods, however, rose to 89,900 tons from 87,900 tons, thereby reducing the overall decline to 11,800 tons. It was noted that stocks were higher by 13,800 tons compared to July 1957, and much above the present monthly output. In view of the dock workers' strike in June, shipments in July were naturally substantially higher, and the Middle East crisis at one time led to an increase in foreign demand. It had been subsequently anticipated that more foreign demand for stockpiling would develop. However, this expectation has not yet materialised, and the trend of purchases by foreign consumers indicated that they continued to be on a hand-to-mouth basis. Reflective of this were the U.S. float stocks at the end of June, which stood at as low as 93 million yards.

The low demand for sacking constructions has been a source of anxiety to the markets and the industry alike. It was stated in market circles that mills had in recent months been producing more sacking goods than the market could absorb, and this was the principal reason why ready B. twills seldom reached the floor price as fixed by the Indian Jute Mills' Association. During the week under review, ready B. twills opened above the floor, but soon declined below the floor. The poor statistical position retarded stabilisation of the price. The need for mills to transfer a portion of the sacking looms to the manufacture of hessian was stressed by trade circles. For it was noted that in the 12 months ended June last, sacking goods produced formed as much as 65.5 per cent. of the total output, as against hessian 37 per cent. and other goods 6.5 per cent. It might be that mills had already realised the need to reduce the proportion of output in sacking in relation to hessian, and perhaps a readjustment was already under way.

On Tuesday last, there was selling pressure in the *fatka*, and this led ready B. twills to decline to Rs. 100.00 from Rs. 101.10 and ready hessian 40" 10 oz. to Rs. 43.95 from Rs. 44.35. At lower levels, there was some covering demand for near delivery goods. On the next day, while hessian 40" 10 oz. was fractionally better at Rs. 44.00, B. twills fell to Rs. 99.85 as overseas buyers showed no interest on expectations of further decline. At this stage, weak holders hurried to sell, and in the *fatka* there was selling pressure. B. twills lost to Rs. 99.35. Some business in hessian was done with the United States. Interest was also shown in hessian on behalf of the Continental markets. Covering business for near delivery goods soon followed. It should be noted that, while forward delivery B. twills were above the ready delivery goods, the reverse was the case in regard to hessian. Thus, Oct.-Dec. B. twills were at Rs. 101.85 and September goods at Rs. 100.80, as against Rs. 99.35 for ready delivery, while these delivery positions in regard to hessian 40" 10 oz. were quoted at Rs. 41.75 and Rs. 42.75, respectively, as compared with Rs. 44.10 for ready hessian. On Friday, the publication of stock figures depressed sentiment for some time that day. However, a recovery soon followed, and on balance B. twills put on a fractional gain at Rs. 99.60, while hessian 40" 10 oz. even after the recovery was lower at Rs. 43.90. Very little business was done on Saturday, and B. twills lost to Rs. 99.15 and hessian 40" 10 oz. to Rs. 43.75. Excepting for some covering business yesterday, there was nothing else done. Overseas buyers sat out. As a result, hessian 40" 10 oz. declined to Rs. 43.05 and B. twills to Rs. 99.50.

Raw jute prices, after remaining firm, shed a part of the recent gains. The recent rumours of damage to crop on account of pest infection proved highly exaggerated and circulated by those interested to push up prices. Some damage was no doubt done on account of pests, but the crop as a whole, especially the superior varieties, were reported to be good. Also, as stated in these columns a week ago, prompt measures against pests were taken by the West Bengal Agriculture Department. Recent rains have eliminated the one cause holding up harvesting in most districts, namely, the absence of sufficient steeping water for treatment of the crop after harvest. During the week under review, local daissee bottoms Sept-Oct. declined to Rs. 29.50 from Rs. 30.25, and Indian Northern bottoms Aug.-Sept. to Rs. 26.75 from Rs. 27.25.

BASE METALS QUIET

(From Our Own Correspondent)

CALCUTTA, 12*th August*

In accord with market advices from London and New York, the base metals market ruled quiet during the week under review. The issue of permits for copper for some cottage industries not only arrested the uptrend in prices of copper scrap and brass sheet but even pushed down the prices.

The allotment of copper for non-scheduled industries has been welcomed. However, what market circles fail to understand is the continued suspension of permits to the scheduled industries which are facing raw material difficulty. It is hoped that, after the requirements of cottage industries were met, issue of permits to the bigger industries depending on copper will be resumed. The latter industries are suppliers of their products to Government departments, the railways and the several public sector corporations.

It was noted that, earlier in the week, the price on the London Metal Exchange had shot up to £210 (later it sagged to £203), following prospects of lifting of the trade embargo with the U.S.S.R. It was thought that there would be increased demand for the several copper products on the European market. The possibility of stockpile in the United States was also suggested. In the U.S.A., consumer buying was markedly on the increase, presumably on fear that the primary producers might raise the price further to 27½ cents per lb. in the event the Metal Subsidy Bill entered the Statute. It was noted that circumstances were slowly changing for a spurt in American economic activity which would raise the international price for copper. Note was also taken of the low stocks in London in the wake of recent strike in Chile and large shipments to the U.S.A. prior to 1st July when the tariff was reimposed.

Locally, virgin lead eased from Rs. 69.50 to Rs. 69. Demand was dull. Tin at one time had declined to Rs. 565, but soon recovered to close at the opening level of Rs. 566. Electrolytic zinc was quiet at Rs. 66.

FOODGRAINS FULLY STEADY

(From Our Own Correspondent)

HAPUR, 11*th August*

Steady to firm conditions prevailed in the foodgrains market during the week. Arrivals from producing areas continued to be small, owing to rains. Kharif crop prospects were reported to be uncertain after the recent heavy rains which have damaged maize and *juar* crops to a great extent in this area. In order to provide incentive to cultivators to step up production, the Government of India is thinking of fixing minimum prices for the *rabi* foodgrains, as stability of food prices is regarded as a primary requisite for the successful implementation of the Plan. The Union Food Minister has urged all the State Governments to see that the forthcoming intensive *rabi* campaign is made a "resounding success."

Wheat at Hapur recorded fractional gains, due to tight stock position, as arrivals were poor, due to waterlogging in rural areas, following recent heavy rains. Sales through fair-price shops had not yet begun. Wheat *dara* was quoted at Rs. 20.75 and farm quality at Rs. 21.75 per maund. Stock with the trade was nominally quoted at one *khatti*, the corresponding figure last year being 45 *khatties* and in 1956, it was 83 *khatties*; wheat *dara* was then quoted at Rs. 16 and Rs. 15 per maund, respectively. The State Food Minister has claimed that the announcement of the Union Government to allot 80,000 tons of wheat to U.P. and the State Government's decision to open more fair-price shops, the number of such shops having mounted to 3,200 in the State, have produced a salutary effect on prices.

Rice also recorded gains during the week due to poor supply position, although paddy crop had been benefited due to recent heavy rains. The prevailing prices were:—Basmati *sela* Rs. 41 to Rs. 43; *mainpuri* Rs. 30.25; coarse quality Rs. 26.25 per maund.

Gram registered an advance during the week, due to good consumer demand and Punjab advices and heavy quantity of gram on State Government account was being despatched to east U.P. Barley and *bejhar* also recorded a hardening trend, as abnormally heavy rains (about 40 inches in one month) have resulted in sizable loss to maize and *juar* crops. Prices in the week-end (in rupees per maund) were:—gram 14.87; barley 14.12; *bejhar* 13.37; *jowar* 13; *guwar* 15.50.

Among pulses, peas hardened due to good demand from east U.P. and Bihar, although despatches had been hampered due to want of loading facilities, while *arhar* was depressed as demand was dormant. Other pulses were mostly steady, due to poor stocks and latest prevailing prices were:—peas *dara* Rs. 13.13; white quality Rs. 13.75; peas *khatti* Rs. 13; peas *dal* Rs. 15; *arhar* Rs. 16.37; *khatti* Rs. 16.37; *arhar dal* Rs. 21.25; *urd* Rs. 19.25 to Rs. 21; *moong* Rs. 25; *massoor* Rs. 16 per maund.

UTILISATION OF IRRIGATION POTENTIAL

PROGRESS MADE BY U.P. REVIEWED

From Our Special Correspondent

NEW DELHI, 12*th August*

IN the seven years since the first Plan started, irrigation-*cum*-power projects and purely irrigation ones have absorbed an enormous public outlay of very nearly Rs. 600 crores in the entire country. But a complete and reliable picture of the irrigation potential created up till now under these projects and of the extent to which it is being actually utilised by agriculturists has not emerged (except in the case of three States—Bihar, West Bengal and Orissa) from the Planning Commission's latest review of the progress of State Development Plans. It is learnt that at the time this review was drawn up, the reports of the Commission's Study Teams covering other States were not wholly ready. In view of the continuing controversy over this question of grave public importance connected with the insufficient utilisation of irrigation potential, it may be that the Planning Commission would present to the public a comprehensive picture of performance in this regard. By now the Commission should be in a position to do this on the basis of the reports of all its Study Teams.

DELHI LETTER

In the absence of such a complete picture, this despatch highlights the findings in respect of new irrigation potential and its utilisation in one out of four States covered by the Study Team headed by Mr. M. S. Sivaraman, I.C.S., Adviser, Programme Administration, Planning Commission. The Team's report covering Uttar Pradesh is interesting not only for the light it throws on the practical difficulties in the way of a fuller utilisation of the irrigation potential but also for its review of progress of green manuring schemes. Mr. Sivaraman's report on Uttar Pradesh is particularly valuable for its treatment of tubewell irrigation.

In Uttar Pradesh, 2,299 tubewells were constructed prior to the first Plan; during the first Plan period, 3,114 tubewells were constructed; and, in the first two years of the second Plan, 137 tubewells have been completed. Of the 3,251 tubewells completed in the last seven years, 3,159 have been energised. The Government has ordinarily constructed one mile of brick-lined channel and two miles of unlined channel for every tubewell.

A tubewell is ordinarily expected to irrigate about 100 to 125 acres of sugarcane, 25 to 50 acres of other *kharif* crops and 250 acres of *rabi* crops. The area for which water was made available in a year from tubewells completed since 1951 was 1,205,000 acres, out of which the actual irrigation in 1957-58 was 785,000 acres upto January 1958.

During the *rabi* season about 300,000 acres have been irrigated from 1,693 tubewells of the first Plan period as against a target of about 400,000 acres, giving a performance of about 178 acres per well. In respect of the remaining tubewells constructed during the Plan period, the average works out to 153 acres per well. There has been a steady and rapid progress in the development of sugarcane irrigation, paticularly in the factory areas, but this cannot be said of the *rabi* area which depends more on winter rains even under old tubewells.

Irrigation Potentials

During the Team's discussions with the State officials and cultivators, various reasons were given to explain why the cultivators were not utilising fully the irrigation potentials. It was stated that one mile of brick-lined channel was not sufficient and an extra mile of lining would result in better utilisation. The cost of additional lining would be about Rs. 7,000 to Rs. 10,000 per tubewell and the increase in the irrigated area was estimated to be 50 acres per tubewell on the assumption that the loss by seepage would be about 12½ per cent.

While every increase in the length of lined channel will help reduce the seepage, the immediate benefit from such extra lining is not likely to be substantial, according to the Study Team. Many of the tubewells run for less than 3,000 hours in a year which is less than about 12 hours a day during the non-rainy season, while some are working upto 7,000 hours in a year within two years of energisation even with brick-lining for only a mile and unlined channels for two miles. It would be premature to take up extension of brick-lining as a general measure when the saving of water is likely to be about 5 to 10 per cent. only.

Another suggestion made was that the length of the unlined channels should be further increased by 2 to 4 miles at the expense of the State. The cost of construction of the unlined channels works out to about Rs. 200 a mile without taking into account the cost of the land which Government will have to incur if these channels which are now constructed by the cultivators themselves are to be laid out by the Government. The chief advantage of these subsidiary channels is some reduction in the cost of the water to the cultivator. When drought conditions prevail, the cultivators are most anxious to complete these channels through co-operative effort.

While the construction of such subsidiary channels may help promote utilisation, it appears that the absence of subsidiary channels wherever this was the case, was not the chief reason for non-utilisation of irrigation facilities. On the other hand, the failure to convince the cultivator that the use of irrigation water for the *rabi* crop will help him take to optimum manuring and use of improved seeds as a normal practice and thereby to increase his yield by even 100 to 200 per cent., appears to be the more important reason.

In most parts of U.P., proper manuring of wheat is hardly done, though the land is left fallow during the monsoon when a green manure crop can be grown. The wheat crop depends merely on timely rains and the average yield, already low, is reduced further if the winter rain is insufficient. The risk of reduction of yield is greater in the case of the manured crop when fertilisers are used. Even when irrigation is available, the cultivator takes the water only when he thinks that the yield of the crop will otherwise be very poor. Adequate manuring of the crop is not done in the areas within the command of tubewells or canals, though irrigation can be had to save the crop in an emergency. The optimum yield of wheat is secured by use of improved rust-resistant seeds, adequate manuring and two "waterings" in Western U.P., as against one in the eastern districts. That irrigation helps the cultivator in overcoming the risk of failure of crop and at the same time enables him to obtain larger profits and a higher yield as against the unmanured rainfed crop even in a year of normal rainfall, is a fact which is not generally known to many of the cultivators. No field demonstrations have been arranged in this matter in any of the tubewell or canal areas and this is the case in many of the National Extension Blocks. No effective propaganda has been done by the Extension Services about the real role played by assured irrigation in improving crop production.

Targets Tardy

The present targets for development of irrigation appear to be tardy in an emergency which calls for immediate use of the existing facilities and these have to be revised so as to ensure complete utilisation in as short a time as possible. Under some of the tubewells in sugar factory areas, full utilisation has taken place in the first year of working of the tubewell in respect of sugarcane and this emphasises the need to revise the targets as well as the importance of convincing the cultivators that extra profits can be got even from wheat and barley if irrigation, manure and improved seeds go together. At present, the tubewells are idle in the summer months, except where sugarcane cultivation is fully developed. In non-factory areas such full development of sugarcane may not take place. Some inducement to the cultivator in the shape of reduced rates for a few years for irrigation from March to June in respect of crops other than sugarcane will help develop irrigation consciousness. The rate charged may be kept low merely to offset the pumping charges so that the cultivators are convinced of the advantages of growing:—(i) a fodder crop like Berseem or Lucerne in the *kharif* areas; (ii) Hubam clover in the *rabi* area; (iii) a green manure crop before paddy; (iv) advance paddy nursery before the monsoon; (v) food crops like summer maize in February-March; or (vi) even cash crops like the bunch variety of groundnut in February-March.

The total irrigation potential created upto March 1957 from new projects of the first and second Five-year Plan *other than tubewells* was 2,032,000 acres and actual irrigation up-to-date was 1,283,000 acres. 3,964 miles of new canals have been constructed in these projects. These require about 20,000 miles of subsidiary field channels or cultivators' channels, but hardly 50 per cent. of these have been constructed.

There has been a sudden spurt in the development of irrigation under the major and medium projects only in a year of drought and this emphasises the similarity of the main problem under canals and tubewells. Apart from taking active steps to complete the cultivators' channels, considerable work has to be done in the matter of teaching the cultivators that irrigation water does play a significant part in improving agricultural production even in years of normal rainfall. However, cropping patterns under some of these projects are likely to be different from those under tubewells where normally greater emphasis is on sugarcane irrigation.

When Mr. Sivaraman visited the State last year in February, he suggested that, with a view to developing local supplies of green manure seeds, the cultivators should be induced to grow sunn hemp and *Dhaincha* on the borders of fields and for this purpose they should be supplied with a packet of seeds, one for each acre-field. As a result 741,000 packets were distributed to the cultivators and it is expected that green manuring will be done on 800,000 acres in the next season, as against 434,000 in the last. It has now been decided to distribute 2½ million packets this year. The quantity of *Dhaincha* seeds per packet will be 2 ozs. and sunn hemp 4 ozs. as against half a pound and one pound of last year.

The planting of perennials like *Sesbania ægyptisa, Indigofera tysmanii, Glyricedia, Ipomea Carnea*, etc., has to be taken up vigorously. In U.P. alone 25 million acres can be green manured and where this cannot be done, every holding, big or small, should be in a position to produce its requirements of organic matter by way of composts by raising perennial border plants.

MARKET GOSSIP

(*Concluded from page 255*)

relatively less attractive for investment. Even those who need it for social and religious purposes may be inclined to buy no more than their minimum requirements. So the evil of buying gold, if evil it is, will be on a much smaller scale than now.

Finally, any move to attract the gold held by the public must be regarded as a sort of gamble. While the experiment may be tried for what it is worth, one should not expect too much from it, if disappointment is to be avoided when the actual results come to be known.

• • • •

Since writing the above, Mr. Morarji Desai, Union Finance Minister, has stated in Parliament, in reply to a question by three members, that the Government is considering a proposal to mobilise the idle gold hoards in the country by the issue of gold bonds. It is significant, in this connection, that, since the beginning of June last, the gold produced in Kolar mines has not been sold. As such sales amounted to 2,000 tolas per day on an average, the Government must have by now conserved not less than 120,000 tolas, valued at Rs. 1.28 crore. There are also floating stocks with dealers estimated at 250,000 tolas, a part of which may quickly find its way into the gold loan if the terms are attractive. The immediate reaction of the bullion market to the Finance Minister's statement was bullish, with the price of the yellow metal gaining about As. 8 per tola.

The effects of intensive application of chemical fertilisers and insecticides and of the adoption of better cultural practices by the U.S. cotton farmers to compensate for the shortfall in production consequent on the withdrawal of land from cultivation under the Soil Bank Programme are impressively reflected in the higher yield per acre expected in the current cotton (1958-59) season. The Crop Reporting Board of the U.S. Department of Agriculture, in its first official crop estimate for the season published on the 8th inst., has forecast a crop of 11,583,000 bales, estimated to yield per acre about 466 lbs., an all-round peak, which compares with the harvested yield of about 390 lbs. in the previous season. The first acreage report issued last month placed the area under the crop at 12,402,000 acres, as against 14.066,000 acres in the same forecast in the previous season. The fall is due to the heavier entry into the Soil Bank which offers recompense for not cultivating the land. If the abandonment of acreage in the current season is equal to the average abandonment in recent years, the 1958-59 crop is likely to be grown from an area less than 12 million acres, the smallest on record since 1876.

As a result of the considerable shrinkage in the area sown to the crop, the yield per acre, as the main determinant of the magnitude of the harvested crop, has assumed considerable significance. Climatic conditions, incidence of pests and other factors determine, to a large extent, the final yield. Last season's September estimate had placed the yield at 446 lbs., but this was subsequently scaled down and the final yield turned out to be only 390 lbs. per acre. So far in the current season, the crop has made excellent progress and pest attack is reported to be only on a small scale. Although it is thus too early to assess the average quality of the new crop, use of better seed, modern harvesting devices, etc., are expected to yield favourable results.

Last season's U.S. cotton crop was the lowest since 1950-51. A small crop, together with a successful surplus disposal programme, reduced the carryover stocks at the end of the season to 8.8 million bales, as compared with 11.3 million bales at the end of the previous season. If the current season's crop outturn approximates the forecast, total supply during the season would aggregate 20 million bales, as against 22.2 million bales in the previous season.

Hapur, supposed to be the granary of Northern India, is very much short of stocks this year and the prices of most of the foodstuffs have gone up considerably. The following comparative figures of prices (in rupees) and stocks of important cereals, pulses and other foodstuffs in the past four years will be read with interest:

Commodity	9-8-'58	9-7-'58	A year before	2 years before	3 years before
Wheat, average quality (per maund) ...	20.50	19	16	15	13-2
Stocks (in *Khatties*)	1	3	45	88	128

PROSPECTS FOR GETTING FOREIGN ASSISTANCE BETTER

MR. Morarji Desai, India's Finance Minister, is scheduled to leave on a brief tour of the Western world during the middle of next week. This will be his first sojourn abroad and we have no doubt that the country stands to benefit by it, for it is calculated to bring closer the economic relationship between India and the Western countries. Although Mr. Desai's main object is to participate in the Commonwealth Economic Conference due to be held at Montreal, Canada, next month, he will have consultations with London, Washington and Bonn on the subject of financial help for the second Plan. There are encouraging signs that he will succeed in his second object to a considerable extent. His principal secretary, Mr. B. K. Nehru, has prepared the ground well through painstaking and patient effort. The World Bank has taken the initiative in calling a conference of the U.S., the U.K., West Germany, and Japan, the free nations which have been assisting India in implementing its plan for economic development, to concert measures for tiding this country over its serious balance of payments difficulties. The need for such a joint effort has arisen because the quantum of financial accommodation required by India is so large that it is beyond the capacity of any one country, excepting, perhaps, that of the U.S., from which India has already secured Rs. 606 crores ($1,275 million) during the past ten years. No other nation has done so much for this country in such a short period as the U.S. The International Monetary Fund, too, is participating in the discussions organised by the World Bank which is expected to last for three days from next Monday. Incidentally, we wish Canada also had been invited to join the talks, as it has rendered sizable assistance to India and is in a position to do more. No definite scheme is expected to emerge from these talks, but it will pave the way for one in the near future. Meanwhile, there are indications that Britain is willing to give a lead by giving a temporary loan which will enable India to meet its immediate needs. Mr. Morarji Desai's presence in the capitals of Britain and the U.S. will certainly help expedite a joint endeavour by the countries mentioned above for finding the funds required to fill its large foreign exchange gap. For this task, he has a distinct advantage, in that he enjoys a good reputation in these centres as a man of great moral courage and intellectual honesty.

Politically, the Western world is in a favourable mood for coming to the rescue of India. The leaders there realise that the consequences of India's failure on the economic front will be far more serious to them than the "sacrifices" they will have to make for helping it out of the foreign exchange crisis. Although they are critical of the mistakes made by this country in planning, they are prepared to overlook them in the larger interests of the free world. Thus, India's wise investment in democracy is now standing it in good stead. If this precious asset is to appreciate in value, the politicians in whose hands its destiny lies now must strive hard to eliminate the anti-democratic weeds that are tending to take firm roots in this country. It is needless to add that this will be possible only if the powers-that-be themselves amend some of their doctrinaire economic policies which have proved to be a good fertiliser for the growth of these poisonous weeds.

Economically, too, conditions are propitious. In the capitals of the Western world, there is a better understanding of the urgency of helping underdeveloped countries than there was, say, a year ago. There is a greater realisation now that something must be done to ensure that the terms, as well as the trend, of trade are fair to these countries, as they have a habit of reacting on the industrial countries themselves, if allowed to persist too long. This does not mean that tangible measures are on way for stabilising the prices of primary raw materials and for raising their offtake. The problem is so intractable that no easy solution for it can be found at a moment's notice. But the realisation has engendered a better disposition towards the underdeveloped countries, in general, and India, in particular, and requests for help are well received, instead of being brushed aside.

Fears of a recession in Europe are worrying its leaders, even though there are distinct signs that the U.S. is steadily recovering from the worst recession in the post-war years. In Britain and West Germany, a surplus is developing in industrial capacity and order books are thinning down. The employment position in these countries no doubt continues to be satisfactory, the number of unemployed being negligible. But, if the present trend were to gather momentum, it might cause concern. Unlike the U.S., these countries have only a limited scope for averting a recession through deficit financing, that is, increase in domestic expenditure by the Governments. Their domestic markets are not large enough for this purpose. They will, therefore, have to stimulate their exports. And one of the means for doing so is to give credit to those countries which are in a position to absorb their goods. India is eminently suited for this purpose and it is Britain's best cultivated market. It would, indeed, be a profitable investment for Britain to utilise a part of its surplus industrial capacity for meeting India's need for capital goods and basic raw materials.

In view of the heavy short-term financial commitments which India has already entered into, as also of the fact that some of its major investment projects will take quite a few years to yield dividends, its credit requirements are for a long term. Assumption of short-term obligations will only confront the country with more difficulties in the near future and keep up a feeling of crisis year after year. The British authorities, who have always been well informed of India's position, must be fully aware of this point and should, therefore, give a correct lead to other Western countries by coming forward with a sizable long-term loan, say, of £100 million for a period of 15 years. This sum is by no means beyond Britain's capacity. It is true that, a year ago, its position was not comfortable. But, through wise management of its affairs and helped by a highly favourable terms of trade, it has improved its external reserves position tremendously. Since September last, when the Bank rate was raised to 7 per cent., Britain's gold and dollar reserves have moved up by nearly $1,200 million to $3,084 million, the highest level to be seen in the past seven years. At the same time, its liabilities to members of the sterling area have come down and most of the remaining sterling balances are unlikely to be drawn further; in any case, the margin for such withdrawals has appreciably narrowed down. It must also be noted that, besides the $3,000-million gold and dollar balances, Britain has an undisclosed dollar reserve, estimated at $4,000 million, in the form of dollar securities held by its people and financial institutions. It has thus over $7,000 million dollar assets, a total much higher than that of West Germany's external reserves. In view of this happy situation, Britain can afford to give India a fairly big loan.

A year ago, rates of interest in Britain and elsewhere in the Western world were high.

A day or so after Mr. T. T. Krishnamachari, the then Finance Minister, left India for Washington, the British Bank rate was put up from 5 per cent. to 7 per cent. Although West Germany reduced its Bank rate a little almost simultaneously with the upward revision by Britain, interest rates in that country were still high. But today, on the eve of Mr. Morarji Desai's tour abroad, interest rates have fallen all over Europe, barring, perhaps, France, and the British Bank rate has been brought down to 4½ per cent., a rate which India cannot consider too high. This development is, in itself, a good auspice for the success of Mr. Desai's mission.

Both London and Washington have been impressed, to some extent, by the various measures taken by the Government of India to bridge the foreign exchange gap. While not hesitating to point out, albeit in a sympathetic manner, the blunders made by India in planning on unrealistic lines and proceeding to implement the plan as though their assumptions in regard to resources will somehow be borne out by events, financial observers in the capitals of the U.K. and the U.S. have not failed to acknowledge the fact that, once the Government of India comprehended the danger on the foreign exchange front, it promptly took steps to slash imports and push up exports. These measures, coupled with the pruning down of the second Plan, the re-introduction of foreign exchange budgeting, the tightening of the conditions for obtaining imports under the deferred payment scheme to such an extent as to make it almost inoperative, and the willingness of the Government to allow the private sector to put up some of the key industries, as, for instance, production of aluminium, which had been reserved for the public sector earlier, have imparted a feeling that India is seriously trying to remedy the position and safeguard its credit abroad. The Government's latest decision to expedite disposal of applications seeking approval of foreign technical and capital collaboration agreements by appointing a "Foreign Agreements Committee" will also serve to strengthen that impression. Thus, the climate for getting financial accommodation from abroad is distinctly better than it was a year ago. It would have become better still had the Government reversed some of the fiscal and other economic policies which are retarding the growth of private investment and enterprise.

FOOD SITUATION

THE sharp criticism of the food policy in Parliament this week is a much truer reflection of the country's mood than the Government is perhaps willing to concede. Leading the attack on the Government, Mr. Asoka Mehta, who headed the Foodgrains Enquiry Committee, declared that the Government, because of its utter inaction and complacency, resembled a group of Rip van Winkles. The present food policy, he warned, would adversely affect the future generations also. An uncharitable critic might have added that this criticism was inappropriate, as the Government's policy would leave no scope for a large future generation. So oppressive is the trend of food prices. It is, of course, unnecessary to dramatise the food situation, for it is bad in all conscience. Food prices are rising to the utter dismay of the common man for whom abundance of food and freedom from imports represent the only concrete sign of success of the Government's economic policy. The political consequences—quite apart from the graver economic repercussions—of a failure on the food front are so obvious that it is surprising that the present Government should have allowed the impression to gain ground that it is singularly inept at handling the problem.

So swift has been the upsurge in food prices that, even before the Food Ministry's laboured effort, showing that these prices were not as high as they were thought to be, appeared in print, they had edged forward. In its excellent publication, *Food Situation*, presented to Parliament, the Ministry was at some pains to point out that the index number of wholesale prices for cereals (Base: 1952-53=100) in July 1958, at 109.9, was not materially higher than that in July 1953 when it was 108. The years 1954 and 1955, the Ministry argued, were a period of heavy depression in prices. Since the time this conclusion was reached prices have risen again, so that, for the week ended 2nd August, the index stood at 112.0. In any case, the common man can derive little consolation from the knowledge that he is not paying more for his food than he did five years ago. Since 1953, his commitments may have gone up and prices of other things also may have advanced. What is important is that, since 1955, the trend has been steadily upward. The index number rose from 101.0 in July 1956 to 111.3 in July 1957 before it reached 109.9 in July 1958 and advanced to the present level of about 112.0. The index number of food articles, as a whole, was 120.0 in the week ended 2nd August and 118.4 in July 1958, as compared with 111.3 in July 1957 and 101.0 in July 1956. The overall rise, disturbing as it is, is perhaps less deplorable than the fact that what to the market analysts is known as the "undertone" of the market is firm, reflecting the possibility of a continuation of the upward trend in prices. The Food Ministry is certainly right in suggesting that, in considering the question of prices, one should not ignore the fact that 70 per cent. of India's population depend on agriculture and their "economic condition depends on agricultural prices." While nobody would like to see the Government stampeded into a decision in favour of food price control and food rationing, it is undeniable that the prosperity of farmers is better assured through increased production than by scarcity-induced high prices. It is also necessary to remind the Food Ministry that, in India, 60 to 70 per cent. of an average man's income is spent on food, and that the number of landless labour and other non-cultivators far exceeds the number of cultivators, so that even a small increase in the cost of food seriously upsets their family budgets.

It is the production front which demands continued attention. Since only 20 per cent. of the cultivated land is under irrigation, India's food supply is largely determined by the caprices of the monsoon. The production of foodgrains which includes pulses has varied from year to year. During the six-year period ended 1957-58, the production (in million tons) of foodgrains, with cereal production in brackets, was:

1952-53—58.27 (49.22); 1953-54—68.72 (58.27); 1954-55—66.96 (56.18); 1955-56—65.79 (54.92); 1956-57—68.75 (57.24); 1957-58—62.03 (52.81).

Because of the variations in production, the Government has been compelled to augment the supply through imports which, in the last 10 years ended 1957, amounted to 25.7 million tons. During the period, the trend of imports (in million tons) was as follows:

1948—2.84; 1949—3.71; 1950—2.13; 1951—4.73; 1952—3.86; 1953—2.00; 1954—0.81; 1955—0.70; 1956—1.42; 1957—3.58.

For 1958, the Government has already imported 1.86 million tons, consisting of 1.52 million tons of wheat and 337,000 tons of rice. An additional quantity of about one million tons of foodgrains is expected against the existing programme and a fresh agreement with the U.S. under P.L. 480 is expected to be finalised soon.

The increase in the demand for foodgrains arises partly from the growth of population and partly from rise in incomes which, in an underdeveloped country, is largely absorbed by expenditure on food. Between 1941 and 1951, India's population increased from 316 million to 361 million or by about 1.4 per cent. per annum. The increase in recent years may have been higher; there are 14 to 15 thousand new mouths to feed every day. India's population in 1956-57 is estimated at 387.68 million. The annual increase in population is said to account for an annual increase of one million tons in the demand for food. In the four-year period ended 1956-57, the Government has maintained an availability of over 50 million tons of cereals per year or about 12 to 13 ozs. *per capita*. The following figures give in million tons the total availability of cereals only in this four-year period:

1953-54: Net production 50.99; imports 0.81; change in stocks —0.17; exports 0.01; net availability 51.62.

1954-55: Net production 49.16; imports 0.70; change in stocks +0.73; exports 0.11; net availability 50.48.

1955-56: Net production 48.05; imports 1.42; change in stocks +0.62; exports 0.04; net availability 50.05.

1956-57: Net production 50.09; imports 3.58; change in stocks —0.82; exports *nil*; net availability 52.85.

N.B.—Net production is taken as 87½ per cent. of gross production, the balance (12½ per cent.) representing an allowance for seed, wastage, etc.

The main strategy in the Government's food policy, it is stated, has been directed towards creation of more or less self-sufficient zones segregation of heavily deficit areas and adoption of measures against speculative hoarding of stocks. The creation of the southern rice zone has solved the problem of Kerala, one of the principal deficit States, while the creation of the three wheat zones has served to hold prices in check, the rise in wheat prices this year being attributed to failure of *rabi* grains in the U.P. and the western zone. At present, 41,000 fair price shops are functioning in the country. Since January last, over 2 million tons have been released from Central stocks through fair price shops where the monthly offtake averages more than 350,000 tons. The Government now holds a reserve stock of 1.4 million tons. As stated earlier, another million ton is expected against purchases already authorised, besides the likely import of more foodgrains under the contemplated fresh agreement with the U.S. under P.L. 480. The Central and State Governments have started procuring foodgrains internally to build up stocks. The Central Government has procured rice to the tune of 250,000 tons in Andhra and 104.000 tons in the Punjab. Some State Governments also have been authorised to procure rice in their respective areas.

Clearly, these measures, commendable in themselves, have not been able to hold prices in check. In this connection, it may be recalled that, as part of a permanent long-term food policy, the Asoka Mehta Committee had recommended the establishment of a Price Stabilisation Board as well as a Foodgrains Stabilisation Organisation. The latter body, according to the Committee, should be charged with the responsibility of open market operations, procurement and maintenance of stocks. But the Government feels that no such body is necessary because the Union Food Ministry already performs these functions. The Government has, however, agreed to the establishment of a Price Stabilisation Board as a purely advisory body and to the creation of a food intelligence division in the Food and Agriculture Ministry. It is doubtful whether these alternatives to the carefully considered proposals of the Asoka Mehta Committee can effectively function. Experience of the Food Ministry's handling of the problem so far only strengthens our doubt. It cannot be too strongly reiterated that, in the final analysis, the food problem is as much a problem in prices as it is in production.

MINERAL OILS BILL

THE Mineral Oils (Additional Duties of Excise and Customs) Bill, which was passed by the Lok Sabha last week, replaces the earlier ordinance, promulgated on 30th June last, whereby the reductions in mineral oil prices allowed by the producers would be collected by the Government as additional excise and customs duties. It may be recalled that, in May last, the oil companies agreed to *ad hoc* reductions in the prices of petroleum products, ranging from 6 nP per gallon for kerosene to 15 nP per gallon for aviation spirit. The revenue which would accrue to the Government through mopping up the reductions by way of additional duties is officially estimated at Rs. 8-9 crores in a full year, as against the unofficial estimate of Rs. 10 crores which was made in May last.

An important point raised by more than one member of the Lok Sabha was that the reductions in the producers' prices should have been passed on to the consumers of petroleum products. This would certainly have been more appropriate than the present decision whereby the benefit of the reduction accrues only to the Exchequer. But the Union Finance Minister, Mr. Morarji Desai, urged two considerations in defence of the Government's action. In the first place, the reductions, he said, were provisional, for adjustments in prices would be made in the light of the examination of the cost accounts of the companies which the Government's cost accountant would undertake. If, as a result of such examination, adjustments had to be made upward, there would be no means of recovering the excess payments. Secondly, price reductions were "not of a magnitude which, even if passed on to the consumer, would be reflected to any considerable extent in the consumer prices." Illustrating this argument by a reference to kerosene prices, he said: "The reduction agreed to is 6 nP per gallon which works out to 1 nP per bottle. Thus, in terms of the retail prices in which this oil is ordinarily bought by the bulk of the consumers, the effect of the price reduction is almost negligible. Indeed, considering the large number of middlemen and retail dealers through which kerosene passes before it reaches the actual consumer, it is doubtful whether even the small benefit of the reductions would, in fact, have been passed on wholly to the consumers, especially when they have already been accustomed to the prices prevailing at present." While this argument is essentially correct, it bears some resemblance to the arguments by which the salt duty used to be defended by the Treasury benches in the past. It reinforces the demand for re-imposition of the salt duty which would help augment Government's revenues and thereby make it easier for the Government, if it has the will, to provide some relief in direct taxation.

MOVE TO REGULATE DEPOSIT RATES NOT WELL ADVISED

NEW LOAN—COTTON EXPORT—COMMODITY TRENDS

THURSDAY, 5 P.M.

THE trend of both equities and Gilt-edgeds continues to be bullish. There are no new factors to account for the persistence of firmer conditions in shares. The Gilt-edgeds are going up because of easy money. Banks are flushed with funds. Their deposits are continuously growing, while the demand for credit is slack. For the first time in the history of joint-stock banking in India, the total bank deposits have exceeded the notes in circulation. This is an indication of the rapid growth of the monetised sector. One of the important factors that brought about this welcome development is the attractive rate of interest offered by banks. Instead of being proud of this achievement, the Indian banks seem to be ashamed of it. This is the only inference that one can draw from the persistent efforts of the big Indian banks to peg the rates of interest at lower levels through a common agreement among all the banks. Such an attempt on their part is tantamount to forming a cartel, if not collusion. In their anxiety to maintain their margin of profit, the bankers seem to be forgetting the principles of free enterprise. They are walking with their eyes wide open into the net of official controls, instead of bravely facing the competition, which is part of their life, with faith in their future. They seem to have forgotten what ultimately happened to life insurance which accepted one control after another, until it was completely taken over by the State. Even controls through gentlemen's agreement, it must be realised, will ultimatey invite statutory controls of all sorts. A gentlemen's agreement will lead to the adoption of "code of conduct," allegations of the breach of the code, mud slinging, and appeal to Government. And, when the Government comes into the picture, we all know what happens. Let the bankers remember what is now happening in the field of general insurance. Politicians and civil servants will sit on their shoulders.

MARKET GOSSIP

We are glad to hear that the move made by the Indian Banks' Association to regulate the rates of interest subject to a ceiling has not yet been finalised, as several Indian banks themselves are sceptical of its success and wish to make a number of safeguards, in order to protect their interests. It is to be hoped that, even those banks which are in favour of the move will think afresh in the light of what we have stated above and vote for its withdrawal. After all, the banks have not fared so badly as they had feared at one time. Further, as deposits grow, the interest rates will automatically adjust themselves at lower levels. If the demand for money increases, they should charge more for bank credit in order to ensure their margin of profit rather than try to cut the rates of interest on deposits and thereby run the risk of restricting the very source of their growth.

Indeed, as the rate of deposit growth has been running ahead of the rise in bank credit, the interest rates have started coming down of their own accord. Inter-bank call money is currently quoted as low as 2 per cent., as against well over 3 per cent. till recently. The rate for House money has retreated from 4-4½ per cent. to 3½-4 per cent. Short-term deposit rates also have fallen likewise. Now that the pressure from the London money market will slacken, following the cut in the Bank rate to 4½ per cent. and the fall in bill rates to below 4 per cent., the downward trend will gather momentum in the coming weeks. Even if the Government borrows more, as it is expected to do in a couple of weeks, that money will return to the market sooner or later and the growth of deposits will be maintained. There is, therefore, no need at all for controlling the interest rates on deposits, either officially or unofficially through mutual consent.

• • • •

The Gilt-edged market has been receiving support not only from banks but also from the Life Insurance Corporation, provident funds and other institutions. There is an acute scarcity of floating stock. The Reserve Bank has availed itself of this opportunity to lighten its holdings of Government securities at progressively higher rates. It believed in knowledgeable circles that the Bank must have practically exhausted its stock of short-medium dated loans, besides considerably reducing its portfolio of long-medium dated loans. As the surplus funds with banks show no signs of contraction, as there is every reason to feel that the pace of growth in bank deposits will be maintained in the coming months, and as the demand for bank credit in the next busy season will not be excessive, in view of the proposal to continue the cut in imports, and can in any case be easily managed for the deposits of banks are over Rs. 1,600 crores, the monetary authorities are believed to be in favour of the Central Government entering the market again with a new loan. From the Reserve Bank's open market operations during the last few days, it looks as though the new loan may be 3½ per cent. 1967 or 3½ per cent. 1968 at ruling market rates. The maturities in these years on account of existing loans are not very large. In 1967, they are Rs. 90 crores and in 1968 no more than Rs. 34.34 crores. The amount of the proposed new issue may be Rs. 50 crores. The Government may create the loan and give it to the Reserve Bank to be sold on tap as and when the demand arises.

It is contended by some students of money market that rather than raise a dated loan of nine or ten years' duration the system of Treasury Bills should be firmly established as a second line of defence for banks, that is, a liquid asset ranking between cash and Government securities. There is everything to be said in favour of this view. But the vast majority of banks prefer to invest their surplus funds in Government securities, instead of putting at least a part of them in Treasury Bills. Their argument runs thus: "Why invest in Treasury Bills which offer only a little over 2.5 per cent., when we can easily buy from the Reserve Bank any amount of Government securities at rates which yield well over 3.5 per cent. When we want cash, we can have it from the same source by handing over the Government securities. So far as we are concerned, investments in Government's dated loans are equal to placing our funds on a call basis with the Reserve Bank at rates of interest varying between 3.5 and 3.80 per cent." In these circumstances, can anyone blame the banks if they are not very anxious to invest in Treasury Bills?

If the Reserve Bank is keen on popularising Treasury Bills, as, indeed, it ought to be, so that the burden of interest charges on the Government of India may be minimised, it must create among banks some respect for these Bills by ceasing to be a jobber in Government securities at the beck and call of banks for all time. It has to tell the banks that it will buy or sell Government securities only in exceptional circumstances and not whenever they desire. It must also tell them that, if they want more cash during the busy season, they will have to go to the open market for liquidating their securities and not run to it with their bundle of Government paper. Incidentally, the readiness with which the Reserve Bank is prepared to exchange Government securities for cash and *vice versa* also explains why the short-term interest rates have not come down as appreciably as may be warranted by the increase in deposits or as is desired by the Bank. It should not be forgotten that the Bank rate in India is still 4 per cent.

It is, however, not understandable as to why the monetary authorities should be in favour of lower interest rates. The existing levels of interest rates are not standing in the way of higher industrial or agricultural production. On the contrary, they have in a large measure attracted more resources into the monetary system and thereby facilitated availability of bank credit. It is not lack of funds but lack of raw materials and demand for some of the finished goods such as cloth which is retarding production. Again, with inflationary pressures beginning to gather fresh momentum, it will not be advisable to make money cheap. To do so, for instance, will be to work for the defeat of selective credit controls which the Reserve Bank is applying to foodgrains and sugar. It is common knowledge that cheap money will only aggravate inflation.

• • • •

Cotton traders' plea for an additional export quota for raw cotton has not fallen on deaf ears. For the Government of India announced late yesterday its decision to release for export a further quantity of 40,000 bales of raw cotton of stapling not above ¾" on a first-come-first-served basis, subject to an individual quantity ceiling of 10 per cent. of the quantity allowed. The present quota follows on the heels of an earlier quota announced a fortnight ago releasing 30,000 bales of Bengal *Deshi* cotton and 20,000 bales of old crop cotton stapling 25/32". With the present quota, the total quantity of cotton released for export during the season amounts to 340.000 bales. The only cause for complaint for the trade, if at all, is that the quantity permitted is not as much as was expected. The trade had urged for a quota for 20,000 bales of Bengal *Deshi* and 50,000 bales of 23/32" cotton. It was contended that, since the supply position of cotton was comfortable, there could conceivably be no risk in permitting an additional quota. The statistical picture presented by it in support of its case was as follows: The current season's crop is estimated at 5.15 million bales, which, together with a carryover stock of 1.72 million bales, gives an aggregate supply of 6.87 million bales. Mill consumption is hardly expected to exceed 4.4 million bales. The export quota so far released (excluding the present quota) amounts to 300,000 bales, thus leaving a surplus of 2.17 million bales, which is about 450,000 bales higher than the stocks at the end of August 1957. It was further mentioned that, as there was a shift in cloth production from coarse to medium and fine cloth, the demand for low grade cotton was less. It was also pointed out that proper timing of the quota announcement would greatly help in expediting exports, as it would put traders in a position to book business as and when demand from foreign countries emerged.

The Government's quick response to the plea indicates that it was impressed by the logic of the aforesaid contention. The reaction of the cotton market to the earlier quota announcement might also have led the authorities to this latest decision. It may be noted that the last quota release was not followed by a spurt in cotton prices. In fact, the experience has been the other way about, as witness the downward trend of the market since the previous quota. The reaction of the market to the current quota is also true to type. For instance, I.C.C. Mogiat Jarilla March, after a modest

(*Continued on page* 331)

TREMBLING ON THE BRINK

From Our Own Correspondent

LONDON, 18*th August*

LONDON LETTER

IN spite of the latest reduction in Bank Rate, no one seems quite certain which way the British economy is going to go in the next few months. The Government still retain their hold on the volume of investment in nationalised industries and in public investment generally, by means of controlling the total volume of overdrafts which the industries are allowed to have and by limiting their capital investment programmes. This indicates that the Government is not yet prepared to take all the brakes off the economic machine.

On the other hand, we have the spectacle of a 4½ per cent. Bank Rate, a level not known for the past three and a half years, and the fourth reduction in five months. Such a tumble from 7 per cent. to 4½ per cent. is a sure indication that there is no need to keep any financial hold on the volume of money which borrowers may wish to utilise. On the public investment side, the only argument against restricting borrowing and expenditure would seem to be the need for economy generally in public outlay. But, since the expenditure under consideration is capital expenditure, or what is known in budgetary language as expenditure below the line, it does not really enter into the normal budget balancing. In any event, the Government is again piling up a substantial surplus on the national accounts this year.

The other significant point about the Bank Rate reduction is that it is taking place at a time when dollar payments are normally rising and when one expects a certain amount of pressure on the pound. This pressure is notably absent at present, although the reason is probably as much the weakness of the dollar as the strength of the pound. There again one has an odd contrast—America, which led the way into recession, is again afraid of inflation. Money rates across the Atlantic are tending to harden and the American authorities have given up any idea of reflationary policies. Of course, on the theory that European economies follow the American with a substantial time-lag, this country and Europe have some way deeper to go into recession before they begin rising. But such theories, though appropriate to the days when economic events looked after themselves, no longer fit a world in which there is such a vast preoccupation with economic management and when so-called normal trends can be affected by policies of overseas aid, arms expenditure and so forth. Hence the uncertainty in this country as to the immediate course of events. The pound is strong but is this only because of deflation, ignoring the consequences in terms of rising unemployment, falling production and economic lassitude?

Unemployment, of course, has increased only slowly over the period of recession and today is only about 160,000 higher than a year ago. The figure is the more remarkable in the light of the recent estimates that British productive capacity is underemployed by about 20 per cent. Does this mean that everyone is working on short-time? No; for 1½ million workers are still on overtime, a drop of only a quarter of a million from the figure a year ago. This emphasises the patchwork nature of the recession in industry with some firms still on overtime and others seriously underemployed. But, on the whole, there is a picture of industry hanging on to its workers and all ready for an upsurge of activity. So there we have the paradox of today of strong economy in terms of the balance of payments, of strong economy in terms of national finances, growing gold reserves, cheaper money and yet the productive machine, on which everything else is based, very slowly winding down and its operators uncertain whether it will suddenly begin to speed up or whether it will dramatically lose momentum in the autumn.—*All Rights Reserved.*

A French company has developed and used for several months for its deliveries of coal a lorry which is unique in the world. It is a semi-trailer with two carriers, whose contents (10 tons of coal) can be unloaded in 15 minutes by a pneumatic system with an MPR 500 m3 an hour compressor and a running pressure of 500 gr. and a flexible pipe-line (80-90 mm. diameter) of plastic and rubber.

EQUITIES FORGE AHEAD

BOMBAY BURMAHS STRONG

(From Our Own Correspondents)

BOMBAY, 21*st August*

CONDITIONS akin to a boom prevailed on the Stock Exchange during the week under review. Early in the week, activity was mostly of a squaring-up nature on end-of-account considerations. Nevertheless, selective scrips made some headway and the undertone was quietly steady. The new account, which opened on Monday this week, however, witnessed a spurt in equity values and the upward trend gathered momentum as the week passed. The bullish trend was mainly due to speculative buying and nervous short-covering. The market would appear to have ignored the effect of higher freight and parcel rates, which will come into effect from 1st October, on the cost of production of industries and the shortage of steel for engineering industries. On the contrary, the operators seem to have based their hopes on an early announcement of higher retention prices for steel, which, it is presumed, would take into account the increase in freight rates, the bonus issue of Indian Irons, and also on the prospects of larger foreign aid, particularly from the U.K. and the U.S., to solve India's balance of payments problem, for which purpose a three-day conference between the representatives of the U.S., Britain, West Germany and Japan, and World Bank officials will be held next week in Washington. Reports from London that Britain would offer India a credit of £100 million, by making payments on behalf of India to firms which had sold goods to India and for which Britain had stood as guarantor, were taken as an indication of the anxiety of other countries to help India.

Tata Steel Ordinaries rallied from Rs. 169.25 to Rs. 172.75, before closing at Rs. 171.75. The new shares gained over the week Re. 1.25 to Rs. 167.75. Indian Irons gained ground from Rs. 24.64 to Rs. 25.70. On profit-taking, the shares dipped to Rs. 25.40 today before closing at Rs. 25.50.

Textile shares followed the general pattern and prominent scrips recorded sizable gains. Bombay Dyeings gained strength from Rs. 59.20 to a peak of Rs. 60.30. After receding to Rs. 59.50, they moved up to Rs. 59.80. Centurys appreciated from Rs. 445 to Rs. 455.50 yesterday. Thereafter, the shares moved erratically lower and closed at Rs. 453. Kohinoors gained over the week Rs. 4.50 to Rs. 283, the highest level touched during the week being Rs. 284.50. Central Indias were marked up by Re. 1.50 to Rs. 103 and Finlays by Rs. 4 to Rs. 292. Indu Ordinaries were a fraction better at Rs. 10.04. While Indore Malwas were dull at Rs. 108 and Khataus were lower by Re. 1.25 at Rs. 186.25, Morarji Mills put on Rs. 10 to Rs. 250. New Greats provided a notable exception to the general trend with a drop of Rs. 13 to Rs. 202.

Bank shares were featureless and activity was also restricted. Barodas were a shade lower at Rs. 122, while Central Banks were done at Rs. 56.80 *ex-div.* as against Rs. 57.50 *cum-div.* a week ago. The new shares closed at Rs. 59 *ex-div.* as compared with the *cum-div.* rate of Rs. 60.30 last week. Bank of Indias were steady at Rs. 133. Jaipur Banks had business at Rs. 36.75 and United Commercials at Rs. 62.50.

Electricity shares were buoyant on keen buying even at higher levels. Ahmedabad Electrics advanced by no less than Rs. 3.20 to Rs. 98.80. Bombay Suburbans were taken up from Rs. 108.50 to Rs. 112. Surat Electrics scored a gain of Rs. 2 to Rs. 112. Tata Hydros rose by a similar extent to Rs. 126.50. Tata Powers rallied from Rs. 1,240 to Rs. 1,272.50 and Andhra Valleys from Rs. 1,196.25 to Rs. 1,201.25.

The highlight of the business in the sugar group was provided by Belapurs which shot up from Rs. 270 to Rs. 294, before profit-taking brought them down slightly to Rs. 289. Bhopals gained 60 nP to Rs. 24, Changdeo Sugars Re. 1.50 to Rs. 29 and Phaltans Rs. 8.25 to Rs. 167.50. Walchandnagars changed hands Rs. 7.50 higher at Rs. 291.25. Cement shares provided no exception. Associated Cements appreciated from Rs. 156 to Rs. 160.50, before losing a part of their gain to Rs. 159.50. Their new shares improved by Rs. 3.25 to Rs. 153. Digvijays were done at Rs. 152 *ex-div.* as against Rs. 156.50 *cum-div.*, a week ago. Orissa Cements hardened from Rs. 14.32 *cum-div.* to Rs. 13.24 *ex-div.* (dividend Re. 1.50). India Cements were in favour and rose by Re. 1 to Rs. 30.25 and Jaipur Udyogs were marked up by Re. 1.08 to Rs. 15.68.

In the engineering and mining group, Alcocks were strong, rising from Rs. 257.50 to Rs. 268.75. Tata Locomotives were keenly sought due to proximity of dividend and jumped up from Rs. 183 to Rs. 192.25. Good business was reported in Texmacos which gained 40 nP to Rs. 22.52. Premier Constructions advanced by Rs. 7.50 to Rs. 206. Larsen and Toubros had business at Rs. 16.72 *ex-right* and *ex-div.*, as against Rs. 18.50 *cum-right* and *cum-div.* a week ago. Mahindras were unchanged at Rs. 20.12. Their Rights were done today at Rs. 4. Shivrajpurs were in good form with a rise of Rs. 9 to Rs. 105.50. Indian Coppers were a shade quiet at Rs. 4.19.

Shipping shares were keenly sought, Scindias closed at a high of Rs. 20.84, a rise of 84 nP over the week. Great Easterns were marked up by 80 nP to Rs. 27 and their new shares by 48 nP to Rs. 17.76. Bharat Lines made a further gain of Re. 1 to Rs. 14. Among automobiles Hindustan Motors were steady at Rs. 7.64 and Premier Automobiles rose by 80 nP to Rs. 88.

In the miscellaneous group, Bombay Burmahs (old), on reports that the Company would shortly get the approval of the Government to issue bonus shares, as also due to proximity of interim dividend, rose sharply from Rs. 569.50 to Rs. 603.50, but finished lower at Rs. 592.50. Their partly-paid shares recorded a rise of Rs. 6.25 to Rs. 217.50. National Rayons moved up from Rs. 228.50 to Rs. 234 before closing at Rs. 232.75. Gwalior Rayons had business today at Rs. 14 *ex-div.*, which represents a gain of 10 nP over the week. Tata Chemicals were 40 nP higher at Rs. 16.68 and Tata Oils at Rs. 18.75 *ex-div.* showed a rise of 25 nP. Hindustan Levers were a shade better at Rs. 23.88. Killick Industries moved up by Rs. 4.75 to Rs. 149 and Wimcos by Rs. 7.50 to Rs. 18.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 20*th August*

The good atmosphere created by last week's announcement of dividend on the increased capital of Indian Iron and Steel Company, Ltd., was put to good use by bulls and the enthusiasm for speculative issues generated interest in several scrips of other sections also. With the result, gains, as well as an expansion in business, were recorded. There were clear indications that the easy money conditions led to an increase in funds seeking investment opportunities in equities. Good corporate news gave colour to trading, and bulls made free use of the expectations that a bonus issue by Indian Irons by capitalising the share premium reserve and an early increase in steel retention prices were certain. The shortage of steel for the engineering industry, no doubt, caused anxiety, and the lay-off of more workers in a big engineering works here due to lack of steel focussed attention on the foreign exchange shortage and the country's economic difficulties. However, confidence was soon regained as it was expected that Mr. Morarjee Desai's forthcoming foreign visit would ease the exchange crisis, and thus allow adequate imports of raw materials to industries. The decline in stocks of jute goods with mills, despite increased production in July, drew more interest in jutes, and coals continued their advance. Expectations of increased dividends led to more buying in the miscellaneous industrials section. Teas, after being quiet, attracted buyers following the better trend in auctions.

The coal section recorded an impressive expansion in the daily list of transactions at hardening rates. East Indias were raised to Rs. 22.62 from Rs. 22.37. Bengals were fully steady at the improved level of Rs. 270. Central Indias, after being lifted to Rs. 8.56 from Rs. 8.50, closed at Rs. 8.53. Borreas spurted to Rs. 22.75 from Rs. 21.87. In active trading, Western Bengals advanced to Rs. 7.18 from Rs. 6.97. Dhemo Mains were fully firm at Rs. 8.50. Pench Valleys were fractionally better at Rs 25.19.

Several features were recorded in the jute section. Barnagores were keenly sought for and put on Rs. 5 to Rs. 118. Landsdownes picked up Rs. 3 to Rs. 121. Megnas reached a new high of Rs. 138. Budge Budges advanced to Rs. 114 from Rs. 111. New Centrals were in good demand and gained to Rs. 17.44 from Rs. 16.37, and Howrahs to Rs. 19.12 from Rs. 18.69. Ganges closed at Rs. 59.50, after having risen to Rs. 60.50 from Rs. 57.00. Aucklands were fully steady at the increased rate of Rs. 110.

In engineerings, Indian Irons had risen earlier to Rs. 24.95 under the impact of the good dividend news; since then the quotation gave way to Rs. 24.09, but soon gained to Rs. 24.76 in active trading. Jessop & Cos. were better at Rs. 20.25, as were Texmacos at Rs. 21.15. Indian Galvanisings moved to Rs. 15.75 from Rs. 15.69, with Hooghly Dockings regaining to Rs. 107 from Rs. 103. Indian Standard Wagons were unchanged at Rs. 96.

Among minings, Indian Coppers closed at Rs. 3.94 after changing hands at Rs. 3.99. Orissa Minerals were better at Rs. 26.50. Karanpura Developments rose to Rs. 15.25 from Rs. 13.25 before closing at Rs. 14.75. India Steamships, among shippings, touched a high of Rs. 14 and closed fully steady at Rs. 13.97 on expectation of a higher dividend. Ports were unchanged at Rs. 13.75. In papers, Orients rose to Rs. 35.90 from Rs. 35.20 and Titaghurs were better at Rs. 40.50.

In the miscellaneous industrials section, Indian Cables hardened to Rs. 30.50 from Rs. 29.87. Jardine Hendersons were done as high as Rs. 79, as against Rs. 72.50 previously. National Cables rose to Rs. 29.56 from Rs. 28.75. Indian Oxygens recorded a further rise to Rs. 20.25. Metal Boxes forged ahead to Rs. 29.37 and Eastern Investments were as high as Rs. 125. B. I. Corporations advanced to Rs. 4.22 from Rs. 4.00.

* * * *

Madras Stock Exchange

MADRAS, 19*th August*

In contrast to the dull conditions noted last week, the Madras Stock Exchange presented a fully steady trend during the week under review. Activity was more broadbased and prices of several counters tended to move up. The chief factors imparting strength to the market were firm advices from Bombay and comfortable conditions in the money market. Plantation shares continued to meet with good buying support. Tea shares were particularly in the limelight. Textile shares also evoked enlarged enquiries although actual purchases were of a selective nature. Bank, sugar and miscellaneous industrials were fully steady.

Among tea shares in the planting section, Nonsuch Teas attracted attention of operators and spurted by 75 nP to Rs. 23.50. Balanoors rallied 50 nP to Rs. 16. Parksides firmed up by 45 nP to Rs. 20.30. Twyfords strengthened by 38 nP to Rs. 14.75 *cum-div.* Chembras were quoted 23 nP higher at Rs. 4.03 *cum-div.* Periakaramalais improved by 20 nP to Rs. 4.32 *cum-div.*, Peermades by 13 nP to Rs. 20, Kil Kotagiris by 12 nP to Rs. 6 and Woodlands by 10 nP to Rs. 8.25. Waterfalls gathered 5 nP to Rs. 3.45. Mlamallays were, however, neglected at Rs. 32 *cum-div.*, reflecting disappointment of operators over the cut in dividend to only 15 per cent. for the year ended 31st March 1958, as against 18 per cent. in the previous year. In the coffee group, Consolidated Coffees advanced by 37 nP to Rs. 28.37. Anaparais found buyers 18 nP higher at Rs. 5.80. Rajendras picked up 15 nP to Rs. 12.50. Savamalais put on 8 nP to Rs. 3.88 and Sheveroys 7 nP to Rs. 2.35. Among rubber shares, Rajagiris climbed up by 35 nP to Rs. 17.25. Tropicals spurted by 38 nP to Rs. 20.50, Kalpettas by 25 nP to Rs. 25.75, Mercaras by 15 nP to Rs. 8 and Midlands by 8 nP to Rs. 12.20. Nenmenys hardened by 25 nP to Rs. 13.75.

In the textile section, Metturs and Coimbatore Cottons rallied Rs. 3 each to Rs. 341 and Rs. 148, respectively. Cannanores advanced by Re. 1.50 to Rs. 137. Maduras were in demand 25 nP higher at Rs. 33.75. Loyals rose by 20 nP to Rs. 35.50. Travancore Rayons gathered a like amount to Rs. 14.40. Cambodias increased by 5 nP to Rs. 8.80. Lakshmis, however, eased by Rs. 2 to Rs. 100. Coimbatore Spinnings receded by Re. 1.75 to Rs. 52.

In the sugar section, Kirlampudis were in the limelight, the quotation advancing by Re. 1.50 to Rs. 55. Jeypores were better by 25 nP at Rs. 14.25. Deccans increased by 18 nP to Rs. 8.78 and Travancores by 5 nP to Rs. 10.30.

Among miscellaneous industrials, W. I. Plywoods were pushed up by Rs. 6 to Rs. 141. General Papers had buyers Rs. 2 higher at Rs. 12. India Cements rose a rupee to Rs. 30.25. Textools hardened by Rs. 2 to Rs. 202, Mysore Stonewares by 75 nP to Rs. 13.25, Mysore Tobaccos by 38 nP to Rs. 13.50 and F.A.C.Ts by 25 nP to Rs. 6.65.

In the banking section, Indian Overseas strengthened by Rs. 3.50 to Rs. 158. Travancores increased by 25 nP to Rs. 19.75. Travancore Forwards gathered 5 nP to Rs. 4.55. Indian Banks were done a rupee higher at Rs. 209. The Bank has received the Government's sanction for the issue of Rs. 16.6 lakhs as bonus shares in the ratio of one such share for every four shares of Rs. 100 each and one for every five shares of Rs. 80 each.

The Directors of the Mercantile Bank Ltd. have declared an interim dividend on all shares of 6¼ per cent., less income-tax, for the year ending 31st December 1958. The dividend is payable on 23rd September 1958.

Notice

THE TATA IRON AND STEEL COMPANY, LIMITED

THE FIFTY-FIRST ANNUAL GENERAL Meeting of The Tata Iron and Steel Company, Limited, will be held on Thursday, the 18th September 1958, at 4.30 p.m. (S.T.), at Bombay House, 24 Bruce Street, Fort Bombay, to receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1958, to declare dividends on Preference, Ordinary and New Ordinary shares, to appoint Directors in place of those retiring, to consider Resolutions regarding the hiring of office and storage space and ancillary facilities in Bombay House and in the Army and Navy Building by the Company from its associates and to appoint Auditors for the current year and fix their remuneration.

The Notice of the Meeting together with the necessary explanatory statements and the Directors' Report, the Audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1958, have been issued to the shareholders.

For and on behalf of
THE TATA IRON AND STEEL COMPANY LIMITED,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents.
J. J. BHABHA,
Agent.

BOMBAY HOUSE,
24, BRUCE STREET, FORT,
BOMBAY, 21*st August* 1958.

NEWS IN BRIEF

A BILL to amend the Mines Act, 1952, is expected to be introduced in the next session of Parliament.

India will receive from the U.S. a fresh allocation of $57 million under the P.L.480 programme for the purchase of 780,000 tons of foodgrains.

The Government of India has placed an order worth Fls. 30 million with a Dutch company, Amsterdamsche Ballast Mij, for dredging operations near Calcutta.

The Western Shipping Corporation, Bombay, is expected to place an order for a 10,000-ton tanker with a Japanese firm, Harima Shipyard, near Kobe. The cost of the tanker is put at Rs. 1 crore approximately.

The Andhra Pradesh Government has established a Warehousing Corporation, with the Director of Agriculture as the ex-officio Chairman and Mr. C. Annamalai, State Marketing Officer, as the Managing Director.

According to a recent report from Hazaribagh, the proposed fourth steel plant in the public sector will be located at Bokaro in the Damodar Valley (south of the river), West Bengal. The actual location will be in the centre of the coal belt. Land acquisition proceedings are already under way.

The Bengal Lines Ltd., Calcutta, which is operating freight services on the Calcutta-Madras-Tuticorin run, has been admitted as a member of the Indian Coastal Shipping Conference with effect from 25th July 1958. With the inclusion of this company, the Conference now has a membership of 16 domestic shipping lines.

The former Indian princes are required to pay as expenditure tax a certain percentage of their privy purses under a new formula worked out by the Union Government. The formula seeks to avoid the scrutiny of every item of expenditure. The total anticipated yield of revenue from this source is estimated at Rs. 3 crores per annum.

The priority assigned to movement of exportable goods by rail to ports has recently been upgraded as a measure of export promotion. Accordingly, all goods meant for export, except iron ore, manganese ore and other items, for which there are alternative arrangements, will now be moved to ports under item 'D' of the Preferential Tariff Schedule.

A new ferro-manganese plant, the second to be set up in the State of Orissa, was inaugurated at Rayagada on the 11th inst. by the State's Chief Minister, Dr. Hare Krushna Mahatab. The first plant, it will be recalled, was installed at Joda in the Keonjhar district by the Tata Iron and Steel Company on 20th April last.

The coke oven and other waste products of the Rourkela Steel Plant will be utilised to produce about 8,000 kw. of electricity which will be utilised by the plant itself. A power plant, claimed to be Asia's most modern one, will be installed for this purpose on top of a 115-feet high steel structure of the main power station which is now nearing completion. The cost of power from this new plant will be considerably cheaper than from an ordinary thermal plant.

The Union Law Ministry has been bifurcated into two sections, namely, the Legal Affairs Department and the Legislative Department, with effect from the 12th inst. The former will deal with the advisory and conveyancing work, arrangements for the conduct of Government litigation and matters relating to Election Commissioner and the Income-tax Appellate Tribunal, while the latter Department will be in charge of legislative drafting, publication of Central laws, implementation of the recommendation of the Law Commission relating to statute law revision, and legislative subjects allotted to the Ministry.

The forge foundry to be established at Ranchi by the Government of India in collaboration with the Czechoslovakian agency, Technoexport, is expected to go into production by the middle of 1962. A contract covering the first stage of the project was signed at New Delhi on the 19th inst. between the representatives of the Government of India and Technoexport. The foundry will be an adjunct of the heavy machine-building plant to be set up with Soviet collaboration. It will supply casting and forgings for steel rolling mills, blast furnaces, coke ovens, heavy cranes, excavators and crushers. Under the agreement, Technoexport will supply the machinery and erect the plant, besides preparing a project report. Towards this supply, the Government of India will pay Rs. 10 crores, payment being made in equal annual instalments, the last two of which will fall due in 1967. No payment involving foreign exchange will be due before April 1961.

A world agriculture fair, the first of its kind to be organised on an international scale, will be held under the auspices of the Bharat Krishak Samaj in New Delhi towards the end of 1959. The fair, which will synchronise with the eleventh annual meeting of the International Federation of Agricultural Producers—a world organisation of farmers—to be held in New Delhi, will begin in the third week of December 1959 and will last for about eight weeks. The objectives of the fair are to educate the Indian farmer about the latest advances in agricultural sciences in India and abroad and to show to the world, especially the participating countries, various facets of Indian agricultural life and progress. All the countries of the world, the various ministries of the Government of India and the State Governments, the associations connected with farmers and manufacturers and the importers of and dealers in agricultural and food-processing machinery in India and abroad are being approached to participate in the fair.

* * * *

From Abroad

The world level of industrial production in the first quarter of 1958 was about 4 per cent. lower, as compared with the corresponding quarter of 1957.

The U.S.S.R. is reported to have discovered in the Siberian region of Yakutia a diamond field which, it is claimed, is one of the richest in the world.

The Irish Government is proposing to set up a fertiliser factory entailing a capital outlay of £6-8 million. The production capacity of the plant will be 100,000 tons per annum.

The U.S.A. launched, on the 16th inst., its seventh nuclear submarine, the *Seadragon*, power with a pressurised water reactor and equipped to fire guided missiles.

The Indonesian Government will purchase shortly 44 ships from abroad for the country's merchant fleet. Of these, 10 will be delivered by Japan, the rest being supplied by Poland, Yugoslavia, Italy, West Germany and the Netherlands.

The Krupps and Stulcan shipyards of Hamburg have combined to bid for a £4.25-million shipyard, proposed to be built at Alexandria, Egypt. The capacity of the yard is about 50,000 d.w. tons and it will be provided with facilities for maintenance and repairs.

About 115,000 small enterprises in Sweden employing less than 50 persons account for 40 per cent. of the country's total industrial production. It is estimated that over 500,000 persons are engaged by these units, the aggregate turnover of which amounts to £900 million.

With effect from the 13th inst., the Malaya-China-Japan Conference reduced the freight rates from Singapore and Malayan base ports from $M 61 per 50 cubic feet to $M 45 for rubber in cases or bales, from $M 54 per 50 cubic feet to $M 40 for latex in drums or tins and from $M 48 per cwt. to $M 45 for latex in bulk.

The Government of Ceylon has decided to set up a steel rolling mill and a factory for manufacturing motor car tyres and tubes under the technical co-operation agreements entered into with the U.S.S.R. Provision for these projects has been made in the budget presented to the Ceylonese Parliament recently.

The Krupps organisation of West Germany has decided to build an engineering plant at Campo Limpo, Brazil, with an initial investment of £5 million. The proposed plant will produce forgings, including axles and frames for buses and lorries. Originally, Krupps had intended to produce locomotives in Brazil but abandoned the project, in view of competition from the U.S.

Increased quota restrictions for cotton imports from China have recently been introduced by the British Board of Trade. The existing restrictions on the cotton and rayon yarns and cloth will in future extend to all manufactures of cotton, linen or man-made fibres except floor covering and footwear. The quota for Chinese imports will be permitted at approximately the 1957 level.

Czechoslovakia proposes to build a synthetic rubber plant near Prague at a cost of 1,000 million Czech crowns, as a part of its programme for stepping up the production of chemicals by 2½ times by the end of 1965. At present, the country imports its requirements of synthetic rubber from the U.S.S.R.

The United Arab Republic has decided to admit the Soviet bloc countries in Eastern Europe to the joint Egyptian Cotton Committee. These countries together account for over 50 per cent. of the cotton exported by Egypt during the current season. At present, the Committee consists of Britain, France, West Germany, Italy and Switzerland, none of which figures largely in the country's export trade in cotton now, besides Egyptian officials and business men.

The aggregate production of steel by the European Coal and Steel Community countries during the seven months of 1958 amounted to 34.57 million tons, which represents an increase of 393,000 tons as compared with the corresponding period of last year. The increase was due mainly to a 7.2 per cent. rise in French output and a 19.2 per cent. gain in the much smaller production of Holland.

PERSONAL

MR. R. K. Nehru, Ambassador of India to the United Arab Republic, has been concurrently accredited as Minister of India to Libya.

Mr. Mekki Abbas, Managing Director, Gezira (Development) Scheme, Sudan, has been appointed Executive Secretary of the newly established U.N. Economic Commission for Africa.

Mr. P. F. Davison, Assistant Trade Commissioner (Public Relations) of Australian Government, in Bombay, will be returning to Australia on the 26th inst., after the expiry of his three-year term of duty.

Mr. G. L. Simmons has assumed charge as the Senior First Secretary of the U.K. High Commission in Bombay, *vice* Mr. R. G. Britten. In the absence of Mr. E. G. Norris, who is on leave, he is also acting as Deputy High Commissioner.

Mr. J. M. Srinagesh has been appointed Officer on Special Duty in the Department of Mines and Fuel to undertake preliminary work in connection with the Gauhati (Assam) refinery. He will be designated General Manager of the Corporation when it comes into being.

Dr. C. V. Raman, Nobel Laureate, returned to Bombay last week after a three-month scientific sojourn to East European countries and Soviet Russia. While at Moscow, he received the Lenin Peace Prize, organised by the International Lenin Peace Prize Committee.

Mr. B. K. Nehru, Secretary, Department of Economic Affairs, Union Ministry of Finance, has been appointed Commissioner-General for Economic Affairs abroad. He will generally be stationed at Washington. Mr. A. K. Roy, former Chairman of the Central Board of Revenue, has taken over charge as Secretary, Department of Economics and Revenue, Ministry of Finance. Mr. E. S. Krishnamoorthy will succeed Mr. Roy with the rank of Additional Secretary. Mr. S. Jagannathan has been promoted to the rank of Additional Secretary in the Department of Economic Affairs.

The German production, however, was lower by 1 per cent. at 13.8 million tons.

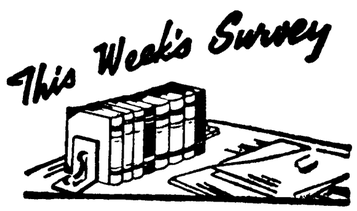
A seven-member delegation of West German trade union leaders is expected to tour India in the third week of September, in order to study the progress of the trade union movement in the country, particularly in the field of heavy industry. The delegation has been sponsored by the German Federation of Labour, an important affiliate of the International Confederation of Free Trade Unions. It will also visit Pakistan, Malaya and Japan.

The United States Steel Export Corporation has raised the export prices of its products with effect from the 12th inst., following the increase in prices effected by the major steel companies. The revised prices per 100 lbs. are $5.79 (including freight to New York, Baltimore and Philadelphia) for carbon steel plates, $8.1 for carbon cold finished bars, $7.98 for alloy steel plates and $9.21 for cold finished bars.

The General Electric Company has announced development of a new highly durable kind of rubber, capable of maintaining strength and usefulness in either Arctic cold or searing heat. The Company spokesmen describe the new product—known as "nitrile silicone rubber"—as "a major advance in chemistry." In a demonstration for newsmen, samples of the new product were dipped in hot jet fuels which cause ordinary rubber materials to wither and lose shape. The new product remained unchanged by the treatment.

Steel production in the U.S. last week climbed above the 1947-49 average and above 60 per cent. of rated capacity for the first time since June. Steel output is slated to make its seventh straight rise this week. The American Iron and Steel Institute reported mills turned out 1,632,000 tons in the week ended 17th August. This equalled 60.5 per cent. of rated capacity and amounted to 101.6 per cent. of the average weekly output in 1947-49. Producers have slated production of 1,678,000 tons this week, a 62.2 per cent. rate. Barring a major strike in the steel-using industry, steel producers predict output should continue to rise slowly through the rest of the year. They report orders are continuing to come in, despite a series of price increases announced in recent weeks.

The U.S.S.R. is understood to have offered substantial aid to the United Arab Republic for prospecting of oil. A group of Soviet geologists has recently submitted a report on Syria's oil potentialities. In Egypt, the Soviet-sponsored oil development programme is nearing completion. The latest supplementary contracts to the U.S.S.R.-Egyptian aid provide for Soviet assistance for the expansion of the present processing capacities of the Suez and Alexandria refineries by 1 million tons each. The U.S.S.R. is also considering the possibility of setting up in Egypt new plants for the production of lubricating oil and high-octane benzene with a combined capacity of 600,000 tons. The immediate aim is to produce an exportable surplus of 1½ million tons annually. The output of crude oil is currently running at an annual rate of nearly 3½ million tons in Egypt to which must be added Syria's 400,000 tons scheduled for this year.



RAILWAY FREIGHT STRUCTURE

AFTER a lapse of ten years, the structure of railway freights has been revised. The new schedule of freights, which will be introduced with effect from 1st October next, is a modified version of the rates recommended by the Railway Freight Structure Enquiry Committee (Chairman: Dr. A. Ramaswamy Mudaliar) which submitted its report in April 1957. The Government has thus taken nearly seventeen months to come to a decision on this important subject which vitally affects the economics of all forms of production. With the introduction of the new rates, the supplementary surcharge of 12½ per cent. now in force, will disappear. The additional surcharge of 6¼ per cent. of the total freight, now imposed on all consignments weighing less than 20 maunds, will be increased to 10 per cent. on consignments weighing less than 10 maunds. The freight rates for parcels have also been revised, such a revision having been necessitated by the introduction of the revised structure of freight rates for transport by goods trains.

The revision in freight rates, now announced, is the second of its kind in the last ten years. The last revision, effected in 1948, simplified and rationalised the rates to a large extent through the introduction of standard telescopic class rates and wagon-load scales over all the Indian railways and on a continuous mileage basis. Since this revision was made, far-reaching changes in Indian economy have taken place. It was, therefore, felt that a further revision was necessary. The Railway Freight Structure Enquiry Committee, which was appointed in 1955, was asked "to review the present railway freight rate structure in all its aspects and to suggest what modifications should be made, bearing in mind the needs of a development economy and the necessity for maintaining the financial stability of the railways." The Committee, besides suggesting eight legs instead of three, as at present, recommended an integrated scale of rates covering both "class rates" and "wagon-load scales," with a regular and progressive increase from the lowest class to the highest class.

At present, commodities are "classified" into 15 classes, depending upon their "transportation characteristics," namely, value bulk per unit, weight, liability for claims, etc. Each of the 15 class rates has three legs of 1-300, 301-600 and over 600 miles. The bases of the three legs of the 1st class rate (in pies per maund per mile) are 0.54, 0.45 and 0.34 respectively; the corresponding figures for the 15th class are 2.32, 1.41 and 1.0 respectively. There are 13 wagon-load scales, all of which are lower than the first class. They also have three legs. Only the legs vary. In some cases, the legs are 1 to 150 miles, 151 to 300 miles and over 300 miles, whereas in some others it is 1 to 100, 101 to 400 and over 400 miles, and in some others, the legs (in miles) are 1 to 300, 301 to 600 and over 600. The rate bases for the wagon-load scales (in pies per maund per mile) vary from 0.25 to 0.48 in the first leg, from 0.20 to 0.38 in the second leg and 0.15 to 0.24 in the third leg. The wagon-load scales are applicable only to commodities with substantial social utility such as grains, salt, manures and ores. Out of the 3,000 commodities in the classification, only 99 have wagon-load scales.

Briefly, the Committee, in suggesting an integrated scale of rates covering both class rates and wagon-load scales, recommended a progressive increase from the lowest class to the highest class through a percentage system with a standard rate base. The Government, however, has proposed new basic scales instead of those recommended by the Committee. The chief aim of this modification, it is stated, has been to refrain from any measure which may tend to raise the prices of commodities. Thus, the additional revenue yield under the Committee's proposals would be 12.9 per cent. of the goods revenue at the existing rates or an additional revenue of Rs. 32.3 crores per year. Because of the Government's modification of the Committee's proposals, the additional revenue will be only 4 per cent. of the goods revenue or Rs. 9.6 crores per year. For six months of the current fiscal year, that is, from 1st October 1958 to 31st March 1959, the extra revenue from this source may be a little more than half of this amount, as this period represents the busiest part of the year. The following are the proposed twin basic scales, the first one giving the rates applicable to commodities such as foodgrains and manures, for which wagon-load scales are at present prescribed and the second one the rates for other commodities:

(In pies per maund per mile)

1-25 miles: 3.60, 2.60; 26-75 miles: 1.40, 1.25; 76-150 miles: 1.10, 1.17; 151-300 miles: 1.00, 1.10; 301-500 miles: 0.85, 1.00; 501-800 miles: 0.70, 0.80; 801-1,200 miles: 0.60, 0.73; 1,201-1,500 miles: 0.50, 0.55; 1,501 miles and over: 0.15, 0.15.

N.B.—It is not clear why the rates have been given in pies instead of naye paise, for the conversion of old into decimal coinage would involve much unnecessary clerical labour.

The Government has generally accepted the Committee's recommendation in respect of 109 commodities, for which the Committee had suggested rates lower than the corresponding class rates. For 28 commodities, the Committee had suggested classifications higher than the corresponding percentage rates. In respect of 13 of these commodities, the Government, after an examination of each case, has decided not to fix rates higher than the corresponding rates. In evolving the new freight structure, special care, it is stated, has been taken to ensure that (1) the overall freight burden on foodgrains is reduced, (2) there is no overall increase in the freight on fruits, vegetables, kerosene and salt, (3) special treatment continues to be accorded to handloom products, *khadi*, books and milk which are now exempt from the 12½ per cent. supplementary charge, and (4) the overall increases generally will be moderate and the minimum necessary to give the extra revenue required.

Defending its modification of the Committee's proposals, the Government observes that it would be an advantage to trade and industry to replace the single scale proposed by the Committee by two scales—one to replace the existing wagon-load scales and the other to replace the existing class rates so as to preserve, to some extent, the different degrees of taper, as at present, in the existing wagon-load scales and class rates. The revised scales, it is stated, avoid both steep increases in the freight rates for short hauls and sacrifice of revenue for long hauls. While one can understand the Government's reluctance to sacrifice the revenue from long hauls, it is somewhat difficult to appreciate its unwillingness to increase the rates for short hauls. What the Committee had in mind, when suggesting the rates it did, was that it must be the "deliberate policy of the authorities to discourage as far as possible short-distance traffic by rail and to encourage alternative modes of transportation over such distances." It further averred that, in evolving the new freight structure, it had "kept in view the desirability of encouraging diversion of short-distance traffic from rail to road," but had at the same time ensured that the rates did not become burdensome. By rejecting this aspect of the Committee's recommendation, the Government has denied road transport the fillip which it might otherwise have received. In other words, the railways want to have the best of both worlds—the world of short-distance and that of long-distance hauls.

A COMMENDABLE PROPOSAL

A welcome feature of President Eisenhower's six-point plan for maintaining peace in West Asia is the proposal for the establishment of an Arab development institution. The suggestion is certainly a reflection of the awareness of the U.S. Administration that lasting peace in West Asia is inextricably bound with the economic fortunes of that region. It also marks, according to some observers, a distinct change in the foreign aid policy of the U.S. That country was all along opposed to the principle of regional funds and preferred to give assistance to individual countries. Be that as it may, the suggestion for a development agency for West Asia comes not a day too soon. For, with the emergence of foreign aid, or promises thereof, as a major instrument of Soviet policy in West Asia, a new dimension has been added to the tangled problems of that region. It is well known that, despite the fact that many countries in the region are rich in oil resources and have been receiving large revenues from oil, the standard of living and the levels of economic development are among the lowest in the world. In the context of the intense desire of the Arab people for material improvement and political independence, it is essential that there should be suitable agencies to help the Arab people to realise their ambitions without having to surrender their independence.

The quickest way to set up the body, as the President suggested, is for the U.N. Secretary-General to consult the Arab states for their agreement to its establishment and then to invite the World Bank to help plan the organisation. The President is well aware that any move or suggestion, however, well-meaning, is liable to all sorts of interpretation by interested parties. He, therefore, took care to point out that, in making the proposal, he was not suggesting a position of leadership for his country in the work of creating such an institution. The function of leadership, he said, should belong to the Arab states themselves.

The organisation is intended to provide loans and technical aid to the Arab states and promote health and education, industrial and agricultural development. Since shortage of water is one of the main problems of the region, priority should be given to plans for overcoming water shortage. Mr. Eisenhower also suggested that other nations and private organisations, which might be interested in the establishment of the institution for facilitating economic development of the Middle East, should also be consulted at the appropriate time. Presumably, he had oil companies in mind, when he referred to "private organisations." In this connection, it may be mentioned that the oil companies operating in West Asia are believed to be earning a billion dollars each annually. It is in their interest that a free and prosperous West Asia emerges as a strong ally of the free world. Again, although President Eisenhower did not make any specific commitment on behalf of the U.S., it is believed that the Administration would not be averse to advancing, say, $100 million to begin with. It is to be hoped that all the interests concerned will strive to give a practical shape to President Eisenhower's commendable proposal.

ESTATE DUTY

It is regrettable that the Lok Sabha Select Committee on the Estate Duty (Amendment) Bill (Chairman: Mr. C. R. Pattabhiraman) has endorsed the Government's move to bring down the exemption limit for payment of Estate Duty from Rs. 1 lakh to Rs. 50,000. Evidently, the members of the Committee, with the notable exception of Messrs. M. R. Masani, R. K. Khadilkar, Pratap Keshai Deo and P. R. Assar, have been prompted by an ideological desire for an egalitarian society. Only, this has made them overlook completely the disquieting effect of the reduction in exemption limit on capital formation which continues to be at a deplorably low level. As a result of the reduction, the middle class people, who contribute largely to the savings of the community, will be brought within the purview of the Estate Duty Act. When this section of society is already groaning under the impact of heavy taxation, especially in the present context of inflationary trends, it would, as Mr. Khadilkar rightly declared in his dissenting note, be unjust to put additional burdens on it.

The force of the above statement will be appreciated better if one bears in mind the fact that, while the money value of estates has gone up in recent years, the real value has actually suffered a setback. Mr. Masani has done well to stress this aspect in a separate minute of dissent appended to the Bill. Calculating that an estate of just over Rs. 50,000 would in the pre-Second World War days have been worth around Rs. 12,000, Mr. Masani says: "One is a little appalled at the thought that an inheritance of this very modest nature, which would probably be divided among several heirs, should be brought within the scope of a tax of this nature." This is, indeed, a correct assessment and it is to be hoped that the members of Parliament will take note of it when they debate the Select Committee's report on the Bill.

It must, however, be said to the credit of the Committee that it has suggested a downward revision in the rates of Estate Duty from 6 to 4 per cent. in respect of estates valued up to Rs. 1 lakh and from 8 to 6 per cent. on the next slab of Rs. 50,000. One wishes that the Committee had suggested similar cuts with regard to other slabs contained in the original Bill. One also wishes that the Committee had recommended (1) exemption from payment of Estate Duty altogether for any estate for which gift tax has been paid, instead of merely proposing a reduction in the amount of duty by a sum equal to the amount of gift tax paid, and (2) raising the period of chargeable gifts from two years to five years as proposed in the amending Bill. On the latter issue, the Committee feels that the *status quo* should be maintained.

There are three notable suggestions of the Select Committee which deserve to be commended. First, the payment of Estate Duty in respect of immovable property must be in four yearly or eight half-yearly instalments, whereas the original Bill had provided for payment in three yearly or six half-yearly instalments; the acceptance of this suggestion will doubtless help the owners of such property, particularly those who are depending entirely on it for their living, by spreading the incidence of duty over a longer period. The second suggestion relates to the exemption of the official residence of a ruler from Estate Duty which is in conformity with the provisions made in the Wealth and Expenditure Tax Acts. Thirdly, a special provision must be included for appeal in respect of penalties levied under the Act.

In its report, the Select Committee has urged the Central Government to assume power to bring the Bill into force on a suitable date, so that the requirements of Article 252 (2) are complied with. Under this Article, resolutions approving the principles of the Bill will have to be passed by the State Legislatures so as to enable the measure to be made applicable to agricultural land. The Committee wants the inclusion in the Bill of a new provision clarifying the position regarding the application of the amending Bill to estates which consist, wholly or in part, of agricultural land. The draft provision proposed by it says that the Bill can be made applicable to agricultural land only after two or more State Legislatures have passed the necessary resolutions. The inclusion of agricultural land in the Estate Duty Act may be welcomed, inasmuch as it will obviate the complications arising from the State Governments making separate legislations to impose special taxes on agricultural lands on lines similar to the levy of Estate Duty.

AIR LINK WITH MOSCOW

From the point of view of Indo-Soviet relations, an important event of the week was the inauguration of an air service between Delhi and Moscow. On 14th August, the first scheduled weekly direct air flight between Delhi and Moscow was inaugurated. The flight is in accordance with the air agreement signed by the representatives of the Governments of the two countries at New Delhi on 2nd June last. The agreement provides for the operation of one weekly service between Delhi and Moscow in both directions by Air-India International and Aeroflot, the airline designated by the Soviet Government. The specified route which the two lines are entitled to operate is Delhi-Amritsar-Tashkent-Moscow. Initially, Air-India International is authorised to carry international traffic in passengers, cargo and mail to and from Tashkent and Moscow, while Aeroflot is authorised to carry such traffic to and from Amritsar and Delhi.

The commercial aspects of the air service are governed by a separate agreement entered into between the two airlines. This agreement lays down that, while each party will bear its own expenses connected with the operation and its aircraft, all the revenues earned by each will be brought into a pool which shall be apportioned and divided between the parties at the end of each calendar month on the basis of the number of scheduled and non-scheduled one-way flights operated by each party in that month.

Air-India International's plane for Moscow will leave Delhi every Thursday and will commence the return flight from Moscow on Saturdays. The service is operated with a Super Constellation aircraft, fitted with first class slumberette and tourist class seats. The one-way tourist class fare between Delhi and Tashkent and Delhi and Moscow is fixed at Rs. 628 and Rs. 1,484, respectively, the corresponding first class fare being Rs. 785 and Rs. 1,857. It may be noted here that, with the operation of this new service, Air-India International now offers direct flights to 25 major cities of the world with easy onward connections to all others.

The inaugural Delhi-Moscow flight of Air-India International is quite significant and, appropriately enough, it was marked by an impressive ceremony held at the Indian Embassy in Moscow on the 15th inst., which incidentally coincided with the Indian Independence Day celebrations. At the ceremony, both Marshal Pavel Zhigarev, head of the Russian civil air-fleet, namely, Aeroflot, and Mr. K. P. S. Menon, Indian Ambassador to Russia, expressed the hope that the new air route would expand the possibilities of India and Russia coming closer together. How significant is the event was aptly described by Mr. Menon who said: "The change that has occurred could not have been anticipated 20 years ago when an Indian passport, though endorsed for the whole of Europe, would not have entitled one to travel to Soviet Russia." The direct air service between India and Russia will, by facilitating quicker passenger, cargo and mail traffic, enable the two countries to strengthen their economic and cultural relations.

WORLD COMMODITY PRICES

Commodity prices have been, and still are, susceptible to violent fluctuations, causing considerable hardships both to producing and consuming countries. There is no doubt that such unpredictable movements in prices virtually cripple the primary producing countries which specialise in the export of a limited range of commodities; many of them are dependent on one commodity for over 50 per cent. of their aggregate export earnings, and on two or three leading commodities for over 80 per cent. Their consequences can be gauged from the adverse impact of the latest recession in the U.S.A. on the value of several commodities which came on top of economic readjustment in Europe after the Suez crisis. Many countries in Asia and the Far East, West Asia and Latin America were almost caught unawares; their export earnings in general declined; consequently, they had to curtail their development programmes and restrict imports. There is no doubt that these falling imports in turn have meant a falling demand for the products of the advanced countries. And now there are reports of a recession in Western Europe. Thus, the impact is tending to become global and not limited to a particular country or region.

It is gratifying to note, in this context, that a few commodities like tin and sugar could hold their own better, relatively speaking, thanks to the international agreements governing these commodities. The experience of these commodity agreements, though far from satisfactory and their future is highly uncertain, has at least highlighted the importance of collective endeavour on the part of all the countries of the world for solving the commodity problem. It is, therefore, but natural that stabilisation of commodity prices should have figured prominently at the twenty-sixth session of the

TREND OF INDUSTRIAL PRODUCTION

RISE IN PRICES OF MANUFACTURES RELATIVELY SMALL

From Our Special Correspondent

NEW DELHI, 19*th August*

THE latest meeting of the Central Advisory Council of Industries has had the benefit of an authoritative review, made by the Commerce and Industry Ministry, of the current industrial situation. This review is notable for the figures it gives of total licensed capacity, as on 15th June 1958, of each industry and of its estimated production in the current year as compared with 1957. These figures are presented in the form of a table at the end of this column. No figures of 'estimated' installed capacity in 1958 are, however, available and, so, no comparison is possible of licensed and installed capacities or of installed capacities and estimated outputs in the year. This, however, does not detract from the value of such figures as are given in the table.

DELHI LETTER

The capacity figures in the table make possible a comparison of the original second Plan's target of annual capacity in the case of each industry and the respective total licensed capacity as on 15th June, 1958. It may be noted from these figures that licensed capacity has already reached or nearly reached the target capacity in the case of industries like coated abrasives, cement, dry batteries, grinding wheels, railway wagons, winding wires and conductors, dyestuffs, matches, paints and varnishes, rubber footwear, soap, staple fibre, sugar, automobile tyres and *vanaspati*; that licensed capacity has exceeded the original target capacity in the case of industries like bicycles, complete ring spinning, frames, electric fans, electric lamps, radio receivers, sewing machines, storage batteries, caustic soda, paper and paper board, plywood, power and industrial alcohol, soda ash, sulphuric acid, bicycle tyres and bicycle tubes; and that there is still a considerable gap between target capacity and licensed capacity in the case of other industries. Where licensed capacities have exceeded the original target capacities, it may be generally supposed that the latter have come in for upward revision.

The production figures in the table make possible a comparison between the current year and the last. It may be seen from these figures that production in 1958 will have exceeded the 1957 level, substantially or slightly in the case of industries like coated abrasives, aluminium, asbestos cement sheets, bicycles, cement, diesel engines, electric fans, electric motors, iron and steel, lead, machine screws, machine tools, oil pressure lamps, power transformers, radio receivers, refractories, rubber and plastic insulated cables and flexibles, sewing machines, storage batteries, ammonium sulphate, bleaching powder, caustic soda, coal, dipped rubber goods, glass sheets, glue, glycerine, insulators (both H.T. and L.T.), paints and varnishes, paper and paper board, commercial plywood, power alcohol, soap, soda ash, sulphuric acid, superphosphate, jute textiles, bicycle tyres and bicycle tubes; and that production in the current year will have declined, substantially or slightly, from the previous year's level in the case of other industries.

In spite of the estimated decline in production in a number of industries, the Commerce and Industry Ministry appears to think that there will be a net increase in industrial production as a whole in 1958 over the 1957 level. This could be inferred from the Government's stand on the question of imports of industrial raw materials. It is stated, in this connection, that Government attaches the greatest importance to providing an adequate supply of raw materials and semi-finished goods for industry but that it is not possible under the present circumstances to meet such requirements in full. The Ministry notes, with gratification, that, so far, industrial production has, on the whole, not been retarded as a result of shortage of raw materials. While Government may make every effort to release as much foreign exchange as possible for maintenance, it is emphasised that there is no alternative to greater use of indigenous substitutes. It is the Ministry's hope that increased exports to countries with which there are special payments arrangements will make possible additional imports of raw materials for the use of industry.

Incidentally, in reviewing price trends, the Commerce and Industry Ministry has referred to its former appeal to industrialists to accept a code of fair prices and not to allow shortages of foreign exchange to raise the prices of indigenous articles without justification. The Ministry has recorded, with satisfaction, that, by and large, there has been a good response to that appeal. The increases in production within the country have also contributed to the stabilisation of prices. The wholesale price index for finished products (non-food industrial finished goods with 1952-53 as 100) has stood at 107.6 in 1958 as compared to 107.9 in 1957 and 104.4 in 1956. In the considered view of the Ministry, the price policy of Indian manufacturers has, thus, on the whole, been satisfactory.

The Commerce and Industry Ministry's review is also notable for the light it throws on how licensed capacities are expected to be actually installed in the difficult foreign exchange situation. In this connection, the review deals with (i) long-term foreign capital inflow, (ii) deferred payments arrangements and (iii) foreign participation in Indian industries. As regards

AMERICAN LETTER

U.S. ECONOMY HAVING FAIR WEATHER

INFLATION BEGINNING TO BECOME A BIG PROBLEM AGAIN

From Our Special Correspondent

NEW YORK, 12*th August*

PRESIDENT Eisenhower's action to land United States Marines in Lebanon in support of a friendly government is widely applauded in the country. "At least, this showed initiative," was the average reaction—initiative which, in recent years, was shown by the Kremlin rather than by Washington. At the same time, Americans would be abhorred if anyone accused them of imperialism. This action is merely to help a friendly people in their troubles and in defence against Communism.

Looming behind this battle of semantics is, of course, Middle Eastern oil to a large extent. It is a double-edged sword. It would create temporary havoc if Europe were deprived of it, as it was during the Suez crisis. It would create equal havoc with the finances of the Arab States and the feudal kingdoms, if the flow of royalties were to stop.

President Eisenhower, wanting to avoid the accusation of big power politics behind closed doors, proposed a "summit" meeting before the Security Council of the United Nations. Comrade Nikita Khrushchev does him one better, he wants the sounding board of the entire General Assembly. This is not too easily accomplished, even if there is no emergency. Hence, the U.S. is open to the accusation it could not and would not bring about such a meeting, with the Kremlin free to act as it pleases in the Middle East and elsewhere. But Mr. Eisenhower has accepted the Russian challenge and, by the time these lines are read in print, he will have had his say on the Middle East from this international forum.

The gravity of the international situation is, by no means, underestimated here. It is considered worse than Korea. To many, the present period is reminiscent of the period preceding the last war. There was Munich. There were pious promises. There were the negotiations with Japan while the Imperial fleet was assembled for the attack on Pearl Harbour.

Magazines and newspapers are pointing out that Russia has more than 1,000 operating missiles while the U.S. has just about 150. Moreover, the U.S. cannot possibly catch up with this deficiency until the early 1960s. Thus, why should Russia wait with the "inevitable" attack which is to come sooner or later, it is argued.

Perhaps, Mr. Khrushchev is smarter than Hitler and does not believe in invincibility. Perhaps, he genuinely believes he could accomplish more by appearing before the U.N. and win a bloodless victory, forcing the U.S. Marines out of the troubled areas. That is regarded as too idealistic a solution to be taken seriously. Such is the atmosphere here, however. In these fast-moving days, air mail despatches half-way around the world are sometimes overtaken by events.

On the U.S. economic scene, a fairer climate prevails. Most observers agree the depth of the recession has been passed. The stock market turned in an impressive performance in recent weeks. It made new highs for the year and nearly wiped up the losses incurred in the lows of October 1957.

Why all of a sudden this optimism? The only logical answer is that everybody has become quite conscious of the oncoming inflation. With only slightly better production, there was a substantial increase in steel prices, following the statutory wage hikes on 1st July 1958. Aluminium is following.

Federal finances also give cause for concern. The deficit in the Federal Budget for the fiscal year ended 30th June 1958 was given at $2,800 million, with $12,000 million expected in the current fiscal year.

Extremely wise monetary and fiscal management will be necessary to minimise the impact of these developments. That does not seem to be in sight. The last Treasury re-financing operation was a failure, in the sense that it resulted in an extraordinarily large attrition. The Federal Reserve authorities are shifting their policies continually with changing conditions as they see them.

At present, the position of the banks is relatively easy moneywise. Most of the commercial banks throughout the U.S. are paying about 3 per cent. for savings and they are quite reluctant to announce lower rates for competitive reasons despite lower discount rates. Thus, there is quite a competition for mortgage money which is still quite lucrative.

Indeed, building and construction are out in front in the economic picture. The last monthly figure for building permits issued in 217 U.S. cities, aggregated $701,211,612, as compared with $543,843,626 reported in July 1957, that is, before the recession started. Construction awards jumped up to more than $3,800 million in June. It was the highest figure for one single month ever recorded, being 18 per cent. above June 1957.

Another plus sign was personal incomes which, in July, were reported at the annual rate of $351,800 million, against $349,800 million a month earlier and $345,100 million in July 1957. The gross national product also perked up. The President's Council of Economic Advisers placed it at the annual rate of $428,000 million in the April-June quarter, against $425,800 million in the first three months of the year.

The last count of those gainfully employed was 64,981,000, against 66,504,000 a year ago. Unemployment was given at 5,437,000, as compared with 3,337,000 12 months previously. The number of those applying for unemployment insurance, however, has been declining steadily in all the key areas of the U.S.

The automobile industry here is still in the doldrums. A pickup in popular demand, it is felt generally, would quickly mobilise the United Automobile Workers for a stiff new wage contract. The old one expired towards the end of May last. If most of the major demands were not granted, a serious strike may ensue quite easily.

Meanwhile, demand for steel has been much better than expected. Output in the industry bounced back to more than 57 per cent. of capacity. It was 80 per cent. a year ago.

The farm picture is also quite cheerful. Total farm assets have increased almost three and a half times since 1940, while the aggregate debt has only doubled. Farmers' assets were placed at $186,000 million earlier this year, up $9,000 million over a year ago. A bumper crop is expected this year. This is cheerful news for some, but it will also create additional surplus problems for the Government.

The big problem, war or no war, is still inflation. For the second time in this session of Congress, a request has been made for an increase in the Federal debt limit, now at $275,000 million. The Administration wants a temporary limit of $288,000 million until 30th June next and a permanent limit of $285,000 million. The request has been reported favourably out of committee.

The total Federal debt, including the statutory one which comes under the limit, rose to $301,700 million in 1957, as against $17,500 million in 1929. State and local government debt was $52,500 million, against $17,200 million, respectively; corporate debt $276,600 million, against $107,000 million and individual debt $221,900 million, against $72,300 million. This gives some indication of the financial problems confronting the United States. At continued high levels of employment and income and inflation, problems are apt to be few.

The Lotus Circle

Among the many treasures of Indian art, is this exquisite piece which dates back to 158 A.D. It is now a part of the rich collection of Amaravati sculpture at the Madras Museum. The "Lotus Circle" is a common but significant decorative motif in Indian art.

A pleasure to smoke

Issued by The Imperial Tobacco Company of India Limited TC/148

BANK RATE CUT AGAIN IN U.K.

LOWEST LEVEL IN 3½ YEARS

THE British Bank rate has been changed again in less than two months. On the 19th June last, the Bank of England made a cut of ½ per cent. to 5 per cent. in its discount rate. A further cut of ½ per cent. to 4½ per cent. was made on the 14th inst. This is the fourth consecutive reduction in the last five months, after it was raised in September last from the "crisis" level of 5 per cent. to the "super-crisis" level of 7 per cent. The latest rate of 4½ per cent. is the lowest since February 1955. The most noteworthy feature of the latest cut is its timing, for rarely has the British Bank rate been lowered at this time of the year, usually a period of seasonal strain for sterling. The last occasion when the Bank rate was cut in the month of August was 33 years ago.

The latest step has obviously been induced by the signs of economic recession in Britain where the major industries are developing a surplus capacity for want of orders. The growing strength displayed by sterling, which stands, as on the 16th inst., at $2.80½-2.80⅝ for spot, as against $2.80.3/16-2.80½ a month ago and $2.78.3/16-2.78.5/16 a year before, has helped the authorities to make this move. They seem to be confident that, despite the current difficult conditions facing world trade, sterling will be able to hold its position.

Move Justified

The move, according to a spokesman of the Bank of England, was in step with the recent credit relaxations and was justified by internal trends and the continuing strength of sterling. There is, however, one difference between the previous cuts in Bank rate from the peak level of 7 per cent. and the latest reduction. While the previous moves could be considered as technical corrections in order to bring the position back to that which existed before September last, the latest cut is regarded as something more than that. There are two possible considerations which may have induced the authorities to take this step. First, the inflationary threat from wage claims by labour in most of the industries has lessened considerably in recent months. It may be recalled that this threat led to a large extent to the crisis of September 1957 and delayed any expansionist move by the Government early this year. The labour demand for wage increases in important groups of industries, particularly in mining, has been rejected by the employers and these rejections have been accepted by labour, at least for the present, thus eliminating the danger of wage inflation. This does not mean that workers all over Britain have withdrawn their demands for higher wages or that they are satisfied with their present wage levels. There are still a number of industries where the workers' demands have yet to be settled. It is, however, expected that the workers will be somewhat more moderate in their demands.

Business Recession

The second consideration which has led to a reduction in Bank rate is, what the Bank of England spokesman referred to as the "internal trend," the increasing pace of decline in business activity in the country. It will be recalled, in this connection, that, in the last Budget, the Chancellor of the Exchequer granted a larger initial allowance to industries in order to promote larger investments. This was followed by the relaxation of credit restrictions and modification of the capital issues control. There are no signs as yet that these measures have attracted substantially larger investment in industries. On the contrary, in many capital goods industries, the running down of order books is said to be going on at a rapid rate. Production in the steel industry during July, for instance, was 13 per cent. less than that in the corresponding month of 1957. This was more than double the rate of decline in the first six months of the year. It is also stated that several manufacturing concerns are working well below their capacity.

The industries, in general, and the building trade, in particular, have welcomed the latest measure. The Federation of British Industries regards it as a "routine" step. It is considered likely that credit for house building will become cheaper, thus reversing the steady rise that had gone on in house loan charges from 4 per cent. in 1951 to 6 per cent. since July 1956.

Following the Bank rate reduction, the London Clearing Bank rates have fallen by a corresponding extent. Thus, the rate of interest on deposits (seven days' notice) has been cut from 3 per cent. to 2½ per cent. The rate on overdrafts for nationalised industries has been reduced from 5 to 4½ per cent., for first class industries from 5½ to 5 per cent. and for other business concerns and private borrowers from 6—6½ per cent. to 5½—6 per cent. The short-term money rates in the London money market have also declined in consonance with the cut in Bank rate. Day-to-day money in London now fetches 2⅜ to 3½ per cent. and deposits for short periods 3 to 3⅜ per cent. The rates for bank bills are 3⅜—3-15/16 for two-three months and 3⅞—4 per cent. for six months, the corresponding rates for fine trade bills being 4½—5¼ and 4¾—5½ for six months. The latest Treasury Bill rate was £3 14s. 5d., as against £3 17s. 3½d. before the Bank rate was cut.

Downward Trend in Interest Rates

The latest cut in Bank rate has given rise to speculation whether the downward trend in interest rates which had gathered momentum with every reduction in the Bank rate during the last five months will come to a halt or get a further fillip. London does not offer a definite answer. It must, however, be noted that the general trend of interest rates in the Western world is downwards and that, despite the reduction in the Bank rate to 4½ per cent., interest rates in Britain are still higher than in many European countries as the following table of Bank rates will indicate:

Country	Latest Bank rate	Previous rate	Highest in 1957-58
	%	%	%
U.K.	4½	5	7
U.S.	1½	2½	3½
Germany	3	3½	5
France	5	4	5
Italy	3½	4	4
Belgium	3½	4	4½
Netherlands	3½	4	5
Denmark	4½	5	5½

In the U.S., however, one of the 12 Federal Reserve Banks, the San Francisco Reserve Bank, has raised its discount rate from 1½ to 2 per cent. with effect from the 15th inst. It is not known whether the other Federal Reserve Banks will follow suit, but it has generally been the case so far.

CALCUTTA, DELHI BOMBAY, MADRAS.

Consequent on the comparatively cheaper rates quoted by overseas centres for trade financing, borrowing in the U.K. for this purpose had been difficult during the last year or two. With the fall in short-term rates in recent months, the cost of borrowing in London has no doubt become much cheaper than it was a few months ago, but it is doubtful whether the business lost by the U.K. in financing trade will be got back. For the U.K. rates are, as already stated, still dearer than in most of its important rival centres.

Long-term Rates

While the short-term rates in London have followed the Bank rate decline, the long-term rates have not been allowed to fall to any marked extent, as a result of the open market sales of Gilt-edged securities by the Bank of England. There is no indication as yet of any change in the official policy in this direction. This is presumably due to the belief that the demand for long-term capital is still so substantial, as compared to the supply, that there is no necessity or scope for boosting up demand. Though the overseas borrowing in the U.K. capital market has fallen off, as a result of the high cost of operations, the demand for long-term finance from local authorities and other domestic borrowers has not fagged. It is true that, if the authorities provide an incentive to create larger demand for long-term capital, the demand will outstrip supply considerably and inflationary pressures might set in again. But it is pointed out in London that this argument overlooks the fact that many of the sterling countries have decided to draw as little as possible of their sterling reserves and as such the use of sterling for financing spending by these countries will drop heavily in the coming months. This is expected to result in an excess of supply over demand for long-term capital, unless corrective steps are taken in time.

IMPORT OF EQUIPMENT UNDER U.S. DEVELOPMENT LOAN FUND

The Government of India has decided that import licences for the import of equipment for the jute and cement industries and of c.k.d. packs for the manufacture of trucks and jeeps will be issued without any conditions regarding deferred payments, in the case of projects which the Government considers to be of sufficient importance for financing out of the United States Development Loan Fund. As already announced, the U.S. Government has agreed to make available a credit in dollars to the Government of India from the Fund. The procedure to be followed for the import of equipment for jute and cement industries has been announced. A separate announcement regarding the procedure for c.k.d. packs for trucks and jeeps will be made later.

Applications in respect of the cement industry should be made to the Chief Controller of Imports and Exports through the Industrial Adviser (Chemicals). A copy should be sent to the Deputy Economic Adviser, Ministry of Commerce and Industry. Applications in respect of the jute industry should be submitted to the Joint Chief Controller of Imports and Exports, Calcutta, through the Jute Commissioner, Calcutta, with a copy to the Deputy Economic Adviser. Importers will have to enter into contracts for the equipment between now and 31st December 1958, for delivery before 31st December 1959. In respect of all purchases outside the United States, insurance must be covered with an Indian insurance company. Contracts with suppliers in the United States should be insured with U.S. companies.

The equipment to be imported under this programme includes not only the plant and machinery but any constructional material required for completing the project including steel for structures, earthmoving equipment, electric fittings and essential supplies of spares required as initial reserves. All normal import licensing restrictions will be applicable and goods and equipment available within the country in adequate quantities will not be allowed to be imported. The conditions and detailed procedure for imports under this programme have been set out in Import Trade Control Public Notices. No fresh applications in respect of the jute and automobile industries need be submitted if applications have already been made under the normal procedure. These will be considered under the Development Loan Fund and if any further information is required it will be called for.

BANK OF BHOPAL

The Reserve Bank of India has served a notice on the Bank of Bhopal Ltd., Bhopal, to the effect that a licence to carry on banking business in India cannot be granted to it. The issue of this notice makes it obligatory on the part of the Bank to cease transacting the business of banking and it will not, therefore, be in order for it, among other things, to accept deposits of money from the public.

The first move to reverse the downward trend in the U.S. Federal Reserve rates noted since October 1957 was taken when the Federal Reserve Board approved of an increase in the discount rate of the Federal Reserve Bank of San Francisco from 1½ per cent. to 2 per cent. with effect from the 15th inst.

PLAN FOR CO-OPERATIVE DEVELOPMENT

By M. S. Menon

DIRECTOR, ALL INDIA CO-OPERATIVE UNION

[Mysore City will be the venue of the International Conference of Agricultural Economics due to be held from Sunday, 24th August 1958, to Wednesday, 3rd September 1958. The Conference is being held under the joint auspices of the Ministry of Food and Agriculture and the Indian Society of Agricultural Economics. Many eminent economists from all over the world will be attending the Conference, which will be inaugurated by Prime Minister Jawaharlal Nehru. The President of the Conference is Dr. L. K. Elmhirst. Notable among the visiting economists are Prof. Arthur Lewis, University of Manchester, Prof. D. Gale Johnson, University of Chicago, Dr. Sherman E. Johnson and Dr. K. L. Bachman of U.S. Department of Agriculture, Prof. M. Cepede, Institut National Agronomique, Paris, Dr. T. H. Strong, Bureau of Agricultural Economics, Canberra, Australia, Prof. K. O. Campbell, University of Sydney, Australia, Prof. C. von Dietze, University of Freiberg, West Germany, Dr. E. de Vries, Institute of Social Studies, The Hague, the Netherlands, Prof. W. S. Anderson, Canada, and Dr. H. B. Low, Massey Agricultural College, New Zealand. Prominent among the Indian economists attending the Conference are: Prof. D. R. Gadgil, Dr. D. G. Karve, Dr. M. L. Dantwala, Dr. S. R. Sen and Dr. J. J. Anjaria. As many as 20 papers covering all aspects of agriculture are scheduled for presentation and discussion. The article on this page on a plan for co-operative development has been prepared exclusively for Commerce *to mark this important conference on agriculture, the largest source of employment and national income in India.—*ED.]

IN India's economic policy, for some years to come, the accent will be on increased production, both industrial and agricultural, and more especially agricultural. Agricultural development, calculated to bring about substantial increases in the production of food and essential raw materials, occupied a central place in the first Five-year Plan. Although the main stress, when the second Five-year Plan was first drafted, was on industrialisation, yet the need to continue the efforts for stepping up food production was clearly recognised. This, however, was more on general grounds connected with the rate of increase in the country's population as also the increase in demand for foodgrains and raw materials likely to result from general economic development. Food harvests in 1953-54 and 1954-55 were fairly comfortable, and targets of food production and imports for the second Plan period were originally framed in this setting. It was planned to produce 75 million tons by 1960-61 and to import a total quantity of six million tons for the whole five-year period as against annual import of three million tons which had been planned for the first Plan. Since then, the necessity for increased output of food has become more imperative. Production declined from the beginning of 1956 and food prices began to rise steeply, necessitating heavier imports. From Rs. 29 crores in 1955-56, the import bill on food has gone up to over Rs. 152 crores in 1957-58. It was in the light of this growing deficit in food supply and consequent foreign exchange difficulties caused by the need to import increasingly larger quantities of food from abroad that the decision was taken to step up the target of additional agricultural production under the second Five-year Plan from 18 per cent. to 25 per cent. It was expected that such an increase could be achieved by means of a proper utilisation of resources already provided in the Plan through intensive work in the villages, efficient organisation of supplies and development of co-operation.

More Finance Wanted

All these have vastly increased the responsibility of co-operatives, since on them has been placed the main reliance for supplying the financial and other resources needed to meet the expanded requirements of production and marketing, and for stimulating the rate of rural savings. It is felt that, if agricultural production is to be pulled up to this level, the volume of agricultural finance channelled through co-operatives will have to increase to an annual amount of very much more than Rs. 225 crores, the figure which was originally contemplated as the target for the second Five-year Plan, and which itself meant more than a fourfold increase on what the co-operatives currently provide for agriculture.

The whole objective of the development programme is to gear the co-operatives to a scale of effort calculated to achieve this result. From a purely statistical point of view, the co-operative movement in the country has recorded steady progress during the last few years. Taking the primary agricultural credit societies, which constitute more than 66 per cent. of the total number of societies of all kinds, the progress may be seen from the following figures:

Primary Agricultural Credit Societies

	1949-50	1954-55	1955-56	1956-57
Number	1,16,534	1,43,320	1,59,939	1,61,616
Membership	48,17,545	65,68,416	77,90,850	96,16,846
Working capital (Rs. in thousands)	35,21,75	62,92,70	79,10,18	98,30,13
Loans advanced (Rs. in thousands) ...	17,98,69	35,47,61	49,61,72	67,32,72

(Source: *Statistical Statements Relating to the Co-operative Movement in India* published by the Reserve Bank of India.)

During the last three years as compared with the year preceding the Plan period, therefore, the progress achieved in all directions has been impressive. The average loan advanced per member rose from Rs. 37 in 1949-50 to Rs. 70 in 1956-57. Among the factors responsible for this expansion in the activity of the co-operatives must be mentioned the reorganisation and strengthening of the co-operative banking structure, following the acceptance of the recommendations of the All-India Rural Credit Survey Committee by the Central and State Governments and the increasing assistance provided by the Reserve Bank of India, both in regard to the quantum of concessional finance made available to the co-operative banking system as well as in the procedure for its drawal. The total working capital of the State and District Co-operative Banks rose from Rs. 30.45 crores and Rs. 49.87 crores respectively in 1949-50 to about Rs. 81 crores and Rs. 110.53 crores, respectively, in 1956-57. With the acceptance of State partnership, Government has begun to contribute substantially to the share capital of the apex co-operative banks, the funds for which have been provided by the Reserve Bank as loans from the National Agricultural Credit (Long-term Operation's) Fund set up by the Bank for the purpose. Up to 30th June 1958, the Reserve Bank has provided a sum of Rs. 743.86 lakhs from this Fund for enabling the State Governments to contribute towards the share capital of co-operative credit institutions. The Bank has further liberalized its provisions, in order to enable the co-operative banks, and through them the agriculturists, to make freer and fuller use of the financial accommodation provided by it. The effect of this is reflected in the increase of drawings on credit limits sanctioned from Rs. 17 lakhs in 1947-48 to Rs. 538 lakhs in 1950-51 and Rs. 2,561 lakhs in 1955-56. It is estimated that, by the end of 1957-58, the annual loans to agriculturists through co-operative channels, both short- and medium-term together, would amount to Rs. 100 crores, as against the target of Rs. 200 crores planned to be achieved by 1960-61.

DIRECTORY OF INDIA ENGINEERING EXPORTERS

SECOND EDITION

We are glad to announce the publication shortly of the second edition of the above Directory.

Bonafide manufacturers exporters of engineering goods who want the names of their firms to be included in the second edition of the Directory are requested to contact the Council immediately.

Advertisements from engineering firms are also acceptable.

Please apply to:

ENGINEERING EXPORT PROMOTION COUNCIL

INDIA EXCHANGE

(7th FLOOR)

CALCUTTA-1

Non-credit Side

The plan for co-operative development in fields other than credit is no less impressive. It includes the organisation of 1,900 co-operative marketing societies, covering every important market area in the country, 35 co-operative sugar factories, 48 cotton ginning and pressing factories on co-operative lines and 118 other types of co-operative processing units. The long term goal is the organisation of rural business on a co-operative basis in such a way that, within 15 years, 50 per cent. of the total of such business—credit, marketing, processing, etc.—would become co-operative. By 1960-61, the membership of agricultural credit societies is expected to be brought up to 15 million.

It is to achieve these targets that the co-operative development plan has been formulated. The main features of this plan is the reorganisation and strengthening of the co-operative credit structure on the basis of major State partnership, the development of co-operative marketing, processing, storage and warehousing, the integration of credit with co-operative marketing, and the provision of trained personnel to man and work this set-up successfully. Each agricultural credit society will operate on a stronger capital base, which in turn involves a larger membership and a wider area of operation. Loans will not so much be based on the security of land as on the capacity of the borrower to repay out of increased production. This means, on the one hand, the disbursement of loans based on a careful estimate of crop production, and, on the other, provision of facilities for the remunerative sale of the produce through well-organised marketing units.

Looking at the plan as a whole, it is difficult to escape the impression that it is largely dominated by what may be called the banking mind. The primary co-operative units are to be credit units, lending money, borrowing money, building up share capital so that their capacity to borrow and lend may be increased; in short, they are to function effectively as village banks. They may ally themselves with marketing and they may endeavour to base their loan policy on cropping requirements, but these measures are mainly taken for the protection of the credit they have advanced and such as any wise banking institution should be mindful of. The societies are not production units, in the sense that they are directly and vitally concerned with increasing agricultural production. The supervisors who guide and supervise their work are in most cases the financing banks' employees and are not obviously qualified to advise the members on production programmes or even to properly assess credit requirements in relation to such programmes. Their main business will be to see that moneys are properly disbursed and collected, that loan applications are carefully prepared and books relating to these transactions efficiently maintained.

Credit and Production

The rest of the plan, namely, the construction of 350 licensed warehouses, 4,000 godowns for the credit societies and 1,500 for the marketing societies, is again intended, in the main through the creation of negotiable agricultural paper, etc., to fortify and strengthen the credit programme. This is not to say that all these measures will not have any effect on agricultural production. Credit no doubt gives command over other resources, and provided other resources are put to effective use, credit will be a powerful auxiliary to production. All that is meant to say is that the co-operative plan does

CONTRIBUTION OF FOREIGN INVESTMENT TO U.S. ECONOMIC GROWTH

By Wilson Schmidt
ASSOCIATE PROFESSOR OF ECONOMICS
GEORGE WASHINGTON UNIVERSITY, WASHINGTON, D.C.

VIRTUALLY everyone agrees that economic development is a good thing. But the trouble with economic growth is that it requires sacrifices. That is why there is not more of it. A major objective in formulating policies for economic growth is to get the most development with the least sacrifice. In the nineteenth century, the United States, like many other countries, sought that goal by relying in part on foreigners for an essential ingredient of growth, namely, capital. In order to achieve economic development, as is well known, labour must be equipped with more (and better) tools and machines, so that more products of better quality can be produced. The foreign exchange spent to buy industrial machinery cannot be used to import radios or cars. Growth requires the sacrifice of consumer goods and therefore exacts a reduction in standards of living.

When all the people in a nation who have profitable uses for funds have borrowed from all those in the same nation who are willing to lend cash, the rate of lending and economic development cannot expand further, unless some means is found to extract cash forcibly from the people. That is the situation when reliance is entirely on domestic sources of capital funds for economic development. But economic development can proceed if the borrowers will search out foreign lenders who are willing to provide funds at rates of interest less than the increase in income that can be gained by the borrowers through the use of the funds. Through overseas borrowing, the burden of reducing consumption is shifted to foreigners who are more able and willing to bear it than domestic lenders; growth is achieved with less sacrifice.

Magnitude of Foreign Capital

This is precisely what the United States did in the nineteenth century when, as occurs in any newly-developing nation, it ran short of domestic capital funds. Generals, congressmen, canal commissioners, and many others turned bond salesmen to make certain that no source of foreign capital was left untapped. At the start of America's first century of independent growth, the nation had borrowed from foreigners a sum equal to almost 14 per cent. of all the reproducible and tangible wealth in the United States. This amount equalled the value of all the buildings and equipment used in non-agricultural business in America at the time, and it was twice the value of all the consumers' durable goods in the nation. Had the United States attempted to create an equivalent amount of capital out of its own resources (by diverting production from consumer to capital goods), American consumers would have had to give up an amount equal to all of their durable goods twice over—an obviously impossible sacrifice.

As America progressed, the proportion of American reproducible, tangible wealth to that borrowed abroad fell, but the actual amount of borrowing climbed. In 1789, the United States owed perhaps $60 million; by the late 1830s, this had more than quadrupled; by the close of the century, it had grown 45 times, and by the start of World War I, over 100 times. From the start, foreign borrowing played a critical role in U.S. national development, for it helped give America its freedom: during the American Revolutionary War, the newly formed United States Government borrowed extensively from France.

In the early years of the new nation, foreign capital played an especially important role in increasing the income and wealth of the United States by financing its international trade. Foreign capital—particularly British—greased the flow of goods through short-term loans to American merchants buying and selling overseas. In 1793, the United States ranked next to England in the value of her foreign trade and in proportion to its population, the United States probably was the first commercial nation of the world. Like many of the nations developing now, America depended upon foreign trade for a major share of her income.

It is exceedingly doubtful that the United States could have achieved that level of foreign trade, which was the source of so much income in the absence of foreign capital. The shortage of domestic funds would, by raising interest rates, have added to the cost of carrying goods, raised prices all around, and generally slowed trade. Instead, through a complex of financial institutions, the British paid Americans cash for their goods, gave U.S. importers three to four and more months to pay for imports from England, and financed American trade, both imports and exports, with nations all over the world.

The role played in American economic growth by this short-term capital did not stop with trade. While these loans were each for a short period, their renewal provided a revolving fund for the use of the United States. This changing mass of credits financed investments far distant from U.S. ports. The impact of foreign funds on the economic development of the United States is readily seen in the foreign-owned land development companies which helped to spread the economy and people of America westward from a thin strip along the Atlantic Coast.

Unfortunately, the United States received only a small proportion of its total inflow of foreign capital through foreign-owned enterprises. Not only did Americans fail to gain technical knowledge but the risks of ventures fell largely upon American rather than foreign shoulders. Because foreigners chiefly bought bonds rather than stocks, payments had to be made to them no matter what the state of profits, the balance of payments, and the economy—unless the borrower wished to default with serious effects on his credit standing.

Furthermore, the United States probably got less development per dollar initially invested by foreigners. Foreign-controlled firms, once they are successful, have a strong tendency to reinvest much of their profit; hence, from a tiny start, a cumulative growth of capital derives. In part, the disadvantage of America's failure to gain relatively large amounts of foreign-operated capital was offset by massive immigration of skilled and knowledgeable people who brought and spread new techniques of production among Americans. Of course, they also helped by bringing capital with them—an average of probably $75.00 per head.

Revolution in Transportation

Foreign capital played a vital role in financing the nineteenth century revolution in American transportation. The significance of this revolution, and hence of the foreign capital which financed it, was noted by Professor George Taylor with these words:

> "From the 'cutting edge' of the frontier, which already reached far into the Ohio River Valley, to the outskirts of its seaboard cities the United States was in 1815 chiefly an agricultural country. Commerce, largely sea- and river-borne, was organised and directed by the merchant capitalists residing in a few cities along the Atlantic Coast. This American economy of the early nineteenth century might best be described as extractive-commercial in character. It is true that the beginnings of industrial growth were already discernible. But, in this land of continental expanses, only revolutionary developments in techniques of transportation and communication would make possible that almost explosive rush of industrial expansion which characterised the later decades of the century."

One of the earliest fuses was the Erie Canal, which was constructed over an eight-year period beginning in 1817. The greater part of its cost was financed by British investors. When completed, the Erie Canal ran westward through New York State to Lake Erie, providing communication between the Atlantic seaboard and the interior of the United States. The problem of gaining the required funds was solved by the State of New York when it issued more than $7 million of bonds, which passed "almost at once into the hands of Englishmen," according to Professor Leland Jenks. The Canal was an immediate financial success, attesting to the value of the service it provided, and its profits in 10 years were sufficient to redeem its obligations entirely.

The success of the Canal inspired other States in the same direction. In this period, the States launched into a vast programme of internal improvements which required heavy capital investment. In 1820, they had combined debts of less than $13 million; by 1830 these had doubled, and by 1840 their total debt measured $200 million. Some of this debt was held at home, but the greater part was in foreign hands. Roads, bridges, canals, and banks were subsidised and otherwise assisted by State Governments, and England was eager to have the bonds which financed them.

A number of American cities issued securities which flowed into foreign ownership and the city of Washington, D.C., floated an issue in Amsterdam in 1830. Though such municipal borrowing provided a channel for only a small part of the total of foreign funds invested in the United States, it continued into the early twentieth century. (Cities such as Boston, Massachusetts, and Providence, Rhode Island, built their streets, water systems, sewers, and city halls with foreign capital in the 1870s and 1880s; from 1907 until just before World War I, no year passed without New York City borrowing abroad.)

At the end of the 1830s, this rapid internal development came to a halt, brought on by serious recession in the American economy. Regrettably, nine States defaulted on the interest on their debt in 1841 and 1842; several simply repudiated their debt. As a result, for roughly a decade, American securities held little or no attraction to foreign lenders, and capital improvements were undertaken only at a crawling pace. Even the Federal Government was largely without credit abroad, for it had been asked to assume the defaulted State debts but had refused. Then, as now, the lender was concerned with the safety of his investment.

Subsequently, foreign faith was renewed and the flow of capital picked up. Much of it was devoted to American railroad securities in the remainder of the nineteenth century. By 1853, foreigners held one-quarter of the nominal value of American railroad securities, and, by 1890, perhaps one-third.

More than any one thing, the railroad unified the United States politically and made it economically strong. The vast distances, difficult mountain barriers, and virgin forests demanded a cheap, fast, and flexible method of transportation by land. The railroad provided it.

Incentives

A noteworthy feature of American railroad finance was the role played by governments—municipal, county, state, and federal—in encouraging development. Each provided important assistance to the privately owned railroads to help them start and then grow.

The Federal Government, for example, made extensive grants of land to a number of roads. While foreign investors might not have had much faith in the road itself, the land provided attractive security. (In some instances, the bondholders could freely convert their securities for land, and in others, the transfer took place only upon default; land found its way into foreign hands in both ways.) These land grants were unquestionably decisive in gaining foreign funds which otherwise would have been unavailable, for example, to the Illinois Central and Northern Pacific.

In the main, American Governments did much to stimulate foreign investment and little to deter it. Laws were passed, in some cases solely because of the fears of local special interests, limiting foreign ownership of land, of merchant ships, and of banks. (In the latter case, the effect on foreign investment was only accidental for the legislation was directed against ownership by persons residing outside of the State passing the legislation.) But the great bulk of the economy was open to unrestricted foreign investment and, in critical areas, as seen with railroads, Governments took special steps to encourage both foreign and domestic private investment.

After more than a century of economic growth, the close of World War I found America in a creditor position as Europe liquidated its assets to finance the war. The tables were turned and the United States began to do for others what they had done for her. Only recently U.S. private foreign investment flowed out at the rate of $4,000 million per annum; U.S. private investors have today assets abroad of roughly $35,000 million.

BOYCOTT CAMPAIGN AGAINST FOREIGN CLOTH INTENSIFIED

MORE COTTON LOOMS IN ASIA

From A Special Correspondent

MANCHESTER, 12th *August*

MANCHESTER LETTER

LANCASHIRE'S critics never tire of telling the cotton industry that it must be prepared to help itself. Up and down the country, the criticised are now taking the critics at their word. The word "boycott" has suddenly flared up and local appeals are being made to the public not to buy imported goods.

In Rochdale, where the shop windows display men's shirts from Hong Kong at 6s. 11d., posters give the warning: "Your job is at stake. Don't buy Empire-made or foreign textiles." In Oldham, Bolton and the weaving towns of north-east Lancashire, similar campaigns are being pressed forward to persuade shoppers to insist on goods which have been spun, woven and finished in Great Britain. Some local authorities are writing a clause into their tender forms that goods supplied for municipal needs must have been manufactured in this country. The campaigners are approaching shopkeepers and co-operative societies and support is being pledged.

It can no doubt be argued that, in effect, the boycott backers are merely supplementing the Cotton Board's own campaign, "Always Buy Britain's Cottons." But there is a difference. The white gloves of subtle persuasion through the medium of modern advertising techniques have been exchanged for the bare knuckles of blunt retaliation.

So far all this has been happening at local level. Centrally, the employers' organisations have said nothing, even though some of their members—as at Rochdale—are actively joining in the boycott moves. In the case of the trade unions, it is true that a central sub-committee has been set up to look at ways of securing "maximum publicity for Lancashire's plight," but the question of a national boycott, it appears, is only one of a number of ideas which are being examined.

The trade unions are also thinking in terms of mass demonstrations in key textile centres; nearly two months have gone by since they asked the employers to unite with them in staging these demonstrations. Now both sides are to meet to discuss their future course of action.

Right Timing?

No one can blame the organisers of these local boycotts for the attitude they are adopting, least of all Lancashire's critics. The imported cloth problem has dragged on for so long that even the patience of the most moderate elements in the industry must by now be sorely tried. Yet the question must be posed as to whether the launching of these local campaigns at this particular moment is calculated to help the Lancashire industry in the immediate future.

It is known that not all the trade union leaders are happy about the timing. The truth is that the boycott call has coincided with the final preparations for the resumption of talks with the Hong Kong industry on the question of a voluntary limitation of exports to the United Kingdom on which there has been a good deal of behind-the-scenes activity.

All this takes time. If these talks are to succeed, and there seems to be growing confidence that they will, an atmosphere of goodwill on both sides is essential. If they do not, then it would really have to be a case of Lancashire helping itself. But in the meantime, it seems hardly fair to Lancashire's negotiators to leave them wide open to a charge from Hong Kong that a "gentleman's agreement" is being sought against a background of threats and boycotts.

The door to a voluntary agreement has been opened by India and Pakistan. It would be a pity if Hong Kong now found an excuse for slamming it shut again.

More Out of Work

Nearly 19,000 Lancashire cotton workers are unemployed or working short time, because mill order books have run down to such a level that full-scale production is impossible. But even this high total does not reveal the full extent of the depression which many blame largely on unrestricted imports from the East. The figure of 19,000 workers affected by mill closures and dwindling order lists is given in a survey by the Ministry of Labour.

But when the survey was made 10 towns in north-east Lancashire, one of the worst hit areas—were on holiday and several thousand cotton workers who would have been included in the unemployed total could not be registered.

The out-of-work figure has shown a sharp advance over the last 12 months. A Ministry survey just a year ago showed that the number of cotton workers affected was then little more than 2,000. Short-time working is now most prevalent in the spinning section of the Lancashire industry. The Ministry of Labour says that 12,447 workers were unemployed when the last survey was made. Of these, 10,470 were on short time.

The total in the weaving section was 4,512, including 3,090 on short time. In finishing, the figure is considerably lower.

Eastern Expansion

No fresh trend is evident in the latest information compiled by the Manchester-based International Cotton Federation estimating the number of cotton looms in place and under construction throughout the world at the end of January. The movement of cotton manufacturing away from the traditional European and North American centres to Asia and South America continues, although the development is a gradual one.

As compared with the position at the end of January 1957, the total number of cotton looms in place declined by nearly 26,000, the aggregate being 2,640,876 against 2,666,774. Once again, the number of automatic looms increased—this time by 23,694—to a total of 993,652, whereas there was a fall of 41,593 in the number of ordinary machines to 1,579,541.

Europe's loomage slumped by 36,729 and in North America the fall was 7,580. In contrast, Asia had 13,199 more looms in place. Individual countries' losses in looms were:—United Kingdom 17,563, the United States 9,950, Germany 8,707 and Italy 6,628. Gains included Japan 3,232 looms, Korea 2,026 and India 1,752.

Considerable programmes for expansion in weaving capacity are being planned in the modern mill area in Asia, South America and Africa. During the current year 14,441 looms are being erected of which nearly 60 per cent. are in Asia. Additionally, weaving machinery amounting to 20,000 looms is on order for erection in 1959-60, of which nearly 16,000 are for Asiatic countries.

Idle Machinery

The pattern remains the same in assessing the quantity of stopped looms. At the beginning of this year over 50,000 machines were at a standstill in the United Kingdom and it needs no particular powers of observation to forecast that the total is now very much larger. When the survey was taken there were more than 23,000 looms idle in the United States, nearly 26,000 in Italy and 18,000 in France. Despite the expansionist plans already drawn up, the beginning of this year saw 13,000 looms standing idle in Brazil and more than 12,000 stopped both in India and Japan.

Comparisons between average weekly loom-hours worked in the various cotton industries have caused dissension and argument in Lancashire in the past. The International Federation now quotes averages calculated on the basis of looms in place and also on the basis of active looms only, but, despite these changes, Lancashire continues to hold the lowest place in the table.

Machinery in the United Kingdom early this year was working on an average of 48.8 hours weekly, assessed on active looms only, whereas, at the other end of the scale, mills in Malaya are quoted as operating 168 loom-hours weekly. Among the major countries, average weekly loom-hours are given as 156.3 in Hong Kong, 92.1 in Japan, 110.6 in India, 64.3 in France and 61.5 in Italy. Of the 350,000 looms in place in the United States, more than 292,000 were operating on three shifts.—*All Rights Reserved.*

WORLD COTTON TEXTILE WEAVING CAPACITY SHRINKS FURTHER

UNDERDEVELOPED REGIONS, HOWEVER, RECORD EXPANSION

THE year 1957 witnessed a further shrinkage in the weaving capacity of the world cotton textile industry. According to a census taken by the International Federation of Cotton and Allied Textile Industries, the number of cotton powerlooms (with a reed space of 16 inches and above) on 31st January 1958 was 2,640,876, as against the revised figure of 2,666,774 on the same date of the previous year, representing a fall of 25,898 looms. Thus, the downward trend in world cotton loomage continued during the year also. From as high a figure as 3.16 million in 1930, the number of cotton looms declined to 2.72 million in 1952, 2.69 million in 1956, 2.66 million in 1957 and, further, to 2.64 million at the beginning of this year.

Although the total number of looms decreased, the number of automatic looms increased by 23,694 from 969,958 at the beginning of 1957 to 993,652 at the commencement of this year. The number of ordinary looms fell by 41,593 from 1,621,134 to 1,579,541 during the same period. Semi-automatic looms, that is, ordinary looms with automatic attachments, also dropped by 7,999 from 75,682 to 67,683. Thus the net decrease in the number of cotton powerlooms throughout the world was 25,898. The following table shows the fluctuation in the number of world cotton powerlooms since 1930:

	Total	Ordinary	Automatic	Automatic attachments
1930	3,158,778	2,444,296	661,023	53,459
1933	3,129,969	2,481,327	596,596	52,046
1936	3,069,905	2,343,693	662,167	64,045
1952	2,725,632	1,833,569	828,713	65,350
1955	2,771,429	1,767,356	925,099	78,974
1956	2,693,919	1,655,794	949,237	78,888
1957	2,666,774	1,621,134	969,958	75,682
1958	2,640,876	1,579,541	993,652	67,683

It will be noted that, since 1952, the number of automatic looms has shot up from 826,713 to 993,652, a rise of 166,939. Of this increase, the share of India is negligible.

A Significant Point

A significant point to note is that, Continent-wise, the reduction in loomage was confined to both Europe and North America; in South America, Asia and Africa, however, the trend has been upward. Thus the number of looms in Europe declined from 1,291,749 on 31st January 1957 to 1,255,060 on 31st January 1958. In North America, it declined from 418,762 to 411,182 in the same period. In South America, however, the number of looms increased from 166,181 in 1957 to 169,100 and in Africa from 26,819 to 29,072. In Asia and Oceania also the number of looms rose from 763,263 to 776,462. The following table shows the trend at a glance.

Continents	Number of looms as on 31st January 1958	1957
Europe	1,255,060	1,291,749
North America	411,182	418,762
South America	169,100	166,181
Asia and Oceania	776,462	763,263
Africa	29,072	26,819
India alone	207,006	205,254
Of the totals above, automatic looms are :		
Europe	390,490	376,804
North America	384,503	392,514
South America	62,386	54,866
Asia and Oceania	144,348	135,716
Africa	11,985	10,056
India alone	14,112	13,402

Country-wise, the reductions were chiefly in the United Kingdom, Germany, Italy and the U.S.A. while the major increase took place in such countries of Asia as Japan, Korea and India. Thus, in the U.K., the number of looms declined from 283,734 on 31st January 1957 to 266,171 on 31st January 1958, while that in West Germany dropped from 132,009 to 123,302 in the same period. Number of looms in Italy, at the beginning of 1958 was down at 114,978, as compared with 121,606 a year earlier. In the U.S. as well, the number of looms declined from 360,059 to 350,109.

Japan, Korea and India recorded an expansion in weaving capacity. The number of looms in Japan increased by 3,232 during the period from 373,076 to 376,308. In Korea, the increase was of the order of 2,026, from 8,447 to 10,473. The number of looms in India was also higher at 207,006, as against 205,254 at the beginning of 1957.

Returns obtained from the various countries indicated that 14,441 additional looms were under erection, as against 14,231 last year, which were expected to produce cloth during 1958. Of these, 13,168 were automatic looms and 1,262 ordinary looms. A further 19,811 looms were on order for the period 1959-60 of which 17,901 will be automatic.

Asia is increasing its number of looms by 8,452 in 1958 which is 58 per cent. of the total new additional looms being erected throughout the world. Of this, 8,062 will be automatic. South American mills intend to add nearly 3,000 of which 2,581 will be automatic. During the period 1959-60, both these continents and Africa have a programme of considerable expansion in their weaving capacity. During the period 1959-60, 18,992 looms (of which 15,330 automatic) are to be erected in Asia, 1,324 looms (862 automatic) in South America and 1,270 (all automatic) in Africa. Although no returns were received from China, it was reported that that country, under the present Five-year Plan, intended to establish 19 mills having an additional 45,000 looms.

Loom Hours Worked

A comparison of the loom hours worked and idle looms in the five continents, namely, Europe, Africa, North America, South America and Asia indicate that the average weekly loom hours, on the basis of active looms only, was the highest in Asia and the lowest in Europe, the figures being 120.1 and 71.2 respectively. Average weekly loom hours, on the basis of looms in place, was also the highest in Asia (115.8) and the lowest in Europe (65.3). The following comparative table illustrates the position.

	Average weekly loom hours		Idle looms
	On basis of looms in place	On basis of active looms only	
Europe	65.3 (62.5)	71.2 (72.3)	106,210
Africa	105.5 (89.3)	106.4 (91.9)	231
North America	94.2 (93.5)	107.8 (94.2)	27,388
South America	91.3 (85.5)	93.8 (89.7)	14,421
Asia	115.8 (106.5)	120.1 (111.1)	28,576

Note.—Figures in brackets are those of 1957.

As will be seen from the above table, the largest number of looms remained idle in Europe and the smallest in Africa. Thus the number of idle looms was as much as 106,210 in Europe, 28,576 in Asia, 27,388 in North America, 14,421 in South America and only 231 in Africa.

RESEARCH IN WOOL

At its fourth meeting held in Srinagar on 26th July 1958, the Development Council for the Woollen Industry discussed, among other subjects, the possibility of setting up a carpet research and dyeing centre in the Mirzapur district, establishment of small testing laboratories, and the standardisation of items of wool manufacture. The removal of burrs by carbonisation or burr picking and crushing machines instead of the hand method was another subject on the agenda. The 4-person sub-committee appointed in March 1958 to examine the possibilities of establishing small testing laboratories recommended that two testing laboratories be set up to begin with, and one more after these two have been firmly set up. They are intended primarily for testing yarn for hosiery and for weaving. It was agreed that, in some cases, standardisation of items of wool manufacture would benefit the export trade, and a sub-committee will recommend what particular items should be considered. It was suggested at the meeting that the present method of de-burring wool by hand was detrimental to the quality and unhealthy for the workers, and carbonising plants or burr-picking machines might be established in suitable wool markets either through public or private enterprise as soon as possible. The Council agreed that the suggestion was sound in principle, but asked that more precise details of the economics of the matter be given.

SHEEP NUMBERS AND WOOL PRODUCTION 1956

The Union Ministry of Food and Agriculture has just brought out the third issue of *Indian Livestock Statistics* covering the 1955-56 season. The issue includes a breakdown by States of the sheep number figures obtained from the March-April 1956 livestock census, together with comparable figures for 1951, recalculated according to the new State boundaries after the reorganisation of November 1956. Out of the total sheep population of 38.7 million, 19 million or nearly 50 per cent. were in the four southern States, just over a third were in the North-west (including Bombay and Rajasthan) and the remainder were widely scattered over the rest of the country. Between 1951 and 1956, the number in the North-west appears to have risen by nearly 3 million, while that in the South fell by 4 million.

Tentative estimates of wool production show a total of 65 million lbs. (actual weight), for 1956, as compared with 59.3 million lbs. in 1951 or an increase of 10 per cent. The broken-down figures (in thousand lbs. actual weight) are given below:

	1956	1951
Fleece wool from adult sheep ...	55,315	45,346
" " lambs	4,694	3,835
Pulled wool	5,041	4,981
Unspecified	...	5,100
Total ...	65,050	59,262

In 1956, over 42 million lbs. or 65 per cent. of the total came from the North-western States, while only 21 per cent. came from the Southern States, despite the greater number of sheep in that area, as the following table shows:

	Sheep numbers			Estimated wool production 1956 (actual weight)	
	1956 (millions)	1951 (millions)	% of total 1956	(Million lbs.)	% of total
North-western States :					
Rajasthan ...	7.37	5.39	19.1	29.42	45.2
Punjab ...	1.16	0.85	3.0	3.95	6.1
Himachal Pradesh ...	0.53	0.68	1.6	1.27	2.0
Bombay ...	4.00	3.65	10.3	7.60	11.7
Total ...	13.16	10.52	34.0	42.24	65.0
Southern States :					
Andhra Pradesh ...	7.43	10.06	19.2	5.18	8.0
Madras	7.17	7.93	18.5	4.06	6.2
Mysore	4.15	4.35	10.7	4.56	7.0
Total (including Kerala) ...	18.85	22.77	48.8	13.81	21.2
Central States :					
Uttar Pradesh ...	1.90	1.64	4.9	4.14	6.4
Madhya Pradesh ...	0.90	0.69	2.3	1.45	2.2
Total ...	2.80	2.33	7.2	5.59	8.6
Jammu and Kashmir ...	1.46	0.98	3.8	1.78	2.7
Other States ...	2.38	2.25	6.2	1.64	2.5
Total India ...	38.67	38.83	100.0	65.05	100.0

Efficiency on your mind?

Naturally! Better lighting means less eye-strain, less danger of accidents, and an increassed output in the long run. RADIO Lamps and Fluorescent Tubes are a buy with a premium —they burn brighter, they last longer. Yes 'RADIO' is indeed the answer to your problem!

SIZABLE FALL IN JUTE GOODS STOCKS

OUTPUT BETTER—OFFTAKE, TOO, HIGHER

THE statistics relating to jute goods for the month of July show that the general expectations of a substantial fall in stocks with mills on account of larger shipments during the month have materialised, though the extent of fall may be somewhat less than that expected. What is, however, noteworthy is that the decline in stocks has not been brought about by a cut in production; on the contrary, the stocks are lower, despite an increase in output. This means that the fall in stocks has been solely due to larger offtake from mills. Thus, while the total output of all varieties has gone up by 7,400 tons to 89,800 tons, thereby reversing the downward trend noted in the preceding month, the stocks have dropped by 11,800 tons to 122,200 tons, in contrast to the rise of 21,900 tons recorded at the end of June. In other words, the fall in stocks would have been more pronounced but for the rise in output.

The spurt in production is shared by all the three main categories of goods. Hessian output has gone up by 4,000 tons to 35,300 tons, thus more than making good the decline of 2,900 tons in the previous month and raising the monthly output to the highest level since July 1957, when it aggregated 35,600 tons. The production of sacking has risen by 3,100 tons to 49,000 tons, as against a shrinkage of 7,800 tons in June. "Other manufactures," at 5,500 tons, account for a rise of 300 tons, as compared with the sharp drop of 1,800 tons in the previous month.

The increase in aggregate production is accounted for in part by the increase in the number of hours worked from 195 to 209, the same as that in the corresponding month of 1957. It will, however, be noted that, though the number of hours worked in July this year and in the corresponding month of 1957 is the same, the output over the latter month shows a rise of 3,900 tons, as will be seen from the following comparative table:

Production of Jute goods

(In tons)

	July, 1958	June, 1958	May, 1958	July, 1957
Hessian	35,300	31,300	34,200	35,600
Sacking	49,000	45,900	53,200	45,000
Others	5,500	5,200	7,000	5,300
Total ...	89,800	82,400	94,900	85,900

As already pointed out, despite the rise in production, stocks of jute goods have declined by 11,800 tons to 122,200 tons. Notwithstanding this fall, the stocks at the end of last month constitute the second highest since September 1956. The shrinkage in total stocks is mainly due to the marked decline in hessian and "other manufactures." The stocks of hessian have dropped by no less than 11,100 tons to 19,900 tons, the lowest level since December 1956, when they amounted to 19,700 tons. It is significant to note that the July-end stocks of hessian constitute only 16.28 per cent. of the total stocks, the lowest ratio in the history of the industry, the corresponding ratio for December 1956 was 20.58 per cent. The stocks of "other manufactures" have declined by 2,700 tons to 12,400 tons, the lowest level in the last seven months.

The following comparative table shows the trend of stocks as at the end of the last three months and at the close of July 1957:

Stocks of Jute Goods

(In tons)

	31st July, 1958	30th June, 1958	31st May 1958	31st July, 1957
Hessian	19,900	31,000	25,000	38,300
Sacking	89,900	87,900	71,800	63,500
Others	12,400	15,100	15,300	6,800
Total ...	122,200	134,000	112,100	108,400

As will be seen from the table above, sacking stocks have gone up by 2,000 tons to 89,900 tons, thus maintaining an almost uninterrupted rise (except in February last) since November 1957, and lifting them to a level not seen since July 1956. At this level, they constitute 73.56 per cent. (a new record high) of the total stocks. Even in July 1956, when the sacking stocks and total stocks were higher than those at the end of last month, the ratio of sacking stocks was no more than 67.58 per cent. The rising share of sacking in the total stocks of manufactured goods seems to have set the mills thinking whether a part of their sacking production could not be diverted to hessian. Another factor which seems to have induced mills to think on these lines is the comparatively larger offtake of hessian in July and in the first week of the current month. Referring to this subject in its article on "Aftermath of Dock Strike," the *Jute Bulletin* of the Indian Central Jute Committee in its July 1958 issue observes:

"The present outlook is not so bright in sacking, with stocks of this fabric (the reference here is to the end of June stocks) at their highest since September 1956. The effect of the dock strike on this accumulation is only marginal. It is believed that stocks may further increase to the detriment of the price structure of the market, unless there is some readjustment of the line of production. The offtake of heavy goods in recent months has been disappointing, and there are still no signs of a revival of demand. Obviously, the position points to a measure of present overproduction which will right itself as mills, for compelling economic reasons, continue their marginal transfer of looms to the production of hessian, which happens now to be relatively better placed, both statistically and marketwise."

It is encouraging to hear that consumption of hessian in the U.S. during July amounted to 68 million yards, an increase of 7.6 million yards over that in June and of 7 million yards over that in July 1957. This brings the total consumption of hessian during the first seven months of the current year to 474 million yards, as compared with that of 482 million yards in the corresponding period of last year.

FINANCING OF JUTE IN PAKISTAN

Jute is one of the most important commercial crops of Pakistan and is the chief source of cash income for millions of agriculturists of East Pakistan. At present, Pakistan's annual production of jute is about 6,000,000 bales of which nearly 1,200,000 bales are consumed by domestic mills. The rest is exported to foreign countries. During 1956-57, total exports of jute were valued at Rs. 80.85 crores. If account is taken of jute consumed by local mills, the total value of the crop may roughly be placed at Rs. 100 crores.

The financing facilities for the production and marketing of this crop are most inadequate at the grower's level and improve progressively as one moves up in the marketing chain. Apart from personal sources, most of the grower's needs for finance and credit were met by Hindu moneylenders before partition. Since their exit, the role has been taken over, albeit on a substantially reduced scale, by relatively more prosperous farmers and marketing intermediaries. The cost of borrowing from these sources is fairly high. Growers are often forced to sell their produce at a predetermined price to the lenders. Even where no obligation to sell the crop to lending agency exists, pressure for the repayment of loans, added to other factors (such as lack of storage capacity), weakens the grower's position.

The small dealers (locally known as *fariahs* or *beparis*) generally buy jute in small lots either from the grower's home or from village markets (*hats*). They are generally financed by more substantial merchants or balers who are relatively more prosperous. Commercial banks do not advance loans to any buying intermediaries in the primary markets.

In recent years, attempts have been made to use the co-operative organisation for financing jute marketing at the primary level. Due to lack of adequate capital and administrative capacity, these operations have not been on a very large scale. Loans sanctioned by the Government for the co-operatives increased from Rs. 0.50 crore during 1951-52 to Rs. 2.0 crores during 1956-57. However, this was still small in relation to the desired size of operations. Such finance is provided through the National Bank of Pakistan which, on the guarantee of the Central Government, opens an account favouring the Registrar of Co-operative Societies. Recently, funds have been made available directly to the East Pakistan Jute Marketing Corporation which has been active in buying jute particularly in the border areas.

Commercial banks come into the picture only in the secondary markets or *pucca* baling centres. Their advances are mainly confined to well-established business firms and shippers. The advances are mainly against the security of hypothecation of stocks on cash credit arrangements. In some cases, the security is simply a lien over the stocks. As advances are usually secured by a floating charge over the stocks, the banks have to be selective about their clients. Stocks have to be covered with insurance and the policies lodged with the bank. Against such advances, banks usually retain a margin of 25 per cent. to cover fluctuation in prices.

In recent years, the volume of credit provided by banks to the shippers has shown a significant rise. The total outstanding under cash credit system rose from Rs. 12.72 crores during 1952-53 to Rs. 20.24 crores during 1955-56. During the same period, packing credit provided by banks also rose by Rs. 2.55 crores to Rs. 4.81 crores. The total amount of bank advances against jute stood at Rs. 18.44 crores at the end of 1957. The increased lending appears to be the combined result of a higher price level, entrance of new banks in the field and extension of facilities to a large number of firms.

NEYVELI PROJECT

TO BE PUSHED THROUGH AS AN INTEGRATED SCHEME

THE multi-purpose Neyveli Lignite Project would go through as an integrated scheme, despite the fact that only the mining part of the project had been included in the "core" of the second Five-year Plan. This was disclosed by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, in the Lok Sabha last week in reply to a two-hour debate on the annual report of the Neyveli Lignite Corporation. The members of the House from Madras, Andhra and Mysore, the States which are the main beneficiaries from Neyveli project, the most important Plan project in the South, naturally evinced keen interest in the working of the Corporation. They also expressed their concern over the decision of the Planning Commission to include only the mining part of the project in the "core" of the Plan, when drawing up the list of core projects in its recent memorandum on the *Appraisal and Prospects of the Second Plan.*

Under the Rs. 68.9 crore-multi-purpose project at Neyveli, which had been given a high degree of priority under the second Five-year Plan, the lignite reserves were to be harnessed to produce much-needed electricity for industrial development in the South to manufacture fertilisers for agricultural development and to produce briquettes for use as domestic and industrial fuel. The annual target for production of lignite is 3.5 million tons per annum. The target date for exposing the first cut had been fixed as 1960 and full production stage was to be attained by the end of 1960 or early 1961. The most important constituent scheme of the whole project is the generation of electric power, because the most economic utilisation of lignite is to use it as fuel in boilers close to the mine itself. The installed capacity of the thermal station consisting of two units, to be set up at an aggregate cost of Rs. 20 crores, would be about 200,000 kw. The first of the two units was programmed to be commissioned by the middle of 1960 and the second by the end of that year. The next important constituent is the fertiliser plant to produce nitrogenous fertilisers with an annual capacity of 70,000 tons of nitrogen content. The fertiliser plant was also programmed to go into production by the end of 1960, the time by which lignite mining in commercial quantities was scheduled to start. The balance of lignite, after meeting the requirements of the power house and fertiliser plant, would be utilised for producing briquettes. The proposed plant would produce 714,000 tons of raw lignite briquettes, which on carbonisation would yield 380,000 tons of carbonised briquettes and by-products.

As already pointed out, the mining part of the Neyveli project alone has been included in the "core" of the Plan. This entails a foreign exchange cost of Rs. 10.50 crores, of which expenditure incurred or committed as on 31st March 1958 amounted to Rs. 6.70 crores and fresh foreign exchange commitments required for completing the programme is Rs. 3.80 crores. The members of the Lok Sabha from the South desired that the whole project should be implemented as an integrated one, and the fertiliser plant, in particular, should be set up at all costs. One of them asked for an assurance that the fertiliser project would not be delayed. There was a complaint from them that the railway facilities in and near the project area were inadequate and that the laying of the railway lines and sidings was not proceeding according to schedule.

In his reply to the debate, Sardar Swaran Singh assured the members that it was the desire of the Government to implement all the schemes in the project. He added that synchronisation of the various aspects of the project was necessary, because lignite had to be used as it was being mined. So far as the mining part of the project was concerned, there was not likely to be any difficulty at all with regard to internal expenditure, as well as foreign exchange. He disclosed that the first unit thermal power station in Neyveli to be set up under an agreement with the U.S.S.R. would be commissioned by 31st January 1961 (as against the original schedule of middle of 1960) and would go into full production by 31st December of the same year. The project report on the power schemes, for the execution of which the Soviet Union had offered aid under the 500-million rouble agreement, was expected next month. The entire foreign exchange cost of this scheme would be met out of the Soviet rouble credit.

TEA INDUSTRY FACES THREAT OF DEPRESSION

NEED FOR EARLY DECISION ON EXPORT DUTY

IN deference to the representations made by tea producers in this country for relief in fiscal levies, particularly on common teas, the Government of India announced, on 1st June 1958, a reduction of export cess on tea from Rs. 4 to Rs. 2 per 100 lbs. and a cut in excise duty on tea in packages exceeding 60 lbs. in weight or loose tea from one anna to half anna per lb. It did not, however, announce any reduction in export duty, for which the industry had been agitating in order to make Indian tea more competitive in world markets. It was, nevertheless, announced by the Government that "the question of affording some relief to the tea industry has been engaging the attention of the Government." The aforesaid reliefs were announced as an interim relief, pending a further study of the problem, that is, devising a scheme by which a greater quantum of relief could be given to producers of common teas as distinct from the superior categories. In fact, the cut in export cess was meant to be effective for two or three months, till the Government was able to formulate a scheme for providing a reduction in the tax burden on a permanent basis. It is more than two and a half months since the interim relief was announced, but the Government has not yet fulfilled its promise to the industry.

Relief Inadequate

Meanwhile, an impression seems to have gained currency in certain quarters that the tea industry is well pleased with the cut in export cess and excise duty on loose tea and that no further relief is needed. In seeking to correct this misapprehension, in the course of a statement, the United Planters' Association of Southern India says that "if this relief were all that is to be granted, it is totally inadequate to meet the difficulties from which the industry is suffering." The planters, however, recognise that, "while these reductions are only nominal, they have been granted as an earnest of Government's recognition of the industry's need for relief and as a token of its intention to afford more substantial help in the near future." The U.P.A.S.I. contends that the reduction in export cess contributes very little towards rendering Indian tea competitive in foreign markets. The statement goes on to add that the reduction in export cess amounts to Rs. 90 lakhs per annum on the average Indian export of 450 million lbs. This works out to a cut of only 2 nP per lb. or less than 0.8 per cent. of the average value of exported tea, while the export duty exceeds 20 per cent. of the average value realised for common teas at the auctions in the last six months.

Cut in Excise Duty

The half-anna reduction in excise duty, according to the U.P.A.S.I., applies only to about 100 million lbs. of tea sold within the country as loose tea. The concession amounts to about Rs. 35 lakhs per annum and represents only about 1½ nP per lb. of tea to which this relief applies and less than 1 nP per lb. on the average of all teas subject to excise duty. Pointing out that this relief does not, in fact, mean anything to those who export and sell packet tea as well, the statement says:

"The amount of excise duty paid by the producer is recovered from the buyer at the time of sale, but this reduction in excise duty will not result in improving in any way the price which the exporter or local packet dealer can pay for his tea as the excise duty which he refunds to the producer, at whatever rate, is credited against the export and enhanced excise duties which the exporter and packet dealer, respectively, must continue to pay as at present. They will thus receive less credit in respect of their initial excise payments, but will have proportionately more export and packet tea excise duty to pay in adjustment."

While acknowledging the Government's measure announced on 1st June as an interim one and that the question of more substantial relief is receiving consideration, the U.P.A.S.I. urges that the granting of something more than purely nominal concessions should not be long delayed, in view of the immediate necessity to improve the competitive position of Indian tea in world markets.

Emphasising the need for affording substantial relief for producers of common and medium teas, Mr. J. R. Vernede, Chairman of the Indian Tea Association in Britain, pointed out, in the course of his address at the annual general meeting of the Association held recently in London, that it was after all in the interests of the country as a whole to see its export industries in good heart, since they were vital to the success of its Five-year Plan. The plight of common and medium teas was well brought out by Mr. Vernede in the following words:

"Any attempt, however, to interfere with the economics of trade presents problems and these are perhaps even more complicated when dealing with tea than is the case with many other commodities. Generally speaking, quality producers have been able to market their teas profitably during 1957 and the demand for such teas continues unabated. Every emphasis is laid by my Association on the need to produce clean teas of the optimum quality of which each estate is capable and it is true to say that the vast majority of North Indian estates are producing the higher standard of tea consistent with geographical location, but when tea is in abundant supply, it is the common producer who takes the knock. The difficulty we have to face is that in the cases where due allowance has to be made for lower yield, the cost of production for common teas may be little, if any, below that of quality teas. To this must be added the same rates of Indian Central taxation, excise and export duties, as well as the multiplicity of State taxes including a high rate of agricultural income-tax as are borne by the quality producer. In such circumstances, it is no consolation to the producer of common tea to find himself priced out of the world's markets by similar teas from other countries which can undersell him by as much as 1s. 6d. to 2s. per lb. and still work to a profit.

Threat of Depression

"When one mentions costs it must be borne in mind that producers in India are required to pay labour in accordance with prescribed minimum wages. They have, in addition, to meet the incalculable burden of implementing the Plantation Labour Act and for the years 1954 to 1956 have also had a liability, when profits have been earned, to make large payments by way of annual bonus. It is the cumulative effect of these many burdens at a time when there is a surplus of tea which has brought about the present critical position of many of our members and unless something is done producers of common and medium teas may well have to face a depression as serious as that which occurred in 1952."

The International Tea Committee's latest annual report disclosed that, over the last twelve years, the cumulative excess of world supply over absorption amounted as at the end of 1957 to 89 million lbs., though during 1957, in particular, the supply fell short of absorption by 14 million lbs. The surplus of supply over the past twelve years, Mr. Vernede said, must be viewed in its correct perspective. "Stocks of tea were undoubtedly run down in all consuming countries," he went on, "as a result of the Second World War and part at any rate of the surplus was essential for the rebuilding of reasonable stocks. When we consider that world absorption has increased from about 1,094 million lbs. in 1939 to 1,435 million lbs. in 1956, it will be readily appreciated that some increase in stocks is essential if stability is to be ensured."

International Tea Agreement

With a view to bringing about stability in world tea markets, two suggestions were made by him. These were the renewal of the International Tea Agreement and the intensive propaganda to increase consumption. Mr. Vernede was convinced that exports from producing countries could be equated to world demand only by the renewal of the International Tea Agreement. The regulation of exports from the four main producing countries, India, Pakistan, Ceylon and Indonesia, which were signatories to the old agreement and which account for 90 per cent. of the world supply of tea, under an international scheme would undoubtedly ensure, for some years at least, the stability which was so desirable in the interests of governments, producers, buyers and consumers alike. Though Mr. Vernede felt it desirable to include other producing countries, the outturn of which had in recent years increased considerably, he thought it was not essential for the success of the scheme. While he was not optimistic about the renewal of the agreement, he felt that it would be of lasting benefit to all concerned if a discussion could be held on the question of world supply and absorption between the representatives of producers' associations, particularly those of India and Ceylon.

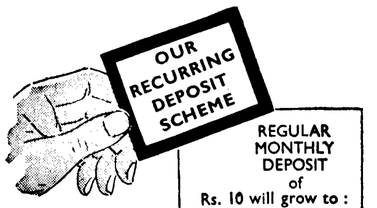
It will be of interest to note that the tea industry was amongst the first to come to an international agreement in order to give consumers the tea they needed at a fair price and at the same time carried on a planned development of estates and steadily improved the conditions for their labour. "It is poor statesmanship," Mr. Vernede pointed out, "if we can no longer combine to put our house in order, but depend instead on other folks' misfortunes in the hope that we shall be the lucky one who gets away with it."

Intensive Internal Propaganda

The only way to meet the potential increase in supply from old and new sources is to increase consumption by intensive propaganda. Referring to the Indian internal market, where the present consumption is of the order of only 200 million lbs. or below ½ of a pound per head per annum, Mr. Vernede said that a substantial increase in internal consumption would provide a complete answer to India's domestic problem. Nearly two years ago, Sir Percival Griffiths, Adviser to the Indian Tea Association, London; submitted, at the request of the Government of India, a report, making recommendations for intensification of propaganda within India. Mr. Vernede was happy to note that at least now the Government of India had realised the need for such propaganda and had set up a promotion committee for the purpose.

In addition to India's own domestic market, Mr. Vernede pointed out, Africa offered a vast potential market, while saturation point had not yet been reached in the U.K. itself. In Britain, according to the I.T.A. Chairman, it was very difficult, if not impossible, to obtain a good cup of tea at sports gatherings, the attendance at which often ran into thousands. "With mobile canteens and with improvement in the serving of tea to large numbers of people in industrial establishments which employ hundreds or even thousands of workers," he added, "it should not be beyond the ingenuity of the expert to evolve methods whereby this latent demand for liquid tea can satisfactorily be met."

The Government of India has become lately conscious of the need to resuscitate propaganda in the U.K. which, since the break-up of the International Tea Market Expansion Board, is being carried out by the Ceylon Tea Propaganda Board alone. After all, the U.K. is the world's primary market for tea and it is, therefore, important to take all possible steps, in the face of fierce competition from other beverages, to make more people tea-conscious in that country. The average annual exports of tea from India to all countries during the last five years amounted to 450 million lbs., on which the export cess at Rs. 4 per 100 lbs. brought an annual income of Rs. 1.8 crore. Even if half of this sum collected were to be expended on propaganda abroad, a substantial increase in tea consumption would result.



REGULAR MONTHLY DEPOSIT of Rs. 10 will grow to : Rs. 500 after 46 months Rs. 1000 after 86 months

MARKETS FOR INDIA'S ENGINEERING GOODS IN SOUTH-EAST ASIA

TRADE DELEGATION'S SUGGESTIONS

A NOTABLE feature of the recent trends in India's export trade is the growing importance of engineering goods for which some producers have been able to find a market in several overseas countries. There is, of course, considerable scope for expanding exports of these goods, provided the quality of the goods is maintained at a high level and prices are competitive. In this connection, the report of the trade delegation (leader: Mr. B. S. Agarwal) sponsored by the Engineering Export Promotion Council, has examined at some length the prospects for India's engineering goods in South-East Asia which the delegation visited this year. The delegation, in its report, has also made a number of valuable recommendations. It has emphasised the need for concluding trade agreements with the South-East Asian countries and for improving the design and finish of India's goods.

The South-East Asian countries covered by the delegation are Ceylon, Singapore, Malaya, Thailand, Cambodia, South Vietnam, the Philippines and Hongkong which have a population of about 70 million. A large part of this population is dependent upon agriculture and imports a wide range of manufactured goods which are at present supplied by the U.S., West European countries and Japan. In one sense, India, according to the report, has a better chance of selling its goods in those countries. This is because the "machinery developed in our country will adequately fill the requirements of these countries, as at the present stage of development of these countries, the labour-saving devices incorporated in the products of the more highly advanced countries are not of much significance." It, however, rightly warns that "a sustained effort for many years will be necessary before any significant results will accrue."

Clearly, cost factor is important. The report observes that, in respect of such items as motor cars, refrigerators and air-conditioners, the prices at which they are sold in South-East Asian markets are lower than those quoted by India. They are, therefore, not competitive. There are, however, good prospects for low-priced consumer goods such as electric fans, sewing machines, steel furniture and hurricane lanterns. There is, it is stated, no prejudice against Indian goods. "To state that there is a prejudice against Indian products," says the report, "would be incorrect as there is not even an awareness that India produces such articles and not even token exports of such products have been made to date." This is certainly a sad commentary on India's export promotion efforts.

In the course of its country-wise analysis of export possibilities for Indian engineering goods, the report makes a number of observations in respect of specific items sold by India or for which there is a potential market. The more important of these observations and suggestions are summarised below:

Ceylon: It imports from India agricultural implements, automobiles, hardware, bolts, nuts and rivets, buckets, dry batteries, electrical fans and electrical goods, steel furniture, oil mill and flour mill machinery, radio receivers, sewing machines and water fittings. The specific suggestions made in the report for increasing exports to Ceylon are:

(1) With some drive, exports of fans can be improved. (2) Ceylon is a potential market for quality machine tools from India. If our prices are competitive and if we offer them service after sales, we can gradually establish a good market. (3) There is good demand for small implements used by farmers and tea gardens for builders' hardware and cycles. (4) Indian prices of bolts and nuts are 33⅓ per cent. higher than Japanese. (5) Indian buckets are popular but supplies are irregular. (6) There are good prospects for exports of sewing machines.

Singapore: There are immediate prospects for the export of electric fans, sewing machines, hardware items like wood screws, hinges, bolts and nuts, cycles, pumps, oil mill machinery and machine tools.

Malaya: India is the second largest exporter of fans to Malaya. There is good demand for deep-well turbine pumps, electrical accessories, radios, bolts and nuts and sewing machines. Other goods for which there is scope for exports include abrasives, cutlery, electrical appliances, steel utensils, steel trunks, razor blades, woodworking machinery, concrete mixers and ball bearings. China is dominating the market for machine tools, through the grant of long and short-term credits and supply on consignment basis extending over a period of two years.

Thailand: Consumer and engineering goods like electric fans, cycles, ball bearings, batteries, sewing machines, lamps, razor blades, bicycles and aluminiumware are in demand. This country requires centrifugal and deepwell pumps but supplies are now being made under the American aid programme. There is keen competition to cater to the demand for diesel engines but the possibilities of securing a market in this line are bright. Agricultural equipment like ploughs, harrows and threshers is in demand. The delegation received enquiries, among other goods, for asbestos roofing, sugarcane machinery, sugarcane crushers, kerosene-operated refrigerators, trucks, trailers, water fittings, ice-making plant, machine tools, printing machines, wire nettings, V-belts and buckets.

Cambodia: Although the delegation received enquiries for a wide range of engineering products, including diesel engines, pumps, water fittings, electric motors, batteries, fans, cycles and sewing machines, it is not possible to conclude business with Cambodia unless India enters into a bilateral arrangement with it and agrees to buy rice and rubber goods from that country. Generally speaking, Cambodia does not buy from countries from which it does not receive aid or with which it has no trade agreement.

Viet Nam: Balance of payment difficulties in Vietnam imply that India cannot sell to that country unless it is prepared to buy Vietnamese goods. A trade agreement with Vietnam has, therefore, been suggested. There is, however, good demand for agricultural machinery, diesel engines, pumps, water fittings, wire netting, cycles, sewing machines, and office equipment. The standard of quality, it is stated, has to be "very high" and only "first class" articles can be sold.

The Philippines: The overall balance of payments position is adverse to the Philippines. The engineering goods which can be sold without difficulty (provided importers get the necessary licences) are: diesel engines, fans, sewing machines, pumps, tools, agricultural implements and tools, grinding wheels, electric motors, automobile parts, beltings, razor blades and water fittings. Air-conditioners, sewing machines and fans are being assembled locally in collaboration with Japanese or American firms. The U.S. is the chief supplier of machine tools. There is keen demand for quality machines, particularly geared head lathes. Sales from India are possible provided prices are competitive.

Hong Kong: This is a free trade area. Import and export licensing regulations are kept to a minimum. The few controls that exist are operated with a "speed which would surprise the merchants of most other countries; licences are issued within 24 hours of application." Harbour dues are low and turnaround is very rapid. Foreign merchants are permitted to remit profits freely and also to repatriate capital. Since its China trade has been seriously crippled, Hong Kong has widened its trade to other countries and also set up new industries. There is no local market to give a firm base from which to attack export markets. It has to import its raw materials. Despite these handicaps, it has set up several industrial establishments. Its only advantage is access to Commonwealth markets at a preferential rate of duty.

Hong Kong is one of the biggest ports in the world for entrepot trade. To this port come merchants from all parts of the world. Indian engineering goods are, however, not popular in Hong Kong. No merchant would be prepared to undertake the risk of stocking our goods. It will, therefore, be useful to organise a small exhibition of Indian goods and also set up a permanent showroom where information relating to prices, terms of deliveries, etc., can be made available to intending purchasers.

Besides emphasing the importance of concluding such bilateral trade agreements with South-East Asian countries as will enable them, in the context of the prevailing balance of payment difficulties, to import goods from India, the report points out that Indian exporters should appoint active agents in all overseas markets. It has also stressed the need for improving design, finish and salesmanship in order to promote exports of Indian engineering goods. It points out how, in Japan, banking institutions advance credits to exporters at favourable rates of interest and well-organised export houses make it possible even for small manufacturers to participate in export trade. The Government of India should extend and improve its services in the matter of providing foreign trade information to Indian business men. The report also calls attention to the fact that the measures which will encourage export trade include the "availability of steel at special prices, special inland freight rates to encourage the movement of goods from the central part of the country to the ports, income-tax relief on earnings on export trade and retention of a part of the foreign exchange earned through the export of engineering products for import of essential raw materials and capital goods for expansion of the industry." Finally, the report has done well to stress the vital need for a sustained publicity drive which will help make Indian goods more and more popular in foreign markets.

EXPORTS OF ENGINEERING GOODS

Special schemes to encourage exports of engineering goods—the value of engineering goods exported in the first half of 1958 was Rs. 1.93 crores—are being implemented by the Directorate of Export Promotion, Union Ministry of Commerce and Industry and the Export Promotion Council for Engineering Goods in co-operation with the Iron and Steel Controller. Under the schemes, raw materials and machinery are supplied from indigenous sources or licences are issued for their imports from abroad to manufacturers and exporters of engineering goods. Other aids are also provided for enlarging exports. Drawbacks on import and excise duties paid on the imported or indigenous components are allowed on the export of about 20 items of engineering goods. These include diesel engines, bicycles, sewing machines, motor vehicles, trailers, bus bodies, sparking plugs, dry batteries and cells, electric fans, tele-communication instruments, radio receivers, chokes for fluorescent lamps, galvanised iron and wire products, R.S. closures, pumps, tin containers, hurricane lanterns, umbrella ribs and crown corks. In addition, facilities for working in bond are also available in the case of aluminiumware, motor vehicles and umbrellas.

Allotment of railway priorities and shipping space are arranged for engineering goods where necessary and possible. Provision is made in trade agreements entered into with foreign governments for the export of engineering goods from India. The State Trading Corporation also helps in securing orders for and arranging the supply of engineering goods from India to countries in Eastern Europe and China. Grants-in-aid are given to the Export Promotion Council which has been sponsored by the Government of India for developing exports.

The programme of the Council includes survey of foreign markets for Indian engineering goods, sending of trade delegations, maintenance of offices abroad for establishing contacts with foreign buyers, participation in international fairs and exhibitions, publicity and assistance to exporters at home. Reports of the delegations sent to study prospects for Indian engineering goods in foreign markets are distributed to manufacturers and exporters.

COMET 4 EXPECTED TO BE A WORLD BEST-SELLER

Britain's Comet 4 jet airliner, which shattered the New York-London non-stop flight record on 12th August, is confidently expected in London to prove a best-seller in world markets. As the airliner continued its testing flights at Hatfield, England, a spokesman of the makers, de Havilland Aircraft Company, said they were so confident of its selling potential that "full plans have been made to expand production lines without any trouble." The new airliner, which costs a little over £1,000,000 and has been developed in a series of three models to meet the requirements of long and intermediate services, will start coming off the assembly lines at the end of this month.

Orders for the plane—claimed to be the most-tested airliner now on the market—have already been placed: 16 for B.O.A.C., six for British European Airways, and six for Aerolineas Argentinas. Officials of East African Airways are also reported to be discussing the idea of buying two or three long-range Comets for the Nairobi-London run. The de Havilland spokesman said that negotiations with "a lot of companies throughout the world" were now going on.

The first Comet 4 destined for commercial service will be delivered to B.O.A.C. at the end of this month, and crews will start the familiarisation course straightaway, in order to get the Comets into B.O.A.C.'s new transatlantic jet airliner service as soon as possible. The date for the start of the service has not yet been fixed, but hopes focus on early November.

The Comet is designed to carry a maximum of 80 passengers over stage lengths of upto 3,000 miles at a cruising speed of 510 m.p.h. In the record-breaking flight on 12th August, the fully loaded Comet cruised at 558 m.p.h. and knocked 1-hr. 28-min. off the existing record—also set up by a British airliner. After the inter-continental Comet comes the 4-B model, which has been designed to apply lifting power to payload rather than fuel. For this version the fuselage has been lengthened by 7½ ft. and the wings clipped 7 ft., thus boosting the speed of this model and cutting its range to 1,900 miles. The sequel to this airliner has been the Comet 4-C, a variant combining the longer fuselage of the B model with the wing of the inter-continental version. This offers maximum exploitation in terms of payload and fuel. All of the Comet 4 series are equipped with the same power plant—four Rolls-Royce Avon RA-29 turbojets of 10,500-lb. sea-level static thrust.

THERMAL POWER IN JAPAN

Hydro-electric power resources in Japan are abundant and have been extensively developed. The total output of hydro-electric power is some 10 million kilowatts which accounts for 62 per cent. of its total national power output. The potential water-power resources which can be economically developed are estimated at 13 million kilowatts. Thus, it is possible for Japan to more than double its hydro-electric power generation capacity in the future. However, the energy requirements of large cities and industrial areas are so great that many gigantic thermal generating plants are being constructed. The total generating capacity of hydraulic power plants to be constructed during the current fiscal year amounts to 637,000 kilowatts. The total generating capacity of thermal power plants is set at 1.17 million kilowatts, or double that of hydraulic power plants. The average generating capacity per thermal electric generating unit is increasing. Most thermal power plants to be constructed during the current fiscal year have a capacity of more than 150,000 kilowatts. The largest has a capacity of 200,000 and the smallest 50,000 kilowatts. In addition to these, 19 thermal power plants with a total capacity of 3.08 million kilowatts will be constructed during the fiscal years 1959 and 1960. Here again, most of these plants have a generating capacity of more than 150,000 kilowatts, including three with over 200,000, and two with over 300,000 kilowatts.

The most conspicuous among these thermal power plants is the Yokosuka thermal power plant of the Tokyo Electric Power Company, now being built at Kurihama, a historical spot where Commodore Perry first landed in Japan some one hundred years ago. The first stage of the project to be completed by 1960 calls for the generation of 265,000 kilowatts. Eventually, the Company intends to increase the capacity of the plant to 1 million kilowatts. Construction has already started, and the neighbouring hills are being dynamited and the mud dredged from the sea to reclaim the area.

Japanese manufacturers are now making units of 150,000 kilowatts capacity, and very soon they will manufacture those of 200,000 kilowatts. Thermal power generating plants are not only getting larger in size, but their efficiency is steadily increasing. Until recently, less than 30 per cent. of the heat generated by coal or heavy oil was effectively utilised. Today the percentage has gone up to 35; and in the near future, it is expected to rise to 39.

The thermal power plant has an advantage in that it can be constructed very quickly. In Japan, many hydro-electric power plants are now under construction or contemplation. However, the most profitable water-power resources have already been developed so the potentialities of this type of plant are limited. The construction of the numerous giant thermal power plants shows that the chemical fibre, chemical fertiliser and other industries which consume enormous quantities of electric energy are making great strides. It also indicates that the living standards of the Japanese are so high that washing machines, vacuum cleaners and many other household electrical appliances are now widely used in homes.

U.K. PLANS ATOMIC-POWERED SUBMARINE TANKER

The success of the initial examination of the British project to build an atomic-powered submarine tanker which would travel at twice the speed of a normal cargo vessel was announced in London on 13th August by the spokesman of a British engineering company. Mr. Frederick Mitchell, a director of the Mitchell Engineering group, said at a Press conference that preliminary tests had come up to expectations and were economically promising. His company had given the "go ahead" to Saunders-Roe Ltd., of Cowes, Isle of Wight, to start work on the second phase of preparations for the 80,000-ton underwater tanker.

This second stage was for design study, and it was expected this would take about eight-and-a-half months to complete. On the result of the design study, a decision would be taken whether it was worth while to go ahead with the project. Ultimately, the scheme would be passed to a shipbuilder who would be given the contract to build the submarine tanker. The atomic-power unit would be the joint work of the Mitchell Engineering Company and the American Machine Foundry (Atomics) Inc. The project was a purely private venture, and no Government money was involved.

A hand-operated cutting tool for laminated plastic sheet and similar materials has been developed from the slate and asbestos cutters manufactured by the Tubela Engineering Company. Although termed a cutting tool, it has no cutting edge and therefore never needs sharpening. In use a small strip of material is removed and because of the design of the upper blade the tool may be "progressed" through any size of sheet. The radiused shearing blade provides a "lead-out" for the waste, while the blade clearance permits clean cutting without damage to veneered surfaces.

INDIA BEGINS TO MAKE REFRIGERATORS

GODREJ'S NEW VENTURE

THE House of Godrej is well known throughout India as manufacturers of soaps, toilet goods, steel cupboards, safes, locks, safe-deposit vaults, all types of steel furniture and hospital equipment. Lately, they have been making steel windows in keeping with modern architecture. It is no exaggeration to say that Godrej have thus been making a significant contribution to the health and happiness of the nation. They have the distinction of being the first in many things, which is another way of saying that they are *entrepreneurs* of the first order. Not long ago, they were the first in India to undertake manufacture of typewriters, an indispensable article of utility for modern civilisation. The latest addition to their list of manufacture is refrigerators. Two refrigerators made by them were specially displayed to a party of journalists at the Cricket Club of India last week.

For a country like India, refrigerator is no doubt a luxury consumer durable. Yet the fact is that there is a good market for it. Westerners living in this country cannot do without it. A refrigerator for them is as indispensable as a hot-water boiler or a mud pot water cooler for the vast number of common people in such urban centres as Bombay, Calcutta and Delhi. Many well-to-do Indian homes have also begun to appreciate the benefits of a refrigerator. Godrej have, therefore, done well to venture in this line.

They are also eminently suited to manufacture refrigerators. Their experience in the production of cupboards, safes, locks and other safe custody equipment will be useful. They have a modern factory in ideal suburban surroundings and a large force of trained workers and skilled technicians. Their labour force of 5,000 in the new factory at Vikhroli, a suburb of Bombay City, is not having sufficient work to keep them fully occupied for want of raw materials. Indeed, the thought of finding work for all their workers is said to have been one of the primary reasons for Godrej undertaking this line of activity. It is true that almost everything that is required for making a refrigerator has to be imported, a great disadvantage in these days of foreign exchange shortage. But Godrej probably wanted to be first in the field and make a beginning even though the foreign exchange allotted for importing the material could not have been large enough to ensure continuous, steady working. No enterprising business man would let himself be daunted by what appears to be a temporary difficulty.

We do not propose to give here a full account of the various features of Godrej refrigerator. They can be had from the manufacturers who will, we presume, readily send their well printed literature to those who want them. Suffice it to mention here that they are making only one type of refrigerator now and it is large-sized: height 52¼ in., width 26¼ in. and depth 27.5/8 in., storage capacity 7.3 c.ft., shelf area 11 sq. ft. The cabinet is in gleaming white, stove enamelled on phosphatised steel. It has a rubber-cushioned door for an atmospheretight interior and a beautiful chromium-plated handle. On the whole, its appearance is elegant. With taxes in Bombay, its cost to the buyer is a little over Rs. 2,050, a price which is said to compare favourably with that for a second-hand imported refrigerator.

At present, Godrej are only assembling the refrigerator from imported parts, but they have a manufacturing programme. Their present enterprise is in co-operation with the world-renowned G.E.C. The units used in the refrigerator are made by the G.E.C. It is understood that, in a few years, the G.E.C. will manufacture at its Calcutta works the most essential part of the unit, namely, the motor. The production of the remaining parts will not be beyond the competence of Godrej.

The current rate of production of refrigerators is 10 per day. Of this, half will be marketed by Godrej as their own and the other half will be taken up and marketed by the G.E.C. as its own product.

The demand for these refrigerators is very keen. Many are already on the waiting list. We were told last week that delivery against an order placed then would be some time in October or November. In order to induce confidence among the buyers, Godrej are offering a five-year guarantee for the sealed-in refrigerating system and a year's guarantee for the rest.

NEW PRODUCTS AND PROCESSES

New Technique for Bone Fracture Healing

ETHOXYLINE resin, the plastic substance used in industry for casting purposes and for bonding metals to other substances, was successfully used for bonding broken leg bones in sheep at the Sydney Hospital, Australia. The resin allowed treated sheep to rejoin the flock within a few hours and the broken bones were firmly united within 10 to 14 days. The normal time for the uniting of broken bones in sheep is much the same as in humans, about six weeks. If the resin can be successfully adapted for use in human tissue, it will mean that people suffering from complicated limb fractures, immobilised for months, will be back on their feet within weeks. It may also have an important veterinary application, in saving the lives of bloodstock, some of which have now to be destroyed following bad limb fractures. Twenty-five experiments were carried out on sheep at the surgical unit last year, of which eight were unsuccessful, due to errors in technique. There has not been any infection or irritation around the fracture site as a result of the resin. The resin which is microscopically porous allows the new bone to grow round and through it. In each experiment the sheep was put under an anæsthetic and the fused metacarpal bones of a foreleg were broken two inches above the hoof, exposing both ends of the break. The resin, mixed with a hardener, was then inserted between the ends of the break. The wound in the sheep's leg was then stitched and a light plaster cast applied around the leg to protect the injury while the animal was with the flock. This was removed about ten days later and the united fracture was firm enough to permit the sheep to support its weight and run about freely.

Inexpensive Microfilm Reader

One of the most pressing needs at the moment in the field of micro-recording is for an inexpensive microfilm reader which will also scan microfiche. This need is now claimed to have been met by the V.C. Lexicon Reader manufactured by Micro Methods Limited of East Ardsley, Yorkshire, England. Costing only £44 it will read microfiche up to a maximum size of 9 cm. wide and can be fitted with a film carrier to take 100 feet of full-size 35 mm. unperforated microfilm. It is a compact machine which takes up when not in use a volume of only 15" x 10" x 11". In order to secure the advantage of complete portability, the weight has been kept down to 25 lbs. The film carrier for microfilm scanning can be removed and refitted very quickly and easily, which facilitates film threading. Transport of the film across the gate is effected by a handle mounted on the carrier, and the image remains in focus whether the film is moving or not. A tensioning arrangement eliminates the need for pressure plates and thus prevents accidental scratching. The fiche image is projected onto a white opaque screen on the desk and is approximately 15" square. A prism attachment is available which enables the image to be projected by finger control onto the screen at any desired reading angle. Magnification is 16, with a gate size of 2.4 cm. x 2.4 cm. The equipment can be set for use with a wide range of A.C. voltages and can be converted to D.C. by special resistances. Microfilm and microfiche scanning, its makers say, are not the only attributes of this versatile item of equipment. It can also be used as a filmstrip or slide projector. The whole reader can be swung into position for horizontal projection with filmstrips fed through the film carrier or slides held in the standard microfiche attachment.

"Thinking" Locomotive

A new German-Australian locomotive that "thinks for itself" will soon be tried out on the New South Wales Railways, Australia. It is one of a type containing German equipment that are now being built in Sydney workshops. It has an automatic gearbox working on the same principle as used on the latest types of cars. The loco will refuse to obey the driver, if its brain "knows that it is being handled wrong." The Clyde Engineering Company is building the locomotive at its Granville workshops for the Commonwealth Railways which have ordered six.

Paper Boxes from Bagasse

Bagasse, the fibre-like residue that is left after sugar has been extracted from sugarcane has been successfully made into heavy corrugated paper shipping boxes through a new process developed by the U.S. Department of Agriculture. The Department reports that, in laboratory tests, 75 per cent. of the bagasse boards used for box-making were equal or superior to comparable commercial paper boards. As part of a research and testing programme, 12,000 boxes to hold cans and bottles were manufactured and given both laboratory tests and shipping durability tests. The bagasse boxes were described as stiffer and not as soft as regular boxes. Major obstacles to economical and effective pulping of bagasse have been removed by improvements in the screen separation of cane fibre and pith.

Device to Reduce Road Accidents

An invention which is claimed will help to reduce road accidents has been patented in Melbourne, Australia. It consists of four convex mirrors which are placed in the centre of a street intersection, either suspended from overhead wires, or fixed on a pole. The installation enables an approaching motorist to see if any traffic is coming from right or left of the intersection, as his vehicle nears the point. The design has been submitted to the Melbourne City Council.

ANDHRA PRADESH LAND CEILINGS BILL

SOME X-RAY FINDINGS

By Prof. S. Kesava Iyengar

ON account of the reorganisation of States in India on 1st November 1956, several data are not available for the new States as units, but the all-India picture with regard to the pattern of employment in agriculture is crystal clear from data that follows. While the abolition of *zamindari* and *jaghirdari* did away with feudal rights granted mainly on political considerations, *raiyatwari* areas in India stand on quite a different footing. Rights in land were acquired, and the bulk of it is personally cultivated. Between landless tenants and agricultural labourers, the latter are more numerous and deserve quicker and effective assistance than tenants. Mr. V. T. Krishnamachari at Abu and Mr. G. B. Pant at Shillong bewailed the discouraging phenomenon of agricultural production lagging behind targets, and the agricultural community not utilising irrigation and G.M.F. facilities even to a partially satisfactory extent. According to the former, Rs. 1,330 crores would be spent on mammoth irrigation works (started during the first and second Plan periods) which will ensure secure supply of water to 38 million additional acres. This figure is apart from new areas that will come under irrigation on account of minor irrigation works, tanks and wells. Putting the total at the modest figure of 50 million acres, and calculating the initial capital expenditure at Rs. 100 on the average for upgrading one acre of dry land to wet, the minimum developmental expenditure on this single item must be Rs. 500 crores, apart from heavy seasonal financial requirements involved in the cultivation of intensive crops like sugarcane and paddy. The prospect is that almost none of the State Governments or the Co-operative Movement will be coming forward even with 10 per cent. of this huge outlay. And at this predicament, it would be very irrational to throw cold water on incentives for investment in agriculture by such measures as land ceilings and betterment levies and verbally patronising subsistence cultivation. The figures in the table below are unmistakable.

Temporary political appeasement could be the only justification for hurrying up with the imposition of land ceilings all over India. From the social and economic viewpoint, the proposal is fraught with grave and far-reaching dangers. The argument that the Planning Commission has blessed the concept does not take away from the incidence of violence contained in the revolutionary step. *Raiyatwari* land reforms began in 1950, underwent different vicissitudes on account of hasty and superficial decisions, and a close study of this process cannot but lead to the observer wondering when and where the series would terminate.

Two Silver Lines to the Cloud

The Revenue Minister of Andhra Pradesh deserves to be congratulated on two scores: the raising of the ceiling from Rs. 3,600 per annum to Rs. 5,400 net income (Rs. 10,800 gross income), and the admission that the actual surplus land that could actually become available for distribution among the landless might not exceed one lakh acres, and thus the land hunger could not be expected to be met even to a small extent: the estimate for the erstwhile Hyderabad State was about a million converted dry acres (wet and garden lands considered as multiples of dry lands, such multiples varying in different areas). While the ceiling is proposed to be raised by 50 per cent. (income), even the new limit, if enforced, is bound to bang the door against any capital outlay on agriculture in the future, because it works out to Rs. 90 per month per member of family (at five persons per family on the average). The savings margin would not be there, and the tendency would be to hoard (and not plough back) even if any driblets were saved: the general fear of confiscation will influence the distribution of agricultural income. Mr. Kala Venkata Rao has been quite frank in his estimate about the area of surplus lands that might become available after the enforcement of ceilings, but he has evaded the question: Is the game worth the candle? With huge evasions on account of absence of data and the impossibility of verification, with sales and partitions for which an interval has been deliberately allowed, with sub-marginal lands in small plots which should be expected from axing the substantial landholders, with the inherent immobility of agricultural labour, and, above all, with the absence of capital and current equipment, it would not be a pessimistic view to say that the whole thing might fizzle out into nothing more than an upheaval in rural psychology which is bound to tell heavily on agricultural production, with suspicious landholders and disgruntled labourers. The protagonists of the ceilings drama are sowing the wind without realising that the whirlwind would have to be reaped in the near future.

Vague and Fallacious

For the rest of it, the Bill is delightfully vague and grossly fallacious in several respects. The Revenue Minister has referred to the merits of universalising optimum farms, but his argument that agriculture could be expected to be more efficient on a 30-acre farm than on a 400-acre farm, is contrary to facts and closes the door against the immense potentialities of large-scale mechanised farming and intensive cultivation. The yield of sugarcane per acre in the Bodhan area (under the Nizamsagar Project) is over 90 tons in big estates, while the average yield, including small holdings, is 20 tons for the State.

An interval is deliberately allowed for partitions and sales upto the date of notification. If the proposal was taken up seriously, the right thing to do was to issue an ordinance with immediate effect. The provisions in the Bill about the determination of the ceiling (the average yield during the previous three years, calculated at the average price during the previous 10 years) and the scale of compensation to retiring landholders (with slabs ranging from 10 to 5 times the annual net income), and the re-determination of "local areas" all over again, remind one of a touring officer travelling by cart along tracks all the night and reaching the starting point at daybreak on account of the uncertainty of such tracks. The greatest handicap in the Indian agricultural economy is the absence of standardisation in soils, rainfall, yields and prices, and the anti-climax is the reputed unreliability of available statistics. Orchards and grass farms are to be axed, but not sugarcane farms maintained by sugar mills as on 10th June 1950. Why not the same principle apply to cotton, oilseeds and tobacco which earn considerable foreign exchange?

Areas and Incomes

The Planning Commission is quite clear that the ceiling on landholding should be a multiple of a family holding determined on the basis of area and manageability by the cultivating family. But the Andhra Pradesh Bill has inherited the income yardstick from the erstwhile Hyderabad Government, the only change being from Rs. 3,600 to Rs. 5,400 net agricultural income per annum. The Commission is equally clear about the continuance of efficient estates, the break up of which might lead to a lower level of efficiency, but the Andhra Pradesh Bill has ignored this altogether. Composite incomes are not to be considered as also world landholdings. The ceiling is to be extended by Rs. 1,200 per additional member of a joint family in excess of five persons, but who is to determine how many are really members of the joint family, and how many ghost members? Obviously, composite incomes and world landholdings are omitted because of the impossibility of estimate and verification.

The blank shot threatening all dodgers with expropriation without compensation is as ridiculous and impracticable as a possible law ordaining that all citizens of the State taller than six feet should be chopped off to the ceiling level of six feet. While this is the threat about one lakh acres, one fails to understand why the Andhra Pradesh Government is quite complacent about the following figures:

	Lakh acres
Cultivable waste	41.19
Current fallows	48.34
Other fallows	17.29
Barren and uncultivable land ...	72.46
Total	179.28

How much of this 180 lakh acres can be brought under the plough and help towards self-sufficiency in foodgrains, depends mainly on agricultural technique, and this in turn depends on high level capital intensity. At this juncture, it is most unfortunate that the Andhra Pradesh Land Ceilings Bill is brandishing a sword against even the little enterprise and resources that are found in the villages. Professions and loud protestations by the Deputy Chairman of the Planning Commission and the Home Minister are indeed contrary to the potentialities of the Andhra Pradesh Land Ceilings Bill for impoverishing not only Indian agriculture but also the proposed beneficiaries, for the simple reason that, when the national cake dwindles, the rural standard of life must go down correspondingly at the base. If a successor Government should raise the ceiling to Rs. 10,800 annual income, would it be possible to resurrect the chopped off under the present Bill?

A Variety of Apartheid

The idea of enforcing ceilings in the case of *raiyatwari* landholders is a variety of *apartheid*, with a hymn of hate against the substantial landholders who have paid for their lands and shown promise of levelling up the factor of incentive in Indian agriculture. To lay down, apparently for all time, that no cultivating landholder shall earn more than Rs. 450 a month from agriculture, with no upper limit for non-agricultural incomes, amounts to discrimination which is prohibited by the Indian Constitution.

WORLD BANK'S PROFIT FOR 1957

The International Bank for Reconstruction and Development earned a net income of $42 million during the year ended 30th June 1958, as compared with $36 million in the previous year. The Bank's gross income, exclusive of loan commissions, amounted to $99 million, having gone up from $74 million in 1956-57. Along with the rise in income, expenses too moved up from $38 million to $57 million, of which interest on Bank's borrowings and other financial expenses accounted for $48 million. The income from loan commissions aggregated $20 million and was credited to the Bank's special reserve raising it to $114 million. The net income of $42 million was added to the supplemental reserve against losses on loans and guarantees. This reserve now stands at $236 million.

The Bank granted 34 loans amounting to an equivalent of $711 million during the year, as compared with $388 million in the previous year. This brought the Bank's gross total loan commitments at the end of June last to $3,819 million. Actual disbursements aggregated $499 million, the corresponding figure for 1956-57 being $332 million. Seven more countries, Ghana, Ireland, Malaya, Morocco, Saudi Arabia, Sudan and Tunisia became members of the Bank during the year under review, bringing the total number of members to 67 and the subscribed capital to $9,405 million as on 30th June 1958.

Pattern of Employment in Indian Agriculture

Agricultural Labour Enquiry, 1949-51		Population Census of India, 1951		The Tenancy Enquiry in Hyderabad State, 1948		The Land Census, Hyderabad, 1953-55	
Category	Per cent.	Category	Per cent.	Category	Per cent.	Category	Per cent.
1	2	3	4	5	6	7	8
Land owners ...	22.2	Rent receivers ...	2.1	Non-cultivating land-owning families (resident and non-resident) ...	11.8	Area under personal cultivation	82.8
Agricultural tenants ...	27.2	Cultivators of land wholly or mainly owned ...	67.2	Fully cultivating landholding families ...	84.0	Area leased out	17.2
Agricultural labourers ...	20.4	Cultivators of land wholly or mainly mortgaged ...	12.7	Partly cultivating landholding families ...	2.1		
Non-agricultural families	30.2	Agricultural labourers ...	15.8	Landholders-cum-tenants ...	12.8

				Agricultural labourers with tiny bits of land ...	17.7		
				Landless agricultural families	21.2		

NEW PUBLICATIONS

Food Production in India—Principles and Problems. By S. Y. Krishnaswamy. Published by Bhamati Books, 3, East Circular, Mandavelipakkam, Madras 28. Pages : 156. Price : Rs. 3.75.

DESPITE all the expert examination to which the problem of food production in India has been subjected, there is no doubt that, by and large, the problem has evaded solution. "Our concern with the subject of food production," says Mr. S. Y. Krishnaswamy, the author of the book under review, "has been fitful and intermittent, and has been characterised by alternating spurts of self-gratulation and self-reproach." In this book, which contains the Rt. Hon. V. S. Srinivasa Sastry Endowment Lectures delivered by the author at Madras in March last, a comprehensive examination of the problems relating to food production is followed by a discussion on the right type of organisational machinery that is necessary in the interests of increased food production. In view of the fact that there is no real lack of knowledge about the technique for raising the output of food, it is difficult not to agree with the author's main conclusion, namely, that it is the organisational defects which must first be remedied. He rightly argues that "if it is accepted that, technically, the measures that are being adopted are the correct ones and that no one has yet been able to suggest anything other than water, seed, manure and reclamation and moisture conservation, then, the major defect has to be looked for in the organisation of the work." A notable defect, as Mr. Krishnaswamy has himself pointed out, is the absence of co-ordination between the great dam builders and the lesser men who are in charge of the distributary system. This defect has led to a colossal national waste in the shape of unutilised irrigation potential—a potential which has been created at such heavy cost.

Elsewhere, the author places his finger on the right spot when he points out that the local farmer has neither the money nor the equipment nor the knowledge that are necessary for a soil-intensive kind of agriculture. It is somewhat depressing to note that unrealistic land reforms prevent the flow of capital and knowledge to the countryside. The author finds fault with the present organisation for food production which is based on a Governmental structure which is suitable for the maintenance of law and order but not for the development of the resources of nature. He pleads for pressing into service the village "shandy," a living economic institution. Above the "shandy" there should be autonomous regional boards for the integrated development of all the resources of a region. These boards should be regional and autonomous in the fullest sense and should transgress State boundaries where necessary. Among many specific suggestions which the author has made, mention should be made of: (1) the minor irrigation plan should pay more attention to the supply of water to the tanks than to the letting out of water from them; (2) draw wells should not, as a rule, be connected with power pumps and the economy upset; (3) the use of fertilisers has to be related to individual soil needs and the deficiencies of the various elements in the soil nutrition, of which nitrogen is only one; (4) land reforms should concentrate on a floor, more than on a ceiling, and build up the small farmer from below; (5) co-operative farming should be abandoned in favour of co-operative servicing for the individual farmer.

In conclusion, the author says: "The fact remains that so far we have not succeeded in solving the food problem and it is legitimate to apprehend that, unless something drastic is done, the problem will snowball itself into unmanageable dimensions." The Central and State Governments will do well to heed this warning. If there is one aspect of our economy which requires more drive and energy than any other, it is food production. The author has done a real service in bringing to bear upon the problem a commendable freshness of outlook.

The Investor's India Year-Book. Compiled by Place, Siddons and Gough, Post Box 592, Calcutta. Published by Orient Longmans Private Ltd., 17, Chittaranjan Avenue, Calcutta, 13. Pages : 490. Price : Rs. 20.

The annual publication, *Investor's India Year-book*, compiled by Messrs. Place, Siddons and Gough, Stock and Share Brokers, Calcutta, is too well known among investors as an authentic work of reference to need any introduction. Nevertheless, the latest edition is noteworthy for its expanded preface in the course of which the compilers have made a competent analysis of the maladies which beset the country's economy during the year 1957. The object of the analysis is not to make a hunt for scapegoats on whom the blame for the economic ill can be laid, but to sift the nature of the difficulties, in order to "ascertain the lines along which the remedial action would be most effective."

Such an analysis has shown, the authors of the preface point out, that "of all the different facets of the present economic problem, it is the slump in share prices that is most significant." Dilating on this point, they observe:

> "The Stock Exchange, true to its function of *barometer of the economic outlook*, has correctly registered not only the loss of investment confidence but also the inadequacy of savings, without which development expenditure can create only inflation and not progress. It is the lack of *savings that lies at the root of the present ills of the economy.*"

In short, the past year is described as a year of crisis of savings. The danger is that "unless *something is done to change the investment* climate, it is likely that, before long, there will not be enough savings in the country for any sort of investment, private or public."

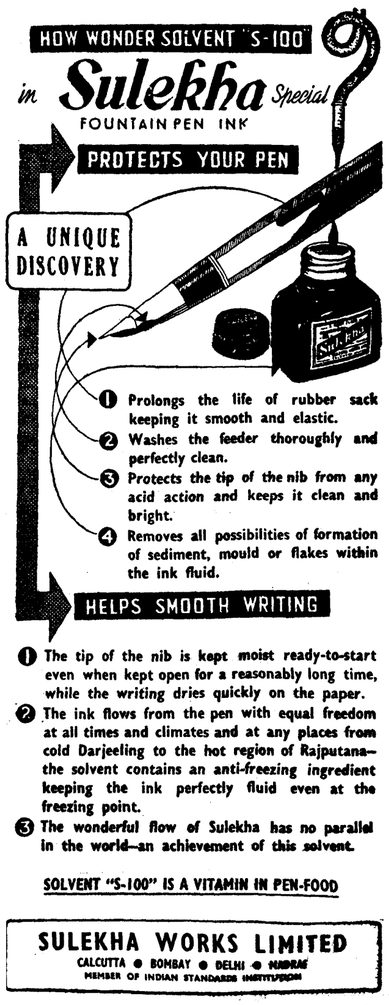
As regards foreign investment, the authors point out that the conditions in the stock markets during 1957 provided the strongest possible deterrent to foreign investors. Even if foreign resources are made available, they contend, such "will either be wasted or will have to be employed in work that could, in difficult circumstances, have been performed by domestic saving and investment. It would be possible to attain a far more rapid rate of advance, if foreign aid were to supplement a vigorous, active home investment drive, instead of having to make up for the limitations and deficiencies of an almost extinct class of domestic investors."

In the last few months, however, the stock markets have presented a slightly brighter picture, due to the mild changes in the official policies here and there, but the main problem of mobilising the savings and providing an investment climate remains to be tackled.

The publication, with its analysis of the major industries and statistical data of various companies, constitutes an authoritative book of reference to investors in shares and securities all over India.

Law and Practice of Banking. By Sohrab R. Davar. Eighth Edition. Published by The Progressive Corporation Private Ltd., Jehangir Wadia Building, 51, Mahatma Gandhi Road, Bombay. Pages : 829. Price : Rs. 13.50.

The fact that the *Law and Practice of Banking* by Mr. Sohrab R. Davar has passed into its eighth edition is itself an index of the continuing utility of this well-known publication. The law on banking has undergone several changes in recent years and Mr. Davar's book is fully equal to the task of explaining the intricacies of the law in a manner that must appeal as much to the expert as to the layman. In this eighth edition, the author, Mr. Sohrab R. Davar, has brought the case law up-to-date, enlarged the chapter on bankers' security for advances and dealt with in greater details the subject of co-operative banks. The appendix includes the text of the Banking Companies Act, the Negotiable Instruments Act, the Reserve Bank of India Act, the Schedule Banks Regulations and the State Bank of India Act. A well arranged index makes the task of reference smooth and easy. There is no doubt that the book deserves the wide measure of popularity which it enjoys among bankers and students of banking.



UNDER SECRETARY TO GOVERNMENT 25 AUG 1958

ACCEPTANCE OF INSURANCE POLICIES BY BANKS WITHOUT DEPOSITS

MORE LIBERAL ATTITUDE URGED

THE question of acceptance by banks of policies issued by Indian insurers and the release of security deposits made by insurance companies with the State Bank of India has been agitating the minds of insurers for a considerable time. Appropriately enough, this problem figured in the speech delivered by Mr. P. U. Patel, Chairman of the Indian Insurance Companies' Association, at the recent annual meeting of the Association. Mr. Patel pointed out that the insistence of banks on deposits to be kept with them to ensure the acceptance of policies issued by insurance companies had caused considerable hardships to the companies. Despite the favourable reaction of the Indian Banks' Association and the accommodating attitude shown by it, the position has not improved. Mr. Patel expressed the hope that banks would adopt a more realistic attitude in the matter by accepting policies issued by companies more freely than in the past and without insisting on any deposit requirement.

The Committee of the Indian Insurance Companies' Association, in the course of a memorandum addressed to the Indian Banks' Association, has tried to bring out the problem faced by insurers in their dealings with banks. The non-acceptance by banks of policies issued by Indian insurers and the insistence by the former on deposits to be made with them in order to ensure acceptance by them of policies issued by these companies to their clients in respect of goods against which loans have been advanced by banks has caused, according to the Committee, considerable hardships to the companies. Many companies felt compelled to comply with this requirement lest their normal working should be hampered and their clients put to considerable difficulties if their policies were unacceptable to banks. Large funds were thus needlessly tied up which could be more profitably utilised in the day-to-day business of Insurance companies.

Insurance companies, as is well known, also need liquidity for their funds and the locking up of funds with banks, the Committee emphasised, handicapped their working. It curtailed their normal retention capacity and restricted the scope of their operations. Further, the investment of general insurers in Government securities was never on the high side and, as such, it was impossible for them to comply with the requirement.

The Indian Insurance Act calls for statutory deposits being maintained with the Reserve Bank of India and these deposits are available for the absolute security of policyholders. This requirement, the committee submitted, constituted a sufficient safeguard and there was, therefore, hardly any justification for a bank to insist from an insurance company on a separate deposit for itself. The memorandum added that the Code of Conduct required general insurers to maintain a minimum security margin. This was designed to ensure that Indian insurers conformed to sound standard and approximated closely to the solvency test prescribed by the British Board of Trade for companies in the United Kingdom. This and other salutary provisions under the Code, the Committee maintained, rendered it unnecessary for banks to require deposits from insurance companies as security. It may be noted here that foreign exchange banks and other foreign banks do not call for such deposits from Indian insurance companies for the acceptance of their policies.

Emphasising the need for banking and insurance to go hand in hand, the Committee suggested that the Banks' Association should agree to an arrangement providing for policies of all insurance companies which satisfy the minimum security margin test being accepted by all member-banks upto at least Rs. 5 lakhs per risk, without the companies being required to make any deposits for this purpose. In certain cases, policies of Indian companies were already being accepted for much larger amounts or without any limits and this practice, the Committee suggested, should be continued.

The Committee, in another memorandum, has also drawn the attention of the Managing Director of the State Bank of India to the difficulties experienced by Indian insurance companies and the loss of business suffered by them as a result of the retention by the State Bank of India of security deposits made by these companies with the former Imperial Bank of India. Several insurance companies, as is common knowledge, were required by the former Imperial Bank of India to make deposits of varying amounts in order to ensure acceptance by it of fire policies issued by these companies to their clients in respect of goods against which loans had been advanced by the Bank. Representations were made, on behalf of some of these companies, requesting the Bank to revise its attitude in this matter, pointing out that the progress made by the companies during the period of their operation over the years, coupled with their relations with other banks, should be taken as a sufficient guarantee for the satisfactory discharge of their obligations in regard to any policies in which the Bank might be interested. It was felt by the companies that retention of the deposits made by them in early years of their growth and development was no longer necessary in the altered circumstances.

The practice of requiring deposits by the State Bank has been followed by similar insistence by other banks, especially those which have recently come under the Control of the State Bank, such as the State Bank of Hyderabad. For reasons enumerated above, such a stipulation, according to the Committee, was not only needless but detrimental to the working and progress of insurance. The Committee, therefore, urged that the State Bank should give a lead in this matter by returning the deposits of all insurance companies in order that such other banks as insist on deposits could be prevailed upon to emulate its example by waiving this requirement which had impeded the progress and development of insurance business in the country.

While the Indian Banks' Association has reacted favourably to the memorandum, the stand taken by the State Bank of India has not been so favourable. The State Bank of India maintains that, while it is satisfied that the minimum security margin, in addition to the compulsory deposit with the Reserve Bank of India, forms the solvency test under the Code of Conduct, it is unable to accept the proposal that the fire policies of each of the companies satisfying the test should be accepted without security deposit, as a rule. The Bank adds that it has as many as 38 out of 44 companies which are members of the Association on its approved list who have been granted limits with or without deposits. It has, however, agreed to advise its local head offices that, along with other considerations, they should give due weight to the quantum of assets over liabilities, i.e., the maintenance of the minimum security margin, while determining the free limits or prescribing the amount of deposits on the merits of each case.

The Indian Banks' Association has issued a circular letter to its member-banks recommending them to prepare an approved list of Indian insurance companies satisfying the solvency test and to give them their best possible co-operation in the matter of accepting their policies without deposits. Despite this, however, it is said that some of the banks continue to adopt a "difficult attitude." There is some force in the contention of the insurers that the banks could adopt a more liberal attitude. It would, therefore, be desirable if the banks could persuade themselves to examine whether they can take a more helpful attitude in the matter, without, of course, compromising their interests.

EMPLOYERS' CONTRIBUTION TO STATE INSURANCE

The Employees' State Insurance Corporation has decided that, for the time being, no date be fixed for increasing the employers' special contribution in areas where medical care under the scheme may be extended to families of insured workers. Although employers are at present contributing 1¼ per cent. of the total wage bill as their share of expenditure on the scheme in implemented areas, it has been statutorily provided that this contribution may be increased to 4¼ per cent.

The Corporation, however, has emphasised that extension of medical care to the families and further implementation of the scheme in new areas should not be delayed on this account. The additional expenditure to be incurred may be met from the current revenues of the Corporation, but the reserves should not be touched for this purpose. If, however, the valuer's final report showed that the rate of employers' special contribution should be increased, the Central Government would take necessary action. For this purpose, the valuer's report should be completed in three months.

The Corporation has also decided that maternity benefits to insured women should be paid at the rate of full assumed average wage of the worker, as against the present rate which amounts to half of the average wage or 12 annas, whichever is greater.

The Corporation has urged the State Governments, who are primarily responsible for the provision of medical benefit under the Act, to take urgent steps to provide hospitals according to the prescribed scale. It has expressed dissatisfaction at the progress made in the construction of hospitals and has asked the Director-General of the Corporation to impress upon the State Governments the need for expediting construction of hospitals. It has also asked the Director-General to take up with the State Governments the question of constructing dispensaries as quickly as possible.

EMPLOYEES' STATE INSURANCE SCHEME

With the extension of the Employees' State Insurance Scheme to Bangalore with effect from 26th July, another 50,000 factory workers have been brought under the scheme. The scheme provides for medical care along with the cash benefits in the form of sickness benefit, maternity benefit, disablement benefit and dependants' benefit in case of death of the insured person due to employment injury. Bangalore is the first centre in the country where the families of insured persons will also receive medical care along with the usual benefits extended to insured persons. The families will become entitled to the medical care 13 weeks after an insured person becomes entitled to benefits under the scheme.

The scheme is already in force in 63 industrial centres covering about 1,280,000 employees and the inclusion of the new centre would be a step forward in the phased implementation of the scheme throughout the country. The State Government will be responsible for the provision of the medical care. For this purpose, 26 State insurance dispensaries are being set up. Three local offices, two sub-local offices and three pay-offices are being opened for the payment of cash benefits under the scheme. Factory employers in the area have so far been paying ¾ per cent. of the total wage bill as employer's special contribution under the scheme. With the enforcement of the scheme, they will now be required to pay special contribution at 1¼ per cent. of the total wage bill.

SIGNIFICANCE OF TERMS OF TRADE

WIDE SWINGS HARMFUL TO BOTH ADVANCED AND UNDERDEVELOPED COUNTRIES

THE changes in the terms of trade, as reflected in the ratio between the import and export prices, is a crucial factor for determining the strength and stability of an economy. Any disturbance in the terms of trade will tell on the economic fortunes of those countries which are heavily dependent on foreign trade. The primary producing countries no doubt have a great stake in terms of trade, in view of the fact that they earn half or even more of their national income from the export of one or two commodities subject to violent fluctuations in prices. Even to industrial countries, the consequences of the changes in the ratio between import and export prices are important. This point has been impressively brought out in an interesting article entitled "The Terms of Trade" by Mr. A. C. L. Day, Reader in Economics in the University of London, contributed to the latest (July 1958) issue of *Lloyds Bank Review*. The author has emphasised that the adverse terms of trade are a real burden on the country concerned and reduce its real income which in turn tells on its trade with other countries.

The experience of the British economy during the past few years affords an example of how the advanced countries are affected by the changing fortunes in their terms of trade. The economic history of the U.K. can conveniently be divided into two periods: the war and the post-war reconstruction period, from 1938 to 1950, and subsequent years upto 1956. Mr. Day points out that, in each of these two periods, the total national product in the U.K. went up by £2,000 million (measured at 1948 prices). But, there was a serious deterioration in the terms of trade during the first period, thanks to steeper rises in import prices than in those of its exports. The situation gradually improved during the second period, the terms of trade in 1956 being the same as in 1950, which meant that the country needed no bigger volume of exports to buy a given volume of imports.

Adverse Terms of Trade

It may be recalled that the U.K. had an adverse balance of trade in 1938 which in subsequent years was further aggravated by the war-time losses of overseas income. It was sought to be overcome, on the one hand, by reducing the volume of imports and by boosting exports, on the other. The deterioration in the terms of trade occurred in this context presumably as a result of the lower prices which the exports from the U.K. were compelled to maintain relatively to its imports with a view to ensuring adequate competitive capacity for its products. All these changes, according to Mr. Day, cost Britain £1,100 million of resources, either in the form of additional exports or reduced imports. In other words, the external needs absorbed an amount equal to over half of the additional resources (£2,000 million) produced by the British economy in 1950 as compared with 1938. It follows then that only less than half of the increase in national resources over the pre-war year was available for domestic use.

The second period affords a refreshing contrast to this picture. To quote Mr. Day:

"Comparing the two years 1950 and 1956, there was some worsening in the balance of payments. To make such a comparison is, however, rather unfair to the trend of events, and it is probably more reasonable to say that the balance of payments around 1956 was showing a surplus similar to that of 1950. Moreover, it has already been seen that the terms of trade were much the same in the two years. External needs did not, therefore, take any of the £2,000 million additional resources coming forward over this period—all of this amount was available at home. The consequences of the difference between the experience in the two periods are obvious. More than twice as large an increase in resources was available for investment at home, for the consumer and for the Government, in the six years 1950-56 as during the 12 years 1938-50. Hence the investment boom and the rise in consumer expenditure during the nineteen-fifties."

World-wide Swing

The deterioration in the terms of trade in the U.K. during the war and immediate post-war years can, no doubt, be attributed to internal developments. But the major cause, as Mr. Day rightly observes, was the world-wide swing in the terms of trade between the broad groups of manufacturing countries and of primary producers. While the index of prices (as computed by Arther Lewis) of exports of manufactured goods rose from 122 in 1938 to 206 in 1950 (Base: 1913 prices=100, prices in dollars) the index of primary product exports went up from 91 in 1938 to 210 in 1950. Correspondingly, the terms of trade of the industrial countries with the primary producers fell from 134 to 98. Thus, a given volume of manufactures used to buy in 1950 less than three-quarters the volume of primary products bought in 1938. The high level of demand for primary products generated in the course of the boom of the war and post-war years, coupled with the stock-piling programme of the U.S. during the Korean war, accounted for this swing in the terms of trade. The inelasticity of supply of these commodities in the short run only forced the pace of this fluctuation.

These trends, however, were short-lived, thanks mainly to the remarkable resilience of the advanced economies. In this connection, the author says:

"The fact is, however, that there is a great deal of automatic self-correction in this part of the economic system—albeit a self-correction which is slow and jerky in its operation. If primary product prices get too high, then manufacturers develop synthetic substitutes or processes which use less materials and more of other factors of production, and market demand tends to switch towards more highly fabricated products with a smaller material content. Again, if primary product prices are high enough, Governments and business men in underdeveloped countries will find good reason to put less of their investment funds in industry and more into primary production. . . . The unfortunate thing is that all of these kinds of reaction come about very slowly, so that additional supplies may still be coming forward now in reaction to the high prices of several years ago. This is another force leading towards quite sharp fluctuations in the relative prices of industrial and primary products, which is superimposed on the other force causing such fluctuations at which we have already glanced, namely, the effects of fluctuations in industrial activity combined with the short-period inelasticity in the supply of most primary products. Since the two kinds of fluctuation may sometimes reinforce and sometimes offset one another, it is a brave man who places very much confidence in predictions of the agricultural-industrial terms of trade for more than a very short time ahead."

Recent Trends

There is, however, no denying the fact that, as the recent trends in commodity price indices in world trade indicate, the primary producing countries have had to encounter great hardships of late. Since 1951, there has been a definite deterioration in the terms of trade of most primary producers. It was, at first, felt quite sharply as a result of the collapse in commodity prices after the Korean boom, then more slowly, because of the upward creep in prices of manufactures at a time when the general level of commodity prices has shown no clear trend.

The following tables, showing the export price indices by regions and commodity price indices in world trade for the years 1952 to 1957, will facilitate a better understanding of the subject under discussion:

TABLE I

Export Price Indices by Regions

The erratic movements in the prices of commodities, however, do not seem to indicate any clue for future course of events. Dilating upon this point, the author observes:

"The widely varying experiences of different commodities shows how dangerous it is to try to predict the future of commodity prices in general. Perhaps a fair summary is to say that, while commodity prices have taken some hard knocks, and many of them have received a great deal of publicity, the outlook is not too discouraging for most commodity prices, so long as the American recession is not intensified and provided it does not last too long. If the commodity markets as a whole were in a hopelessly weak state, it could have been expected that they would all have taken much harder knocks already as a result of the recession. The world will probably have to adjust to the present kind of relationship between primary product prices and prices of manufactures, until recovery is clearly well under way in the United States; but there are fewer indications than one might think of any general collapse in prices—though there may still be dramatic happenings in store for individual commodities."

It cannot be gainsaid, however, that the adverse movements in the terms of trade upset the pace and progress of development in any country. To quote Mr. Day:

"One dynamic effect is now a commonplace. This arises from the long time-delay before many countries (in particular primary-producing countries) react to a fall in their export earnings by reducing their imports (whether the reduction is by market mechanisms or by Government action). For a time, the tendency is to maintain the old volume of imports, at the expense of reductions in their exchange reserves, as was the case in the outer sterling area in 1951-52 and 1957-58. Subsequently, it is likely to be considered desirable to rebuild reserves again to a satisfactory level, which may be possible only by particularly sharp cuts in imports. For a time, imports by the countries which have suffered an adverse shift in the terms of trade may, therefore, have to be reduced below the new equilibrium level. This is only a particular example of the general rule that a terms of trade change is an important disturbance to the economy, and it takes some time and difficulty to adjust to such a disturbance."

Fear of Slump Discounted

Mr. Day, however, discounts the fear expressed in certain quarters that the sharp falls in commodity prices and a consequent deterioration in the terms of trade of the primary producing countries will lead to a progressive decline in the total level of expenditure in the world and thus lead to a serious slump, both in the primary producing and in the manufacturing countries. This fear, according to him, is based on the fact that the Great Depression preceded a shift in the terms of trade against primary producing countries. He points out, in this connection, that in the 'twenties, the importance of maintaining total expenditure as a means of maintaining the level of activity was not at all fully realised. Now it is well understood—at times, a little too well. He adds:

"The consequence of a shift in the terms of trade against the primary producers is that their potential spending power is reduced—but that the potential spending power of the manufacturing countries is correspondingly increased. In the 'twenties, there was little or no conscious mechanism by which this increase in the potential spending power of the manufacturers could be taken up: hence the spiral of recession. Today, Governments in most manufacturing countries know perfectly well how to take up any undesired slack that may show itself. There is, therefore, no more danger that a collapse in primary product prices must inevitably lead to a spiral of deflation and unemployment than there is from any other sudden decline in spending, whether it comes from a drop in defence expenditure, a fall in investment or a rise in consumer savings."

Need to Stabilise Prices

All these considerations, however, do not rule out the need for stabilising commodity prices, in the absence of which the sharp fluctuation in commodity prices will jeopardise the growth of primary producing countries. It is harmful to the advanced countries as well. By allowing unnecessary fluctuations in primary product prices, as Mr. Day points out, the industrial countries probably maintain the average level of the terms of trade more unfavourable to themselves than it otherwise would be, because instability makes the primary producing countries less willing to produce and export more primary products.

Naturally, a country would always wish to have favourable terms of trade, that is, to sell dear and buy cheap. There are, however, certain exceptions. Political and philanthropic considerations may induce some advanced countries to tolerate worse terms of trade in the interests of the underdeveloped countries. In this context, Mr. Day warns against indiscriminate schemes for commodity stabilisation designed to keep the primary product prices at more than equilibrium levels, for, he avers, their long-run effect would be to encourage

(*Continued on page 331*)

KRISHNARAJENDRA SHOWS LOWER PROFIT

DIVIDEND CUT—EXPANSION PLAN PROGRESSING

THE hardship through which the cotton textile industry passed in the past year is well known. Higher prices for cotton, stores, chemicals and spare parts, enhanced excise duty and labour cost, a progressive decline in the prices of finished products and heavy consumer resistance, all these led to a shrinkage in the profits of cotton mills. It is common knowledge that for 1957 several mills showed a loss and many others greatly diminished profits. The working of the Sri Krishnarajendra Mills Ltd. (Chairman and Managing Director: Mr. H. N. Pallegar, Mysore) during the year ended 31st March 1958 is typical of the many such instances reported in these columns ere now. A marked decline in profit was the Company's lot during the year under review. After reporting a steady upward trend from Rs. 6.66 lakhs in 1951-52 to Rs. 24.41 lakhs in 1955-56, the Company's profit curve took a downward trend in 1956-57 for which year the gross profit was Rs. 18.04 lakhs. It fell steeply in 1957-58, the actual gross profit being no more than Rs. 5.18 lakhs, a drop of 72 per cent. As the gross profit was inadequate for meeting the provision for depreciation, there has been a net loss, according to our reckoning, of Rs. 1.50 lakh. The Directors have, however, written back a sum of Rs. 6.68 lakhs, being excess provision for depreciation provided in 1952-53, and have utilised it for declaring a dividend of 9 per cent. (Rs. 4½ per share of Rs. 50) and crediting the reserves with Rs. 1.70 lakh.

The following table shows at a glance the Company's results for four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	1,01.44	99.08	1,16.75	97.52
Closing stocks	42.01	29.59	23.15	34 71
Manufacturing and other expenses	1,09.72	99.52	93.40	80.74
Gross profit	5.18	18.04	24.41	17.78
Provision for—				
Depreciation	6.68	4.84	5.46	6.00
Taxation	...	5.40	10.00	5.44
Net profit (+) or loss (—) ...	—1.50	+7.80	+8.95	+6.34
Excess provision for depreciation written back	6.68	...	...	...
To reserves	1.70	3.56	3.00	2.65
Dividend	4.50 (D. 9%)	5.14 (D. 14%)	5.14 (D. 10% +B. 4%)	3.67 (D. 10%)
Carry forward	0.38	0.19	1.09	0.28

D = Dividend. B = Bonus.

It will be seen that no provision has been made for taxation. This is understandable, because there seems to be no assessable income. The sum of Rs. 1.70 lakh shown in the table as a transfer to the reserves is made up of Rs. 1,65,064 credited to the development reserve and of Rs. 4,687 earmarked for meeting depreciation on investments.

The dividend of 9 per cent. represents a cut of 35.7 per cent. as compared with that for 1955-56 and 1956-57. It is lower than even that (10 per cent.) for 1954-55 but is the same as that for 1953-54 and higher than the 8 per cent. paid for 1950-51 and 1952-53 and 6 per cent. for 1951-52.

The aforesaid table clearly shows that the chief factors responsible for the adverse results for 1957-58 were the sharp rise in manufacturing and other expenses and the heavy accumulation of stocks. Thus, while the sale proceeds increased by only Rs. 2.36 lakhs, manufacturing and other expenses were up by Rs. 10.20 lakhs. Of this, consumption of raw materials (cotton) alone showed a rise from Rs. 58.59 lakhs to Rs. 65.71 lakhs. Closing stocks also stood higher at Rs. 42.01 lakhs, as against Rs. 29.59 lakhs in the previous year. This reflects, to a considerable extent, the consumer resistance in the cotton goods market.

The Company's expansion programme is being steadily implemented. Referring to this subject, the Directors observe as follows:

"Last year, it was reported that, out of 12,180 spindles licensed under the expansion scheme, 9,240 spindles were erected and put into production. During the year under report, the remaining 2,940 spindles were also erected. The total spindleage of the mills now stands at 42,924. Out of 96 automatic looms sanctioned for expansion scheme, 24 Texmaco automatic looms have been received and are in the process of erection. Another 24 Texmaco automatic looms are expected to be received shortly: On account of the rigid import restrictions, import licence for the remaining 48 automatic looms and the preparatory machinery has not been granted so far.

"In connection with the installation of a spinning unit of 12,000 spindles at Chitaldrug, orders have been placed for a portion of the machinery with Textool Company, Ltd., Coimbatore, and we are awaiting the receipt of import licence to import the rest of the machinery. The construction of the buildings at Chitaldrug is progressing and has come up to basement level."

The balance-sheet of the Company as at 31st March 1958 shows that its paid-up capital is unchanged at Rs. 36.70 lakhs. These are supplemented by reserves and surplus aggregating Rs. 22.29 lakhs. The provision for taxation stands at Rs. 5.69 lakhs and current liabilities at Rs. 57.81 lakhs. Of the latter, secured loans from banks account for Rs. 38.81 lakhs. The gross block of Rs 105.51 lakhs has been written down to Rs. 35.04 lakhs. Of the difference between the two figures, actual depreciation amounts to Rs. 61.66 lakhs, the balance, namely, Rs. 8.81 lakhs, representing the capital reduction effected in the distant past. The net block of Rs. 35.04 lakhs includes additions to building, plant and machinery made during the year of the value of Rs. 9.48 lakhs. The current assets aggregate Rs. 87.45 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 23.95 lakhs.

It may be noted here that, way back in 1926, the Company underwent a capital reduction scheme when the paid-up value of each share was reduced from Rs. 50 to Rs. 25. Twenty-two years later, however, the paid-up value was raised to the original level of Rs. 50 by capitalising reserves to the tune of Rs. 18.35 lakhs.

The Rs. 50 fully paid-up shares are currently quoted at Rs. 72.50 *cum-div.* On an *ex-div.* basis, the yield is 6.6 per cent. per annum. Indications are that, in the current year, the Company will fare better.

OSLER ELECTRIC LAMP MANUFACTURING COMPANY

The interim appointment of Mr. Ramendra Chandra Roy, Assistant Secretary, Eastern Zone, L.I.C., as special officer in charge of the Osler Electric Lamp Manufacturing Company, Ltd. was confirmed last week by Mr. Justice Bose of the Calcutta High Court. Accordingly, he would take charge of the properties, assets and books of the Osler Company which were not kept in possession by the Receiver appointed by the Bombay High Court. The Court ordered further that all the members of the present Board of Directors of the Company, including its Managing Agents, be removed. The Special Officer was invested with powers to investigate into the Company's affairs and to take such other steps as he considered necessary for straightening the Company's affairs. Orders were also issued for the immediate termination of any agreement between the Company, on the one hand, and the Directors and Managing Agents, on the other. In addition, the present Directors and Managing Agents were debarred from handling in any manner whatsoever the assets and properties of the Company. The Special Officer was, again, authorised to call forth meetings of the shareholders, if he deemed it necessary for the efficient management of the Company's affairs.

(*Concluded from next column*)

is taken up by reserve land (2,756.76 acres) and buildings, roads, etc. (122.41 acres). The Company was allotted 846,731 lbs. export quota of tea for the year 1957-58 which is equal to 63.44 per cent. of the best crop basis. The coffee crop for 1958-59 is estimated at 175 tons. The Company's visiting agents have reported that the estates are being maintained in excellent order.

The balance-sheet of the Company as at 31st March 1958 discloses a satisfactory financial position. The reserves and surplus aggregate Rs. 13.85 lakhs, as against a paid-up capital of Rs. 9.33 lakhs, all in ordinary shares of Rs. 2 each. The current liabilities amount to Rs. 4.27 lakhs. The gross block of the value of Rs. 23.56 lakhs stands written down at Rs. 16.43 lakhs. Additions during the year were of the order of Rs. 1.10 lakh. The current assets amount to Rs. 11.02 lakhs and are equal to more than twice the current liabilities and provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 3.90 *cum-div.* On an *ex-div.* basis, the shares yield 5.4 per cent. per annum, free of tax.

CHEMBRA PEAK'S PROFIT DECLINES

EFFECT OF HIGHER EXPENSES

THE results of the Chembra Peak Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Calicut, Kerala) for the year ended 31st March 1958 show a great divergence from the highly encouraging performance noted in the previous year. For, although production of tea touched a new record level and total proceeds from sale of both tea and coffee were higher than those realised in 1956-57, these have been more than neutralised by a sharp rise in estate and other expenditure and a perceptible fall in the prices of tea. Consequently, the Company's gross profit for the year under review at Rs. 3.93 lakhs is only a little more than one-third of the record profit of Rs. 9.39 lakhs earned in 1956-57. It is true that the Company's record earnings has not been uniformly progressive. Nevertheless, the gross profit for the year is the lowest since 1953-54 in which year it amounted to only Rs. 3.90 lakhs. The net profit, after providing for Managing Agents' commission and depreciation and after substantially reducing the allocation for taxation from Rs. 4 lakhs to Rs. 1.47 lakhs, also stands appreciably lower at Rs. 1.58 lakh, as compared with Rs. 4.17 lakhs for 1956-57. In other words, the net profit has fallen by no less than 61 per cent. A sum of Rs. 60,388, representing refund of income-tax and surplus provision, has been written back and added to the net profit. Nonetheless, in view of the steep fall in profits, the Directors have been constrained to cut the dividend to shareholders once again from 20 per cent. to 10 per cent., thereby taking it back to the 1955-56 level. Likewise, the transfer to general reserve has been halved from Rs. 2 lakhs to Rs. 1 lakh. A sum of Rs. 9,262 has also been set apart as development rebate.

The following comparative table brings out some of the salient features of the Company's results for the last four years:

(Value in rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds of tea ...	26,06,796	24,33,033	20,39,852	21,24,096
Sale proceeds of coffee ...	4,82,272	3,62,242	1,90,670	1,99,062
Estate and other expenditure	27,84,871	20,36,509	18,82,468	18,84,340
Gross profit	3,92,032	9,39,325	4,85,283	7,40,075
Managing Agents' commission	25,000	66,291	48,706	48,995
Depreciation	62,625	55,778	86,855	66,780
Taxation	1,47,000	4,00,000	1,18,000	2,42,000
Net profit	1,58,307	4,17,256	1,86,722	3,87,321
Excess provision written back	60,388	...	...	...
To reserves	1,09,262	2,00,000	1,50,000	2,50,000
Dividend	98,340 (10%)	1,96,680 (20%)	98,340 (10%)	1,96,680 (20%)
Carry forward	75,291	80,198	28,022	85,246
Crop harvested—				
Tea in lbs. ...	1,618,887	1,380,470	1,208,198	1,078,648
Coffee in cwts. ...	2,745	3,170	2,247	1,417
Cost of production of tea per lb.	Rs. 1.23	Rs. 1.32	Rs. 1.41	As 25.61
Average price realised—				
Tea per lb. ...	1.36	1.80	1.69	25.60
Coffee per cwt. ... Rs.	117	123.50	117	112.50

The output of tea during the year under review rose further from 1,380,470 lbs. in 1956-57 to 1,618,887 lbs. As stated earlier, this is a new record in the Company's history. In this connection, it may be of interest to know that the Company's production of tea has been steadily on the increase since 1952-53, a factor which redounds to the credit of the management, reflecting as it does excellent upkeep of the plants. In view of such higher yields, the cost of production of tea has come down further from Re. 1.32 per lb. to Re. 1.23 per lb. The average price realised was, however, substantially lower at Re. 1.36 per lb., as against Re. 1.80 per lb. The output of coffee, on the other hand, has not maintained the same steady progress, production in 1957-58 having fallen from the previous year's peak of 3,170 cwts. to 2,745 cwts. Although the decline is not significant, it has occurred for the first time since 1953-54, in which year it was as low as 775 cwts.

It can be seen from the table above that the Company's proceeds from sale of tea during the year under review increased by Rs. 1.73 lakh to Rs. 26.07 lakhs and those from coffee by Rs. 1.20 lakh to Rs. 4.82 lakhs But, as against these increases, the rise in estate and other expenditure was as much as Rs. 7.49 lakhs.

The Company's estates, situated in Kerala State, have a total area of 4,586.50 acres. Of this, mature tea accounts for 1,336 acres and mature coffee (robusta) for 371.33 acres. The rest

COMPANY MEETINGS AND DIVIDENDS

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1958. Dividend: *Nil*. Transfer books remain closed from 21st to 27th August 1958, both days inclusive.

KALAPAHARI COAL CO., LTD. Annual General Meeting, Calcutta, 28th August 1958. Dividend: *Nil*. Transfer books remain closed from 16th to 28th August 1958, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 28th August 1958. Dividend: Rs. 2.00 per share. Transfer books remain closed from 14th to 28th August 1958, both days inclusive.

AMALGAMATED COALFIELDS LTD. Annual General Meeting, Calcutta, 29th August 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 20th to 29th August 1958, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th August 1958. Dividend: Rs. 10.00 per share or 10 per cent. Transfer books remain closed from 23rd to 29th August 1958, both days inclusive.

UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th August 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books remain closed from 23rd to 29th August 1958, both days inclusive.

SAUGOR ELECTRICITY SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th August 1958. Dividend: Re. 0.50 per share. Transfer books remain closed from 23rd to 29th August 1958, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 30th August 1958. Dividend: Rs. 4.50 per share. Transfer books remain closed from 23rd to 30th August 1958, both days inclusive.

CHEMBRA PEAK ESTATES LTD. Annual General Meeting, Kozhikode, Kerala State, 30th August 1958. Dividend: 10 per cent. or Re. 0.20 per share. Transfer books remain closed from 18th to 30th August 1958, both days inclusive.

EMERALD VALLEY ESTATES LTD. Annual General Meeting, Madras, 3rd September 1958. Dividend: Re. 0.30 per share or 6 per cent., payable on or after 3rd September 1958. Transfer books remain closed from 23rd August to 3rd September 1958, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram, District Triruchirapalli, Madras State, 4th September 1958. Dividend: Re. 1.20 per ordinary share and Re. 0.12 per deferred share. Transfer books remain closed from 18th August to 4th September 1958, both days inclusive.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Annual General Meeting, Calcutta, 4th September 1958. Dividend: Rs. 2.00 per share or 20 per cent. Transfer books will remain closed from 25th August to 4th September 1958, both days inclusive.

DUFFLAGHUR TEA CO., LTD. Annual General Meeting, Calcutta, 8th September 1958. Dividend: Rs. 3.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 29th August to 8th September 1958, both days inclusive.

SEAJULI TEA CO., LTD. Annual General Meeting, Calcutta, 8th September 1958. Transfer books will remain closed from 29th August to 8th September 1958, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 9th September 1958. Dividend: 2½ per cent. Transfer books will remain closed from 26th August to 9th September 1958, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 9th September 1958. Dividend: 4 per cent. Transfer books will remain closed from 26th August to 9th September 1958, both days inclusive.

LEDO TEA CO., LTD. Annual General Meeting, Calcutta, 10th September 1958. Dividend: *Nil*. Transfer books will remain closed from 2nd to 10th September 1958, both days inclusive.

MURPHULANI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 11th September 1958. Dividend: Rs. 2.25 per share, on preferred ordinary shares and Re. 1.75 per share, on ordinary shares. Transfer books will remain closed from 28th August to 11th September 1958, both days inclusive.

LODNA COLLIERY CO. (1920) LTD. Annual General Meeting, Calcutta, 11th September 1958. Transfer books will remain closed from 3rd to 11th September 1958, both days inclusive.

ESTRELA BATTERIES LTD. Annual General Meeting, Bombay, 18th September 1958. Dividend: Rs. 3.00 per share, payable on 22nd September 1958. Transfer books remain closed from 23rd August to 18th September 1958, both days inclusive.

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala State, 20th September 1958. Dividend: Re. 0.75 per share or 7½ per cent. Transfer books will remain closed from 13th to 20th September 1958, both days inclusive.

NEW DOOARS TEA CO., LTD. Dividend of Rs. 20.00 per share, for the year ended 31st December 1957.

METHONI TEA CO., LTD. Dividend of Re. 1.50 per share or 15 per cent. for the year ended 31st December 1957.

KADRI MILLS (C.B.E.) LTD. Dividend of 10 per cent. for the year ended 31st December 1957.

AMAR DYE-CHEM LIMITED

CHAIRMAN'S PLEA FOR RECLASSIFICATION OF RAW MATERIALS AND IMPORT DUTY

THE Fourth Annual General Meeting of Amar Dye-Chem Limited was held in Bombay on 14th August 1958. In the course of his address to the shareholders delivered on the occasion, Mr. A. K. Doshi, Chairman, emphasised the immediate need for reclassification of raw materials for the purpose of levying import duty, in order to make the protection to the dyestuff industry effective.

The following are extracts from Mr. Doshi's speech:

"GENTLEMEN,

"I have great pleasure to welcome you all here this afternoon to the fourth annual general meeting of the Company. The Directors' report and the audited accounts for the year ended 31st December 1957 have been in your hands for some time past and I shall, therefore, with your permission, take them as read.

"I am sure, the performance in the last year would be viewed with satisfaction. It will be specially appreciated if we take into account the heavy odds against which we had to fight, namely,

(1) The light of collaboration that was gradually dwindling, failed us in the last quarter of the year.

(2) The untrained personnel, on whom we had to rely for evolving the complicated processes involving many steps and finalising them for our use, unadvised and unassisted.

(3) Unwilling labour and their demands.

(4) Accumulation of stocks in the first half of the year, so much so that the factory had to be closed for a month.

(5) Failure of our BON-Acid Plant due to faulty process and its design.

"Notwithstanding all these handicaps, we evolved processes of almost the entire range of dyes produced during the period and placed them on the market. Thus, the emergence of the Company as a manufacturer, wending its way all alone, carefully and cautiously was an achievement, of which all of us could justly be proud.

"At this critical hour, the prime need was to increase production, to develop trade and instil a feeling of security amongst all concerned. Just then, we had to devote much time to the consideration of comprehensive demands from the workmen at the factory. Issues were discussed threadbare before the Conciliation Officer. As no decision acceptable to both the parties could be reached, the matter has been referred to the Industrial Tribunal under the Industrial Disputes Act.

"As you are well aware, during this year, imports of all the items manufactured by the Company have been completely banned. This held out considerable promise and presented both an opportunity and a challenge; opportunity, because it released a powerful stimulus to the sales of our products; challenge, because it called for such resourcefulness as would meet the needs of the country from indigenous production. The floating stocks in the market took one full year to get depleted as a consequence of the above Government policy and there is now an immense demand for our products. We are exerting ourselves to the utmost to cope with the demand.

"The chemical industry is mostly characterised by large investments in plant and equipment. Our capital investment, therefore, of approximately Rs. 15,000 per wage earner is comparatively extremely lower than $30,000 or so invested by U.S.A. chemical factories. We may not aspire at that figure, but this should provide a yard-stick to the investors and to the Controller of Capital Issues, who should appreciate the complex nature of chemical operations, many of which require high temperatures and pressures and high degree of instrumentation.

"In the year 1954, Tariff Enquiry was held with particular reference to the dyestuffs manufactured by one unit and, therefore, only few raw materials came under the purview of the Commission. Since then, and especially since 1956, many units have come into existence and have been operating. But except in the way of banning or curtailing the imports, protection as envisaged by the Tariff Commission is not given, even though representations are made to the Government by the manufacturing units. The customs duty on raw materials alone comes to about 40 per cent. of the c.i.f. value thereof. The cost of the finalised dye would, therefore, work out very high. Further, the cost of indigenous chemicals used in the processes is two or three times higher than those prevailing in foreign countries and this adds to the cost structure as well.

"It is, therefore, imperative that the classification of raw materials and the customs duty thereon should be revised immediately a product is manufactured and that should be done on the lines of the principles set forth by the Tariff Commission.

"The wrong classification of some of the raw materials as 'finished products' and consequent raising of duty from 12 per cent. to 20 per cent. serves to inflict a penalty rather than offer protection. This is an obvious mistake which raises a barricade and must immediately be reviewed to protect the industry. Unless the anomaly is corrected forthwith there is no possibility for the industry to thrive as intended.

"But we should not despair. We are in the midst of the Eastern markets and the visit of our Mr. J. H. Doshi to China, in response to an invitation from them, has enabled the Company to effect recently a shipment of our products to our neighbour—China. We have also secured some trial orders from Europe.

"Given reasonable opportunities and operating conditions, your Company shall continue to expand steadily on a firm footing. Much, however, will depend on Government policies with regard to import of raw materials and availability of foreign exchange."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

BRIDGE AND ROOF EARNS HIGHER PROFIT

RESULTS OF TWYFORD AND HAILEYBURIA ESTATES

Bridge and Roof Co. (India) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie and Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 6,35,876 (Rs. 6,14,612) to which is added the balance brought forward from 1956 of Rs. 1,77,445 (Rs. 1,51,297) making a total of Rs. 8,13,321 (Rs. 7,67,445 including post-war excess profit tax refund of Rs. 1,536). Out of this total, the Board has transferred Rs. 4,00,000 (Rs. 3,50,000) to general reserve, leaving a balance of Rs. 4,13,321 (Rs. 4,17,445) available for distribution, which it is recommended be dealt with as follows:—

To payment of a dividend of 20 (20) per cent. absorbing Rs. 2,40,000 (Rs. 2,40,000) and leaving a balance to be carried forward of Rs. 1,73,321 (Rs. 1,77,445).

No provision has been made for liability to Wealth Tax, Payment of Wealth Tax is not considered to be a charge against current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—Sales during the year were Rs. 167 lakhs, reflecting about the same production as in 1956. Profits before taking into account items relating to previous years, depreciation and taxation, also remained approximately the same.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	21,20,000
Debentures	6,500	Expenditure on buildings under erection ...	6,097
Reserves ...	25,05,000	Stock of raw materials	20,63,930
Provision for taxation ...	4,94,002	Work-in-progress ...	23,53,341
Liabilities ...	82,01,256	Goods-in-transit	1,60,230
Profit and loss account ..	1,73,321	Debts, deposits and advances ...	55,15,559
		Investments	94,207
		Cash ...	2,66,715
Rs	1,25,80,079	Rs.	1,25,80,079

Twyford Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam, Kerala State) submit the audited accounts of the Company for the year ended 31st December 1957.

The result of the year's working after providing for depreciation on buildings, factory and machinery amounting to Rs. 37,813 (Rs. 26,054) and after making provision for payment of income-tax and agricultural income-tax amounting to Rs. 1,50,000 (Rs. 2,05,000) is a net profit of Rs. 1,74,521 (Rs. 1,84,796) to which must be added the balance of Rs. 26,152 (Rs. 21,356) brought forward from the previous year's account making a total of Rs. 2,00,673 (Rs. 2,06,152). The directors recommend the payment of a dividend of 15 (20) per cent. for the year 1957 absorbing Rs. 1,68,750 (Rs. 1,80,000) leaving a balance of Rs. 31,923 (Rs. 26,152) to be carried forward to next year's account.

The dividend of 15 per cent. for the year 1957 is on the increased capital of Rs. 11,25,000, while the dividend of 20 per cent. for 1956 is on a paid up capital of Rs. 9,00,000.

Crop and Price.—11,66,231 (9,76,268) lbs. tea was produced during the year under report against an estimate of 10,00,000 lbs. The cost of production was 152.51 cents per lb. against 170.04 cents in 1956. The net average price realised per lb. was 169.83 cents against 219.17 cents in 1956. The stock of tea remaining unsold as at 31st December, 1957 was 5,53,645 lbs. all of which have been since sold.

Estimates.—The estimate for the year ending 31st December, 1958 is 11,25,000 lbs. tea to be produced at a cost of 167.00 cents.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,25,000	Block ...	23,17,059
Reserves ...	16,53,668	Stock-in-trade	11,82,369
Provision for taxation ...	3,57,470	Stores, spare parts and nurseries ...	1,48,539
Liabilities ...	9,16,299	Debts, deposits and advances ...	2,18,720
Profit and loss account ...	31,923	Investments	1,101
		Cash ...	2,16,572
Rs.	40,84,360	Rs.	40,84,360

Haileyburia Tea Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam, Kerala State) submit the audited accounts of the Company for the year ended 31st December 1957.

The result of the year's working after providing for depreciation on buildings, factory, machinery, furniture etc. amounting to Rs. 1,22,664 (Rs. 62,779) and paying debenture interest Rs. 12,650 (Rs. 12,650) and income-tax on debenture interest Rs. 5,046 (Rs. 4,503) and providing for Income-Tax and Kerala Agricultural Income-Tax amounting to Rs. 3,70,000 (Rs. 6,25,000) is a net profit of Rs. 3,82,301 (Rs. 5,61,001) to which must be added Rs. 18,414 (Rs. 36,990) brought forward from the previous year's account making a total of Rs. 4,00,715 (Rs. 5,97,991). Out of this 5 per cent. dividend on preference shares amounting to Rs. 12,500 (Rs. 12,500) has been paid leaving a balance of Rs. 3,88,215 (Rs. 4,60,491 after paying an interim dividend on equity shares of 10 per cent. absorbing Rs. 1,25,000 now available. The directors recommend the following appropriations:—

To pay a dividend of 15 (final dividend of 15) per cent. on the equity shares for the year 1957 absorbing Rs. 2,34,375 (Rs. 1,87,500) and transfer to development reserve Rs. 1,25,000 (Rs. 2,50,000) leaving a balance of Rs. 28,840 (Rs. 18,414 after transferring Rs. 4,577 to reserve for bad and doubtful debts) to be carried forward to next year's account.

The ordinary dividend of 15 per cent. for the year 1957 is on the increased capital of Rs. 15,62,500; while the dividend of 25 per cent. for the year 1956 is on the paid-up capital of Rs. 12,50,000.

The position of the reserves after making the transfer mentioned above is:—General reserve Rs. 8,50,000 (Rs. 8,50,000), development reserve Rs. 5,50,000 (Rs. 4,25,000), dividend equalisation reserve Rs. 1,00,000 (Rs. 1,00,000) and debenture redemption reserve Rs. 2,50,000 (Rs. 2,50,000).

The addition amounting to Rs. 1,45,775 (Rs. 43,617) represents the cost of machinery purchased for Semni Valley Estate. The addition of Rs. 20,392 represents the value of one diesel engine and one set of clutch housing and fly wheel for lorry and value of one Chevrolet lorry fitted with "Perkins" diesel engine. The addition of Rs. 1,03,926 represents expenditure on new clearings, upkeep of immature tea area and cart road.

Crop and Price.—8,34,000 (7,14,583) lbs. tea was produced from Haileyburia and 11,70,000 (9,82,000) lbs. from Semni Valley Estates (total [20,04,000 (16,03,876)] lbs.] during the year under report against an estimate of 7,10,000 lbs. from Haileyburia and 9,90,000 lbs. from Semni Valley [total 17,00,000 lbs.]. The average cost of production was 145.38 cents per lb. against 150.84 cents in 1956. The net average sale price realised was 195.50 cents per lb. as against 234.17 cents per lb. in 1956. The stock of tea remaining unsold as at 31st December 1957 was 8,97,134 (4,36,444) lbs. of which 8,72,600 (4,35,324) lbs. have since been sold.

The Estates are reported to be in excellent order and have been regularly inspected by the Visiting Agents.

Estimates.—The estimates for the period ending 31st December 1958 provide for a crop of 8,00,000 lbs. tea to be produced at a cost of 164.06 cents per lb. from Haileyburia and 11,25,000 lbs. at a cost of 160.55 cents from Semni Valley.

The crop as at 10th July 1958 is 6,11,584 lbs. from Haileyburia and 7,40,527 lbs. from Semni Valley against 3,60,955 lbs. and 5,80,153 lbs. respectively as on 10th July 1957.

The Kerala Labour Minister in a recent speech has stated that the Minimum Wages Committee would recommend the enhancement of Minimum Wage to Rs. 1.75; the compulsory payment of bonus irrespective of loss or gain and the deposit with Government of the gratuity due to workers. These proposals, if implemented, would be dangerous and would seriously affect the competitive position of the industry and its ability to pay its way.

World production again showed an increase in 1957. Production of tea in the African continent continues to increase and new areas are being opened. In addition, teas from Iran, Argentine and Mauritius have all been seen in London. While the International Tea Committee has estimated that the internal consumption in India in 1955 was of the order of 212 million lbs. and that this is increasing, the general picture is not satisfactory. Tea restriction is not finding favour with Producer countries. The only alternative is to emphasise quality and to take steps to increase consumption.

During 1957, prices were generally lower than during the previous year and it was only towards the end of the year that there was an improvement in the tune. In general, good prices were paid for quality teas while poor teas could not even get their cost.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,12,500	Block ...	36,23,688
Debentures ...	2,30,000	Stock-in-trade	20,27,529
Reserves ...	21,25,000	Stores, spare parts and nurseries ...	2,79,275
Provision for taxation ...	3,64,910	Debts, deposits and advances ...	4,40,825
Liabilities ...	14,41,490	Investments	4,100
Profit and loss account ...	28,840	Cash ...	1,27,323
Rs.	66,02,740	Rs.	66,02,740

Agra Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The difficulties associated with the raising of additional capital is at present under discussion with the Central and State Governments. The position has been brought about due to the provisions of the Electricity (Supply) Act, 1948, which does not make adequate provision for meeting charges on loans. The amount of new capital required to meet the present plant extension scheme is Rs. 60 lakhs.

The following schedule indicates that satisfactory progress has been maintained during the past three years:—

Year ended	Maximum demand on power station K.W.S.	Units sold	Revenue Rs.
31st March 1956 ...	7,500	29,067,738	35,45,600
31st March 1957 ...	8,200	31,512,687	38,75,925
31st March 1958 ...	9,400	36,282,671	42,28,832

As the clear profit for the year under review falls short of the reasonable return as calculated under the Electricity (Supply) Act, 1948 a sum of Rs. 56,718 representing the shortfall has been transferred from the balance at credit of the tariffs and dividends control reserve account to the profit and loss account in accordance with the provisions of sub-clause (2) of Clause II of the Sixth Schedule to the Act. Owing to income-tax depreciation allowances the Company has no liability on account of taxation on the profits for the year in question, and no provision has accordingly been made in the accounts in respect thereof.

After providing for all charges and placing Rs. 62,957 (Rs. 46,474) to statutory contingencies reserve, Rs. 4,14,900 (*nil*) to development reserve, Rs. 1,03,000 (Rs. 1,03,000) to reserve for redemption of debentures and Rs. 92,000 (Rs. 2,05,000) to general reserve, there remains a balance of Rs. 2,49,355 (Rs. 2,49,901) including Rs. 49,941 (Rs. 49,073) brought forward from the previous year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum without deduction of tax Rs. 1,99,960 (Rs. 1,99,960) and carrying forward to next year Rs. 49,395 (Rs. 49,941).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,99,600	Block ...	79,06,130
Debentures ...	10,00,000	Expenditure on capital-work-in-progress ...	3,30,101
Reserves ...	44,20,245	Stores and spare parts, etc. ...	17,31,882
Provision for wealth tax	38,500	Goods-in-transit ...	4,14,073
Liabilities ...	56,30,355	Debts, deposits and advances ...	20,27,248
Profit and loss account ...	49,395	Investments	4,57,937
		Cash ...	2,38,768
		Miscellaneous expenditure	31,956
Rs.	1,31,38,095	Rs.	1,31,38,095

Upper Ganges Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

Although the charges for lighting and fan purposes were reduced in the rural towns, as from 1st April 1957, trading results have been such that the earnings have been in excess of the permissible reasonable return as specified in the Electricity (Supply) Act, 1948, therefore, a further reduction in rates will be put into effect from 1st April 1958.

Notice has been received from the State Government that it proposes to exercise its rights to purchase the Undertaking under Section 7(2) (b) of the Indian Electricity Act, 1910, on the expiration of the initial period specified in the licence; however, negotiations are proceeding with the State Government for an extension of the licence, but if such fail, the Undertaking will be taken over as from 5th February 1959.

The following schedule indicates the progress that has been made:

Year Ended	Units Sold	Revenue Rs.
31st December 1954 ...	7,417,106	12,01,849
31st December 1955 ...	8,138,813	13,34,214
31st March 1957 (15 months)	11,960,311	20,76,277
31st March 1958	11,902,566	19,43,312

The net revenue for the year ended 31st March 1958, after providing for taxation, depreciation and all other charges amounts to Rs. 1,96,041. From this has been deducted a sum of Rs. 1,32,816 in respect of the following reserve allocations in accordance with the provisions of the Electricity (Supply) Act, 1948.

To contingencies reserve Rs. 14,516, development reserve Rs. 48,480, tariffs and dividends control reserve Rs. 34,910 and rebate to consumers Rs. 34,910. There remains a balance of profits amounting to Rs. 63,225 to which is added Rs. 8,663 brought forward from the previous year making a total of Rs. 71,888. After setting aside Rs. 3,000 to general reserve, there is left a sum of Rs. 68,888 which the directors recommend should be dealt with as follows:—

Payment of a dividend at the rate of 10 per cent. per annum without deduction of tax Rs. 59,850 and carrying forward to next year Rs. 9,038.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,250	Block ...	11,73,085

Saugor Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

Satisfactory progress has been maintained during the period under review, as indicated in the following schedule:—

Year Ended	Units Sold	Revenue Rs.
31st December 1954	1,280,801	4,21,063
31st December 1955	1,358,962	4,42,098
31st March 1957 (fifteen months)	1,906,378	6,21,206
31st March 1958	1,678,296	5,47,253

As the clear profit for the year under review falls short of the reasonable return as calculated under the Electricity (Supply) Act, 1948, a sum of Rs. 1,119 representing the shortfall has been transferred from the tariffs and dividends control reserve account to the profit and loss account in accordance with the provisions of sub-clause (2) of Clause II of the Sixth Schedule to the Act. Owing to income-tax depreciation allowances the Company has no liability on account of taxation on the profits for the year in question, and no provision has accordingly been made in the accounts in respect thereof.

After providing for all charges and placing Rs. 7,821 (Rs. 4,606) to statutory contingencies reserve, Rs. 6,105 (*nil*) to development reserve and Rs. 48,000 (Rs. 21,000) to general reserve, there remains a balance of Rs. 17,052 (Rs. 21,080) including Rs. 2,330 (Rs. 2,248) brought forward from the previous year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 5 (5 per cent. for 15 months ended 31st March 1957) per cent. without deduction of tax Rs. 15,000 (Rs. 18,750) and carrying forward to next year Rs. 2,052 (Rs. 2,330).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	11,01,807
Reserves ...	2,10,805	Expenditure on capital work-in-progress ...	7,336
Liabilities ...	9,71,206	Stores, tools, etc. ...	2,48,451
Profit and loss account ...	2,052	Debts, deposits and advances ...	50,637
		Investments	23,928
		Cash ...	51,904
Rs.	14,84,063	Rs.	14,84,063

Cawnpore Textiles, Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland and Co., Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the nine months ended 31st December 1957.

The results for the period after making the usual provisions and adjustments show a profit of Rs. 4,11,698 (Rs. 10,07,088 for 12 months ended 31st March 1957) to which has been added the amount brought forward from the previous year of Rs. 48,855 (Rs. 36,767) making a total of Rs. 4,60,553 (Rs. 10,43,855). From this amount has been deducted: Taxation reserve Rs. 24,500 (Rs. 2,70,000), depreciation Rs. 3,25,000 (Rs. 3,00,000) and rehabilitation reserve Rs. 1,00,000 (Rs. 2,75,000). [Against development rebate of Rs. 1,58,021] leaving to be carried forward to next account Rs. 11,053 (Rs. 48,855 after paying a dividend of Re. 0·25 per share, absorbing Rs. 1,50,000).

During the period under review trading conditions have continued to be extremely difficult. The offtake of cloth deteriorated considerably resulting in heavy accumulation of stocks of finished goods. The reduction in excise duty on cloth announced on 14th December 1957 did not produce any marked improvement in the offtake of cloth, as the quantum of reduction on medium cloth mainly manufactured by the Company's Mill was negligible. It is hoped that the recent announcement in the reduction of excise duty on medium cloth will have a more favourable effect on the movement on cloth. Labour relations in general remained satisfactory.

Reference is made in the balance sheet to commitments on account of capital expenditure amounting to Rs. 3,60,000. That expenditure has been authorised in connection with a capital development programme which has been approved by the directors. Rs. 1,00,000 has been utilised out of the rehabilitation reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	16,48,035
Reserves ...	33,43,336	Stock-in-trade	56,47,968

Liabilities ...	41,20,885	Goods in transit ...	1,40,018
Profit and loss account ...	11,053	Debts, deposits and advances ...	15,53,176
		Investments	9,62,906
		Cash ...	75,552
Rs.	1,05,67,838	Rs.	1,05,67,838

Amalgamated Coalfields Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The Company's profit for the year is Rs. 9,47,462 (Rs. 8,68,854). And after providing taxation on profits for the year of Rs. 5,56,393 (Rs. 1,28,300) there remains a balance of Rs. 3,91,067 (Rs. 7,40,554) to which is to be added provision for liabilities no longer required Rs. 2,61,268 (*nil*), items relating to previous periods Rs. 1,07,413 (Rs. 96,347) and the amount brought forward from the previous year of Rs. 29,730 (Rs. 28,610) making a total of Rs. 7,89,498 (Rs. 13,74,339 including Rs. 4,50,000 transferred from general reserve Rs. 25,000 transferred from benevolent fund and Rs. 33,828 being provision for taxation no longer required). From this amount has to be deducted provision for Labour Appellate Tribunal Award Rs. 2,30,109 (Rs. 6,75,859), transfer to development reserve Rs. 30,000 (*nil*) and transfer to general reserve Rs. 1,70,000 (*nil*) leaving a balance of Rs. 3,59,389 (Rs. 6,98,480). Out of this the directors recommend a dividend of 12½ (12½) per cent. payable without any deduction for income-tax paid by the Company Rs. 3,18,750 (Rs. 3,18,750) leaving a credit balance to be carried forward of Rs. 40,639 (Rs. 29,730 after placing Rs. 3,50,000 to contingencies reserve).

Output and despatches of steam and other grades of coal for the last three years are as follows:—

Year ended	Raisings Tons	Despatches Tons
31st March 1958	8,61,267	8,59,453
31st March 1957	8,53,379	8,55,642
31st March 1957	8,34,805	8,61,759

Capital expenditure during the year is Rs. 7,60,601 against Rs. 7,70,135 in the previous year. Heavy expenditure is necessary on mechanisation and development to maintain output and also to implement various provisions of the Coal Mines Regulation 1957.

For reasons stated in the previous report, a further sum of Rs. 2,30,109 being the estimated cost of the Appellate Tribunal Award for the period from 1st April to 14th July 1957 has been provided for in this account.

Rs. 30,000 has been transferred to development reserve in compliance with the provisions of the Finance Act, 1958 representing seventy-five per cent. of the development rebate allowable in plant and machinery installed after 31st December 1957. In view of the improved working results of the Company during the year and some extraneous credits, it has been possible to transfer Rs. 1,70,000 to general reserve in partial replenishment of the withdrawals made last year. Having made the above transfers to reserves, the directors recommend a dividend of 12½ (12½) per cent. leaving a carry forward of Rs. 40,639 (Rs. 29,730).

The Coal Prices Revision Committee has not yet submitted its report. The selling price of coal has, however, been increased by 0.75 nP per ton to cover the extra dearness allowance payable to a colliery worker under the Award.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,50,000	Block ...	28,58,600
Reserves ...	27,26,650	Capital work-in-progress	2,45,472
Provision for taxation ...	6,60,000	Stores and spare parts	22,45,849
Liabilities ...	43,77,621	Stock ...	65,602
Profit and loss account ...	40,639	Debts, deposits and advances ...	45,43,560
		Investments	1,12,500
		Cash ...	2,84,107
Rs.	1,03,54,890	Rs.	1,03,54,890

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 28th February 1958.

The accounts show a profit, after charging all expenses, of Rs. 1,38,559 (loss of Rs. 96,674). The debit balance brought forward from the previous year was Rs. 3,17,911 (Rs. 2,21,237) making a debit balance to be carried forward of Rs. 1,79,352 (Rs. 3,17,911). Wealth-tax in respect of the year ended 28th February 1958 is estimated to amount to Rs. 1,500 and this has been provided for by transfer from capital reserve.

Raisings have been satisfactory from the Ghusick 'A' seam at Damra Colliery and amounted during the year to 85,907 tons compared with 37,627 tons in the previous year, whilst despatches totalled 78,602 tons as against 34,090 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	7,20,259
Reserves* ...	3,85,964	Stock of coal	1,49,871
Provision for wealth tax, taxation and cesses ...	26,972	Stores and spare parts	65,430
Liabilities ...	4,99,091	Debts, deposits and advances ...	2,98,487
		Cash	27,980
Rs.	12,62,027	Rs.	12,62,027

*Reserves are shown after deducting the debit balance of Rs. 1,79,352 in the profit and loss account.

Badra Coffee Estates Ltd.

The directors of the above Company (Managing Agents: Young India Agencies (Private) Ltd., Bangalore) present the audited accounts of the Company for the year ended 31st May 1958.

The Company's working for the year resulted before allocations in a profit of Rs. 1,61,552 (Rs. 2,28,807) to which was added the amount brought forward from last year of Rs. 63,034 (Rs. 22,732) making a total of Rs. 2,24,586 (Rs. 2,51,539). The directors disposed of this amount as follows:—

To dividend on preference shares at 7½ per cent. per annum already paid Rs. 11,250 (Rs.11,250), 10 per cent. of the net profit to managing agents Rs. 16,155 (Rs. 22,880), to transfer to general reserve Rs. 50,000 (*nil*), to dividend on ordinary shares at 17½ (17½) per cent. Rs. 74,375 (Rs. 74,375) and to provision for taxation Rs. 37,500 (Rs. 65,000) leaving a balance to be carried forward to next year's account of Rs. 35,306 (Rs. 63,034 after placing Rs. 15,000 to dividend equalisation fund).

The coffee crop harvested during the year is 3,010 cwts. (88½ cwts. Arabica and 2,921½ cwts. Robusta). The estimate for the next year is 4,000 cwts. (300 cwts. Arabica and 3,700 cwts. Robusta). The Estates are well maintained.

The planting industry is being called upon to bear an increasing burden under salaries, wages, bonus, provident fund and welfare amenities. The arabica crop has been much less this year. Owing to these reasons the profit for the year has been lower.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,75,000	Block ...	7,16,977
Reserves ...	3,02,366	Stock ...	3,56,422
Provision for taxation ...	1,47,523	Stores and spare parts	70,307
Liabilities ...	2,32,112	Debts, deposits and advances ...	36,578
Profit and loss account ...	35,306	Investments ...	11,658
		Cash ...	1,00,365
Rs.	12,92,307	Rs.	12,92,307

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a loss, after charging all expenses, of Rs. 58,830 (profit of Rs. 10,126). The credit balance brought forward from last year was Rs. 16,682 (Rs. 22,456) and there has been transferred to the credit of the profit and loss account excess tax provisions in previous years amounting to Rs. 15,000 (*nil*) leaving a debit balance to be carried forward of Rs. 27,148 (Rs. 16,682 after paying a dividend at Rs. 10.00 per share absorbing Rs. 15,900).

Whilst prices obtained for teas in 1957 were virtually the same as in the previous year, increased expenditure which had to be incurred on account of labour contributed materially to the disappointing results. The extension of the Employees Provident Fund Act to cover all tea garden workers resulted in an additional cost of Rs. 8,736, whilst issues of foodstuffs at the garden accounted for an increased cost of Rs. 6,399. The West Bengal Entry Tax cost the Company Rs. 8,349.

A crop of 2,062 maunds was secured and sold at an average price of Rs. 3.45 per lb. This compares with a crop of 2,092 maunds in 1956, sold at an average price of Rs. 3.44 per lb.

Estimates for the current season have been framed for a crop of 2,500 maunds to cost Rs. 6,16,181. Despite two hailstorms experienced at the garden in April this year, it is hoped that this crop will be secured.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,59,000	Block ...	2,49,561
Reserves* ...	3,23,091	Stock of tea	1,11,269
Provision for taxation ...	11,606	Stores, spare parts and loose tools	73,807
Liabilities ...	1,23,669	Debts, deposits and advances ...	1,63,607
		Investments	1,097
		Cash	18,025
Rs.	6,17,366	Rs.	6,17,366

*Reserves are shown after deducting the debit balance of Rs. 27,148 in the profit and loss account.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the Seventy-fourth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday the 4th September, 1958, at 11 a.m., to consider the Profit and Loss Account for the year ended 31st December, 1957, and the Balance Sheet as at that date, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS

Notice is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That in compliance with the provisions of Section 360 of the Companies Act, 1956, consent be and is hereby accorded to the purchase by the Company from its Managing Agents, Balmer Lawrie & Co., Ltd., of the following items at the prices stated:—

	Rs.
Buildings	1,49,627
Plant and Machinery	2,975
Electric Installation and Equipment	871
Furniture and Fittings	17,596
Total ...	1,71,069

the said purchase being deemed to have been made on 1st January, 1958."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 25th August to 4th September, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *30th July*, 1958.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE INDIAN IRON AND STEEL COMPANY, LIMITED
12, Mission Row, CALCUTTA

AT A MEETING OF THE BOARD OF Directors of The Indian Iron and Steel Company, Ltd., held on the 12th August 1958, the Directors have declared an interim dividend of One Rupee per share on the Ordinary share capital in respect of the year ended 31st March 1958, being at the rate of 10 per cent. per annum without deduction of Indian income-tax payable by the Company. This action has been taken in order that shareholders shall not be kept waiting for their dividend in view of the closing of the Accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel.

The Directors wish to make it clear in this connection that this dividend, although termed "interim," will in fact be the final dividend for the year and that no further distribution in respect of the year ended 31st March 1958 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified, the Ordinary Share Register and the Transfer Books of the Company will be closed from the 18th August 1958 to the 27th August 1958. Payment of this interim dividend will be made on or after the 15th September 1958 to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 27th August 1958 or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, *12th August*, 1958.

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE SENDRA COAL COMPANY, LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday the 18th September, 1958, at 10.50 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 70 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be Proposed as an Ordinary Resolution:

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of directors by rotation."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 4th to the 18th September, 1958, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, *14th August*, 1958.

Note:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividend, if declared, will be paid on or after 25th September, 1958, to those shareholders so entitled whose names appear in the Company's books on the 18th September, 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under Item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE ONDAL COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of The Ondal Coal Company, Ltd., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 18th September, 1958, at 10.30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 4th to the 18th September 1958, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, *14th August*, 1958.

Note:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividend, if declared, will be paid on or after 25th September, 1958, to those shareholders so entitled whose names appear in the Company's books on the 18th September, 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Tuesday, the 30th September, 1958, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1957, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare dividends, and to transact other ordinary general business of the Company.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 8th September to 30th September, 1958, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *11th August*, 1958.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

PLAN FOR CO-OPERATIVE DEVELOPMENT

(*Concluded from page 299*)

not provide for the preparation and technical scrutiny of a production programme as a vital and basic part of a farm credit plan. The Reserve Bank has endeavoured to perform the tremendously important task of institutionalising rural credit and helping to build up a structure, which for want of credit alone will not allow production to languish. In fact, to the extent to which production can be taken care of from the credit angle, they have done so by suggesting that credit hereafter should look to the outturn from land rather than to the land itself as security.

The Rural Credit Survey Committee has stressed everywhere in their report that unless credit is carefully related to production and production linked with marketing, neither will increased credit result in increased production nor will increased production be effectively translated into increased real income. The point, however, is that this cannot be given a concrete shape, unless a production programme which will result in increased output is prepared in advance of the loan and the amount of the loan, short, medium and long, solidly based on such a programme.

That this should be the objective of the co-operative development plan admits of no argument. How this is to be brought about and what structural and functional changes are needed in the existing organisation to achieve this is beyond the scope of this short paper. On the one side, there is an important programme of what has come to be called "integrated credit," which, thanks to the initiative of the Reserve Bank, is sought to be put into operation; on the other, there is the massive programme of agricultural improvement which the Ministry of Community Development and the Extension Wing of the Ministry of Agriculture are interested in putting through. It should not be difficult to devise some way of close and continuous collaboration between these two efforts, both aiming at improved agricultural production and greater rural prosperity.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *20th August*

Distinctly comfortable conditions came to prevail in the short-term money market during the week under review, despite the heavy subscriptions to the Treasury Bills and large purchases of Government securities from the Reserve Bank. This was due to the return of oversubscribed funds to the Municipal loan and placing of Municipal borrowing back with banks, as well as repayment of 3 per cent. 1958 loan. Consequently, banks became once again lenders in the inter-bank call money section and the rates declined from 2½-2¾ per cent. to 2½ per cent. Even at the lower rate, banks were not interested in borrowing. The rate for house money at call was unchanged at 3½ to 4 per cent. Short-term deposits too were quoted at the self-same rate of 3½ to 4 per cent.

The response to this week's Treasury Bill tenders was not as encouraging as in the previous week. While last week, as against an invitation for Rs. 3 crores the subscriptions aggregated Rs. 5.54 crores, in the week under review the total amount offered was a little over Rs. 5.29 crores, in response to the call for Rs. 4 crores. Tenders at Rs. 99.360 and above were accepted in full and those at Rs. 99.355 allotted approximately 59 per cent. Lower tenders were rejected. The total amount accepted was Rs. 4 crores; the average rate of accepted tenders was Rs. 2.561 per cent., as against Rs. 2.513 per cent. last week. The authorities have reduced the tender amount to Rs. 3 crores for next week, after having successively raised it from Re. 1 crore to Rs. 4 crores in the last four weeks.

A fall of Rs. 8.44 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 15th August 1958. Notes held in the Banking Department are higher by Rs. 9.36 crores. There is no change in either foreign securities or rupee securities, but there has been a welcome rise of Rs. 4.40 crores in balances held abroad, raising the total foreign assets to Rs. 194.53 crores. Deposits of the Central Government are lower by Rs. 1.20 crores, while no notable changes are seen in deposits of other Governments and banks. A fractional rise is noted in loans and advances to Governments, while other loans and advances are lower by Rs. 1.93 crore. Of the latter, advances to Scheduled banks against usance bills account for a drop of Rs. 2.26 crores. With this repayment, the outstanding borrowings of banks against these bills stand at only Rs. 3.28 crores, as against Rs. 45.62 crores a year before.

The Scheduled banks' statement for the week ended 8th August 1958 discloses a drop of Rs. 5.98 crores in demand deposits and a small rise of Rs. 83 lakhs in time deposits. Inter-bank borrowings have risen by Rs. 3.27 crores, while borrowings from the Reserve Bank are lower by Rs. 2.45 crores. Advances are almost unchanged, but bills purchased and discounted have declined by Rs. 2.65 crores. There has been an addition of Rs. 4.99 crores to the banks' investment portfolio. Cash balances have, however, shrunk by Rs. 13.69 crores. Money at call and short notice is higher by Rs. 2.92 crores.

The Gilt-edged market continued to rule buoyant for yet another week, with a further all-round rise in prices. The demand for almost all securities in the list of Central loans and for 4 per cent. and 4½ per cent. State loans continued unabated. The Reserve Bank of India stopped its sale of 3½ per cent. 1967 during the week under review after raising its price to Rs. 98.45 from Rs. 98.20 and, instead, commenced sale of 3½ per cent. 1967 at Rs. 100.15, which represents an increase of 35 nP over the week. The Bank stepped up its selling price of 3½ 1968 by 20 nP to par value. The change in the Reserve Bank's open market operations is considered as an indication that another issue of Central Government loan is in the offing.

To list the variations in prices of some of the important securities during the week. 3 per cent. 1986 improved by 25 nP to Rs. 71.75. 2½ per cent. 1960 was better by 5 nP at Rs. 96.85 and 2¾ per cent. 1962 by 15 nP at Rs. 96.55. 2½ per cent. 1976 was marked up by 10 nP to Rs. 83.20. 3 per cent. 1959-61 was placed at Rs. 99.80 *ex*-voucher, as against Rs. 99.60 *cum*-voucher a week ago. 3 per cent. 1964 gained 15 nP to Rs. 96.35 and 3 per cent. 1966-68 by as much as 35 nP to Rs. 93.75. 3 per cent. 1970-75 advanced by 20 nP to Rs. 88.30. 3½ per cent. 1962 rose by 10 nP to Rs. 98.60 and 3½ per cent. 1961 by a similar extent to Rs. 100.20. 3½ per cent. 1963 moved up by 10 nP to par value and 3½ per cent. 1964 by 25 nP to Rs. 99.95. 3½ per cent. 1965 put on 35 nP to Rs. 99.65. 3½ per cent. 1967 recorded a gain of 55 nP over the week to Rs. 98.70. As already stated, 4 per cent. and 4½ per cent. State loans were all in keen demand, and the gain in prices ranged from 5 nP to Re. 1.

In the foreign exchange section, the slight hardening of sterling abroad gave strength to the rupee in terms of the U.S. dollar. While banks' selling rate for ready dollars declined from Rs. 477.25 to Rs. 477, their buying rate was unchanged at Rs. 473.75 per $100. In New York, spot sterling advanced from $2.80.7/16-2.80½ to $2.80.9/16-2.80¾, but shaded off yesterday to $2.80½-2.80.9/16. Three months' forward rose from $2.79.1/32-2.79.3/32 to $2.79.9/16-2.79¾ and transferable sterling from 278.05-278.15 cents to 278.20-278.30 cents.

HIDES AND SKINS QUIET

(From Our Own Correspondent)

MADRAS, *18th August*

Arrivals of E.I. tanned hides and calves were moderate and clearance by shippers fair-sized at prices one penny above U.K. parity. Shipment business in F.A.Q. types continued unremunerative, on account of local prices ruling above U.K. levels. Due to good inland demand for lower grade kips, sales for shipment were negligible. Arrivals of cow calf and buff calf were small. There was good demand for buff hides from shippers to U.S.A.

In the tanned skins section, there was no change in the market. Tanners of superior marks held firm to their price levels, and shipment business was patchy. A few isolated sales of goat skins were made at 3d. over July levels. Tanners were buying raw stocks of goat skins at high prices thanks to small arrivals.

The next London auctions will commence on the 25th instant when 5,60,000 tanned goat skins and 6,20,000 sheep will be offered for sale. It is generally expected that demand will be good at around May auction levels.

SPURT IN GOLD

(From Our Own Correspondent)

BOMBAY, *20th August*

The highlight of the week's trading in the bullion market was the spurt in gold prices, while silver followed the trend in the yellow metal. The Reserve Bank of India's circular to all foreign exchange dealers to the effect that all trade and invisible payments between Pakistan and India should be made in sterling or any sterling area currency or in Indian or Pakistani rupee with effect from 2nd September 1958, as against the present mode of payment in India or Pakistani rupee only, led to the expectations that smuggling of gold through Pakistan border would dwindle. These hopes were strengthened by the Reserve Bank's announcement that it would stop buying and selling Pakistani rupee from the aforesaid date. The prospects of issue of gold bonds by the Government of India and good demand for the metal from Madras also gave a spurt to prices.

Early in the week, silver showed a tendency to decline on offerings by those who import silver coins from Tibet, but soon gained ground in sympathy with gold. Towards the close, both the metals shed a part of their earlier gains on profit-taking, with the result that closing rates today were below the week's highest levels.

Forward silver (*Shravan* Second Settlement) shaded off from Rs. 184-2 to Rs. 183-12, but rallied to touch Rs. 185-9 yesterday. Today, however, it gave way to Rs. 184-12 at the close. The *Bhadrapad* settlement closed today at Rs. 185-10, as against Rs. 184-14 a week ago.

Ready silver finished at Rs. 184-8, after improving from Rs. 183-6 to Rs. 185-5. The floating stocks of silver are estimated at 900 bars. The daily average arrivals were 25 bars (including unrefined metal), while the offtake was 10 bars per day on an average.

Gold, for forward delivery (*Shravan* Second settlement) rallied from Rs. 106-11 to Rs. 108-6 before finishing lower at Rs. 108-1. The *Bhadrapad* settlement advanced over the week from Rs. 106-11 to Rs. 108-4.

Ready gold scored a gain of Re. 1-10 to Rs. 108-13; the highest level touched was Rs. 109-2. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was a shade higher at 3,500 tolas.

In New York and London, prices of silver were unchanged at the previous week's levels, as indicated in the table below. Gold prices in London, however, gave way from 250s. 4d. to 250s. 1½d., before moving up to 250s. 3d.

The following comparative table shows at a glance the trend of the market during the week under review:

	20-8-58	Highest	Lowest	13-8-58
	Rs a.	Rs. a.	Rs. a.	Rs. a.

BASE METALS RECOVER

(From Our Own Correspondent)

CALCUTTA, *19th August*

A small recovery was in evidence in the prices of "free" base metals during the week under review. Electrolytic zinc closed at Rs. 66.50, after opening at Rs. 66.25. This fractional recovery was due to an enquiry for a substantial tonnage by Tatas who, however, desired that sellers should give their licence numbers in offers. There was little other demand, and it was believed that buyers upcountry were delaying entering the market, in view of the good stock position with importers. They expected that the price would fall further. The decline in price here was also in accord with the trend on the London Metal Exchange. It was noted that copper in London was declining, although stocks in warehouses were lower. This was attributed to doubts if the American stockpile programme would materialise, in view of opposition in Congress. Locally, copper scrap continued to ease. For, with the announcement of copper allotment to non-scheduled industries, cottage industries were no longer interested in scrap. An announcement by producers raised the price of copper conductors by 3 nP per pound. Virgin lead closed better at Rs. 69, as against the opening of Rs. 68.50. Demand was small. Tin was quiet at Rs. 568, but recovered to Rs. 570.

COTTON FUTURES REACT AFTER EARLY STEADINESS

(From Our Own Correspondent)

BOMBAY, *20th August*

The cotton futures market had only four trading days during the week. It was closed on Friday the 15th inst., Independence Day, and also yesterday, it being a Jain holiday. Cotton futures ruled quietly steady during the major part of this short week, although towards the end, a reaction set in. Earlier, price movements were narrow in range and turnover small. The main factor that contributed to the steadiness of the market was the expectation that, as a result of the representations made by the trade, the Government of India might release an additional export quota for cotton. Trade quarters have pointed out that as the current season's crop was estimated at as high as 5.2 million bales and consumption was likely to drop by 250,000 bales, the end-season carryover would be 400,000 bales higher than at the close of last season. Since the supply position was thus comfortable, an additional quota of 20,000 bales of Bengal *Deshi* and 50,000 bales of 23/32" cotton could well be issued without fear of any adverse effect on the domestic price level of cotton. They have also urged that export of Bengal *Deshi* should be expedited since there was fear that Pakistan, with its incentive schemes, might steal a march over this country in the matter of exports of cotton. A section of the trade was inclined to think that the Government would react favourably to the proposal.

This influenced some buying in the new crop contract. Follow up support was, however, lacking and higher levels met with resistance. Reports of favourable weather in most cotton tracts, especially beneficial rains in Gujerat and Saurashtra, the failure of cloth offtake to improve to the desired extent, the downward trend in mill consumption and the declining trend of cotton prices in the spot market discouraged large-scale buying. Prices, as a consequence, tended, to rule steady. Today, as noted above, there was a reaction, thanks to heavy liquidation in the new crop contract, with the result that the modest gain made earlier was erased. The expiring contract, however, managed to show an improvement of one rupee over the week.

I.C.C. Moglai Jarilla August 1958 opened the week at Rs. 648, same as the previous closing rate, and after gradually improving to Rs. 652 on Saturday declined to Rs. 647 on Monday. The contract opened higher at Rs. 650 today but closed one rupee lower at Rs. 649. Tenders against the contract issued on Monday aggregated 300 bales. Total to date was 3,800 bales.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 669.50, 50 nP higher than the previous close, and rose to Rs. 671.50 on Monday. Commencing today's session at Rs. 670.75, the contract improved fractionally before dropping to close at Rs. 667.

The following table indicates the trend of price of the contracts during the week:

(In rupees per candy of 784 lbs.)

	20-8-58	*High*	*Low*	13-8-58
I.C.C. Moglai Jarilla (August 1958) ...	649	650	647	648
I.C.C. Moglai Jarilla (March 1959) ...	667	671.50	665.50	669.50

Listless conditions prevailed in the spot section. Prices showed a sagging tendency. Mill enquiries in staple varieties slackened, thanks to the import allocation for a large quantity of foreign cotton. However, popular staple varieties such as Khandesh, 320F, Digvijay, etc., evoked the attention of spinners. Southern mills were especially interested in Kalyans.

In the export section, moderate activity was noted. Continental buyers were interested in low grade Bengals. Some business was also reported in Bengals superfine and Zoda and pickings. Sales against the recently announced quota have fallen below expectations.

The Government of India has announced that Assam, Comilla, Zoda, Cotton, Cotton pickings, and sweepings, yellow pickings and cotton linters will be licensed freely for export during the 1958-59 cotton season to all permissible destinations other than Tibet and the Portuguese possessions in India.

In the spot section, mill buyers were inclined to adopt a wait and watch attitude. The downward revision of Sudan prices and the declining trend of East African prices have induced them to defer their purchases in anticipation of a further fall in prices. The expectation of a cut in export duty on Egyptian cotton have discouraged traders from entering into large commitments with Egyptian exporters for the present.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closings:

Bengal *Deshi* 635 (645); Berar Jarilla 710 (720); Khandesh 770 (775); Vijay 885 (890); Hubli Luxmi 1,025 (1,030); Jaydhar 925 (935). *Delivery contracts*: Bengal 592 (585); Mathia 615 (618).

Steady conditions prevailed in the Karachi cotton futures market during the week under review. There was fairly good export demand from traditional buyers. Domestic spinners also made purchases. Prices, however, did not record any marked improvement. Keen competition from India and easy advices from New York put a curb. N.T.R.G. January improved from Rs. 78-7 last week-end to Rs. 78-13. The March contract, however, declined fractionally towards the end and closed at Rs. 78-3½, as against Rs. 78-13 last week-end.

As a sequel to the sharp reduction in the reserve prices of the Sudan Gezira Board, Alexandria cotton futures market ruled easy during the week under review also. There were apprehensions of increasing competition from Sudan. This touched

off speculative selling. Prices receded as a consequence. Reports of favourable weather and excellent crop progress imparted additional weakness to the market. There were hopes that the Government would cut the duty rates on Egyptian cotton as a counter-move against the action of Sudan. But they have not so far materialised.

According to the Egyptian Ministry of Agriculture, the area under cultivation in Egypt for the new cotton crop is 1,905,000 feddans, as compared to the revised figure of 1,819,000 feddans for the 1957 crop. The quality-wise break is: Menoufi 610,000 feddans, Ashmouni 609,000 feddans. Karnak 521,000 feddans, Dendera 99,000 feddans, Giza 30 50,000 feddans, others 16,000 feddans.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's rates:

Karnak: November 75.80 (76.00); January 76.15 (76.40). *Ashmouni*: August 66.85 (67.15); October 67.95 (68.18).

Cotton futures values in the Liverpool market suffered a setback during the week. A modest amount of Commission House selling was only partially absorbed in short covering. Uncertainty over U.S. cotton legislation continued to restrict the volume of business. Lower New York cables and absence of encouraging news from the yarn and piecegoods markets induced additional selling and a fall in prices. Sudan contracts eased further, thanks to the downward revision in Sudan cotton prices at Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 24.03; December-January 24.25; March-April 24.35; May-June 24.38. *American cotton mixed growth contract*: October-November 24.68; December-January 24.70; March-April 24.65; May-June 24.60. *Sudan*: September-October, November-December, January-February 30.00.

Cotton futures declined in the New York market during the week. The turnover was limited as traders were awaiting Senate action on the Farm Bill. Values, however, declined in thin dealings, which were mainly of the nature of hedging operations in the current crop months. Favourable weather reports and the expectation of a crop slightly bigger than that of last year, prompted Commission House selling which accelerated the downward trend.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-8-58	12-8-58	5-8-58
Spot	36.40	36.40	36.45
October	35.53	35.72	36.22
December	35.89	36.02	36.55
March	36.30	36.25	36.80

SUGAR DECLINES FURTHER

(From Our Own Correspondents)

BOMBAY, 20*th August*

As was anticipated in this report last week, the spot and ex-mill prices of sugar in the Deccan area and Bombay City have receded further, by a rupee per bag this time. The E and D grades sugar produced by co-operative mills are quoted at Rs. 100-Rs. 101 per bag ex-mill or Rs. 36.50 per maund, which is the controlled ex-mill price fixed for North Indian sugar. Consequently, the railway freight advantage of about Rs. 2 per maund normally enjoyed by Deccan sugar mills is no longer in existence.

Following the further downward revision in ex-mill prices, the sugar market put on a distinctly bearish appearance during the week and prices continued to move downward. Small grain sugar dropped a rupee to Rs. 105 per bag. Medium grain fell from Rs. 107-Rs. 108 to Rs. 106-Rs. 107.50. Large grain was quiet at Rs. 109-Rs. 114.

Arrivals of sugar by rail into the market were lower than those in the previous week; they aggregated 13,900 bags, as against 20,100 bags.

Reports from Kanpur avert that the sugar mills are now freely selling their released stocks of sugar at controlled prices. A bulk sale of 30,000 bags C grade sugar of Gola Gokarnath Mills, for instance, is reported at the controlled rate, with a number of mills following suit. There is thus an overall picture of sugar prices declining in the country in a short period of only three weeks after the Government took the severe action of imposing price control on sugar in North India. Trade circles admit that the attitude of Northern mills to sit tight on their released stocks of sugar was not very happy, but, at the same time, they feel that the action of the Food Ministry was very severe and unnecessary, as evidenced by a general fall in values all over the country in recent days.

* * * *

HAPUR, 18*th August*

Despite resumption of trading which was virtually at a standstill following the imposition of controls on the prices of crystal sugar on 30th July, sentiment in the sugar market was still depressed, as consuming centres evinced little interest. The prices per maund fixed by the Government for different varieties of sugar produced by factories in U.P. and North Bihar are:—A29 Rs. 37.75; A28 Rs. 37.37; A27 Rs. 37; B29 Rs. 37.12; B28 Rs. 36.75; B27 Rs. 36.37; C29 Rs. 36.37; C28 Rs. 36; C27 Rs. 35.75; D29; Rs. 36; D28 Rs. 35.67; D27 Rs. 35.44; E29 Rs. 35.81; E28 Rs. 35.50; E27 Rs. 35.25.

The sugar market of Muzaffarnagar ruled quiet. Saurashtra and Gujerat evinced limited interest and business was transacted at the controlled prices fixed by the Government. Dealers, however, did not make commitments for bulk quantities in spite of easy supply position. The rates at which a few mills transacted business were: Iqbalpur (A29) Rs. 37.75; Khatauli (B29) Rs. 37.12; Deoband (D29) Rs. 36; Rohana (B29) Rs. 37.12; Dhampur (E29) Rs. 35.81; Kashipur (D28) Rs. 35.69; Amroha (D29) Rs. 36; Mansurpur (C28) Rs. 36.

Sugar prices in the Kanpur market declined during the past week, due to steady improvement in arrivals and supplies secured against tenders started arriving in bulk quantities. A fall of Re. 1.50 per bag in prices has been noted in the North Indian markets since the price control three weeks ago.

Khandsari also ruled depressed, as demand was slack. Prevailing prices were Rs. 33 to Rs. 36 per maund according to quality.

Dry quality *gur* stocks had nearly exhausted and arrivals from rural areas were negligible. This quality was nominally quoted here at Rs. 21 per maund, while dry-wet *kotha* was done at Rs. 19.25 and wet *kotha* at Rs. 18.75 per maund. Offtake by road to Punjab during the week was small and local stocks amounted to 39,000 maunds. The condition of the standing cane crop was reported to be fairly good, due to heavy rains in the past few weeks.

Gur, however improved by 50 nP per maund in Muzaffarnagar, due to poor stocks at about 10,000 maunds and despatches of *gur chakku* were made to Gujerat. *Shakker dara* was in poor demand. *Gur chakku* was quoted at Rs. 22.50 to Rs. 23.50 and *shakker dara* at Rs. 24.50 per maund. *Khandsari desi* was available at Rs. 32 to Rs. 33 per maund.

Gur fagun moved quietly both ways during the week, but trading was reported on a small scale. Opening at Rs. 13.94 on Monday and touching the highest of the week at Rs. 14.14 and lowest at Rs. 13.83, *fagun* delivery was quoted today at Rs. 14.10. Bullish trend was noticeable towards the week-end, following Punjab support.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 20*th August*

The yarn market ruled bearish during the week under review. Art silk yarns encountered selling, due to expectations of larger arrivals of imported yarn in the coming months. Traders noted the clarification made by the Joint Chief Controller of Imports and Exports, Bombay, to the effect that, under both actual users' licences and licences of export promotion scheme, (*a*) 120 and 150 deniers bright viscose rayon yarn would be allowed to be imported up to 50 per cent. of the face value of licences and (*b*) 120 and 150 deniers acetate rayon yarn up to 25 per cent. Staple fibre yarns also came in for selling, thanks to poor offtake of cloth woven from these yarns and reports of heavy accumulations of stocks with several traders. There were fears that, as powerloom and handloom weavers were not making any fresh purchases on account of low profit at prevailing levels, the local stockists might have to lower prices in order to create demand. Among the important consuming markets, Surat showed little interest. Punjab was also weak and prices there were reported to be on the decline. Advices from Calcutta and Bhagalpur, too, were discouraging. Cotton yarns continued to remain depressed. Demand from local markets was poor and export prospects were considered to be not quite bright, on account of keen competition from China, Japan, Pakistan and other countries.

In the art silk yarn section, 120 Italy fell by 44 nP to Rs. 6.56. 120 Japan retreated by 7 nP to Rs. 6.37. 150 Japan, however, gathered 6 nP to Rs. 6.62. 150 Italy were better by 19 nP to Rs. 6.75. Among indigenous yarns, National Rayons 120 bright cones first grade receded by 3 nP to Rs. 5.91. But 150 bright cones first grade gathered 10 nP to Rs. 5.19.

Staple fibre yarn 40×2 October delivery was subjected to heavy selling pressure and slumped by Rs. 17 to Rs. 734. August delivery dropped Rs. 6 to Rs. 724. Spot 40×2 New Greats eased by 9 nP to Rs. 3.94. Citys were done 12 nP lower at Rs. 4. Kohinoors climbed down by 10 nP to Rs. 4.09, Centurys declined by 12 nP to Rs. 3.94. Among foreign yarns, Fujis were dull at Rs. 9.37.

In the cotton yarn section, ten counts came in for selling. Moderns receded by 25 nP to Rs. 13.25 and Podars by 43 nP to Rs. 12.25. Twenty counts were neglected, Indus, Moderns and Gokaks being quoted at Rs. 16.75. Among thirty counts, Hinds were done at Rs. 19.75, same as last week. Forty counts Moderns softened by 25 nP to Rs. 25.25. But Minaxis were in demand 6 nP higher at Rs. 25.37. Among sixty counts, Finlays eased by Re. 1.50 to Rs. 59.50. Raghuvamshis lost a rupee to Rs. 58. Eighty counts Moderns declined by 50 nP to Rs. 71.50. Mahendras changed hands at Rs. 72, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	20-8-1958	13-8-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6.37	6.44
150 Japan (per lb.)	6.62	6.56
120 Italy (per lb.)	6.56	7.00
150 Italy (per lb.)	6.75	6.56
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	724.00	730.00
40×2 October	734.00	751.00
40×2 Kohinoor (per lb.)	4.09	4.19
40×2 City (per lb.)	4.00	4.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	12.68
20s Modern	16.75	16.75
30s Hind	19.75	19.75
40s Minaxi	25.37	25.31
60s Finlay	59.50	61.00
80s Mahendra	72.00	72.00

GROUNDNUTS FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 20*th August*

A steady trend was in evidence in the oilseeds market during the week under review. Groundnuts met with good bull support induced by rumours of an imminent release of a bonus quota of 25,000 to 30,000 tons of groundnuts expellers for shipment before September next and large purchases by Delhi and Punjab operators. Consequently, prices of forward contracts registered handsome gains. Even reports of favourable rains in Saurashtra failed to have any effect. In sympathy with groundnuts, castorseeds ruled strong in the later sessions of the week. The sentiment in this section, of course, continued to be somewhat depressed. Fresh export business in castor oil was lacking, thanks to wide disparity between overseas and Indian prices. The U.K. quotation for commercial quality was around £104 per ton, as against the Indian parity of £108½. Cottonseed was fully firm, with prices showing a tendency to rise. Linseed, however, ruled quiet in the absence of fresh export business in linseed oil and discouraging advices from Argentine. The export price was higher at £114 per ton, as against the quotation of £111 prevailing in London. There would have been a marked fall in prices but for the cautious attitude on the part of sellers in view of Australian enquiry.

Forward contracts in the groundnut section presented a distinctly firm trend. Induced by excellent bull support, the contracts forged ahead. August 1958 contract rallied Rs. 5 to Rs. 198, February 1959 contract, which stood at Rs. 163.25 last week-end, spurted to close at Rs. 166.75 today. In the spot section, bold ready rallied 25 nP to Rs. 39.25; at one time on Saturday, the quotation stood higher at Rs. 39.75. Coromandel and Khandesh quality both advanced from Rs. 39.37 to Rs. 39.75. Groundnut oil ex-mill, which had eased from Rs. 20.75 to Rs. 20.50 on the 16th inst., recovered subsequently, today's closing rate being Rs. 20.62. Railway receipt, after receding from Rs. 20.50 to Rs. 20.12, firmed up to Rs. 20.37.

The castorseed section ruled easy in the first two sessions of the week, but picked up strength on Monday which gathered further momentum today. There was large-scale switching-over operations from September contract to May delivery. September 1958 contract, which stood at Rs. 156.62 last week-end, declined to Rs. 155.87 on Saturday. Thereafter, it gradually rose to touch Rs. 156.25 at the close today. May 1959 contract was done at Rs. 156.62 today, as against Rs. 156.37 on Wednesday last. Over the week, ready Madras suffered a loss of 37 nP, today's closing rate being Rs. 31.25. Kanpur quality shed 37 nP to Rs. 30. Castor oil B.S.S. was on offer, the quotation moving down from Rs. 17.50 to Rs. 17.25. Commercial quality fell from Rs. 16.26 to Rs. 15.94.

Linseed September 1958 contract encountered selling and declined from Rs. 33.62 last week-end to Rs. 33.12 on the 16th inst. The contract, however, recovered subsequently and touched Rs. 33.81 today. Business in May 1959 contract commenced at Rs. 33.21 today. Towards the close, the delivery was quoted at Rs. 33.25. Bold ready, after easing from Rs. 33.62 to Rs. 33.12, recovered to Rs. 33.25. Linseed oil was quiet at Rs. 17.37 throughout the week, as against Rs. 17.50 last week-end. Today, however, it evoked buying enquiries and registered a gain of 13 nP.

Cottonseed February 1959 contract attracted good attention of the operators and advanced from Rs. 103.75 to Rs. 106.50. September 1958 was on request, the quotation rising by Re. 1.50 to Rs. 121.50.

Among other seeds, kardiseed bold ready was well supported. It was done at Rs. 21.50 today, as against Rs. 20.50 on Wednesday last week. Niger-seed Madras quality was also well supported, the quotation rising from Rs. 33.00 to Rs. 34.50 before finishing lower at Rs. 34.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	20-8-1958	13-8-1958	6-8-1958
	Rs.	Rs.	Rs.

BLACK PEPPER MOVES DOWN

(Messrs. Parekh and Co.)

BOMBAY, 20*th August*

Under pressure of bear selling and for want of foreign demand, Malabar black pepper receded during the week with undercurrent uncertain. Specific delivery for September moved down from Rs. 600 to Rs. 580, with buyers holding off for lack of new incentive.

Ungarbled at Alleppey and Cochin went down to Rs. 606½, with small business passing. October delivery was nominally quoted at Rs. 108.75, the highest and the lowest being Rs. 113 and Rs. 107.50, respectively. December delivery on the ring moved narrowly between Rs. 102.50 and Rs. 103.75, the business turnover being very much restricted.

Prices of Sarawak at Singapore were well maintained at Str.$74, though white showed some small fall from Str.$126 to Str.$124.

New York spot was marked down from $0.27½ to $0.27¼, in sympathy with easy advices from the supplying countries. Grinders were reported to be buyers at round about $0.27. This year, there is little likelihood of competition from Sarawak with Malabar black, the crop in Sarawak being small. Though some fear is entertained from Indonesia, nothing is certain, as the position of Lampong black is reported to be in fluid state, pending internal political stability in the country.

September delivery moved down from Rs. 600 to Rs. 580, with small business passing, both bears and bulls awaiting new development. At the time of writing, ungarbled at Cochin is quoted at Rs. 612½, while Calicut at Rs. 650.

In A.S.T.A., nominal quotation for August-September is $0.26.

Today's nominal quotations are: Ready delivery Rs. 82 per Bengal maund; September Rs. 580.90 and October Rs. 585.95 per candy of 5¼ cwt.

QUALITY TEAS WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, 19*th August*

There was good demand for quality teas on offer during yesterday's export sales. Common teas, however, suffered a setback, thanks to enlarged availability and expectations of a further decline in prices. It was noted that production in North India in July was estimated at 90.47 million lbs., recording a rise of 9.86 million lbs. Up to the end of June, output was running lower than last year, but, with the figure in July now estimated, this position changed, the decrease having been converted to an increase of 6.4 million lbs. at the end of July. Although last year's output was below normal, market circles felt that, this year, the increase in availability of common teas would prove to be an embarrassing problem.

Dusts on offer during internal sales held last week amounted to 15,931 chests, which included some useful good liquorings. There was better demand, with plainer liquoring orthodox teas risking by 8 nP on keen competition. Non-withering Dooars and better liquoring orthodox Assam teas opened easy and gained firmness as the sales progressed. C.T.C. Assams had more buyers than in the previous sales. Prices of plainer liquoring and medium descriptions recorded higher advances often, while, in irregular trend, the few best liquorings gave way. Darjeelings were not wanted. The rates (in rupees per lb.) with those of the previous sales in brackets, are: Best Assam C.T.C. 2.55 to 2.85 (same); medium Assam C.T.C. 2.20 to 2.40 (2.10 to 2.30); medium Dooars 1.70 to 1.74 (1.68); and medium Assam grainy dust 1.72 to 1.76 (1.68 to 1.72).

Leaf on offer amounted to 357 chests.

Export quota changed hands at 11 nP. Subsequently, sellers demanded 11½ nP, but buyers offered only 10¾ nP.

On offer during yesterday's export auctions were 52,868 chests, which met with good general demand. Whole leaf grades were fully steady, as also tippy teas. Darjeelings were keenly bid. The price of plain brokens rose by 4 nP and fannings tended to move up. Keen attention was shown to medium orthodox Assams possessing bright liquors and prices rose, while those with more ordinary liquors gave way by 10 nP. Although orthodox Dooars met with good demand, prices were irregular. Legg-cut teas eased by 5 to 10 nP. The quotations (in rupees per lb.) with those of a week ago given in brackets, are: Best Assam C.T.C. fannings 3.60 to 4.00 (3.80 to 4.20); best Assam C.T.C. B.P. 3.30 to 3.60 (3.50 to 3.80); medium fannings 2.05 to 2.15 (same); clean black pekoe 2.10 to 2.15 (same); medium B.P. 1.90 to 2.00 (same); plain B.P. 1.70 to 1.74 (1.66 to 1.70); and plain fannings 1.84 to 1.88 (same).

Export quota, after being done at 10½ nP, declined to 10 nP.

JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 19*th August*

Quiet conditions prevailed in the jute markets during the week under review and the holiday on Friday last was a welcome relief to market circles. Prices of jute goods fluctuated within narrow limits, although, earlier in the week, hessian was fully steady on reports of higher consumption in the U.S. Overseas interests refrained from displaying any large interest, but normal business took place in both hessian and heavy goods. Business would have probably been more had it not been for the announcement of the July output which, at 89,800 tons, showed a substantial increase of 7,400 tons. The largest increase, which was 4,000 tons, was shown in hessian at 35,300 tons, suggesting that mills had already commenced transferring a portion of sacking looms to hessian manufacture, in view of the abnormal nature of increase in stocks of sacking goods in recent months. Heavy goods produced in July amounted to 49,000 tons, as against 45,900 tons in the previous month, and miscellaneous constructions at 5,500 tons recorded a small increase of 300 tons. Stocks of all goods at the end of June being 134,000 tons, the availability in July was 223,800 tons. It was, therefore, noted that the demand last month was 101,600 tons which was far higher than the monthly output. Such an increase was due to several June shipments having taken place in July, in view of the dock workers' strike in June.

Another news noted with satisfaction in the market was that burlap consumption in the U.S. in July at 68 million yards was higher by 7.6 million yards as compared with June. Following this, hessian goods hardened, and B. twills also moved up in sympathy. However, this was not followed by genuine interest and so prices fell. American buyers were content to keep away from the market, as they had a fair quantity in their hands, following heavy purchases made after the Middle East crisis.

On Tuesday last, the market opened on an easy note, but, after sagging, prices recovered. Thus, hessian 40″ 10 oz., after being lower at Rs. 42.40, closed at Rs. 43.15. Ready B. twills at Rs. 99.90 registered a small rise. On the next day, prices in both hessian and sacking goods improved. In B. twills, some business was done on Australian account, and the price was unchanged but steady at Rs. 99.90. Hessian constructions were marked higher, in view of the satisfactory consumption in the U.S. Hessian 40″ 10 oz. at Rs. 43.20 marked the highest level for the week. On Thursday, as the interest shown by overseas markets was meagre, prices were marked lower with hessian 40″ 10 oz. quoting at Rs. 42.95 and B. twills at Rs. 99.40. Towards the week-end, the quotations were still lower at Rs. 42.90 and Rs. 99.25, respectively. Near and forward delivery quotations for B. twills were higher than the rate for the ready delivery, while the reverse was the position in regard to hessian. Jan.-March B. twills opened at Rs. 101.95, but eased to Rs. 101.40 over the week, and the same delivery hessian 40″ 10 oz. eased from Rs. 40.90 to Rs. 40.65. Little interest was shown by overseas buyers yesterday and prices declined. In addition, there was selling pressure in the *jatka*. This led to B. twills giving way to Rs. 90.00 However, hessian 40″ 10 oz. at Rs. 42.95 showed a fractional improvement.

Raw jute was quiet. Mills bought sparingly. However, sellers were reserved, and this prevented the quotations from declining. The latest quotations of the 1958-crop are given below:

	Middles Rs.	Bottoms Rs.	Delivery
Pakistani:			
District	32.00	29.00	Aug.-Sept.
Northern	32.00	29.00	Do.
Indian:			
Northern	28.75	26.25	Do.
Assam	28.75	26.25	Do.
Orissa	30.75	28.25	Sept.-Oct.
Desal	27.75	25.25	Aug.-Sept.
Murshidabad	26.00	23.50	Do.
Dalsee	31.50	29.00	Sept.-Oct.
Uttar Pradesh	25.50	25.00	Aug.-Sept.
Daisee Mesta	26.50	24.00	Oct.-Nov.
Bimli f.a.q.	...	Rs. 22.50	Do.
Pucca bales 1st marks ...	...	Rs. 167.00 per bale ready.	

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 18*th August*

During the week under review, the hides and skins market ruled steady. The local tanners were active buyers, while the Madras dealers were lukewarm. The country tanners were inactive, because of heavy rains. New arrivals were considerable.

The latest available quotations are: Wet salted cow 1st grade Rs. 360 to Rs. 380, 2nd grade Rs. 300 and 3rd grade Rs. 260 per score; wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; Goat 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; skins 1st grade Rs. 250 to Rs. 270 and 2nd grade Rs. 160 to Rs. 180 per 100 pieces.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 18*th August*

The foodgrains market ruled distinctly firm during the week under review, due to poor supply position. The Union Food Minister informed the Lok Sabha that, out of a total quantity of 2.3 million tons to be imported during 1958, 1.47 million tons had already been received in the country up to the end of July and imports were keeping pace with the requirements of the country. As regards rice, stocks in the possession of the Central Government amounted to 406,000 tons, which had been built up partly through imports from Burma, the U.S.A., and Viet Nam and partly through internal procurement in the States of Andhra, Punjab and Orissa.

Wheat prices at Hapur registered further gains during the week to touch new heights at Rs. 21.50 per maund for average quality and Rs. 23 for farm produce. The supply position was very tight, as arrivals from producing areas were scanty due partly to waterlogging following heavy rains in the past few weeks and mostly due to uncertainties of *kharif* crop which has been destroyed in most of the western U.P. districts as a result of abnormally heavy rains. Occasional unauthorised arrivals of wheat here were from Punjab and trade stock was nominally quoted at one *khatti*. Sales through fair-price shops here had not yet begun and, due to paucity of wheat, consumers demand had been switched on to other coarse grains like gram, barley and peas.

Rice recorded modest gains in line with other cereals, although standing crops were fairly good. Prevailing prices were:—*basmati* Rs. 41 to Rs. 43.50; *mainpuri* Rs. 30.50; coarse quality Rs. 26.50 per maund.

Gram registered a sharp advance in prices, following firm Punjab advices and depletion of stocks due to brisk consumer demand. Barley and *bejhar* also recorded fractional gains during the week, as the maize crop has been destroyed in major part of western districts of the State. *Jowar* and *guwar* registered a hardened trend and week-end prices (in rupees per maund) were:—gram 15.87 to 16.12; barley 15.25; *bejhar* 15; *jowar* 13 to 15.25; *guwar* 15.75.

Peas continued to attract heavy demand from east U.P. and Bihar and prices moved up considerably. *Arhar's* purchases were mostly by local millers for grinding it into *dal* and prices registered a gain of about Re. 1 per maund. Other pulses were mostly steady. Week-end prices (in rupees per maund) were:—peas *dara* 14.31; *khatti* 14.25; peas *dal* 15.75; *arhar* 18.12; *arhar dal* 22.25; *urd* 19 to 20.25; *moong* 25; *massoor* 16.

After heavy rains for many weeks which have resulted in heavy losses to Sawani crops, weather has been clear for about a week. The preparation of land for *rabi* sowings has just begun.

SURVEY

(Concluded from page 295)

Economic and Social Council which concluded at Geneva recently. After considerable discussion on this subject, in which the representatives of primary producing countries took a prominent part, the Council decided to reconstitute the Commission on International Commodity Trade by giving it the following functions:

The basic task of the Commission will be "to study and analyse developments and trends in international commodity trade, including excessive fluctuations in the prices and volume of commodity trade and movements in the terms of trade and the effect of such developments on both the international and domestic economic position of countries participating in international commodity trade, especially on the economic developments of less-developed countries. In this connection, the Commission will bring to the attention of the Council or of Governments of States-members of the United Nations its views and recommendations as to the need for governmental or inter-governmental action to deal with problems or emerging problems which its studies may disclose. The specific functions of the Commission are: (*a*) to keep constantly under review the movements of world primary commodity markets by the assembly and analysis of appropriate data; (*b*) to submit periodic reports to the Council on its work; (*c*) to publish studies and statistical reports on prices, terms of trade and other matters relating to international trade in primary commodities.

Another resolution passed by the Council relates to the future meetings of the Commission. The Council decided to convene the re-constituted Commission at its headquarters on 9th March 1959. The meeting is expected to last two weeks. The subjects of discussion during the session will include fluctuations in commodity prices and volume of commodity trade, including changes in terms of trade, and the measures applied or proposed for the solution of problems connected with primary commodity trade; and the medium and long-term prospects for consumption and production in the main commodities with reference, *inter alia*, to developments in the consumption and production of synthetic and substitute materials. The States and organisations concerned will be invited to take part in the work of the next session of the Commission. The Council will, moreover, request participating States to be represented by highly qualified experts.

The Council subsequently elected the following 18 members of the Commission on International Commodity Trade:

Pakistan, Argentina, Brazil, Poland, United Kingdom, the U.S.S.R. (one year's term of office), Sudan, Indonesia, Yugoslavia, Greece, Australia, the U.S.A. (two years), France, Uruguay, India, Chile, Belgium, Canada (three years).

With its expanded membership, the Commission should now be able to evolve realistic schemes for stabilisation of commodity trade and prices. Its success depends ultimately upon how far it is able to win the co-operation, if not the confidence, of the constituent countries, whose interests, more often than not, come into conflict with one another. The task is extremely difficult; in fact, many economists of repute in the Western world consider it a wild-goose chase. It may be mentioned here that Britain and the U.S. have agreed to serve on the Commission only after the Council had agreed to drop from the earlier terms of reference of the Commission the "impossible task" of establishing a fair and equitable relation between the prices of raw materials and those of industrial products.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less bonus-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1955 is on shares of Rs. 10 each. F.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page 291*)

e, following the news, declined to close at Rs. 666, as against yesterday's closing quotation of Rs. 667. It is clear that considerations of the overall supply position of cotton in relation to the demand and the promising signs of a good crop in the 1958-59 season are more decisive in influencing the trend of the market.

Prospects for the absorption of the current export quota are generally regarded as bright. The whole quota is expected to be fully absorbed by the end of October. Hong Kong and Japan are said to be the major buyers. Although there is keen competition from Pakistan at present, Indian varieties are comparatively cheaper. Unless there is a duty reduction in Pakistan, which is considered unlikely, the present price advantage may continue.

* * * *

Barring foodgrains which remain firm, the commodity markets continue to r

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2476 BOMBAY, 30th AUGUST 1958 PRICE: Re. 1·50

PLANTERS' PROBLEMS

THE problems confronting the plantation industry in South India appear to be growing, if the length of the speech of the President of the United Planters' Association of Southern India can be taken as an index. This year, it fell to the lot of Mr. C. I. Machia, the retiring President of the Association, to focus public attention on them in his speech at the sixty-fifth annual meeting of the Association held at Coonoor on Monday last. He performed this task very ably in a really marathon address. Perhaps, he could not avoid its length, as the problems had to be presented against their background, so that they could be seen in proper light and the urgency of effectively solving them realised. The plantation industry is undoubtedly one of the industries about which many wrong notions prevail even in high places. This explains why some of its problems which could have been solved long ago persist. One of them surely is the heavy incidence of export duty on tea. The planters in South India and North India alike have been contending, for over a year now, that the burden of this fiscal levy on medium teas, also known as common teas, which account for the bulk of the tea crop, is unbearable and detrimental to the long-term interests of Indian economy. Even the dire need for more foreign exchange has not moved the authorities to come to a decision on this question, though it has made them acknowledge the validity of the planters' plea. It is, of course, patently unfair to subject common teas fetching approximately Re. 1.50 per lb. to the same rate of export duty as is applied to finer teas earning Rs. 3 per lb. Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, who attended the U.P.A.S.I. meeting as its chief guest, admitted this point in as many words. He said: "I do agree that it is hardly fair that common teas selling at half the price of quality tea should pay the same duty, when the production of common teas is as much as 50 per cent. of the total."

If the Government is thus in full agreement with the industry on this issue, why should there be such a delay in giving relief to medium teas? There are two reasons. The administrative problems arising from an attempt to define common teas render it difficult to introduce two rates of export duty, a higher one for the quality teas and a smaller one for the common teas. The obvious solution, therefore, is to reduce the export duty for both the types. Here comes the second reason. The Exchequer's need for revenue is so pressing and the tea industry has been providing such large sums by way of export duty that the Government is reluctant to accept the logical remedy. In other words, it is unable to reconcile the clash of interests in choosing between export promotion and revenue requirements. Mr. Shastri, however, made the reassuring statement that, though the task was not easy, "the Government would take a decision before long." It remains to be seen how he is going to do it. The fact that no workable scheme has been found so far is itself a sufficient ground for the authorities to take a more realistic view. The best thing for the Government to do, therefore, is to reduce the present rate of export duty substantially rather than try a double-decker system which will have many disadvantages. If, as a result, quality teas make a good profit, the Government can get its share of revenue through the direct taxes obtaining at present. It is time the Government realised that excessive export duties are tantamount to providing tariff protection to the competitors of Indian tea. It may be argued by the philanthropic-minded politicians that people in other parts of Asia, as well as Africa, must have a chance to find new sources of employment. But there is a lot of wisdom in the old saying "charity begins at home."

The future of tea exports does not depend solely on a reduction in the burden of export duty. Action is required in two other directions also. One is promotional campaign for increasing consumption of tea in foreign markets. Whether India was right or wrong in abruptly withdrawing from the International Tea Market Expansion Board is a debatable question. But nothing will be gained by going into it now. What is necessary is an effective "Drink More Tea" campaign in foreign markets, not excluding Britain. Now that the Government has not been successful in this task, it would be well advised to entrust the work to the industry which has been contending that propaganda should be taken out of departmental control. Past history provides sufficient ground for the Government to trust the industry for this purpose. Another direction in which action is required pertains to world regulation of production by reviving the old International Tea Agreement. The Government of India has not been averse to this idea. And Mr. Shastri reiterated that it was quite prepared to help the producers. This was apparently in response to the U.P.A.S.I. President's suggestion that producers of all the countries competing for a share in the world trade should get together and seek a mutually satisfactory solution. He appears to hold the view that, where the Government has failed, the industry may succeed.

While nothing will be lost in making fresh attempts to restore life to the International Tea Agreement, it looks to us that the chances of success are not very promising. Will producers in East Africa, who have succeeded in building up export markets for 76 million lbs. within a short period, be in a mood to accept a limitation on their production? In Britain, they have already found a market for 51 million lbs., a quantity almost equal to the exports from South India. With such remarkable success to their credit and with the Government of India supporting them by keeping up a tariff wall against exports of Indian tea, would they condescend to talk to their Indian confreres? Then, there is Pakistan imbued with hatred against India. Even if the producers of tea in that country were willing to negotiate, their Government would not let them do so. At one time the Governments of Ceylon and Indonesia were believed to be in favour of international agreement, but one does not know whether they are still of that friendly disposition. Then, there is a host of other countries which have succeeded in producing tea for export, notable among them being Argentine and Iran. Egypt and Russia are making serious attempts to produce tea. There is every possibility of China, an old exporter of tea, returning to the scene. There is thus a real threat to India which has held the leadership in the world tea market for over half a century. It is very unlikely that tea producers in the rest of the world will appreciate the need for, and the value of, an international understanding so long as Indian tea is on the defensive in the world market and the powers-that-be in this country "refuse," to quote the words of Mr. Machia, "to consider the economics of tea industry in terms of its competitiveness in the world market." The key to the solution is thus in Government's hands. If it tarries, as it did in the case of the jute industry, India will lose the game.

The problems of the tea industry are not confined to finding export markets alone. With world production of tea expanding fast and already in excess of demand, it is imperative to boost domestic consumption also. Next to Britain, India is, perhaps, the largest consumer of tea. This makes the problem of pushing up sales in the home market a little easier. Also, as Mr. Shastri pertinently remarked, the efforts that are being made to raise the living standards of people will themselves lead to higher consumption in India. All the same, the industry cannot afford to take this development for granted. Accordingly, vigorous propaganda and other means of sales promotion within India itself must be adopted. This is true of coffee also. As in the case of tea, the world has a surplus of coffee, so much, indeed, that the principal producers, most of whom are in Latin America, have been trying, albeit without any success so far, to regulate world coffee production and to stabilise coffee prices through international agreement. At this juncture, Indian coffee production is running at between 40,000 and 45,000 tons, as against 25,000-28,000 tons in the not distant past. The supply is greater than the demand, domestic as well as export. Yet, the Government is compelling the industry to adopt marketing policies and procedures designed to suit a situation when demand exceeded supply. Mr. Machia was, therefore, perfectly justified in pleading for a reorientation of outlook on marketing practices and for intensifying propaganda in areas where coffee is practically unknown.

Plantation industry offers a typical and convincing example of the immense benefits which people can enjoy by adopting sound and scientific agricultural practices. It is the organisational and managerial structure that distinguishes plantations from ordinary agriculture. Mr. Machia deserves to be complimented for effectively bringing out, with facts and figures of the achievements of South Indian plantations, the superior virtues of plantation agriculture. In heaping taxes on this industry, or in drawing up land reforms, the authorities concerned do not seem to bear this vital point in mind. Their policies are such as will sap the very vitality of the industry, unless they heed, in good time, the advice given by its leaders. A perusal of Mr. Machia's well-reasoned address will clearly show that there is no exaggeration in our warning. The burden of taxation by the States and the Centre is so high that most estates, whether they produce coffee or rubber, are already finding it

necessary to dip into their past reserves in order to maintain their productive efficiency. This leaves little or nothing for replanting and for bringing new land under cultivation. At this rate, when the life of existing bushes comes to an end, India will find itself deprived of a valuable source of employment and national income. The result will not be different if the State Governments are allowed to adopt land reforms which will lead to fragmentation or sub-division of plantations. There is, therefore, an urgent need for a special conference of the representatives of planters, the Central and the State Governments concerned at which the issues that are threatening the future of plantation industries could be thrashed out and mutually satisfactory solutions found.

AGRICULTURAL ECONOMICS

THE tenth International Agricultural Economists Conference, inaugurated by Mr. Nehru this week at Mysore, has served to highlight the importance of agricultural economics which, in contrast to the immense attention it has received in many parts of the world, has suffered in this country from cursory study with preconceived notions born of slogans. If the Conference succeeds in arousing at least academic enthusiasm in the need for organising studies in agricultural economics by experts with practical knowledge of Indian conditions and in stimulating a more objective attitude on the part of political and social groups towards India's agricultural problems, it will have made a significant contribution to this country's cultural and economic progress. As recent developments on the food front have abundantly demonstrated, India can ill afford to neglect its agriculture. With refreshing candour, Mr. Nehru admitted, in effect, that the failure of the monsoons and the tardy progress made in the sphere of food production had shocked the Government into a new awareness of India's agriculture. Like one's heart-beat, or one's breathing, agriculture in India is an operation which is seldom noticed unless something goes wrong with it in a serious way. This implies the danger that, when the present crisis has been tided over, the country may redevelop its agricultural blind spot. It is of the utmost importance to national economy that agriculture comes more and more under expert scrutiny, that agricultural policies are guided by objective and painstaking analysis. What can be more conducive to such an attitude and policy than a continuous study of agricultural economics?

As a branch of economic discipline, agricultural economics is of recent origin. Although agriculture is the oldest of professions and has played a most notable part in the evolution of human civilisation, the economics of this activity did not attract much notice even in other parts of the world till about 50 years ago. The problems of land and rent had been known to early economists. The systematic study of the intricate issues of agriculture did not receive the benefit of careful study and reflection on a scale which industrial economics got from inquiring students. But in more recent years, much has been done in foreign countries to make up for the long neglect of the subject. Further, the nature and scope of the subject are being continuously expanded. And as the new human and social sciences, like psychology and sociology, put new tools in the hands of analysts or break new paths, the scope and content of agricultural economics too expand. Water-tight compartments exist neither in arts nor in sciences. Agricultural economics is no exception. It has borrowed and borrows freely from other sciences.

Among the votaries at the shrine of agricultural economics—they are an ever-widening community—the most prominent is Mr. L. K. Elmhirst. With much commendable fervour, this high priest has done more than any other to popularise the subject, to evoke interest in it and to stimulate its objective study. He has been the moving spirit behind the International Conference of Agricultural Economists which he, along with a few other enthusiasts, founded in the U.K. in 1929. The constitution of the Conference defines its aim as "that of fostering development of the science of agricultural economics and of furthering the application of the results of economic investigation of agricultural processes and agricultural organisation in the improvement of economic and social conditions relating to agriculture and rural life." It will thus be seen that the object is as broadly conceived as it can be.

Since the year of its establishment, the Conference has met periodically in many countries, including the U.S., Italy, Germany and Finland. At each session, a topic is taken up for exhaustive study and comment. The topics covered so far include land tenure, consumption of agricultural produce and world food resources. In 1955, at its session in Helsinki (Finland), the Conference discussed the implications of the technical changes in agriculture. A no more appropriate theme could have been chosen, considering that the developments in nuclear sphere have opened up vast vistas of progress in the agricultural field. It is true that the harvest is not in sight yet. But it may come sooner than most persons imagine, even as nuclear power, as distinguished from conventional electrical energy, has come to stay earlier than was thought possible a decade ago. The theme for the Mysore Conference is "Agriculture and its terms of trade." Here again, the subject is of both academic and practical interest, for the development of rural communities, as well as of agricultural nations of which these communities are a part, depends a great deal upon the "terms" on which they trade with the rest of the community or the world at large.

In a country like India, which derives 50 per cent. of its national income from agriculture, one would expect greatly extended facilities for the study of agricultural economics. Actually, the study has suffered through much and prolonged neglect. The late Prof. A. W. Ashby, Director, Institute for Research in Agricultural Economics, University of Oxford, who visited India in 1949-50, said: "Having regard to the area of agricultural land, the size of the agricultural population, the importance of agriculture in the national economy—its actual and potential contributions to national wealth—I am appalled at the small provisions made for investigation and research in Agricultural Economics." This verdict is a sad commentary on University education in India. Be that as it may, a notable development in India is the establishment of the Indian Society of Agricultural Economics. Founded in 1939, it owes its origin to the inspiration provided by Mr. Elmhirst himself. Guided in its activities by Mr. Manilal B. Nanavati, a tireless savant in the cause, the Society has made a commendable contribution to the study of agricultural economics. Besides undertaking valuable research projects and publications, the Society has convened no less than 18 annual conferences where the problems discussed so far include such important issues as land tenures, agricultural marketing, rural finance, debt legislation, stabilisation of prices and farm management. While the Society's efforts deserve all praise, it should be evident that its activities have to cover a wider area and should be supplemented by extended investigations and studies on a regional basis which, it is needless to add, should be without political predilections.

Appropriately enough, Mr. Elmhirst prefaced his address to the Conference with a discussion of what ought to be the chief concern of agricultural economists. He averred that they should be mainly concerned with the individual farm and with the farmer earning his living from it. In the past, they had tried to measure his efficiency with the help of costings, of surveys and of statistics. But they had more recently come to appreciate that, unless they looked more closely into the farmer's whole environment, they might go wrong. The farmer and his wife had a family of their own but they were also citizens of their nation and the wide world; they sold their produce on the world market. This indicated that agricultural economists must take a "wider view of the farm in its relation to the world, as well as to the national economy in which it operates." Further, they had to understand the motives, conscious and unconscious, which lie behind a farmer's decisions. Here, as Mr. Elmhirst pointed out, the economist is brought into direct association with the sociologist and the psychologist. Indeed, it would lead one to erroneous conclusions if one ignored the social conditions in which a farmer works.

Proceeding, Mr. Elmhirst pointed out that, in India, as in China, in South-East Asia and in the Middle East, it "is the ancient rural community and not just the farm family which is the vital unit." Great urban conglomerations—Bombay, Calcutta and Delhi—"tend, as they grow, to become impersonal in their operation and costly to operate." Mr. Elmhirst admitted that cities conferred great benefits, but they also cut people off from nature and from daily acquaintance with natural beauty. Emphasising the importance of providing amenities and services in rural areas, he said:

"If we are to welcome the services that cities perform as centres for government, for the exchange of goods and of ideas, if we are to build, as we must, sizable towns around the great industrial centres we need, we must see that in their own turn rural areas receive the roads, the water-supplies, the transport and marketing facilities and the services of education, health and communication that they also need.... The problem of rural India is the underemployment of 75 per cent. of her manpower. Can the new industries and the services that go with them syphon off some of this unused potential? Can all rural areas be so linked with their appropriate urban centres that a new and two-way service may develop between them, so that a wider range of opportunity for agriculture and for the village community can emerge? We have come here to discuss such questions. As scientists, we need a detached assessment of the problems and of the results from all sources, whether positive or negative."

Besides the right balance between urban and rural development, there is another important problem to which the attention of social scientists deserves to be increasingly devoted. This is the problem of growing population in relation to food resources. Without necessarily giving in either to Malthusian pessimism, or uncritical optimism, it should be the concern of agricultural economists to make an objective, as well as a constructive and rational, study of the problem. By no means can it be regarded as easy of solution, considering that, at the present rate of growth, world population is likely to double itself by the end of this century. Mr. Elmhirst rightly urged that this was a problem which social scientists must "face boldly and examine with care." He did well, too, to stress the significance of proper land use which he regarded as the duty the present generation owes to the future generations. He said: "It would, I believe, be wise for every nation or State to begin to work out for itself today a sound strategy of multiple land use before too much land is gobbled up for limited or unsuitable purposes or lost to use altogether by wind, fire, flood or over-grazing. Humanity must hold and husband the land surface of the globe in trust for future generations. There is no doubt that, unless this trust is accepted by this generation, whole areas might deteriorate and fail to render the services needed by successive generations and expanding populations."

The important thing in agriculture is to increase per-acre yields. Science has placed in the hands of man many devices by which agricultural yields can be improved. But there is also a closely related problem which deserves examination, namely, the demand on poorer lands. Mr. Elmhirst pointed out that, "as the good land becomes more productive, a variety of new demands is also being made upon the poorer lands." By wisdom and forethought and by limited capital investment, these lands too can be made to render an ever-widening range of services, whether of timber, of fuel, of water-gathering and storage or as holiday resorts. Mr. Elmhirst declared: "The ultimate interest of soil, of community and of individual is one." He averred that experiment was needed in order to find out ways whereby the State could delegate the responsibility for proper land use to institutions "without stifling individual initiative and enterprise."

The theme for the Mysore session of the Conference, as stated at the outset, is "Agriculture and its terms of trade." Elucidating the significance of the theme, Mr. Elmhirst said: "The farmer offers a service to the community. He needs in return a full range of service, from his market town, from industry, from his university and his government. Does he yet receive a fair reward for all his labour and foresight?" Mr. Elmhirst pointed out, in this context, how different factors influence the "parity position" of agriculture; some are local and some worldwide, some arise from political or governmental decisions and developments or from technical innovations or as a result of sociological or biological disturbance. These developments have their effect on agriculture and its terms of trade. The evolution of policies which will benefit agriculture and secure for it a just, if not a generous, treatment in its relationship with the rest of the national economy and the wider international markets must be based upon the knowledge of, and insight into, agriculture. It is to be hoped that the Mysore session of the Conference will provide some guidance to agricultural planners in all countries who are keen that the farmer gets an adequate reward for the services he renders to the community.

U.S'. COMMENDABLE INITIATIVE TO RAISE INTERNATIONAL LIQUIDITY

NEW LOANS—GUEST KEEN—SHIPPING—COPPER

THURSDAY, 5 P.M.

MARKET GOSSIP

THE Union Finance Minister, Mr. Morarji Desai, who left Bombay yesterday on his first foreign visit to attend the Commonwealth Economic Conference at Montreal, takes with him the good wishes of the entire country. No Finance Minister left India at a more critical juncture and of none other has more been expected than of Mr. Morarji Desai. It is now no longer any official secret that the Finance Minister is on his way to the West to find some means whereby the country's yawning foreign exchange gap may be bridged. Mr. Desai could not have chosen, as we pointed out last week, in an analysis of the prospects for foreign aid, a more appropriate time for his departure, considering that world opinion, in general, and U.S. and Commonwealth opinion, in particular, is now more inclined than ever to help India out of its foreign exchange difficulties. A £75 to £100 million aid from the U.K. is now regarded as well within the bounds of possibility.

The three-day conference of India's principal creditor nations, namely, the U.S., Britain, W. Germany, Japan and Canada—it is gratifying to note that Canada, which had not been mentioned in earlier reports from Washington, was invited to the meeting—and the World Bank, which concluded this week, is believed to have ended in an atmosphere of optimism. This conference was intended to consider India's request for new credits to the tune of one billion dollars over the next two and a half years. Although no official *communique* was issued at the end of the meeting, informed opinion regarded India's chances of getting increased foreign aid as bright.

Against this background, much interest attaches to President Eisenhower's proposal for expanding the resources of the World Bank and the International Monetary Fund. This proposal will be widely welcomed in India, as in all underdeveloped countries. President Eisenhower, in a communication addressed to the U.S. Secretary of Treasury, Mr. Anderson, has expressed agreement with the latter's view that the "well-being of the free world is vitally affected by the progress of the nations in the less-developed areas as well as the economic situation in the more industrialised countries." Among the principal elements in maintaining such an economic basis for the free world are (1) a continuing growth in productive investment, international as well as domestic; (2) financial policies that will command the confidence of the public and assure the strength of currencies; and (3) mutually beneficial international trade and a constant effort to avoid hampering restrictions on the freedom of exchange transactions. With this end in view, the U.S. has adopted a number of measures, including an increase in the lending authority of the Export-Import Bank, the establishment of the Development Loan Fund on a firmer basis, the extension of the Reciprocal Trade Agreement Act and the continuation of the programmes under the Agricultural Trade Development and Assistance Act.

President Eisenhower has pointed out that the time has now come for them to consider, together with the other members of the World Bank and the I.M.F., how they could better equip these two international agencies of "proved effectiveness" for the tasks of the decade ahead. Accordingly, he has proposed (1) negotiations designed to establish an International Development Association as an affiliated body to the World Bank, if studies now being made indicate its feasibility, (2) prompt consideration of a general increase in the quotas assigned to the member-governments of the I.M.F., and (3) some consideration of an increase in the World Bank's authorised credit.

After paying a tribute to the important role played by the I.M.F. in assisting countries which encountered temporary difficulties in their balance of payments, Mr. Eisenhower says: "Through its growing experience and increasingly close relations with its members, the Fund can also help see to it that countries are encouraged to pursue policies that create stable financial and monetary conditions while contributing to expanding world trade and income." In support of the proposal for augmenting the resources of the World Bank, he says that such additional capital subscriptions, if authorised, would not necessarily require additional payments to be made by the Bank; they would, however, ensure the adequacy of the Bank's lending resources for an extended period by strengthening the guarantees which stand behind the Bank's obligations. He suggests that the Bank could make an increasing contribution to the economic progress of the free world by "channelling the savings of private investors throughout the world into sound loans, repayable in dollars or other major currencies." He adds: "But to meet the rising need for such sound development loans, it must be able to raise the funds in the capital markets of the free world. An increase in the Bank's subscribed capital, by increasing the extent of the responsibility of member-governments for assuring that the Bank will always be in a position to meet its obligations, would enable the Bank to place a larger volume of its securities in a broader market, while still maintaining the prime quality of its securities and hence the favourable terms on which it can borrow and re-lend funds."

As regards the proposal for an International Development Association, Mr. Eisenhower believes that such a body, affiliated to the World Bank, if adequately supported by a number of countries able to contribute to it, could provide a useful supplement to the existing lending activities of the Bank and thereby accelerate the "pace of economic development in the less-developed member-countries of the Bank."

The three-point programme, contemplated by Mr. Eisenhower, does certainly constitute a "broad attack" upon some of the major problems of our time. The World Bank and the I.M.F. must be strengthened further, if they are to expand the sphere of their activities. The next decade may well witness a larger and more insistent demand on their services. And it is to be hoped that international opinion will support Mr. Eisenhower's proposals for broadening and strengthening the financial and organisational structure of these two international institutions which have made a unique contribution to the stability and progress of the free world.

* * * *

When we discussed the money market trends in these columns last week, little did we think that the two new issues, created by the Government of India for an aggregate sum of Rs. 60 crores, would be announced so soon. We thought that they might not come on the market for a fortnight at least, as some of the industrial concerns had been allowed to take their requirements during this period. Apparently, the extreme easy money conditions and the persistent enquiry from banks for dated loans must have induced them to change their mind. On Monday, the Reserve Bank stopped selling from its stocks 3½ per cent. 1967 and 3½ per cent. 1968. The next evening, the Government of India announced the creation of two issues—3½ per cent. 1967, which is only a continuation of an existing loan, and 3½ per cent. 1968, for Rs. 30 crores each. The latter is a new loan, in that there was no 3½ per cent. loan repayable in 1968. Both the issues were given to the Reserve Bank to be sold to the public at rates depending upon the trend of the market. The Government's selling price to the Reserve Bank was Rs. 98.80 for 3½ per cent. 1967 and Rs. 98.50 for 3½ per cent. 1968, the yield at these rates being 3.65 per cent. and 3.68 per cent., respectively.

The Reserve Bank is reported to have sold sizable lots of both the loans on the first day itself, that is, on Wednesday, at the same rates at which they were given to it by the Government. The Gilt-edged market is happy that the Government followed this procedure, for it is of the view that, if the loans had been offered straight to the public with a time limit of two or three days, there might have been some pressure on the money market and the existing loans. The institutional investors can now take up their requirements of the new loans as and when they need, though there is the risk of the Reserve Bank putting up the selling rates, if market conditions become favourable for doing so.

Since the outstanding amount of the existing 3½ per cent. 1968 loan is only Rs. 34.34 crores, the Government, it may be argued, could have made a second issue of this loan, instead of creating a new 3½ per cent. loan repayable in the same year. The reasons for this are not far to seek. In a rising market, a borrower will always try to make the best bargain by stiffening his terms. This is exactly what the Government has done now. The 3½ per cent. 1967 issue had already gone into a small premium of 15 nP and 3¾ per cent. 1968 to par. Even the latter would have gone into a premium—as it has done now, the rate for it being Rs. 100.20—if the Reserve Bank was not selling it at par. The authorities could have easily made a second issue of 3¾ per cent. 1968 and sold it at a premium by pulling up the market a bit, but they must have felt that it was a little premature to do so. Further, by issuing a loan at 3½ per cent., the Government has saved ¼ per cent. in the rate of interest payable every six months, though, of course, it will have to pay Re. 1.50 more by way of principal at the time of redemption. This policy has led to a spurt in the value of most of the existing loans of the Central and State Governments. Conditions in the money market are so easy now that the Government has the upper hand over the capital market; for the first time after a decade, it is able to lead the market, instead of being led.

* * * *

The eagerly-awaited details of the debenture issue of Guest, Keen, Williams, Ltd., the well-known mechanical engineering company of Calcutta, have been announced, *vide* pages 354-359. The salient features of the offer are as under:

The total amount of issue is Rs. 1.50 crore, in units of Rs. 1,000 each. The rate of interest is 6½ per cent., subject to tax, payable half-yearly on 1st January and 1st July. The first interest payment will be on 1st July 1959 at Rs. 52.72 (less income-tax) per Rs. 1,000. The issue price is at par. The debentures are redeemable on 1st January 1971, with option to redeem the whole or any part on 1st January 1966, or at any time thereafter at par on three calendar months' notice. The amount available to the public for subscription is only Rs. 75 lakhs, as the balance of Rs. 75 lakhs has been taken by the underwriters and the Company's friends. The whole issue is, of course, underwritten.

The entire proceeds of the issue will be utilised for financing the Company's expansion programme. The Company, as is common knowledge, specialises in mechanical engineering works and has also a valuable agency business, importing and selling a wide range of mechanical and electrical products of well-known overseas manufacturers. It has manufacturing works at Calcutta and at Bhandup, near Bombay. The factory at Bhandup, which commenced manufacture only as late as 1953, is by now the largest producer of high-class steel and brass wood screws in India.

The Company, it may be mentioned, has spent considerable sums in the past two years on development plans involving the extension and modernisation of plant, property and machinery, the cost of which has been borne by existing resources. The purpose of the present issue is to provide, by means other than short-term bank borrowings, a substantial part of the finance required for the fulfilment of these development plans and also the developments planned for the immediate future.

The past year saw the beginning of large-scale addition to plant capacity, apart from rehabilitation, at the Calcutta factory and a progressive increase in the plant installed at Bhandup. Among the programmes at present envisaged, special mention may be made of a scheme for the expansion of the Company's steel rolling mills for which the approval of the Government has been obtained. The Company also proposes to effect a sizable expansion of its capacity for the manufacture of tungsten carbide rock drill inserts and coal cutter picks; Government's permission for this activity has already been received. In the factory at Bhandup, a considerable expansion in the productive capacity of wood screws and metal thread screws has been completed and production has consequently begun to increase. New lines are also being explored. The Company has thus a bright future. That knowledgeable investors are aware of this is clear from the fact that the debenture issue has had no adverse effect on the market value of the Company's ordinary shares. Actually, there has been a perceptible improvement in their value, following keen investment buying. The current market price of Rs. 32 represents an

EQUITIES BUOYANT

ALL-ROUND BUYING FERVOUR

(From Our Own Correspondents)

BOMBAY, *27th August*

THE Stock Exchange continued to rule buoyant during the week under review. There was persistent all-round buying fervour in equities and values maintained their upward trend. Chief impetus to the market was provided by renewed hopes of India getting substantial foreign aid following reports that the meetings on India's balance of payments problem held at Washington under the auspices of the World Bank had been quite successful. Easier money conditions and the gradual decline in yield on Gilt-edged securities also imparted strength to the market. The latest annual report of the Tata Iron and Steel Company, though it showed lower earnings, was well received because of its impressive progress in the implementation of expansion plans. All these factors encouraged the bulls to remain aggressive. This, together with nervous short-covering, led to handsome gains in equity rates. There was some profit-taking towards the close. Nevertheless, the closing rates of many counters were much higher than those at the end of Thursday last.

Under the impetus of good buying orders influenced by the publication of T.I.S.Co.'s annual report, Tata Steel Ordinaries jumped up from Rs. 171.75 last week-end to Rs. 174.75 on Saturday. Subsequently, however, they fluctuated within a narrow range, today's closing rate being Rs. 173.75. The new shares were done yesterday at **Rs. 170**, as against Rs. 167.75 on the 21st inst. Indian Irons evoked enquiries and spurted from Rs. 25.50 to Rs. 26.40 before finishing lower at Rs. 26.20.

Textile shares were generally well supported. Bombay Dyeings advanced from Rs. 59.80 to Rs. 60.70 and, after declining to Rs. 59.70, recovered again to finish at Rs. 60.10. Centurys opened the week at Rs. 458, as against Rs. 453. They moved up to Rs. 460 but closed lower at Rs. 453 on news that the Directors of the Company were considering issue of preference shares. Kohinoors registered a gain of Rs. 2 to Rs. 255. Phœnix advanced by Rs. 8.25 to Rs. 136.25 and Models by Rs. 5 to Rs. 170. Simplex hardened by Rs. 3 to Rs. 178. Gokaks and Standards rose by Rs. 2 each to Rs. 154 and Rs. 432, respectively. Podars gained a rupee to Rs. 138. Shree Nivas gathered a like amount to Rs. 165. Ahmedabad Advances were fully maintained at Rs. 175, as also Edwards at Rs. 262.50, Elphinstones at Rs. 46, Sholapurs at Rs. 375, Tatas at Rs. 39 and Western Indias at Rs. 4,525. New Citys and New Greats, however, encountered selling; the former dropped Rs. 4.25 to Rs. 113.75 and the latter Rs. 2 to Rs. 200. Central Indias were on offer Rs. 4 lower at Rs. 99. Swadeshis declined by Rs. 2.50 to Rs. 203. Vishnus eased by Re. 1.50 to Rs. 111. Finlays lost a rupee to Rs. 291.

The bank section was quite active. Punjab Nationals attracted some attention and spurted by Rs. 3 to Rs. 63. Barodas, Bank of Indias and United Commercials hardened by a rupee each to Rs. 123, Rs. 134 and Rs. 63.50, respectively. Central Banks improved by 50 nP to Rs. 57.30. Jaipurs gathered 25 nP to Rs. 37 and Union Banks 4 nP to Rs. 7.24.

Among electric shares, Andhra Valleys met with excellent support and firmed up by Rs. 23.75 to Rs. 1,225. Tata Hydros strengthened by Rs. 3 to Rs. 129.50. Tata Powers put on Rs. 2.50 to Rs. 1.275. Bombay Suburbans increased by Re. 1.50 to Rs. 113.75. Ahmedabad Electrics gained 50 nP to Rs. 99.30. Surat Electrics, however, were neglected at Rs. 111, as against Rs. 112.

Sugar shares were quiet, as follow-up support was lacking. Belapurs came down from Rs. 289 last week-end to Rs. 285 on Monday. In the subsequent sessions, buying enquiries emerged and the quotation advanced to Rs. 288.50 before finishing at Rs. 287.50. The net loss over the week was Re. 1.50. Walchandnagars suffered a loss of Rs. 3.75 to stand at Rs. 287.50. Phaltans declined by 50 nP to Rs. 167. Bhopals, however, rose by 8 nP to Rs. 24.52 on special support.

Cement shares were fancied well. Associated Cements spurted from Rs. 159.50 to Rs. 164.50 before finishing at Rs. 162.50. Digvijays rallied Rs. 2.50 to Rs. 154.50. Jaipur Udyogs were taken up from Rs. 15 68 to Rs. 16.12. Ashoka Cements were done 28 nP higher at Rs. 10. Dalmia Cements strengthened by 24 nP to Rs. 12.24. Orissa Cements gathered 8 nP to Rs. 13.32.

In the engineering and mining group, Premier Constructions proved to be the brightest spot with the quotation firming up by Rs. 9 to Rs. 215, on revival of rumours regarding bonus issue. Shivrajpurs were also well supported at Rs. 108, a rise of Rs. 2.50 as compared with the previous closing rate. Alcock Ashdowns, however, came in for selling and were pushed down by Rs. 5 to Rs. 263.75. Tata Locomotives declined by Re. 1.25 to Rs. 191, notwithstanding the announcement of higher dividend of Rs. 9 for the year ended 31st March 1958, as against Rs. 8 for 1956-57, and capital issue scheme in the ratio of three shares for every five shares held. The decline in prices was due to profit-taking at high levels which the shares had touched in previous weeks, as the dividend and new issue news was in line with market expectations. Larsen and Toubros eased by 26 nP to Rs. 16.48 *ex-right* and *ex-div.* Indian Coppers shed 15 nP to Rs. 4.04. Mahindras were done at Rs. 16.24 *ex-right*, as against Rs. 20 with rights quoted at Rs. 4 last week.

Shipping shares continued to be keenly sought and there was a further addition to values. Scindias picked up Re. 1.28 to Rs. 22.12. Great Easterns advanced by 50 nP to Rs. 27.50 on rumours of higher dividend. Bharat Lines rose from Rs. 14 to Rs. 14.44 yesterday. India Steamships hardened by 37 nP to Rs. 14.37.

Among automobile shares, Hindustan Motors failed to record an impressive gain, despite encouraging working results for the year ended 31st March 1959. The outlook for the current year was not considered to be quite bright, in view of foreign exchange difficulties. The shares of the Company were quoted at Rs. 7.72, the gain over the week being negligible at 8 nP. Premier Automobiles actually receded by Re. 1.50 to Rs. 86.50.

In the miscellaneous group, Bombay Burmahs (Old) evoked renewed buying enquiries on reports that the bonus scheme of the Company had been sanctioned by the Government, as also due to proximity of interim dividend. The quotation for the fully paid shares moved up by Rs. 9 to Rs. 601.50. The partly-paid shares rallied Rs. 2.50 to Rs. 220. National Rayons met with excellent support and advanced by Rs. 9.50 to Rs. 242.25. Industrial Investment Trusts scored a gain of Rs. 5.20 to Rs. 82. Wimcos put on Re. 1.75 to Rs. 192.25. Tata Oils improved by 54 nP to Rs. 39.25 *ex-div.* and Tata Chemicals by 44 nP to Rs. 17.12. Hindustan Levers increased by 36 nP to Rs. 24.24. Killick Industries were firm at **Rs. 149.**

Calcutta Stock Exchange

CALCUTTA, *27th August*

Although there was an early reaction in prices of equities on the Calcutta Stock Exchange during the week under review, trading soon became lively under the active support of speculators. Fair gains were recorded in all sections. Yesterday, however, a receding tendency was recorded following the announcement of investment policy for the L.I.C. Stock market circles feared that if the L.I.C. were to increase its buying of shares in any one concern to 30 per cent. of its issued ordinary capital, it would mean a step in the way of indirect nationalisation. In mid-week, genuine investment interest was small, and the speculative buying by operators was attributed to expected institutional support. The report that the premium for issue of new shares by existing companies would not be insisted upon added to making sentiment. Similarly, the report from Washington that India might soon receive financial assistance from the U.S.A. was noted cheerfully. The British Government was said to be thinking of providing India £100 million. It was, therefore, anticipated that the foreign exchange crisis would soon be solved. Operators took the view that, if the present firmness were maintained, genuine investment support would follow. This assumption supported the view that, prior to the present upward trend, equities were undervalued.

Coals were fully firm. Amalgamateds gained from Rs. 20.94 to Rs. 21.12 before closing lower at Rs. 21. Churulias were a strong feature, the quotation rising from Rs. 2.87 previously to Rs. 3.50, following satisfactory working report for the year ended December last. The dividend at 5 per cent. compared with 1¼ per cent. declared for 1956. On the other hand, Kalpaharis gave way from Rs. 13.75 to Rs. 13.37 since the dividend has been passed. Moderate interest was shown in New Beerbhooms and the quotation at Rs. 19.50 was higher by Re. 1.25. Borreas strengthened from Rs. 22.50 to Rs. 23.25 before receding to Rs. 22.06. Equitables were better at Rs. 28.87, as were Western Bengals at Rs. 7.18. Talchers at Rs. 2 put on 7 nP.

Jutes recorded further gains. Although prices of jute goods declined, it was believed that the plentiful nature of the jute crop would take down fibre prices. New Centrals commanded keen attention and changed hands at Rs. 16.81, as against Rs. 16.19 earlier. There is no change in the dividend of 15 per cent. for the year ended March last. Another reason for the keen interest shown was the proposal to issue 427,500 ordinary shares of Rs. 10 each to the existing shareholders at par in proportion of one share for two existing shares in connection with the plan to set up a soda ash plant in U.P. to begin production by March next. Lansdownes were raised from Rs. 121 to Rs. 123, Gourepores being fully steady at Rs. 318. Fair interest put up Nuddeas at Rs. 49.50, which, however, closed lower at Rs. 48.50. Barnagores sagged to Rs. 114 from Rs. 117 and Howrahs to Rs. 18.75 from Rs. 19.00.

Engineering shares were fully steady. Indian Irons at Rs. 25.25 gained almost by a point on speculative support encouraged by expectations of higher retention prices. Texmacos reached a high of Rs. 22.60 from Rs. 20.85, following institutional investment support. At Rs. 98.50, Indian Standard Wagons increased by 2½ points. Burn & Co., were as high as Rs. 374, as against Rs. 362. From Rs. 22.50, B.I. Electric Constructions rose to Rs. 23.75.

Teas were about steady, with selected counters recording fractional gains. East Indias gained from Rs. 20.30 to Rs. 20.75. New Terrais rose from Rs. 19.31 to Rs. 19.44. Murphularis at Rs. 28 were higher by a few nP, although the dividend announced for 1957 was 17½ per cent., as against 20 per cent. in 1956. At Rs. 158, Hullungoories added Rs. 2.

Miscellaneous industrials drew in fair support. India Steamships reached a high of Rs. 14.25. Indian Cables at Rs. 30.44 added 32 nP. National Cables at Rs. 33 recorded a smart rise of Rs. 2.38. Titaghur Papers strengthened from Rs. 40.75 to Rs. 41.87. Martin Burns moved up from Rs. 27.25 to Rs. 27.37. Orient Papers were better at Rs. 36. Angelo Bros. advanced from Rs. 20.19 to Rs. 21.25. Metal Boxes were firm at Rs. 30.25.

• • • •

Madras Stock Exchange

MADRAS, *26th August*

The steady conditions noted on the Madras Stock Exchange last week continued during the week under review also. There was renewed buying in several counters, thanks to prospects of India getting more foreign aid and easy money conditions, with reduced rates of interest. Plantation shares registered further gains under the leadership of tea shares. Sugar, bank and miscellaneous industrials were also well supported. Textiles, however, were dull, buying enquiry being restricted to select counters.

Tea shares were in the limelight in the planting section during the week. Coorg Teas jumped up by Re. 1.40 to Rs. 13. Peermades spurted by a rupee to Rs. 21. Twyfords hardened by 75 nP to Rs. 15.50 and Nonsuch Teas by 60 nP to Rs. 24.10. Parksides were quoted 57 nP higher at Rs. 20.87. Coonoors and United Nilgiris strengthened by 50 nP each to Rs. 22 and Rs. 17, respectively. Waterfalls gained 20 nP to Rs. 3.65. Kalasas 15 nP to Rs. 3.80, Blue Mountains 13 nP to Rs. 3.50 and Balanoors 10 nP to Rs. 16.10. Kil Kotagiris gathered 5 nP to Rs. 6.05. In the coffee group, Coffee Lands were on request, the quotation rising by Rs. 1.60 to Rs. 34. Consolidated Coffees firmed up by Re. 1.03 to Rs. 29.40. Ouchterlonys rose by 10 nP to Rs. 5.63. Among rubber shares, Vaikundams put on Re. 1.75 to Rs. 23. Rajagiris increased by 50 nP to Rs. 17.75, Thamarapallys by a rupee to Rs. 25, T.R. & Ts by 15 nP to Rs. 7.05, Kalpettas by 10 nP to Rs. 25.85, Anandams by 25 nP to Rs. 13.25 and Pullangodes by 5 nP to Re. 1.85.

In the textile section, Coimbatore Murugans slumped by Rs. 10 to Rs. 100, reflecting disappointment of operators over the cut in dividend to 7½ per cent. for the year ended 31st December 1957, as against 12 per cent. for the previous year. Ranga Vilas slipped down by Rs. 2 to Rs. 60. Vasantas eased by Re. 1.50 to Rs. 230. Coimbatore Spinnings lost a like amount to Rs. 50.50. Maduras and Loyals shed 25 nP each to Rs. 33.50 and Rs. 35.25, respectively.

In the sugar section, Kirlampudis were taken up from Rs. 55 to Rs. 60. Mysores advanced by Rs. 2 to Rs. 44 and Travancores by Re. 1.05 to Rs. 11.35. Deccans were quoted 52 nP higher at Rs. 9.30. Jeypores hardened by 75 nP to Rs. 15.

Among miscellaneous industrials, W.I. Plywoods were in the limelight, the quotation rising by Rs. 5.50 to Rs. 146.50. Mysore Lamps advanced by 45 nP to Rs. 15.25. Indian Steel Rollings improved by 60 nP to Rs 14.10. India Cements rose by 35 nP to Rs. 30.60 and Spencers by 30 nP to Rs. 18.55.

NATIONALISATION OF MUNDHRA GROUP COMPANIES

The Union Minister of Industry, Mr. Manubhai Shah, stated in the Lok Sabha last week that the Government of India did not consider it necessary to nationalise Messrs. Jessop & Co., Ltd., as requested by its employees, in view of the fact that the Government had already taken over the management of the Company under section 18(A) of the Industries (Development and Regulation) Act, 1951, in order to secure better management of the Company. He also stated that there was a sizable rise in production after the management was taken over by the Government. He had every hope that both production and management of the Company would improve further. The Minister added that the demands of the workers of Jessop and Company were being considered sympathetically.

In reply to a question whether the Government would consider the question of taking over other concerns of Mr. Mundhra, which were not being run satisfactorily, the Minister said that, out of the six companies with which Mr. Mundhra was associated, namely, Jessops, Richardson and Cruddas, British India Corporation, Osler, Angelo Brothers and Smith Stanistreet, four were rather badly managed. In the case of the B.I.C., Osler and Richardson and Cruddas, the Life Insurance Corporation had moved the courts and special officers had been appointed by the courts. Angelo Brothers and Smith Stanistreet were working fairly satisfactorily and hence no action had been taken in their case.

Notice

THE INDIA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of The India United Mills, Limited, will be closed from Friday the 5th September 1958 to Monday the 29th September 1958, both days inclusive.

By Order of the Board,
AGARWAL & Co.,
Agents.

BOMBAY, 19th *August* 1958.

NEWS IN BRIEF

THE Government of India has abolished the export duty of Rs. 150 per ton on all oilseeds and of Rs. 300 per ton on all vegetable oils.

It is learnt that the Government of India proposes to set up an organisation to take up the work of propaganda and publicity for tea in foreign countries as a measure of promoting its exports.

The Raw Silk Merchants' Association has been entrusted by the Union Government to undertake the distribution of raw silk in the Bombay State in response to the repeated representations made by the Association.

The Kerala Government has under consideration a scheme to set up a State Trading Corporation. The Articles and Memorandum of Association have already been submitted to the Controller of Capital Issues.

Replying to a question in the Lok Sabha, the Union Minister for Commerce said that the Government was examining, in consultation with banking experts, the need for and the feasibility of improving credit facilities for export operations.

Exports of drosses, skimmings, ashes, slimes, flue dust and slags of metals other than silver will be licensed freely on production of a complete analytical report indicating the chemical composition of the material, provided the free metal content in the material does not exceed 15 per cent.

The operations of the award of the All-India Industrial Tribunal (Colliery Disputes) as modified by the decision of the Labour Appellate Tribunal has been extended further upto 25th May 1959, in pursuance of the recommendation made by the Committee on Coal Mining Interests, at its meeting held in Calcutta early this month.

The production of crude mica in 1957-58 is estimated at 555,000 cwts., as against 430,000 cwts. in 1956-57. The U.S. was the biggest importer followed by the U.K., the actual quantities purchased being 180,000 cwts. and 93,000 cwts., respectively. West Germany bought over 42,000 cwts., Norway 36,000 cwts., France 24,000 cwts. and Japan 22,000 cwts.

The Ship Repair Committee headed by Mr. O. V. Alagesan, former Deputy Minister for Railways, recently visited Cochin, one of the sites proposed for the establishment of the second shipyard, with a view to examining the facilities that exist in the port for ship-repairing. The Committee had discussions with the Port Administrative Officer and the representatives of trade and commerce.

The Government of India has decided to appoint a team of two special officers to collect information and report on all matters relating directly or indirectly to the utilisation of irrigation potential created by the various projects. The actual utilisation of irrigation potential created during the first two years of the second Plan was of the order of 670,000 acres and 1.15 million acres, respectively, as against the average annual target of 2 million acres.

A total of 1,663,000 acres of land has been reclaimed by the Central Tractor Organisation since 1947-48. Of these, 1,309,000 acres have been reclaimed in Madhya Pradesh, 330,000 acres in Uttar Pradesh, 14,000 acres in the Punjab, 5,000 acres in Bihar and 5,000 acres in Assam. The total geographical area of the country is 806,270,000 acres. The net area sown between July 1955 to June 1956 was 318,200,000 acres, while the area of fallow lands was 60,414,000 acres and of cultivable waste 54,931,000 acres.

The Central Government has given permission to the three oil companies, namely, Burmah-Shell, Standard-Vacuum and Caltex, to install petrol and diesel pumps in Dandakaranya for reclamation and other purposes. It is proposed to constitute transport co-operative societies of displaced persons who will be dealers for petrol, oil, etc. The sites for the petrol pumps will be leased out by the Dandakaranya Development Authority to the dealers' societies. The first batch of displaced persons of West Bengal is expected to be there by November next.

The Government of India has issued orders restricting the export of wheat and wheat products (other than wheat—bran, bread, cake, etc.) from any place in any of the Southern States, namely, Andhra Pradesh, Mysore, Madras, Kerala and Pondicherry to any place outside these States except under special permits issued by the State Government concerned. This step has been taken with a view to preventing the movement to the Northern States of wheat issued for local consumption from the Central reserves to the Southern areas.

The Union Government has decided to commission the Rs. 80-lakh project, known as the Decca Navigator Hyperbolic System, by the end of next year. The project which is claimed to be the first of its kind in the East, envisages installation of a chain of eight modern marine wireless stations fitted with navigational equipment, along the country's east and west coasts, in order to ensure safer and smoother navigation in the Arabian Sea and the Bay of Bengal. India is purchasing power-house equipment, transmitters, and steel towers for the project from the U.K. These are expected to arrive by October next.

The Government of Bombay has sanctioned another loan of Rs. 25 lakhs to the Ballarpar Paper and Straw Board Mills Limited, Ballarpar, in Chanda district. This is in addition to the loan of Rs. 90 lakhs already sanctioned to the mills. The loan will be utilised for purchase and installation of machinery, plant and equipment for the manufacture of paper, for purchase of building material, for erection of factory and other buildings, as working capital for the mills or for repaying loans and liabilities taken or incurred by the Company for completing the project or for providing the working capital. The loan carries an interest of 3¾ per cent. per annum and is repayable in 17 annual instalments.

The value of exports of Indian plastic goods in 1957-58 increased by over 70 per cent., as compared with the previous year, being Rs. 12.31 lakhs as against Rs. 7.09 lakhs. Ceylon was the largest buyer of Indian plastic goods. The other importing countries included Burma, Kuwait, Kenya, Saudi Arabia, Tanganyika, Mauritius and Mozambique. The number of principal manufacturing units which was 40 in 1947 has risen to 120 units. The value of the total production of plastic goods has also increased from Rs. 1 crore in 1947 to Rs. 10 crores in 1957. With the commencement of indigenous production of *polystyrene* and urea formaldehyde moulding powder, the industry has now been relieved of its dependence on some of the important raw materials.

From Abroad

The total foreign aid received by Pakistan so far amounts to Rs. 400 crores, of which Rs. 335 crores have been given by the U.S.

The Governments of Ghana and Israel have signed recently a formal five-year agreement which provides for mutual trade in goods and services worth £7 million.

The U.S. gross national output during the second quarter of 1958 was at an annual rate of $429,000 million (seasonally adjusted).

The U.S. Senate has voted to increase the national debt limit by $8,000 million to $288,000 million, which represents the peace-time peak level so far.

The U.S. Congress passed, on the 23rd inst., a $3,298-million Foreign Aid Bill. The amount is about $652 million less than that sought by President Eisenhower.

Canada's population is estimated at over 17.0 million (middle of April 1958) which represents an increase of 2.8 per cent. as compared with last year's total of 16.5 million.

The aggregate exports of raw jute from Pakistan during the year ended July 1958 amounted to 4.5 million bales, as compared with 4.8 million bales in 1956-57 and 6.0 million bales in 1955-56.

The cost of living in the U.S. rose further by 0.2 per cent. in July last, touching a new record. The increase, it is said, was the result of the higher cost of transport, food and medical care.

The Franco-Egyptian Suez Canal Compensation Agreement was signed by the representatives of the two Governments in Geneva on the 22nd inst. after prolonged negotiations.

The Government of Iraq is planning to boost its oil exports by 28 million tons a year. For this purpose, it proposes to construct a new terminal in the Persian Gulf and a new pipeline via Syria.

Orders for the supply of oil equipment placed with the U.K. manufacturers during the first half of 1958 amounted to £60.4 million which was about £5.6 million less as compared with the corresponding period, last year.

The Government of Ceylon has under consideration a proposal to introduce *ad-valorem* rates of export duty on tea and to bring the auctions of tea (now conducted on a private basis) under Government control by setting up a Tea Auctions Board.

The Brazilian Government oil monopoly, Petrobras, will purchase a minimum of £4 million worth of equipment from British manufacturers for a new oil refinery proposed to be erected at Rio. The supply will be made by the constituent companies of a consortium called British Refinery Constructors (Brefcon).

Both average weekly earnings and the basic wage rates of workers in the British industry rose by 4.6 per cent. between April 1957 and April 1958. In the previous 11 years, earnings had more than doubled (the actual extent of the rise was over 106.8 per cent.) while basic rates rose by only 76.4 per cent.

The carryover stocks of wheat in the U.S. are expected to touch a record level of 1,303 million bushels by the middle of 1959, thereby reversing the downward trend which commenced three years ago. Farmers are currently harvesting a 1,421-million bushel crop, the largest on record and 50 per cent. bigger than in 1957.

The Malayan Government is reported to have asked the U.S.S.R. to suspend immediately all exports of Russian tin in a fresh attempt to stabilise prices in world markets. In the meantime, it has asked the U.S. to step up the purchases of tin by commercial and Government agencies and the U.K. to restrict its imports of Russian tin.

School children over 11 years of age in East Germany will be required to spend one day in a week working in a factory or on a farm with effect from next month. The object behind the scheme is said to be "to train the children "to love work and the workers." The scheme, however, is reported to have evoked protests from parents, teachers and factory heads.

An oil refinery with an annual capacity of 2 million tons is proposed to be set up at Maison-Carré, on the outskirts of Algiers, at a cost of £850,000. The Royal Dutch-Shell's Algerian subsidiary and French B.P. will have interests to the extent of 21 per cent. and 12 per cent. respectively, the rest being shared by the French and U.S. oil companies.

The output of the French Union Oil Company touched the peak level of over 2 million tons in the year ended 31st July 1958. The quantity represents an increase of almost 50 per cent. over the previous year. The rise in output was accounted for entirely by the oilfields in Sahara and black Africa where production was started only last year. The output from the Parentis field, south of Bordeaux, and other fields in Metropolitan France remained stationary.

Nepal's budget proposals for the next financial year include a new exchange rate of 150 Nepali rupees (as against 128 rupees at present) for 100 Indian rupees and levy of a new tax on a wide range of goods including petrol, cigarettes and tobacco, toilet goods, sugar, cement and cloth. The proposals are expected to turn the year's revenue deficit of Rs. 22.73 lakhs (Indian) to a small surplus of Rs. 1,08,000. The total budget expenditure is estimated at Rs. 5.32 crores.

The British manufacturers of atomic energy equipment hope to procure orders worth about £400-600 million as a result of the International Atomic Energy Conference now being held at Geneva. Altogether, 83 British companies are taking part in the Exhibition, as against 57 from the U.S. The total number of exhibitors is 327. The U.K. is expected to sell not only research reactors and nuclear power stations but also considerable quantities of ancillary equipment, plant for processing atomic materials and radio isotope devices.

According to a compromise formula reached between the U.S. House and Senate on the surplus barter clause of the Farm Bill, the provision requiring the Agriculture Department to barter $500 million worth of farm surplus yearly has been dropped. It is left to the Secretary of the Department to decide whether he will barter any surpluses. It is learnt that the present measure will give the Department an additional $2,250 million to use in new agreements over the next 18 months.

PERSONAL

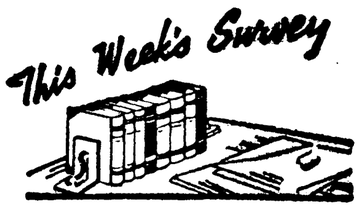
MR. Morarji Desai, Union Finance Minister, left Bombay for London on Wednesday this week. He will visit the U.K. and the U.S. before attending the Commonwealth Economic Conference at Montreal.

Mr. N. V. Gadgil, a former Works, Mining and Power Minister, Government of India, and Vice-Chairman of the State Bank of India at present, has been appointed Governor of the Punjab *vice* Mr. C. P. N. Singh.

Mr. K. B. Mathur, Member, Transportation, Railway Board, and Mr. J. Dayal, Financial Commissioner for Railways, left New Delhi for Washington on the 29th inst., to participate in the negotiations with the World Bank for a fresh loan.

Mr. V. Shankar, at present Revenue Secretary to the Bombay Government, has been appointed Director General of Posts and Telegraphs, in place of Mr. Shankar Prasad, I.C.S., who has taken over charge as Secretary, Kashmir Affairs, in the Union Home Ministry.

Mr. P. A. Gopalakrishnan has been reappointed Chairman of the Life Insurance Corporation. The other members of the Corporation appointed for a period of two years with effect from 1st September next are: Mr. Mohammed Hasham Premji (Bombay), Prof. D. G. Karve (Poona), Mr. Dhiren Mitra (Calcutta), Mr. S. M. Ramakrishna Rao (Bangalore), Mr. Vadilal Lallubhai Mehta (Ahmedabad), Lala Raghuraj Swarup (Muzaffarnagar, U.P.), Mr. L. K. Jha, Special Secretary, Ministry of Commerce and Industry, Mr. D. K. Kaul, Joint Secretary, Ministry of Finance, Mr. P. C. Bhattacharya (Bombay), Prof. B. N. Das Gupta (Lucknow), Mr. C. C. Desai (New Delhi), Mr. N. K. Petigara (Bombay), Mr. T. S. Krishna (Madurai) and Sardar Ujjal Singh (New Delhi).



N. I. D. CORPORATION

ALTHOUGH nearly four years have elapsed since the National Industrial Development Corporation—N.I.D.C., for short—was set up by the Government of India, the Corporation has still not succeeded in bringing into existence any new industry. All that it has been able to achieve is completion of technical studies for a number of projects, besides granting loans for the rehabilitation and modernisation of cotton textile and jute industries. Even here, its achievements are by no means impressive, the actual amount of loans sanctioned by the end of June 1958 aggregating Rs. 2.28 crores for cotton mills and Rs. 2.93 crores for jute mills. The slow progress made by the Corporation in the field of setting up new industries may perhaps be attributed to the undertaking of too many projects simultaneously without due consideration being paid to the availability of adequate technical personnel. Considering this and also the continued critical foreign exchange situation, it looks as though the total amount which the Corporation will have actually spent by the end of 1960-61 will fall far short of the outlay of Rs. 55 crores earmarked in the second Five-year Plan.

An idea of the Corporation's activities in the execution of the more important projects is provided in a brochure published by it this week. The review reveals that the Corporation is concentrating its efforts on projects relating to the manufacture of (1) industrial machinery in the field of heavy engineering, (2) some crucial industrial materials like raw film, aluminium and synthetic rubber, and (3) primary intermediates for the drug, dyestuff and plastic industries. The Corporation, it will be recalled, is conceived mainly as an instrument of Government for securing a balanced and integrated development of industries in both private and public sectors, the primary object being the development of industries which are necessary to fill the gap in the industrial structure.

One of the most important projects undertaken by the N.I.D.C. is the setting up of a heavy machine building plant at Hatia near Ranchi in Bihar State. This is intended to produce machinery and equipment for the iron and steel, mining, coal and cement industries, heavy equipment such as coke-oven and by-product equipment, excavators, cranes, heavy oil drilling rigs, equipment for crushing and grinding, mining and press-forging, and miscellaneous heavy machine parts, assemblies and ancillary items. The establishment of the plant will be on the lines recommended by the Soviet team, utilising a portion of the 500-million roubles credit made available by the Soviet Government. It will have a productive capacity of 45,000 tons of finished machinery per annum in the initial stage and be capable of being expanded later to an output of 80,000 tons. Scope is being provided on the site for a further expansion upto 165,000 tons. After successful negotiations for credit or deferred payment arrangements, a contract has been entered into with the Technoexport of Moscow for the preparation of a detailed project report for the plant; the report is expected to be ready by the middle of 1959.

The other important projects on which agreements have been reached are the foundry-forge project to supply heavy castings and forgings for the machine building plant, plant for manufacturing coal mining equipment, and a factory to produce optical and ophthalmic glass. As regards the schemes relating to the manufacture of intermediates for drugs, dyestuffs and plastic industries, raw film, synthetic rubber, newsprint from bagasse, etc., studies have reached advanced stages and their further progress now depends on the outcome of negotiations for foreign exchange required for the purchase of machinery and equipment. Meanwhile, discussions are proceeding with a consortium of leading West German firms on the details of collaboration for the manufacture of intermediates. An Italian firm, we are told, has also shown interest in the scheme, and discussions have taken place with its representatives. In the case of the project for photographic, cinema films and paper manufacture, details have been finalised and a team of East German experts is expected to arrive shortly for negotiations on deferred payment.

The N.I.D.C. has made a fresh assessment of the estimated demand for alloy and tool steels by the end of the second Plan period. Draft specifications will be issued and detailed project reports invited from four firms which have evinced interest in the project. With regard to the production of aluminium, carbon black, cellulose pulp and tungsten carbide, the project surveys conducted by the Corporation have been followed up by efforts in the private sector to put up factories with foreign technical and financial collaboration. If, however, these efforts of industrialists do not succeed, the Corporation may again examine the question of taking up these projects.

Apart from planning and formulating projects to set up new industries or develop new lines of production, the N.I.D.C. has been entrusted with the work of assisting the cotton textile and jute industries in their plans for rehabilitation and modernisation and advancing loans to the machine tools manufacturing units. As already stated, the Corporation had sanctioned, by the end of June 1958, loans amounting to Rs. 2.28 crores to cotton mills and Rs. 2.93 crores to jute mills. These amounts are, however, negligible considering the magnitude of the finances required for rehabilitating and modernising these industries and the urgency thereof. It is estimated that the total outlay on new machinery for the cotton textile industry alone would be of the order of Rs. 300 crores. The resources actually available with the two industries are too limited to meet such vast investments, so that, if the industries are to go ahead with their schemes of rehabilitation and modernisation, a much greater scale of assistance from corporations like the N.I.D.C. is urgently required. It is encouraging to hear that the N.I.D.C. is considering a new scheme for financing the modernisation of cotton textile and jute mills on a short-term basis.

ROLE OF FINANCE OFFICERS

The world has travelled a long—indeed a very long—way from the time when the common belief was that expressed in the maxim "when the king trades the country is ruined." With every passing day, one finds the State (the modern "king") spreading its tentacles wider and wider, gradually bringing trade, commerce and industry all within its fold. Political philosophers and economic theorists may continue to cross wordy swords on the merits or demerits of this trend of the State becoming a leviathan. But on one thing they cannot disagree—that is, with the growing participation of the State in industry, the problem of organising State-owned undertakings in a manner that will combine, in one organisation, the principle of public ownership and public accountability with that of business management, is getting not only more complex but more important too. The adoption of the company form of management for public undertakings is designed to secure the best of both worlds. In ensuring adherence to sound commercial standards, finance and accounts officers have an important role to play. For they, with their specialised knowledge and experience, are important to any organisation, be it in the public or private sector, where money is spent. Theirs is not the routine job of keeping accounts of incomings and outgoings and costing operation. They have to take a wider view of their functions and to advise the executive in the proper and planned utilisation of money, machines, materials and manpower.

A three-day conference of finance and accounts officers of industrial and commercial projects in the public sector held recently at New Delhi focussed public attention on the important role of these officers. The conference, the first of its kind held in India, was inaugurated by Mr. Morarji Desai, Union Minister for Finance. It aimed at bringing together finance officers employed in different undertakings in the public sector and facilitating exchange of views, with a view to securing efficient financial management of Government undertakings and better co-ordination of their effort and experience. Mr. Desai pointed out, in the course of his inaugural address, that the role of financial advisers in securing efficiency and economy and adherence to planned targets and objectives were very important. They had to keep constantly in mind the objectives and the targets to be achieved and how these could be accomplished within the total outlay envisaged. Mr. Desai said that the Government had no intention to introduce duality of control in public undertakings. On the other hand, it wanted the management to be responsible for the affairs of the undertakings. It, however, desired that the views of financial advisers should be given due consideration. If they were to be overruled, he emphasised, it should be on adequate grounds and at the highest level. Financial advisers, on their part, should appreciate the problems and difficulties of the technical officers and management and consider themselves as part of the organisation in which they worked.

Mr. Desai expressed the hope that the conference would initiate steps for building up an efficient body of trained financial experts. He emphasised the importance of introducing a unified question of cost accounting for different units of an industry with such modifications as were necessary for individual units. It may be noted here that the necessity of having a complete and efficient system of cost accounting has been underlined by more than one parliamentary committee and accepted by the Government. Having planned for production, the management needs to know how good the results achieved really are and whether any steps taken for effecting improvement are in fact yielding the expected results. For this, it has to depend upon information supplied by the costing department. Costing system serves, *inter alia*, two useful purposes. It can give a historical record of the financial results of the operations of the business; it can also provide a means of controlling expenditure while it is being incurred. A cost accountant must be able not only to show where an organisation is following wasteful methods but should also evolve proper procedures for eliminating waste and improving efficiency.

The Minister defined the relation of the Government of India to the undertakings in the public sector. He gave the assurance that the organisations could function without fear of interference in their day-to-day matters. The Government was responsible to Parliament for their efficient management. This meant that it had not only to look after the money invested but also to safeguard the interest of the consumers. It is gratifying to find that Mr. Desai appreciates the importance of consumers' interests, for there is no doubt that public enterprises, working in a pleasant monopoly climate, may easily come to think that what they do is right for the consumer.

COHEN COUNCIL ON BRITISH ECONOMY

In a blueprint for the nation's economic future, the "three wise men" of Britain namely, Lord Cohen, Sir Harold Howitt and Sir Dennis Robertson, constituting the Council on Prices, Productivity and Incomes, have advised timely and restrained action to stave off any possible economic recession. The Council, a completely independent body set up last year by the British Government to keep under periodic review the developments in the economy, has given two blunt warnings that unemployment might increase and that the Government would have to go slow on any policy aimed at easier times. It has suggested that, in the event of a recession hitting Western Europe, Britain should persuade itself to give more loans and credits abroad so as to counter it. "By this means," it adds, "we (Britain) could satisfy the desire of the overseas sterling countries to maintain, as far as possible, their standards of life and their pace of development and our own desire to keep our productive resources in employment. We may thus justifiably be led to undertake measures of credit creation and organisation which, in other circumstances, would be unnecessary or even dangerous."

The Council is keenly aware of the inflationary potentialities of expansionist policies. While it is right that economic policy should aim at an expansion of demand, the Government should, it maintains, proceed gradually and with caution towards that end. The dangers of recession, according to the Council, are not so drastic and so imminent nor those of inflation so remote as to justify a policy of all-out encouragement to expenditure. The danger of inflation has been halted in Britain during the past 12 months and the trend has been for incomes to fall more into line with productivity. But inflation, the Council says, has only been "scorched" and not "killed." It has urged the Nation to steer clear of both the Scylla of inflation and the Charybdis of recession.

Reviewing Britain's production and expenditure trends over the last year, the Council has forecast a drop in British exports. It adds that, though confidence in sterling has been restored, it could again be impaired. The Council is not optimistic that the country's balance of payments on current account during the second half of 1958 will be as favourable as in the first. It points out that, in the coming months, a deterioration in the current balance of payments position and a less favourable trend in the gold and dollar reserves of the U.K. could be expected. While conceding that Britain's balance of payments is in a healthy state and its foreign exchange reserves have been rising very satisfactorily, the Council is afraid that neither of these conditions is bound to last. Past experience suggests that any substantial revival of demand may well be accompanied by renewed threats to price stability, to the balance of payments and the gold and dollar reserves. Expansionist policies, it emphasises, should, therefore, be followed very cautiously. It suggests that such policies as world conditions demand could be more smoothly carried out if the various countries with money to lend and industrial population to employ acted in concert.

The Council underlines the need to maintain stability in prices and to curb wage rises to that end. Wage increases granted so far in the year has averaged about three and a half per cent. It is wrong to think, according to the Council, that this was an exceptional year after which there could be a return to the happy days when annual wage increases typically ran at the rate of five, six or seven per cent. In fact, the contrary is the case. Next year, the Council suggests, such wage increases as are granted should be lower than this year's. Annual increases of three and a half per cent., in the opinion of the Council, are not merely higher than the present rate of increase in productivity but they are also higher than any rate of productivity increase which can reasonably be forecast over a long period in the future. It also suggests that the British Government should, if productivity continues to lag behind, give first priority to stimulating capital expenditure. If the ceilings on public investment imposed last year were removed, such expenditure would rise steadily. The Government could, the Council feels, also take steps to stimulate private investment either by lowering interest rates and providing easier credit or by tax reduction.

STORAGE BATTERY INDUSTRY

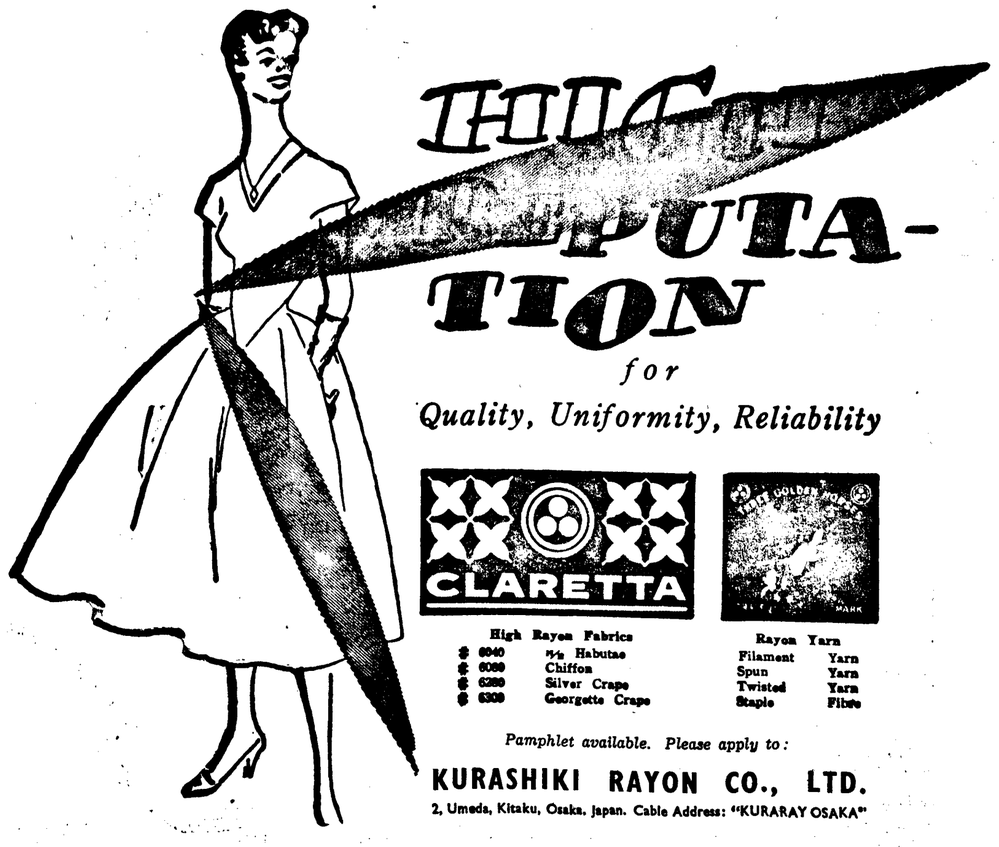
Storage battery industry in India, although of comparatively recent origin, has given a good account of itself. During the short span of a decade, production of batteries has gone up by about five times the total output having moved up to 324,000 units in 1957, as against 70,000 units in 1947. Similarly, there has been a notable expansion in the installed capacity which rose from 171,600 to 316,800 during the same period. The Tariff Commission has estimated that the domestic requirements at 340,000 batteries in 1955 would go up by about 20,000 every year. The second Plan has envisaged an expansion in the capacity of the organised sectors of the industry to 350,000 batteries and the small-scale sector to 70,000 batteries per annum by 1960-61. In this connection, it is noteworthy that an illuminating account of the growth, problems and prospects of the battery industry in India was given by Mr. Peter Aspinall, Export Manager of Chloride Batteries, London, an associate of the Chloride and Exide Batteries (Eastern) Private Ltd., Calcutta. Mr. Aspinall, who is on a business tour to India and South East Asia, rightly averred that the phenomenal progress of the industry was the result of heavy investment undertaken in India by the battery manufacturing industry, particularly by the Exide factory near Calcutta, which the Tariff Commission referred to as "the largest battery manufacturing concern in India." Indeed, Exide, it is claimed, is the largest and best equipped factory in the whole of Asia.

Exide's acquaintance with the Indian market was of no recent origin. Even before 1944, when the Exide factory was set up at Shamnagar, Calcutta, its batteries formed 50 per cent. of India's imports. The factory has made considerable progress towards its aim of complete self-sufficiency in a very wide range of products in the shortest possible time. As a result, India is at present importing only certain special types of batteries, such as those for jet aircraft.

The indigenous units are handicapped to a great extent owing to their dependence on imported raw materials. But the position has been improving of late. Mr. Aspinall said that the lead recovery plant at the Exide factory was an important measure towards lessening the unit's dependence on imports. He further disclosed that the factory was at present installing a new plant to manufacture the famous tubular—positive plate Exide—iron clad battery of the type used by the railways throughout India and most of the world for train lighting and air-conditioning. Further developments were also under way. He felt confident that, by 1960, Exide would be able to save about Rs. 1 crore of foreign exchange annually in the field of railway batteries alone.

Although exports of batteries were negligible hitherto, there are reasons to be optimistic on this account. According to Mr. Aspinall, the Exide factory in India has exported bulk supplies of batteries to Egypt, and is currently engaged in executing further orders from that country. There are other potential markets for Indian-made batteries in countries like Afghanistan. It may be noted that batteries are one of the commodities covered by the recent Indo-Afghanistan trade agreement. Mr. Aspinall, however, disclosed that local units were coming up in many of the countries within India's reach which have a growing vehicle population. The storage battery industry will, therefore, have to step up its competitive capacity, particularly by focussing its attention on developing indigenous sources of supply of raw materials and reducing its cost of production.

The American Atomic Energy Commission has started tests with a "portable" nuclear reactor. Its Argonne Low-power Reactor (A.L.P.R.) which is a prototype of the nuclear reactor designed to produce electric power and heat at remote military stations, has begun operating at the testing station at Idaho Falls. It is claimed that the reactor is capable of operating at full power of 3,000 kw., can be erected on any type of terrain, its components weigh no more than 20,000 lbs. each and can be transported easily in cargo planes.



COMMUNITY DEVELOPMENT PROGRAMME

RESULTS OF FIFTH EVALUATION

From Our Special Correspondent

NEW DELHI, *26th August*

EARLY in 1956, in his report of a survey of Community Development Programme in India, Mr. M. L. Wilson, Ford Foundation Consultant, wrote that "any government that is so forward-looking as to have a continuous evaluation process going on outside of the legislative and administrative functions is most likely to succeed in its objectives." Since then the Programme Evaluation Organisation of the Planning Commission has drawn up three evaluation reports (including the latest one covered in this despatch) on the working of Community Development and N.E.S. Blocks, and the Committee on Plan Projects has also produced a report on the same subject. Besides these, there is the report of the Estimates Committee of the First Lok Sabha on the Community Projects Administration. The general impression produced by these reports is that Community Development Programme has been either a partial failure or, at best, a partial success.

DELHI LETTER

The latest Evaluation Report is the fifth of its kind and is based upon a sample survey of 82 blocks (36 C.D. and 46 N.E.S. Blocks) which had completed one year of working and which represented roughly one-fifteenth of the total number of blocks in the country. Some basic data about an average selected block are: Number of villages, 126; total population, 75,000; total net cultivated area, 78,200 acres; total net irrigated area, 12,900 acres; number of villages per *Gram Sevak*, 12.3; area per *Gram Sevak*, 27.4 sq. miles.

The sample survey covered elaborate field enquiries into the organisation and operation of the C.D. and N.E.S. programmes, the organisation and working of the *panchayats*, the dissemination of improved agricultural practices and the growth of people's participation. The main factual findings of these enquiries are given below:

About 40 per cent. of the blocks studied reported absence of Block Development Officers for varying lengths of time, the average being five months. As regards agricultural specialists, nearly 60 per cent. of the blocks, both N.E.S. and C.D., had to do without them on an average for 5 and 10 months, respectively, or about one-fourth of the average periods of their operation. The position in respect of animal husbandry is even more serious.

As a result partly of under-budgeting and even more of shortfall in expenditure, the annual expenditure *per capita* is Re. 1.4 in the case of N.E.S. Blocks and Rs. 2.0 in the case of C.D. Blocks. These figures are 70 per cent. and 55 per cent., respectively, of the expenditure figures envisaged in the block pattern. As regards the causes of shortfalls in expenditure, most Block Development Officers relate them to delays in sanctions and other procedural steps.

The value of people's participation in works programmes works out to an average of Re. 1 per person per year in case of N.E.S. Blocks and Re. 1.8 in case of C.D. Blocks. Larger contributions could be mobilised from the people in the C.D. Blocks, because of the larger fund available to them. In the case of both C.D. and N.E.S. Blocks, the value of people's participation declines as the block period moves towards its end. This is contrary to what one would expect to happen. The people's participation should grow progressively as the years pass, and the educational effort of the staff and the radiational influence of the work done may be expected to produce their effect. But the survey data tell a different story, and it would seem that the educational effort and the radiational influences have not been effective enough.

The level of programme activity in agriculture is generally low outside the Punjab and U.P. and individual blocks in other States. Agricultural activity is concentrated on the dissemination of improved practices, for example, use of improved seeds and fertilisers and the Japanese method of paddy cultivation. Except for minor irrigation schemes, very little has been done in respect of the land improvement items. The achievements in improved practices are substantial only in areas where the rainfall is adequate and/or the proportion of irrigated to total cultivated area is high. But the large majority of the blocks lie outside these favoured areas. Activity in areas which are dry, hilly, inhabited by tribal people or are otherwise backward, is extremely small, and in some cases insignificant. Even in minor irrigation, the maximum activity is reported in blocks which have already comparatively high percentages of the area under irrigation. Apparently, blocks which have already substantial areas under irrigation can increase them with less difficulty. On the other hand, blocks with low percentages of their area under irrigation, find it difficult to make further advance through minor irrigation.

About 50 per cent. of selected households adopted improved seeds for food crops, paddy, wheat and *jowar*; for cash crops, cotton and sugarcane, the percentages are higher. In spite of the general increase in the adoption of improved seeds, large ground remains to be covered. About half the area under all crops other than cotton remains under *Desi* seeds, and it is the smaller cultivator who lags behind. Even in the case of cash crops and in irrigated areas, considerable distances have to be traversed before saturation point can be reached. The overall picture for the crops taken together is, that 24.5 per cent. of the households have not adopted or have reverted because they still lack faith in the superiority of the improved seed, another 11.8 per cent. have done so because of the failure of the supply and only 2.8 per cent. on account of lack of financial resources.

Forty-five per cent. of selected households have taken to the use of ammonium sulphate. All the other fertilisers are used much less extensively. Fertilisers are used more frequently with improved seeds than with *Desi* varieties. There has been a generally expanded use of fertilisers, and more households have taken to them without recourse to the facilities provided by the programme.

Between one-half and three-fourths of selected households have adopted line sowing, crop rotation and transplantation. Only 15 per cent. have taken to the Japanese method of paddy cultivation but 23 per cent. of these households are inclined to give it up even if the facilities offered by the programme are continued. There seems to be fairly widespread ignorance about the Japanese method and line sowing. While the approach to crop rotation has been handicapped by lack of irrigation facilities, farmers are not keen to adopt line sowing and transplantation because of the difficulties of securing enough labour in time.

Two-thirds of households in the sample have taken to the use of improved seed for some crop or other. The percentage of households which have adopted some fertiliser or other is almost equally high. But the number which are using improved seeds, fertilisers and better techniques together is only one-third of the relevant households in the villages. This would seem to indicate that different improved practices which complement one another are not being sponsored as parts of the integrated programme of farm development.

The problem of resources is about the most difficult one faced by the *panchayats*. In most States, the Acts include a long list of sources of revenue for them. However, in practice, most of these sources exist only on paper; they are not tapped and the *panchayats'* income from the few sources which are tapped is very small. In many cases, the self-raised income of the *panchayats* is barely sufficient to pay for expenditure on establishment.

The regular income (self-raised income *plus* recurring Government grants) of the selected *panchayats* varies from a *per capita* average of Rs. 3.6 in Manavadar (Saurashtra) to Re. 0.17 in Bhadrak (Orissa). Considering the self-raised income alone, the range is from Re. 1.64 in Erode (Madras) to Re. 0.07 in Cachar (Assam). The figure is less than Re. 0.50 *per capita* in five blocks. These figures bring out the extent of poverty of these institutions.

Since the income of the *panchayats* is very low, even the most elementary administrative expenditure takes up a large share of it. The proportion of administrative expenditure to the regular income of the *panchayats* is more than 50 per cent. in three blocks. After meeting their administrative expenditure, the *panchayats* in only three blocks—Erode (Madras), Bodhan (Andhra) and Sonepat (Punjab) are left with Re. 1 or more *per capita* for spending on routine civic duties like cleaning of streets or on development activities.

Because of substantial grants from the projects, from the Government sources and in some cases substantial contributions from the people, there is appreciable development expenditure in most of the *panchayat* villages. The average *per capita* development expenditure per year varies from more than Rs. 3 in the *panchayat* villages of Bodhan (Andhra) to only Re. 0.57 in those of Morsi, Bombay.

Street lighting is being done by only one-third of the selected *panchayats;* sweeping of village streets is reported by about 40 per cent. But in not all these cases are arrangements adequate or even regular.

(*Concluded from next column*)

There have been perhaps a few cases in this category but a more practical view is surely to expect that the assets of a firm should be used in the most economic fashion and there is nothing like the fear of take-over, which, after all, means nothing very different than a change of Government, to spur the Directors of firms to operate in the best interests of their shareholders as well as of the public.—*All Rights Reserved.*

TAKE-OVER BIDS

LATEST TRENDS IN U. K.

From Our Own Correspondent

LONDON, *23rd August*

WITH Ministers away on holiday and the affairs of Government ticking over quietly, City events naturally attract more publicity than usual and this August is seeing a quite exceptional revival of activity in what are known as "take-over bids." These bids are offers made by a buying company to the shareholders of the company it wishes to acquire to invite them to sell their shares either for cash or against the issue of shares in the acquiring company. Normally, unless special arrangements are made, the board of directors of the company taken over are liquidated as a result of the merger, hence such bids are highly unpopular with the directorates, and sometimes the management, of the company acquired. Sometimes these take-overs are a result of negotiations between the two firms in the normal course of business, such, for instance, as the bid notified today in which the multiple provisions firm, Allied Bakeries Limited, is proposing to take over the multiple provisions firm of Peter Keevil Limited. This sort of take-over is more in the nature of the old-fashioned amalgamation.

LONDON LETTER

But the take-over bids which have been in the public eye the last few days have been of a different order, a straightforward battle by one company to wrest control of another from the existing directorate and management. The reasons for such struggles may be that the company bid for has undervalued capital assets, such, for instance, as the taking over more than a year ago of the boot and shoe firm of J. Sears which owned a group of retail shops all standing in the balance-sheets at below market value. In this case, the taker-over sold all the properties at a large capital profit and then acquired them all back on long leases on annual rent payments. In another case, when a unsuccessful bid was made for the Savoy Hotel in London, the idea was to pull down the Berkeley Hotel, which belongs to the Savoy, and replace it with a block of offices which would have had a far higher income earning value. In other cases, directors may have followed a conservative dividend policy and acquired large cash reserves which the acquirer can find useful.

Tobacco and Crematorium

An example of the last case has just been concluded, with the Amalgamated Tobacco Company taking over the London Cremation Company, the largest crematoria owners in the country. The Directors of the Crematorium asked their shareholders not to sell on the grounds that there was no connection between a tobacco company and a crematorium company —nobody seems to have pointed out that both are interested in the reduction of matter to ashes! Then, it was said that a crematorium company should be non-commercial, but the facts are that this Company had built up liquid resources of £120,000 and this was tempting enough to the Tobacco Company to put in an attractive bid for the shares. In the event, the pass was sold by the London Cremation Society who thought their affairs would be safe in the hands of the Tobacco Company and the Tobacco Company in return having acquired the desirable liquid assets from cremation have undertaken to build up a fund over the next 20 years to buy back the Cremation Company's shares and turn the latter into a charity working on a non-commercial basis.

The second example in the public eye is a straightforward struggle to expand a commercial empire. The two leaders of the soft drinks industry in this country are Schweppes and Beechams. They are both bidding for the smaller firm of Thomas and Evans whose drinks go by the name of 'Corona.' So far four bids have been made, each side capping the other's offer twice. There seems little for the shareholders to do in such a case but to sit tight and wait for the fifth offer, for prestige as well as shares are involved in such a case and battle having been joined, neither of the two giants will easily let go of their intended conquest.

In some quarters this business of take-over bids is deprecated as sheer piracy designed to milk the victim company and then cast it aside.

(*Continued in previous column*)

T.I.S.CO.'S PROFIT DOWN DUE TO HIGHER PRODUCTION COSTS

ADDITIONS TO ASSETS EXCEED RS. 50 CRORES

A STRIKING feature of the fifty-first annual report of the Tata Iron and Steel Company, Ltd., covering the financial year ended 31st March 1958, is the sharp increase in cost of production of steel. From 16th May 1957, the consumer of steel was asked to pay Rs. 70 per ton more. Of this, about Rs. 46 per ton was allowed to the producer of steel to cover his increase in the cost of production, pending the verdict of the Tariff Commission on the question of fair price for the producer. The results of the Commission's findings have not yet been made public. But the T.I.S.Co's results for 1957-58 clearly show that the increase of Rs. 46 per ton in its retention price has not been sufficient to safeguard its margin of profit. A glance at Table I showing the Company's financial results for the past four years will convincingly prove this point. Net sale proceeds for 1957-58 were Rs. 45.40 crores, an increase of Rs. 3.61 crores as compared with those for 1956-57. Other income was higher by about Rs. 34 lakhs. In other words, gross income was better by Rs. 3.95 crores. As against this, expenses shot up by Rs. 5.89 crores, that is, nearly Rs. 2 crores more than the increase in gross income. Consequently, gross profit for 1957-58 is down almost by an equivalent amount, from Rs. 12.87 crores for 1956-57 to Rs. 10.94 crores, to be precise.

A more striking indication of the rise in costs is provided by a comparison of the latest results with those for 1954-55. Between 1954-55 and 1957-58, sale proceeds rose from Rs. 35.03 crores to Rs. 45.40 crores, that is, by Rs. 10.37 crores; similarly, other income grew by Rs. 80.28 lakhs to Rs. 2.59 crores. The gross income thus expanded by Rs. 11.27 crores. At the same time, expenses increased by no less than Rs. 9.60 crores, so that the gain in gross profit was only Rs. 1.58 crores. The outcome is a contraction in the margin of profit; the ratio of gross profit to gross income has dropped from 28 per cent. to 24 per cent.

One of the factors responsible for the rise in cost of production is labour. There has been persistent rise in the cost of labour without practically any improvement in the output per worker in recent years, as will be seen from the undermentioned figures:

	Average annual income per employee Rs.	Average labour cost per ton of finished steel Rs.	Average output of finished steel per employee Tons
1939-40	784	27	28.9
1951-52	2,237	93	24.1
1952-53	2,299	97	23.8
1953-54	2,279	98	23.2
1954-55	2,294	99	23.2
1955-56	2,392	101	23.8
1956-57	2,437	101	24.2
1957-58	2,481	104	23.9

The fall in output per worker in 1957-58, as compared with that for 1956-57 which saw a slight improvement over the year preceding it, may not be due to the fault of workers, as production was dislocated to a considerable extent by the great construction work that went on in connection with the one-million ton addition to the Work's capacity. But it will be noted that, as compared with 1939-40, production per worker was low by as much as 5 tons. The only satisfaction that one can have is that it has not deteriorated to any significant extent as compared with 1951-52. This, however, is a negative satisfaction.

In tune with the trend of gross profit, the net profit also has, according to our calculation, receded from Rs. 6.26 crores to Rs. 4.72 crores. The provision for depreciation has been raised from Rs. 2.47 crores to Rs. 3.90 crores, but that for taxation has been pruned from Rs. 2.72 crores to Rs. 90 lakhs. The rate of dividend on old ordinary shares has been cut from Rs. 9.50 to Rs. 8.25 per share of Rs. 75 each. As against this, the shareholders had the benefit of Golden Jubilee bonus share, at the rate of one for every five shares. The exact position of dividend is a little confused, in view of the issue of new shares in the previous year. But, according to the Directors, the dividend recommended by them on the equity capital "will result in maintaining the dividend rate of Rs. 10.50 paid on the old shares upto 1955-56 and a return of a little over 5 per cent. on the average amount paid up during the year on the new shares." The solicitude shown by the Directors to the shareholders will be further evident from the following extract from the report:

"It is proposed to pay the dividends on ordinary shares and the balance of dividends on preference shares from an amount transferred to the appropriation account from taxed profits earned in past years and credited to General Reserve No. 1. This procedure is recommended, in order that the ordinary shareholders will be treated as having paid income-tax on the dividend since it will come out of past taxed reserves and will be relieved of payment of income-tax or be entitled to a refund in accordance with the provisions of the Income-tax Act."

The foregoing method is, indeed, an ingenious one to overcome the meaningless handicap imposed by the taxation authorities on investors. We have no doubt other companies similarly placed will follow the way out indicated by T.I.S.Co.

The total net amount of profits ploughed back this year is only Rs. 2.66 crores, as compared with Rs. 4.40 crores in the past year. This undoubtedly is the result of contraction in profit. In fine, the immediate interests of shareholders have enjoyed a greater priority at the hands of the Directors than the conservation of resources. This might sound a rather retrograde step, especially as the Company is heavily indebted to the World Bank and the Government of India, but the fiscal policy of the Government is such that pursuit of a conservative policy does not seem to pay the investors in the long run.

The profits for 1958-59 indicated in the foregoing paragraphs will have been actually less than they are shown but for a change in the valuation of stocks. The advantage thus gained will not recur in the coming years, but this does not mean that profits will be less, for the addition of a million tons to capacity will greatly enhance the Company's profit-making capacity.

ISSUE OF FURTHER CAPITAL

The Directors have decided to offer with right of renunciation for subscription 5,00,000 Ordinary Shares of Rs. 10 each at par to the registered holders of Ordinary Shares whose names would appear in the Register of Members on the 11th day of September, 1958 in the proportion of one new Ordinary Share for every three existing Ordinary Shares then held. The Share Transfer Register shall remain closed for this purpose from 8th September to 11th September, 1958, both days inclusive. The Shareholders are also given the right to apply for additional shares, the allotment of which will be at the absolute discretion of the Directors. Circular of offer explaining full details along with necessary forms of application and renunciation will be posted to the Shareholders in due course on or about the 11th September, 1958. The said new Ordinary Shares shall for all purposes rank *pari passu* with the existing Ordinary Shares of the Company save and except that the new Ordinary Shares shall not confer on the holders thereof the right to any dividend on the Ordinary Shares declared in respect of the accounting year of the Company ended 31st March 1958.

TAX BENEFIT

The Company is advised that companies subscribing capital under this issue will be entitled to obtain exemption from payment of Super Tax as provided in Section 56A of the Income Tax Act.

COMPANY'S ACTIVITIES

The Company's first cement plant of 500 tons per day capacity at Sawaimadhopur went into production in the year 1963. The production at the cement works has since been rapidly expanded by installation of two more units each of 600 tons daily capacity. A fourth cement plant of 750 tons daily capacity is in course of erection and is expected to be commissioned to production by the end of 1958, raising the annual installed capacity to over 8 lakhs tons. Sawaimadhopur, with the Company's cement works, is today the largest cement producing centre in the country. The Company's gross block at the end of March, 1958 stood at approximately Rs. 6.70 crores which will substantially increase with the completion of installation of the fourth cement making plant, power house extension, proposed mechanisation of limestone quarries, etc.

Year ended March	*Cement Production (tons)*	*Rate of Dividend on Ordinary Shares*
1955	2,22,694	7½%
1956	1,98,324	12½%
1957	1,71,412	12½%
1958	4,03,339	7½% (interim)*

As a result of the recent recommendation after the enquiry conducted by the Tariff Commission in respect of Cement Industry, the Central Government has increased the price of the Company's cement by 3.50 nP per ton with effect from 1st July, 1958.

With the completion of the expansion programme it can be reasonably expected that there will be marked increase in the Company's earnings.

*Final dividend for the year ended 31st March 1958 will be recommended by the Board for declaration at the next Annual General Meeting.

BANK RATE IN WEST GERMANY

RECENT CHANGES REVIEWED

By A German Correspondent

RECENTLY, the general trend of interest rates in the Federal Republic of Germany entered upon a new stage, inasmuch as on 26th June, with effect from the next day, the Bundesbank lowered its discount rate from 3½ to 3 per cent. This was the fifth reduction of the Bank rate since the autumn of 1956, when a cautious move was made to relax the restrictive measures previously taken. The last previous reduction was on 16th January this year, also with effect from the day after. The Central Bank discount rate is now back at the level at which it had stood between May 1954 and August 1955—that is, before pronounced measures of credit policy had been initiated against the employment boom then existing.

This new reduction was induced above all by the wave of similar measures in other countries after the German bank rate had been lowered the last time. Since 17th January this year, the Central Bank discount rate has been lowered, for instance, three times by a total of 1½ per cent. in New York, three times by a total of 2 per cent. in the United Kingdom, and three times by a total of 1½ per cent. in the Netherlands, not to mention Canada with its "fluctuating" bank rate which is fixed weekly according to the state of the market. As a result of these reductions, the level of foreign bank rates had come much closer to the German bank rate than was the case at the end of January. There is no doubt that, in view of the various Bank rate reductions in certain foreign countries, the adaptation of the still relatively high level of German interest rates to those abroad would at least have been further retarded, had not the reduction of interest rates in the Federal Republic been given a fresh stimulus through further lowering of the Central Bank discount rate.

Such a course would, however, have been most undesirable precisely in the present circumstances. For some months now, the German Federal Republic has again recorded relatively large foreign exchange surpluses. This, it is true, is due not so much to international capital transactions as to the striking improvement in the terms of trade as a result of the fall in international prices and freight rates. It is also due, in part, to the fact that the combating of inflationary tendencies in some foreign countries has so far been less successful than might have been expected early this year. It is obvious, however, that, in such a situation, it would be all the more unfortunate if an influx of moneys from abroad were to intensify the foreign exchange accruals from other sources. In the case of a renewed widening of the gap between interest rates in this country and those in others, such a risk might have been present. In this connection, due regard had also to be given to the fact that the abolition of the Liberalised Capital Mark as from 1st July this year has removed strong barriers till then impeding the import of capital.

The domestic situation, it is true, did not similarly demand a lowering of the Bank rate. Economic activity on the whole continues at a high level because the depressive influences which for some time have emanated from the decline in foreign demand and the tendencies towards reducing stocks of goods are being compensated by a slight increase in investment activity—particularly in building—and a considerable growth of demand for durable consumer goods. Unemployment, therefore, reached a fresh non-seasonal low this summer. The movement in prices actually gave grounds for some objection to another reduction in the Bank rate. At the consumer level, the rise in prices has not yet quite ceased; in May, for instance, the cost-of-living index again slightly exceeded the figure for the previous month.

Nevertheless, in many respects domestic economic developments justify an optimistic attitude towards the crucial problem of maintaining the value of the currency. The market situation which made it comparatively easy to raise prices has, of late, been increasingly replaced by a quite different pattern of forces. It is in only a few industries that demand up to the limit of production capacity has declined. In point of fact, there are more and more indications of sharply increasing competition—a factor supported by the decline in international raw material prices and the larger supply of finished goods for importation. Already in some fields one may perhaps say that there is a "buyers' market" again. It is, therefore, becoming increasingly difficult to raise prices; in some cases, indeed, prices have fallen off already. Even according to the official price indices—which as a rule are based on list prices and take account only incompletely, if at all, of the discounts and other price reductions universal today—the overall price level has actually shown a slight decline of late. This is true not only of basic materials but also of capital and consumer goods, notwithstanding the fact that, in many cases, the business situation has remained much better here. Accordingly, conditions for stabilisation of the price level at the consumer stage have also greatly improved.

In these circumstances, it was not only possible to heed the factors favouring a reduction of the Bank rate on the grounds of foreign trade and payments but it appeared indeed advisable to make use of the present comparatively steady trend of economic activity in order to advance the adjustment of the German interest-rate level to those of other countries without disturbing the internal process of stabilisation.

PROFIT OF BRITISH BANK OF THE MIDDLE EAST HIGHER

A sizable expansion in business and profit alike is disclosed by the accounts of the British Bank of the Middle East (General Manager: Mr. H. Musker, London) for the year ended 31st March 1958. The balance-sheet total has gone up from £69.81 million to £80.85 million, thus more than making good the setback noted in 1956-57. The profit, after provision for taxation, reserve for contingencies, etc., shows an increase from £254,213 to £265,675. This increase in profit has been achieved, despite higher expenses on account of the rising cost of living everywhere in the Middle East. As the Chairman of the Bank, Sir Dallas Bernard, Bart., points out in his statement, "there is no sign anywhere of a halt in the movement. In fact, the tendency is for costs in those territories without oil royalties to rise to the level of others subject to the inflationary effects of large oil royalties." With the aforesaid rise, the upward trend in the Bank's profit has been maintained for another year. It is also noteworthy that the profit has more than doubled itself in the last four years, that is, from £113,814 earned in 1953-54 to £265,675 in the year under review.

After bringing in a surplus of £171,209 from the previous year, the Directors have maintained the allocation to the reserve account, for the third year in succession, at £100,000 and that for bank premises account at £50,000. They have also repeated the dividend at 10 per cent., made up of an interim distribution of 4 per cent. and a final one of 6 per cent., but this is on a higher capital of £2 million, raised during the year by the issue of an additional 500,000 ordinary shares of £1 each. These appropriations have a surplus of £117,884 to be carried forward to the current year.

While the slight setback in the Company's business suffered during 1956-57 was due largely to the effects of the Suez crisis, the expansion in activity during the year under review is attributed to the expansion in production of crude oil in Iran, Iraq, Saudi Arabia, Kuwait and other producers in the Persian Gulf, where the Bank has branches. The crude oil output of these countries increased from 166.92 million metric tons in 1956 to 170.41 million metric tons in the following year. The progress of the Bank in recent years is reflected in the following table:

(In thousands of £s sterling)

	For the year ended 31st March			
	1958	1957	1956	1955
Capital paid-up	2,000	1,500	1,500	1,500
Reserves and surplus	2,272	2,071	1,953	1,587
Current and deposit accounts, bills payable and provisions...	64,170	54,690	57,928	53,346
Credits and guarantees on behalf of customers (contra)	12,340	11,502	10,990	9,419
Advances and bills discounted...	20,074	19,496	20,476	15,941

It will be seen that the Bank's reserves have been strengthened sizably in the last three years. The current and deposit accounts, etc., at £64.17 million, show a rise of £10.82 million over the period of which the increase during 1957-58 alone accounts for £9.48 million. As against this, expansion in deposits and other items, advances and bills purchased have risen during the year under review by no more than £570,000 to £20.07 million, while investments, at £27.67 million, stand strengthened by £4.62 million. Cash balances, too, have swelled by £5.05 million.

The only country in Asia outside the West Asian region where the Bank has got a branch is India. The Bank established itself in India in 1953 by taking over the branches of the Nationale Handelsbank. The latter had two branches, one in Bombay and the other in Calcutta. The Bank found by experience that "its connections with India can be adequately served by one branch in Bombay." Trade between the Middle East and Calcutta is said to be not sufficient to justify its maintaining a branch there and so it has been closed.

BRITISH BANKS AND H.P. FINANCING

Commenting on the very recent development in British banking, namely, the interest taken by banks in houses doing hire-purchase business, Sir Oscar Hobson, City Editor of the *News Chronicle*, writes, in his weekly column of the paper, as follows:

"The banks' invasion of the hire-purchase finance field raises more questions than are obvious at first sight. One is whether, irrespective of the half dozen or so liaisons recently formed between banks and finance houses, the time is not ripe, economically and socially, for a consolidation of the whole H.P. 'finance movement.' This field of finance is far from confined to the large firms which have been in the public eye and those smaller firms which adventure for deposits. There are, in fact, no fewer than 700 firms up and down the country tilling, what one must suppose to be on the average, very fertile soil.

"Hire-purchase finance seems to stand where banking stood 100 or more years ago and one would think that the reasons why it is likely to coalesce into large units are similar to those which worked to bring about the compact banking system which we have today. One certainly can have little faith in the capacity for independent survival of very many of the smaller finance houses which, though they may be efficiently and honestly run, must necessarily be 'one-man shows.' The banks cannot be expected to make a very big contribution, directly, to the consolidation of H.P. financing. They will not be interested in taking over or participating in the smaller firms. But indirectly they may, and I would say ought to, give a more considerable impetus to the unifying process.

"Hire-purchase charges are high—I do not use the word 'exorbitant,' which is sometimes applied to them. In terms of per cent. per annum they may amount to 16 or 20. That, of course, is not a proper measure to use. Hire-purchase charges are not pure interest; they include quite a formidable element of service and administration costs.

"Even so, the finance houses reckon to make a profit margin of around 5 per cent. on the money receivable under contracts—which again is more than that percentage per annum. There should be scope for scaling down in all the elements which go to make up the H.P. charge. Administrative costs should be reducible if business is done on a larger scale. Bigger and stronger finance houses should be able to borrow on more favourable terms than smaller and weaker ones. The banks doubtless will lend at fine rates to the houses in which they are directly interested. The houses' own 'margin,' moreover is not sacrosanct.

"So far, one has to admit there has been little sign that competition has been effective in minimising H.P. charges to the public. It does not even seem that the effect of the lower Bank rate has yet been passed on. Nevertheless, it would be surprising if rationalisation were in this instance completely ineffective in reducing prices. I have faith that competition and publicity (which is why this is being written) will perform their standard 'trick.' And while there is something to be said for official control of H.P. in respect of periods and down payment percentages, I can't see that there is anything to be said for charging the public unnecessarily high prices for the financial service involved."

CENTRAL BANKING IN AFRICA

Since the end of World War II, four central banks have been established in different parts of Africa. These are: the Banque Centrale due Congo Belge et due Ruanda-Urundi (1951), the National Bank of Libya (1955), the Bank of Rhodesia and Nyasaland (1956), and the Bank of Ghana (1957). Central banks are also to be established in Tunisia, Nigeria, and the Sudan, so that, except for the East African territories, there is no important African country in which there is no central bank in being or in contemplation. In addition to the belief that enlightened monetary policy may be used to influence the volume of economic activity, there is, says *Barclays Bank Review*, a feeling in certain African territories that, as commercial banking there is mainly and sometimes solely carried on by expatriate banks, the establishment of a central bank with embryonic powers over the banking system is in the best interests of the country. Closely associated with this consideration is an understandable tendency on the part of countries which have recently achieved independence to regard a central bank as a sign of status.

In the absence of an organised money market, the power to change a statutory reserve ratio, according to the *Review*, is the only real weapon that a newly created central bank in Africa can use to enforce its views. In actual practice, it will no doubt be found that more reliance will be placed on consultation than on constant alterations of reserve requirements.

Reflecting the growing American interest in the Union of South Africa, the First National City Bank of New York has announced that it proposes to establish in Johannesburg a subsidiary, to be known as The First National City Bank of New York (South Africa) Ltd. It is reported that the necessary approval of the Board of Governors of the Federal Reserve System and of the authorities in the Union of South Africa has been received. It is expected that the new bank will commence operations late this year.

THE INDIAN OVERSEAS BANK LIMITED

SPECIAL SAVINGS CERTIFICATES

Invest in I. O. B's three-year Special Savings Certificates for security to self and service to country

Special Features:

- Interest on the certificates is payable half-yearly.
- Repayment may be obtained at the end of 1st, 2nd, 3rd, 4th, 5th or 6th half-year at the option of the depositor without loss of accrued interest.
- Loans may be taken on the security of the certificates at a nominal rate of interest.
- Certificates are available in denominations of Rs 50. Rs 100 Rs 500 and Rs 1000.
- Interest is allowed at progressively increasing attractive rates.

AUGMENTING COTTON TEXTILE OUTPUT AT REDUCED COST

INSTALLATION OF AUTOMATIC LOOMS MOST URGENT

THE economic prosperity of the cotton textile industry, just as that of any other industry, depends on two vital factors. First, the cost of production should be such as to enable the industry to earn a reasonable return. Secondly, the industry must be assured of a regular, adequate market—indigenous and foreign—for its product. Judged by these yardsticks, the outlook for the Indian cotton mill sector would not appear to be quite bright. For the industry today is in the grip of a severe cost inflation, due, among other causes, to the low efficiency of equipment, most of which is old and out-moded, as well as direct and indirect labour costs. If production of textiles is to be augmented and prices reduced, it is of the utmost importance that the industry should be encouraged to modernise equipment and rationalise methods of production. This aspect was impressively brought out by Mr. Ramnath A. Podar, Chairman, Millowners' Association, Bombay, in his speech at the conference on textile industry and technicians organised by the Textile Association (India), Bombay Branch, on Sunday this week. Mr. Podar said that, unless the cost of production was reduced, it was not possible for the industry to lower the prices of textiles, and production cost could be reduced by installing modern machinery.

The need for modernising equipment is all the more urgent from the point of view of stimulating overseas demand for Indian textiles. Competition in world markets is becoming more and more acute. How difficult it must be for India to weather such competition will be evident from the remark of Mr. Podar that the price of cloth exported by this country is higher by as much as 15 per cent. and 10 per cent. as compared with China and Japan, respectively. The mill industry cannot acquire greater competitive power in foreign markets so long as the machinery and equipment are in a debilitated condition. A large majority of the machines in existence today were installed more than 40 years ago and have outlived their usefulness. Drawing attention to this disquieting feature, the Textile Enquiry Committee has clearly pointed out that, if the machinery is not replaced at an early date, its effect would be felt, as it has been felt in the case of marginal and sub-marginal units, in the form of low production, bad quality of products, engagement of a large number of workers and high cost of production.

On the question of modernising equipment of mills, special stress must be laid on the installation of automatic looms. An idea of how, in this sphere, India compares very unfavourably with several other countries is indicated in the table below. It will be seen from this table that, during the period July 1952 to January 1958, the total number of automatic looms in place in India has gone up by just 5,063, as against 63,000 in Soviet Russia, 15,765 in Pakistan, 15,696 in Japan, 11,169 in Brazil, 10,053 in Italy and 5,866 in the U.K. Even of this small addition of 5,063 automatic looms in India, a large part—4,334, to be precise—was installed prior to June 1956, that is, before the Government of India announced its decision to allow installation of 18,000 automatic looms. In other words, the number of automatic looms actually installed out of the 18,000 allowed has been only 729. Such disappointing progress must be attributed to the stringent conditions attached to licences issued to mills, namely, that the entire production of such looms is exported and that at least 87½ per cent. of exports during any of the three years 1953, 1954 and 1955, at the choice of the mill concerned, is maintained. The world textile market is so very uncertain that it is futile to impose such conditions on mills. The Textile Enquiry Committee has done well to urge that, in the context of the present downward trend in world demand, on the one hand, and the superior position of other competing countries, on the other, efforts must be intensified by all concerned towards smoothening the process of introducing automatic looms in the country.

The number of automatic looms actually in place in India at present is no more than 14,112 which represents a bare 6.8 per cent. of the aggregate loomage. As against this, the percentage share of automatic looms to the total number of looms installed is as high as 53.0 in France, 52.2 in Italy, 42.4 in the U.S.S.R., 28.2 in Brazil, 27.1 in West Germany, 25.0 in Pakistan, 17.9 in Japan, 15.0 in the U.K. and 11.7 in China. A striking feature of development in the textile industry of many countries, including our next-door neighbour, Pakistan, in recent years has been the replacement of ordinary looms and looms with automatic attachments by automatic looms. It is the predominance of automatic looms in these countries that is largely responsible for the low ratio of the total wage bill to production cost. It is said that, in a certain leading group of cotton mills in Japan, this ratio works out to only 6 per cent., whereas it is as high as 24 per cent. in Indian mills.

Against this background, it is certainly regrettable that the powers-that-be in India and the labour spokesmen have still not realised the urgency of installing automatic looms in Indian mills. Unless this is done, our cotton cloth is bound to struggle hard to maintain the markets it now has, let alone increase them. It will be interesting to note here that, according to a recent assessment, 10,000 automatic looms (and 7,500 plain looms) are required for purposes of replacement, while 24,000 automatic looms (and 17,000 plain looms) are required for expansion during the second Five-year Plan period.

BURMA-U.S. AGREEMENT FOR PURCHASE OF INDIAN TEXTILES

More than Rs. 2.3 crores ($5 million) worth of Indian textiles will be purchased by Burma under the terms of an agreement reached on the 25th inst. between the Governments of Burma and the United States, with the co-operation of the Government of India. The agreement provides that the U.S. will make available to Burma five million dollars in Indian rupees acquired by the U.S. through the sales of surplus agricultural commodities to India under P.L. 480 and that these rupee funds are to be used by Burma for the purchase of Indian textiles. The Government of Burma will deposit an equivalent amount of kyats to the credit of the U.S. Under the Agricultural Commodities Agreement signed in 1956 by India and the U.S., and aggregating $360 million, it will be recalled, India received $288,000,000 and the balance of $72 million worth of rupees was set aside for U.S. uses. The latest agreement involves $5 million worth of rupees taken from the U.S. Uses Rupee Account. The original Public Law 480 passed by the U.S. Congress provides that the U.S. Government may use such locally-owned currencies to expand international trade and to enter into "agreements with friendly nations to use these currencies to finance the purchase of goods or services of other friendly countries."

TEXTILE INDUSTRY IN JAPAN

The Japanese Government has decided to spend 700 million yen (about £700,000) during the current financial year as part of a plan to help the recovery of the textile industry. A spokesman for the Prime Minister's Office said recently that a Cabinet conference had decided on measures to help the industry. These include the following:

The purchase of 70,000 looms in the two financial years ending on 31st March 1960;

the prohibition of the installation of new looms for all kinds of synthetic fibres including nylon;

a Government recommendation for weavers to set up a good system for the purchase of yarn;

a recommendation that all cotton spinners, rayon yarn producers, dealers and weavers form an organisation to help stabilise textile prices; and

aid for various organisations established recently to buy up unwanted textiles and stabilise prices.

TEXTILE TALKS WITH HONG KONG AGAIN

PRICE REGULATION SCHEMES TO BE OFFICIALLY INVESTIGATED

From A Special Correspondent

MANCHESTER, *19th August*

MANCHESTER LETTER

EMPLOYERS and trade unions in the cotton industry have shown wisdom in recognising that nothing should be allowed to prejudice the forthcoming talks with leaders of the Hong Kong industry on voluntary limitation of cloth shipments to the United Kingdom. The temptation to sanction and widen at central level the local boycott campaigns against Empire-made goods now developing in a number of Lancashire towns must have been strong. But good sense prevailed and the atmosphere of goodwill essential to a successful outcome of the talks in Hong Kong has been preserved. Nothing is to be gained at this particular moment by boycotts.

Whether Hong Kong recognises Lancashire's tolerance and keen desire for a fair and reasonable understanding should soon be known. Although the Cotton Board has so far said nothing officially, everything points to an early announcement. Colonel Whitehead, the Managing Director of Lancashire Cotton Corporation, who has firsthand knowledge of the earlier discussions with India and Pakistan, has forecast that Lancashire representatives will be returning to Hong Kong in three or four weeks' time. He told a conference of Lancashire civic leaders at Oldham: "I am quite confident in my own mind that they will come back with some agreement. If they come back with nothing, you can yell for all you are worth."

In recent weeks, this growing confidence among Lancashire leaders that Hong Kong is now ready to negotiate has been one of the few heartening developments in an otherwise depressing outlook. When a company of the technical and progressive standing of Calico Printers' Association has to announce the closing down of an important print works, the situation is clearly bad. It can be pointed out, of course, that C.P.A. attributes the need for this decision to the decline in Lancashire export trade and that any limiting agreement with Hong Kong would apply only to Empire-made goods for retention in Britain's home market. Nevertheless, the two are so interrelated that the vigour and strength of one has a strong and decisive influence on the other.

A Many-sided Problem

Colonel Whitehead told his Oldham audience that, if the Hong Kong meeting failed to produce an agreement, "you can yell for all you are worth." It is likely to be quite a yell. The Government's position will then become even more uncomfortable, especially against the background rumours of a forthcoming General Election. The fundamental importance of maintaining the basis and pattern of Commonwealth trading is hardly likely to make sense to a Lancashire cotton operative who has just lost his job. It is so much easier to take the broad view and see the picture as a whole when you are a bystander rather than a participant.

Nor would the election of an alternative Government necessarily mean that Lancashire's troubles would be solved. The problem is deep and many-sided and, with the industrialisation of the underdeveloped countries of the Commonwealth, the dilemma facing Lancashire today is likely to confront some other old-established British industries in the years ahead.

Meanwhile, if the worst comes to the worst, there is no doubt that we shall hear a great deal more on the subject of boycotts. According to a trade union source, employers at last Friday's joint meeting pledged full support for everything that has happened so far at local level.

Still in the Doldrums

Traders dealing with Lancashire cotton goods are rarely busy at this time of the year. The interference of holidays, not only in the mill towns but also among individual key men in producing and merchanting firms, has an effect on the offtake which is only occasionally disturbed by a sudden need to anticipate requirements. Such a singular occurrence was encountered last year when the expectation of rising prices due to the wage advance for spinning and weaving operatives created a sharp spurt of activity, but there is no anticipation of any similar movement in quotations being imminent.

In fact, all the portents indicate a lack of initiative among customers and a reluctance to operate at all freely for at least some weeks ahead. How soon a revival in demand can be hoped for is anybody's guess and, at the moment, the estimates are far from optimistic.

Cotton traders, in general, are not noted for their gay approach to their problems, nor are they particularly inclined to be encouraging in their forecasts, but it is a long time since the general tenor of conversations between buyers and sellers was so despondent. Getting even a hopeful phrase out of most members of 'Change is even more difficult than extracting the proverbial blood from a stone.

Certainly, there is little encouragement to be gained from the various facets to the situation arising out of the matters which have been uppermost in the minds of traders for some years. Shrinking exports are still as much a problem as ever and, with foreign competition increasing and more importing countries putting up their own machinery, the prospects for expanding trade abroad appear negligible.

On the import side, the anticipated mission to Hong Kong has yet to put its case before the Colony's millowners and the outcome of the deliberations can at best bring a quantitative limitation on arrivals of such goods which may well be above the current level of imports. It has been truthfully pointed out that an arrangement of this kind will by no means solve Lancashire's problems, but few local traders have ever imagined that it would. By providing some stability, however, an import ceiling would at least offer manufacturers a guide to the future in this connection.

Of mounting importance in assessing the market outlook is the approach of the time when the price regulation schemes in spinning and doubling are to be officially investigated by the Restrictive Practices Court. According to British legislation, the accused is always innocent until found guilty, but there are many interested parties who have already made up their minds what the Court's decision will be. Their view is expressed in the general disinclination of buyers to extend commitments in the belief that, eventually, internal price-cutting may bring more favourable opportunities of securing goods.

Whatever the final judgment on the schemes, distributors appear to be on safe ground. There is little in the situation at the moment to encourage a belief in a substantially higher level of prices. Unfortunately, while customers withhold their purchases, the state of trade goes from bad to worse.

Manpower Down Again

In 12 months, Lancashire mills have lost 19,000 workers. The number of workers on employers' books has now fallen to 224,380. These sombre figures, issued here by the Cotton Board, reflect the steady contraction of the industry. The contrast is all the sharper when it is recalled that the industry's post-war manpower peak was 320,880 workers.

A warning that the size of the Lancashire cotton industry has now shrunk below the level necessary for the national interest has been given to the Government by leaders of the Manchester Cotton Association. The "national interest" was interpreted in textile quarters as meaning that, strategically, Lancashire might not be able to meet all the demands made upon it in the event of an emergency.

In an exchange of correspondence now published, the Association expresses "grave concern" about the situation in a letter to Sir David Eccles, President of the Board of Trade, and calls on the Government to take "immediate and positive action to prevent further contraction of the industry."

In his reply, Sir David says that he is fully conscious of the problem and of the serious difficulties facing the industry. The Government was giving full support and encouragement to the efforts which the Lancashire industry was making to reach agreement with the industries of India, Pakistan and Hong Kong for a voluntary limitation on their cotton textile exports to the United Kingdom. The reply adds: "The industry has reached agreements with India and Pakistan, and it is understood that they have under consideration an early approach to the industry of Hong Kong. The Government earnestly hope that these negotiations will reach a successful conclusion."—*All Rights Reserved.*

EFFECT OF STORAGE OF BALED COTTON ON LINT QUALITY

FINDINGS OF AN EXPERT INVESTIGATION

THE cotton trade and industry in India hold every year about 1.5 to 2 million bales of cotton as stocks. Trading firms and cotton mills have, even in normal times, to carry over sizable unsold or unused stocks of cotton to the following year. In national emergencies like war, huge stocks have to be held to meet the war needs or because of difficulties in exporting. Such a contingency arose during World War II when a sizable quantity of cotton produced in India could not be exported to Japan, as was normally being done, but had to be stored in commercial godowns. When it comes to selling the cotton thus stored up, many difficulties arise. It becomes untenderable against the Indian Cotton Contract. It could be sold in the ready market only at a discount as there is a belief in trade circles that cotton deteriorates in quality by storage. The price realised depends upon the grader's estimate of the extent of its quality deterioration, if any, and the demand for such cotton at the time of selling. It may be noted here that in contrast to this, in the Liverpool and American cotton markets even cotton stored up for three to four years could be tendered against their respective contracts. The price fetched may, of course, be less than that realised on new crop.

A scientific assessment of the nature and extent of the deterioration of cotton on storage is of prime importance in assessing the quality of the stored cotton and determining its price. In this connection, an investigation conducted by Dr. C. Nanjundayya and Mr. V. Venkataraman at the Indian Central Cotton Committee's Technological Laboratory at Matunga, has led to some interesting findings regarding the effect of storage of baled Indian cotton on lint quality.

It may be noted here that similar investigations were made in this country in the past also. Mr. Nazir Ahmad found in 1936 that, while open storage was more harmful than storage in a shed, the yarn-strength of cotton drawn from the bale after six months of storage recorded an increase, and remained in excess of the initial value even after 1½ years' storage. In another investigation by Mr. A. N. Gulati which was carried out to examine the effects of storage on Broach cotton, it was observed that the main cause of deterioration and discoloration was rapid action of certain micro-organisms. Further extension of this work of Messrs. Nazir Ahmad and Gulati on Broach *Desi* cotton showed that there was a critical point of humidity, in the neighbourhood of 85 per cent. above which deterioration set in rapidly, while below this, the cotton may be stored for several months without appreciable loss in strength.

Effects on Spinning Quality

In this connection, it may be mentioned that the effect of storage prior to ginning on the spinning quality of cotton was investigated by Mr. Ahmad, who concluded that the harmful effects of storage of *kapas* on the quality of seed and lint should not be ignored and ginning operation should not be delayed. If the period of storage should exceed a few weeks, the seed-cotton should be occasionally taken out and exposed to the sun. Dr. Nanjundayya examined the variation in copper number, cuprammonium fluidity and fibre strength of Surat 1027 A.L.F. cotton stored under high humidity for four months. Mr. H. R. Nayak studied the influence of storage on the fibre properties of Dharwar cotton and found no significant change in fibre properties even after storage for a period of 3½ years though the colour was observed to change slightly. Messrs. Nanjundayya and Ahmad also investigated the effects of storage in Bombay on the quality of baled Indian cottons and showed that the yarn lea-strength increased significantly after the first monsoon period of storage and at the end of two years, it was nearly equal to or even greater than that at the commencement. An American expert, Dorothy Nickerson, noted that the colour of cotton changed from white to yellow after storing for over five years, particularly at places where high humidity and temperature prevailed and that this yellowish colour could easily be removed by kier-boiling and bleaching.

The investigation under reference was undertaken with a view to examining the opinion expressed by some mills that Jarilla cottons grown in Khandesh and Madhya Pradesh were found to deteriorate rapidly by storage. The Indian Central Cotton Committee, therefore, decided that investigations should be carried out at its Technological Factory to find out whether (1) Jarilla cotton actually deteriorated in quality by storage, (2) if so, whether it was to the same extent or more than what was usually occurring in other varieties, (3) whether cottons especially Jarilla, behaved differently when stored in Bombay and in upcountry centres, particularly in their respective places of growth. Advantage was also taken of this opportunity to include two more cottons, namely, Cambodia Co. 2 and Punjab American 124 F, in this investigation. For purposes of the investigation, 15 commercial bales each of Jarilla, Cambodia Co. 2 and P.A. 124 were stored in a Bombay godown, 15 bales each of Jarilla and Cambodia Co. 2 were stored at the same time at Jalgaon and Coimbatore respectively. Samples from all the 15 bales of each variety at each place were initially drawn and subsequently from three bales every six months, thus exhausting all the bales in 2½ years. These were tested at the Technological Laboratory for whiteness, blow room loss, card loss, lea-strength, neppiness, etc. The last three bales of the three varieties stored in Bombay and those of Jarilla stored in Jalgaon were stored for a further period of 1½ years, thus making a total of four years from January 1947 to January 1951. Samples from these three bales were drawn every six months and subjected to the same tests as mentioned above. A similar experiment was conducted on bales of Broach Vijay cotton.

A Common Finding

One common finding from all these investigations was that when baled cotton was stored in a commercial godown for two to three years there was little or no decline in the strength of the yarn spun from it though there might be a slight discoloration after a year's storage. It was found that at any rate there was no justification for the trade to discount the cotton stored for a year or two.

The investigation revealed that the storage of Broach Vijay cotton for more than 1½ years, on the whole, adversely affected the colour of the cotton. Cambodia Co. 2 did not, however, show any change in colour when stored in Coimbatore while it indicated a marked change when stored in Bombay. Thus, the same cotton stored in a comparatively drier place was affected to a lesser extent in colour. Cambodia Co. 2 and Vijay stored in Bombay and in their respective places of growth maintained nearly the same fibre-strength even after 2½ years' storage. But Jarilla stored in Bombay and in Jalgaon, and P.A. 124 F., recorded a significant decrease after storage for 2½ years. Waste losses were not affected to any extent by storing these cottons for 2½ years. Storage of these cottons even for four years did not adversely affect the quality of the yarns spun from them. Cambodia Co.2 did not show any difference in lea-strength whether stored at Bombay or at Coimbatore. Taking yarn strength into consideration, storing Jarilla at Jalgaon appeared to be more beneficial than at Bombay; the same was the case with Vijay. If a cotton were to be made into a fabric which involved yarn strength and extensibility, it seemed immaterial whether fresh cotton or that stored for even four years was used, because storage did not affect either of the two characteristics of the yarn spun from it though some discoloration was produced.

Other Results

Another finding was that the trade practice of discounting stored cotton chiefly on the basis of discoloration could not be justified in the light of the results obtained in this investigation. It was found advantageous to store these varieties in their respective places of growth which, in the present case, happened to be much drier than Bombay. Storage, generally, had no adverse effect on yarn extensibility. It was only Cambodia Co. 2, when stored in Bombay and in Coimbatore, that showed a significant decrease in extensibility on storage. It was noted that, generally, the neps per yard of yarns were significantly lower when spun from a cotton stored for a period of 2½ years; these were further reduced by storage upto a period of four years. Generally, the neppiness of yarns spun from the samples stored for even four years was found to be independent of the place of storing.

RUSSIA LIKELY TO BE WORLD'S BIGGEST SUGAR PRODUCER

TARGET FIXED AT 6.53 MILLION TONS

SOVIET Russia is expected to rank as the world's biggest producer of sugar by 1960. The Russian sugar industry has launched upon a very ambitious scheme of expansion which has already gone half-way through; its implementation commenced in 1958. The scheme envisages a rise of as much as 191 per cent. in sugar production over the five years ending in 1960, the target fixed for 1960 being 6.53 million tons. An interesting account of how the implementation of the scheme is going on is given by Mr. Stephan G. Prociuk in an article published in a recent issue of the *Bulletin* of the Institute for the Study of the U.S.S.R., situated in Munich, Germany.

The main sugar manufacturing area in Russia is the Ukraine where sugar output is to be stepped up to nearly 4.0 million tons in 1960, as against 2.5 million tons in 1955, or a rise of over 70 per cent. The anticipated increase of 1.5 million tons represents about 50 per cent. of the total planned addition of 3.0 million tons. Bordering on the 400,000 hectares (1 hectare=2.471 acres) of land given to sugar beet in the Ukraine are a further 93,900 hectares in Kursk area, 70,700 hectares in Voronezh, and 34,900 hectares around the Don and Kuban. Thus, in this one concentrated area of roughly 600,000 hectares, 26 million tons of sugar beet were harvested in 1955, representing 85 per cent. of the total Russian beet crop. The centre of this area is the Vinnitsa district. There are in this district 38 factories which together produced one-fifth of the entire Russian sugar production in 1955.

The planned expansion of sugar production —from 3.53 million tons in 1955 to 6.53 million tons in 1960—is proposed to be achieved partly through expansion of the area under sugar beet and partly through measures designed to improve the sugar content of beet and technological processes of sugar refining. The aggregate acreage under sugar beet is expected to rise by 130 per cent. during the five-year period, the actual yield increasing from 30.5 million tons to 50.0 million tons.

A striking feature of the aforesaid expansion scheme is the importance attached to the utilisation of the already existing capacity, including manpower. Numerous surveys have been conducted on the possibility of augmenting production within the framework of the prevailing sugar-producing system and 63 per cent. of the total increase planned for 1960 is to be achieved in this way. Special stress is laid on the introduction of improved methods of purification and reduction of the time required for evaporation. Proposals have been made on the installation of equipment making continuous evaporation possible, while new methods of sugar crystallisation are being studied. Nevertheless, it is felt that, on the whole, the operational processes in the Soviet sugar plants are still far from satisfactory, thanks to the detrimental effect of many factors even after new processing machinery has been installed. Mention, for instance, is made of the use of unpurified water in some refineries which is causing considerable damage to boilers and unsatisfactory sanitary measures. Mention is also made of extensive losses during processing; only 81 to 83 per cent. of the sugar is extracted, the rest being lost. In view of these factors, Mr. Stephan G. Prociuk observes:

"Thus, increased sugar production appears to have been due not so much to manufacturing improvements as to an increase in the sugar content and general quality of the beets themselves as a result of improved growing methods in the principal beet-raising regions. Even the Soviets do not disguise the fact that the outstanding figures for sugar production in the U.S.S.R. in 1953 (3,434,000 tons) and 1955 (3,419,000 tons) resulted from the favourable climatic conditions. The figure for 1954 was only 2,611,000 tons. It is not surprising, therefore, that the most recent plans for increasing sugar output deal mainly with improved farming methods and the location of sugar mills."

Since the 1956 harvest, the prices paid for State deliveries of sugar beet have been enhanced. The actual rates now prevailing differ from area to area; it is 21 roubles per centner in the Ukrainian S.S.R., the Don and Kuban regions and the Central Chernozen areas; 23—25 roubles in the central R.S. F.S.R., the Baltic Republics and the most westerly areas of the U.S.S.R. (Lvov and Kishninev); and 32 roubles in the Volga regions, the Urals and the Soviet Far East, the regions in which the Kremlin is hoping to develop a sugar industry. The last-mentioned figure is a deliberate incentive, as the climatic conditions in these areas are not favourable. For three years, a further 30 per cent. of the State delivery price is to be paid in these areas, if the Kolkhoz concerned switch over to sugar beet raising for the first time, and a 20 per cent. bonus if delivery is made before 15th September. This last step is to increase the mills' working season and thus improve the utilisation of existing capacity.

The payment of monetary compensation to collective farms in lieu of syrup has ceased. Instead, the sugar beet growers and transporters are allowed to purchase a certain quantity of sugar at reduced prices. In addition, the rates fixed for payment in kind by collective farms for M.T.S. work during the 1955 and 1956 harvests were lowered by 50 per cent.

Whatever may be the inducement given for augmenting production of sugar beet, it would appear that mechanisation of cultivation has not made satisfactory progress. Commenting on this, Mr. Prociuk makes the following remarks:

"The problem of supplying agriculture with modern machinery has always been a weak point. As early as 1953, a plan was drawn up under which even plants belonging to the Ministry of Defence and the Ministry of Aviation were obliged to organise the production of certain types of agricultural machinery in urgent demand. Additional funds were made available for the expansion of the Kharkov Tractor Plant and Krasnaya Zvezda Works, also in Kharkov, which produces agricultural machinery. However, judging from the 1956 plan, little was achieved, since the demands continued unabated. To help solve the problem, a new designing institute was established at the Kharkov Hammer and Sickle Works. However, the programme did not yield appreciable results, the new types of machines not proving as successful as expected. Thus, last summer, there was considerable criticism of clumsy harvesters requiring much additional manual labour."

Lately, however, the Soviet planners have turned their attention to several ways of improving the beet harvest. They include more widespread use of fertilisers, particularly manure, peat compost ash and other, mostly local, fertilisers, intensive campaign against insect pests, and development of insecticides, due emphasis being given to the carrying out of more research into the problem. As a result of these manures, it is stated that the goal of 6.53 million tons of sugar in 1960 will be achieved. Alluding to this question, Mr. Prociuk points out that tremendous efforts will be needed to attain the goal, as is evident from the following figures relating to the trend of sugar production in Russia during the 15 years ended 1955:

(In thousand tons)

	1940	1945	1950	1955
Ukrainian S.S.R.	1,580	329	1,806	2,426
Chernozen regions in South-West R.S.F.S.R.	264	30	303	532
Rest of R.S.F.S.R.	95	33	127	176
All other Soviet Republics ...	226	73	287	285
Total ...	2,165	465	2,523	3,419

If it is assumed that the rate of development between 1956 and 1960 will be the same as in the period 1951-55, the sugar output in 1960 will be no more than 4.68 million tons. To reach the planned figure of 6.53 million tons, the annual rate of increase will, therefore, have to be more than double what it was between 1951 and 1955. Time alone can tell whether this achievement will be possible.

A factor that will probably influence sugar production in the U.S.S.R. is the trend of output in the satellite countries, namely, Bulgaria, Czechoslovakia, East Germany, Hungary and Poland. Alluding to this factor, Mr. Prociuk says:

"One additional factor which will probably influence sugar production in the U.S.S.R. is the sharp decline in the output of the satellites in 1956, the last year for which figures are available. Apart from Bulgaria, the least important satellite sugar-producing country, which increased output by 61 per cent. over the 1955 figure, all the other satellites had a considerable drop in output as compared with 1955. The decline was: Czechoslovakia 27 per cent.; East Germany 15 per cent.; Hungary 20 per cent. and Poland 13 per cent. This could have an adverse effect on the trade balance between the U.S.S.R. and the satellites and may result in increased Soviet sugar export to these countries. This clearly would complicate the Soviet domestic scene, already disquieting for the authorities, in view of popular pressure."

Since the above study appeared in print, estimates of sugar production in the Soviet satellite countries have been published. These reveal that, barring Bulgaria and Hungary which produce only a small quantity, sugar production in other countries has registered a notable expansion. Thus, the estimated output of sugar in Czechoslovakia is placed at 2,312,000 tons (raw value) for 1957-58, which compares very favourably with 1,692,000 tons in 1956-57, and 1,979,000 tons in 1955-56. Similarly, production in Poland is expected to be higher at 1,136,000 tons, as against 848,000 and 1,072,000 tons, respectively, in the previous two years, and in East Germany at 767,000 tons, as against 553,000 and 702,000 tons.

PLANTATION INDUSTRY IN KERALA

LABOUR UNREST AND HEAVY TAX BURDEN DEPLORED

SOME of the disquieting problems confronting the plantation industry in Kerala State were effectively highlighted by Mr. K. L. Kershaw, the retiring President of the Association of Planters of Kerala, when he addressed the nineteenth annual general meeting of the Association held at Kottayam recently. The problems included the continued labour unrest, unhelpful official attitude, heavy impact of taxation and concern over the Kerala Agrarian Relations Bill. Mr. Kershaw vividly described how these problems had led to much hardship and inconvenience to an industry which is the largest industry in the State, covering as it does over 174,000 acres of tea, rubber, coffee and cardamom plantations, and the biggest employer of manpower.

The major issue before the planters of Kerala relates to labour relations. Mr. Kershaw pointed out that, although, as compared with the widespread lawlessness prevailing in Kerala plantations a year ago, the situation had lately improved, it still remained in the forefront of present-day events. A recent dangerous development in a few districts, he declared, was the adoption of such tactics as unruly behaviour by workers and intimidation of loyal workers with the object of interfering with purely managerial functions of regulating and directing labour. Added to this, rowdyism, illegal confinement of staff in offices, factories and bungalows, abuse, threats of violence, and resort to violence continued to occur in scattered incidents but with deplorable frequency. Whatever may be the factors responsible, such an attitude on the part of labour deserves to be censored. The State Government should shoulder its legitimate responsibility for maintaining peace and protecting the liberty of the citizen without fear or favour. It will do well to recognise that, if industrial democracy is to work efficently, a sound and healthy trade union movement is the most important prerequisite.

Understandable Concern

The aforesaid aspect must be particularly stressed, because politics continues to dominate the trade union movement in plantations. Expressing understandable concern over this trend, Mr. Kershaw observed:

"Plantation workers are first and foremost pawns in the game of party politics, while a multiplicity of unions in the industry, more often than not on the same estate, is now the bane of our existence. After over 10 years of trade unionism, one should be able to claim that some progress has been made in the sphere of labour relations. Certainly, privileges and rights have been conferred by a spate of labour laws which have led to a substantial improvement in the socio-economic conditions of plantation workers. And yet we continue to be gravely concerned by the unconstitutional behaviour of labour and by the output of labour which appears to fall in inverse ratio to the benefits accruing from a benevolent industrial democracy. Complete stoppages of work as a result of strikes have been a rarity it is true. But a new and more serious pattern of strike has been evolved through the use of the creeping paralysis of 'go-slow' tactics and of a mounting degree of daily absenteeism. In the plantations of Kerala today, there exists at best a four-hour day and a five-day week, with the solitary and lone exception of the woman plucker."

There will be no two opinions on the relevancy of Mr. Kershaw's point. After all, it must be remembered that the capacity and dignity of an honest day's work is, as Mr. Kershaw rightly averred, the worker's main asset and it is high time that the plantation labourers were educated to his responsibilities. Unless this is done, there cannot be an amicable understanding between managements and workers. Such a lack of understanding is harmful more to the workers themselves than to the managements. It will stand in the way of their assuming greater responsibilities.

Industrial Relations Board

A matter which is causing profound anxiety to the planters of Kerala and to which Mr. Kershaw referred is the outcome of the deliberations of the Kerala Industrial Relations Board since its inception in September last year. The main function of the Board, it is said, is to devise measures for ensuring industrial peace, thereby creating the proper climate for the further development and expansion of existing industries and formation of new industries in the State. It is regrettable that the State Government should have excluded such a major industry as the plantations from the Board. The industry has not been given representation, nor invited to nominate a representative or representatives to state its case. And yet, the stage, we are told, is now being reached on the Board when proposals in respect of wages, bonus, festival holidays and other matters affecting all industries in the State are being finalised. Mr. Kershaw was perfectly right in warning the State Government that the planters would not be bound by any decision taken by the Board. To quote him:

"Unilateral decisions on these vital questions by-pass the three Committees on Plantations set up by Government to resolve these very same problems in our industry. Unilateral decisions will certainly disrupt the healthy atmosphere that has prevailed in tripartite negotiations. They will most certainly prejudice our case. In March of this year, I wrote to the Hon'ble Minister for Labour explaining the Association's view. I advised him that, if industrial peace is to be ensured in the plantation industry and if we are to contribute towards the expansion of existing industries and towards the development of new industries in the State, we must be excluded from any overall *ad hoc* policy decisions taken by the Board which would cut across the statutory negotiating bodies already in being. Not only has Government taken no heed of our request, but my letter has not been afforded the courtesy of an acknowledgment, which appears to emphasise—if any emphasis is necessary—our deliberate exclusion from membership of this important Board."

Tax Burdens

Apart from labour unrest and unhelpful attitude of the State Government, the plantation industry of Kerala is subject to heavy tax burdens—cesses, excise and export duties, tax on income and sale, *panchayat* and municipal taxes, licence free, etc.—and that at a time when the wage bill has gone up markedly. There is no exaggeration whatever in the Statement of Mr. Kershaw that the impact of taxation is so heavy that the plantation companies are no longer in a position to meet their tax liabilities from current revenues and, at the same time, meet the many other inescapable demands on their financial resources. An analysis of the latest balance-sheets of a number of plantation companies for the past year will reveal that a few companies have sustained losses and that the financial resources required by many companies for the proper maintenance of capital assets are no longer available in adequate measure, let alone the resources needed for extending cultivation, replanting cultivated areas, building up reserves against adverse trading conditions, improving properties, and meeting capital commitments for the amelioration of living and working conditions of labour force, or even the residual resources to pay a reasonable return on capital. Mr. Kershaw drew pointed attention to this state of affairs and said:

"If this level and method of taxation is to continue, an erosion of the capital value of the plantation industry in Kerala is inevitable. The net result must be the gradual deterioration and attrition of the planting economy and the ultimate destruction of Kerala's most valuable economic asset.... The subject requires Government's urgent and sympathetic understanding. I believe a thorough and detailed study of the financial position of planting companies will indicate beyond doubt that direct taxes levied on the industry are crippling. Positive ameliorative action is essential to our economic survival. If such action is not to be taken, one can only assume that this penal level of taxation is part and parcel of a long-term policy to nationalise plantations by any means. Whatever the outcome, the Government's taxation policy will not attract outside investment to the State, nor attract the development of the new industries on which Kerala has set her heart as the ultimate solution to her urgent problem of unemployment."

There is considerable force in these observations of Mr. Kershaw, as also in his remarks that the definition of the plantation industry as contained in the Kerala Agrarian Relations Bill would nullify the benefit conferred by way of exemption of plantations from the limitation of ceilings and that the clauses denying the industry fixity of tenure offered to other tenants are highly discriminatory and objectionable.

NEW USES FOR NATURAL RUBBER

REPORT OF DEVELOPMENT BOARD

THE use of rubber powder and latex in road surfacing materials, perhaps the most important current development in highway construction, is given special attention in the Natural Rubber Development Board's Annual Report for 1957. This reflects its big potential as a major outlet for rubber. It was an encouraging sign that, during the past year, many road authorities chose to use rubber in their construction and repair programmes "as a direct result of the success of earlier experiments." The Report goes on to note with satisfaction "the general recognition now being accorded to the development by the Press, engineers and organisations concerned with road construction and maintenance."

The tendency to use rubber in conditions which were particularly severe and where traditional materials proved inadequate is commented upon in the Report. Among examples of "difficult" surfaces so treated was Spencer Street Bridge, Melbourne, a heavily trafficked junction. Here several attempts to seal the surface had previously failed. "The job," the Report states, "was satisfactorily accomplished with rubber." Other examples illustrated include a cobbled hill with a one-in-five gradient in Pennsylvania, a series of dirt roads in New Jersey and a number of country roads in other parts of the world, including some laid over peat foundations, all of which were successfully resurfaced using rubber.

In Australia, rubberised bitumen had a thorough testing as a surface material for airport runways with such good results that more airports were scheduled for the same treatment during 1958. Sufficient time has not elapsed for the main results of the full-scale tests by the Government's Road Research Laboratory to become available, but an interim report stated that, on five different test strips, a normal "cut-back" bitumen "fatted"* seriously during the summer when comparable sections of rubberised bitumen remained in good condition. Work by the Road Research Laboratory on developing rubberised tar reached the test stage, while a method of using latex as an alternative to rubber powder as an additive to road materials was successfully tested at the Natural Rubber Development Board's Laboratories near Washington, U.S.A.

Rubber Rail Pads

The Board devoted considerable effort to developing the growing uses of rubber in other branches of engineering and, in this context, it notes how useful was the contribution made by its recent technical conferences for key officials and industrialists. One particularly striking result of the Railway Conference was the interest aroused in rubber rail pads which "have since been laid in very large numbers." Describing the developments in this sphere, the Report states: "In South Africa, following a successful trial, 400,000 rubber pads were ordered for use with concrete sleepers. In Australia, New South Wales Railways are using regular supplies of pads and intend gradually to introduce these to the majority of the track which they control, whilst the Queensland Railways are to commence experiments with rubber pads in connection with their electrification scheme. Following close liaison with New Zealand Railways, there seems every prospect of large-scale use in that country."

Creating a New Public for Latex Foam

In the engineering field, the Board's policy has been "to stimulate new developments in conjunction with the British Rubber Producers' Research Association and to issue basic information to engineers on established uses where natural rubber is pre-eminent."

The Board continued to provide information on the latest developments in the use of latex foam upholstery to the furniture industry, to students and to the general public. The media used included lectures and the Report comments: "Further evidence came to light of the influence of the lecture scheme in stimulating interest in latex foam which now forms part of the standard syllabus of almost every leading college in the United Kingdom. When the Board initiated its work in this field, treatment of the subject was negligible." Demonstrations of methods of re-upholstering with latex foam were given by the Board's demonstrator to some 10,000 people

*"Fatting"—a condition where bitumen rises to the road surface making it slippery.

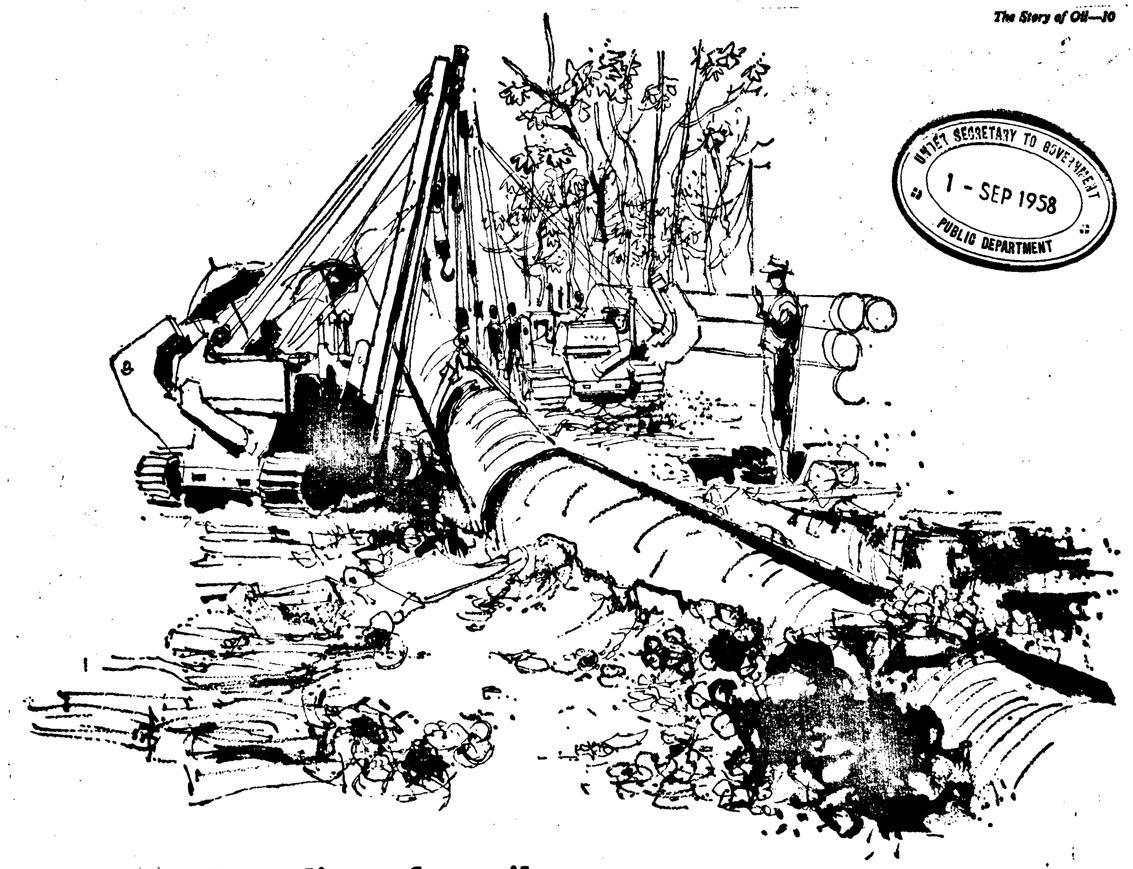
The Story of Oil—10



UNDER SECRETARY TO GOVERNMENT
1 - SEP 1958
PUBLIC DEPARTMENT

Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

NATURAL RESOURCES OF CANADA

ABUNDANCE OF FORESTS, MINERALS, WHEAT, FISH AND ELECTRICITY

[In view of the Commonwealth Trade and Economic Conference scheduled to be held at Montreal, Canada, on 15th September 1958, at which India will be represented by its Finance Minister, Mr. Morarji Desai, the article on this page, describing the natural resources of Canada and the success achieved so far in harnessing them for the benefit of mankind, is of topical interest. It provides a fitting background for understanding Canada, a country which has been quietly helping India on a significant scale in its onward march to economic prosperity. The continuous efforts that are being made by the Canadian authorities to protect the fertility of land through adoption of proper soil conservation methods is of particular importance to Indian agriculture. We are indebted to the Royal Bank of Canada for this article.—Ed.]

CANADA'S great store of natural resources is not something locked away in a vault for misers to gloat about. It is a treasury of material things to be turned into useful commodities by our skill and energy. He is, however, a wise man who takes stock every once in a while to see how his inventory stands, and to learn whether he is making the best use of what he has. Every civilisation rests on a different basis of resources. Adam, when forced to till the ground, was using the resource of agricultural soil; we, when we produce atomic energy from uranium, are tapping not only a deeper layer of the earth, but of intellect.

We Canadians had, for generations, the reputation of being suppliers of raw materials: but, in little more than a generation, we have witnessed a great change. Today, Canada is not only a rich storehouse of materials but an industrial nation, fabricating natural resources into usable goods. In 1955 our net value of primary production was $4,315 million. After processing these resources in our factories, we exported goods to the amount of $4,282 million, after supplying our own needs of domestic products.

Luxuriant Forests

Canada has a fair share of the world's 5,000 million acres of forests. It has been estimated that about 44 per cent. of the land area of Canada is covered by forest growth. We have, according to *Canada Year Book*, 582,000 square miles of commercially productive forest. This forest land bears 150 species of trees, of which 31 are conifers. According to a statistical record published by the Dominion Bureau of Statistics, the lumber industry had 7,333 establishments in 1955, employed 58,586 persons, and its gross production was valued at $644 million; the pulp and paper industry employed 62,205 workers, and turned out $1,327 million worth of goods.

As to industries developing out of forest products, exports of wood, wood products and paper represent the largest single category in the published export statistics and amounted to $1,521 million during the year 1955, or 36 per cent. of our total exports of Canadian produce. The pulp and paper industry leads all other manufacturers in gross value of production, and is one of the world's great industrial enterprises.

Abundant Minerals

Having reached her western limits in wheat and having embarked on fullest use of her timber, Canada is now rolling back her northern frontier in search of minerals. Increased knowledge of the geology of the north-west and north-east, and changes in transportation and communication, have brought under scrutiny vast areas which were hitherto looked upon as waste rock. Today, Canada is the chief world producer of nickel, the platinum metals, and asbestos. It ranks second in the production of gold, zinc, cadmium and selenium; third in silver, molybdenum and barite, and fourth in copper and lead. The leading metallic minerals produced in Canada last year were nickel, copper, iron, gold, uranium, zinc and lead, valued at $1,048 million; the leading non-metallics were coal, asbestos, petroleum and natural gas, valued at $677 million; and in addition there were clay products and other structural material valued at $275 million. The total mineral production was valued at $2,134 million.

Iron provides the foundation of modern industry, and Canada is blessed with great resources of ore. Discoveries in the Lake Superior region a few years ago were developed from 1945 onward. Deposits astride the Quebec-Labrador border have been rolling into production since 1954. It seems likely that Canada's production of iron ore will continue to show a general upward trend, perhaps doubling or tripling within the next decade.

Canada has tapped important deposits of uranium ore, major source of atomic energy. Early in 1953, we had one producing area at Great Bear Lake in the North-west Territories; now we have four such areas. The three additional are: the Beaverlodge area of northern Saskatchewan, the Blind River area of northern Ontario, and the Bancroft area of south-eastern Ontario. There are additional potential uranium areas: in the North-west Territories and in British Columbia. Our production in 1957 was 13 million pounds valued at $131 million. Output this year is expected to come from 24 uranium concentration plants which will handle over 44,000 tons of ore daily.

Although the material which is its principal component is not a natural resource of Canada, but is imported from other countries, aluminium must be mentioned in this list. Its manufacture in Canada is due to our great wealth of another natural resource, water power.

Asbestos, Coal and Oil

Canada is rich in non-metallic minerals. It is the world's chief source of asbestos, production of which is concentrated in the eastern townships of Quebec. The value of annual production increased from $24,700 in 1880 to $24½ million in 1946 and $106½ million in 1957.

Coal is one of our problems. This country is one of the world's richest in bituminous reserves, but they are largely located in places far removed from industrial centres. Because of this, Canada has never supplied more than about 50 per cent. of the nation's market requirements. In 1957 we produced 13 million tons and imported 20 million tons.

Canada used to suffer from oil anæmia, producing only about a seventh of her needs from her own wells. Total production in 1947 was 7,632,204 barrels. Then came 10 years of extraordinary discovery and development, and in 1957 the production was 182 million barrels, valued at $445 million. Our production of natural gas leaped from 52,656 million cubic feet in 1947 to 206,214 million cubic feet in 1957.

We have, in addition to the flowing oil wells, enormous oil deposits in the tar sands of Alberta, but the difficulty is to find an economic method of extracting the oil. According to *Canada Year Book*, this is "the greatest known oil reserve on the face of the earth." Estimates vary between that of Canadian geologists at 100,000 million tons and that of the United States Bureau of Mines at 250,000 million tons.

Agriculture's Importance

Agriculture is, of course, Canada's leading primary industry, providing raw materials for many manufacturers. At the time of the last census, 20 per cent. of Canada's people lived on farms. There are different phases of the industry, the Maritimes with their emphasis on products other than grains, Ontario and Quebec with their mixed farming, the Prairies with their overwhelming stake in wheat, and British Columbia with its fruits.

The area of arable lands can be estimated only approximately, because every decade sees an extension of the land found suitable for cultivation. The total occupied agricultural land, improved and unimproved, is given by *Canada Year Book* as 272,000 square miles, or 174 million acres. Crops range from tobacco, grapes and peaches, which are grown in the southern parts of Quebec and Ontario, to the quickly-maturing wheat which ripens in districts where the summer is very short. The area given to grain in 1955 totalled 45½ million acres, of which 21½ million acres were given over to wheat. The wheat crop in the five years ending in 1955 yielded 2,673 million bushels, an average per year of 534½ million bushels. The yield per acre ranged from 12.7 to 26.8, averaging 21.7 bushels per acre over the five years.

Livestock and livestock products form by far the largest source of income to Canadian farmers. They yielded $854 million in 1955.

Fruit deserves special mention, because so many people in other lands think of Canada as part of the "frozen north." The truth is that fruit is grown on a commercial scale in many provinces. It is the principal agricultural crop in such well-known sections as the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario, and the Okanagan Valley of British Columbia. In 1957, the leading fruit crops yielded 15 million bushels of apples, 68 million pounds of grapes, 15 million quarts of strawberries, 12 million quarts of raspberries, nearly 3 million bushels of peaches, and a million bushels of pears. In addition, there were plums, cherries, apricots and loganberries.

Technological progress has marched hand-in-hand with territorial expansion. The number of tractors on farms increased from 47,000 in 1921 to 160,000 in 1941 and 400,000 in 1951. There were, in 1951, 526,000 automobiles and trucks on Canada's farms. The past 80 years have seen Canada change from a land of sickles and scythes to one of threshing machines and combines; from ox-cart and buck-board to truck and tractor. Zimmermann, in his book *World Resources and Industries*, contrasts the seven million farmers in North America with the tens of millions in Europe and perhaps hundreds of millions in Asia, and he adds: "A better example of the effect of machine energy and of the capitalistic method of production on the extent of land utilisation and the determination of cultivability can hardly be imagined."

The dynamic factors in the agricultural picture of the future will likely be technological improvements, growth of the domestic market, and conservation. Scientific farming, with proper care of soil and careful choice of crops, plays a leading part in increasing and maintaining output. Agriculture represents immense long-term capital investment. Recent estimates put the value of Canadian farm lands and buildings, implements and machinery and livestock at nearly $10,000 million.

Great Fishing; Rich Furs

Fishing was probably the first industry carried on by Europeans in the New World. Long ago, those stalwart adventurers caught their fish off Newfoundland and the Maritimes, cured or dried them, and sailed back to sell them in Europe. Today, two of the four great sea-fishing areas of the world border on the east and west coasts of Canada. We have rich harvests from the Atlantic, the Pacific and many freshwater lakes and rivers. There are still largely unknown, but very great, possibilities of increasing the economic value of fisheries in all our waters. The situation of fishermen would be easier if Canadians would eat more fish. The sea catch in 1957 amounted to more than 100 pounds for every person in Canada. Our domestic consumption in that year was only 14 pounds per person on the average. Inland waters, rivers and lakes contribute about one-seventh of the total fish catch. Canada has 283,000 square miles of fresh water lakes within her borders and these abound in fish of the finest quality. A drastic decline in the lakes fisheries has resulted in joint conservation action by Canada and the United States, directed against the predacious sea lamprey. In five years the average annual value of products of the fisheries was: sea fisheries $139 million; inland fisheries $19 million. There are about 600 firms engaged in the fish processing industry.

Raw furs are the chief commercial product from a big region in the northern part of Canada, but not quite so many people are engaged in trapping as is claimed in a book published a few years ago. The author says: "Tens of thousands of American Indians still roam the lonely, pathless forests of north-west Canada, trapping the fur-bearing animals." It seems too bad to spoil a romantic exaggeration in an otherwise informative book, but the truth is that the total Indian population of Canada is only 155,874, of whom only 3,838 live in the North-west Territories, and of these 2,793 are non-trap-laying women and children. However, Canada is one of the two great fur-producing countries of the world. We have a wide variety of fur, including bear, wolf, fox, weasel, otter, beaver, marten, fisher, mink, rabbit and muskrat. The value of pelts produced in the four seasons 1953-56 was $101½ million. Fur farming, supplemented by the development of marshlands and establishment of muskrat and beaver preserves has provided work for hundreds of Canadians. In the 1955-56 fur year, ranch-raised pelts amounted to 56 per cent. of the total value.

Twenty Million Horse-power

We have left to the last of our material resources one which is most important in the processing and development of all others: hydro-electric power. Water flow has been an important natural resource in Canada from the time the first settlers set up their water-mills to grind grain. The quantity of power available brought this country's economy from one based largely on vegetable growth and raw resources to one more than 70 per cent. industrial. Canadians are now the second largest *per capita* consumers of electricity in the world.

Since 1901, when hydro-electric installation was less than a quarter million horse-power, Canada's total climbed to a million in 1911, three million in 1921, six and a half million in 1931, and to nearly 20 million in 1957. This latest figure represents less than 28 per cent. of our recorded water-power resources. Total ultimate consumers in 1956 numbered 4,426,479. Of these, 3,833,913 were domestic and farm; 491,044 commercial; and 96,982 industrial and other bulk users. Of the revenue, $597 million, $235½ million came from domestic and farm sales and $11½ million from sales for street lighting.

Looking to the Future

These are days when we have so much trouble on our minds that rumblings of more troubles ahead make little difference. To the casual individual, the Canadian nickel resources of the year 2,058 do not matter very much, nor may he be particularly interested in what forest trees are left standing in the year 2000.

The thoughtful citizen, however, is aware of his responsibilities for the continuity of group life, and particularly for the chance he gives future Canadians to live satisfactorily. Destructive practices today can milk the best of our resources, to the possible enrichment of this generation, but at the expense of impoverishing our children's children who will see the turn of the century. It has been pointed out in carefully documented reports that world population has increased until there are only about two acres of productive land for each individual, and, while destructive practices are daily causing these two acres to shrink, population is mounting at the rate of about 100,000 people per day.

The world's population in 1930 was 2,013 million; today it is approaching 3,000 million; by 1980 it will, at its present rate of growth, have reached 4,000 million. And even now, said the former head of the World Health Organisation in March, two-thirds of the world's people are suffering from malnutrition.

Conservation of soil and other resources does not mean, as opponents or muddled people affirm, a restriction of use, but a wise exploitation with a minimum of waste, a maximum utility for all purposes, and a maximum replacement of such resources as are replaceable.

Progress of Conservation

It is evident that, if conservation is to be carried out efficiently, there must be expert guidance. This is provided by trained men and women in many different areas of resources—agriculture, fisheries, wild life, minerals, and so forth. As one example of this interesting field, consider the work of the conservation officer in Ontario, formerly called a game warden. His duties include: enforcing the various acts and regulations established for the protection of the fish and wild life resources; carrying out inventory of wild life and fish; checking on the harvest of game and fur bearers; undertaking management projects.

The conservation officer is primarily an outdoor man, on a year-round basis. He makes his patrols in all kinds of weather, being away from his base for days at a time in the rugged bush country. He must have a keen interest in the principles of conservation and management, as well as knowledge of the game and fish laws and of forest and plant life.

In this work as well as in the related conservation fields of forest ranging, biology, hatchery management and superintendence of parks, the enthusiastic support of the public is required. The conservation officer in whatever field is not trying to drive people to conserve our resources, but to show them the way. His is an educational effort, one that needs to be supported by school teachers and parents, by fish and game associations, and by every person who hunts, traps or travels in Canada's forests or fishes in her streams.

Human Resources

This article has been about the boundless material natural resources of Canada, but far more important than all these are the human resources of the country.

Canada is the home of nearly 17 million people, including men, women and children who became Canadians out of 46 other national groups. Whether born here or elsewhere, all Canadians are heirs to the freedom of this democratic country, in which they are building a standard of living second to none in the world. They find that in this as in other activities of life where there is freedom to develop there is also responsibility to preserve.

Canada has risen to her present position of influence and prestige through the enterprise and character of her people and their energy in using intelligently the resources she has provided. By exercising foresight and using our heads and applying our capacity for work we can assure that this country shall have ample and diversified resources and industries for generations to come. There are always impractical people interested in Promised Lands where everything will be easy and free. Canada, whose resources we have reviewed, comes as close as reasonable men want to a Promised Land, but she does not promise things free. All she says is that she will provide the raw materials in abundance if we will do the work needed to turn them into usable goods.

Flying KLM to the U.K. via Amsterdam is something to look forward to. Efficient, multi-lingual personnel. Delicious meals. Comfortable, reclining chairs. The unique personal service. And the Tax-Free Shopping Centre at Amsterdam Airport, where on your return journey you can buy gifts for your near and dear at surprisingly low prices.

ANNUAL MEETING OF ORISSA CEMENT LTD.

PACE OF EXPANSION IMPROVES STEADILY

CHAIRMAN, MR. J. DALMIA, DISAPPOINTED WITH THE INCREASE IN CEMENT PRICES

THE new refractories plant of the Orissa Cement Ltd., when completed, will be the largest and one of the most modern composite units of its kind in India. Disclosing this at the Eighth Annual General Meeting of the Company held at Rajgangpur on 16th August 1958, Mr. J. Dalmia, Chairman of the Company, claimed that the supply of refractories from this plant would result in a saving of Rs. 2 crores in foreign exchange. Commenting on the recent increase in cement prices, Mr. Dalmia expressed his disappointment over the increase of only Re. 1 per ton in the price of cement granted to the Company, as also over the denial of the benefit of price increase to producers for a period of six months from 1st January to 30th June 1958.

The following is the full text of Mr. Dalmia's speech:

"LADIES AND GENTLEMEN,

"I have much pleasure in welcoming you to this Eighth Annual General Meeting of your Company. The audited accounts and the Directors' report for the year ended 31st December 1957 have been with you for sometime now, and I will, with your permission, take them as read.

"In my address to you last year, I had made certain references to your Company's expanding activities. I am happy to report that the tempo of this expansion continues to be well maintained. The rate of production from the extended plant, which was commissioned early in 1957, has improved steadily. Satisfactory progress has been made in the setting up of your Company's new refractories plant which, when completed, will be the largest and one of the most modern composite units of its kind in India. The fireclay and silica sections of this project went into production in April 1958 and orders for firebricks and for silica refractories have been received from various consumers including the steel industry. Work on the basic plant is being pressed ahead and it is hoped that this third stage of the composite project will be commissioned towards the end of the year when your Company will also be in a position to supply basic refractories such as magnesite and chrome-magnesite bricks, etc., to, among others, the steel plants in the public and private sectors. I am sure that you will share with me a sense of satisfaction in this and in the potential savings to the country of foreign exchange to the extent of about Rs. 2 crores per annum, presently expended on the imports of refractories, which your Company's new project will be able to supply.

Expansion of Refractories Plant

"I had also referred last year to a provision for further expansion of the Company's refractories plant. This was done in anticipation of the growing demand for refractories in line with the rising tempo of industrialisation in the country and particularly in view of the rapid development of the steel industry. It is understood that the target for steel production in India may be raised further by more than 4 million tons to about 11 million tons per annum, which alone must call for a greater output from the refractory industry. It is to be hoped that your Company will be able to play its part creditably in any such further expansion that the refractory industry may be called upon to undertake.

"The Government of India's decision on the recommendations of the Tariff Commission in regard to fair selling price to cement producers has been announced at last, and has been given effect for a period of three years from 1st July 1958. The Tariff Commission has this time made a significant departure from the principles they had adopted in their 1953 report for the determination of profits and for the fixation of fair prices to the producers. The profit margin that has been allowed to the producers is inadequate and entirely inconsistent with their needs and with the present money market conditions as illustrated by the high rate of interest on borrowings and the high yield on Government securities. It is disappointing to find that your Company has been allowed an increase of only Re. 1 per ton.

"Moreover, whereas the Tariff Commission had recommended the introduction of the new prices with effect from 1st January 1958, the Government of India have decided to introduce the new rates only from the 1st July 1958, thus depriving the producers of the benefit for six months of whatever price increase the producers might have been allowed. Government have explained that giving retrospective effect to the Tariff Commission's recommendations would involve administrative and financial complications. It is difficult to appreciate this argument as the industry would have to submit its supplementary claims arising out of the price increase and to adjust its accounts with only one party, the State Trading Corporation, which could not have proved such an unsurmountable obstacle as could justify this somewhat arbitrary decision of the Government at the cost of the industry.

"On the basis of the Tariff Commission's recommendations, the Government of India have also prohibited the use of second-hand gunny bags for the packing of cement after 30th September 1958, on the plea that the use of second-hand gunny bags has not benefited the consumer and that the jute industry was in a position to meet the requirements of the cement industry for new bags. It is incorrect to say that the use of second-hand gunny bags has not benefited the consumer. The use of second-hand gunny bags for cement packing had created a ready market for them and the consumer had so far been able to sell his used bags, not readily disposable elsewhere, to the producers, a facility which he will now be deprived of. The fact that the jute industry may be in a position to meet the cement industry's entire requirements for new bags is, I submit, no reason why bags which are good and serviceable should not be used. This, in fact would run contrary to the policy of conserving the country's resources and of generating a maximum effort for export.

Wage Board

"I would turn now to the setting up by the Government of India of a Central Wage Board for the cement industry in April, 1958, composed of six members, two independent, two representing the employers and two representing workers, under the chairmanship of Shri M. R. Meher, I.C.S., (Retd.). It may interest you to know that Shri V. H. Dalmia, a Director of your Company, is one of the members representing the employers on the Board. Under its terms of reference the Board has to determine a suitable wage structure for the industry and to recommend the principles that should govern the grant of bonus to the industry's workers. The majority of industrial disputes stem from these two items of worker-demands and the importance of the work of the Wage Board becomes immediately apparent. While the Board would doubtless subject these problems to a very careful examination, I would like to refer here briefly to a few of the important issues which must weigh strongly with the Board in their deliberations.

Cement Should be Made Cheaper

"The national effort, the Five-year Plans and the industrial development in the public and private sectors have all a common goal, the raising of the standard of living of our people. Measured by the *per capita* consumption of cement, an accepted indicator of national achievement, our standard of living leaves much to be desired and considerable progress is still to be made before we may claim having achieved one of the fundamental aims of our independence, the eleventh anniversary of which we had celebrated only yesterday. Cement is required not only for industrial growth but to bring to the people the essential amenities of life, better and adequate housing, sewage, drainage, roads and other conveniences. It is, therefore essential that cement is not only made available in adequate quantity but also as cheaply as possible. Already with the high level of excise duty and transportation expenses the selling price of cement has placed this essential commodity beyond the reach of many. This is to be borne in mind in any wage fixation as any variation in wages, which form a substantial element in the production cost of cement, will reflect in the selling price of cement, which is a controlled commodity.

"It is pertinent to refer here to the increasing benefits to the workers, direct and indirect, such as provident fund, gratuity, housing and medical facilities etc., in which the cement industry is in the forefront, and which already constitute a heavy charge on the industry. The Board will also undoubtedly bear in mind the cardinal principle that wage scales for the several units of the industry should be in line with those prevailing in their respective neighbouring localities. I earnestly hope that through a careful consideration of these and other relevant matters, the Board will, in their wisdom, avoid the lacunæ and errors of the Journalists Wage Board Award. I am sure that you will join me in the hope that the recommendations of the Board will lead to a satisfactory and permanent solution of the wage and bonus questions and thus pave the way for a lasting industrial peace in the cement industry.

Dalmia Iron and Steel

"You will be happy to learn that the steel casting plant of Messrs. Dalmia Iron and Steel Limited, in which your Company has a large interest, has gone into production and their grinding media and steel castings are now available to the cement industry and to others at considerable savings of foreign exchange. Their spun cast iron pipe plant is due to be commissioned before the end of the year and will go far towards meeting the large demand for such pipes. Perhaps of even greater importance will be the news that the deadburnt magnesite plant at Salem of Dalmia Magnesite Corporation, in which your Company has a substantial interest, is also expected to go into production before the end of the year. Apart from catering to the large demand from Indian and foreign markets, this would assure your Company of regular and adequate supplies of deadburnt magnesite for the manufacture of basic refractories.

"Rapid industrial expansion has subjected to a very considerable strain the transport system throughout the country. This has been particularly so in certain areas served by the Eastern and South Eastern Railways as a result of traffic generated in connection with the large steel works which are coming up in the public sector and the expansion of certain existing plants. Situated in what may be termed one of the most important centres of industrial development in the country, your Company has had to encounter considerable difficulties in moving capital goods and raw materials to its works and in the despatch of its finished products. The railway administrations concerned and the Railway Board are fully seized of the problem and efforts are being made to augment the track capacity in that region. It is to be hoped that with the doubling of the track between Tatanagar and Rourkela, the position will ease appreciably.

Paucity of Technicians

"The gap between the rapid pace of industrial development and the training of technical personnel, on which I had commented last year, has grown wider. Skilled technicians are not available either in quality or in quantity to meet the demand of industrial India. We hope that the measures which the Government of India have introduced or will introduce will eventually meet the situation adequately.

"Last year, I remarked on the grave deterioration in the national standards of discipline and on the growing disregard for responsibility. There has been hardly any improvement and we see with dismay the spread of the trouble even to the Universities and other public institutions. I earnestly hope that urgent and effective remedial measures will be taken to contain and improve the situation before it becomes catastrophic. During the year under review, illegal strikes were resorted to by the workers which had affected our goal of round-the-clock production, so vital not only to keep down costs but, also for the fulfilment of the targets placed before the industry in the second Five-year Plan. I am glad to report, however, a distinct improvement since then in our relations with our employees, and an indication of growing goodwill and trust which may augur well for the future.

"I would like to take this opportunity of

INSTRUMENTATION

Prestige and profits go hand-in-hand with product quality. The way to keep quality standards consistently high is to put engineered instrumentation to work.

Today's methods of process measurement and control also hold production costs in line by reducing rejects and raising output.

If you're thinking of modernizing your plant facilities, consider the many proved economies of Honeywell instrumentation.

Honeywell, the largest maker of automatic controls in the world, offers the most comprehensive line in the industry, engineered and serviced in India by BLUE STAR.
Ask a Blue Star representative to advise you on Honeywell instrumentation for quality control in your plant.

Offer

The Debenture Stock now offered for subscription was created by a Resolution of the Board of Directors of the Company passed on the 29th day of May, 1958 and will be constituted and secured by a Trust Deed in favour of Kenneth John Harold Hartley and Basil Gill as Trustees for the stockholders. Interest at the rate of 6½ per cent. per annum will be payable half-yearly on the 1st January and 1st July except that the initial payment of interest will be made on 1st July, 1959 and will amount to Rupees 52 Naye Paise 72 (less Income Tax at the appropriate rate) per Rupees 1,000/- of Stock.

Objects of Issue

Considerable sums have been spent in the past two years on development plans involving the extension and modernisation of property, plant and machinery, the cost of which has been borne by existing resources. The purpose of this Issue is to provide, by means other than short-term bank borrowings, a substantial part of the finance required for the fulfilment of these development plans and also the developments planned for the immediate future.

Trust Deed

The Trust Deed will provide, *inter alia*, as follows:—

1. Security—

(a) Payment of principal and interest will be secured by a first fixed and specific charge on the Company's immovable properties and fixed plant and machinery and a floating charge on the whole of the undertakings and assets of the Company.

(b) The Company shall, however, be at liberty to hypothecate, to pledge and create mortgages or charges over its raw materials, manufactured goods and goods in process of manufacture and book debts ranking in priority to the said floating charge to secure sums borrowed from Banks or obligations incurred in the ordinary course of business of the Company and for the purpose of carrying on the same but save as aforesaid and save as mentioned below the Company may not create any hypothecation, pledge, mortgage or charge over or permit any lien to arise or affect any part of its properties ranking in priority to or *pari passu* with the floating charge and/or the fixed charge. The existing hypothecation and any hypothecation supplemental thereto in favour of the National Overseas & Grindlays Bank Ltd. will take priority over the floating charge to be created by the Trust Deed.

(c) In respect of leasehold property (if any) for which the consent of the landlord is required and in respect of land acquired for which the consent of the Government of India is required for the creation of the charge thereon but which has not been obtained when the Trust Deed is executed, the charge created by the Trust Deed will not be of immediate effect but will be postponed until such consent has been obtained.

(d) The principal amount of the Stock to be issued pursuant to the Trust Deed is limited to Rs. 1,50,00,000/- but the Company is to be at liberty from time to time to issue further Stock ranking *pari passu* in point of security with (but not in priority to) the said Rs. 1,50,00,000/- Stock carrying such rights as to interest, redemption and otherwise as the Directors of the Company may determine provided that:—

(i) the amount outstanding of the Stock and of any Stock ranking *pari passu* therewith (including such further issues) shall not exceed 50 per cent. of the value of the specifically mortgaged premises comprised in the Trust Deed as certified by the Company's Auditors.
