(ii) The average of the combined profits of the Company and its subsidiaries (if any) calculated before charging depreciation and taxes on income but after charging all expenses of working and management, including maintenance and repairs, for the three financial years for which accounts have been audited last preceding the date of any such further issue was sufficient to cover twice the amount required to pay the aggregate of one year's interest and the contribution (if any) to the sinking fund on the total sum outstanding in respect of the Stock and all Stock ranking *pari passu* therewith, including any such further issues.

2. Redemption—

(a) Such part of the Stock as has not been previously purchased or redeemed will mature for payment at par plus accrued interest on the 1st January, 1971. The Company may redeem the whole or any part of the Stock on the 1st January, 1966, or at any time thereafter at par plus accrued interest on giving three calendar months' notice to the Stockholders in that behalf.

(b) A Sinking Fund will be established, to which annual contributions will commence in 1961 with a contribution in respect of the calendar year ending 31st December, 1961. Such contributions will be payable only out of the distributable profits (as defined in the Trust Deed) of the Company's relevant financial year as certified by the Company's Auditors. Where such profits exceed Rs. 5,00,000/- it will be obligatory on the Company to contribute to the Fund a minimum of Rs. 5,00,000/- but the amount by which any contribution exceeds Rs. 5,00,000/- may be applied in reduction of the Company's obligations in any later year or years. In a financial year in which the distributable profits are less than Rs. 5,00,000/- the Company will be obliged, unless it exercises its right to apply any excess of a previous financial year, in reduction of such obligations, to carry the whole of such profits to the Sinking Fund, but it will be under no obligation to make up the amount by which such profits fall short of Rs. 5,00,000/- in any subsequent financial year or out of any excess of a previous financial year. The Fund may be utilised in the purchase of the Stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a bank until required for purposes of redemption. Stock purchased or redeemed out of the Sinking Fund is not to be re-issued. "Financial Year" will be defined in the Trust Deed as meaning a period in respect of which any Profit and Loss Account of the Company laid or to be laid before it in annual general meeting is or is to be made up.

(c) In addition to purchases out of the Sinking Fund the Company may at any time purchase any of the Stock at a price not exceeding par plus accrued interest out of current profits.

3. Trustees—Included among various provisions designed to indemnify and limit the liability of the Trustees are the following:—

(a) The Trustees shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof.

(b) The Trustees shall not be responsible for the money subscribed by applicants for the Stock or any part thereof or be bound to see to the application thereof.

(c) The Trustees shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed or in the title of the Company to the mortgaged premises or any part thereof.

(d) No Trustee shall be liable for anything whatever except a breach of trust fraudulently committed by such Trustee; provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show the degree of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

4. Additional Provisions—

(a) The rights of Stockholders may be modified or compromised by an extraordinary resolution passed at a meeting of the Stockholders in accordance with the Trust Deed, a quorum for this purpose being the holders present in person or by proxy of a majority in value of the total amount of the Stock then outstanding or, in the case of an adjourned meeting, those present and entitled to vote. On a show of hands, each Stockholder present in person will have one vote and on a poll each Stockholder present in person or by proxy (who need not himself be a Stockholder) will have one vote for each Rs. 1,000/- of Stock held by him.

(b) A register of the Stock will be kept at the registered office of the Company and may be closed for any period not exceeding forty-five days in any year.

(c) The Stockholders will be entitled to their Stock free from equities or cross claims by the Company against the original or any intermediate holder.

(d) The Stock will be transferable in amounts and multiples of Rs. 1,000/-.

History and Business

The Company was incorporated in Bengal on the 17th February, 1931 as a Private Limited Company under the name Henry Williams India (1931) Ltd., and was formed, *inter alia*, with the object of acquiring and carrying on the business of Henry Williams (India) Limited, an earlier Company incorporated in Bengal in the year 1922, which founded the Company's manufacturing Works at Calcutta. The other main objects of the Company will be found set out below in this Prospectus. The change to the Company's present name was made on the 19th December, 1934, consequent upon the purchase of a large interest by Guest, Keen & Nettlefolds, Ltd., of Birmingham, England.

On the 29th January, 1953, the Company formed a wholly owned Subsidiary, Nettlefolds of India Private Ltd., incorporated under the Indian Companies Act, 1913, for the purpose of connecting the name "Nettlefolds" with the Company's project for manufacturing wood screws and kindred fastenings in India. This Subsidiary as well as the Company has the right to use wood screw and kindred trade marks and labels, including the name "Nettlefolds," which is famous throughout the world for these products, under user agreements with the proprietors. The Company has also entered into a user agreement with George Goodman Ltd., of Birmingham, England, in respect of the latter's trade mark and labels relating to safety-pins and kindred products manufactured by the Company in India. The Company has also entered into an Agreement with Exors. of James Mills Limited of Stockport, England, whereby the Company is permitted to manufacture in India under Licence certain products including railway permanent way fittings under Trade Marks and Patents belonging to Exors. of James Mills Limited, in consideration of which the Company pays a royalty based on the selling price of the products subject to a minimum payment of £500 per annum. The said Agreement contains provisions whereby the user of the Trade Marks undertakes that the goods to be manufactured shall be up to specification and that the Owner of the Trade Marks shall have a right of access to the place where the goods are manufactured for the purpose of inspecting all stages of manufacture.

The main business of the Company is manufacturing in India but an Agency section importing and selling a wide range of mechanical and electrical products of well-known overseas manufacturers makes a useful contribution to the profits of the Company.

Land, Premises and Plant

The Company has its main office at Calcutta and offices at Bombay, Madras, New Delhi and at London, England, and manufacturing Works at Calcutta and at Bhandup near Bombay.

The Calcutta Works is situated at Shalimar, Howrah, West Bengal, on two sites owned by the Company each of which is within its own ring fence, the older site containing an area of approximately 33 acres and a site recently acquired for future development containing an area of approximately 20 acres. The two sites are joined by railway sidings and are readily accessible to Andul Road. Erected on this land is a modern, well-equipped manufacturing Works with a covered floor area totalling approximately 11,05,860 sq. ft. The Works is well served by internal railway sidings adequate to handle incoming raw materials and outgoing finished goods and ample water is available from deep tubewells and surface tanks. The Plant and Machinery is well maintained in efficient condition.

The Bhandup Works, approximately 18 miles from Bombay on the main Agra Road, is served by its own siding from the Central Railway and is now the largest producer in the country of high-class steel and brass Wood Screws. As additional lines this Works started manufacturing Safety-pins in the latter half of 1954, Cotter Pins in the first half of 1955, Hypodermic Needles in January 1956, Tinmen's Rivets in June, 1956 and Metal Thread Screws in July, 1956. The property on which the Works is situated comprises a residential area of approximately 15 acres on the West side of the Agra Road, and an industrial area of approximately 53 acres on the East side of the Agra Road, which latter accommodates the Works proper. Approximately 12 acres of the industrial area are rented on a 50 years lease to Sankey Electrical Stampings Private Ltd. The industrial area has its own electric generating station; water is taken both from the main supply and from wells on the Estate. This Works has a covered floor area of approximately 91,500 sq. ft. and all the Plant and Machinery has only recently been installed and is well maintained in efficient condition.

The Company's Head Office at Calcutta is held on lease, and a written undertaking has been received for an extension of this lease until the 30th June, 1979. The Offices at Bombay, Madras, New Delhi and at London, England, are all held under tenancy agreements on reasonable terms.

It is estimated that at the end of the current financial period, the written down value of the Fixed Assets will exceed Rs. 3,25,00,000/-.

Management and Staff

Of the Directors, the Chairman, Mr. R. Catlow, has for most of his working life been connected with Guest, Keen & Nettlefolds, Ltd., England, and has since August 1952, been a member of the Board of that Company. There are three full-time Working Directors, all of whom have been in the employment of the Company for many years either as Executives or Directors and have considerable practical experience as engineers and commercial men. There are three non-Executive Directors in India, whose experience and guidance form a valuable contribution to the efficient running of the Company.

FINANCIAL INFORMATION

Auditors' Report

The following is a copy of the Report of the Company's Auditors, Messrs. Price Waterhouse Peat & Co., Chartered Accountants.

The Directors,

MESSRS. GUEST, KEEN, WILLIAMS, LTD., 41$_8$ CHOWRINGHEE ROAD, CALCUTTA-16.

B-4, GILLANDER HOUSE,
CALCUTTA-1.
26th August, 1958.

DEAR SIRS,

We have examined the books and accounts of GUEST, KEEN, WILLIAMS, LTD., as kept in Calcutta in which are incorporated the certified returns from the Calcutta Works, Bhandup Works (which started production in 1953) and Bombay and Madras Branches for the five years ended 28th December, 1957 and the books and accounts of NETTLEFOLDS OF INDIA PRIVATE LTD., a wholly owned subsidiary company of GUEST, KEEN, WILLIAMS, LTD., as kept in Bombay for the five years ended 28th December, 1957 and report that the profits or losses of the Companies are as set forth below. These profits or losses have been arrived at after charging all expenses of working, management and consultant's fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

No dividend has been declared by Nettlefolds of India Private Ltd. since the date of its incorporation on 29th January, 1953.

Yours faithfully,
PRICE WATERHOUSE PEAT & CO.

Profits and Prospects

The report by the Auditors of the Company shows that the average profits for the four financial periods 1954/57 after charging depreciation, maintenance and repairs but before charging bank interest or taxes on income was Rs. 1,00,00,000/-, approximately equivalent to more than 10 times the annual interest charge of Rs. 9,75,000/-.

STATUTORY AND GENERAL INFORMATION

Underwriting

The Debenture Stock now intended to be issued is underwritten in full for a commission of 2 per cent. on the issue price making a total commission of Rs. 3,00,000/-, by the Life Insurance Corporation of India, Messrs. Place Siddons & Gough, Messrs. Lewis & Jones and Messrs. Batliwala & Karani pursuant to Contracts Nos. 20(*a*) to 20(*d*) hereinafter mentioned under the heading "Contracts." In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their obligations.

Licences

A scheme for the expansion of the Company's Rolling Mills has been approved by the Government of India under the Industries (Development and Regulation) Act 1951 and the Registration and Licensing of Industrial Undertakings Rules 1952, as follows:—

"A Licence (No. L/4/75/55 / L/1A(7)/47 dated 3rd December, 1955 for the manufacture of Bars and Rods) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking; a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

It is also proposed to effect a substantial expansion to our existing industrial undertaking for the manufacture of Tungsten Carbide Rock Drill Inserts and Coal Cutter Picks. This development has received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules 1952, as follows:—

"A Licence (No. L/12(2)/N-1/57 dated 6th March, 1957, for the manufacture of Tungsten Carbide Rock Drill Inserts and Coal Cutter Picks) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking; a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this License the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

At the Company's Bhandup Works a considerable expansion in the productive capacity or Wood Screws and Metal Thread Screws has been completed, and the resultant increase in production is already being experienced; at the same time this Works is now manufacturing Cotter Pins, Screw Eyes and Hypodermic Needles as new lines. The proposal for a substantial expansion to the capacity for Tinmen's Rivets has received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules 1952, as follows:—

"A Licence (No. L/1-A(7)/N-27/57 dated 30th December, 1957, for the manufacture of Tinmen's Rivets) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking; a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

Option to Subscribe

Save as provided by the Underwriting Agreements hereinafter referred to, the Company has not entered into any Contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in or debentures of the Company.

Purchase of Property

Save as respects property purchased or acquired or to be purchased or acquired under Con-

tracts being Items Nos. 7 to 19 both inclusive referred to below under the heading "Contracts", wherein are given the particulars required by Clause 12 of Part I of Schedule II to the Companies Act, 1956, any property which the Company has purchased or acquired or proposes to purchase or acquire which is to be paid for out of the proceeds of the present issue or the purchase or acquisition of which has not been completed at the date of the issue of this Prospectus, is property:

(a) the contract for the purchase or acquisition whereof has been entered into in the ordinary course of business of the Company, the contract not being made in contemplation of this issue or this issue in consequence of the contract; or

(b) as respects which the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under Contracts Nos. 7 to 19 both inclusive aforesaid has vested or will vest absolutely in the Company and there have been no other transactions relating to such property within the two years preceding the date of this Prospectus.

Contracts

The following Contracts, not being Contracts in the ordinary course of business, which are or may be material, have been entered into by the Company during the two years preceding the date hereof:—

1. Dated the 20th September, 1956, between the Company and Sankey Electrical Stampings Private Ltd., whereby the former Company leased to the latter certain pieces or parcels of land situated at Bhandup, near Bombay, together with several structures, buildings and erections standing thereon and other rights and privileges appertaining thereto for a period of 50 years commencing from 1st January, 1956 at a monthly rental of Rs. 1,641/-.

2. Dated the 28th September, 1956 between the Company and Jardine Henderson Limited, appointing the latter Registrars and Share Transfer Agents to the Company for a period of five years at Rs. 30,000-/ per annum.

3. Dated the 27th September, 1957 between the Company and Crompton Parkinson Ltd., England, whereby the latter granted to the former the exclusive licence to make, use and sell within India, Electric Arc Stud Welding products, embodying the inventions disclosed by the Licensed Patents, subject to the terms and conditions of the Agreement.

4. Dated the 1st January, 1956 between the Company and Henry Morton Leech Williams appointing the latter Managing Director of the Company for a period of five years at a salary of Rs. 6,000/- per month and such other benefits, privileges and amenities granted to Senior Staff by the Board of Directors. In addition, Mr. H. M. L. Williams is paid a commission of 1 per cent. of the Net Profits of the Company.

5. Various orders numbered 5/1 to 5/6 dated between 29th March, 1957 and 9th April, 1958 on various suppliers for the supply of plant and machinery. The cost of these orders is estimated to be £66,953 (Rs. 8,92,707/-).

6. Various orders numbered 6/1 to 6/4 dated between 26th April, 1957 and 12th June, 1958 on various suppliers for the supply of plant, machinery and equipment, the cost of which is estimated to be Rs. 13,79,302/-.

7. On the 18th March, 1957 an order on Taylor Woodrow (Building Exports) Ltd., London, England, for the supply of Structural Steel Work for buildings. The cost of this order and the supplemental one dated 24th June, 1958 is estimated to be £129,699 (Rs. 17,29,320/-).

8. Various orders numbered 8/1 to 8/5 dated between 9th July, 1956 and 14th September, 1957 on Brightside Foundry & Engineering Co. Ltd., Sheffield, England, for the supply of Rolling Mill equipment, the cost of which is estimated to be £986,659 (Rs. 1,31,55,453/-).

9. Orders numbered 9/1 and 9/2 dated 12th November, 1956 and 13th December, 1957 on Stein & Atkinson Ltd., London, England, for the supply of furnaces and their ancillary equipment, the cost of which is estimated to be £89,463 (Rs. 11,92,840/-).

10. On the 25th February, 1958 an order on Ceretti e Tanfani, S.p.A., Milan, Italy, for the supply of Cranes, the cost of which is estimated to be £59,990 (Rs. 7,99,867/-).

11. On the 19th November, 1957 an order on Jessop & Co., Ltd. Calcutta, for the supply of Cranes, the cost of which is estimated to be Rs. 2,51,400/-.

12. On the 1st November, 1957 an order on Guest Keen & Nettlefolds (Midlands) Ltd., Birmingham, England, for the supply of plant and machinery, the cost of which is estimated to be £32,864 (Rs. 4,38,187/-).

13. On the 11th March, 1958 an order on Ateliers de Constructions Electriques de Charleroi, London, England, for the supply of equipment for Induction Heating, the cost of which is estimated to be 5,130,000 Belgian francs (Rs. 4,95,652/-).

14. Various orders numbered 14/1 to 14/3 dated between 5th April, 1957 and 21st February, 1958 on A. & J. Main & Co., Ltd., Calcutta, for the supply and erection of buildings. The cost of these orders is estimated to be Rs. 6,56,435/-.

15. Various orders numbered 15/1 to 15/3 dated between 15th May, 1957 and 8th January, 1958 on Associated Engineers Private Ltd., Calcutta, for civil engineering works and buildings. The cost of these orders is estimated to be Rs. 21,87,321/-.

16. On the 7th January, 1958 an order on Simplex Concrete Piles (India) Private Ltd., Calcutta, for concrete piling, the cost of which is estimated to be Rs. 4,29,800/-.

17. Various orders numbered 17/1 to 17/3 dated between 24th May, 1958 and 20th June, 1958 on Indian Cable Co., Ltd., Calcutta, for the supply of cables. The cost of these orders is estimated to be Rs. 6,81,384/-.

18. Contracts entered into by the Company for the purchase of land, buildings and building materials within the Howrah Municipality as follows:—

	Date of Contract.	*Name, address and occupation of Vendors.*	*Subject Matter.*	*Price Rs.*
(a)	7th November, 1956.	Krishna Chandra Mondal, Swarnamayi Road, Landholder	Land	26,243
(b)	9th November, 1956.	Do. do.	Building Materials	1,384
(c)	30th January, 1957.	Panchkari Samanta, Daspara Lane, Landholder	Land and Buildings	12,171
(d)	8th October, 1956.	Panchkari Samanta and another, Daspara Lane, Landholders	Land	29,334
(e)	30th January, 1957.	Do. do.	Land and Buildings	16,322
(f)	31st October, 1956.	Kristo Bera and Gosto Bera, Daspara Lane, Landholders	Land	20,083
(g)	4th February, 1957.	Panchkari Samanta and another, Daspara Lane, Landholders	Land	3,336
(h)	4th February, 1957.	Kristo Chandra Bera and Gosto Behari Bera, Daspara Lane, Landholders	Land and Buildings	11,855
(i)	4th February, 1957.	Sm. Giribala Dasi, Daspara Lane, Landholder	Land	875
(j)	4th January, 1957.	Panchanan Dalui, Daspara Lane, Landholder	Land and Buildings	10,278
(k)	23rd November, 1956.	Panchanan Dalui and Sm. Basanbala Dasi, Daspara Lane, Landholders	Land and Buildings	8,310
(l)	26th March, 1957.	Bholanath Samanta, Sm. Harimati Dasi and Guiram Samanta, Puddopukur, Landholders	Land	11,390
(m)	13th November, 1956.	Becharam Samanta, Daspara Lane, Landholder	Land and Buildings	37,222
(n)	24th October, 1956.	Prasad Das and Gokul Das, Shibpore, Landholders	Land	1,676
(o)	5th October, 1956.	Mahendra Nath Dera, Narendra Nath Dera, Becharam Samanta and Sm. Durgabati Dasi, Daspara Lane, Landholders.	Land	14,648
(p)	24th September, 1957.	Satish Chandra Samanta, Sasti Charan Samanta and Panchu Samanta, Daspara Lane, Landholders	Land	10,008
(q)	24th September, 1957.	Satish Chandra Samanta, Sasti Charan Samanta, Panchu Samanta and Sm. Surabala Dasi, Daspara Lane, Landholders	Land	33,694
(r)	24th September, 1957.	Do. do.	Land	At 485 per Cottah.

Note:—With the exception of item No. 18(r), all the lands and buildings contracted to be sold as above have since the above mentioned dates of contracts been conveyed to the Company.

19. Agreement dated 25th July, 1958 between the Company and Mangatram Nandram, Bombay, to purchase at a cost of Rs. 9/- per square yard, a plot of Land situate at Kanjur, on the Bombay-Agra Road at Bhandup and measuring about 19,639 square yards.

20. Underwriting Agreements—

(a) Dated 22nd August, 1958 between the Company and the Life Insurance Corporation of India under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Forty Lakhs thereof.

(b) Dated 22nd August, 1958 between the Company and Messrs. Place, Siddons & Gough under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Seventy Lakhs thereof.

(c) Dated 22nd August, 1958 between the Company and Messrs. Lewis & Jones under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Twenty Lakhs thereof.

(d) Dated 22nd August, 1958 between the Company and Messrs. Batlivala & Karani under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Twenty Lakhs thereof.

Redeemable Preference Shares

The Company has not issued and it does not at present intend to issue any Redeemable Preference Shares.

Previous Issues

In November, 1956 there were offered for public subscription 5,89,400 Ordinary Shares at a premium of Rs. 10/- per share payable in full on application. This issue was fully subscribed and the shares were allotted on 21st November, 1956 against payment in full totalling Rs. 1,17,84,000/-. Save as aforesaid, no Shares or Debentures have been issued or agreed to be issued within the two years preceding the date hereof either for cash or as fully or partly paid-up otherwise than in cash.

Commission

Save for brokerage amounting to Rs. 1,41,165/- on the issue referred to in the previous paragraph and save for underwriting commission and brokerage payable in respect of the present issue of Debenture Stock, no sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any Shares in or Debentures of the Company or as discount in respect of Shares issued.

Expenses of the Issue

The expenses of this issue including underwriting commission, brokerage, legal charges, stamp duty and registration fees are estimated to amount to Rs. 7,00,000/- and are payable by the Company.

Payment to Promoter

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

Capitalisation of Profits

On 29th August, 1947 the Company issued 11,75,500 fully paid Bonus Shares of Rs. 10/- each by capitalising the sum of Rs. 1,17,55,000/- standing to the credit of Capital Reserve Account.

Directors

The Articles of Association of the Company provide that:—

The number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting) more than nine. The Consultant (see reference below) has the right to appoint up to one-third of the total number of Directors and to nominate the Chairman. A Director does not require any share qualification. Each of the Directors of the Company shall (unless otherwise determined by the Company in General Meeting) be paid out of the funds of the Company as remuneration for his services as a Director the sum of Rs. 200/- in respect of each Meeting of the Directors which he attends. If any Director being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from his usual place of business or residence for any of the purposes of the Company or in giving special attention to the business of the Company as a member of a Committee of Directors, the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his share in the remuneration from time to time provided for the Directors. The Articles provide that the business of the Company shall be managed by the Directors who may exercise all such powers of the Company as are by law or by the Articles required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations which may be made by the Company in General Meeting not being inconsistent with the Articles or the provisions of any law.

Interest of Directors

Mr. R. Catlow is interested to the extent that he is a Director of Messrs. Guest, Keen & Nettlefolds, Ltd., England, the Principal Shareholders and Technical Consultant and as a Director of Exors. of James Mills Limited, England, a subsidiary of Guest, Keen & Nettlefolds, Limited.

Mr. H. M. L. Williams is the Managing Director of the Company and receives remuneration for his services as such.

Mr. J. F. Heatly and Mr. W. Morrice are salaried employees of the Company and in addition participate in commission based on the net profits of the Company.

Other than Mr. R. Catlow, all Directors are interested as shareholders.

Mr. R. Catlow, Mr. H. M. L. Williams and Mr. J. F. Heatly are shareholders (each holding less than one-tenth of 1 per cent. of the issued capital) of Guest, Keen & Nettlefolds, Ltd., the Principal Shareholders of this Company. Mr. H. M. L. Williams and Mr. J. F. Heatly are also Directors of Nettlefolds of India Private Ltd., the wholly owned Subsidiary referred to above. Save as above no Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

Indemnity

The Articles provide that every Director, Manager or Officer of the Company, or any person (whether an officer of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application in which relief is granted to him by the Court.

Management

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Consultant

Guest, Keen & Nettlefolds Ltd., a Company incorporated in England, was appointed the Technical Consultant of the Company by virtue of an agreement dated the 17th September, 1948, effective from the 1st January, 1948, and terminating on the 31st December, 1967. In accordance with the terms of the said Agreement, *inter alia*, the Consultant undertook to furnish the Company with technical assistance in regard to manufacture and details of plant processes and methods for the production of engineering products (other than wood screws and their kindred products which are the subject of separate user Agreements with the Company and with the Company's wholly owned subsidiary). Furthermore, the Consultant undertook to lend to the Company technical instructors and advisors and to advise the Company of any patent invention development process or manufacturing improvement and the results of any research carried out by the Consultant relevant to the manufactures of the Company from time to time. In addition the Consultant agreed to afford overseas technical training for the Company's employees. The overseas training has extended from training Indian Officers at the highest level at an Administrative Staff College in England to courses for Works Junior Supervisory Staff on specialised machines at the various works of Guest, Keen & Nettlefolds, Ltd., in the United Kingdom. All these facilities will still be fully available to the Company and the Company relies on them for its continued technical development. For the services to be rendered pursuant to the said Agreement which have undoubtedly been of great benefit in the past and which the Directors consider essential for the future prosperity and expeditious development of the Company, the Consultant receives a remuneration of twelve and a half per cent. of the profits of the Company with an assured minimum of £30,000 per annum and a fixed royalty of £2,000 per annum. The Consultant in accordance with its rights under the Agreement is entitled to appoint and has appointed two Directors. By an Agreement dated the 30th May, 1950 between the same parties as are parties to the said Agreement dated the 17th September, 1948, the Company has agreed to accept performance of the obligations contained in the last mentioned agreement by G. K. N. Group Services Ltd., a wholly owned subsidiary of Guest, Keen & Nettlefolds, Ltd.

Borrowing Powers

The Articles provide that the Directors may from time to time raise or borrow any sum or sums of money for the purposes of the Company and may secure the repayment of any sum or sums of money so borrowed in such manner and upon such terms and conditions in all respects as they think fit. The Directors' borrowing powers are now limited by Section 293(1)(d) of the Companies Act, 1956.

Voting Rights

The Articles provide that, subject to any special rights or restrictions affecting any particular class of shares, on a show of hands every member present in person or by proxy shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him. There are no special rights or restrictions attaching to the present Ordinary Share Capital of the Company.

Restriction on the Right to Transfer Shares and Vote

The Articles provide that the Directors may decline to register any transfer of shares upon which the Company has a lien, and in the case of shares not fully paid up may refuse to register a transfer to a transferee of whom they do not approve. No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

Auditors' Consent

Messrs. Price Waterhouse Peat & Co. have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, set out above, in the form and context in which it is included.

Main Objects

The Main Objects of the Company, as set out in sub-clauses (a), (b) and (c) of Clause 3 of its Memorandum of Association, are as follows:—

(a) To acquire and take over as a going concern the undertaking and certain assets of Henry Williams (India) Limited, and with a view thereto to enter into and carry into effect, with or without modifications or alterations as may be agreed upon, whether before or after the execution thereof, an agreement already prepared and expressed to be made between Henry Williams (India) Limited, and the Liquidators thereof of the one part, and the Company of the other part, a draft whereof has been subscribed with a view to identification by A. H. Bishop, a Director of the Company.

(b) To carry on the business of iron-founders, mechanical and railway engineers, and manufacturers of railway appliances, agricultural implements and other machinery, toolmakers, brass-founders, metal-workers, boiler-makers, mill-wrights, colliery owners, ship owners and ship-builders, machinists, iron and steel converters, smiths, wood-workers, builders, painters, metallurgists, electrical engineers, water supply engineers, gas-makers, farmers, printers, carriers and merchants, and to buy, sell, manufacture, repair, convert, alter, let on hire, and deal in machinery, implements, rolling-stock, and hardware of all kinds, and to carry on any other business (manufacturing or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above, or otherwise calculated, directly or indirectly, to enhance the value of any of the Company's property and rights for the time being.

(c) To carry on any business relating to the winning and working of coal and other minerals, the production and working of metals, and the production, manufacture, and preparation of any other material which may be usefully or conveniently combined with the engineering or manufacturing business of the Company, or any contracts undertaken by the Company, and either for the purpose only of such contracts or as an independent business.

Inspection of Documents

Copies of the Memorandum and Articles of Association of the Company, the draft (subject to modification) of the Trust Deed to be entered into for the purpose of constituting the Stock, the Consent Order of the Controller of Capital Issues, the Licences issued by the Central Government referred to above, the Contracts or memoranda thereof referred to above as being material contracts and/or copies thereof, the above-mentioned Auditors' Report and copies of the Balance Sheets and Profit and Loss Accounts upon which the Report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the Subscription List closes whichever is earlier.

Application and Allotment

Applications for the Stock which must be for a minimum of Rs. 1,000/- or multiples thereof must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of the National Overseas & Grindlays Bank Ltd., in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges must be drawn either upon a branch of the National Overseas & Grindlays Bank Ltd., in India, to which the application form and cheque or draft are being sent, or upon a bank situated in a town in which there is a branch of the National Overseas & Grindlays Bank Ltd. If drawn upon a bank elsewhere the appropriate bank charges must be included in the remittance, otherwise the application will be refused.

Cheques or Drafts should be made payable to the "National Overseas & Grindlays Bank Ltd., Account Guest, Keen, Williams, Ltd. Debenture Issue," and should, for the applicants' protection, be crossed "A/c. Payee only." A separate cheque or draft must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full the whole or any balance of the application money received will be refunded to the applicant, through the post at his risk, in which event Bank's commission, if any, will be payable by the applicant.

Stock Certificates are expected to be available for issue in exchange for Letters of Allotment on and after 15th October, 1958.

Brokerage

Brokerage at the rate of one half of one per cent. will be paid by the Company on allotments made in respect of applications bearing the stamp of a certified member of a recognised Stock Exchange.

Copies of this Prospectus and forms of applications may be obtained from the Brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

DIRECTORS:

R. CATLOW (By his authorised Agent) H. M. L. WILLIAMS.
J. F. HEATLY (By his authorised Agent) R. B. RITCHIE.

Dated at Calcutta, 26th August, 1958.

POLAR VOYAGE BY "NAUTILUS"

INTERESTING COMMERCIAL POSSIBILITIES IN SIGHT

THE successful voyage of the U.S. atomic submarine, the *Nautilus*, under the Arctic ice-cap (followed later by another submarine, the *Skate*), which hit the headlines of the world Press this month, has opened up new vistas of progress in transport. Decribed as an achievement worthy of ranking along with the voyage of the first steamships in the sphere of sea transport, the voyage of the *Nautilus* continues to engage the attention of experts who are now examining the commercial possibilities of undersea transport of goods and men. A new dimension to transport has thus been added. To the list of land, sea and air, which man has mastered, the depths of unfathomed oceans may now be added. By any reckoning, this will go down in history as an important milestone in the history of transport.

What makes the voyage of the *Nautilus* so significant an achievement? It cannot lie in the fact that a nuclear-powered ship has completed a voyage, for atomic ships have been built. Nor is a voyage under the sea a new development, considering that conventional submarines have done it before. The distinguishing features of the voyage of the *Nautilus* are that it represents the first instance in which a ship has been under water for nearly 100 hours—a conventional submarine has frequently to come to the surface for charging its batteries—and it is also the first instance in which the Arctic Ocean, a mass of ice, has been crossed from below. The *Nautilus* did not conquer ice. But it stooped to conquer it. The Arctic Ocean, it may be mentioned here, covers 5.4 million sq. miles at the top of the earth, its waters washing the shores of Russia, Alaska, Canada, Greenland and Scandinavia. Its centre is covered by the polar ice pack, two million sq. miles in area. The ice is up to 50 feet thick. The depth of water beneath the ice at the Pole is 13,410 feet.

Voyage

The *Nautilus* left Honolulu on 23rd July and entered the Arctic through the Bering Strait. Its crew of 116, it is stated, last saw the sky off Point Barrow, Alaska. It plunged under the ice pack at 8.37 a.m. on 1st August. At 11-15 p.m. on 3rd August, the *Nautilus* passed under the North Pole. At 9-54 a.m. on 5th August, the *Nautilus* came to the other side of the ice pack. It had travelled 1,830 miles in 96 hours. It arrived in England on 12th August. The U.S. Navy did not give its exact speed or depth. But it is known to be capable of more than 20 knots and to be able to dive more than 400 feet. Just two days after the *Nautilus* had completed its voyage, the *Skate*, with its crew of 106 men, navigated the same ice-clogged waters in the opposite direction. The *Skate's* duplication of the *Nautilus's* feat serves only to confirm the possibility of undersea voyage in the Arctic region.

To a navigator, with the call of the sea in his blood, a voyage under the sea must be an interesting experience. He does not face the perils which the twin elements, air and water, may often have in store for him when he sails on the sea's surface. Deep down, the waters of the ocean are believed to be calm. So far as the voyage of the *Nautilus* is concerned, it had to be undertaken without that well-known instrument, the mariner's compass—for no magnet is of any use at the North Pole—and also without star, radio or radar. The *Nautilus's* trip, it is stated, was made possible by two major advances in submarine technology. In the first place, marine engineers have developed machines which produce air for the crew so that a submarine of the *Nautilus* type can remain submerged in the ocean for a much longer period than a conventional submarine. Secondly, a complex system of reckoning directions, known as the Inertial Navigation System, makes it possible to determine the position of the ship without the aid of stars or compasses or other conventional equipment.

The main value of the *Nautilus's* trip is strategic. The trip showed that a missile-armed submarine could use the ice pack as a sanctuary in which detection and attack would be almost impossible. The Russians do not possess a nuclear submarine now, though they are known to have the capacity to build one. The U.S. programme envisages the construction of nine nuclear submarines to be armed with the 1,500-mile missile, Polaris, now in process of development. The U.K. is currently building a land-based atomic-powered submarine prototype, while France has also stated that it has undertaken the development and construction of an atomic submarine. The U.K. is buying from the U.S. an atomic submarine engine of the *Nautilus* type. The construction costs alone of the *Nautilus* amounted to $57 million or about £20 million, quite apart from expenditure on development. The costs of developing a U.K. atomic submarine are also estimated at £20 million.

Commercial Success

The more important question is the commercial possibilities of the naval feat performed by the *Nautilus*. In this connection. it is noteworthy that President Eisenhower emphasised the "possible use of this route by nuclear-powered cargo submarines as a new commercial seaway between the major oceans of the world." Honolulu to London by surface ship through the Panama Canal is 9,500 miles; by the Polar route it is 6,700 miles. Again, the distance between Tokyo and London is 11,200 miles by Panama and only 6,300 miles by the Pole. As against this saving in distance must be put down the higher costs of constructing and operating a nuclear ship. Discussing the possibility of commercial application of the *Nautilus* feat, the Shipping Correspondent of the London *Times* points out that a large oil tanker would be the most feasible project to start with, because the "cargo is easily loaded and discharged and because it nearly fills the vessel with a fluid of something like the same weight as water, it nearly meets the requirements of buoyancy and pressure." Although a tanker with oil could satisfy the conditions of buoyancy, necessary for a submerged vessel, it would have cargo only one way. On its return voyage, it would have an empty space which must be pressurised to balance the pressure of the sea or made to withstand that pressure. Proceeding, the correspondent observes:

> "The other great technical problem lies in giving power to the ship, or, rather, in transmitting the power. It has already been demonstrated by tank tests and calculations in Britain that the undersea vessel compares favourably with the surface vessel only above a certain speed. At the present normal service speed of around 16 knots, a 70,000-ton surface ship would actually require less power than a submarine at the same speed. Double this speed, however, and the submarine wins hands down. But, even for the submarine, very great power is immediately called for—300,000 horse-power, perhaps, at 40 knots. The liner s.s. *United States*, which is probably the most powerful merchant ship afloat, is thought to have a horse-power of about 250,000 acting through four propellers. This is over 60,000 horse-power on each propeller, which is considered to be about the maximum possible. The big submarine would, therefore, bring up formidable problems of power transmission, quite apart from the space engines of this size and their auxiliaries would occupy. She would need special terminals, probably built some distance offshore to give the required depth of water. She would, of course, need a crew—and shipowners have their doubts about the ease of recruiting. As if the technician had not already said enough to sink the ship before she is built, his commercial counterpart now steps in to point out that the cost of it would be quite prohibitive. He wants a 65,000-ton tanker. He can have a conventionally powered surface ship for £4,500,000; a nuclear-powered surface ship for £8 million; a nuclear-powered submarine for—at a guess—£11 million. Oil companies, he might remark, are not entirely philanthropic. Moreover, he would be buying a pig in a poke, because no one seems to know just how much nuclear fuel will cost, nor what the operational costs as a whole will be."

Although the possibilities of utilising an atomic submarine for commercial purposes now appear uncertain and remote, it must be recognised that the two advantages of distance and speed—the Polar route is only half the customary route connecting certain important centres and an atomic submarine can travel twice as fast as a conventional ship—may induce men to solve the cost and other problems involved in making a commercial success of an atomic submarine. Further, it must be remembered that nuclear power itself was regarded as an impracticable commercial proposition a few years ago. And yet, it has now come to stay. It is not, therefore, inconceivable that technical progress may soon show ways of tiding over the difficulties which stand in the way of commercial exploitation of the pioneering voyage of the *Nautilus*.

HEAVY ELECTRICAL PROJECT

PHASED PROGRAMME FINALISED

DEFERRED payments arrangements to cover the foreign exchange expenditure of the Heavy Electrical project, Bhopal, have been arranged as a result of the agreement, concluded last week, between the Government of India, the Government-sponsored Heavy Electricals (Private) Ltd. and its technical collaborators, the Associated Electrical Industries (A.E.I.). The first phase of the project will involve a foreign exchange expenditure of Rs. 5 crores (as against Rs. 9 crores envisaged formerly) for purposes of purchase of machine tools and other equipment. While the purchases will be made by the A.E.I., who will act as purchasing agents for the project in the U.K. and, to a limited extent, in European countries, which are members of the European Payments Union, credit arrangements with a syndicate of British banks have also been arranged. As a result of the arrangement, the net foreign exchange expenditure will be only Rs. 1.22 crore before 1960; the balance will be paid thereafter in instalments.

The total cost of the first phase of the project which is programmed to be completed by 1960 is Rs. 21 crores. The execution of the first phase will enable the Heavy Electricals factory to undertake the production of transformers, switch-gears, control-gears and capacitors. Under the revised programme of this phase, the production of these items will commence earlier than originally anticipated. Thus, whereas under the original programme, the production of switch-gear and control-gear was to begin in 1961, it will now commence by 1960. Similarly, the production of capacitors will commence in 1960, as against 1963 under the original programme. Full production of transformers, control-gear and capacitors will be reached in 1964 and that of switch-gear in 1965. Work on the second and third phases of the project it is stated, will be taken in hand as soon as circumstances permit. Under the second phase, the manufacture of traction motors, industrial motors and heavy rotating plant will be undertaken. The production of turbines and rectifiers will be taken up under the third phase.

For executing the first phase of the project, the authorities have placed a contract with a Calcutta firm for the construction of three factory blocks at a cost of Rs. 1.25 crore. The first orders for machinery and equipment will also be placed shortly. Considerable work has been carried out at the factory site at Bhopal. The construction of the training school and workshop is expected to be completed in the next few months. The programme of training will begin in January 1959 when the first batch of 900 trainees will be admitted to the school. Already 50 trainees who will occupy higher directional posts in the factory, are undergoing training in A.E.I.'s factories in the U.K. Work has already begun on the railway siding for the project. Machinery worth Rs. 98 lakhs for the training school and workshop is expected to be delivered this year.

UNDER-WATER CARGO SHIP

Mr. Clarence Morse, the U.S. Maritime Administrator, reported that the U.S. is studying preliminary details of a high speed propellerless nuclear-powered under-water cargo ship. Mr. Morse said that Aerojet General Corporation has been conducting analytical and hydrodynamic studies for the project at its California laboratory. The research, the administrator explained, was directed toward the improvement of sea vehicles to employ more suitably the potentialities of nuclear energy. The hull of such a ship, it was explained, would "fly" when under water. It would travel just under the surface of the sea with only a thin strut or fin visible. On the surface, supported by the fin, would be a gondola containing living quarters, navigating bridge and running lights. Pumps that would be used to provide water-jet propulsion would be driven by nuclear power. The wave-riding gondola would permit conventional navigation and an air breathing power plant. Engineers and scientists would test hull models to determine the best shape of the submerged hull and strut. Later they would, Mr. Morse said, investigate the proper shape of the gondola, and the design of the power plant, cargo spaces and cargo handling equipment.

A chain of 16 robot observers which flash reports on the weather from mountain tops and isolated shore points in various parts of America has been installed by the U.S. Weather Bureau. Others are to be installed in large weather stations, such as the one at the National Airport here. The automatic observers, consisting of standard weather instruments and teletypewriter equipment, relay to receiving points information on wind direction and speed, visibility, temperature, precipitation, air moisture content, pressure readings that airplane pilots use to set altimeters, etc.

NEW PRODUCTS AND PROCESSES

New Plastic Material

MORE than 2,000 articles are now said to be produced out of different kinds of plastics in the Soviet Union. Among the wide variety of plastics polyamides occupy a prominent place. In everyday life, they are known chiefly in the form of kapron, nylon and other kinds of synthetic fibre used in the manufacture of hosiery, cloth, knitted fabrics and artificial fur. However, polyamides are not only fibre, but also plastics out of which gears, bolts, nuts and other parts of machines are made. Different kinds of glue have been prepared from polyamide resins for use in leather, wood, steel and aluminium industries. The strength of a glued seam is so dependable that it can replace welding in metallurgy. Plastics obtained from artificial resins with an interlayer of glass fibre possess great durability. There is unquestionably a big future for glass-plastics from polyether resins which are able to change from liquid into solid at room temperature and then will not return to that state. These plastics rank with steel in durability, and they can easily be moulded into diverse articles, hardly requiring any mechanical processing. In this way building walls, drilling installation pipes, ship hulls or aircraft bodies can be made. Very soon collieries will have trolleys and props made of plastics and coal transporters with parts made of plastics. They are absolutely rust-proof, do not absorb moisture and desist the destructive action of acids, alkalis and many other chemical substances. Besides, these items of plastics are considerably cheaper than those made from metal. Experiments on using radioactive isotopes to improve the quality of many kinds of plastics are at present being conducted in the Soviet Union.

New Process for Producing Vitamin 'C'

The National Chemical Laboratory, Poona, has worked out a new process to produce vitamin 'C' (ascorbic acid) in India. Pilot plant work was carried on a 10-pound scale and the results obtained in laboratory experiments were found to be reproducible on a larger scale; and the final product was found to conform to the specifications of the India, British and the U.S. pharmacopœia. Besides experiments for the production of vitamin 'C', a number of schemes for the manufacture of vitamins are at various stages of progress in India. Two of the schemes are for the manufacture of synthetic vitamin 'A' from lemongrass oil, which is largely available in the country.

New Plastic Material for Packaging

A foamed-in-place polyurethane plastic cushioning material which will not adhere to the surfaces of packaging containers, moulds, or packaged items has been developed by the U.S. Air Force and is described in a research report just released for use of industry. Although polyurethane cushioning materials, with excellent energy-absorbing properties, have been put to effective use in packaging, and the development of machines to foam-in-place the materials have allowed cost reductions and increased flexibility of operations, an important problem has been adhesion to surfaces of many materials and the difficulty of later removal. In the Air Force research, according to the report, a satisfactory chemical process was developed for the production of a non-adhering foamed-in-place polyurethane foam. Additionally, in a study of organic acids as release agents, fatty acids such as stearic acid were found to impart excellent release properties to foam after foaming on bare metal and glass surfaces. The release agents also improved stress-strain properties and, when used in varying amounts, permitted variations in density of foam and, as a consequence, in cushioning properties.

New Rubber Paints

A new series of chlorinated rubber paints has been developed in the U.K. They are said to be as easy to apply as oil paints, while at the same time retaining excellent resistance to chemicals and water. This is important because chlorinated rubber paints have sometimes been criticised in the past as being difficult to apply through their tendency to pick up previous coats and follow-on coats. Research into the drying time of chlorinated rubber paints has also, it is claimed, led to the production of a paint of this type which has a drying time fast enough to give the most economical application, but slow enough to provide a wet edge for joining up where work has been temporarily left off for, say, a lunch interval. Special chlorinated rubber paints for application to wet surfaces and with fungus-resisting properties have also been developed.

Protective Paint

Zinc-silicate is the basic constituent of a new protective paint that has been developed by U.K. scientists. It contains no conventional organic ingredients such as resins or pigments. It is claimed that this paint protects metals for periods running into a number of years against atmospheric corrosion and corrosion caused by sea water, fresh water, electrolytic and galvanic action and attack by carbon chemicals. The paint is said to be able to resist temperatures up to 1,060 degrees Fahrenheit. It is said to be easy to apply by brush, or by spraying, and only two coats are said to be required. The paint is also being made available in a form which can be used as a stove primer and a form which can be used as an anti-fouling coating for marine applications.

INCENTIVES AND LABOUR PRODUCTIVITY

ROLE OF NON-MATERIAL FACTORS

IN the search for new methods of promoting higher production and greater productivity, a question which naturally suggests itself is how best material and non-material incentives could be judiciously combined to induce a worker to give of his best to the enterprise in which he works. Although few will deny the importance of non-material or psychological incentives in principle, it tends to be ignored in practice. Material incentives thus assume an undue importance. The worker's desire for money comes to be accepted as the sole relationship between himself and his job. Researches into the work attitudes of industrial workers and the response of labour to incentive schemes indicate that, whatever the value of material incentives, they by themselves cannot inspire the worker to give his best. Underlining this point, Mr. Madanmohan Mangaldas, President of the Ahmedabad Millowners' Association, in the course of a talk over the A.I.R., Ahmedabad/Baroda, pointed out that there was, in this country, only an inadequate appreciation of the basic factors that motivate a worker. Analysing whether wage incentives and "new-fangled" welfare schemes alone will make for a contended labour force, Mr. Mangaldas said that what was required in India at present was a fuller grasp among industrial managers, trade union leaders, etc., of the significance of work in a worker's life and a thorough reorientation of their attitudes.

Mr. Mangaldas emphasised the importance of personal and social satisfaction a worker derives from his work. A worker works because it satisfies a number of his desires, economic, social and personal. It satisfies his desire to earn a living, and provides him a social function and status. Work affords him an opportunity for the manifestation of his creative urges and imparts to him a sense of belonging, of being part and parcel of the society he is living in. Most of the industrial managers, trade union leaders and even the workers themselves, according to Mr. Mangaldas, have not grasped the full significance of work. And hence the undue emphasis on material incentives. In Western countries, economic incentives are losing their significance as a factor in productivity. There is a tendency to attribute this to the fact that, in these countries, the incomes of workers are adequate to maintain a reasonable standard of living. But this fact alone cannot explain it. If so, the same tendency should be found at least in a lesser degree among industrial workers in India also. For the income of an industrial worker in India is very much higher than that of an agricultural worker. The average wage received by a textile worker, for instance, is amongst the highest paid to any worker in India. Mr. Mangaldas is, therefore, inclined to think that economic incentives to labour would not necessarily lead to higher productivity.

Payment by Results

The adoption of the system of payment by results, according to him, will, in many cases, prove an effective incentive for higher productivity. An analysis of the experience of firms by their modes of payment has shown that, over the last 20 years, the workers' productivity was higher by about 15 per cent. in those units that paid by piece-rates over those that paid hourly or daily wages. Payment by results is an effective incentive because, apart from the facility it affords the worker to earn an extra amount, it satisfies his sense of justice in that greater efforts are reflected in more earnings. The worker naturally feels deprived of justice in an industry or a firm where workloads are not equitably distributed. Allocation of scientifically determined, equitable, workloads is, therefore, absolutely essential for increasing the worker's productivity.

Other material benefits like provident fund, Employees' State Insurance, clubs, canteens and other welfare measures and profit-sharing schemes, according to Mr. Mangaldas, have no direct influence on productivity. The worker may be attracted to the firm with such schemes but he will neither stay there nor work harder for it unless he finds other satisfactions later. Physical environment and conditions of work such as light, heat, fresh air, hours of work—all these have an effect on the worker's physical health and comfort. Highly desirable though these amenities are, they have little or no direct relationship to good morale. In fact, operatives, Mr. Mangaldas points out, do not mind inconveniences arising from the very nature of the work. As labour incentives, the usefulness of improvements in physical environment of work, according to him, is, therefore, very doubtful.

As regards the non-material or psychological incentives, one of the most basic satisfactions to be obtained from work is the feeling of pride and achievement at having accomplished something. Work affords an opportunity to the human instinct of craftsmanship to express itself in creative ways. But in modern industry, the intensive break-up of operations leads to a situation wherein a worker hardly realises that he "creates" something. He only feels that he works. He thus misses the purpose of his efforts. In other words, work to him becomes fruitless, meaningless repetition of movements. It is possible, according to Mr. Mangaldas, with a little effort, to impart meaning and purpose to a worker's efforts. It is easy to enable him to feel the joy of accomplishment. What the worker needs is to see the plant from the top, from the point of view of a manager. What he lacks, and what needs to be imparted to him, according to Mr. Mangaldas, is the vision of the whole plant in and through his work.

Sound Leadership

It is possible, with a little imagination, and within the technical limits of efficiency, to enlarge the field of a worker's operations, to give his job the contents of a function. This will provide him an opportunity to satisfy his strong deep and universal desires. It is unfortunate, observes Mr. Mangaldas, that managements should be oblivious of the opportunity to increase a worker's satisfactions and his willingness to do his best. He adds: "That industrial experts should be racking their brains to devise some complicated wage-incentives instead of giving proper content to the work itself, that managers should be vying with one another to introduce new-fangled welfare schemes while neglecting to remedy the overlapping of functions or the grievance of their staff, is a sad commentary on their qualities of leadership. There is, therefore, need for a thorough reorientation of the minds of the leaders of the industrial community."

It is the various strata of industrial management—jobbers, supervisors, managers and trade union leaders—who need to provide proper leadership in industry. Leadership is a function of situation. The present industrial situation in the country calls for a leadership which would be receptive and would satisfy the deeper personal and social urges of its operatives. For marshalling and directing the human resources of industry, Mr. Mangaldas points out, its leaders must have the primary attributes of deep human sympathy, intelligence, a sense of justice and fair play. Only such leadership would be able to provide the worker the satisfaction he needs and draw from him his best.

(Concluded from next column)

cesses allied to agriculture, food, except beverages, and non-metallic mineral products, women's employment had been more or less stationary. The drop in women's employment was marked in the jute industry, their number decreasing from 37,000 in 1950 to 21,000 in 1956. The employment position in *bidi* and match industries was good. There had, however, been a significant fall in women's employment in cashewnut industry and in tea factories.

In the mining sector, women's employment had considerably increased in manganese and iron ore mining but declined in coal and mica mining. In plantations, there was a decrease in women's employment from 2.48 lakhs in 1950-51 to 1.66 lakh in 1956-57. But this decline was almost proportionate to the fall in the total number of adult workers, both male and female.

The study adds that the changes which are taking place in our social attitudes will help accelerate women's employment in all spheres of the economy and that, in future, the number of women workers is bound to increase, especially in the tertiary sector, with the rising tempo of industrialisation. It has, however, not explained—at least the official summary of the study does not contain any explanation—why, despite the changes that took place during the 50 years, there has been a decline in the number of working women.

EMPLOYMENT OF WOMEN

TREND OVER FIVE DECADES

WITH rapid industrialisation and swift change in cultural patterns, the position of women in society and economic life is altering profoundly. Although the proportion of women in the total labour force of the great majority of countries has increased little, yet, there has been a notable change in the characteristics of their participation in economic activity. Women the world over are increasingly moving into industries and services and out of agriculture. This change, which appears to accompany and reflect the process of industrialisation, has given birth to new opportunities for society as a whole and women in particular. But, at the same time, it has given rise to new social problems as well. Statistical information on the composition and character of the women labour force is, therefore, of interest not only to planners and economists but also to sociologists.

A study jointly undertaken by the Labour Bureau, Government of India, and the Labour and Employment Division of the Planning Commission, throws some interesting light on the trends in employment of women in India. It covered the 50-year period between 1901 and 1951. Although, in carrying out the study, some reliance had to be placed on census data, which have certain limitations, attempts have been made to overcome these limitations so as to secure a certain degree of comparability. The results obtained could, therefore, be considered a fairly reliable picture of the employment position of women.

The study revealed that the number of working females declined from 43 million in 1901 to 40.7 million in 1951, while the female population during the same period increased from 149.9 million to 173.4 million. In other words, there was a decrease of about 2.3 million in the number of working women, as against the increase of 23.5 million in the female population.

The occupational distribution of working women in any country reflect, fairly directly, the stage of industrialisation and, to some extent, the particular character of the economy. For instance, in the more industrialised countries, there is a higher proportion of women workers in the professional and technical category and in the managerial, administrative and clerical group. In the less developed countries, both these groups represent a very small percentage of the women at work. The occupational distribution of working women in India is typical of an underdeveloped country. The study reveals that, during 1901-51, participation of women, in absolute numbers, in the cultivation of owned and unowned lands substantially increased with the exception of 1931 during which year the data had been vitiated, thanks to the treatment of household women as domestic servants under the census data. In relative terms, women's participation in the cultivation of land and their employment as agricultural labour did not show any significant change though there were variations from one decade to another.

A general decrease had also taken place in absolute numbers, as well as relatively, in the number of women engaged in production other than cultivation, commerce and other services and miscellaneous occupations. Transport, however, recorded a rise in women's employment. During the 50 years, increase had taken place in women's employment in coal mining, tobacco, iron and steel and non-ferrous metal industries, transport equipment, bricks, tiles and other structural clay products, furniture and fixtures, paper and paper products, printing and allied industries, educational services and research, municipalities and local board, hotels, restaurants and tea houses and legal and business services. Their employment, however, recorded a decrease in certain sections, including miscellaneous food industries, retail trade in fuel, sanitary works and services and laundry and laundry services.

The latest available information regarding organised employment, that is, for the year 1956, has also been incorporated in the study. During the six-year period 1950-56, trends in the employment of women in different industrial groups were not uniform. While employment in tobacco industries and chemicals and chemical products had been on the increase, that in wood and furniture industries, paper and paper products, textiles, basic metal industries had gone down. In other industrial groups, namely, pro-

WEST'S TRADE WITH COMMUNIST BLOC

RESTRICTIONS ON EXPORTS RELAXED

IN spite of the political wranglings between the East and the West, it appears that there is a growing inclination on the part of both sides to extend economic relations which are mutually advantageous. This is one of the possible explanations for the latest step taken by the U.K. and other Western powers, including Japan, to relax, with effect from the 15th of this month, the restrictions imposed on exports of several goods to the Communist bloc. This step follows the revision of the strategic embargo list by the 15 nations represented on N.A.T.O.'s Communist Trade Committee (except Iceland), at its meeting recently held at Paris. This list was the target of frequent criticism by the Soviet bloc. Many even in the West felt that it contained some anomalies. It has now been so revised as to reduce the number of goods wholly barred from export to the Soviet bloc and China from 181 to 118. This number includes some goods which have been newly added. Further, the quantitative controls imposed on 25 items have been freed from all restrictions.

Needless to say that this relaxation of controls will lead to an expansion of trade between the countries of the two blocs. The manufacturers of the U.K. and other W. European countries need at present, perhaps more than any other time, an expanding outlet for their products. The tide of recession which began in the U.S. has now reached the shores of Western Europe. Besides, the fall in real incomes of the primary-producing countries, as a sequel to their adverse export trade, have impaired their capacity to maintain their imports of manufactured goods from the West. The impact of this trend on the economy of the U.K. in particular, is quite sizable, considering the fact that the primary-producing countries of the sterling area account for almost half of its exports. It should also be noted in this context that the volume of total exports from the U.K. increased by six per cent. between 1955 and 1956, whereas the increase was only two per cent. between 1956 and 1957. Its exports during the first half of the current year were 5 per cent. lower than a year ago. These trends are significant in that they show that the U.K. must be quite anxious to step up its exports even with the Communist countries. Clearly, the revision of the embargo list is, as Mr. C. S. Garland, President of the National Union of Manufacturers, London, pertinently observed, a "welcome, if belated, piece of realism."

Capital Goods

More important among the goods which can be freely sold by Britain to the Communist countries are civil aircraft and aero engines, oil well drilling equipment, petroleum refinery and petrochemical plant, electric generators and motors, turbines, petroleum products, all vehicles, industrial diamonds, most vacuum pumps, carbon black furnaces, almost all industrial types of ball and roller bearings and all forms of aluminium and copper. Most types of ships have also been freed from the embargo. To be a little more precise, they are passenger and cargo ships with a speed of upto 20 knots, tankers upto 18 knots and fishing vessels upto 17 knots. Some restrictions remain on certain equipment and arrangements for demagnetisation. Besides warships, large ice-breakers and non-magnetic ships continue to be banned. It has also been laid down that the building of ships for the bloc will require licence from the Admiralty and the sale of second-hand ships the sanction of the Minister of Transport.

The foregoing position applies also to other West European countries who are members of N.A.T.O.

There is no doubt that some of these items will readily find a market in the Communist bloc. For instance, copper, which was hitherto restricted to a quota of copper wire, has now been freed for export; and it is an item for which there has been a growing Russian demand. It may be noted in passing that the U.K. export of copper wire and alloys in 1957 accounted for £12.9 million, representing a third of its total exports of this item. Similarly, it is anticipated that machine tools, scientific instruments, petrochemical equipments and civil aircrafts, will find favour with the Communist countries. Russia may not be having a dearth of scientific instruments considering the great advance it has made in the field of heavy industries, electronics, nuclear power application, and launching of satellites into space. Whatever deficiency it suffered from must have been made good by the absorption into its orbit of East Germany and Czechoslovakia. It has also had the benefit of a large number of German scientists decoyed by it during the war years. Nevertheless, it might like to buy scientific instruments from the West on a small scale in order to study Western techniques and compare its progress in this field with that of the West. The relaxation in the export of petrochemical plants may be of real help to Russia as it is greatly deficient in the sphere of plastics and chemicals, so vital in the manufacture of a very wide variety of modern consumer goods. On the contrary, it seems that car manufacturers and shipbuilders and many others in Western Europe will not have any immediate benefit. A sizable expansion in the U.K.'s trade with the Communist bloc in the near future, however, is unlikely. Its total exports to Russia in 1957 was about £37 million, only a little over one per cent. of its aggregate exports, and its exports to the Soviet bloc, as a whole, were only about 2 per cent. But the relaxation of controls, both numerically and quantitatively, will lead to a gradual improvement.

Important Event

The present relaxation was described by Sir David Eccles, President of the British Board of Trade, as an important event in the relations with the Communist bloc and in the foreign trade of the U.K. Sir David, however, felt that there was no need for a trade agreement with Russia since the British market was open for the goods the latter had to offer. He added that, as the West had to deal with State importing agencies in the Communist countries, the prospects of the U.K.'s trade could not be judged on a straight commercial basis. He wondered whether any Communist country would come forward to purchase "Viscounts," a civilian aircraft which, as a purely commercial proposition, had many advantages over others.

Significant and far-reaching as is the present revision of the embargo, not only from the point of view of trade, but also in terms of the value of personal contact within the Iron Curtain, it remains to be seen how far these Communist countries, with their elaborate bureaucratic machinery and a network of regional councils, will be in a position to avail themselves of the opportunities offered by the West for more trade between the two. At any rate, as was aptly remarked by the President of the British Board of Trade, "the stage is now cleared for testing out whether the protests of the various Communist Governments that trade between them and the West has been hamstrung by the list (embargo) are genuine or not." The Communist countries may still contend that an embargo exists, but the fact is that the list has been cut to the bone and that many goods of strategic importance have been removed from the list. So long as the present world situation continues, it will be unrealistic to expect the West to trade with Communist countries on the same basis as it does with the rest of the free world.

INDUSTRIAL PRODUCTION

The total value of output of registered factories in 28 major industries in India more than doubled in the 10 years 1946 to 1955. The value of production in 1955 was over Rs. 1,411 crores as against about Rs. 601 crores in 1946, according to a summary of census figures, entitled 10 *Years of Indian Manufactures*, published recently.

The productive capital investment in the industries has also shown a marked increase during the period. It rose from about Rs. 367 crores in 1946 to about Rs. 862 crores in 1955. This includes fixed capital like buildings, plant and machinery, etc., and working capital like stocks of raw materials, finished and semi-finished products, etc. The number of registered factories also increased by about 50 per cent. during the period, that is, from 5,013 in 1946 to 7,424 in 1955. The number of persons employed in the factories also rose from 1,514,000 to about 1,764,000. The salaries and wages earned by them during the period have gone up by more than 100 per cent. The bill was for Rs. 101.8 crores in 1946 and Rs. 231.14 crores in 1955.

The census reports for the 10 years, from 1946 to 1955, were compiled under the Industrial Statistics Act of 1942. For the purpose of the census, only registered factories, which used power and employed 20 or more workers per day, were taken into account. The census was confined to 28 major industries in the country.

The summary contains valuable statistical information about the factories in each of the 28 industries, their capital, employment and output. For each industry, details about the consumption of materials, fuel and power, manufacture of products and by-products, salaries and other benefits to the employees are also given separately. Although the census is statutory, in practice reports are not received from all factories. In 1955, reports were not received from 7 per cent. of the factories, while in 1946 20 per cent. of the factories did not submit returns. The Industrial Statistics Act of 1942 was repealed by the Collection of Statistics Act, 1953, which came into force on 10th November 1956. Under the new Act, the Centre will be responsible for the collection of data relating to the industries scheduled under the Industries (Development and Regulation) Act.

U.K. RAISES STATUS OF EXPORT CREDITS GUARANTEE DEPARTMENT

The status of Britain's Export Credits Guarantee Department is to be raised because of its vital importance to the export trade, according to a Board of Trade announcement in London. Business of the department, which insures British exporters against payment defaults by oversea customers and other risks, has increased tenfold since 1946. The top post in the Department will be upgraded under the new title of Secretary of the Export Credits Guarantee Department, and the Government has taken the view that it would be advantageous to fill this post, for the initial period, with a man having practical experience of the City of London. It has appointed Mr. L. J. Menzies, an adviser to the Governors of the Bank of England, to the post for a period of two to three years. Mr. Menzies takes up his new duties on 6th October 1958 and will be directly responsible to the President of the Board of Trade.

The upgrading of the status of the Export Credits Guarantee Department is a recognition of the considerable increase in the weight of business transacted by the Department. The Government has been considering for some time whether changes should be made in the organisation and status of the Department, and on this point has had the advice of an expert committee.

The main question under consideration was whether Government export credit insurance should be carried on through a statutory public corporation—as in some countries—or by a Government department. The Committee concluded that this work should continue to be performed by a Government department because of its use of public funds, its relation to the broader aspects of economic policy, and its dependence on information from Government sources.

The Government has accepted these recommendations. The upgrading of the status of the Department follows also from the Committee's advice that, because of the considerable increase in its business and its vital importance to the export trade—though its work has been administered wisely and with competence in the past—this was necessary.

STAINLESS STEEL *VERSUS* BRASS

Apropos our recent article on the shortage of stainless steel in the country and its effect on fabricators of this metal, Messrs. Binani & Co., Bombay, observe as follows:

"It has been argued that the life of stainless steel utensils is estimated at 40 years, while brass utensils last only five years. The life of stainless steel utensils is still an estimate; it may last only 15 to 20 years, whereas experience has shown that brass utensils do last 13 to 15 years. Even after being in use for such a long period, the brass utensil scrap commands a reasonable price, whereas scrap of manufactures of stainless steel sheets fetches no price at all. Thus, even from a long-range view, the stainless steel manufactures cost 2½ times the price of brass manufactures. Even assuming their life is twice that of brass utensils, it is still not economical, because, ultimately, the unserviceable stainless steel manufactures would be valueless in distinct contrast to brass.

"In the manufacture of stainless steel, accumulation of sheet cuttings, which become available for export, amounts to 20 to 25 per cent. and fetch 5 per cent. of the value of stainless steel semis. Countries like Japan, who import these scraps, can offer articles made from these cheap sheet cuttings and export them. In this context, the question of our export of stainless sheet manufactures and earning foreign exchange is difficult to be believed."

We wish to add here that what we said in our issue of 16th August 1958 on this subject was based entirely on the publication *The Story of Stainless Steel* distributed by stainless steel interests. It is for them to reply to the points made by the firm referred to above.

EXPORTS OF SHELLAC

With a view to stabilising the prices of lac, the exports of this commodity have been brought under a system of licensing. The exporters have been helped to organise themselves into a Lac Exporters Association, presided over by the Chairman of the Lac Export Promotion Council. Exports are permitted only on the basis of licences issued to those members of the Association who have succeeded in eliminating unfair trade practices and maintaining export prices at remunerative levels, consistent with the demand and price situation in foreign markets.

Meanwhile, the Export Promotion Council is taking steps to survey foreign markets for Indian lac, find new uses for it, lay down quality standards, and participate in international fairs and exhibitions for promoting exports. The State Trading Corporation is also helping to procure orders from China and the East European countries. Besides, the Government of India has set up a Lac Working Group to suggest protective and developmental measures to be taken up by the Lac Cess Committee and the Export Promotion Council. It may be noted that, in 1957, India exported about 299,800 cwts. of shellac valued at about Rs. 4.5 crores.

Notices

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-SIXTH ORDINARY GENERAL MEETING of the BENGAL POTTERIES LIMITED will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Tuesday, the 16th September, 1958, at 4 p.m., to transact the following items of business:—

1. To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider, and if thought fit, pass the following Resolutions as Ordinary Resolutions:—
   (a) Resolved that the members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Ltd., of Sir Shri Ram who has attained the age of over 74 years and declare that the age limit of 65 years as specified in Section 280 of the Companies Act of 1956 shall not apply to him.
   (b) Resolved that the members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Ltd., of Shri Dhirendra Nath Sen who has attained the age of over 68 years and declare that the age limit of 65 years as specified in Section 280 of the Companies Act of 1956 shall not apply to him.
6. To consider, and if thought fit, pass the following Resolutions as Special Resolutions:—
   (a) Whereas Shri D. N. Sen, a Director of the Company, is also a Director of the Jay Engineering Works Ltd., a company under the management of Madan Mohan Lall Shri Ram & Co. Private Ltd., one of the partners in Bharat Ram Bhagat & Co., Managing Agents of the Company, and it can be deemed that the said Jay Engineering Works Ltd. is a company under the management of the Managing Agents of the Company.

      And whereas Shri D. N. Sen is one of the Directors retiring by rotation this year.

      Resolved that Shri D. N. Sen be and he is hereby re-elected a Director of the Company.
   (b) Whereas Shri Bishen Swarup Agarwal, a Director of the Company, is also an officer of the Jay Engineering Works Ltd., a company under the management of Madan Mohan Lall Shri Ram & Co. Private Ltd., one of the partners in Bharat Ram Bhagat & Co., Managing Agents of the Company, and it can be deemed that the said Jay Engineering Works Ltd., is a company under the management of the Managing Agents of the Company.

      And whereas Shri Bishen Swarup Agarwal is one of the Directors retiring by rotation this year.

      Resolved that Shri Bishen Swarup Agarwal be and he is hereby re-elected a Director of the Company.

Special Notice under Sections 281 and 261 has been received from Shareholders sponsoring the abovementioned Resolutions.

Explanatory Statement under Section 173(2) of the Companies Act, 1956

Re: Ordinary Resolution No. 5 (a) (*under S.*281)

Special Notice has been received by the Company on the 4th day of August, 1958 of this resolution from three of its members under the provision of Section 281 of the Companies Act, 1956.

Sir Shri Ram is a non-retiring Director of the Company, being a nominee of the Managing Agents, Messrs. Bharat Ram Bhagat & Co., and he is otherwise entitled to be so nominated under the terms of the Managing Agency Agreement between the Company of the one part and the said M/s. Bharat Ram Bhagat & Co., of the other part. Sir Shri Ram, if appointed, will get remuneration from the Company as provided in its Articles of Association and is interested to that extent. Sir Shri Ram has attained the age of over 74 years.

Re: Ordinary Resolution No. 5(b) (*under* S.281)

Special Notice has been received by the Company on the 4th day of August, 1958 of this resolution from three of its members under the provision of Section 281 of the Companies Act, 1956. Shri D. N. Sen, if appointed, will get remuneration from the Company as provided in its Articles of Association and is interested to that extent. Shri D. N. Sen has attained the age of over 68 years.

Re: Special Resolutions No. 6(*a*) *and* 6(*b*) (*under S.*261)

Special Notice has been received by the Company on the 4th day of August 1958 of these resolutions from three of its members under provision of Section 261 of the Companies Act.

The material facts have been stated in the resolutions itself. The said Directors, Shri D. N. Sen and Shri Bishen Swarup Agarwal, if appointed, will get remuneration from the Company as provided in its Articles of Association and are interested to that extent.

The Share Transfer Register of the Company will be closed from 1st September to 29th September 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA, *18th August*, 1958.

THE BORREA COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAVE RECOMmended payment of the following Final Dividends for the year ended 31st December, 1957, without any deduction for Income-tax payable by the Company.

On Preference Shares for the half-year at 6½ per cent. per annum.

On Ordinary Shares at 7½ per cent. per annum for the year.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st August*, 1958.

THE BORREA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE BORREA COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 26th September 1958, at 10-30 a.m., for the following purposes:—

TEXMACO EARNS GOOD PROFIT

DIVIDEND STEPPED UP—OUTLOOK PROMISING

THE Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Belgharia, 24-Parganas, West Bengal) has shown an impressive record of progress in its working during the year ended 31st December 1957. Indeed, the audited report for the year under review makes highly encouraging reading. While the Company's production and selling activities in its various manufacturing units maintained their rate of improvement, these were fully supplemented by commendable progress in its schemes of expansion. The results for the year under review have actually stolen a march over those for the previous year which were by themselves highly impressive.

The gross profit at Rs. 110.61 lakhs represents a strident advance of Rs. 31.64 lakhs over Rs. 78.97 lakhs earned in 1956, to which level it had sharply risen from Rs. 58.21 lakhs for 1955. It may be noted that the gross profit has more than quadrupled in the past three years, from Rs. 26.86 lakhs for 1954 to well over a crore of rupees for 1957. The net profit at Rs. 35.73 lakhs also stands higher, as compared with Rs. 31.18 lakhs for the previous year, although the extent of increase is not commensurate with that in gross profit. This is due to the substantially larger provisions made for both depreciation and taxation. Thus, the provision for depreciation has been raised from Rs. 21.21 lakhs to Rs. 36.28 lakhs, while that for taxation has gone up from Rs. 20 lakhs to Rs. 30.51 lakhs. The latter amount is inclusive of a sum of Rs. 1.36 lakhs made as provision for wealth tax.

The excellent performance of the Corporation has enabled the Directors to step up the distribution to the ordinary shareholders further, to 15 per cent. per annum from 12½ per cent. for the previous year, to which level the dividend had been raised from 10 per cent. per annum for 1955 and 1954 and 7½ per cent. for 1953. Before recommending a higher dividend, the Directors have, it is noteworthy, bestowed sufficient attention to the need for building up adequate reserves; they have allocated a sizable amount of Rs. 12 lakhs to them. A breakdown of the allocation shows that development reserve gets Rs. 7 lakhs and general reserve Rs. 5 lakhs.

The following comparative table shows the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	4,54.24	3,68.47	2,34.27	1,41.53
Other income	11.06	7.92	3.14	2.50
Closing stocks	82.22	56.54	47.00	18.13

Carry forward	0.54	0.99	1.23	1.48

* On an increased capital of Rs. 150 lakhs, raised by a fresh issue of shares worth Rs. 90 lakhs.

During the year under review, the production of ring frames in the cotton textile machinery division was maintained at a steady level. Further progress was also made in the assembly of carding engines, and despatches of Texmaco-Howa cards commenced in July 1957. Good progress was made in the planning of drawing and speed frames. The Directors state that although the back-log of orders have been cleared, the current order position is not quite encouraging in view of the continuing depression in the textile industry. The management are, therefore, considering the question of utilising some of the idle capacity of the Company's workshops for other jobs. The Company has entered into an agreement with Messrs. Thos. W. Ward of England for the manufacture of the latter's renowned Capstan lathes in collaboration with them. It is stated that, as soon as the sanction of the Government of India is received, work will commence on this project. No progress could, however, be made in the jute machinery division, owing to paucity of orders.

Referring to the other branches of the Company's activities, the Directors observe as follows:

"The year under review saw a considerable expansion of shops in the boiler and heavy engineering division. Wagon production was maintained at a satisfactory level. We have received orders for the manufacture of metre-gauge coaching underframes and further expansion of shops has been taken up to enable early commencement of manufacture. We have also received an order from the Railway Board for the supply of YP and YG loco boilers and planning for these is already in an advanced stage.

"We have also secured a contract for the supply of a complete sugar mill plant in Andhra Pradesh, in collaboration with Messrs. Stork Werkspoor of Holland. Several other orders for sugar machinery have also been booked. Manufacture of radial crest gates for the Panchet Hill Dam of the Damodar Valley Corporation is making steady progress. An order from the Bhilai Steel project for 4,500 tons of fabricated structurals comprising storage tanks, pipelines, etc., has also been received and work on it is progressing satisfactorily. The overall shortage of steel in the country, however, is making it a little difficult for us to execute the various orders expeditiously.

"The steel foundry division has progressed fairly well. Besides making the castings required by ourselves for railway wagons and sugar mill machinery, we are also supplying castings to several outside concerns too."

The Company's present paid-up capital stands at Rs. 190 lakhs of which Rs. 150 lakhs are accounted for by ordinary shares of Rs. 10 each. The balance, namely, Rs. 40 lakhs, is represented by preference capital which is divided into 10,000 5½ per cent. tax-free cumulative preference shares of Rs. 100 each and 30,000 5½ per cent. taxable redeemable preference shares of Rs. 100 each. In addition to this, the Company has debentures of the order of Rs. 40 lakhs carrying interest at the rate of 6 per cent. and redeemable on 31st December 1960. Its reserves and surplus aggregating Rs. 41.41 lakhs are modest as compared with the size of its capital. But it must be remembered that the Company is young and is engaged in the difficult task of firmly establishing a heavy industry. Although it was registered 18 years ago, the Company commenced production only in 1951 and began making sizable profit only from 1953 onwards. The provision for taxation stands at Rs. 60.15 lakhs, while current liabilities amount to Rs. 312.28 lakhs. There has been an addition of Rs. 88.55 lakhs to the gross block during the year (of which plant and machinery alone account for Rs. 44.43 lakhs) bringing the total value of the block account to Rs. 355.99 lakhs. This has been written down to a book value of Rs. 208.38 lakhs. Miscellaneous expenditure not written off stands at Rs. 12,896. The current assets aggregate Rs. 435.34 lakhs and adequately cover the current liabilities and the provision for taxation.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 21.80 *ex-div.*, at which rate and on the basis of the latest dividend, the yield is a little over 7 per cent. per annum.

The Company has been a regular dividend-payer since 1951. Although a maiden dividend of 3¾ per cent. was paid in 1949 for 1948 and maintained in the following year, it had to skip the dividend for 1950. It again began paying dividend from 1951 for which year 2½ per cent. was declared. It was raised to 5 per cent. in the following year, then to 7½ per cent. and then again to 10 per cent. for 1954. The rest of the dividend story can be had from the table above. It may be noted that the Company raised its ordinary capital in November 1955 when 900,000 ordinary shares of Rs. 10 each were issued at par in the proportion of three for two. This point must be borne in mind while comparing the dividends for 1956 onwards with those for the years preceding it.

The shares of the Company are popular with investors and speculators alike and are therefore readily marketable. The outlook for the Company is promising, as it is engaged in industries the products of which will be in considerable demand for several years to come.

(Concluded from next column)

each and 30,000 6 per cent. tax-free cumulative preference shares of Rs. 10 each. The reserves and surplus aggregate Rs. 9.79 lakhs. The provision for taxation stands at Rs. 2.59 lakhs and current liabilities amount to Rs. 4.31 lakhs. The gross block of Rs. 29.09 lakhs stands written down at Rs. 23.23 lakhs. The current assets aggregate Rs. 14.46 lakhs and are equal to more than twice the current liabilities and the provision for taxation.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 12 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6.66 per cent. per annum.

HIGHLAND PRODUCE'S PROFIT DOWN

DRASTIC CUT IN DIVIDEND

THE note of pessimism sounded by th Directors of the Highland Produce Company, Ltd. (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Kerala), in their report for the year ended 31st December 1956 about the Company's profit-earning capacity in future years, in the light of higher costs of production resulting from increased wages and amenities to labour and the imposition of fresh and heavy taxes, has proved to be correct. The Company's profit for the year ended 31st December 1957, for instance, shows a sizable decline from those earned in the previous years. Even a substantial increase in the crop of tea harvested has not helped the Company to neutralise the increase in costs and taxation. The gross profit for the year under review at Rs. 5.18 lakhs shows a decline of Rs. 2.65 lakhs or 36 per cent. as compared with that for the previous year which itself was a year of modest profit.

Although the Company's profit has suffered a sharp setback, the provision for taxation at Rs. 2.45 lakhs does not show much variation from Rs. 2.89 lakhs made in the previous year. This shows the extent to which the incidence of taxation has gone up. The provision for depreciation has been raised from Rs. 51,794 to Rs. 62,772. The net profit, after these essential provisions, works out to Rs. 1.64 lakhs which is less than half of that (Rs. 3.69 lakhs) for the previous year. In view of this precipitous fall, the dividend on ordinary shares has received a drastic cut; it is only 7½ per cent., as compared with 20 per cent. for 1956 and 1955, to which level it had been pruned from 25 per cent. for 1954, after having been doubled from 12½ per cent. for 1953. In fact, the net profit for the year is only just sufficient to pay this attenuated dividend on ordinary shares, besides the dividend on 6 per cent. preference shares. Such being the case, the question of transferring any sum to the reserves does not arise.

The Company's progress during the past four years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	21.59	21.07	21.30	23.13
Closing stocks	3.19	3.39	2.44	3.30
Estate and other expenditure ...	16.55	14.66	13.95	11.80
Gross profit	5.18	7.83	7.26	13.04
Managing Agents' remuneration	0.46	0.73	0.68	1.27
Depreciation	0.63	0.52	0.47	0.37
Taxation	2.45	2.89	2.40	4.75
Net profit	1.64	3.69	3.71	6.65
Transfer to reserves	...	...	...	2.00
Dividends—				
6% cumulative preference ...	0.18	0.18	0.18	0.18
Ordinary	1.35	3.60	3.60	4.50
	(7½%)	(20%)	(20%)	(25%)
Carry forward	0.49	0.37	0.46	0.54
Crop harvested—				
Tea	lbs. 1,211,000	1,049,800	1,018,000	1,013,270
Cost of production per lb. ...	Rs. 1.20	Rs. 1.28	Rs. 1.15	Rs. 1.09
Average price realised	Rs. 1.72	Rs. 1.94	Rs. 1.87	Rs. 2.23
Cardamom	lbs. 8,121	10,050	15,100	10,700
Average price realised	Rs. 8.43	Rs. 9.56	Rs. 7.92	Rs. 6.32

The Company's sale proceeds of tea, cardamom and minor produce for the year amounted to Rs. 21.59 lakhs, as compared with Rs. 21.07 lakhs for 1956. The closing stocks were slightly lower from Rs. 3.39 lakhs to Rs. 3.19 lakhs but expenses had risen from Rs. 14.66 lakhs to Rs. 16.55 lakhs.

The Company's estate consists of 2,047 acres, of which tea in bearing accounts for 885.75 acres, new clearings for 73.06 acres, coffee inter-planted with pepper for 15 acres and cardamom for 210 acres.

The Directors state that, although production of tea on both the estates of the Company were in excess of the estimates as well as of the previous season's crop, additional payments had to be made for more amenities to labour and for increased taxation, particularly sales tax which was raised during the year from 2 nP to 5 nP. Larger amounts were also expended for tea quota and excise duty and cess. There was, at the same time, a heavy fall in the prices fetched by teas in auctions at Cochin during the year. Hence, the margin of profit on each pound of tea was reduced by over 30 per cent. which accounts for the reduction in gross profit in spite of the heavy increase in production and consequent saving in the cost of production. The Company's estates are reported to be in excellent order and condition.

The paid-up capital of the Company at Rs. 21 lakhs consists of 180,000 ordinary shares of Rs. 10

(Continued in previous column)

MYSORE PAPER REPORTS STEADY RESULTS

FINANCIAL STRENGTH ENHANCED

THE results of the Mysore Paper Mills Ltd. (Chairman and Managing Director: Mr. T. Shamanna, I.A.S., Bangalore) for the year ended 31st March 1958 shows that the Company was successful in maintaining the steady rate of progress recorded in recent years. The Company's production is stated to have been satisfactory. Turnover for the year at Rs. 108.53 lakhs was a new record, such having exceeded the previous year's peak by Rs. 2.18 lakhs. It has, however, to be conceded that the pace of improvement in turnover during the year under review was rather slower. The increase in sale proceeds in 1956-57 was Rs. 18.43 lakhs and in 1955-56 it was Rs. 19.41 lakhs. In view of this, as also due to the rise in manufacturing and other expenses, the upward trend in the Company's gross profit has experienced a mild setback. Thus, at Rs. 19.81 lakhs, the gross profit shows a small fall of about Rs. 45,000, or a mere 2 per cent. as compared with that for the previous year. The net profit, after providing Rs. 10 lakhs for depreciation, as against Rs. 10.50 lakhs in the previous year and setting aside Rs. 1 lakh for taxation, as against *nil*, also stands lower at Rs. 8.81 lakhs, the corresponding figure for 1956-57 being Rs. 9.76 lakhs. The Directors state that, as in the previous year, no provision for taxation is considered necessary for the year under review as well but that the aforesaid provision has been made towards future tax liabilities. The dividend to shareholders has been maintained at 10 per cent., the same as that for 1956-57 and 1955-56, to which level it had been stepped up from 7½ per cent. for 1954-55 as well as 1953-54. The dividend for 1955-56, it may be remembered, was in the nature of a dividend of 6¼ per cent. and a cash bonus of 3¾ per cent. Subsequently, that is, in 1956-57, when these two were consolidated, we expressed the view that this action of the Directors reflected their confidence in the Company's ability to maintain the dividend at 10 per cent. This expectation has now been justified.

The following table shows at a glance the Company's financial results for the four years ended 31st March 1958:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	1,08.53	1,06.35	87.92	68.51

Carry forward	0.27	0.48	0.47	0.85

D = Dividend. B = Bonus.

A feature of the appropriation of profit is the importance attached by the Directors to strengthening the Company's financial position. They have transferred, once again, a good part of the profit to reserves. As against only Rs. 2.50 lakhs earmarked for dividend, they have set apart Rs. 5.42 lakhs to reserves, as will be seen from the table. It will also be noted that the provision for wealth tax is Rs. 30,000. Another encouraging feature is the repayment in advance of an additional instalment of Rs. 3 lakhs due to the Industrial Finance Corporation in July 1958. This has contributed to a reduction in interest charges, besides enhancing the soundness of the Company's financial position.

The Directors report that necessary action is being taken to acquire various parts and units required to step up production of bamboo pulp and to recondition the first paper machine. Licences to import some of the necessary equipment have been obtained from the Government of India and equipment ordered have been arriving. The work is expected to be completed during the current year.

A happy feature which redounds to the credit of the management is that the Company has been able to maintain cordial relations with its labour force in these days of industrial unrest. An industrial peace agreement has been concluded between the labour association and the management for a period of five years. The management hopes that this agreement would help increase production and promote the progress of the mills.

As already stated, the financial position of the Company is quite satisfactory. As compared with 31st March 1957, the latest balance-sheet shows considerable improvement. The reserves are larger, the secured as well as unsecured liabilities are lower, the block account has been reduced further and the liquidity of current assets is better. Stocks of unsold paper at the end of March last were next to nothing. The Company's paid-up capital remains unchanged at Rs 25 lakhs, all of which are in ordinary shares of Rs. 10 each fully paid-up. As against this, the reserves and other funds (including provision for repairs and renewals —Rs. 4 lakhs) total Rs. 30.82 lakhs. The secured loan from the Industrial Finance Corporation has been brought down from Rs. 46.50 lakhs to Rs. 42 lakhs. As against a gross block of Rs. 149.63 lakhs, the written down value of the net block stands at Rs. 62.24 lakhs, the difference of Rs. 87.38 lakhs representing the depreciation provided up to the end of the year of review. The current assets aggregate Rs. 60.49 lakhs, while the current liabilities (excluding the I.F.C. loan) amount to Rs. 24.91 lakhs.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 17.75 *cum-div.* On an *ex-div.* basis, the yield works out to 5.96 per cent. per annum.

When the loan from the I.F.C. is substantially reduced, it should be possible for the Company either to enhance the dividend or to issue bonus shares. It may be noted, in this connection, that the reserves and surplus mentioned above include a sinking fund of Rs. 9.50 lakhs against the I.F.C. loan. Since capitalisation of reserves attracts heavy taxation, the best course would be to raise the dividend.

SWADESHI COTTON MILLS CO., LTD.

Despite the difficult trading conditions that prevailed in the cotton textile industry during the past year, the Swadeshi Cotton Mills Company, Ltd. (Secretary: Mr. M. L. Bagla, Kanpur), appear to have managed to show satisfactory results for the year ended 31st December 1957. It is true that, in common with other units in the industry, the earnings of this Company also have suffered a setback. But, while assessing the situation on these general lines, account must be taken of the fact that treading conditions in Kanpur were far more unfavourable than those prevailing in the rest of the country.

The gross profit of the Company for the year under review at Rs. 55.08 lakhs represents a fall of Rs. 15.11 lakhs as compared with that (Rs. 70.19 lakhs) for the preceding year. Decline in gross profit has naturally meant smaller remuneration for the Managing Agents and lower provision for taxation. Thus, the Managing Agents get only Rs. 4.44 lakhs, as against Rs. 6.53 lakhs in the previous year. The provision for taxation has gone down from Rs. 25 lakhs to Rs. 19.14 lakhs. But the Directors have not neglected the need for adequate provision for depreciation. In fact, this account has been credited with a larger amount, namely, Rs. 15.87 lakhs, an increase of Rs. 4.44 lakhs over the amount earmarked for this purpose last year.

The net profit, after the aforesaid essential provisions, works out to Rs. 15.63 lakhs. This compares adversely with Rs. 27.23 lakhs made in 1956, the decline being Rs. 11.60 lakhs or 42.6 per cent. A sum of Rs. 1.33 lakh has been added to the net profit as income from the previous year. Barring a sum of Rs. 77,500 set aside as provision for specific liabilities, as against Rs. 74,282 in the previous year, the Directors have not been able to transfer any amount to the general reserve, which had received Rs. 5 lakhs in the previous year, nor to any other reserves. Indeed, the net profit has not been sufficient to cover the dividend which has been maintained at the previous year's level, namely, 11¼ per cent. on preferred ordinary and 7½ per cent. on ordinary shares. The former absorbs Rs. 18.11 lakhs and the latter Rs. 1.31 lakh. In addition, the preference dividend has taken up Rs. 2.10 lakhs. In all, the dividends require Rs. 21.52 lakhs, that is, Rs. 5.89 lakhs more than the net profit. This amount has been found from the undistributed surplus of Rs. 8.36 lakhs in the previous year, so that the sum carried forward is a mere Rs. 2.65 lakhs.

The sale proceeds of the Company for the year under review amounted to Rs. 8.57 crores, as compared with Rs. 8.12 crores for the previous year. In view of this larger turnover, the results would have proved better had not the cess and excise duties accounted for an additional payment of as much as Rs. 36 lakhs.

The Directors' report says that the Company's textile mill at Kanpur worked normally during the year but that trading conditions, particularly in Kanpur, continued to be unfavourable throughout the year. The Managing Agents of the Company, Messrs. Jaipuria Brothers Ltd., resigned office with effect from 25th February 1958. Since then, the Company is being managed by the Board of Directors. The Company has set up a spinning mill at Naini (Allahabad) and a sum of Rs. 61 lakhs had been expended on its construction during the year under review. The mill started functioning only this year.

The Company's paid-up capital as on 31st December 1957 stands at Rs. 210 lakhs, of which ordinary shares of Rs. 10 each account for Rs. 17.50 lakhs, preferred ordinary shares of Rs. 10 each for Rs. 157.50 lakhs and preference shares of Rs. 100 each for Rs. 35 lakhs. As against this, it has reserves and surplus aggregating Rs. 238.93 lakhs. The current liabilities stand at Rs. 622.68 lakhs. Of this, secured loans from banks are of the order of Rs. 234.76 lakhs. The gross block of Rs. 528.86 lakhs, including additions during the year of Rs. 18.48 lakhs, has been depreciated by Rs. 197.31 lakhs to Rs. 331.55 lakhs. Construction expenses at Naini mills, amounting to about Rs. 61 lakhs, are shown separately as a capital expenditure. The current assets aggregate Rs. 679.03 lakhs and exceed the current liabilities and provision for taxation by a comfortable margin. Of the current assets, investments in shares of subsidiaries and other joint-stock companies amount to Rs. 195.12 lakhs, stores Rs. 51.18 lakhs, stock-in-trade Rs. 302.92 lakhs, book debts Rs. 58.62 lakhs and cash balances Rs. 21.86 lakhs. It may be noted that stocks of finished goods alone amounted to Rs. 191.83 lakhs, reflecting the sluggish conditions that were obtaining in the cloth market at the close of last year.

COMPANY MEETINGS AND DIVIDENDS

MYSORE PAPER MILLS LTD. Annual General Meeting, Bangalore City, 3rd September 1958. Dividend: Re. 1.00 per share or 10 per cent., payable on and after 13th September 1958. Transfer books remain closed from 14th August to 3rd September 1958, both days inclusive.

RAJGARH TEA CO., LTD. Annual General Meeting, Calcutta, 4th September 1958. Dividend: Rs. 2.50 per share. Transfer books remain closed from 20th August to 4th September 1958, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram, District Tiruchirapalli, Madras State, 4th September 1958. Dividend: Re. 1.20 per ordinary share and Re. 0.12 per deferred share. Transfer books remain closed from 18th August to 4th September 1958, both days inclusive.

DAWN MILLS CO., LTD. Annual General Meeting, Bombay, 9th September 1958. Dividend: Rs. 5.00 per share, payable on and after 12th September 1958. Transfer books remain closed from 25th August to 15th September 1958, both days inclusive.

BRADBURY MILLS LTD. Annual General Meeting, Bombay, 10th September 1958. Dividend: Rs. 7.50 per share, payable on and after 15th September 1958. Transfer books remain closed from 25th August to 15th September 1958, both days inclusive.

KATRAS JHERRIAH COAL CO., LTD. Annual General Meeting, Calcutta, 11th September 1958. Dividend: Rs. 6.50 per share (includes interim dividend of Rs. 3.00 per share). Transfer books remain closed from 29th August to 11th September 1958, both days inclusive.

JAYBIRPARA (DOOARS) TEA CO., LTD. Annual General Meeting, Calcutta, 11th September 1958. Dividend: *Nil*. Transfer books will remain closed from 4th to 11th September 1958, both days inclusive.

HASTINGS MILL LTD. Annual General Meeting, Calcutta, 15th September 1958. Dividend: Rs. 5.00 per share. Transfer books will remain closed from 8th to 15th September 1958, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 16th September 1958. Dividend: Rs. 20.00 per share. Transfer books will remain closed from 2nd to 16th September 1958, both days inclusive.

TEESTA VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 17th September 1958. Dividend: Re. 1.00 per share or 10 per cent. Transfer books will remain closed from 4th to 17th September 1958, both days inclusive.

CHURULIA COAL CO., LTD. Annual General Meeting, Calcutta, 18th September 1958. Dividend: Re. 0.20 per share or 5 per cent. Transfer books will remain closed from 4th to 18th September 1958, both days inclusive.

METHONI TEA CO., LTD. Annual General Meeting, Calcutta, 19th September 1958. Dividend: Re. 1.50 per share. Transfer books will remain closed from 12th to 19th September 1958, both days inclusive.

BALMER LAWRIE & CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: Rs. 12.50 per share (includes interim dividend of Rs. 2.50 per share). Transfer books will remain closed from 8th to 30th September 1958, both days inclusive.

UNITED NILGIRI TEA ESTATES LTD. Final dividend of 11 per cent. (making a total of 16 per cent. for the year), for the year ended 31st March 1958. Transfer books will remain closed from 15th to 29th September 1958, both days inclusive.

PARRY'S CONFECTIONERY LTD. Dividend of Re. 0.20 per share or 20 per cent. for the year ended 31st March 1958. Transfer books will remain closed from 2nd to 16th October 1958, both days inclusive.

COIMBATORE MURUGAN MILLS LTD. Dividend of 7½ per cent. or Rs. 7.50 per ordinary share, for the year ended 31st December 1957. Transfer books will remain closed from 2nd to 15th September 1958, both days inclusive.

BALMER LAWRIE PRUNES DIVIDEND

BRADBURY MILL SUFFERS LOSS

Balmer Lawrie and Co., Ltd.

THE directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 15,71,721 (Rs. 17,76,456) to which is added the balance brought forward from 1956 of Rs. 5,03,375 (Rs. 5,03,129) making a total of Rs. 20,75,096 (Rs. 28,79,585 including excess provision for taxation of Rs. 6,00,000). Out of this total the Board paid an interim dividend of 5 (5) per cent. on 28th February, 1958, amounting to Rs. 4,00,070 (Rs. 4,00,070). A sum of Rs. 2,00,000 (Rs. 10,00,000) has been transferred to general reserve and Rs. 1,74,000 (Rs. 1,76,000) has been transferred to reserve for pensions, leaving a balance of Rs. 13,01,026 (Rs. 13,03,515) available for distribution, which it is recommended be dealt with as follows:—

To final dividend of 2½ per cent. for 1955 Rs. 2,00,035 and to final dividend of 7½ (10) per cent. for 1957 Rs. 6,00,105 (Rs. 8,00,140) leaving a balance to be carried forward of Rs. 5,00,886 (Rs. 5,03,375).

During 1957 an order was made by the Commissioner of Income-tax under Section 23A(3) of the Indian Income-tax Act, 1922, requiring the Company to distribute a further dividend for the year 1955 amounting to Rs. 2,00,035. The order of the Commissioner was upheld by a Board of Referees appointed by the Central Government. The Board therefore recommends that the additional dividend be paid in compliance with the Commissioner's order.

The provisions of Section 23A of the Indian Income-tax Act, 1922 do not apply to the Company subsequent to the financial year 1955 in consequence of the amendments made to that section by the Finance (No. 2) Act, 1957.

The Company's investments have in the past been valued at the market value prevaling at the date of each balance sheet. In consequence, the share investment reserve required adjustment from year to year. The Board has now re-valued all investments at cost, leaving a balance of Rs. 9,31,031 on share investment reserve. In doing so, the Company's holding in British India Electric Construction Co. Ltd. which was written off in 1954 has been restored.

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against the current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—Profits show a reduction largely due to a falling off in the tea export business. The level of trading and imports was maintained. The full effect of import restrictions will however be apparent during the current year.

Bridge & Roof Co. (India) Ltd., The Bengal Flour Mills Co. Ltd. and British India Electric Construction Co. Ltd. all did well. The last-named has now wiped off its debit balance and its Board has recommended the payment of a dividend.

The Bengal Paper Mill Co. Ltd. showed improved results. An agreement has been arrived at with the shareholders and an application has been submitted to the Central Government for sanction to the appointment of Balmer Lawrie & Co Ltd. as Secretaries and Treasurers to the Company.

In The Indian Galvanizing Co. (1926) Ltd. a critical situation developed, and the directors of that Company decided to close down the Calcutta factory to avoid further losses. The plant at Bombay, though handicapped at times by shortages of steel sheet, continued to work efficiently.

Future prospects for many interests in the group are governed by the import position. As forecast above there will be a falling off in trading business for the current year and the Engineering companies must sooner or later also be affected by the shortage of steel.

Accounts in brief are as under:—

Bradbury Mills, Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The result of this year's working shows a loss of Rs. 6,55,034 (profit of Rs. 4,94,854) after providing Rs. 3,76,300 (Rs. 3,54,949) for depreciation. Rs. 6,00,000 (*nil*) have been transferred from general reserve and Rs. 2,50,000 (*nil*) from dividend equalisation reserve. These with the credit balance of Rs. 63,115 (Rs. 91,711) brought forward from last year's profit and loss account, make a total of Rs. 9,13,115 (Rs. 5,86,365) from which has to be deducted the loss of Rs. 6,55,034 (*nil*) for the year, leaving a balance of Rs. 2,58,081 (Rs. 5,86,365) which, the directors recommend, may be dealt with as under:—

To payment of a proposed dividend at Rs. 3.50 per share free of income-tax on 7 per cent. preference shares for the year Rs. 1,03,250 (Rs. 1,03,250) and to payment of a proposed dividend at Rs. 7.50 (Rs. 15.00) per share free of income-tax on ordinary shares for the year ended 31st March, 1958 Rs. 1,50,000 (Rs. 3,00,000) leaving a balance carried forward to next year's account Rs. 4,831 (Rs. 63,115).

The results of the year under review have been disappointing, in common with the other textile units, due to heavy excise duty and mounting costs of production.

During the period under report, additions to fixed assets of an aggregate value of Rs. 8,00,681 have been made.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,85,000	Block ...	26,80,618

		Cash ...	42,445
Rs.	1,38,21,208	Rs.	1,38,21,208

Phœnix Mills, Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The result of this year's working shows a profit of Rs. 4,33,042 (Rs. 17,63,319 for 15 months ended 31st March 1957), after providing Rs. 7,74,460 (Rs. 8,45,839) for depreciation and Rs. 6,00,000 (Rs. 12,00,000) for taxation. To this result has to be added the sum of Rs. 4,06,676 (Rs. 1,18,358) brought forward from last year's account, making a total of Rs. 8,39,718 (Rs. 18,81,677) which the directors have appropriated as under:—

To payment of a proposed dividend at Rs. 10 (Rs. 12.50 for 15 months ended 31st March 1957) per share on 48,000 shares, free of income-tax absorbing Rs. 4,80,000 (Rs. 6,00,000) and leaving a balance to be carried forward to next year's account Rs. 3,59,718 (Rs. 4,06,677 after transferring Rs. 8,75,000 to gratuity reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rajgarh Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit after charging all expenses, of Rs. 77,143 (Rs. 3,24,194) of which taxation provision requires Rs. 42,000 (Rs. 1,35,000) leaving a balance of Rs. 35,143 (Rs. 1,89,194). The balance brought forward from last year was Rs. 41,025 (Rs. 31,831). Excess provision for taxation in previous years written back was Rs. 15,000 (*nil*) and the surplus on redemption of investments amounted to Rs. 312 (*nil*) making a total available for appropriation of Rs. 91,480 (Rs. 2,21,025). The directors recommend payments of a dividend of Rs. 2.50 (Rs. 4.00) per share absorbing Rs. 50,000 (Rs. 80,000) leaving a balance to be carried forward of Rs. 41,480 (Rs. 41,025 after placing Rs. 1,00,000 to general reserve). Wealth tax in respect of the years ended 31st December, 1956, and 31st December, 1957, is estimated to amount to Rs. 6,008 and this has been provided for by transfer from general reserve.

A crop of 5,597 maunds was sold at an average price of Rs. 2.16 per lb. This compares with a crop of 6,013 maunds in season 1956, sold at an average price of Rs. 2.65 per lb.

Estimates for the current season have been framed for a crop of Rs. 6,500 maunds to cost Rs. 9,20,204.

In the report of the Directors for the year ended 31st December, 1956, members of the Company were advised of the application which had been made to the Controller of Capital Issues for permission to capitalise a sum of Rs. 4,00,000 out of the amount standing to the credit of general reserve. In October, 1957, a letter was received from the Controller of Capital Issues sanctioning the bonus issue applied for. Since then the Board have given this matter careful consideration but in view of the present level of tax on bonus issues, has decided to take no action for the present.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	5,12,13
Reserves ...	8,46,492	Stock of tea	3,11,58
Provision for taxation ...	94,020	Stores, etc.	1,48,54

Profit and loss account ...	41,480	Investments	2,10
		Cash ...	3,73,16
Rs.	15,64,443	Rs.	15,64,443

Dhunseri Tea Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year after charging depreciation, staff bonus, manager's and managing directors' commission and providing for labour bonus amounted to Rs. 3,46,324 (Rs. 91,392). To this amount should be added the credit balance of profit and loss account brought forward from the previous year of Rs. 1,486 (Rs. 2,100) and provision for labour bonus account 1956 no longer required Rs. 2,267 (*nil*) making a total of Rs. 3,50,077 (Rs. 93,492) from which the following provisions have been made:—

To provision for taxation Rs. 1,60,000 (Rs. 25,000), to general reserve Rs. 30,000 (*nil*), to rehabilitation reserve Rs. 25,000 (*nil*) and to development rebate reserve Rs. 8,000 (*nil*). From the available balance of Rs. 1,27,077 (Rs. 68,492). The directors have paid dividends on preference shares for the half-years to 31st March and 30th September 1957 absorbing Rs. 8,385 (Rs. 8,385). They now recommend payment of dividend of 20 (12½) per cent. on ordinary shares for the year ended 31st December, 1957, absorbing Rs. 93,794 (Rs. 58,621) leaving a balance to be carried forward Rs. 24,897 (Rs. 1,486).

The season got a very promising start and weather conditions throughout the season were quite favourable. The final crop during this season came to 9,210 maunds as compared with 7,590 maunds in 1956 and 6,856 maunds average over 1952-56 period. Due to depressed market conditions the prices realised on the season's crop came to Rs. 2.14 per lb. as compared with Rs. 2.26 in 1956 and Rs. 1.77 in 1955.

Estimate for 1958 provide for a crop of 9,700 maunds at a local cost of production of Rs. 1.42 per lb. The total tea manufactured up to 30th June, 1958 comes to 1,776 maunds against 2,267 maunds in 1957. 33,648 lbs. of the 1958 season tea have been sold till this date at an average price of Rs. 3.83 per lb. Prospects for remainder of the season seem to be fair.

The authorised capital of the Company has been increased to Rs. 15,00,000 by creation of 76,000 additional ordinary shares of Rs. 10 each and a 40,000 additional 7 per cent. cumulative preference shares Rs. 3 each as per resolution passed in the extraordinary general meeting of the share-holders held on 21st February, 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,98,280	Block ...	7,83,984
Reserves ...	4,58,000	Stock of tea	5,26,189

		Cash ...	58,447
Rs.	17,40,116	Rs.	17,40,116

Rungamattee Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working profit of Rs. 46,713 (Rs. 2,84,015). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 20,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 98,289 (Rs. 2,41,286), of which the directors have transferred Rs. 25,000 (Rs. 50,000) to revenue reserve and Rs. 5,000 (Rs. 50,000 to buildings and machinery reserve) to development reserve. The directors recommend a dividend of 7½ (20) per cent. leaving Rs. 28,914 (Rs. 36,286) to be carried forward.

Crop was 6,97,200 lbs. as compared with 6,73,120 lbs. in 1956. The average selling price realised was Re. 1.72 per lb. as against Rs. 2.09 per lb. in the previous year. Planted area is now 700.45 acres.

Estimates for 1958 provide for a crop of 6,40,000 lbs. at an outlay of Rs. 11,20,404, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Block ...	10,28,054
Reserves ...	11,72,956	Stock-in-trade	5,44,409
Provision for taxation ...	2,31,150	Stores, etc.	59,730
Liabilities ...	1,80,988	Debts, deposits and advances ...	2,08,688
Profit and loss account ...	28,914	Investments	98,989
		Cash ...	1,99,138
Rs.	21,39,008	Rs.	21,39,008

Hansqua Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working profit of Rs. 51,840 (Rs. 86,666). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 20,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 75,882 (Rs. 1,11,584) of which the directors have transferred Rs. 10,000 (Rs. 30,000 to revenue reserve and Rs. 15,000 to buildings and machinery reserve) to development reserve. The directors recommend a dividend of 10 (10) per cent. leaving Rs. 15,882 (Rs. 16,584) to be carried forward.

Crop was 5,07,667 lbs. as compared with 4,61,865 lbs. in 1956. The average selling price realised was Re. 1.71 per lb. as against Re. 1.84 per lb. in the previous year. Planted area remains at 529.92 acres.

Estimates for 1958 provide for a crop of 5,20,000 lbs. at an outlay of Rs. 8,45,155, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	9,77,273
Reserves ...	10,53,794	Stock-in-trade	5,71,629

Rs.	18,55,819	Rs.	18,55,819

Nagaisuree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working loss of Rs. 42,707 (profit of Rs. 2,03,240). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 55,223 (*nil*) from buildings and machinery reserve and Rs. 18,000 (Rs. 46,000) from provision for taxation, being a reserve no longer required, there is a balance at credit of profit and loss account amounting to Rs. 1,19,054 (Rs. 2,83,250), of which the directors have transferred Rs. 10,000 (Rs. 1,00,000 to revenue reserve) to development reserve.

The directors recommend that a dividend of 7½ (15) per cent. be declared at the annual general meeting, leaving Rs. 37,054 (Rs. 39,250) to be carried forward.

Tea crop was 8,45,223 lbs. as compared with 9,03,942 lbs. in 1956 and the average selling price realised was Rs. 1.82 per lb. as against Rs. 2.02 per lb. in the previous year.

Estimates for 1958 provide for a crop of 10,00,000 lbs. at an outlay of Rs. 17,59,946, including inland freight and sale charges. Planted area remains at 1,129.90 acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,60,000	Block ...	16,56,101

		Cash ...	1,20,108
Rs.	34,50,265	Rs.	34,50,265

Estrela Batteries Ltd.

The directors of the above Company (Managing Agents: Choonilal Manilal Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March, 1958.

The directors have been following a policy of successive expansion in the interest of the Company, but the Financial year 1957-58 has been exceptional in the sense that although the sales and production have been maintained in comparison with the working of the previous year, the profits have registered a sharp fall.

The reasons are, the rise in the prices of raw materials, the higher wage bill due to the awards of the Industrial Court for workers as well as the staff members, the ban on the import of torches and bulbs, all these have contributed to an increase in the cost of production and a reduction in the margin of profits.

The working of the year under review has resulted in a profit of Rs. 5,20,214. With the balance brought forward from last year amounting to Rs. 21,558, there is an amount available for disposal of Rs. 5,41,772. The directors have recommended the following appropriations of the above amount:

To depreciation Rs. 1,16,967, to development rebate Rs. 77,739, to provision for taxation Rs. 1,55,257, to managing agents' commission Rs. 42,034, to payment of dividend of Rs. 2.50 per share on 19,947, 5 per cent. cumulative preference shares, free of income-tax Rs. 49,868 and to payment of dividend of Rs. 3 per share, on 29,947 ordinary shares, free of income-tax Rs. 89,841 leaving a balance to be carried forward of Rs. 10,066.

The scheme of modernisation of the Company was continued during the year under report, and it will be observed that a sum of Rs. 3,15,777 has been spent on the purchase of machinery and a sum of Rs. 1,00,295 on purchase of new vans. The directors are glad to inform that the Company is producing "Extruded" Zinc Cans, in place of soldered Cups.

At the Extraordinary General Meeting of the Company, held on 11th June, 1958, the shareholders authorised the Board of directors of the Company to negotiate with and enter into an agreement for technical collaboration with such foreign concern of battery manufacturers who would aid the Company in the matters of technical advice and supply of know-how. The directors inform that the agreement is on the point of finalisation with one of the foreign concerns of battery manufacturers.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,97,680	Block ...	12,32,014
Reserves ...	4,61,996	Stock-in-trade	15,68,283

		Debts, deposits and advances ...	9,97,783
		Investments	4,202
		Cash ...	1,05,827
Rs.	46,37,798	Rs.	46,37,798

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year (including items relating to previous years) after providing for depreciation was Rs. 5,94,020 (Rs. 3,10,691). From this amount is deducted the balance brought forward from 1956 of Rs. 2,16,238 (Rs. 5,26,929) leaving a credit balance of Rs. 3,77,782 (debit of Rs. 2,16,238). Out of this total the Board has transferred Rs. 2,00,000 (*nil*) to general reserve, leaving a balance of Rs. 1,77,782 available for distribution which it is recommended be dealt with as follows:—

To payment of a dividend of 20 (*nil*) per cent. absorbing Rs. 1,00,000 (*nil*) leaving a balance to be carried forward of Rs. 77,782 (debit of Rs. 2,16,238).

As a result of the carry forward of tax losses, the Company has no liability to tax on the profits of the year 1957. In consequence the proposed dividend will be liable to income-tax in the hands of the members. The Board has taken this into account in recommending the dividend.

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against the current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—The demand and production of electric motors and switchgear continued to increase during the year. Motor sales were mainly responsible for the increase in turnover

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	6,87,597
Reserves ...	3,06,358	Capital expenditure on buildings under erection ...	56,430

Profit and loss account ...	77,782	Work-in-progress ...	6,95,029
		Goods-in-transit ...	1,41,451
		Debts, deposits and advances ...	12,17,729
		Investments	2,000
		Cash ...	4,826
Rs.	47,82,900	Rs.	47,82,900

Polychem Ltd.

The directors of the above Company (Chairman: Mr. Ramdas Kilachand, Bombay) submitted the audited accounts of the Company for the period 1st January 1957 to 31st March 1958. The accounts are for a period of fifteen months as the directors thought it advisable that the annual closing date of accounts should be the 31st March of each year.

A second call of Rs. 10 was made on 80,000 redeemable 7½ per cent. taxable cumulative first preference shares of Rs. 50 each thus making them fully paid. The amount of the call was Rs. 8,00,000 and was payable on 15th May 1957. The total amount of Rs. 7,84,410 has been received upto date in respect of this call.

During the period under report, the Company has made a profit of Rs. 4,47,404 (Rs. 67,790 for 12 months ended 31st December 1956) after providing for depreciation of Rs. 3,46,866 (*nil*). To this has to be added the sum of Rs. 67,790 being the balance carried forward from the last period making a total of Rs. 5,15,194 which the directors propose to appropriate as follows:—

For transfer to plant development rebate reserve fund Rs. 12,000 (*nil*), for provision for income-tax for the period ended 31st December 1956 Rs. 47,000 (*nil*), for writing off preliminary expenses carried forward as per last balance-sheet Rs. 76,201 (*nil*) and for payment of dividend on 7½ per cent. taxable cumulative first preference shares for the period ended 31st December 1956 Rs. 1,08,750 (*nil*). This leaves a balance of Rs. 2,71,243 which is proposed to be carried forward to the next account. No provision has been made for income-tax on profits of the current year nor for wealth tax as the Company is not liable for payment of the same during the period under report.

The Plant commenced production in May 1957 and has been working satisfactorily. The *Polystyrene* produced by the Plant is marketed under Dow's Trade Mark, "*STYRON*" and has been very well received by the Customers. Coloured *STYRON* products of the Company are becoming more popular and their production is being augmented as early as possible to enable the Company to cope with the increasing demand for the same.

The Plant had to be operated at only 50 per cent. to 60 per cent. of its rated capacity as the offtake was poor due to very large stocks of previously imported material lying in the country. The necessary equipment for a Distillation Unit for distilling *Styrene Monomer* has been ordered and the installation of the Plant is expected to be completed by the end of this year.

Due to growing demand for plastic sheets, the Company is installing a *Sheeting Plant* which is scheduled to go into production during the course of this year. This will also increase the consumption of *Polystyrene* which in turn will help to achieve the Company's objective of running the Plant to its rated capacity. The Company maintained adequate stocks of imported raw materials during the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	79,83,825	Block ...	45,71,517
Reserves ...	12,740	Stock-in-trade	38,60,476

		Cash ...	4,917
		Miscellaneous expenditures and losses	1,79,998
Rs.	1,00,16,644	Rs.	1,00,16,644

Straw Products Ltd.

The directors of the above Company (Managing Agents: Messrs: J. K. Agents Private Ltd., Bhopal) present the audited accounts of the Company for the year ended 31st December 1957.

The working result of the Company, after meeting all the expenses and charges and taking into account bonus to workers and staff, provision for depreciation, remuneration to directors and commission to the Managing Agents, shows a net profit of Rs. 3,96,306 (Rs. 12,78,902) to which is added the credit balance brought forward from the previous year of Rs. 82,406 (Rs. 16,003) making a total of Rs. 4,78,712 (Rs. 12,94,905). The directors have appropriated from this amount provision for taxation amounting to Rs. 2,88,000 (Rs. 3,75,000) leaving a balance of Rs. 1,90,712 (Rs. 9,19,905). This amount the directors recommend to be disposed of as under:

To pay dividend at Re. 1.25 (*Re. 1.25*) per share equivalent to 12½ (12½) per cent. free of tax absorbing Rs. 1,87,500 (Rs. 1,87,500) and leaving a balance to be carried forward of Rs. 3,212 (Rs. 82,405 after placing Rs. 6,50,000 to general reserve).

The production and sale of the Company's products have been satisfactory. Relation with labour continue to be cordial. The erection of the *New Cylinder Mould Machine* was completed and it went to commission during the year under report. The extension of the Fourdrinier Machine was also finished.

Accounts in brief are as under:—

ORISSA CEMENT LTD.

(*Concluded from page 352*)

expressing my thanks to the large number of shareholders who have written to me to convey their appreciation of the rapid progress which your Company has made in the brief span of its existence, and their satisfaction at the results achieved in the year under review. I am greatly heartened by these messages of appreciation and confidence.

"Before I conclude, I would like, on your behalf and on my own, to thank all the executives, staff and workers for their keen interest and hard work which have not only led to the good results achieved by your Company for the year under review but also contributed materially towards the setting up of the new refractories project which it is hoped will be completed shortly."

N.B.—The above extract of the speech does not purport to be the report of the proceedings of the Eighth Annual General Meeting of the Company held on 16th August 1958.

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books will now be closed from 27th September 1958 to 25th October 1958, both days inclusive, and not as previously published.

By Order of the Board.
K. M. WILCOX,
Secretary.

KANPUR, U.P., 21*st August* 1958.

MONEY EASIER

(From Our Own Correspondent)

BOMBAY, *27th August*

The short-term money market is easier than a week ago, as the lendable resources of banks expanded further in the face of falling demand for credit. Inter-bank call money has come to be quoted at 2 per cent., though in the mornings, before the clearing hours, some borrowers are found at 2½ per cent. Many banks say that, after the clearing, inter-bank money at call is practically unlendable even at 2 per cent. Because of a surfeit of funds, banks are not keen to take up House money repayable on demand. With interest rates in London having fallen and with foreign trade slackening, some of the Exchange banks have begun to offer for House money ¼ per cent. less than the Indian banks. It is said that today one big exchange bank was unwilling to pay anything more than 3¼ per cent. for House money. The representative rate for this money is, however, 3½ per cent., though there are still some needy banks which are prepared to offer even 3¾ to 4 per cent. There is not much change for term deposits. One to four months' money earns 3½ to 4 per cent., the former rate being more common than the latter. A slightly higher rate, 3¾-4 per cent., can be had for six months' deposits.

The fact that the market is more easy than last week is clearly reflected in the response to this week's Central Treasury Bills. As against an invitation for Rs. 3 crores, the applications were Rs. 6.60 crores; in the previous week, the amount offered was only Rs. 5.29 crores, as against Rs. 4 crores invited. Tenders at Rs. 99.365 and above were accepted in full and those at Rs. 99.364 allotted approximately 20 per cent. Lower tenders were rejected. The average rate of accepted tenders was 2.520 per cent. per annum. This is slightly lower than 2.561 per cent. in the previous week, though a bit higher than 2.513 per cent. a fortnight before. The amount invited for the coming week also is Rs. 3 crores. This shows that, though the response was very impressive, the authorities do not wish to raise it to Rs. 4 crores. This is understandable, in view of the two new loans issued by the Government of India today for an aggregate sum of Rs. 60 crores.

A sharp fall of Rs. 20.71 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 22nd August 1958. Since there has been a rise of Rs. 7.46 crores in notes held by the Banking Department, the contraction in the total notes issued is only Rs. 13.24 crores. This has been adjusted on the assets side of the Issue Department of the Bank by a reduction of Rs. 14.90 crores in rupee securities and an increase of Rs. 1.66 crores in rupee coins. There has been no change in foreign securities. But, as balances held abroad in the Banking Department have fallen by Rs. 4.77 crores, the total external reserves have come down from Rs. 194.53 crores to Rs. 189.76 crores. The deposits of the Central Government have declined by only Rs. 90 lakhs to Rs. 62.69 crores, while those of other Governments have risen by Rs. 8.49 crores to Rs. 25.31 crores. Indicative of the easier conditions in the money market is the rise of Rs. 11.07 crores in the deposits of banks which now stand at the impressive level of Rs. 106.35 crores. There has been a fall of Rs. 31.27 crores in other deposits. Loans and advances to Governments have fallen from Rs. 15.44 crores to Rs. 12.78 crores. Similarly, "other loans and advances" are down by Rs. 1.63 crore at Rs. 49.89 crores. Of these advances, loans to Scheduled banks against usance bills are no more than Rs. 1.93 crore, a drop of Rs. 1.35 crore over the week. A year ago, banks' borrowings against usance bills were Rs. 37.04 crores.

During the week ended 15th August 1958, the demand and time deposits of Scheduled banks gained Rs. 2.42 crores and Rs. 6.42 crores respectively. The total of time deposits on that day stood at Rs. 816.32 crores and of demand deposits at Rs. 717.42 crores, the total net deposits being Rs. 1,533.74 crores. Inter-bank borrowings from banks were lower by Rs. 2.07 crores and so also those from the Reserve Bank by Rs. 2.23 crores. There was an aggregate fall of Rs. 8.07 crores in bank credit, but an increase of Rs. 7.78 crores in investments in Government securities. The total cash holdings of the banks also improved by Rs. 3.69 crores.

The outstanding development of the week pertaining to the Gilt-edged market was the creation of two new issues by the Government of India for an aggregate sum of Rs. 60 crores. Both the issues carry interest at 3½ per cent.; one represents a further issue of 3½ per cent. National Plan Bond 1967 for Rs. 30 crores; this is the third series of this loan and its issue price is placed at Rs. 98.80. The second issue is a new loan repayable in 1968, the issue price being Rs. 98.50. The amount of this issue is Rs. 30 crores. Both the issues have been initially taken up by the Reserve Bank but would be made available to the public through the usual procedure for sale of special issues at ruling market prices.

The official announcement pertaining to the above issues was made late on the evening of the 26th inst. Today, the Reserve Bank is reported to have sold a part of these new issues at the same prices at which it took them over from the Government.

The Gilt-edged market continued to be bright. The new issues have had no significant effect on the market either way, as they had been fully anticipated. The trend was firm. Over the week, 3 per cent. 1986 Conversion Loan has gone up 50 nP to Rs. 72.20 and the 3 per cent. non-terminable by 40 nP to Rs. 72.00. The short-term loans have gained 10 nP and the medium-dated loans 15 nP. Thus, 3½ per cent. loans repayable in 1963 and 1964 have come to be quoted at par. There has been a small rise of 5 nP in some of the long-dated loans. The Reserve Bank was a seller in 4 per cent. 1972 at Rs. 100.45 and also in 4 per cent. 1973 at Rs. 100.25; a week ago, these loans were quoted at Rs. 100.40 and Rs. 100.15, respectively.

All State loans also were in good demand at hardening rates, the appreciation during the week varying from 4 annas to 8 annas.

In the foreign exchange markets, sterling was a shade easy. The spot rate in New York fell from $2.80½-2.80.9/16 to $2.80.5/16-2.80⅜. Three months' forward also lost 3/16 of a cent, the closing rate yesterday being $2.79⅜-2.79.7/16. In consonance with this variation in the value of sterling in New York, the rupee weakened in terms of U.S. dollar. The banks' selling rate for ready dollars increased from Rs. 477 to Rs. 477.50 and their buying rate from Rs. 473.75 to Rs. 474.

BULLION RECOVERS AT CLOSE

(From Our Own Correspondent)

BOMBAY, *27th August*

The bullion market ruled easy during the major part of the week under review but staged a recovery today. Gold was particularly subdued, thanks to offerings by Delhi and Calcutta operators. There was also some unloading by bulls following high carry-over charges and rumours of sizable arrivals of contraband gold. Consequently, prices suffered a setback. Today, however, a recovery was in evidence aided by replacement buying. The recovery was, of course, not marked enough to make up the earlier losses, so that the closing rates were lower than those at the end of last week.

Silver encountered selling in the earlier sessions, on reports of continued arrivals in North Indian centres on a fairly large scale and on news regarding payment of duty on 80,000 Tibetan coins. Prices, as a result, tended to decline. The downward trend was halted on Monday when, owing to buying support induced by expectations of enlarged demand for the metal in the coming weeks following favourable monsoon, prices staged a recovery. The rise gathered further momentum yesterday and today.

Forward silver (*Shravan* second settlement), which stood at Rs. 184-12 last week-end receded to touch Rs. 183-15 on Monday. Thereafter, it gradually recovered to Rs. 184-13 today before finishing lower at Rs. 184-11. The *Bhadrapad* settlement, after declining from Rs. 185-10 to Rs. 185-5, moved up to close at Rs. 159-9.

Ready silver fell from Rs. 184-8 last week-end to Rs. 183-14 on the 25th inst. Subsequently, it recovered, today's closing rate being Rs. 184-11. The floating stocks of silver are estimated at 900 bars. The daily average arrivals were 11 bars, while offtake was 9 bars per day on an average.

Gold for forward delivery (*Shravan* second settlement), which had touched the highest level of Rs. 109-2 last week, encountered selling and came down to Rs. 106-12-6 on Monday. Today, it was quoted at Rs. 107-8. The *Bhadrapad* settlement declined over the week from Rs. 108-4 to Rs. 107-11.

Ready gold receded from Rs. 108-13 to Rs. 106-13-6 before finishing at Rs. 107-14. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 5,000 tolas, while offtake was of the order of 3,600 tolas.

The prices of silver in London and New York were unchanged at the previous week's levels, as indicated in the table below. Gold prices in London, however, gave way from 250s. 3*d.* to 250s. before recovering to 250s. 2*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	27-8-58	Highest	Lowest	20-8-58
	Rs. a.	Rs. a.	Rs. a.	Rs a.

KIPS WELL SUPPORTED

(From Our Own Correspondent)

MADRAS, *25th August*

There were more enquiries for kips from the U.K., but shipment business continued to be difficult because prices locally for F.A.Q. cow hides were 2*d.* higher than U.K. levels. A few sales of tanners marks were reported at last prices. Arrivals of F.A.Q. cow hides were better than usual, while offtake was restricted on account of price. Demand for lower grades in cow hides and cow calf was good, and arrivals were taken up for inland trade at 5 per cent. above U.K. importers' ideas. Enquiries for buff calf were brisk but tanners had no stocks to offer, being the offseason.

Prices of tanned goat skins were firm and of sheep steady. There was good clearance of medium class sheep by shippers. Arrivals of common sorts in goat and sheep skins were small. The raw markets ruled firm.

The results of the London Public Sales which commence today are awaited with interest.

JARILLA AUGUST EXPIRES

(From Our Own Correspondent)

BOMBAY, *27th August*

The last hedge contract of the 1957-58 season, namely, I.C.C. Moglai Jarilla August 1958, went off the board on the 25th inst. at Rs. 649 (excluding the penalty charge for non-delivery). The contract, it may be recalled, started its career on 3rd April at Rs. 672.50 and, after rising to a peak of Rs. 694.50 on 3rd July 1958, touched the lowest rate of its career of Rs. 645.00 on 22nd August. Subsequent trading in the contract was very dull. Tenders against the contract were comparatively small, being only 4,800 bales comprising M.P. Jarilla 150 bales, Khandesh Jarilla 600 bales, Vijay 650 bales, 320F 150 bales, Buri American 800 bales, Jaydhar A 1,250 bales, Jaydhar B 750 bales, Laxmi A 300 bales, Laxmi B 100 bales and Cambodia 50 bales.

While the August contract thus quietly finished its career, the new crop contract, namely, I.C.C. Moglai Jarilla March 1959, depicted a distinctly easy trend during the week. Favourable weather and satisfactory crop progress indicated the possibility of a good crop in the new season. This, together with the higher end-season stocks and the prospect of a substantial inflow of foreign cotton, following the recent import quota, pointed to a comfortable supply position in the new season beginning on 1st September next. Operators, therefore, took a very cautious view of the cotton situation. Even erstwhile bulls were reluctant to extend support to the market. Sentiment was further affected by the downward trend of mill consumption of raw cotton and the bleak textile outlook. Vague rumours of a possible reduction in export duty on its cotton by Pakistan induced fears of keener competition from Pakistan. There were also rumours that the Government of India would issue another export quota. It, however, failed to impart strength to the market.

There was no business in I.C.C. Moglai Jarilla August 1958 on the opening day of the week, namely, Thursday. The contract opened at Rs. 645 on Friday and improved slightly to Rs. 649 the next day. It expired at that rate on 25th.

I.C.C. Moglai Jarilla March 1959 commenced the week at Rs. 667.50, as against the previous closing of Rs. 667. It met with sustained selling and declined to Rs. 659.50 yesterday. Opening higher at Rs. 663 today, the contract improved fractionally before closing lower at Rs. 661.50. The net loss over the week was Rs. 5.50.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	27-8-58	*High*	*Low*	20-8-58
I.C.C. Moglai Jarilla (August 1958) ...	*649	649	645	649
I.C.C. Moglai Jarilla (March 1959) ...	661.50	668	658.75	667

*On 25th August 1958.

In the spot section also, prices were easy. Mill demand continued to be on a restricted scale. Mill enquiries were noted for Jaydhar, Laxmi, Khandesh, Kalyan, etc.

In the export section, foreign demand had not revived to any appreciable extent. Shippers made moderate purchases of Kala, Wagad, *Deshi* and C.P. II against previous sales to China. Japan's response to the recent quota was not encouraging. Belgium and France, however, were interested in Dholleras. America was said to be interested in lower grade Bengals. But stocks with shippers were mainly composed of Bengal superfine. Exporters were expecting renewed demand from Japan following the exchange allocation for cotton import reported to have been made recently by the Japanese Government.

In the foreign section, activity was mainly confined to Sudan cotton. Sustained business was reported in certain Sudanese styles. East African and Egyptian varieties also evoked some attention.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end quotations:

Bengal *Deshi* 625 (635); Berar Jarilla 700 (710); Khandesh 765 (770); Vijay 880 (885); Hubli Laxmi 1,020 (1,030); Jayadhar 910 (925). *Delivery contracts:* Bengal (Fine) 590 (592); Mathia 612 (615).

Cheerful conditions prevailed in the Karachi cotton futures market during the week. Rumours of a possible reduction in export duty on cotton, which would make Pakistan cotton competitive with Indian growths, imparted strength to the market. Export enquiries also were encouraging N.T.R.G. January improved from Rs. 78-13 last week-end to Rs. 79-5-6. The March contract met with sustained buying and spurted from Rs. 78-3-6 to Rs. 79-10-6 at close.

Exports from the commencement of the season, that is, 1st September 1957, to 13th August 1958, aggregated 670.883 bales, as compared with 754.425 bales during the corresponding period in the previous season.

The Alexandria cotton futures market was subdued during the week under review also. Prices showed a declining trend. The expected reduction in export duty on Egyptian cotton did not materialise. Increased competition from Sudan and reports of excellent crop progress discouraged support. Overseas enquiries were few and far between. Profit-taking and hedge selling led to a fall in prices. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: November 75.10 (75.80); January 75.15 (76.15). *Ashmouni*: August 65.35 (66.85); October 67.65 (68.18).

The Liverpool cotton futures market ruled easy during the week. The easiness was due to liquidation by American interests in Liverpool, which was prompted by the passing of the U.S. Farm Bill by

the Senate. The Bill, as is common knowledge, provides for lower support prices and larger acreage. Fears of a probable increase in the U.S. cotton export subsidy rate adversely affected buying sentiment. Easier advices from the yarn and cloth market imparted further weakened sentiment. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates:

American cotton one inch staple contract: October-November 23.50 (24.03); December-January 23.80 (24.25); March-April 23.85 (24.35); May-June 23.90 (24.38). *American cotton mixed growth contract*: October-November 24.20 (24.68); December-January 24.25 (24.70); March-April 24.35 (24.65); May-June 24.30 (24.60). *Sudan*: September-October, November-December, January-February 30.00.

Cotton futures values in New York suffered a setback during the week. The Senate's approval of the Farm Bill providing for lower support prices and higher acreage touched off a wave of selling which led to a sharp fall in prices. Continued favourable crop news and larger-than-expected ginning figures accelerated the downward trend of the market. Even reports of heavier entry into the Government loan failed to lift values.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	26-8-58	19-8-58	12-8-58
Spot	36.30	36.40	36.40
October	35.35	35.53	35.72
December	35.70	35.89	36.02
March	36.00	36.30	36.25

YARNS WEAK

(From Our Own Correspondent)

BOMBAY, 27*th August*

There was a landslide in yarn prices during the week under review. This was due to considerable selling pressure let loose by fears of heavy arrivals of imported yarn in the coming months. The fears were based on reports that actual users of art silk yarn had placed substantial orders with foreign countries against import licences received by them recently and expectations of relaxation in import policy following prospects of enlarged foreign aid resulting from the discussions now being held at Washington under the auspices of the World Bank. Staple fibre yarns encountered heavy selling and suffered a sharp setback. The selling was prompted by expectations of the Government considering grant of import licences for raw staple fibre to mills spinning staple fibre yarns. Nor were reports from important consuming centres encouraging. In fact, offtake of staple fibre cloth was said to be at a low ebb even at reduced prices. Even the higher prices quoted by mills on account of their inability to secure adequate supplies of raw staple fibre from indigenous manufacturers at reasonable prices failed to have any effect. Cotton yarns continued to remain depressed, owing to the persistent slackness in demand from handlooms and powerlooms.

Thanks to nervous liquidation, staple fibre yarn (40 x 2) October delivery tumbled down by Rs. 32 to Rs. 702. August delivery fell by Rs. 28 to Rs. 696. Spot 40 x 2 Citys dropped 24 nP to Rs. 3.76. Kohinoors were done at 15 nP lower at Rs. 3.94. Centurys retreated by 22 nP to Rs. 3.72 Among foreign yarns, Paramounts were done at Rs 9.44. Fujis, however, elicited some support and gathered 7 nP to Rs. 9.44.

In the art silk yarn section, 120 Japan declined by 46 nP to Rs. 5.91. 150 Japan receded by 18 nP to Rs. 6.44, 120 Italy by 19 nP to Rs. 6.37 and 150 Italy by 25 nP to Rs. 6.50. Among indigenous yarns, National Rayons 150 bright cones first grade shed 19 nP to Rs. 5. 120 bright cones first grade lost 10 nP to Rs. 5.81.

Cotton yarns were subdued. Twenty counts Indus receded by 13 nP to Rs. 16.62. Moderns were neglected at Rs. 16.75. Thirty counts Hinds eased by 13 nP to Rs. 19.62. Among forty counts, Minaxis were quoted 18 nP lower at Rs. 25.19. Moderns were stagnant at Rs. 25.25. Sixty counts Raghuvamshis dropped 50 nP to Rs. 57.50. Finlays decreased by Re. 1.50 to Rs. 58. Among eighty counts, Mahendras shed 50 nP to Rs. 71.50. Moderns, however, put on 50 nP to Rs. 72. Ten counts evoked some support. Moderns advancing by 25 nP to Rs. 13.50 and Podars by 12 nP to Rs. 12.37.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	27-8-1958	20-8-1958
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Japan (per lb.)	5.91	6 37
150 Japan (per lb.)	6.44	6 62
120 Italy (per lb.)	6.37	6 56
150 Italy (per lb.)	6.50	6 75
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 Auronk	696.00	724 00
40 x 2 October	702.00	734.00
40 x 2 Kohinoor (per lb.)	3.94	4 09
40 x 2 City (per lb.)	3.76	4 00
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	12.37	12 25
20s Modern	16.75	16 75
30s Hind	19.62	19 75
40s Minaxi	25.19	25 37
60s Finlay	58.00	59 50
80s Mahendra	71.50	72 00

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 27*th August*

The oilseeds market presented a distinctly bearish trend during the week under review. In particular, castorseeds were depressed, thanks to encouraging crop prospects, following reports of beneficial weather conditions, and absence of stimulating advices from overseas countries. The U.K.'s quotation for commercial quality castor oil in bulk was mentioned lower at £103 per ton, as against £104 a week ago. Groundnuts came in for selling because of favourable weather. Prices would have shown a more marked decline but for short-covering at lower levels. Offerings in spot groundnuts were restricted with values moving narrowly. Linseed encountered selling on account of poor export business. The rate offered by the U.K. interests for linseed oil was not more than £108 per ton, as against £111 prevailing in the previous week and the shippers' quotation of £114. The reports of heavy accumulations of linseed oil in Rotterdam led to some unloading of stocks by shippers. There was also no news regarding Australian enquiry for Indian oil. Some recovery in linseed oil was in evidence today, as a result of scattered bear covering. In sympathy with the general trend and following weak advices from the cotton market, cottonseeds suffered a setback.

Groundnut February 1959 contract, which stood at Rs. 166.75 last week-end, came down on selling pressure to Rs. 163.37 today. August 1958 contract, however, came in for hectic bear covering and forged ahead from Rs. 198 at the close of last week to an all-time peak level of Rs. 204 on Thursday. At higher levels, profit-taking set in and the contract moved down, today's closing rate being Rs. 200.50. In the spot section, Bold ready was quoted at Rs. 40, as against Rs. 39.25. Coromandel and Khandesh quality were both done at Rs. 40, as against Rs. 39.75. Groundnut oil ex-mill declined by 12 nP to Rs. 20.50. Railway receipt lost 25 nP to Rs. 20.12.

Castorseeds September 1958 contract was subjected to selling pressure and fell from Rs. 156.25 to Rs. 152.50 yesterday. Today, however, it was a shade higher at Rs. 152.75. May 1959 contract slided down from Rs. 156.62 to Rs. 151.87, before winding up at Rs. 152.50. Ready Madras dropped 63 nP to Rs. 30.62. Kanpur quality decreased by 50 nP to Rs. 29.50. Castor oil B.S.S. was on offer at Rs. 17, as against Rs. 17.25. Commercial quality declined from Rs. 15.94 to Rs. 15.62.

Linseed September 1958 contract came down from Rs. 33.81 last week-end to Rs. 32 yesterday, but recovered to Rs. 52.50 today. May 1959 contract suffered a loss of 25 nP over the week, today's closing rate being Rs. 32; yesterday, it was still lower at Rs. 31.69. Bold Ready lost 25 nP to Rs. 32. Linseed oil was on offer at reduced prices, the quotation receding from Rs. 17.50 to Rs. 16.62 yesterday. Today, however, it was slightly higher at Rs. 16.87.

Cottonseed September 1958 contract was neglected at Rs. 121 today, as against Rs. 121.50 last week-end. February 1959 contract was subjected to selling pressure and moved down from Rs. 106.50 to Rs. 103.

Among other seeds, kardiseed bold ready was well supported, the rate advancing from Rs. 21.50 to Rs. 22.50 on the 22nd inst. It declined to Rs. 21.50 on the following day, but recovered to Rs. 22.25 yesterday. Today, however, it was again depressed at Rs. 21.50. Over the week, nigerseed Madras quality spurted by 50 nP to Rs. 32.50.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	27-8-1958	20-8-1958	13-8-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	200.50	198.00	163.00
Feb. 1959	163.37	166.75	163.25
Bold ready (per cwt.) ..	40.00	39.25	39.00
Linseed—			
Sept. 1958	32.50	33.81	33.62
May 1959	32.00	31.25	—
Bold ready (per cwt.) ..	32.00	33.25	33.62
Castorseed—			
Sept. 1958	152.75	156.25	156.62
May 1959	152.50	156.62	156.37

SUGAR DEPRESSED

(From Our Own Correspondents)

BOMBAY, 27*th August*

The sugar market continues to rule depressed and there has been a further fall in prices. Several North Indian mills are reported to have made sales of sugar at rates lower than those fixed by the Government. In the Bombay-Deccan region, too, the ex-mill sales put through are at the lowest prices since the year began. Trade circles feel that sugar prices may resume their upward trend immediately after the normal post-monsoon and festival demand emerges in the next fortnight.

Small grain sugar has declined by 50 nP to Rs. 104.50 per bag. Medium grain has lost a like amount to Rs. 105.50-Rs.107-50. Large grain is quoted at Rs. 108-Rs. 115, as against Rs. 109-Rs. 114 last week.

Arrivals of sugar by rail into the market continued to be small; they aggregated 10,600 bags, as against 13,900 bags in the previous week and 20,100 bags two weeks before.

* * * *

HAPUR, 25*th August*

Sugar prices ruled depressed during the week, due to easy supply position and slack outside demand. Some of the factories were reported to be quoting prices even below the controlled price, on account of poor outside support. Lower advices from Kanpur and Muzaffarnagar also aided the market sentiment.

Quiet conditions prevailed in the Muzaffarnagar sugar market during the past week and, barring Gujarat and Saurashtra, demand from consuming centres was dormant. Business for Gujarat and Saurashtra was done in bulk quantity for hold crystal and, as there was meagre demand for small crystal, prices of some of the factories for (D29) and (E29) quality were being quoted below the Government-controlled price. The following were the quotations prevailing in the market:

Crystal retail Rs. 36.50 per maund, wholesale Rs. 100.37 per bag; mill delivery wholesale prices per maund were: Deoband (A28) Rs. 37.37; Iqbalpur (B29) Rs. 37.12; Mansurpur (B29) Rs. 37.12; Lahksar (B29) Rs. 37.12; Mawana (B29) Rs. 37.12; Dhampur (D29) Rs. 35.56; Amroha (D29) Rs. 35.75; Bijnore (E29) Rs. 35.50; Kashipur (D28) Rs. 35.69.

Sugar prices also ruled quiet in the Kanpur market, as demand from consuming areas was slack and prices of sugar in the markets in the South recorded a further decline.

The *khandsari* market presented a quiet trend, as demand was slack. There were reports that many crushers were being installed here and in the rural areas for crushing cane into *khandsari* and *gur* just at the beginning of the new season starting in early October. *Khandsari* was quoted at Rs. 33.50 to Rs. 36 per maund according to quality.

Stocks of dry *gur* had been exhausted here and small arrivals from the rural areas were lifted upto Rs. 24 per maund by consumers. *Kotha* drywet was quoted at Rs. 19.75 and wet at Rs. 19 per maund. The week's offtake was 10,000 maunds and the local stock was put at 27,000 maunds. The condition of the cane crop was reported to be fairly good, due to heavy rains. *Gur* prices ruled quiet in the Muzaffarnagar market due to poor demand and stocks left were poor.

BLACK PEPPER QUIET

(From Our Own Correspondent)

BOMBAY, 27*th August*

Malabar black pepper continued to rule quiet during the week, with narrow fluctuations, both buyers and sellers awaiting new development.

Alleppey and Cochin, after going down to Rs. 587½, improved to Rs. 600, but the business was thin for lack of foreign inquiries. Wide fluctuations on the forward market at Cochin were seen, the highest and the lowest for October and December delivery being Rs. 109 and Rs. 105 and Rs. 105 and Rs. 101, respectively. Calicut was quoted at Rs. 630.

New York, after paying for August shipment at $0.25½, is now reported to be offering at $0.25. Spot having gone down from $0.27½ to $0.26¾, grinders remained sporadic buyers.

Uneasy political situation in the Far East and general expectation of improvement in demand from the U.S.A. after the Labour holidays are responsible for the present unwillingness on the part of Indian exporters to quote lower.

Singapore is reported to be fairly steady, with minor fluctuations. Black and white are quoted at Str. $75 and Str. $126, respectively. Lampong black is also reported to be steady. Though growers in all the primary markets of Malabar Coast are reserved sellers, the second-hands who are holding stock against their hedge sales in the forward ring are off and on coming out to press sales, as foreign enquiries are not forthcoming, as expected earlier. This is said to be one of the reasons why Indian market is ruling quiet at this time of the season, though Lampong and Sarawak are fairly maintained, despite their harvesting season. The other factor that is affecting the trend of the Indian market is the bear pressure on Bombay following the accumulation of tenderable stock.

The future of the market depends upon foreign demand, as also on inland inquiries which are likely to be resumed after the current wet spell is over.

Today's nominal quotations are: Ready delivery Rs. 81 per Bengal maund, September Rs. 555.65 and October Rs. 560.70 per candy of 5½ cwts.

EXPORT TEAS STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 21*st August*

About 721,256 lbs. were offered in the 26th export auction which was held on Tuesday, 19th inst. The quality of teas from the Nilgiris showed a further improvement in quality and there were a number of useful teas on offer. At the other end of the scale, certain low medium and medium teas were disappointing in leaf appearance. The sale opened to a strong general demand, with exporters showing renewed interest.

Low medium and medium brokens met with some support and were irregularly 5 nP dearer, but the equivalent fannings met with some competition and were 10 nP dearer. Best liquoring teas were considerably dearer following quality, and were at times 50 nP up on last week's rates. A small but useful selection of tippy teas found ready buyers at considerably above last rates. There was better demand for whole leaf teas.

The quotations were: Plain B.P. Rs. 1.48; low medium Re. 1.50 to Re. 1.65; medium Re. 1.65 to Re. 1.85; good medium Re. 1.95 to Rs. 2.05; and quality Rs. 2.30 to Rs. 3.95.

London Market: Sale of 18th August 1958:—Market selective. Best stronger, while others irregular.

Sale of 20th August 1958:—Market unchanged.

Colombo Market: Sale of 18th August 1958:—Better brokens irregular dearer. Coloury mediums steady. Light and plain sorts lower. Middle East distinctly dearer.

Sale of 19th August 1958:—Good demand. Useful liquoring sorts firm. Poorer sorts five to ten cents lower.

Calcutta Market: Export:—Good general demand. Commons firm to dearer. Medium Dooars B.O.Ps. and orthodox Assams tendered easier. C.T.C teas 10 to 30 nP lower. Tippy teas sold well.

Internal:—18,600 packages. Dust met with strong general demand. Mediums firm to dearer. C.T.Cs. irregular sometimes dearer. Darjeelings limited support. Coloury descriptions strongest feature. 900 packages internal leaf met with good demand at irregularly dearer rates.

Export Quota:—The market during the week has shown a slight decline, with business being transacted at 10½ nP. The market during the past two days has shown a decline, and business has been done in Calcutta at 9 nP. The latest quotation is sellers 9 nP and probable buyers at 8½ nP.

Forthcoming Auctions:—Sale No. R will be held on Friday, the 29th inst.

QUALITY TEAS DEARER

(From Our Own Correspondent)

CALCUTTA, 26*th August*

With fair demand, quality teas were dearer during yesterday's export auctions.

Last week's internal sales, when dusts on offer aggregated 18,495 chests, witnessed stronger demand for all descriptions. Prices of mediums and commons rose, but Darjeelings were only sparingly supported. C.T.C. Assams on occasions gained, but were mostly irregular. The smaller coloury teas were in good demand. The quotations—in rupees per pound—with those of the previous week in brackets were: Best Assam C.T.C. 2.60 to 2.90 (2.55 to 2.85); medium Assam C.T.C. 2.20 to 2.40 (same); medium Assam grainy dust 1.72 to 1.76 (same); and medium Dooars 1.70 to 1.74 (same).

Leaf offerings amounted to 736 chests. They met with good general demand, with prices rising.

Export quota changed hands at 9½ nP, but soon declined to 8 nP.

Sale No. 6 of Pakistan tea was held in Chittagong on the 21st inst., when leaf on offer amounted to 11,740 chests and dusts 3,114 chests and a supplement of 223 chests. In leaf, whole leaf grades and tippy teas gained As. 2. Fannings realised valuations, with the legg-cut teas rising by half an anna. The better liquoring teas were firm, while brokens gave way by an anna to an anna and a half. Green teas on offer aggregated 820 chests which met with receptive demand. Rates quoted in rupees per pounds were: Pekoe 2-12-6; B.O.P. 2-9 to 2-9-6; O.F. 2-14-6 to 2-15; P.F. 2-8 to 2-8-6; and B.P. 2-6 to 2-6-6.

In dusts, prices gained by an anna to an anna and a half, with the strongest features recorded being better liquoring and popular varieties. Plain Sylhet dust was quoted at Rs. 2-9 per lb.

On offer at the next sale on 3rd September would be 13,135 chests and 2,645 chests of leaf and dusts, respectively.

In the export sale held yesterday, 54,660 chests were on offer. General demand was good, with medium orthodox Assams possessing bright liquors being a strong feature. However, an irregular tendency was recorded by the poorer liquoring teas with B.O.Ps and O.Fs giving way by 10 nP to 15 nP. Opening easier, plain brokens closed on a firm note, and fannings of the same type tended to move up. The best C.T.Cs on offer sold well, but the remainder of this kind fell by 10 nP to 30 nP. Legg cut teas were weaker by 5 nP to 10 nP. Whole leaf grades also eased as also Darjeelings. The rates were: Best Assam C.T.C. fannings Rs. 3.50 to Rs. 3.80; best Assam C.T.C. B.P. Rs. 3.20 to Rs. 3.40; clean black pekoe Rs. 2.10; medium fannings Rs. 2.05 to Rs. 2.15; medium B.P. Re. 1.85 to Re. 1.95; plain fannings Re. 1.84 to Re. 1.90; and plain B.P. Re. 1.70 to Re. 1.74.

Export quota changed hands at 9 nP, rising subsequently to 9¼ nP.

JUTE GOODS EASY

(From Our Own Correspondent)

CALCUTTA, 26*th August*

Prices of both jute goods and raw jute recorded a decline during the week under review. Only very little business was done in jute goods, and shippers took the advantage of lower prices. However, their support was negligible and did not have any effect on prices. There was selling pressure in the futures market, and that was the main reason for the decline. Although after the establishment of the present regulated futures market, a better trend in the movement of prices was gradually setting in, prices, especially of heavy goods, suffered wide fluctuations, thereby affecting prices of hessian as well as miscellaneous goods. B. twills seldom reach the floor as recommended by the Indian Jute Mills Association, and when once they reach the minimum, their fall is quick.

Such frequent rises and falls in prices of heavy goods, which affected prices of other constructions also, were possibly in the mind of Mr. H. L. Mehta, when he said on Friday last, presiding over the annual general meeting of the Gunny Trades Association here, that stability in prices was keenly looked for by the foreign buyers who, he added, were prepared to pay even a little more for price stability. Wide fluctuations in prices embarrassed both the seller and the buyers. The figures relating to output for July clearly showed that the percentage of hessian produced in relation to heavy goods increased. It was expected that during this month the increase would be more marked. Market circles, therefore, hoped that with a better balancing of output as between hessian and sacking, B. twills should touch and remain at the floor price. For, the stock and output figures of mills affected market sentiment deeply, and influenced foreign buyers also.

On Tuesday last, selling pressure in the futures market was so heavy that ready B. twills were offering at Rs. 97.90 as against Rs. 99 on the previous day. Ready hessian 40" 10 oz. gave way to Rs. 42.70 from Rs. 42.95. Foreign buyers were in no hurry to enter the market, since they thought that with the efforts in the U.N., the Middle East crisis has lost its import in terms of a world conflagration and that the Red Chinese activity around the Quemoy island was only a reminder that the Formosan issue should not be treated as dead. With foreign buyers taking the view that prices would come down, futures trading was under more selling pressure. On Wednesday, B. twills gave way to Rs. 97.55 and hessian 40" 10 oz. to Rs. 42.60. However, some covering business was soon done, but it was not of such a degree as to arrest the decline. So, B. twills on the next day lost to Rs. 97.35, while hessian 40" 10 oz. was fractionally better at Rs. 42.10. It was noted that hessian shipped upto the middle of this month was slightly higher at 21,000 tons, while sacking shipments at 16,300 tons recorded a small decline. On Friday, there was more covering business done in hessian, and in heavy goods some business was done on Australian account. Hessian 40" 10 oz. improved to Rs. 42.70, while B. twills continued to decline and touched Rs. 97.00. Over the week-end, there was no change in conditions with B. twills being priced at Rs. 97.05 and hessian 40" 10 oz. at Rs. 42.60. With little activity in the futures market, prices were again affected yesterday. Hessian 40" 10 oz. gave way to Rs. 42.40, while B. twills were somewhat steady at Rs. 97.00. In the futures market, August Hessian 40" 10 oz. declined to Rs. 41.78 from Rs. 42.62, and August B. twills to Rs. 96.60 from Rs. 97.55.

Raw jute prices gave way. Mills were interested in purchasing small quantities only. Reports of flooding and damage to crop did not arrest the decline in prices. For, the earlier reports of plentiful crop were so firmly established that mills could not be stirred to activity, without regard to conditions in the jute goods market. Latest quotations of the new crop are:

TIN MOVES DOWN

(From Our Own Correspondent)

CALCUTTA, 26*th August*

The feature in the metal market during the week under review was the gain in the price of electrolytic zinc from Rs. 66.50 to Rs. 67.50. The gain followed the tender of Tatas for 2,000 tons. But for this, the demand for the metal was small. In fact, in both New York and London, zinc recorded a declining trend. Locally, shortage of copper supplies restricted demand. The delay in the issue of permits for copper to scheduled industries was causing considerable difficulty, while it was noted that, on the London Metal Exchange and in the New York market, the price was moving up again. Tin eased from Rs. 570 to Rs. 567.50. Demand was dull. From Rs. 69, lead declined to Rs. 68.50.

With the U.S.S.R. keeping out of the International Tin Agreement and with Russia and China continuing to offer tin in London, trade circles feel that the Agreement can remain effective only so long as the Buffer Manager in London purchases Soviet tin at the support price. The Buffer Manager is reported to have already purchased a fair quantity. How long can the purchases be continued is, of course, anybody's guess. Considering Russia's reported unwillingness to join the International Tin Agreement, operators are anxious to see how the price will be stabilised in world markets. Practically, the value of the Agreement is becoming less and less, and it would not be a surprise if the producing countries to the Agreement were to decide on further restriction on exports in a final bid to counter Russian attempts.

LINSEED LISTLESS

(From Our Own Correspondent)

CALCUTTA, 25*th August*

There was very little activity during the week. Towards the close, however, there was a slight weakening in prices, but supplies were still very scarce. Very few crushers are operating at present and those that are working do so on a restricted scale and are unable to cover their crushing costs. With sellers of seeds reserved and buyers for oil pausing, business was negligible. The overseas market declined, thus causing the disparity in Indian prices to widen still further. Latest quotations are as follows: Ready August Rs. 25-12 and September Rs. 25-8 per maund.

HIDES AND SKINS UNCHANGED

(From Our Own Correspondent)

KANPUR, 26*th August*

During the week under review, the condition of Kanpur hides and skins market was unchanged. Fresh supplies, however, were not as considerable as during the previous week. Rains affected transport. Madras dealers were keen buyers of fresh goat and sheep from the butcheries. The main purchasers were the local tanners. Latest quotations are as follows:—

Wet salted cow 1st grade Rs. 320, 2nd grade Rs. 260 and 3rd grade Rs. 200 per score. Wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee. Goat 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces. Sheep 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 150 to Rs. 175 per 100 pieces.

FOODGRAINS RISE FURTHER

(From Our Own Correspondent)

HAPUR, 25*th August*

The rise in foodgrain prices continued unabated during the week under review. The Union Food Minister admitted in the Lok Sabha that the food situation in many parts of the country was difficult and that prices had risen much beyond the levels prevailing last year. The next six to eight weeks, he said, were going to be difficult and the Government was trying to counter this largely by supplying grains to deficit areas from Central reserves. According to the Minister, a new agreement for import of wheat was expected to be concluded soon with the United States. Import of 2.0 million tons of wheat and 530,000 tons of rice in 1958-59 had been budgeted for and arrangements had been made for shipment during the current financial year of 1,292,000 tons of wheat, 223,000 tons of rice, 100,000 tons of milo and 25,000 tons of maize. The Government's future food policy is to maintain zonal restrictions on the movement of foodgrains and to continue credit control. A number of fair-price shops are also to be maintained and the Government will continue supply of wheat to roller flour mills and future trading in foodgrains will remain banned.

Wheat prices at Hapur continued to rise to touch a new height of Rs. 23 per maund for average quality and Rs. 24.25 for farm produce. Daily arrivals from rural areas were scanty and sales through fair-price shops aggregating 100 maunds daily failed to check the rising trend, as this quantity offered was far below the requirements. Wheat stock with the trade was nominally put at one *khatti* and a small quantity put in bags was stored here which was brought here from outside the State by road.

Kharif, maize and *juwar* crop prospects have been marred in some of the west U.P. districts, due to abnormally heavy rains last month. As waterlogging still continues over wide area, the preparation of land for *rabi* sowings has been delayed.

Rice prices, however, ruled quiet, thanks to good crop prospects of paddy crops, due to heavy rains. The latest prevailing prices here are:—*Basmati sela* Rs. 40 to Rs. 42; mainpuri Rs. 30; coarse quality Rs. 26.25 per maund.

Firm Punjab advices and good consumer demand accounted for the sharp gains in gram prices. Stocks with trade are fast moving down. Most of the State Government-sponsored gram has already been despatched to east U.P. Barley and *bejhar* prices continue to be firm, due to good demand in the face of poor stocks. Maize arrivals have not yet begun, although harvesting of early sown crop has begun in some areas. *Jowar* and *guwar* prices ruled quiet in the absence of ready demand. The latest prices on Monday (in rupees per maund) were:—Gram 16.50 to 16.62; barley 16.25; *bejhar* 16.12; *jowar* 13 to 15; *guwar* 14.75.

Brisk east U.P. and Bihar demand and the consequent heavy offtake led to appreciable gains in the prices of peas during the week. The local stock was put at 108 *khatties*, as against 125 *khatties* last week-end. *Arhar* also continued steady, although outside support was dormant, as prices were mostly influenced by the bullish trend in peas prices. Other pulses were steady. The week-end prices (in rupees per maund) were: Peas *dara* 15.12; *khatti* 15; farm quality 16; peas *dal* 16.12; *arhar* 18.12; *arhar khatti* 18; *arhar dal* 23; *urd* 19 to 19.75; *moong* 25; *massoor* 15.50.

Towards the week-end, there were heavy showers. The preparation of land for *rabi* sowings has been delayed. Further waterlogging in low-lying areas has also been responsible for hampering tilling operations.

The Joint Committee of Parliament on the Merchant Shipping Bill has, in response to the virtually unanimous demand of Indian shipowners, reduced the proportion of permissible foreign participation in the capital of Indian shipping companies from 49 per cent. to 25 per cent. Under the new definition of "Indian ship," if the ship is owned by an individual, the entire ownership must vest in Indian hands. And, if it is owned by a company, at least 75 per cent. of the share capital should be held by Indian citizens. Again, not less than three-fourths of the total number of directors should be Indian citizens, while the chairman of the board of directors and the managing director, if any, should be Indians. The managing agents of the company should be Indians, or, if the managing agents are themselves a company, such company should be predominantly Indian. Finally, the principal place of business of the shipping company should be in India. The reduction in the permissible share of foreign capital participation, together with other reductions on management, proposed by the Committee in its definition of "Indian ship," will certainly discourage any possible inflow of foreign capital into the shipping sphere where overseas capital and know-how could be of great assistance in speeding up the rate of progress achieved so far. It might have at least accepted the modest formula for capital structure (60 per cent. Indian and 40 per cent. foreign) suggested by Mr. Akbar Ali Khan who rightly thought that the formula would effectively safeguard national interests and at the same time give suitable encouragement to foreign investment and speedy development of Indian shipping.

The Committee has, however, done well to provide for the setting up of a non-lapsable development fund and entrust its administration to a corporate body to be called Shipping Development Fund Committee. The fund may be utilised for giving loans and financial assistance to shipping companies for the acquisition and maintenance of ships. It has also provided for the establishment of a National Shipping Board. This body, it is stated, will advise the Central Government on matters relating to Indian shipping, including its development, and on other matters arising out of the Bill. In the absence of the full text of the Select Committee's report which is not available at the time of writing, it is not clear whether the functions of these two bodies will not overlap at some stages. In any case, these two bodies, if they are energetic and work in co-operation, would be able to accelerate the growth of shipping on sound lines.

• • • •

The firmness of the world copper market noted in the past fortnight has since abated. In fact, the market is now distinctly easy. Cash copper in London is quoted at £230¾, as against £207¾ a week ago and £210 two weeks ago. This setback has been brought about by two important factors. First, the U.S. House of Representatives has finally rejected the Minerals Stabilisation Bill providing for a programme to stockpile 150,000 tons of copper. Secondly, the Western division of Kennecott Copper, which accounts for the Company's entire U.S. production, has announced its decision to augment copper output by 33⅓ per cent. as compared with the July level, the planned monthly rate of output from September onwards being 29,900 tons. The increase is proposed to be effected by raising the number of working days from five to six and recalling about 750 shift workers. This is the second time in three weeks that Kennecott Copper has added a day to its working week (a total production increase of 50 per cent.).

It is too early to say as to whether the downward trend in world copper prices will gather further momentum. For much will depend on the attitude of the two other leading U.S. producers—Phelps Dodge and Anaconda. These producers have not so far raised their production above the current low level and they are reported to have stated that they have no plan to increase output "in the immediate future." Much will also depend on the extent of orders from Russia following the removal of copper from the embargo list. Considering the large spare capacity available, it would, however, appear that copper prices cannot go up appreciably, unless, of course, demand for the metal picks up on a significant scale.

T.I.S.CO.'S PROFIT DOWN

(*Concluded from page 341*)

The following extract from the Directors' report will enable readers clearly to understand the changes made in the appropriation of profit and in the valuation of stocks:

"The Company's stocks of raw materials and semi-finished and finished products had, during and ever since the last world war, been valued each year on a conservative basis. This was to ensure that, in the event of a post-war fall in prices, the Company would not find itself with large stocks at inflated values. As prices, however, did not fall, but in fact continued to rise from year to year, and as there now seems to be no likelihood of a fall in the foreseeable future, it has been decided to revalue all stocks at cost or market value, whichever is lower, with effect from the year 1957-58. This revaluation resulted in a surplus in the opening stocks of Rs. 186 lakhs which has been transferred to general reserve No. 1 and in an increase in the valuation of the closing stocks of about Rs. 80 lakhs which is included in the profit for the year.

"The large increase of Rs. 143 lakhs over the previous year in the provision for depreciation is due to the completion during the year of some of the new units of plant under the expansion and modernisation programmes. This enhanced provision is necessary, even though these units did not increase the output of finished steel.

"The provision for taxes, including wealth tax, this year amounts to Rs. 90 lakhs as compared with Rs. 342 lakhs in the previous year. The reduction of Rs. 252 lakhs is accounted for mainly by the much higher depreciation and development rebate resulting from the large additions to the block. As, under the current scheme of retention prices, all savings in tax have been absorbed in the price structure, no margin is left for making any provision for deferred taxes.

"No additional provision in respect of development rebate has been made this year as against the provision of Rs. 95 lakhs in 1956-57, because the allocations to the Plant Rehabilitation and Development Reserve under the agreements with Government fulfil the requirements of Section 7 of the Finance Act, 1958.

"Government's decision on the industry's representations for increased retention prices to cover increases in costs has not yet been announced. As the bulk of the increases in costs claimed by the Company is specifically provided for under the Agreement of 23rd June 1955, in terms of which the two-million-ton programme has been undertaken, the Company has, pending the Government's decision, made a provisional adjustment in the accounts for the year 1957-58 for the increase in the retention prices due to the Company.

"The creation of a retention price equalisation reserve was explained in the last annual report. Out of the net amount of Rs. 48.54 lakhs in this reserve, a sum of Rs. 8.82 lakhs, applicable to the increase in costs this year, has been transferred to the profit and loss account. The balance will be absorbed over the next two years."

The financial position of the Company as at 31st March last fully reflects the heavy capital expenditure incurred in connection with the expansion and modernisation of the Company's works. Between 31st March 1956 and 31st March 1957, the balance-sheet total rose from Rs. 74.88 crores to Rs. 98.29 crores, an increase of Rs. 23.41 crores. The latest total stands at Rs. 148.72 crores, the rise over the year being Rs. 50.43 crores, that is, twice as much as that in 1956-57. In Table II of this review, we have given a synopsis of the latest balance-sheet against the background of the two preceding ones. It will be seen therefrom that, on the assets side, the gross block has gone up by Rs. 53.60 crores, and the net block by Rs. 50.25 crores. Other major variations are an increase of Rs. 2.37 crores in stores and of Rs. 4.92 crores in stock-in-trade, a decline of Rs. 94 lakhs in sundry debtors, of Rs. 3.97 crores in loans and advances and of Rs. 2.22 crores in cash and bank balances. On the liabilities side, capital is higher by Rs. 3.37 crores and so also reserves and surplus by Rs. 5.65 crores. Secured loans have jumped up by Rs. 38.69 crores. Similarly, a rise of Rs. 6.87 crores is disclosed by sundry creditors, while there is no significant change in unsecured loans at Rs. 10.55 crores. Thus, secured and unsecured liabilities are up by Rs. 45.56 crores. As against this, there has been a contraction in the tax liability by Rs. 4.60 crores, though the liability on account of the proposed dividend is more by Rs. 23 lakhs.

That, in brief, sums up the principal variations in the financial position of the Company. It may be added that, including the share premium account, since capitalised in May last, the paid-up capital of the Company is Rs. 30.66 crores, as against which there are reserves and surplus of Rs. 24.50 crores. The total of capital and reserves aggregate Rs. 55.16 crores, which is only a little over half—52.3 per cent., to be precise—of the value of net block. Another feature of the Company's financial position is the heavy proportion of borrowings to total assets. Excluding sundry creditors, tax provision, proposed dividends, and retiring gratuity for staff, all of which amount to Rs. 33.36 crores, borrowings alone amount to Rs. 60.18 crores, or a little over 40 per cent. If the other liabilities are taken into account, the total indebtedness comes to Rs. 93.54 crores, equivalent to 63 per cent. of the total assets. The Company is thus heavily under-capitalised and has an excessive amount of borrowings. While the provisions for depreciation and plant rehabilitation in future years will reduce this imbalance to a considerable extent, it will also be necessary for the Company to raise additional capital of a sizable order. The sooner the Company does so the better for its health.

PLANTING

(*Concluded from page 348*)

mainly housewives and handicraft teachers in hundreds of women's institutes.

Of the Board's campaign to promote the increased use of rubber in building, the Report comments: "The Board's aim in this field has always been to impress upon architects in a way no individual firm could do that rubber is a progressive as well as a reliable material whose many uses in the building field are being continually extended." An example of the way this policy was implemented was the publication by the Board during the year of comprehensive information on a number of new uses for rubber connected with concrete construction, including the use of rubber to give a decorative finish to concrete.

Towards the end of the year, the Board began "a major effort" to publicise S. P. rubber developed by the Rubber Research Institute of Malaya. This new form of natural rubber with special processing advantages at once began to arouse the interest of manufacturers all over the world. Another development that attracted special interest was the method of producing hard moulding compositions from modified natural rubbers such as Heveaplus and cyclised rubber. Technical advice was given to a number of manufacturers and potential manufacturers of latex foam, while other matters on which assistance and information was provided including latex bonded fabrics, and the suitability of various types and grades of rubber for a wide variety of different applications.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2477 BOMBAY, 6th SEPTEMBER 1958 PRICE: Re. 1·50

IMPORT AND EXPORT POLICIES

IT is now becoming increasingly clear that the country can have no respite from the rigour of import control, nor can it shirk from bearing the hardships inseparable from a vigorous export drive. The Import and Export Advisory Councils, which met at New Delhi last week-end, produced no ready-made solutions for India's foreign trade problems and promised none. Both the official and non-official representatives recognised, as well as appreciated, the hard realities of an extremely difficult situation, in which national self-denial and additional production and exports must continue to be the accepted policy for a much longer period than was envisaged earlier.

Normally, one would expect in the present crisis a wealth of statistical information about foreign trade. Actually, the country is functioning under a critical statistical black-out. The publication, *Monthly Statistics of Foreign Trade of India*, in its new form, is intended to be informative. Maybe, it is. But it is difficult to distil any sense from this voluminous medley of figures. The former publication which it replaced might have lacked scientific accuracy but it had the great virtue of clarity. Further, the data are not always up to date—the latest issue refers to May 1958—and no comparable figures for previous years are readily available. In other countries with which India wants to compete for trade, statistical publications are clearer and more prompt. Not only are trade figures for a month released almost as soon as the month is completed but the trends in invisible trade and the overall balance of payments position analysed and presented. The Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, himself had to rely on unsatisfactory scraps of statistical information. No coherent account emerged from his analysis. Perhaps, the Government will be well advised to issue a simpler and summarised version every month, at the first instance, and then follow it up by an elaborate publication. This is conducive to winning popular support for official policies. The Government has an obligation to publicise, and the country the right to have, a prompt and complete account of the overall balance of payments position every month.

The latest available complete data refer to 1957-58 when the overall balance of payments position, inclusive of exports and imports of invisible items, was minus Rs. 376.8 crores (excess of debits at Rs. 1,285 crores over credits at Rs. 908.2 crores), as compared with an adverse balance of Rs. 306.8 crores in 1956-57 (excess of debits at Rs. 1,205.7 crores over credits at Rs. 898.9 crores). In recent months, export earnings have fluctuated, though a few traditional items have been able to maintain their position. But, on the whole, average export earnings in the first seven months of the current calendar year are lower at Rs. 42.7 crores, as compared with the average of Rs. 53.6 crores in the corresponding period last year. Thanks to rigorous import control, the rate of withdrawal from sterling balances—these stood at Rs. 187 crores as on 29th August 1958—has been reduced; in the first seven months of the current year, the rate of withdrawal was Rs. 4.1 crores, as against Rs. 7.2 crores in the corresponding period last year. The country, however, has heavy foreign exchange commitments (for goods already imported or for which orders have been placed), estimated at Rs. 887 crores, of which capital goods account for Rs. 660 crores; the public sector's share in the total commitments is Rs. 496 crores. The decline in export earnings, together with the imperative need to honour commitments already entered into, makes the task of planners a particularly difficult one.

At the Import Advisory Council, Mr. Shastri made the not unexpected announcement that there was no prospect of any liberalisation of imports for the next licensing period October 1958-March 1959. The import policy, followed so far, has produced some results. During the period January-June 1958, the Union Commerce and Industry Ministry has been able to show, in the sector managed by it, a saving of Rs. 100 crores of foreign exchange as compared with the first half of 1957. Steel, non-ferrous metals, machinery, vehicles, raw cotton, chemicals and electrical goods have all made their contribution to this saving. The chief objective of the Government's import policy, Mr. Shastri said, was to "spread the benefit of our resources as widely as possible." It is, however, a difficult task to lay down correct criteria for judging import requirements of industries and an even more difficult task to apply them to numerous individual claimants for foreign exchange. Broadly speaking, the Government's policy is to give preference to industries with large employment potential and to export industries. But it will not generally prefer capital goods to raw materials. Mr. Shastri claimed, in effect, that industrial production had not been impaired by import policy. This is not altogether correct, for some industrial enterprises have had to close down and some others have had to curtail production. In any case, no system of allocation of scarce foreign exchange resources can be entirely free from a certain element of arbitrariness. It must, however, be admitted that the Government has, by and large, been trying to make the best of a bad situation. Even so, there is room for improvement, especially in the matter of planning a curb on the virtually insatiable desire for foreign exchange by the Government's own departments. The authorities must know how best they can do without imported materials and also reduce the consumption of scarce commodities. Mr. Shastri, for instance, exhorted the Government departments to reduce their paper consumption by 15 per cent. This piece of advice can be extended to cover many goods and commodities.

The issues which figured prominently in the discussions include greater utilisation of the services of established importers, liberal imports of essential drugs and medicines, and priority for the import of essential raw materials required by the coal and transport industries. Mr. Shastri gave the assurance that higher priority would be given to the imports of spare parts of components without which production could not be maintained. An issue which aroused interest was the holding of the price line for imported commodities. Mr. Shastri expressed some concern over the rise in prices of imported goods. Perhaps, it is easy to exaggerate the social effects of a rise in the prices of these commodities. A slight increase in prices is inevitable in the context of shortage of goods. In any case, a rise in their prices is not an unmixed evil, for it does stimulate internal production and restrain consumption. In recent months, many light engineering and chemical industries have come into existence or have expanded their production in response to demand arising from the virtual ban on imports.

Although export promotion efforts have not yielded substantial results, it cannot be denied that the Government has, by and large, adopted a liberal attitude towards export trade. It has set up 11 export promotion councils—one each for cotton textiles, art silk and rayon, plastics, leather, tobacco, cashew and pepper, mica, shellac, engineering goods, chemicals and sports goods—while it intends setting up similar bodies for feature films and handlooms. The handloom export promotion organisation would be a subsidiary to the State Trading Corporation. The Government has also decided to set up an export promotion organisation in W. Germany, probably at Hamburg. Many commodities have been freed from export control. Last week, the Government announced the lifting of controls on exports of 200 items, including ceiling fans, enamelware, hurricane lamps, matches, pharmaceutical products, manufactures of paper and board, a number of chemicals, stores, fruits, soap, handloom cloth, silk fabrics and art silk manufactures, storage batteries, umbrellas, plastics, woollen fabrics, iron and steel manufactures and paints. The regulations for the drawback of import duties on exported goods are applicable to 59 commodities, and the cases for relief for another batch of 21 commodities are under examination. Compulsory grading regulations have been made applicable to tobacco, raw wool, lemon-grass oil, sandalwood oil, sunn hemp and bristles, while the quality of cotton textiles is subject to inspection. A voluntary scheme for controlling the quality of East Indian tanned skins is being put into operation. The Export Risks Insurance

Corporation has made a modest beginning in underwriting export risks. A bureau is being set up to study the issues arising out of freight anomalies and inadequacy of shipping opportunities. Facilities have been made available for manufacture in bond of a few products from imported materials with a view to encouraging their exports.

If these measures, commendable in themselves, have not produced appreciable results, it is obviously because costs of production in India are high and the quality of the products leaves something to be desired. The Government should not overlook the importance of concentrating its attention on traditional exports such as tea, coffee, cotton and jute textiles, oilseeds and minerals, in its anxiety to explore new markets for lines of goods which India has begun to manufacture only in recent years. Further, new schemes, such as the one for retaining a part of foreign exchange by exporters for purposes of importing essential goods (as is now sought to be made applicable to textiles, now proposed to be tried, involve unwise currency expedients which other countries have tried without any remarkable success. Such schemes place non-exporting units at an undeserved disadvantage. Again, they imply a tacit admission of the weakness of national currency and may, sooner or later, lead to devaluation. In the final analysis, exports are won only the hard way through reduced costs and improved quality rather than by clever currency retention schemes.

STATES' TAX EFFORTS

MUCH interest attaches to the reported communication by the Planning Commission to the States asking them to raise Rs. 140 crores more than they have done by way of additional resources. The Planning Commission, it is stated, will hold consultations with the State Governments during this month and the next on how best the increased resources can be found. The results of these discussions are expected to be placed at the meeting of the National Development Council which is scheduled to meet at New Delhi on 8th and 9th November 1958. While these discussions will be welcomed as a method of exploring avenues for mobilising internal resources for the Plan, it may be wondered whether the State Governments are, or ever likely to be, in a position to raise the additional resources now contemplated by the Commission.

It is also intriguing why the Commission expects increased resources of the order of Rs. 140 crores to be found by the States. In its recent review of the progress of, and prospects for, the second Plan, it indicated that the resources for the first three years of the Plan were of the order of Rs. 2,456 crores, and that, on the basis of current trends, the anticipated resources for the last two years of the Plan would be Rs. 1,804 crores, making in all Rs. 4,260 crores over the five-year period. It was stated that, in order to reach the target of Rs. 4,500 crores, there would thus be a shortfall of Rs. 240 crores which the Commission expected to find by way of loans and small savings Rs. 60 crores, economies in expenditure and collection of arrears of taxation as well as debts Rs. 80 crores, and additional taxation Rs. 100 crores (Centre 40 crores and States Rs. 60 crores). It is, therefore, not clear why the States' share of additional resources is now sought to be raised to Rs. 140 crores. It is also not clear whether what is now intended is not merely additional tax effort, as such, but increased diversion of resources, to Plan purposes. Even so, the figure is on the high side.

It is, however, true that the States have been unable to reach the target of additional tax effort fixed under the Plan. Thus, whereas the Centre's tax proposals are expected to yield an extra Rs. 725 crores over the five-year period, or Rs. 500 crores over the tax target fixed for it, the States' tax effort will bring in only an additional Rs. 173 crores, or Rs. 52 crores less than the similar target of Rs. 225 crores. But the reasons for the States' fiscal failure are not far to seek. They stem partly from the inelastic sources of taxation available to them and partly from the relatively large slice of the national income absorbed by the Centre itself. In other words, if the Centre exceeds its own tax target by too wide a margin, the States must find it difficult to reach their target.

Further, in recent months, certain basic weaknesses have manifested themselves which most adversely affect the States' capacity to raise additional resources. The increase in prices and living costs, the decline in agricultural production, and the general slackening in certain sectors of economy have served to place the States in an unenviable position. There is considerable opposition to even the existing rates of some taxes, such as sales tax, so that any further increase in these rates would be resented. In any case, there are already signs that some of these tax rates have reached levels at which they are bound to be regressive in their effect. And, if the tax reliefs, designed to serve as incentives for exports, were implemented, the States might lose a part of their revenue. As regards certain other sources already suggested by the Commission, namely, betterment levy and irrigation cess, it seems clear that there is a limit beyond which they cannot be stretched. Already, some State Governments experience difficulties in inducing farmers to utilise the water potential created by irrigation works; the farmers feel that the water cess is unattractively high. In the context of the imperative need to increase food production, there is a case for suitable reliefs in taxation on agriculture, rather than for the imposition of new or increased burdens.

It should thus be obvious that any attempt to compel the States to go too far in the direction of increasing their tax revenues is both unwise and impracticable. This, however, does not mean that the State Governments should not make an all-out effort to prevent leakages in revenue and to collect arrears of taxes. There is scope for raising larger revenue by these methods. Again, as the Commission has itself pointed out, a part of the increased revenue raised by the States themselves or obtained from the Centre as a result of the Finance Commission's award and other means has been "absorbed by expenditures that do not enter into the Plan." By placing a curb on their non-developmental expenditure, as also by making economies in all possible directions, the States should be able to release more resources for Plan purposes. This would constitute a commendable contribution to the success of the Plan.

COFFEE AND RUBBER BOARDS

INADEQUATE representation for producers in the Coffee and Rubber Boards came in for some sharp criticism at the recent meeting of the United Planters' Association of Southern India, at Coonoor. The trend towards authoritarian control of coffee and rubber commenced, it may be recalled, in 1954, when the two Boards were so constituted as to imply nothing more than a doctrinaire sacrifice of producers' interests which lost what a medley of other interests so undeservedly won. The loss would, perhaps, be immaterial if the Boards were innocuous bodies meant to pass pious policy resolutions. Actually, the Boards' policies have their effect on plantation industry's performance and prospects, so that it is all a case of taxation without adequate representation.

Mr. C. I. Machia, who was the President of the U.P.A.S.I. for 1957-58, made the point that "industrial representation cannot be based on methods and principles that are necessary and suitable for legislative representation." Clearly, producers in any industry are always few, whereas consumers and workers are numerous. To base the representation of these interests on their numerical strength is to do violence to all canons of justice. Apart from the larger question whether any industrial body, however, constituted, can be wiser than a free market, there is the vital problem of ensuring that the producer has a reasonable say in matters which concern him. And yet, in the two Commodity Boards for coffee and rubber, the producers' voice is drowned in a babble of tongues—the tongues of representatives of Governments, consumers, traders and Parliament. It is inconceivable that the interests, other than the producers, can have anything more than an academic interest in the problems which come up before the Boards. To give them a preponderant representation is to deny the producers their legitimate right to have an effective voice in the making of policies. "It is undoubtedly unsound," Mr. Machia rightly said, "if the growers have very little voice in the matter of the disposal of the crop raised by them." Further, the present method of choosing the producers' representatives, according to him, is not conducive to the eventual selection of men "who could bring to the discussions within the Board not only their experience and knowledge but also the sanction of the community of producers whom they represent." Clearly, in the absence of the necessary sanctions, the Boards' decisions are bound to lack strength and coherence and lose their value and significance to the industry. It is to be hoped that, when the Boards come up for reconstitution this year, the authorities will accord the producers adequate representation.

There are also certain special circumstances which make it imperative that the Coffee and Rubber Boards should be reconstituted with a larger representation for producers' interests. The coffee industry, as we pointed out last week, is faced with the problem of disposal of its large production. It may be mentioned here that the Board was constituted at a time of shortage of this commodity which, in fact, vitiated all official thinking on the subject of producers' representation. The tables have now been turned. There is a prospect of embarrassing surplus. The carryover stock as on 1st January 1958 was 9,681 tons, as against 6,084 tons at the beginning of 1957 and 3,655 tons at the commencement of 1956. With a crop of well over 40,000 tons in the current year, the supplies are once again substantially in excess of the demand for export and domestic consumption. World coffee production, too, is considerably above current consumption. It would require all the knowledge and skill which the best men in the industry can muster before a market is found for the surplus. This could be ensured only if representatives of the industry, with years of experience behind them, are allowed to shape decisions. This is a special reason why the producers should be adequately represented on the Coffee Board. In this connection, Mr. Machia did well to stress the importance of publicity for coffee in the internal market.

Apart from the question of reconstituting the Coffee Board, there is a valid case for restricting its powers to spheres where it can function effectively. An unlimited extension of its powers would bring the Board into disrepute. It would appear, for instance, that the Board intends to take powers to control the opening of new coffee and the replantation of old coffee-growing areas. Commenting on this move, Mr. Machia said that "there are over 43,000 growers of coffee and the magnitude of the job of inspection and licensing may defeat its purpose." He warned that the Board may "have to take the responsibility for any losses that may be caused to individual growers who may be compelled to follow the Board's decisions as to the suitability and selection of land, the type of coffee that is to be grown and the choice of planting materials." It is not clear why the Board is anxious to underwrite so large a risk. The attempts made by the Rubber Board in this direction have not been a success. The lessons of this experiment should serve as an eye-opener to the Government.

If, in the sphere of coffee, the problem is to expand the market in order to absorb increased output, the problem in the sphere of raw rubber is to increase output to match the growing demand from rubber manufacturers. In the current year alone, consumption is expected to aggregate 40,000 tons or 5,200 tons more than the actual consumption last year when nearly 13,200 tons were imported. With the progressive expansion of rubber goods industries, raw rubber consumption is bound to move up year after year. It is expected to go up to 46,000 tons in 1959 and to 60,000 tons by 1961. The output of raw rubber, though it has increased in recent years, has not kept pace with the increase in consumption. It is, therefore, somewhat deplorable that much progress has not been made by the Rubber Board in implementing its scheme of replantation. Mr. Machia pointed out that the "Board's scheme of replantation, at 7,000 acres per annum, in itself inadequate considering the enormous quantity of rubber required by the country, has not been fulfilled." Only 2,766 acres, it may be noted, were replanted under this scheme last year. He added: "Much of the expansion under rubber is now taking place in unselected strains and in many cases in unsuitable areas. From the tardy progress of the rubber rehabilitation scheme and the unsatisfactory rise in production and the inexplicable delay in making any progress in the construction of the research station of the Board, I am inclined to share the belief of many that the affairs of the Rubber Board require a thorough examination." This constitutes another reason why the Rubber Board should be strengthened by the incorporation of additional producers' representatives who can be trusted to help evolve, as well as implement, a vigorous scheme of expansion of rubber output in which they are vitally interested.

BOOM IN EQUITIES OVERDONE

CALL DEPOSIT SYSTEM TO GO FROM NEXT MONTH

THURSDAY, 5 P.M.

THE share markets appear a little subdued now, in contrast to the bullish fervour that dominated them till almost the beginning of this week. Although the undertone is still in favour of the buyer, the shares are meeting with resistance at higher levels. In fact, the froth in the market for steel, shipping, chemical and engineering shares is being gently blown away. This is probably because of the absence of any new bullish developments. Reports from London and Washington alike on the prospects of India getting sufficient aid to tide over immediate balance of payments difficulties are no doubt encouraging. But the markets had anticipated this event earlier. Accordingly, its actual materialisation, let alone its likelihood, is no hot news for them. For a long time, they have been climbing up, in the belief that the Government will, in its anxiety to earn more foreign exchange, give several concessions to industries, so that they could concentrate on exports. The encouraging observations made by Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, at the Export Advisory Council meeting this week have also, therefore, failed to generate a fresh upward momentum in equities. The same is true of the monthly production returns of the T.I.S.Co. for August 1958, showing a notable rise in the output of finished steel. It thus looks as though the share markets have discounted all possible bullish factors. They have to digest the recent gains before they can advance further. From the point of view of yields, almost all the popular shares in Bombay and Calcutta appear to be fully priced. Indeed, some of them seem to be a little overvalued, if regard is had for the current profit-margins of industries and the uncertainty about the Government's fiscal policy.

MARKET GOSSIP

Shortly after we went to press last week, the Reserve Bank was reported to have advised the Scheduled banks to exercise caution in giving unrestricted advances against shares. It was neither a directive nor a stern warning, but a friendly counsel of caution. The Bank was said to have drawn the attention of Scheduled banks to the abundance of funds with them, the increasing buoyancy of share markets and the recent attempts in certain quarters to corner speculative shares. Whether this advice was based on the Bank's information of the advances of banks against shares or on pure inference from the current trends is not known. But there are reports in share markets that the Reserve Bank had acted on the basis of definite information. Whatever that may be, there is no doubt that the Reserve Bank's mild warning was long overdue. In fact, there is every reason for investigating whether or not there has been excessive speculation in shares. According to some, there is a heavy overbought position in some of the speculative counters, such as Indian Irons, Tata Steels, Bombay Dyeings, Scindias and Bombay Burmahs, to mention only a few. It has been frequently stated, for instance, that some parties in Calcutta are long in Indian Iron by 1,200,000 shares, while a few in Bombay are short in it by 300,000 shares. This kind of report cannot be verified by external observers, but the trend of prices supports it. The Boards of Stock Exchanges, however, should be in a position to check it and take appropriate remedies. In any case, have not the values moved up so fast and to such a sizable extent as to warrant the introduction of some effective checks on speculation, say, for instance, stiffer margins on all transactions? In the present context of easy money conditions, the existing margins on Indian Irons and Tata Steels are neither adequate nor effective. In the interests of genuine investors and of their own fair name, the Stock Exchange authorities will do well to take the initiative before being told to do so by the Government. It would be interesting to recall here that, recently, the margins on shares on the New York Stock Exchange, where the system is different from the one operating in Bombay or Calcutta, were put up, on seeing that the values on the Exchange kept on moving up in a manner which was out of tune with the prevailing economic conditions in the country.

There are some who are inclined to feel that there is nothing unhealthy in the recent happenings in the share market and that the rise in equity values only represents a recovery from the unduly low levels to which they had gone down, following the heavy tax imposts and the unfavourable remarks made by some Ministers against private enterprise. The "present bull phase," says a firm of share brokers in Madras, "far from causing perplexity or concern, as it appears to have done in official quarters (apparently the reference here is to the Reserve Bank's aforesaid advice to banks), must be welcomed as breathing some oxygen into a lotus-eating market, wherein the turnover was declining to pitiful proportions." This may be true of the Madras Stock Exchange to some extent, but not of its Calcutta and Bombay confreres where speculation has been of a magnitude not conducive to a healthy market. It is also contended by some that the rise in equity values is attributable to cheap money conditions. That may be so, but a policy of cheap money, when inflation is rife on account of deficit financing, is surely not the right one.

Neither inflation nor speculation is good for investors, when they cross the safety limit as they appear to have done now. One of the grounds on which speculators have boosted equity values is the hope that Mr. Morarji Desai, Union Finance Minister, will give substantial relief in taxation when he presents the next budget. But by overdoing their game, the speculators are unnecessarily queering the pitch for him. Will any Finance Minister be in a position to give relief in taxation when Stock Exchanges are booming? Normally, in a Government and a Parliament dominated by socialists, it will be a difficult task for a Finance Minister to give tax reliefs. By taking up the share values to new heights not justified by the trend of industrial profits, his task will be made even more difficult. This is an aspect which ought to cause some concern to the industrialists who have been pleading for relief in taxation. Some of them, however, seem to regard the bull phase in shares with great satisfaction. In fact, quite a few are alleged to be pulling up the market in the shares of their concerns in order to facilitate raising additional capital successfully. But these tactics are harmful from the point of view of long-range interests of investors.

There is no doubt that, during his present visit abroad, Mr. Morarji Desai will do his best to get foreign help for the economic development of India. The Western countries are also favourably inclined to assist India for practical reasons, economic and political. But the leftist elements in this country who are opposed to Mr. Desai both within and outside the Congress Party appear to be active to discredit him in the eyes of the public and the Prime Minister. They did that successfully to Mr. T. T. Krishnamachari when he was in charge of the Commerce and Industry Ministry and also when he went abroad last year as Finance Minister. Unfortunately, T.T.K. played into their hands and tried to outdo the leftists, with results that have done great harm to the economy of the nation as well as to his own reputation for economic foresight and administrative competence. Will the same thing happen to Mr. Morarji Desai? Will he be able to hold his own against the leftists or allow himself to be dominated by them? Time alone can tell. But it seems to us that, in assuming that he will be able to undo some of T.T.K.'s work in the sphere of direct taxation, the speculators in shares are assuming a great risk and taking many things for granted.

* * * *

At long last, the scheme proposed by the Indian Banks' Association for regulating interest rates on deposits through voluntary agreement among all the banks has won the approval of all the Indian banks, excepting one in South India, as also that of the Exchange banks. Even this South Indian bank, which has only a minor objection, is confidently expected to fall in line with the others. The scheme has the blessings of the Reserve Bank and the support of the State Bank of India. It is likely to come into force on 1st October 1958.

The scheme is a comprehensive one and seeks to place a ceiling on interest rates payable by banks on deposits of all kinds, excluding inter-bank transactions. There will, however, be no restriction on the rates of interest chargeable on bank credit. The small banks have been exempted from the scheme; only banks with deposits over Rs. 5 crores are parties to it. The salient features of the scheme are: the rate of interest on current accounts is not to exceed ½ per cent. per annum. No interest is to be paid on deposits repayable on call. This means the present system of house money on call will cease to exist. Instead, banks can quote for deposits repayable on seven days' notice. The maximum rate for these deposits shall not exceed 3½ per cent. per annum. Similarly, a maximum rate of 4 per cent. per annum is fixed for term deposits. There is also a maximum time limit of two years for deposits. But banks which wish to take funds for periods in excess of two years should do so by issuing deposit certificates. It thus looks as though there will be no higher rate for deposits than 4 per cent. A maximum interest of 2½ per cent. is allowed on savings bank accounts. There are detailed provisions to ensure that banks do not subvert this arrangement by charging lower rates of interest on advances given to those who maintain deposit accounts.

The factors that have overcome the opposition to the aforesaid scheme are: the decline in bank profits in the first half of the current calendar year; the strong support extended by the Reserve Bank both privately and publicly; and the easier money conditions not only in India but also in foreign countries, notably in Britain. It would appear that one of the big Indian banks which was strongly against the move until recently has turned out to be its keenest supporter, apparently because it has suffered a substantial fall in its profit for the six months ended June last.

* * * *

While banks in India have thus plumped in for restricting competition among themselves, their confreres in Britain, known for their conservatism, have just chosen to have more competition and enterprise, we mean here their direct entry into a field of activity hitherto reserved for the hire-purchase finance companies and considered unorthodox for commercial banks. In the legal sense of the term, it is not hire-purchase business that comes under the category of personal loan service. But, in effect, it is not very much different from hire-purchase finance. This revolutionary initiative was taken by the Midland Bank. It held no consultations with the other banks and, in fact, took the whole London City by surprise. The most outstanding feature of this scheme is that the loans are to be given without any collateral, the only qualifications for the facility being that the applicant must have held a deposit account with the Bank for some time and that his personal character and creditworthiness should be to the satisfaction of the local bank manager.

The Midland Bank's move caused a flutter in the bankers' dovecot and put the cat among the hire-purchase pigeons. But the other banks soon got over the shock and announced similar facilities to their depositors; in fact, some of them improved upon the Midland's scheme in favour of their customers. Barclays, for instance, has no lower limit, whereas the Midland offers loans from £50 to £500. Again, though the Midland was the first to announce the scheme, Barclays' plan came into force three days earlier than that of the Midland's. Another feature of Barclays' plan is that it will be available to any customer, whether old or new, and is designed to attract the wage-earners to the banking habit.

The new scheme of personal loans adopted by British banks has the following three attractions as compared with the facility provided by hire-purchase finance companies:

(1) The rate charged on these personal loans is lower than that on hire-purchase contracts.

(2) There is a valuable and attractive life assurance cover in them, provided by banks at their own cost.

(3) The interest paid on these personal loans becomes, unlike that on hire-purchase contracts, a proper allowance against income-tax and surtax, as the banks will issue interest certificates for use in claiming rebates of tax.

The rate of interest on the aforesaid advances is 5 per cent., but, since it is on the whole of the loan granted without any reduction for the monthly instalments paid by the borrower, the effective rate is about 9¼ per cent. per annum. This new facility by the British banks is expected to stimulate the demand for cars, furniture, durable household goods, motor cycles, industrial plant, farm equipment and caravans. It is also designed to help construction of new houses and repair of old ones. Following the initiative taken by banks, several hire-purchase finance companies have already reduced their charges. There has been no cry of unfair or cut-throat competition by either banks or hire-purchase companies.

* * * *

The speech of Mr. K. K. Birla at the last annual meeting of the Textile Machinery Corporation Ltd., popularly known as "Texmaco" in market circles, is notable for its comprehensiveness, moderation and useful suggestions. The speech falls into two distinct parts, the first part covers the progress and problems of engineering industry in general and the second those of Texmaco, which has come to occupy a prominent place in the field of this important industry. The Company began manufacture only in 1951, and yet, within a short period of seven years, it has been successful in producing an impressive range of capital goods. The Company is one of the typical examples sufficient to convince any impartial observer that the theory that, in India, the State has to enter the field of capital goods as a producer, as there are insufficient number of *entrepreneurs*, is not wholly true. If, despite several handicaps, most of which are traceable to the Government's defective economic policies, Texmaco could be a success in almost every respect, its achievements would have been greater in an atmosphere free from these handicaps. And it is needless to add that this remark applies to the private sector as a whole. The rate of India's economic progress would have been distinctly higher had the system of free enterprise been given more freedom of action and better incentives.

A perusal of Mr. K. K. Birla's speech will show that it is not easy to develop export markets for capital goods, even though India may have the geographical advantage in regard to the potential markets in West Asia, Africa and East Asia. There are many difficulties to be overcome. First, it takes time to establish a name as a producer of high quality capital goods. Secondly, the cost of labour is progressively going up and this trend will gather further momentum, as expenditure on development plans is speeded up. The effect of this factor on the price of capital goods can be neutralised only through higher production, which in turn is dependent upon hard work, understanding and co-operation on the part of labour. Thirdly, adequate credit facilities from banks will be necessary. It must be remembered, in this connection, that India has to compete for markets not only with the traditional exporters in the West but also with the Communist countries—Russia, East Europe, and China. Mr. Birla's suggestion that the Reserve Bank of India Act must be amended, so that it can rediscount export bills of longer usance than three months, is quite pertinent and deserves to be carefully examined by the Bank and the Government. And, fourthly, the engineering industries are suffering from both inadequate supply and high cost of steel. It is, perhaps, not yet widely realised that "India has lost the distinction, which it so far had, of having the lowest price for steel in the world." Due to a rise of Rs. 70 per ton in the price of steel inside India and a decline of about Rs. 100 per ton in the price of foreign steel, Indian steel at Rs. 700 per ton is as costly as that of imported steel. It is true that, a few days ago, the Government announced a reduction of Rs. 50 per ton in the price of steel used by engineering units for export purposes. But this concession may not be sufficient to overcome the other difficulties referred to above.

The adverse effects of the Government's defective textile policy are not confined to the cotton mill industry alone. They have been felt by the other producers who serve this industry in one way or another. Texmaco, as a supplier of textile machinery, is one of them. It has found it necessary not only to curtail its production but also to postpone its plan for raising the capacity for ring frames and carding engines till more favourable times.

Texmaco, however, is making good progress in the other fields of manufacture, namely,

SHARE MARKET LISTLESS

TEXTILES ENCOUNTER SELLING

(From Our Own Correspondents)

BOMBAY, *4th September*

IN striking contrast to the hectic activity in recent weeks, colourless conditions prevailed on the Stock Exchange during the week under review. Operators were generally not inclined to enter into further large fresh commitments, the highly favourable prospects of foreign aid and continued easy tone of the money market notwithstanding. The Reserve Bank of India's directive to banks to adopt a cautious attitude in granting advances against shares acted as a damper. The enunciation of the investment policy of the Life Insurance Corporation, though it was well received, did not have any effect. Business put through, as a consequence, was moderate and prices moved narrowly, the general trend being a shade downward, except in a few scrips which registered handsome gains on investment support.

In particular, the textile section ruled easy. The chief unhelpful factor was the payment of enhanced dearness allowance to mill workers following the steep increase in cost of living index from 395 in June to 407 in July. Nor were reports of piecegoods offtake—domestic and foreign—encouraging. The fact that prices of cotton today are lower by well over 10 per cent. as compared with those a year ago did not receive much attention in evaluating the profit-margin of mills. Steel shares failed to evoke support, despite renewed rumours of an early upward revision in retention prices and reports of L.I.C. purchases of Indian Irons early in the week.

Tata Steel Ordinaries opened the week at Rs. 174.75, as against Rs. 173.75 on Wednesday last week, and came down on selling pressure to Rs. 172.75 on Tuesday. After recovering to Rs. 175.50 on reports of higher steel retention prices and encouraging production performance in the month of August, they finished lower at Rs. 174.75. The new shares were done today at Rs. 170.25, as against Rs. 170 last week. Indian Irons were firm at Rs. 26.25 on the opening day, but encountered selling in the subsequent sessions, the quotation receding to Rs. 25.40 today; towards the close, however, they were a shade better at Rs. 25.60.

Textile shares were offered at reduced prices. Bombay Dyeings, which stood firm at Rs. 60.80 on the opening day, came in for selling and moved down to Rs. 59.80 before closing at Rs. 60.10. Kohinoors fell by Rs. 7 to Rs. 278. Finlays dropped Rs. 6 to Rs. 285. Svadeshis retreated by Rs. 4.50 to Rs. 198.50. Models declined by Rs. 3.75 to Rs. 166.25. Central Indias and Podars shed Rs. 3 each to Rs. 96 and Rs. 135, respectively. Gokaks eased by Rs. 2 to Rs. 152. Simplex lost a like amount to Rs. 176. Morarjis were lower by Re. 1.75 at Rs. 247. Khataus receded by Re. 1.25 to Rs. 185. Indores and Minervas decreased by a rupee each, the former to Rs. 107 and the latter to Rs. 64. Tata Mills lost 75 nP to Rs. 38.25.

In the banking section, Central Banks declined by 30 nP to Rs. 57 and new shares by Re. 1 to Rs. 57.50. United Commercials shed 30 nP to Rs. 63.20. Bank of Indias (A shares) were dull at Rs. 135, as also Union Banks at Rs. 7.24. Punjab Nationals, however, evoked some support and advanced by Re. 1.50 to Rs. 62. Barodas were favoured 50 nP higher at Rs. 123.50 and Jaipurs gained 25 nP to Rs. 37.25.

Electricity shares were quiet. Poona Electrics came down from Rs. 127.50 to Rs. 127. Tata Hydros declined by Re. 1.75 to Rs. 122.75, while Tata Powers were unchanged at Rs. 1.225. Bombay Suburbans eased by 75 nP to Rs. 113, despite encouraging results for the year ended 31st March 1958. Ahmedabad Electrics were offered 50 nP lower at Rs. 98.80. Andhra Valleys, on the other hand, found buyers Rs. 2.50 higher at Rs. 1,177.50. Surat Electrics rose by Rs. 4 to Rs. 115.

Among sugar shares, Belapurs opened the week firm at Rs. 289, as against Rs. 287.50 last week-end, and, after receding to Rs. 286, recovered to Rs. 290 before finishing at Rs. 289. The net gain over the week was Re. 1.50. Walchandnagars encountered selling and went down by Rs. 4 to Rs. 283.50. Phaltans dropped Rs. 3 to Rs. 164. Bhopals, however, elicited enquiries and gained 68 nP to Rs. 25.20. Changdeos gathered 50 nP to Rs. 31.

Cement shares failed to evoke follow-up support and suffered losses. Associated Cements moved down from Rs. 162.50 to Rs. 160 before closing at Rs. 161, the net loss over the week being Re. 1.50. Digvijays decreased from Rs. 154.50 to Rs. 153. Dalmias eased by 48 nP to Rs. 11.76 and Orissas by 32 nP to Rs. 13. Jaipur Udyogs were done today at Rs. 14.68 *ex*-right, as against Rs. 16.12 last week.

In the engineering and mining group, Tata Locomotives fell by Rs. 2 to Rs. 189. Larsen and Toubros were down by 68 nP to Rs. 15.80. Mahindras declined from Rs. 16.24 to Rs. 15.88. Texmacos lost 10 nP to Rs. 22.80 *ex*-div. Indian Coppers were quiet at Rs. 4.04, thanks to the marked fall in gross profits revealed in the audited accounts of the Company for the year 1957. Premier Constructions, however, continued to be fancied well on hopes of an early bonus issue and firmed Rs. 6.50 higher at Rs. 221.50. Shivrajpurs were also well supported following news of right issue at par and hardened by Rs. 6.50 to Rs. 114.50. The Directors of the Company have decided to raise the capital by Rs. 3.5 lakhs by issuing one new share at par for every two shares held. Alcock Ashdowns strengthened by Rs. 2.50 to Rs. 261.25.

Among shipping shares, Great Easterns shed 10 nP to Rs. 27.40. India Steamships declined by 29 nP to Rs. 14.08. But Scindias were somewhat favoured, the quotation rising by 22 nP to Rs. 22.44.

Automobile shares ruled easy. Premier Automobiles sagged by Re. 1.50 to Rs. 85. Hindustan Motors shed 24 nP to Rs. 7.48, as the Company could not pay ordinary dividend for 1957-58 also.

In the miscellaneous group, National Rayons were on offer Re. 1.25 lower at Rs. 241. Tata Oils dropped a like amount to Rs. 38. Killick Industries declined by a rupee to Rs. 148. Amar-Dyes shed 50 nP to Rs. 115 and Tata Chemicals 32 nP to Rs. 16.80. Wimcos retreated by 25 nP to Rs. 182. Bombay Burmahs (old), however, continued to attract good attention on bonus issue consideration and proximity of interim dividend. The quotation for the fully paid shares spurted by Rs. 9 to Rs. 610.50. The partly paid shares put on 75 nP to Rs. 220.75. Industrial Investment Trusts gathered 30 nP to Rs. 82.30. Gwalior Rayons, however, were easy at Rs. 13.75, as against Rs. 14.08 a week ago.

Calcutta Stock Exchange

CALCUTTA, *3rd September*

A steady trend was in evidence on the Calcutta Stock Exchange earlier in the week under review, but, as bulls elected to take profit, offerings increased and prices eased. In the meantime, encouraging reports regarding firm possibility of India being able to secure foreign assistance to the tune of $350 million between now and March next were noted, and the outcome of Mr. Morarjee Desai's foreign mission was keenly awaited. Although, in his speech to the Import Advisory Council, the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, could not hold out any liberalisation of the import policy, market circles took the view that, in view of the possible solution to the foreign exchange shortage, more imports of essential requirements for industries, both spare parts and raw materials, would be provided. Trade circles appreciated the recent measures announced by the Governmnt to increase exports, and hoped that the huge monthly deficit in foreign trade—the deficit in June was Rs. 36 crores—would now be arrested. Teas received selective support following announcement of more corporate results and expectation of an early announcement according relief to common teas. The Central Government's decision to float a new loan for Rs. 60 crores and issue bonds for Rs. 30 crores did not affect the market, as this was in accordance with earlier expectations in the market and also because both would be taken up by the Reserve Bank, in the first instance.

Textiles were shown more attention on speculative support encouraged by expectations of increased offtake of cloth for internal consumption on the eve of approaching *poojas* and *Diwali*. From Rs. 5.96, Basantis gained to Rs. 6.25. Elgin Mills were unchanged at Rs. 13.56.

In coals, East Indians at Rs. 23.62 were fractionally higher, while most other shares eased. Bengals were lower at Rs. 265. Talchers moved down from Rs. 2 to Rs. 1.97, while Burrakurs were unchanged at Rs. 21 and Equitables at Rs. 28.75.

The number of transactions in jutes shrinked, but a few selected counters were lifted at higher rates. Thus, Gourepores spurted to Rs. 330 from Rs. 315. Kamarhatties were better at Rs. 123. Nuddeas, after rising from Rs. 49.25 to Rs. 50.25, closed lower at Rs. 49. New Centrals at Rs. 17 added a few naye paise with Nationals easing to Rs. 22.50 from Rs. 23.62. Megnas were unchanged at Rs. 135, but Howrahs were firm at Rs. 18.87. Cheviots receded from Rs. 180 to Rs. 174.

Engineering shares gave way. Indian Irons opened at Rs. 25.48 and, after rising to Rs. 25.56, closed lower at Rs. 24.73. Texmacos at one time were as high as Rs. 23.25, but closed at Rs. 22.60. On reports of raw materials shortage affecting rolling of steel, Bhartias receded to Rs. 15.94 after recording an early rise to Rs. 16.19. From Rs. 107.50. Hooghly Dockings gave way to Rs. 105. Kumardhubis were quiet at Rs. 9.12.

Teas were quietly steady. Sungmas were better at Rs. 13.50, as were Bishnauths at Rs. 21.44. Brooke Bonds at Rs. 19.44 added a few naye paise.

Miscellaneous industrials receded. Indian Coppers, after realising Rs. 3.93, eased to Rs. 3.82. Orient Papers were lower at Rs. 35, while Titaghur Papers were better at Rs. 42.06. Indian Oxygens at Rs. 20.50 added 32 nP, but Dunlop Rubbers eased to Rs. 28.12 from Rs. 28.50. National Rollings were on offer at Rs. 12.25, as against Rs. 13.37 previously, and Indian Cables eased from Rs. 30.50 to Rs. 29.87.

Madras Stock Exchange

MADRAS, *2nd September*

The Madras Stock Exchange put on a cheerful appearance during the week under review. Buying enquiries were quite widespread, with values of equities tending to move up. Plantation shares were specially favoured. The speech of the Union Minister for Commerce and Industry at the annual meeting of the United Planters' Association of Southern India, and his statement in Parliament that the Government was considering proposals to grant further relief to common teas, besides lower excise duties, induced good buying support which pushed up prices. In sympathy with planting shares, sugar, bank and miscellaneous industrials ruled steady. Textiles, however, were easy, as buying enthusiasm was lacking, thanks to continued poor offtake of yarn and piecegoods.

Tea shares were fancied well. Mlamallays rallied Rs. 3 to Rs. 35. Lucky Valleys advanced by Re. 1.50 to Rs. 11. United Nilgiris spurted by Re. 1.25 to Rs. 18.25 and Cowcoodys by Re. 1.7 to Rs. 8.22. Stanes Amalgamateds climbed up by 75 nP to Rs. 14. Woodlands strengthened by 37 nP to Rs. 8.62, Talayars by 35 nP to Rs. 9.40, Blue Mountains by 22 nP to Rs. 3.72 and Peermades by 25 nP to Rs. 21.25. Kil Kotagiri's rose by 17 nP to Rs. 6.22. Waterfalls increased by 15 nP to Rs. 3.80 and Parksides by 13 nP to Rs. 21.

In the coffee group, Coffee Lands firmed up by 50 nP to Rs. 34.50. Kumergodes were quoted 26 nP higher at Rs. 6.16. Rajendras gathered 10 nP to Rs. 12.60 and Consolidated Coffees 5 nP to Rs. 29.45.

Among rubber shares, Valkundams were on request, the quotation rising by a rupee to Rs. 24. Thamarapallys improved by 50 nP to Rs. 25.50 and T.R. & Ts by 45 nP to Rs. 7.50. Rajagiris gained 25 nP to Rs. 18. Highlands put on a like amount to Rs. 12.25. Midlands gathered 10 nP to Rs. 12.20 and Be Bes 5 nP to Rs. 3.40. Nelliampathys were better by 3 nP at Rs. 3.20.

Textiles encountered selling. Rajalakshmis fell by Rs. 5 to Rs. 67. Janardanas dropped Rs. 3 to Rs. 72.50. Anglo-French, Coimbatore Spinnings Ranga Vilas and Vijayakumars lost a rupee each to Rs. 77, Rs. 49.50, Rs. 59 and Rs. 105, respectively. Maduras were quoted 70 nP lower at Rs. 32.80. Loyals receded by 25 nP to Rs. 35. Travancore Rayons lost a like amount to Rs. 14.65. Coimbatore Pioneers, however, evoked special support and gained Rs. 3 to Rs. 228. Metturs hardened by a rupee to Rs. 342.

In the sugar section, Cauverys were marked up by Rs. 2.50 to Rs. 93. United Breweries strengthened by 50 nP to Rs. 220. Travancores were quoted 35 nP higher at Rs. 11.70. Deccans, however, lost 15 nP to Rs. 9.15.

Among miscellaneous industrials, Singarenis evoked good support and rallied Rs. 2 to Rs. 16. Mysore Lamps increased by 75 nP to Rs. 16. General Papers advanced by 50 nP to Rs. 12.50. Mysore Tobaccos improved by 25 nP to Rs. 13.75, Aluminium Industries by 20 nP to Rs. 17.55 and F.A.C.Ts by 8 nP to Rs. 6.78. Travancore Cements gathered 7 nP to Rs. 9.32.

Notices

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2¾ per cent. less Indian Income-tax thereon, will be paid to the Registered holders as on the 7th October, 1958, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1959.

The Share Transfer Books of the Preference Shares will be closed from 30th September to 7th October, 1958, both days inclusive.

By Order of the Board,

D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA 1, *28th August*, 1958.

PUBLIC NOTICE

TO ALL TO WHOM IT MAY CONCERN

NOTICE IS HEREBY GIVEN THAT THE registered office of the Punjab National Bank Ltd. has been transferred from 8, Underhill Road, Delhi, to Parliament Street, New Delhi.

By Order of the Board of Directors,

R. L. TULI,
Secretary.

NEWS IN BRIEF

THE State Trading Corporation has decided to import newsprint shortly from some East European countries, which will be distributed directly to small newspapers and printers.

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 3.09, as against Rs. 2.88 per pound in force from 1st August 1958. There is, however, no change in the existing rate of duty, namely, 38 nP per pound.

The agreement between India and Switzerland for avoidance of double taxation of income of enterprises operating aircraft, initialled in Berne during the visit of the Indian official delegation in June last, was signed by the Governments of the two countries in New Delhi on 29th August.

The Central Government has accepted the U.P. Government's scheme for the establishment of a factory to manufacture synthetic rubber by utilising the surplus power alcohol. With the sanction given by the Centre for the setting up of four new alcohol producing distilleries in addition to the expansion schemes of the existing 12 units, production of alcohol in Uttar Pradesh is expected to aggregate 14.8 million gallons in 1958 and 18 million gallons in 1959.

A new company called "Indian Refineries Private Limited" was registered at New Delhi on 22nd August. Set up with an authorised capital of Rs. 30 crores, the Company will control and manage the two oil refineries to be established by the Union Government in Assam. It will be managed through a Board of Directors, consisting of 10 members. Mr. Feroze Gandhi, M.P., and Mr. J. M. Srinagesh, I.C.S., have been appointed Chairman and Managing Director, respectively, of the Company.

Two new items of postal stationery, namely, air mail postcards in 40 nP denomination and blue air mail envelopes in 90 nP denomination have been introduced with effect from 29th August 1958. The existing 4-anna air mail postcards and 12-anna foreign air mail blue envelopes will, however, continue to be on sale after affixing the required additional postage of 15 nP to make up the deficiency till such time as their stocks are exhausted.

The Government of India has launched family living surveys among workers employed in factories, mines and plantations at 50 selected centres all over the country. The purpose of these surveys is to obtain data for constructing a new series of working class consumer price index numbers for various centres, as well as for the whole of India, on a uniform basis and also to study the level of living of workers. The field work of these surveys, which has already begun, has been entrusted to the National Sample Survey organisation and will continue for a year.

Draft rules for allowing rebate of customs and Central excise duties paid on indigenously rolled sections of steel used in the manufacture of various steel products subsequently exported, have been published. The refund will be applicable to agricultural implements, belt fasteners, bolts, nuts and rivets, builders' hardware, collapsible gates, electric conduit pipes, electrodes, expanded metal, galvanised iron bath tubs, buckets, drums, tanks and water bottles, hardware, iron nails, mild steel pipes, mild steel screws, rolling shutters, steel trunks and steel furniture. The rate of refund proposed is Rs. 50 per ton of steel content of the articles.

The prospecting of coal by drilling carried out by the Geological Survey of India has led to the discovery of proved reserves of about 5.5 million tons in Ondal, W. Bengal, and 300,000 tons in Garo Hills, Assam (calculated on the basis of 200 metres radius around a bore hole drilled to a depth of 2,956 feet). Some of the seams found in Ondal was correlated with some of the well-known types of the main Raniganj coalfield, a few miles further west. As a result of drilling conducted in seven blocks in Karanpura coalfields, covering 24,192 feet in 75 bore holes, the reserve of coal at the end of the field season is estimated at 218 million tons. The drilling of two bore holes in the "Barren Measures" of Jharia Coalfield has also revealed existence of coal deposits.

The Bombay Government has decided to exercise more effective control on the trading in, and stocking of, paddy, rice, wheat, *jowar*, *bajri* and maize with effect from 1st November next, when the Bombay Foodgrains Dealers Licensing Order, 1958, comes into force. The order, issued by the Government under section 3 of the Essential Commodities Act, 1955, provides that no dealer (including a rice-miller) in these foodgrains, or their brokens and flours, can carry on business (purchase, sale, or storage for sale) in quantity of 100 maunds or more at any one time except under and in accordance with the terms and conditions of a licence issued for it by the State Controller of Foodgrains Distribution, in the case of dealers in Greater Bombay, and the *mamlatdars* or *mahalkaris* elsewhere in the State.

India had an adverse balance of trade to the extent of Rs. 35.85 crores during the month of June 1958, according to the provisional official figures of foreign trade by all routes—sea, air and land—on private and Government accounts. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) accounted for Rs. 27.78 crores, re-exports for Rs. 34 lakhs and imports for Rs. 63.93 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 66 lakhs while there were no exports of gold. Exports of current coins were (excluding gold coins) negligible. Imports of currency notes aggregated Rs. 3.39 crores and gold Rs. 4 lakhs, whereas those of current coins (excluding gold coins) were negligible.

* * * *

From Abroad

The Pakistan Geological Survey Department has recently discovered deposits of gold in the mountain rocks of Chagal district, in the former province of Baluchistan.

The Government of Pakistan is granting a full rebate of customs duty paid on raw materials imported for the manufacture of exportable products, with a view to boosting its export trade.

Degussa of Frankfurt (West Germany) is to supply a uranium smelting plant with an annual output capacity of 20 tons to India's Atomic Energy Commission.

The Malayan tin miners have welcomed the assurance given by the Australian Government that it will protect Malayan tin imports against undercutting by the U.S.S.R. and its undertaking to impose a duty on cheaper tins, if Malaya so desires.

The London Underwriters have reduced the war, strike, riot and civil commotion shipping risk rates in the Middle East to a general rate of 9*d*. per £100 with effect from 27th August. Previously, the rate was 18*d*. for Iraq ports and 30*d*. for Syria and Lebanon.

The American Federation of Labour-Congress of Industrial Organisations has constituted a committee to raise funds for United Auto Workers, in case the union is involved in a strike with motor companies. The committee will canvass financial support from all unions.

The Western world will have to face stiff competition should the Soviet Union enter the commercial air transport field, according to a recent report on the economic implication of long-range jet transports prepared by the International Civil Aviation Organisation.

The Government of Iraq has agreed to honour the agreements reached between its predecessor and the oil companies. It has, however, reserved the right to invoke the Iraqi letter of September 1951 which provides for a review of the revenue paid by the oil companies in the event of a neighbouring country receiving a rise in its average revenue from exported oil.

The Lockheed's Electra turbo-prop airliner has been certified by the U.S. Civil Aeronautics for commercial use. This will enable the Company to execute the orders for 40 transports valued at about $100 million to Eastern Airlines, which has planned to introduce the Electra service between New York and Miami and Washington and Montreal by 1st December next.

The depopulation of Eastern Germany through the mass flight of 18,000 to 20,000 persons (including professors, dons, teachers and doctors) each month, which followed the recent decision of the Government to bring about immediately "the completion of socialist society," is becoming a serious economic problem for this Communist region, the only country in the world to register a declining population.

The Common Market Countries have decided to resume the imports of steel scrap from the U.S. and the U.K. in accordance with the recommendation made by the Brussels Scrap Office to the High Authority in Luxemburg. Out of a total of 300,000 tons to be contracted for by 1st October next, 250,000 tons will come from the U.S. and 50,000 tons from the U.K. and other neighbouring countries. Italy is expected to be the main buyer.

The Atoms for Peace Conference, which began at Geneva on 31st August, has announced, among others, the development of two new types of atomic power stations, claimed to be exceptionally cheap to operate, and the latest significant results on the harnessing of thermonuclear power for industrial application. Over 60,000 scientists and company representatives from 80 countries are attending the Conference, the largest technical conference ever held in the world.

Australia had a trade deficit of £A103.7 million with the U.K. in 1957-58, which represents an increase of £A18.7 million as compared with the previous year, and is the worst trade result for the last seven years. Merchandise exports to Britain fell by £A55.2 million, while imports rose by £A27.9 million to £A324.2 million. Despite this imbalance in its trade with the U.K., Australia had a favourable balance of trade of £A23.5 million from its overall trading operations.

Only 5 per cent. of the free world's steel production is nationalised, the rest being owned by private enterprise, according to the British Iron and Steel Federation. The only countries in the West where the bulk of steel is produced from nationalised undertakings are Austria (nationalised in 1946 to keep it out of Soviet hands), South Africa (where the main producer ISCOR is State-owned but run on ordinary commercial lines) and Norway. Elsewhere, the State holdings in the steel industry are said to be small.

A new steel mill is now being built at Brazil by Japanese interests. Claimed to be the largest in Latin America, the mill is expected to be completed by 1961 to produce 500,000 tons of steel ingots initially which will be raised to 2 million tons annually by 1964. The new undertaking, called Usiminas, is being financed jointly by Japanese private interests and the Brazilian Government and a privately owned steel mill. Of the eventual capital of about £10½ million, the Japanese will subscribe 40 per cent. The plant will depend entirely on Brazilian coal and iron ore and will supply its products mainly to the domestic car industry.

The view that there can be no easy solution to the problem of introducing the metric system in Britain was expressed by Sir Alexander Fleck, Chairman of Imperial Chemical Industries, at a recent Press conference at Glasgow. He pointed out that one of the great difficulties would be the divergence of opinion between the U.S. and the U.K. He was of the opinion that the cost of introducing the metric system in Britain would run into millions of pounds. It may be noted here that the Commission set up by the British Association has already got down to study the practicability of introducing the metric system in the country.

The rate of industrial output in the U.K. is still running at 3½ to 4 per cent. below last year or about 5 per cent. below the mid-1957 peak. The seasonally adjusted production index for July 1958 stood at 123-124 (1954=100), as against 118-119 for July 1957. During the second quarter of 1958 the index of output remained virtually static at 134-135, as against the swing from 139 to 142 in the corresing quarter of 1957. There has been a marked weakening in demand since May last for a wide range of products which has resulted in a substantial shortening of order books. A fairly marked de-stocking movement has got under way, particularly in the domestic market, affecting both raw materials and finished goods.

At the second International Conference on Peaceful Uses of Atomic Energy, which is being held at Geneva from 1st to 13th September, the Indian delegation is being led by Dr. H. J. Bhabha who is also one of the six Vice-Presidents of the Conference. It may be recalled that the first conference, which met at Geneva in August 1955, was presided over by Dr. Bhabha and was the largest scientific conference ever held. It resulted in the release of much useful scientific information. For the second conference, 2,200 papers have been submitted, as against 1,067 in the last. India has contributed 60 papers (of which 20 have been selected for oral presentation), as against 16 papers in 1955. India is in the unique position of being the only industrially underdeveloped country with an important atomic energy programme which envisages the production of all basic raw materials required for the harnessing of atomic energy and its use in agriculture, biology, medicine and industry.

PERSONAL

MR. Tribhuvan Narayan Singh, M.P., Chairman of the Public Accounts Committee, has been appointed a member of the Planning Commission.

Dr. J. N. Bannerji, of Sandoz Products (Private) Ltd., left for Brussels last week-end to attend the general assembly meeting of the Council of the International Pharmaceutical Federation.

Mr. L. T. Mirchandani, Managing Director, J. B. Advani-Oerlikon Electrodes Private Ltd., left Bombay last week on a business tour of the U.S., the U.K. and the Continental countries.

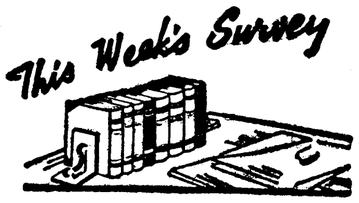
Mr. Harilal Mehta has been re-elected President of the Gunny Trades Association, Calcutta, for the year 1958-59. Messrs. B. P. Keidia and G. C. Sil have been elected Deputy President and Vice-President, respectively.

Mr. M. M. Varghese has been elected President of the United Planters' Association of South India, Coonoor, for 1958-59. Mr. L. W. Russell has been chosen as the Vice-President.

Dr. Jagan Nath Khosla, at present Indian Ambassador to Czechoslovakia, has been appointed Ambassador of India to the United States of Indonesia. He will take charge of the new office by the middle of October next.

Mr. V. Natarajan, of Messrs. Dalal & Co., and Mr. K. S. Vaidyanathan of Messrs. Paterson & Co., have been elected President and Vice-President, respectively, of the Madras Stock Exchange for the year 1958-59, while Mr. H. C. Kothari is the Treasurer, Mr. K. Venkataraman, Mr. C. S. Natarajan and Mr. H. Subramaniam are the members of the Council, on which the Government is represented by Mr. P. S. Nadkarni and Mr. J. S. Jaspal.

Dr. Erhard, West German Economics Minister, will visit Egypt, Pakistan, Japan, Burma and probably Ceylon, after taking part in the meeting of the World Bank and the I.M.F. scheduled to be held at New Delhi next month. During his stay in these countries, he will hold formal discussions regarding the possibilities of German technical and financial aid.



SCIENCE AND BUSINESS

THE contribution made by science to the economic development of the world has been so significant that one cannot think of modern life without the vital role of science. However, science is only just beginning to come into its own in India where the techniques of production—industrial and agricultural—are not sufficiently well advanced. Although utmost stress has been laid on scientific research in recent years, the progress actually achieved in its application is small. The annual expenditure on scientific research in India by both Government and non-Government agencies, though it may be considerable in relation to the country's national income, is by no means large in view of the long leeway we have to make up in the scientific sphere. No correct estimate of the expenditure is available. But it cannot be more than a mere fraction of the colossal sums spent in the industrially advanced countries of the West. In the U.K. alone, the total annual research expenditure is estimated at as much as £300 million (about Rs. 400 crores).

The vital role which science and scientific research play in the economic development of a nation was lucidly portrayed by Sir Alexander Fleck, Chairman of Imperial Chemical Industries, and the retiring President of the British Association for the Advancement of Science, in his speech at the opening session of the Association's 1958 meeting held at Glasgow last week. The partnership between science and business, Sir Alexander declared, was fundamental to the future of economic prosperity of Britain. Developing his theme, he said that, if science was to carry forward Britain's social evolution, it needed the financial and productive effort of business, while the future prosperity of the country depended on the "technologically sophisticated" products of its export trade. To quote him: "The advancement of science can only be achieved with the resources that business can provide and, if business is to provide them, then it must bring science to its aid."

The above words, though they were meant for Britain, are capable of application to any country. The productivity in the different sectors of India's economy is deplorably low and, unless techniques of production are improved through the application of scientific research, the output of goods cannot be augmented to any appreciable extent. There is imperative need for raising the national resources by substituting cheap and abundant materials for those in scarce supply and by finding uses for materials which have remained unutilised.

Similarly, the three characteristics which Sir Alexander thought a business should have if it was to survive and function effectively over a period of years holds good as much for India as for Britain. First, business has to contribute to the well-being of the community and its social evolution by producing goods and services at fair prices, by giving fair treatment in remuneration and working conditions for pay-roll employees, administrators and scientific staff, and by giving a fair return to those who risk their money in business, so that they will be encouraged to provide again for further ventures. Secondly, business must have the capacity to change its methods and, if necessary, even its objectives; it must be constantly alert to see that its products or services meet or anticipate the needs of the public and to withstand the nipping and eager air of competition whether it comes from advancing techniques or from new entrants into the field. Thirdly, if business is to be self-perpetuating through growth of modernisation, it has to dispose of its products and services for more than their cost—it must make a profit.

These are the three characteristics which should govern the conduct of business whether run by private enterprise or by the State. And the political system of the State does not, as Sir Alexander rightly averred, make any difference to the validity of this notion. After all, it must be remembered that it is only when there is excess of income over expenditure that expansion of business and science can be financed. Sir Alexander showed how, as a result of encouraging growth of investment in productive resources, output in the U.K. manufacturing industry as a whole had increased by 3½ per cent. per annum since 1948, as compared with 2½ per cent. between the two world wars, and said: "If science has laid the foundation for much of this expansion, business has provided the will and the means to complete the structure and both must continue." Discussing how the partnership between business and science can be achieved in practice, he observed:

> "If there are to be no weaknesses in any one part of the organisation, technical staff may have to be moved from one department to another, and this places a vital responsibility on those exercising the personnel function in selection, training and promotion. At the same time, it is their duty to ensure that the employees can find satisfaction in their work. This function can conveniently be performed by a scientist whose knowledge of what the technical departments require helps him to place staff to the best advantage both of the business and themselves. On the commercial side also, scientists may be needed in sales, service or purchasing, to achieve the best results for a business making technically complex products."

The foregoing observations vividly bring out the balance that should exist between science and business. It is needless to say that the society which such a balance can help to build will, as always, call for courage, integrity and tenacity. These, as Sir Alexander pointed out, are some of the ideals that "we might have in our minds as we each address ourselves to the problems of education for an age of science."

LIFE INSURANCE

In his review of the working of the Life Insurance Corporation of India during the two years of its existence, the Chairman Mr. P. A. Gopalkrishnan, has done well to highlight the achievements as well as the problems of the Corporation. The Chairman, in the course of his address at the twenty-seventh meeting of the Corporation, held last Sunday in Bombay, reported that, despite the many administrative and organisational problems which still remained unsolved, the Corporation was able to do a record new business of Rs. 283 crores in 1957. So far during the current year, new business figures were above those in the corresponding period of the previous year. If this trend were to continue, the year would close with a much better record than the last one. The Corporation had a hard time last year. Though the Chagla Inquiry served its purpose, the adverse publicity that the Corporation received had, according to the Chairman, the temporary effect of slowing down the momentum of business developed in 1957.

On the financial side also, the Corporation made progress. As a result of the increase in new business, the premium income moved up from Rs. 4.6 crores per month in the first year of the Corporation's working to Rs. 5.4 crores in the first 11 months of the second year. The average claims paid per month also went up from Rs. 1.3 crore in the first year to Rs. 1.4 crore in the first 11 months of the second year. The surplus funds available for investments amounted to Rs. 30.2 crores in the first year. It rose to Rs. 34.7 crores in the second year. The investments of the Corporation were at present about Rs. 383.3 crores, composed of Rs. 275.6 crores in Government and approved securities, Rs. 72.8 crores in stocks, shares and debentures, Rs. 14.0 crores in mortgage and other loans and Rs. 20.9 crores in properties including buildings.

The Chairman frankly admitted that there had been a decline in the standard of efficiency of the Corporation's staff. He attributed this to the tendency of some of the employees, now assured of security of service and standardised scales of pay, to take things easy, and the stresses and strains caused by the bringing together of personnel from diverse units into the administrative structure of the Corporation and organisational defects.

Clearly, as the Chairman himself admitted, a great deal remains to be done in the matter of servicing of policies and speedier settlement of claims. It is gratifying to note that the problem is engaging the serious attention of the Corporation and, as a result of certain steps already taken, some improvement has been noticed. In view of the steep rise in new life business since 1941 and 1950, the volume of maturity claims against the Corporation after 1961, it is stated, is likely to increase sharply. The Chairman said that the Corporation proposed to take suitable steps for strengthening the staff on the claims side.

The Chairman referred to certain administrative problems which were awaiting solution such as consideration of the Lall Committee's report regarding the senior services and the mechanics of application of the categorisation formula to the field officers. It was a matter for satisfaction, he said, that the Corporation took final decisions regarding the senior services about three months ago. These decisions were, on the whole, well received and implemented. Similarly, the field officers were categorised and fitted in at appropriate stages in the pay scales admissible to them or absorbed in lower administrative jobs. Nearly 70 per cent. of these officers received one or more increments depending upon their performance. The others were continuing on their existing emoluments or had suffered slight reductions on account of their poor performance. It was only a very small percentage of the field force, namely, 2.25 per cent., who had to be retrenched because they had done little or no work at all during the year nor had shown any inclination to do any work. It was a pity, the Chairman added, that, in spite of this generous treatment accorded to the field officers, a few of them had resorted to hunger-strike in Calcutta and other places in order to force the Corporation to alter its decisions.

As regards the integration of the old units, the Chairman said that the process of integrating the units of the old insurance companies into the 33 divisional offices of the Corporation would take at least two more years for its completion. It involved the redistribution of over five million policies and connected papers and reassignment of thousands of employees working in these units. Until this process of integration was completed and the policies issued by the old companies were allocated to one or other of the Corporation's divisional offices, these policies had to be handled by the conglomerations of head office units which were now working in the zones separately from the divisional offices. Many of the complaints regarding policy servicing had arisen, according to him, because the organic connection between the head offices of the units and their branches was severed on nationalisation and the units had not yet been broken up and fused into the organisational pattern of the Corporation. All the steps which have been taken recently for improving the servicing of policies, etc., have, therefore, been limited to bettering the internal efficiency of the units and bringing about better co-ordination between the working of the units, on the one hand, and the divisional and branch offices, on the other. Not until the process of integration of these units with the divisional pattern of the Corporation had been completed, he added, would the Corporation be able to grow to its fullest stature in the organisational efficiency required for expanding and nurturing its business. A beginning had been made with regard to this work of integration. Thousands of policies issued by the old insurance companies had already been transferred to the divisional offices of the Corporation. All the foreign policies issued by the various units were being transferred for centralisation at the foreign department.

Mr. Gopalkrishnan stressed the need for a strong centralised foreign department. Such a department, he pointed out, would enable the Corporation to maintain a standard of efficiency comparable to other insurers in foreign countries where competition was keen. The Corporation was writing annually new business of about Rs. 6 crores in 10 foreign countries where it had to compete with private insurers from different countries. In view of this, the organisational pattern of the foreign department differed slightly from that in India.

Outlining the future plans of the Corporation, the Chairman stated that, from the long-range point of view, much preparatory work was necessary for strengthening the organisation and for successfully launching and executing the insurance plans. Recently, a training scheme was started for field officers and agents. It was proposed to set up a research and statistical section in the investment department to provide all necessary data for making investments.

The Chairman explained the stand of the Corporation in regard to the bonus claim put forward by the All-India Life Insurance Employees' Association. He disclosed that the Government of India had decided, as a matter of general policy, that no bonus would be payable to employees of nationalised undertakings. Instead, the Corporation had extended a scheme of free insurance to its employees. A comprehensive scheme of housing, costing about Rs. 12 crores, was also sanctioned by the Corporation. He added that, after the completion of the biennial valuation of assets and liabilities of the Corporation, it might be possible to consider a scheme of incentive bonus for the staff, the quantum of which would depend upon the financial results disclosed by the actuarial valuation.

While the policyholders in general would welcome the Chairman's assurance of better servicing of policies and quicker settlement of claims, those who had taken out "with profit" policies must certainly have felt disappointed at his silence over the question of bonus for such policies. Many to whom the year 1956 was a bonus year had to go without it because of nationalisation. They have waited long enough and it is only natural if they are anxious to get what is their due. They would have appreciated at least an indication as to when they could expect the relevant declaration by the Corporation. The question of uniformity in the premium rates is also one in which an early decision would be welcomed by those policyholders who took out policies with private companies charging different premium rates in pre-nationalisation days, and now find themselves contributing varying rates for identical benefits.

AUTONOMY FOR P. & T. DEPT.

To an organised community, the Posts and Telegraphs constitute a vitally essential service. Indeed, their role is all the more significant in a country like India which is on the threshold of a new era of economic development. Admittedly, the Indian Posts and Telegraphs Department has a proud record of achievement to its credit; during the period of well over a century of their existence, they made substantial progress, both extensively and intensively. It cannot, however, be gainsaid that the system as it stands today leaves much to be desired. It has to be geared to new levels of efficiency and a greater sense of dedication, lest it should falter in the face of growing challenges of an expanding economy. Against this background it is noteworthy that the authorities intend setting up an autonomous body for Posts and Telegraphs. This was disclosed last week-end by Mr. S. K. Patil, Minister for Transport and Communications, while speaking to the postal employees in Bombay at a farewell function organised in honour of Mr. Dalvi, Postmaster General, on his retirement. Mr. Patil disclosed that this autonomous body would be on the lines of the Railway Board and would take its own decisions in relation to its working and not refer everything to his Ministry as at present. This proposed body, consisting of six or seven directors, he averred, would eliminate red-tape and be free to

... target to be reached ahead of time

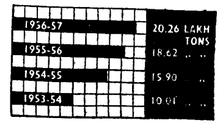
The last few years have recorded remarkable progress in the Sugar Industry. Production of white sugar in India has been doubled within a period of four years—from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. This expansion has been proportionately greater than in any other established Industry. There is now a rising tide in the affairs of White Sugar Industry, which if taken advantage of, would not only lead to further progress, but the industry would also emerge as a leader in this commodity in the world market.

With the grant of protection in 1932, the Indian Sugar Industry has grown to become the second largest national industry and it is a vital factor in the nation's economy. Its new development will contribute materially to the success of the Second Five Year Plan. There has been a steady increase in sugar consumption too. This phenomenal increase both in production and consumption places the Planning Commission's Second Plan target of 22.5 lakh tons of Sugar out of date and calls for a revision.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian WHITE sugar ...



ample for home market—with surplus for export too

RAISING AGRICULTURAL PRODUCTION

FORD FOUNDATION EXPERT'S SUGGESTIONS

From Our Special Correspondent

NEW DELHI, *2nd September*

DELHI LETTER

WHAT with the Khanpur experiment in bullock-powered pump irrigation and power generation and with the techno-economic surveys being carried out in a number of States by the National Council of Applied Economic Research, it looks as though the Ford Foundation is planning to play a more active catalytic role in rural reconstruction, small industrialisation and agricultural production. Mr. Douglas Ensminger, Ford Foundation's Representative in India, has outlined in this connection a programme for achieving freedom from hunger. For India to win its freedom from hunger, he says, it must have a national programme to solve its food shortages through intensive food production efforts. Mr. Ensminger's principal suggestions are as follows:

The nation must, as *a national policy*, establish each year, at least six months before time for the villager to plant his crops, guaranteed sale prices for all the basic food crops. If, in planning to sow certain crops, the cultivator knows that at the time of harvest the Government will guarantee him a minimum sale price, he will then know how much he can invest in improved seeds, fertilisers, insecticides, improved implements, irrigation and soil conservation.

The need is for a guaranteed sale price at the time of harvest. If, at that time local prices exceed the Government-guaranteed price, the cultivator should and will sell at the higher price. If, however, *local prices are lower than* the Government guarantees, then the Government will pay the guaranteed price. Government purchase of some share amount of the crop under a price support programme will require a network of grain storage godowns. This will be a clear gain for India. At least a year's supply of the basic cereal crops, produced from India's soil, will be the best possible guarantee, not only against fluctuations in price, but against fear of famines and food shortages from local crop failures.

Farmers Need Security

Even with a guaranteed price for their future harvest, few cultivators can, even when they use their old methods, plant and harvest their crops without credit. One can immediately see the need for substantial additional credit when the cultivators accept improved practices. A programme which seeks to encourage and urge the cultivator to adopt better farming methods, should be matched by a credit programme, which will provide on loan the money needed to put the new methods into effect. This means credit for seed, fertiliser, implements, insecticides, and irrigation. If this credit goes for these necessary farm supplies, and possibly or preferably if credit is advanced in the shape of these supplies—*and* further if the sale price of the crops is guaranteed, certainly loans advanced against the expected harvest should then be viewed as secured loans.

The third point of Mr. Ensminger's programme is a clear immediate determination of the accepted *size* of the holdings. The continuous threat of further breaking up of existing holdings is a real deterrent to large farmers and small tenants alike in adopting immediate and effective land improvements and better farming methods.

By and large, India's agricultural and extension specialists know now what kind of improved seeds, implements, fertilisers, and insecticides to recommend to the village cultivators to increase food production. If liberal supply of credit is assured to buy them, it becomes essential to organise a supply and distribution system to assure that these supplies are accessible to the cultivators when they are needed, in the quantities required, and within a bullock-cart's hauling distance.

Since the nation's needs are urgent, intensification of effort should be made in the areas where water is available and the soil is most productive. This means that all the fertilisers, improved seeds, insecticides and improved implements should be made available on a priority basis to the areas where canal and tube-well irrigation are available and to areas having sufficient water from rains. By all-out intensification of effort—administrative, organisational and educational—in these areas, the nation should be able, in a comparatively few years, to realise a substantial tonnage increase in food production.

Import Policy

At the Import Advisory Council meeting over the week-end, the Commerce and Industry Minister laid down an order of priorities in allocating foreign exchange for the next licensing period. High in this order would be the requirements of industries employing large numbers of people; of those catering to the needs of masses of people; and of industries relying mainly on indigenous products and requiring imported raw materials only to a small extent. Industries showing a good export performance and individual units with a good export record would also be given preference. The requirements of small industries and imports of fertilisers would also be high in the list of priorities. Mr. Lal Bahadur Shastri assured industry that the supply of essential raw materials, with possible cuts in some lines, would be ensured so as to enable the level of production to be maintained.

The Commerce and Industry Minister told the meeting that the average weekly rate of depletion of sterling balances had come down from Rs. 7.2 crores in the first seven months of 1957 to Rs. 4.1 crores in the corresponding period of the current year. Although the monthly average of exports had fallen from Rs. 53.6 crores in the first seven months of last year to Rs. 42.7 crores in the corresponding period this year, there had been a saving of Rs. 100 crores in the import sector managed by the Commerce and Industry Ministry in the first half of this year as compared with the corresponding period of last year. If, thus, the foreign exchange earned by exports was less by about Rs. 66 crores in the first half of the current year, the saving of exchange on the import side was Rs. 100 crores during the same period. How, in these circumstances, the overall position in respect of foreign exchange was now more difficult than six months ago, the Minister did not explain. Was the pressure again due to imports of food and defence equipment on Government account? Mr. Shastri admitted that imports of steel non-ferrous metals, machinery, vehicles, raw cotton, chemicals, electrical goods, textile yarn and fabrics, paper, photographic materials, etc., had been cut down to the bare minimum. At the same time, he appeared to think that further savings of foreign exchange might be possible on the import side. One wondered if there was no possibility of savings on account of defence imports.

Export Drive

At the Export Promotion Advisory Council meeting, the Minister for Commerce and Industry stated that figures of exports of tea in recent months were very reassuring. The total exports of tea during the first six months of 1958 were 190.5 million lbs., as against 174.3 million lbs. in the corresponding period of 1957. As for textile exports which had fallen in recent months, Mr. Lal Bahadur Shastri told the Council that an export promotion scheme in this connection would be shortly announced. Under this scheme a part of the foreign exchange earnings on textile exports would be made available to the exporting mills for the purchase of machinery and import of raw materials and stores. Tea also would come in for further export promotion under a suitable scheme.

(Concluded from next column)

of the national resources of labour and capital, on the one hand, or whether there should be stable prices on the other. The critic of the Report will say that price stability has won over all other considerations and on the Left at least it will be said that the two objectives are not incompatible and there should be both full utilisation of economic resources *and* stable prices. But even these critics will be bound to confess that the national resources are not at present organised in a way to make such objectives possible!—*All Rights Reserved.*

COUNSEL OF CAUTION

COHEN COMMITTEE REPORT

From Our Own Correspondent

LONDON, *30th August*

LONDON LETTER

THE second Cohen report, or to give it its more informative title, the Report of the Council on Prices, Productivity and Incomes, has caused just as much irritation with the Trade Unions and the Labour supporters generally than did the first. The reason is to be found in the Council's forecast of lower wage increases in the future than in the past, rather more unemployment, no more prospects of increasing production; in general, apparently, a future of stagnation and decline rather than of expansion and progress.

But that, of course, is not how the Council see their analysis; they consider that the Government's restrictive measures, though they have involved increasing unemployment and some reduction in production, have been fully justified. They note that both wholesale and retail prices are now stable, that there is a possibility of some reduction in food prices, mainly seasonal, that export prices have been reduced and that the prices of imported materials are falling even more sharply. On the other hand, the total national output still shows a slight increase and industrial production has fallen only slightly. They note with satisfaction that, in the first half of 1958, only just over four million wage earners received wage increases, averaging 5.7 shillings per head, while in the same period of 1957, the corresponding figures were 9½ million and 8.1 shillings per head. And, the trend noted in the former period continues. Profits in the first half of the year increased by 2½ per cent. and this again is lower than the corresponding period of last year.

The Council have clearly been obsessed with the spectre of inflation and are expressing their satisfaction that this spectre has been scotched, though not, they point out, killed. Indeed, they are afraid that any substantial revival of demand would renew the threat to price stability.

Negative and Irritating

Hence, although they agree that rising employment and rising production must remain economic objectives, they are fearful that, unless progress towards these objectives is very cautious indeed, it will not be compatible with reasonable price stability. It is this insistence on caution and the consequent restrictive approach to the country's economic future that the Trade Unions find so negative and irritating.

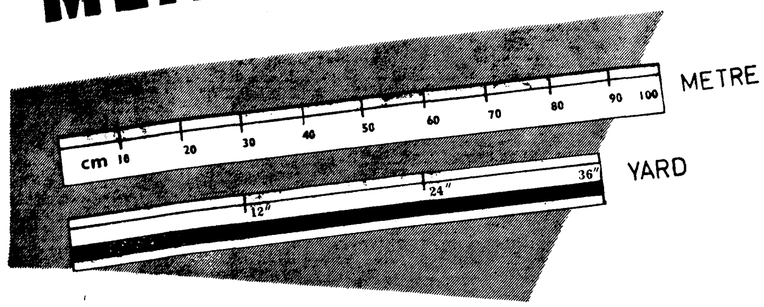
Pursuing their role of Cassandra, the Council think that production is likely to go on falling over the next few months, that the balance of payments is likely to deteriorate, as falling export prices catch up with reduced import prices and then, though they agree that the Government could certainly stimulate public investment and could encourage private investment and consumption, they think it should not do these things because bottlenecks would, they believe, quickly be reached and inflation rear its head at these points. This then leads immediately to their views on wages: gone are the days of happy wage increases of 5, 6 or 7 per cent. per annum, even the average over the past year of 3½ per cent. is in excess of the present rate of productivity increase; and what after all is the point of a 3½ per cent. wage increase if the result is a retail price rise of 4½ per cent. That is the sort of logic for which Trade Unions have no use at all—for the very simple reason that, while averages are all very well as descriptive general terms, very few people are themselves the average!

So the Report concludes: "In these circumstances, it seems clear to us that, while it is right that policy should aim at an expansion of demand, it must proceed gradually and with caution towards that end. The dangers of recession are not so drastic and so imminent, nor those of inflation so remote, as to justify a policy of all-out encouragement of expenditure."

And then in a flash of intuition on the sort of comment that their report would raise, they point out that, in an economic policy, there might be two objectives conflicting one with the other—whether there should be full utilisation

(Continued in previous column)

WHAT IS THE METRIC SYSTEM ?



The Metric System derives its name from the Metre, which is the primary unit for measuring length. In this system, as in all decimal systems, the basis of calculation is 10. We multiply or divide any unit of length, weight or volume by the same number i.e. 10.

In the Metric System, the multiples of a unit have the prefix *deca* (10 times), *hecto* (10 × 10 = 100 times) and *kilo* (10 × 10 × 10 = 1,000 times). The sub-units have the prefix *deci* (1/10), *centi* (1/100) and *milli* (1/1,000).

THE CHANGE-OVER TO THE METRIC SYSTEM OF WEIGHTS AND MEASURES BEGINS FROM OCTOBER, 1958

KNOW THE METRIC LENGTHS

The primary unit of length is THE METRE = 40 inches approx. 1 Kilometre = 5 furlongs

SUB-UNITS
10 millimetres = 1 centimetre
10 centimetres = 1 decimetre
10 decimetres = 1 metre

MULTIPLES
10 metres = 1 decametre
10 decametres = 1 hectometre
10 hectometres = 1 kilometre

FIRST DECADE OF INDUSTRIAL FINANCE CORPORATION OF INDIA

SOME ASPECTS OF ITS WORKING EXAMINED

By L. C. Gupta

THE Industrial Finance Corporation of India completed its tenth year of operations on 30th June 1958. The present is, therefore, a suitable occasion to review its lending operations and policies. In spite of the great publicity that it received during several Parliamentary debates, there are various aspects of its working which have hitherto remained obscure. This article attempts at examining particularly these aspects and to appraise the working of this important financial institution against the general economic and financial conditions and in the light of the statutory framework within which the Corporation has to operate. It is also proposed to point out the factors which have been hampering the Corporation's progress.

The Corporation was started at a time when Indian industries were in need of large long-term capital, thanks to the steep rise in the cost of replacement of plants completely worn-out on account of the Second World War and the plans for establishing several new industries. Conditions in the capital market were deteriorating and it was becoming increasingly difficult even for good concerns to raise capital from the market. According to a recent Reserve Bank study, actual capital issues (including shares and debentures) by public limited companies in India touched the lowest point in 1952. The decline in capital issues can be seen from the following figures:

(Value in crores of Rs.)

1948	21.9
1949	16.3
1950	14.6
1951	9.3
1952	4.7

In view of these conditions, the Corporation came into existence not a day too soon. The financial assistance rendered by the Corporation has enabled many industries not only to survive but also to expand and achieve a more economic size.

The Corporation is the first of the several special financial institutions that are working in India today. As such it had to face the difficulties of a pioneer. Lala Shri Ram, first Chairman of the Corporation, referred to these difficulties, at the fifth annual general meeting of the Corporation thus: "The work that we have been doing is of a new type, at least in India, and we are not ashamed to confess that we have slowly felt our way. In the early stages, perhaps we were groping, if not in the dark, certainly in feeble twilight."

Loans and Advances

For these reasons, the progress of the Corporation during the initial period of five years was slow and halting. In the subsequent years the rate of progress was accelerated. This is evident from the figures of loans sanctioned. The amount of loans sanctioned per year averaged Rs. 3.9 crores during first five years and increased to an average of Rs. 9.9 crores in the subsequent four years. The amount of sanctions had reached a high level of Rs. 15 crores during 1955-56, after which it came down to about Rs. 12 crores because many industries were unable to import plant and machinery on account of foreign exchange difficulties.

Similarly, the average of actual disbursements of sanctioned amounts rose from Rs. 2.0 crores during the first five years to Rs. 4.1 crores in the next four years. Disbursements during 1956-57 had attained a level of nearly Rs. 10 crores. As a result of this quick progress in recent years, the Corporation had nearly exhausted its resources by 1957 and, for some time, could not sanction any further loans till additional funds had been arranged. The total of all loans sanctioned by the Corporation since its inception up to 30th June 1957 was about Rs. 55 crores. During the same period, actual disbursements aggregated Rs. 26.5 crores, of which Rs. 4.6 crores had come back to the Corporation. Sanctions and disbursements are likely to reach about Rs. 58 crores and Rs. 34 crores, respectively, by the end of June 1958. The number of industrial concerns which have received loans from the Corporation is in the neighbourhood of 200.

These results have been achieved by energetic efforts on the part of the management of the Corporation to cut down all delays and to accommodate applicant concerns as much as possible. Among the steps taken by the Corporation for this purpose are the appointment of its own law officers in all its branches, further liberalisation of the procedure for granting interim loans pending completion of legal formalities and a general toning up of its administrative machinery.

Rejections

It is interesting to note that the proportion of rejected applications to the applications made has fallen quite sharply in recent years. In the first five years, the total number of applications considered for loan by the Corporation was 256, of which 108 were sanctioned and 148 were rejected, the respective percentages being 42 and 58. During the next four years, the Corporation considered 218 loan applications, of which it sanctioned 151, that is, 69 per cent. and rejected only 67, that is, 31 per cent. An important reason for fewer rejections in recent years is an improvement in the quality of the applications themselves. In the earlier period, industries in India, not being familiar with the methods of mortgage-lending, and not being in the habit of detailed planning of industrial projects, many of the schemes submitted to the Corporation for grant of loans were not well conceived and were drawn up haphazardly. An indirect influence of the Corporation's activities has, therefore, been a wider adoption of the habit of detailed planning of projects among Indian industries.

Biggest Lender

Today, the Corporation has become the most important industrial mortgage-lending institution not only in India, but perhaps in the whole of Asia. According to the arrangements more or less completed, total funds at the disposal of the Corporation by the end of March 1961 will roughly be of the order of Rs. 50 crores, as shown below:

	Rs. crores
Share capital	5.0
Bonds	12.3
Loan from Government	22.5
Loan from Life Insurance Corporation (under negotiation)	10.0
	49.8

According to the latest Reserve Bank survey of the finances of 429 selected public limited companies which closed their accounts during the quarter ended December 1956, loans from the Industrial Finance Corporation increased over the year by Rs. 1.83 crores while mortgage loans from other sources increased by only Rs. 70 lakhs and outstanding debentures went down slightly. This brings out the importance of the Corporation in the field of mortgage-lending in our country.

Loans to Small Companies

A point of great economic significance, which is not yet generally known, is that the firms which approach the Corporation for financial assistance are generally the marginal ones which are unable to raise capital from other sources. The vast majority of them belong to the small and medium-size groups. It has persistently been alleged in Parliament that the Corporation has neglected the small and medium-sized industries and has been advancing money to the big industrialists. The fact, however, is that, out of the 177 companies which had been sanctioned loans upto 30th June 1957 about 26 per cent. had a capital of less than Rs. 10 lakhs and about 43 per cent. between Rs. 10 lakhs and Rs. 25 lakhs. Thus, 69 per cent. of the companies obtaining loans from the Corporation belong to the small and medium-sized groups. About 50 per cent. of the amounts sanctioned as loan had gone to these small and medium-sized companies. This not only involves greater risk but also greater expenditure on supervision. According to an English writer, "the general degree of risk in financing of small business is such that a loan may carry a risk of loss equivalent to that on a good quoted ordinary share." Hence, even though providing only loan capital, the Corporation shares in the fortunes (or rather the misfortunes) of these enterprises. In providing loans to this type of business, the Corporation, in a sense, may be said to be providing "risk-capital."

The main purpose for which loans have been sanctioned by the Corporation is acquisition of fixed assets in connection with renovation, modernisation and expansion of existing units or starting of new units. In a few cases, particularly after the Korean War, when the industrial concerns were finding difficulty in obtaining working capital from banks, the Corporation also advanced loans partly to meet this difficulty.

Processing of Applications

An application for loan received by the Corporation passes through several stages. It is first scrutinised at the head office which also obtains an inspection report of the factory from its branch manager in whose jurisdiction the factory is located. The head office also obtains from the applicant concern such further particulars or clarifications as it may find necessary. On the basis of the branch manager's inspection report and the data supplied by the applicant concern, the head office prepares a memorandum which is placed before the Advisory Committee concerned. There are at present five Advisory Committees dealing with textiles, sugar, engineering, chemicals and miscellaneous industries, each of which consists of two or three non-official experts drawn from the private sector of the industry concerned, two or three official experts, one or two directors of the Corporation and the Chairman. The Advisory Committees meet periodically and act as the technical sieving bodies. Where necessary, the Corporation also seeks and obtains technical advice from the Development Wing of the Ministry of Commerce and Industry or other Government Departments such as the Textile Commissioner's office or from other official sources. In some cases, a special technical investigation into the working of the applicant's factory may have to be arranged; this is done by either official or non-official experts as may be decided upon. Finally, the recommendations of the Advisory Committees are placed before the Central Committee of the Board of Directors of the Corporation which may sanction the loan or reject it or may ask for modifications in the scheme.

Thus, every application for loan is examined on its own merits by a Central Committee of the Board of Directors of the Corporation who are statutorily empowered to act in this behalf and the sanction or rejection of loan application is strictly a "business decision." The Corporation acts as an "open house," giving recognisable and free access to all deserving cases.

Government Directive

Generally speaking, loans are advanced on the security of all present and future fixed assets belonging to the concern. In April 1954, the Government issued a directive to the Corporation that, in sanctioning loans "a minimum margin of 50 per cent. should be generally aimed at." The wording of this instruction is such that there could be an endless debate on its exact meaning. The words "minimum" and "generally" do not seem to go well together and, in the interest of clarity, either of them should be dropped. Moreover, it leaves open the important question as to how the assets are to be valued for purposes of security—on the basis of their realisable value or their book value—and, as such, loses much of its mandatory significance. Whatever its true meaning, in practice it is bound to have an extremely restrictive effect on the discretion of the Corporation and the flexibility of its loan policies. Indeed, it appears to have already resulted in considerable rigidity in the application of margin requirements. Even though there may be quite a strong case for lowering the margin below 50 per cent. in suitable cases, such as of well-managed concerns with good prospects but not enough fixed assets, the Corporation would hesitate to do so, lest it should be accused in Parliament of disobeying a Government directive.

Though ostensibly intended to ensure safety of the Corporation's funds, the directive is based on a misconception. This kind of defect in the loan policies of public financial institutions has been pointed out by the well-known writers, Messrs. Guthmann and Dougal, in very apt words: "Whereas commercial bankers were often accustomed in the past to rely too heavily upon personal reactions and general reputation, there is now the danger of too much emphasis by supervisory authorities upon statistical factors. . . . No financial formula can take the place of banking judgment that is competent to give proper weight to such intangibles as personal character and business ability which factors should influence the interpretation of statistical information."

In view of the great difficulty of raising equity capital at present, particularly by the small and medium-sized companies, the aforesaid directive is likely to be particularly harsh on them. It is imperative that the Government should leave greater discretion with the Board of the Corporation and the directive pertaining to the margin of security should be amended to the effect that the margin should be determined having regard to the earning capacity and prospects of the industrial concern, the competence of its management and other relevant considerations.

Risky Business

There are two other important factors which also have made the task of the Corporation more difficult and hindered the adoption of a bolder policy. The first of these is Parliament. As the debates have shown very clearly, Parliament has not fully appreciated the fact that some risk is inevitable in the business of granting loans, particularly long-term loans, to existing as well as new industrial enterprises. It also appears that the statutory audit conducted on behalf of the Comptroller and Auditor-General of India tends to concentrate attention on the security aspect alone and place undue emphasis on it. All this restricts the environment in which the Corporation has to work. Chairmen of a few State Financial Corporations also have spoken about this kind of attitude on the part of the State Legislatures. It is not fully realised by our legislators that the business of long-term lending is everywhere inherently risky and complicated and, further, that it is more risky in underdeveloped countries like India. That the risk attending industrial investment is greater in underdeveloped countries than in the industrialised countries of the West, is well explained by Mr. Henry G. Aubrey in a paper on "Investment Decisions in Underdeveloped Countries" in the volume *Capital Formation and Economic Growth* published by the National Bureau of Economic Research, U.S.A. Mr. Aubrey says:

> "In underdeveloped countries, the situation is very different. Experts for exploratory investigation are rarely available locally; foreign experts are costly and their advice is not always suited to different conditions. Often the lack of or deficiencies in statistics make estimates of consumption and markets, of costs and capital requirements very difficult if not totally impossible. Worse yet, since many preliminary services which come ready-made in industrial countries are absent, the initial capital outlay is increased and a risk of running short or 'making do' with regard to skills, parts and sometimes even power and transportation, is incurred. Planning deficiencies, caused by lack of means to carry out the required scrutiny of new ventures, appear as an almost inevitable danger."

Guaranteed Dividend

The second factor, which seems to have retarded the progress of the Corporation, is its unsuitable capital structure with the guaranteed minimum dividend. The shares of the Corporation are guaranteed by the Central Government as to the repayment of the principal and the payment of the annual dividend at a minimum rate of 2½ per cent. per annum. When the profits of the Corporation are not sufficient to pay the guaranteed dividend in full, the deficiency is made good by the Government by paying a subvention to the Corporation. The Government subvention is not treated as a grant but is a liability of the Corporation to be repaid to the Government. The experience of the working of the Industrial Finance Corporation, as also of the State Financial Corporations, has clearly shown the undesirability of this feature. The guaranteed minimum dividend without any provision whatsoever for Government grants virtually means that the Corporation does not possess any equity capital. This, in combination with the Corporation's liability to pay income-tax and super-tax on its income, has imposed a very heavy burden on the Corporation. It has prevented the Corporation from building up reasonable reserves which are absolutely necessary in this type of business. After five years of operation, the reserves of the Corporation totalled only Rs. 3 lakhs against a paid-up capital of Rs. 5 crores. The Government had, therefore, to amend the Industrial Finance Corporation Act in 1952 by providing for the creation of a Special Reserve Fund in which all dividends accruing on the shares of the Corporation held by the Central Government and the Reserve Bank, are, instead of being

AMERICAN LETTER

FEELING OF OPTIMISM DOMINANT

AVERAGE MAN CARES LESS FOR INFLATION

From Our Special Correspondent

NEW YORK, *26th August*

PUBLIC opinion in the United States is no longer preoccupied with the business recession which is regarded as on the way out. It got a great psychological lift from the feat of the atomic submarine *Nautilus* which discovered the North-East passage under the polar ice cap. It is being pointed out by newspapers and magazines as an outstanding mark of American superiority at least in *one* field. The crew of the ship received a gaudy welcome at New York which was played up newswise to the limit.

Like the recession, the Middle East crisis, too, is no longer of paramount importance in American thinking. Most people seem to believe that the talks among international scientists at Geneva have produced a workable formula for controlling atomic tests, that the United States is willing to withdraw their occupation forces from lands in the Mediterranean, even though they are there at the request of the local Governments and that Soviet Russia will not fight over this issue.

Up to this point, all seems to be well except that the Western powers appear to bow to Arab nationalism without knowing where that course is going to lead. As seen from here, President Nasser of Egypt has been quite successful in playing the East against the West and *vice versa*. The Iraqi new regime has adopted the same policy. It is a new Munich, in the opinion of many informed people here—a British "muddling-through" according to an American pattern and "let's extricate ourselves as gracefully as we can from an obvious dilemma."

All this news has overtaken, too, the case of Sherman Adams, a former Governor of New Hampshire and assistant to President Eisenhower who accepted many gifts "imprudently." Yet, his stories and those about him are still haunting Republicans running for election or re-election this year.

The Democrats have made no political capital out of the incidents. The only explanation seems to be that as many Democrats are involved in the list of those receiving gifts as Republicans. Hence, there is no point in being too specific.

As this is being written, the wind-up of this session of Congress is in progress. There have been many new laws passed. It was not an unconstructive session. Yet, there was one great deficiency. After all the hearings which exposed gross abuses by labour leaders, the combined wisdom of legislators in the Senate and in the House of Representatives could not muster enough courage to pass an effective law to stem at least some of these abuses. Everyone at Washington seems to be labouring under the illusion that the Unions can deliver votes which they cannot do under the secret voting system. Thus, abuses are apt to continue until they reach emergency proportions. An emergency is the only compelling motivation.

Meanwhile, the compelling fear of the business and financial community has switched from "depression" to "inflation." The San Francisco and Dallas Federal Reserve banks have increased their discount rates. Both dragged their feet in following the general trend in reducing them just a few months ago. Government bond prices were subjected to a severe test of rapidly rising stock prices after an ill-advised and ill-executed Government financing.

Inflation is like sin in any religion. Every right-thinking person ought to be and should be against it. Yet, 95 per cent. of the "average men in the street" could care less, as long as their salaries go up so that they can pay their bills. This reasoning does not apply to the unsophisticated alone. The great American Telephone and Telegraph Company is a vivid example. It is one of the investment favourites among small people and professional ones. Its claim to frame is that it has paid a $9 dividend for each ordinary share since 1922 every year. Very few people seem to raise the question of poor management which paid $9 a year in 1922 and $9 a year in 1958 dollars which are worth about $4.50 in terms of 1922 dollars.

Business in the U.S. is definitely better. Throughout the country, the ups exceed the downs. These spot checks pertain to the second half of August. Business is booming, especially in the West and South of the U.S. The farm States seem hardly aware that there was a recession. Farm income, on a national basis, is about 10 per cent. above a year ago.

The other extreme is found in heavy industry. The motor industry is still depressed and faced with a major strike, if and when popular demand for automobiles should pick up. Centres where appliances, transportation equipment and certain types of machinery are made, are still in the doldrums. Coal mining is also in a bad way, such as Pennsylvania, West Virginia and parts of Kentucky. There are also scattered communities in New England on the Eastern seaboard of the U.S. where unemployment is rampant, because industries moved away, mostly to the South, where labour is cheaper.

Industrial growth in recent years has been greatest in the South and the West. Living is easier in those areas. No provision has to be made for winter attire and heating in winter is not a prime necessity. This adds up in dollars and cents. No wonder, business activity in San Diego, California, rose to the highest in history at mid-year, 1958. Employment and personal income has also been above last year's level in Arizona, where home building is booming in an endeavour to keep pace with a rising population.

Slow auto business is still affecting such manufacturing centres as Detroit and Lansing, to name just two. Employment there is still 15 to 20 per cent. below the levels of last year.

Both General Motors and Akron rubber manufacturers are rehiring help. Factories catering to defence industries are also doing well. For some reason, the tide has turned so far as popular confidence is concerned. Retail buying has improved all over the country.

Industrial expansion programmes, too, are not lagging behind, excluding the ailing railroad and oil industries. In the Chicago area, for instance, industry intended to spend twice as much on expansion as it did in 1957, when the same question was asked.

Even textile plants are beginning to rehire help. The increases in employment are small, to be sure, but they indicate confidence in the future where only pessimism reigned a few weeks and months ago. The feeling now in most communities which were hit by the recession is: "The worst is over." They believe it. The reasons are inexplicable.

Tobacco plants have added workers recently. Sales of smokes are booming and hardly anybody pays any attention to the news stories about lung cancer being caused by cigarettes.

For the correspondent who has to summarise a national picture, business in an individualistic country like the United States, assumed and assumes local proportions. A banker in Ohio said, for example, "General Motors have called back more than 1,600 workers at their local plant . . . things are looking up." All these people are employed in the home products divisions of General Motors and the demand for these products has improved because of increased demand for private homes.

One of the best summaries of U.S. business conditions was contained in the August month-end report of *U.S. News and World Report*. It said, "a few cities still are enjoying boom-time prosperity. Others, especially in farming regions, are doing well in trade and commerce. And, in widely scattered areas, where recession has left its mark, business is now starting to improve." It sums up, beautifully, what the average American has in mind, when it writes thus: "How am I doing? . . . what are the chances for myself and for my neighbours? . . . the Middle Eastern crisis and war are remote . . . things are looking up and, perhaps, we can afford to buy a new car again in 1959."—*All Rights Reserved.*

EXPORT TRADE IN COTTON TEXTILES

MR. NEVILLE WADIA ON DUMPING BY CHINA IN S.E. ASIAN COUNTRIES

COTTON textiles figured prominently in the discussions at the first meeting of the reconstituted Export Promotion Advisory Council held at New Delhi on Sunday last. This is only as it should be, considering that the export trade in cotton textiles, which constitute a staple earner of foreign exchange, has suffered a distinct setback of late. The aggregate quantity of cotton piecegoods actually shipped during the first seven months of 1958 is estimated at not more than 320 million yards, as against nearly 510 million yards in the comparable period of 1957.

The causes for the low level of textile exports are partly domestic and partly international. Among the former, special mention must be made of heavy taxation, high cost of production thanks to the all-round rise in wages and stores, and low productivity of a large part of the equipment in mills which is old and outmoded. The chief international factor responsible for shrinkage in India's textile export trade, apart from unhelpful tariffs and other measures such as quotas taken by a few individual overseas countries, is the emergence of competition from communist countries, particularly China, in markets which were normally drawing supplies from the free world. Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, did well to stress, in his speech at this week's New Delhi meeting of the Export Promotion Advisory Council, that it was no longer a case of straight forward competition with other countries but competition against a totalitarian regime. Mr. Wadia declared that the prices at which the Chinese were selling textiles were nothing short of dumping and that it was an unfriendly act to upset the entire international trade in this manner. Stating that he did not know if the Government of India could do anything through diplomatic channels, he urged the need for preparing a long-term programme for cotton textile exports.

No Crying "Wolf"

Mr. Wadia has certainly not cried "wolf." For the effect of Chinese competition has turned out to be too severe. According to a Press report, attractive terms of credit for long periods, extremely low prices—the prices of cloth exported by China are said to be 15 per cent. lower than those of India—and energetic sales drive by emigrant Chinese merchants have been helping China in steadily edging India out of the South-East Asian textile markets. To quote the report: "China has been making an open offer to textile importers in this region that she will supply any type of textile goods at 10 per cent. cheaper price than that of any other textile exporting country. Another feature of the Chinese export drive is her readiness to apply a 'falling clause' to her forward contracts for textiles under which importers make payments at the prices prevailing at the time of delivery, if these happen to be lower than the original contract priced.... Leading textile firms in Malaya, Thailand, Indonesia and Burma are finding the handling of Chinese textiles profitable, in view of the attractive prices and credit facilities. At the same time, the Indian traders who were main importers of Indian textiles are switching over to imports of rayon goods from India, as these offer more profits."

It is stated that the disquieting impact of Chinese competition is particularly felt on the Malayan market, as is evident from the continued decline in exports of cloth from India to Malaya. Although, during the first quarter of 1958, Malaya imported 13 million yards of cloth less than in the corresponding period of last year, Chinese exports actually increased to this country in the same period. The drop in Malayan imports was mostly accounted for by the contraction in purchases from India. From about 26.37 million yards in the first seven months of 1957, the Malayan textile imports from India fell to a meagre figure of about 9.75 million yards in the corresponding period of 1958. India's share in the total Malayan textile trade is at present substantially lower, being 12 per cent., which compares very unfavourably with 30 per cent. in 1954.

Burma and Indonesia

The Chinese export drive is also stated to be vigorous in Burma and Indonesia, India's traditional textile markets. An indication of this is provided by the fact that the quantity of cloth shipped from Bombay port to Burma during the month of May 1958 was just 293,000 yards, as against 3.91 million yards in the month of 1957. Similarly, exports to Indonesia were lower at 1.56 million yards, as against 3.77 million yards.

The downward trend in the exports of such a vital earner of foreign exchange as cotton textiles is all the more unfortunate in the present context of the urgency of finding finance for imports of goods which are essential for the implementation of the development programmes. Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, candidly admitted in his speech at the meeting of the Export Promotion Advisory Council that the fall in the export of textiles had caused considerable concern. Mr. Shastri revealed that the Government was now examining the various recommendations of the Textile Enquiry Committee and assured the Council that it would not fail to make an appropriate contribution to the proper upkeep and success of the textile industry.

EXPORTS OF HOSIERY GOODS

There is a proposal to set up an Export Promotion Council for hosiery goods. Disclosing this, Mr. Nityanand Kanungo, Minister for Commerce, said in the Lok Sabha last week that several measures had been adopted to promote the export of hosiery goods. These are:

(1) The Cotton Textile Export Promotion Council has been giving wide publicity for Indian hosiery goods in overseas markets.

(2) Samples of hosiery goods are displayed in all important fairs and exhibitions in foreign countries and in departmental stores.

(3) An *ad hoc* committee has been set up at Calcutta to look into the problems connected with exports of hosiery goods. Another such committee is proposed to be set up shortly at Ludhiana.

(4) Exporters of art silk hosiery goods are granted licences for import of art silk yarn to the extent of 100 per cent. of the f.o.b. value of such exports.

(5) Import licences are granted to manufacturers and exporters to import raw materials against exports upto 75 per cent. of the f.o.b. value of exports.

(6) The National Small Industries Corporation assists in supplying basic technical data, preparation of new designs, etc.

In view of the stress laid on export of hosiery goods, a brief account of the latest position of the cotton hosiery manufacturing industry will be noted with interest. There are at present 300 hosiery factories which together produce about 11.0 million lbs. of hosiery goods and 4.4 million lbs. of knitted fabrics per annum. The following are the figures relating to the production of cotton hosiery in 95 factories during the month of May 1958, the figures in brackets being in dozens:

	(In lbs.)		
Vests	260,824	(112,381)	
Trunks/underwear	10,322	(6,400)	
Sock/stockings	13,658	(14,681)	
Other items	29,344	(21,090)	
Total ..	314,148	(154,567)	
Knitted fabrics	154,567		

STOCKS WITH MILLS

The total stocks of unsold cloth with cotton mills in India had come down from 373,000 bales (of 1,500 yards each) in January 1958 to 321,000 bales on 2nd August and of yarn from 100,000 bales (of 400 lbs. each) to 81,000 bales. These figures were given by Mr. Lal Bahadur Shastri while replying to a question in the Rajya Sabha the other day. Asked as what assistance the Government had given for the disposal of the accumulated stocks, Mr. Shastri referred to the following measures:

Excise duties have been reduced and rationalised, particularly in the case of coarse and medium varieties of cloth, with effect from 4th July 1958.

Coarse *dhotis* and *saris* lying in packed bales on 3rd July are allowed concession of clearance at the old rate, provided the duty is paid on or before the 30th of this month (September).

Exports of cotton yarn by mills are allowed freely for the licensing period July to December 1958; the export policy has been announced on a long-term basis, that is, up to 1960.

MILL CLOSURES

The number of cotton mills which remained totally closed as on 2nd August 1958 was 25, while 35 units were partially closed. The following table gives the details regarding the closures:

	Spinning	Composite	Total
Mills remaining totally closed:			
Number	9	16	25
Workers affected	2,736	31,375	34,111
Spindles affected	59,612	466,481	526,093
Looms affected	..	9,615	9,615
Estimated loss of production—			
Cloth (thousand yards)	..	9,610	9,610
Yarn (thousand pounds)	1,338	2,082	3,420
Mills remaining partially closed:			
Number	5	30	35
Workers affected	816	15,238	16,054
Spindles affected	38,960	390,089	429,049
Looms affected	..	10,618	10,618

MANPOWER IN COTTON MILLS SHRINKS

FRESH MOVES TO STIMULATE SALES OF LANCASHIRE-MADE TEXTILES

From A Special Correspondent

MANCHESTER, *26th August*

MANCHESTER LETTER

EVEN when recruitment of labour for Lancashire cotton mills was in full swing in the era of prosperity which followed the end of the last war, it was difficult to keep the labour force together during the summer holiday period. Losses then incurred were soon made good during the rest of the year, but this is no longer the case. The shrinkage in manpower is an inevitable accompaniment to closing mills and declining trade.

At the half-year's end, the number of operatives on the books of spinning and weaving employers had fallen to 224,380, nearly 17,000 below the equivalent figure at the beginning of the year. Subsequent losses can be assumed to bring the current available labour force to around 220,000, which is 100,000 lower than the post-war peak at the end of 1951.

One of the most frequently quoted extracts from the report of the Working Party on the cotton industry, published in 1946, was the section relating to the probable future size of the labour force. Looking back on this survey, we find that the committee responsible for the report was not so far out in its predictions as was at one time imagined. Its forecast of 250,000 as a maximum total to be expected was soon proved wrong and the success of the recruiting movement, as well as profitable and expanding trade, encouraged newcomers to seek careers in cotton.

Later events, from 1952 onwards, took a heavy toll of the industry's manpower, but there were hopes over the past year or two that some form of stability had been reached. At this point, the Working Party's comments become singularly appropriate: "Taking into account the heavy wastage which must be expected over the next few years, it is probable that this total (250,000) will thereafter decline and over the next few years will stand at an average substantially below this figure—possibly even dropping to 200,000."

Efficiency Call

The members of the Working Party were among the pioneers of many reports and documents which have since urged millowners and workers alike to introduce and operate systems for the most effective use of machines and labour. They emphasised that a labour force of 250,000 represented only 65 per cent. of that required to staff post-war spinning and weaving mills on a pre-war basis.

Much of their report reflects with remarkable foresight, the conditions in which the trade finds itself today. "The cotton industry, which in the past relied on an over-abundant, cheap and very skilled labour force, containing a large proportion of women and juveniles, will have to work in future with a smaller, much more highly paid labour force, containing a higher proportion of men," they declared. Returning to the estimate that the available manpower could only staff 65 per cent. of the industry's pre-war spindles and looms, the document added: "No scope for economy in the use of labour to the extent necessary for bridging this gap appears to exist without a complete revolution in mechanical equipment."

"Buy British" Call

Fresh moves to stimulate sales of Lancashire-made textiles at the expense of foreign imports are being urged by the cotton unions. The Legislative Council of the United Textile Factory Workers' Association, the central assembly of the cotton unions, decided in Manchester this week to ask the Cotton Board to approach local authorities, nationalised industries and hospital management committees asking them to purchase only cotton goods produced in Britain.

In the meantime, the unions have decided to postpone further consideration of the industry's difficulties. They agreed to await the outcome of the visit to Hong Kong by a Lancashire mission, led by Sir Cuthbert Clegg, which will try to persuade Hong Kong to impose a voluntary "ceiling" on textile shipments to this country. After the meeting, Mr. James Milhench, Secretary of the Legislative Council, said that, because of the credit squeeze, many firms which would normally buy in bulk had been limiting the amount of stocks they carried.

Now that the credit squeeze had been eased, there was no reason why they should not now purchase ahead and help the industry out of the period of strangulation" it was experiencing at the present time.

Lower Export Earnings

A near-miracle would be needed to prod the Lancashire industry out of the depressing state of its export trade this year. The lack of enterprise and current dullness is amply reflected each month in the overseas returns, which do nothing to create optimism in any quarter. Receipts from the July shipments amounted to £5,741,514, an increase of more than £700,000 on the previous month, but over £1,500,000 below the July 1957 level. As compared with this time a year ago, earnings from cotton goods shipped abroad have dwindled by £10,000,000 and now stand at £44,434,050.

All branches of the industry have shared in this shrinking trade. Yarn exports of 16,598,048 lbs. are 6,000,000 lbs. lower than last year, their value being down by £3,400,000 at £6,912,379. Cloth exports so far total 238,424,000 square yards, as against 278,207,000 square yards, earnings being £4,500,000 down at £31,754,903. Shipments of sewing thread have also declined, from 6,689,503 lbs. to 4,817,100 lbs., the value being almost £2,000,000 lower at £5,278,431.

No single area is responsible for this downward movement, as the chief destinations for cloth remain practically unaltered. Most countries have taken rather smaller supplies and the trend continues. In cotton yarn, Australia is still the leading customer, absorbing nearly a third of all exports, but shipments to India have declined by almost 1,000,000 lbs.

The export-import gap in cotton cloth, after seven months of the year, gives the shippers a slight advantage, with exports of 238,000,000 yards and imports of 230,000,000 yards. Arrivals of grey cloth in July were 24,906,000 square yards, a fall of 4,000,000 yards as compared with a year ago. India's share in the seven-month total has dropped from 119,421,000 yards to 72,989,000 yards, but Hong Kong has already sent 58,914,000 yards, as against 36,148,000 yards and China 32,705,000 yards, as against 9,107,000 yards.

Split on Compensation

The Lancashire cotton unions will continue their efforts to secure compensation payments for textile workers who lose their jobs when mills close down. Union leaders spent two hours in Manchester this week discussing the employers' refusal to entertain a compensation scheme under which they would contribute a sum equivalent to 5s. in every £100 paid in wages into a central compensation fund. At the end of the meeting, Sir Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, said that there was a great deal of dissatisfaction at the attitude of the employers who rejected the application on the grounds that welfare of workers was a matter for the State. It was a rowdy meeting at which some "bitter things" were said. Mr. Lewis Wright, General Secretary of the Weavers' Amalgamation, said: "This has sparked off a dispute that might bode ill for industrial relations in the cotton industry."

A number of suggestions for "positive action" put forward at the meeting will now be examined by a special sub-committee. These are believed to include a suggestion that the compensation issue might be submitted to an Industrial Court and that a new approach to the employers might be made. There may also be a stiffening attitude by the unions towards suggestions put forward by the employers.—*All Rights Reserved.*

SUPIMA COTTON

A new variety of extra long-staple cotton—Supima—has been developed in the U.S.A. over a long period. Introduced in the market in 1953, Supima was first planted on a large scale in 1954. Since then production of long-staple cotton in the U.S. has increased steadily to 40,900 bales of 500 lbs. each in 1954-55, 49,000 bales in 1956-57 and an estimated 82,000 bales in 1957-58.

Supima is the commercial name for Pima S-1, a complex cross of Pima, Tanguis and Upland strains. It has a high yield, well above the average for U.S., and is economical to produce. It has a staple length of 1⅛" to 1¼" (average 1-7/16"). Spinning tests are said to have shown that Supima yarn has a tensile strength equal to or greater than other long-staple cottons. It takes a long time to mature and is subject to certain diseases and is also rather slow to germinate. Research work is under way to develop hardier varieties without sacrificing its strength, fineness and lustre.

RAW COTTON EXPORT POLICY

EARLY ANNOUNCEMENT OF QUOTA URGED

A FORCEFUL plea for a vigorous and integrated export policy for raw cotton was put forward by Mr. Madanmohan Ruia, President of the Cotton Buyers' Association, in his address to the 21st annual general meeting of the Association held in Bombay on the 27th ultimo. Mr. Ruia suggested that, in formulating the export policy for the new season (which commenced on the 1st inst.), exports had to be viewed not only from the point of view of earning foreign exchange but also from that of reducing surplus supplies of raw cotton to manageable proportions so as to ensure a proper adjustment between supply and demand. The Government, he said, would be well advised to release a reasonably large quantity of cotton for export. The same plea was made by Mr. Ruia and Mr. J. P. Patel as members of the reconstituted Export Promotion Advisory Council at its first meeting held in New Delhi last Sunday. They urged the Government to announce, as early as possible, the export quota for raw cotton. Mr. Ruia drew the attention of the authorities to the latest reduction in export duty on raw cotton by Pakistan, India's competitor in the field, and suggested that this country should do likewise to keep up its competitive capacity. The export quota, he added, might consist of 100,000 bales of Bengal *Deshi* and a like quantity of other varieties divided into two categories of cotton stapling upto 23/32" and ¾". This quantity might be supplemented by further releases as soon as the size and progress of the new crop were assessed.

To revert to Mr. Ruia's address to the Cotton Buyers' Association. Mr. Ruia emphasised that a policy on the lines suggested by him would not only ensure continuity of supplies to overseas buyers but would also arrest any unhealthy trend in the internal market. The disposal of the quota, which might be released in the next season, would, of course, depend upon the overseas demand and also upon the policies followed by Pakistan. The prospects of making large export sales, according to Mr. Ruia, did not appear to be bright at the moment but some headway could be made if export announcements were made to synchronise with the foreign demand and the timing of exchange allocations in countries which were traditional buyers of Indian cotton. In any case, Mr. Ruia submitted, the policy might be such as would not price Indian cotton out of parity with Pakistan cotton. All impediments which stood in the way of achieving this objective should be removed.

Supply Position Comfortable

Mr. Ruia supported his contention by an analysis of the statistical position of cotton in the season just ended and the probable trend of supply and demand in the new season. The 1957-58 season commenced, he pointed out, with a somewhat reduced carryover of Indian cotton of 1.72 million bales, as against 1.93 million bales in the previous season. Thanks to the generally favourable weather conditions which prevailed during most part of the season, the commercial crop of Indian cotton turned out to be as high as 5.2 million bales, thereby making a total supply of 6.92 million bales. As against this, mill consumption was not likely to have been more than 4.4 million bales representing a decline of as much as 265,000 bales from the previous season's figure. This, as is common knowledge, was largely due to the textile crisis which led, in many cases, to partial and, in some cases complete, closure of certain textile units in the country. Export quotas allowed during the season amounted to 340,000 bales which consisted of 180,000 bales of Bengal *Deshi*, 85,000 bales of cotton stapling not above 23/32", 55,000 bales of cotton stapling not above 1" and 20,000 bales of old crop cotton stapling 25/32". Out of this total quantity released for export, total shipments, on present indications, might not have exceeded 300,000 bales. Total distribution thus amounted to 4.7 million bales, as against the total supply of 6.92 million bales. The carryover at the end of the current season was, therefore, 2.2 million bales.

Large Carryover

After making a normal provision for a carryover of 1.2 million bales with the mills, which would be sufficient for their consumption before the new crop was available in abundance, the trade would have to carry a large stock of one million bales, consisting mainly of short-staple varieties. This, Mr. Ruia pointed out, would probably create a very serious situation for the trade since it would involve considerable blocking of funds, apart from the fact that it would act as a serious drag on the market. In order to tide over this situation, it seemed essential, according to him, that a part of this surplus stock should be allowed for export immediately. New crop prospects, on present indications, were encouraging. With favourable rainfall one could reasonably look forward to a commercial crop of nearly 5.5 million bales. Deducting the mill consumption, which, even if larger than in the 1957-58 season, from the anticipated supplies of 7.7 million bales (2.2 million bales of carryover plus 5.5 million bales crop), there would be a much larger carryover at the end of the 1958-59 season than at its beginning. The only way to reduce this unusually large surplus, according to Mr. Ruia, was to widen the export outlet for cotton in the ensuing season, as otherwise it was bound to have serious consequences on the crop in the 1959-60 season.

Mr. Ruia commended the policy of first-come-first-served followed in respect of distributing export licences. This policy demonstrated that it was very useful from the point of view of not only earning foreign exchange speedily but also from that of providing equal chances to one and all. He suggested that it might be continued in the succeeding seasons with the modification that, instead of issuing export licences on shipping bills, these should be issued on the basis of registration of sales with, of course, a bank guarantee involving a fixed amount per bale instead of five per cent. of the invoice value as required under the existing procedure. Such a change, according to him, would help shippers to sell distant and thereby meet the convenience of the foreign buyers who might wish to spread their purchases over a period of time. This was not possible if licences were given on the basis of shipping bills. Suggestions on these lines have been already submitted to the authorities concerned by the Association.

Imports

Referring to the question of imports, the President of the Association observed that, with the shortage of foreign exchange getting more and more acute, the textile industry would have to put up with reduced imports in the new season. He recalled that, during the season just ended, import allocations from sterling area countries aggregated 265,000 bales of which 155,000 bales were Egyptians and Sudans and 110,000 bales East Africans. No import allocation was, however, issued from dollar areas, although licences involving about 80,000 bales of American cotton were issued against the allocations announced in the previous season under the various aid programmes. Foreign cotton consumption in the season was not likely to have exceeded 575,000 bales owing to the restricted availability of cotton supplies from abroad. It seemed reasonable, Mr. Ruia observed, that with the shortage of foreign exchange getting more acute, the industry would have to be satisfied with very limited imports of cotton from sterling area countries hereafter. At the same time, it was also necessary to see that textile production did not suffer in any manner. With this basic end in view, it would be essential, he pointed out, to plan for an import of at least 500,000 bales in the next season. Out of this, 175,000 bales should be of cotton stapling 1.3/16" and above from Egypt and Sudan, and a major part of the balance of 325,000 bales would have to be of cotton stapling 1.1/16" and above from the U.S. under P.L. 480 and the rest from East Africa.

Mr. Ruia suggested that, so far as the first category was concerned, arrangements might be made to obtain an extension of the special payments agreement which already existed between India and Egypt. This would also help the industry to obtain a reasonable quantity of Egyptian cotton without having to pay in sterling. A similar arrangement could be attempted with Sudan. He also suggested that the question of making effective arrangements for importing a sufficiently large quantity of cotton from the U.S. under the aid programme (P.L. 480) should be examined. If such an arrangement was not possible for one reason or another, it would perhaps be necessary to renew imports from East Africa on an extensive scale as in the past.

DELIVERY CONTRACTS

The Board of the East India Cotton Association reports that it has come to its notice that, in spite of the amended provisions of by-law 66, delivery contracts for cotton containing the term "buyer's selection," "fair average quality," "best average quality," "fair average quality of the season," "best average quality of the season" or equivalent wording, are still being entered into by the trade. The Board had in the past pointed out to the trade, the difficulties which must necessarily arise in surveying cotton under such contracts and the risks which the seller under such contracts must undoubtedly run. The Board has now given its ruling that delivery contracts for cotton containing the term "buyer's selection," "fair average quality," "best average quality," "fair average quality of the season," "best average quality of the season" or equivalent wording, entered into subject to the by-laws of the Association, shall for purposes of the by-laws, be taken to be and construed to be of the quality "fine" in grade and if there is no staple stipulation in any such contract, "the basic staple of the respective description," permitted to be traded in by the Board under by-law 66. In the case of delivery contracts for cotton "fine with specific staple stipulation" and containing the term "buyer's selection" or for cotton "equal to sealed or type sample" containing the term "buyer's selection" made subject to the by-laws of the Association the term "buyer's selection" will not confer any additional right on the buyer except those mentioned under the by-laws.

CLOTHING OFF THE PEG IN W. GERMANY

Not only the women but also the men of the German Federal Republic and West Berlin have been buying more and more ready-made clothes. The West German garment industry has adjusted itself to this trend by introducing a greater variety of available sizes. Styles have begun to change more rapidly than formerly, and this, together with growing purchasing power, has resulted in a considerable increase in the West German garment industry's turnover. Since 1956, this increase has amounted to 10 per cent., the total turnover now being DM.5,990 million, or, if West Berlin is included, even DM.6,900 million. Since 1936, the production value has quadrupled, a remarkable growth, even though it is in part due to the establishment in the Federal Republic of some garment factories that used to be in Central Germany. In this favourable situation, the garment industry, which today employs a total of 320,000 people, has only one worry—that more and more ready-made clothing is being imported. In 1957 alone, such imports rose by 40 per cent., reaching a value of DM.132 million. Nevertheless, this is only 2 per cent. of the amount produced by the West German garment industry itself, and compares unfavourably with its exports, amounting to about 3 per cent.

The Commonwealth Department of Statistics' revised estimate of the 1957-58 Australian wool clip is 1,426 million lbs. (greasy), or 2 million lbs. less than the preliminary estimate issued some weeks ago. This compares with the all-time record of 1,564 million lbs. set up in 1956-57. The first estimate of the 1958-59 clip is 1,386 million lbs. (greasy), or about 3 per cent. below the estimate for the season lately concluded. Australia's flock of sheep and lambs in March last numbered 149,250,000, a decline of 600,000 as compared with the previous year, the first decline in 10 years.

SUGAR EXPORT PROMOTION BILL PASSED

FOOD MINISTER AGREES TO REFER PRICES TO TARIFF COMMISSION

AFTER a lively and interesting debate marked by criticisms of the official sugar policy, the Lok Sabha passed last week the Sugar Export Promotion Bill. The Bill seeks to replace the Ordinance promulgated by the President on 27th June 1958 and vests the Central Government with the following powers:

To fix from time to time a quota for export, the aggregate of which not exceeding 20 per cent. of the production in the season ending with the month of October within that year;

to distribute the quota on a *pro rata* basis to the sugar mills in the proportion in which they produce the sugar, each of these mills being under a statutory obligation to supply that quantity for export purposes to the exporting agency; and

to impose a penalty excise duty of Rs. 17 per ton on any mill which goes by default; if a mill undertakes to supply the quota, it will not be required to pay the excise duty of Rs. 8, but, if a mill fails to supply, it will not only have to pay Rs. 8 but, in addition, Rs. 17 as excise duty by way of penalty.

The debate on the Bill provided an opportunity to both Congress and Opposition members to criticise the promulgation of the Ordinance of 27th June. The objection was on the score that the Ordinance, as it was issued after the crushing season terminated, had only helped the sugar interests "to make huge profits through underhand means." Even the Speaker of the Lok Sabha asked as to why the Food and Agriculture Minister could not bring up this measure when the House was sitting last or put it off till the House met again.

Mr. Jain's Justification

Replying to the criticism, Mr. Ajit Prasad Jain justified the issue of the Ordinance on three important grounds. First, the Government could not finalise its sugar export scheme before the last session adjourned, as various factors had to be gone into, including the setting up of an agency for sugar export. Secondly, the Government could not wait for the current session of Parliament to bring forward the measure for the reason that, as the foreign exchange need of the country was urgent, the Government thought that it should take the earliest steps to give legal shape to the scheme. In fact, some advantage had already accrued from the promulgation of the Ordinance. About 9,900 tons of sugar worth Rs. 50 lakhs had been exported up to 23rd August 1958. If the Ordinance had not been issued, some loss would have resulted. Thirdly, some rumours had been circulating in the market that Government intended to export sugar. The prices had begun to show an upward trend in May and, even if the Government had not undertaken the sugar export scheme, the upward trend in prices would have continued. In this connection, Mr. Jain observed:

"Before the Ordinance, the Government had consulted the representatives of sugar industry and they had given an assurance not to raise the prices. But everyone did not comply with it. Further, the Government released a quota to check the rising prices. But some millowners did not play the game and withheld release of the quota. The Government was, therefore, driven to promulgate the Ordinance. The Ordinance was issued on 27th June. Effective steps were taken to control the prices on 30th June. The intervening period was taken to watch the market trends. We then undertook to control prices which have had a salutary effect, and prices are today lower than the controlled prices."

Justifying the importance attached to the export of sugar, the Food and Agriculture Minister remarked that, while every effort should be made to increase export of traditional items, he saw no reason for not exporting sugar "in ever-increasing quantity." He declared that past experience had shown considerable scope for sugar export and it was the Government's definite policy to export sugar."

The anxiety of Mr. Jain to build up as large an export trade in sugar as possible is no doubt understandable, considering the ever-increasing need for earning foreign exchange to finance the development schemes. But the point is that the amount of foreign exchange earned from sugar export is disproportionately low as compared with the enormous loss of internal revenue by way of income-tax, corporation tax, excise duty and cane cess and the reduction in the national income brought about by lower price realisation. The world price of sugar is currently ruling at about Rs. 420 per ton, as against the average price of Rs. 750 for Indian sugar, even after the full remission of excise duty (Rs. 291.20) and cane cess (Rs. 50.90). The loss on every ton of sugar thus comes to as much as Rs. 330. This amount, together with the loss of Rs. 291.20 by way of excise duty remission and Rs. 50.90 by way of cane cess, will be over Rs. 672 per ton, as against the foreign exchange amounting to about Rs. 420 earned by exports.

One may, of course argue that, considering the critical foreign exchange position in which the country finds itself today—the position may be expected to continue for many more years—whatever exchange that is earned from exports is most valuable. But to try to export sugar for this sake at a disproportionately heavy cost to the rupee resources available to the Government, which, too, are by no means plentiful, is, as this journal pointed out on an earlier occasion, simply ridiculous. By basing the sugar export policy on the ground of earning as much foreign exchange as possible irrespective of the cost involved, the Government has only tended to overlook the long-term issue involved, namely, how to build up a stabilised permanent export market for Indian sugar?

Sugar Prices Unduly High

The aforesaid question is specially stressed because the prices of Indian sugar are high in all conscience and, unless they are reduced, the competitive capacity in world markets will continue to be very poor. Surely, the country cannot afford to go on exporting sugar at a loss continuously. The current wide disparity in the prices ruling for Indian and foreign sugars points to the need for a policy of rationalisation of sugar prices. Mr. A. C. Guha, a former Minister in the Central Government, did well to bring out this point. He urged that the Tariff Commission should go into the cost of sugar production in India. The Food and Agriculture Minister said that he was prepared to consider the question of referring the matter to the Tariff Commission, which, he remarked, will be able to study all aspects and make recommendations that will be fair to all concerned. But is such a reference necessary? Do we all not know the facts already? Are the sugar prices high because of the manufacturers' greed for more profit or of the politicians' glamour for the votes of sugarcane growers? Has not the Exchequer's greed for more revenue contributed largely to the inflation in sugar prices? It is to be hoped that the Tariff Commission will go into these questions thoroughly before giving its verdict, if and when it is asked to do so. But, in our opinion, there is no need for such an enquiry, because the facts about the sugar industry are well known to the policymakers. The decisions to be taken are matters of policy which are outside the scope of the Tariff Commission. It will, therefore, be sheer waste of public money to refer the industry to the Commission. We do not know what Mr. Guha had in mind when he threw the suggestion on the floor of Parliament. Is the Commission to be asked: Whether prices of sugar are high and, if so, who is responsible for this situation? Can sugar be exported and, if so, how? Must there be more controls on sugar? Should the prices of sugarcane be lowered? All these questions, it will be conceded, involve Government's policy. Is it the desire of the Government to be guided by the Commission's views on them? Let Mr. Jain ponder before referring the matter to the Commission.

Any impartial observer of the trends in Indian sugar economy will admit that the cost of sugar manufacture has turned out to be too rigid, thanks to the major elements in the cost structure being entirely beyond the control of producers. Of the average price of 50 nP per pound of sugar, the cost of sugarcane alone accounts for as much as 21 nP, while excise duty and cane cess together account for another 18 nP, making a total of 39 nP, or 78 per cent. of the average price. The remaining 22 per cent. includes the wages of workers, salaries of administrative staff, prices of stores, interest

(*Continued on page* 419)

PUBLIC SECTOR'S COAL OUTPUT TARGET

WILL IT BE HIT IN TIME?

THE view that the National Coal Development Corporation (N.C.D.C.) will be able to attain, in the last three months of the second Five-year Plan period, "at least a level of production commensurate with the overall target of 10.5 million tons" is expressed by the Union Ministry of Steel, Mines and Fuel, in the course of a review of the first annual report of the Corporation. In support of this view, the Ministry points to the progress that has been made already. The total quantity of coal actually produced in the existing State collieries (excluding the Singareni fields) during 1957 aggregated 3.38 million tons, which represents an increase of 21 per cent. as compared with 1955 when it amounted to 2.80 million tons. It may be noted here that the output in the first quarter of 1958 was lower, the quantity actually produced being 870,000 tons, as against 880,000 tons in the corresponding quarter of 1957.

In particular, the Ministry commends the progress achieved by the N.C.D.C. in developing new areas. The analysis reveals that, at Kathara, more than one million tons of coal have been exposed and regular despatches on a commercial scale are only waiting for the completion of the railway siding scheduled for December 1958. At Saunda, where eight inclines are being driven, in addition to a quarry, about 6,000 tons of coal have been extracted already, and further production and despatches are expected to increase sharply with the completion of the railway siding. At Gidi six inclines are being driven, but raisings on a commercial scale, though possible earlier, will have to wait till the completion of the bridge across the Damodar river. Three inclines are being driven at Bachra and raisings are expected during the last quarter of 1958. In the new quarry at Bhurkunda, despatches will begin from this month; two inclines are also being driven in this area. The quarry at Korba is already in a position to produce 1,000 tons of coal per day; in addition, four inclines are being driven in the Ghordewa thin seam. At Kurasia, work was begun in June 1958 and production is expected very shortly.

The latest plan of coal production to make up the target of 10.5 million tons is as follows:

(In thousand tons)

Expansion of production from existing State collieries ..	500
Korba	1,000
Kathara	1,500
Central India Coalfields	1,500
Of which—	
Korea	500
Kurasia (through a new working adjacent to the existing colliery)	500
Kohma	500
Total C. I. Coalfields	1,500
Karanpura :	
Gidi	1,500

Total Karanpura	5,000
Balanda (Orissa)	500
Total ..	10,600

The ceiling of total expenditure in relation to the target output of 10.5 million tons is put at Rs. 40 crores. Of this amount, foreign exchange accounts for Rs. 15 crores, exclusive of the requirements of spares and other items of maintenance. The value of orders for machinery and equipment placed so far by the Corporation abroad comes to about Rs. 7 crores. A part of the machinery has already arrived and the rest is expected to arrive within a few months. Further tender notices will be put out by the Corporation to meet the balance of its requirements. In fact, a team of engineers is already in the U.S. to investigate to what extent the Corporation can avail itself of the credit offered by the Export-Import Bank. The Union Ministry of Steel, Mines and Fuel claims that the Corporation has also achieved a marked degree of success with its recruitment and training programmes.

From the foregoing account, it is clear that the public sector will not be in a position to reach even the reduced target of 10.5 million tons by March 1961. The statement that "something commensurate with the overall target of 10.5 million tons" will be produced is vague and misleading. It only shows that the authorities are not confident of hitting the target and that they yet do not know what exactly will be the production in the public sector, even assuming that other things will remain the same.

Notices

RAZA BULAND SUGAR COMPANY LIMITED

RAMPUR, U.P.

NOTICE IS HEREBY GIVEN THAT THE 23rd Annual General Meeting of the Shareholders of the Company will be held at Rah-e-Raza, Rampur, the Registered Office of the Company, on Tuesday the 30th September, 1958, at 10 a.m., to transact the following business:—

1. To receive and consider the report of the Board of Directors and the Auditors and the Audited Statement of Accounts of the Company for the financial year ended 31st October, 1957.
2. To declare Dividend.
3. To appoint a Director in place of Raizada Jagmohan Lal, who retires by rotation at the Meeting, and is eligible for re-appointment.
4. To appoint a Director in place of Shri Chunni Lal who retires by rotation at the Meeting, and is eligible for re-appointment.
5. To appoint Auditors for the financial year 1957-58 and fix their remuneration. Messrs. V. Sankar Aiyar & Co., Chartered Accountants, the retiring Auditors, are eligible for re-appointment.
6. To consider any other business that can be transacted at an Annual General Meeting with the permission of the Chairman.

SPECIAL BUSINESS

To consider and if thought fit, to pass with or without modification, the following resolutions:—

7. *As Special Resolutions*:—

(i) "Resolved that the provisions of clause 3 of the Memorandum of Association of the Company with respect to the objects of the Company be and are hereby altered by omitting sub-clause 28 and by substituting therefor the following sub-clause:—

'28. To build or contribute to the building of huts, houses, etc., to grant pensions, allowances, gratuities and houses or other payments to employees or ex-employees of the Company or the dependants or connections of such persons, and to establish and support or to aid in the establishment and support of any schools and any educational, scientific, literary, religious, national, charitable, philanthropic, medical and other institutions, places of recreation, hospitals, dispensaries, societies, clubs, provident or other funds, medical and other attendance and other assistance as the Company shall think fit, trusts, trade unions, etc., and conveniences calculated to benefit not only employees or ex-employees or the dependents and connections of such persons but the public generally or any particular section thereof and to make payment towards insurance and to subscribe, contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or other funds not directly relating to the business of the Company or the welfare of its employees, or for any exhibition.'

(ii) "Resolved that the provisions of clause 3 of the Memorandum of Association of the Company with respect to the objects of the Company be and are hereby altered by inserting therein, immediately after clause 36, the following new clauses:—

'37. To carry on business as financiers, concessionaires and merchants and to undertake and carry on and execute all kinds of financial, commercial, trading and other operations.

38. To amalgamate with any other Company having objects altogether or in part similar to those of this Company.

39. To carry on the business of hotel, restaurant, cafe, tavern, beer-house, refreshment-room, and lodging-house keepers, licensed victuallers, wine, beer, and spirit merchants, brewers, distillers, importers, and manufacturers of ærated, mineral, and artificial waters and other drinks, purveyors, caterers for public amusements, generally proprietors of motor vehicles, garage proprietors, livery-stable keepers, job-masters, farmers, dairymen, ice merchants, importers and brokers of food, live and dead stock, and colonial and foreign produce of all descriptions, hairdressers, perfumers, chemists, proprietors of clubs, baths, dressing rooms, laundries, reading, writing and newspaper rooms, libraries, grounds, and places of amusement, recreation, sport, entertainment, and instruction of all kinds, tobacco and cigar merchants, agents for railway, shipping and air-plane companies and carriers, theatrical and opera box office proprietors, entrepreneurs and general agents, and any other business which can be conveniently carried on in connection therewith.

40. To develop and turn to account any land acquired by the Company or in which it is interested, and in particular by laying out and preparing the same for building purposes, constructing, altering, pulling down, decorating, maintaining, fitting up, and improving buildings, and by planting, paving, draining, farming, cultivating and letting on building lease or building agreement, and by advancing money to and entering into contracts and arrangements of all kinds with builders and others."

8. *As a Special Resolution.*

"Resolved that pursuant to Section 31 of the Companies Act, 1956 the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof, be and are hereby adopted as the Articles of Association of the Company within the meaning of the Companies Act, 1956, with effect from the date of adoption, in substitution for and to the exclusion of the existing Articles of Association of the Company."

9. *As an Ordinary Resolution.*

"Resolved that the approval of the Central Government having been obtained, *vide* Ministry of Commerce and Industry, Department of Company Law Administration letter No. 1(79)-CMN/58 dated 15th April, 1958, for variation in the Managing Agency Agreement dated 14th March, 1957, between the Company and the Managing Agents, Messrs. Govan Bros. (Rampur) Private Ltd., the Company does hereby approve of and consent to the amendment of the existing clause No. 3(*a*) of the said Agreement to read as under:—

'3 (a). The remuneration of the Managing Agents, until otherwise revised with mutual consent, in accordance with the provisions of the Companies Act 1956, or any amendment thereof, shall be a commission of 10 per cent. on the net profits of the Company for each financial year to be calculated in accordance with the provisions contained in Sections 349, 350 and 351 of the Companies Act, 1956 and/or any other provisions of the said Act subject to a minimum remuneration of Rupees Fifty thousand per year payable at the rate of Rs. 4,000 per month at the close of each calendar month and the remaining sum of Rs. 2,000 being paid along with the last instalment relating to the last month of the Company's financial year. The difference, if any, payable to the Managing Agents after the ascertainment of 10 per cent. of the net profit will be paid after the accounts of the Company for such financial year have been audited and laid before the Company in general meeting.'

and the Board of Directors be and are hereby authorised to execute the necessary supplementary agreement to give effect to this decision."

Explanatory statements with regard to the items of special business to be transacted at this meeting are annexed in terms of Section 173(2) of the Companies Act 1956.

The Share Transfer Books of the Company will remain closed from 19th September, 1958 to 4th October, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint one or more proxies to attend and vote instead of himself, who need not necessarily be a member. Such proxies should reach the Company at least 48 hours before the meeting.

By Order of the Board,
For RAZA BULAND SUGAR CO. LTD.,
S. K. KAUL,
Secretary.

NEW DELHI, 14*th August*, 1958.

Note:—(1) The dividend as proposed by the Directors, if declared, will be paid on or after the 16th October, 1958, to those members whose names appear in the books of the Company on the 30th September, 1958, or to their Mandatees. No applications for dividend warrants will be necessary.

(2) Members or other persons holding shares of the Company on blank transfer should submit such shares for transfer with stamped and completed transfer deeds and the registration fee before the closure of the Transfer Books so as to be entitled to the despatch of the dividend warrants in respect of those shares to them. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

(3) Members should immediately notify any change that may have occurred in their addresses as the Dividend Warrants will be sent at the addresses of members registered in the books of the Company on 30th September, 1958.

Explanatory Statement under Section 173(2) of the Companies Act, 1956, in respet of the items of Special Business to be transacted at the Twenty-third Annual General Meeting

Item No. 7.

Directors of the Company have decided at a meeting held on the 19th day of May, 1958, to revise and amend the Memorandum of Association as stated in the resolutions.

Existing sub-clause 28 of Clause 3 of the Memorandum of Association stands as under:—

"(28) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit employees or ex-employees of the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance and to subscribe or guarantee money for charitable or benevolent objects or for any exhibition for any public, general or useful objects."

The proposed modification in the said sub-clause 28 enlarges the scope of the existing clause to better suit the purpose it is intended to serve.

The proposed additional clauses have been considered necessary with a view to making the provisions of the Memorandum of Association wide enough to cover such other business as may be conveniently and/or advantageously combined with the present business of the Company.

Item No. 8.

The existing Articles of Association of the Company were adopted at the time of incorporation of the Company and have been amended in certain respects from time to time. Companies Act, 1956, which came into force as from 1st April, 1956, effected revolutionary changes in the Law and procedure relating to joint stock companies. Several of the changes have made various provisions in the existing Articles of Association of the Company either obsolete, or inadequate, or over-ridden or affected, with the result that a thorough revision and complete substitution of the existing Articles of Association has become necessary so as to bring them in line with the provisions of the Act of 1956.

It has, therefore, been considered desirable to substitute a new set of Articles for the existing Articles of Association of the Company. A copy of the new proposed set of Articles of Association of the Company is sent herewith marked 'A' for the information of the shareholders of the Company.*

The Managing Agents of the Company have no interest in any of the amended Articles. The Directors may be considered to be interested only in Articles 107 and 109 which replace existing Articles 110 and 143 quoted below, and Article 108 which is a new Article.

Existing Article 110.

"Until otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 600 per year. The

ECONOMIC IMPORTANCE OF PLANTATION INDUSTRY

EARNS LARGE FOREIGN EXCHANGE BUT CONSUMES VERY LITTLE

AT the annual meeting of the United Planters' Association of Southern India, held at Coonoor last week, Mr. C.I. Machia, its retiring President, gave much interesting information on the economic importance of plantations to India. In order to enable readers to get a better understanding of the industry's position, it is proposed to record here the bare facts of his statements:

The total area under recognised plantation crops forms 0.3 per cent. of the total agricultural land in the country. Yet, in terms of value at 1956 prices, the plantation industry contributed 5 per cent. of the total value of agricultural products in the national income. In other words, for the area it occupies, it produced crops of the value which is nearly 17 times more than any equivalent area occupied by other crops in general. Although the industry utilises only 0.3 per cent. of the area, it employs 0.7 per cent. of the total agricultural labour.

The plantation industry accounts for approximately 28 per cent. of the foreign exchange earned by the country.

As a source of taxes, the role of plantations is probably more prominent than of any other single agricultural crop in the country. According to the 1957-58 Union Budget, as originally estimated, credit was taken for an earning of Rs. 19 crores from the export duty of tea alone, a sum which exceeded the Government's budgetary grants for the entire agricultural development by Rs. 4 crores during the year.

The plantations provide a very substantial stimulus for the manufacture and supply of a wide range of goods and services required for the maintenance of plantations and the production of crops. It is estimated that the entire plantation industry of India buys goods and services worth approximately Rs. 45 crores per annum, of which South India accounts for very nearly Rs. 17 crores. The plantations in the South directly employ very nearly 5 lakh workers and pay out by way of wages, allowances, provident fund contributions and gratuity about Rs. 21 crores per annum. This does not, of course, include the cost of welfare measures on plantations.

Striking Progress

The plantation industry in South India has made remarkable progress in recent years. The tea section created a new record in 1957 by producing 145 million pounds, with, on the whole, a commendable standard of quality within the limits set by geography and climate. This crop exceeded the previous record of 1955 by some 16 million pounds and the trend of the current crops foreshadow that 1958 will exceed the total of 1957. The South Indian tea crop has increased by nearly 67 per cent. in the past decade and this offers an unequivocal answer to the rather alarming prophecies of the Plantation Inquiry Commission.

An even more remarkable increase in production was achieved in the coffee industry during the 1957-58 season, with a record crop of 43,000 tons harvested, showing a rise of nearly 190 per cent. over the crop 10 years ago. From the 1956-57 crop, a record export of over 15,000 tons was made. Rubber has effected a record in production, though not of the order of tea or coffee. 1957 was relatively a poor year, as many tapping days were lost due to heavy rains. Nevertheless, it produced the highest crop since rubber began to be grown in India. Thus, 1957, was a remarkable one for the South Indian plantation industry, in that production expanded as never before in the history of the industry from practically the same acreage.

The progress made by the plantations would be a source of fruitful study for agricultural economists to investigate how and in what manner plantations have reached the status that they occupy, pay such high and steady wages, provide comprehensive amenities to their workers, pay such high taxes to the Government and become the largest earners of foreign exchange for the country. The explanation is that the plantation industry has been the leader in sound and scientific agricultural practices.

As in promotional activities, so also in research and scientific agriculture, planters have been pioneers. As early as 1898, the U.P.A.S.I. considered the setting up of a scientific department. It took the Association about 10 years before a scientific officer was available and the nucleus of a research department was established. The successful teams of research workers have held the pests at bay, rooted out diseases, contributed to the improvement of agricultural practices and exploited the yield propensity of the plants. In 1938, the average yield of tea in South India was 500 lbs. per acre; it has been doubled within 20 years without injury to the soil or to the bushes.

An interesting but less known feature of the plantation industry is that, while it is the largest earner of foreign exchange, it requires very little imports of foreign goods to maintain its production. For a tea crop valued at over Rs. 160 crores in 1957, the tea industry's requirements of imported fertilisers, special equipment and tools and plant protection chemicals did not exceed 2 per cent. of the value realised from exports. But, if proper care is not taken to ensure adequate and timely supply of these small imports, the industry's ability to earn foreign exchange will be seriously impaired. It, therefore, behoves the authorities to give a high priority to the plantation industry's requirements of the goods mentioned above.

Economic Viability

One of the problems worrying the plantation industry is the heavy incidence of taxation which, if continued, is likely to injure its economic viability. What makes the tax burden onerous is the fact that it is on top of mounting obligations to labour in the form of higher wages, bonus, gratuity, provident fund, housing, sick leave, privilege leave, and other amenities. Mr. Machia illustrated the effect of these imposts by taking a thousand-acre estate and showing how its income is distributed. According to him, the proceeds of 630 acres out of 1,000 acres go towards meeting the cost of production. 240 acres are entirely devoted to producing for the Government. The proceeds from 30 acres go towards statutory depreciation and reserves. Labour welfare, gratuity and provident fund liabilities take away the proceeds of 70 acres and 30 acres remain as available to the management. But capital expenditure liabilities in respect of labour housing and welfare and other items of expenditure and for the maintenance of capital assets which requires the proceeds from 150 acres have to be found from outside the income of the 1,000 acres. In other words, many of the estates are now compelled to draw from their past reserves to meet some of the current liabilities. It has been suggested by some that the industry should finance expansion and rehabilitation by going to the market for further funds. An industry which is not in a position to declare a fair return to the investors is hardly in a position to inspire confidence in investors or to attract fresh investment.

It is common knowledge that one of the suggestions put forward for solving the problem of surplus tea is to curtail production. The views of Mr. Machia on this solution are worth reproduction. He said:

"In the South, we have resorted to a form of voluntary regulation by concentrating on finer plucking. For many producers, any restriction of production would involve a greater cost per pound. The deciding factor is whether the higher cost can be offset by the higher price realised. If it does not, voluntary restriction by finer plucking or regulation of crop will not solve the problem. Restriction for the purpose of maintaining the price is at best a negative step. And, if restriction has to be resorted to while export duty is maintained, it shows the unnatural extent to which the competitiveness of a product is subjected to the revenue requirements of the country. Even as a temporary measure, it would be worthwhile for the Government to consider a substantial reduction in the export duty, as it has wisely done in the case of oilseeds and several other commodities."

The plantation industry is opposed to the ceiling on landholdings being applied either directly or indirectly. The reasons for this opposition is obvious. Reliable data are available to show that there is a close relationship between the yield and the size of estates. If the

OUTLOOK FOR JUTE INDUSTRY

IMPROVEMENT IN QUALITY URGENT

JUDGING by the recent trends in jute economy the world over, it looks as though the outlook for the Indian jute industry is still far from encouraging. Apart from the persistent deficit in supplies of high grade, high-coloured jute required for manufacturing good quality hessian and growing competition from substitutes, there is the emergence of formidable competition from Pakistan, rendered possible by the abundant supply of superior quality raw jute, cheap labour and installation of modern machinery in all its mills. Thanks to this, as also to the setting up of jute mills in many countries, particularly in the Middle East and Far East, India has failed to increase its exports proportionate to the expanding use of jute goods in the world. Indeed, the foreign exchange earned from exports of jute yarns and manufactures during the first five months of 1958 was no more than Rs. 40 crores, as against nearly Rs. 56 crores in the comparable period of 1957. It is thus clear that, if India is to maintain what has already become only a marginal monopoly of world jute goods exports, the Government and the jute industry should, as Mr. Hari Lal Mehta, President of the Gunny Trades Association, very pertinently urged in his speech at the annual general meeting of the Association held at Calcutta recently, pool all their resources, adopt all measures of economy in production, improve the quality, effect full modernisation and minimise the dependence on Pakistan for raw jute supplies still further. Mr. Mehta struck a note of realism when he declared that mere production at the cost of quality was undesirable. Drawing attention to the rising number of complaints from customers overseas regarding the quality of jute goods, he regretted that this aspect had not been attended to with the meticulous care it deserves. In this connection, he said:

"The buyers must have the goods of the contracted quality and, in view of keen and growing competition with the substitutes for jute goods, they will not tolerate such behaviour much longer. Moreover, lowering of quality will mean, in fact, a wastage of the huge amounts being spent on popularising jute goods in foreign countries. . . . I, on behalf of this Association, appeal to all jute mills in India that they should produce goods of quality strictly in accordance with the specifications. In order to maintain the flourishing export trade and the good name of the industry, it should always be remembered that quality is a secret salesman by itself and engenders lasting goodwill."

There is considerable force in these observations. But the question is how can the jute mills be expected to manufacture quality goods, so long as the labour unions continue to obstruct the programme of rationalisation, financial resources are limited and tax burden is heavy. Never in the history of the jute industry before had the need for modernising equipment been so urgent as it is today. To the extent modernisation takes place, the cost of production also will be lower. This aspect must be specially stressed because one of the prime factors governing exports of jute goods, as Mr. Mehta rightly stated, is that prices should, besides being competitive, be stable. Stability in prices can be ensured, according to Mr. Mehta, in the following manner.

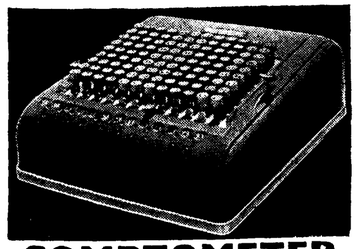
Self-sufficiency in raw jute requirements should be attained.

All traders should have a distant view of the jute and jute goods market without indulging in highly speculative transactions.

The Indian Jute Mills Association should keep constant vigilance on production *vis-a-vis* stability of prices by calling upon its members, as it did in February 1958, to abstain from trading below a minimum price level for both hessian and sacking.

The East India Jute and Hessian Exchange Ltd. must constantly watch the trend of the market and take appropriate steps to check wagering practices.

Another subject to which Mr. Mehta alluded was the new usage of jute. He recalled the experiments undertaken in the U.S. on the initiative of the I.J.M.A. in co-operation with cotton interests for developing raw cotton bale cover made of jute as well as the experiments conducted in the use of jute membrane for covering irrigation canal lining. If these were perfected, he averred, vast avenues would be opened for the consumption of jute products. Meanwhile, it is encouraging to be told that the jute industry is expanding the production of jute packing for tufted carpeting.



COMPTOMETER
is available on HIRE

COMPTOMETER — the world's fastest adding calculating machine—does the work of more than four people! You can now hire a comptometer for only Rs. 75/- a month. Trained operators are available on a monthly salary of around Rs. 150/-.

Complete Comptometer Service: If you already have a comptometer get the best out of it by careful maintenace. We are equipped to give you comptometer service.

WHY ARE HINDUSTAN MOTORS LAGGING BEHIND?

GOVERNMENT'S WRONG POLICY THE MAIN CAUSE

THE disappointing trends in the profit-earning capacity of Hindustan Motors Ltd. is in depressing contrast to the high hopes raised at the time of its incorporation nearly 16 years ago. The report of the Company (with a paid-up capital of Rs. 6.98 crores) for the year ended 31st March 1958 no doubt shows a modest net profit of Rs. 12.9 lakhs, as against Rs. 9.93 lakhs in the previous year. But it must be remembered that it has an uncovered back-log of depreciation to the tune of Rs. 140 lakhs. Further, the fact remains that whereas later entrants into the automobile field have been able to work with an accelerator on their profits, Hindustan Motors has had to slow down its speed through the application of brakes, which are neither of its choice nor of its making. And yet impartial opinion has consistently complimented Hindustan Motors on its high level of achievement in the matter of increasing the indigenous content of a manufactured vehicle. Apparently, all this encomium, however spontaneous and well-deserved it may be, has been of no avail to the Company. Its fortunes are at a low ebb, thanks mainly to the inadequate allocation of foreign exchange which has adversely affected all aspects of the Company's working, including production and profits. And, on this main cause of the Company's shortcomings, the progress report, prepared by the management, throws much interesting light.

Hindustan Motors Limited was conceived and incorporated in 1942, when most *entrepreneurs* were looking forward to an era of expanding prosperity after the termination of hostilities. The Company, however, had to wait for nearly seven years before it could acquire the equipment for commencing the manufacture of components. Since the management was unwilling to let its cars shine as India-made cars in the borrowed feathers of imported equipment, it urged the Government to give a clear lead to the manufacturers by placing restrictions on the manufacture of "assembled" vehicles. In June 1950, the Government notified that importers or assemblers, without a manufacturing programme, would not be considered for allocation of foreign exchange. In 1953, the Tariff Commission, to which the question of encouraging domestic manufacture of automobiles was referred, recommended that only five firms which had already submitted programmes of manufacture were to be recognised as manufacturers of motor vehicles—Hindustan Motors Ltd., Premier Automobiles Ltd., Automobile Products of India Ltd., Standard Motor Products of India Ltd. and Ashok Motors Ltd. Later, the Automobile Products of India Ltd. and Ashok Motors Ltd. withdrew from the field and two new concerns, the Tata Locomotive and Engineering Company, Ltd. (Telco) and Ashok Leyland were permitted to enter it. The latest position is that the Government has decided that, for the present, there should be only three approved models in cars: (1) Hindustan Motors—Ambassador; (2) Premier Automobiles—Fiat 1100, and (3) Standard Motor Products—Standard 10. The truck models approved are: (1) Hindustan Motors—General Motors trucks, (2) Premier Automobiles—Dodge, and (3) Telco—Mercedes-Benz, and (4) Ashok Leyland—Leyland.

Tariff Enquiry

To trace the development of Hindustan Motors. In 1954, following the enquiry by the Tariff Commission into the automobile industry, the Company had taken in hand a programme for the progressive manufacture of Hindusthan 14 (a light car), big car, 5-ton truck and baby car. Among these, the Company had been marketing for a number of years the Hindusthan 14 car with locally manufactured engine, gears, rear and front axles and many other important components. Because of the high proportion of components of indigenous manufacture, the cost of production remained high. As regards, Baby Hindusthan, after the issue of licences for the import of 650 Baby Hindusthan cars in 1954, further licences were stopped and were not restored till December 1956, when the Government accepted the recommendation of the Tariff Commission to the effect that the Company should be allowed to continue the manufacture of the Baby Hindusthan. A tribute to the Company's manufacturing programme was paid by the Tariff Commission which said: "Hindustan Motors have made notable progress in regard to the Landmaster car. They are now producing almost all the major components of this car and their dependence on their foreign associates is reduced to the minimum." Examining the Government's import policy in the context of the development of automobile industry, the Commission observed: "Generally speaking, the yield on investment depends on the ratio of turnover to capital employed. Although it was originally intended to so administer the import policy with respect to automobiles as to confer a relative advantage on manufacturers as against assemblers, in practice, the import policy has so operated that firms which have made less progress in manufacture have been able to build up a bigger turnover in relation to their capital employed."

Profit

The disability to which the Commission referred in the course of its examination of the Government's import policy, lies at the root of Hindustan Motors' unsatisfactory profit position. The one major handicap is the inadequacy of the Company's share of the foreign exchange allotted for import of vehicle components into India, the other being the modifications in the orders issued for the progressive manufacture of the Baby Hindusthan car. The total amount of licences for import of motor vehicles granted from July 1956 to March 1958 to the six approved manufacturers amounted to Rs. 26.4 crores, of which Hindustan Motors' share was only Rs. 2.5 crores or 9.55 per cent. of the total. Small wonder, then, that the Company's turnover has been limited, thanks to the operation of the Government's import policy which has given the Company less facilities for import than what its equipment and manufacturing capacity would indicate. Other manufacturers with a relatively smaller capacity and much less progress in the scheme for progressive manufacture of automobiles have received larger allocation of foreign exchange. The result has been that the ratio of turnover to capital invested has been very low; it was no more than 1.62 : 1 in 1956-57 as well as in 1955-56, as compared with the high ratio for the other units which varied from 3.28 : 1 to 8.40 : 1. In this connection, the Company's progress report rightly points out: "The great disparity in the ratio of annual turnover to capital invested and the consequent low rate of profits in the case of Hindustan Motors is to be attributed largely to the fact that the formula followed by the Government in determining the amount of licences is based on sales in the previous six months and takes no account of either the progress made or capital employed or capacity." After stating the obvious proposition that the sales of an automobile manufacturing concern, in any particular six-month period, can never be a satisfactory guide to the Company's volume of production or its foreign exchange requirements in the succeeding six months, the report observes:

"Besides, sales are dependent on the amount of import licence from which to produce vehicles. If there is insufficient material available, production is low and, consequently, sales are low. Sales may fall considerably below capacity temporarily, on account of shortage of raw material, labour trouble and other reasons. Such fluctuations are the essence of progress, for a decline in sales stimulates efforts to remove the obstacle and to step up efficiency. The present formula, which ignores capital invested or progress in productive capacity, acts as a drag on those concerns which invest large sums in expanding their manufacturing capacity. The recommendation of the Tariff Commission quoted above, with regard to grant of import licences, has not yet been implemented. Unless some relief is given to the Company by action along these lines, its profit-earning capacity cannot improve. Capital investment and productive capacity would be a better index of a company's foreign exchange needs than half-yearly sales figures."

As regards the Company's manufacturing programme for Baby Hindusthan cars, the Tariff Commission stated: "We consider that the proposal put forward by Hindustan Motors with regard to Baby Hindusthan has the advantage that two important assemblies, namely, rear axle and front suspension, are proposed to be deleted straightaway from the C. K. D. packs. In this sense, the manufacture of this vehicle would appear to have progressed much farther than that of the other two small cars already approved." Accordingly, the Commission recommended that the permission for the manufacture of this car should not be withdrawn. It also reiterated, in effect, the grant of necessary import facilities. And yet, the Company has received less import entitlements than its manufacturing capacity would justify. Thus, as already stated, after the issue of import licences for some 500 cars, the import licence for this model was withdrawn in 1955. Again, after the recommendation of the Tariff Commission, the Company was given import licence for only 500 Baby Hindusthan cars. Thereafter, no independent licence was issued in respect of these cars, the foreign exchange for which had to be provided for out of the import licences given for the import of Hindusthan Ambassador cars. Thus, the Company has had to face a double disability. In the first place, it received less than its due in the matter of foreign exchange allocation for Baby Hindusthan cars. Secondly, it had to divert a part of its limited foreign exchange allocation for Hindusthan Ambassador cars to import of Baby Hindusthans. It may be mentioned here that the ex-factory sale price of Baby Hindusthan 10 h.p. is only Rs. 7,612. As the Company's progress report points out, it would be in the interests of the country that "the Company should obtain its full requirement of foreign exchange for the manufacture of the Baby Hindusthan which sells at a low price because of its large volume of production in the U.K."

It is to be hoped that the Government will be able to take a favourable decision on the question of import facilities for Hindustan Motors. The Company, as is well known, has a notable record of achievement to its credit. Its manufacturing programme, as the extracts from the Tariff Commission's report quoted above will reveal, is so designed as to enable it to undertake the manufacture of a progressively increasing proportion of a car's components in its factory. And, what is more important, the Company has achieved a large measure of success in this field. Despite its many handicaps, the Company has produced about 50,000 cars and trucks so far, which have been sold at attractively low prices. Finally, in considering the Company's case for liberal import entitlements, the Government should not overlook the fact that, since it has now accepted a long-term policy for the development of automobile industry, it should lay down a long-range policy for necessary imports for the industry and the policy should be such as not to place at a disadvantage a company which is faithfully and vigorously carrying out the manufacturing programme *vis-a-vis* companies which are less enterprising in this direction.

STANVAC'S MARKETING OPERATIONS

After providing Rs. 184.1 lakhs for income and wealth taxes, Rs. 64.9 lakhs against depreciation and writing off Rs. 40.12 lakhs, covering the expenses incurred in the search for oil in West Bengal under the Indo-Stanvac Project, the Standard-Vacuum Oil Company in India (excluding Refinery operations) earned a net profit of Rs. 106.5 lakhs during the year ended 31st December 1957. The audited accounts of the Company show that the net profit resulted from a gross turnover of Rs. 5,621.9 lakhs, which includes inter-Company turnover of Rs. 27 lakhs. The net profit for 1957 represents a return of 2.1 per cent. on the total sales turnover, 3.4 per cent. on the total assets and 4.1 per cent on gross block plus working capital. The volume of sales increased from 333.3 million imperial gallons achieved in 1956 to 380.4 million imperial gallons, representing an increase of 14.13 per cent. Trading results, however, reflect the fact that the Company was unable to recover fully increased costs for the most part caused by the continued closure of the Suez Canal early in the year 1957 and higher operating costs for supplying up-country markets.

The value of the Company's total assets at cost increased by Rs. 3.49 crores, that is, from Rs. 30.27 crores in 1956 to Rs. 33.76 crores in 1957. The total value of its inventories in India at cost stood at Rs. 12.21 crores, as against Rs. 10.47 crores in the previous year. The value of its investments in fixed assets at cost increased by Rs. 1.48 crore and stood at the end of the year at Rs. 13.31. crores.

During the year, the Company maintained full levels of employment, despite unfavourable returns, and paid out Rs. 2.71 crores in wages and salaries, as against Rs. 2.60 crores in 1956. The Company's programme of progressive Indianisation made further headway and the number of overseas employees was reduced from 48 at the end of 1956 to 32 at the end of 1957.

The Company's operations for the year were a large source of revenue to Government, and the accounts reveal that Rs. 1.556 lakhs are reflected under the heading import duties and excise taxes, including amounts paid to the Standard-Vacuum Refining Company of India Limited and Rs. 36.8 lakhs in property and other taxes in addition to income and wealth taxes reported above. The Company also collected on behalf of and paid to the various State Governments a total of Rs. 159.57 lakhs in sales taxes.

NEW PRODUCTS AND PROCESSES

Refractories from Kyanite

A PROCESS has been developed at the National Metallurgical Laboratory, Jamshedpur, for producing both high temperature hot face insulation as well as dense refractories from kyanite. Of these the former consists of more than 90 per cent. mullite while the latter varies from 60-85 per cent. mullite as determined by microscopic examination. The insulation refractory has the same refractoriness under load as the imported alumina insulation and has very low shrinkage even at 1550° C. The dense variety has porosities varying from seven to zero per cent. and a refractoriness under load higher than 1560° C. (one variety) has a Ta of 1600° C.). Both of them have adequate crushing strength and other load-bearing properties. An important feature of the process is that it employs coarse bladed kyanite that is not finding any market at present. This class of refractories has not yet been manufactured in India though a sizable demand can be expected for them. The annual requirement of all high alumina refractories will be 15,400 tons and insulation 4,000 tons by 1960-61. The process follows the traditional pattern of heavy clay industry, the specialities being the way the raw materials are prepared and blended and the temperature schedules followed in firing the products. The plant will need the traditional ceramic machinery except for kilns which have to be designed to attain temperatures of the order of 1550°C-1600°C. The total capital outlay for a plant making 3,000 tons each of hot face insulation and dense mullite refractories (total capacity 6,000 tons annually) will be Rs. 11 lakhs. Parties interested in taking up the process may contact the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

Cheap Heavy Water

A British firm, John Brown Ltd., has announced the development of a new method of producing heavy water. The company will disclose details of the new process at the international exhibition to be held this month in Geneva at the time of the U.N.-sponsored Atoms-for-peace Conference. It is said that, though the new method has been known in broad principle for some time, the Company's research department developed a new system which enables the price to be reduced considerably below that at which heavy water is sold by the U.S. Atomic Energy Commission. Until now, as a result of large-scale production, the Commission has been able to sell heavy water at a price which made it uneconomical for most countries to produce their own.

New High-speed Calculating Machine

Precisa Ltd., a Zurich firm, has just put the finishing touches to the prototype of a calculating machine, which will be able to carry out, it is claimed, in a much shorter space of time than any similar machines which exist at the present moment, the four classical operations, which will be printed on a paper tape, together with the automatic indication of the relevant stops and commas, in the right place. This remarkable machine, which is made up of some 3,600 different parts, has come at the right moment to crown the efforts of the founder of the firm, Mr. Ernst Jost. It was Mr. Jost who, in 1926, was the first to think of building a calculating machine, possessing only ten keys, one for each figure. It took him ten years to realise successfully a project which, at that time, appeared to be Utopian.

Swiss Watchmaking Novelty

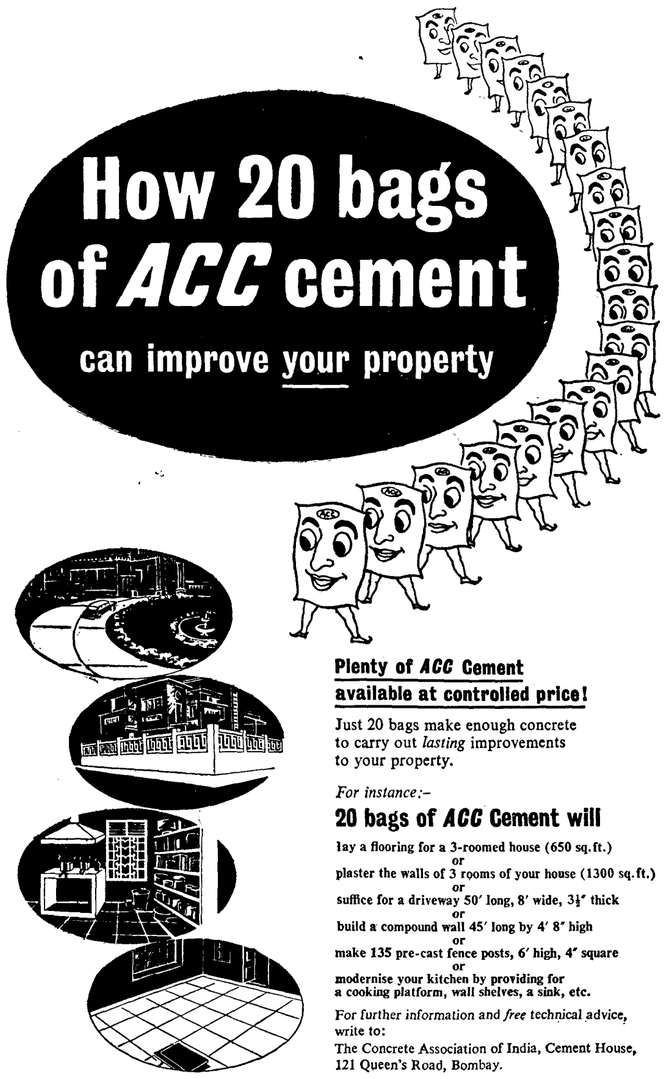
One of the most recent novelties to be found in the Swiss watchmaking industry is a wristlet watch provided with an indirect electric lighting system. This solves the problem of seeing what time it is in the dark, much better than the radium figures on the dial. A uniform lighting up of the dial, by means of a tiny bulb (cleverly dissimulated in order to avoid any dazzle and which is connected with a miniature watertight accumulator, is obtained by simply pressing on the push. The accumulator can be re-charged by means of a gadget, sold together with the watch, for a period of from six months to one year, according to how often it is made use of.

Disease-resistant Rice Strain

A strain of rice that may eliminate the "white leaf" rice disease has been developed at a ranch owned by U.S. philanthropist Nelson A. Rockefeller in the State of Portuguesa. The "white leaf" disease has almost eliminated Venezuela as a factor in the rice business and has had similar effect on rice crops in the rest of the Caribbean area. Mr. Rockefeller sought the assistance of Dr. Rufus A. Walker, former Head of the Rice Experiment Station at Crowley, Louisiana. Under Dr. Walker's direction, 6,000 varieties of rice were tested at the ranch and one, called Lacrosse, was found to have effective resistance to the disease.

A New Chemical Product

The Swiss chemical industry has recently perfected a steroid, which has now been patented in nineteen countries under the name of *Skinostelon*. This new product possesses a regenerative action on the skin. Contrary to the effect of hormones which are used in this domain, the action of Skinostelon is limited strictly to the skin, which makes it possible for it to be used in cosmetics. A keen interest in it is being shown by big foreign firms.



Plenty of *ACC* Cement available at controlled price!

Just 20 bags make enough concrete to carry out *lasting* improvements to your property.

For instance:–

20 bags of *ACC* Cement will

lay a flooring for a 3-roomed house (650 sq.ft.)
or
plaster the walls of 3 rooms of your house (1300 sq.ft.)
or
suffice for a driveway 50′ long, 8′ wide, 3½″ thick
or
build a compound wall 45′ long by 4′ 8″ high
or
make 135 pre-cast fence posts, 6′ high, 4″ square
or
modernise your kitchen by providing for a cooking platform, wall shelves, a sink, etc.

For further information and *free* technical advice, write to:
The Concrete Association of India, Cement House, 121 Queen's Road, Bombay.

TEXTILE MACHINERY CORPORATION LIMITED

GOOD PROGRESS IN DIVERSIFICATION OF PRODUCTION

MR. K. K. BIRLA'S ADDRESS AT ANNUAL MEETING

THE Textile Machinery Corporation, Limited has made great progress in diversifying its production in the field of capital goods. This is evident from the speech of Mr. K. K. Birla at the Eighteenth Annual General Meeting of the Shareholders of the Company held at Calcutta on 28th August 1958. In this speech, Mr. Birla, Chairman of the Company, gave a lucid account of the Company's progress in its various divisions. He also referred to the problems facing the engineering industries in general and made several constructive suggestions to overcome them. He was hopeful that engineering industries could make a distinct contribution to the winning of more foreign exchange badly needed by the country, provided raw materials and finance were available on terms comparable with those at which their competitors got them.

The following is the full text of Mr. Birla's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you to the 18th annual general meeting of your Company. The Directors' report and the audited statement of accounts for the year ended 31st December 1957 have already been with you for some time and with your permission I propose to take them as read.

"An event of considerable importance since we met last was the resignation of Shri T. T. Krishnamachari from the post of Finance Minister. His was a towering personality and during his tenure of office, first as Commerce and Industry Minister and then as the Minister for Finance, he made a valuable contribution towards the industrialisation of the country. It was a matter of both regret and disappointment that a man of his unassailable integrity and ability had to resign to uphold constitutional propriety. I, however, welcome the appointment of Shri Morarji Desai to this post of high responsibility. He is renowned as a man of great sagacity and wisdom. The economy of the country has been put to a great strain in recent years and the very fulfilment of the Second Five-year Plan is in peril. In the circumstances, it is reassuring to find a man of his calibre at the helm of affairs and it is the duty of industrialists and businessmen to make concerted efforts in strengthening his hands and in attempting to save the Five-year Plan from the mire in which it has fallen.

Shortage of Foreign Exchange

"The biggest single factor threatening to jeopardise the Plan is the shortage of foreign currency. Our foreign exchange reserves at the beginning of the first Five-year Plan stood at about Rs. 800 crores. There was no appreciable decline in these reserves till about March 1956 when the figure stood at Rs. 742 crores. Thereafter, owing to the increase in the tempo of the second Five-year Plan, as also owing to unplanned imports, our foreign exchange reserves dwindled away in an alarming manner. By 1st January 1958 they were reduced to Rs. 293 crores only. This means that in 91 weeks our foreign currency reserves declined by Rs. 449 crores or at the rate of roughly Rs. 5 crores per week. It was a painful situation for the country but it had to be faced. The momentum of decline has now been controlled but even then we are losing foreign currency at the rate of Rs. 3¼ crores per week after 1st January 1958. If this rate continues unchecked, the entire foreign currency reserves would vanish in about 14 months. Whereas the efforts made by the Government of India to stop the decline are commendable, it is feared that unless substantial assistance comes from external sources, our position would hardly improve.

"But, besides depending on foreign resources, we must rely on our own efforts to improve the situation. Proper steps have already been taken by the Government of India to control imports. There may be further scope for improvement in that direction. But that apart, we have to concentrate on exports also. It is disappointing to note that in the quarters ending March 1958 and June 1958 there was a decline of Rs. 25 crores and Rs. 28 crores respectively in exports as compared with the corresponding quarters last year. Thus, in the half-yearly period ending June 1958, the country has lost over Rs. 50 crores in exports. This indicates an annual rate of decline of Rs. 100 crores. The situation could be improved only by a careful consideration of the problems of each individual industry and making attempts to solve the same. The engineering industry too must play its role in the export drive. But before it could do so, it has to develop on sound lines so that it may be in a position to export its production in the face of competition from foreign countries.

Exports

"At present, the export of engineering goods from India is insignificant, being only about Rs. 4 crores out of a total export trade of about Rs. 600 crores. But, as the reports of the recent Engineering Trade Delegations to foreign countries reveal, the Middle and Far East countries are very good potential markets for engineering goods and we should endeavour to take advantage of these markets. Much, however, would depend upon our quality, reputation and price. Regarding the first two, we shall be able to establish a reputation only in course of time. So far, India has occupied a very insignificant place in the world map in the export of capital goods. To export consumer goods is not difficult but the export of capital equipment which has a life of twenty years or more cannot be accomplished unless the necessary confidence about quality is inspired in the minds of the customers. Towards this end, the engineering industries in this country should no doubt make their best endeavours. But the third and a very important factor is regarding the cost of our products. Although at present labour in India is comparatively cheap, the wages will certainly go up if the standard of living has to be improved in this country, as is planned. But unless that is accompanied by a *pro rata* increase in the productivity of labour, the cost of production would rise and the industry would be unable to export. Therefore, a rise in wages should be commensurate with increase in productivity. The two are inseparable. In this connection, mention may also be made of the growing demand of labour for higher bonuses. Workmen are no doubt entitled to a reasonable bonus if by their hard and sincere work they bring about a reduction in the cost of production and an improvement in resultant prosperity. But at the same time it has to be realised that the award of bonus must be subject to an appropriate ceiling. In the textile industry, for instance, such ceilings have been fixed in many important centres by agreement with labour. Some sort of a similar understanding is needed in the engineering industries too. After all, bonus is not the only liability on profits. A much more important item is the expansion of the industry itself and since fresh capital is not readily available, a major portion of the profits must be ploughed back into the industry for the purpose.

"While I am not sounding a note of over-optimism, I should like to mention that enquiries from foreign countries have been received for goods manufactured by your Company and there are fair prospects of sales for exports materialising in the near future. I do hope that, in course of time, we shall be able to build up this business which would not only be of some assistance to your Company but would also earn valuable foreign exchange for our country.

Reserve Bank Act Needs Amendment

"A vital factor affecting exports is our capacity to grant credit facilities. As is well known, other countries like Germany and Japan are in a position to grant credit facilities for periods extending upto five years or in certain cases even more. India too is getting goods on credit from these countries as also from other countries in the West. If, therefore, we have to export, we too must be in a position to grant credit facilities According to the present practice, banks in this country discount bills for a maximum period of only six months because they themselves get credit facilities from the Reserve Bank of India for bills of only three months' maturity. The Reserve Bank, however, is unable to do anything in the matter because it is tied down by Section 17 of the Reserve Bank of India Act. According to the provisions of that section, only bills maturing within ninety days from the date of their discounting are eligible for rediscount by the Reserve Bank or for being held by it as security for advances. In other countries, the exporters of machinery are in a position to grant long-term credit to their customers because they, in turn, themselves receive similar discount facilities from banks of their respective Governments. If Indian exporters of machinery want to compete in the international market, they must be able to offer the same credit facilities to their customers as other foreign suppliers do. It appears, therefore, that unless the Reserve Bank of India Act is suitably amended so as to permit the rediscount of bills of more than three months' maturity, there would be no satisfactory or lasting solution to the problem.

Incentive Needed

"With the imposition, since we last met, of the gift tax the chain of various taxes—some of them novel—has been completed. No country is as heavily taxed as India is and in no other country are there taxes of such varied nature as in India. It may be pertinent to mention that such heavy taxes have not been imposed even in Western countries many of whom have social democratic governments. In the United Kingdom, for instance, even when the Labour Party was in power, such taxes were not imposed. Nor are they likely to be imposed in future if the speeches of the leaders of the Labour Party are any indication of things to come. It is being argued that India is experimenting with these taxes to achieve a socialistic society in this country. But to experiment with finances is like playing with fire and should be undertaken with the greatest caution. Two things in particular have to be borne in mind. In the first place, the taxes should leave adequate incentive to individuals to improve their condition, and secondly, they should not be such that capital becomes dry. It is with these two objectives in view that the pattern of taxes should be revised.

"In this depressing gloom, it is heartening to note the strides which have been made by private enterprise. With the exception of those items where demand is not likely to come up to expectations, there has been a general improvement in the production of the private sector. In fact, in many sections of the industry, it is expected that even the capacity earmarked for them under the second Five-year Plan would be exceeded. To cite a few examples, some of the industries in which the targets of capacity are expected to be exceeded are mentioned below:

Name of industry	*Unit*	*Plan target*	*Capacity at the end of 1957*	*Capacity likely to be achieved by 1960-61*
1. Soda ash	(000 tons)	253	108	320
2. Plastics and synthetic moulding powders	(tons)	12,810	3,730	13,200
3. Rubber manufacture (automobile tyres)	(000 Nos.)	1,450	1,062	1,774
4. Automobiles	(Nos.)	57,000	36,000	60,000
5. Bicycles	(000 Nos.)	805	627	1,350
6. Radio receivers	(000 Nos.)	213*	213	360
7. Staple fibre	(mill. lbs.)	32	32	40
8. Glass	(000 tons)	335	295	343

* 300 revised.

"Special mention may be made of the iron and steel industry which is one of the key industries in the private sector. The target of capacity under the second Five-year Plan for the private sector has been placed at 2.3 million tons. It is expected that this target would be realised much earlier than the end of the Plan period.

Appreciable Progress

"The engineering industries in the country in particular have made appreciable advancement since 1951. As I had mentioned last year, their progress has been more marked than that of the other industries. The latest indices of production are:

Name of industry	*Index of production in 1957 (Base 1951 = 100)*
1. Cotton textiles	115.6
2. Jute textiles	120.5
3. Cement	175.3
4. Iron and steel	119.3
5. Sugar	185.4
6. Paper	150.3
7. Engineering industries	240.1
8. General Index	137.1

"Apart from the general development of the organised sector of the engineering industry as pointed out above, there has been a considerable growth of engineering industry on a smaller scale, particularly in West Bengal and the Punjab. Spare parts of machinery, railway equipment, lathe chucks and umbrella parts of high standard are being manufactured in good quantities in West Bengal by these small-scale industries. Likewise, the Punjab is witnessing a welcome growth of small-scale manufacturers of cycle parts, small machine tools, sewing machines, rice and flour mill machinery, rivets and screws, etc. All these enterprises are mostly proprietory or partnership concerns.

"I am happy to say that, during the year under review, the progress of engineering industries has not only been maintained but has been further improved upon in a majority of the cases. The improvement would be evident from a comparison of the indices:

Item	*Unit*	*Production*			*Index of production (Base: 1951 = 100)*	
		1951	1956	1957	1956	1957
1. Machine tools	Rs. Lacs	47.3	82.0	250.0	173	529
2. Transformers	000 KVA	196	911	1219	467	622
3. Bicycles	Lac Nos.	1.14	6.64	8.01	574	701
4. Electric fans	Lac Nos.	1.94	3.38	5.24	174	270
5. Ring frames	Nos.	276	1116	1368	405	496
6. Carding engines	Nos.	..	732	1020	..	..
7. Sewing machines	000 Nos.	44.5	130.4	166.6	293	375
8. Radio receivers	000 Nos.	49.1	150.6	190.3	307	388
9. Electric motors	000 HP	143	360	469	251	328
10. Railway wagons	000 Nos.	3.7	16.0	16.8	432	454
		(1951-52)	(56-57)	(57-58)		
11. Diesel engines	000 Nos.	7.2	11.9	16.5	164	228
12. Automobiles	000 Nos.	22.2	32.1	31.9	144	143

"The improvement, as the above indices show, has been most marked in the case of machine tools where the production in 1957 increased to more than three times of what it was in 1956. As the machine tool industry is one of the most important among engineering industries, this development is particularly welcome. The development, it may be stated, was possible mainly as a result of the improvement in production of the Hindustan Machine Tools Factory at Bangalore which accounted for as much as 64 per cent. of the total machine tool production in the country.

Textile Machinery

"In the textile machinery industry also, the improvement has been quite satisfactory. In 1956, the index of production of ring frames, for instance, was 405 with 1951 as the base. The index had thus advanced by 365 during the course of five years. In 1957, the index stood at 496 which means an advance of 91 over 1956. Similarly, the production of carding engines which was *nil* in 1951 and 732 in 1956, rose to 1,020, that is to say by 39 per cent., in 1957. Taking an overall picture of the heavy machinery industry, which perhaps is the most important among engineering industries, the production in 1956, as I stated last year, was about Rs. 23 crores. In 1957, the figure increased to about Rs. 35 crores. Since the present annual requirement of machinery is estimated at Rs. 150 crores, it is evident that there is still much scope for expansion in this direction. The value of all the engineering goods imported during 1957 stood at a figure of about Rs. 300 crores which is quite a big amount considering that our total imports were of the order of Rs. 1,000 crores. This gives some indication of the long way we have yet to cover. But perhaps a clearer perception of how far we really lag behind will be obtained only when we compare the position of our engineering industries with that in the other countries of the world. The *per capita* consumption of steel which faithfully reflects the advancement of engineering industries in a country is painfully low in India. The figures for some of the important countries are as given below:

Name of country	*Annual per capita consumption of steel in lbs.*
1. U.S.A.	1,178
2. U.K.	837
3. Japan	243
4. India	19

"The figures of actual production of some engineering goods in these countries would also be of interest in this connection:

Item	*Unit*	*Production in 1956*			
		U.S.A.	*U.K.*	*Japan*	*India*
1. Crude steel	Mill. tons	104.5	20.9	11.1	1.7
2. Aluminium	000 tons	1,850	128	80	7.5
3. Motor vehicles	000 Nos.	6,920	1,004	102	32
4. Vessels launched	000 tons	169	1,383	1,746	11.7
5. Radios	Lac Nos.	139.8	16.8	30.6	1.5
6. Textile machinery	Rs. crores	N.A.	102.0	86.6 (1955)	4.0 (1955-56)
7. Machine tools	Rs. crores	N.A.	114.0	N.A.	0.82

"Although the picture which the above figures give is rather disappointing, it is no doubt to be hoped that the position of the engineering industries would improve in time to come. The private sector, as has been shown above, has been making fairly good progress and in the public sector too, projects like the steel plants at Rourkela, Bhilai and Durgapur, the Heavy Machinery plant and the Foundry and Forge plant at Ranchi and the Heavy Electric plant at Bhopal will start bearing fruit in course of time. All the same, it would not be out of place to examine the difficulties which stand in the way of a more rapid expansion of the engineering industries in our country.

Three Difficulties

"To my mind, there are three such difficulties which deserve special mention. First is the lack of adequate capital equipment required for the engineering industries. We are not able to import the necessary capital equipment because we do not have the required foreign exchange. Reference to this difficulty has already been made above.

"The second difficulty is the non-availability of adequate supplies of necessary raw materials like steel. The figures for the availability of steel during the years 1956 and 1957 were as follows:

(In million tons)	1956	1957
Indigenous production	1.33	1.44
Imports	1.79	1.63
Total availability	3.12	3.07

"Thus although the requirements of steel are obviously increasing day by day due to our expanding economy, the availability of this most important raw material actually decreased in 1957 as compared with 1956.

"The shortage of raw materials has led to the lowering down of the production of units engaged in steel casting and the manufacture of items like electric fans, building materials, etc. In fact, some of the units had even to close down. The rolling mill industry particularly is in a bad plight and the shortage of scrap and billets has rendered idle a good deal of the installed capacity for bars and rods.

"Apart from shortage, the prices of steel also have not remained stationary during the year under review. Towards the middle of 1957, the price of indigenous steel was raised by Rs. 70 per ton with the result that since then the prices of different categories of steel have ranged between Rs. 650 and Rs. 700 roughly. But the curious fact is that while prices of steel in India rose, those in foreign countries fell. Imported steel used to cost about Rs. 800 per ton. Now it costs round about Rs. 700 which means a reduction of about Rs. 100 per ton. India has thus lost the distinction which it so far had of having the lowest prices for steel in the world.

"The third difficulty which faces the engineering industries is the lack of prosperity and purchasing power in the country. Unless the purchasing power is improved, increased production will have no outlet. On account of these three difficulties, the engineering industries in the country are not making the progress which they otherwise could. In fact, it is becoming apparent that in certain cases even the targets of capacity fixed under the second Five-year Plan are not likely to be realised. On a rough estimate, the short-falls in the targets of capacity in some of the engineering industries in the private sector are expected to be as indicated below:

Industry	*Unit*	*Target of capacity under the Second Plan*	*Capacity likely to be achieved by 1960-61*
1. Cotton textile machinery	Rs. crores	17	10
2. Jute textile machinery	Do.	2.5	1.0
3. Paper machinery	Do.	4.0	Nil
4. Cement machinery	Do.	2.0	0.75
5. Structural fabrication	000 tons	500	289
6. Motors	000 h.p.	1,200	736

"Of the three difficulties mentioned above which prevent a rapid expansion of engineering industries, the one regarding the shortage of steel is expected to be solved in the near future. With the functioning of the three steel plants in the public sector and the expansion of capacity for steel in the private sector, the production of steel by the end of the second Plan is expected to reach the figure of 4.3 million tons which would more than meet the requirements of the country. Likewise, the position of foreign exchange is also likely to improve in course of time. The only major difficulty that will remain is about purchasing power which is linked up with the general prosperity of the country and it is in this direction that efforts have to be made.

"Gentlemen, I would now deal briefly with the developments that have taken place in the different divisions of your Company during the year under review.

Cotton Textile Machinery Division

"You will perhaps recollect that in my last year's address I had expressed an apprehension that the recession which had set in the textile industry from the latter half of 1957 might continue for some time and might adversely affect the targets of production and consumption of cloth and consequently those of the installed capacities and production in the textile machinery industry also. I am sorry to say that my apprehensions have come true. Till today there is no sign of any improvement in the conditions. Accumulation of stocks in the textile mills continues. Several mills have closed down while many others are working shorter hours. Orders for new machinery have almost ceased. In fact, in certain cases even orders placed have been cancelled. In several cases, mills are not in a position to accept delivery of materials manufactured by us on order and have requested for a postponement of deliveries.

"Realising these difficulties of the textile industry, the Government of India recently appointed a Committee with the Textile Commissioner as the Chairman to investigate the present condition of the industry and to suggest remedial measures. One of the recommendations of the Committee was to lower the rate of excise duty. The Government have accepted this recommendation as a result of which the situation is expected to improve. The Committee's recommendation about the installation of additional automatic looms for the purpose of turning out exportable products is also welcome. It is to be hoped that the steps taken by the Government will assist the industry in tiding over the crisis and recovering from the recession which had lately set in.

"I regret to say that on account of the adverse circumstances pointed out above, not only had the production in your factory to be curtailed but our scheme for increasing the capacity for ring frames and carding engines had also to be postponed till more favourable times. However, during this lull in business we have been able to devote greater attention to the development side. Development work on drawing and speed frames has been taken up and is progressing with the help of our collaborators, Messrs. Howa Machinery Ltd., of Japan. We are also trying to manufacture more and more components of carding engines than hitherto and hope that by the end of 1958 we shall be able to produce all the components here. The special purpose machine tools required for these components are also being designed and manufactured in our own Works.

Boiler and Heavy Engineering Division

"In this division, as in the previous year, we can look back with satisfaction on a fairly well-filled order book and some really substantial work executed. Considerable extensions have taken place in our shop areas during the year and more extensions are under way. We also see bright prospects for new lines of expansion.

"Our schemes for the manufacture of water tube boilers, sugar machinery and railway rolling stock no doubt received a temporary set-back due to the restrictions on the import of capital equipment. But we are making strenuous efforts to have the equipment imported and we do hope our efforts will succeed. The completion of our water tube boiler project has, for this reason, been delayed a bit. In the meantime, we have made an intensive survey of the internal market for water tube boilers. The data gathered has enabled us, in conjunction with our collaborators, Messrs. Combustion Engineering Inc., of New York, to plan the production of the types and sizes of water tube boilers in demand in this country. These plans we hope to put into execution at the earliest. Orders for Lancashire and vertical boilers, however, continue to be received from various industrial users including the Government for whom indents are placed through the Directorate General of Supplies and Disposals. I am glad to report that now we have sufficient capacity to meet the entire demand within the country for these types of boilers.

"During the year under review, we got fairly good orders for the supply of locomotive boilers and fireboxes. Previously, we were manufacturing locomotive boilers of only one type. Now we have widened the scope of production to include other types also so that capacity does not remain idle. Thermic syphons—standard equipment for the classes of boilers now under manufacture by us—are also proposed to be made in our Works. These are usually imported from abroad by even established locomotive builders. In view of our proposal to manufacture them locally, the two Indian locomotive manufacturers, Telco and Chittaranjan, have placed orders on us for their requirements of this item.

(*Continued on page 419*)

INVESTMENT POLICY OF THE L.I.C.

SECTION 27A OF INSURANCE ACT RESTORED

THE announcement in the Lok Sabha by Mr. Morarji Desai, Union Minister for Finance, of a new investment policy for the Life Insurance Corporation of India must set at rest all speculations and conjectures on the subject. The salient feature of the new policy is the statutory restoration of Section 27A of the Indian Insurance Act, which has been made applicable, with some modifications to the L.I.C. This section, as is well known, defines, in clearly precise terms, the ambit within which an insurer in pre-nationalisation days could operate in the matter of investments. By making it applicable to the Corporation, the Government has laid down the framework within which the Corporation can similarly operate. In short, the modified version of this section embodies, by and large, the investment policy the Corporation has to follow.

In his statement to the Lok Sabha, Mr. Desai gave reasons as to why the statutory provisions of Section 27A should be retained. Both the freedom given and the restrictions imposed, he pointed out, had stood the test of time. While ensuring safety of the policyholders' money, the possibility of augmenting profits had also been afforded. For this reason, Section 27A had proved satisfactory both to the insurers and the policyholders. The Government had, therefore, decided to follow these principles, subject only to such changes and modifications as had become necessary owing to the fact that investments, which were previously spread over 240 odd companies, were now held by one single Corporation.

Under the scheme of investments proposed, the investments of the Life Insurance Corporation will be divided into three broad categories. First, Government and approved securities which generally mean Gilt-edged securities. Secondly, investments approved under Section 27A and, thirdly, other investments. The limitations are that at least 50 per cent. of the total funds should be held in Government and gilt-edged securities and 35 per cent. in approved investments. Not more than 15 per cent. should be held in the form of other investments.

Modifications

Justifying the modifications suggested, Mr. Morarji Desai pointed out that they were, to a large extent, of a minor character. It was necessary, he added, to make them because of the altered conditions which obtained after the nationalisation of insurance. The modifications are mainly in respect of sub-sections 4 and 8 of Section 27A. While the change suggested in respect of the former enables the maximum limits of holdings of the Corporation of the ordinary shares of the companies to be raised from 10 per cent. to 30 per cent. of the subscribed ordinary capital (with a further provision for exceeding this limit with the prior approval of the Central Government), that in respect of the latter section will permit the Corporation to invest in private limited companies also, with the prior approval of the Government.

As regards the general investment policy of the Corporation, Mr. Desai recalled that Section 6(1) of the Life Insurance Corporation Act enjoined on the Corporation the duty of carrying on its business to the best advantage of the community. He observed: "Whereas the Life Insurance Corporation will always bear in mind that its primary obligation is to its policyholders whose money it holds in trust, and will work, as far as possible, on business principles, it will never lose sight of the fact that, as the single largest investor in India, it has to keep before it the interest of the community as a whole. It will, therefore, invest in ventures which further the social advancement of the country. It will take no parochial view. Its funds are drawn from all over India and they will, as far as practical considerations allow, be invested for the good of the entire country. There shall be a studied diversification of its investible funds which is an essential requirement of any insurer, particularly the sole insurer of the country."

The Minister explained the attitude which the Life Insurance Corporation would adopt in relation to the stock market. He said that there was not the slightest intention that the Corporation should indulge in speculation and thus take advantage of temporary fluctuations in market prices. It must necessarily invest on a long-term basis. But this should not preclude it from certain buying and selling operations when circumstances warrant them. It would actively examine its investment portfolio from time to time and decide whether some of its holdings were worth keeping, adding to or disposing of. If, for instance, the Life Insurance Corporation were to sell during periods of boom and to buy during periods of depression, not only would the Corporation gain, but, indirectly, the national interest would be served by evening out the fluctuations in the stock market.

Apart from Section 27A, Mr. Desai added, there were various other sections of the Insurance Act which it was obligatory on the Government to apply to the Life Insurance Corporation with such modifications and subject to such conditions as might be considered necessary. These sections dealt with certain "returns" to the Controller of Insurance, so as to enable the latter to ensure that the interests of the policyholders were safe. These provisions were salutary ones; and it was felt that the Life Insurance Corporation should continue to submit these returns and be governed by the sections in question.

Satisfactory Arrangement

The new policy should be regarded, more or less, as a satisfactory working arrangement. The restoration of Section 27A of the Insurance Act and the extension of the supervisory functions of the Controller of Insurance to certain activities of the Corporation should provide a reasonable assurance of safety to the policyholders' money. It may be noted that, barring the statutory restoration of Section 27A, the policy remains, to all intents and purposes, the same. Even restoration of the aforesaid section cannot be termed an entirely new or radical change, for, on the assurance given by Mr. C. D. Deshmukh, the then Finance Minister, it had already assumed statutory shape under Section 43(2) of the L.I.C. Act. What is now proposed, therefore, is an assurance that the provisions of the Section would be enforced in practice.

The modifications suggested in Section 27A for enabling the maximum limit of the Corporation's holdings of ordinary shares of companies to be raised from 10 to 30 per cent. of the subscribed capital, and even higher, has provoked some criticism. It has given rise to renewed fears of nationalisation through the backdoor. It is true that, with the taking over of the investment portfolio of the 240 insurance companies, the Corporation has actually come to possess more than 10 per cent. of the shares of certain companies. The raising of the limit is, therefore, understandable. But having raised it to 30 per cent., the Government would have been well advised to leave it at that for the present, instead of leaving open the possibility of raising it further, subject to its formal approval. This qualification gives room for misgivings about the future intentions of the Government.

The propriety of earmarking as much as 15 per cent. of the funds of the Corporation to be invested in "other investments" although it is restricted by the requirement that the investment should be unanimously approved by the Investment Committee or by a resolution of the Corporation with a two-thirds majority, is open to question. For it may imply a certain diversion of the Corporation's funds for purposes in which the interest of the policyholders need not be the first consideration. It may be pertinent to recall here that Section 28 of the L.I.C. Act lays down that not less than 95 per cent. of the surpluses should be reserved for the benefit of the policyholders. This would mean that only 5 per cent. of the surplus should be utilised for socially desirable purposes. This principle should be made applicable to "other investments" also; in other words, only 5 per cent. of the funds should go into "other investments."

The Government also appears to be unduly obsessed by what is called "the interest of the community as a whole." Mr. Desai's statement that, while the Corporation would as far as possible, work on business principles, it will never lose sight of the fact that it has to keep before it the interest of the community as a whole, is certainly an expression of this obsession. As has been pertinently asked, Should a conflict between the policyholders' interest and that of the community arise, would it be resolved to the disadvantage of the policyholders? "The interest of the community as a whole" is, clearly, an expression which is stretchable to any limits and in any manner. So long as it is not used as an instrument to put the policyholders' money to purposes not beneficial to them, it is innocuous; otherwise, it is dangerous.

A Policy Issued By
The
Bombay Fire & General Insurance Company, Ltd.
(Incorporated in India)
Your Symbol of Security in the Event of
FIRE, ACCIDENT OR A MARINE PERIL
Head Office:
Henley House, Graham Road Ballard Estate, BOMBAY 1
Represented In
INDIA, BURMA & PAKISTAN

CONCORD OF INDIA INSURANCE COMPANY

A slight decline of Rs. 13,000 in the net premium income of the Concord of India Insurance Company, Ltd. (Managing Director: Mr. K. G. McLeod) is disclosed in the audited accounts of the Company for the year ended 31st December 1957. The decline is shared by the fire and marine departments only, while the accident section showed a slight improvement in net premium income. The combined net premium income in all the three departments stood at Rs. 58.17 lakhs, as compared with Rs. 58.30 lakhs in the previous year. Alongside the fall in premium income, the claims, commission and expenses of management have increased. The working of the Company during the year, however, resulted in a profit of Rs. 3.24 lakhs, as against Rs. 2.06 lakhs in the previous year. The Directors have decided to maintain the dividend at last year's level of Re. 1 per share.

The following table shows the salient features of the working of the Company during the past three years:

(In lakhs of rupees)

	1957	1956	1955
Fire—			
Net premium	32.04	32.24	31.24
Claims	12.46	12.31	10.76
Expenses of management, commission, foreign taxes, etc.	17.62	16.51	17.79
Fire fund	16.02	16.12	15.62
Accident—			
Net premium	13.33	12.60	10.70
Claims	6.79	6.22	5.06
Expenses of management, commission, etc.	4.57	4.68	4.42
Accident fund	6.66	6.35	5.35
Marine—			
Net premium	12.80	13.37	11.23
Claims	9.67	9.63	8.51
Expenses of management, commission, etc.	3.21	3.07	2.97
Marine fund	12.80	13.37	11.23

Net premium income in the fire department amounted to Rs. 32.04 lakhs. Claims paid and outstanding aggregated Rs. 12.46 lakhs, representing a loss ratio of 38.89 per cent., as compared with 38.20 per cent. in the previous year. Expenses of management, including depreciation on motor cars, office equipment, etc., together with commission and foreign taxes, amounted to Rs. 17.62 lakhs. After setting apart Rs. 16.02 lakhs (50 per cent. of premium income) as provision for unexpired risk, a sum of Rs. 2.06 lakhs has been transferred to the profit and loss account.

In the accident department, the net premium income stood at Rs. 13.33 lakhs. Claims paid and outstanding aggregated Rs. 6.79 lakhs representing a loss ratio of 50.94 per cent. Expenses of management and commission amounted to Rs. 4.57 lakhs. After earmarking Rs. 6.66 lakhs (50 per cent. of premium income) to the accident fund, a sum of Rs. 1.65 lakhs has been transferred to the profit and loss account.

In the marine section, net premium income declined from Rs. 13.37 lakhs in 1956 to Rs. 12.80 lakhs in 1957. Claims paid and outstanding aggregated Rs. 9.67 lakhs and expenses of management Rs. 3.21 lakhs. After providing Rs. 12.80 lakhs being the marine fund (100 per cent. of the premium income), the accounts shows a profit of Rs. 48,103 which has been transferred to the profit and loss account.

After making provision of Rs. 3.68 lakhs for taxation the profit and loss account shows a surplus of Rs. 3.24 lakhs which is carried to the profit and loss appropriation account. This, together with a sum of Rs. 1.69 lakhs carried forward from the previous year, makes in all Rs. 4.93 lakhs. Out of this, Rs. 50,000 have been transferred to the contingency reserve and Rs. 60,000 appropriated to reduction in the book value of investments. Out of the balance of Rs. 3.83 lakhs the dividend of Re. 1 per share absorbs Rs. 2.7 lakhs, leaving a balance of Rs. 1.13 lakhs to be carried forward.

FEDERATION ON FOREIGN EXCHANGE GAP

STRICTER CONTROL OVER GOVERNMENT IMPORTS URGED

AFTER much has been said on the foreign exchange problem confronting the country, the Federation of Indian Chambers of Commerce and Industry has come forward with an analysis of the situation. It is not clear what the Federation seeks to gain by belatedly publishing a pamphlet of this sort. Perhaps, its object was to present the problem anew as a background to the meetings of the Import and Export Advisory Councils held this week. The main conclusions of the Federation are that there should be a highly selective import policy, both on private account and on Government account, that exports should be stepped up substantially and that conditions conducive to the flow of foreign capital should be created in the economy.

At the very outset, the Federation rules out the suggestion, put forward as a short-run remedy even by quite a few responsible experts, that the backing of foreign exchange to our currency could be completely done away with. "In the present circumstances and conditions, with the vital need to maintain quick economic progress with the co-operation of friendly countries, any such unorthodox step," says the Federation, "may do irreparable harm to us." It, therefore, calls for a categorical declaration of policy on this question. While such a declaration may set at rest doubts created by the aforesaid suggestion, we may add here that it is the intention of the Government to maintain a minimum foreign exchange reserve of Rs. 200 crores. It is true that at present the sterling balances are no more than Rs. 189 crores, but the authorities are keen on bringing them back to at least Rs. 200 crores. This will be clear from the following quotation taken from Mr. Morarji Desai's statement to Parliament on 13th August 1958, on the foreign exchange situation:

"In the Planning Commission's paper on 'Appraisal and Prospects of the second Five-year Plan,' it has been estimated that for the period April 1958 to March 1961, the gap in our foreign exchange balance-sheet might approximate to Rs. 500 crores. The latest estimate prepared in this behalf, taking account of the current unfavourable trend in exports, has shown that for the last three years of the current plan, our requirements of foreign exchange will be of the order of Rs. 560 crores. This is on the assumption that any food imports found to be necessary, in addition to our normal marketing obligations in respect of wheat and our agreement for importing Burma rice, would be found under P.L. 480 arrangements. The basis for the estimate is that the core of the Plan which, including existing commitments, requires a further expenditure of Rs. 619 crores for completion, will be completed and that needs for the maintenance of the economy and for security will be provided. It also assumes that the sterling reserves will stand at Rs. 200 crores at the end of the Plan period. This does not, however, mean that the reserves would not fall below Rs. 200 crores at any time. As a matter of fact, they are below Rs. 200 crores today. It is considered necessary, however, that we should begin the third Plan with a reserve of not less than Rs. 200 crores, rebuilding it up to this level, if it is possible to do so. In estimating the deficit at Rs. 560 crores, as on the 1st April 1958, the foreign aid already promised which amounts to about Rs. 513 crores, was fully taken into account. Since then, a further loan of Rs. 12 crores has been authorised by the International Bank for Reconstruction and Development in July 1958 for the D.V.C. Project."

Defective Estimates

It is common knowledge that the present crisis owes its origin to the unimaginative policies pursued by the powers-that-be for some time past and the failure to make proper estimates of the Plan requirements. The second Plan had envisaged that the exports and imports on current account in 1956-57 would be Rs. 573 crores and Rs. 783 crores, respectively. But, actually, exports amounted to Rs. 637 crores and imports to Rs. 1,077 crores. Thus, in the very first year, the Planning Commission's calculations had gone wrong. Even as compared with 1955-56, imports in 1956-57 were up by Rs. 326 crores. This was due to heavy imports of iron and steel, machinery, defence stores and foodgrains. Drawing a lesson for the future from this development, the Federation says:

"*Prima facie*, all these items should be regarded as essential or inescapable. However, in a country of limited resources like ours, selection and elimination has to reach farthest even into the details of what might be regarded as essentials. The administrative machinery for scrutinising import permits has to attain a degree of efficiency and perspicacity as would be exhibited in the best type of planning and budgeting. The scrutiny of various licences should be undertaken at a level of urgency and authority that is far higher than as at present. Even a re-examination of past licences would be worthwhile."

The Federation contends that, while the scrutiny of private imports is rigid, such is not the case with Government imports. Thus, between 1955-56 and 1956-57, while imports on private account rose by only Rs. 115 crores (from 546 crores to Rs. 661 crores), those on Government account were up by Rs. 211 crores (from Rs. 205 crores to Rs. 416 crores). Further, subsequent to the recent import licensing policy, private imports have steadily declined, but this saving has been more than neutralised by Government imports. The Federation recognises that, as the matter is a part of intra-Ministry and inter-Governmental relationships, clear-cut criteria are apparently difficult to establish and enforce. It is precisely for this reason that the Federation advocates a new policy for regulating imports on Government account. According to its suggestion, "the entire organisation for the licensing of imports should be raised to a much higher level of economic responsibility." All imports on Government account, whether by its trading organisations or factories, should be subjected to systematic and stringent scrutiny.

Drawbacks

After making this constructive suggestion, the Federation does a little bit of *post mortem* and exposes the following drawbacks in the Government's licensing policy:

"It is usually averred that the unpredictability and the uncertain hold of the import control mechanism can be traced to difficulties in estimating withdrawals made on licences issued in the past. Thus, it is calculated that in 1955 over 214,000 import licences worth about Rs. 648 crores were issued. In 1956, their number grew to over 267,000 and their value to over Rs. 977 crores. A reversal of this trend did not come even in the first half of 1957 when over 118,000 licences worth Rs. 383 crores were issued. From the second half of 1957, of course, with the abolition of the O.G.L. and drastic reductions in imports, the number of licences issued as well as their values were reduced in such a sudden and sweeping manner that many plans of industrial production were thrown out of gear owing to lack of raw materials, essential components and spares. However, maturing of licences issued in the earlier period and the continued heavy imports on Government account seem to have nullified any improvement which one might expect in the overall balance of payments position. This element of under-estimation regarding the needs of rising industrial production has been more and more prominently felt in the last few months as can be seen from the fact that the steady rise in the index of industrial production has not been maintained. The high promise which most industries held in exceeding the second Plan targets may not be fulfilled, because there is not sufficient foreign exchange to import goods and products essential for the maintenance of the industrial structure. Another matter where the calculations of our planners went awry was the heavy imports of foodgrains."

Turning its attention to the subject of exports, the Federation remarks that the Export Promotion Committee's suggestion that exports will have to be stepped up from Rs. 700 to Rs. 750 crores a year is not an overambitious target. It has, however, qualified this view thus:

"The attainment of this target depends not only on external and international circumstances, but also on creation of the necessary prerequisite or climate within the country. Delays and obstacles will have to be removed in the way of exporters even where the amounts involved are in thousands or lakhs of rupees. The Committee has made a large number of general and detailed recommendations. But the authorities have yet to recognise and adopt these higher targets and to create the feeling at all levels of administration that exports are not the exclusive concern of exporters and traders but a national undertaking. If exports slacken, the pace of the economy will slacken and the shadows of bare subsistence and unemployment will begin to loom larger over our economic landscape."

Do's and Don'ts

The Federation has put forward ten do's and don'ts for achieving an increase in exports and minimising the country's dependence on imports. These are:

(1) "With the considerably depressed market for the commodities and products exported by India, marginal adjustments in prices and duties cannot be expected to have more than a marginal effect on the total exports. As it is, the outlook for export of tea and manganese ore does not seem to be very bright. The cotton textile industry has also not been able to export to its fullest capacity.

(2) "The ill effects of duties imposed on exportable goods are cumulative and, unless some drastic changes are made with regard to the export duty policy, no sizable increase in earnings is likely to accrue to us. For any reduction in export duties to be effective, it has to be large enough so as to make an adequate impression on the world market. It is in this direction that Government should divert its attention; a few marginal reliefs here and there are not likely to affect the generally depressed outlook of our export trade, including that of our traditional items. All too often, Government action has been tardy in the reduction or removal of export duties and this has adversely affected our exports. As a matter of fact, the policy in regard to export duties must be radically reorientated in the present changed circumstances.

(3) "We can ill-afford to be complacent about the future of our traditional items of export. Even now, they are up against the problems of marketing and there is fall in their export earnings. What has to be firmly borne in mind is that a small percentage reduction in the value of exports of traditional items, constituting as they do the bulk of our exports, would result in sizable reduction in our total earnings.

(4) "It is imperative that prompt steps are taken to exploit to the fullest extent the opportunities which exist for the increased exports of sugar and commencing exports of cement. Possibilities and opportunities for long-term bilateral agreements in respect of cloth, tea, etc., in return for raw materials and other essentials should be explored.

(5) "A special policy should be adopted for the export of non-traditional items of our economy. Such items, e.g., engineering wares, processed steel goods, agricultural implements, electric pumps, and motors need to be given an initial start and for that some workable scheme of special concessions may prove of great help to our nation.

(6) "A much wider scope is justified for schemes whereby in return for exports exhibiting special enterprise, an import licence to the extent of a liberal percentage of the foreign exchange earned through such exports may be issued automatically and may be permitted to be utilised for a specific list of capital equipment and other essential industrial raw materials.

(7) "Similarly, the system for the prompt payment of fiscal assistance in the form of rebates on excise duties and other imposts should be worked out for the widest range of items possible and put into operation without delay.

(8) "Another field requiring attention is the need to give an impetus to our tourist traffic through better facilities and greater amenities. Certain countries like Switzerland and Italy have considerable invisible earnings in their favour by giving every possible encouragement in building up a sustained tourist traffic.

(9) "More attention also needs to be paid to the study of freight rates and the encouragement of Indian shipping. The development of Indian shipping will enable the country to earn visible and invisible foreign exchange in several ways.

(10) "Since considerable foreign exchange is spent on imports of fuel oils, it is necessary to explore both speedily and effectively the possibilities of increasing indigenous supplies. This exploration should not be restricted to Governmental effort only. As a matter of fact, an open door policy in this behalf should be actively followed, for that alone will enable the exploration of our oil resources quickly and adequately."

There is, of course, nothing new in the aforesaid suggestions. They have been advocated by many from time to time. That, however, does not mean that they have become irrelevant or less important. The only point we would like to make is that the Federation is quite unrealistic when it includes sugar in the list of goods in which India should try to develop an expanding export market. There is little prospect of any sizable export trade in sugar being built up, except at the heavy expense of the domestic consumer, the investor in the sugar industry and the taxpayer, in general. Is foreign exchange worth earning through such expensive methods? Or has the Federation any plans whereby exports of sugar can be effected at a much smaller cost than at present?

CERAMIC INDUSTRY IN BURMA

A United Nations' expert has found that a mineral at Bawsaing in Burma contains lead carbonate which can replace the imported red spar, the main raw material for ceramics industry. This discovery has virtually revitalised the Burmese ceramic industry, which was hard hit by the prohibitive price of the imported red lead. A pottery pilot plant set up by the Burmese Government at Moulmein, which was on the verge of liquidation by 1957, has now been revamped. As a result, production in the plant has shot up considerably, the value of total output per month being $3,000, as against the annual average of about $800 before October 1957. The expert considers the discovery important, not only for the future development of the ceramics industry in Burma, offering "definite export possibilities," but also for the neighbouring countries engaged in this industry.

T.E.L.CO. MAKES IMPRESSIVE PROGRESS

CAPITAL ISSUE CONTEMPLATED

THE Tata Locomotive and Engineering Company Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) has had one more year of highly encouraging results, namely, that relating to the year ended 31st March 1958. The Company's production as well as turnover made further strides over those witnessed in the previous year, thus maintaining the upward trend in its operations. The value of the products sold during 1957-58 increased from Rs. 21.45 crores in 1956-57 to Rs. 26.94 crores. The output of locomotives and boilers, truck and bus chassis, as well as of the products of the steel foundry, showed a substantial increase and, despite a fall in realisation on the locomotives and boilers sold during the year, the Company's total turnover exceeded that of the previous year by about 25 per cent.

The gross profit for the year at Rs. 245.08 lakhs shows a rise of Rs. 43.41 lakhs or 21.5 per cent. over Rs. 201.67 lakhs earned in the previous year. The Directors state that the profit for the year, which was wholly accounted for by the operation of the automobile division, kept pace with the increase in the turnover. As against the improvement in the gross profit, the rise in net profit is only meagre, such at Rs. 92.95 lakhs, being only Rs. 3.80 lakhs better than Rs. 89.15 lakhs for 1956-57. This modest increase is due to a large addition to the provision for depreciation. At Rs. 129.30 lakhs, the amount set aside for this purpose is higher by about Rs. 59 lakhs. This enhanced provision is partly the result of the Directors' anxiety to provide in full the amount allowed for tax purposes. This decision accounts for Rs. 25 lakhs out of the increase of Rs. 59 lakhs. For the balance, the larger capital expenditure incurred during the year is the cause. Besides, in order to bring up the total provision for depreciation in the Company's books as at 31st March 1958, to the figure allowed for tax purposes, a sum aggregating Rs. 70.35 lakhs (Rs. 29.93 lakhs from the development reserve and Rs. 40.42 lakhs from general reserve No. II) has been transferred to depreciation. It will be interesting to note that, as at the close of the year, the Company has provided for depreciation to the full extent allowed under the Income-tax Act. This is, indeed, a creditable achievement.

As for the provision for taxation, a sum of Rs. 6.49 lakhs has been set apart for the purpose, of which wealth tax accounts for Rs. 4.30 lakhs and additional income-tax paid for 1955-56 for the balance. The Company has to pay no income-tax for the year under review as the development rebate exceeded the profits for income-tax purposes.

In view of the better results, the Directors have proposed to raise the dividend to 9 per cent. from 8 per cent. for the previous year, to which level it had been stepped up from 6 per cent. for 1955-56. As in the case of the Tata Iron and Steel Company, Ltd., the Company's general reserve has been divided into two, namely, reserve No. I and reserve No. II, with a view to segregating the reserves created out of taxed profits from the rest. The reserves built up from retained profits which have borne tax constitute reserve No. I. Other profits which have been credited to reserves over the past years constitute reserve No. II. It is proposed to pay a part of the dividends on ordinary shares from such part of the net profit for the year as is exempt from tax under Section 15C of the Income-tax Act and to pay the dividends on preference shares and the balance of the dividends on ordinary shares from an amount transferred to the appropriation account from taxed profits earned in past years and credited to general reserve No. I. Accordingly, a sum of Rs. 41.85 lakhs has been transferred from general reserve No. I. This procedure is followed in order to enable the ordinary shareholders to claim exemption from payment of tax on their dividend. This depletion has been nearly made good by the transfer of a larger amount, namely, Rs. 82.37 lakhs, to reserves, the exact increase being Rs. 37.38 lakhs. The appropriations to reserves consist of Rs. 26.87 lakhs for development reserve, Rs. 1.50 lakhs for reserve for additional tax on dividend over 6 per cent. and Rs. 54 lakhs for general reserve No. II.

The table given hereunder will enable the reader to make a comparative study of the Company's working and progress during the preceding three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sales of products and services	26,94.37	21,44.57	11,98.06	4,10.65
Other income	43.88	19.91	19.90	54.24
Raw materials, stores, etc., consumed	19,34.95	17,54.70	7,73.52	2,64.70
Other expenses	5,58.22	2,08.11	2,02.48	1,63.92
Gross profit	2,45.08	2,01.67	2,45.71	36.27
Managing Agents' remuneration	16.34	15.11	15.50	1.24
Depreciation	1,29.30	70.14	1,05.48	35.00
Taxation	6.49	27.27	32.00	..

	(9%)	(8%)	(6%)	
Carry forward	1.76	1.18	1.30	0.50

* Including arrears of dividend amounting to Rs. 34.96 lakhs.

As stated at the outset, the output of locomotives and spare boilers recorded an increase of more than 14 per cent. over that of the previous year and exceeded the targets set by the Tariff Commission in respect of the total outturn as well as of the indigenous content. The Railway Board has agreed to place orders with the Company hereafter for complete locomotives only. The expansion programme of the locomotive division was completed in August 1957 and production at the rate of 100 locomotives per year had been established since September 1957, four months ahead of schedule. The Company continues to receive valuable technical assistance and advice from its technical associates, Messrs. Krauss-Maffei A.G.

The progress made by the automobile division is quite satisfactory. The output of Tata-Mercedes-Benz vehicles during the year was over 7,000 units. The phased manufacturing programme of parts and components is ahead of schedule and the preparations for the final phase, namely, the production of the complete diesel engine, are proceeding satisfactorily in spite of some difficulties. The Company confidently expects to complete the entire manufacturing programme as per schedule by the end of October 1959, thanks to the co-operation and assistance received from its partners, Messrs. Daimler-Benz. The quality of the indigenous product, it is stated, is in every respect comparable to the high standard established by the latter at their German factories. Hence, the demand for Tata-Mercedes-Benz vehicles continues at a high level and far exceeds the available supplies. The Government of India has indicated its general approval to the Company's programme for expansion of output to 12,000 units per year, but, because of the foreign exchange situation, the programme has been held in abeyance. The Company's arrangements for the sale, distribution and after-sales service of its vehicles continue to develop. But, while adequate supplies of all spare parts falling within the Company's own manufacturing programme are available, import restrictions have brought about a shortage in certain types of spares.

The manufacture of steel castings in the foundries division commenced from June 1957 and the rate of production has since been increased progressively. The Company has received an order from the Chittaranjan Locomotive Works for over 2,000 tons of steel castings for the manufacture of WG type locomotives. Deliveries against this order are ahead of schedule. The alloy iron foundry which will supply high grade alloy iron castings to the Company's automobile division is rapidly reaching completion and is expected to go into production during the next few months. A scheme for the construction of a welding and fabricating shop for the production of certain items of fabricated plant and equipment has been sanctioned by the Directors. This line of production, besides being remunerative, is expected to promote more effective utilisation of some of the available plant capacity and labour force. The facilities which are being created will also be needed for the production of diesel hydraulic locomotives which the Company hopes to build in the future in collaboration with Messrs. Krauss-Maffei A.G. and Messrs. Daimler-Benz A.G.

Considerable amounts of additional finance had to be raised by the Company during the year to finance its expansion schemes. Thus, in order to secure a part of the increased funds required for the automobile project, an issue of 10,000 mortgage debentures of Rs. 1,000 each, bearing interest at 5 per cent. per annum, was made during the year for an aggregate sum of Rs. 1 crore on the same terms and conditions and ranking *pari passu* in all respects as from the date of issue with the existing 30,000 mortgage debentures of the Company. These have been pledged with the State Bank of India as security for a further cash credit arrangement for Rs. 1 crore. A further issue of 10,000 mortgage debentures was made since the close of the year under review on the same terms and conditions and pledged with the State Bank of India for an additional cash credit arrangement of Rs. 1 crore.

Again, with a view to securing additional funds for the automobile project, the Directors propose to increase the equity capital of the Company by an issue of 300,000 new ordinary shares of Rs. 100 each, ranking *pari passu* with the existing 500,000 ordinary shares. The shares will be offered at par to the existing holders of ordinary shares in the ratio of three new shares to every five old shares held by them. Accordingly, application has been made to the Controller of Capital Issues for the proposed issue.

The paid-up capital of the Company as at 31st March 1958 stands at Rs. 7 crores, consisting of Rs. 2 crores in 5 per cent. cumulative preference shares of Rs. 100 each and Rs. 5 crores in ordinary shares of Rs. 100 each. The reserves and surplus have come down from Rs. 105.60 lakhs to Rs. 67.29 lakhs and represent only 9.6 per cent. of the paid-up capital. The Company's debenture liability in 5 per cent. mortgage debentures (1960-65) secured by first mortgage of movable and immovable properties amounts to Rs. 3 crores. The other liabilities stand at Rs. 21.18 crores. The latter include, among others, Rs. 70.38 lakhs, being housing loan from the Bihar State Government, secured by a first mortgage of lands and quarters for staff housing, Rs. 11 crores being secured loans from banks and Rs. 80.85 lakhs unsecured loans. The gross block is Rs. 16.75 crores, of which additions during the year were of the order of Rs. 5.32 crores. This has been written down to a net book value of Rs. 10.07 crores, the difference, namely, Rs. 6.68 crores, being the total accumulated depreciation. The current assets aggregate Rs. 21.78 crores. The major items falling under this head are: equipment and stores in transit, Rs. 5.98 crores; stores, spares and tools, Rs. 1.91 crores; raw materials and components, Rs. 6.97 crores; stock-in-trade, including work-in-progress, Rs. 2.67 crores; loans to hirers of diesel trucks and other debts, Rs. 2.55 crores. That cash and bank balances were no more than Rs. 3,10,999 reflects the extent to which the Company is short of working capital.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 190.75 *cum-div.* and *cum-right*. On an *ex-div.* basis, the shares provide a yield of 4.9 per cent. per annum. This low level of yield reflects partly the investors' optimism in the future for the Company and partly the attractive terms at which new shares are being offered to the existing shareholders. It may be noted here that, on *ex-right* basis, the yield works out to a little less than 6 per cent. It is believed in market circles that the Company will be able to maintain the increased dividend on the new capital also. This is by no means an extravagant expectation. For a full year, the Company will require an additional sum of Rs. 29 lakhs to maintain the dividend at Rs. 9 per share on 800,000 shares of Rs. 100 each. With its turnover rapidly expanding, it should not be difficult for the Company to find this extra amount from its earnings after meeting all essential provisions. The first full year with increased capital will be 1959-60 and by that time its business will have recorded a sizable growth.

CONTRIBUTION TO POLITICAL PARTIES

A non-official Bill seeking to amend the Companies Act for prohibiting contributions by joint-stock companies to political parties or to any election fund has been introduced in the Rajya Sabha by Mr. Bhupesh Gupta, a Communist Member. The amendment pertains to Section 293 of the Companies Act 1956.

The statement of objects and reasons of the Bill, called the Companies (Amendment) Bill, says that the High Courts of Bombay and Calcutta, in their recent judgments, have drawn particular attention to the undesirability of big business houses liberally contributing to the funds of political parties. The Bill wants the relevant section of the Act amended to prevent such contributions to political parties.

The introduction of the Bill was opposed by some members belonging to the Congress Party. The Chairman, Dr. S. Radhakrishnan, however, ruled out the objection, as there could be no opposition to the mere introduction of a Bill. The spontaneous adverse reaction of Congress Members to the aforesaid move clearly reflects the great importance attached by their party to the relevant provision in the Company Law.

KALASA TEA'S EARNINGS DECLINE

THE financial results of the Kalasa Tea and Produce Company, Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Mangalore, South Kanara), for the year ended 31st March 1958, are not quite so encouraging as they were for the previous year. Athough the tea crop during the year has surpassed the production in all the previous years, thus creating a new record, the higher cost of production and the lower price realisation per lb. have more than neutralised its effect on earnings. Thus, the gross profit of the Company for the year under review amounts to Rs. 1.41 lakh, as against Rs. 2.94 lakhs for 1956-57, representing a fall of Rs. 1.53 lakh or 52 per cent. over the year. At this level, it is only fractionally better than Rs. 1.40 lakh for 1955-56.

The net profit for 1957-58 amounts to Rs. 47,230, as compared with Rs. 1.44 lakh for the previous year, after slightly raising the provision for depreciation from Rs. 56,689 to Rs. 59,292 but lowering that for taxation from Rs. 75,000 to Rs. 22,000. A sum of Rs. 58,000 has been transferred to general reserve and another Rs. 3,000 to development reserve, as against Rs. 50,000 set aside to debenture redemption reserve in the previous year. The dividend to shareholders has been lowered to 12½ per cent. from 15 per cent. for the previous year, to which level it had been restored from 10 per cent. for 1955-56. The net profit has fallen so low that even the payment of this lower dividend and the transfers made as aforesaid would not have been possible had not the Directors written back a sum of Rs. 80,000, being excess provisions made in previous years no longer required. It must, however, be noted that the dividend for the year under review is on a higher capital of Rs. 6 lakhs raised by the capitalisation of Rs. 60,000 from the general reserve.

It may be mentioned here that, after the close of the accounting year, in June 1958, to be exact, the capital of the Company was reorganised. Before this, the Company had an authorised and subscribed capital of Rs. 5,40,000 divided into 60,000 shares of Rs. 9 each. Under the reorganisation scheme, the authorised capital was raised to Rs. 9,00,000, which was subdivided into 900,000 shares of Re. 1 each. Then, Rs. 60,000 of the reserves were capitalised and the subscribed capital was raised to Rs. 6,00,000. This, too, was subdivided into shares of Re. 1 each. The final step was consolidation of the Re. 1 shares into Rs. 2 shares, so that at present the authorised and the subscribed capital are Rs. 9,00,000 in 450,000 ordinary shares of Rs. 2 each, and Rs. 6,00,000, in 300,000 ordinary shares of Rs. 2 each, respectively.

The table appended below brings out the main features of the Company's results for the past four years:

	For the year ended 31st March			
	1958	1957	1956	1955
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of crop	8,83,043	8,47,132	5,56,266	3,25,837
Stocks	1,20,212	1,48,041	1,10,148	27,622
Other income	9,715	11,046	4,233	4,50,650
Estate and other expenditure	7,24,410	8,01,724	4,83,180	2,91,637
Gross profit	1,40,522	2,94,847	1,39,845	5,12,471
Managing Agents' remuneration	12,000	10,013	14,679	20,486
Depreciation	59,292	56,689	54,900	21,070
Taxation	22,000	75,000	..	1,98,100
Net profit	47,230	1,43,845	70,266	2,72,815
Excess provisions written back	80,000	..	..	..
To reserves	61,000	60,000	368	1,50,341
Dividend	75,000	81,000	54,000	81,000
	(12½%)	(15%)	(10%)	(15%)
Carry forward	76,660	85,420	72,776	56,877
Crop of tea (in lbs.)	464,700*	418,054*	311,281*	974,856† 13,145* 160
Crop of coffee (in lbs.)	..	..	..	..
Cost of tea per lb.	137.36‡	134.10‡	142.27‡	..
Price realised per lb. of tea	184.04‡	211.27‡	197.72‡	..

* Manufactured tea. ‡ Cents † Green leaf.

The crop in 1957-58 at 464,700 lbs. exceeded the estimated production of 419,000 lbs. and is also appreciably higher than that for 1956-57, when a record crop of 418,054 was harvested. Despite this, the cost of production per lb. increased from 134.10 cents to 137.36 cents, while the average price realised per lb. dropped from 211.27 cents to 184.04 cents, leading to the decline in profit as noted above. A crop of 467,000 lbs. is expected to be harvested in 1958-59 at an estimated cost of 146.78 cents per lb.

The Company's estate, which is situated in Mysore State, has a total area of 936 acres, made up of 465.59 acres under tea, 47.68 acres of wet lands, 28.04 acres of roads, buildings and miscellaneous and 394.69 acres in reserve.

The Company's latest balance-sheet discloses a sound financial position. Its paid-up capital as on 31st March 1958 stands at Rs. 5.40 lakhs in ordinary shares of Rs. 9 each. (As stated earlier, this has since been raised to Rs. 6 lakhs, divided into 300,000 ordinary shares of Rs. 2 each). The paid-up capital is supplemented by reserves and surplus aggregating Rs. 8.04 lakhs. The Company's 7 per cent. first mortgage debenture-stock stands reduced from Rs. 2.32 lakhs to Rs. 2.22 lakhs. The gross block of Rs. 13.71 lakhs has been written down to Rs. 11.44 lakhs. These are inclusive of additions during the year of Rs. 1.09 lakh. The current assets aggregate Rs. 6.28 lakhs, of which cash balances alone, amounting to Rs. 2.70 lakhs, more than adequately cover the current liabilities (including the provision for taxation) aggregating Rs. 2.05 lakhs.

The Rs. 2 fully paid-up shares of the Company are currently quoted at Rs. 3.80 *cum-div.* On an *ex-div.* basis, the yield works out to 7.04 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

KALASA TEA AND PRODUCE CO., LTD. Annual General Meeting, Mangalore, 13th September 1958. Dividend: 12½ per cent. on the increased capital. Transfer books will remain closed from 10th to 13th September 1958, both days inclusive.

LUKWAH TEA CO., LTD. Annual General Meeting, Calcutta, 15th September 1958. Dividend: Rs. 2.50 per share (includes interim dividend of Rs. 2.00 per share). Transfer books remain closed from 4th to 15th September 1958, both days inclusive.

NEW INDIA INVESTMENT CORPORATION LTD. Annual General Meeting, Calcutta, 15th September 1958. Dividend: Rs. 2.50 per share. Transfer books remain closed from 6th to 15th September 1958, both days inclusive.

BASMATIA TEA CO., LTD. Annual General Meeting, Calcutta, 16th September 1958. Dividend: Re. 1.75 per share. Transfer books remain closed from 3rd to 16th September 1958, both days inclusive.

BENGAL POTTERIES LTD. Annual General Meeting, Calcutta, 16th September 1958. Transfer books remain closed from 1st to 29th September 1958, both days inclusive.

CLIVE ROW INVESTMENT CO., LTD. Annual General Meeting, Calcutta, 17th September 1958. Dividend: Re. 0.75 per share (includes interim dividend of Re. 0.25 per share). Transfer books remain closed from 3rd to 17th September 1958, both days inclusive.

ONDAL COAL CO., LTD. Annual General Meeting, Calcutta, 18th September 1958. Dividend: Re. 0.50 per share, payable on or after 25th September 1958. Transfer books remain closed from 4th to 18th September 1958, both days inclusive.

SENDRA COAL CO., LTD. Annual General Meeting, Calcutta, 18th September 1958. Dividend: Re. 0.25 per share or 2½ per cent., payable on or after 25th September 1958. Transfer books remain closed from 4th to 18th September 1958, both days inclusive.

TATA IRON AND STEEL CO., LTD. Annual General Meeting, Bombay, 18th September 1958. Dividend: Rs. 8.25 per share, on old ordinary shares and Rs. 7.56 per share, on new ordinary shares, payable on and after 19th September 1958.

KILLCOTT TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1958. Dividend: Re. 1.50 per share. Transfer books will remain closed from 11th to 20th September 1958, both days inclusive.

GUNGARAM TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1958. Dividend: 7½ per cent. or Rs. 7.50 per share. Transfer books will remain closed from 11th to 20th September 1958, both days inclusive.

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 23rd September 1958. Dividend: *Nil*. Transfer books remain closed from 6th to 23rd September 1958, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Calcutta, 24th September 1958. Dividend: 18 per cent. or 4.32 pence, i.e., Re. 0.24 nP per unit of stock, payable 6th October 1958.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Annual General Meeting, Bombay, 25th September 1958. Dividend: Rs. 7.00 per share (includes interim dividend of Rs. 3.00 per share). Transfer books will remain closed from 10th to 25th September 1958, both days inclusive.

HOOGRAJULI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 26th September 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 12th to 26th September 1958, both days inclusive.

BORREA COAL CO., LTD. Annual General Meeting, Calcutta, 26th September 1958. Dividend: Re. 0.75 per share or 7½ per cent. Transfer books will remain closed from 12th to 26th September 1958, both days inclusive.

PHILIPS INDIA LTD. Annual General Meeting, Calcutta, 27th September 1958. Transfer books will remain closed from 8th to 27th September 1958, both days inclusive.

SINGARENI COLLIERIES CO., LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1957.

SRI RANGA VILAS GINNING, SPINNING AND WEAVING MILLS LTD. Dividend of 4 per cent. or Rs. 2.00 per share, for the year ended 31st December 1957.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. Interim dividend of 12½ per cent. or Re. 1.25 per share, for the year ending 31st December 1958. Transfer books will remain closed from 4th to 10th October 1958, both days inclusive.

Points From The Chair

Bank Credit for Exports

"A VITAL factor affecting exports is our capacity to grant credit facilities. As is well known, other countries like Germany and Japan are in a position to grant credit facilities for periods extending upto five years or in certain cases even more. India too is getting goods on credit from these countries as also from other countries in the West. If, therefore, we have to export, we too must be in a position to grant credit facilities. According to the present practice, banks in this country discount bills for a maximum period of only six months because they themselves get credit facilities from the Reserve Bank of India for bills of only three months' maturity. The Reserve Bank, however, is unable to do anything in the matter because it is tied down by Section 17 of the Reserve Bank of India Act. According to the provisions of that section, only bills maturing within ninety days from the date of their discounting are eligible for rediscount by the Reserve Bank or for being held by it as security for advances. In other countries the exporters of machinery are in a position to grant long-term credit to their customers because they, in turn, themselves receive similar discount facilities from banks of their respective Governments. If Indian exporters of machinery want to compete in the international market, they must be able to offer the same credit facilities to their customers as other foreign suppliers do. It appears, therefore, that unless the Reserve Bank of India Act is suitably amended so as to permit the rediscount of bills of more than three months' maturity, there would be no satisfactory or lasting solution to the problem."

K. K. BIRLA,
Textile Machinery Corporation Ltd.

Kerala Plantations

"In lieu of nationalisation, Kerala has apparently adopted a slower but surer method of achieving the purpose. It has resorted to a level and method of taxation particularly applicable to corporate ownership in the planting industry which will erode the capital value of plantation property. Many of the companies have begun to show the result of their working during this year after the new taxation levels were introduced last year. Companies have sustained losses and even where they have not, the resources required for the maintenance of capital assets in a satisfactory state have to be drawn from reserves, if they exist. If the Government of Kerala really means to attract outside investment to the State, it must examine anew its policy relating to plantations. If its policy towards the largest and oldest industry in the State is inimical to its growth, how can it be fair to the industries that it professes to invite? I do not wish to judge the Kerala Government's taxation and labour policies on the basis that they emanate from a Communist Government. In the same spirit, if the Kerala Government would examine its labour and taxation policies for their effect upon prospective investors both from within the rest of India and outside, it might help to serve a useful purpose in the interests of the State and the country."

C. I. MACHIA,
United Planters' Association of Southern India

Hindustan Motors

"On account of the competition encountered with the assemblers, the Company which took up actual manufacture from the very beginning has not so far been able to provide for full depreciation, whereas the companies which started as assemblers and subsequently developed into manufacturers only on a limited scale have been paying dividends on account of the advantage enjoyed by the use of large proportion of imported parts for a long time. From the questions recently asked in Parliament, it appears that there is an impression in some quarters that this Company has been given preferential treatment in the matter of granting of import licences. In fact, it is not so. On the contrary, the Directors feel that the Company has not had its legitimate share and even after the Tariff Commission report the position has not improved. Out of the total licences issued from July 1956 to March 1958 to the six approved manufacturers the quota of the Company was about 10 per cent. of the total foreign exchange allotted to the industry. This happened in spite of the fact that the investment made by the Company is nearly half of the total investment in the automobile industry in India. As you may be aware, the Government have considerably reduced the amount of licences due to deterioration in the foreign exchange position. However, in the case of the Company, the quota of licences in proportion even to its investments in the automobile industry has not been allotted. In fact, only a small licence has been granted for import of General Motors trucks. Though there is a good demand for our vehicles, yet, on account of the limited licences made available to the Company, it could only produce the limited number allotted to it. In consequence, a part of the production capacity remains idle, and this naturally affects the working of the Company adversely."

B. M. BIRLA,
Hindustan Motors Ltd.

KATRAS JHERRIAH COAL EARNS HIGHER PROFIT

RESULTS OF MORE TEA COMPANIES

Katras Jherriah Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January 1958.

The accounts show a profit, after charging all expenses, of Rs. 12,10,736 (*Rs. 10,39,862*) of which taxation provision requires Rs. 7,55,000 (*Rs. 6,10,000*) leaving a balance of Rs. 4,55,736 (Rs. 4,29,862). The balance brought forward from last year was Rs. 1,38,336 (Rs. 1,33,474) making a total available for appropriation of Rs. 5,94,072 (Rs. 5,63,336). The directors have transferred to capital reserve Rs. 500 (*nil*) and to general reserve Rs. 1,00,000 (Rs. 1,00,000). An interim dividend of Rs. 3 (Rs. 3) per share was paid on 8th March, 1958 absorbing Rs. 1,50,000 (Rs. 1,50,000). The directors now recommend that a final dividend of Rs. 3.50 (Rs. 3.50) per share be paid absorbing Rs. 1,75,000 (Rs. 1,75,000) leaving a balance to be carried forward of Rs. 1,68,572 (Rs. 1,38,336).

Wealth tax in respect of the years ended 31st January 1957 and 31st January 1958 is estimated to amount to Rs. 27,000 and this has been provided for by transfer from investment realisation surplus.

Raisings for the year were 3,48,085 tons, compared with 3,10,552 tons in the previous year, and constituted a record in the history of the Company. Despatches, which included purchased coal, amounted to 3,68,730 tons as against 3,32,000 tons.

In their last report dated 24th September 1957, the Board *referred to the fact that the Government of India had been unable to accord their consent to the proposal to capitalise Rs. 10,00,000 out* of reserves and to apply this in a scrip issue of 1,00,000 new shares of Rs. 10 each credited as fully paid-up. The matter has continued to engage the attention of the directors, and application is now being made to the Controller of Capital Issues for permission to capitalise Rs. 7,50,000 out of reserves and to apply this in a scrip issue of 75,000 new shares of Rs. 10 each credited as fully paid-up. If and when sanction is received, the Board will give further consideration to this matter in the light of conditions then prevailing.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Gross block	49,73,401
Reserves ...	19,66,031	*Less*—Depreciation	39,04,335
Provision for taxation ...	5,57,119		
Liabilities*	20,55,676	Net block	10,69,066
Profit and loss account ...	1,68,572	Stock of coal	1,72,607
		Stores and spare parts	6,20,997
		Debts, deposits and advances	19,58,202
		Investments	7,29,123
		Cash ...	6,97,403
Rs.	52,47,398	Rs.	52,47,398

*Includes provision for wealth tax—Rs. 27,000 and provision for cesses—Rs. 2,54,398.

Duffla ghur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit on revenue account of Rs. 6,62,781 (Rs. 9,10,936). After providing for depreciation amounting to Rs. 50,282 (Rs. 66,593), and writing off development expenditure of Rs. 35,631 (*nil*) incurred during the year on tea estate and providing Rs. 58,300 (*nil*) for contingencies. After transferring the above profit, making various adjustments, setting aside Rs. 3,00,000 (Rs. 3,75,000) for taxation, paying an *interim dividend of 10 (15) per cent.* for 1957 absorbing Rs. 70,062 (Rs. 1,05,093), the balance available on profit and loss account amounts to Rs. 5,90,546 (Rs. 6,29,621). From this amount it is proposed to pay a final dividend of 20 (25) per cent. for 1957 absorbing Rs. 1,40,124 (Rs. 1,75,155) and carry forward Rs. 4,50,422 (Rs. 2,21,346 after transferring Rs. 2,33,120 to general reserve).

The following are comparative statistics of sales for the past three years:—

	Lbs.	Average per lb.
1955	891,538	Rs. 2.48 nP
1956	979,890	,, 2.92 nP
1957	980,116	,, 2.76 nP

The estimate for 1958 provides for a crop of 1,000,000 lbs. of tea at a cost of Re. 1.56 nP per lb.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,620	Gross block	23,48,336
Reserves ...	10,33,300	*Less*—Depreciation ...	13,52,736
Provision for taxation ...	5,55,782		
Liabilities ...	10,76,740	Net block	9,95,600

		Stores, spare parts and loose tools	2,78,252
		Debts, deposits and advances ...	1,73,692
		Investments	2,15,750
		Cash ...	11,20,742
Rs.	38,16,864	Rs.	38,16,864

Seajuli Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit on *revenue account of Rs. 1,89,642* (Rs. 1,14,617). After providing for depreciation amounting to Rs. 35,342 (Rs. 32,537) and making a provision for contingencies of Rs. 31,100 (*nil*). After transferring the above profit, making various adjustments and setting aside Rs. 80,000 (Rs. 22,000) for taxation, transferring to general reserve Rs. 50,000 (*nil*) and to staff account Rs. 7,000 (Rs. 12,000), the balance available on profit and loss account amounts to Rs. 1,43,999 (Rs. 1,04,627) from which it is proposed to pay a dividend of 22½ (15) per cent. for 1957 absorbing Rs. 56,025 (Rs. 37,350) and carry forward Rs. 87,974 (Rs. 67,277).

The following are comparative statistics for the past three years:—

	Lbs.	Average per lb.
1955	359,952	Rs. 2.68 nP
1956	349,758	,, 3.09 nP
1957	420,226	,, 2.91 nP

The estimate for 1958 provides for a crop of 4,000,000 lbs. of tea at a cost of Rs. 2.15 nP per lb.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,49,000	Gross block	11,48,864
Reserves ...	3,31,000	*Less*—Depreciation ...	6,60,764

Liabilities ...	2,59,337	Net block ...	3,62,200
Profit and loss account ...	1,69,219	Stock-in-trade	2,17,843
		Stores, spare parts, etc.	78,867
		Debts, deposits and advances ...	44,662
		Investments	1,49,547
		Cash ...	5,38,137
Rs.	13,91,256	Rs.	13,91,256

Chamong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a loss on revenue account of Rs. 18,548 (profit of Rs. 1,10,108). After providing for depreciation amounting to Rs. 7,593 (Rs. 8,982). After transferring the above loss and making adjustments the profit and loss account shows a balance at credit of Rs. 22,108 (Rs. 33,357 after paying a dividend of 7½ per cent. absorbing Rs. 20,993) which it is proposed should to carried forward.

The following are comparative statistics of sales for the past three years:—

	Lbs.	Average per lb.
1955	144,772	Rs. 2.92 nP
1956	176,418	,, 3.58 nP
1957	157,514	,, 3.30 nP

The estimate for 1958 provides for a crop of 168,000 lbs. of tea at a cost of Rs. 3.23 nP per lb.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,79,900	Gross block	3,98,716
Reserves ...	1,05,000	*Less*—Depreciation ...	74,916
Provision for taxation ...	9,542		
Liabilities ...	2,24,786	Net block	3,23,800

		Stores, spare parts, etc.	1,48,290
		Debts, deposits and advances ...	58,946
		Investments	1,000
		Cash ...	7,210
Rs.	6,41,336	Rs.	6,41,336

Ledo Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working loss of Rs. 1,32,365 (profit of Rs. 65,684). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 71,688 (*nil*) from buildings and machinery reserve, Rs. 30,000 (*nil*) from revenue reserve, Rs. 27,445 (*nil*) from replanting reserve and Rs. 10,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 25,392 (Rs. 80,670), of which the directors have transferred Rs. 25,000 (Rs. 15,000 to revenue reserve) to development reserve, leaving Rs. 392 (Rs. 16,920 after paying a dividend of 7½ per cent. absorbing Rs. 48,750) to be carried forward. The loss was *mainly due to the low price* received for the produce during 1957 and to the continued high cost of wages and statutory concessions to labour, especially loss on foodstuffs.

Crop was 451,300 lbs. as compared with 436,160 lbs. in 1956. The average selling price realised was Rs. 2.03 per lb. as against Rs. 2.33 per lb. in the previous year.

Estimates for 1958 provide for a crop of 4,80,000 lbs. at an outlay of Rs. 10,51,630, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,50,000	Gross block	12,07,806
Reserves ...	10,94,454	*Less*—Depreciation ...	3,53,788

Dawn Mills Co., Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons, Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The result of the year's working shows a profit of Rs. 3,21,189 (Rs. 2,97,764 for 15 months ended 31st March 1957) after providing Rs. 7,74,565 (Rs. 5,71,592) for depreciation and Rs. 3,25,000 (Rs. 6,00,000) for taxation. To this result has to be added the sum of Rs. 24,840 (Rs. 2,17,076) brought forward from last year's account, making a total of Rs. 3,46,029 (Rs. 5,14,840) which, the directors have appropriated as under:—

To payment of a proposed dividend of Rs. 5 (Rs. 7.50) for 15 months ended 31st March 1957 per share on 56,000 shares free of income-tax absorbing Rs. 2,80,000 (Rs. 4,20,000) and balance to be carried forward to next year's account Rs. 66,029 (Rs. 24,840 after placing Rs. 70,000 gratuity reserve). During the period under report, additions to fixed assets of an aggregate value of Rs. 9,92,703 have been made.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Gross block	90,59,554
Reserves ...	26,37,709	*Less*—Depreciation	54,08,586

		Cash ...	41,152
Rs.	1,39,79,263	Rs.	1,39,79,263

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(*Concluded from page 393*)

Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as above specified."

Existing Article 143.

"If any Director being willing shall be called upon to perform extra service or to take any special exertions in going or residing away from the district in which the office is for the time being situate for any of the purposes of the Company or in giving special attention to the business of the Company as a member of a Committee of Directors the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors, and such remuneration may be either in addition to or *in substitution* for his or their share in the remuneration above provided for the Directors."

Item No. 9.

The Managing Agency agreement dated 14th March, 1957 executed by the Company in favour of the Managing Agents, Messrs. Govan Bros. (Rampur) Private Ltd., pursuant to their re-appointment for a period of 10 years with effect from 15th January, 1957, provides for the Managing Agents a remuneration of 10 per cent. of the net profits of the Company computed as per Sections 349, 350, and 351 of the Companies Act, 1956, with a minimum remuneration of Rs. 35,000 per annum payable in the event of absence or inadequacy of profits in any financial year. This minimum remuneration is payable in instalments of Rs. 2,500 per month and the balance of Rs. 5,000 being paid along with the last instalment payable in the last month of the financial year.

The Managing Agents had represented after the implementation of the scheme of amalgamation of The Raza Sugar Company, Ltd., with this Company (formerly The Buland Sugar Co. Ltd.) that as they were to be paid a minimum remuneration of Rs. 30,000 per annum in The Raza Sugar Company, Ltd., and Rs. 35,000 in The Buland Sugar Company, Ltd., making a total of Rs. 65,000, they would now receive as per their Managing Agency agreement with this Company, formerly known as The Buland Sugar Company, Ltd., a minimum remuneration of only Rs. 35,000 in the event of absence or inadequacy of profits in any financial year. They had, therefore, requested the Board of Directors to increase their minimum remuneration from Rs. 35,000 to Rs. 50,000 per annum which is permissible under Section 198 of the Companies Act, 1956. The Board had considered the matter at their meeting held on 19th May, 1958 and decided to approach the Central Government pursuant to Section 329 of the Companies Act, 1956, to approve the variation in the terms of the aforesaid Managing Agency agreement to provide for a minimum remuneration of Rs. 50,000 per annum in place of Rs. 35,000. The Central Government has approved the proposed variation, *vide* Ministry of Commerce and Industry, Department of Company Law Administration letter No. 1(79)-CMN/58 dated 15th April, 1958, a copy of which is attached herewith marked Annexure 'B'.*

As required by Section 329 of the Companies Act, 1956, the variation sought to be made in the Managing Agency Agreement is now placed before the shareholders for their approval.

The existing Memorandum and Articles of Association, the Managing Agency Agreement dated 14th March, 1957, and the original letter No. 1(79)-CMN/58 dated 15th April, 1958, of the Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, referred to in the explanatory statements of the special business for the 23rd Annual General Meeting can be inspected by any shareholder at the registered office of the Company at Rampur (U.P.) between the hours of 10 a.m. and 4 p.m. on any working day except Saturday, and the hours of 10 a.m. and 12 noon on Saturdays.

By Order of the Board,
For RAZA BULAND SUGAR CO. LTD.,
S. K. KAUL,
Secretary.

NEW DELHI, *14th August*, 1958.

*Sent to the Shareholders individually.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37 Chowringhee, Calcutta, on Thursday, the 25th September, 1958 at 3.30 p.m. for the transaction of the following business:—

63, NETAJI SUBHAS ROAD,
CALCUTTA, *26th August*, 1958.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE MORARJEE GOCULDAS SPINNING AND WEAVING COMPANY, LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE recommended to the Shareholders in General Meeting the payment of the following Dividends for the year ending 30th June 1958:

Rs. 4.50 per share on 4½ per cent. Cumulative Preference Shares.

Rs. 15.00 per share on Ordinary Shares.

By Order of the Board,
P. B. MODI,
Secretary.

BOMBAY, *30th August* 1958.

IN THE MATTER OF THE COMPANIES ACT, 1956

AND

IN THE MATTER OF SECTIONS 397, 398, 399, 404 AND 403 OF THE COMPANIES ACT, 1956,

AND

IN THE MATTER OF RICHARDSON & CRUDDAS LTD.

BY AN ORDER OF THE CALCUTTA HIGH Court in the above matter, dated the 23rd April 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the Shareholding in the above Company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October, 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the Company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:—

"The Special Officer, Richardson & Cruddas Limited,
Hindusthan Buildings, 4, Chittaranjan Avenue, Calcutta-13"

and superscribed "SHARES".

D. N. MITRA,
Special Officer

Dated this 26th day of August, 1958.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS
(Railway Board)

REQUIREMENT OF CENTRE BUFFER COUPLERS

THE RAILWAY BOARD, GOVERNMENT OF India, propose to obtain from established and reliable manufacturers one thousand wagon sets of Centre Buffer Couplers.

2. Tender documents are obtainable from the Research Design and Standardisation Organisation, Baroda House Annexe, New Delhi, or from the Director General, India Store Department, Government Building, Bromyard Avenue, Action, London W. 3, on payment of Rupees two per set on or after 28th August 1958. The cost of the tender document does not include the cost of the relevant Indian Railway Drawings and Specifications which can be obtained on payment from the two sources mentioned above.

3. The quotations which should reach the undersigned not later than 30th September 1958 will be opened in public on 1st October 1958 at 11 hours in the Committee Room of the Railway Board's Office, State Entry Road, New Delhi.

H. D. SINGH,
Director, Railway Stores,
Railway Board, State Entry Road,
New Delhi.

Notices

THE ALEXANDRA JUTE MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 29th September, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. A. B. Kingsley, the Director retiring by rotation at the Meeting.

   And in this connection to consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. A. B. Kingsley be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. A. B. Kingsley is an "Associate" of the Managing Agents within the meaning of the Act and that, therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

As Special Business.

5. To appoint a Director in place of Mr. R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation in place of Mr. R. G. Edwards."

The Share Transfer Books of the Company will be closed from 15th September to 29th September, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *27th August*, 1958.

Note.—Payment of the proposed Dividends, if declared, will be made on or after 4th October, 1958, only to those members whose names are registered in the Books of the Company on 29th September, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in Respect of Special Business

Mr. R. G. Edwards resigned from the Board at the end of March, 1958, and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 5 of the above notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr. R. G. Edwards. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "Associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation, since McLeod & Co., Ltd., the Managing Agents of the Company, are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

THE INDIA JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of The India Jute Company, Limited, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Monday, the 29th day of September, 1958, at 3.15 o'clock in the afternoon, for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions:

5(*a*) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 125 each in the authorised capital of the Company be subdivided into 10 shares of Rs. 12/50 nP each and that the 6,98,400 issued Ordinary Shares of Rs. 12/50 nP each resulting from such sub-division be credited as fully paid up.

(*b*) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

As a Special Resolution:

6. That the Articles of Association of the Company be altered in manner following:—

   Article 4 shall be deleted and the following new Article substituted therefor:—

   "4. At the date of adoption of this Article, the Capital of the Company is Rs. 1,50,00,000 divided into 12,00,000 Ordinary Shares of Rs. 12/50 nP each."

The Share Transfer Books of the Company will be closed from 19th September, 1958, to 29th September, 1958, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *1st September*, 1958.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Your Directors have been considering the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and have come to the conclusion that a nominal value of Rs. 12/50 nP per share would permit of greater freedom in transmission and transferability of the shares.

Your Directors accordingly propose that each of the existing Ordinary Shares of Rs. 125/- each should be sub-divided into 10 shares of Rs. 12/50 nP each.

The proposed sub-division is in accordance with Section 94(1) of the Companies Act, 1956, and your Directors recommend that the Resolutions for the purpose set out in the notice should be passed.

The Directors other than as shareholders have no interest in the proposed resolution.

THE MEGNA MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of The Megna Mills Company, Limited, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Monday, the 29th day of September, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions:

5(*a*) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 100 each in the authorised capital of the Company be subdivided into 10 shares of Rs. 10 each and that the 8,16,520 issued Ordinary Shares of Rs. 10 each resulting from such sub-division be credited as fully paid-up.

(*b*) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

As a Special Resolution:

6. That the Articles of Association of the Company be altered in manner following:—

   Article 4 shall be deleted and the following new Article substituted therefor:—

   "4. At the date of adoption of this Article, the Capital of the Company is Rs. 1,50,00,000 divided into 15,00,000 Ordinary Shares of Rs. 10 each."

The Share Transfer Books of the Company will be closed from 19th September, 1958, to 29th September, 1958, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *1st September*, 1958.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Your Directors have been considering the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and have come to the conclusion that a nominal value of Rs. 10 per share would permit of greater freedom in transmission and transferability of the shares.

Your Directors accordingly propose that each of the existing Ordinary Shares of Rs. 100 each should be sub-divided into 10 shares of Rs. 10 each.

The proposed sub-division is in accordance with Section 94(1) of the Companies Act, 1956, and your Directors recommend that the Resolutions for the purpose set out in the notice should be passed.

The Directors other than as shareholders have no interest in the proposed resolution.

NOTHING NEW IN MONEY

(From Our Own Correspondent)

BOMBAY, *3rd September*

There have been no new developments of any note in the short-term money market. The traditional slack season continues. The demand for bank credit is of a limited nature. Although there does not appear to have been any notable addition to their resources in the week under review, the banks are not keen borrowers, as there is no attractive outlet for their funds. There is hardly any activity in the inter-bank section, with day-to-day funds being nominally quoted at 2—2¼ per cent. Some small banks, however, have been willing to pay a slightly higher rate of 2½ per cent., as they are said to be in a position to employ their funds in certain upcountry centres where they are well represented.

Many banks are not quoting for house money on call, presumably because this system of call money will soon cease to exist. It is learned that the informal understanding among banks to restrict the rates of interest on deposits will soon come into force and, when it does, house money on call will yield place to "one week money," for which the rate of interest at present is 3¾ per cent. per annum. There are, however, still some banks which quote for house money on call, but the turnover is small. Their rate for this deposit is 3¼—3¾ per cent. The term deposits namely, one to six months' money, are fetching the self-same rate, that is, 3¼—4 per cent.

The Central Government's 91-days' Treasury Bills attracted relatively less attention as compared with the previous week. This is reflected in the fall in the total amount offered from Rs. 6.60 crores to a little over Rs. 4.00 crores, as against an invitation of Rs. 3.00 crores in both the weeks. It may be noted that a fortnight ago the tenders had aggregated Rs. 5.29 crores albeit against an invitation of Rs. 4.00 crores. Despite the contraction in the amount offered, the average rate of accepted tenders is a shade lower at 2.518 per cent. per annum; in the previous week, this rate was 2.520 per cent. and a fortnight ago 2.561 per cent. Of the tenders offered during the week, allotment was in full to those who offered them at Rs. 99.375, while it was 85 per cent. to those who offered at Rs. 99.370. The decline in the amount of tenders is apparently due to the offer of two new issues by the Government of India, referred to in this column last week. With these loans yielding 3.65 per cent. and 3.68 per cent. and with facilities for selling back Government securities to the Reserve Bank still readily available, there is no reason why banks, in general, should be anxious to invest in Treasury Bills which offer only a little more than what they can get on inter-bank call loan.

The statement of affairs of the Reserve Bank of India for the week ended 29th August 1958, as compared with that for the previous week, reveals no striking features. In consonance with the slack season, notes in circulation continue to fall, the decline during the week being Rs. 8.20 crores. Notes held in the Banking Department also have shrunk by Rs. 5.70 crores, so that total notes issued are down by Rs. 13.90 crores. There has been a reduction of Rs. 9.94 crores in rupee securities held by the Issue Department and a rise of Rs. 1.04 crore in rupee coin. There has been a reduction of Rs. 5 crores in foreign securities, as against which there has been a rise of Rs. 2.45 crores in balances held abroad. Consequently, the total foreign assets have recorded a net fall of Rs. 2.55 crores and stand at Rs. 187.21 crores. In the Banking Department, Central Government's deposits are poorer by Rs. 10.36 crores and so also those of other Governments by Rs. 4.79 crores. Deposits of banks have receded by Rs. 4.96 crores, but their indebtedness to the Bank against usance bills has declined further to a mere Rs. 1.91 crore. The variations in other portfolios on both the liability and the asset sides are of a minor nature.

The return of the Scheduled Banks for the week ended 22nd August 1958 shows a rise of Rs. 3.31 crores in demand deposits and of Rs. 1.08 crore in time deposits. Inter-bank borrowings of a demand nature are lower by Rs. 7.46 crores, though those of time nature are a little higher by Rs. 1.74 crore. Borrowings from the Reserve Bank against securities other than usance bills, as well as those against usance bills, are smaller by Rs. 1.97 crore and Rs. 1.34 crore, respectively. There has been a contraction of about Rs. 11 70 crores in bank credit which has been offset by an increase of Rs. 10.05 crores in investments in Government securities. Money at call and short notice is down by Rs. 7.94 crores but there has been a rise of Rs. 6.75 crores in the total cash balances.

The firmness of the Gilt-edged market continues unabated. The demand for both Central and State loans from institutional investors is still keen, notwithstanding the sizable increase in values in recent weeks. There has been an impressive rise of nearly Re. 1.80 in 3 per cent. 1986 Conversion Loan, with a corresponding rise in the price of 3 per cent. non-terminable loan also. Both are now quoted at Rs. 73.75, but there are no sellers below Rs. 74. The main reason why investors have started paying attention to these undated loans is the fact that the yield on them at 4.07 per cent. (flat rate) is, perhaps, the best that can be had from Central Government loans today. Among the dated securities, there has been a gain from 5 nP to 45 nP. Thus, 3 per cent. 1963 and 1964 have gone up by 5 nP to Rs. 100.05. 3½ per cent. 1960 has gained 30 nP to Rs. 99.10. A rise of 45 nP has occurred in 3 per cent. 1970-75. The appreciation in 3 per cent. loans maturing in 1962-65, 1964, 1966-68 is 10 nP to 15 nP. The Reserve Bank continues to sell 4 per cent. 1972 at Rs. 100.45 as also 4 per cent. 1973 at Rs. 100.25. Among the medium-dated loans, the Bank is a seller in 3½ per cent. 1967 and 1968. A sizable amount of the newly created issues has already been sold at the same rates at which they were issued by the Government to the Reserve Bank.

Among the State loans, there has been good enquiry for the 4 per cent. and 4½ per cent. issues at rates which show a gain of 25 nP to 50 nP over the week.

As sterling has eased further in terms of U.S. dollar, the rupee-dollar rate has weakened a little. Thus, the banks' selling rate for ready dollars has moved against the rupee by 25 nP to Rs. 477.75 per $100. Similarly, their buying rate has moved up by 25 nP to Rs. 474.25. In New York, spot sterling was quoted today at $2.80¾-$2.80.3/16, as compared with $2.80.5/16-$2.80¾ a week ago. Three months' forward was also easier at $2.79.11/32-$2.79.13/32, the corresponding rates a week ago being $2.79¾-$2.74.7/16.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *3rd September*

The recovery in prices noted in the bullion market towards the close of last week gathered considerable momentum during the week under review, with both silver and gold registering perceptible gains. There was brisk covering by bears, thanks to the tense political situation in the Far East and shortage of contracts. The bulls also lent good support, induced by hopes of enlarged demand for bullion in view of the continued upward trend in agricultural commodity prices and reduced supplies of Tibetan coins. Consequently, business put through was quite sizable, the estimated aggregate commitments in silver and gold futures contracts being 6,500 bars and 150,000 tolas, respectively. Although there was some reaction today on account of profit-taking, the closing rates were markedly higher than those at the end of Wednesday last

The *Shravan* second settlement in gold expired on Friday, with the adjustment rate fixed at Rs. 107-4 and that in silver on Saturday, the adjustment rate being Rs. 186-5. Yesterday, 750 tolas of gold were delivered through the clearing house. Business in *Ashod* delivery silver commenced at Rs. 188-5 yesterday; the carry-forward charge was As. 6 against the buyer.

Forward silver (*Bhadrapad* settlement) attracted very good attention of operators and spurted from Rs. 185-9 last week-end to a high of Rs. 187.15 yesterday. After declining to Rs. 186-13, it recovered again to Rs. 187-14 before finishing today at Rs. 187-12. The net gain over the week was thus Rs. 2-3. The *Ashod* delivery was quoted at Rs. 188-2.

Ready silver moved up from Rs. 184-11 to Rs. 187-8 before closing at Rs. 187-4, the net gain over the week being Rs. 2-9. The floating stocks of silver are estimated at 900 bars. The daily average arrivals were nine bars, while offtake was seven bars per day on an average.

Gold for forward delivery (*Bhadrapad* settlement) advanced from Rs. 107-11 last week-end to Rs. 108-8 yesterday. After declining to Rs. 107-12 today, it finished at Rs. 108-2.

Ready gold met with good support and hardened from Rs. 107-8 to Rs. 108-5 today. Towards the close, however, it was easy at Rs. 107-14. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 5,000 tolas, while offtake was of the order of 3,600 tolas.

The prices of silver in London and New York were unchanged at the previous week's levels, as indicated in the table below. Gold prices in London, however, firmed up from 250s. 2d. to 250s. 5¾d. following the weakness of sterling in terms of U.S. dollar.

The following comparative table shows at a glance the trend of the market during the week under review:

	3-9-58	Highest	Lowest	27-8-58
	Rs a.	Rs. a.	Rs. a.	Rs. a.

HIDES ARRIVALS CONSIDERABLE

(From Our Own Correspondent)

KANPUR, *1st September*

During the week under review fresh arrivals of hides and skins were considerable, but the country tanners were active. Demand for buff and sheep was very strong. The main purchasers were the local tanners headed by Messrs. Cooper Allens. The exporters of goat and sheep made heavy purchases against the background of demand from America.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 260 and 3rd grade Rs. 140 to Rs. 180 per score; wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat 1st grade Rs. 275 and 2nd grade Rs. 225 per 100 pieces; sheep 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, *3rd September*

There were only two trading days for cotton futures during the week. The market was closed on 28th and 29th August on account of Coconut Day and on Monday, it being Parsi New Year Day. It was closed today also in memory of a prominent trader, the late Mr. Gopalbhai of Khimji Poonja & Co. The market depicted an upward trend on the opening day of the week, namely Saturday, due to short-covering attracted by the decline in values in private trading during the holidays. Operators were inclined to await the outcome of the Export Promotion Advisory Committee's Meeting in New Delhi on the next day. The comfortable supply position and the prospect of good crop kept the undertone subdued. The market ruled distinctly firm yesterday. The firmness was attributed to hopes that the Government of India would take a favourable view of the forceful plea put forward by Mr. Madanmohan Ruia and Mr. J. P. Patel at the meeting of the Export Promotion Advisory Council, for a vigorous export policy for raw cotton in the new season. There was expectation that the Government would not take long to announce an export quota for one lakh bales of cotton. This factor, together with reports of excessive rains in the Moglai tracts of Berar and Khandesh as also in Gujerat induced sustained bull support and bear covering with the result that prices staged a smart rally. Jarilla March gained as much as Rs. 7 in one day. Even news of the reduction in export duty on its cotton by Pakistan from Rs. 80 to Rs. 50 per bale failed to induce a downward trend, although there were fears that it would affect the export prospects of Indian cotton.

I.C.C. Moglai Jarilla March 1959 opened the week on Saturday at Rs. 660.50 and after improving to Rs. 661.75 declined to Rs. 659.75. It, however, closed higher at Rs. 661. Commencing at Rs. 660.50 yesterday, the contract firmed up to Rs. 667.75 and closed a shade down at Rs. 667.50. The net gain over the week was Rs. 6. The trend of prices of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	2-9-58	*High*	*Low*	27-8-58
I.C.C. Moglai Jarilla (March 1959) ...	667.50	667.75	659.75	661.50

In the spot section, activity was subdued early in the week. But yesterday enquiries revived. Staple varieties like Jarilla, Kalyan, Khamgaon, Jaydhar, etc., met with good buying.

In the export section, Kala, Oomra *Deshi*, Bengals and Pickings evoked attention. Exporters felt that, with the reduction in export duty by Pakistan, the export prospects for Indian cotton had become less bright. Although the reduction would only bring Pakistan prices on a par with those in India, Pakistani shippers, it was pointed out, had the additional advantage of the recent concession given by their Government to retain 10 per cent. of export earnings. Prominent shippers are already reported to have approached the Government of India with a request to abolish the export duty of Rs. 50 per bale in force at present so as to make Indian cotton cheaper.

The most important development of the week, in so far as the import section was concerned, was the reduction in export duty on Egyptian cotton from 5.50*d.* to 3.50*d.* per lb. with immediate effect. This amounts to a reduction in the prices of Karnak and Menoufi varieties by about Rs. 88 per candy. Importers were of the opinion that this had been offset by the simultaneous cut in the discount offered from 21 per cent. to 15 per cent.

There is a general feeling in trade quarters that the cut in export duty and the reduction in discount rate have not enhanced the prospects of Egypt selling more cotton to this country. Sudan prices of equivalent extra-long staple cottons are still cheaper. But owing to qualitative damage to its crop, Sudan is not in a position to offer large quantities of such varieties.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 620; Berar Jarilla 685; Khandesh 750; Vijay 865; Hubli Laxmi 1,010; Jaydhar 893. *Delivery contracts*: Bengal 594; Mathia 615.

Despite the reduction by the Pakistan Government of the export duty on the *Deshi* and Comilla cotton, from Rs. 80 to Rs. 50 per bale, the Karachi cotton futures market ruled slightly subdued during the week. Values tended to decline. The duty reduction was discounted beforehand, as witness the sharp rise in prices last week in anticipation of the decision. Foreign demand showed no striking revival even after the announcement, although it was expected that it would improve in due course. Weaker advices from New York and favourable crop news led to an easing of values. N.T.R.G. January which had closed at Rs. 79-5-6 last week-end shed three annas to Rs. 79-2-6 while the March contract eased from Rs. 79-10-6 to Rs. 79-6-6.

The Alexandria cotton futures market ruled firm during the major part of the week under review. The main influencing factor was the expectation of a reduction in the export duty on Egyptian cotton as a sequel to the recent cut in the reserve price of the Sudan Gezira Board. However, when the reduction was actually announced on the 1st inst., the futures market staged a retreat. The cut was to the tune of 2*d.* per lb., from 5.50*d.* to 3.50*d.* on long-staple cotton, to take immediate effect. The fall in prices was partly attributed to the simultaneous reduction in the discount offered from 21 to 15 per cent. Traders felt that this would offset the effect of the duty reduction. Some operators also were inclined to think that, notwithstanding the reduction in duty, competition from Sudan would be severe. This consideration induced selling with the result that values receded. Reports of good crop progress and the prospect

of a larger crop of about 1,304,800 bales (of 730 lbs.), accelerated the downward trend. The earlier gains were erased and the markets closed at levels below last week's. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: November 74.65 (75.10); January 75.00 (75.15). *Ashmouni*: August 65.35 (66.65); January 66.65 (67.65).

It is reported that, at its next session, the Sudanese Parliament will consider a Bill for the establishment of a Cotton Lint Marketing Board empowered to sell all Sudan cotton. The Board will include representatives of the Gezira Board, private growers and the Ministry of Finance. It will work as an autonomous body, but will be responsible to the Minister of Finance. The proposed Cotton Lint Marketing Board may not commence working this year since private growers will be unable to participate because of their indebtedness to crop financiers.

Cotton values in Liverpool ruled barely steady during the week. Price movements were narrow in range and the volume of business was limited. A small volume of liquidation by American interests in Liverpool, prompted by weak New York advices, were absorbed in short-covering and occasional mill fixation. Follow up support was, however, lacking because of the bleak textile outlook, and prospects of better crop in most producing countries in the northern hemisphere. The uncertainty regarding the U.S. export subsidy rate was another unsettling factor. Sudan contracts were quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: October-November 23.75; December-January 23.75; March-April 23.80; May-June 23.78. *American cotton mixed growth contract*: October-November 24.20; December-January 24.25; March-April 24.30; May-June 24.20.

The New York cotton futures market ruled easy during the week under the influence of the passing of the Farm Bill, favourable weather news and larger private estimates of the new crop. One such estimate put the crop at 11,825,000 bales which was about 250,000 bales above the official August forecast. Rumours of a lower mid-August parity price also imparted weakness to the market. The rumours later turned out to be correct as the Department of Agriculture fixed the parity rate at 38.43, as against the mid-July rate of 38.55. The fall in prices would have been more marked but for the scattered support prompted by higher entry into the Government loan.

The newly passed U.S. Farm Bill is said to contain provisions which offer cotton farmers during the next season, that is 1959-60, the option of the Government allotted acreage with a support price at 80 per cent. of parity or a planted acreage 40 per cent. more than the official allotment with a loan rate of 65 per cent. of parity. Farmers who choose the higher support rate with allotted acreage will not be given the privilege of redeeming cotton from the loan and the cotton surrendered by them to Government for the support price will be an outright official purchase. Those who opt for the larger acreage and lower support will continue to have the right to redeem cotton pledged by them in the loan during the season as in the present support programme. Government are empowered to sell cotton bought at the higher support price in the free market at 110 per cent. of the lower loan rate. It is generally thought that the Farm Bill will get Presidential assent and become law.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	2-9-58	26-8-58	19-8-58
Spot	36.20	36.30	36.40
October	35.25	35.35	35.53
December	35.59	35.70	35.89
March	35.98	36.00	36.30

YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, *3rd September*

After the sharp decline in prices noted last week, the yarn market picked up some strength during the week under review, with art silk yarn and staple fibre yarns registering gains. Cotton yarns, of course, continued to remain depressed. The firmness of art silk and staple fibre yarns was aided by fears of shortage of supplies. The fears were based on the ground that, notwithstanding bright prospects of India getting further large-scale foreign aid, New Delhi might continue the restrictive import policy in view of heavy outstanding commitments. Even reports of lower offtake from piecegoods markets and reluctance of weavers in important centres like Calcutta, Bhagalpur, Surat and Punjab to augment stocks failed to have any effect on the market. Cotton yarns were depressed, as demand continued to be slack. The spinning mills were reported to be doing only negligible business.

In the art silk yarn section, 120 Japan advanced by 9 nP to Rs. 6. 120 Italy rose by 7 nP to Rs. 6.44. 150 Japan was fully maintained at Rs. 6.44. 150 Italy, however, receded by 6 nP to Rs. 6.44. Among indigenous yarns, National Rayons 120 bright cones first grade moved up by 13 nP to Rs. 5.94. 150 bright cones first grade were fully steady at Rs. 5.

Staple fibre yarns (40x2) October delivery elicited support and advanced by Rs. 7 to Rs. 709. August delivery improved from Rs. 696 last Wednesday to close at Rs. 712 on the 30th ultimo. The spot section was also steady. Spot 40x2 Civys increased by 11 nP to Rs. 3.87. Kohinoors gained 5 nP to Rs. 3.99 and Centurys 9 nP to Rs. 3.81. Among foreign yarns, Fujis gathered 6 nP to Rs. 9.50. Paramounts were firm at Rs. 9.44.

Cotton yarns lacked support. Ten counts Moderns receded by 25 nP to Rs. 13.25. Podars were neglected at Rs. 12.37. Among twenty counts Moderns eased by 13 nP to Rs. 16.62. Indus were dull at Rs. 16.62. Gokaks, however, gathered 12 nP to Rs. 16.62. Thirty counts Hinds were stagnant at Rs. 19.62. Forty counts Moderns were dull at Rs. 25.25, but Minaxis put on 6 nP to Rs. 25.25. Sixty counts Finlays changed hands at Rs. 58, same as last week. Among eighty counts, Moderns shed 50 nP to Rs. 71.50. Mahendras were quiet at Rs. 71.50, as also Finlays at Rs. 78.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	3-9-1958	27-8-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	6 00	5.91
150 Japan (per lb.)	6 44	6.44
120 Italy (per lb.)	6.44	6.37
150 Italy (per lb.)	6.44	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40 s 2 August	—	696.00
40 s 2 October	709.00	702.00
40 s 2 Kohinoor (per lb.)	3.99	3.94
40 s 2 City (per lb.)	3 87	3.76
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 37	12.37
20s Modern	16.62	16.75
30s Hind	19.62	19.62
40s Minaxi	25.25	25.19
60s Finlay	58.00	58.00
80s Mahendra	71.50	71.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *3rd September*

The oilseeds market had a short week, as it remained closed for three days, on the 28th and 29th August and 1st September. During this brief period, the market ruled firm. The buying fervour of the market was whipped up by the favourable interpretation of the proceedings of the Export Promotion Advisory Council held at New Delhi this week. The extension of the shipment period for groundnuts H.P.S. and oil till the end of December gave rise to expectations that the Government might announce further relief with a view to boosting export trade in oilseeds and oils. In particular, castorseeds were buoyant, thanks to large-scale covering by shorts, induced by poor tenders. The quantity issued on the first notice day was only 300 candies. Groundnuts met with good support, following sizable purchases of groundnut oil by *vanaspati* interests. Linseed tended to move up on short-covering. In sympathy with the general trend and following encouraging advices from the cotton market, cottonseeds recorded a rise in prices.

Groundnut February 1959 contract was well supported, the quotation spurting from Rs. 163.37 last week-end to Rs. 165.62 today. August 1958 contract terminated at Rs. 203 on the 30th August, as against Rs. 200.50 at the close of last week. Spot bold ready advanced from Rs. 40 to Rs. 40.75, before finishing lower at Rs. 39. Coromandel and Khandesh quality both rose from Rs. 40 to Rs. 40.75. Today, however, they were done at Rs. 39.75 and Rs. 39.50, respectively. Over the week, groundnut oil ex-mill strengthened by 25 nP to Rs. 20.75. Railway receipt hardened by 38 nP to Rs. 20.50.

Castorseed September 1958 contract attracted very good attention of operators and rallied Rs. 6 to Rs. 158.75. May 1959 contract moved up from Rs. 152.50 to Rs. 158.25. Ready Madras increased by Re. 1.25 to Rs. 31.87. Kanpur quality put on Re. 1.10 to Rs. 30.60. Castor oil B.S.S. recorded a gain of 56 nP over the week, today's closing rate being Rs. 17.56. Commercial quality strengthened from Rs. 15.62 to Rs. 16.12.

Linseed September 1958 contract elicited enlarged buying enquiries and advanced by 62 nP to Rs. 33.12. May 1959 contract rose by 37 nP to Rs. 32.37. Bold ready met with excellent buying support and picked up Re. 1.12 to Rs. 33.12. Linseed oil was bought higher at Rs. 17.31 today, as against Rs. 16.87 last week-end.

Cottonseeds February 1959 contract received good enquiries and spurted from Rs. 103 to Rs. 105.50. September 1958 contract strengthened by 50 nP to Rs. 121.50.

Among other seeds, kardiseed bold ready was fully maintained at the last week's level of Rs. 21.50. Nigerseed Madras quality, however, came down from Rs. 34.50 to Rs. 34.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	3-9-1958	27-8-1958	20-8-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	203 00§	200.50	198.00
Feb. 1959	165.62	163.37	166.75
Bold ready (per cwt.)	39.00	40.00	39.25
Linseed—			
Sept. 1958	33.12	32.50	33.81
May 1959	32.37	32.00	31.25
Bold ready (per cwt.)	33.12	32.00	33.25
Castorseed—			
Sept. 1958	158.75	152.75	156.25
May 1959	158.25	152.50	156.62

SUGAR MOVES UP

(From Our Own Correspondents)

BOMBAY, *3rd September*

The sugar market presented a firm trend during the week under review, in contrast to the depressed conditions which prevailed in the past two weeks. There were good enquiries from Malabar side, besides the normal demand from the interior in the beginning of the month. But arrivals of sugar by rail were meagre, being only 3,900 bags, as against 10,600 bags in the previous week. Prices, as a result, registered an improvement.

Large grain sugar advanced by a rupee to Rs. 109.50-Rs. 116 per bag. Medium grain rose by 50 nP to Rs. 106-Rs. 108. Small grain gained a like amount to Rs. 105.

* * * *

HAPUR, *1st September*

The sugar market ruled depressed during the week under review, as demand from consuming centres was slack and supply position was fairly easy. The rates of some factories producing small grain sugar were quoted below the controlled prices. Want of support accounted for quiet conditions in the Muzaffarnagar sugar market and moderate business was done for Punjab and Gujerat side. The other consuming centres showed little interest. Amroha, Seohara, Bijnore and Dhampur factories sold their stocks at below the controlled price and small crystal sugar prices went down further by 12 nP per maund. Bold crystal sugar remained unchanged. Business was done by the following factories at prices (mill delivery wholesale) quoted against each:

Khatauli (A28) Rs. 37.37; Deoband (B28) Rs. 36.71; Iqbalpur (A29) Rs. 37.75; Rohana (B29) Rs. 37.12; Mansurpur (C29) Rs. 36.37; Meerut (D29) Rs. 36.71; Iqbalpur (A29) Rs. 37.75; Rohana (B29) Rs. 35.37; Buland (D29) Rs. 36.

Sugar prices in the Kanpur market suffered a setback, owing to heavy pressure of arrivals, coupled with further shrinkage in offtake. Trading in the ex-mill delivery section continued to be featureless and certain mills reduced the prices of R/R deals by 25 nP to 37 nP per maund below the controlled rates. The main factor responsible for the increase in supplies was a substantial rise in despatches against old contracts, thanks to better loading facilities. The latest ex-mill controlled prices are: Rs. 36-12 per maund, spot per bag (C29) Rs. 193-8; Gola Rs. 102-8; D 29 Gola and Burhwal Rs. 102; Waltergunj Rs. 101-12; Balrampur and Tulsipur Rs. 101-8; Hargaon and Lakhimpur Rs. 101-4.

Khandsari prices were quietly steady. Demand was slack. Prices ranged between Rs. 33.50 and Rs. 36 per maund according to quality.

Small arrivals of dry *gur* were lifted upto Rs. 23.50 per maund by consumers, while stocks of dry-wet kotha quality were being quoted at Rs. 19.44. Demand from consuming centres was slack, as most of their requirements were being met from producing centres in the South where prices were lower. The week's offtake was small at 1,000 maunds and local stock was put at 26,000 maunds, mostly of dry-wet and wet quality. The condition of the cane crop is fairly good.

Ready *gur* in the Muzaffarnagar market eased fractionally, due to poor demand. *Shakker* prices were unchanged, while *khandsari* prices ran down by Re. 1 per maund.

Future *gur* ruled quietly both ways in absence of new urges. *Fagun* opened at Rs. 14.06 last Monday and, after touching the highest of the week at Rs. 14.17 and lowest at Rs. 13.96, was quoted today near the opening level of the week at Rs. 14.07.

BLACK PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, *3rd September*

Malabar black pepper showed some improvement following a sizable purchase by the East European countries during the week. When New York market opened after the Labour holiday the dealers were more prone to buy Malabar black for September shipment but appeared to be haggling for a lower price. In view of very steady market at Singapore, it is likely that America may be forced to meet Indian sellers particularly because of the deteriorating situation in the Far East. Growers at all the primary markets are stiff sellers. Sizable purchases by exporters were reported at Rs. 625 at Alleppey, at Rs. 637½ at Cochin and at Rs. 645 at Calicut.

Forward market at Cochin rallied, under pressure of buying by bulls together with short covering, to Rs. 111.25 for October and Rs. 106.25 for December. Big exporters-*cum*-speculators are said to be trying to keep down the market as they want to pick up their requirements at cheaper rate against their overseas sales. But this time their efforts seem to have proved abortive. Singapore remained fully steady at Str.$75 for black and at Str.$126 for white. Arrivals from Sarawak and Djakarta were disappointing.

Malabar Pepper is likely to improve as export during August and September from India will, in all probability, make comparatively good reading. If so, floating stock, which is acting as a drag on the market, will diminish thus making the market healthy since stock in the hands of the growers is not so heavy as envisaged earlier. In A.S.T.A. section, September, after improving to $0.26, is quoted at $0.25½ at the time of writing. In specific delivery, the trend is steady with better undertone as nobody is willing to sell at lower prices.

After the establishment of forward market at Cochin, the job of shaping the prices, which was formerly in the hands of the growers, seemed to have been taken over by the operators who were holding stock against their hedge. The investors who do only switching business from one position to another are also said to be playing a responsible part in shaping the market.

Today's nominal quotations are: Ready delivery Rs. 82 per Bengal maund, September Rs. 565-75 and October Rs. 575-85 per candy of 5¼ cwts.

TEAS EVOKE GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, *2nd September*

Fair demand at lower rates was in evidence during yesterday's sales, and buyers followed quality. The keen bids in last week's sales in Mincing Lane, where quality teas gained 1*d.*, and the rise in prices in the Colombo sales of last week contributed to pushing up sentiment at times.

Dusts on offer in the internal sales held here on 26th August amounted to 18,106 chests. General demand was good, all orthodox teas realising valuations. Among the C.T.C. Assams, the brighter liquoring teas advanced, while the balance lost 10 nP. Darjeelings were extremely quiet. The quotations—in rupees per pound—with those of the previous week were: Best Assam C.T.C. 2.50 to 2.80 (2.60 to 2.90); medium Assam C.T.C. 2.20 to 2.40 (same); medium Assam grainy dust 1.74 to 1.76 (1.72 to 1.76); and medium Doars 1.72 to 1.74 (1.70 to 1.74).

Leaf amounting to 1,184 chests were in good demand and gained in prices.

Export quota, after changing hands at 9¼ nP, declined to 9 nP.

A long time has now passed since the Government of India, in deference to the persistent demands, announced its intention to accord relief to common teas, but nothing has so far been done. The trade and industry have revived the reasonable demand.

The case for the abolition of the export duty on tea was succinctly put forward here by Mr. B. C. Ghosh, Vice-Chairman of the Tea Planters' Association recently. He said that India was losing its overseas market for tea, in view of keen competition from other producing countries—Ceylon, East Africa, Indonesia, Formosa and China, none of which, he thought, levied an export duty on tea. Foreign customers of Indian tea such as Association, recently. He said that India was losturned their attention to Ceylon and East Africa for their supplies, in view of the high export duty on Indian tea.

There was good demand during yesterday's export sales at lower rates. Offerings aggregated 56,516 chests. All good liquoring teas, especially good medium Assam B.Ps and P.Fs were firm, while orthodox O.Fs and B.O.Ps possessing more ordinary liquors gave way by 10 to 20 nP. A strong feature was provided by B.Ps on keen demand. However, C.T.C. teas declined by 20 to 30 nP and legg cut teas by 5 to 10 nP. Plain brokens eased by 4 to 8 nP, and a similar decline was recorded in fannings of the same grade which, however, opened dearer. Whole leaf grades were quiet and prices eased. Tippy teas also eased, although there was fair support. Darjeelings were in good demand, but in accord with the general trend prices were lower. The quotations were: Best Assam C.T.C. fannings Rs. 3.50 to Rs. 3.80 (same); best Assam C.T.C. B.P. Rs. 3.20 to Rs. 3.40 (same); clean black pekoe Rs. 2.05 to Rs. 2.10 (Rs. 2.10); medium fannings Rs. 2.05 to Rs. 2.15 (same); medium B.P. Re. 1.85 to Re. 1.95 (same); plain fannings Re. 1.78 to Re. 1.86 (Re. 1.84 to Re. 1.90); and plain B.P. Re. 1.68 to Re. 1.72 (Re. 1.70 to Re. 1.74).

Export quota realised 9¼ nP. Subsequently, sellers raised the price to 9½ nP with buyers offering only 9 nP.

JUTE GOODS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, *2nd September*

Demand being at a low ebb, prices of jute goods gave way during the week under review. A similar tendency was also recorded in raw jute. Stockists, however, anticipated that American interest for hessian would soon make itself felt and that the transfer of more sacking looms to hessian manufacture was under way. That Calcutta-made hessian and sacking continued to be cheaper in world markets was clearly demonstrated in the recent closure of some producing units in Dundee. Continental mills also complained of Indian competition which tended to make their production uneconomic, due to very high prices charged by Pakistan for raw jute. In this context, the report from Dacca estimating output for this year at 5.4 million bales, as against the target of 5.5 million bales, was thought here as aimed at propaganda and foreign consumption. The same report stated that, in view of the very satisfactory rains in August, outturn should increase as the season proceeded.

Early in the week, there was fair covering demand and, for a time, Australian buyers showed interest in sacks for near deliveries. Ready B. twills were quoted at the unchanged rate of Rs. 97.00 on Tuesday last, while hessian 40" 10 oz. declined from Rs. 42.40 to Rs. 42.10. It is noted that, in New York, stockists are still caught in the "over bought" position, a position which resulted from the Middle East crisis. When once this position eases, prices should hold to steady levels and then American buyers should show more attention to offers. In this view, a New York report, referring to the improvement in the international and business outlook, foresees an early increase in consumption. Stockists here are enthusiastic, albeit this week's lack of interest, and point out with encouragement to the decline in American burlap stocks to 228.7 million yards as being proof that the outlook is improving.

Soon, some business in sacks with Australian buyers followed. Also, the report that mills were transferring more sacking looms to hessian was strong. The cumulative effect was a rise in the price of ready B. twills to Rs. 97.20 on Wednesday from Rs. 97.00, and hessian 40" 10 oz. to Rs. 42.15 from Rs. 42.10. However, selling pressure in the futures market followed and disturbed the conditions in the genuine market, which was already groaning under lack of adequate business with overseas buyers. On Thursday, November hessian 40" 10 oz. fell from Rs. 40.44 to Rs. 40, November B. twills from Rs. 99.05 to Rs. 97.75 and November Assam bottoms from Rs. 24.62 to Rs. 24.50 in the futures market. This caused ready hessian 40" 10 oz. to give way to Rs. 41.70 and ready B. twills to Rs. 96.00. On Friday, the market was closed on account of *Rakhi Poornima*, but prices were nominally unchanged. Towards the weekend, so little actual business passed that B. twills came down to Rs. 95.90 and hessian 40" 10 oz. to Rs. 41.60. There was again selling pressure in the futures market yesterday and the quotations in futures and for ready delivery declined further. Ready B. twills, however, after being lower, recovered to Rs. 97.00, due to anticipations of lower stocks in view of the transfer of looms to hessian. On the other hand, ready hessian 40" 10 oz. declined to Rs. 40.60.

Prices of raw jute gave way by 50 nP, but sellers were not prepared to discount prices further and preferred the lack of business. Heavy rains fell this week in most jute districts of West Bengal and, as a result, retting facilities have considerably improved. This would be reflected on raw jute quality. Little notice was taken of reports of damage to crop following floods. For it was believed that damage, if there had been, should be only minor. So it was maintained that the crop would by all means record a higher figure than last year and that there would be an increase in the output of quality fibre. It is expected that, in this season, India would be fully self-sufficient and that token imports would be made from Pakistan only to maintain contacts. The latest quotations for the new crop for the different varieties are:

	Middles	Bottoms	Delivery
	Rs.	Rs.	
Pakistan:			
District ..	30.00	27.00	Sept.-Oct.
Northern ..	30.00	27.00	Do.
Indian:			
Northern ..	26.75	24.25	Do.
Assam ..	26.75	24.25	Do.
Orissa ..	29.00	26.50	Do.
Desal ..	25.50	23.00	Do.
Murshidabad ..	24.25	21.75	Do.
Jungli	23.50	21.00	Do.
Daisee	29.50	27.00	Do.
Uttar Pradesh ..	23.50	21.00	Do.
Daisee meets ..	24.75	22.25	Oct.-Nov.
Bimli f.a.q.		Rs. 21.25	Do.
Pucca bales 1st mark..		Rs. 157.50 ready per bale.	

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, 1*st September*

Conditions in the linseed market were dull throughout the week under review. Prices showed no change and business put through was negligible. Supplies of seeds were still very poor, and, with crushers virtually keeping out of the market, little trading took place. Oil prices were maintained, despite slackness in demand. For supplies of goods in the hands of millers and stockists were scarce. Despite a recent improvement by £2 in the overseas price for linseed oil, Indian prices at £118 were still about £8 higher than buyers' indications.

The latest available quotations are: Ready Rs. 25-10 and September Rs. 25-8 per maund.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, *2nd September*

Easy conditions were in evidence in the metal market during the week under review. Fair demand was absent, while supplies of "free" base metals were comfortable. Reports of easiness in both New York and London, following the announcement of an increase in production by Kennecotts, also contributed to weakening sentiment here. Buyers were very reserved, as they anticipated that, now that foreign exchange assistance to the tune of $350 million was considered a certainty, there would be more provision for the import of base metals. It was in this context that market circles read Mr. Lal Bahadur Shastri's announcement at the Import Advisory Council meeting that the announcement of import policy for the October 1958-March 1959 period would be delayed by about three weeks in order to frame the policy after knowing exactly the outcome of the Finance Minister's mission abroad. In the meantime, it was noted that the Controller of Non-ferrous Metals issued permits for electrolytic and blister copper to scheduled industries, and this, of course, eased the supply position of manufacturers.

In the scrap market here, both brass and copper scrap ruled easy, while, in finished products, Calcutta interests turned their attention to Bombay where copper wire was offering cheaper than in Calcutta. Electrolytic zinc opened at Rs. 67.50 and eased to Rs. 67.00. Demand was poor, as consumers had adequate stocks. Tin closed at Rs. 566, after opening at Rs. 567. Lead was quiet at Rs. 68.50.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 1*st September*

There was no change in the kip market. U.K. importers did not improve their price levels but were only trying to buy at lower limits which were not workable for shippers to operate in the local market for F.A.Q. types. Sales of premium mark kips were not free, because tanners were trying higher prices in vain. Arrivals of kips were of moderate volume and clearance was slow. There was good demand for cow calf fourths and inferiors and buff calf all grades, but stocks were negligible. Due to brisk buying by exporters to the U.S.A., prices of buff hides remained firm.

In the tanned skins section, enquiries from the U.K. were small, due to the progress of public sales. Owing to good attendance of home and Continental buyers at the auctions, prices of goat skins, especially better class tannages, improved by 6*d.* to 12*d.* on May levels. Sales of tanned sheep skins will be taken up this week and the results are awaited with interest.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 1*st September*

Following the adoption of various fresh measures by the Government of India to check the rising trend in prices, the foodgrains market ruled quietly steady during the week under review. The movement of all foodgrains, including paddy and rice, which was hitherto banned for export from only 14 districts of east U.P., has now been completely banned from the entire State and an additional 25,000 tons have been assured as an *ad hoc* allocation, in addition to 60,000 tons a month which this State has been getting from the Centre.

Wheat at Hapur ruled quietly steady during the week. Average quality was quoted at Rs. 23 per maund and farm produce at Rs. 24. Although daily arrivals from producing areas were scanty, occasional arrivals of unauthorised wheat continued from the Punjab by road. These arrivals were mainly responsible for checking the bullish trend in wheat prices. Local trade stock of wheat was unchanged at one *khatti*, the corresponding figure last year being 42 *khatties* when wheat average quality was quoted at Rs. 15.87.

Rice, however, ruled quiet, thanks to the latest ban on export of rice and paddy from the entire State of U.P., coupled with good crop prospects. The prevailing prices were:—*Basmati sela* Rs. 40 to Rs. 42, *mainpuri* Rs. 30.50; coarse quality Rs. 26.50 per maund. Gram prices touched new heights due to firm advices from the Punjab, and local gram stocks with the trade were fast running down, due to good consumer demand. Barley and *bejhar* ruled quietly steady, while *jowar* and *guwar* were quiet in the absence of ready demand. Arrivals of new maize into the market has again been delayed, due to recent rains. The prevailing prices (in rupees per maund) on Monday were:—Gram *punjabi* 16.75; barley 16.12; *bejhar* 16; *jowar* 13 to 15; *guwar* 15; maize 16.

Ruling quiet earlier, pulses recorded a hardening trend due to good demand from east U.P. and Bihar. A heavy quantity of peas was being despatched to east U.P. and Bihar. *Arhar* registered sharp gains during the week, while other pulses were quietly steady. The week's offtake of peas was 12 *khatties*, leaving the balance stock of 96 *khatties*. The prevailing prices (in rupees per maund) were:—peas *dara* 14.56; *khatti* 14.50; farm quality 15.37; peas *dal* 15.75; *arhar* 18.37; *khatti* 18.25; *arhar dal* 23; *urd* 19 to 19.50; *moong* 25.50; *massor* 16.25.

SURVEY

(Concluded from page 383)

tackle the tasks of expansion. Mr. Patil's proposal appears to be sound and deserves an honest trial.

The post and telegraph communications provide employment to over 350,000 workers and run by a country-wide network of offices. It is easily one of the largest public utility undertakings in this country, next only to the Railways. Therefore, as was pertinently pointed out by Mr. Patil, if the Department functioned efficiently, it would be laying the foundation of a true Welfare State. Mr. Patil conceded that the Department incurred losses at present except in telephone services. The new set-up now contemplated, it may be hoped, would lead to better results through efficiency and economy in the services. Mr. Patil rightly stressed that it was necessary to reorganise the Department so as to make it self-sufficient and self-supporting. It might sound a little odd when it is said that the Department, though it has functioned for about 105 years, and claimed to be the largest *commercial-cum-utility* service in the country, is yet to attain the maturity to stand on its own feet. It is high time its revenue was separated from the General Revenue and subjected to stricter measure of control and judicious management.

There is no doubt that bureaucratic machinery has inevitably to operate under many limitations. As Mr. Patil himself pointed out, year after year, the grants set aside for the construction of buildings for the Department's offices in many parts of the country were being allowed to lapse because of the inability of the Central Public Works Department to execute them. The proposed autonomous body might well give a fresh impetus to the development of these essential services in the country. It is to be hoped that the new body will not be a merely pseudo-commercial institution but an active organisation, responsible to public need.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 29th August, 1958

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	5,00,00,000

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures. N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. I = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

† Less income-tax. (z) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1955. • Including bonus. (k) Investments.

M—Managed by the Board of Directors. + Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December, 1954.
+ New Central Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1955 is on shares of Rs. 10 each. P—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. 'C'—On increased capital.
For 1958 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 379*)

boilers, sugar machinery, structurals, cranes and steel foundry. It has undertaken bold plans for the manufacture of milling plant, a vital equipment needed by sugar factories, and machine tools. This is an instance of the management's commendable enterprise. No wonder the shares of the Company are highly rated by investors who want not only a steady return but also prospects of sizable capital appreciation over a reasonable period of time.

* * * *

A vigorous plea for scrapping of the control on copper at the end of the current month when the import policy for the ensuing half-year (October 1958-March 1959) is due to be announced has been put forward by the Bombay Metal Exchange Ltd. in the course of a memorandum submitted to the Government of India. The object with which the Central Government imposed price and distribution control on copper on 2nd April 1958, namely, to arrest the upward trend in prices, has not been fulfilled. In fact, the prices of copper and its products have registered a sharp advance and, even at such high prices, the consuming interests, it is said, are not getting adequate supplies. Electrolytic copper, for instance, is now quoted as high as Rs. 220 per cwt., as against Rs. 175 prior to the imposition of control. Following this rise, copper scrap and copper sheet cuttings are ruling higher at Rs. 210 and Rs. 215, the corresponding figures before 2nd April being Rs. 165 and Rs. 170, respectively. It is true that the prices of copper ruling in India are influenced predominantly by the trend of the London Metal Exchange, but the extent of the increase in prices has been much more marked in India than in London. Thus, over the past five months, copper prices in India have gone up by over 25.7 per cent., while the same in London have risen by only 12.2 per cent.; cash copper in London now stands at £202 per ton, as against £180 on 1st April last.

It is thus evident that neither the traders nor the consumers have gained anything from control on copper. On the contrary, the control has interfered with the normal forces of supply of and demand for copper. The Metal Exchange feels that, if the Government were to lift the control, the prices

VOL. XCVII. No. 2478 BOMBAY, 13th SEPTEMBER 1958 PRICE: Re. 1·50

RIGHT MONETARY POLICY NEEDED

IT is contended by some that the Reserve Bank of India should be critical of the Government's economic policies and actions when it analyses economic trends in its annual publications instead of being merely objective. This argument apparently proceeds on the assumption that, as an autonomous body and as the watch-dog of the currency, it is the duty of the Bank to tender its views on current problems to the Government and also keep the public informed of them. The assumption here is a little unrealistic. The autonomy of a nationalised institution is of a limited character, more so when its chief executives are civilians chosen by the Government. Some time ago, a former Finance Minister clearly stated that a country like India, with plans for socialist economy, could not afford to indulge in the luxury of controversies on policy matters between the Treasury and the Central Bank. It is part of history now that a Governor of the Bank who was not liked by him had to leave the post long before his time. The Board of Directors of the Bank are also nominated by the Government and they do not seem to have exercised much independence either. In any case, even if the Reserve Bank conveys to the Government its disagreement on any of the economic policies, it is not necessary that it should make a public display of it through the medium of its publications or otherwise. Such a thing is generally not done nowadays in any part of the free world. Indeed, a central banking institution rarely speaks to the public. And, when it does, its observations are of a general nature.

This does not mean that, in the free world, there are no controversies between Central Banks and Treasuries. In many countries, their Central Banks do express their dissent or assent to several of the Government's policies but they are neither disclosed to the public, nor discussed in public. Generally speaking, in all the free countries, the Central Bank is subservient to the Treasury. In India, too, the Reserve Bank may have occasionally expressed its disagreement with the Government on some policies. The present Governor, Mr. H. V. R. Iengar, told Press men in Bombay the other day that, on subjects pertaining to banking, currency and finance, the Reserve Bank continued to exercise its right to express its views. It is encouraging to hear him say so. In fact, the Reserve Bank, in our view, is entitled to advise the Government *in private* on policies covering a much wider ground, for the value of money is affected by almost all the actions of the Government. But, if the critics of the Government, be they rightists or leftists, feel that the Reserve Bank should openly say what it feels about the Government's various economic policies, they are expecting too much. It is no use depending upon the Reserve Bank for fighting their battles with the Government in the open or for expecting its open support and sympathy. The Reserve Bank is not a champion of either free enterprise or socialism. If it is to champion the cause of anyone, it is that of the Rupee. Its duty lies in protecting the value of the Rupee to the extent it can in a managed money economy. If this point is appreciated, it will be realised that the Bank's annual publications on banking, currency, finance and other economic trends cannot but be factual and dry. Their value lies in the authenticity of the data and the accuracy of description of the trends. Even here, the Reserve Bank has to be careful in seeing that its reports do not become an apologia for Government's actions or inactions, or tend to emphasise or exaggerate certain trends that suit Government's policies. Objectivity should be the main criterion if its reports are to serve the purpose of reference and guidance.

It is no exaggeration to say that, in all its economic survey reports so far, the Reserve Bank has followed this general criterion. The Report of the Bank's Central Board of Directors for the year ended 30th June 1958 is no exception. Its description of economic trends in 1957-58 is appropriate and interesting. There is no word of criticism of the Govenment or of sermon to the public. The few remarks that appear in the paragraphs relating to the prospect for the country constitute a mere statement of prerequisites for the success of the Plan. Similarly, the observations on monetary and credit policy are only an elucidation of the Bank's efforts in this sphere.

The Report clearly reveals that India is now confronted with the risk of a dangerous inflation, an outcome of the over-ambitious second Plan foisted on the people. The diversion of the major part of the resources to the core of the Plan had led to a slackening of economic activity in certain sectors. The rate of growth of industrial production, for instance, has registered a decline. Output of several agricultural crops, especially foodgrains, has fallen, but there seems to have been no abatement in the rate of population growth. Stocks of stores and raw materials have been depleted, while chances of augmenting them have become slender, because of reduced imports and of the country's limited capacity to fill the gap. Exports have failed to expand; if anything, they are tending to fall, despite several attempts on the part of the authorities to boost them. There has been a distinct slackening in the growth of money supply. Time deposits with banks are rising and bank credit is slowing down. In fine, money is pronouncedly easy. Despite the policy of general restraint on bank credit and money supply pursued by the Reserve Bank, prices are rising and cost of living is moving up. In recent months, the Rupee has been buying less goods than it used to a year before. The prospect of any significant and sustained relief in the near future is not promising.

Such is the position as we see it. The Reserve Bank, however, describes it in a circuitous fashion. Thus, it says that "the economic situation in the country presents many complex features." It admits that private investment and industrial production "have touched a plateau, after the sustained and substantial increases recorded in the preceding few years." The monetary situation "has turned from extreme stringency to unusual ease." It concedes that, while prices of raw materials and food have gone up and so also cost of production, those of manufactured goods have shown little or no increase. So, "profit-margins have begun to decline in some sectors, thus accounting for the comparative stagnation in investment and production." It predicts that "the balance of payments situation will remain a source of grave concern" and suggests that, as the available meagre foreign exchange reserves have to be conserved for the completion of the core projects of the Plan, "austerity, including some restraint of growth of consumer goods industries, is inevitable" and that "the claims of further expansion or investment in new directions have to be carefully balanced with those of the maintenance of current economic activity." While recognising in full measure the need for a substantial degree of *foreign* assistance, the Bank reminds the authorities that "the problem of resources must be considered in its fundamental aspect of increasing the rate of savings in the community to match the higher rate of investment." Proceeding, it says that "the rate of domestic savings has failed to show a perceptible increase and the great challenge in the near future is to increase decisively the elasticity of domestic resources." It then stresses the need for maximisation of agricultural production, particularly foodgrains, through intensive application of resources, in order to meet the requirements of growing population and secure "a material alleviation of the long-term foreign exchange problem."

The foregoing account sums up the prospect as seen by the Reserve Bank. It will be noted therefrom that the supply of consumer goods will be short, that the difficult food situation is going to persist and that, at the same time, investment expenditure on the core of the Plan will continue. Deficit financing of Rs. 220 crores in 1958-59—*it might* actually be more—on top of about Rs. 500 crores of deficit incurred in 1957-58 will greatly aggravate the inflationary pressures. In such a situation, what should be the monetary and credit policy? The logical answer is that it should be one of great restraint on bank credit and mopping up of surplus funds. The interest rates should be high enough to attract more savings and to strengthen the drive for austerity. The Reserve Bank agrees with this view but only in part. Thus, it says in the Report under reference that "the tenor of monetary and credit policy would have to be absorption of the available liquid assets for urgent financing of the Plan projects and maintenance of stringent control on expansion of credit facilities in general." It has, however, said very little on interest rates. It appears to share the view that higher rates of interest would affect production and restrain gainful investment. This is a fallacy. There is enough evidence in world economic history to show that, in a deliberately planned rising economy, higher interest rates are no impediment to progress and that, on the contrary, they help the overall aim of securing austerity in living, higher savings and speedier development through less inflation. If Mr. Iengar has any doubts on this issue, let him spend a couple of days with Dr. Erhard, West German Economic Minister, when he visits this country next month and seek his elucidation. Without a policy of reasonably high rates of interest, it will be extremely difficult for the Bank to make its policy of selective credit control a success, more so when the banks are

flushed with deposits and have a high ratio of liquid assets. What is even more disturbing is that, in the last two or three months, the Reserve Bank has, through its open market operations, actively assisted the downward trend in interest rates. Its aim in selling Government securities should have been to absorb as much of the surplus funds as possible and not make a profit of a few naye paise for the Government by putting up its selling rates progressively. It is obvious that, by raising the price of securities and thereby bringing down the yields on them, the Bank is making the securities less attractive to buyers and reducing their incentive to take up more of them. Moreover, in an inflationary situation, the psychological repercussions of a fall of a half per cent. in yields on Government securities on the other sectors of the capital market are far greater than is generally imagined. It looks as though the Reserve Bank has not yet sufficiently realised that, in an atmosphere of ever-increasing expenditure and consumer demand, unaccompanied by a corresponding rise in the supply of goods, it is extremely easy to make money cheap but very hard even to prevent interest rates from falling and fanning the inflationary fire, let alone push them up. Mere expression of a desire for credit restraint will not do. The Bank has to work hard for it diligently from all sides.

NUCLEAR POWER

THE second United Nations Atoms-for-Peace Conference, now being held at Geneva, has naturally enough attracted world-wide attention. It is now increasingly realised that the progress of nuclear research and the application of nuclear science for peaceful ends has suffered considerably through secrecy observed for strategic reasons, Mr. Francis Perrin, France's High Commissioner for Atomic Energy and President of the Conference, told the 5,000 delegates from 69 nations that secrecy in nuclear research was "harmful and dangerous to all mankind." India's representative at the Conference, Dr. Homi J. Bhabha, declared that secrecy in atomic research had served no useful purpose whatever. It is, therefore, to be hoped that the Conference will be a prelude to further co-operation in the atomic field. The Conference is bound to be a sort of clearing house for scientific information. To take only one instance of what this Conference might mean to the world, the Russian scientist, Mr. Z. U. Artzinovich, announced that Russia had developed a method for extracting uranium —the fuel on which nuclear power plants operate—from sea water. This research might conceivably lead to a solution of the intricate problems connected with the economics of nuclear power production.

Among the underdeveloped countries, India alone has developed an atomic power programme, thanks to the inspiring lead given by Mr. Nehru and the devoted work of a band of enthusiastic scientists, headed by Dr. H. J. Bhabha. Under the atomic energy programme, the *Apsara*, India's first reactor, which will complete two years of successful operation very soon, has produced isotopes and given irradiation facilities to scientific institutions. A Zero energy reactor has also been set up. Work is in progress on the biggest of the reactors, the Canada-India reactor, which will be ready by the end of 1959. For ensuring an adequate and steady supply of raw materials, the Atomic Energy Commission has an extensive programme for prospecting of atomic minerals. In one sense, it is true that there can be no desperate urgency for producing nuclear power in India. For India's coal reserves are nearly 40,000 million tons which, at the present rate of consumption, will last the country for 1,000 years. Its hydroelectric potential is of the order of 35-40 million kw. and, by the end of the second Plan, it will have developed only about 3 million kw. All this might suggest that this country can afford to go slow with its atomic energy programme. But this would be a serious mistake, for energy requirements are likely to increase at a fast pace and our population is also increasing at a very rapid rate. It may be mentioned here that the *per capita* energy consumption in India is only one-twentieth of what it is in the U.S. About 70 per cent. of even this small energy consumption comes from cowdung which could be more usefully utilised in agriculture.

It is also well to remember that India's coal deposits, large as they are, are not inexhaustible. As industrialisation gains momentum, they will be used up very fast. Even now the *per capita* availability of coal is less than what it is in the U.S. or China. Thus, it is about 100 tons per head, as against 15,000 tons in the U.S. and 2,000 tons in China. Further, about 90 per cent. of our coal deposits are located in Damodar Valley, so that the transport of this coal to centres of consumption in this vast country will imply a heavy demand on our limited railway facilities. But the development of nuclear power will mean very little demand on transport, because a ton of uranium can do the job of 2½ million tons of coal. India could and should tap its hydroelectric potential. Hydro-electric energy is, however, dependent upon regular monsoons. If monsoons fail, hydro-electric power may have to be cut. South India has already had enough experience of the fitful nature of hydel power supply on account of the vagaries of monsoon. The lack of firm supply in this region has caused considerable handicap to industries and agriculture. In any case, India's energy requirements will increase year after year, so that it cannot afford to overlook the importance of developing atomic energy as speedily as possible.

In the course of his survey of the energy problems in underdeveloped countries, in general, and in India, in particular, Dr. Bhabha stated at the Geneva Conference that the development of nuclear energy was not too costly for underdeveloped countries. He admitted that the cost of erecting a nuclear power plant was about 50 per cent. higher than for a conventional power station. He, however, thought that the excess cost was recoverable within seven years, since uranium fuel was much cheaper than large quantities of coal or oil which must be transported to conventional power plants over long distances. He pointed out that India's total resources of hydro-electric power, at about 35-40 million kw., might be exploited by 1986, by which time its population would have increased to 500 million. He predicted that "electricity from coal will become progressively more expensive, so that, after that year, most of the expansion of electricity in India will have to be borne by nuclear energy."

Dr. Bhabha calculated that, even if the electric power produced in India increased to 140 million kw. by the end of the century, it would still work out to less than 0.23 kw. per head, on the basis of a minimum population of 600 million by that time; the present *per capita* capacity in Canada was 1 kw. and that in the U.S. 0.72 kw. He added: "This is a measure of the magnitude of the problem." Dr. Bhabha observed that the decisive factor was not the relative cost of power stations, but the relative cost to the economy as a whole of providing progressively larger amounts of new power. From this point of view, international co-operation in nuclear science is of utmost importance to the underdeveloped countries which account for a total population of 1,800 million or nearly 70 per cent. of the world's total population. Living standards in these countries could be raised rapidly only through application of the results of nuclear research to agriculture and to the generation of power which provides the basis of industrialisation.

DEFENCE INDUSTRIES

A WELL-KNOWN martial adage warns us that we cannot fight today's wars with yesterday's weapons. The history of India's pre-British period furnishes many instances of military failures which could be traced to the fact that the generals, brave though they were, lost their battles mainly because of their reliance on out-of-date weapons. Although India is jealous of maintaining its pacifist traditions, it cannot possibly ignore the need for developing its defence potential to a level at which it can adequately defend itself. In this task, it has necessarily to depend on its defence industries. In a total war—modern war is a total war—the entire industrial potential must be pressed into war service. Modern war is, of course, pre-eminently a race in scientific advance. Defence thus calls for efficient scientific organisation and research. War-time necessity has itself often provided great fillip to scientific development which has proved as useful in war as it undoubtedly has been in peace. Without relaxing its efforts in the cause of peace, India should strive hard to build up its own defence and defence equipment, reducing its dependence on foreign supplies.

Much commendable work in the sphere of defence equipment production was initiated during the British period. Some of the excellent ordnance factories in the country owe their origin to the farsighted genius of the British authorities. The first ordnance unit was started in 1834 in Calcutta. There are now 19 ordnance factories which produce a wide range of military equipment, including artillery guns, heavy mortars, naval guns, bombs and shells, and other types of ammunition. These factories, together with Hindustan Aircraft Private Ltd. and Bharat Electronics Private Ltd., constitute the chief industrial enterprises under the Defence Ministry. Hindustan Aircraft Ltd., as is well known, undertakes the overhaul and repair of aircraft and aero engines. It has also started the assembly-*cum*-manufacture of aircraft, the H.T. 2, for use by the Indian Air Force and civil flying clubs. It also produces coaches for railways and bus bodies for various transport authorities. It has entered into an agreement with a firm in the U.K. for the manufacture of jet aero engines. The manufacturing programme of Bharat Electronics Private Ltd. is designed to produce transmitters, communication receivers and other equipment required by the civil and defence departments. Briefly, it is intended to produce electronic, radio and radar equipment and radio tubes and components. The Defence Production Exhibition at New Delhi, which was inaugurated by Mr. Nehru last week, is the first attempt ever made in India to enable the public to know what defence establishments are doing in the sphere of military equipment production.

Although defence industries have necessarily to be owned by the State—it is claimed that these industries are now the second largest industry in the public sector—it cannot be denied that private enterprise, too, has an important role to play in the development and manufacture of defence equipment. This is because strategic considerations demand that productive capacity should be as widely diffused as possible. There should, of course, be concentration of effort in certain lines of production to be owned by the State. But there are many lines where both public and private enterprise could co-operate in the production of defence equipment and stores. Such an arrangement has a strategic value, in that it will avoid a situation where a country might suffer through putting all its defence eggs in one basket—the public sector basket. The factories producing defence equipment should also be geographically distributed over a wide area. Even research effort in the sphere of military science should be distributed among many establishments, although the overall co-ordination of research should naturally be the responsibility of the Defence Ministry. The Defence Science Organisation (D.S.O.), which represents the research wing of the Defence Ministry, has done considerable work in initiating and directing research in defence science. Mr. Nehru paid a well-deserved compliment to the D.S.O. when he said: "I expect great things from this Organisation. Already, it has shown good results." It is to be hoped that the D.S.O. will win new laurels by contributing to scientific research of value in peace and in war.

Since public and private efforts both have, as already stated, a legitimate place in the development of defence potential, it is necessary that the private sector should be taken into confidence and enabled to participate in the production of at least certain lines of strategic equipment. After all, there is no clear-cut line of demarcation between civilian and defence stores. Experience in the West has shown that civilian industrial establishments are very efficient units for turning out military equipment and stores. From this point of view, the Defence Production Exhibition serves a useful purpose, in that manufacturers can learn the type of equipment the Defence Ministry requires. Through closer co-ordination between the Defence Ministry and the private manufacturing sector, it will be possible to evolve many schemes which, when implemented, might ultimately reduce India's dependence on foreign countries for all equipment. For obvious strategic reasons, such co-ordinational effort has necessarily to be limited. But once it is conceded that defence effort should be as widely diffused as possible, a way can always be found for combining Government's ultimate responsibility for the defence of the country with private participation in the production of much necessary military equipment.

WEST COMES TO INDIA'S AID

MIDLAND BANK'S ENTERPRISE—ANOTHER ATTRACTIVE DEBENTURE ISSUE

THURSDAY, 5 P.M.

MARKET GOSSIP

BY his quiet, unassuming ways, which are in the best Indian tradition, the Union Finance Minister, Mr. Morarji Desai, has done much to impress the Western world with the obvious sincerity of his purpose. He knew that everyone knew that his mission was to get financial aid for India's economic programmes. Nowhere did he overstate the case for aid, nor did he ever try to underrate the severity of India's economic crisis. There was in him none of the sophistication of the kind which makes some men pretend they are not in earnest about the aid which they want. At one time, he declared that many countries had developed with the help of foreign financial assistance and there was no reason why India should not follow their example. It is to be hoped that this realistic attitude will be extended to cover a host of other determinants of economic progress, including foreign private capital, facilities for private initiative and effort, and appropriate fiscal reliefs.

The success of Mr. Morarji Desai's 'aid' mission is, of course, not a little due to the change in the climate of opinion in the West, now so favourable to India, and to the painstaking efforts of Indian embassies abroad, in general, and the personal efforts of Mr. B. K. Nehru, rightly described as India's economic ambassador. Much precious ground had been covered already before the arrival of the Union Finance Minister in the British and American capitals, so that, when he actually commenced the talks, he must have found that the authorities in London and Washington knew India's case fully well. It is a tribute as much to India's ability to present its case as to the free world's willingness and ability to appreciate the difficult financial situation of a free country struggling to raise its living standards that constructive decisions for granting aid to India were taken. Perhaps, it is not as widely known as it should be that the "conference" method, which was adopted under the auspices of the World Bank for arriving at joint decisions on India's request for assistance, is without any parallel in post-war international finance.

The aid now granted in firm terms should go a long way towards bridging India's foreign exchange gap. The World Bank has agreed to grant $100 million between now and March 1959, of which railway development alone will absorb some $85 million, and to make available some $225 million in the following two years. West Germany will spare $40 million before March next and another $60 million later—it has also indicated its willingness to consider postponing the instalments on debts amounting to $160 million—and Canada $17 million immediately and $28 million later. Japan, it is stated, will grant India credit to the tune of $10 million by March next. The aid promised by Britain is for £40 million or roughly $114 million and that by the U.S. is for $305 million.

Although it is ungracious to look a gift-horse in the mouth, the U.K. might have taken a more liberal attitude, considering that India's economic association with it extends over a longer period than with any other country. Further, a decade ago, the U.K. itself owed India about £1,200 million. Since the U.K.'s economy was then in disrepair, India agreed to keep down its withdrawal from sterling balances to a modest annual rate of £40 million, besides denying itself convertibility terms. Again, India agreed to pay sterling pensions outright. If it had insisted on paying them monthly, it could have had £100 million more today. Nor should it be forgotten that, in 1949, India promptly devalued its currency following the devaluation of the pound, although it might have maintained its traditional exports without devaluing its currency to the same extent as the pound. These considerations, together with the fact that India buys more from the U.K. than from any other country, warrant the adoption of a reasonably more liberal attitude by the U.K. towards India's request for aid. Be that as it may, it is to be hoped that Britain will be able to consider long-term plans for investment in this country in a more favourable light and the authorities in India, on their part, will facilitate such investment for which there is both need and scope. It is noteworthy that the British Government, in the course of its *communique* announcing the grant of aid, has, after referring to the Washington meeting of India's creditor-countries, indicated its willingness to consider the long-term problems of India's development programmes. Thus, it observes: "Her Majesty's Government, for their part, are willing to take action, which they indicated at the meeting, both to make available £40 million in financial aid before 31st March 1959 and to give continuing consideration to the long-term problems of Indian development during the rest of the second Five-year Plan period which ends in March 1961. They hope that the other participants will similarly be willing to take action." The interest on this loan and the terms of its return, it may be mentioned here, will be decided through bilateral negotiations between the two Governments.

By far the most massive effort designed to aid India's economic development has come from the U.S. which announced this week financial assistance to the tune of $303 million (Rs. 140 crores), consisting of a loan of $100 million from the Development Loan Fund, $200 million by way of sale of foodgrains surpluses to India by the U.S. and nine-year deferment of the 1951 wheat loan ($190 million) on which the interest and amortisation payment this year amount to $3 million. Explaining these provisions, the State Department, in a statement, pointed out that the U.S. was "prepared, in the U.S. fiscal year ending in June 1959, to finance through Development Loan Fund a series of economic development projects in India which are expected to total about $100 million." Loans for these projects, the Department stated, would be on a long-term basis and repayable in Indian rupees. It also announced that the U.S. was prepared to begin discussions leading to the conclusion of "agricultural commodity agreement under title one of Agricultural Trade and Development Act (Public Law 480) which would provide for sale for local currency of surplus agricultural commodities." Such an agreement, it is computed, would provide foodgrains having an export value of about $200 million. Finally, the Department stated that the U.S. Embassy in New Delhi had been authorised to exchange notes with the Indian Government to "amend the present repayment schedule of $190-million wheat loan extended to India in 1951 to defer the interest and amortisation payment which are due over the next nine years."

The latest measure of financial assistance, aggregating $303 million, brings the total of the U.S. aid committed to India since 15th August 1947 to a total of $1,678 million (Rs. 794 crores). Excluding the $303-million aid, the U.S. has so far given India $1,375 million. This assistance includes both Governmental and private assistance. The U.S. Government aid consists of: Technical Assistance and Economic Aid Programmes (from January 1952 to August 1958) $411.8 million; Agricultural Commodities Agreement (August 1956) $288 million; Agricultural Commodities Agreement (June 1958) $57 million; loans from Export-Import Bank for purchase of capital equipment in the U.S. (June 1958) $150 million; loan from Development Loan Fund (June 1958) $75 million; aid to Orissa Iron Ore project (June 1958) $20 million; wheat loan (1951) $190 million; agricultural commodities distributed through voluntary agencies (upto 1st January 1958) $73.2 million; milo assistance (1950-51) $12.15 million; flood relief aid $5.4 million; Fulbright and Smith-Mundt Grants $4.02 million and ocean freight assistance to voluntary agencies $600,000. The measures of assistance from private U.S. organisations are: Ford Foundation grants (upto 8th January 1958) $25.6 million; American Voluntary Agencies Aid under Indo-American Agreement $5.5 million; Rockefeller Foundation grants (upto 30th September 1957) $4.28 million; American Red Cross contributions $0.8 million and gifts in kind or cash (up to 31st December 1957), including scholarships and technical assistance from American educational organisations and foundations (not already included) $50 million. This list does not, of course, include private American investment in Indian trade and industry. Nor does it include the U.S. share in the assistance provided by the specialised agencies of the United Nations, to the funds of which the U.S. is a very large contributor.

It will thus be seen that the U.S. assistance to India, besides being generous, has been spread over many fields of activity. Such aid has also been given without any strings attached. In this connection, it may be recalled that the U.S., when it agreed recently to give $650 million loan to France, imposed certain conditions such as reduction in French military forces and adoption of policies designed to hold deficit financing to a minimum. No such conditions have been imposed on India by the U.S. or other countries which have offered financial assistance to this country. The U.S. Ambassador, Mr. Ellsworth Bunker, has rightly hailed the latest U.S. agreement with India "as further and continuing evidence of the American people's faith in and support for India's magnificent effort to develop her economy through democratic processes."

Although no 'strings' have been attached to the aid given by the Western countries to India, it is not unlikely that men connected with their Governments have impressed upon Indian authorities the importance of realistic approach to economic planning. The Press in the West, while generally supporting India's case for aid, has expressed the view that we should not hereafter present them with a *fait accompli* of a financial crisis in which foreign aid becomes an imperative necessity. In other words, we cannot possibly repeat the economic SOS. The obvious lesson should be learnt that we can never be too careful in striking a balance between the idealism of Plan targets and the reality of internal and external resources.

* * * * *

A bold bid to popularise the banking habit among the lower-income groups has been made by the U.K.'s Midland Bank, one of the "Big Five." A few days after announcing its scheme of "personal loan without security," to which we made a reference in these columns last week, it came out with a new scheme of "economy" bank service. Under the new scheme, known as "personal cheque account," the owner of an account in the Bank is given cheque service at a low and fixed cost of 6*d.* per cheque, inclusive of the stamp duty of 2*d.* No further bank charges will be levied. The Bank's service will encourage transfers of money by cheques instead of by postal money orders for which the rates vary from 1*s.* for £10 to 1*s.* 8*d.* for an order of £40—50. However, other bank facilities such as overdrafts and personal loans, which are available to holders of current or deposit accounts, will not be given to the owners of "personal cheque account." The scheme does not envisage any minimum amount to be kept with the Bank. The personal cheque account, according to the Midland Bank, breaks entirely new ground, for it brings banking within the reach of every man and woman in the U.K. It may be mentioned here that schemes on these lines have been in operation for some time in the U.S. and Canada.

Some observers feel that the cheaper service charges under the scheme might induce current account holders to convert their accounts to personal cheque accounts. But the Bank apparently feels that not many persons will choose to effect such conversion. The London *Financial Times* has drawn attention to the possible results which may flow from the wider adoption of the system of payment by cheques, contemplated by the Midland Bank's new service. In the first place, the gradual substitution of cheques for cash in wage packets and the settlement of bills may produce enormous savings of time and manpower. Secondly, there will be a gradual improvement in the cash position of the banking system produced by a net transfer of cash to it from other sectors. The resultant widening of the credit base, it is pointed out, has "obvious implications for monetary policy, but it will probably take place too slowly to be a serious problem." Thirdly, there will be increased competition for money. "The fact that the growth of personal cheque services will tend to divert funds from the Post Office and Trustee Savings Banks to the joint-stock banks," it says, "is only one example of a development which may eventually have implications for Government finance." For these and other reasons, the operation of the Midland Bank's new scheme will be watched with interest.

* * * * *

Conditions in the money market continue to be easy with interest rates ruling low. Indeed, several banks are having large lendable funds and, since borrowings are on a somewhat reduced scale, a sizable part of the banks' resources has found its way into investment in gilt-edged securities. Consequently, the values of these securities have gone up quite markedly in recent weeks, while actual yields have fallen, as is evident from the figures cited below:

	Price (in rupees)		Yield (per cent.)	
	Latest available	Beginning of 1958	Latest available	Beginning of 1958
3½% 1962	99.03	97.80	3.52	3.78
3½% N.P.B. 1967..	98.85	97.50	3.65	3.82
3 % Dev. 1970-75.	89.40	85.75	4.12	4.48

Thanks to the persistently upward trend in gilt-edged values and lower yields thus, investors are naturally evincing greater interest in fixed-yielding preference shares and debentures of well-known companies. Although these "fixed-yielders" have not recorded any appreciable improvement in prices, they are not easily available, because those who hold them are not inclined to part with them at quoted rates. A striking indication of the keen demand for fixed-yielding securities is provided by the heavy rush for the debenture issue of Guest, Keen, Williams Ltd., the subscription list for which opened and closed on Tuesday this week. The issue, it will be recalled, was for Rs. 1.50 crore in units of Rs. 1,000 each, the rate of interest being 6½ per cent. (subject to tax) and redemption date being 1st January 1971, with option to redeem the whole or part on 1st January 1966. The response to the issue was so excellent that the amount actually subscribed is said to be nearly four times the sum of Rs. 75 lakhs offered for public subscription; the balance of Rs. 75 lakhs had been "placed firm" by the underwriters. The issue is already being unofficially quoted at a premium of Rs. 4.

Close on the heels of the above issue has come the decision of that famous rubber goods manufacturing firm, the Dunlop Rubber Company (India) Limited, to issue at par Rs. 1-crore debenture-stock carrying interest of 6½ per cent. (taxable) and redeemable in 1968-73. The issue will open for public subscription twelve days from now—on Tuesday, the 23rd inst. Full particulars of the issue can be had from the prospectus published on pages 440A to 440D in this issue. Applications for the issue will have to be in a minimum of Rs. 1,000 and those who want more must apply in multiples of Rs. 1,000. Interest on the stock is taxable and will commence from 1st of next month; the first payment of Rs. 16.25 less income-tax per Rs. 1,000 of stock is to be made on 1st January 1959. The whole issue has been underwritten by the Industrial Credit and Investment Corporation of India, the Investment Corporation of India and the Life Insurance Corporation of India. It may be noted here that the Company has an outstanding debenture-stock of Rs. 1,04,55,000 out of the Rs. 1.20-crore 5 per cent. stock 1961-71 issued in 1950. The rate of interest of this stock and its date of redemption have been brought on par with those of the new issue. Judging from the spectacular response to the Guest, Keen, Williams' offer, there is no doubt that the present issue of Dunlop, too, will be oversubscribed and command a good premium.

SHARE MARKET FIRM

STEELS WELL SUPPORTED

(From Our Own Correspondents)

BOMBAY, 11*th September*

THE share market which was somewhat subdued last week picked up strength again during the week under review. In fact, the market ruled distinctly firm. Although there was no fresh bullish development, operators would appear to view the prospects for industries with optimism. The general feeling was that New Delhi might grant some new concessions to industries with a view to augmenting foreign exchange through enlarged exports. There were, besides, renewed reports from abroad about India getting sizable aid from the U.S., thanks to the efforts of Mr. Morarji Desai. These reports, together with hopes of relief in taxation in the 1959-60 budget, prompted some interests to extend their commitments, with the result that equity values registered a handsome improvement. Not only were the last week's losses of many counters completely made up but today's closing rates were higher than those a fortnight ago.

Steel shares were specially well favoured, the buying fervour having been fanned by rumours of an imminent rise of Rs. 56 per ton in retention prices. Tata Ordinaries opened the week at Rs. 175.50, as against Rs. 174.75, and moved up to touch a high of Rs. 180.25 today. Towards the close, there was some profit-taking and the quotation was lower by 25 nP. The net gain over the week was Rs. 5.25. The new shares rallied Rs. 4.50 over the week, today's closing rate being Rs. 174.75. Indian Irons spurted from Rs. 25.60 on Thursday last to Rs. 26.45 on Tuesday and, after declining to Rs. 26.15 today, finished at Rs. 26.20.

The textile section ruled quite active and transactions were put through at higher rates. New Greats were particularly well fancied, the quotation forging ahead by Rs. 16 to Rs. 225. Finlays advanced by Rs. 6.50 to Rs. 291.50, Centuries by Rs. 4.75 to Rs. 455.50 and Models by Rs. 3.75 to Rs. 170. Kohinoors strengthened by Rs. 3 to Rs. 281. Podars, Simplex and Svadeshis gained a like amount to Rs. 138, Rs. 179 and Rs. 201.50, respectively. Central Indias and Gokaks gathered a rupee each, the former to Rs. 97 and the latter to Rs. 153. Bombay Dyeings improved from Rs. 60.10 to Rs. 60.80 before finishing at Rs. 60.60. B.R. Cottons gained 55 nP to Rs. 25.80, Indores 50 nP to Rs. 107.50 and Tata Mills 25 nP to Rs. 38.50. Shree Niwas, however, were subjected to selling pressure and came down by Rs. 11 to Rs. 154. Edward Textiles encountered selling and receded by Rs. 5 to Rs. 257.50, reflecting disappointment over the working results for the year 1957 which show a loss of Rs. 12.20 lakhs (after providing depreciation). Morarjis shed Rs. 4 to Rs. 243.

Bank shares evoked good buying enquiries. Punjab Nationals hardened by Rs. 3.50 to Rs. 65.50. Barodas firmed up by Re. 1.50 to Rs. 122 *ex-div.* Central Banks were fully maintained at Rs. 57 and new shares picked up Re. 1.10 to Rs. 58.60. United Commercials put on 60 nP to Rs. 63.80 and Unions 12 nP to Rs. 7.36. Jodhpurs were firm at Rs. 1.44.

Electricity shares, however, continued to remain neglected. Tata Powers dropped Rs. 10 to Rs. 1,215. Andhra Valleys fell by Rs. 7.50 to Rs. 1,170. Tata Hydros declined by Rs. 2.75 to Rs. 120. Bombay Suburbans were on offer lower at Rs. 112.75, as against Rs. 113 last week-end, and Ahmedabad Electrics at Rs. 98.60, as against Rs. 98.80.

Buoyant conditions prevailed in the sugar section. Belapurs provided the brightest spot with a sharp rise of Rs. 19 to Rs. 308, on expectations of higher dividend for the year 1957-58. Phaltans climbed up by Rs. 9 to Rs. 173. Bhopals strengthened by 30 nP to Rs. 25.50 and Changdeos by 15 nP to Rs. 31.15. Walchandnagars were done at Rs. 290.50 *ex-right*, as against Rs. 283.50 *cum-right*.

Among cement shares, Associated Cements were bought Re. 1.50 higher at Rs. 162.50. Jaipur Udyogs gained 8 nP to Rs. 14.76 *ex-right*. Dalmias, however, receded from Rs. 11.76 to Rs. 10.48. Digvijays lost 75 nP to Rs. 152.25. Orissas eased by 20 nP to Rs. 13.20.

Engineering and mining shares were in good form, with values tending to move up. Premier Constructions met with renewed buying support on hopes of an early bonus issue and advanced by Rs. 5 to Rs. 226.25. Tata Locomotives evoked enlarged demand induced by reports of the Company having received official sanction for the issue of new shares at par and increased by Rs. 4.50 to Rs. 193.50. Shivrajpurs recorded a gain of Rs. 3 to Rs. 117.50. Alcock Ashdowns rose by Re. 1.25 to Rs. 262.50. Larsen and Toubros gathered 8 nP to Rs. 15.88. Indian Coppers were fully steady at Rs. 4.04, as also Mahindras at Rs. 15.88.

In the shipping group, Scindias gained 8 nP to Rs. 22.52. Great Easterns, however, encountered selling and shed 50 nP to Rs. 26.90, notwithstanding the declaration of a higher dividend of 18 per cent. for the year ended June 1958, as against 15 per cent. for the previous year. India Steamships eased from Rs. 14.06 to Rs. 13.96.

Among automobile shares, Premiers were supported well, the rate improving by Re. 1.70 to Rs. 86.70. Hindustan Motors put on 4 nP to Rs. 7.52.

A notable increase of Rs. 16 to Rs. 198 in Wimcos and of Rs. 9.50 to Rs. 620 in Bombay Burmahs (old) was the feature of trading in the miscellaneous section. Buying interest in Bombay Burmahs was whipped up by the announcement of bonus issue at one fully paid-up share for every four shares of Rs. 125 each and one fully paid-up share for every ten partly paid-up shares of Rs. 50 each, as also of an interim dividend of 6 per cent. on both old and bonus shares. National Rayons strengthened by Rs. 2.50 to Rs. 243.50. Tata Oils improved by 75 nP to Rs. 38.75 and Chemicals by 56 nP to Rs. 17.36. Killick Industries gathered 50 nP to Rs. 148.50. B.B. Petrols rose by 12 nP to Rs. 2.24. Gwalior Rayons were done at Rs. 13.76, as against Rs. 13.75. Hindustan Levers lacked support and eased by 20 nP to Rs. 24.12.

Calcutta Stock Exchange

CALCUTTA, 10*th September*

The good work being done by the Finance Minister, Mr. Morarjee Desai, abroad and expectations of increased aid, over and above the $350 million promised by the World Bank, the U.S., the U.K., Canada, Japan and W. Germany, failed to enthuse sentiment on the Calcutta Stock Exchange during the earlier part of the week under review. Nor was the freeing from export control of about 200 items seriously taken note of in the market. Speculative interest was at a low ebb, as a desire to lessen holdings was predominant. In the selling that followed, prices receded markedly.

The recession in prices followed the circular issued by the Reserve Bank instructing Scheduled banks not to contribute to a purely speculative boom and pointing out the need for the utmost caution while making advances against huge blocks of shares. This circular naturally caused alarm in the market, as the present boom was not at all attributed to real investment interest. Heavy selling soon followed, but, in the result, a healthier technical position invited outside buying support which led to a small recovery in speculative issues on Saturday last. Recovery was also aided by expectations of higher retention prices for steel and the earlier announcement of satisfactory dividends for some of the jute mills under the managing agency of Messrs. Bird & Co. Both on Monday and yesterday, with the extension of recovery to other counters, an impressive increase in volume of transactions was a feature.

Madras Stock Exchange

MADRAS, *9th September*

Steady conditions prevailed on the Madras Stock Exchange during the week under review also. Plantation shares continued to evoke good demand. Tea shares were specially favoured, thanks to reports of rising tendency in prices, steady improvement in exports of South Indian tea in recent months and hopes of an early announcement of relief to common teas. Rubber shares also attracted good attention of operators on prospects of an early upward revision in rubber prices. In sympathy with tea and rubber shares, coffee shares tended to move up. Textiles were well fancied, as also several bank, sugar and miscellaneous industrials.

Among tea shares in the planting section, United Nilgiris spurted by Re. 1.12 to Rs. 19.37. Stanes Amalgamateds and Lucky Valleys firmed up by 50 nP each to Rs. 14.50 and Rs. 11.50, respectively. Peermades rallied 35 nP to Rs. 21.60. Cowcoodys gained 18 nP to Rs. 8.40 *cum-div.* Kil Kotagiris and Kalasas improved by 13 nP each, the former to Rs. 6.35 and the latter to Rs. 3.98 *cum-div.* Chandramalais added 8 nP to Rs. 3.40.

Among rubber shares, Travancore Rubbers were on request and advanced by 65 nP to Rs. 16.15. T.R. & Ts strengthened by 40 nP to Rs. 7.90 and Rajagiris by 30 nP to Rs. 18.30. Teekoys and Malabar Industrials hardened by 25 nP each to Rs. 6.25 and Rs. 17.25, respectively. Cochin Malabars climbed up by 42 nP to Rs. 5.52.

In the coffee group, Kumergodes hardened by 24 nP to Rs. 6.40, Sangameshwars by 6 nP to Rs. 2.66 and Bababudins by 5 nP to Rs. 12.25. Consolidated Coffees, on the other hand, eased by 30 nP to Rs. 29.15.

In the textile section, Coimbatore Pioneers advanced by Rs. 9 to Rs. 237. Bangalore Woollens improved by Rs. 3.50 to Rs. 165 and Vijayakumars by Rs. 3 to Rs. 108. Coimbatore Cottons and Buckinghams rose by Rs. 2 each to Rs. 150 and Rs. 182, respectively. Lakshmis and Anglo-French increased by a rupee each, the former to Rs. 102 and the latter to Rs. 78. Adonis increased by 25 nP to Rs. 7.75. Coimbatore Spinnings, on the other hand, were pushed down by Rs. 8.50 to Rs. 41, reflecting disappointment of operators over the passing over of the dividend for the year ended 31st December 1957, as against 20 per cent. paid for 1956. Pankajas dropped Rs. 2 to Rs. 40.

In the sugar section, United Breweries were marked up by Rs. 7 to Rs. 227. Cauverys rallied Rs. 2 to Rs. 95. E.I.Ds spurted by 65 nP to Rs. 28.75. Deccans rose by 10 nP to Rs. 9.25.

Among miscellaneous industrials, Textools hardened by a rupee to Rs. 201. Mysore Chemical Manufacturings strengthened by 65 nP to Rs. 20. Mysore Lamps were quoted 37 nP higher at Rs. 16.37. Mysore Papers increased by 38 nP to Rs. 18.50. Spencers gained 16 nP to Rs. 18.71 and Central Scientifics 25 nP to Rs. 6.25.

MARKET GOSSIP

(Concluded from previous page)

The net proceeds of the Rs. 1-crore debenture issue of the Dunlop Rubber Company is expected to amount to Rs. 95 lakhs. These will be utilised to meet a part of the total estimated capital expenditure of Rs. 4.67 crores on the implementation of the Company's development programme, 1956-60. A sum of Rs. 2.03 crores (net) has already been raised by the issue, in July 1957, of 1,400,000 ordinary shares of Rs. 10 each at a premium of Rs. 5. The balance of the capital cost is to be financed by retained profits and depreciation provisions together accounting for Rs. 1.14 crore (from 1956 and 1957 appropriations). Out of the capital outlay of Rs. 4.67 crores, about Rs. 2.21 crores had been spent up to 31st May 1958, leaving a balance of Rs. 2.46 crores to be expended by the end of 1960.

The Dunlop's development programme envisages the establishment at Ambattur, near Madras, of a new factory for the manufacture of giant tyres, cycle tyres and repair materials and a substantial expansion of the existing factory at Sahagunj in order to provide additional capacity for various products, mainly tyres, cycle rims and repair materials. Production from both the units is expected by the beginning of next year. The Company has also on hand a considerable plant replacement and improvement scheme at Sahagunj factory.

The Dunlop Rubber Company manufactures a wide range of products, chiefly pneumatic tyres for bicycles, motor cycles, scooters, cars, trucks, buses, tractors, earth-moving vehicles, animal-drawn vehicles, handcarts, barrows, aircraft; cushion tyres for trolleys; tyre repair materials and accessories; bicycle rims; latex foam cushioning ('Dunlopillo'); transmission and conveyor belting; fan and vee belts; and braided hose. The utmost importance attached by the Company to the maintenance of quality standards and the stress laid by the Government on development of industries, mechanisation of land, and expansion of road transport will, there is no doubt, ensure a continuously rising demand for the increasing volume of products turned out by the Company.

The financial position of the Dunlop Rubber Company is quite sound. The net assets at written-down values as on 31st December 1957 aggregated over Rs. 8.32 crores, or more than four times the total nominal amount of the existing and the present issue of debentures. The fixed assets of the Company as on 31st May amounted to Rs. 4.64 crores and these are expected to rise to over Rs. 6 crores by the end of next year. The assets have been conservatively written down, as is indicated by the fact that the depreciation provided comes to Rs. 2.68 crores, representing 42 per cent. of the total cost of assets, excluding land, and there have been no revaluation of any of the assets at any time in the history of the Company.

The foregoing account clearly brings out the bright prospects for the Company, as also its sound financial position. It is not surprising, therefore, that, despite the new debenture issue, the market value of the Company's ordinary shares has not only not suffered any decline but actually registered a distinct improvement. The currently ruling market price is Rs. 28.12, as against Rs. 20.44 before the Company issued (in July 1957) 1,400,000 new ordinary shares.

* * * *

The Central Government has extended the last date for effecting shipment of sugar allowed for export by a month, that is, up to the end of November next. This decision is a sequel to the representation made by the Indian Sugar Mills' Association (I.S.M.A.), the agency designated for sugar export. The plea was on the ground that the tempo of export business during the months of July and August had slowed down on account of dislocation of transport following heavy rains.

The total quantity of export orders booked by the I.S.M.A. up to the 2nd inst., however, comes to 21,770 tons, including 100 tons sold on this day for Muscat at £34 per metric ton (f.o.b.). This means that there is still a balance of 28,230 tons to be sold. The progress made by the scheme to export sugar abroad is, therefore, not very encouraging. Of the total quantity, 11,370 tons are scheduled for shipment in the current month, the bulk of which, amounting to 10,020 tons, will be from Calcutta port and the balance from Bombay. Meanwhile, it is reported that the I.S.M.A. is now offering D 29 grade sugar for October-November shipment at £34 per ton (f.o.b.).

MUNDHRA GROUP OF COMPANIES

In the course of his recent statement on the Government's action in respect of concerns of Mr. H. D. Mundhra, made in the Lok Sabha, the Union Minister for Industry, Mr. Manubhai Shah, observed that Angelo Brothers and Smith Stanistreet were working fairly satisfactorily and no action had been taken in their case (*vide Commerce*, 30th August 1958, page 336). It would, however, appear that Mr. Mundhra's connection with these concerns is too remote to entitle them to be classified under what has come to be known as the "Mundhra group of companies." Indeed, we are advised by Messrs. Turner, Morrison & Co. Private Ltd. (Managing Agents: Angelo Bros. Ltd.) that Mr. Mundhra had, at no time, held a controlling interest in Messrs. Angelo Bros. Ltd. and, at the present moment, he is not even a member of the Company. As regards Messrs. Smith Stanistreet, in which Messrs. Turner, Morrison & Co. Private Ltd. hold a controlling interest through a subsidiary, Mr. Mundhra's shareholding is insignificant.

NEWS IN BRIEF

PLANS to absorb 20,000 displaced families now residing in West Bengal in the Dandakaranya project have been finalised by the Union Ministry of Rehabilitation.

A new process for producing high temperature hot face insulation, as well as dense mullite refractories from Kyanite, has been developed at the National Metallurgical Laboratory, Jamshedpur.

The Consultative Committee attached to the Union Ministry, which met at New Delhi last week, was reported to have favoured the formation of a single wage board for the plantation industry.

The first coke oven factory in the Rourkela Steel plant has begun to be heated up since the 8th inst. The functioning of the coke oven factory is a preliminary step towards the commencement of operation in the steel plant now under construction.

Mr. Karam Chand Thapar, a noted industrialist, has started negotiations with the Kerala Government on the question of setting up a paper and pulp factory in the State, says a report. Despite the abundance of raw materials available in the State, paucity of foreign exchange is said to have stood in the way of the proposed plant.

The Government of India proposes to appoint shortly a Textile Advisory Board to advise the Government on the development of the textile industry, in general, and on any problems relating to the industry which may be referred to the Board from time to time. This was disclosed by Mr. Nityanand Kanungo, Minister for Commerce, in the Lok Sabha on Thursday last week.

A second consignment of 6,804 metric tons of skimmed milk powder is to be imported by the State Trading Corporation of India from the U.S. under P.L. 480 programme. Out of this quantity, 4,304 metric tons are being shipped to Calcutta port and the balance of 2,500 metric tons to Madras port. Two ships carrying the entire quantity to be imported have already sailed from American ports.

The surplus funds with the Employees' State Insurance Corporation till the end of 1957-58 was Rs. 13,90,91,575. The amount will be utilised for constructing hospitals, annexes to existing hospitals and dispensaries for insured persons. A sum of Rs. 6,67,11,495 was collected for health insurance under the Employees' State Insurance Scheme during 1957-58 and Rs. 4,37,99,697 were spent in the same period.

At a meeting held at Dehra Dun on the 4th inst., the Oil and Natural Gas Commission decided to take active measures to expedite drilling and exploration programmes in various parts of India. It also decided to award a running shield to the work-party which maintained the best drilling site, to promote persons on the basis of merit (and not seniority), and to grant cash bonuses for the work done in lesser time and at lesser expense.

The half-yearly meetings of the Indian Central Cotton Committee and its sub-committees were held in Bombay from the 8th to 13th inst., under the chairmanship of Dr. M. S. Randhawa, Vice-President, Indian Council of Agricultural Research. The subjects which came up for consideration at the meeting related to assessment of the long-term trend of development of cotton in India and other topics of current importance to cotton production and exports.

The output of bicycles in the small-scale sector in the country exceeded the 100,000-mark in 1957. The production in the small sector, which started only towards the end of March 1956, was about 109,000 bicycles in 1957, as against about 22,000 in 1956. There are 20 large-scale bicycle factories in the country which produced about 791,000 bicycles in 1957, as against about 664,000 in 1956 and 491,000 in 1955. Indian capital invested in the bicycle industry at present is Rs. 3.39 crores, while the amount of foreign investment is about Rs. 39.81 lakhs.

* * * *

From Abroad

Oil has been discovered by French explorers at a depth of 1,800 feet near Chateaurenard, 60 miles South-east of Paris.

Production and export of British passenger cars and commercial road vehicles in the month of July last were at the high levels of 85,468 and 50,207, respectively.

The number of male persons unemployed in Holland during August was lower at 71,000, as against 77,000 in the previous month.

The U.S. Government has agreed to contribute more than $8 million worth of reserve foodstocks for use in an Egyptian school lunch programme.

Paris-Cairo air flights have been resumed for the first time since November 1956. The Air France Super Constellation left Orly, France, for Cairo, Nairobi, and Antanarivo on the 2nd inst.

Norwegian workers will now get a wage increase of 3½ per cent. under a new wage contract. This is the outcome of compulsory arbitration and is expected to compensate partly for the increase in the cost of living.

The value of British aero-engine exports since 1945 has reached £200,000,000. British engines are being built under licence in nine countries, and more than 50 types of overseas aircraft are fitted with British power plants.

The first major deposit of uranium in West Germany has been located in the Lichtenfeld area, of Bavaria. The exploitation of the deposit will enable the country to dispense with imports of uranium for its atomic energy programme.

The Anglo-American Corporation, London, is opening up a new source of capital for South Africa, designed to strengthen the financial structure of the diamond trade, by an issue of bearer bonds in Germany.

The U.S. Government has granted Lebanon an immediate aid of $2.5 million to be utilised for maintaining essential governmental operations and services in public works, health, education, national security welfare, agriculture and other necessary functions.

A programme of tax cuts and increased payments to the unemployed in order to stimulate the U.S. economic expansion has been advocated by the Vice-President Mr. Nixon. The best way for American people to improve their living standards, he says, is through policies that promote maximum business growth.

The Government of Canada has decided to construct a special highway at Ontario in areas adjacent to the U.S. at a cost of $100 million, a part of which is being financed by levying tolls. The sum of $100 million is in addition to the regular annual highway budget of approximately $300 million.

A $2.5-million plant to manufacture 14,000 tons (per year) of carbon black for use in the production of certain rubber products will be constructed at Ravenna (Italy) by the Societa Cabot Italiana, an affiliate of Cabot Laboratories, Boston (U.S.).

Unemployment in the U.K. rose during the month of August to 446,000—a figure equal to 2 per cent. of the total labour force. The number of unfilled vacancies dropped by 11,000 to 203,000, the lowest level since the war. The number of persons out of work rose by 34,000 during the month.

Japan is willing to buy tin from Russia if the latter country is prepared to sell at a reasonable price, according to a spokesman for the Yawata Iron and Steel, a leading consumer of tin in Japan. If a workable barter agreement is reached between the two countries, it is not unlikely that Japan, which at present imports about 7,000 tons of tin annually from Malaya, will switch over to high quality and low-priced Soviet supplies.

In the first six months of this year, some 498,500 overseas visitors arrived in Britain which represent an increase of 8 per cent. over the figure of 462,000 for the first half of 1957. The number of visitors from the U.S. rose from 105,200 to 130,900. The British Travel and Holidays Association reports that June was a record month, with 155,500 oversea tourists arriving in Britain. This represented a 10 per cent. increase over the figure for the same month last year.

The United Arab Republic will seek an agreement for economic co-operation with Japan, negotiations for which are expected to start shortly at Tokyo. Disclosing this, Dr. A. Sidky, Minister of Industry, U.A.R., who is now leading an industrial mission to Japan, pointed out recently that his country would seek the help of Japan in such industries as cotton spinning, sugar, sodium-hydroxide and dyes, refrigeration, canning, toys, films and lime. The U.A.R. is also expected to purchase ships from Japan.

American companies are showing a new interest in the economic development of Paraguay (Latin America). The First National City Bank of New York will shortly open a branch in Asuncion. Paraguay recently signed contracts with U.S. Oil interests for prospecting and development. Further, the U.S. Development Loan Fund has granted a $2.6-million credit to the largest American company at Paraguay, the International Products Corporation, for expanding its meat packing and other exchange earning activities.

A new high-altitude aero-engine test plant, claimed to be one of the most advanced in the world, will be opened at the Rolls-Royce works at Derby by the British Prime Minister, Mr. Harold Macmillan, on the 26th inst. The plant, built at a cost of £3,800,000, will make it possible to test jet and turbo-prop engines more powerful than any yet in production. The engines will be operated under conditions encountered at altitudes of 12 miles and speeds of 1,800 m.p.h.

The Government of Ghana has set up an Investments Promotion Board to assist private enterprise. The Board will examine applications for the establishment of new factories or new industries and make appropriate recommendations to the Trade and Industries Minister. It will also so coordinate the activities of the various Ministries as to expedite measures for tax relief, priority connections for water, electricity power and telephone services, currency permits, exemption from import duties on raw materials, etc.

PERSONAL

MR. S. S. More, former M.P. and Mr. T. Bhagavathi, M.P., have been appointed Directors of the Government-owned Indian Oil Refineries Private Ltd.

Mr. J. M. C. James, C.M.G., M.B.E., at present an Assistant Under-Secretary of States in the Commonwealth Relations Office, London, has been appointed U.K. Deputy High Commissioner in India in succession to Mr. W. A. W. Clark, C.M.G., G.B.E.

Mr. Manubhai Shah, Minister for Industry, has left New Delhi for Montreal, Canada, where he will join the Indian delegation to the Commonwealth Trade and Economic Conference to be held there from the 15th to 26th inst.

Mr. N. C. Deb, Additional Member for Finance, Railway Board, has been appointed Additional Secretary in the Union Finance Ministry. He will be a full-time Director of Hindustan Steel Private Ltd. and also function as Financial Adviser to the Ministry of Iron and Steel.

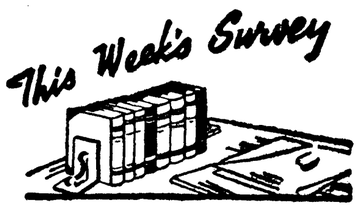
Mr. Om Prakash Aggrawal, Managing Director, Messrs. Devidayal Stainless Steel Industries, left Bombay on a business tour of Japan. He will study the various developments in the industry, besides negotiating collective bargain for import of stainless steel sheets against licences received by the members of the All-India Stainless Steel Industries Association.

One of the most striking post-war developments in British precision engineering is the progress made by watch and clock industry. In 1957, the industry turned out more than 2,500,000 watches, over 5,000,000 mechanical clocks, and 660,000 electric clocks. Large quantities of timing switches and recorders were also produced by the industry's clock factories. Production in 1958 is expected to be greater than ever. Many of the latest designs in British clocks and watches will be on show at the "Pendulum to Atom" exhibition to be held in London next month.

Canada's composite index of industrial employment for 1st June stood at 118.2, a rise of 3.1 per cent. over the figure of 114.6 a month back. The rise was slightly below average for the time of year, fractionally reducing the seasonally adjusted index. Industrial employment continued below its level a year ago when the unadjusted index was 123.5. Weekly wage and salary payments were 3.8 per cent. higher in the latest survey period than a month earlier and raised the pay roll index to 195.5, virtually the same as on 1st June last year (195.7). *Per capita* earnings reached a new high at $70.76, as compared with $67.82 on 1st June 1957.

Details of the new Soviet Seven-year Plan reveal that the country will greatly speed up the shift in the pattern of fuel consumption from coal to liquid and gases. Production of Soviet crude oil is expected to exceed the original target of 111.8 million tons for this year by 2 to 3 million tons. At the current rate of growth, it should double within seven years. Natural gas output is currently running at an annual rate of 305,000 million cubic feet and is expected to go up substantially. If the plans now envisaged for changing the fuel balance succeed, it is estimated that there would be a saving of 125,000 million roubles between 1959 and 1965.

Prospects for the 1958-59 world rice harvest have shown some improvement, according to the Commonwealth Economic Committee's Rice Supplement just published in London. A large crop, it states, is reported in China, while the outturn in India, Japan and South Korea has not been as badly affected by weather conditions as was feared. Favourable conditions are reported from Europe and the Middle East, while the decline in the U.S. has been checked. Shipments from the major exporting countries in 1958 have been less than a year ago, but Malaya and Formosa have shown some expansion. Malayan imports show a corresponding increase and those into Hong Kong have also risen, but, elsewhere, imports have generally fallen. Export quotations in Thailand in mid-July were slightly below those a month earlier, but, in South Viet-Nam, some increase in prices is attributed to hoarding by merchants. There was little change in U.S. rice prices during the month. Imports of rice into India during the second quarter of 1958 amounted to 190,800 tons, well below the figure for the same period of 1957 of 295,000 tons. Shipments to Pakistan, which had aggregated 48,000 tons in the first quarter of 1958, amounted to 31,100 tons in April. Imports into Ceylon were 61,800 tons in April and May, as against 85,300 tons in the same months of 1957, but those into Malaya and Singapore rose in April from 18,300 tons in 1957 to 47,500 tons in 1958, while imports into Hong Kong in the same month rose from 23,800 tons to 38,800 tons. Imports into Japan in April and May amounted to 163,100 tons, somewhat below those a year earlier of 167,300 tons. Among smaller importers, the U.S. imported 22,800 tons in the second quarter (slightly less than a year earlier, when 24,700 tons was taken), while France imported 11,700 tons during April-June, as against 29,100 tons. The report adds that stocks of rice in India were officially stated in June to amount to 500,000 tons.



AGITATION ON FOOD

THE agitational approach adopted by the Opposition parties in U.P. in respect of the admittedly difficult food situation in the State, far from helping to solve the problem, will only serve to create an atmosphere which will render solution infinitely more difficult. Since Prime Minister Nehru has offered to convene an informal meeting of Members of Parliament belonging to all political parties to discuss the food situation in the country, the Opposition parties in U.P. should abandon the agitational path and take a constructive and co-operative attitude, especially in view of the promise of Mr. Nehru that if, after the meeting. Parliament so desired, the Government was prepared to have a two-hour discussion on the situation in U.P. The Central Government's decision to convene an all-party conference to discuss the food position on a national level should lift this vital problem out of party politics. In fact, the agitation in U.P. is itself mainly politically motivated. This is not to deny that the food position in the State is difficult. The State's Chief Minister, Dr. Sampurnanand, himself admitted that it was bad enough. But it is nothing short of a crime to paint it worse and create panic which would only encourage the tendency towards hoarding and profiteering at all levels which in turn would inflict more hardship to the vast majority of consumers.

The problem in U.P. is not one of acute food shortage. In fact, as Mr. A. P. Jain, Union Minister for Food and Agriculture, pointed out in the Lok Sabha, food supply position in the State was better than what obtained in the neighbouring States of Bihar and West Bengal. It is true that there has been a shortfall in the production of foodgrains in Uttar Pradesh. Production of wheat in 1957-58 was 2,714,000 tons, as compared with 3,115,000 tons in 1956-57, while that of cereals was 3,478,000 tons as compared with 3,895,000 tons in 1956-57. But this fall in production is not peculiar to U.P.; many other States also had the same experience.

The Centre is supplying the State a monthly quota of 60,000 tons of foodgrains. An additional quota of 20,000 tons has been promised to the State for the month of September. These have already started moving and the entire quantity of 80,000 tons is expected to be supplied this month itself. The crisis is in fact, partly at least, the result of the unfair advantages taken by the trade of the difficult transport situation created by waterlogging as a result of heavy rains. This led to a spurt in prices causing much hardship to the people.

The attitude of political parties should not have been the one they have taken. Instead of launching *satyagraha* campaigns, resorting to hunger strikes, and exhorting people to raid Government godowns, they should have helped the Government to check profiteering and hoarding and to regulate supplies. It is surprising that the leadership of these parties failed to realise the grave consequences of the course it adopted. It was idle on its part to say that it urged the seizure of grains in the godowns with a view of selling them to the people at a fair price and remitting the money back to the Treasury. It should have realised that, even with the best of intentions, such a course could easily degenerate into sheer looting, as unsocial elements are always there to exploit the situation. If the aim was to protest against the Government's food policy and mobilise public opinion against it, it could certainly have had recourse to more civilised methods than these dangerous antics. It is to be hoped that better counsels will prevail.

RURAL CREDIT

Much water has no doubt flowed down the Ganges since Sir Frederick Nicholson wrote his famous report on Co-operation in 1895. The co-operative movement has made not inconsiderable headway. Nevertheless, the progress actually achieved by the movement is very small and patchy when it is compared with the magnitude of the problem of rural credit. The All-India Rural Credit Survey Committee (1954) estimated the total annual borrowings—short, medium and long—of the cultivators at as much as Rs. 750 crores; on the basis of the rise in prices and increase in the agricultural operations, these may now be put at Rs. 1,000 crores. Out of such borrowings, more than 90 per cent. is met from non-institutional private agencies, of which the most important are moneylenders —professional and non-professional—who together account for nearly 70 per cent.

A notable feature of the Government's agricultural policy is the increasing interest in rural credit evinced by the Reserve Bank of India. Thus, the Bank's Governor, Mr. H. V. R. Iengar, stated last week that the Bank was assisting to a great extent in the setting up of an integrated system of rural credit. Speaking to pressmen in Bombay, Mr. Iengar claimed that the scale of financial assistance provided by the Bank to the rural sector primarily through the agency of State co-operative banks had been rising fast, the bulk of the advances being made at a concessional rate of 2 per cent. below the Bank rate. The total of these advances (outstanding) at present is of the order of Rs. 50 crores, as against a bare Rs. 3 crores on the eve of the commencement of the first Five-year Plan. This figure is expected to touch Rs. 100 crores by the end of the second Plan period. In addition to advances, on such a large scale, the Reserve Bank has also made available a sum of Rs. 6 crores to the State Governments to enable them to contribute to the share capital of co-operative institutions. Mr. Iengar declared that the Rural Credit Department of the Reserve Bank would be one of the biggest institutions in the country in terms of money it handled, surpassing, perhaps, some leading banking institutions.

Mr. Iengar disclosed that the Reserve Bank had been conducting, during the last few months, a survey in the sphere of rural finance as a follow-up to the one undertaken by the Rural Credit Survey Committee. This initiative will be widely welcomed. Surely, the findings of the survey should be able to throw much light on whether there has been an improvement in the income of agriculturists in recent years, what the sources of income are, how much the agriculturists have received from the co-operative societies, whether they have spent the money wisely, whether they have been saving more or borrowing more, and so on.

Besides providing liberal finance, the Reserve Bank of India has implemented, since December 1952, a scheme of voluntary inspection of co-operative banks. Describing such inspection as being complementary to that made by the Registrars of Co-operative Societies, Mr. Iengar said that it was designed to serve "the wider purpose of improving the machinery and operations of co-operative credit. As many as 240 co-operative banks, we are informed, were inspected during the year 1957-58, as against 104 banks in the previous year, bringing the total number of inspections carried out so far to 439; some of the institutions have been inspected more than once.

The system of inspection carried out by the Reserve Bank is commendable for two notable reasons. First, it covers many points which are included in audit and implies, in addition, the duty of imparting to members of societies a working knowledge of co-operative principles. Secondly, inspection seeks to promote, not merely to test, the efficiency of a society by ensuring that the defects noted in the audit are rectified and that the operations of the society, particularly disbursement of loans, are undertaken on business-like and genuinely co-operative lines. It is only through such inspection that the prerequisites for the establishment of a sound system of rural credit can be fulfilled. The prerequisites have been impressively summed up by Mr. Louis Tardy in his report on the system of agricultural credit and insurance (League of Nations, 1938). They are: Rural credit should be (*a*) granted at a low rate of interest and that for a sufficiently long period, commensurate with the length of the operation which it is designed to facilitate, (*b*) adequately secured, in order, more particularly, to avoid any abuse of credit facilities, (*c*) adapted to the average yield and capacity for repayment of the farms, especially during periods of economic depression, and (*d*) placed in the hands of institutions the directors of which have received special training and had actual banking experience. The scheme of inspection by the Reserve Bank will be regarded as successful only if it facilitates the observance of these principles in the operation of the system of rural credit in the country.

TEXTILE CONFERENCE

Leaders of textile industries in West European countries, the United States, Japan, the United Arab Republic and Mexico were recently in conference at Stockholm to consider the major problems and challenges facing the world cotton textile industry. The Conference, which was attended by about 100 delegates, was held at the invitation of the Swedish Cotton Industry Association and was presided over by Mr. W. T. Winterbottom of the U.K., President of the International Federation of Cotton and Allied Textile Industries. The discussion at the Conference centred round a wide range of subjects having direct bearing on the industry such as the implications of the European Common Market, raw cotton export policies of the major producing countries, new techniques of cotton marketing, standardisation of fibre testing, ocean freight rates for cotton and labour productivity in cotton textile mills.

No branch of industry, or for that matter agriculture, can remain unaffected by the Common Market. The conference, therefore, considered a report on the practical implications for the cotton textile industry of the Common Market, particularly with regard to the gradual reduction of tariffs and the elimination of quotas among the Common Market countries. It also examined the financial aspects of the Rome Treaty, especially the provisions concerning taxation and exchange rates. The Federation set up a special independent research group which will continue studies of the effects of Common Market on the cotton industry. It recommended that a uniform tariff nomenclature regarding the cotton textile industries should be evolved within the member countries of the Common Market.

One of the most important items on the agenda of the conference was the discussion of raw cotton export policies of producing countries, especially the U.S. It was emphasised that sudden, arbitrary changes in export selling prices, export taxes or rates of exchange, as well as the existence of two-price systems, contributed to the prevailing uncertainty in the cotton consuming world. The latest amendments to the U.S. farm legislation were considered. The Federation is expected to issue a statement on the subject shortly.

Recent developments in ocean freight rates also came up for discussion. A resolution recognising the importance of the "Conference freight system," in assuring regular and frequent sailings, thereby facilitating a constant and even flow of cotton, was passed. The Federation drew the attention of the members of the Conference Lines to the necessity of adopting always a realistic attitude when alterations in freight rates were considered.

It also examined various new methods of cotton marketing with the help of mechanical aids. The newly proposed rules of arbitration on the basis of Micronaire readings were discussed with a special delegation from the American Cotton Shippers' Association. It was agreed that the rules of arbitration drafted by the International Federation should be examined in detail by raw cotton shippers in the U.S. before any decisions were reached. The report on the results of an elaborate testing scheme, which was carried out with the Shirley Analyser in 14 different mills and laboratories in seven countries, was also considered. The results of this testing scheme revealed that it should now be possible to buy raw cotton on the basis of trash content, using the Shirley Analyser for arbitration purposes, but only if so desired and mutually agreed upon between buyer and seller.

The conference reviewed the work of the Federation on the development and application of a new method for measuring labour productivity in cotton spinning mills. Several member-countries have already had considerable experience with this method and plans are being made for an international comparison of productivity data.

A technical sub-committee reported on various matters in connection with standardisation and fibre testing. The Federation adopted a resolution regarding the introduction of TEX, the new universal yarn counting system, stating that, as far as the cotton and allied textile industries were concerned, the introduction of stage one of the system could start without further delay, prior to the suggested date, so that, by the 1st January 1960, stage one would be completed and stage two could begin. In order to accelerate the widespread application of TEX, the Federation recommends that further efforts should be made on an educational level, namely, in schools, colleges, universities and other institutions of learning, so that the new generation of textile engineers and technologists will be brought up thoroughly familiar with the TEX system. The Federation urged the educational authorities and their respective Governments to introduce TEX in the various establishments as soon as possible. At an industrial level, the national member associations of the International Federation agreed to promote the practical application of TEX in the industries of their respective countries. The Federation also endorsed a recommendation by the International Organisation for Standardisation regarding methods for determining commercial weights of textiles and the definitions of commercial weight, commercial regain and commercial allowance.

In view of the importance which man-made fibres have attained as a complementary raw material used by the cotton textile industry, it was decided that a permanent committee for man-made fibres should be established within the Federation. This committee will deal with the technical and commercial aspects of man-made fibres, in so far as they are of interest to the cotton industry. The Committee will first undertake studies of such subjects as terminology of man-made fibres, establishment of standards for man-made fibres, the price situation, and labelling of textile goods. It was decided that close co-operation should be established with the organisations representing producers of man-made fibres and their respective trade associations.

It is noteworthy that the conference devoted a special session to the discussion of market research and sales promotion techniques which had been tried in many consumer countries throughout the world and which had strengthened cotton's competitive position *vis-a-vis* other fibres. A new documentary film entitled "Cotton—Nature's Wonder Fibre," produced by the Cotton Council International, was shown. Clearly, if cotton is to hold its own against other fibres, its intrinsic worth and utility as apparel material should be widely publicised.

CAUSTIC SODA AND BLEACHING POWDER

The caustic soda and bleaching powder industry is once again in the news. Protection granted to the industry is due to expire on 31st December 1958; and the industry has claimed continuance of protection for a further period of five years. The Tariff Commission (Chairman: Mr. C. Ramasubban) has now taken up the issue for consideration. A public enquiry into the industry's case for continuance of protection commenced last week. It may be recalled that the Commission had examined the claim of the industry for protection three times previously, in 1946, 1950 and 1954. In pursuance of the latest report (1954) of the Commission, the Government of India introduced a scheme of protection which envisaged a protective duty of 27.3 per cent. *ad valorem* (preferential rate) and 37.3 per cent. *ad valorem* (standard). A protective duty of 15 per cent. *ad valorem* was also imposed on bleaching powder; it was in due course extended to cover bleaching paste as well. Last year, the rates of duty on caustic soda were revised to 30 per cent. *ad valorem* preferential and 40 per cent. *ad valorem* standard.

Under the protective umbrella, the industry seems to have made a determined bid to consolidate its position. The annual installed capacity of the industry stood at 51,075 tons caustic soda on 1st January last, as against 39,317 tons in 1954. Although the number of units producing for sale remained the same during this intervening period, certain units managed to expand their capacity either by expansion or by the increased utilisation of the plant. Since the commencement of the year, a few new plants have been installed, the current capacity for caustic soda being 63,655 tons. A few more new projects are under way and, when these are completed, there will be a big rise in capacity. Accordingly, the Commission estimates the capacity to go up to no less than 176,420 tons by 1961. As regards bleaching powder, the present rated annual capacity is estimated to be 10,845 tons, out of which 4,950 tons is for producing stable bleaching powder and 5,895 tons for tropical bleaching powder. While the capacity continued to be constant since 1954, production increased from 2,923 tons in 1954 to 5,347 tons in 1957 due to increased utilisation of capacity.

Estimates of current demand for caustic soda vary from 102,000 tons to 124,000 tons per year. According to the Development Wing, the demand for caustic soda will increase to 130,000 tons in 1959, 144,000 tons in 1960 and 160,000 tons in 1961. On the basis of domestic production and imports, the availability of caustic soda during the period 1954 to 1957 was on an average 100,000 tons per year. The availability (production and imports) of bleaching powder was 7,147 tons in 1957, as against 9,000 tons in 1956 and 7,933 tons in 1954. It is difficult to estimate the demand for bleaching powder for which there are many substitutes such as liquid chlorine, bleach liquor and hydrogen peroxide.

Manufacturers of caustic soda and bleaching powder should, it is needless to add, pay greater attention to the quality of their products. It is gratifying to note that attempts have been made to see that the products con-

COAL CONSUMPTION OF RAILWAYS

MORE ON FOOD PRODUCTION BY FORD FOUNDATION EXPERT

From Our Special Correspondent

NEW DELHI, *9th September*

DELHI LETTER

THE Expert Committee on coal consumption by the railways has submitted its report to the Government. The Committee's major finding is that the inferior quality of coal supplied to the railways is responsible for an increase of 10 to 11 per cent. in their present fuel bill. The coals now supplied do not conform to the grades specified, because no effective check is possible on the large number of collieries supplying them. The position can, however, be improved, according to the Committee, if the railways have freedom to select collieries for their supplies and if they set up their own inspection organisation to prevent loading of inferior coal by collieries. The Committee is also of the view that a 15 per cent. cut in transport costs can be made because coal supplied to the railways contains 15 per cent. of dust. This dust can be removed by getting the coal washed at collieries. But the Committee has ruled this out for the present because establishing washeries is a long-term measure and there are technical difficulties in removing dust from coal.

There is no scope for economy in fuel consumption by the railways, except through rigid quality control, according to the Committee. At present, the railways consume about 14 million tons of coal a year, that is, more than a third of the country's total annual production, accounting for an expenditure of nearly Rs. 45 crores. The Committee has tried to prove that there is no waste in coal consumption. The figures worked out, in this connection, are that railway traffic had increased by 27 per cent. between 1952-53 and 1956-57 and coal consumption by only 19.5 per cent. during the same period. According to the Committee, this percentage increase in coal consumption showed an improvement in fuel utilisation. But expenditure on coal during that period had increased by nearly 38 per cent. due to the progressive rise in pithead prices and freight. Out of the total increase of Rs. 12.1 crores in expenditure on coal during these five years, nearly half was due to the increase in pithead prices and freight rates and the remainder to the increase in coal consumption.

The Committee has also projected the demand for coal by the railways in future years. This demand will be 16.5 million tons during the last year of the second Plan and 26 million tons by the end of the third Plan. By 1975, the coal requirements of the railways are expected to reach an annual level of 50 million tons on the supposition that all further increase in traffic continues to be handled by steam power. But the Committee would not like this to happen, and so it has suggested a ceiling on coal consumption by the railways at a level of 26 million tons forecast for the last year of the third Plan. This could be done only by increasing diesel and electric traction, and it is, therefore, recommended that, by 1975, not more than 50 per cent. of railway transport be carried by steam power and that a target of 30 per cent. electrification and 20 per cent. dieselisation be fixed for that year. Even currently, the Committee favours increased electrification and dieselisation, the former to be introduced on sections of railways where traffic density is high and the latter for diesel shunting on all the railways and on sections where shortage of water is also a problem. The Committee has not estimated the magnitude of investment effort that would be required for power generation and manufacture of heavy electrical machinery and for manufacture of diesel plant and equipment and production of diesel fuel and lubricants.

Food Problem

The food crisis continues to absorb attention both inside and outside Parliament here. While the Prime Minister has not ruled out the dreaded possibility of compulsory rationing of foodgrains in urban areas as a short-term expedient, he has emphasised the need for "a fundamental and frontal attack on backward agricultural techniques" to increase production. He has also favoured the reorganisation of Agriculture Departments in the States and looks forward to better work in the Community Development areas which now cover a hundred thousand villages in the country. In this connection, the other elements in a national food programme canvassed by Mr. Douglas Ensminger of the Ford Foundation can find relevant mention here. These are in addition to his suggestions covered in my last letter:

A soil and water conservation programme for every village should be a national objective. India can no longer be indifferent about the continued loss of soil from water and wind erosion. It can no longer be indifferent about the heavy yearly losses of monsoon rains that rush to sea because there are no far-reaching programmes to hold the water on the soil or store the run-off in tanks and behind dams for later use in irrigation. It is authoritatively estimated that a nation-wide village soil and water conservation programme could alone contribute a 20 to 50 per cent. increase in food production.

While there is now available sufficient research and information on tested and improved seed varieties, fertilisers and insecticides to recommend to farmers, there should be no complacency as to India's long-run needs for intensive and constant research. Since research needs time, it is urgent to step up research programmes now, with special emphasis on new seed varieties, on kinds of fertilizers and fertilizing methods required by different types of soils, and research and testing on crop and soil adaptations.

The administration and staff of agricultural departments need to be thoroughly reoriented, on a vigorous and broad scale, to give *first priority* to an impact action programme for higher food production. India has the know-how for food production. The crux of the problem now is one of gearing up its administration to get the food produced. As one looks at the administration of agricultural programmes, both in the Centre and the States, one observes two disturbing things. First, there seems to be an almost total absence of any sense of urgency about increasing food production; there is even, one might say, what appears to be an actual acceptance of the traditional village farming methods which yield so little. Second, these attitudes result largely from the fact that the administration of agricultural programmes, in its machinery and procedures, is simply not keyed to development. It is keyed to regulatory functions, again, to paper rather than people. It has had little to no experience in mounting an impact programme involving all of India's villages in accomplishing a specified result.

However effectively the agricultural departments reorient and administer their technical services, the key to solving India's food production rests, in the final analysis, on the participation of village people. The national community development programme, therefore, must be the nation's instrument for mobilizing village interest and leadership, providing the educational guidance, and effectively organising all the technical and supplementary production resources of the nation for the task of getting the villages to adopt the improved agricultural practices at the earliest. The community development programme must also therefore give *priority attention* to increasing food production. To do so in no way changes the basic objective of community development.

While there are several ways of building an educational food production programme for all villages, agreement is necessary on the following fundamental principles and approach:

1. Of first importance is agreement that increased food production must be an accepted responsibility of all cultivators and all village communities.
2. The carrying out of the responsibility for higher production can be done only by village leadership and village organisations, while stimulus, encouragement and farming recommendations come from the village level workers (Gram Sevaks) and the block staff.

THE CREDIT FLOOD

From Our Own Correspondent

LONDON, *5th September*

LONDON LETTER

AFTER the credit squeeze, the credit flood! The banks having been told by the Treasury that they were free to manage their credit affairs as they liked, they, or the Big Five at least—went into a great flurry of activity. The first novel departure was the acquisition of shares in the hire-purchase companies. This is a branch of activity from which the anxious banks, though not their Continental counterparts, had always abstained. Hire-purchase finance is traditionally carried on in this country by finance houses which specialise in taking the kind of risk involved and charge handsome interest rates for doing so. The trader who sells the wireless set or the motor car on hire-purchase terms in which the instalments may be spread over two years does not carry the financing of this himself but hands over the transaction without cost to himself to the specialist firm. The cost is borne by the purchaser through the interest which he makes. A vast volume of consumer purchasing, and latterly a certain amount of industrial buying, is carried on through hire purchase and the banks have decided that it was too important an outlay for funds to be ignored any longer.

But not content with acquiring an interest in this new line of business and thereby obviously ensuring ample money for the financing of consumer purchases, the Midland Bank started a different ball rolling by announcing that, from this week, it would in effect cut out the middleman and finance consumer buying directly by loans to the purchaser. The purchaser had, of course, to be a customer of a bank, but he could be a customer for only a nominal account. The bank would require no security for such loans which could be up to a limit of £500, and their decision to lend would be made entirely on their estimate of their customer's ability to repay. This new arrangement is a sort of overdraft, for an overdraft usually carries security backing, or else employs a very substantial hold by the bank on the borrower. An overdraft, moreover, is fluctuating, may disappear as funds are paid into the account and reappear again, and interest charged depends always on the varying balance.

Not so the personal loan under the Midland Bank scheme. The personal loan must be for a specific transaction, that is, the purchase of a house, of furniture, even of a special holiday. It does not apparently matter what provided the bank thinks that their client will have the means to repay the loan within two years and the amount of interest is also fixed as it is in the case of the ordinary commercial hire-purchase transaction. The Midland Bank have fixed it at 5 per cent. on the capital sum and, taking into account the repayments, this means an average rate of interest per annum of about 9 per cent. This is handsome interest by British banking standards!

Although the Midland Bank have kept their project a great secret, it was obvious that the other banks would jump in at once on such a new way of attracting customers and using their funds. The Midland have lost pride and place in total banking deposits to Barclays Bank in recent years and competition between the joint-stock banks is so keen that none of them would be likely to stand aside. In fact, Westminster announced similar terms almost at once and Barclays and National Provincial are understood to have decided to follow similar lines. Only Lloyds Bank, for the time being, are making out that their arrangements for financing their clients are already so elastic that they do not need a special scheme, but time will show whether in the interest of holding depositors they will have to come in line with the others.

It may be asked: why are the banks such keen competitors? The cynical answer is that the Treasury, after the great amalgamations of the 1920's, having told them that they could not amalgamate any further, they are bound to compete, since, otherwise, the Socialists will say that they are virtually a monopoly anyway and might just as well be nationalised. If they can show that competition means better service for the consumers, then they are far more likely to retain their independence.—*All Rights Reserved.*

PROBLEM OF INTERNATIONAL LIQUIDITY

PROPOSAL FOR INCREASING I.M.F.'S RESOURCES

[A topic which has aroused keen interest in many countries is the adequacy of the present level of international monetary reserves for purposes of financing the growing world trade. Much interest attaches in this connection to President Eisenhower's proposal to increase the resources of the International Monetary Fund (I.M.F.), to which we drew our readers' attention in our issue dated 30th August 1958. In the following article, which is an extract from the September Monthly Bank Letter of the First National City Bank of New York, the whole problem of world monetary reserves is subjected to close scrutiny with special reference to the proposal for increasing the I.M.F.'s resources. It is noteworthy that the article reaches the conclusion that "any enlargement of the Fund's resources should, of course, be predicated upon the first principle of public and private finances—that we live within our means."—ED.]

THE remarkable expansion in world trade during the last decade has aroused concern over the adequacy of monetary reserves to sustain further growth. Marking up the $35 per ounce official price of gold—in other words, devaluing the U.S. dollar, along with other currencies—has been rejected by the U.S. Government as a way to increase international liquidity. But the idea of enlarging the resources of the International Monetary Fund is receiving close attention and study. On 26th August, President Eisenhower requested the Secretary of the Treasury, Mr. Anderson, in the latter's capacity as U.S. Governor of the International Monetary Fund, to "propose, at the annual meeting of the Fund at New Delhi in October, that prompt consideration be given to the advisability of a general increase in the quotas assigned to the member-Governments." While most countries are short of money to buy abroad all that they might like, the strongest advocacy of increasing international money supplies has come from the United Kingdom. The Chancellor of the Exchequer, Mr. Heathcoat Amory, disclosed last April that the British Government had been discussing with the U.S. Government "long-term financial liquidity and other problems." Presumably having in mind enlargement of the Fund's resources, he stated that "the time is now approaching, if it has not already arrived, for another forward move in international economic co-operation."

While the view that there is a serious general shortage of monetary reserves has not been accepted in the United States, the Government is concerned with payment difficulties, particularly of the less-developed countries which, as the President noted, suffer "great variability in foreign exchange receipts." As a matter of fact, the Government has been making generous credits available—through the Export-Import Bank and other channels—to primary producing countries whose balance of payments difficulties have been accentuated because of the fall in world prices of such commodities as coffee and copper. Along with the enlargement in the Fund's resources, the President suggests giving consideration to an increase in the authorised capital of the International Bank for Reconstruction and Development and to the establishment of an International Development Association, affiliated with the International Bank to supplement its existing lending activities.

Sources: Gold and dollars—Federal Reserve System; sterling—1928: Committee on Finance and Industry, Report (1931); 1937 and 1957: United Kingdom Balance of Payments White Papers; world imports—1928: International Monetary Fund, Staff Papers (October 1953): 1937 and 1957: International Financial Statistics.

The argument that there is a lack of "international liquidity" rests mainly on the idea that the growth of monetary reserves has lagged behind the expansion of world trade. It is pointed out that, since 1937, the flow of world trade (in money terms) has nearly quadrupled while world monetary gold stocks have risen by not much more than one half. This easy conclusion becomes suspect, however, when one considers the peculiarities of the base year 1937. International trade at that time was still sorely depressed while the United States gold price a few years earlier had been raised by 69 per cent. from $20.67 to $35 an ounce. The situation was one of excess liquidity. If the comparison is made with an earlier prosperous year such as 1928, the result is quite different. As may be seen from the accompanying table, the value of world trade has increased three and a half times since 1928 while world monetary gold stocks have risen almost four times.

There is another way to evaluate the record since 1937. World trade in physical terms, as estimated by United Nations' statisticians, has risen by less than 80 per cent. since 1937. The near quadrupling of world trade is, therefore, the outcome of a much larger increase in prices than in the volume of trade. This has happened on the basis of the overswollen monetary reserves created by the radical mark-up in the price of gold in 1934. The thought emerges that a big rise in the price of gold today would have the practical result of giving inflation another 25 years' lease on life.

Key Currency Holdings

If the Governments raise gold prices, they feel richer and able to spend more. There are, however, no static relationships in the world between gold and trade. Many central banks are holding sizable amounts of gold, but gold is actively used in adjusting residual positions in international settlements principally by the United States, the United Kingdom, and the Continental Western European countries. In most other countries, international trade and financial settlements are commonly made in dollars or pounds sterling. Holdings of these key currencies then serve as substitutes for and economisers of gold. While international reserves for the United States are measured by its gold stock, other countries—including the United Kingdom—commonly count dollars with their gold. Members of the sterling area have continuously used sterling as reserves; others are finding sterling balances increasingly useful now that British exchange controls have been so far relaxed.

International reserves so defined—gold, and dollars and sterling held by countries other than the United States and United Kingdom, respectively—are now much larger than in 1928 or 1937, as is brought out by the table. If compared with foreign trade, as is done at the bottom of the table, they appear as adequate today as in 1928. Thus, total monetary reserves of foreign countries equalled last year 42 per cent. of the value of their imports—the same percentage as in 1928. Venturing further back to 1913, a year that marked the culmination of a remarkable expansion in output and trade under the traditional gold standard, we find that official gold stocks and foreign exchange reserves equalled only 21 per cent. of the value of imports.

Gold and Dollars

The very fact that the pound sterling has become, for foreign holders, increasingly convertible into the dollar is, in itself, a large contribution to international liquidity. Surviving the 1957 crisis without further devaluation or relapse into more severe controls over trade and payments, the British have been able to rebuild their gold and dollar reserves from a low of $1.8 billion in September 1957 to $3.1 billion at the end of July 1958. Even after allowing for Britain's drawing on the Export-Import Bank credit and its postponement of payments on the United States and Canadian post-war loans, the rise in Britain's reserves is noteworthy. It is true that Britain owes about $1 billion to the International Monetary Fund and the Export-Import Bank repayable within a few years. On the other hand, the British Government and people possess $4.5 billion worth of United States and Canadian securities, not to mention their direct investments throughout the world.

Re-establishing a convertible pound, as an essential aid to world commerce, has been a steadfast objective of United States international economic policy ever since the $3¾ billion 50-year 2 per cent. loan granted the United Kingdom in 1946. More generally, and apart from sterling, the broad policy of the United States—through foreign aid and loans, private capital outflow, and lowered import tariffs—has resulted in greatly enlarging supplies of dollars available for international payments.

The economic and financial transactions with the United States have been, throughout the post-war years, the most important factor in the growth of foreign gold and dollar reserves. New gold output, receipts of gold from Russia, and—as recently in the case of France—internal gold dishoarding have further contributed to available reserves. Altogether, foreign reserves increased by $16 billion from the end of 1948 through June 1958, when they stood at some $31.5 billion. Besides this, the International Monetary Fund has holdings of $2.1 billion in gold and U.S. dollars. Foreigners also hold billions in portfolio investments here, and have, furthermore, large direct investments capable of being translated into dollars, if needed. Although many countries, like most American citizens, are suffering from "dollar shortage," the fact is that aggregate monetary gold reserves and dollar holdings are bigger than ever.

Dollars are held by foreign countries as international means of payment and monetary reserves because of the strength of the United States dollar. This strength comes not only from this country's large gold stocks but above all from its real resources and its high productivity. This, however, ought not to give rise to any complacency. In particular, we must prevent a creeping inflation from undermining the confidence that holders of dollars—Americans as well as foreigners—have in the dollar.

A False Alarm

What aroused concern over the adequacy of "international liquidity" earlier in the year was the business recession in the United States. The fear was that the United States would cut imports, increase exports, reduce foreign lending, and drain away foreign gold and dollar reserves. In fact, the United Nations Economic Commission for Europe reported at the end of June that a general liquidity crisis was touched off by the recession in the United States. This turned out to be a false alarm. The actual development has been the other way around. American exports have fallen noticeably from last year's record levels, but our imports have held up remarkably well. Private capital outflow has become increasingly important, having reached during the first half of this year a post-war record level, mainly because of large foreign capital issues in the New York market. There has been no material change in the aggregate of economic aid and other outlays by the United States Government abroad. Foreign countries as a whole have thus kept on acquiring gold and dollars through commercial and financial transactions with the United States, at the annual rate of $2½-$3 billion, on the basis of preliminary estimates.

There is no evidence that the American recession has made it necessary for any of the other industrial countries to slow down their output on the ground that they could not pay for imports required to sustain their domestic economies. The primary producing countries, it is true, have been affected by the decline in many basic commodity prices; but the fall in these had begun in late 1956 and could hardly have been attributed to a recession in America that did not develop until the latter part of 1957.

In any case, reserves exist to be used. Like anyone's cash account, they naturally move up and down. And however large the total of international reserves, there will be countries that will run chronically short. The reasons for it are all well known: overspending on imports capital flight, the absorption of exportable products into domestic uses—briefly inflation. Here is the kernel of the international liquidity problem. Unless nations give up indulgence of cheap and depreciating money, and the use of inflation as a substitute for taxing and saving, they will never, individually or collectively, have enough reserves.

Fund's Resources

A nation must meet a deficit in its balance of payments in the first place out of its own monetary reserves; but if it has insufficient reserves of its own, it will seek assistance from various sources abroad, including the International Monetary Fund. Each Fund member has a quota equal to the capital subscription it has made to the extent of 25 per cent. in gold and 75 per cent. in its own currency (though the gold portion may be reduced under certain circumstances). From this pool of resources, a member may obtain other currencies in exchange for its own; in form, the transactions are purchases and sales of currencies, but in substance, they are international loans. The United States dollar is, of course, the currency most in demand: the only other currencies that have been drawn out—and in very modest amounts indeed—are pounds sterling, German marks, Canadian dollars, Belgian francs, and Dutch guilders.

As already noted, the Fund still holds about $2.1 billion of gold and U.S. dollars; and even if allowance is made for the contingent liability represented by unused stand-by arrangements, the Fund has an uncommitted gold and U.S. dollar balance of $1.2 billion. It also has large holdings of other currencies—Canadian dollars and certain major European currencies in particular; as these currencies have become increasingly convertible, the resources upon which the Fund members may wish to draw have, in effect, been increased even though the book value of the Fund assets has remained unchanged.

Subscriptions

An increase in the Fund's subscriptions—50 per cent. has been mentioned—would entail, of course, a further contribution by all members to the Fund's pool of gold and currencies. Obviously, no member would be indifferent to the size of its additional gold payment, but those countries which are unlikely to need the Fund and which, on the contrary, would have to contribute currencies likely to be drawn from the Fund, might be reluctant to accept an increase in the subscriptions. It is presumably in view of considerations like these that the President, in requesting the Secretary of the Treasury to make the proposal to increase the Fund's resources, stressed the need for consulting members of the Congress.

The access by members to the Fund is limited in both amount and purpose. Under the present Fund policy, access to the first 25 per cent. of the quota that a country has, as a rule, paid in gold is "almost automatic." Requests for drawings within the next 25 per cent. are also treated "liberally," but even so, such requests are approved only if the country asking for assistance can show that it "is making reasonable efforts to solve its own problems." For drawings beyond the first 50 per cent. of the quota, "substantial justification is required."

Responsible Custodian

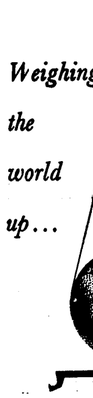
The Fund has thus been likened to a fire brigade which, in an emergency, can help a member—provided that the member helps himself. The member knows that the resources obtained from the Fund are essentially of a short-term character and must be regarded as a temporary addition to reserves, permitting it to adopt and carry out, within a limited period of time, a constructive programme to restore stability and balance in its economy. The Fund is, in effect, a "revolving fund," and its policy is that currencies acquired from it must be repaid within a prescribed period, with an outside limit of five years. This has been done so far. Virtually all borrowing transactions prior to 1955 have been fully repaid.

The Fund has proved to be a responsible custodian of emergency international reserves. At the moment, to be sure, the Fund is not seriously handicapped by a general shortage of resources. Furthermore, as pointed out earlier, the recession has brought increase, not decrease, in the aggregate gold and dollar reserves of foreign countries. The notable recovery of sterling, the fiscal reforms in France, the emergence of the German mark as a hard currency, and the growth of private international lending are additional constructive factors. For these reasons, an increase in the Fund's resources could be envisaged not as a step called for by the state of international trade and payments today, but—in the President's words—"for the tasks of the decade ahead."

Any enlargement of the Fund's resources should, of course, be predicated upon the first principle of public and private finance—that we live within our means. This is what the Fund is constantly having to impress upon its borrowers. "If we examine how the Fund has actually operated," stated the Fund's Managing Director, Mr. Per Jacobsson, at the Brussels Exhibition last month, "it is fair to say that the Fund has increasingly been a factor not for weakening, but rather for strengthening, monetary discipline, being able to grant assistance only when countries make reasonable efforts to solve their problems and present programmes holding out the hope of enduring stability at realistic rates of exchange."

WORLD BANK'S SALE OF DOLLAR BONDS

The World Bank has arranged the sale, entirely outside the United States, of a $75 million issue of U.S. dollar bonds. The sale was made by private placement with 40 institutional investors in 28 countries, and marks a broadening of the already wide international market for the bonds of the Bank. The new bonds are known as the "Two Year Bonds of 1958," and carry interest of 3¼ per cent. payable semi-annually, with the first payment due on 1st April 1959. The issue is dated 1st October 1958 and matures on 1st October 1960. There was keen interest in the issue among the selected institutions approached, orders being received for $127 million of bonds. Requests for bonds were received from institutions that had not previously bought the Bank's obligations and in countries where Bank bonds had not been held before. The purchasers of the issue included central banks, government special accounts, commercial banks, insurance companies and private corporations. The issue was sold chiefly to investors who made purchases from the $75 million issue of 3½ per cent. dollar bonds.



Weighing the world up...

....even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

Twenty-five years ago ...

Nineteen hundred and thirty-three . . . the world is still reeling from the shock of the great economic depression. . . everywhere industrialists are on the defensive, playing safe . . . and yet The Metal Box Company Ltd, London, decide to establish their first overseas company, The Metal Box Company of India Ltd . . . "What foolhardy daring is this?" ask all good and cautious businessmen.

It was foresight and faith that helped Metal Box to take this decision. Foresight that the depression would not last forever . . . faith in the emergence of India from economic torpor into an industrial nation holding out enormous prospects for the packaging industry.

Today twenty-five years later that faith and foresight have been vindicated. Over 5,000 workers are employed in five up-to-date Metal Box factories strategically located in different parts of India. More than 1,000 packers and manufacturers sell over Rs 100 crores of products every year protected by Metal Box cans, tubes, closures and polyethylene bags. The Metal Box Company of India Ltd have earned a place of importance in India's economy

As India's resurgent economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

COTTAGE WEAVING INDUSTRY IN BOMBAY

ANNUAL VALUE OF OUTPUT AGGREGATES RS. 24 CRORES

THE cottage weaving industry is one of the most important small industries in the State of Bombay, accounting as it does for over 25 per cent. of the total labour force engaged in the decentralised sector of the industrial economy. How vital is the role played by this industry is described in the second annual report on sample survey of the industry contained in a recent issue of the *Quarterly Bulletin of Economics and Statistics* of the Bureau of Economics and Statistics, Government of Bombay. The survey covers 2,568 selected establishments in selected centres. Although the findings of the survey relate to the year 1955 (that is, before the reorganisation of Bombay State), they nevertheless provide much interesting information on the different aspects of the cottage weaving industry—production, consumption of materials, employment particulars, earnings of labour and the like.

During the year 1955, the industry produced 227.3 million yards of cloth worth Rs. 23.84 crores. The bulk of the production was accounted for by cotton cloth, the quantity actually produced being 181.0 million yards (valued at Rs. 17.91 crores or 80 per cent. of the total. The share of art silk cloth was 43.9 million yards (Rs. 5.03 crores or 19 per cent.), of silk cloth 2.1 million yards (Rs. 67 lakhs or 0.9 per cent.), and woollen cloth 300,000 yards (Rs. 23 lakhs or 0.1 per cent.). The average value of production per worker was Rs. 1,177 and that per establishment was Rs. 4,139. *Saris* are manufactured on an extensive scale and *khans*, shirting and coating on a smaller scale. No other variety of cloth is woven to any significant extent. The following table gives the quantity and value of the different kinds of goods produced during 1955:

(Quantity in million yards; value in crores of rupees)

	Quantity	Percentage share	Value
Saris	141.7	61	15.37
Khans	20.8	9	2.68
Coating	22.5	10	2.43
Shirting	21.6	10	1.71
Other products ..	21.2	10	1.65
Total ..	227.3	100	23.84

It is thus evident that the production of *saris* is considerably higher than that of other varieties, accounting, as it does, for 61 per cent. of the total output. The share of *saris* in the annual mill production of cloth, it may be noted here, comes to 44 per cent. The annual value of sale of cloth (Rs. 23.53 crores) is more or less identical to the value of production, namely, Rs. 23.84 crores. The value of stock of cloth at the end of 1955 formed 1.4 per cent. of the value of production. However, these identical figures relating to the values of production and sale may not be construed that the cottage weaving industry does not have to face the marketing problem.

Sales of Cloth

The annual value of sales of cloth produced by establishments working on wage basis for master establishments and co-operative societies—that is, the value of products manufactured by establishments working on wage basis, to total value of sales is about 33 per cent. Besides these sales, independent establishments also effect a high proportion of their sales through retail traders.

The average price of a yard of cotton *sari*, cotton coating and cotton *khans* was Re. 1.04, Re. 1.00 and Re. 1.22, respectively, while that of art silk *sari*, art silk coating and art silk *khans* was Re. 1.99, Re. 1.08 and Re. 1.31. It, therefore, appears that the prices of the varieties of cloth manufactured in the cottage sector are not too high to fetch a sizable market.

The expenditure on consumption of raw materials (Rs. 16.23 crores) in 1955 formed 68 per cent. of the value of production. The expenditure on all types of yarn (Rs. 15.76 crores) formed 97 per cent. of the cost of raw materials. In particular, the expenditure on cotton yarn (Rs. 10.20 crores) and art silk yarn (Rs. 3.05 crores) accounted for 63 per cent. and 19 per cent. of the total cost on all types of raw materials. It is thus obvious that the cost of yarn is a decisive factor in determining the cost on consumption of raw materials used for weaving cloth. Moreover, the proportionately high cost of cotton yarn (63 per cent.) and art silk yarn (19 per cent.) is primarily due to the consideration that the proportionate value of cotton type of cloth and art silk type of cloth to the total value of cloth production is 75 per cent. and 21 per cent., respectively.

The quantity of cloth manufactured from a pound of yarn depends on many considerations, the main being the counts of yarn and the width of cloth. In spite of this consideration, an attempt has been made to get the output-input (quantitatively) ratio. It seems that about 5.4 yards of cloth are manufactured from a pound of yarn. The average price of a pound of cotton yarn used for weaving purposes was Rs. 3.01, while the corresponding price of medium type of cotton yarn (21-40 counts) and fine cotton yarn (above 40 counts) was Rs. 2.84 and Rs. 5.36, respectively.

Value Added by Manufacture

The estimates of the value added are arrived at by deducting the value of raw materials and fuels consumed from the value of production. The estimated annual value added in 1955 by the cottage weaving industry amounted to Rs. 7.61 crores.

About 92 per cent. of looms installed in weaving establishments are handlooms, while 8 per cent. of looms are powerlooms. Weaving of cloth in the cottage weaving establishments is, therefore, carried out essentially with the help of handlooms. The percentage proportion of idle handlooms to the total number of handlooms during 1955 was 32 per cent., while that of powerlooms was 11 per cent. Thus, a high proportion of handlooms is reported to be idle. The major reasons for idle capacity are (i) lack of demand and (ii) shortage of working capital. Rarely are the looms reported to be idle on account of non-availability of labour for the purposes of weaving or looms getting out of order. The average number of looms per establishment was 2.52, while the average number of working looms per establishment was 1.76. The distribution of establishments according to the number of looms installed in them shows that 41 per cent. and 27 per cent. of the cottage weaving establishments are in possession of one loom and two looms, respectively.

The number of days in a year for which the working handlooms and powerlooms are used for weaving of cloth is 308 and 300 respectively. The working handlooms and powerlooms, therefore, appear to be used for about six days in a week for weaving purposes.

Labour Force

The composition of labour force into two constituents, (i) household labour and (ii) hired labour, shows that 74 per cent. of labour is household labour, of which females account for 40 per cent. Such substantial proportion of females in the composition of household labour may be partly attributable to the consideration that some of the processes, for example, sizing of yarn and winding of yarn in weaving establishments, can be executed by females without any considerable physical strain.

The average annual earnings of a family owning weaving establishment from weaving industry amounted to Rs. 717 in 1955. The average annual earnings of household worker engaged in the weaving industry from weaving industry were Rs. 267, while the corresponding annual earnings of hired labour employed in the weaving industry were Rs. 335.

The outstanding loan per family at the end of 1954 was Rs. 449. About 20 per cent. of the loan incurred in 1955 was met from banks, 4 per cent. from co-operative societies and 55 per cent. from moneylenders. Thus, the families engaged in weaving industry have to depend upon moneylenders for their loan requirements. It is said that 35 per cent. of the loan incurred during 1955 was invested in the industry.

You can see it in his eye, his bearing and the way he dresses. Such self-confidence often indicates the influence of strong family traditions of refinement and culture.

THIS YOUNG MAN WILL GO FAR

When BINNY'S started manufacturing their quality cloth nearly eighty years ago young men discovered a new standard in textiles, for here was *variety* in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials including anticrease suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for these reassuring BINNY'S trade marks on the cloth they buy:

BINNY'S — a great name in textiles

TEXTILE MISSION TO VISIT HONG KONG BY END OF THIS MONTH

COTTON BOARD'S ANNUAL CONFERENCE AT HARROGATE

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, 2nd September

AFTER weeks of "behind-the-scenes" activity the names of the Lancashire mission to Hong Kong to discuss the vexed question of cotton cloth imports into the United Kingdom have been announced. Working on the well-tried principle that a small committee can often achieve better results speedily than a large and sometimes unwieldy delegation, the mission is believed here to stand a good chance of success. Its members will be Lord Rochdale, Chairman of the Cotton Board, Mr. James Broatch, Director-General of the Board, and Sir Cuthbert Clegg, Vice-President of the Cotton Manufacturers' Association. Sir Cuthbert has been a leader of various delegations which have visited the East during the past year or two in connection with this problem.

Little fresh can be said about the situation, in view of the many comments which have been made about imports into the United Kingdom since the flow of goods from Commonwealth countries reached substantial proportions. The mission is receiving its brief from the industry in Lancashire and will go to Hong Kong towards the end of September armed with a formidable array of information showing how the arrivals of foreign cloth have caused damage to the British textile industry.

Considerable interest has been taken on this side in the comments made in Indian journals relating to the conclusion of the talks earlier this year between the British, Indian and Pakistani industries. The view that the Indian delegates were ready to accept a ceiling on their exports to Britain, as they felt they would not be able to retain their share of the British market much longer, has been confirmed in recent returns of imports. These show that Hong Kong and China have been gaining ground at India's expense during the current year.

"British-Made" Label

The campaign to help the Lancashire cotton industry by persuading shoppers to insist on textile goods which have been produced in this country reached a new stage this week. The Manchester Chamber of Commerce has announced that it is ready to issue certificates declaring that fabrics have been spun, woven and finished in the United Kingdom when suppliers and their customers provide the necessary evidence. In its official report, the Chamber said:

"Garment manufacturers, for instance, will be able to have assurance for themselves and for their customers that frocks, overalls, shirts and pyjamas have been made from cloth that has not been imported but is 100 per cent. United Kingdom manufactured."

Adverse comments which have sometimes been made about the negative effect of the Cotton Board's annual conference at Harrogate can hardly be levelled against the programme as it stands for this year. Unless one of those unfortunate political occurrences intervenes there is every sign that next month's gathering will be as interesting and as vital to the industry as any of its predecessors.

Not only are the speakers men of substance in the trade, dealing with general topics of importance, but the final session is to be addressed by no less than the Prime Minister. Mr. Macmillan will be the first Conservative Premier to speak to the conference. When Mr. Attlee gave a short address in his capacity as Prime Minister some years ago, the spectre of foreign cloth imports was no more than on the horizon.

Position Has Changed

Since that occasion, the whole position of Lancashire's cotton industry has changed unmistakably and the mood of this year's conference will largely be governed by the result of the Hong Kong discussions which should be completed before the Harrogate meeting. Those attending will welcome the opportunity of receiving the Prime Minister in their midst no less than the chance of raising their voices in protest, if they consider the Government has let them down.

Whether the traders who cross the Pennines into Yorkshire in October for a week-end of discussions about the future of the Lancashire industry will agree with the Indian viewpoint "that Mr. Macmillan and his colleagues have played their cards well" will depend on the intervening negotiations in Hong Kong. On the platform at Harrogate will be two members of the three-man mission to the Colony. Lord Rochdale will open the conference and Sir Cuthbert Clegg will take the chair at the "question and answer" session. For good measure, the meeting will also include contributions from Mr. W. T. Winterbottom, whose subject is the future shape and policy of the producing side of the industry, while Mr. Eric Kann, a director of Marks and Spencer Ltd., will speak on the marketing and distribution of cotton textiles.

Shift From Cotton

Worried by a drift of population, the North-East Lancashire cotton town of Colne has told Manchester that it is ready to consider buying houses in the town for letting to Manchester families who move there—provided the City Council encourages industry to move with them. A report to be presented to Manchester City Council next week says that Colne is anxious to secure more diversification of industry and to arrest the drift of population. "They realise it is of primary importance to attract new industry to Colne," says the city's General and Parliamentary Committee.

If Colne provides houses for Manchester families, the City Council is expected to make a contribution. The financial implications of this are to be discussed by representatives of the two Councils as a first step. Meanwhile, Manchester has agreed that Colne should be informed of industries which are likely to be disturbed by the city's slum clearance programme.

The Thirties and Today

Since relinquishing his post as Chairman of the Cotton Board, Sir Raymond Streat has more than once burst into print with some of his reminiscences. As one who for so long was taking daily part in the inner councils of the industry, his views must be treated with respect. His latest contribution, in the current issue of the *District Bank Review* is devoted to the era of contraction experienced during the inter-war years. Tragic as was the experience of those days, so they have their parallel today in the sharp curtailment of productive capacity which has followed the post-war boom which ended in 1952. Comments on the previous period are no less appropriate at this moment.

History's habit of repeating itself can be observed in this survey of events of a generation or more ago. Sir Raymond's summing up, in which he upbraids the Government of the day for failing to provide Lancashire with assistance, is reflected in the later outcry which has gathered force during the current phase of contraction.

His review of the inter-war years concludes: "What was done by public action was on the whole too small in scope and too late in date to affect materially a sequence of events already set in motion by political and industrial developments in the world at large." If anything, this situation has been accentuated in the following years of war-time and post-war activity. In a free society neither community leadership nor central government can easily attract the support of public opinion for measures involving interference with the freedom of individuals or the rights of individuals over their property. If a large sector of the community is faced, as Lancashire was, by a common problem clearly involving deep-seated changes in employment and the disposition of physical assets, the Government must take responsibility for setting up remedial measures."

Most Lancashire traders of the 1950's would fully support this contention expressed about the attitude of the politicians during the 1930's. They would also endorse Sir Raymond's further comment: "If the Government does not consider the facts warrant intervention by the State it should take the responsibility and the political consequences of saying so, unequivocally. In that case, the community concerned will either find means to act communally or leave things to individuals."

In the past five years, the cotton industry in Lancashire has been hovering uncertainly, not knowing whether State intervention and aid was around the corner or whether to strike out fearlessly on its own. Within the next few months, several important matters of policy affecting the future trend of the trade should be the subject of vital decisions.—*All Rights Reserved.*

PAKISTAN AND EGYPTIAN COTTONS

EXPORT LEVIES REDUCED

PAKISTAN'S decision, announced on 30th August, to cut the export duty on its *Deshi* and Comilla varieties of cotton from Rs. 80 to Rs. 50 per bale and retain the duty on other varieties at Rs. 115 per bale, while not altogether unexpected, has made Indian exporters wonder whether it will not make export prospects for Indian cotton gloomy. The reduction has brought the export duty in Pakistan in line with that in India and might wipe out the price advantage which India was so far having. Since the prices would now, in all probability, move to parity, the feeling is that competition would be keener. Exporters point out that Pakistani shippers have the added benefit of export incentives recently introduced by the Government under which they can retain 10 per cent. of the export earnings to themselves.

There is, an inclination among a section of the trade here to look to the Government for some fiscal measures which would offset this disadvantage. A few prominent shippers are reported to have already approached the Government with a request to abolish the export duty. Certain quarters are, however, sceptical whether a duty reduction would at all help India to export more. Of course, it will make Indian cotton cheaper and to that extent it may act as a stimulus. But price has become less important as a factor determining the volume of purchases by some of India's main customers such as Japan and France. These countries, faced as they too are with shortage of sterling, have found it necessary to adopt a rigid pattern of exchange allocation for imports. They issue exchange allocation for each source of supply and importers have no option but to get their supplies therefrom, no matter however cheap prices are elsewhere. For example, traders point out, when Japan releases foreign exchange for import of cotton from Pakistan, importers there have to cover their requirements from this source, although Indian prices may be lower.

To remedy this state of affairs, it has been suggested that India should enter into bilateral trade agreements with countries like Japan whereby it could accept payment in yen which could be utilised for purchasing India's requirements such as textile machinery from that country. This, it is pointed out, has the added advantage of making Indian cotton cheaper to Japan since it will do away with the necessity of having to pay high premium which is inevitably involved in making payments in sterling.

Close on the heels of the duty reduction in Pakistan comes a similar move from Egypt which cut the export duty on its cotton on the 1st inst. from 5.5*d.* to 3.5*d.* per lb. with immediate effect. After the recent revision in the reserve prices of Sudan Gezira Board it was generally expected that Egypt would also take measures to improve the competitive capacity of its cotton.

The cut in Egyptian duties on cotton has been generally welcomed by importers in this country. But they are disappointed at the simultaneous reduction in the discounts offered on Egyptian cotton from 21 to 15 per cent. as, they fear that this might wipe off a substantial part of the benefits of the reduced duty. The question is asked whether the reduction in discount will be applicable to India as the trade between the two countries are governed by a special trade agreement entered into in last April. Under this agreement, India exported tea and jute against import of Egyptian cotton which was offered at a discount of 21 per cent. The rupee-pound (Egyptian) rate was fixed at Rs. 10.80=1E£. It has been now confirmed that the cut is applicable to India also which means a change in exchange rate as well. On the basis of the reduced discount rate, the exchange rate has been revised by the State Bank and fixed at Rs. 11.62=1E£. This has resulted in an enhancement by three to three and a half per cent., of Egyptian prices to Indian buyers. Sudan prices are therefore considered still cheaper to Indian buyers. But the entire needs of Indian mills, it is said, cannot be met from Sudan alone because of the limited supply of cotton in that country which had a record low crop in the season just ended. Indian importers of Egyptian cotton have protested to the Egyptian Government against the reduction in discount and urged for the restoration of the 21 per cent. discount so that they can cover their requirements against the recently announced import allocation for 30,000 bales of cotton of 1.3/16".

CALIFORNIAN COTTON

India would be in the market for Californian cotton for at least 10 to 15 years, according to Mr. Tom Akers, Jr., sales executive of Calcot Ltd., one of the leading American firms shipping cotton to this country. Although India was making efforts to grow the Californian type of cotton inside the country, it would, Mr. Akers added, still require considerable amounts of Californian cotton for sometime to come. Currently on a visit to this country, after a similar stay in Japan, to study export market conditions for U.S. cotton, Mr. Akers stated that India would need 600,000 bales of Californian type cotton for its textile mills.

He pointed out that India's foreign exchange position would undoubtedly make it necessary to curtail, to some extent, its imports of U.S. cotton. He was, however, optimistic that his country would supply at least 200,000 bales in addition to what India continued to obtain from Egypt, Sudan and East Africa. Cotton ranked third among commodities shipped out of this important Pacific Coast port, Japan leading the list of importers of cotton from California. For the fiscal year ended 30th June 1957, more than 102,000 tons were shipped overseas, representing an increase of 40 per cent. over the previous year's figure. Meanwhile, shipments of raw cotton to India through the port have gone up steadily in recent years.

As regards the cotton export business of Calcot Ltd., one of the principal shippers of quality cotton to India, Mr. Akers revealed that Japan was its premier customer for Californian cotton with India occupying second place. He said that there was a possibility of India displacing Japan, occasionally, at least, in this respect. His firm, he said was concentrating on improving packaging of cotton by means of a fully covered bale which was automatically sampled during the ginning process It would produce at the gin about 70,000 bales of this particular type, namely, gin-compressed bales for export.

Discussing the current prospects for increased Indo-American trade, Mr. Akers declared that most American businessmen personally preferred to see India growing strong economically. even if it meant less business with them in the long run. He remarked, in this connection, that, due to one reason or another, there would always be a chance to supply some American cotton to India even after it had become considerably more developed economically.

IMPORT OF LONG-STAPLE COTTON

Replying to a question, Mr. Nityanand Kanungo, Minister for Commerce, stated in the Lok Sabha that India had begun producing long-staple cotton to the tune of one lakh bales per year, as compared with *nil* at the time of partition. Some members of Parliament complained that the Government was spending over Rs. 25.5 crores of foreign exchange in importing long-staple cotton from Egypt and Sudan and asked if this could not be stopped. Mr. Kanungo explained that long-staple cotton was imported from these countries to keep the normal trade channels open. Unless India bought cotton from these countries, it could not sell its textiles to them. Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, intervening, explained that if these cotton imports were stopped the mills in Bombay and Ahmedabad, in particular, which manufactured fine and superfine cloth, would have to close down. It was the Government's intention, he pointed out, to grow long-staple cotton in the country itself.

COTTON CREDIT FOR JAPAN

The recent grant by the U.S. Export-Import Bank of a credit of 60 million dollars for the current (1958-59) crop year to Japan for financing the import of U.S. cotton brings the Bank's total financing of cotton purchases by Japan since 1948 to $542.2 million. The latest is the tenth cotton credit approved for Japan by the Bank. At current prices, about 400,000 bales of cotton can be financed for export by this credit which will be available up to 31st July 1959.

THE MYSORE PAPER MILLS LIMITED

MR. T. SHAMANNA'S SPEECH AT ORDINARY GENERAL MEETING

OUTPUT SATISFACTORY, DESPITE OPERATIONAL DIFFICULTIES AND RISING COSTS

PRESIDING over the Twenty-third Ordinary General Meeting of The Mysore Paper Mills, Limited, held at Bangalore on Wednesday, 3rd September 1958, Mr. T. Shamanna, M.A., I.A.S., Chairman and Managing Director of the Company, stated that the production performance of the Company was quite satisfactory, despite operational difficulties and rising costs. He, however, pointed out that the level of production could be maintained only if the import restrictions did not impose undue strains and the Company got proper assistance for importing essential materials such as wood-pulp, wires, felts, machinery and spares, as well as for securing adequate quantities of chemicals from sources here and abroad.

The following is the full text of Mr. T. Shamanna's speech at the meeting:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twenty-third ordinary general meeting of the shareholders of the Company and to place before you the report of the Directors and the audited balance-sheet for the year ended 31st March 1958. These have been circulated already and, with your permission, I shall take them as read as usual and proceed briefly to review the salient features of the year's operations.

Production and Sales

"I am glad to state that production and sales during the year under review have been quite satisfactory. Last year, our production was 7,500 tons and this year it is 7,300 tons. I feel a word of explanation is called for as to why I consider production to be quite satisfactory, in spite of a shortfall of 200 tons. I must recall what has been reported to you on previous occasions, that our paper-making capacity exceeds our bamboo-pulp making capacity and, to set right this imbalance, action has been taken to further step up bamboo-pulp production from 6,000 tons to 7,000 tons and, in order to utilise the increased pulp-making capacity when achieved, action has also been taken to recondition the first paper machine which has worked continuously for over 19 years and requires urgent attention. As stated in the Directors' report, licences to import some equipment have already been received and orders have been placed. The shortfall in production during the year 1957-58 as compared with the year 1956-57, is mainly due to the shutdown of the mills for a fortnight during April 1957 for purposes of general cleaning, overhaul and repairs. Having regard to these considerations, I said that the production was satisfactory.

Difficulties

"Ordinarily I should have not narrated on this occasion the many difficulties we face in the day-to-day operations. The situation has, however, become so serious that I would be failing in my duty if I did not do so. To mention a few only: the supply position of chemicals, particularly Glauber's salt, caustic soda and liquid chlorine, has become very acute. We cannot get adequate supplies from the previous sources and we are resorting to purchases from all over the country and in the case of Glauber's salt from countries abroad. All this obviously adds very much to the costs, but, even then, we are not free from anxiety in maintaining production and in avoiding the development of critical situations threatening suspension of operations. We are keeping a constant vigil on the situation and sparing no efforts for procuring supplies to keep the factory going. In spite of all these incessant and growing troubles, we have managed to secure better results due to increased operational efficiency.

"Although our production costs have gone up considerably due to the foregoing reasons, we have not enhanced the prices of our products even to the extent of covering up such enhancement fully. We have tried to maintain the tradition and accepted policy of the mills of always keeping the interests of the consumer in the forefront of our thoughts by constantly improving upon the quality and, at the same time, maintaining a steady price structure. I have to bring to your notice, in this connection, that, having regard to the trend of rising prices generally in the country, the Government of India are contemplating an examination of producers' costs. So far as we are concerned, we do not feel that there is any need for such examination.

"In placing before you these facts pertaining to operational difficulties and rising costs, I am not trying to sound a note of alarm. Despite all this, it would be comforting for you to learn that the production for the first five months of the current year is encouraging. The level of production can be maintained, however, only if the import restrictions do not impose undue strains on us and we get proper assistance for importing essential materials such as wood-pulp, wires, felts, machinery and spares and for securing adequate quantities of chemicals from sources here and abroad.

The Balance-sheet

"I shall now turn to a brief review of the salient features of the balance-sheet. As I stated earlier, although the increased operational efficiency has helped to reduce costs and to secure favourable results, the financial results would have been much better and appreciated as such, had there not been a further rise in the costs of raw materials, chemicals, coal, electricity, etc.

"The turnover this year has exceeded that of last year by Rs. 2,17,682, amounting to Rs. 1,08,53,227. The market conditions throughout the year were favourable and continue to be so. Certain import restrictions have been imposed and what is produced in the country is not adequate to meet the increased demand for paper created by developmental activities adumbrated in the Five-year Plans. The requirements of the Central and State Governments have increased and, in consequence, the tonnage available for civilian consumption is reduced. We are taking steps to organise as equitable a distribution as possible of our products and, in this attempt, we have made arrangements, besides sales through normal trade channels, for direct supplies from the mills to essential users of paper like textbook publishers, educational institutions and co-operative societies and specially to those which are attached to schools and colleges.

"This year, we have provided for depreciation on fixed assets, a sum of Rs. 9,99,656 calculated on the basis of rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, and have paid interest amounting to Rs. 2,16,176.09 on borrowings. The provision for gratuity has been limited to Rs. 80,000, as together with previous provisions made for this purpose, all the cases of employees who have put in a service of 15 years and are eligible for gratuity would be covered. Further, a sum of Rs. 2,00,000 towards cost of repairs and replacements, together with Rs. 30,000 towards wealth tax and Rs. 42,097 towards development rebate as per Income-tax Act have been provided. In response to the suggestion made at the last meeting, a sum of Rs. 1 lakh has also been provided to meet future tax liability, though the profits of the Company for the year under review would not be subject to tax. After making all these provisions, the net profit for the year stands at Rs. 5,29,437.85, as against Rs. 5,00,531-7-3 in the previous year.

I.F.C. Loan

"Before passing on to the question of disposal of surplus, I wish to report that, as on today, the Industrial Finance Corporation of India loan stands reduced to Rs. 30 lakhs, as against Rs. 42 lakhs shown in the balance-sheet. We had agreed to repay the loan of Rs. 50 lakhs of the Industrial Finance Corporation of India in 16 annual instalments with the first instalment commencing from 1st July 1955. The first instalment of 1,50,000 was paid in June 1955, the second instalment of Rs. 2,00,000 in June 1956, the third instalment of Rs. 2,00,000 due on 1st July 1957 in May 1957, and the fourth instalment of Rs. 2,50,000 due on 1st July 1958 in August 1957. In addition to the repayment of the first four instalments amounting to Rs. 8,00,000, we have, during the last five months, paid the fifth, sixth, seventh and eighth instalments falling due on the first of July 1959, 1960, 1961 and 1962 amounting to Rs. 12,00,000, thereby reducing the loan to Rs. 30,00,000. I have no doubt that you would appreciate the policy of repayment pursued by your Directors in this behalf.

Disposal of Surplus

"Reverting to the question of disposal of surplus of Rs. 5,77,135.51, inclusive of the carry-over, your Directors have decided to set apart Rs. 3,00,000 towards the Industrial Finance Corporation of India Loan Redemption Fund and to recommend declaration of 10 per cent. dividend, absorbing Rs. 2,50,000, the balance being carried forward. There appears to be a feeling in some quarters that your Board of Directors have been pursuing a cautious and conservative dividend policy and that a slightly higher rate of dividend could have been adopted. I feel that much could be said in favour of and against a declaration of a higher rate of dividend, but, after a serious consideration of all aspects of the question, it is found that the path of prudence points to the desirability of maintaining the dividend rate at 10 per cent., which is fair and reasonable. I trust that, in the light of these observations, you will consider the working results quite satisfactory and accord approval to the proposal to declare 10 per cent. dividend, which has also been approved by the authorities of the Industrial Finance Corporation of India, for which I am grateful to them.

Labour

"It had been reported to you that the Government of India have accorded sanction to the construction of three hundred tenements in our labour colony under the Labour Housing Scheme, and that the work of construction has been progressing rapidly and I am glad to inform you that the tenements will be ready for occupation shortly, and, with this, about 60 per cent. of our employees would have been provided with housing accommodation.

"A bonus equivalent to three months' basic pay or wages has been sanctioned to the staff and labour as in the previous year.

"You will recall that I had told you at the last meeting that the Labour Association has been making certain representations and that their reasonable demands would receive sympathetic consideration. The Consent Award, passed by the Labour Appellate Tribunal in April 1955 fixing, among other things, a period of 30 months as the tenure of the Award, expired in October 1957 and, thereupon, our Labour Association issued a notice of change demanding fixation of higher minimum wages, revision of wage scales, service weightage, production incentives, etc. Matters in dispute were directly negotiated and a comprehensive agreement was signed by the parties and this agreement, which is in the mutual interests of the management and labour, has ushered in an era of industrial peace for five years during which period the Association would not resort to strike. The benefits under the agreement have also been extended to corresponding categories of employees who are not members of the Association.

More Enduring and Desirable

"I consider that an agreement of this kind entered into voluntarily as a result of direct negotiations is far more enduring and desirable and that this method of resolving differences and settling industrial disputes is more satisfactory than that of adjudication or arbitration where protracted proceedings would leave behind feelings of bitterness, not conducive to creating the cordial atmosphere necessary for the smooth working of the factory. Representatives of both the management and labour are worthy of our congratulations for the helpful and co-operative spirit displayed in the finalisation of these negotiations and the implementation of the terms of the agreement. I hope that the cordial relations between labour and management will substantially contribute to achieving better results.

"I would now like to say a few words about our development schemes. The Board of Direc-

(*Continued on page 460*)

IMPROVEMENT IN QUALITY OF SUGAR PRODUCED LAST SEASON

OUTPUT OF HIGHEST COLOUR GRADE RISES

THERE has been a perceptible improvement in the quality of sugar produced in India in recent years, thanks to the continuous effort of mills to enhance the technical efficiency of manufacture, as well as to the vital role played by the Bureau of Sugar Standards which is chiefly responsible for stipulating sugar standards and advising mills to conform to the specifications as laid down by it. The major portion of the sugar output during the season 1956-57, for instance, was accounted for by the highest colour grade, namely, I.S.S. 29, the actual share being 78.79 per cent. which compares very favourably with 69.76 per cent. in 1955-56, while the percentage share of I.S.S. 28 and 27 colour grade was lower at 19.75 and 0.646, as against 27.49 and 2.169, respectively, according to the latest review by the Director of the National Sugar Institute, Kanpur. The review covers the production of sugar by 143 units, out of the 147 central sugar factories reported to have worked during 1956-57.

An equally welcome development has been the progressive decrease in the production of crushed sugar during the past few seasons. No factory reported manufacture of such sugar in the season 1956-57; the share of this sugar in the total production during 1955-56 was 0.001 per cent. As regards ungraded sugar (*rori*, dust, etc.), however, the season 1956-57 witnessed a slight increase in percentage share of its production, from 0.26 to 0.34. Under 'above I.S.S. grade,' the figure has also gone down from 0.82 to 0.24 per cent., whereas, in the case of 'below I.S.S. grade,' it has increased from 0.32 to 0.47 per cent.

The following table indicates the production of factory-made sugar corresponding to different standard grades and the percentage share of each grade during 1956-57 as compared with 1955-56:

I.S.S. No.	Season 1956-57 Quantity (tons)	Season 1956-57 Percentage of total production of 143 factories	Season 1955-56 (Revised) Quantity (tons)	Season 1955-56 (Revised) Percentage of total production of 142 factories
Above I.S.S.	4,814	0.24	15,274	0.82
A 29	35,071	1.74	33,549	1.79
B 29	96,664	4.79	87,189	4.66
C 29	275,609	13.65	184,463	9.85
D 29	716,298	35.49	620,726	33.16
E 29	461,908	22.88	364,710	19.48
Total in 29 colour series in all grain sizes ..	1,590,364	78.79	1,305,891	69.76
A 28	1,917	0.094	4,296	0.23
B 28	12,182	0.60	14,274	0.76
C 28	89,926	4.45	148,650	7.94
D 28	148,001	7.33	187,121	10.00
E 28	146,962	7.28	160,279	8.56
Total in 28 colour series in all grain sizes ..	398,988	19.75	514,620	27.49
A 27	..	..	21	..
B 27	122	0.006	160	0.01
C 27	2,398	0.12	4,290	0.23
D 27	3,300	0.16	25,275	1.35
E 27	7,281	0.36	10,916	0.58
Total in 27 colour series in all grain sizes ..	13,101	0.65	40,662	2.17
Below I.S.S.	9,347	0.47	5,928	0.32
Crushed 13	..	..	15	0.001
Ungraded (Rori and other ungraded sugars) ..	6,787	0.34	5,411	0.26
Total under crushed below grade and ungraded	16,084	0.81	11,354	0.58
Total ..	2,018,537	100.00	1,871,906	100.00

Note :—The total quantity of sugar shown above represents the sugar actually bagged as reported by factories, which includes sugar recovered from the remeltings of the preceding season's sweepings, rori, etc., but excludes sugar left in process at the close of the current season.

The foregoing table shows that I.S.S. D.29 accounts for the largest production for any single quality, being 35.49 per cent. of the total sugar production, as against 33.16 per cent. in the previous season, followed by grain size E which accounted for 22.88 per cent., as against 19.48 per cent. The percentage share of different grain sizes in all the three colours (29, 28 and 27) during 1956-57, the figures in brackets relating to 1955-56 was: A.1.83 (2.02); B.5.40 (5.43); C.18.23 (18.02); D.42.99 (44.51); E.30.52 (28.63); crushed, ungraded and others: 1.03 (1.39). It is thus seen that the position in respect of grain size remained more or less the same in 1956-57 as in 1955-56.

The number of factories producing first four grades of sugar during 1956-57 stood higher at 71 (49.65 per cent.) as against 64 (45.39 per cent.) in 1955-56. The number of factories producing one, two and three grades of sugar has improved from 9 (6.38 per cent.), 13 (9.22 per cent.) and 16 (11.35 per cent.) to 10 (6.99 per cent), 16 (11.19 per cent.) and 24 (16.78 per cent.), respectively, while that of units producing four grades has receded from 26 (18.44 per cent.) to 21 (14.69 per cent.). Considering that up to six different grades may be produced under the normally varying conditions in the factory, 104 factories (nearly 73 per cent. of the total) produce up to six different grades. The remaining 39 units (or 27 per cent.) still manufacture more than six grades which are considered to be too many. There is certainly scope for achieving greater uniformity in this matter by producing only a few standard grades of sugar, preferably not more than six by each factory, which is the average number in the case of a majority of factories.

An idea of the State-wise production of sugar during the 1956-57 season corresponding to different I.S.S. grades can be had from the table below:

	Colour 29 and above I.S.S.	Colour 28	Colour 27	Others (below I.S.S. and ungraded)
Bombay	224,751	16,009	17	549

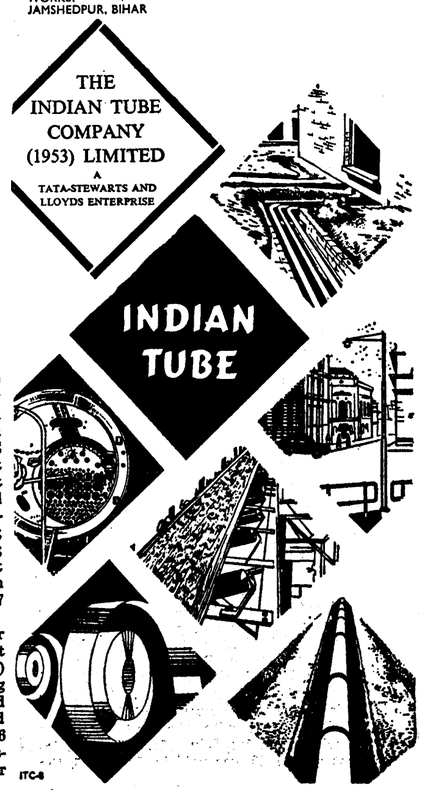
THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE



ITC-8

The steady improvement in the quality of the sugar produced is quite encouraging. Indeed, it is claimed that the quality of Indian sugar compares favourably with that produced in any other country. There is, however, no denying the fact that much yet remains to be done. To the extent that the technical efficiency of the sugar factories is raised, not only will the quality of the product improve but the actual output also will be higher. It is here that the scientists and technologists connected with the sugar industry can play a vital role.

SUGARCANE DURING 1957-58

The 1957-58 season has witnessed a distinct setback to the sugarcane crop. The all-India final estimate of the crop places the aggregate yield of cane at 63,954,000 tons, as against 66,998,000 tons in the previous season, representing a fall of 4.5 per cent. The decline in production is due largely to the drop in the per-acre yield and partly also to the reduction in the area devoted to cane cultivation. The average quantity of cane actually raised per acre in 1957-58 has not been more than 12 8 tons, as against 13.3 tons in 1956-57. The total area under cane was lower by 0.7 per cent. at 5,021,000 acres, that for 1956-57 being 5,057,000 acres. The quality of the cane grown in the current year is also poorer, the average yield of *gur* per 100 tons of cane being less than 10 tons, as compared with 10.5 tons in 1956-57.

The decrease in production of sugarcane has been reported mainly by Uttar Pradesh, Bihar, Madhya Pradesh and West Bengal States and is attributed to decrease in area as well as damage caused by adverse seasonal conditions during the growing period of the crop. The decrease in production has been offset to a large extent by increases registered mainly in Bombay and Punjab States. The production estimates for 1957-58 and 1956-57 in respect of Andhra Pradesh and West Bengal (excepting Darjeeling District and merged areas) are based on the results of random crop cutting surveys.

The reduction in acreage during the current year has been reported mainly by Uttar Pradesh, Bihar and Madhya Pradesh and attributed generally to unfavourable weather conditions during the sowing period. The decrease in acreage has been offset to some extent by increases recorded mainly in Bombay, Mysore and Punjab States.

PRIZE COMPETITION FOR CANE IN BOMBAY

The target for getting the highest yield of sugarcane per acre for the purpose of awarding prizes under the scheme of prize competition for the highest production of sugarcane and sugar has been reduced by the Government of Bombay from 125 tons with 11.5 per cent. recovery of sugar to 115 tons with 11.5 per cent. recovery of sugar. This decision is based on the results of the competitions for the last five years, during which the yield per acre never reached the 125-ton mark; it was 107.85 tons in 1952-53, 122.62 tons in 1953-54, 106.9 tons in 1954-55 and 94.78 tons in 1955-56. The percentage of recovery of sugar has, however, been near about 12 and, therefore, the original 11.5 percentage has been retained.

The competition, which was initiated in 1952, now provides for the award of a prize of Rs. 2,000 to any sugarcane grower in the State, who produces 115 tons or more of sugarcane per acre with a minimum recovery of 11.5 per cent. of sugar. A prize of Rs. 1,000 is given in case the target of production only and not of recovery of sugar is achieved. Applications for participation in the competition are to be made to the Secretary, Deccan Sugar Technologists' Association, Walchandnagar, with a copy to the Sugarcane Specialist, Sugarcane Research Station, Padegaon, Poona District.

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of July 1958 was 4,300 tons, bringing the total production up to 31st July 1958 to 1,971,000 tons. The corresponding figures for the 1956-57 season were 4,300 and 2,019,000 tons respectively.

The offtake of sugar from factories during the month of July 1958 was 170,000 tons, as against 163,000 tons (including despatches for exports) during the corresponding period last season. This brings the total despatches from factories upto 31st July 1958 to 1,521,000 tons, as against 1,590,000 tons (including despatches for exports) in the same period last season.

The total closing stock of sugar with factories as on 31st July 1958 was 878,000 tons, as against 956,000 tons on the same date last season.

CO-OPERATIVE SUGAR MILLS

The Government of India has decided to give aid for the purpose of setting up the factories at the rate of Rs. 15 lakhs per factory subject to a matching contribution by promoters. The co-operative sugar factories become eligible for such assistance only after they have been licensed under the Industries (Regulation and Development) Act and granted an import licence. So far during the second Five-year Plan, the Government has provided assistance to co-operative sugar factories in the States of Assam, Bombay, Madras, Punjab and Uttar Pradesh.

The total profit made by the Indian Sugar Mills' Association in the export of sugar during 1957-58 was about Rs. 12 lakhs, according to the Union Minister for Food and Agriculture. But the sale of the last consignment of 500 tons involved a loss of about Rs. 65,000. The sale was in parity with world prices. The prior approval of the Government was not necessary for the sale.

COAL CONSUMPTION BY RAILWAYS

EXPERT COMMITTEE SUBMITS FINAL REPORT

LESS than three months after its interim report, the Expert Committee on Coal Consumption by Railways has submitted the final report to the Union Ministry of Railways. This Committee, it will be recalled, was set up in December last under the chairmanship of Mr. Karnail Singh, Member (Engineering), Railway Board, to enquire into the increasing cost of fuel consumption by Railways and to estimate their requirements of high-grade coal during the next few years. In June, the Committee submitted its interim report in which it suggested, among others, measures for reducing the coal consumption and urged the establishment of three to five central washeries for upgrading non-coking coal, particularly in the outlying coalfields. The final report, since submitted, is devoted to the reasons for the increased cost of fuel consumption by Railways and an assessment of the requirements of high-grade coal in the next few years.

The full text of the Committee's report is not available; only a summarised version of the report has been released. The Committee declares that the inferior quality of coal supplied to the Railways is alone responsible for an increase of 10 to 11 per cent. in the present fuel bill of Railways. The coals, it says, do not conform to the grades specified and an effective check on the quality of coal loaded is at present well-nigh impossible as a large number of collieries supply coal to the Railways. This statement seems to be quite justified. Thus, while the quantity of coal actually consumed by the Railways has gone up over the past four years by 18.0 per cent.—from 11.12 million tons in 1952-53 to 13.15 million tons in 1956-57—the expenditure on coal has risen by as much as 100 per cent., that is, from Rs. 22.5 crores to Rs. 44.2 crores. Although a part of the enlarged coal bill is due to factors like increases in the prices of coal, higher freight charges, excise duty and cess, there is no denying that the quality of coal now being consumed by Railways is very much higher than what is actually required, thanks to deterioration in the quality of coal supplied. This aspect must be specially stressed considering that the Railways consume over 30 per cent. of the total production of coal in India.

It is encouraging to be told by the Committee that there has been some improvement in the fuel utilisation of late. Between 1952-53 and 1956-57, we are told, coal consumption by Railways rose by 19.5 per cent., while the traffic increased by 27 per cent. The present fuel consumption trend on Railways is considered to be favourable, but it is felt that there is still scope for reducing consumption through effective control on losses and wastage.

Requirements in Future Years

The Karnail Singh Committee has estimated the coal requirements of Railways by the end of the third Five-year Plan period (1965-66) at 26 million tons, which represent more than 25 per cent. of the tentatively fixed production target of 100 million tons. The requirements are expected to rise rapidly thereafter, touching 50 million tons per annum by 1975, if all further increase in traffic is handled by steam power.

In view of the vast coal requirements of Railways thus, the Committee urges that the consumption of coal by Railways in future must be restricted to the level forecast for the end of the third Plan, that is, 26 million tons. This objective, it is said, can be achieved by progressively replacing steam power by diesel and electric traction. In the considered opinion of the Committee, by 1975, not more than 50 per cent. of railway transport should be carried by steam power, the balance being shared by electrification (30 per cent.) and dieselisation (20 per cent.). For the electrification of Railways, the development of adequate capacity for manufacturing heavy electric machinery and traction equipment within the country is imperative. Also, co-ordination in the planning of power development, transmission lines and service stations is essential to ensure supply of power to the Railways and other industries. Diesel shunting should be introduced on all main line services, particularly in areas far away from the collieries where shortage of water is a problem.

The Committee anticipates a serious deficiency in high grades of coal required for the Railways by the end of the second Plan period and the position is expected to deteriorate dur-

SPIRITUAL VALUES IN U.S. ECONOMIC SYSTEM

COMMUNITY OF INTEREST BETWEEN EMPLOYERS AND EMPLOYEES

By James P. Mitchell
U. S. SECRETARY OF LABOUR

(Although America's economic achievements which are a source of inspiration to the free world are fairly widely known, the underlying basis of the country's social and economic system has not always received the same attention and study abroad. In this context, the following excerpts from an address at commencement exercises of the University of Notre Dame, South Bend, Indiana, by Mr. James P. Mitchell, U.S. Secretary of Labour, who discusses the essential unity of the American society and the spiritual values which enrich the American economic system, will be read with interest.—ED.)

AMERICAN society springs from the boldness of our original political experiment; the origins of our people; the challenge of the wilderness; the natural interplay of the forces of Government, industry and labour; the increasingly high efficiency of our technology; our abiding identification as a people with religion. It has come a long way. In terms of economics as well as in terms of social progress, it looks back into the past upon socialism, upon communism, even upon capitalism and private enterprise in their classic European definitions. In this sense, it is the most modern society in existence.

This is something beyond the classic concept of capitalism, where the ownership of the great properties and corporations has passed into the hands of millions of stockholders. Directly and indirectly, a myriad of interested parties, including employees, participate in and influence management decisions in an atmosphere of freedom from central, authoritarian control.

Socialism has never taken root in our country because our system has accomplished its humanitarian aims without submitting to the muffling controls demanded by State ownership. The American economic system has, in fact, reached a point so far in advance of its origins that we are without adequate terms to describe it. There is an urgent need to comprehend the nature of our system and express it in meaningful terms that the world can understand. Whatever we call this system of ours, it is something unique. It is a living idea. Informed by the spirit of a great people and the accumulated experience of 20 centuries of Western culture, it has compelling value to all those peoples of the world who are restless for economic growth and thirsting for dignity and understanding. We have, in practice, shown the communist concept to be obsolete.

Popular Will

We have shown that it is possible that the great powers natural to a technological society —the State, the corporation and the labour union—can be brought into equipoise and that they can be directed by the popular will toward social improvement. As these three great powers interact upon each other, and exert restraint where it is needed, they move in common with other forces toward achieving the common good. Rising spontaneously from the people is a whole galaxy of organisations—national, regional, State, local—that contribute to this effort. These units of society bring influences to bear upon the Government, upon corporations through members who are managers or stock-holders, upon unions through members who are union members and union officials. And this diversity of interest and influence provides a central clue to the ability of the American to maintain his integrity as an individual in the face of an increasingly organised society. The American is not only a citizen, a worker and a union member, he is also father, brother, church member, lodge member, voter, taxpayer, home owner, member of an ethnic group. He gives of his personality to dozens of activities, and his personality colours and helps to shape them all.

Unity

In the very plurality of American society, in its delicate but natural balance of interests and forces, lies its unity. This unity is perhaps the most difficult thing of all to describe, even though we are bred to it and exist within it every day of our lives. Communism displays to the world an iron, rigid unity that is impressed and imposed and enforced—but which is fragile—a vast shell of pretence that crashes to earth in places like Hungary. Democracy, on the other hand, is apparently distinguished by disunity, while at heart there exists within a democratic society a vast, if often imperfect, unity of will that informs all our own daily lives. There is, for example, the common agreement that production should serve the interests of all interested parties—owners, workers and consumers—in as equitable a fashion as possible. But superficially we see considerable disagreement on the means and proportions.

There is common agreement that one of the richest prizes of American life is the ability to rise regardless of race, religion or origin. And yet we see turmoil in the ways and means to achieve this. There is a unity of belief in the dignity and importance of office, and superficially we see the holders of office often denounced and decried. Our firmest unities of belief attach to our traditional liberties of worship, speech, assembly and privacy. And as we progress, we are applying old freedoms to new situations, in terms of civil rights, for example, and about these freedoms—despite the superficial and sometimes violent differences that appear—there is a deep unity of American opinion.

Man's Happiness

Economics is not, as the communists say, the cure-all and end-all of man's quest for ultimate happiness. Economic well-being helps him toward that goal; it does not provide the fulfilment. For man's happiness ultimately flows from his spiritual well-being. I can find an illustration, I think, if I may digress for just a moment into the field of American economic life with which I am most familiar—labour-management relations. Here, perhaps more than anywhere else in our system, the welfare of the individual is at stake.

No better defence of our system as a vehicle for human fulfilment can be made than the simple statement of the fact that we have managed, to a remarkable degree, to safeguard the well-being of the individual in the face of advancing technology and organisation. We are deeply concerned that there be, at the heart of the labour-corporation power balance, a sense of the basic and direct relationship between employer and employee. We are concerned that the worker, despite all the apparatus of technology and the hugeness of modern enterprise, will retain a feeling that he is doing something worthwhile with his skill and his time. We are concerned that the employer, despite the largeness of his operations, will maintain a feeling of responsibility to his workers; that, by and large, he will respect the employee's right to a just share of profits, to good working conditions, to social justice.

If this mutual sense that there is some value beyond production goals did not exist, then there would be no balance of economic forces as we know it in America. It is this community of interest and sympathy between employer and employee which has been the traditional and unique strength of our system. Most workers feel that they have a chance to rise in the economic scale; the fluidity of our social system depends upon their feeling so.

We have remained a fluid society, we have avoided the solidification of economic power in a few hands, because of this current of aspirations which distinguishes our social and economic system from all others. This is, after all, the only system under which a man can set out to rise from messenger boy to president of his corporation—and have a reasonable chance to make the president's office if his gifts are equal to his ambition. This American sense of aspiration is what has kept us from stratifying into classes.

Whether the employee works in a one-man shop and deals directly with the boss, or whether he has sought to express his desires by uniting with thousands of other workers in a trade union to deal with his boss, he retains his right as an individual to obtain his share of the fruits of his labour. This idea is what animates labour —by which, I mean not only the great unions with their 18 million members, but also the other 50 million workers who exert social pressure by other means, some of which they hold in common with union members—this idea is what animates labour and management toward the achievement of increased living standards for all people and the preservation of individual dignity. The sense that there are broader issues at stake than victory at the bargaining table, that the health of a free society depends upon the judicious restraint of power for the common good of society is essential in a social complex in which interests are often coinciding, sometimes identical, frequently supporting, and almost always interdependent. So it is that economic and social means are employed to propel the citizen toward the ultimate ends of existence.

Spiritual Welfare

Organisational mobility, social flexibility, the wide distribution of wealth through high standards of enterprise and reward for labour —all these things operate to free the individual from the burdens of care and release him to devote fuller attention to his spiritual welfare, the genuine source of earthly meaning. Whether the individual seizes that opportunity is a matter of his own conscience. The fact remains that the system creates the opportunity, and as such is the most splendid social edifice ever erected by man. And supporting it is a unity of belief, opinion and conviction in its worth that is distinctly American in its fervour and its sincerity. There is no effective competition for our kind of unity. It is a unity of the spirit, a rallying point for mankind.

What binds together the Chinese communist and the Russian communist? The Italian communist and the Vietminhese? It is an invalid materialistic philosophy which provides the comforting assurance that one day the hardships and sacrifices they have been forced to endure will be compensated for when the technical plant is built and the economy is in full motion. It has nothing to offer, in the end, but it continues to hold out the old, dry dream of a classless State which becomes a nightmare of repression and the crushing of the individual.

Something Better

We have something better than this to offer. But too often we talk as if we did not. We speak of all the things in American life which are of secondary importance—our 125 million automobiles, our 45 million refrigerators, our 38 million television sets. To the European or the African or the Asian who is eager to know about America, we are more likely to talk about production statistics, profit margins, and efficiency reports rather than the rich, shared life of the community with its churches, its civic organisations, its charities, its responsive Government. The results are not always so happy as they were in the case of a Japanese taxi driver who says: "One of the nicest things about America is that there is no difference between a farmer's breakfast and President Eisenhower's." What we Americans do not speak of is the way of life which has set us apart from the communists—and which unites us to all people everywhere in search of peace, self-determination, and the ever-unfolding drama of a free people seeking a larger liberty and an enlarged dignity.

'SANFORIZED' means better sales for you!

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced ...our expert visits a mill licenced to use the trade mark 'Sanforized'. Selecting samples of cloth at random, he subjects them to a rigorous international wash-test, reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'!

It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

DALMIA CEMENT (BHARAT) LIMITED

SPEECH OF CHAIRMAN, MR. V. H. DALMIA AT THE ANNUAL MEETING

TARIFF COMMISSION'S FAIR PRICE FORMULA DEFECTIVE IN MANY RESPECTS

THE Sixth Annual General Meeting of Dalmia Cement (Bharat) Limited was held at the Registered Office of the Company at Dalmiapuram (Madras State) on Thursday, 4th September 1958. In his speech on the occasion, Mr. V. H. Dalmia, Chairman of the Company, reviewed the affairs of the cement industry at some length and also examined the basis on which the Tariff Commission recently determined the fair prices payable to producers. He was of the view that the Commission's formula did not do full justice to the efficient producers. He also drew pointed attention to the ill-effects of inter-union rivalry on production and recommended legislation for settling the rival claims of the union.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I am happy to welcome you to this the Sixth Annual General Meeting of the Company. It is usual on such occasions to review the activities in the past and to consider the future programmes and prospects of the Company.

"The accounts for the year 1957, together with the Directors' report thereon, were circulated to you along with the notice of the meeting, and I am sure, you must have carefully studied the working results of your Company. I would, therefore, with your permission, take them as read.

Industry's Progress

"Since we last met, there has been a rapid improvement in the availability of cement, partly due to the expansion in production and partly because of the slackening of demand on account of the slowing down of some important Central and State Government projects due to pruning of the second Five-year Plan. One result of this has been that the plan for import of cement, which was one of the principal reasons for introduction of State trading in cement, has been abandoned. Against 4.9 million tons in 1956, the total production of cement in the country in 1957 was 5.6 million tons. There are now 29 cement factories, with an annual rated capacity of 6.83 million tons. By the end of this year, the installed capacity is likely to exceed 8 million tons and may be around 9.5 million tons by the end of 1959. Government has licensed the expansion of existing plants and establishment of new units which if they materialise in full, will raise the installed capacity by 1960-61 to 14.7 million tons. It is understood, however, that on account of foreign exchange difficulties, and no less important, the difficulty in arranging adequate internal finance, many of the schemes will not materialise. In the circumstances, it is likely that, by 1960-61 the installed capacity would be around 9.95 million tons only.

"On account of the increase in the availability of cement, the restrictions on retail sale of cement have been withdrawn to a large extent. As many as twelve States have permitted free sale of cement to the consumers. The rest have relaxed the permit requirements to the extent possible in the light of the conditions prevailing in each State. In view of the developing surplus of cement in the country, the Government of India is also giving serious thought to the export of cement as a normal feature by establishing markets in neighbouring countries. The efforts in this direction have not met with any appreciable success so far.

Develop Roads

"Shortage of steel and difficulties of foreign exchange are also mentioned as two important reasons for the slow-down of building activities and industrial expansion and consequent decline in the offtake of cement. In this context, I would suggest that Government should speed up the programme of road building on an extensive scale as neither steel nor foreign exchange is required for road building. Apart from improving the means of communications, the construction of roads will help the expansion of road transport and thus reduce the pressure on the railway system. In the second Plan, an outlay of about Rs. 271 crores is estimated on construction and improvement of national highways and about 18,000 miles of surfaced roads under the State programmes. The road construction programme would also help in maintaining the offtake of cement. In this connection, I may also refer to the Finance Minister's Budget Speech on 28th February 1958, when he mentioned that a sum of Rs. 7.34 crores which was surplus with the State Trading Corporation on cement account will be utilised by Government on the development of national highways. The Finance Minister also announced an increase in the excise duty by Rs. 4 per ton which was expected to yield Rs. 2.24 crores additional revenue in a year. This revenue was also specifically earmarked for road development. The Government of India should, therefore, press on with the road-building programme and also urge the State Governments to do likewise.

Tariff Commission's Recommendations

"I wish to refer to the recent recommendation of the Tariff Commission that the price at which cement is made available to the consumers should be re-assessed. The excise duty of Rs. 24 per ton accounts for nearly 20 per cent. of the wholesale f.o.r. destination price of cement and amounts to about 50 per cent. of the cost of production of cement. When a steep rise in the excise duty on cement was announced in the budget proposals on 15th May 1957, one of the main objectives behind the increase was stated by the Finance Minister to be to place a restraint on consumption. At that time the indigenous production of cement fell short of the demand and imports were being planned to meet the deficit. In the present position of cement supply, no fiscal measure is needed to restrain consumption. On the contrary, it is necessary to stimulate the public demand for cement for which purpose a reduction has to be brought about in the current selling price. I hope Government would review its policy of restraining consumption in the changed circumstances which now prevail in regard to the availability of cement.

"You will no doubt be anxious to hear from me about the recommendations of the Tariff Commission in regard to the cement price and the decision of the Government of India in this respect, which has come into effect from 1st July 1958. The Tariff Commission has found the production cost at your Dalmiapuram Works to be the lowest. Instead of being rewarded for the excellent performance in keeping down the production cost, notwithstanding the important disadvantage of being situated far from the coalfields, your Company has not been allowed any increase in price and the present ex-works price of cement allowed to your Company is the lowest. Certain vital departures have been made by the Tariff Commission from the basis which had been followed in its 1953 report on the question of fair price of cement payable to the producers. The Tariff Commission has allowed a return of 12 per cent. on the capital employed in the case of low cost units, 10 per cent. to four high cost units, 8 per cent. to the one highest cost unit and 6 per cent. to the two State-owned factories in Mysore and Uttar Pradesh. The capital employed has been taken as the sum of the nett block plus five months' cost of production by way of working capital. One result of adopting this method has been that higher the manufacturing cost, the more has been the return allowed to the producer. There are units which have been allowed a return at a lower rate, but the profit in rupees is considerably more than in the case of units with a comparable production which have been allowed a return at a higher percentage. This method of determining the profit margin can hardly be regarded as satisfactory or fair. Thus, there is no incentive to reduce the production costs. If anything, units with lower production costs have been placed at a distinct disadvantage.

"In the past, price was being fixed on a standard basis and made applicable uniformly to all units having normal costs of production. This time, as recommended by the Tariff Commission, Government has fixed separate price for each producer. If this system of price fixation is to be adopted, it was imperative to take into consideration the individual needs of each producer also in fixing the margin of profit. The producer is expected, out of the profit allowed, to meet the expenditure on bonus, gratuity, interest charges, Managing Agents' commission, to pay tax and to declare a reasonable dividend on the capital. It was represented before the Tariff Commission that the investor will reasonably expect a return on his investment which is in line with the return available in other major industries in the country. An impression seems to have been created that the cement industry has been paying handsome dividends. A study by the Reserve Bank of the dividend record of the various industries for 1951-55 showed that as compared to industries like iron and steel, sugar, paper, and jute, the cement industry has paid the minimum dividend. The following figures from the *Reserve Bank Bulletin* of September 1957 will be of interest.

Dividend as percentage of Paid-up Capital of various Industries in India.

Average for 1951-55

	Per cent.
Iron and steel	13.4
Sugar	11.3
Matches	10.8
Paper	10.8
Jute	10.0
Cement	9.2

"The margin of profit should, therefore, have been fixed so as to be adequate in the case of each producer to meet the various obligations that the profit is expected to take care of and leave sufficient residue to enable payment of dividend which can be considered fair in the light of the dividend record of other major industries in the country. This unfortunately does not appear to have been given the consideration that it deserves. I wish the Tariff Commission had taken a more realistic view and appreciated the importance of giving a fair return to the shareholders so as to attract the investment of savings in equity capital which is vital to keep up the pace of industrial development in the country. It has been mentioned in the report of your Directors that a representation has been submitted to the Government of India in regard to the price allowed in the case of your Dalmiapuram Works and I have every hope that our representation will receive sympathetic consideration.

Use of Second-hand Bags

"One of the recommendations of the Tariff Commission is that the use of second-hand gunny bags for packing of cement should be discontinued. While the Commission has apparently taken amiss the savings made by the cement producers by use of second-hand bags, the benefits which were accruing to the consumers have completely escaped the notice of the Commission. The consumer would no more be able to realise the price for the bags which he used to get while he could sell the used bags to the manufacturers for repacking of cement. On the representations made by the producers, Government has, however, permitted the use of second-hand gunny bags till the end of September only to exhaust the old stock of such bags, but the producers are being paid for such packing at a reduced rate. The consumer, however, is still being charged the full amount as for new packing.

Commission to Stockists

"You will probably be aware that it has been the practice in the cement industry with many of the producers to allow a commission to cement stockists on all sales of cement effected through them. In the southern region particularly, on account of the easy position of cement supplies, the stockist's commission was being paid by practically all the producers. In the past, this expense was always regarded as an item of cost while determining the selling price. The recent Tariff Commission Report has, however, ignored the incidence of this commission, presumably for the reason that any such commission should be paid by the S.T.C. It is a matter of regret, however, that the S.T.C. has declined to pay any commission to the stockists. In the conditions that now prevail, every effort has to be made to strengthen the marketing arrangements. It is needless for me to stress

(*Continued on page* 460)

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment of a new industrial undertaking and for effecting a substantial expansion to the existing industrial undertaking, of which copies are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of this prospectus, having attached thereto the documents specified below, has been delivered to the Registrar of Companies, West Bengal for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in the Debenture Stock now being offered and in due course for an official quotation.

The Application List will open at 10 a.m. on Tuesday, the 23rd day of September, 1958 and will close as soon as the Directors may decide but in any case not earlier than Friday, the 26th day of September, 1958.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

(Incorporated in India with limited liability under the Indian Companies Act, 1913.)

SHARE CAPITAL

Authorised Rs.		Issued and Subscribed Rs.
30,00,000	30,000 6% (tax free) Guaranteed Cumulative Preference Shares of Rs. 100 each	30,00,000
40,00,000	40,000 6% (taxable) 2nd Cumulative Preference Shares of Rs. 100 each	40,00,000
4,30,00,000	43,00,000 Ordinary Shares of Rs. 10 each	3,00,00,000
5,00,00,000		3,70,00,000

LOAN CAPITAL

Rs. 2,04,55,000 6½% Debenture Stock 1968/73, of which Rs. 1,00,00,000 is now offered for public subscription. The Stock is secured by a floating charge upon the assets of the Company. The Company has no other loan capital outstanding, except that it has bank overdrafts (secured by a floating charge on the Company's stocks of raw materials and finished goods) which amounted as at 31st July, 1958 to Rs. 87,01,794.46.

ISSUE OF

Rs. 1,00,00,000 6½% Registered Debenture Stock 1968-73 at par,

Payable in Full on Application.

The Company is advised that this Debenture Stock is an approved investment within the meaning of Section 27A of the Insurance Act, 1938.

APPLICATIONS FOR STOCK MUST BE FOR RS. 1,000 OF STOCK OR IN SUMS BEING MULTIPLES OF RS. 1,000.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—*Cont'd.*

In 1950 an issue of Rs. 1,30,00,000 5% Debenture Stock was made, redeemable in 1961/71. This Stock was secured by a Trust Deed dated 10th August, 1950 executed by the Company in favour of Guardian Assurance Company Limited as Trustees. Out of this issue Debenture Stock as to Rs. 1,04,55,000 is at present outstanding. The holders of this existing Debenture Stock have agreed by a special resolution passed on the 4th day of September, 1958, in accordance with the provisions of the Trust Deed to increase the amount of the Debenture Stock secured by the Trust Deed by the creation and issue of Rs. 1,00,00,000 additional Stock, to alter the rate of interest from 5% to 6½% per annum and to postpone the date of redemption from 1961/71 to 1968/73. The additional Rs. 1,00,00,000 Debenture Stock is now being issued under a resolution of the Board of Directors passed on 4th September, 1958, in accordance with the special resolution aforementioned. The entire Stock (both the existing and present issue) will be secured by the Trust Deed aforesaid as modified by the Supplemental Trust Deed to be executed by the Company also in favour of Guardian Assurance Company Limited. Interest will be payable on 1st January and 1st July in respect of the half-yearly periods ending on the previous day. Interest on the present issue of Stock will commence from 1st October, 1958 and the first payment will be made on 1st January, 1959, amounting to Rs. 16.25 less income-tax per Rs. 1,000 of Stock. The Trust Deed and Supplemental Trust Deed will contain *inter alia* the following provisions :—

1. Security : (a) Payment of principal and interest will be secured by a floating charge upon the whole of the Company's undertaking and assets, present and future, including uncalled capital but excluding only leasehold properties.

(b) The Company will be at liberty at any time after 31st December, 1959 to create and issue further Stock ranking *pari passu* in point of security with (but not in priority to) the existing Stock and the present issue of Stock, on such conditions as to price of issue, rate of interest and term for repayment as may be determined by the Company but subject to the provision that the total amount of the Stock for the time being ranking *pari passu* and entitled to participate in the benefit conferred by the Trust Deed and the Supplemental Trust Deed shall not at any time exceed fifty per cent of the aggregate of (i) the Company's paid-up share capital, (ii) its reserves including the share premium account and (iii) the amount standing to the credit of its profit and loss account. Every prospectus issued generally in connection with the issue of such further Stock shall provide that applications from the holders of Stock standing registered in the books of the Company one month prior to the date of such prospectus shall have preference in allotment.

(c) The Company may create charges on its raw materials and stock-in-trade ranking in priority to the floating charge thereon created by the Trust Deed as modified by the Supplemental Trust Deed to secure sums borrowed from or obligations incurred to bankers in the ordinary course of the business of the Company, but the Company may not create other charges ranking in priority to or *pari passu* with the charge in the Trust Deed.

(d) Any subsidiary company of the Company may create charges on its raw materials and stock-in-trade to secure sums borrowed from or obligations incurred to bankers in the ordinary course of its business and, when any part of the existing and present issue of Stock has been redeemed or purchased and cancelled, subsidiary companies may issue and secure debentures or debenture stock not exceeding in the aggregate the amount of the Stock which has been redeemed or purchased and cancelled, but save as aforesaid the Company will procure that no subsidiary company shall create any other mortgage or charge on its properties and assets otherwise than in favour of the Company and such mortgage or charge shall be retained by the Company. The Company has no subsidiaries at present.

(e) The Company will keep its property adequately insured against loss or damage by fire, riot and civil commotion in so far as it is practicable to do so.

2. Redemption : (a) Such part of the Stock as has not been previously purchased or redeemed will mature for repayment on 31st December, 1973 at par plus accrued interest.

(b) During the year ending 31st December, 1958 and during each succeeding year, the Company will transfer to a Redemption Fund not less than Rs. 8,00,000 but any excess which may be so set aside in any year may be applied in reduction of the obligation for any later year. The amount for the time being standing to the credit of the Redemption Fund may be : (i) used in the purchase of Stock or on 31st December, 1968 or thereafter, in the redemption of Stock, accrued interest and expenses being paid by the Company otherwise than out of the Fund; (ii) placed on deposit at a bank; or (iii) used for the purchase of trustee securities, the expenses of purchase, net proceeds of sale and income accruing from such investments being borne by and belonging to the Fund.

(c) Before 31st December, 1968, the Company will not be entitled to redeem or acquire any part of the Stock other than by voluntary sale and purchase. On that date and at six monthly intervals thereafter on giving six months' previous notice, the Company will be entitled to redeem the whole or any part of the Stock remaining outstanding at par plus accrued interest, and in the case of redemption of part only the particular Stock to be redeemed will be determined by drawings. Stock purchased or redeemed out of the Redemption Fund will be cancelled and may not be re-issued.

(d) Purchases of Stock made out of the Redemption Fund will be at a price not exceeding Rs. 102 per Rs. 100 of Stock plus accrued interest, exclusive of expenses.

(e) In addition to any purchases out of the Redemption Fund, the Company may at any time purchase with other funds any of the Stock at a price not exceeding Rs. 102 per Rs. 100 of Stock plus accrued interest exclusive of expenses or at a higher price with the consent of the Trustees, which consent is not to be unreasonably withheld, and such Stock can be re-issued. The nominal value of any Stock purchased by the Company otherwise than out of the Redemption Fund may, after cancellation of such Stock, be treated as a transfer to the Redemption Fund in any future year.

3. Additional Provisions : (a) The rights of Stockholders may be modified or compromised by a special resolution passed at a meeting of Stockholders in accordance with the Trust Deed, a quorum for this purpose being the holders present in person or by proxy of a clear majority in value of the total amount of the Stock then outstanding or, in the case of an adjourned meeting, those present and entitled to vote. On a show of hands each Stockholder present in person will have one vote and on a poll each Stockholder present in person or by proxy (who need not himself be a Stockholder) will have one vote for each Rs. 500 of Stock held.

(b) A register of the Stock will be kept at the Registered Office of the Company. It may be closed for any periods not exceeding forty-five days in any year and not exceeding thirty days at any one time.

(c) Stockholders will be entitled to their Stock free from equities or cross-claims by the Company against the original or any intermediate holder.

(d) The Stock will be transferable in amounts and multiples of Rs. 500.

PROSPECTUS

HISTORY AND BUSINESS :

The Company was incorporated as a public Company in Bombay on the 19th August, 1926 for the purpose of acquiring the undertaking and assets of the business in the Indian sub-continent previously carried on by Dunlop Rubber Co., Ltd., which is referred to below as "the English Company". The Company imported and distributed the products of the English Company up to the year 1936, when it established the first pneumatic tyre factory in India at Sahagunj, near Calcutta. At that time the registered office and head office were transferred from Bombay to Calcutta.

Since then the Company has progressively expanded both its volume of production and range of products. Its present business consists chiefly of the manufacture and sale of pneumatic tyres for bicycles, motorcycles, scooters, cars, trucks, buses, tractors, earthmoving vehicles, animal drawn vehicles, handcarts, barrows and aircraft; cushion tyres for trolleys; tyre repair materials and accessories; bicycle rims; latex foam cushioning ("Dunlopillo"); transmission and conveyor belting; fan and vee belts; braided hose.

The business is carried on in India at the Company's Head Office in Calcutta, factory at Sahagunj, selling branches at Calcutta, Madras, Bangalore, Ernakulam, Hyderabad, Bombay, Nagpur, Ahmedabad, Lucknow, New Delhi, Jullundur and Gauhati and a rubber purchasing branch at Cochin.

MANAGEMENT, STAFF AND TECHNICAL FACILITIES :

Of the Directors, Messrs. Luckham, Gillespie, Haksar, Jackson and Morris are in the whole-time employment of the Company and have had many years of service with it or with associated companies. A large number of experienced and highly qualified technicians and executives are also employed and continuity of management is assured.

The training of Indian employees for the higher technical and administrative posts has always been a feature of the Company's policy and many of the Indian staff have been sent to the United Kingdom for courses of instruction in the factories of associated companies. Approximately 6,000 staff and operatives are employed by the Company, of whom about 5,000 are located at Sahagunj factory. The new Ambattur factory initially will provide employment for 600 people.

The Company has always had the benefit of the valuable technical advice and assistance of the English Company which includes all the advantages derived from the research and development work in the Dunlop group. The present working arrangements between the two Companies are contained in an agreement dated 29th January, 1957 (referred to as item 3 under the heading "Contracts") which provides *inter alia* that the English Company will upon request make available to the Company all information, processes and inventions relative to the manufacture of goods made by the Company upon payment by the Company of the costs of communication of such information and a proportionate part of the costs incurred by the English Company in the acquisition, discovery and development of such information, processes and inventions.

DEVELOPMENT :

From an initial area of 94 acres in 1935, the Company's Sahagunj factory and residential estate now occupy 237 acres. Manufacturing capacity is now approximately seven times greater than that of the original 1936 installation and the following figures indicate the progressive and substantial growth of total sales turnover :—

		Rs.
1937	... ...	1,22,00,000
1947	... ...	6,14,00,000
1954	... ...	13,70,00,000
1955	... ...	15,09,00,000
1956	... ...	17,00,00,000
1957	... ...	19,97,00,000

The emphasis on industry in the Second Five-Year Plan and the development of mechanisation on the land are expected to create further increases in the demand for the Company's products. In particular the expanding use of road transport, tractor and earthmoving vehicles is causing a marked increase in the demand for rubber tyres, which as far as can be foreseen will continue to grow with the further expansion of India's economy.

The Company has always endeavoured to play a part commensurate with its position in the industry in meeting the requirements of the country. In furtherance of this progressive policy, licences were obtained in 1956 under the Industries (Development and Regulation) Act for (i) the establishment of a new industrial undertaking in the shape of a second factory for the manufacture of giant tyres, cycle tyres and repair materials and (ii) a substantial expansion of the existing factory at Sahagunj to provide additional capacity for various products, mainly tyres, cycle rims and repair materials. A site for the new factory was later selected at Ambattur, near Madras and work on this and also the Sahagunj expansion has reached an advanced stage. Production from both is expected by the beginning of 1959 and it is considered that these developments will give sufficient overall capacity to meet the demands for the Company's products for some time to come.

The Company has also on hand a considerable plant replacement and improvement programme at Sahagunj factory, where additions to the housing and welfare estate are also in progress.

FINANCE :

The total estimated cost of the expansion and replacement programme outlined above over the period 1956/60 was Rs. 4,67,00,000. To finance this capital expenditure the sum of Rs. 2,03,00,000 (the net proceeds) has already been raised by the issue in July, 1957 of 14,00,000 Ordinary Shares of Rs. 10 each at a premium of Rs. 5 and the net proceeds of the present issue of Debenture Stock are expected to amount to Rs. 95,00,000. The balance of the capital cost will be financed by retained profits and depreciation provisions, which already amount to Rs. 1,14,00,000 from 1956 and 1957 appropriations. Of the total cost of Rs. 4,67,00,000, expenditure of approximately Rs. 2,21,00,000 had already been incurred up to 31st May, 1958, leaving a balance of Rs. 2,46,00,000 to be expended by the end of 1960. Taking into account bank facilities, the Directors consider that the Company has and will have adequate working capital for its requirements at present and during the remaining period of the expansion and replacement programme.

The following report by the Auditors of the Company shows that at 31st December, 1957 the net assets at written-down values, excluding goodwill, patents and trademarks, amounted to Rs. 8,32,52,249 or more than four times the aggregate nominal amount of the existing Debenture Stock and the present issue. If to this figure are added the estimated net proceeds of the present issue, Rs. 95,00,000, the resulting total is Rs. 9,27,52,249.

The report by the Auditors also shows that at 31st December, 1957 the written-down value of the Fixed Assets amounted to Rs. 3,82,24,627 and that the capital expenditure incurred between 1st January and 31st May, 1958 amounted to Rs. 81,96,076. The resulting total representing Fixed Assets at 31st May, 1958 is Rs. 4,64,20,703 or more than twice the aggregate nominal amount of the existing Debenture Stock and the present issue. The total Fixed Assets are expected to increase to over Rs. 6 crores by the end of 1959. The Fixed Assets have been conservatively written-down, as indicated by the fact that the total depreciation provided amounts to Rs. 2,68,24,548 or 42% of the total cost of the assets, excluding Land. There has been no revaluation of any of the assets at any time in the history of the Company.

The report also shows that for the five years ended 31st December, 1957 the average annual net profits of the Company arrived at after charging all expenses, normal depreciation and all interest except interest on the existing Debenture Stock, but before charging taxes on income, was Rs. 1,22,88,681, equivalent to more than 9 times the aggregate annual interest charge of Rs. 13,29,575 on the existing Debenture Stock and the present issue.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—*Cont'd.*

AUDITORS' REPORT

The following is a copy of a Report which has been received from Messrs. Ford, Rhodes, Parks & Company, Chartered Accountants :—

Stephen House,
Dalhousie Square,
Calcutta 1,
18th August, 1958.

The Directors,
The Dunlop Rubber Company (India) Limited,
"Dunlop House",
57B, Free School Street, Calcutta.

Gentlemen,

We have examined the Accounts of The Dunlop Rubber Company (India) Limited, as audited by us for the five years ended 31st December, 1957, and report as follows :—

I. PROFITS :

The Profits of the Company arrived at on the basis set out below were :—

	Year ended 31st Dec. 1953.	*Year ended 31st Dec. 1954.*	*Year ended 31st Dec. 1955.*	*Year ended 31st Dec. 1956.*	*Year ended 31st Dec. 1957.*
	Rs.	Rs.	Rs.	Rs	Rs.
Sales	12,59,29,862	13,71,76,069	15,11,60,338	16,99,60,530	19,97,00,490
Miscellaneous Income	5,87,502	4,40,387	3,45,491	4,28,231	4,66,394
	12,65,17,364	13,76,16,456	15,15,05,829	17,03,88,761	20,01,66,884
Cost of Materials	7,41,79,283	8,06,84,541	9,11,28,653	10,72,13,547	12,18,97,627
Excise Duty	1,27,26,906	1,45,62,689	1,55,95,529	1,69,61,244	2,15,20,859
Salaries, Wages and Incidental Expenses ...	1,49,10,552	1,61,25,921	1,77,51,526	1,92,41,821	2,14,97,810
Expenses	1,19,84,193	1,29,35,596	1,44,56,490	1,30,23,124	1,51,89,899
Depreciation	17,76,884	19,45,801	22,78,275	23,94,568	27,68,551
	11,55,77,818	12,62,54,548	14,12,10,473	15,88,34,304	18,28,74,746
Net Profit before Taxation	1,09,39,546	1,13,61,908	1,02,95,356	1,15,54,457	1,72,92,138
	12,65,17,364	13,76,16,456	15,15,05,829	17,03,88,761	20,01,66,884
Net Profit before Taxation	1,09,39,546	1,13,61,908	1,02,95,356	1,15,54,457	1,72,92,138
Provision for Taxation	37,49,935	37,74,857	42,32,360	47,34,548	86,51,561
Net Profit after Taxation	71,89,611	75,87,051	60,62,996	68,19,909	86,40,577

The above profits have been arrived at before charging interest on the existing Debenture Stock and the depreciation that was provided at higher than normal rates and subsequently transferred to a Special Depreciation Reserve in 1955 and 1957.

II. DIVIDENDS :

Full Dividends have been paid on the 6% (tax free) Guaranteed Cumulative Preference Shares and on the 6% (taxable) Second Cumulative Preference Shares in respect of each of the five years ended 31st December, 1957. Dividends paid (tax free) on the Ordinary Shares in respect of such years were as follows :—

1953	...	15% on the Paid Up Ordinary Share Capital of Rs. 1,60,00,000		
1954	...	15%	—do—	—do—	—do—
1955	...	15%	—do—	—do—	—do—
1956	...	15%	—do—	—do—	—do—
1957 Interim	...	7½%	—do—	—do—	—do—
Final	...	8½% on the Paid Up Ordinary Share Capital of Rs. 3,00,00,000			

III. ASSETS AND LIABILITIES :

The Assets and Liabilities of the Company as at 31st December, 1957 based on the audited Balance Sheet as at that date were as follows :—

	Rs.	Rs.	Rs.
FIXED ASSETS—at cost	...	...	6,50,49,175

IV. FIXED CAPITAL EXPENDITURE :

We also report that we have verified that expenditure on Fixed Assets during the period 1st January, 1958 to 31st May, 1958 amounted to Rs. 81,96,076.

V. ACCOUNTS :

No audited accounts have been made up in respect of any period since 31st December, 1957.

Yours faithfully,
FORD, RHODES, PARKS & COMPANY,
Chartered Accountants.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—*Cont'd.*

STATUTORY AND GENERAL INFORMATION :

The main objects specified in the Company's Memorandum, apart from the taking over of the business of Dunlop Rubber Company, Limited in India referred to above, are :—

"To carry on all or any of the following businesses namely manufacturers of articles in India Rubber or other like gums, or the same in combination with any metallic or non-metallic substance, dealers, agents, factors and merchants in the same manufactures; and to sell, manufacture and deal in commodities of all kinds which can be conveniently dealt in or manufactured by the Company in connection with any of its objects, and to carry on any other business, whether manufacturing or otherwise, which can be conveniently carried on in connection with any of the Company's objects

To carry on the trade or business of General India Rubber, Gutta Percha, Asbestos, Waterproofing, Textile, Leather and Canvas Manufacturers or the combination of the same, and of articles to be manufactured from such commodities and to factor, sell, or otherwise deal with the same.

To buy and sell Raw Rubber, as factors, merchants, or otherwise, either on account of the Company, or any other company person, or firm."

No share or loan capital is under option or agreed to be put under option.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this prospectus as fully or partly paid up otherwise than in cash.

In July, 1957 the Company issued 14,00,000 Ordinary Shares of Rs. 10 at a premium of Rs. 5. The whole of this issue was underwritten by Messrs. Place, Siddons & Gough, Stockbrokers, 6 Lyons Range, Calcutta, to whom the Company paid the sum of Rs. 7,00,000 by way of underwriting commission at the rate of 50 naye paise per share. No officer of the Company was directly or indirectly interested in the said firm of Messrs. Place, Siddons & Gough. No other shares have been issued at a premium within the two years preceding the date of this prospectus nor are any shares presently intended to be issued at a premium. No other consideration for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company have been paid within the said two years, nor is any such consideration intended to be paid other than the underwriting commission on the present issue of Debenture Stock referred to under the heading "Underwriting"

No amount or benefit has been paid or given within the two years preceding the date of this prospectus or is intended to be paid or given to any promoter or officer of the Company save as remuneration for services as a managing director, deputy managing director, director or employee of the Company.

No director of the Company is directly or indirectly interested in any property acquired by the Company within two years of the date of this prospectus or in any property proposed to be acquired by it.

The qualification of a director fixed by the Company's Articles of Association is the holding of shares in the Company of the nominal value of Rs. 1,000.

The Articles of Association provide that unless otherwise determined by the Company in General Meeting each director other than a salaried official of the Company shall receive remuneration for his services at the rate of Rs. 2,000 per annum and in addition a sum of Rs. 300 in respect of each directors' meeting which he attends.

Subject to the provision of sections 267, 268, 269, 316 and 317 of the Act the Board may from time to time appoint one or more directors to be managing director, managing directors, deputy managing director or deputy managing directors. Subject to the provisions of sections 309, 310 and 311 of the Act a managing director or deputy managing director shall receive such remuneration as may from time to time be sanctioned by the Company.

The share capital of the Company consists of Rs. 5,00,00,000 divided into 43,00,000 Ordinary Shares of Rs 10 each, 30,000 Cumulative Preference Shares of Rs. 100 each and 40,000 Second Preference Shares of Rs. 100 each. The Cumulative Preference Shares confer the right to a fixed cumulative dividend at such rate as after deduction of Indian income-tax therefrom at the rate then current will leave a clear dividend at the rate of 6 per cent per annum and rank for dividend in priority to all other shares of the Company and are in a winding-up entitled to repayment of capital and arrears of dividend in priority to all other shares of the Company, but do not confer any further right to participate in profits or assets. The Second Cumulative Preference Shares confer the right to a fixed cumulative dividend at the rate of 6 per cent per annum but subject to deduction of Indian income-tax therefrom at the rate from time to time current and rank for dividend next after the Cumulative Preference Shares and in priority to the Ordinary Shares and are in a winding-up entitled to rank as regards repayment of capital and arrears of dividend next after the Cumulative Preference Shares and in priority to the Ordinary Shares but do not confer any further right to participate in profits or assets.

At any General Meeting of the Company on a show of hands every member present in person has one vote and upon a poll every member present in person or by proxy has ten votes for each Cumulative Preference Share, ten votes for each Second Preference Share and one vote for each Ordinary Share held by him, subject however to the following restrictions :—

(i) No member may exercise any voting rights either personally or by proxy in respect of any shares registered in his name on which any calls or other sums presently payable by him have not been paid.

(ii) The Cumulative Preference Shares and the Second Cumulative Preference Shares do not confer any voting rights unless the fixed dividend on such shares is in arrear for six calendar months or any resolution is proposed for reducing the capital of the Company or winding up the Company or directly affecting the interest of the holders of such shares as a class as regards dividend, return of capital or voting.

The Board are authorised to borrow and secure the payment of any sums of money for the purposes of the Company but they may not without the sanction of a General Meeting so borrow any sum of money which will make the amount borrowed by the Company (exclusive of temporary loans obtained from the Company's bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

The Articles of Association provide that every director, officer and auditor of the Company shall be indemnified out of the funds of the Company against all liability incurred by him in such office in defending proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application under section 663 of the Companies Act in which relief is granted to him by the Court.

The Trust Deed contains provisions to the following effect, among other provisions, for the indemnification of the Trustees and their relief from responsibility :—The Trustees shall (i) save as otherwise expressly provided have absolute and uncontrolled discretion as regards the exercise of all trusts, powers, authorities and discretions vested in them and in the absence of fraud shall not be responsible for any loss, costs, damages, expenses or inconveniences resulting from the exercise or non-exercise thereof; (ii) not be responsible for the moneys subscribed by applicants for the Stock or be bound to see to the application thereof; (iii) accept without inspection, enquiry or requisition such title as the Company may have to the mortgaged premises; provided nevertheless that nothing in any of the foregoing shall exempt the Trustees from or indemnify them against any liability for breach of trust where the Trustees fail to show the degree of care and diligence required of them having regard to the provisions of the Trust Deed nor any liability which by virtue of any rule of law would otherwise attach to them in respect of any negligence, default, breach of duty or breach of trust of which they may be guilty in relation to their duties.

The following capitalisations of reserves or profits of the Company have taken place :—

Bonus issue of 5,00,000 fully paid Ordinary Shares of Rs. 10 each in April, 1949.

Bonus issue of 6,00,000 fully paid Ordinary Shares of Rs. 10 each in April, 1951.

CONTRACTS :

The following Contracts (not being contracts entered into in the ordinary course of business) which are, or may be, material have been entered into within the last two years :

(1) 25th September, 1956, between the Governor of West Bengal and the Company for the construction of a drain and outfall on the foreshore of the river Hooghly.

(2) 28th September, 1956, between the Commissioners of Bansberia Municipality and the Company for the construction of a sewer under the Chinsura-Tribeni road.

(3) 29th January, 1957, between Dunlop Rubber Co., Ltd., England and the Company being the agreement referred to above.

(4) 20th March, 1957, between the Company and Martin Burn Ltd. for the construction of Operatives' Quarters at Sahaganj for Rs. 2,42,266.6.6.

(5) 8th June, 1957, between the Company and Place, Siddons & Gough being the agreement for underwriting referred to above.

(6) 26th July, 1957 between the Company and The Coromandel Engineering Co. (Private) Ltd. for the construction of a tyre factory for Rs. 31,26,906.72

(7) 11th January, 1958, between the Governor of Madras and the Company under the Land Acquisition Act, 1894, for the acquisition of lands at Ambattur, Madras, for the establishment of a tyre factory.

(8) Between the Company and the following Managing Director and Deputy Managing Directors, subject to three months' notice by either party in each case, entitling these Directors to the monthly salaries undernoted, together with such allowances and perquisites appropriate to their appointments as are determined by the Board:—John Luckham, Managing Director dated 15th July, 1958 Rs. 4,500; A. W. Gillespie, Deputy Managing Director, dated 26th September, 1956 Rs. 3,900; P. N. Haksar, Deputy Managing Director, dated 9th November, 1953 Rs. 3,200; F. G. W. Jackson Deputy Managing Director dated 24th October, 1957 Rs. 3,350; E. H. Morris, Deputy Managing Director, dated 25th March, 1958 Rs. 3,000

(9) Agreements for Underwriting, being the agreements referred to below :
(a) Letter dated 2nd September, 1958, from The Industrial Credit and Investment Corporation of India Ltd. making an offer to underwrite and the Company's acceptance thereto dated 4th September 1958 (b) Letter dated 2nd September 1958 from The Investment Corporation of India, Ltd., making an offer to underwrite and the Company's acceptance thereto dated 4th September, 1958. (c) Letter dated 2nd September, 1958, from the Life Insurance Corporation of India making an offer to underwrite and the Company's acceptance thereto dated 4th September, 1958.

(10) On various dates between 14th November, 1956 and 12th May, 1958, nine orders (subject to alteration) for plant, machinery, and electrical and building fittings and installations, with David Bridge & Co., Ltd., Dunlop Rim & Wheel Co., Ltd., Lightfoot Refrigeration Co., Ltd., F. H. Lloyd & Co., Ltd., Mather & Platt, Ltd., John Thompson (Wolverhampton), Ltd., and Tubewrights, Ltd. of an aggregate value of £396,678 : and one order for the supply of pipes and fittings with Stewarts & Lloyds of India (Private), Ltd., of an aggregate value of Rs 3,39,725

UNDERWRITING :

Underwriting Commission at the rate of 2% of the total amount of the Debenture Stock is payable to the Underwriters, The Industrial Credit and Investment Corporation of India, Limited, The Investment Corporation of India, Limited, and the Life Insurance Corporation of India, respectively, in accordance with the terms and agreement contained in letters dated 2nd September, 1958 from the said Underwriters and the Company's acceptance of each of them dated 4th September, 1958. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

BROKERAGE :

A brokerage at the rate of ½% will be paid on acceptances in respect of applications bearing the stamp of a recognised stockbroker or banker. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on such amount of the Stock as is taken up by them or has been allotted through them including the amount applied for by their sub-underwriters unless such applications bear the stamp of a recognised stockbroker or bank.

EXPENSES :

The expenses of the issue payable by the Company, inclusive of underwriting commission, brokerage, stamp duty, registration fees and legal and other charges are estimated at Rs. 5,00,000.

APPLICATION FOR DEBENTURE STOCK :

Application should be made on the accompanying Application Form and must be for multiples of Rs. 1,000 with a minimum of Rs. 1,000. All application forms, properly completed, must be lodged, together with the full amount, with the principal office of National Overseas & Grindlays Bank, Limited or State Bank of India in Calcutta, Bombay, Madras or Delhi. Payment should be made by cheque or draft in favour of "National Overseas & Grindlays Bank, Limited or Bearer" or "State Bank of India or Bearer" and crossed "Not negotiable". Any alteration from "order" to "bearer" must be signed by the drawer. A separate cheque must accompany each application form. Cheques or drafts drawn on National Overseas & Grindlays Bank, Limited or State Bank of India, or drawn on any bank in the same town as that in which the bank with which the application is lodged is situated, need include no allowance for collection charges. All other cheques or drafts must include bank charges at the rate of 25 nP. per Rs. 100.

Applications from persons resident outside India will not be considered.

If no allotment is made, the amount received on application will be returned in full. If allotment is made for a lesser amount of Stock than the amount applied for the balance of the application money received will be refunded to the applicant by post at his risk. Stock certificates will be ready on or after 1st November, 1958 at the registered office of the Company in exchange for Letters of Allotment. The Company will register transfers prior to 25th October, 1958 against Letters of Allotment accompanied by duly completed forms of transfer.

PAYMENT OF INTEREST :

Interest on Stock will be paid by cheques or warrants that may be collected at par through any branch in India of National Overseas & Grindlays Bank, Ltd.

INSPECTION :

Copies of the Memorandum and Articles of Association of the Company, the Trust Deed, the draft Supplement Trust Deed (subject to modification), the material contracts above referred to, the Report of the Auditors and their Statement of Adjustments and the audited Accounts of the Company for the last five financial years may be inspected at the registered office of the Company during usual business hours (Saturdays excepted) for a period of fourteen days from the date of publication of this prospectus or until the closing of the application list, whichever is earlier.

Messrs. Ford, Rhodes, Parks & Company have given and have not withdrawn their written consent to the issue of this prospectus with a copy of their Report included therein in the form and context in which it is included. A copy of such consent, together with a statement of the adjustments made by that firm in arriving at the profits and assets and liabilities shown in the Report and giving the reasons therefor, copies of the consents of the auditors, solicitors, bankers and brokers to the Company to act in those capacities and copies of the material contracts specified above have been attached to the copy of this prospectus which has been delivered to the Registrar of Companies for registration.

Copies of this prospectus and forms of application can be obtained from the principal offices of National Overseas & Grindlays Bank, Limited and State Bank of India in Calcutta, Bombay, Madras and Delhi, or from any of the Brokers or Underwriters specified above.

International Panorama of Progress

New caravans in old settings

Ancient and modern transportation, travelling along the same road, present a vivid contrast, and, at the same time, curiously appropriate contrast. This meeting of the past and present symbolizes the rapid advance in many parts of the world from slow, laborious methods of hauling goods and equipment to swift, up-to-date means of transport. Power once supplied by beasts of burden is steadily being supplanted by the more efficient power of petroleum. Caltex quality fuels, oils, and lubricants keep cars, trucks and tractors operating smoothly, speeding production, transportation, distribution—and bringing to the peoples of many nations a new prosperity, a new era of comfort and covenience. Caltex is participating in the present and planning for the future in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

THE INDIA CEMENTS LTD., MADRAS

EXPANSION PLANS BEING SUCCESSFULLY IMPLEMENTED

MR. SURYANARAYANA, CHAIRMAN, OPTIMISTIC ABOUT FUTURE

A NOTE of optimism about the future was struck by Mr. P. Suryanarayana, Chairman of The India Cements Limited, Madras, in his speech at the Twelfth Annual General Meeting of the Company held on Wednesday, 6th August 1958, at its Registered Office at 11-12 Second Line Beach, Madras-1. Referring to the Company's progress in implementing its plan for expansion, Mr. Suryanarayana said that the additional plant would go into production about September next year and the Vizag factory in 1960. He was confident that, given a steady policy, the Company would, with all its factories on the eastern seaboard of India, be in a good postion to establish an export trade in cement.

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"On behalf of the Board of Directors of your Company and also on my own behalf, I have great pleasure in welcoming you to this twelfth annual general meeting of your Company. The audited statement of accounts, together with the Directors' report, have been in your hands for sometime now, and, with your kind permission, I shall take them as read.

"It is needless for me to expatiate in detail on the working and the financial position of the Company. The figures given in the balance-sheet and the profit and loss account bear ample testimony to the sound and stable position of your Company. Your factory is functioning economically and efficiently. The production has been above the rated capacity. I have no doubt that you will agree with me that the results of working of the Company during the year 1957-58 are completely to your satisfaction, especially in view of the larger provisions that we have made for depreciation and wealth tax, though we did not have the advantages in price and freight which we had last year.

Increase in Retention Price

"You would have seen from the newspapers that the Government of India have, subsequent to the publication of your Directors' report, announced increases in the retention price of cement for various units based on the recommendations of the Tariff Commission. However, these recommendations have been given effect to only from 1st of July 1958 and not from 1st of January 1958. Till the end of June 1958, the retention price allowed to us was Rs. 54.50 per ton loose cement. From 1st of July 1958, it has been raised to Rs. 60.50 per ton. The resultant increase has no doubt given to the manufacturer a partial measure of relief.

Increase in Production

"In my speech at the last general body meeting, I mentioned to you that your Company had obtained a licence for the installation of an additional plant of 200,000 tons per year in furtherance of our programme for raising the output to 400,000 tons per annum. I am now happy to inform you that the Directors of your Company have been able to negotiate successfully and procure a plant of greater capacity than the one originally programmed for. The plant which we have now ordered is of the capacity of 750 tons, instead of, as originally planned, 600 tons per day. I am also glad to inform you that, though we have secured a bigger plant, it has been done without any additional foreign exchange. Credit for this entirely goes to the Managing Agents. When this plant goes into production, your factory would have an annual output of 500,000 tons per annum.

"The Government have also agreed to the installation of the bigger plant and the licences have been amended accordingly. The suppliers have also agreed to the terms of the deferred payments suggested by your Company with the approval of Government.

"Licences under T.C.M. Aid for electrical motors and other equipment have been obtained; orders have been placed with the suppliers and necessary letters of credit have been opened.

"The new machinery is expected to be shipped in the course of the next three months. The necessary lay-out drawings have been received, and the preliminaries connected with civil engineering work are also proceeding apace.

"Your Directors feel confident that the additional plant will go into production about September next year.

Factory at Vizag

"The preliminary work connected with the starting of the cement factory in Visakhapatnam is also progressing satisfactorily. Detailed survey and prospecting have been completed. The survey regarding the aerial transport of limestone from the Borra Cave Region has been carried out by Mr. H. F. H. Shields, O.B.E., who is a leading British ropeway specialist. It has now been established that the ropeway transport is a practical operation at economic costs. Import licences for both the cement making machinery, electrical motors and auxiliary equipment have all been obtained. It is expected that your Vizag factory will go into production in the year 1960.

Review of Cement Industry

"With the shift in emphasis from agriculture to industries in the second Five-year Plan and the realisation of the necessity of building up basic industries for furthering the economy of your country, the Government have accorded to the demands of the cement industry a high priority in spite of numerous difficulties of both the competing claims of other basic industries and also foreign exchange.

"The general progress of the cement industry in India can be held to be very satisfactory. In 1957, the Indian production of cement was 5.6 million tons, as against 4.9 million tons during 1956; and the installed capacity increased during the year 1957 to 6.63 million tons.

"Besides the 29 units already in operation, 54 schemes comprising 25 new units and 29 projects for expansion of the existing units have so far been approved by the Government of India. Although the total licences issued for the expansion of the existing units and for the installation of new plants have been to the order of 16.6 million tons, we anticipate that the effective production of cement by 1959 will only be of the order of about 9 million tons. Of these, four new units and 11 expansions of the existing units with a total capacity of 1.8 million tons are expected to be completed by the end of 1958-59. You will agree that this is a reasonably quick progress for the development of the cement industry in this country. Perhaps, it will not be out of place for me to inform you that the results of the expansion of a basic industry can be judged not merely by the increase in the output of this basic industry but by its effect on numerous other industries, not to speak of the tremendous employment potential afforded, for which the material of the basic industry is an essential prerequisite. In the case of cement, a whole range of nation-building, including irrigation, dams, factories, roads and essential housing will stand to benefit by the increased production of cement. Further, in the wake of an initial industrialisation, progress has to be appreciated not in terms of the percentage of increase over the production of previous years but in terms of the amount of leeway that we have to make up in industrialisation and increased standards of living for the people. Looked at in this way and in comparison with the production of cement in the industrially developed countries in the world, the cement industry in India should be considered to be in its infancy, and I have no doubt that this little child will grow from strength to strength and will grow into strong and sturdy manhood.

Immediate Prospects

"With the improvement in the domestic production of cement, the supply position has eased greatly with the result that it has been possible for Government to relax the control over distribution to a certain extent in the interests of both the consumer and the producer. One would, however, wish that the price to the consumer is reasonably reduced to ward off consumer resistance and also to pave the way for the greater offtake of cement, which will lead to a faster pace of development and better working economy to the industry, due to increased production.

"In the course of the next two years, the three steel plants in India will go into production. The parallel progress of the steel industry with the cement industry is a welcome sign for the immediate future of the country's economy. It will not be out of place if I mention here that the Government will be well advised to co-ordinate the distribution of cement and steel in such a way that both the commodities are made available simultaneously to the consumer in adequate quantities. The supply of one without the other very often leads to building operations being held up and occasionally leads to the wrong sale of the non-available commodity or to the wrong purchase of the available commodity, neither of which is good for proper progress.

Foreign Trade

"The future of the cement industry is linked up with the availability and retention of sound continued foreign markets. I need hardly emphasise how important it is to develop an export market for the industry to augment the much needed foreign exchange resources to carry out our national development programme. Fortunately for India, it has extensive foreign markets beyond the eastern seaboard and since foreign trade forms an indispensable part of the economic development of a country and no rapid industrialisation is possible without securing the necessary minimum of foreign exchange, the foreign trade policy in respect of export of cement should be framed and executed not by reference to occasional surpluses that may be available but rather as part of a deliberate State policy. It may be that this will involve occasionally the staggering of the supplies in the local market or subsidy by Government but this is a sacrifice which is worth making in the interests of preventing glut in the local markets. The control of cement used within India is a matter of national policy, and it is in our hands. Exports to other countries will have to suit their programmes. A steady stream of cement export should, therefore, form an indispensable aspect of industrial planning and trade. It is to be hoped that the Government will take up the question in all seriousness at the earliest opportunity. In this connection, I may mention to you that your two cement factories, one to be established at Visakhapatnam and your factory at Talaiyuthu, and other present and prospective units that may spring up in the eastern seaboard, are particularly suitable for the export of cement to foreign countries.

Employer-Employee Relation

"I am happy to inform you that the relations between the management and employees of your Company have been uniformly cordial. I may go so far as to say that it is one of the marked features of the history of your Company. In recent times, a great deal has been said of mutual co-operation, understanding and settlement of differences by mutual negotiation. Nevertheless, there has been a certain amount of labour unrest in the country. Considering the question from this background, the peaceful atmosphere prevailing in your Company is a matter, on which all of us can congratulate ourselves.

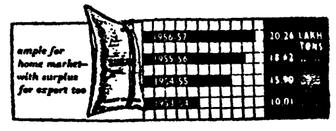
"Your Company has always been keen on providing educational facilities for the sons and daughters of the employees and their dependents. With this aim in mind, the management started firstly the elementary school and then the Sankar secondary school. Forms IV and V have been opened in the current year and free education is being imparted to the children and dependents of the employees. You will recall to your mind that I made a reference in my last general body meeting address, to the proposal for the starting of a Polytechnic at Talaiyuthu. I am happy to inform you that this has now become a *fait accompli*. The Government of India have approved the proposal for the starting of a Polytechnic and the opening ceremony of this institution has been performed by Sri K. Kamaraja Nadar, the Chief Minister, on the

(*Continued on page* 453)

Our country still needs substantial foreign exchange for successful completion of the Second Five Year Plan. In this time of stress the Sugar industry's achievements last year have been a welcome development. For the first time, large quantities of Indian sugar have been exported to China, Malaya, Singapore, Burma, Ceylon, Aden, Iran, Saudi Arabia, Sudan, East Africa, the United Kingdom, North Vietnam and other countries. Indian sugar has secured a place in the world market. Now the task is to maintain it permanently. Geographically, India is within easy reach of a number of sugar importing countries. In quality, too, Indian sugar compares favourably with sugar produced in other countries. What is needed, then, is greater co-operation between the consumers in the home-market, our industrialists and the Governments.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.



Indian WHITE sugar ...

vital to India's national economy

ECONOMICS OF POWER SUPPLY

SHOULD URBAN SECTOR SUBSIDISE RURAL AREAS?

By R. P. Aiyer

THE Indian agricultural scene is, as it has been in the past, plagued by the peasant having to face long stretches of inadequate diversity in farming operations. How best this near fatal weakness in the country's agricultural economy can be overcome continues to exercise the minds of all concerned. An obvious and generally accepted solution is that opportunities should be provided for the peasantry to engage itself in subsidiary occupations, leading to the development of a number of cottage or small-scale industries. Progress in this direction could be faster with the coming of electricity in rural areas.

One can well visualise the magic transformation which electricity could effect by changing a lifeless village into a lively one. This has led to the prescription of capsule remedies designed to solve the vexed problems incidental to rural electrification. Both the first and second Five-year Plans have given adequate importance for rural electrification and in doing so have underlined the need for subsidy. Nevertheless, there have been votaries who would not hesitate to penalise the industrial and urban consumers to make good the loss incidental to rural supplies. Such a solution has been suggested by Mr. A. D. Gorwala in his report on the Mysore State Administration (published in July 1958). In an all too brief a reference to electricity, Mr. Gorwala has commented:—

"Electricity in rural areas is used either for irrigation pumps or for lighting. Very little is devoted to small industries, so that the village really does not derive from rural electrification the benefit it should. The low rate for supply to rural areas ought not to lead to a fall in the income from electric supply as a whole. There is no reason why urban areas should not be charged a sufficiently high rate to make up for the concessionary rural rate, so as to give a reasonable return on the total capital invested."

Unlike other enthusiasts of rural electrification, who attach less importance to the financial viability of the power system in pursuing policies involving sociological considerations, Mr. Gorwala has conceded the need for "a reasonable return on the total capital invested." Only, in doing so, he has not hesitated to recommend the adoption of a pricing policy inimical to the urban areas.

Pricing Principles

This approach raises a number of issues of fundamental importance bearing on pricing policy by public utilities. And before one attempts a discussion of these issues, it would only be appropriate to make some general remarks on rate making.

The rate engineer of a power system should aim at sale proceeds which will enable the utility to operate profitably, and at the same time, render the consumer the best possible service. Unlike other businesses, rate making in a public utility is not an exact scientific procedure, but a skilful balancing of conflicting objectives, a curbing of tendencies towards technical complications, and an avoidance of undue yielding to the public urge for the simplicity prevailing in other commercial transactions. The results of such balancing would differ with the character of the service. These postulate that the successful builder of rate structures must primarily be a philosopher rather than a technician.

Although rates for electric supply service are, by and large, price tags, the special characteristics of the business necessitate difference in pricing methods. It would be an ideal situation if an electric power supply system could sell all its services at a simple uniform rate. But such a rate utopia is rarely possible. If an attempt were made to sell all service at one average price, the system would lose the business of those consumers who could obtain energy at a cheaper price from some other source. This would result in an increase in the rates for other consumers. A stable price structure should, therefore, be governed by a number of technical considerations—certainly divorced from sociological objectives—such as load requirements of the customer, characteristics of the service and cost of supply. It must not be forgotten that one important function of rate making, whether in licensed undertakings or power systems operated by statutory authorities, is to formulate a system of charges that will give as high a degree of revenue stability as possible. Revenue stability is of greater importance in a regulated business than in a competitive business which has no regulatory limitations on earnings in good times. In other words, the rate structure of a utility should be based on a philosophy which calls for the lowest *possible* prices consistent with customer requirements, quality service efficiently rendered, fair wages and a fair return. Again, the rate structure should enable the service concerned to be extensively used. It should be promotional, i.e., it should provide for lower prices for larger loads and for longer use of service. Other characteristics of a sound rate structure are that it should evaluate the factor of service and should meet the needs of the future.

Yardstick

While a sound pricing policy visualises differential in the rates based on the load characteristics of the consumer, one would certainly stray on to dangerous ground if political or sociological reasons are to influence decisively rate-making policy. A classic commentary as to how a nationalised industry (the State Electricity Boards constitute such form) should run was made in 1956 by the Herbert Committee on the United Kingdom electric supply industry when it emphasised that the industry should run as a commercial concern, as otherwise it was felt "it could be used as a device for implementing national policies and for transferring income from one section of the community to another without the burden of these policies being properly weighed in Parliament or by the Minister." If it is conceded, as it should be, that the pricing policies to be adopted by public utilities, especially the ones which are statutory corporations, should not tend to "transfer income from one section of the community to another," the propriety of the urban consumer of electricity being made to pay higher rates to make good the loss resulting from rural supplies is seriously questionable, because such extra levy is but a form of tax without the safeguard of the Legislature being seized of the problem.

Need for Subsidy

If the consumers in rural areas are to be charged the real value of the resources used in serving them, the burden may not be bearable. But the solution then should be that the general taxpayer should subsidise such rural supplies as part of State policy and not one section of the community alone. The reality in relation to rural electrification is that it can be supplied only at rates not justified by normal economic or commercial tests. Thus, by its very nature, rural electricity supply involves large-scale subsidy. How best this problem should be solved in the country has been the subject of discussion in power conferences and committees. For the first time, the need for "subsidy in one form or another" was accepted by the Second All-India Power Engineers Conference, held in January 1957, in Bangalore, the grant of such subsidy being subject to prior utilisation of all surplus revenues derived by the State or the State Electricity Boards from the operation of the power systems. A more realistic recommendation of the Conference was that the Departments of Industries and Commerce of the State Governments and the Central Government connected with development of cottage, small-scale and light industries should be requested to disperse the location of these industries into the rural areas so that, apart from securing other benefits, it may contribute towards development of load in rural areas. Rural electrification could then spread from an industrial base.

These recommendations are in conformity with the country's modest resources especially as we cannot aspire to aim at the standard of achievement in the U.S.A. The Rural Electrification Administration in the U.S. has all but solved the problem of rural electrification, thanks to unlimited finance at an interest rate as low as 2 per cent. and the assistance of co-operatives.

The significance of the modest recommendations of the Second All-India Power Engineers' Conference lies in the importance given to shifting industries to rural areas so that rural electrification could develop around such areas. After all, rural electrification does not mean merely the lighting of the village main street, or the village headman's house. To be fully beneficial, rural electrification in the proper sense postulates fuller utilisation of the power facilities so as to augment production in diverse ways, which naturally poses problems over line charges, equipment cost, safety and a host of other incidental issues.

The supply of electric power to rural communities has always been a subject of sentiment with all Governments, and Mr. Gorwala, while adopting the corrective *vis-a-vis* the need for the power system earning a reasonable return, has not been able to resist the temptation to suggest that one section of the consumer (urban) should buttress the other section (rural). Nevertheless, beyond the general remark that the "village really does not derive from rural electrification the benefit it should" no valid reason has been advanced to justify the Electricity Board jettisoning business standards—a policy which could only be justified in rare cases and in pursuance of a national mandate to sustain uneconomic development.

Commercial Concept

Summing up, in the working of nationalised undertakings the emphasis should be on commercial aspect and the operation of the undertaking on business lines. The enthusiast for public ownership may raise the poser, "How commercial can you get?" No better answer to this can be found than what the Taxation Enquiry Commission has vouchsafed. The Commission, while conceding that "public purpose rather than profit should be the guiding factor in the operation of a public undertaking," goes on to say that "every effort should be made to place Government industrial undertakings on a sound financial basis so that losses are avoided and a reasonable return is secured as far and as soon as possible." Such a dispensation certainly does not admit of a section of the consumer being penalised for the benefit of the other.

The enthusiasts for rural electrification might well argue that the phrase "as far as practicable" in Section 59 of the Electricity (Supply) Act (which lays down the general principles governing the State Electricity Board's finance) cannot be interpreted in strict relation to profit or loss, as there comes a point at which commercial concept and social responsibility could not be reconciled. There can be no two opinions that in matters concerning social conscience and social responsibility, financial reckoning should not be projected so far as to interfere with social development. At the same time, what will bear repetition is that a commercial body should not be saddled with a social responsibility. Rural electrification —particularly in the Indian context—is a social problem. It is more appropriate that this service should be subsidised by the general taxpayer—as part of his duty towards his less fortunate brethren—than that one section of the electricity consumer should be called upon to shoulder the entire burden.

RURAL ELECTRIFICATION

A total number of 12,930 villages will be supplied with electricity during the period of the second Plan. This information was given by the Union Deputy Minister of Irrigation and Power, Mr. Jaisukhlal Hathi, in the Lok Sabha. By 31st July 1958, electricity had been made available to 5,737 villages, so that the number of villages which would receive power in the rest of the Plan period is 7,193. Under the scheme, the number of villages which will receive electricity in 1958-59 is 2,384. The State-wise distribution of villages to be supplied with electricity in the second Plan period is:

Assam 29; Bihar 1,285; Bombay 700; Kerala 1,344; Madras 5,000; Madhya Pradesh 329; Mysore 700; Orissa 223; Punjab 2,100; Rajasthan 113; U.P. 235 and Centrally Administered Areas 872.

Methods of reducing the cost of electricity produced from nuclear reactors by using improved fuel elements will be demonstrated by the United Kingdom Atomic Energy Authority at the forthcoming Industrial Fuel Efficiency Exhibition, in London, scheduled to be held from 24th September to 3rd October. If fuel can be made to achieve longer burn-up and higher temperatures of operation, the reactors' efficiency will be greater. Examples of new types of fuel element will be on show and their expected effect on reactor performance outlined. Also on display will be models of D.M.T.R. (Dounreay Materials Testing Reactor) and of Z.E.T.A. (Zero-Energy Thermo-nuclear Assembly), the apparatus at Harwell in which temperatures of up to 5,000,000° C. have been obtained and held for appreciable periods.

NEW PRODUCTS AND PROCESSES

New Car Radios

AN electrical engineering equipment factory of the Netherlands has recently put on the market two new types of car radios for 6 and 12 volts. Since the electron tubes have been partly replaced by transistors no vibrator or other converter is required and this improves reliability. The use of special low-voltage tubes eliminates the necessity of high voltages. The sets are fitted with an improved push-button system with five push buttons and are suitable for two wave bands, namely, medium wave (186-585 metres) and long wave (1150-2000 metres). The 6-volt set has five tubes and two transistors, and the 12-volt set five tubes and one transistor. An adapter enables the radio to be connected to the chassis by either the positive or the negative pole. In order to facilitate adaptation to different car models these sets are supplied without assembly or anti-interference equipment, this being provided in a separate package for each type of car. For a number of cars there are special assembly packages and a universal assembly package for other types of car. The set itself can be provided with either a small or a large station dial, dependent on the space available on the dashboard.

New Textile Fibre

A new type of polyester fibre, called Dacron Type 64, developed for use in winter as well as lightweight summer apparel, has been announced in the U.S. The new fibre, decribed as more versatile than Dacron Type 54, an earlier fibre used in lightweight clothing, is said to show increased resistance to pilling and greater potential for a wider range of colours, while being equally tailorable, crease-resistant and durable. Now being made available in limited quantities in three denier staple or tow at $1.51 a pound. 10 cents more than Type 54, the new fibre can be blended with wool or rayon. It is said to make possible more loosely constructed fabric types such as gaberdines, sharkskins, bedford cords, basket weaves and flannels. The first men's suits and slacks to be made of the new Dacron are scheduled to go on sale in the Fall of 1959, and its use is expected to be expanded to women's and children's lines.

A New Microfilm Reader

One of the most pressing needs at the moment in the field of micro-recording is for an inexpensive microfilm reader which will also scan microfiche. This need is, it is claimed, now met by the V.C. Lexicon Reader manufactured by Micro Methods Limited of East Ardsley, Yorkshire. Costing only £44 it will read microfiche up to a maximum size of 9 cm. wide and can be fitted with a film carrier to take 100 feet of full-size 35 mm. unperforated microfilm. It is a compact machine which takes up when not in use a volume of only 15"x10"x11". In order to secure the advantage of complete portability, the weight has been kept down to 25 lbs. The film carrier for microfilm scanning can be removed and re-fitted very quickly and easily, which facilitates film threading. Transport of the film across the gate is effected by a handle mounted on the carrier, and the image remains in focus whether the film is moving or not. A tensioning arrangement eliminates the need for pressure plates and thus prevents accidental scratching.

Lacing up Cracked Iron Casting

A system of repairing cracked iron castings by "stitching" or "lacing" the fractures has been carried out in the United Kingdom for some years by a Derbyshire firm, which is now seeking to expand its activities to other countries. Castings which have been cracked or completely shattered can be successfully repaired by this method, which requires no heating and no re-machining. A further advantage is that the repairs can be done on the site with a minimum of dismantling. Because of the speed with which repairs can be completed, losses due to disruption of production are greatly reduced, says the firm. The method has been used with success in repairing heavy slag ladles used in the iron and steel industry, and repairs are continuously being carried out by the firm on such equipment as ships' crankcases, cylinder heads and linings, capstans and auxiliaries, crane frames, power presses, and shearing machines.

Building Cheap Pavements

A method for producing cheap pavements has been developed in South Africa. The operation of the process depends on the use of earth and concrete. The pavements produced by the process are said to have shown excellent wear resistance in long-term trials and are said to cost considerably less to make than those consisting either of macadam alone or those consisting partly of macadam and partly of grass borders. The material used consists of a quantity of dry mixed soil combined with cement. The successful operation of the process depends on the removal of large stones and clinker from the soil, which is then combined with the cement in the proportion of ten parts of soil to one part of cement. The cost of the pavements made in this way is said to be about 4s. 6d. a square yard.

Plastic Tilting Door

In co-operation with the Plastics Research Institute, a Netherlands firm has developed a new tilting door. This door is made of a honeycomb of impregnated hard paper coated with a polyester glass fibre sheet. The use of these materials reduces the weight to one-fifth of that of a steel door, so that light mechanism is sufficient and little force is needed for operation. The use of plastic materials has the further advantages that the doors need not be painted and do not warp, and there is no question of corrosion. Maintenance is thus reduced to a minimum.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

MR. K. A. P. VISWANATHAM'S SPEECH AT ANNUAL GENERAL MEETING

THE Eighteenth Annual General Body Meeting of the South Madras Electric Supply Corporation, Limited, was held at Tennur, Tiruchirapalli, on 27th August 1958. The following are the relevant extracts from the speech of the Vice-Chairman, Mr. K. A. P. Viswanatham, who addressed the meeting in the absence of Mr. S. Vaidyanatha Iyer, Chairman:

"The Corporation has kept up the usual progress in their expansion schemes and, as will be observed from the report, we have invested about Rs. 16 lakhs in capital expenditure and have added 40 villages this year, making up in all 556 villages electrified. House service connections now number nearly 46,000. There are nearly 2,000 power service connections and more than 6,000 acres of land are irrigated by nearly 2,000 pump sets installed in the villages.

"We were able to build up a fairly good stock of stores to the extent of Rs. 18 lakhs, particularly of poles, transformers and cables at advantageous prices when import policies were liberal. With these stores stocks, supplemented by such purchases as are necessary, we expect to keep up the usual annual programme of about Rs. 15 lakhs of works.

"I also understand that the State Electricity Board, in co-ordination with the State Government and the Planning Commission of the Government of India, are seized of the problems of finance of licensees and would come to our rescue shortly. You may naturally ask me why, in the face of the power restrictions that are imposed on supplies and the serious situation that arises annually during summer months almost involving complete shut-downs of supply, we should go on with expansion schemes. I would mention that this is a statutory duty cast on us as licensees, and we have by ourselves no right of refusing to expand. Further, it is in the interests of shareholders to maintain a steady pace of expansion so that distributable profits under the Supply Act may be kept up. In fact, this year, too, power restrictions were lifted in July, as Pykara storages got filled up, and we are assured that, by end of September, Periar will go into operation and thus ensure a satisfactory year.

"As mentioned in the Directors' report, this year's accounts reflect the repercussions of the revisions in the Electricity Supply Act. While the return on the capital base has been increased to 5½ per cent. (that is, 2 per cent. over the Reserve Bank rate of 3½ per cent. ruling on 1st April 1957), the capital base itself has been considerably reduced by the withdrawing from the base of consumer security deposits. The recommended dividends of 8¾ per cent. on ordinaries has been possible with the carry forward balances of last year and a withdrawal of Rs. 9,571 from the tariff and dividend control reserve built up as provided for in the Supply Act.

"We expect that we will be able to keep up dividends at about this level in future years, as the adjustments made this year in the capital base fully reflect the requirements of the Supply Act.

"Our licence is to expire on 12th January 1962 and, if the Electricity Board intends to acquire the Company, they should give us notice by January 1960. There is, however, the Acquisition Act which empowers the Madras Government to acquire the licence any time by giving us four months' notice. My feeling, however, is that the Government may have no intention of applying the Act; nor is the Board likely to exercise their right of purchase, obviously for the reason that the Corporation has been rendering efficient and signal service to the public.

"In this context, I will be failing in my duty if I do not pay my sincere tribute to Messrs. Seshasayee Brothers Private Ltd., and to Mr. V. Seshasayee, in particular, for their devoted service in the stewardship of this Company. They have put this Company on the electrical map of India and we and our engineers are held in high regard throughout the country. Mr. Seshasayee is one of the very few persons who have been honoured with the Companionship of the Institution of Engineers (Great Britain) for signal services to electrical industry. Mr. V. Seshasayee, the Managing Director of the Managing Agents is also not present at today's meeting under Doctor's advice. He is, however, giving full attention and guidance to the Company's affairs and desires me to convey to you his sincere greetings and good wishes. I am sure you are all one with me in wishing Mr. V. Seshasayee the best of health.

"Your Directors, Mr. K. Chinnaswami Iyer and Mr. T. S. Balasubramania Iyer, in respect of whom a shareholder had given notice for age exemption, have expressed their desire to retire, as they feel that the provisions relating to age exemptions, should be applied only in exceptional cases. I greatly appreciate their point of view. The Board has accepted their resignations at today's meeting and have recorded their grateful appreciation of their services to the Company in these many years of association with us.

"I would invite your particular attention to the additional business before this meeting in the form of the various special resolutions tabled for your consideration. On the resolutions relating to the amendments of the Articles, no comments are necessary from me with regard to those relating to the stock exchange requirements.

"As regards the restrictions, the Company have recommended on the transfer of shares by seeking your approval to refuse transfers of holdings less than 30 shares to non-members; the object is mainly to prevent disintegration which has its evils. The interests of the Company and the shareholders are best served by the prevention of such disintegration. I trust you will agree with me and the Directors and pass the resolution accordingly. You may rest assured that this discretion will not be exercised arbitrarily.

"Mr. H. K. Ramaswami who has been associated with this Company for the past 14 years as Deputy Chief Engineer has joined the Board of Seshasayee Brothers Private Limited, but, as hitherto, as a Director of Seshasayee Brothers (Private) Ltd., he will be primarily associated with the administration of the Corporation on behalf of the Managing Agents. On behalf of you all and on my own behalf, I wish him all the best.

"Now a word about staff and industrial relations. It will be recalled that we had entered into an agreement on 15th April 1957 with the only union then in existence embracing various points including grievance procedure. That agreement is to ensure for a period of three years, that is, till 31st March 1960. While the said agreement is in force, the management was informed of the formation of another union which has put forward demands which amount to a violation of the agreement. The management had to turn down these demands which had led to some of them being referred to adjudication by the Industrial Tribunal. As the agreement must continue to govern the mutual relationship till 1960 on all such matters, the management had to resort to the High Court on the question as to the validity of the reference for adjudication. Our writ petition has been admitted and interim stay of further proceeding before the Tribunal has been granted.

"I must take this opportunity to emphasise, if necessary, the need for statutory control against existence of rival trade unions in a unit in an industry. The Government and the powers-that-be have often declared in the Press and on platform that they are in favour of one union for one industry. It is desirable that declaration of such a policy must take a more concrete shape as early as possible.

"The emoluments paid by this Company by way of salaries, dearness allowance and other benefits and amenities to the staff and labour compare favourably with those obtaining in other units of this industry. The Directors will always be happy to help the employees realise their ambitions consistent with their responsibility to the shareholders and the consumers.

"I now move that the Directors' Report and Audited balance-sheet as at 31st March 1958 and the profit and loss account for the year ended 31st March 1958 be approved and adopted."

The above extract of the speech does not purport to be the report of the proceedings of the eighteenth annual general meeting of the Company held on 27th August 1958.

COMPUTATION OF BONUS

GUIDANCE PROVIDED BY JUDICIAL DECISIONS

DESPITE the fact that principles governing the determination and payment of bonus are now fairly well settled, bonus disputes continue to predominate among recent industrial disputes. But the disputes centre not so much on fundamental principles, for these have been laid down by the Supreme Court in some well-known cases such as the Muir Mills' case, as on their detailed application to individual cases. When broad principles are sought to be applied to specific instances, various questions of details naturally arise. Between 1950 and 1956, the Labour Appellate Tribunal of India had, in the course of a series of learned judgments, made many observations which give a measure of guidance in regard to these details. Collectively, they form a set of useful guiding principles for company management in dealing with the question of bonus to workers. The Indian Chamber of Commerce, Calcutta, deserves to be complimented for having undertaken a careful compilation of the main points that emerge out of these rulings and presented them in the form of a brochure. Among the topics dealt with in the brochure are the nature of bonus, conditions to be satisfied before bonus demand could be justified, how profits are to be computed, what prior charges are to be met before bonus is determined, how bonus is to be allocated between workers and who are to be excluded. Some rulings of the Appellate Tribunal, bearing on certain general points relating to the question of bonus, are also included. Almost every point made is based on some ruling or other of the Labour Appellate Tribunal or the Supreme Court.

Various judicial decisions have more or less clearly defined the nature of bonus. Bonus, it has been ruled, is a cash incentive to greater efficiency and production where an industrial undertaking has the capacity to pay a living wage and is so stabilised that its capacity to pay living wages may be counted upon continuously. But where the undertaking has not that capacity, or its capacity varies or is expected to vary from year to year so that it cannot afford to pay living wages, bonus is to be looked upon as a temporary satisfaction wholly or in part, of the needs of the employees; it is not an *ex-gratia* payment in such cases.

Demand for Bonus

A demand for bonus will not be justified where the wages paid are such as to satisfy the living standards of the employees. The demand for bonus should be made within a reasonable time after the close of the year in respect of which the demand is put forward. If during a year in respect of which bonus is claimed, the undertaking has made no trading profits, no question of bonus should arise. And for this purpose, trading results of the particular year alone must be considered. Losses of previous years, and unabsorbed depreciation, cannot be set off in entirety against the trading profits of the particular year, but a reasonable part thereof may be set off. When dealing with bonus questions, settled accounts relating to previous years cannot be reopened. *Puja* bonus (in West Bengal) is payable irrespective of the undertaking's profits during the year in question. In other words, bonus is payable even if there is a loss. Similarly, where there is an agreement, express or implied, or long usage to pay bonus, then also bonus is payable whether the undertaking has made profits or not. It has been held that a period of seven years is not long enough to establish that there has been long usage to pay bonus.

The amount out of which bonus is to be given should relate to the employees' efforts. Any items of income, to the earning of which the employees had not contributed, should be let out of account in computing profits for the purpose of bonus. In order to entitle them for bonus workmen should contribute to earning profits by helping production and should not do anything which contributes to loss or a fall in production.

Questions of bonus, it has been held, may be dealt with industry-wise, or unit-wise. Where it is considered industry-wise, then the capacity of the industry as a whole would be considered and not the average capacity of the average undertaking.

Where a concern comprises a head office and branches, or has several undertakings under the same management or comprises several departments under a single unit, the question arises as to whether the profits of the concern as a whole should be taken into account for determining the bonus payable, or whether each department, branch, or other unit of the undertaking may claim to be considered on the results of its working alone. In cases like this it has been laid down that the matter should be viewed from the following angles: whether the business is done as a single undertaking, whether a common profit and loss account is maintained and whether there is centralised direction of the policy to be followed in respect of sales, purchases, capital expenditure, etc. In short, the question to be decided will be whether there is a nexus of integration so as to make the unit an integral part of the concern as a whole.

Computation

In computing profits, some items may be deducted. These include managing agency commission, as allowed in the managing agency agreement, provided the same is in accordance with the law, compensation paid to a managing agent where his services are terminated, commission paid to directors where it is a contractual obligation, provided it is not unduly large, expenditure in business litigation, entertainment expenses, leave salaries and leave passages, commission to executives, bad debts written off where the reserve for bad debts is small, wages paid during the year where the same represents increased wages awarded in respect of any previous years and bonus amounts paid voluntarily by the undertaking. Where the bonus payable to officers is so large as to adversely affect the residuary surplus for workmen's bonus, the bonus to officers will not be allowed to be deducted. A previous year's bonus paid during the relevant year cannot be deducted. Charitable donations, where the undertaking is not a charitable institution, will not be allowed to be deducted.

Certain of the items of income that should be excluded in computing the profits for purposes of bonus are profits by sale of capital assets, profits by sale of raw materials where the sale is made on account of the price being favourable, profits arising from fortuitous circumstances, interest on investments, profits derived from the sale of investments, rebate of income-tax received during the year in respect of past years, etc.

Some further deductions, however, have to be made from the profits arrived at in the aforesaid manner. Thus, an estimated amount in respect of income-tax payable on the year's profits should be deducted; the income-tax should be calculated on the basis of the amount the undertaking would have to pay on the trading results of the year. Again, depreciation should be allowed according to the income-tax rules irrespective of what the company has set apart in its accounts, that is to say, even where the amount actually provided by the undertaking in its accounts is less than what is allowed by the income-tax rules. Provision for arrears of depreciation and of dividends on preference shares may be gradually made, but not entirely in one year. Other deductions permissible are: (1) an estimated amount to be carried to reserve for rehabilitation of plant and machinery; (2) provision for return on paid-up capital; and (3) provision for a return on reserves and other funds employed as capital.

After the profits have been ascertained and the prior charges have been deducted therefrom, it is not the entire balance which remains that should be distributed as bonus. A portion should be carried over and only the balance should be distributed. But there is no ruling as to how much should be carried over. One of the factors to be taken into account in this connection is that the bonus should not be so excessive as to create fresh problems in the vicinity or upset emoluments all round or create industrial discontent. Even where there is a very large surplus, the maximum bonus to workers should not exceed four to five months' basic wages or a little more.

What the employees used to receive by way of bonus in the past is, however, not a factor to be taken into account in determining the quantum of bonus, nor should the bonus be linked to dividends paid to the shareholders in the particular year.

After the total amount available for distribution as bonus has been arrived at, the question arises as to how this should be allocated as between the various workers. For this purpose, the length of service put in by each workman during the year to which the bonus relates is the determining factor. The amount of bonus payable to each worker should be calculated on the basis of the basic wages earned by him during the year in respect of the profits out of which the bonus is paid. Basic wages paid to the worker for earned leave and paid holidays should be included for this purpose while dearness allowance, overtime pay, etc., should be left out of account. But where the dearness allowance far exceeds the basic wages, bonus may be based on the consolidated wages. Workmen who were in service during the whole or a part of the year to which the profits relate, but who were discharged prior to the actual declaration of bonus, should be paid bonus in proportion to the period of their service in the year of working to which the profits relate.

Where, however, the contract of employment expressly provides that the employee will not be entitled to bonus, he will not be entitled to it. Workmen carrying on activity which is not a normal activity of the company will not be entitled to a share in the bonus declared. Employees dismissed for misconduct will not also be entitled for bonus in respect of the years during which they were dismissed. It is permissible to impose a condition that workers, who had not put in a certain minimum period of service, will not be entitled to bonus.

The formula relating to bonus laid down by the Full Bench of the Labour Appellate Tribunal in the Bombay Millowners' case is to be applied whenever a question of bonus arises, whether it be a manufacturing or a trading concern, and also whether it be to workmen or to clerical staff. But in the case of any company which is only a distributing company, and is not a producing concern, and is doing business on a global scale, the Full Bench formula will not apply.

U.K. RESTRICTS IMPORT OF RUSSIAN TIN

MOVE TO SAFEGUARD PRICE STABILITY

THE Government of the U.K. has, in a bold bid to placate the cause of the International Tin Agreement, imposed severe restrictions on the import of Soviet tin into the country. Tin originating in or consigned from the U.S.S.R. has been limited to a quarterly quota of 750 tons with effect from the 30th August. Accordingly, imports of unwrought tin and tin alloys from the Sino-Soviet bloc have been brought under a system of individual licensing, instead of covering it under the Open General Licence, as has been the case hitherto. The withdrawal of open licence treatment from the Sino-Soviet bloc countries is claimed to be a precautionary measure designed mainly to prevent possible evasion of import restriction on Soviet tin. It should be noted that, although Soviet imports of tin have been cut to a specific figure, no definite quota has been fixed for those from the other countries of the bloc; they will be decided on the merits of individual cases.

These steps taken by the U.K. Government are expected to go a long way towards stabilising the price of tin in world markets. Besides, it will give a fresh lease of life to the International Tin Agreement which, ever since its inception in 1956, has faced strange odds, what with the U.S. recession and the indiscriminate disposal of tin from the U.S.S.R., a country which has consistently refused to become a member of the Agreement. The Soviet exports of tin to the free world rose from 450 tons in 1956 to about 9,000 tons in 1957 and are currently running at double the rate. Above all, there are reports of an incipient recession at present in Europe; it is fast becoming a veritable nightmare for the primary producing countries which account for about 90 per cent. of the aggregate world exports of tin.

Others Follow Suit

In the light of these trends in the tin trade, the action taken by the U.K., one of the two leading countries purchasing Soviet tin, is to be greatly welcomed. The Netherlands, the other major importer of tin, it must be noted, has followed suit. Dutch imports of Russian tin are to be cut by 40 per cent. of the last 12 months' total of about 1,510 tons, as against 790 tons in 1956-57. In other words, the Russian imports of tin will be restricted to a maximum of about 893 tons a year. The present restriction will be in force for three months. Australia, in its turn, has agreed to safeguard the interests of Malayan tin against undercutting by Soviet Russia. It is gratifying to note that Australia refused to accept cheap tin offered to it recently. The trade agreement signed between Malaya and Australia guarantees the free entry of Malayan tin into Australia. It is also learnt that the Australian Government will impose a duty on cheap tin if asked to do so by Malaya. These measures, it cannot be gainsaid, are bound to give some stability to tin in the world market.

The immediate effect of these measures has been encouraging. The price of tin, which has been knocking against the International Tin Council's support level of £730 per ton for a long time, has risen to about £738 a ton in the London Metal Exchange following the decision of the Government to curtail Soviet imports. Malaya has also welcomed those moves, the price of its tin having shown signs of marked recovery. Incidentally, Malaya has a greater stake in the shifting fortunes of tin; for it is the major exporter of this commodity; and a slump in its price will automatically lead to serious stresses and strains in its economy. Out of the aggregate world production (excluding Russia and China) for 1958 estimated to be about 104,000 tons, Malaya accounts for 93,000 tons. Be that as it may, the overall picture of tin in the world markets does not warrant any gloomy predictions. In view of the estimated level of consumption of tin at about 134,000 tons in 1958, which falls short of (estimated) production by 30,000 tons (excluding the Soviet bloc) it might be hoped that there is a fair chance for restoring stability to tin prices.

Tin prices have for long been subjected to wide swings causing considerable concern to the producing countries. It may be recalled that tin, though both ore and metal production were substantially lower in the first three quarters of 1957 than in the corresponding period in 1956 and although consumption continued its previous expansion so that the gap between them was narrowed significantly, the market weakened slowly through the year and by the last quarter prices were from 6 to 10 per cent. below the 1956 average. Among the underlying causes of this were the withdrawal of the United States Government as a major buyer, its stockpiling programme having been completed and its Longhorn smelter closed, the announcement of tin releases by the British Board of Trade and the Canadian Government from their respective stockpiles and the possibility of substantial amounts of metal being made available by the Soviet Union. The decision of the International Tin Council in March 1957 to raise the minimum price rallied the market only temporarily and though the Manager of the Buffer Stock was a frequent buyer during the year, the price on the London Metals Market sagged close to the established floor. In October 1957 the International Tin Council raised its estimate of the year's surplus from 5,000-6,000 tons to 12,500 tons, and stocks of metal and concentrates in the United States, United Kingdom, Malaya, Belgium and Indonesia rose by about 6 per cent. during the first eight months of 1957.

Soviet Exports

Cheap Soviet exports has aggravated the instability of tin in world markets. Its exports of tin in 1957 aggregated about 17,000 tons. To take the exports of Soviet tin to the U.K., in particular, they were of the order of 2,090 tons in the second quarter of the current year, which represented almost twice the quantity imported in the first quarter. The figure compares with 629 tons in the second quarter of last year and 316 tons during the whole of 1956. While there are no indications as to the level of Soviet exports of tin in future, it may be presumed that the sustained increase in production of tin in the country for the last ten years or so, makes it possible to procure a progressively increasing rate of exportable surplus. In this context, it may be mentioned that the International Tin Council, following complaints from tin-producing countries like Malaya, Bolivia, Indonesia, the Belgian Congo, Thailand and Nigeria, approached the U.S.S.R. to join the Council; but in vain. Although it has not given any undertaking to bring down the exports of tin, it has lately agreed to send an observer to the Tin Council. The Council no doubt, was hard put to it to stabilise the price of tin. It has recently reduced the aggregate quarterly quota of the member-countries from 23,000 tons to 20,000 tons during the three months ending December 1958. It may be recalled that since 1957, producer-members of the International Tin Agreement have been restricting their exports to a rate of about 60 per cent. of their previous level. It has now been agreed that these countries will lower their exports by 50 per cent. of the pre-restriction level during the fourth quarter of the current year. Needless to say that the lack of co-operation from the U.S.S.R. will only make the position of tin in the world markets worse.

Thus, there is no doubt that the U.K.'s action alone is not likely to bring about any perceptible recovery unless it is supplemented by restrictive trade policies by other major importers of Soviet tin. No doubt, the Netherlands and Australia have already come forward with measures designed to counteract unhealthy competition from the U.S.S.R. and to bolster up the Tin Council. Japan and Federal Germany, neither of which is a member of the Council, may in turn, be cited as potential markets for Soviet tin. If, however, these countries do not choose to boost up their imports of tin, there is no reason why the lead given by the U.K. should not restore the tin price at a somewhat stable level. Nevertheless, the fact remains that despite the optimistic estimates of rising levels of world demand, there is hardly any sign hitherto of a genuine upturn in buying. What is more, the Buffer Stock Manager is said to have accumulated stocks amounting to well over 25,000 tons awaiting disposal at a time when the price will rise up to £780 a ton.

HINDUSTAN INSECTICIDES

Despite heavy odds, the Hindustan Insecticides (Private) Ltd., Delhi, during the short span of about three years of its existence, has come to hold its own. Set up in 1955 with an authorised capital of Rs. 1 crore and subscribed capital of Rs. 62 lakhs, consisting of 6,200 shares of Rs. 1,000 each by the Government of India with the assistance of the World Health Organisation (W.H.O.) and the United Nations' International Children's Emergency Fund (U.N.I.C.E.F.), the Company has a plant with a capacity to manufacture 700 tons of DDT. The production was handicapped to a certain extent in the initial stages, owing to some technical difficulties and bad weather conditions. The production of DDT in the year 1955 was no more than 172 tons. The unit, however, seems to have turned the corner well in time. The schemes for doubling the capacity of the plant are now under way. Considering the deficiencies that existed in the original plant, these designs are so drawn up, we are told, as to provide for substantial reserve capacity in the expanded unit to ensure a sustained annual production of 1,400 tons of technical DDT and 2,800 tons of formulated DDT.

The third annual report (1956-57) of the Hindustan Insecticides Private Ltd. reveals that the Company has made considerable progress. During the year under review, while there was substantial increase in the production of technical DDT, the output of formulated DDT could not keep pace with it. To quote the report:

"A total of 517.75 tons of technical DDT was produced during the year. Steady progress in production of technical DDT was maintained. Starting with 41.9 tons in April 1956, the production increased to 58.5 tons in March 1957 and the target reached. Two serious breakdowns of condensers in the MCB section in the months of November 1956 and January 1957 caused a drop in production during those months. The condensers broke down one after the other apparently due to the corrosion to which they were subjected in the very early stages of plant start-up. Position in the formulation section has, however, not been as encouraging. Although the production substantially increased over the previous year, it was far from the designed targets. The difficulties of grinding DDT in the summer months under the prevailing high temperature defied all efforts to resolve."

The U.N.I.C.E.F. has come forward with a generous offer of $275,000 in the shape of plant and machinery for the expansion schemes envisaged during the year.

The financial position of the Company, it must be noted, is improving. The working of the year has disclosed an excess of income over expenditure amounting to Rs. 870,480 (including a carryover of Rs. 2,976 from the previous year), after providing for depreciation, interest and lease money.

Geared to the NATION'S ECONOMY

J. K. Organization is not content to rest on its laurels in a spirit of complacency. It is striving with all its vast resources at its command to meet the possible requirements of the country through various sectors.

INDIAN COPPER'S EARNINGS DECLINE

OVERALL IMPROVEMENT IN PRODUCTION

THE increase in the overall operating cost of mining and other operations coupled with the consistent fall in the world price of copper have been responsible for bringing about a decline in the earnings as well as profit of the Indian Copper Corporation Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) for the year ended 31st December 1957. The fall in profit took place despite the fact that the Company maintained its high standard of production and made satisfactory despatches. The gross profit at £1,204,009 has come down from the previous year's peak of £1,616,358 to which level it had smartly risen from the erstwhile record of £1,585,326 for 1955.

In conformity with the fall in earnings, the distribution to shareholders has been stepped down from 20 per cent. paid for the previous year to 18 per cent. free of income-tax. It must be noted here that the dividend for both 1957 and 1956 are on a higher capital of £1,371,300, raised by the capitalisation of £457,100 from out of the funds standing to the credit of the Company's general reserve account. The heavy decline in the gross profit has, however, been offset to a considerable extent by the substantial reduction in the provision for taxation as a result of reduced charge for dividend tax and the absence of any charge similar to the additional taxation on the bonus share issue in the previous year. Hence, the net disposable surplus is only slightly lower than that in the previous year, as could be seen from the comparative table appended below:

(In thousands of £'s sterling)

	For the year ended 31st December			
	1957	1956	1955	1954
Net sale proceeds and adjustment of stocks	3,018	3,273	2,745	2,049
Other income	74	59	274	182
Expenses	1,887	1,716	1,434	1,264
Gross profit	1,204	1,616	1,585	966
Managing Agents' remuneration	80	109	110	68
Depreciation	175	175	175	100
Taxation	522	885	683	264
Net profit	427	447	617	534
Provision for leave and furlough pay written back	16	...	...	...
To general reserve	175	175	200	150
Provision for gratuities and superannuation	15	...	...	120
Dividend	247 (D. 18%)	274 (D. 20%)	411 (D. 20% +B. 25%)	229 (D. 15% +B. 10%)
Carry forward	120	115	117	112

D—Dividend and B—Bonus.

The Directors have fully maintained the provision for depreciation as also the transfer to the general reserve at the previous year's level of £175,000. This, they explain, is due to the substantial capital expenditure incurred during the year under review and the anticipated further expenditure of this kind which will be required to maintain and improve the Company's production.

During the year, the mill treated 440,671 short tons of ore averaging 2.136 per cent. copper, as compared with 421,131 short tons averaging 2.183 per cent. copper in the previous year. The ore milled was a record, being 19,540 tons above that in the previous year. Against 35,577 short dry tons of an average value of 24.925 per cent. copper in 1956, the concentration plant produced 35,674 short dry tons of concentrates of an average value of 25.447 per cent. copper during the year. The output of refined copper amounting to 7,848 long tons was 220 long tons above the record production of 7,628 long tons in the previous year. The overall recovery from ore to refined copper was a shade better at 93.144 per cent., as against 93.02 per cent. in 1956. The output of rolled products was higher at 7,983 long tons, as compared with 6,788 long tons in the previous year.

Despatches of products for sale during the year under review amounted to 10,301 long tons (including 2,924 tons of copper ingots), as compared to 9,787 long tons (including 3,647 tons of copper ingots) during the previous year. The average selling prices of the Company's products during the past four years were as folows:

(£ per ton)

	1957	1956	1955	1954
Copper ingots ...	252	330	309	233
Rolled brass ...	254	273	245	230
Yellow metal circles ...	296	305	266	241
Rolled copper ...	341	388	357	288

There was no restriction on the export of kyanite ore and despatches aggregated 17,952 tons, representing an increase of 1,335 tons over the previous year.

The Company's financial position is quite satisfactory. Its paid-up capital as on 31st December 1957 stands at £1,371,300 and is supplemented by reserves and surplus aggregating £1,468,761. The gross value of the block is £2,621,717 of which mining rights and permanent works account for £73,399 and buildings, machinery, plant, etc., for £2,548,318. The additions during the year to buildings, machinery and plant amount to £305,330. The written-down book value of the fixed assets is £1,028,155, the aggregate depreciation provided so far being £1,593,562. The current assets amount to £2,813,704 of which the liquid assets alone (investments and cash balances) total £1,247,749 and cover the current liabilities and provisions (£921,347) and reserve for taxation (£80,451) by a very wide margin.

The 2*s.* fully paid-up shares are being currently quoted at Rs. 4.10 *cum-div.* On an *ex-div.* basis and on the basis of the latest dividend, the yield on the shares works out to 6.2 per cent. per annum, free of tax.

HINDUSTHAN-PILKINGTON GLASS WORKS LTD.

Despite higher sale proceeds, the working of the Hindusthan-Pilkington Glass Works Ltd. (Managing Agents: Messrs. Talukdar Law & Co. Private Ltd., Calcutta) during the year ended 31st October 1957 has resulted in a decline in its earnings. The Company's gross profit for the year under review at Rs. 12.81 lakhs is Rs. 1.32 lakh lower than Rs. 14.13 lakhs for the previous year. This is stated to be due to higher cost of production, resulting from continuously mounting replacement costs of stores and spares, increase in wages and prices of raw materials, higher cost of coal and enhanced railway freight. The net profit, after paying Managing Agents' commission and providing Rs. 5.57 lakhs for depreciation, as against Rs. 6.34 lakhs, in addition to setting apart Rs. 37,708 for wealth tax, as against *nil* in the previous year, also stands lower at Rs. 6.54 lakhs, as compared with Rs. 7.47 lakhs for the previous year.

The Directors have transferred a sum of Rs. 1.94 lakh to the reserves, as against Rs. 1.43 lakh in the previous year. Of this, the provision for tank repair gets Rs. 89,224, the amount provided in the previous year for this purpose having been Rs. 1.43 lakh, development rebate Rs. 4,727 and general reserve Rs. 1 lakh. With the sum left over, together with the surplus of Rs. 41,597 brought forward from the previous year, the Directors have declared a dividend of 6 per cent., absorbing Rs. 4.80 lakhs. The balance, namely, Rs. 21,730, is carried to the balance-sheet. It may be noted that, in the previous year, though the Company's profit was better, the Directors were not able to declare any dividend to the shareholders since the major portion of the profit had to be utilised for wiping out the losses, amounting to Rs. 5.62 lakhs, incurred in the preceding years.

The Company's products appear to be selling well in the market. This is to be seen in the rising trend in its sale proceeds. Thus, from Rs. 52.96 lakhs in 1954-55, the sale proceeds increased to Rs. 56.01 lakhs in 1955-56 and still further to Rs. 60.45 lakhs during the year under review. This is again reflected in the closing stocks which are a shade lower at Rs. 1.76 lakh, as against Rs. 2 lakhs in the previous year. At the same time and for reasons stated earlier, expenses increased from Rs. 40.58 lakhs to Rs. 47.68 lakhs.

The Company's output of glass during the year was fairly well maintained at the previous year's level though production in the factory had to be completely suspended for about two months on account of the periodical cold repairs of the furnace. Despite rising costs during the year under review, the Directors state, emphasis was laid on maintaining the high standard of quality of the Company's products. Recently the factory also started manufacturing "obscured glass" as a welcome addition to its range of production of sheet glass. The difficulty of getting adequate number of wagons, both for despatch of finished products to various markets and for bringing raw materials to the factory, however, still continues and efforts are being made to improve the situation.

The Company is only of recent origin. It is in its seventh year now and owes its existence to the foresight of the late Mr. N. R. Sarkar, who saw great scope for it. His assumptions are proving true. Because it is new and entered the stage of making profit only two years ago, its balance-sheet as at 31st October 1957 reflects the position of a company still in its infancy. It has a paid-up capital of Rs. 80 lakhs all in ordinary shares of Rs. 10 each. It has already built up a modest reserve of Rs. 1.26 lakh, besides the provision of Rs. 4.33 lakhs for tank repairs. The gross block of the value of Rs. 95.06 lakhs has been written down to Rs. 73.46 lakhs. The current liabilities stand at Rs. 17.65 lakhs, against which there are current assets aggregating Rs. 29.79 lakhs.

As regards the outlook for the Company, readers' attention is invited to the Chairman's speech on page 219 of our issue dated 9th August 1958.

CALTEX OIL REFINING (INDIA) LTD.

The year ended 31st December 1957 marks the completion of the third year of existence of the Caltex Oil Refining (India) Ltd. Registered in 1955, the Company started its construction work at Visakhapatnam in right earnest and brisk activity followed. It is significant that, despite the delay in obtaining the necessary material, the schedule of construction of the refinery was completed within a few months. The refinery was formally opened in November 1957.

The first consignment of crude was received in February 1957 and the processing thereof commenced in April of the same year. Thereafter the plant was under steady operation which resulted in a total crude throughput of 35,55,727 barrels for the year under review.

The working of the refinery during the period of eight months in the year under review makes encouraging reading, in that it indicates that the Company has set off well in its operations. The results show that the Company made a net profit of Rs. 82.84 lakhs, after providing Rs. 46.41 lakhs for depreciation and writing of preliminary, debenture issue and operational expenses prior to starting of plant, aggregating in all Rs. 7.25 lakhs. Though no tax liability exists for the year under report, the Directors have wisely recommended that a sum of Rs. 20.71 lakhs be provided as tax equalisation reserve to meet the liability for taxation at a future date. They have also proposed that the surplus after the foregoing provision, amounting to Rs. 62.13 lakhs, be carried forward to the next year and that no dividends be declared for the year 1957. Income from refining during the year amounted to Rs. 246.73 lakhs.

The training of Indian employees to replace overseas personnel is proceeding satisfactorily. The major portion of housing colonies is completed and is under occupation by the employees. Work on the remaining portion is expected to be completed by the end of 1958.

The latest balance-sheet of the Company shows its paid-up capital at Rs. 405 lakhs made up of 450,000 ordinary shares of Rs. 100 each, of which 449,993 ordinary shares are paid-up to the extent of Rs. 90. The reserves and surplus aggregate Rs. 92.90 lakhs, including the tax equalisation reserve of Rs. 20.71 lakhs. The Company's 5½ per cent. debenture liability, secured by a first specific mortgage of certain fixed assets and a floating charge on the general assets of the Company, stands at Rs. 2 crores. The current liabilities amount to Rs. 741.97 lakhs. The gross block of a value of Rs. 13.84 crores stands written down at Rs. 13.38 crores. The current assets aggregate Rs. 101.82 lakhs.

COMPANY REGISTRATIONS IN THE SOUTHERN REGION

During the half-year ended 30th June 1958, 81 companies with an authorised capital of Rs. 622.83 lakhs were registered in the Southern region comprising the four States of Madras, Andhra Pradesh, Mysore and Kerala. Out of these, six are public limited companies, 69 private ones, one association not for profit and five companies limited by guarantee. The notable flotations during the period are two Government companies registered in the State of Kerala, namely, Kerala Cycles Private Ltd. with an authorised capital of Rs. 25 lakhs and Kerala Water Transport Corporation Private Ltd. with an authorised capital of Rs. 1 crore, and a public company in Mysore State by name Mysore Cements Ltd., with an authorised capital of Rs. 3 crores.

During the period under review, 60 companies went into liquidation, and 127 companies, three Associations not for profit and two companies limited by guarantee were struck off the register as defunct. The paid-up capital of the companies which have ceased working during this period comes to Rs. 104.51 lakhs.

The total investment by way of new investment or increase in the paid-up capital of existing companies during the half-year works out to Rs. 459.71 lakhs, the largest contributory being the Government-owned Neiveli Lignite Corporation Private Limited which accounts for Rs. 220 Lakhs. Challapalli Sugars Ltd. account for Rs. 13.15 lakhs, Ashok Leyland Ltd. for Rs. 15.50 lakhs and Kothari Textiles Ltd. for Rs. 16.86 lakhs.

During this period, the enforcement of the Companies Act was vigorously taken up and 174 prosecutions were launched against companies and its officers for various defaults like non-holding of annual general meetings, non-filing of annual returns and balance-sheets and against the liquidators for non-filing of liquidation accounts. Out of these, 89 cases have been disposed of during the period resulting in a conviction of the accused in 55 cases and their acquittal in the rest.

AMBIKA SILK'S PROFIT LOWER

DIVIDEND, HOWEVER, MAINTAINED

THE earnings of the Ambika Silk Mills Company, Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas & Co., Bombay), has suffered a recession for the second year in succession with the gross profit for the year ended 31st December 1957 declining further to Rs. 5.98 lakhs from Rs. 6.36 lakhs for 1956 and Rs. 6.93 lakhs for 1955. This is in marked contrast to the steady upward trend noted for the three years preceding 1956 when the gross profit rose from a mere Rs. 1.94 lakh for 1952. It may be noted here, again, that the gross profit for 1955 at Rs. 6.93 lakhs was a record for the previous eight years. In the context of the general slump in the textile trade today, the performance of the Company, although not quite encouraging, is nevertheless not disappointing. Shareholders can feel gratified that, despite the setback in earnings, the Directors have maintained the dividend at 15 per cent. to which level it had been lowered from 20 per cent. paid for 1955. The amount provided for depreciation at Rs. 2.78 lakhs is also higher, as against Rs. 2.15 lakhs in the previous year. In addition, a sum of Rs. 80,000 has been provided for taxation, as against *nil*. The net profit, after the above provisions, works out to Rs. 2.08 lakhs, as compared with Rs. 3.79 lakhs a year ago, but it is higher than Rs. 1.91 lakh two years earlier.

In view of the fall in profits, the reserves have not received the generous allocation noted in the previous year. Thus, the transfer to general reserve has been lowered from Rs. 1.30 lakh to Rs. 20,000, as also the depreciation reserve from Rs. 1.30 lakh to Rs. 69,889. The cut in the latter allocation is, however, more than offset by the higher provision made for depreciation.

The following comparative table, giving some of the relevant features of the working of the Company during the past four years, provides a broad idea of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds of cloth and waste	66.82	62.40	63.14	57.41
Other income	1.88	1.66	0.81	0.79
Closing stocks of cloth	9.62	8.36	4.48	3.50
Manufacturing and other expenses	63.98	61.59	57.99	58.32
Gross profit	5.98	6.36	6.93	4.36
Managing Agents' commission	0.32	0.42	0.39	0.25
Depreciation	2.78	2.15	3.03	1.84
Taxation	0.80	..	1.60	0.80
Net profit	2.08	3.79	1.91	1.47
To reserves	0.90	2.60	0.41	0.31
Bonus to operatives	..	..	..	0.35
Dividend	1.15 (15%)	1.15 (15%)	1.54 (20%)	0.77 (10%)
Carry forward	0.11	0.08	0.05	0.09

The Directors state that the Company's working during the year was satisfactory. This is to be seen in the sale proceeds of cloth and waste which have recorded a rise of Rs. 4.42 lakhs to Rs. 66.82 lakhs. Manufacturing and other expenses have increased by Rs. 2.39 lakhs and closing stocks of cloth by Rs. 1.26 lakh.

The Directors state that the plan of modernisation of the mill machinery was further continued during the year under review. The Company also decided to start printing fabrics and preliminary work in this respect was completed in 1959; since then, work in this section has commenced. The Directors have expressed concern over the inadequate supplies of indigenous art silk yarn and the difficulties of getting foreign yarn due to the drastic curb on imports. The Company is, therefore, trying to take advantage of the facility offered by the Government to import art silk yarn against exports of art silk fabrics. The Directors observe that despite these efforts, shortage of raw materials continues to persist and this, in turn, may affect the future working of the Company.

The financial position of the Company, as disclosed by its balance-sheet as at 31st December 1957, is quite sound. Its reserves and surplus aggregate Rs. 9.32 lakhs, as against a paid-up capital of Rs. 7.70 lakhs, all in ordinary shares of Rs. 100 each. Of this, depreciation reserve accounts for Rs. 4.24 lakhs, general reserve for Rs. 2.50 lakhs and reserve for rehabilitation of machinery for Rs. 2.25 lakhs. The current liabilities stand at Rs. 23.34 lakhs and include a provision of Rs. 80,881 for taxation. Of the current liabilities, secured loans from a bank account for Rs. 10.55 lakhs and unsecured loans for Rs. 2.37 lakhs. The gross block of the value of Rs. 31.44 lakhs stands well written down to a book value of Rs. 14.98 lakhs. It is worthwhile noting here that of the total amount of Rs. 6.02 lakhs spent on additions to the gross block during the year, as much as Rs. 4.99 lakhs were on account of machinery alone. In addition to this, machinery under erection in stock amounted to Rs. 1.05 lakh. The current assets aggregate Rs. 24.33 lakhs and are enough to cover the current liabilities and the provision for taxation.

Points From The Chair

Paper Industry's Expansion

"I HAVE heard it said on fairly good authority that, while the Government of India, agreeably with their policy to expand production, have granted licences for the establishment of new paper units, lack of finance in some cases, but mostly foreign exchange difficulties, have delayed their installation. I also understand that capital projects based even on deferred terms of payment have little chance of materialisation. As the present circumstances do not permit of our pursuing the expansion scheme, it has to be deferred for some time. I want to assure you that it is not the lack of a well-considered scheme that delays action and I make bold to say that it is not even the lack of funds either—for I am confident of raising the necessary funds with your co-operation and with the aid and assistance of the credit institutions in the country like the Industrial Finance Corporation of India—but it is the insurmountable difficulty, as things stand today, of securing the necessary foreign exchange. We have, therefore, to think of alternative short-term projects and these are under consideration. I devoutly wish that conditions would soon improve when specific proposals for large-scale expansion would be placed before you for acceptance."

T. SHAMANNA,
Mysore Paper Mills Limited.

Industrial Peace

"I had made a mention last year to a three-year agreement which we had reached with our workers in regard to bonus and wages. It was hoped then that there will be industrial peace at Dalmiapuram and the workers would co-operate in achieving all-round increase in production. I regret to tell you that inter-union rivalries have belied our hopes and since some time there has been one strike after another without lawful notice and in complete disregard of mutual agreement and assurances. Due to the continuous troubles created by the unions, production has suffered. What is happening at Dalmiapuram is probably in the same pattern which has shown itself in several other places of industrial importance. Tata Steel is, of course, the most recent example. At this crucial time in the history of our country when production and more production is the need of the hour, this state of affairs should not be tolerated. Legislation is urgently needed under which some procedure be prescribed by which claims of rival unions can be tested and recognition granted to the one that commands support of the majority of the workers. Some time back the Madras Government took a lead in the matter and had circulated a draft Bill. I do not know why the Bill was not proceeded with. Unless a suitable law is enacted for this purpose, there will be increasing loss of production on account of unions struggling for power, more so when the principal object is more political than the betterment of workers, whose interests are sought to be protected."

V. H. DALMIA,
Dalmia Cement (Bharat) Ltd.

Cement Export

"The future of the cement industry is lined up with the availability and retention of sound continued foreign markets. I need hardly emphasise how important it is to develop an export market for the industry to augment the much needed foreign exchange resources to carry out our National Development Programme. Fortunately for India, it has extensive foreign markets beyond the eastern sea-board and since foreign trade forms an indispensable part of the economic development of a country and no rapid industrialisation is possible without securing the necessary minimum of foreign exchange, the foreign trade policy in respect of export of cement should be framed and executed not by reference to occasional surpluses that may be available but rather as part of a deliberate State Policy. It may be that this will involve occasionally the staggering of the supplies in the local market or subsidy by Government but this is a sacrifice which is worth making in the interests of preventing glut in the local markets. The control of cement used within India is a matter of national policy, and it is in our hands. Exports to other countries will have to suit their programmes. A steady stream of cement export should, therefore, form an indispensable aspect of industrial planning and trade. It is to be hoped that the Government will take up the question in all seriousness at the earliest opportunity. In this connection, I may mention to you that your two cement factories one to be established at Visakhapatnam and your factory at Talaiyuthu, and other present and prospective units that may spring up in the eastern seaboard are particularly suitable for the export of cement to foreign countries."

P. SURYANARAYANA,
India Cements Ltd.

COMPANY MEETINGS AND DIVIDENDS

HANTAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1958. Dividend: *Nil*. Transfer books remain closed from 11th to 20th September 1958, both days inclusive.

PERIYAR AND PAREEKANNI RUBBERS LTD. Annual General Meeting, Palai, Kerala State, 22nd September 1958. Dividend: Re. 1.20 per share (includes interim dividend of Re. 0.60 per share). Transfer books will remain closed from 15th to 22nd September 1958, both days inclusive.

KARIKODE RUBBERS (1945) LTD. Annual General Meeting, Palai, Kerala State, 22nd September 1958. Dividend: 10 per cent. or Re. 1.00 per share. Transfer books will remain closed from 15th to 22nd September 1958, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 24th September 1958. Dividend: Rs. 20.00 per share. Transfer books remain closed from 11th to 24th September 1958, both days inclusive.

NEW CHUMTA TEA CO., LTD. Annual General Meeting, Calcutta, 26th September 1958. Dividend: 12½ per cent. or Re. 1.25 per share. Transfer books will remain closed from 13th to 26th September 1958, both days inclusive.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME)-GONDALPARA MILL. Annual General Meeting, Calcutta, 27th September 1958. Dividend: Rs. 60.00 per share, on shares of Rs. 300 each. Transfer books will remain closed from 15th to 27th September 1958, both days inclusive.

SARAN ENGINEERING CO., LTD. Annual General Meeting, Kanpur, U.P., 29th September 1958. Dividend: Re. 0.40 per share, free of income-tax. Transfer books will remain closed from 15th to 29th September 1958, both days inclusive.

LINGIA TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: 20 per cent. or Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 22nd to 29th September 1958, both days inclusive.

MEGNA MILLS CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: Rs. 17.50 per share (includes interim dividend of Rs. 5.00 per share). Transfer books will remain closed from 19th to 29th September 1958, both days inclusive.

INDIA JUTE CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: Rs. 15.62 per share (includes interim dividend of Rs. 3.75 per share), on shares of Rs. 125 each. Transfer books will remain closed from 19th to 29th September 1958, both days inclusive.

DISHERGARH POWER SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: Rs. 7.00 per share. Transfer books will remain closed from 15th to 29th September 1958, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Annual General Meeting, Calcutta, 29th September 1958. Transfer books will remain closed from 15th to 29th September 1958, both days inclusive.

EDWARD TEXTILES LTD. Annual General Meeting, Bombay, 30th September 1958. Dividend: Rs. 15.00 per share, on shares of Rs. 200 each. Transfer books will remain closed from 15th to 30th September 1958, both days inclusive.

RAZA BULAND SUGAR CO., LTD. Annual General Meeting, Rah-e-Raza, Rampur, 30th September 1958. Dividend: Re. 1.50 per share. Transfer books will remain closed from 19th September to 4th October 1958, both days inclusive.

VAYITRI PLANTATIONS LTD. **Dividend of 6 per cent. or Re. 0.12 per share, for the year ended 31st March 1958.** Transfer books will remain closed from 14th to 20th September 1958, both days inclusive.

COWCODDY ESTATES LTD. Final dividend of 40 per cent. or Re. 0.80 per share, for the year ended 30th June 1957.

COMPANY REGISTRATIONS

BARODA RAYON CORPORATION LTD. (First Director: Mr. Babubhai M. Chinai.) Business: Manufacturers, importers and dealers in rayon yarn, staple fibre, etc. Authorised capital: Rs. 10,00,00,000. Public company. Address: Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay.

BRITELITE ELECTRIC INDUSTRIES PRIVATE LTD. (First Director: Mr. A. T. Barma.) Business: Importers, exporters and commission agents in bulbs, lanterns, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 199, Abdul Rehman Street, Bombay 2.

HASTINGS MILL REPEATS DIVIDEND

RESULTS OF HEILGERS GROUP COAL COMPANIES

Hastings Mill Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit of Rs. 19,56,822 (Rs. 13,63,177) to which has been added the amount brought forward from the previous year of Rs. 3,00,036 (Rs. 3,40,348) making a total of Rs. 22,56,858 (Rs. 17,03,525). Out of this amount has been provided for depreciation Rs. 9,12,385 (Rs. 6,53,489), for income-tax Rs. 1,25,000 (*nil*) and for wealth tax Rs. 50,000 (*nil*) leaving at the credit of profit and loss account a sum of Rs. 11,69,473 Rs. 16,50,036 including Rs. 5,00,000 being provision for contingencies no longer required and Rs. 1,00,000 being provision for taxation no longer required.

The interim dividend paid on 25,000, 6 per cent. cumulative preference shares at Rs. 3 per share without any deduction for income-tax payable by the Company absorbed Rs. 75,000 (Rs. 75,000). Leaving an available balance of Rs. 10,94,473 (Rs. 15,75,036). From this amount the directors propose to transfer to general reserve Rs. 5,00,000 (Rs. 1,00,000), to pay a final dividend on 25,000, 6 per cent. cumulative preference shares at Rs. 3 per share without any deduction for income-tax payable by the Company absorbing Rs. 75,000 (Rs. 75,000), to pay a dividend on 40,000 ordinary shares of Rs. 100 each at Rs. 5 (Rs. 5) per share without any deduction for income-tax payable by the Company absorbing Rs. 2,00,000 (Rs. 2,00,000) and to carry forward to next account Rs. 3,19,473 (Rs. 3,00,036 after providing Rs. 9,00,000 for depreciation on investments).

In compliance with the working time agreement of the Indian Jute Mills Association, the mill worked for 48 hours per week throughout the year under report with 12½ per cent. of the total looms sealed.

Raw material position remained satisfactory throughout the period under report. Further stress should be laid on improving the quality and this in future will strengthen the competitiveness of the Industry in the world market.

During the latter half of the period under review, dull conditions were evidenced in the finished goods market and this was viewed with grave concern as the jute industry is a prime earner of foreign exchange. With the dual object of stabilising the market and to avoid loss in the earnings of foreign exchange, the Industry took a bold step and decided not to sell their products below certain prices. It had a most salutary effect on the market and prices were stabilised at a realistic level.

Silk Department: Demand for its products further increased necessitating an expansion in the loomage, the directors have, therefore, added 47 more looms. During the latter half of the year under review the supply position of art silk yarn worsened. An acute shortage of yarn is felt due to restricted imports and inadequate indigenous production. This has also led to an abnormal rise in yarn prices. The Company's products are gaining popularity in foreign markets.

The Company held 1,44,610 ordinary shares of the subsidiary, viz., Fort William Jute Co. Ltd., as at the close of the latter's financial year ending 31st March 1958.

The net aggregate amount of profit in the subsidiary company for its last financial year with which the shareholders are concerned as the members of the Holding Company is Rs. 7,60,556.57 nP. Neither this amount nor any part of it has been included in the accounts of the Company as the Holding company.

The net aggregate amount of profits of the subsidiary Company for the previous years since it became subsidiary is Rs. 10,06,679.19 nP. Out of this sum, Rs. 3,25,320 has been received by the Holding Company by way of dividend on its investment in the subsidiary Company and has been included in the accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	65,00,000	Gross block	1,32,37,430

Borrea Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. F. W. Heilgers and Co., (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1957.

Raisings and Despatches.—1,52,270 tons of coal were raised and 1,51,308 tons despatched during the year compared with 1,46,056 tons raised and 1,44,202 tons despatched during 1956.

Output did not improve to the extent expected due to the delay in acquiring overlying surface areas for depillaring operations.

Development into Araigoria made steady progress and is expected to replace the diminishing output from the remaining reserves in Bhagaband proper as scheduled.

Transport.—Although there was a general improvement in the wagon supply position, the Company's colliery was greatly inconvenienced by irregular placements. In addition, a larger proportion of covered wagons was supplied which prevented full use being made of the existing mechanical screening and loading installation at the colliery.

The profit and loss account after providing for all charges and making provision of Rs. 29,085 (Rs. 98,343) for taxation, Rs. 26,100 (*nil*) for wealth tax and Rs. 60,626 (Rs. 57,095) for depreciation shows a profit of Rs. 1,24,015 (Rs. 2,14,746) to which is added the balance brought forward from previous year of Rs. 19,553 (Rs. 84,207) making a total of Rs. 1,43,568 (Rs. 2,98,953). From this there has been transferred to tax contingency reserve Rs. 18,725 (Rs. 15,400), to development rebate reserve Rs. 12,975 (Rs. 42,500) and to provision for payment under Appellate Award Rs. 2,687 (Rs. 83,000). The directors have paid an interim dividend declared on 30th January 1958, without any deduction for income-tax payable by the Company, on preference shares absorbing Rs. 13,000 (Rs. 13,000) leaving a balance available of Rs. 96,181 (Rs. 1,20,553). The directors propose to dispose of this amount as follows:—

By payment of a final dividend on the preference shares making 6½ per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 13,000 (Rs. 13,000) by payment of a dividend on the ordinary shares at the rate of 7½ (15) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 56,250 (Rs. 1,12,500) and by carrying forward Rs. 26,931 (Rs. 19,553).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Gross block	46,69,896
Reserves ...	24,50,156	*Less*—Depreciation ...	27,71,129

Churulia Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. F. W. Heilgers and Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1957.

Karangura Mining Syndicate.—During the year ended 31st December 1957, 1,88,747 tons of coal were raised and 1,88,067 tons were despatched. A Managing Contractor continues to raise and sell coal from Religara Colliery and this arrangement continues to work satisfactorily.

The profit and loss account after providing for all charges, making provision of Rs. 3,438 (*nil*) for taxation, Rs. 3,300 (*nil*) for wealth tax, and transferring Rs. 5,000 (*nil*) to general reserve, shows a profit of 36,297 (Rs. 11,111). To this amount is added the balance brought forward from the previous year of Rs. 4,240 (Rs. 2,129) making a balance available of Rs. 40,537 (Rs. 13,240). The directors propose to dispose of this amount as follows:—

By payment of a dividend at the rate of 5 (1½) per annum without any deduction for income-tax payable by the Company absorbing Rs. 30,000 (Rs. 9,000) and by carrying forward Rs. 10,537 (Rs. 4,240).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Investments	7,29,936
Reserves ...	1,49,122	Debts, deposits and advances ...	1,48,904
Provision for taxation*	4,900	Cash	93,068
Liabilities ...	2,07,349		
Profit and loss account ...	10,537		
Rs.	9,71,908	Rs.	9,71,908

*Includes wealth tax of Rs. 3,300.

Ondal Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account after providing for all charges and making provision of Rs. 46,068 (Rs. 55,064) for taxation, and Rs. 6,675 (*nil*) for wealth tax, shows a profit of Rs. 55,197 (Rs. 49,848) to which is added the balance brought forward from the previous year of Rs. 37,244 (Rs. 56,646) making a balance available of Rs. 92,441 (Rs. 1,06,494). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of 6½ (6½) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 13,000 (Rs. 13,000). by payment of a dividend on the ordinary shares at the rate of 5 (7½) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 37,500 (Rs. 56,250) and by carrying forward Rs. 41,941 (Rs. 37,244).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,50,000	Gross block	3,97,666
Reserves ...	15,69,648	*Less*—Depreciation	2,77,666

Profit and loss account ...	41,941	Investments	22,50,716
		Debts, deposits and advances ...	2,45,627
		Cash ...	1,21,121
Rs.	27,37,464	Rs.	27,37,464

*Includes wealth tax of Rs. 6,675.

Sendra Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1957.

Colliery.—The directors report that the deed of sale was completed on the 28th of September, 1957. The buyers have continued to pay the sums promised on completion of documents and three of the five annual instalments towards the purchase price have now been received.

The profit and loss account after providing for all charges and making provision of Rs. 29,032 (*nil*) for taxation, Rs. 8,450 (*nil*) for wealth tax and after taking credit for Rs. 1,568 (*nil*) being refund of income-tax shows a loss of Rs. 2,465 (Rs. 7,337). From this amount is deducted the credit balance brought forward from the previous year of Rs. 5,166 (Rs. 7,503) leaving a credit balance of Rs. 2,701 (Rs. 166). To this is added the amounts transferred from general reserve of Rs. 15,000 (Rs. 25,000) and from reserve for taxation of Rs. 2,927 (*nil*) leaving a balance available of Rs. 20,628 (Rs. 25,166). The directors propose to dispose of this amount as follows:—

By payment of a dividend at the rate of 2½ (2½) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 20,000 (Rs. 20,000) and by carrying forward Rs. 628 (Rs. 5,166).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Gross block	52,491
Reserves ...	4,91,081	*Less*—Depreciation ...	28,867
Provision for taxation*	22,805		
Liabilities ...	88,256	Net block ...	23,624
Profit and loss account ...	628	Investments	7,25,824
		Debts, deposits and advances ...	3,48,532
		Cash ...	3,04,790
Rs.	14,02,770	Rs.	14,02,770

*Includes wealth tax of Rs. 8,450.

Hindustan Motors Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The revenue account shows a credit balance of Rs. 91,46,534 (Rs. 46,08,841) after taking into account the sum of Rs. 7,92,903 (Rs. 6,16,062) brought forward from the previous year. After providing Rs. 63,60,000 (Rs. 30,00,000) for depreciation, Rs. 6,96,996 for wealth tax and Rs. 1,41,000 (*nil*), as reserve for development rebate, there remains a balance of Rs. 19,48,538 (Rs. 16,08,841) which the directors recommend should be dealt with in the following manner:—

To payment of a dividend on 3,21,427 cumulative convertible redeemable preference shares of 6 per cent. per annum, free of income-tax on the amounts paid up thereon, absorbing Rs. 10,03,680 (Rs. 6,75,442) and for dividend on above preference shares short provided for last year Rs. 6,017 (*nil*) leaving a balance to be carried forward of Rs. 9,38,841 (Rs. 7,92,903 after providing Rs. 1,40,496 towards adjustment of income-tax for accounting years 1950-51 and 1951-52). Depreciation amounting to over Rs. 140 lakhs still remains to be provided for upto the end of the year under report.

The Company has entered into an agreement with Messrs. General Motors Corporation, U.S.A., for the assembly of Chevrolet cars and trucks and G.M.C. and Bedford trucks and manufacture of one of the trucks in India. The Company in consultation with Messrs. General Motors Corporation has now made preparations to manufacture one of the trucks in India.

During the year under review, further progress was made in the manufacture of components required for Hindustan cars. At present components representing approximately 68 per cent. of the c.i.f. value of a complete car are being manufactured here. No other factory in the country has been able to make so much progress in the indigenous manufacture.

As the entire capital of the Hindustan Motor Corporation Ltd. as on 31st March, 1958, was held by the Company, the profit of the subsidiary company for the last year as well as losses for the previous financial years (which have not been dealt with in or for the purposes of the accounts of the Company, concern wholly the members of the Company. As regards the Pakistan Motors Ltd., 65 per cent. of the issued capital of the said subsidiary company as on 31st March, 1958, was held by the Company. The proportionate part accordingly of Rs. 2,247 being loss for the period ended 31st March, 1958, and of Rs. 35,646 being net aggregate loss for the previous financial years of the Pakistan Motors Ltd. (which have not been dealt with in or for the purposes of the accounts of the Company), concern the members of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Western India Tanneries Ltd.

The directors of the above Company (Managing Agents: Messrs. Pratap Pandit and Co., Bombay) present the audited accounts of the Company for the year ended 31st December 1957.

The total sales for the year ended 31st December 1957, together with the closing stocks as on 31st December 1957, and sundry receipts amounted to Rs. 56,64,467 (Rs. 58,84,747). Deducting from this the opening stock, purchases of raw materials etc., and direct expenditure thereon such as stores consumed, workmen's wages, rents, rates, etc., for the year ended 31st December 1957, which amounted to Rs. 46,10,348 (Rs. 47,81,889), there is left a balance representing the gross profits for the year's working of Rs. 10,54,119 (Rs. 11,02,858). After deducting agents' commission, staff salary and general charges amounting to Rs. 4,58,072 (Rs. 5,13,155) the profit amounts to Rs. 5,96,047 (Rs. 5,89,703). From this amount is to be deducted provision for gratuity Rs. 1,413 (Rs. 1,438), depreciation written off for the year 1957 Rs. 33,874 (Rs. 29,913) and bonus to the Company's staff and workmen for 1957 Rs. 64,702 (Rs. 65,771). The balance of income-tax for 1956 absorbed Rs. 2,219 and wealth tax for 1956 Rs. 7,107 (Rs. 7,107) leaving a net profit subject to provision for taxation, for the year ended 31st December, 1957 of Rs. 4,86,731 (Rs. 4,92,581). After adding the balance brought forward from last year of Rs. 8,396 (Rs. 8,815) there is a total of Rs. 4,95,127 (Rs. 5,01,396). This amount of Rs. 4,95,127 (Rs. 5,01,396), the directors propose to dispose of as follows:—

To provision for taxation Rs. 2,66,000 (Rs. 2,63,000), to payment of a dividend at Re. 1 (Re. 1) and Rs. 2 (Rs. 2) per share of Rs. 5 and Rs. 10 paid up, respectively, free of income-tax and dividend tax for the year 1957 absorbing Rs. 1,40,000 (Rs. 1,40,000), to transfer to reserve fund Rs. 70,000 (Rs. 80,000), to reserve for gratuity Rs. 10,000 (Rs. 10,000) and to carry forward to next year's account Rs. 9,127 (Rs. 8,396).

The actual number of days worked during the year ended 31st December 1957 is 307. The directors have paid a bonus at the rate of three months' basic salary to the members of the staff and three months' basic wages to the workmen of the Company out of the profits for the year ending 31st December, 1957.

In the course of the year 1957 the Company has subscribed for 750 shares of Rs. 100 each in the Bombay Footwear Private Ltd., incorporated in the year 1957, having its registered office at 2A, Dharavi Road, Bombay 17. This Company has an authorised capital of Rs. 5 lakhs and issued capital of Rs. 2 lakhs. Its business will be to manufacture boots, shoes and other footwear and will start operation as soon as its buildings which are at present in the course of construction at Deonar (Chembur), are completed. The Company has paid Rs. 37,500 by way of allotment money in respect of these shares during the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Gross block	7,46,114
Reserves ...	9,21,551	*Less*—Depreciation ...	3,62,924
Provision for taxation ...	2,66,000		
Liabilities ...	6,39,054	Net block	3,83,190
Profit and loss account ...	9,128	Stock-in-trade	3,06,845
		Stores, etc.	3,05,501
		Debts, deposits and advances ...	3,90,924
		Investments	6,71,578
		Cash ...	4,77,695
Rs.	25,35,733	Rs.	25,35,733

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COAL

(*Concluded from page 437*)

ing the third Plan period. In order to remove this deficiency, the Committee emphasises the need for washing inferior coals of which there is an ample supply in the country. According to it, the Central Fuel Research Institute has put up proposals for five washeries for the Railways and, of these, three show promise of economic production. It is only if the planning of these washeries is taken up immediately that they can be brought into commission by the end of 1960-61, affording relief to the Railways during the third Plan period.

For effective control over wastages of coal in railway sheds, the Committee suggests the recording of the time spent in various shed services and improvement in the method of estimation of coal consumption; strengthening of the security forces, provision of enclosures around the sheds, and strong disciplinary action against staff indulging in malpractices. Economy in consumption on the line can be achieved by fixing targets of consumption more accurately to permit assessment and analysis of excess consumption, by improving in the firing technique through better training of staff, and closer attention to the maintenance of locomotives. A loss of about one per cent. takes place due to pilferage in transit and further losses occur through pilferage from sheds. The Committee feels that contract labour should be replaced by departmental labour in sheds where pilferage of coal is heavy, for the handling of both coal and ashes cinders.

The Committee also feels that the need for proper grading of Indian coals is urgent, as the present grading is limited to the Bengal and Bihar coalfields and, as even this is based on tests carried out 10 years ago, it has become out of date. Coupled with this, the price of various grades should, it is pointed out, be so fixed as to reflect their relative heat values, so that the users of low grade coal are not placed at a disadvantage. The present price structure, which suffers from this drawback has also contributed to some rise in the Railways' fuel bill.

THE INDIA CEMENTS LTD., MADRAS

(*Concluded from page 442*)

28th of last month. Provision has been made in the Institute for Civil, Mechanical and Electrical Engineering courses.

"Provision of technical personnel is of vast importance to the industrial progress of our country. Backwardness of a country is often attributable not to lack of raw materials or facilities for power but to lack of trained personnel and technicians, in various fields. In India, especially, it has been a relevant criticism that there is a paucity of trained personnel at what may be called the working level. We have, of course, been able to produce quite a number of qualified engineers, though not up to the number required by us. But we have not produced a sufficient number of young technicians, who can superintend and help in the actual day-to-day manual working in the factories or who can start small industrial units in the countryside on their own for the upkeep and maintenance of pumps, radios, etc. This defect can be cured only by training men at middle levels, so that they may supply this much needed want. Further, there are various aspects in the field of engineering, in which India is either backward or has no facilities for training. I may mention, for example, the fields of marine engineering, the manufacture of internal combustion engines, the making of precision instruments and certain other aspects of engineering like architecture. There is work here in the Polytechnic level as well as in the high grade Engineering College. It is the hope of your management that, in course of time, they will be able not only to expand the activities of the Polytechnic so as to cover the lesser known but important fields that I have briefly mentioned above, but also to start a full-scale Engineering College for training at higher levels. In order to implement the scheme in respect of education, your Company has brought into being an Educational Trust called 'The India Cements Educational Trust.' Your Company has created the Trust with a sum of Rs. 3,75,000 stipulated under the scheme approved by you at the last meeting. The Polytechnic has come into existence not a day too soon. The Ministry of Scientific Research and Cultural Affairs has directed us to reserve a seat for a student from as far as Jammu and Kashmir. This bears testimony to the popularity of the institution from the very start.

"I do not wish to detain you much longer and, before I close, I must thank the administrative as well as the technical staff both at Madras and at the factory and also all our employees for the willing co-operation and unstinted service they have given."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

(Incorporated in Travancore-Cochin with Limited Liability)

Head Office: PALAI, KERALA.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

NATIONAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, Norton Buildings, 1 & 2, Old Court House Corner, Calcutta, on Tuesday, 30th September, 1958, at 12 noon, for the following purposes:—

(1) To receive and adopt the Directors' Report and audited accounts for the year ended 31st December 1957;

(2) To declare Dividends on Ordinary, First Preference, and Second Preference Shares;

(3) To elect Directors;

(4) To appoint auditors and to fix their remuneration;

(5) To transact any other business that may be brought forward.

(6) As Special Business;

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

1. "That the regulations contained in the printed document submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof be and are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."
2. "That with effect from the 1st January 1956 each Director other than a Director who holds the office of a Manager shall be paid out of the funds of the Company by way of remuneration for his service in attending Meetings of the Directors a fee of Rs. 200/- for each meeting attended by him. The Directors, other than a Director who holds the office of a Manager, shall also be entitled to receive a commission (to be divided between them in such manner as they shall from time to time unanimously determine) of 1% of the net profits of the Company (computed in the manner referred to in Sub-Section (1) of Section 198 of the Companies Act, 1956) in any financial year, the first payment of such commission to be made in respect of the financial year ended on the 31st December, 1956. The commission payable to the Directors shall continue to be payable for a period of five years from the 1st January, 1956 but may be renewed from time to time in accordance with the provisions of any statutory enactment from time to time in force and applicable thereof."
3. "That the contracts between your Company and the Managing Agents and associates of the Managing Agents be renewed subject to the provisions of the Companies Act, 1956. (Details contained in the printed Circular addressed to the Shareholders accompanied herewith."

The Share Transfer Books of the Company will remain closed from the 16th to 30th September, 1958, both days inclusive.

Shareholders are reminded that Dividend Warrants will be isued in the name of registered holders or their mandatees only and will be sent to their respective addresses as recorded in our books.

A member who is entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,
For and on behalf of
B. N. ELIAS & CO., PRIVATE LTD.
N. B. ELIAS,

TREASURY BILLS NOT WELL FANCIED

(*From Our Own Correspondent*)

BOMBAY, 10*th September*

The short-term money market has been easy but not easier than last week. In fact, since Monday, there has been a slight improvement in the demand for funds unaccompanied by any perceptible rise in the supply of funds. These changes, however, have been so slight that they have not made any difference either to the tone of the market or to the rates of interest. In both respects, the state of the market remains unchanged. The slight increase in the demand for money mentioned above is attributed to some extent to the new issue of Guest, Keen, Williams and also to good enquiries for bank credit in some mofussil centres.

In the inter-bank section day-to-day money stands at 2 per cent. with big banks and 2¼ per cent. with small banks. House money on call is not well favoured nowadays for reasons mentioned by us last week, but the rate for this deposit is still being quoted at 3¼-3¾ per cent. Term money for 1-6 months fetches 3¾-4 per cent. per annum.

The results of the Central Government's Treasury Bill borrowings this week show that the bills have failed to gain popularity to the vast majority of banks. They also reflect, albeit in a small way, the slightly less easier conditions in the money market. Thus, as against an invitation of Rs. 3 crores, the total amount offered was no more than Rs. 394.50 lakhs. This amount compares with Rs. 400.50 lakhs tendered in the previous week and Rs. 660.00 lakhs a fortnight before, the amount invited being only Rs. 3 crores in each week. The average rate of accepted tenders has also moved up from 2.518 per cent. per annum to 2.523 per cent. per annum. A fortnight ago the rate was 2.520 per cent. per annum. During the week under review tenders at Rs. 99.370 and above were accepted in full and those at Rs. 99.365 allotted approximately 55 per cent. Lower tenders were rejected. Apparently, due to the growing indications of the disinterestedness of the market in these bills, the authorities have reduced the tenders for the next week to Rs. 2 crores only.

A sharp increase of Rs. 19.89 crores in notes in circulation, and a fall of Rs. 11.65 crores in notes held in the Banking Department, resulting in a net increase of Rs. 8.23 crores in total notes issued, are the main features of the Reserve Bank's statement for the week ended 5th September 1958. The increase in total notes issued has been offset on the assets side by an increase of Rs. 15 crores in rupee securities and a fall of Rs. 5 crores in foreign securities and of Rs. 1.76 crore in rupee coins. In the Banking Department of the Bank, the Central Government's deposits are sharply down by Rs. 20.81 crores and are now no more than Rs. 52.23 crores. There has also been a fall in deposits of other Governments from Rs. 20.52 crores to Rs. 14.72 crores. Deposits of banks also are lower by Rs. 7.94 crores at Rs. 93.44 crores. Balances held abroad show a small rise of Rs. 1.16 crore, but, as foreign securities have dropped by Rs. 5 crores as just noted, the total foreign assets of India are lower by Rs. 3.84 crores at Rs. 182.21 crores.

Loans and advances to Government by the Reserve Bank, show a rise of Rs. 1.53 crore. Other loans and advances, too, have gone up by Rs. 3.48 crores. Of this increase, advances to Scheduled banks against usance bills alone have accounted for Rs. 2.61 crores. This increase in bankers' advances from the Reserve Bank as well as the drop in their deposits with the Bank, together with the marked expansion in notes in circulation, clearly show that in the past week itself there must have been a sizable demand for money. Investments of the Reserve Bank show a fall of Rs. 23.38 crores during the week under review. This is obviously due to the substantial sale of the two newly created Central Government loans.

The latest available statement of the Scheduled banks pertains to the week ended 29th August 1958. This shows, as compared with that for the previous week, relatively minor variations. Among the deposits, while there has been a small fall of Rs. 54 lakhs in demand deposits, a rise of Rs. 91 lakhs is shown in time deposits. Borrowings from banks of time nature as well as of demand nature are up to the tune of Rs. 1.21 crore in the aggregate. Advances in India are lower by Rs. 347 lakhs, but bills purchased, both inland and foreign, are higher by Rs. 25 lakhs. Consequently, total bank credit shows a contraction of Rs. 312 lakhs. Investments have moved up by Rs. 8.12 crores but total cash is smaller by Rs. 2 crores.

A steady trend prevails in the gilt-edged market. There are, however, signs of abatement of the strong bullish trend which characterised the trading in this market during the past few weeks. The demand for Central Government's loans is modest, while there is hardly any enquiry for the State Governments loans. There has no doubt been a further spurt in 3 per cent. 1986 Conversion Loan which closed today at Rs. 74.45, as against Rs. 73.75 a week ago. There has also been a rise of 50 nP over the week in 3 per cent. 1970-75. These increases are more due to shortage of scrips than to any substantial demand. The turnover in these two loans was much less than the one indicated by the rise in price. Among other Central Government loans, an increase of 10 nP is recorded in 2½ per cent. 1962 and 3 per cent. 1963-65 and a rise of 5 nP is shown in 2½ per cent. 1960, 3 per cent. 1966-68 and 4 per cent. 1960-70. 3½ per cent. 1963 actually shows a loss of 5 nP. 3½ per cent. 1967 and 3½ per cent. 1968—the two newly created Central Government issues—met with poor demand especially in the latter half of the week, following an increase of 5 nP and 10 nP respectively in the selling prices of the Reserve Bank. It is estimated that the total amount of these loans so far sold by the Bank is not more than Rs. 25 crores.

There have been practically no changes in the rates of State Government loans.

In the foreign exchange section of the money market, over the week, rupee-dollar rate shows an insignificant change, following a similar trend in the pound sterling *vis-a-vis* U.S. dollars. The banks' selling rate for ready dollars is unchanged at Rs. 477.75 per 100 dollars. But their buying rate is a shade higher at Rs. 474.50 per 100 dollars as against Rs. 474.25 a week ago. In the New York Exchange, spot sterling went down from $2.80¼-2.80.3/16 to $2.79⅞-2.79.15/16 during mid-week, but recovered during the last two days to stand at $2.80.5/32-2.80.7/32. Three months' forward moved in sympathy with spot. the closing rate at $2.79⅞-2.79.7/16, comparing with $2.79.11/32-2.79.13/32 last Wednesday.

BULLION RECEDES

(*From Our Own Correspondent*)

BOMBAY, 10*th September*

The bullion market had only three working sessions during the week under review, as it remained closed on the 5th, 6th and 9th inst. This brief period witnessed a setback to the prices of both the precious metals, thanks to apprehensions of Government interference in bullion trade, as well as heavy arrivals, especially of unrefined silver and contraband gold. The weakness of silver was also due to reports regarding payment of duty on 125,000 Tibetan coins and oilerings by local interests. There would have been a marked rise in values but for support at lower levels and enquiries induced by mounting tension in the Far East.

Forward silver (*Bhadrapad* settlement) was subjected to selling pressure and came down from Rs. 187-12 last week-end to Rs. 185-10 before finishing today at Rs. 186-6. The net loss over the week was Re. 1-6. *Asauyuj* delivery receded from Rs. 188-2 to Rs. 186-6. The carryforward rate to day was As. 4½-As. 5¼ against bulls.

Ready silver dropped Re. 1-9 over the week, today's closing rate being Rs. 185-11. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 18 bars, while offtake was 13 bars per day on an average.

Gold for forward delivery (*Bhadrapad* settlement), which stood at Rs. 108-2 on Wednesday last, declined to Rs. 107-5 today. Towards the close, however, it was better at Rs. 107-7. The net loss over the week was As. 11. The carry forward rate today was As. 9-As. 10 against bulls.

Ready gold encountered selling and moved down from Rs. 107-14 to Rs. 107-3 before closing at Rs. 107-7. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,500 tolas while offtake was of the order of 2,700 tolas.

The price of spot silver in London which was standing at 75d. for some weeks now hardened to 75⅞d. yesterday—this rate was maintained today also—while that in New York was unchanged at 88⅛c. Gold prices in London firmed up further, from 250s. 6¼d. last week to 250s. 7¼d. today.

The following comparative table shows at a glance the trend of the market during the week under review:

	10-9-58	Highest	Lowest	3-9-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	107 7	107 9	107 3	108 4
Forward*	107 7	107 15½	107 5	108 2
Sovereign	71 0	—	—	71 0
SILVER				
Ready (.996 fine Mint)	185 11	187 1	185 10	187 2
Forward†	186 6	187 11	186 5	187 12
London Silver Ready	75¼d.	—	—	75d.

GOOD DEMAND FOR BUFF

(*From Our Own Correspondent*)

KANPUR, 8*th September*

There was no development of import to the hides and skins market during the week under review. New arrivals were not as considerable as in the previous week. Demand for buff and high grade goat was particularly strong. The main purchasers were the local tanners headed by Messrs. Cooper Allens. Exporters, Madras dealers and the country tanners were lukewarm.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360 to Rs. 380, 2nd grade Rs. 260 and 3rd grade Rs. 140 to Rs. 180 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat, 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep, 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 175 to Rs. 200 per 100 pieces.

LINSEED ADVANCES

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 8*th Steptember*

Although there was very little business in the linseed market during the week to report, firm prices were maintained. In fact, advances were recorded for both seeds and oil. Fresh offers for seeds from the centres continued to be scarce, but deliveries against previous higher-priced purchases showed an increase. Crushers were operating on a very restricted scale, with producing costs still uneconomic. Oil business was confined to retail sales in the local market, where demand improved, owing to higher prices prevailing for mustard and groundnut oils.

The latest available quotations are: Ready Rs. 26-2 and September Rs. 26 per maund.

COTTON FUTURES DULL

(*From Our Own Correspondent*)

BOMBAY, 10*th September*

Dull conditions prevailed in the cotton futures market during the week under review. Values showed a sagging tendency in featureless trading. The none-too-bright textile outlook, the comfortable supply position of cotton and the prospect of a good crop discouraged support. Towards the close of the week, however, the market derived some strength from reports of excessive rains in parts of Punjab and Berar, threatening damage to the crop. The expectation that the Cotton Advisory Board, which is expected to meet on the 15th inst., to assess the exportable surplus and advise the Government on the export policy for the new season, will recommend immediate release for export of raw cotton in excess of the estimated requirement of mills and urge the abolition of the export tax of Rs. 50 per bale favourably affected sentiment. The brisk buying induced by these considerations led to a mild recovery in values yesterday and a part of the earlier loss was made good. The market maintained a steady undertone today.

I.C.C. Moglai Jarilla March 1959 opened the week lower at Rs. 665.50, as compared with the previous day's closing of Rs. 667.50, and declined to Rs. 663 on Monday. The market was closed on Friday as a mark of respect to the memory of the late Seth Piramal Chatrabhuj and also on Saturday on account of *Janmashtami*. The contract improved to Rs. 664.50 yesterday. Commencing at Rs. 662 today, it gathered Re. 1.75 before closing fractionally lower at Rs. 663.25. The trend of price of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	10-9-58	*High*	*Low*	2-9-58
I.C.C. Moglai Jarilla (March 1959) ...	663.25	664.50	661	667.50

In the spot section, values ruled more or less steady. Mill demand was on a restricted scale. Good quality cotton continued to attract mill-buying. Surti, Kalyan, Rajapalayam and Vijay evoked attention. Jarilla came in for selling resulting in a fall in its quotation.

The export front was devoid of much activity. Some stray business was reported with Japan and Continental buyers. The Government of India has decided to add the unutilised balance of the export quotas for cotton issued during the last season for which the shipping period expired on 31st August 1958, to the current export quota for Bengal *Deshi* and for all varieties of cotton not above ¾" in staple (other than Bengal *Deshi*). The export quota of 30,000 bales of Bengal *Deshi* issued in August is thus increased to 35,300 bales and that of 40,000 bales of all varieties of cotton (other than Bengal *Deshi*) not above ¾" staple to 61,200 bales. The Government has also raised the export quota of 20,000 bales for all varieties of old cotton not above 25/32", issued in August to 30,000 bales. Cottons of the 1957-58 season not above 25/32" in staple length would qualify for export under this category.

In the foreign section, business was put through in East African varieties and Sudan. The individual import quotas received by mills against the recent quota of 40,000 bales of cotton of 1-1/16" staple and above and 30,000 bales of 1-3/16" staple and above from soft currency areas are said to be smaller than what was expected. This has naturally led to an automatic cancellation of part of their business done on "subject to licence" basis.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi*: 625 (620); Berar Jarilla 680 (685); Khandesh 750 (750); Vijay 865 (865); Hubli Laxmi 1,000 (1,010); Jaydhar 880 (890). *Delivery contracts*: Bengal 594 (594); Mathia 614 (615).

The cotton futures values in Karachi showed a declining trend during the week. The reduction in export duty led to an easing of values. Operators were in no mood to extend support. News of favourable weather and apprehension that India might abolish export levies on its cotton prompted selling which led to a setback in values. N.T.R.G. January, which had closed at Rs. 79-2-6, declined to Rs. 78-4-6 and the March position shed, over the week, As. 13 to Rs. 78-9-6.

The Alexandria cotton futures market ruled easy during the week under review, reflecting traders' disappointment that the duty reduction fell short of expectations. The feeling was that the cut of 2*d.* per lb. was not sufficient to make Egyptian cotton fully competitive with Sudan growths. Easy advices from the spot market and favourable crop news imparted further weakness to the market.

It is reported that the Egyptian Government has decided to keep the minimum prices guaranteed for the new crop unchanged at last season's level. The minimum prices are (in tallaris per cantar) Karnak Good/Fully Good 69; Menufi Good/Fully Good 64; Giza 30 Good 59; Ashmouni Good 55; Dendera Good 57. Dendera cotton has been included in the new crop list since it is now tenderable against medium staple futures contracts.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.45 (74.65); January 72.55 (75.00). *Ashmouni*: October 66.05 (66.65); December 65.90 (66.65).

Quiet conditions prevailed in Liverpool during the week. Prices tended to decline in slow dealings. The continued absence of any signs of reco-

very in the textile trade and the prospects of a larger cotton crop in the U.S. which the Department of Agriculture, in its September estimate published on Monday, placed at 12.1 million bales as compared with 11.5 million bales forecast a month ago, led to an easing of values. Both the American and American type contracts declined under pressure of selling. The Sudan contracts also ruled easy. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end quotations:

American cotton one inch staple contract: October-November 23.55 (23.75); December-January 23.55 (23.75); March-April 23.50 (23.80); May-June 23.45 (23.78). *American cotton mixed growths contract*: October-November 23.95 (24.20); December-January 23.90 (24.25); March-April 23.85 (24.30); May-June 22.95 (24.20). *Sudan*: September-October, November-December, January-February 29.75 (30.00).

In its estimate, released on 8th September, the U.S. Department of Agriculture forecast a crop of 12.1 million bales of 500 lbs. in the new season. This compares with the 11.5 million bales forecast a month ago and the harvested crop of 10.9 million bales last season. The yield per acre was estimated at 486 lbs., as against 466 lbs. forecast last month and the final yield of 388 lbs. last season.

Trading in the New York cotton market earlier in the week was dull as the operators were awaiting the official crop report. The official estimate of the crop was higher than trade expectations. The average of the estimate of 67 members of the New York Cotton Exchange worked out to only 11.8 million bales. The higher official forecast resulted in an immediate decline in values. But the market advanced soon after on fresh buying with the result that the week's closing rates are a shade higher than last week-end quotations.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	9-9-58	2-9-58	26-8-58
Spot	36.15	36.20	36.30
October	35.39	35.25	35.35
December	35.83	35.59	35.70
March	36.30	35.98	36.00

CONTROL ON STAPLE FIBRE

(From Our Own Correspondent)

BOMBAY, *10th September*

Of much significance to the yarn trade is the clamping down of control on the acquisition, distribution and prices of staple fibre announced yesterday by the Union Ministry of Commerce and Industry. Accordingly, every producer of staple fibre is required to furnish to the Textile Commissioner within a week information regarding the quantity and description of staple fibre held by him as on the 9th inst., as also stocks sold by him during the period from 1st January 1958 to the aforesaid date. In addition, the producer is required to give details of prices at which the sales were made and the names of purchasers to whom such sales were effected. No person can acquire staple fibre from a producer except under a permit issued by the Textile Commissioner. The permit scheme makes it obligatory on the part of producers to sell staple fibre produced or held by them in stock only to permit holders and that at the price stipulated in the schedule attached to the order.

The above move of the Government seems to have had no effect on the market. Excepting that the control would ensure equitable distribution of yarn, it would not, it is felt, improve the position in respect of supplies which continue to be short. The indigenous production of fibre is running at an annual rate of 14,400 tons, as against the estimated demand of 21,600 tons. In fact, apprehensions are expressed that the unofficial prices of staple fibre may be much higher than those fixed. It is, therefore, urged that, unless the Government grants adequate licences for import of essential raw materials such as wood-pulp, caustic soda and sulphur required for the manufacture of staple fibre, prices of fibre and, consequently, yarn cannot be brought down. Meanwhile, traders are anxious to know whether permits will be issued to composite mills as well, although reports suggest that the Textile Commissioner will give priority to about 10 or 12 mills which spin only staple fibre yarn.

Dull conditions prevailed in the yarn market during the week. Reports from important consuming centres indicated slackness in demand due to unsatisfactory offtake of cloth and accumulations of stocks. Art silk yarn was quiet, as advices from piecegoods market were not encouraging and arrivals of imported yarn were slightly larger. The total imports of art silk yarn into Bombay port during August 1958 were 1.91 million lbs., as against 1.48 million lbs. in the previous month and 1.33 million lbs. two months before. Cotton yarns, as usual, lacked support.

Staple fibre yarns (40x2) October delivery evoked some support and gathered Rs. 5 to Rs. 714. Spot yarns encountered selling. 40x2 Citys receded by 6 nP to Rs. 3.81. Kohinoors retreated by 5 nP to Rs. 3.94. Centurys lost 3 nP to Rs. 3.78. Foreign yarns were quiet, Paramounts being quoted at Rs. 9.50 and Fujis at Rs. 9.50.

In the art silk yarn section, 120 Japan declined by 3 nP to Rs. 5.97. 120 Italy receded by 7 nP to Rs. 6.37. 150 Japan was quiet at Rs. 6.44. 150 Italy, however, put on 6 nP to Rs. 6.50. Among indigenous yarns, National Rayons 120 bright cones first grade climbed up by 18 nP to Rs. 6.12.

Cotton yarns were dull. Ten counts Moderns were neglected at Rs. 13.25, as also Podars at Rs. 12.37. Among twenty counts Gokaks receded by 12 nP to Rs. 16.50. Indus were stagnant at Rs. 16.62, Moderns gained 13 nP to Rs. 16.75. Thirty counts Hinds put on 13 nP to Rs. 19.75. Among forty counts, Minaxis changed hands at Rs. 25.25, and Moderns at Rs. 25.25, same as last week. Sixty counts Finlays were on offer at Rs. 58. Eighty counts were neglected, Mahendras being quoted at Rs. 71.50, Moderns at Rs. 71.50 and Finlays at Rs. 78.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	10-9-1958	3-9-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.97	6.00
150 Japan (per lb.)	6.44	6.44
120 Italy (per lb.)	6.37	6.44
150 Italy (per lb.)	6.50	6.44
Staple fibre yarn (per case of 200 lbs.)—		
40×2 October	714.00	709.00
40×2 Kohinoor (per lb.)	3.94	3.99
40×2 City (per lb.)	3.81	3.87
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.37	12.37
20s Modern	16.75	16.62
30s Hind	19.75	19.62
40s Minaxi	25.25	25.25
60s Finlay	58.00	58.00
80s Mahendra	71.50	71.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *10th September*

The firm trend noted in the oilseeds market last week continued unabated during the week under review. Buying fervour was well sustained, thanks to rumours of fresh export quota for seeds and oils. The castorseed section ruled active. Supplies of contracts were scarce, thanks to holding up of stocks by Ahmedabad traders as well as a few Stock Exchange operators. The bulls asserted themselves and applied *teji* option, while some bears were trying to cover their sales in view of the rising tendency in prices and the political tension in the Far East. Groundnuts also presented a firm trend, owing to excellent purchases in groundnuts and oils by *vanaspati* manufacturers. Linseed was also firm, following continued short-covering. Cottonseeds were well supported and prices tended to move up. The undertone of the market was distinctly firm.

Groundnut February 1959 contract, which stood at Rs. 165.62 last week-end, spurted to touch Rs. 167.75 today. Bold ready forged ahead from Rs. 39 to Rs. 41. Coromandel moved up from Rs. 39.75 to Rs. 41.25 Khandesh quality was done at Rs. 41.25 today, as against Rs. 39.50 last week. Groundnut oil ex-mill evoked very good buying support and hardened by 62 nP to Rs. 21.37. Railway receipt strengthened by a like amount to Rs. 21.12.

Castorseed September 1958 contract moved up from Rs. 158.75 to Rs. 160. May 1959 contract registered a gain of Re. 1.37 to Rs. 159.62. Ready Madras gathered 13 nP to Rs. 32. Kanpur quality rose by 15 nP to Rs. 30.75. Castor oil B.S.S. picked up 19 nP to Rs. 17.75. Commercial quality gathered 13 nP to Rs. 16.25.

Linseed September 1958 contract found buyers today at Rs. 33.50, as against Rs. 32.12 last week. May 1959 contract was done at Rs. 32.62, the quotation for last week-end being Rs. 32.37. Bold ready improved by 25 nP to Rs. 33.37. Linseed oil put on 31 nP to Rs. 17.62.

Cottonseed September 1958 contract received excellent support and rallied Rs. 4.50 to Rs. 126. February 1959 contract gathered 25 nP to Rs. 105.75.

Among other seeds, kardiseed bold ready was better by 50 nP at Rs. 22. Nigerseed Madras quality advanced from Rs. 34 to Rs. 34.75 before finishing at Rs. 34.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	10-9-1958	3-9-1958	27-8-1958
	Rs.	Rs.	Rs.
Groundnut—			
August 1958	—	203.00§	200.50
Feb. 1959	167.75	165.62	163.37
Bold ready (per cwt.)	41.00	39.00	40.00
Linseed—			
Sept. 1958	33.50	33.12	32.50
May 1959	32.62	32.37	32.00
Bold ready (per cwt.)	33.37	33.12	32.00
Castorseed—			
Sept. 1958	160.00	158.75	152.75
May 1959	159.62	158.25	152.50
Madras (per cwt.)	32.00	31.87	30.62
Cottonseed—			
Sept. 1958	126.00	121.50	121.00
Sept. 1959	105.75	105.50	103.00

Commercial (per quarter) ..	16.25	16.12	15.62
Linseed oil†—			
Ready	17.62	17.31	16.87

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
§ 30th August 1958.

BLACK PEPPER FULLY STEADY

(Messrs. Parekh & Co.)

BOMBAY, *10th September*

Malabar black pepper ruled very steady during the week. Higher counter offers from New York and tension in the Formosa Strait proved a supporting factor. After buying at about $0.25¼, New York was reported to be offering at $0.25¾, but Indian sellers were unwilling to meet anything less than $0.26¼. As a result, no business was reported.

Singapore also remained very steady, arrivals from both Sarawak and Telok Betong being poor. As Djakarta was offering Lampong black pepper at competitive price, the buyers were said to be neglecting both Singapore and Djakarta. But there being no regular shipping facilities, etc., from Telok Betong or from Djakarta, immediate requirements of the U.S.A. could only be met either by India or by Singapore. Consequently, exporters in India expected broadening of inquiries from overseas some time during the next fortnight. So far, Formosan trouble appeared to have unaffected New York market where prices failed to improve as anticipated earlier.

It is reported that the American Conference Line has reduced its freight from $91.50 to $80.50 with effect from 22nd August 1958.

Ungarbled at Alleppey and Cochin ruled steady at Rs. 625, while Calicut was quoting Rs. 640-Rs. 650. There were narrow fluctuations in the forward market at Cochin with undertone very steady. Ready was quoted at Rs. 107.50, while October and December hovered round Rs. 110 and Rs. 105, respectively.

In specific delivery, most of the business comprised of switching from September to October.

A.S.T.A. was neglected and was quoting $0.26 for September nominally.

Today's nominal quotations are: Ready delivery Rs. 82 per Bengal maund; September Rs. 570.80; October Rs. 580.90 per candy of 5¼ cwts.

SUGAR RISES FURTHER

(From Our Own Correspondents)

BOMBAY, *10th September*

The sugar market continued to rule firm during the week under review. The ex-mill quotations for Bombay-Deccan sugar were raised by about 50 nP per bag. Demand from Malabar and South Indian sides was quite good, while arrivals were not much, being only 9,000 bags. This quantity is of course, larger than the 3,900 bags received in the previous week but considerably short of the current demand. In view of this and following the delay in the issue of normal monthly release, sugar met with support at higher level.

Large grain advanced by a rupee to Rs. 109-Rs. 117 per bag. Medium grain rose by 50 nP to Rs. 106.50-Rs. 108. Small grain gained a like amount to Rs. 105.50.

* * * *

HAPUR, *8th September*

Absence of ready demand accounted for quiet conditions in the sugar market during the week. Modest business was done for Punjab and Gujerat, while other consuming centres displayed little interest. The supply position was reported to be satisfactory.

Quiet conditions were also witnessed in the Muzaffarnagar sugar market. While some business was reported for Saurashtra, demand from other consuming centres was dormant. Small crystal prices, which had earlier declined by 19 nP to 44 nP per maund below the Government controlled prices, improved later by 12 nP per maund. Business was done by the following factories at the prices against them (ex-mill delivery wholesale):—Khatauli (A29) Rs. 37.75; Deoband (C29) Rs. 36.36; Iqbalpur (A29) Rs. 37.75; Mansurpur (B29) Rs. 37.12; Shamli (C29) Rs. 36.37; Amroha (D29) Rs. 35.69; Bijnore (E29) Rs. 35.56; Dhampur (D29) Rs. 35.62.

Sugar prices at Kanpur were quiet. The latest prices per bag were: (C29) Basti Rs. 103-8; Gola Rs. 102-8; Burhwal Rs. 101-12; Waltergunj Rs. 101-4; Lakhimpur Rs. 101; Hargaon Rs. 101; Balrampur Rs. 101.4; Tulsipur Rs. 101-4.

Khandsari ruled quietly steady. Demand was reported to be slack. Prices ranged between Rs. 33 and Rs. 36 per maund according to quality.

Dry *gur* stocks had been exhausted and small arrivals from producing areas were lifted up at Rs. 22.50 per maund, while local stocks, now put at 24,000 maunds, were mostly of *kotha* dry-wet quality which was being transacted at Rs. 19.37 per maund. Outside demand was slack and stockists were reported to be anxious to sell their stocks before the advent of new quality *gur* early next month. The conditions of the standing cane crops were reported to be fairly good, due to occasional heavy rains. Demand for ready *gur* was slack in the Muzaffarnagar market. While *chaku* dry prices remained unchanged, *chaku kotha* and *pan sera* eased fractionally to Rs. 21.75 and Rs. 19.50 per maund, respectively. *Chaku* dry and *pansera* were quoted at Rs. 23.25 and Rs. 20 per maund. *Shakker* was not quoted, as its stocks were almost nil. *Khandsari* remained unchanged at Rs. 33 to Rs. 36 per maund according to quality.

Future *gur* ruled quietly firm on continued bull support. *Fagun* delivery opened at Rs. 14.07 last Monday, touched the highest of the week at Rs. 14.24 and was quoted at Rs. 14.17 on Saturday.

TEA STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *4th September*

The first of the fortnightly sales—Sale No. 27—was held on Tuesday, the 2nd inst. The sale contained 1,146,674 lbs. High-grown teas showed a further marked improvement in quality, with some really flavoury invoices on offer from the Nilgiri district. The appearance of teas from other districts was satisfactory. The sale opened to a good demand, but this became somewhat irregular as the sale progressed. Low medium teas showed no change and were fully firm on last week's sale. Medium teas were stronger and advanced by 10 nP, and good mediums met with useful support and were dearer by 5 to 20 nP. Best liquoring teas were very strong and dearer, and

these descriptions advanced by as much as 80 nP in some cases. Whole leaf teas were easier.

The quotations were: Low medium Re. 1.50 to 1.65; medium Re. 1.75 to 1.95; good medium Rs. 2.00 to 2.25 and quality Rs. 2.35 to 4.25.

London Market.—Sale of 1st September 1958: There was improved demand for all kinds.

Sale of 2nd September 1958: Firm to dearer.

Colombo Market.—Sale of 1st September 1958: Fresher selection active demand. Mediums and highgrowns 20 cents dearer. Best UVAS irregular. Following quality Middle East types 10 cents lower.

Sale of 2nd September 1958: Stalky broken mixed and powdery dusts lower. Better sorts strong demand. Improved quality UVAS dearer.

Calcutta Market.—Export: Less general demand. Commons 4 to 8 nP lower. Orthodox Assam B.O.Ps. eased by 10 to 20 nP C.T.C. apart from best sold 20 to 30 nP below valuations and were the weakest features. Darjeelings and tippy teas sold well at easier rates.

Internal.—21,000 packages. Dust strong demand. Powdery types strongest feature, generally dearer. Exportable C.T.Cs easier. Other types steady. 850 packages internal sold at around valuation.

Export duty.—The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty at Rs. 3.09 per pound, as against Rs. 2.88 per pound in force from 1st August 1958. There is no change in the existing rate of duty of 38 nP per pound.

Export Quota.—The market remained steady during the week, and business was registered at 9 to 9¼ nP. Today's quotation was, however, sellers 9¼ nP and buyers 8¼ nP.

Forthcoming Auctions.—Dust Sale 'S' will be held on Thursday, the 11th inst.

EXPORT TEAS WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, *9th September*

Although there was good demand during yesterday's export sales, prices realised were unimpressive. The same trend developed in the last week's internal sales too. The rise in U.K. stocks of tea to 97 million lbs. in the week ended 29th August from 95 million lbs. in the previous week was noted, but no reaction to this report was caused here, in view of the extremely steady conditions in last week's auctions in Mincing Lane, attributed to attractive prices touched in the dullness of recent weeks.

According to the preliminary estimates for the month of August, the North Indian tea output registered a rise as compared with August last year and, naturally, anxiety about disposal of the growing common tea stocks was increasing. It is believed that tea despatches from several gardens to Calcutta are held up, owing to shortage of wagons and also to floods affecting tea movements from gardens to rail-heads. It is, therefore, expected that, when once the floods receded, arrivals, especially of commons, would increase and might affect prices further. Meanwhile, reports of financial difficulties being faced by some gardens on account of the very low prices being realised by them for common quality teas are causing anxiety. These gardens are also finding difficulty to obtain credit. Regarding quality teas, the U.S.S.R. is now an active buyer, and no difficulty is anticipated in the timely disposal of such teas. Tea trade circles are surprised at the delay in the expected announcement of cancellation of the export duty on common teas especially after the Commerce Minister, Mr. Lal Bahadur Sastri, unreservedly accepted, while addressing the recent planters' conference at Coonoor, the unfairness of common teas selling at half the price of quality teas being subjected to the same duty as quality tea.

Dusts offered in last week's internal auctions amounted to 20,886 chests. Demand was good, Darjeelings being the strong feature. Commons and orthodox Assams were bid at firm rates, and these lots possessing useful liquoring powders were keenly bid. In C.T.C. Assams, mediums met with competition, but liquoring teas declined. Quotations—in rupees per lb.—with those of the previous week in brackets, were: Best Assam C.T.C. 2.50 to 2.75 (2.50 to 2.80); medium Assam C.T.C. 2.20 to 2.40 (same); medium Assams grainy dust 1.74 to 1.78 (1.74 to 1.76); and medium Dooars 1.72 to 1.74 (same).

In strong general demand, prices in Chittagong's sale No. 7 held on 3rd September improved by an anna to two. Offerings amounted to 13,140 chests leaf, 2,655 chests dust and a supplement of 130 chests. In leaf grades, best liquoring teas were buoyant but tippy teas occasionally lost to sell below valuations. Legg cut teas were fully steady and quoting Rs. 2-11-6. In green teas, offerings aggregated 888 chests. Fannings eased by an anna to two annas but the polished grades advanced. The rates—in rupees per lb.—were: O.P. 2-15-6; Pek. 2-13-6; O.F. 2-13; B.O.P. 2-10-6; P.F. 2-9 to 2-9-6; B.P.S. 2-8-6 to 2-9; and B.P. 2-8.

The 17th September is the date fixed for sale No. 8.

During yesterday's sale, 62,411 chests were offered for export. Although demand was good, prices were irregular, often tending to be easier. A good portion of the C.T.C. teas on offer had to be withdrawn. The price eased by 30 to 50 nP. On the other hand, teas for price advanced and provided a strong feature. Plain liquoring brokens were firm, but similar fannings eased. A steady tendency was maintained in orthodox Assam and Dooars, B.O.Ps and O.Fs possessing bright liquors, while the lots with ordinary liquors eased by 20 nP. Legg cut teas gave way by 5 to 10 nP. Whole leaf grades were in good demand, but, in consonance with the general trend, the price, especially of the higher-priced lots, eased. Tippy teas were irregular in good demand. Darjeelings eased, although there were keen enquiries. The quotations with those of last week in brackets were: best Assam C.T.C. fannings Rs. 3.20 to 3.40 (2.50 to 3.80); best Assam C.T.C. B.P. Rs. 2.90 to 3.10 (3.20 to 3.40); clean black pekoe Rs. 2.05 to 2.10 (same); medium B.P. Re. 1.85 to 1.95 (same); plain fannings Re. 1.76 to 1.84 (1.85 to 1.95); and plain B.P. Re. 1.70 to 1.74 (1.68 to 1.72).

Export quota changed hands at 8¾ nP before losing to 8¼ nP.

RUSSIA BUYS HESSIAN CLOTH AND BAGS

(From Our Own Correspondent)

CALCUTTA, *9th September*

Quiet conditions were in evidence in both the raw jute and jute goods markets during the week under review. A notable development was the interest shown in hessian by the Russian Government. In fact, a deal in hessian cloth and bags for delivery before January was put through with the U.S.S.R. More deals were anticipated and this expectation led to a small recovery in hessian prices. Although American interest continued to be small, it was believed that American buyers would show greater interest in the near future, in view of higher consumption of burlap and decline in burlap stocks. However, reports from New York continued to be dull, but it was stated that the revival of industrial activity in autumn would lead to more orders from bag manufacturers. Nevertheless, the dull conditions here and the lack of stability in prices were factors which were making foreign buyers cautious. Viewed thus, this week's depression in the futures market was causing concern.

Some amount of buying was also done on account of Australia and the Continent in sacking goods. Covering business soon followed and more interest was anticipated. Judging from shipment figures, it was difficult to see how an increase in stocks at the end of last month could be avoided. For, upto 25th August, hessian shipped was 10,000 tons lower at 23,000 tons, and sacking was 20,000 tons, as against 21,000 tons. Discounting for this factor was also a cause for this week's lower trend, as there was no ground to believe that there had been an increase in internal buying. In the meantime, the reduction of £5 a ton in jute yarn and cloth prices in Dundee was noted here and was attributed to increasing competition in world markets. It was clearly seen that, unless Pakistan adopted a more reasonable price policy in regard to raw jute, that country's export trade in raw jute could receive a severe jolt. Pakistan's raw jute exports in the year ended June last fell by as much as 1.2 million bales, and this was due to the high prices charged. It was felt here that official expectations of lower crop would not lead to an increase in interest regardless of the price. For, with high labour charges and exorbitant prices for raw jute, Continental mills are faced with serious problems Dundee interests would be only too glad if India again commenced exporting raw jute, even in small quantities. However, the time has not yet come for India to do so, although this year's crop would see India entirely self-sufficient. Lower prices for raw jute in Pakistan are not, of course, to the interests of Indian jute goods abroad. However, India's foreign trade policy being one of looking out for long-term benefits rather than short-term on thin grounds, market circles feel that India will have permitted token quantities of raw jute to be exported if only there is clear proof of some surplus.

It is known here that all was not well with the Pakistani jute mills industry also. Although these mills possess more up-to-date machinery than India and can get better quality raw jute, they are yet unable to compete with Indian mills. They do not appear to have established production techniques and are handicapped with inexperienced labour. No doubt, Pakistani mills have exported token quantities of goods, but these instances are mainly directed to frighten India of the forthcoming (proved unreal) competition from Pakistan and do not reflect the true state of affairs of the mill industry there. It is reported that the biggest producing unit in Pakistan, Adamjee Jute Mills, incurred a loss of Rs. 93 lakhs in the accounting year ended December 1957.

On Tuesday last, the markets opened steady and, in heavy goods, business took place on both Australian and Continental accounts for near delivery positions. The price of ready B. twills was firm at Rs. 96.75 and of hessian 40" 10 oz. at Rs. 41.25. However, prices were soon affected on account of selling pressure in the futures market, where November hessian 40" 10 oz. declined from Rs. 40 to Rs. 39.06, November B. twills from Rs. 98.15 to Rs. 97.55 and December upper Assam white bottoms from Rs. 23.88 to Rs. 23.56. Reflecting this declining trend in futures, ready hessian 40" 10 oz. lost to Rs. 40.90 on Wednesday and B. twills to Rs. 96.40. Selling pressure in futures continued and, on Thursday, B. twills lost further to Rs. 96.20, while the fractional improvement of ready hessian 40" 10 oz. to Rs. 41 was nominal in character in the absence of business. The market was closed on Friday on account of *Janmashtami*, but, on Saturday, the reported Russian deal in hessian cloth and bags imparted a better trend to push up ready hessian 40" 10 oz. to Rs. 41.25. In sympathy, ready B. twills at Rs. 96.90 added a fractional improvement. There was no development in the market to change the dull conditions, and ready hessian 40" 10 oz. sagged to Rs. 40.80. In heavy goods, the Continent continued to show some interest reflecting which ready B. twills improved to Rs. 97.40.

At one time, rumours of damage to crop on account of floods were strong, but these lacked basis. However, transport on aecount of floods had been affected, although so far rains in West Bengal had been below normal. Reports of good harvest continued to emanate from jute districts and growers feared that, if the present recession continued, prices would soon reach uneconomic levels, especially when the rise in prices of food items and other essential commodities continued unabated. Assam northern bottoms opened at Rs. 24 and, after giving way to Rs. 23.75, recovered to close at Rs. 24.25. The recession in the goods markets naturally caused anxiety to raw jute stockists, and offers were not meeting with response.

The latest quotations for September-October delivery of the 1958-59 crop are:

	Middles	*Bottoms*
	Rs.	Rs.

TIN AND LEAD EASY

(From Our Own Correspondent)

CALCUTTA, *9th September*

Although the Commerce and Industry Minister, Mr. Lal Bahadur Shastri's indication, when he addressed the Import Advisory Council at New Delhi recently, that he could hold out no prospect for liberalisation of the import policy, it was hoped here that, in view of the chances of increased earnings from export following the decontrol of about 200 items for purposes of export, as also of the country's success in getting foreign financial aid to the tune of $350 million, there would be more provision for import of metals in the import policy to be announced by the middle of next month. The quiet trend during the week under review was attributed to such an expectation.

Regardless of the upward trend in the Singapore market, tin gave way to Rs. 564, after opening at Rs. 566. Demand was dull. At Rs. 68, lead eased by 50 nP and Chinese tin was available at a discount. Some fresh imports were received and this led to selling pressure. Although there was little demand, electrolytic zinc gained to Rs. 68 from Rs. 67. The improvement was attributed to bazar considerations. It was noted that, on the London Metal Exchange, copper was moving up on account of demand from West Germany and Russia.

*

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *8th September*

Quiet conditions prevailed in the foodgrains market during the week. The beginning of new *kharif* crop grain maize arrivals into the market and the various measures taken by the Union Government, including the total ban on export of foodgrains from the State, were the main influencing factors. Prices of foodgrains are likely to run down after some weeks when *kharif* grain arrivals will increase in the markets. Barring a few west U.P. districts where *kharif* crop has suffered from excessive rains, the general prospects for this crop are reported to be fair all over U.P.

Wheat prices were now quoted slightly lower than the best levels of the season at Rs. 22.75 per maund for average quality and Rs. 24 for farm produce. Daily arrivals from producing areas continued to be small, at an average of 50 maunds, but supplies were occasionally supplemented by unauthorised arrivals from the Punjab. Fair price shops continued to sell 100 maunds of wheat daily at 2 seers 10 chattaks per rupee. A heavy quantity of rice was reaching east U.P. from Calcutta, while wheat from Central reserves was being sent to Bihar by special trains. The local stock of wheat with the trade was put at one *khatti*, besides some quantity stored in bags which had not been registered with the local chambers.

Rice ruled quiet, thanks to better supply position and the ban imposed on movement outside the State. *Basmati* was quoted at Rs. 40 to Rs. 41.75, mainpuri at Rs. 30 and coarse quality at Rs. 26.50 per maund.

Gram continued steady on Punjab advices. The local stock ran down by one *khatti* during the week to 29 *khatties*. Arrivals of new maize had begun in small quantity, but the quality was poor. Barley and *bejhar* eased slightly, while other coarse grains were quiet during the week. The week-end prices (in rupees per maund) were: Gram Punjabi 16.75; barley 16; *bejhar* 15.50; maize new 16.25; *jowar* 13 to 15; *guwar* 14.75.

Good outside demand, coupled with lack of restrictions on export outside the State, accounted for slight gains in the prices of peas during the week. The local stock ran down by three *khatties* during the week to 92 *khatties*. Demand for *arhar* was dormant and some despatches were made during the week on previous commitments. Other pulses stayed steady. The week-end prices as on Monday were:—Peas *dara* Rs. 15.12; *khatti* Rs. 14.87; farm quality Rs. 16; peas *dal* Rs. 17; *arhar* Rs. 18.37; *khatti* Rs. 18.25; *arhar dal* Rs. 23.50; *urd* Rs. 18.75 to Rs. 19.25; *moong* Rs. 25; *massor* Rs. 16 to Rs. 18.

SURVEY

(*Concluded from page 427*)

form to the I.S.I. standards. Nevertheless, there are complaints from certain quarters regarding the purity of caustic soda. The Development Wing maintains that, though the quality of the product has "definitely improved," the caustic soda produced from diaphragm cells does not conform to the revised I.S.I. specifications. It must be noted, however, that the I.S.I. has under consideration a proposal for relaxing the limits of its specification, particularly of sodium chloride and sodium carbonate in caustic soda.

India continues to import large quantities of caustic soda and bleaching powder. While imports of caustic soda were of the order of 66,042 tons (valued at Rs. 388.22 lakhs) during 1957, as against 52,638 tons (valued at Rs. 317.57 lakhs) in 1954, those of bleaching powder were about 1,805 tons (valued at Rs. 13.58 lakhs) only, as against 5,010 tons (valued at Rs. 25.94 lakhs). A large share of domestic demand for caustic soda and bleaching powder is thus being met from imports.

The principal raw materials required for the production of caustic soda by the causticisation process are soda ash and lime. Tata Chemicals, the only unit that follows this process, uses its own soda ash. Lime is produced by burning limestone from its own quarries near Mithapur and also from Ranavav, 150 miles from the factory. Common salt is the raw material in the electrolytic process, adopted by the other producers of caustic soda. The salt available in the country contains a high proportion of impurities. It has also to be transported over distances to factories which need them. The high rates of transport charges and the high cost of electricity serve to increase production costs. Any reduction in transport and electricity charges would naturally be of material assistance to the industry.

DELHI LETTER

(*Concluded from page 428*)

3. To carry out on a village-wide basis the recommended farming methods, will require a special food production committee for each and every village.
4. It should be through this village food production committee that the Gram Sevak works in getting new practices demonstrated and his recommendations carried out by each and every cultivator.
5. Each village should have a co-operative to serve the cultivators' needs for credit, agricultural supplies, storage and marketing.
6. Each village should have a *panchayat* to assist in land consolidation, and soil and water conservation programmes which involve the co-operation of the village community.
7. Each village should have a youth club so that youth can gain experience in farming by new methods and in working together.
8. The Gram Sevak must be supported and helped by the entire block staff in organising and servicing the village food production committee, the co-operative, the *panchayat* and the youth clubs.
9. The Gram Sevak will give 75 per cent. of his time to helping organise the village for food production. But he must be for ever mindful that man does not live by bread alone. He needs to continue his sensitivity about all the problems of the village people and encourage and help them find solutions to their many problems in every aspect of rural life.

THE MYSORE PAPER MILLS LIMITED

(*Concluded from page 435*)

tors have considered the suggestion made last year in view of the scarcity of foreign exchange and the long delivery period quoted for supply of machinery from abroad, as to whether we could not make use of the old machinery available in the country, if it suited our purpose and proved efficient and economic. Your Board of Directors have since examined in detail this suggestion and found that the old machinery which was available did not suit us for expansion of production in our mills, as the primary raw material used by us was bamboo and hence the proposal had to be dropped.

"What I say presently regarding expansion, I am saying with a realistic appreciation of all relevant factors. When I had the privilege of addressing you for the first time in August 1956, I told you that it was considered that efficient operation under modern conditions required relatively large-scale production and opinion had been expressed that for an efficient and economic unit, the production should not be less than 16,000 tons per annum. And when we met here last in August 1957, I reiterated my view that it was necessary to undertake such an expansion scheme, but stated that it had not been possible to formulate specific proposals in this behalf, in view of certain developments relating to tightness of the money market, scarcity of foreign exchange, etc. Today, it is common knowledge that the foreign exchange position has reached a critical stage and the Government of India are devising stringent measures to meet the situation by drastic cuts in imports.

Large-scale Expansion

"I have heard it said on fairly good authority that, while the Government of India, agreeably with their policy to expand production, have granted licences for the establishment of new paper units, lack of finance in some cases, but mostly foreign exchange difficulties, have delayed their installation. I also understand that capital projects based even on deferred terms of payment have little chance of materialisation. As the present circumstances do not permit of our pursuing the expansion scheme, it has to be deferred for some time. I want to assure you that it is not the lack of a well-considered scheme that delays action and I make bold to say that it is not even the lack of funds either—for I am confident of raising the necessary funds with your co-operation and with the aid and assistance of the credit institutions in the country like the Industrial Finance Corporation of India—but it is the insurmountable difficulty, as things stand today, of securing the necessary foreign exchange. We have, therefore, to think of alternative short-term projects and these are under consideration. I devoutly wish that conditions would soon improve when specific proposals for large-scale expansion would be placed before you for acceptance.

"Since we last met, Mr. S. V. Karandikar, who was the General Manager of the Mills, has gone on leave from 1st January 1958 preparatory to retirement. Mr. S. V. Karandikar served the Company in several capacities as Superintendent, Electrical Section, Works Manager and as General Manager, and your Directors have placed on record their warm appreciation of his valuable services to the Company.

"Before I conclude, I would like to express on behalf of the Directors and the shareholders our thanks to the Central and State Governments for the continued interest they are evincing in the progress of the Mills. I am very grateful to my colleagues on the Board for their wholehearted support and valuable guidance. I wish also to express, on behalf of the Directors and my own, our appreciation of the willing and efficient co-operation of all our employees.

"Gentlemen, with these observations, I now beg to move that 'the Directors' report, the audited balance-sheet and profit and loss account for the year ended 31st March 1958, be approved and adopted'."

Note.—This is not a report of the proceedings at the above meeting, of which proceedings a separate report will be circularised.

DALMIA CEMENT (BHARAT) LTD.

(*Concluded from page 440*)

that any disturbance in the current channels of cement distribution can be ill afforded. It would not be worth the while for cement stockists to engage in the cement trade unless either they are paid the usual commission or their margin of profit in the retail price fixation is suitably increased. I hope the Government of India will take a practical and realistic view in this matter and make a suitable provision in the cement price for the stockists' commission if the S.T.C. themselves cannot take up this responsibility.

Wage Board

"I wish to take this opportunity of informing you that the Government of India has constituted a Central Wage Board for the Cement Industry. It is composed of six members, two independent, two representing employers and two representing the workers. Shri M. R. Meher, President of the Industrial Court, Bombay, is the Chairman of the Board. I happen to be on the Board as one of the employer representatives. Shri I. M. Moinuddin, Vice-President, Dalmia Cement Workers' Union, is also one of the members of the Board representing the labour. The Board is required to determine a suitable wage structure for the cement industry and to recommend the principles that should govern the grant of bonus. I hope that the Board will succeed in making recommendations which will be found acceptable by both the management and the labour, and thus contribute to continued peace in this vital industry.

"You will be glad to know that there has been increasing co-operation between the cement producers in all matters affecting the industry. We have been meeting informally from time to time to exchange views and this has proved of considerable value to all. Encouraged by these experiences, it has been decided to form an association of the cement producers which will be called 'Indian Cement Manufacturers' Association.' All the cement producers are expected to join the Association and, with their help and co-operation, I hope that the Association will be able to do valuable work in the general interest of the industry.

Expansion

"I would request all of you who are present at this meeting to go round the factory and see for yourselves the progress which has taken place since we met last. To cope with the increasing demand for our refractories and stoneware pipes two modern gas-fired chamber kilns have been installed at a heavy cost which will result not only in increasing the production, but also in improvement of the quality. The expansion of the cement works is also well in hand and I am hopeful that, by early 1960, the new plant will go into production. This will raise the production capacity of your Cement Works to a little over 4 lakh tons. Our efforts are being constantly devoted towards improving the working results and expanding the activities of your Company. You will be glad to know that the steel casting plant of Dalmia Iron and Steel Limited, in which your Company has a substantial interest, has gone into production and the spun cast iron pipe plant is expected to be commissioned before the end of this year. I may also mention that the plant for deadburning of magnesite which is being put up at Salem by Dalmia Magnesite Corporation, in which Dalmia Cement Ltd., the wholly owned subsidiary of your Company, is one of the partners, is fast nearing completion and is likely to go into production by the end of this month. There is very good demand both at home and in foreign markets for deadburnt magnesite and this venture should soon prove profitable.

Inter-union Rivalry

"I had made a mention last year to a three-year agreement which we had reached with our workers in regard to bonus and wages. It was hoped then that there will be industrial peace at Dalmiapuram and the workers would co-operate in achieving all-round increase in production. I regret to tell you that inter-union rivalries have belied our hopes and, since some time, there has been one strike after another without lawful notice and in complete disregard of mutual agreement and assurances. Due to the continuous troubles created by the unions, production has suffered. What is happening at Dalmiapuram is probably in the same pattern which has shown itself in several other places of industrial importance. Tata Steel is, of course, the most recent example. At this crucial time in the history of our country, when production and more production is the need of the hour, this state of affairs should not be tolerated. Legislation is urgently needed under which some procedure be prescribed by which claims of rival unions can be tested and recognition granted to the one that commands support of the majority of the workers. Some time back the Madras Government took a lead in the matter and had circulated a draft Bill. I do not know why the Bill was not proceeded with. Unless a suitable law is enacted for this purpose, there will be increasing loss of production on account of unions struggling for power, more so when the principle object is more political than the betterment of workers, whose interests are sought to be protected. In regard to labour unrest at your Dalmiapuram Works, I hope Government would take firm action against those responsible from time to time for disrupting the peace, so that normal conditions prevail and the work goes on smoothly and efficiently.

"With these few words, I conclude my address and propose that we proceed now to consider the annual accounts and transact the rest of the business before the meeting."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2479 BOMBAY, 20th SEPTEMBER 1958 PRICE: Re. 1.50

WORLD BANK ON PLAN

IT is now nearly two years since the World Bank's Chief, Mr. Eugene Black, wrote to the then Union Finance Minister, Mr. T. T. Krishnamachari, giving the results of his study of the Indian economic situation. Although Mr. Black employed much understandable restraint in his language, in order presumably to avoid any impression that he was over-exercising a banker's well-recognised right to advise his client, he did not hesitate to point out where exactly he thought the Indian policies needed appropriate changes. The significance of his emphasis on the imperative need for giving private enterprise every encouragement to make its maximum contribution to the development of Indian economy, as well as on determined efforts for strengthening the competitive position of India's traditional export industries, has been justified by events. There is now no longer any doubt that industrial production would have gained greater momentum, if enterprise had not been shackled by ideological fetters and unjustifiable tax burdens. If the emphasis on exports had received two years ago the recognition it came to receive later, there would, perhaps, be less need now to make a frantic bid to capture elusive world markets. There is a tide in economic sphere which, if ignored, will take a long time in coming again. Past mistakes cannot always be remedied. This explains why the observations of a two-man study team of the World Bank which visited India this year, embodied in its report entitled "Current Economic Position and Prospects of India" (this report formed the basis of the recent five-power economic aid to India), deserves a much better reception by the Government.

Clearly, the report has avoided the temptation to adopt the "I-told-you-so" attitude which, however justified it may be, would be irksome and pointless. The Bank, however, has earned the right to offer what might appear to the recipient unpalatable advice. For, if the Bank has been critical, it has also been eminently constructive, in that it has paved the way for that not inconsiderable foreign aid without which many of India's projects might have had to be put into cold storage. The Bank's good offices have been a major factor in the aid which India has now been promised. If its advice were again rejected, it might well be that India would have little justification for any possible request it might have to make for aid or assistance in future. Indeed, the world financial press, while it has recognised the need for the West to come to India's aid, has taken care to warn that there should be no repetition of the kind of crisis which made that aid desperately urgent. It is true that there might be causes beyond our control which have made it difficult to avoid running into economic bottlenecks. But it is undeniable that a less doctrinaire approach and greater forethought would have eliminated some at least of our major difficulties.

It is precisely the avoidable pitfalls which the World Bank's report urges this country to avoid. A pitfall to which it has rightly drawn attention is the temptation to leap without gauging the foreign exchange gap. This exercise has cost the country dear. The report emphasises that no commitments should be made for new projects in the third Plan, involving substantial foreign exchange until there is reasonable assurance that the country will be able to afford them. In this connection, it points out that a considerable proportion of available resources in the early years of the third Plan will have to be earmarked for the completion of the projects carried over from the second Plan. It notes that India has already heavily mortgaged its future foreign exchange earnings. It, therefore, offers the prudent suggestion that all imports of capital goods and defence equipment for which firm orders have not yet been placed and which are not covered by specific credits should be closely re-examined, even though this means temporarily halting some of the less urgent projects.

It is not without reason that the report has called into question the Government's excessive preoccupation with welfare measures. In India, unlike in the Western countries, welfare is not concerned merely with social security schemes and wages and living conditions of the workers. The concept is extended to every conceivable interest which, in the opinion of the authorities, deserves special protection. The handloom weaver, the individual shoe-maker and a host of other interests are protected and subsidised at the expense of the factory owner who is at the same time called upon to maintain the highest possible standards of welfare for his workers and pay all the normal taxes, besides contributing to the revenue raised for purposes of subsidising the so-called weaker elements in his industry. Efficiency is penalised for the sake of buttressing inefficiency in industrial production. This policy is bound to lead to lowered efficiency all round, generate forces which inhibit productivity and engender an attitude of supine complacency among producers.

Appropriately enough, the report warns that not the least amongst the factors to be guarded against in the present stage of India's development is the pursuit of welfare at the expense of efficiency. A tendency in this direction, the report points out, is reflected in the emphasis initially placed on welfare in the Community Development programme, in the lavish social amenities usually associated with new Government factories, in the recent talk of introducing a system of unemployment insurance for industrial workers, and in some of the measures taken for the protection of cottage industries. The report, however, admits that these are all desirable aims in themselves. But it warns that, if they are pursued to excess, they will slow down the pace of economic growth. It deplores that it is not always realised that policies designed directly to protect the interests of a particular group may work indirectly to the disadvantage of the community as a whole. Thus, if industrial costs are overloaded with social overheads, India will find it increasingly difficult to compete abroad and the resulting loss of exports may lead to the slowing down of investment and to industrial unemployment. Again, the Government's policy of progressively reducing inequalities of income and wealth, if carried beyond a certain point, may be difficult to reconcile with the aim of rapid economic development. This policy, according to the report, is likely to encourage widespread evasion among the very rich, while penalising the honest taxpayers, discouraging private foreign investment and inhibiting the growth of a progressive middle class.

Yet another defect to which it has drawn the attention of the authorities is the existence of serious deficiencies in the organisation of planning at the Centre. The spending of individual departments has not always been properly supervised and economic decisions have been unduly influenced by State Governments; at the same time, the Central Government has assumed so many new responsibilities in the economic field that the administrative machine is becoming dangerously overstrained. Accordingly, its advice is, now that the process of economic development, stimulated by the State, is well under way, the Government would be well advised to avoid assuming new responsibilities, especially so far as investment in industry and mining is concerned. It is to be hoped that the Government will take note of this advice. It should not yield to political pressure which might urge it to venture into new fields of economic activity. For one thing, such a policy is fraught with danger to the economy as a whole. Secondly, the very quarters which encourage the Government in such policies will not hesitate to make political capital out of any possible mistakes in which the policies may lead. These considerations alone, if not any other, should induce the Government to refrain from taking upon itself additional economic functions and responsibilities.

The report has made a number of notable points in its comments on specific programmes. A general criticism of the agricultural programme is that the efforts have been dispersed over too wide a field, instead of being concentrated on a few key points. Given the right general framework of inducements and assurances, together with adequate credit, striking

results might be achieved from the resources now available; and, if the full demand for fertilizers could be met, this alone might make up the difference between the production of the additional ten million tons of foodgrains originally envisaged and the revised target of an additional 15 million tons. Commenting on the steel projects, the report wonders whether it was wise, in the first place, to embark simultaneously on three huge undertakings. It, however, recognises that there can be no going back now; the sooner the plants come into operation the better. The Government's insistence that the oil refineries should be in the public sector and its reluctance to grant new exploratory concessions to the oil companies, it is stated, have inhibited the participation of private foreign capital in the development of India's oil resources and delayed by two or three years the exploitation of the new field in Assam. As regards transport, the report emphasises that the railways must continue for many years to handle the bulk of the inland freight, but this does not mean that India can neglect its road transport. It is a reasonable presumption, the report says, that the scales are still tipped too heavily in the railways' favour. Finally, in regard to export policy, the report observes that, till recently, the Government had not accorded high priority to exports and its policies have frequently had the effect of impeding the promotion of overseas sales. It notes that, if exports are accorded the priority they have long deserved, earnings of between Rs. 700 and Rs. 750 crores should be a perfectly feasible target by 1960.

It would be folly to underestimate the value of the report merely on the ground that external observers cannot be expected to be fully familiar with India's problems. For such observers may really see more of the game than the players. Further, the World Bank's men have intimate knowledge of the peculiar problems of economic development in underdeveloped countries which it is their function to assist. Their views ought to be of considerable assistance to countries which have embarked upon development schemes. In any case, the observations contained in the report, besides being based on on-the-spot study, are substantially similar to those which have been made by many other independent observers, including this journal. To ignore them will be to prepare the country for the repetition of the crisis which has now been fortunately averted through the assistance of foreign countries secured under the auspices of the World Bank.

FOOD—A PERENNIAL PROBLEM?

THE food problem continues to hold the stage. There is no reason to feel surprised at this. Napoleon was once reported to have said that an army marches on its stomach. It has been a true saying from time immemorial. It will remain true for ever, whatever may be the objective. India's battle is against poverty. If its march against this inanimate enemy is to be successful, it must have sufficient food. The task is a difficult one. While the God of Rain—*Varuna* in India's mythological parlance—has been behaving in a capricious fashion, the God of Love—*Manmadha*—has been more studious than ever before. It has been computed by the experts of the Union Food Ministry that India's foodgrain requirements go up by a million tons per annum, because of an increase of about five million per year in its population. As against this, production of foodgrains in 1957-58 at 62.03 million tons is 6.63 million tons less than in 1953-54. Actually, it ought to have been more by four million tons, that is, at 72.70 million tons, to cover the increase of 20 million in population since then.

If Nature has thus made the food problem difficult, politicians have rendered it more complicated by their follies. Instead of placing the emphasis on the supply of water and fertilizer, they have attached too much importance to the redistribution of land. Today, they are the victims of their own wrong emphasis. Almost every politician, whether he belongs to the party in power or to the Opposition, keeps on saying that one way to increase agricultural production is to speed up the implementation of land reform. By this, he invariably means fixation of a ceiling on agricultural landholdings, redistribution of excess land among landless labour and effective implementation of cooperative farming. Attempts made by non-political thinkers and observers to highlight the dangers of this extreme egalitarian policy have fallen on deaf ears. On the contrary, the greater the shortage of food the more emphatic becomes the politician on this issue. There is plenty of evidence of this trend in the recent debates in Parliament and the State Legislatures. Even this week, several members stressed in Parliament that the policy of ceiling on land should be vigorously implemented. Concurring with this view, the Union Food Minister tried to comfort the House by saying that the Congress High Command had appointed a special sub-committee, under the leadership of the Congress President himself, to evolve measures for expediting land reforms.

It is mere wishful thinking to say that the absence of a ceiling on land has stood in the way of increased agricultural production. On the contrary, there is sufficient reason to feel that excessive land reforms and the persistent plea for placing a ceiling on land holdings have impeded agricultural production, as they have created an air of uncertainty among agriculturists and driven away capital and talent from land. By imposing a ceiling on land, the feeling of suspense can, of course, be ended. But this is not going to lead to an increase in production. Instead, there may actually be a fall in production, as land may be transferred to less efficient hands suffering from the additional handicap of inadequate resources. In any case, the uncertainty about land reforms can be ended by giving up the proposals for ceiling on land. The poor progress made by Co-operation, the unsatisfactory working of Community Development projects and the marked failure of State Governments in the drive for more agricultural production should serve as a warning to those who believe that the vacuum created by redistributory land reforms can be effectively filled in by State-oriented institutions. The greatest beneficiaries of these dubious land reforms will, we are afraid, be the enemies of freedom. There is, fortunately, still time, though not much, for fresh thinking on this problem. Will the powers-that-be have the courage to change their ideological approach in favour of a more realistic one based on hard facts?

In the debate on the food problem in Parliament, the question of distribution received more attention than that of supply. Equitable distribution is, of course, important, but it is obvious that supply is even more important. The Union Food Minister, Mr. A. P. Jain, was right in rejecting the demands for introducing rationing and for giving up the zonal system. Past experience has shown that rationing seriously impedes production and encourages the State Governments to depend more and more on the Centre. Food requirements will be calculated on a theoretical *per capita* basis, which in turn will magnify the actual deficit. A foretaste of this is already provided by Bengal. The Government of Bengal worked out the State's deficit in food on the assumption of 15 ounces of cereals per adult per day, as against the per capita availability of 13.5 ounces for the country as a whole, and made an inflated demand on the Centre. When the latter was unable to meet this demand, some of the politicians in Bengal charged the Food Minister with partiality for U.P. and Bihar, because these States had been allotted more foodgrains than Bengal. The Food Minister's explanation for this is that the shortfall in production in U.P. and Bihar was greater than in Bengal. It is dangerous to import charges of parochialism into the food front, especially at a time when several fissiparous tendencies are already trying to undermine the unity of the country. And it is to be feared that introduction of rationing will only widen the scope for this evil. Even as it is, the State Governments are not as energetic as they ought to be in working for an increase in food production. The introduction of rationing will only make them more lazy and complacent.

It would be unwise to make frequent changes or modifications in the zonal system. There may be a case for suitable readjustments or reducing the rigour of zonal controls when there is a surplus, but certainly not when the scarcity tends to become acute. In times of shortage, even suggestions against the zonal system, let alone official moves, are sufficient to encourage unhealthy speculation and upward trend in prices. It may be noted here that, a few days ago, rumours that the Punjab would be merged with the U.P. zone and the pressure tactics adopted by interested parties to bring about such a change had led to hoarding by merchants and a sharp rise in the prices of foodgrains in the Punjab, which is a surplus area. Mr. Jain was, therefore, perfectly right in saying that he would not permit any attempts at disrupting the zonal controls.

The Union Food Minister proposes to intensify internal procurement to supplement imports, so that he may be in a better position to ensure equitable distribution of available supplies among all the States and to thwart the attempts of speculators and hoarders. As an alternative to total control and rationing, an increase in the State's share in foodgrains trade is certainly a lesser evil. But it must be recognised that the policy of intensified procurement is a double-edged weapon. It has to be used with tact and caution, if the incentive to the producer is not to be diminished. There is also a risk of middlemen being provided with easier opportunities to exploit the situation against the consumer, for an increase in procurement by the State may leave less foodgrains for the normal trade channels. If the Government takes over a larger part of the trade in foodgrains than at present, it must also assume the additional responsibility for ensuring that there is no deterioration in the quality of foodgrains. For some inexplicable reasons, the grains supplied to the consumer by fair price shops and co-operative stores are both inferior in quality and highly adulterated with dust, stones and unhusked cereals. This compels many consumers, especially in large cities like Bombay and other urban centres, to buy their requirements from shops run by traders who manage to sell grains free from these defects. They, of course, charge a little more, but, invariably, the additional cost is more than offset by better quality.

Larger imports, increased internal procurement, more State trading and better distribution methods—all these are only palliatives and very costly ones at that. With the population jumping up at the rate of five million per annum—by 1975 India is expected to have 500 million people—all these expedients will one day be found totally inadequate. The critics who keep harping on rationing will do well to remember, in this connection, that not all the paper that is produced in this country will be sufficient to print ration cards and the campaign for more literacy will have to be suspended. The only effective solution for the food problem is intensive cultivation, as distinct from extensive cultivation. Here, the failure of the public sector is distressingly perceptible. The Governments, both at the Centre and in the States, have not been able to make any impression on this aspect of the problem. Whatever increase there has been in production during the last ten years has been due largely to an expansion in the land brought under the plough. It would be worthwhile to find out as to why the yield per acre has not gone up. Every one concerned with the problem has known all along that the solution lies in growing two blades of grass where one is raised. Mr. Nehru and his colleagues have talked about it *ad nauseam* and preached it incessantly. India's low yield per acre has been compared with those of other countries on countless occasions. And, yet, the per-acre yields have either gone down or gone up only negligibly, or remained static. Why has it been so? The Union Food Minister attributes it to the addition of marginal lands which has depressed the national average. But this explanation is not wholly convincing. There must be other, and more important, causes. As this is a vital problem, a committee of experts must be appointed to study it separately and suggest solutions. It is true that the device of appointing committees has been adopted so often that this suggestion may sound as stale and superfluous to some. Others may say that they know the answers and recite them somewhat on these lines: inadequacy of fertilizers, failure of better seed propagation and distribution programmes, non-utilisation of all available irrigation facilities, indifference of State Governments, unhealthy land reforms, non-availability of cheap credit to agriculturists and so on. Nevertheless, we feel that it will pay this country to have an expert probe into the specific problem of raising the yield per acre and focussing attention on the solutions to it under a proper order of their importance.

MR. J. R. D. TATA ON PLANS FOR STEEL

BRIGHT OUTLOOK FOR T.I.S.CO.—CONTRIBUTIONS TO POLITICAL PARTIES—COTTON TARGETS

THURSDAY, 5 P.M.

MARKET GOSSIP

MR. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Ltd. (T.I.S.Co.), prefaced his stimulating address at the annual meeting of the Company, held today, by a reference to the foreign exchange crisis and the Government's general economic policy. While he was naturally reluctant to add to the immense literature on the foreign exchange muddle, much of it non-controversial, he rightly observed that, unless India could greatly increase its earnings of foreign exchange and also attract long-term foreign investments, it would "not only be unable to finance the foreign component of new development projects but will also have to exercise such a tight control over current imports that industries depending on imported raw materials and components will be hard put to it to maintain normal operations." He also put his finger on the right spot when he said that the first imperative need today was the attainment of *self-sufficiency in food*. Since 1946, India has spent Rs. 1,000 crores on food imports, besides the offer of Rs. 300 crores worth of food from the U.S. in the form of gift. After referring to this fact, Mr. Tata said: "There would be no foreign exchange crisis today if we still had that Rs. 1,000 crores in hand."

Insisting that the major expansion of our economy will depend mainly on our ability to ensure a continuous flow of fresh capital, he said that "one of our main tasks will be to induce our own people and people in foreign countries to invest in productive enterprises in India." He did well to emphasise the importance of attracting capital by assuring it of good treatment and return. He added: "If our Government and our Parliament, while by all means protecting the under-privileged, providing the maximum welfare services within our means and ensuring equal opportunities for all, were to let it be known that India was a land of opportunity for constructive and honest enterprise, where those who risked their savings or their surplus capital could reap a fair reward, we would see such a flow of capital from within and from abroad and such an upsurge of economic activity as would transform our land and our people's way of life in a few decades."

Listing some of the factors which have inhibited the flow of capital in recent years, he pointed to the complex and rigid controls imposed on industry under various enactments, the crushing burden of individual and corporate taxes, excise duties and other imposts, and the ideological attitude of "hostility and mistrust towards private enterprise." There is no doubt that, if these inhibiting factors were removed, there would be such resurgence of economic activity in the country as would surpass the expectations of the most optimistic of our planners.

There is one point on which Mr. Tata urged some caution—the future plans for steel industry. Obviously, he deserves to be listened to with respect on this subject. He sounded a note of warning against "allowing the steel industry to run away with too great a proportion of whatever total resources will be available in future Plan periods." In this connection, he called attention to the provisional target of 15 million tons of steel to be reached by the end of the third Plan period, an increase of nine million tons over the second Plan target. He estimated that the total cost of such additional capacity would not be far from Rs. 1,500 crores, of which something like Rs. 700 crores would be required in foreign exchange. Surely, it would be unwise to spend too high a proportion of our resources on steel, which is a capital-intensive industry with a relatively low return on investment. Mr. Tata felt that we would be better off if, for a while, we had less steel plants but more secondary and finishing industries using steel and if we made more trucks, cars, machine tools and capital and consumer goods of all sorts in preference to making raw steel, for, in return for the same amount of capital investment, we would thereby create much more wealth, earn and save more in foreign exchange, provide more employment, and generally build up a more balanced and productive economy. This is a point to which the planners will do well to give their thought before they put the finishing touches to the draft of the third Plan.

Turning to the affairs of T.I.S.Co., Mr. Tata devoted a not inconsiderable part of his speech to the recent strike in Jamshedpur. This ill-wind, as all impartial observers now know, has blown nobody any good. Apart from the immeasurable human loss—four men killed, 114 injured and 400 discharged—there was the loss of Rs. 25 lakhs in wages to workers and of 45,000 tons of steel valued at Rs. 2½ crores. Inspired by the Communists' insatiable hunger for power, for control of labour in this strategic sector of the country's economy, the Jamshedpur strike has served to put the clock of labour's progress several years behind. Many employers are now wondering whether it is wise to be liberal when the reward of such painstaking efforts on the part of so far-sighted a management as Tatas is violence and sabotage by workers. Is the country fit or the time propitious for taking further measures designed to associate workers with management? Is it wise to be liberal when the reward of liberal measures is nothing but unrest? These questions may be deplored. But they are the natural outcome of the Jamshedpur episode. Three decades of patient endeavour in the cause of industrial peace disappeared overnight in Jamshedpur which the Communists converted into a blast furnace of labour unrest. It is true that peace has returned, thanks to the firm, yet sympathetic, attitude on the part of the State Government and the Company and the innate goodwill of the vast bulk of the employees. But, as Mr. Tata pointed out, there can be no room for complacency. It is to be hoped that the leaders, who have the genuine interests of labour at heart, will steadfastly refuse to allow the Communist Party to make the workers a pawn in their nefarious political game. As Mr. Tata pointed out, a heavy responsibility devolves on Indian trade union leaders who, helped by the striking change in the attitude of management to labour problems throughout Indian industry in recent years and by the consistently pro-labour attitude of the Central and State Governments, have a great opportunity of constructive service to the growing mass of India's industrial workers.

Mr. Tata regarded the future of the Company with sober confidence. He explained that the Rs. 1½-crore decline in profits in 1957-58 was almost wholly due to lower production and despatches of steel. He, however, said there "was no cause for alarm"; the situation would retrieve itself when the new plant went into full production. From the point of view of shareholders, much, therefore, depends on the early achievement of higher production. Mr. Tata expected that the new plant would, barring unforeseen troubles, go into production by the end of the current financial year. He admitted that the two-million-ton programme could not be completed by 31st May, the original date for the completion of the project. The coke ovens came into operation in January 1958. The new blast furnace will be in operation by the middle of next month. All the seven new open hearth furnaces are in production. Two of the three Bessemer convertors will be commissioned in a few days and the third next month. Of the three new rolling mills, the blooming mill went into production last month, while the sheet bar and billet mill and the medium and light structural mill will be in operation in November and December 1958, respectively.

The capital cost of the expansion programme has, however, gone up from Rs. 118.7 crores to Rs. 133 crores, the increase being due to a number of factors, including the addition of new items, or improvements to existing ones and increases in prices of steel and other materials. The increase in capital cost, Mr. Tata said, has put a "severe strain" on the Company's financial resources, already burdened by additional taxation. However, because of the easier conditions in the money market, the management hopes to secure its requirements of finance from short-term borrowings. Nevertheless, there is a wide disparity between share capital (Rs. 30 crores) and the total of invested funds (Rs. 135 crores). This disparity will be still wider next year when the expansion projects are completed. Mr. Tata felt that, in order to reduce this gap and also to keep the load of debt within manageable proportions, it was necessary to "make fresh issues of capital as opportunities arise." He added: "If and when proposals for an issue of capital are made to you, your Directors will bear it in mind that, in these difficult days the capacity of shareholders to produce additional money is limited, and also that any fresh issue should from the start be assured of a fair return based on current equity yields." This assurance will be greatly welcomed by the shareholders.

The Company's annual meeting was well attended; in fact, the number of shareholders present was so large that the large hall could not accommodate all of them and several had to stand. One of the shareholders was provoked by this sight to remark that, in future, the Company should hold its meeting in a big hall hired in the City which can hold more than a thousand people. In the absence of the Chairman, who was ill, the meeting was presided over by the Vice-Chairman, Mr. J. D. Choksi. As usual, several shareholders spoke and tried to elicit from the Chair information on a number of problems pertaining to the Company. Mr. Choksi gave all the information they wanted generously and in good humour. His replies reflected robust optimism about the future for the Company. His answers to the likely trend of profits in the coming years, future production, productivity per worker, issue of additional equity capital and the dividends give this writer the impression that the rise that has taken place in the market value of the Company's shares in recent months has not been overdone and that, given peace and helpful fiscal policy, workers and investors in the Company have a bright future.

The following important points emerged from questions and answers at the meeting:

Capital: All those who spoke were almost unanimous that the Company was undercapitalised and that its equity base required to be raised. The Chairman concurred with this view. In spite of Mr. Tata's assurance that new capital would be raised in a manner which would not cause any hardship to existing shareholders, several shareholders pleaded that it should be raised in instalments of Rs. 4-5 crores per year, that this should be done when the stock exchanges were buoyant, and that no premium should be collected from shareholders. A suggestion was made that, instead of issuing equity capital straightaway, second mortgage debentures with the right of conversion into equity capital at a later stage should be offered. While agreeing to consider the suggestion, Mr. Choksi indicated that, personally, he had doubts about the feasibility and advisability of the proposition. He assured the shareholders that new capital would be issued only at par and that all the Directors of the Company were unanimously against collecting any premium. He gave a hint that no call for additional capital would be made before the end of March 1959. The Board of Directors was opposed to issue of bonus shares so long as the Government persisted in taxing capitalisation of reserves. The present tax of 30 per cent. was simply prohibitive.

Dividends: The Chairman agreed that shareholders had had a raw deal so far and assured them that the Board wanted to give them as large a dividend as possible. Payment of a better dividend would be the goal of Directors in future. The disparity between the old and new shares in regard to the mode and quantum of dividend would continue in 1958-59, but would cease from 1959-60 onwards. The Board would continue the policy of paying dividends from taxed reserves in all those years in which the Company had no taxable profits under the tax law. The Company had enough of such reserves to meet the contingency in future.

Production: The estimated production is 850,000-900,000 tons of finished steel for 1958-59 (the current accounting year of the Company) and 1,200,000 tons for 1959-60, which will be the first full year of operations of the new million-ton plant.

L.I.C.: The Life Insurance Corporation's holding in the Company is: 8,244 first preference shares, 24,000 and odd second preference shares, 87,242 old ordinary shares and 58,000 and odd new ordinary shares.

Competition: Mr. Choksi was confident that the T.I.S.Co. could be competitive in a buyer's market, if and when it arose. As an example for comparison, he gave the price of steel bars. The Company's retention price for this variety of steel was Rs. 427 per ton, as against the Government's selling price of Rs. 560 to the consumer; the same steel was selling at Rs. 650 per ton in the U.K., Rs. 753 in the U.S., and Rs. 501 on the Continent and Japan.

Labour: Productivity per worker would increase when the new plant went into production with all its labour-saving devices and neutralised the surplus labour from which the Company had been suffering for a long time. The new wage contract due to be negotiated with workers would probably mean more income for them. It was, however, too early to gauge its impact on the profits of the Company, but there was no cause for shareholders to be worried on this score.

Nationalisation: The Directors felt confident, observed Mr. Choksi, that, in view of the meritorious services rendered by T.I.S.Co. for the country and the co-operative manner in which the Company was working with the Government, the fear of nationalisation of the Company was not warranted and that the Company would be assured of an honourable place by the Government in the economy.

• • • •

The private Bill, seeking to amend the Company Law so as to prohibit donations or contributions to political parties by joint-stock companies, introduced in Parliament by Mr. Bhupesh Gupta, a Communist M.P., is patently propagandist in motive. Mr. Gupta's object in moving the Bill is revealed in his statement that, if the proposed amendment is not accepted by the Government, "it will be known to the world that the Congress still counts on Tata's millions for its political future." Clearly, it is designed to lower the prestige of the Congress among the public by telling it that the policies of the Congress are directed by those individuals or institutions giving donations to the Party's funds.

Here is a case of a pot calling a kettle black. Mr. Gupta's party, namely, the Communist Party of India, also receives huge sums of money as donations; the only difference is that their source is mysterious. Is there any party, as Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, asked in a spirited reply to Mr. Gupta's charges, which could honestly claim that it received no contribution from outside the party. The Congress, he said, accepted donations but openly. Can anyone substantiate that the Congress is controlled by industrialists and business men who make donations to party funds? The record of Congress rule during the last 10 years is a record of restrictions clamped down on them.

One cannot find anything fundamentally wrong in companies making contributions to political parties. The capacity of individuals to make such gifts is growing less and less. Further, what is wrong in a group of people constituting the shareholders of a company deciding to contribute to the funds of that Party, which, in its opinion, will safeguard its interests? Further, if trade unions can devote a part of their funds to political purpose, could not the same standard be applied to companies also?

The Minister said that the judgment of the Bombay and Calcutta High Courts on the subject had received the careful consideration of the Viswanatha Sastri Committee and its suggestion that there should be no secrecy about such donations and that the balance-sheets of companies making donations should contain full particulars about them had been accepted by the Government, and a Bill embodying the suggestion would be introduced in Parliament in the next session. This seems to be the only sensible thing that needs to be done about it. We would, however, suggest that political parties, if they desire public donations, should

EQUITIES RISE FURTHER

UNDERTONE FIRM

(From Our Own Correspondents)

BOMBAY, *18th September*

THERE was a further handsome improvement in equity values during the week under review. The improvement followed sustained buying enquiries induced by encouraging reports regarding foreign aid and the Union Finance Minister's observations on the role of private capital made in the U.S. and at the Commonwealth Economic Conference at Montreal, Canada. In particular, his statement that the Government of India was determined "to create a dynamic atmosphere for investment" was widely welcomed by the operators. Some even interpreted the statement to mean that the budget for the coming year would definitely contain some positive measures of tax relief with a view to boosting industrial production. Another factor which imparted strength to the market was the feeling that the trend of prices would continue to be upward following possibilities of large-scale deficit financing, thanks to the marked shortage of internal resources as lately estimated by the Planning Commission in its reappraisal of the second Five-year Plan. Influenced by these factors and also by the continued easy money conditions, the share market pushed its way into new high ground. The undertone of the market was distinctly firm.

Fresh buying support was in evidence in the steel section on reports that the official announcement of the upward revision in retention prices would be out any day. Tata Ordinaries opened the week fully steady at Rs. 181, as against Rs. 180 last week-end, and climbed up to touch a high of Rs. 186.50 today before finishing at Rs. 186.25. The net gain over the week was thus Rs. 6.25. The new shares rallied Rs. 6.75 to Rs. 181.50. Indian Irons were bought today at Rs. 25.95 *ex-div.*, as against Rs. 26.50 *cum-div.* on Thursday last. Allowing for the dividend of Re. 1 per share, today's closing rate represents a rise of 75 nP over the week.

Textile shares continued to rule active with further additions to values. Centurys were very well supported, the quotation spurting by Rs. 12.50 to Rs. 468. Kohinoors and Standards advanced by Rs. 6 each to Rs. 283 *ex-div.* and Rs. 432, respectively. New Greats hardened by Rs. 5 to Rs. 230. Finlays registered a rise of Rs. 3.50 to Rs. 295. Podars and Simplex gained a like amount, the former to Rs. 141.50 and the latter to Rs. 182.50. Swadeshis put on Rs. 3 to Rs. 204.50. Morarjis increased by a similar sum to Rs. 246. Bombay Dyeings gathered Rs. 2.90 to Rs. 63.50, Khataus Rs. 2.50 to Rs. 187.50 and B.R. Cottons 70 nP to Rs. 26.50. Swans were fully maintained at Rs. 360, as also Tata Mills at Rs. 38.50, Central Indias at Rs. 97 and Indores at Rs. 107.50. Models, however, encountered selling and dropped Rs. 2.50 to Rs. 167.50. Gokaks and Shreenivas declined by Re. 1 each to Rs. 152 and Rs. 153, respectively.

Buying enquiry was of a selective nature in the banking section. Jaipurs were specially favoured with a rise of Rs. 2.25 to Rs. 39.75. United Commercials strengthened by Re. 1.20 to Rs. 65. Bank of Indias picked up 50 nP to Rs. 136.50, Central Banks 20 nP to Rs. 57.20 and Jodhpurs 4 nP to Re. 1.48. Barodas were firm at Rs. 121 and Punjab Nationals at Rs. 65.50. Bikaners, on the other hand, lost 52 nP to Rs. 20. Dena Banks shed 25 nP to Rs. 45.75 and Unions 8 nP to Rs. 7.22.

Among electricity shares, Tata Powers met with good support and spurted by Rs. 5 to Rs. 1,220. Hydros hardened by Re. 1.50 to Rs. 121.50. Ahmedabad Electrics were better by 40 nP at Rs. 99. Bombay Suburbans gained 25 nP up to Rs. 113. Andhra Valleys, however, came in for selling and eased by Rs. 3.75 to Rs. 1,166.25.

Buoyant conditions continued to prevail in the sugar section. Belapurs evoked renewed buying orders on hopes of higher dividend and forged ahead by Rs. 11 to Rs. 319. Phaltans were also fancied well and climbed up by a like amount to Rs. 184. Walchandnagars rallied Rs. 4.50 to Rs. 295. Changdeos recorded a gain of Re. 1.35 to Rs. 32.50. Bhopals advanced by 65 nP to Rs. 26.15.

Cement shares ruled quietly steady. Associated Cements strengthened by Rs. 3 to Rs. 165.50. Digvijays gathered 25 nP to Rs. 152.50. Dalmia Cements, however, declined by 36 nP to Rs. 10.12. Jaipur Udyogs lost 16 nP to Rs. 14.68.

Engineering and mining shares were in good form this week also and values continued to maintain their upward trend. Premier Constructions provided the brightest spot with a sharp advance of Rs. 15.75 to Rs. 242 on persistent rumours of an early bonus issue. Tata Locomotives evoked excellent support and were taken up to Rs. 200.25, as against Rs. 193.50, or a rise of Rs. 6.75 over the week. Alcock Ashdowns improved by Rs. 2.25 to Rs. 268.75. Mahindras increased by 32 nP to Rs. 16.20. Indian Coppers gathered 10 nP to Rs. 4.14. Shivarajpurs were done at Rs. 94.50 *ex-right*, the last week's closing rate being Rs. 117.50 *cum-right*. Larsen and Toubros, however, were a shade easy at Rs. 15.84.

Among shipping shares, Scindias received enquiries and rose by 24 nP to Rs. 22.76. India Steamships were fully maintained at Rs. 13.90. Great Easterns, which stood at Rs. 26.90 last week-end, improved to Rs. 27 today before finishing lower at Rs. 26.85.

Automobile shares attracted good attention of operators. Premiers jumped up by Rs. 7.80 to Rs. 94.50. Hindustan Motors strengthened by 76 nP to Rs. 8.28.

In the miscellaneous section, National Rayons were very well favoured, the quotation spurting by Rs. 5.50 to Rs. 249. Wimcos rallied Rs. 5 to Rs. 203, the buying fervour having been fanned by reports about the start of the Company's paper plant. Tata Oils hardened by Rs. 4.25 to Rs. 43. Killick Industries gathered a rupee to Rs. 149.50. Tata Chemicals increased by 64 nP to Rs. 18. Gwalior Rayons moved up from Rs. 13.76 to Rs. 14.24. B.B. Petrols gained 10 nP to Rs. 2.34. Bombay Burmahs opened the week firm at Rs. 622.50, as against Rs. 620 last week-end, and touched Rs. 628 the same day. The *ex-right* quotation for the scrip, which was Rs. 515 early on Monday, moved up to Rs. 524 today before finishing at Rs. 523.

Calcutta Stock Exchange

CALCUTTA, *17th September*

Earlier in the week under review, an irregular trend was in evidence on the Calcutta Stock Exchange, and this led to a decline in the number of transactions. However, as the week progressed, encouraging reports from Bombay continued and, from Monday, under the lead of Indian Irons and selected jute shares, prices forged ahead. The recent debenture issue of Guest, Keen, Williams naturally diverted some funds from the market, and funds were also being reserved for the debenture issue by Dunlops, opening on the 23rd inst. A near-buoyancy was the feature yesterday and Indian Irons were the cynosure of all eyes. Apart from speculative interest, investors also paid keen attention to this counter, as there was no doubt that prospects were good, and, considering this, the current quotation would appear to be undervalued. It was believed that limitation of dividend at 10 per cent. under Government edict would be removed when once the expansion programmes began to yield more substantial results. In addition, a bonus issue through capitalisation of the share premium reserve was in the mooting. Encouragement was also derived from corporate results announced this week, as, despite various troubles, the industrial outlook was by and large satisfactory. The reported shortage of Rs. 390 crores in internal resources for the Plan caused some anxiety, but it was thought that, now that the foreign exchange shortage was nearing solution, the ways of meeting the internal shortage were only a matter of detail. Opinion in market circles was moulding towards the possibility of Mr. Morarji Desai according tax relief, since—the realist that he is—it would be difficult for him not to have cut the bulges from his predecessor's taxation policy.

Among coals, Khatras Jherriahs were maintained at the higher level of Rs. 65.50; the dividend for 1957 was maintained at 65 per cent., and there is a proposal to capitalise funds from reserve to issue 75,000 new shares of Rs 10. each. Amalgamateds rose from Rs. 20.12 to Rs. 20.87, while Burrakurs were shaded to Rs. 20.37 and Equitables to Rs. 28.25 from Rs. 28.50. Central Indias were unchanged at Rs. 8.31.

As the week progressed, considerable activity gathered around jute shares, as reports of good working from mills continued to enlighten sentiment. The details of the more prominent gains of this week are:

	Opening	*Closing*	*Gain*
	Rs.	Rs.	Rs.
Kinnison	144.00	163.00	19.00
Kelvin	197.00	230.00	33.00
India	155.00	168.00	13.00
Budge Budge ...	105.00	114.00	9.00
Belvedere	113.50	125.00	11.50
Union	175.00	180.00	5.00
Kamarhatty	132.00	138.00	6.00
Ganges	57.50	63.00	5.50
Khardah	144.00	148.00	4.00
Gourepore	315.00	320.00	5.00
Howrah	19.62	20.19	0.57
Northbrook	17.19	18.25	1.06

Under the lead of Indian Irons, engineering shares were paid keen attention. Indian Irons rose to as high as Rs. 25.80 from Rs. 25.22. Jessop & Cos. at one time changed hands at Rs. 23.12, after opening at Rs. 22.25, but closed at Rs. 22.75. Burn & Cos. moved up from Rs. 374 to Rs. 378. Braithwaites recovered from Rs. 31.12 to Rs. 31.50. Texmacos advanced from Rs. 22.80 to Rs. 22.96 before closing at Rs. 22.85.

In the mining section, Indian Coppers hardened from Rs. 3.83 to Rs. 3.90 with Orissa Minerals recovering to Rs. 28.06 from Rs. 27.87. In papers, there was profit-taking with Orients receding to Rs. 34.88 from Rs. 35.10, while Sirpurs opened at Rs. 13.31, gave way to Rs. 13.12 and rose to Rs. 13.75.

Among miscellaneous industrials, Jardine Hendersons jumped up from Rs. 72.50 previously to Rs. 82, with Hindustan Levers hardening from Rs. 24.31 to Rs. 24.50. Indian Oxygens were enquired at Rs. 20.50, as against Rs. 20.37 earlier. National Tobaccos were unchanged at Rs. 14.12, while Indian Cables, after receding to Rs. 29.37, recovered to Rs. 30.

Madras Stock Exchange

MADRAS, *17th September*

The Madras Stock Exchange continued to rule steady during the week under review also. Operators seemed to take an optimistic view of the outlook for industries. The optimism was based on prospects of India getting substantial foreign aid from the World Bank, the U.S., the U.K., West Germany, Canada and Japan for implementing the Plan. Further, some of the observations made by the Finance Minister in the U.S. led to expectations of a more helpful fiscal policy in the form of tax relief and active measures to augment investment. Plantation shares continued to attract good attention of operators. Tea shares were specially favoured, despite the reported statement of the Union Minister for Commerce and Industry at the meeting of the Congress Parliamentary Committee this week that there was at present no case for a reduction in export duties on tea. Coffee and rubber shares were also well fancied. The textile section was steady, with selective buying enquiry. Reports of difficulties confronting the cotton mills, especially those spinning lower count yarns, news of curtailment of production operations by a few units, and unencouraging working results of some companies in the past year would appear to have had no effect on the market. Bank shares and several miscellaneous industrials evoked enlarged enquiries at higher rates.

Among tea shares in the planting section, Mlamallays spurted by Rs. 3 to Rs. 38. Coonoors were marked up by Rs. 2 to Rs. 24. Stanes Amalgamateds rallied 75 nP to Rs. 15.25. Devasholas strengthened by Re. 1.13 to Rs. 20. Lucky Valleys rose by 50 nP to Rs. 12, Twyfords by 15 nP to Rs. 14.30 and Neelamalais by 13 nP to Rs. 4.85. Coorgs hardened by 10 nP to Rs. 13.10. Nonsuch gained a like amount to Rs. 24.30. The Directors of the Peermade Tea Company Ltd. have declared a first interim dividend of 6¼ per cent. free of income-tax for the year 1958 and the shares were fully steady at Rs. 21.60.

Among rubber shares, Vaikundams forged ahead by Rs. 2.25 to Rs. 26.25. Malankaras firmed up by 90 nP to Rs. 19.50 *cum-div.*, despite the cut in the dividend to 17 per cent. for the year ended 31st March 1958, as against 22½ per cent. for the previous year. Highlands strengthened by 65 nP to Rs. 12.90 *cum-div.* Malabar Industrials climbed up by 75 nP to Rs. 18. Midlands increased by 60 nP to Rs. 12.90. Rajagiris were better by 45 nP at Rs. 18.75.

Among coffee shares, Kumergodes were quoted a rupee higher at Rs. 7.40. Coffee Lands hardened by 35 nP to Rs. 34.85. Sangameshwars put on 6 nP to Rs. 2.72 and Cheveroys 3 nP to Rs. 2.28.

Buying enquiry in the textile section, as already stated, was of a selective nature. Coimbatore Pioneers evoked good support and advanced by Rs. 6 to Rs. 243. Coimbatore Cottons climbed up by Rs. 5 to Rs. 155. Coimbatore Spinnings strengthened by Rs. 2.50 to Rs. 43.50. Bangalore Woollens were quoted Rs. 2 higher at Rs. 167. Lakshmis were fully maintained at Rs. 102, Radhakrishnas at Rs. 130 and Maduras at Rs. 32.25. Metturs, however, dropped a rupee to Rs. 341. Janardanas were pushed down by Rs. 2.50 to Rs. 70, reflecting disappointment of operators over the cut in dividend to 6 per cent. for the year 1957, as against 20 per cent. for 1956.

Among miscellaneous industrials, Textools hardened by a rupee to Rs. 202. Aluminium Industries improved by 95 nP to Rs. 18.35. Rallis strengthened by 75 nP to Rs. 40. Indian Steel Rollings increased by 50 nP to Rs. 14.50, United India Fire by 30 nP to Rs. 6.80, Singarenis by 25 nP to Rs. 16.25 *cum-div.* and Orissa Cements by 17 nP to Rs. 13.12.

Calcutta Stock Exchange Official Year Book 1958. Compiled and published by the Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta. Pages: 528. Price: Rs. 12.50.

The Calcutta Stock Exchange Association, established in 1908, completes 50 years of useful existence this year. Appropriately enough, arrangements are being made to celebrate its golden jubilee. However, it was only in 1923 that it was registered as a limited liability concern. It has now got a membership of 276, as against 210 in 1923. The Association has the distinction of being one of the earliest institutions for publishing an official year book, providing all relevant details about leading joint-stock companies which will be of interest and utility to investors. The twentieth edition of the *Year Book* under review is a comprehensive document which gives the financial position of the old companies and also particulars regarding new companies which have come up in the last one year.

The review of the year 1957, in so far as it relates to stock exchanges and the securities dealt on them, makes interesting, though dismal, reading. Describing the year as a "woeful" one for the stock market, the compilers have computed that, between January 1956 and May 1957, that is, within a short span of 17 months, the investors in industrial equities have lost no less than Rs. 81.50 crores, or 26 per cent., as a result of the downswing in prices.

The latest edition also contains the provisions of the Securities Contract (Regulation) Act, 1956 and rules governing the same, the rates of taxes on various personal and corporate incomes, the rates of estate duty, etc. Another useful addition is the list of prices of various shares as on 2nd January 1954; this will facilitate the assessment of one's tax liability under wealth tax and capital gains tax.

NEWS IN BRIEF

THE cost of the Neiveli Lignite Project, Madras, is likely to exceed the original estimate of Rs. 67 crores by about Rs. 8 crores.

The Government of Madras has under consideration a proposal to bring 15,000 additional acres under rubber cultivation in the Kanyakumari district.

The Seshasayee Industries, Tiruchirapally, has been given a licence to establish a factory at Neiveli for the manufacture of porcelain high-tension and low-tension insulators. The factory is expected to commence production by the end of March 1959.

As a result of a contract concluded between the Government of India and Messrs. Komaton Manufacturing Company of Japan, the Indian ordnance factories are now able to produce, in collaboration with the Japanese firm, earthmoving equipment, tractors, bulldozers, scrapers, motor grader sets.

A proposal to set up a fourth steel mill in India in the public sector, it is learnt, has been taken up with the U.S. Government by the Indian representatives. The estimated cost of the proposed project is put at £107 million, of which £71 million represents foreign exchange, the balance of £36 million being the local cost.

The Indian trade delegation now touring Central and West African countries is of the opinion that India can land centrifugal pumps, diesel engines, sewing machines and electric fans in Africa at prices about 10 per cent. lower than those exported by Japan. The delegation has found no prejudice against Indian goods in Rhodesia and has established contact with some good agents who, it is said, are prepared to handle manufactures from India.

A storm-warning radar near Safdarjung Airport, New Delhi, which has been in operation for the last nine years, was formally inaugurated by Prime Minister Nehru on the 13th inst. The largest of its kind in South-East Asia, the Rs. 15.11 lakhs radar provided by the U.S. Technical Cooperation Mission, can probe more than 300 miles away and forecast storms four hours in advance. It helps to make air routes safer for internal as well as international airlines flying over this part of the country.

The erection of the silver refinery plant for the Calcutta Mint has been finished. It is expected to go into operation shortly. The installations have been built by Demag-Elektrometallurgie, a subsidiary of Demag, Germany, which is one of the leading companies in the planning and erection of the integrated iron and steel plant at Rourkela. The silver refinery plant will work up old coins, originating from the time of British Government. The daily output of the plant runs up to 2,000 kg. fine silver and 1,600 kg. electrolytic copper. The connecting capacity will be approximately 2,000 kVA.

An outline of the third Five-year Plan is expected to be issued by the Government of India shortly. Preliminary work on the Plan has already been started by the Planning Commission, Central Ministries and some of the State Governments. Working groups for agriculture, irrigation and power and education have been set up. The various Ministries are continuing their studies on the different aspects of the Plan. Besides, data relating to manpower requirements are being collected both at the Centre and by the States. It is learnt that an attempt is being made to fit proposals for the third Plan into a perspective Plan extending over a period of 15 to 20 years.

The Central Government has made special arrangements for the supply of copper to small-scale manufacturers of electric copper wires, copper utensils and imitation *jari* goods. A total quantity of 5,500 tons has been allocated for distribution among the manufacturers for the current licensing period April-September 1958 on the basis of their consumption in 1957. The total consumption in that year is estimated at 11,000 tons of copper. Out of the 5,500 tons allocated to the small units, about 4,500 tons have already been distributed. The Government has now decided that the allocation work should be done by State Governments and some quantity of copper is likely to be placed at their disposal for distribution.

The Scheduled banks have generally agreed to provide additional financial accommodation to cotton textile mills by reducing the margin from 25 per cent. to 10 per cent. wherever possible. This was disclosed by Mr. Nityanand Kanungo, Minister for Commerce, while replying to a question in the Lok Sabha the other day. Mr. Kanungo said that the banks had been requested to reduce the margin of security against loans and advances to the mills in order to relieve the difficulties of the textile industry which was recently faced with heavy accumulation of stocks. According to him, the mills, particularly upcountry mills, had derived considerable relief by this accommodation, although it was not possible to state precisely how far the mills had benefited from these facilities.

Replying to a question in the Lok Sabha the other day, the Deputy Minister for Commerce and Industry, Mr. Satish Chandra, stated that, as soon as the threatened closure of three Nagpur dailies due to shortage of newsprint was brought to the notice of Government, the dailies were offered relief by release of newsprint from the Nepa Mills and from ready stocks of imported newsprint. The Government had no knowledge of threatened closure of any other newspapers in Bombay State. Asked about the annual requirements of newsprint in the country, he said that the demand was gradually increasing and was expected to reach 100,000 tons by 1960-61. The newsprint imported in 1957 amounted to 63,750 tons, as against 71,450 tons in 1956 and 73,600 tons in 1955. Imports in the first five months of 1958 aggregated 21,550 tons. The production of indigenous newsprint, which was 2,563 tons in 1955, had risen to 10,781 tons in 1956 and 14,489 tons in 1957. The production in the first half of 1958 was 9,549 tons. Revealing that a scheme for the establishment of a newsprint factory at Shakkarnagar (in Andhra Pradesh) with a capacity of 100 tons per day was under the consideration of the National Industrial Development Corporation, Mr. Satish Chandra said that it had not been possible so far to arrange for satisfactory terms of deferred payment for the proposed newsprint factory. The Andhra Pradesh Government had been requested to survey the site proposed, excavate trial pits to test the nature of the soil and prepare contour maps of the area.

From Abroad

The population of the U.S.A. as on 1st August 1958 was 174,326,000 which represents an increase of 2,852,000 as compared with that a year before.

The *per capita* consumption of paint in Sweden at 22 lbs. is the highest in Europe. The country is said to be more or less self-sufficient in paints, its total output of paints being of the order of £13.8 million.

The flotation of a company to manufacture non-woven fabrics was announced in Holland last week. Participating in the project are Lantor of Manchester, West Point Manufacturing Company of the U.S. and Tootal and six of the leading Dutch cotton mills.

America's Boeing 707 jet airliner, which carried out noise tests at London last week, set a new transatlantic air record on its return to the U.S. by flying non-stop from Stansted Airport, Essex, to Idlewild, New York, in 7 hours 29 minutes.

Japan has agreed to grant a loan of $30 million in the form of yen credits to the United Arab Republic. No agreement, however, has yet been arrived at between the two countries regarding the rate of interest. While Japan is insisting on 5½ per cent., the U.A.R. is asking for 4½ per cent.

The world consumption of primary tin exceeded production by 6,200 tons to 36,400 tons in the second quarter of 1958. This is in marked contrast with the first quarter when consumption was 36,400 tons, while output was 38,400 tons. In the second half of last year, there was a production surplus of 9,700 tons.

The U.S. Export-Import Bank has approved of a $40 million credit to the Central Reserve Bank of Peru for maintaining essential imports from the U.S. during the rest of 1958 and in 1959. The economy of Peru, it is said, has been adversely affected by the depletion of its export earnings owing to the fall in world market prices.

A low-cost aluminium classroom, which can be moved from one school site to another within three days, has been developed by the Thompson Trailer Corporation, U.S.A. The portable schoolroom, measuring 20 feet wide, 40 feet long and 10½ feet high, was designed to relieve a crowded main school building. It is claimed that the classroom can accommodate 40 pupils and be erected in 1.5 working days.

Britain's share in the total imports into Australia during the financial year 1957-58 was maintained at the previous year's level of just over 41 per cent., despite the efforts of the major competitors in the Australian market to increase their share. The percentage share of Japan and West Germany in the total Australian imports during 1957-58 was higher at 3 and 5¾, as against 2 and 4¾, respectively, in 1956-57.

Iraq is reported to be considering a proposal to withdraw from the sterling area in response to popular demand. A technical committee of the Government, it is learned, is currently studying the question as to how Iraq can obtain financial freedom of action instead of being obliged to follow the sterling area policies. The total of Iraq's sterling balances is currently put at about £80 million.

A bilateral trade agreement, extending unconditional most-favoured-nation treatment to each other, has been reached between New Zealand and Japan. The agreement contains, *inter alia*, provisions for safeguarding the domestic industries of each country by necessary consultations between the two Governments. It also stipulates certain specific commitments by Japan in regard to imports of New Zealand meat, wool, tallow, hides and dairy products.

The payload-range performance of the Vickers Viscount 810 series, one of Britain's best selling prop-jet airliners now in service in many countries of the world, has been stepped up in all airliners ordered as from the 10th inst. The makers, Vickers-Armstrong Aircraft Ltd., have announced that the necessary engineering development and flight test programme has advanced sufficiently to raise the maximum take-off weight by 3,500 lbs. to a total of 72,500 lbs.

The British European Airways has announced sizable cuts in fares on its domestic trunk routes with a view to encouraging traffic. The revised fares with effect from 1st November next will be £8 for flights between London and the Scottish and North Ireland cities and £5½ between London and Manchester. The company has also announced a concession in the form of 8-day winter week-end excursion return rates in the routes between London and Belfast, Edinburgh, Glasgow and Manchester.

A new fuel oil terminal, claimed to be the largest and the most up-to-date in the United Kingdom, was opened on the 15th inst. Built on the reclaimed site of a former East London dock at a cost of over £400,000, it will be capable of storing 4,000,000 gallons of fuel. An outstanding feature of the new terminal is the automatic pumping equipment that feeds fuel oils from storage tanks to loading bays. This equipment, by eliminating manual control, ensures that nearly 400,000 gallons of fuel oil can be loaded daily into road tankers for distribution in and around London.

The Volta River Plan of Ghana, which will receive the highest priority in its second development plan, is expected to be financed jointly by the Government of Ghana and the International Co-operation Administration. The Kaiser Engineering Co-operation, U.S.A., has shown keen interest in the project and if the company were to decide on its participation in the scheme, the U.S. Government contribution is also expected to be forthcoming. Ghana does not intend to apply for a World Bank loan for the time being. It is said that Ghana is in a position to meet the outlay on the next development plan for two years and may borrow in London in 1960.

Many new industries are coming up in Ghana, mainly financed by foreign capital, but the Government subscribing about 25 per cent. of their share capital. Imperial Chemical Industries, London, for instance, will set up a factory at Tema shortly for manufacturing insecticides, Gammalin 20. Another plant for the production of aluminium cooking vessels will be established with the collaboration of Swiss industrialists. Again, a new iron and steel rolling mill, which is now under construction at Abosso, is expected to commence production by early next year. The Government has invested £20,000 in the project, which represents about 25 per cent. of the share capital.

PERSONAL

MR. C. S. Venketachar, High Commissioner of India to Canada, presented credentials to the Acting Governor-General, Justice Taschereau, at Ottawa on the 12th inst.

Mr. G. L. Mehta, Indian Ambassador to the U.S. till recently, returned from Geneva on Sunday this week after attending the seminar on International Tensions held at Berne last month.

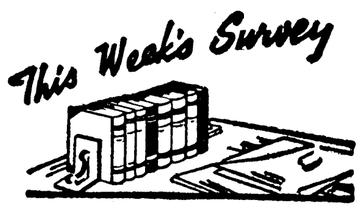
Mr. N. G. Ranga, M.P., has been appointed Chairman of the Public Accounts Committee till 30th April 1959, *vice* Mr. T. N. Singh, who has taken over charge as Member, Planning Commission.

Mr. Mohamed Ali Currim Chagla, at present Chief Justice, Bombay High Court, has been appointed Ambassador of India to the United States of America. He will assume charge of his new assignment some time next month.

Mr. Howard C. Sheperd, Chairman of the Board of the First National City Bank of New York, is due to arrive in Bombay City on 20th inst. He is accompanied by Mr. George S. Moore, Executive Vice-President of the Bank, in charge of its Overseas Division. After meeting important industrialists and Government officials in Bombay, they will proceed to New Delhi to represent their Bank at the annual meetings of the World Bank and the I.M.F.

Dr. Panjabrao S. Deshmukh, Union Minister of Co-operation, will lead the Indian delegation to the fourth F.A.O. Regional Conference for Asia and the Far East and the sixth session of the International Rice Commission due to be held in Tokyo from 3rd to 16th October 1958. The delegation will include Mr. H. G. Patil, a non-official member, Dr. R. N. Poduval, Deputy Economic and Statistical Adviser, Government of India, and Dr. S. M. Sikka, Additional Agricultural Commissioner, Indian Council of Agricultural Research.

Mr. Derick Heathcoat Amory, Chancellor of the British Exchequer, will lead the U.K. delegation to the annual meetings of the Boards of Governors of the International Monetary Fund and the International Bank for Reconstruction and Development, due to take place at New Delhi from 6th to 10th October. The delegation from the U.K. will include Mr. Reginald Maudling, the Paymaster General, Mr. Terence O'Neill, Minister of Finance, Northern Ireland, Sir Roger Makins, Joint Permanent Secretary to the Treasury, Sir Denis Rickett, U.K. alternate Governor of the World Bank, Mr. M. H. Parsons of the Bank of England, who is U.K. alternate Governor of the Fund, Mr. G. F. Thorold, U.K. Executive Director of the Fund and the Bank, and Sir Robert Hall, Economic Adviser to the U.K. Government.



L.I.C.'S STAFF POLICY

ALTHOUGH Mr. P. A. Gopalkrishnan, Chairman of the Life Insurance Corporation of India, could not give a favourable reply to the demand of the Corporation's employees for bonus, he had many other pleasant things to tell them when he addressed the twenty-seventh meeting of the Corporation held on the occasion of its completion of two years' working. The Chairman disclosed that, though the demand for bonus could not be conceded, since the Government of India had decided, as a matter of policy, that no bonus would be payable in nationalised undertakings, the Corporation had instead extended a scheme of free insurance to its employees and decided to contribute a lump sum every year for staff benefits. It had also sanctioned a comprehensive scheme of housing for its employees costing about Rs. 12 crores. The Chairman indicated the Corporation's willingness to consider, after the biennial valuation of the assets and liabilities of the Corporation had been completed, a scheme of incentive bonus for the staff.

To the extent these measures contribute to make the employees a contented lot, and thereby make work efficient and service prompt, they would be welcomed by the country in general and the policyholders in particular. But the question is whether there are not other problems which deserve a higher priority. The Corporation is no doubt making efforts to improve the administrative machinery. But, on the Chairman's own admission, there is a great deal to be done in the matter of better servicing of policies and speedier settlement of claims. Policyholders in other countries receive many benefits and privileges which their confreres in India have yet to enjoy. The Corporation's efforts to bring these or similar benefits within the reach of its policyholders will be a measure of its earnestness to serve their interest. Certainly, it is no consolation for them to be told that the Corporation has earmarked Rs. 12 crores for housing its staff, or that it proposes to give incentive bonus to its employees, when they themselves, after having taken out with-profit policies, are still in the dark about the future of their bonus. This is not to be taken as a criticism of the Corporation's staff policy or the amenities it proposes to provide to its employees. It is meant only to underline the need for doing first things first.

A Government-owned Corporation, enjoying an absolute monopoly of life insurance in the country, and having, by the very nature of its business, large funds at its disposal, needs to be very circumspect in its policies. It should resist the temptation to be overgenerous, to which it can easily succumb. Since it is a Government undertaking, it has to take into account the impact of its salary scales and service conditions on other sections of Government employees and see that these are not disproportionately high as compared with those offered by other departments. In no case should the Corporation's employees, or the employees of other public undertakings for that matter, be singled out for special treatment, which the majority do not get, nor should its policies lead to the creation of an elite among employees in the public sector. Already, this tendency is evident and, if it is not checked in time, it will have a very unhealthy influence on the morale of the not-so-privileged Government and non-Government employees.

The Corporation has drawn up building programme. The *raison d'etre* of it, according to the Chairman, is that at present most Divisional Offices are located at places where there were no head offices of the former insurance companies and where, therefore, no suitable buildings are available for accommodating the Divisional Offices. Until these buildings are constructed and adequate space becomes available, the Chairman said, the Divisional Offices concerned would not be in a position to take over the policy papers of the units or the personnel necessary to deal with them. One wonders whether the programme at present deserves the priority which the Corporation has given it. Following nationalisation, the Corporation has come into possession of many buildings which formerly accommodated the branch offices of private companies. Could not the Corporation make use of the office space saved as a result of the centralisation of life insurance for purposes of housing its Divisional Offices? It is true that the Divisional Offices are functionally different from the branch offices of companies and, therefore, require better facilities. But, if those already available are so grossly insufficient as to render the working of the Offices difficult, would it not suffice for the present to rent out buildings already existing, instead of launching a fresh building programme and that too at a time when the Corporation has many problems to grapple with and the need for conserving the scarce building materials like steel for more essential construction projects is urgent?

PROFESSIONAL ACCOUNTANTS

With the growth of business enterprises, the professional accountant is being called upon to play an increasingly important role. Whether he works as an accountant inside a business enterprise or as an "internal" or "external" auditor, he is a person whose advice is worth listening to. Now that managements of most corporate enterprises are getting divorced from the day-to-day scrutiny of the ultimate owners, the shareholders, more and more reliance has necessarily to be placed on the integrity and professional skill of the accountants and auditors. The recently amended Company Law has also cast on this class of men much onerous responsibility. They cannot possibly discharge this responsibility without professional equipment of a high order. Appropriately enough, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, in the course of his address at the annual meeting of the Institute of Chartered Accountants, held last week, at New Delhi, urged the Institute to maintain the highest possible standards in the profession. A new branch of accounting science which is coming into its own is management accounting which, as Mr. S. Vaidyanath Aiyar, President of the Institute, pointed out, could be of considerable assistance to efficient and economic management. It is gratifying to note that the syllabus framed by the Institute for its management accounting examination includes such subjects as business administration and industrial relation. The new syllabus should enable the accountant to acquire that liberal attitude without which he is bound to remain a mere stickler for unimaginative figure work.

Mr. Shastri stressed that the Government was fully seized of the importance of adopting the best techniques of accounting science in the companies in the public sector. He revealed that the Department of Company Law Administration would shortly be promoting some preliminary discussions at a technical level to consider how best suitable systems and accounting for management could be introduced in the public sector and that, in this connection, the authorities would be seeking the assistance of the Institute. The Government, he said, had also decided to set up a Technical Advisory Committee to be associated with the Department of Company Law Administration. This Committee, which would consist of legal and accountancy experts, would function as an advisory body to the Government in regard to accounting and legal matters which come up before the Government. It would be the Indian counterpart of the Consultative and Technical Advisory Committees associated with the Insurance and Companies Department of the U.K. Board of Trade.

From time to time, the Institute has suggested amendments to the provisions of the Chartered Accountants Act. It is stated that these proposals have been thoroughly discussed and there is now a large measure of agreement between the Institute and the Department. Mr. Shastri disclosed that the Government would be able to finalise these proposals and introduce the necessary amending legislation in Parliament by the end of this year. It is not, however, clear which of the suggestions made by the Institute have been accepted by the Government.

MINERAL OIL AT CAMBAY

It is welcome news that an oil-bearing stratum has been located at Cambay in the Bombay State. The exact position, as described to Parliament by the Union Minister for Mines and Oil on the 12th inst., is as follows:

"I deem it my duty to report to the House that, at the Cambay site, we have penetrated into what appears to be an oil-bearing stratum. A small underground structure was independently delineated by our Indian specialists at a depth of 3,000 ft., some five miles north-west of Cambay. There were exposures of marine rocks and gas around the fringe of the basin. It was thought that this was a region of marine sedimentation and a decision was taken to test the structure by drilling to a depth of 10,000 feet.

"After the necessary preparations, drilling operations were started on 25th July, 1958 with a Russian Uralmash-3D turbo drill and a depth of 5,368 ft. was reached on the morning of 3rd September, when drilling was stopped for taking electro-logging data. On the 4th inst., when the drilling mud was circulated in the morning, thin films of dark brown oil were seen to come to the surface with the return mud. When the casing was lowered on the 8th inst. and mud circulation resumed, oil started to reappear and flowed with the mud in a continuous stream for about 15 minutes. The pressure of the drilling mast at the bottom of the hole was about 190 atmospheres, suggesting that the oil was under considerable pressure."

It, however, remains to be seen whether the oilfield now located at Cambay affords possibilities of exploitation of oils on a commercial basis. Mr. Malaviya observed that, while there was reason for cautious optimism on the basis of results achieved so far, it would be necessary to continue fairly intensified drilling and testing for 3 to 12 months more, before one could be certain that a commercially exploitable oilfield had been discovered. He said that they were "extremely fortunate to strike oil at such shallow depth in an unknown virgin area within a short time and at negligible cost." He also announced that it had been proposed to increase the number of drills in the Cambay area and in other promising areas.

Addressing a Press conference at Cambay on the 16th inst., Mr. Malaviya, who was on an on-the-spot inspection visit to the place, pointed out that investigations carried on so far and more especially information obtained from the first well at Cambay had given a lot of encouragement to intensify the search for oil. He added that the Natural Gas and Oil Commission would intensify its search for oil, following the discovery of a number of gas seepages in the area, both on the east and west of the Gulf of Cambay. He, however, observed: "Because oil is elusive and howsoever perfect the geologists', geophysicists' and drillers' work may be, oil can be found only where it is seen, and then oil is not worth finding unless it is in commercial quantities." He also disclosed, in this connection, that each installation for further exploration operations would cost the country Rs. 50 lakhs in equipment and Rs. 30 lakhs in operational cost.

Much effort will be needed before India's oil supply is augmented by domestic sources. India's production of mineral oils accounts for no more than 8 per cent. of the present annual requirements of 5 million tons. Even on the assumption that the Nahorkatiya oilfields yield an additional 2½ million tons of crude by 1960, the total production, it is computed, will fall short of domestic demand by no less than 50 per cent. Consequently, the total value of annual imports of crude and petroleum products will be of the order of Rs. 140 crores by 1961, as against the current annual expenditure of about Rs. 100 crores. In order to minimise this drain on foreign exchange, there is a compelling urgency for launching a vigorous drive to boost domestic oil production.

SECOND PLAN—ANOTHER REAPPRAISAL

Just four and a half months after its Memorandum on the appraisal and prospects of the second Five-year Plan, the Planning Commission has come out with another reappraisal of the Plan. In a detailed note submitted to Parliament's Consultative Committee on Planning, the Commission has looked at the Plan again on the basis of the developments that have taken place since April 1958. It now places the total outlay on Part A of the Plan at Rs. 4,650 crores, a rise of Rs. 150 crores as compared with the ceiling of Rs. 4,500 crores fixed by the National Development Council early in May last. This Part, it will be recalled, covers, besides the programmes directly related to increase in agricultural production, 'core' projects and projects which have reached an advanced stage, and other inescapable schemes. All the other remaining schemes are included in Part B of the Plan, with a total outlay of Rs. 300 crores, to be undertaken to the extent to which additional resources are available.

The whole of the increased outlay of Rs. 150 crores in Part A of the Plan is accounted for by the plans pertaining to the Centre. The cost of these plans has been stepped up from Rs. 2,452 crores to Rs. 2,602 crores. The cost of the plans of States is expected to remain unchanged at the level envisaged in the Memorandum, that is, Rs. 2,048 crores. The bulk of the increase in the Centre's Plan—Rs. 92 crores to be precise—pertains to industries and minerals, the total provision for which has been enhanced from Rs. 775 crores to Rs. 867 crores. The allocations for agricultural and community development have been raised by Rs. 2 crores to Rs. 56 crores, for irrigation and power by Rs. 12 crores to Rs. 75 crores, for village and small-scale industries by Rs. 12 crores to Rs. 67 crores, for transport and communications by Rs. 8 crores to Rs. 1,185 crores, and for "miscellaneous" by Rs. 5 crores to Rs. 35 crores. The allocation for social services is left unchanged at Rs. 298 crores. These increases, together with the enlarged provision of Rs. 19 crores for proposals such as expansion of technical education, come to Rs. 150 crores.

In the opinion of the Planning Commission, the abovementioned increases in Central projects are "virtually unavoidable." On the basis of the revised cost of the projects, the actual gap in financial resources comes to as much as Rs. 390 crores, as against Rs. 240 crores mentioned in the Memorandum issued in May last. In view of the success that has already attended the efforts made to obtain foreign exchange resources, the central problem now is one of raising internal resources during the rest of the Plan period. The estimate of these resources in the first three years of the Plan is placed at Rs. 1,101 crores which compares with Rs. 2,652 crores (including the latest addition of Rs. 150 crores) required for the whole of Part A of the Plan. In other words, the internal resources to be raised in the last two years of the Plan is of the order of Rs 1,551 crores. Can such a large sum be found within a couple of years? Experience so far does not warrant any optimism. Several State Governments, it may be noted, have already expressed their inability to levy any new taxes. It is true that the prospects for open market borrowings have improved, but this advantage is likely to be neutralised to a large extent by the fall in small savings.

It is unrealistic on the part of the Planning Commission to maintain even in the latter half of the third year of the second Plan that the State Governments should intensify their efforts at raising additional revenue. For reasons already mentioned (*vide* page 378, *Commerce* 6th September 1958) and reiterated in our Delhi Letter (page 468) this week, it is no use proceeding on the assumption that the States can and must find more money than they have been able to do so far. Accordingly, there are only two alternatives. One is to cut the coat according to the cloth available. The other is to set aside sentiment and reintroduce the salt duty and modify the policy of prohibition. In fact, both the remedies can be tried. If the authorities are not prepared to do so, they can finance development by creating more paper money. But they will have to face more music from the public which is already groaning under the weight of high cost of living and excessive taxation and run the grave risk of a revolution. This is, of course, taking an extreme view of the situation, not providing for the occurrence of miracles. Supposing the production of foodgrains in the next year or in the one following it goes up by four to six million tons, followed by a corresponding rise in other agricultural crops, the problem of internal resources will have been very nearly solved.

Be that as it may, the Planning Commission's assessment of the position in respect of external assistance is somewhat encouraging. The total of such assistance actually received and announced to date is of the order of Rs. 1,350 crores, made up of assistance carried over from the first Plan accounts for Rs. 132 crores, fresh assistance authorised in the two years ended March 1958 for Rs. 727 crores, and assistance offered by the five countries participating in the recent Washington talks under the auspices of the World Bank as well as the Bank itself for Rs. 491 crores. This amount not only exceeds the foreign assistance of Rs. 800 crores assumed in the original Plan but also more than fully covers the uncovered gap of Rs. 400 crores in the original version of the Plan.

Notwithstanding the substantial improvement in foreign assistance as noted above, it is highly doubtful whether the efforts to fulfil the physical targets will meet with success, thanks to several limitations such as shortage of technical and administrative personnel, red-tapism, lethargy of Government employees, labour unrest, transport bottlenecks and, finally, scarcity of rupee resources. In fact, there are indications of a downward revision in many vital physical targets even according to the latest estimates of the Planning Commission. The total area of land for which irrigation facilities will be provided, for instance, is put at 10.4 million acres, as against the original target of 12.0 million acres. Similarly, the output of power is expected to be 500,000 kilowatts lower at 3,000,000 kilowatts. Industrial production is expected to achieve only 70 to 75 per cent. of the capacity of targets, the shortfall being marked in respect of aluminium, ferro-manganese, caustic soda, fertilisers, dyestuffs and cotton textiles. While the targets for locomotives, wagons and bicycles are expected to be hit, there will be shortfalls in the field of engineering industries. The target of coal production will be lower than the original target of 60 million acres, but the target capacity for consumer goods, most of which are in private sector, is expected to be secured, with a few exceptions. Transport and communications development are also expected to be affected to some extent, while provision for social services, which include education, health and housing, has been cut by Rs. 135 crores.

It would appear from the Planning Commission's latest reappraisal that the Plan will provide employment opportunities for only 6.5 million, as against the original target of 8.0 million, and that the increase of 25 per cent. in national income envisaged in the original Plan may not be realised. The actual extent of the shortfall is not indicated. The Commission merely states that "whether national income as a whole will grow as anticipated in the Plan turns largely on the extent to which the targets of agricultural production as revised in 1956 are realised." It is, however, estimated that the rise in national income in the non-agricultural sector may be close to the level suggested in the Plan. But even this assumption is somewhat optimistic, now that all the three steel projects in the public sector are progressing far behind schedule and are unlikely to be in full production before 1963.

WORLD COFFEE

No information is yet available about the final outcome of the deliberations of the two-day session of the African coffee producers' conference held in Paris on the 11th and 12th inst. and the decisions taken thereat. All that is known at the time of writing (Monday, the 15th inst.) is that the main object of the conference was to discuss the draft of an international coffee agreement prepared by the Brazilian and U.S. Government representatives after negotiations in Washington. Under the draft agreement, as explained by the Brazilian observers who were in Paris for the conference, Brazil is willing to cut its exports of coffee to the normal European and North African markets by 40 per cent.—that is, from 25 million bags to 15 million bags per annum—provided, of course, the African producers (mostly the French West African Colonies) share the sacrifice. The Brazilians want that the African producers should absorb almost 10 per cent. of their exportable surplus of about 3 million bags. Further, it is made clear that Brazil would preserve its freedom of action to find out new markets for coffee exports, an addition to the 15 million bags in the Communist world and Asia. There have been hints that "if the African producers refuse to accept the Brazilian proposals, Brazil will export her surplus regardless, thereby sharply reducing world prices."

From the aforesaid brief details it would appear that the draft international coffee agreement seeks to unite all the main producers of coffee in the task of controlling the huge surplus of 12 million bags hanging over the world market. The aggregate world production of coffee during 1958 is estimated at as high as 50.50 million bags (of 132.28 lbs. each), while demand is not expected to exceed 38.00 million bags. Never in the history of world coffee industry had the harvest been such a bumper one as in the current season; the previous record level of output was less than 43.62 million bags, touched in 1956. The position regarding coffee surplus, it is said, may be worse in the coming years. To quote a Press version of a confidential study by the World Bank: "There will be a serious surplus for the next five to ten years and that, without some form of control, the price of coffee will drop precipitously and substantially."

It is no wonder, therefore, that the principal producing countries are very much concerned over the prospects for their coffee exports. In particular, Brazil is most anxious and apprehensive. Brazil, it is common knowledge, is the biggest producer and exporter of coffee in the world, accounting as it does for well over 43 per cent. (22 million bags) of the total world output and 41 per cent. (17 million bags) of the total world exportable production of 42 million bags. Coffee constitutes the most important foreign exchange earner for Brazil; its share in the total exports of this country comes to as much as 67 per cent. As in the case of Brazil so in that of the other Latin American countries, coffee earns the largest amount of foreign exchange, the percentage share in the total being 83 for El Salvador, 77 for Columbia, 73 for Guatemala, 70 for Haiti, 54 for Costa Rica and 45 for Nicaragua.

In view of the vital role played by coffee in their economies thus, the Latin American countries are greatly worried over the latest trends in the world economy. While their coffee production continues to rise, thanks to adoption of better methods and cultivation of large expanses of arable land, competition is growing from African coffees which are being offered at considerably lower prices than South American varieties even in the U.S. and which have cut deeply into the European market. It is stated that the proportion of these coffees in the total purchases by the U.S. during 1957 was 20 per cent., as against 12 per cent. in the pre-war period. It is also stated that the value of coffee purchased by the U.S. from the Latin American countries dropped from $1,955.01 million in 1956 to $1,788.82 million in 1957.

The growing competition from African producers in the U.S., the natural market for Latin American producers, has made the latter get together and present a united front. They have been vigorously trying to persuade the U.S. to agree to some sort of an international commodity pact for coffee. Till recently, the U.S. was firmly opposed to any such collective arrangement to hold the prices of coffee. Addressing a meeting of the American coffee importers early this year, the U.S. Assistant Secretary of State categorically declared that the American Government would have nothing to do with schemes to allocate world markets and support coffee prices. But all this is past history. The economic plight of Latin America and the clever attempts made by Russia to exploit the situation in order to win the support of these countries in its favour have induced the U.S. Government to alter its policy and plump for world commodity agreements. In fact, the U.S. has been compelled to take the initiative in organising the International Coffee Study Group, thanks to the "ugly" reception which Vice-President Nixon had in Lima (Peru) and Caracas (Venezuela) during his visit in June last and to the Russian threats of economic penetration of the hemisphere. The Group, it will be recalled, includes not only the Latin American coffee-producing countries but also Ethiopia, Britain, France, Belgium, Portugal and the Netherlands.

While the Study Group is still grappling with the problem of regulating world output of coffee and stabilising prices, the Brazilian and U.S. Government representatives have, as already stated, come out with a draft international coffee agreement. The African producers, who were strongly opposed to any international restrictive arrangement, appear to have softened. The very fact that they agreed to discuss the plan at Paris last week is sufficient proof of the change in their attitude. Having made substantial inroads into the markets, which were once the close preserve of Latin America, the African coffee producers must have thought that, if they refused to co-operate, they might lose a good part of their gains. Moreover, they do not have much choice in this matter, as the European powers, under whose control they are, have preferred to toe the line taken by the U.S.

PLANNING BODY'S REAPPRAISAL OF SECOND PLAN

ASSUMPTIONS UNREALISTIC

From Our Special Correspondent

NEW DELHI, *16th September*

DELHI LETTER

PARLIAMENT'S Consultative Committee on Planning has just been apprised of a further revision in the Second Plan. This is an upward revision involving an addition of Rs. 150 crores to the five-year expenditure target of Rs. 4,500 crores fixed some months back by the National Development Council for the more essential Part A of the Plan. It may be recalled here that the Planning Commission, in its *Appraisal and Prospects of the Second Five Year Plan* of May last, had visualised a gap of Rs. 240 crores in internal resources even at the level of a total expenditure target of Rs. 4,500 crores under Part A. The latest revision would mean that the gap in internal resources will become wider still, being Rs. 390 crores (Rs. 150 crores *plus* Rs. 240 crores). But the Planning Commission, in its latest note to the Consultative Committee, estimates the gap at anything from Rs. 300 crores to Rs. 350 crores only in the light of possible changes in estimates under individual heads. The Commission assumes that a good part of this gap can be covered at the States' level by (1) betterment levies on lands; (2) special assessment on agricultural lands used for non-agricultural purposes and on agricultural lands which have acquired an urban character on account of particular development projects or general economic development; (3) improvement in collections of existing taxes like sales tax and State excise duties; (4) recovery of arrears of *taccavi* and other loans; and (5) more collections under small savings.

The Commission's assumption that the States might be in a position to raise additional resources under the listed heads is not wholly justified. For one thing, the States would not generally, for political and practical reasons, levy and collect betterment fees, on any appreciable scale, from lands which are supposed to have appreciated in values following the execution of new irrigation projects; this would be particularly difficult because water rates under the new projects are already very high and concessions in them in some areas have to be given to encourage greater utilisation of the newly-created irrigation potential. The admission of the Deputy Minister for Power and Irrigation in the Lok Sabha yesterday "that the levy of Betterment Tax was one of the factors that discouraged cultivators to take advantage of the irrigation potential additionally created" is also significant in this connection.

As for special assessment on agricultural lands used for non-agricultural purposes and betterment tax on urban lands which have appreciated in values, they are promising only on paper for they are least likely to be levied in the face of more certain opposition which, in urban areas, can easily find political expression; in any case, it is doubtful if any substantial revenue can be expected from this source, the more so because it would be very difficult to determine the extent of betterment in land values supposed to have been brought about by general economic development. As for improvement in callections of sales tax, it is again doubtful if there is any considerable scope for it, particularly in the context of the Central levy of sales tax on certain essential commodities which does effect some improvement in collection. As for State excise duties, their yield is bound to remain more or less static as in recent years on the supposition that there is no rapid extension of Prohibition to new areas.

In the matter of more expeditious recovery of arrears of *taccavi* and other loans suggested by the Planning Commission, not much can be expected if allowance is made for recurring droughts or floods in different regions. As for the suggested greater collections under small savings, it may be safely assumed that they will continue to be as unsatisfactory as in the first three years of the Plan. This assumption is based on the consideration that food prices in particular periodically upset the domestic budgets of middle class families and render small savings next to impossible. So long as there is no reasonable prospect of the price line being held at a stable level, it would be breezy optimism to look forward to any substantial increase in small savings.

It would thus appear that shortfalls in expenditure under the State Plans would be inevitable on account of inadequacy in resources. Of the five-year revised target of expenditure of about Rs. 2,200 crores under the State Plans (including those of Union Territories), it can now be estimated that the first three years (1956-57, 1957-58 and 1958-59) would be accounting for just 45 per cent. In the light of the prospective resources position in the States, it would be reasonable to estimate that the remaining two years (1959-60 and 1960-61) might account for 30 per cent. of their five-year revised target of expenditure. In other words, the actual five-year expenditure under the State Plans (including those of Union Territories) might not exceed Rs. 1,650 crores. If allowance is made for a price rise of one-tenth (which is probably on the low side) in the financial performance, the physical performance could be valued at Rs. 1,485 crores in 1952-53 prices at which the Second Plan's original targets were fixed for the Centre and the States.

The picture in respect of the Centre's Plan does not appear to be so depressing inasmuch as the Planning Commission has found it possible to provide for a total five-year expenditure of about Rs. 2,600 crores, as against the previous revised target of Rs. 2,450 crores. The expected additional rupee resources that will be made available for development purposes under fresh P.L. 480 deals (including the latest one which appears to have been finalised during the visit of Mr. Morarji Desai to Washington) could well be of the order of Rs. 150 crores, and this would be available for the Centre's Plan. Assuming a shortfall of just 10 per cent. in the actual five-year expenditure under the Centre's Plan, the financial performance would be of the order of Rs. 2,340 crores. If allowance is also made for a price rise of one-tenth (which, again, is probably on the low side) in the financial performance, the physical performance could be valued at Rs. 2,105 crores in 1952-53 prices at which the Second Plan's original targets were fixed for the Centre and the States.

It would thus appear that, taking the Plans of the States and the Centre together, the most likely five-year physical performance would represent in all about Rs. 3,600 crores in round figures (Rs. 1,485 crores *plus* Rs. 2,105 crores) or, roughly, three-fourths of the original Second Plan target of expenditure (investment outlay *plus* current outlay) of Rs. 4,800 crores in the public sector in 1952-53 prices. If the actual financial performance under the State and Central Plans would not be more than Rs. 4,000 crores (Rs. 1,650 crores *plus* Rs. 2,340 crores), as against the target of Rs. 4,800 crores at current prices, the actual outlays would be, more or less, in accord with available or mobilisable resources—both external and internal.

The over-ambitious character of the original Plan-size (which is the equivalent of Rs. 5,300 crores at current prices) in relation to the maximum mobilisable resources of Rs. 4,000 crores is thus obvious. Why, in the face of this true state of affairs, the Planning Commission periodically reappraises the Plan in a way that still leaves a considerable gap in resources, is by no means clear. Perhaps, the Commission's essays at so-called reappraisal and the National Development Council's so-called decisions thereon have no more than a political or psychological significance. The real master of the situation appears to be the Finance Ministry which alone is in a position to limit actual expenditure to available or mobilisable resources.

It is, therefore, significant that the Economic Affairs Department of the Finance Ministry has "leaked out," just in advance of the submission of the Planning Commission's note to the Parliament's Consultative Committee, some findings of the latest report of the World Bank Mission—especially the ones bearing on the inadequacy of resources. Why the Government has not taken the public and Parliament's Consultative Committee into confidence by releasing the full report of the World Bank Mission along with the Planning Commission's latest note of reappraisal, is a pertinent question. Surely, there is an element of unreality or of "hide-and-seek" in the whole affair. It looks as though the Government is still allergic, for some mysterious political reason, to a frank public discussion of the state of the Second Plan.

THE TRADE UNION LAMI

From Our Own Correspondent

LONDON, *12th September*

LONDON LETTER

THE Annual Trade Union Congress held at Bournemouth last week was a victory for orthodoxy. Everyone expected that it would be the battleground between the Transport and General Workers' Union led by the militant Mr. Cousins (who was so deeply committed to the bus strike earlier this year) and the front bench of the Trade Union Congress which had, of course, opposed an extension of the strike. Now both sides are to argue their case out before the body of delegates and, if Mr. Cousins were to win the day, then it was realised that a very troubled industrial year would lie ahead. But, in the event, the battle was a cold one, instead of a hot one, neither side either wanted or dared to crush the other and, though Mr. Cousins in fact argued that the Trade Union Congress should have brought the country as near to a general strike as mattered in the interest of supporting the bus workers' claims, he did concede that there was something to be said for the opposite point of view. The Congress leaders while maintaining that they were right in not wanting an extension of the struggle and that Mr. Cousins had been wrong, did not want to push their defence any further than that. Mr. Cousins got his applause but much less support than he had expected. The mass of Trade Unionists were prepared to settle for a quiet life and the leaders of the Congress who were as lamblike as any such body could be clearly had the temper of the movement. Observers could not resist the conclusion that, at the present time, if the Trade Union movement can be led by its present gentle supporters, it could be led by almost anybody.

So, although the Transport and General Workers' Union fully ventilated their case for a fight with industry and with the Government, it is clear that the Trade Unions do not want a fight. Mr. Cousins and the militants have very quietly but firmly been held in place.

The relevance of this to forthcoming wage negotiations is clear. At the moment, the 40 unions, which make up the Confederation of Shipbuilding and Engineering Unions, are meeting to discuss the rejection by the shipbuilding employers of their wage claim and the employers' counter-offer of approximately a 3 per cent. increase—against an approximate 4½ per cent. which it is thought the Unions will accept. The Unions' negotiators have rejected the 3 per cent. and the Unions concerned are to debate their attitude. 250,000 shipyard workers are involved and, though they have claimed that the industry is a busy and productive one, they also know that current orders on the books are all running out over the next two years. A recent order for £11 million worth of dry cargo tonnage has been cancelled and another order from the Argentine for £1½ million is said to have been transferred to Germany where prices are lower. The prospects for a negotiated settlement are certainly better than they would have been before the Bournemouth Conference, unless the Unions succeed through threatened strike action in getting a Court of Enquiry set up, but the Government will be chary of such a Court as recent experience shows they can lean to the side of the Unions' claim.

At the same time, it would be wrong to suggest that the Trade Unions have any more of a wage policy now than they had before the Bournemouth Conference. They will not accept that wage increases cannot exceed productivity increases without inflation. But they are not prepared for a wave of strikes. So negotiations in this as in other claims to be made later will proceed by the old method of push and pull, but the employers and the Government will have the assurance behind them that each claim will be fought on its own merits and the spectre of a general strike has for the time being been laid.—*All Rights Reserved.*

AMERICAN LETTER

NOT MUCH PUBLIC THINKING ON CHINA POLICY

ECONOMY STEADILY RECOVERING

From Our Special Correspondent

NEW YORK, *9th September*

THE Lebanon crisis and the exchange of notes over a summit meeting have been completely forgotten. The previous hysteria has been replaced by a new one. It revolves around the offshore islands between Formosa and the Chinese mainland which have been under heavy bombardment for some time.

Contrary to Congressional wishes expressed in 1955, the new official policy of the United States is that it will fight for retention of these islands by the Chinese Nationalists. Private opinions of Congressional leaders have supported that policy in the last few days as they did the landings of U.S. marines in Lebanon. Perhaps it was because nothing happened in the Middle East when Washington finally adopted a firm policy, that there is no hesitancy now to display strength in the Far East.

It would seem logical to assume that, at the recent meeting of high ranking Kremlin and Chinese Communist leaders, the decision was made to renew the attack on the offshore islands. They are extremely vulnerable. They have some tactical value, but hardly a strategic one.

There are a few reasons for this U.S. position of upholding Nationalist China. There is first the tradition of the governments-in-exile which existed through the years of the last war and which were finally reinstated. Then, there is the relatively long historic relationship with Chiang Kai Shek and his group.

Finally, there are the moral and legal obligations of promises made in writing and in print which make it impossible for the United States to throw Formosa to the mercy of its adversaries. The strategic importance of bases on these islands also cannot be overlooked.

However, in the long-range perspective, Formosa's position and existence seems artificial and futile. There would seem to be no hope of re-establishing a regime on the mainland which was ousted by its own people, not by the enemy abroad, as was the case in Europe. The logical questions which arise are how long can the defence and support of Formosa be kept up and what would happen if Generalissimo Chiang Kai Shek dies.

Public opinion in the U.S. does not enquire into these details. It merely responds with pride to the strength of hand shown by Washington and the maintenance of U.S. prestige, as a result. As a matter of fact, many commentators in recent days and weeks have pointed with pride to the resumption of U.S. initiative in East-West relations and the apparent success of current Washington policies.

Cold War in Auto Industry

The U.S. recession is receding. The one glaring exception is the automobile industry. In recent weeks and days, wildcat strikes have made their appearance in many factories, involving tens of thousands of people. Apparently, as directed by the management of the United Automobile Workers of America, a few thousand workers return to work every day. It is a cold war with the management of the industry. The purpose is to force a new contract.

For the past several months, the some 600,000 automobile workers have worked or been idle without a contract. Industry management took advantage of the recession and figured correctly that labour would not dare to call a general strike and, thus, jeopardise the pay envelopes of those who still remained at their benches. Walter Reuther, President of U.A.W., is biding his time.

Should an upturn in public demand occur, a strike is almost a certainty and with it, higher wages and fringe benefits which means higher costs. Optimistic statements have been made recently by leaders of the industry. Sales would increase, they said, in the latter part of this year and in 1959. There is no substantiation for this wishful thinking.

In fact, there is good reason to believe that the post-war decade boom in sales produced a saturation. There is also a saturation of vehicles on the existing highways. So far, the industry has been working on the theory of planned obsolescence. It introduces every year, new automatic gadgets which, it believes, the public will want and, therefore, turn in the older cars.

Foreign car sales are based on an opposite psychology. Give the public efficient transportation at low cost, and cars will be sold. The dilemma is great. Ford, General Motors and Chrysler make most of their money on Fords, Chevrolets and Plymouths. The gap between them and the low-priced foreign cars is great. All three are debating at this point whether or not they should enter the economy price field.

If they do, the costs of tooling would be such that they could not compete, price-wise, with foreign cars at U.S. wage and price levels. Meanwhile, they are importing the small cars which they make in their own factories overseas and are cutting down on their own domestic sales in their most profitable lines. That is the dilemma.

An automobile strike at this time, particularly if it is prolonged, could have a retarding effect on the overall economic recovery movement. It could have one beneficial effect, though. At present, inventories are two months ahead of sales. The normal is one month. Thus, a strike would and could wipe out all excess inventories and it could build up pent-up demand which would assure a fairly high level of production for some time.

So far as the overall economic picture is concerned, employment has been rising. The August figure was 65,179,000, against 64,981,000 in July and 67,221,000 in August 1957. At the same time, unemployment was 5,294,000, against 5,437,000 in July and 3,007,000 in August 1957.

Personal income is considerably ahead. It was reported in mid-August at the annual rate of $354,500 million, against $352,000 million in July and $351,000 million in August 1957.

Steel operations are recovering, too. They are, of course, closely tied to the automobile picture. But they have recovered from their low of 50 per cent. of capacity operations earlier this year to 63.5 per cent. of capacity early in September. This compares with 82.2 per cent. in September 1957.

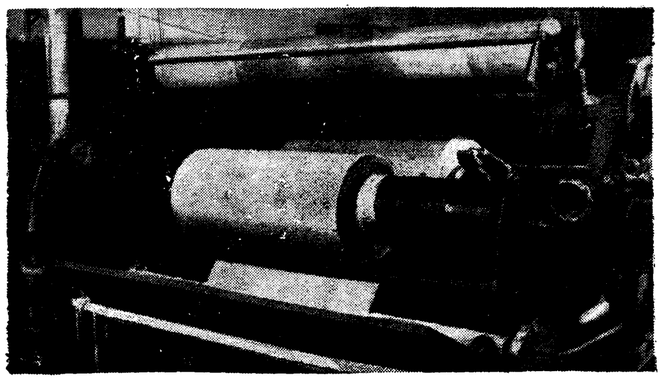
This gives a general idea of the trend in the U.S. at this time. Meanwhile, financial quarters here are following closely the meetings under the auspices of the World Bank among India's chief creditor nations, U.S., Britain, West Germany and Japan, which are to work out a rescue operation for New Delhi.—*All Rights Reserved.*

The U.S. Rubber Company has produced a new heavy nylon cord tubeless tyre having a new mesh pattern in tread and improved rubber compounds. The main features of the new tyre are: It is the safest so far produced. It will eliminate the need for carrying a spare and will give 60 per cent. more mileage than present tyres on new cars. Although it will cost 80 per cent. more, it will provide a far safer ride, great stability on curves and more resistance to punctures and blow-outs than any other passenger car tyre available.

A recent Press report from New York avers that the expected further recovery in economic activity in the U.S. is not likely to have any significant impact on the U.S. foreign trade until the latter part of next year. According to the report, both imports and exports in the rest of 1958 will probably show little change from the second quarter levels. In other words, this year's total exports will aggregate $15,500-16,500 million which represent a fall of 18 per cent. as compared with the previous year. Imports of raw materials are also not likely to go up until well towards the end of 1959, in view of the abundant stocks in the country.

IDET-10 The Powerful

New Detergent and Wetting Agent for All Textile Wet Processes



In every textile mill, IDET-10 is indispensable in all wet processes such as scouring, bleaching, dyeing and soaping.

IDET-10 is a synthetic organic surface-active agent, possessing powerful wetting action and detergency. It can be used in all processes which require wetting out, dispersing, emulsification, penetrating and cleaning. It is equally effective in hard water, alkaline or acid solutions.

IDET-10 is equally useful in other industries: for degreasing, tanning, wetting back and dyeing of leather; for cooking of rag-stock, de-inking of waste-paper, washing and conditioning of felts in the paper industry; also for metal processing operations like corrosion inhibition, electro-plating and emulsion-cutting.

DEVELOPMENT PROGRAMMES FOR BACKWARD REGIONS

VIEWS OF A DUTCH ECONOMIST

THE ever-growing literature on the problem of development of economically backward regions reflects the keen interest in the subject among professional economists, administrators and men devoted to economic research. The chief difficulty encountered in the transformation of an economically backward region into a highly productive area is in perfecting techniques which would compress into a small period of years the development which industrially advanced nations took several decades to cover. Perhaps, a factor which is often overlooked is that such development cannot be achieved merely by transferring from a developed into an underdeveloped country money or equipment or technical skills. After all, it is not an economy alone but a whole society, a living organism, that is to be developed. This suggests that there must be an entire change of political, economic and social attitudes in the country which seeks to achieve higher standards of productivity and living. To treat the science of economic development of a backward country as if it were nothing more than setting some automatic machine to work is to ignore the many vital factors which go to make up the whole complex of economic progress.

The chief merit of the study of the subject made by Mr. Jan Tinbergen of the Netherlands School of Economics, Rotterdam, in his publication *The Design of Development** lies in the fact that it presents a comprehensive view of the dynamics of economic development. Mr. Tinbergen undertook the study of the subject at the instance of the World Bank which, as is well known, has taken considerable interest in it. In 1955, the Bank established the Economic Development Institute which has, as its object the improvement of the quality of economic management in governments of the less developed countries. It would appear that Mr. Tinbergen's book was used extensively at the Institute as a basis for discussion of development policies. Appropriately enough, it has now been published for the benefit of a larger audience which it deserves to reach.

Objectives

Any "development" policy, according to Mr. Tinbergen, should have four principal objectives: (1) to create the general conditions favourable to development; (2) to acquaint the Government itself, the business community and the public generally with the potentialities and advantages of development; (3) to make a number of 'basic' investments, and (4) to take measures designed to facilitate private activity and investment. The achievement of the first objective involves the establishment of minimum security and stability, and that of the second, namely, the creation of an awareness of potentialities of development in the public, is best done through statistics, research and information. "Basic" investments, which are to be carried out by the State, include housing, water-supply, power and transport. "Usually such investments," he says, "cannot all be made by private individuals, since their yields spread through the community and do not readily take the form of income to the investor." At the same time, he recognises that "there may be some difference of opinion about the exact dividing line between public and private activity in these fields." The fourth objective, namely, the imparting of a stimulus to private activity can be achieved through appropriate tax policies, import duties and subventions.

The programme of economic development will consist of two parts—the "macro-economic" and the "micro-economic" parts. A macro-economic programme merely projects the development of such totals as national income and outlay (private consumption and investment and public outlay), imports and exports of capital and total national capital, while a micro-economic programme fills in this framework with figures relating to individual industries or regions or even specific important plants. The macro-economic programme is usually based on a forecast of population over a period to be studied, say 10 years. Multiplying the "active" population figure by "productivity" will give the volume of gross product or "total resources available." A rough estimate of the volume of imports may then be made. With certain further assumptions as to possible capital imports, an estimate of the necessary exports follows. The value of national resources minus imports equals national income and, with the aid of tax rates and a savings rate, it may very roughly be estimated how tax revenue and savings are likely to develop.

Capital Coefficient

A vital problem is whether savings plus estimated capital imports will be sufficient to raise the national capital to the extent required to attain the assumed national income. A concept which is relevant to this question is that of the "capital co-efficient." Experience shows that the ratio of investments to increase in national income is a fairly constant figure. In other words, there is a fairly constant ratio between a country's wealth and its income per annum; for economies like those of the U.S. and the U.K., it is about 3 : 1. It would seem often safe to assume that for development programmes in underdeveloped countries a capital coefficient of 4 is needed. Sometimes, even lower values of capital coefficient, say 2, are indicated. Generally speaking, to raise income per head by 3 per cent. a year requires an investment programme of at least 2, and perhaps 4, times $(x + 3)$ per cent. of national income, where x is the rate of increase in population. If a country's population is growing at the rate of 1.5 per cent. a year, and if again the capital coefficient is taken to be 4, then a savings rate of 6 per cent. means stagnation whereas a rate of 8 per cent. means an increase in income *per capita* of 0.5 per cent. annually.

At the "micro" stage of planning, the question which will come up for answer is the types of goods to be produced. Here, data relating to the demand for, and supply of, various goods should be collected, and the trends in demand estimated on the basis of information from such sources as family budgets and retail trade and stocks. The most difficult part of the analysis is consideration of international competition. Thus far, it has been assumed that prices do not change. This raises the "cost problem." At what prices can increased quantities be supplied? Since prices will affect demand, one has to know demand elasticities in order to tell by how much the initial estimates have to be corrected. But the present knowledge of possible future production costs and demand elasticity is very incomplete. This limited knowledge may, therefore, have to be supplemented by reasonable guesses. The productive pattern must then be estimated; it should include all practicable possibilities for producing relatively cheaply and, in fields for which no cost figures are available, it should assure expanded production in proportion to demand increases.

Four Factors

Plans for economic development must, of course, be suited to the circumstances in each country. In this connection, the author lists four important considerations to be borne in mind. In the first place, the stage of development a country has reached must be taken into account. In the earlier stages, there is need for some general facilities for which public investment is required. Secondly, much depends upon the degree of activity and initiative in the private sector. Where the private sector is rather passive, either more initiative must originate in the public sector of other types of initiative must be provided. The other two factors are the particular bottlenecks with which the country is faced (such as capital, foreign exchange and skilled labour) and the general attitude of people, like the willingness of the people to co-operate with the Government. Again, the choice of each project has also to be governed by certain conditions. The availability of scarce resources, such as capital, land, and labour must be considered not only for the country as a whole but for each region and in each year. This is usually considered the "essence" of planning, the solution of a jig-saw puzzle of considerable complexity.

The author next makes out a case for taking into account the concept of "accounting prices." The central point to be made is that a number of market prices, particularly those of the "factors of production" (capital, labour, foreign exchange) often diverge from the "intrinsic value" or "accounting prices" that would prevail if (i) the investment pattern under discussion were actually carried out, and (ii) equilibrium existed in the markets. In other words, there are two reasons why market prices do not truly reflect "intrinsic values." First, the realisation of the investment pattern will itself influence these values, but, only after some time since investment processes are essentially time-consuming. Secondly, there do exist, in underdeveloped countries especially, a number of "fundamental disequilibria." The most important is the widespread unemployment—open and disguised. The basic reason in all probability is the lack of complementary means of production i.e., land and capital. Very probably, the equilibrium level of wage rates will be considerably less than market wages. On the other hand, equilibrium interest rates probably are much higher than the market rates. Some indication of equilibrium interest rates may be derived from (a) the rates at which it would be possible to attract additional capital and (b) the profitability of marginal projects, corrected for risks involved (such as inflation risks). Even if it is difficult to obtain figures of any accuracy, it would be wise to try figures of the order of 10 per cent. and over, if only to observe the consequences.

A whole section is devoted by the author to methods of stimulating private investment. In this connection, he covers the familiar ground of protection, subvention and tax relief provisions. It is only when these measures do not serve to induce private investors to come forward a different course should be envisaged. Mr. Tinbergen is averse to discussing the issue of private *vs.* public sector in purely ideological terms. He points out that, even in the Soviet Union, there is a private sector of peasants, small traders and handicraftsmen, whereas, in the U.S. where the belief in private initiative is particularly strong, the public sector is nonetheless considerable. Modern expansion as well as economic analysis, he says, has shown that certain activities can best be undertaken by public authorities, whereas others can best be left to the private sector. Apart from assuring internal security and performing basic juridical functions, the Government should undertake certain economic tasks such as the creation and maintenance of healthy monetary conditions, regulation of activity designed to avoid mass unemployment, correction of extreme inequalities in income distribution and undertaking of activity which will supplement private activity which for one reason or another, falls short of meeting legitimate requirements. Finally, the author rightly emphasises that the choice need not be a black-or-white one between wholly public or wholly private ownership, for mixed ownership may sometimes afford means of combining private efficiency with desirable direct public control.

Men and Oil . . . 1

THE GEOLOGIST

Geologists are people whose main business in life is to know rocks, to work and live among them. In the oil industry they look for certain types of rocks that hold oil.

In 1865, a Government geologist was sent to the coal areas of Assam. He reported the presence of several oil shows south of the Dihing river and advised testing, by experimental boring, those near Makum. A well was drilled there in 1867, followed by more wells at Makum and Jaipur. Several of these wells yielded a little oil but went dry in a short time. But in 1889 the first well at Digboi was drilled and the Assam Oil industry was born.

Geologists still play an important role in the Assam Oil industry. They decide the new locations, examine the rock cuttings during drilling and guide the industry in its search for more oil.

At present, the Geological Department of the Assam Oil Company is manned entirely by a number of well qualified and highly experienced Indian geologists.

PRODUCTION AND OFFTAKE OF CLOTH

MILLOWNERS SUGGEST A SCHEME FOR STIMULATING EXPORTS

THE production performance of cotton mills would appear to have improved slightly of late. The average daily output of cloth and yarn during the 25 working days in August 1958 was 16.24 million yards and 5.56 million lbs., as against 15.52 million yards and 5.37 million lbs., respectively, during the 27 working days in July. Taking the whole month of August as compared with July, however, the production of cloth and yarn was lower, the former by 13 million yards at 406 million yards and the latter by 6 millon lbs. at 139 million lbs. With the 406 million yards woven in the month under review, the aggregate output of cloth for the first eight months of 1958 comes to 3,276 million yards which represents a fall of 304 million yards as compared with the production of 3,580 million yards in the corresponding period of 1957. The total production of yarn during the January-August 1958 period was 1,103 million lbs., that for the same period a year before being 1,179 million lbs.

The slight improvement in the production performance of the cotton industry during August can be attributed to the decline in the stocks of cloth and yarn lying unsold with mills. The total of these stocks as on 2nd August was lower at 481.50 million yards (321,000 bales) and 32.40 million lbs. (81,000 bales), as against 512.40 million yards (341,600 bales) and 42.28 million lbs. (105,700 bales), respectively, at the end of June 1958. The reduction in unsold stocks in the month of July thus comes to 30.90 million yards. This is, indeed, quite significant, considering that the production of cloth in that month was substantially higher at 419 million yards, as against 388 million yards in June. The improvement in stock position followed better offtake of cloth for both domestic consumption and export. The total shipment of mill cloth from Bombay during July 1958 is estimated at over 43 million yards, as against 26.76 million yards in the previous month. The rise in exports was, however, checked again in August when exports from Bombay were lower at 38.75 million yards.

Reflecting the rising tendency in offtake, the wholesale prices of cotton textiles tended to look up during July. The index of these prices (base: 1952-53=100), which stood at 112.9 for the week ended 5th July, advanced to 114.1 for the week ended 2nd August. Thereafter, however, the prices have come down, the index for the week ended 23rd August being 111.5.

Trend of Production

The trend of mill yarn and cloth production—month by month—during the first eight months of 1958 and 1957 is indicated below:

	Cloth (million yards)		Yarn (million lbs.)	
	1958	1957	1958	1957
January	437	484	149	156
February	391	435	133	143
March	408	453	138	150
April	408	464	134	154
May	421	453	139	150
June	388	420	126	137
July	419	460	145	150
August	406	411	139	139
Total ..	3,276	3,580	1,103	1,179

The pace of cloth exports during the eight months ended August 1958 was very much slower than that in the corresponding period of 1957. The aggregate shipments (from Bombay) are said to be no more than 375 million yards, which compares unfavourably with nearly 546 million yards. The decline of 171 million yards was accounted for by all the varieties, with the exception of superfine counts the exports of which were slightly higher at 13.78 million yards, as against 12.70 million yards. The shipments of medium cloth during January-August 1958 aggregated 235.23 million yards, a drop of 147.11 million yards as compared with the exports of 382.34 million yards in the same period last year. Similarly, shipments of coarse and fine counts were lower at 121.80 million yards and 3.89 million yards, as against 141.58 million yards and 9.28 million yards, respectively.

The following table shows the exports of cloth from Bombay in the first eight months of 1958 as compared with those a year before:

(In million yards)

Year	Coarse	Medium	Fine	Superfine	Total
1957					
January	23·07	63·07	2·90	1·62	90·66
February	17·30	50·93	1·58	1·66	71·47
March	20·97	59·80	1·32	1·90	83·99
April	18·67	52·62	1·87	1·74	74·90
May	17·83	47·47	0·30	1·80	67·34
June	13·98	35·51	0·36	1·26	51·11
July	15·02	38·93	0·58	1·66	56·19
August	14·74	34·01	0·37	1·06	50·18
Total Jan.-Aug. ..	141·58	382·34	9·28	12·70	545·84
1958					
January	19·66	42·06	0·44	1·79	63·95
February	15·04	30·27	0·65	1·76	47·72
March	16·91	34·58	0·45	2·01	53·95
April	15·87	31·44	0·61	2·43	50·35
May	16·47	31·28	0·44	1·93	50·12
June	9·86	15·34	0·26	1·30	26·76
July	14·86	26·33	0·50	1·51	43·10
August	13·13	24·03	0·54	1·05	38·75
Total Jan.-Aug. ..	121·80	235·23	3·89	13·78	374·70

At 38.75 million yards, shipments during August were 4.35 million yards less than those in July and 11.43 million yards lower than those in the corresponding period last year. Barring June when shipments were seriously affected by the dock strike, the August figure was the lowest in the current year.

More Energetic Steps Wanted

It is thus evident that the trading conditions in the export sector continue to be unsatisfactory. Cotton piecegoods are no doubt placed as an item of free exports and cumbersome procedures of export licences done away with. But these are only small measures. What is urgently wanted is adoption of more energetic steps to stimulate exports. This aspect is reported to have been stressed by the Indian Cotton Mills' Federation in the course of a detailed export promotion scheme submitted to the Union Ministry of Commerce and Industry. The scheme, it is said, seeks to encourage exports by allowing the exporting mills to use a certain percentage of their foreign exchange earnings for importing raw cotton, colours, chemicals, spare parts and machinery for rehabilitation and modernisation. The salient features of the scheme are as follows:

Exporting mills will be divided into two categories—those whose annual average export performance in respect of cloth has exceeded an average of Rs. 2,000 per loom during the three years 1954-56 and Rs. 4 or more per spindle installed in respect of yarn. Others will be known as newcomers. Exports will comprise both direct exports by mills and those done through other agencies. Value taken will be the f.o.b. value. The established exporters will not be eligible for import licences under the scheme until they export in a calendar year 50 per cent. in value of their average annual exports in the basic period. If exports are in excess of 50 per cent., they will get import licences equal in value of this excess of cloth or yarn exported. New comers will not be eligible for import licences until their cloth exports exceed Rs. 1,000 per loom and yarn exports exceed Rs. 2 per spindle installed. They will be entitled to import licences equal to the value of exports in excess of this prescribed limit.

Licences up to 10 per cent. of the face value of the import licences given should be allowed to be used for import of colours, chemicals, dyes, stores and spare parts within the framework of the Government import policy. Import licences against yarn can also be used for the import of fibres. Subject to this relaxation, the whole of the import licences must be used for the import of cotton. Mills can consume from their licences under the scheme imported cotton equivalent to 15 per cent. of the value of licences over and above the share of imported cotton to which they may be eligible under the scheme of imported cotton distribution through the Textile Commissioner, the remaining part of the licences being offered to the Textile Commissioner for resale at a premium not exceeding 10 per cent. The scheme visualises the import licences for cotton on the basis that export of cloth and yarn will cover 50 per cent. of the total needs of the industry. The balance of cotton (roughly 300,000 bales) must be imported in the usual manner. Ten per cent. thereof may be distributed to new comers and the balance should be distributed by the Textile Commissioner only to traditional users of imported cotton in proportion to their consumption in the basic period.

The Federation urges that, as regards import licences for chemicals, colours, dyes and spare parts, no restrictions should be imposed on their consumption and the mills may be allowed to sell the whole or any part thereof at any price. They must also be allowed to sell import licences directly without any obligation to import the goods covered under the licences.

With regard to machinery, the Federation makes the following suggestions:

The mills must be allowed to import it to the extent of five per cent. of the total value of exports of cloth and yarn or (*a*) in the case of established exporters, half the value of exports in the calendar year minus the value of average annual exports in the basic period, (*b*) in case of new comers, half the value of cloth export in a calendar year minus Rs. 2,000 per loom installed in respect of cloth and half the mills' export of yarn in the calendar year minus Rs. 4 per spindle installed in respect of yarn, whichever is higher. The imported machinery will be for the use of the mill concerned and, if it wants to resell this within five years of the installation, it will have to obtain sanction from the Textile Commissioner. The scheme for the import of machinery will be current for five years and a mill will be eligible to import machinery against its likely exports for a period of five years on giving a bond in the prescribed form to the Textile Commissioner as regards its exports in the five-year period.

Competition in the world textile markets is growing day by day, thanks to attractive terms of credit for long periods, low prices, etc., offered by countries such as China and Russia. There is also the competition from the highly modernised Japanese textile industry. It may, however, be wondered whether a currency "retention" scheme, of the kind suggested by the Federation, is the best device for meeting international competition. Be that as it may, it must be admitted that, if India is to weather world competition successfully, it is imperative that the production efficiency of cotton mills is enhanced through modernisation of equipment and rationalisation of production methods. And these are not possible unless the Government grants adequate tax relief and follows a more helpful policy free from ideological considerations.

WORLD WOOL CONSUMPTION

Although world consumption of wool in the second quarter of 1958 is estimated to have fallen by about 5 per cent. as compared with the first quarter, the daily rate appears to have declined by less than this, as there were fewer working days in the second quarter. The April-June total for the ten largest manufacturing countries was 404 million lbs. (clean), according to the Commonwealth Economic Committee estimates. The comparative figure for the first three months of the year was 426 million lbs. Four countries showed increases in actual consumption after the sharp falls of the previous quarter. In Japan, consumption rose by 7 per cent., and, in Italy and the Netherlands, it increased by one and 6 per cent., respectively. Australian usage is estimated to have shown an improvement of 3 per cent. There were, however, declines, in all other listed countries. In the United States, usage fell by 2 per cent.—a rise of 12 per cent. in apparel wool usage being more than offset by a reduction of 26 per cent. in carpet wool. In the U.K., there was a decline of 7 per cent. though the quarter's consumption of 109 million lbs. is still nearly 30 per cent. larger than that of any other country for which figures are available. West Germany and Belgium showed declines of 5 per cent. in each case and there was a sharp fall of 18 per cent. in France.

EXPORTS OF SILK FABRICS

A revised scheme to supply imported raw silk to exporters of silk fabrics at reasonable prices has now been brought into force. The scheme, which is designed to promote export of silk fabrics, is being implemented by the Central Silk Board. Under the scheme, raw silk will be made available to exporters to the extent of two-thirds of the f.o.b. value of the pure unmixed fabrics exported by them. For this purpose, the Board will estimate for each quarter the quantity of raw silk required for allotment to exporters. It will establish agencies in the principal centres of silk production to inspect the fabrics exported and estimate the silk contents of the fabrics. On the basis of the estimated silk content of the fabrics exported in the previous quarter, the quantities of raw silk, to which exporters will be entitled, will be stocked and made available to the exportes.

The scheme was administered so far by the Silk and Rayon Textiles Export Promotion Council. Applications pending before the Council for allotment of raw silk will now be dealt with by the Silk Board.

CONTROL ON STAPLE FIBRE

The Government of India has brought under control the acquisition, distribution and prices of staple fibre with effect from the 9th last. Every producer of staple fibre was asked to furnish, within a week to the Textile Commissioner, information about the quantity and description of staple fibre held in stock on the aforesaid date and quantity sold by him during the period 1st January 1958 till the 9th inst. Details of prices at which the sales were made and the names of purchasers were also required to be furnished.

No person can acquire staple fibre from a producer except under a permit issued by the Textile Commissioner. When permits have been issued, it will be obligatory upon every producer to sell staple fibre produced or held in stock by him to the permit holders. No sales can be made to other persons. The price at which a producer may sell staple fibre has been laid down in a schedule attached to the Order. Details of the procedure to be followed in purchase and sale of staple fibre have been set out in the Order.

COTTON AND RAYON GOODS OUTPUT DOWN

HONG KONG'S LATEST OPPOSITION

From A Special Correspondent

MANCHESTER, *9th September*

SCARCELY had the names of the Lancashire mission to Hong Kong been announced before there came a quick response from the Colony, which appeared to be inspired, objecting strongly to any negotiations to establish a ceiling on imports other than grey cloth. As nothing had been said in this country about discussions on other textile products, it seemed to be a case of "shouting before they were hit."

MANCHESTER LETTER

At the same time, there is ample justification for nervousness among traders on this side at the implications underlying this campaign. Various organisations in Britain dealing in textile manufactures other than grey cloth are apprehensive about future developments. The millowners in Hong Kong would only be carrying on their natural bent as business men, if, when expansion in one direction is halted, they did not contemplate moving into other spheres.

The immediate impact of arrivals of foreign cloth into this country has fallen most heavily on the manufacturers of cotton piecegoods, but other producers have also felt the pinch. Hong Kong is installing finishing plant and can be expected to compete before long in processed goods. Spinners, too, are far from immune from this kind of rivalry; already, there are reports of supplies of yarn entering the United Kingdom at prices up to 10d. per lb. below Lancashire quotations.

Some local producers of yarn see danger in the fact that no direct representative of the spinning trade is included in the mission—nor will the finishers have a voice at the conference table. It is understandable that details of the tentative arrangement between the Lancashire mission and India and Pakistan have so far been kept secret. Any agreement will have to be a four-sided pact involving Hong Kong as well. Speculation, however, will persist on the scope of the talks until the veil is lifted. A settlement which relieves pressure on one section of Lancashire traders and merely shifts the burden to other branches will give little satisfaction.

Supply Statistics

Yet another reminder of the shrinking size of current production of cotton and rayon goods in Lancashire is contained in the half-year's totals affecting supplies and distribution. During the first six months of this year, the quantities involved in every aspect were substantially lower than in 1957, as the table shows:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1947	2,012	175	2,186	639	1,547
1949	2,592	400	2,992	1,078	1,914
1951	2,900	476	3,376	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,314	380	2,694	595	2,099
1957	2,287	490	2,777	567	2,210
First 6 months					
1953	1,280	70	1,350	420	930
1954	1,438	142	1,580	439	1,141
1955	1,350	200	1,550	351	1,199
1956	1,215	201	1,416	301	1,115
1957	1,212	250	1,462	295	1,167
1958	1,105	229	1,334	257	1,077

Not only has output of cotton and rayon cloth from the mills declined by more than 100,000,000 yards during the half-year but, contrary to recent experiences, the volume of arrivals of foreign cloth has also decreased. Available supplies are thus smaller than at any time since 1953, and the almost regular curtailment of exports merely accentuates the position.

Supplies remaining for home trade distribution follow the general downward trend, being roughly in line with the smaller output of local mills. At the same time, there is clear evidence of the cycle which has arisen in the past, coinciding with a sharp break in trading conditions. The large accumulation of goods which took place in 1957 has brought with it a marked recession in business and, as yet, there is no indication of a reduction in stocks, which might encourage hopes of a revival in activity.

Liverpool—Crisis Ahead?

In view of the difficult state of trade in raw cotton, it is hardly surprising that fresh rumours have been circulating as to the whole future of the Liverpool market. Since its re-establishment in 1954, very little has gone right for this once highly-regarded bulwark of free enterprise. Its traders have been hamstrung at every turn and the efforts made to widen the scope of the market, enterprising in themselves, have failed to achieve success.

In its first year's trading after reopening, the daily rate of business was about 30,000 bales bought and sold. That was small enough in comparison with the enormous turnover which took place in Liverpool a generation or more ago. Now the situation has been reached where less than 2,000 bales a day is the average offtake. In such circumstances, it is difficult to conceive any sudden or lasting solution.

Even leading officials of the Liverpool Cotton Association have been heard to say that the futures market is in grave jeopardy and that there is a growing danger that it will close for lack of business. Two main reasons are put forward for the apathy surrounding trading in the raw material—the American two-price system coupled with confusing farm legislation and Lancashire's steady decline as a producer of cotton textiles. Unless there is a radical change in cotton policy in the United States—an unlikely event—the Liverpool market will continue to dwindle towards extinction.

The Last Straw

The last straw in this connection has been the imposition of a subsidy by the American Government which can be altered at any time without prior notification. Any attempt to assess futures prices in such a situation is obviously meaningless. Nor is it any easier for Liverpool interests to build up a spot market for raw cotton, as conditions in the mill centres are so discouraging.

Only spasmodic buying of raw cotton is likely when future needs cannot be calculated with any accuracy. Lack of forward commitments affects not only merchants and producers of yarn and cloth but the raw cotton broker and distributor as well. Absence of confidence throughout the market from raw material to finished product is a matter which is already having serious consequences and threatens to undermine time-honoured trading methods.

Easier Price Trend

Amidst the many other uncertain factors which have lately conspired to restrict business in cotton goods, the tendency for prices to fall is a fundamental cause for buyers keeping their commitments at a minimum. Since the beginning of the year, there have been few occasions when operators might have been tempted to look ahead and place contracts with confidence in the belief that they would congratulate themselves on their foresight some months later. The tendency has been all the other way, so that hand-to-mouth trading has been invariable.

A glance at the following table, illustrating the trend of prices for futures and spot cotton in the Liverpool and New York markets, will be sufficient to show the regular downward drift in values, which has been accentuated in the past two or three months:

	Liverpool (in *d.* per lb.)			New York (in cents per lb.)		
	Futures		Spot	Futures		Spot
	American Oct./Nov.	Mixed Oct./Nov.	American One-inch	October 1958	October 1959	
1958						
Jan. 2 ..	26.81	27.66	27.05	34.60	..	36.45
„ 15 ..	26.82	27.72	27.00	34.68	..	36.35
Feb. 3 ..	26.48	27.48	26.90	34.50	..	36.15
„ 17 ..	25.95	26.95	26.00	35.50	..	35.85
Mar. 3 ..	26.10	26.95	26.55	35.84	..	36.05
„ 17 ..	25.98	26.83	26.15	36.16	..	35.95
Apr. 1 ..	25.80	26.58	26.00	36.74	..	36.10
„ 15 ..	25.65	26.32	26.00	36.68	..	36.00
May 1 ..	25.95	26.70	26.25	37.02	..	36.05
„ 15 ..	25.85	26.60	26.05	36.74	36.16	36.40
June 2 ..	26.00	26.65	26.05	36.57	34.27	36.30
„ 16 ..	25.62	26.28	26.20	36.36	34.32	36.25
July 1 ..	25.60	26.17	26.20	36.46	34.24	36.50
„ 15 ..	25.20	25.75	25.85	36.84	35.19	36.50
Aug. 1 ..	24.93	25.33	25.85	36.26	32.96	36.45
„ 15 ..	23.98	24.58	25.85	35.71	32.62	36.40
Sept. 1 ..	23.65	24.32	25.50	35.33	31.92	36.25

Even these figures do not tell the whole story; the decline in futures quotations in Liverpool in the distant July-August contract has been even more pronounced than in the near positions. Since the beginning of August, the price has fallen by 2*d.* per lb. The sharp drop in prices for the 1959 American crop in New York is symptomatic of the nervous feeling which prevails as to future farm legislation and the likelihood of increasing surpluses.—*All Rights Reserved.*

SUGAR EXPORT BILL IN RAJYA SABHA

MANY MEMBERS CRITICAL OF GOVERNMENT'S DECISION

THE debate on the Sugar Export Promotion Bill in the Rajya Sabha last week was as lively and interesting as that in the Lok Sabha a fortnight before. The debate was marked by criticisms of the official sugar policy by both the Opposition and Congress members. As was only to be expected, a few members raised strong objection to the Government resorting to ordinance for enforcing its scheme for export of sugar. One of them asked whether the Government was justified in promulgating the Ordinance just for earning foreign exchange of Rs. 3 crores on export of sugar. Another went a step further and charged the Union Food Minister with remissness in not anticipating the consequences of the Ordinance; he even urged the Minister to resign for his "remissness" and wanted an enquiry to be held in order to find out the extent of profits made by the sugar millowners.

While one may agree with the criticism of the habit of Government to rule by ordinances, the accusation that sugar millowners had reaped a harvest as a result of the Ordinance is baseless. It is no doubt true that the prices of sugar, especially in North India, went up not only before the Ordinance was issued but also immediately thereafter. But the extent of the rise was no more than 4 to 5 per cent. Such a rise cannot be called excessive, for two reasons. First, a large part of the increase in sugar prices was in sympathy with the general trend of commodity prices, especially of foodgrains and oilseeds. Secondly, when the free market forces of supply and demand operate, an advance of 4 to 5 per cent. in prices must be considered to be a natural phenomenon. It is very unfortunate that some politicians often indulge in making the business men engaged in the manufacture and distribution of sugar scapegoats.

Be that as it may, replying to the debate, Mr. A. M. Thomas, Union Deputy Minister for Food, who piloted the Bill, justified the issue of the Ordinance on the ground of urgent necessity for earning foreign exchange. He observed that, because of the Ordinance, it was possible to book export orders for more than 17,000 tons of sugar before 11th August. He revealed that the total quantity sold was 21,770 tons, of which 9,900 tons had already been shipped. Mr. Thomas also sought to answer the criticisms that the Government had not anticipated the rise in sugar prices after the Ordinance. His answer was as follows:

There were rumours with regard to the additional levy of excise duty and also the quota that might be allotted for export. The price of sugar had gone up by a little more than a rupee per maund, in anticipation of export and the duty, and so it was expected that there would be no further increase in prices. The Millowners' Association had also assured the Government that it would exercise its good offices to see that the prices did not shoot up. The Government, therefore, did not take any steps that time. But, subsequently, when a hoarding tendency was noticed, steps were taken immediately to check hoarding and the rise in prices.

Mr. Thomas claimed that there had been a fall of Rs. 2.50 to Rs. 3 per maund in retail price of sugar in parity with the fall in wholesale prices of sugar. According to him, the prices prevailing in the market were on a satisfactory level. The table below gives the latest available prices of sugar in Bombay and Hapur, as compared with those immediately after the promulgation of the Sugar Export Promotion Ordinance on 27th June:

	Latest available	*Before the issue of Ordinance*
Bombay (wholesale prices per bag)—	Rs.	Rs.
Small	105.50	106.50
Medium	106.50–108	108–110
Large	109–17	112–117
Hapur (ex-mill delivery rates per maund)—		
Amroha	35.69	36.06
Bijnore	35.56	36.50
Shamli	36.37	37.25

Although the prices of sugar have thus gone down to some extent, their level is still higher than that of world prices. The export price of Indian sugar after allowing for the full remission of excise duty and cane cess comes to about Rs. 750 per ton, as against the currently ruling world price of Rs. 425. It may be noted here that the rate at which the Indian Sugar Mills' Association is offering D29 grade sugar for October-November shipment is Rs. 453 per ton (f.o.b.). On this basis, the loss on every ton of sugar exported works out to nearly Rs. 300, in addition to the loss of Rs. 342.10 in revenues to Government (Rs. 291.20 and Rs. 50.90 by way of excise duty and cane cess, respectively). Drawing attention to this aspect, Mr. M. C. Shah, a former Minister in the Central Government, stated: "In trying to export 50,000 tons of sugar, consumers have been made to pay a heavy price to the tune of Rs. 1.40 crores and the State is losing Rs. 1.80 crores—a gap which may have to be filled by additional taxation." Another member remarked: "Exporting 50,000 tons of sugar by incurring a loss of Rs. 3.25 crores for earning Rs. 2.50 crores is an example of trying to earn foreign exchange with a vengeance."

If Press reports of Mr. Thomas's reply are any guidance, it would appear that he did not put forward any effective arguments in support of the Government's decision to export sugar. All that he said was only this: "The target of sugar production in the second Five-year Plan period is about 2.5 million tons and the idea is that, even at the risk of the local consumer having to pay a little more, it is better that we put the sugar industry on a sound basis and earn such foreign exchange as is possible. India has changed from a sugar importing country to an exporting country and we must try to maintain the export market."

The above argument is not only vague but also wholly unconvincing. It is, as this journal has ere now pointed out, simply ridiculous to aim at building up an export trade in sugar on the ground of earning as much foreign exchange as possible irrespective of the cost involved. The entire problem should be viewed from a different angle altogether. The current wide disparity in prices ruling for Indian and foreign sugars can be reduced not by sentimental pronouncements but by earnest and energetic efforts to lower the cost of production. Out of every rupee the sugar industry gets on sale of sugar, the statutory cane price alone accounts for 40 nP, excise and other production levies for 38 nP, and manufacturing expenses (including salary, wages and packing charges) for 16 nP. The balance of 6 nP represents the overhead charges and profit subject to taxation.

It is thus evident that, if the price of sugar is to be brought down to an economic level, it is of the utmost importance that the price of cane is reduced and the heavy burden of taxation decreased. Both the Congress and Opposition members of the Rajya Sabha did well to urge the Government to take steps for bringing down the cost of sugar production. Replying to the debate, Mr. Thomas declared that this question was being constantly kept in view; a number of development schemes in the States were in operation with subsidies from the Centre to improve the per-acre yield, as well as quality, of cane. But the realisation of this objective is being hampered by the present system of paying for cane on the basis of only weight and not on that of both weight and quality.

In the course of the debate, some members pointed out that the South was being neglected in regard to the setting up of new sugar factories and their expansion. The Minister for Food, however, denied this allegation. He said that, out of the capacity of 636,000 tons in new sugar mills, the South had been allotted 469,000 tons. Similarly, as regards expansion, nearly 600,000 tons had been allotted for the South, while the share of the North was 428,000 tons. These figures would show, he said, that the South was being given adequate attention.

COAL IN FRANCE

REMARKABLE RISE IN PRODUCTIVITY

By M. N. Barbier

Director, Mission De Liaison Technique Avec L'etranger

THE coal mining industry in France has existed for more than two centuries but experienced a remarkable development after the war and finds itself today in the first rank of the European nations from the point of view of productivity. The progress made in recent years is all the more noteworthy, because the French mines suffered extensive damages during the war and had been seriously affected prior to this by the economic crisis of the thirties which cut heavily into coal sales and forced the private operators to practically suspend investments.

Within a period of 10 years, the greater part of the French mining installations has been completely renewed. Thanks to an enormous effort of modernisation and equipment, production in 1958 reached 60 million tons after having dropped from 47.5 million tons in 1938 to 35 million tons in 1945. France is today the only country in Europe where production of coal has been increased by 25 per cent. in relation to prewar figures.

The increase in productivity is even more striking. Whereas 161,000 underground miners were required to extract 47.5 million tons in 1938 and 220,000 tons were needed after the war to produce the same amount, the record production of the year 1958 was obtained by only 144,000 miners. In other words, the output per miner and per working day, which had dropped from 2,650 lbs. before the war to 2,100 lbs. immediately afterwards, today is over 3,750 lbs. This is the most rapid progress recorded anywhere in Europe, and places French mining methods ahead of countries like Great Britain and Germany, though their industries are larger and their deposits easier to exploit.

The French coal deposits are actually of the type of those which present great difficulties to miners and engineers by their varied and irregular character. Seams are thin here and heavy there, and interspersed by numerous faults; dips vary greatly; the risk of spontaneous combustion and instantaneous fire damp explosions is very frequent; the quality of coal is often mediocre and results in fines and pulverised matter which requires processing for utilisation; the relatively low reserves compel the industry to operate deposits which would be simply abandoned in more fortunate countries.

These poor natural factors only stress the achievements obtained by the ceaseless efforts for rational operation and modernisation of equipment which are not yet terminated and were begun in 1946 under an extensive technical and administrative plan for the installation of new equipment which is still being continued. The plan concentrates on four main points:

1. Concentration of exploitation which has made it possible to profitably institute new methods of operation with modern and more powerful equipment.

2. More intensive exploration and more rational attack of the deposits, together with more suitable equipment, has led the French engineers to develop more productive methods of exploitation.

3. Mechanisation in the various stages of operations has resulted in greater productivity and has lightened the hard task of the miner. A single figure will be sufficient to illustrate this progress. The number of kilowatt hours, i.e., mechanical servants, available to the miner has been multiplied by seven during the last few years. This progress continues and, although the fully automatic mine is still a thing of the future, new processes that are being investigated and tested in the French mines (walking pit-props, directional cutting heads on digging equipment, etc.) may make it a reality in a few years.

4. More rational utilisation of the coal produced from the French deposits has also been the subject of large capital investments by the national coal mines and goes from mechanical preparation, processing and coking to the production of electric power and chemical plants directly connected with the mines.

At the same time, steps have been taken to make the particularly hard work of the miner easier and less exhausting. The rise in productivity has been accomplished only by the cooperation of all the workers. Along with the investments of the operators and the planning of the engineers and technicians, the tenacity and goodwill of the miners have definitely been one of the factors in the success of the French mines. The housing of the workers was one of the major problems of the mines which was solved by the construction of 107,000 housing units, occupied by 52.3 per cent. of the personnel on 1st January 1957 and pensioned workers were settled in more than 45,000 units on the same date.

In regard to surface installations, the French coal mines have also heavily invested in more efficient utilisation of all of the coal produced for the purpose of meeting the increased needs for energy from coal. Thermal power plants operating in conjunction with the mines and consuming almost exclusively the unsaleable waste from processing of commercial coal, have tripled their production in 10 years and today provide more than one-half of the thermal electric power produced in France, or 20 per cent. of the total.

The manufacture of coke has been considerably expanded to meet the rising needs of the French steel industry. A particular success of French technics is the discovery for a process of making coke from the Lorraine cannel coal, heretofore reputed unsuitable for this purpose. After having produced no coke at all, the Lorraine coal mines will soon furnish 2 million tons annually to the French industry.

The chemical plants, processing the by-products of coal distillation and producing fertilisers, synthetic textiles, colorants, plastics, etc., are "among the most advanced in the world and capable of meeting all European or international competition," according to a statement by an American trade journal.

A grand total of approximately 700,000 million francs has been invested by the French coal mines during these 10 years, one-half of which has gone into underground equipment and the other half into coal consuming surface installations.

Much experience has been acquired during the process of modernising the French mines, and the mining industry has been desirous of making the new knowledge available to other countries. For this reason, a company has been constituted under the auspices of the Charbonnages de France, the Mines de Fer and the Bureau de la France d'Outremer. This company acts as consulting engineer for mining prospection, exploration of deposits, selection of methods for exploitation and operation, location of markets, problems of utilisation and organisation, investigation of profitability and planning of industrial complexes, whether this concerns underground or open-pit operation, modernisation of existing installations or the processing of coal and ore.

The Company is particularly well adapted to carry out such work, because it is able to turn to the most highly qualified experts in the trade for any particular question. The Company obtained last year from the International Bank for Development and Reconstruction an important contract for preliminary investigation in view of modernising and increasing production in the Japanese coal mines. In competition with British, American, German, and other specialists, it is probable that the experience of the Company with the difficulties of the French deposits and circumstances may have seemed particularly valuable for the solution of the Japanese problems. Presently, other investigating missions of the same type are under way in Peru, Brazil, Italy, Turkey and elsewhere.

VOLUNTARY AMALGAMATION OF COLLIERIES

The Government of India has set up a special committee for promoting voluntary amalgamation of small and irregularly shaped collieries, particularly in the States of West Bengal and Bihar. The Committee will be presided over by the Coal Controller and consists of the Chief Inspector of Mines, the Chief Mining Engineer, Coal Board, a representative each of the Governments of West Bengal and Bihar, and a mining engineer from the private sector. The appointment of the Committee will be for one year; the period may be extended later, if necessary.

The Committee has been asked to invite and initiate proposals for the voluntary amalgamation of collieries having between them a total minimum production of 6,000 tons per month, provided that, in the course of a year, the monthly output of each amalgamated unit can be stepped up to 10,000 tons. It has also been asked to invite proposals from collieries for voluntary adjustment of boundaries in the interest of avoidance of loss of coal locked up in barriers, as well as of difficulties in extraction. The Committee will examine all these proposals, modify them where necessary and communicate them to the collieries for further processing. It will lay down, with the consent of the parties concerned, the terms and conditions of amalgamation. Where necessary, technical advice will be rendered to the amalgamated units in such matters as adjustment of boundaries, enforcement of safety measures and procedural formalities.

COTTON PRODUCTION AND EXPORTS

I.C.C.C.'S RECOMMENDATIONS

THE Indian Central Cotton Committee, (I.C.C.C.), the seventy-eighth meeting of which was held in Bombay last week under the presidentship of Dr. M. S. Randhawa, proposed a tentative target of 7.2 million, 8.1 million and 9 million bales for cotton to be achieved in the third, fourth and fifth Five-year Plans, respectively. These targets have been suggested after taking into consideration the increase in population, improvement in the standard of living and the consequent increase in the *per capita* consumption of cloth. Total population of the country is expected to be of the order of 410 million by 1961, that is by the end of the second Plan, and 436 million at the end of the third Plan. The *per capita* consumption of cloth has been estimated at 14 yards in the first Five-year Plan, 18½ yards in the second and 22 yards in the third Plan. Consumption of cloth has been estimated to reach 9,600 million yards by the end of the third Plan and 11,500 million yards by the end of the fourth Plan.

Dr. Randhawa underlined the limitations to extensive cultivation of cotton and urged the intensive growing of the crop with the help of fertilizers. He pointed out that, in view of the urgent need for the production of food crops, there was not much scope for increasing the area under cotton which at present was 20 million acres. At the most, he said, one million acres might be added by the end of the second Plan period, especially in the areas covered by Bhakra-Nangal, Chambal, Hirakud and Nagarjunasagar projects. Reliance had, therefore, to be placed on intensive cultivation measures, including provision of extra irrigation facilities, increased application of fertilizers, plant protection measures and improved seed. It was anticipated that, during the third Plan period, about 1.4 million acres of additional land would be brought under irrigation which would result in an additional production of about 700,000 bales. If a further two lakh tons of fertilizers were made available, according to Dr. Randhawa, it would lead to a further production of 200,000 bales.

Reviewing the progress of cotton production in the past (1957-58) season, the President said that the dependence of the cotton crop on the vagaries of the monsoon had, in years of erratic rainfall and unfavourable seasonal conditions, resulted in a shortfall in production. For instance, the estimated production in the last season was 5.2 million bales, as against the Plan target of 5.4 million bales. This was due to unfavourable weather conditions, particularly in the Punjab and Gujerat and the incidence of bollworm and jassid attacks.

As regards the prospects for the new season, which commenced on 1st September, Dr. Randhawa felt that, owing to favourable weather so far, the Plan target of 5.7 million bales was likely to be achieved. But it was too early to make an estimate that would at least approximate the final outturn, as much depended on weather conditions in October.

It may be noted here that on the question of cotton export policy, the Central Committee has joined issue with the trade in urging the Government to announce the policy early, some time in the beginning of November every year. An early announcement, after taking into account the stocks available, the Committee emphasised, would be of benefit to the cotton growers. It would give the foreign buyers, as well as the Indian exporters, an idea of the minimum quantity that would be available for export during the year. If the crop turned out to be in excess of the textile industry's requirement, additional quotas could be announced subsequently. Such a policy, according to the Committee, would assure the foreign buyers of continued supplies. The Committee felt that export duty should not be allowed to come in the way of exports and that, in view of the need for earning foreign exchange, it should be either reduced or abolished altogether. It suggested that the Government might permit the export of 25,000 bales of cotton lying unsold in the Punjab after examining its staple and other qualities.

To revert to Dr. Randhawa's address. Reviewing the research schemes, he said that the scheme for development of Sea Island cotton was making good progress. In 1957-58, "Andrews" variety of Sea Island cotton was raised over an area of 135 acres. In 1958-59, 2,500 acres have been sown with this cotton in Kerala and Mysore. The crop was making satisfactory progress. It was proposed to concentrate efforts in this direction in the States of Kerala and Mysore. Since it was a delicate crop, which required a good deal of attention, it would be promoted in the best areas only. Steps would also be taken to provide fertilizers as loan in kind and to provide plant protection measures. In view of the special requirements of this crop, it was very necessary that it should be grown in compact areas.

At its last meeting, the Committee had recommended that production of harsh, short-staple Assam Comilla cotton, which is a valuable foreign exchange earner, should be increased in Assam, Tripura, Rajasthan, Andhra Pradesh and the submontane areas of the Punjab. In pursuance of this recommendation, a comprehensive scheme on the same lines as that for Sea Island cotton, would be formulated to promote the production of this cotton. The President stated that the concept of organisation of regional research stations on cotton, oilseeds and millets on a cross-commodity basis had now been translated into reality. The Committee, he disclosed, propose to intensify regional research on cotton, oilseeds and millets. Out of the six centres which will deal with cotton three had already started functioning, and the remaining ones would also be functioning very soon. The staff had been mostly recruited and steps were being taken for devising suitable plans for the building of laboratories, etc., and procuring the necessary equipment and apparatus. Regional co-ordination committees, which would consider the technical programmes of work, have been organised.

Recognising the importance of cotton crop and its problems, the Central Committee had been urging, from time to time, that State Cotton Committees should be organised in the States where cotton was an important crop, with a view to reviewing the progress of work, particularly in relation to cotton production. While such Committees were organised in the States of Madras, Mysore, Uttar Pradesh and Rajasthan, it was regrettable that in the States of Bombay, Madhya Pradesh, Punjab and Andhra Pradesh, they were still to be organised. With the object of eliminating the prevalent malpractices in cotton ginning and pressing factories, the Committee had reviewed at its meeting held in March 1957, the laws relating to cotton ginning which were enforced in the various States. Its recommendations were accepted by the Governments of Bombay and the Punjab. The Governments of Andhra Pradesh, Uttar Pradesh and Mysore were still considering the matter. Replies from the Governments of Madhya Pradesh, Rajasthan, Madras and Assam were still awaited. The President expressed the hope that these State Governments would accept, without any further delay, the recommendations of the Committee which were in the interest of the industry as well as the trade.

TOP DRESSING OF COTTON

In summer, cotton plantations of the U.S.S.R. usually receive several sub-feedings. The fertiliser is usually applied in the soil, close to the roots. Reaching the plant through its root system, it accelerates its growth. But with this method some of the fertiliser is inevitably lost. It is washed away by water and sticks between the particles of the soil. A group of scientists of the Uzbek Agricultural Academy have worked out a new and better method of application of mineral fertiliser. Instead of being poured on the soil, the solution containing mineral fertiliser is sprayed from the air by a special device installed in a plane. Thus, the fertiliser is put directly on the leaves of plants. Tracer atoms have helped to establish that the fertiliser spread by this method quickly penetrates into the vascular system of the plant and produces good effect. The method of top-dressing of cotton is widely applied in the republic now. This year it is being used on more than half of all cotton plantations of Uzbekistan. More than a hundred planes of agricultural aviation are stated to be already engaged in this work.

THE CHALLENGE OF CHINA

IMPRESSIONS OF A CANADIAN BUSINESS MAN

By James Muir

CHAIRMAN AND PRESIDENT, THE ROYAL BANK OF CANADA

[The author visited China this summer on a fact-finding mission. He has written the following report of his experiences there, and of what he saw through his business man's eyes.—ED.]

THIS is an attempt to report information on life and conditions in China as I saw them on a short visit. It is not meant to prove or disprove anything. If anyone is interested enough to read it, I ask that he read it all through before drawing any conclusions—and particularly I ask that he refrain from lifting any passage from context which, with an elaboration built thereon, might create quite a wrong impression of the whole.

The first question you would probably ask is "Why did you go to China, what was the purpose of your visit?" Quest of knowledge—the desire to see how other people live and have their being—the desire to see how business, and more particularly how banking operations, are conducted—were the main urges that prompted me to go, plus, of course, a fairly healthy measure of natural curiosity.

I went of my own accord, at my own expense, and received invaluable physical assistance from Bank of China officials in arranging such things as accommodations and travel facilities. From first to last their courtesy, assistance, kindness and general good humour under all circumstances were of infinite help. Their explanations of their system were naturally of the highest interest and they showed not the slightest reluctance to answer questions, and plied me with queries in return. I have read that in visits to China one is put in the hands of "Intourist," a Government Agency, which in effect leads one around by the nose. I was not under such auspices. Actually, I saw but one "Intourist" official and that was in Canton. In many respects I would compare "Intourist," as I saw glimpses of it functioning, as a sort of Chinese Thomas Cook and Son or American Express operating under Government auspices.

Cost of Living Low

The cost of living is unbelievably low, probably about one-fourth to one-third of ours in many directions. In the main cities, we had good and immaculately kept hotel accommodation; laundry was done and returned the same day and looked less war worn than is the case on our continent; clothes pressing was often and prompt—dry cleaning in a matter of hours in case of need.

I was told rats have been exterminated so bubonic plague has gone. I saw one fly and one mosquito and no sparrows in the cities. National campaigns were organised to get rid of these pests and I believe were used as a test to see how successful or otherwise the authorities could be in organising the populace to singleness of effort. From their point of view, the results must have been astonishingly gratifying.

Bewildering Growth

The growth in industry, the change in living standards, the modernisation of everything and anything, the feats of human effort and the colossal impact of human labour are not within our power to describe and still give a worthwhile picture of the scene. All I can say is that it must be seen to be believed. It's truly stupendous. The effect is almost to bewilder one when he sees what has been accomplished in less than 10 years, but, if he is a thinking person, to appal him and dumbfound him when he realises what had not been done in the previous 4,000 years or even 100 years. There are 600,000,000 people in the land—the net population is increasing 20,000,000 per annum or 38 per minute. Take deaths into consideration, and births must be at something resembling machine-gun speed—and we were freely told there is already a labour shortage. Twenty-five per cent. of the population of the world lives in China and in a score of years or less it will be nearer half the world's population. How one can fail to "recognise" this colossal scene is over my head.

I shall give but one example, an exceptional one perhaps, of the inexorable effect of human effort in terms of human labour. I saw the new irrigation and flood control dam in the Ming Tombs Valley. It was practically finished and had taken only 140 days to complete. It is over 2,000 feet long, about 95 feet high, 555 feet wide at the base and about 25 feet wide at the top. It has a concrete core, the upstream side is clay and the other is earth, gravel, and stone, 100,000 people were working in three shifts around the clock. All work was described as "voluntary"—certainly it was unpaid. About half of the work force was provided by the army, the rest by citizens from every walk of life who go and live and work at the site for days or weeks as circumstances, age, health, and physique permit. With little else than their bare hands, picks, and shovels, this colossal task has been accomplished. I stood on high ground and looked down upon this vast human ant hill. I took photographs of the scene, a shift of 30,000 toiling people, and hope when developed these pictures will have caught something of the atmosphere of the drama.

The almost fanatical drive towards hygiene and physical culture by the people is a study in itself. At 10 a.m. and 4 p.m. all work must stop and physical exercise be indulged in—young and old, over and under weight alike. I saw few in the former category. Many people wear gauze masks as a protection against dirt and fumes. *En route* from Shanghai to Canton by air we stopped at an airstop for lunch. We were met at the plane by a girl wearing a white gauze mask, in white skirt and long white smock, spotless. She conducted us to the dining room and it was she who served our lunch. Part of the table dishes was a porcelain spoon, resting upon a piece of paper. As I was about to pick up the spoon, she nudged my elbow, pointed to the paper and made motions to show I should first thoroughly rub the spoon with it.

In many ways, Peking is a beautiful city and in and around it are vast historical buildings and relics. They have been maintained, and repaired with the preponderance of Chinese red paint and offer a startling and pleasing appearance. To mention just a few, the Imperial Palace within the Forbidden City, the Summer Palace, the Ming Tombs in the Ming Valley and, of course, the Great Wall itself, all go to fulfil a sightseer's and photographer's dream.

Absolute Honesty

I have been asked about the standard of living in China. It is difficult to give an understandable answer because for vast millions there is not such a thing as we know it. Man, woman and child have not risen much beyond the beast-of-burden stage. The sights one sees of the stresses, the strains, the unbelievable extent to which a human frame can be abused, leave one almost physically ill. And yet the lot of these people is better than it was, and improving. For millions more one sees contentment, happiness and one would believe more freedom from oppression and civil strife than their previous generations have known. Corruption and graft we were told—and confirmed by people living outside the area—have disappeared. Petty theft is rare; one does not bother to lock his home. We did not bother to lock our hotel room doors. As an example of their apparently fanatical honesty, when leaving the hotel in Canton I failed to pick up some $2 or less in change. They followed me to the station and found me after I was seated on the train in order that they might deliver this change to me.

It cannot be that the present way of life is pleasing to everyone; there are many refugees constantly arriving in Hong Kong, for example, but they can be but a flea-bite as compared with the country's population of 600,000,000 people, and we should think they are mostly small farmers who are still individualistic enough to resist being brought into the co-operative farm movement. Those in authority freely state that the aim is to add slowly and patiently, yet without interruption, to the standard of living, that to try too much too quickly would be fatal—lead to inflation and endanger their whole programme.

Unless the whole scene is a dream or one's senses of observation and appraisement are less than useless, then we think the vast majority of the people of China have a Government they want, a Government which is improving their lot, a Government in which they have confidence, a Government which stands no chance whatever of being supplanted. All this quite obviously indicates a political problem that will sear the very souls of some Western powers, and which at some stage is going to pose an overwhelming face saving problem in more directions than one. It is difficult to believe that anything resembling war is desired in China if for no reason other than that such a development would have a disastrous effect upon the plans for improvement they are trying to bring about.

While in personal contacts we found individuals courteous, friendly, good-natured and prepared to go through a generous dose of good-natured ribbing, they are as a people exceedingly sensitive and touchy at the slightest implication of lack of confidence in their business undertakings or at sharp or belittling criticism of them as a nation or at the thought that there is or ever can be a divided China. We would caution those business men and men in public life who would have dealings with China to bear the foregoing ever in mind. Only undesirable results can ensue and nothing whatever can we hope to gain by ignoring these sensitive areas in the Chinese character.

The so-called strategic list of prohibited exports adopted by some nations has become in Chinese eyes almost ridiculous. So far as we can see (always with the exception of really strategic materials) about all that is happening so far as China is concerned is that annoyance is created, the goods are forthcoming from some other source, progress is not being seriously retarded and, ironically, a great long-run benefit may be conferred upon the Chinese by forcing them to make things for themselves.

Thirst for Knowledge

One highly placed person, not resident in China but thoroughly familiar with Chinese people, made the statement to me that the capacity of the Chinese to learn and perform is governed entirely by the teaching capacity of others who would undertake to instruct them. Their thirst for knowledge is now great and a visit to the University of Peking shows a lot of eager and enthusiastic students. A similar attitude, we were told, prevails in other seats of learning. As far as education of the masses is concerned, they have a long, long way to go. Steps are now afoot to change the Chinese characters to the Roman alphabet which is in general use in the Western world, and it is believed this will be a tremendous help in the educational process. There seem to be many professors of political economy around—and many students. We twitted one professor with the gibe that no doubt he found Adam Smith and John Stuart Mill among his mentors. Laughingly he replied, "Well, their theories are not exactly popular with us at present."

One innovation in economic organisation has resulted from the liquidation of the Kuomintang. Businessmen who were "clean" or free from entanglement with this organisation, have been allowed to maintain their financial interest in the business and receive 5 per cent. on their capital, even though the enterprise may be managed by State-appointed personnel. If the owner of the business is appointed manager, he will, of course, receive the regular State salary for his type of managerial service *plus* the 5 per cent. return on his investment. Here we have joint private State enterprise which should be of interest to all students of comparative economic organisation. How long this hybrid will persist, one cannot say. But I understand that the private rights involved may be bequeathed or transferred; and, if this is true, the joint private-State type of enterprise may last for generations to come.

Trade

The all-important matter of trade was constantly coming up, and, listening to the Chinese side of the story and to the outside phase of it, none of which incidentally came from traders, we are frankly a little confused.

One thing is certain—China needs a multitude of things and is most desirous of trading. It would be a waste of time for us to try to cover this field in a report of this kind. Any Canadian exporter who wants to trade with China—and if he is conscious of his own interests and is farsighted enough to realise his responsibilities to our Canadian economy—can readily obtain from our Department of Trade and Commerce in Ottawa a good idea of what is wanted. The Trade Commissioners of our Government who cover that area are fully conversant with the picture and we feel we should assume they keep Ottawa headquarters fully advised.

If we have anything to suggest here it is that our exporting fraternity shake themselves loose, get busy and visit China either individually or as a group, probably in the latter form initially, but keep at it. It was galling to meet and to talk with the selling forces of other Western powers, not only obviously getting business but enthusiastic about it while our people seem to sit back and wait for a silver platter deal. Our exporters have got to learn to develop resourcefulness and to take reasonable business risks. Outside China we heard a good deal about the Chinese importing movement endeavouring to make one-sided deals, about their reneging on contracts and so on; but we were unable to uncover a substantiated case. Our people should make clear the deal they want, make it reasonable and orthodox, and have a full and complete understanding of the transaction before they start—documented, if necessary, throughout. If they do this, deliver on time, and do not deviate from the terms, we should be inclined to believe they won't experience undue difficulties. This opportunity, coupled with our need for export markets, should sound a clarion call to our Government to see to it that, if any Canadian enterprise should be induced by outside influence to deviate from its responsibility to the Canadian worker and to the Canadian economy by declining legitimate and clean business, drastic and immediate steps be taken to discipline any such Canadian corporation. Canada needs export trade and it should be sought after everywhere with no interest other than the welfare of Canada involved.

Freedom

We had some interesting discussions relative to the new Chinese Constitution which provides for freedom of speech, right of assembly and freedom in the practice of religion. Freedom of speech, we believe, can be followed in the criticism of how things are being done in a material way, or of the people who are charged with the responsibility of doing them—but the Chinese cannot be "agin the Government" as we know it. Anything savouring of sedition would meet with the inevitable treatment: so, perhaps, freedom of speech could, in our view, be largely confined to the "suggestion box" principle. In this highly restricted sense, it might even be welcomed by the authorities.

Right of assembly exists in the sense that crowds can immediately assemble and listen to a speaker. We saw such crowds at street corners and at country crossroads. When we asked what the spouter was dispensing, it was always a harangue on the virtues of hygiene, on the desirability of continuing to swat flies and kill mosquitoes, or on some such subject. Theoretically, we suppose one could assemble a crowd and talk about anything—but for how long we don't know. There is no Chinese "Hyde Park."

Regarding the freedom to practice religion, there could be a need for this—not perhaps out of regard for religion but because there is a political problem due to the large number of Moslem followers in addition to the Buddhists. I found Christian churches of many denominations—I also visited a Buddhist temple. On Sunday morning in Peking, we heard what sounded like church bells. At first, we could not believe our ears. Persistently we went down a side street from which the sound was coming and certainly it was the sound of church bells. We found the church, a large Roman Catholic edifice, within a walled enclosure. The front court was full of children playing, the front doors were closed and again children playing and squatting in front of them, but we proceeded to a side door and found a church which could accommodate a very large congregation. Mass was in progress; the church was not full but there was a large congregation of people, devout to all appearances, young and old—male and female—very small children crawling in the aisles—older ones moving around from pew to pew. The clergy were all Chinese. We stayed for part of the service. There are other authorities more competent than I am to discuss this phase, but, so far as I could find out, all clergy must be Chinese and, if this is so, then perhaps "freedom" is more apparent than real. This is only an observation. Someone else, I am sure, can give a positive answer.

Unquestionably, here is some subtle difference in life between China and other nations of Marxian persuasion. One feels no sense of domination, no depression, no lack of freedom in moving around and so on. Perhaps, it is inspired by the courtesy, good nature and natural politeness of the people. One goes shopping as he would in Montreal—big stores, little stores, all sorts of goods. Food is rationed on a seasonal basis we were told. In hotels and restaurants, there are no restrictions. One can go sightseeing, rubbernecking and camera using at will—but must get an export permit for his undeveloped film which was a rather perfunctory procedure.

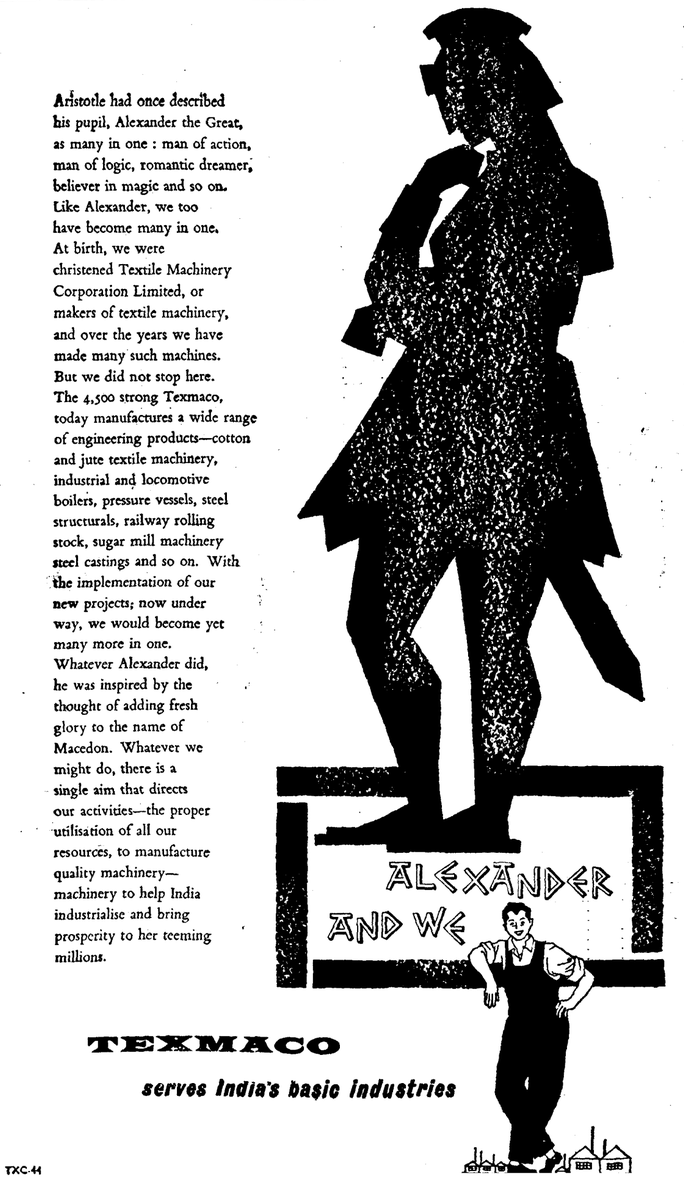
For those who have read so far no doubt a variety of impressions of life in China has been formed. Some may be favourable, even too much so, some sceptical and unbelieving. Both are wrong.

As I said at the beginning, one has to see what is going on with his own eyes before he can realise what the picture unfolds. Nobody can do so for him. China is a socialist State, a managed economy adhering to the teachings of Karl Marx with some modifications to meet Chinese reality. The State is supreme, man an instrument—therefore he can't be really free. There is none of the "Comrade" technique, there is no pretence that all are equal; on the contrary, "the working class," "the peasants," are freely referred to. One is rewarded in the material sense according to his talents and his responsibilities; but the plunder, the privilege and corruption are said to be gone. One wonders what China would be like today if over the last 150 years it had moved along the lines of democratic progress, instead of exploitation and corruption. The wind was sown, the whirlwind is being reaped.

As mentioned earlier, 25 per cent. of the world's population live in China; may be in 20 years, they will be one-half of the world. Their present rate of progress is beyond description—but they have, as we have said, a million miles to go before the masses have a semblance of a decent standard of living. They are moving fast, however. If one can picture a future nation of one billion people—skilled, educated, industrialised and with a capacity for work that beggars description—the high cost economy of the West is eventually in for revision. We of the West want no part of the political and economic philosophy that governs such States—but I wonder if we had a similar experience as a people how we would feel about it? The answer seems to be clear.

Regarding the so-called "recognition" of China in the political sense, one just does not see how six hundred million people, which may be a billion before too long, can be given myopic treatment. I am no prophet—but a "Bonnie Prince Charlie" from across the sea from Taipan seems more than unlikely. Just how face is to be saved there presents a staggering problem. There is every indication that the people of China as a whole are satisfied with their Government. It seems to meet their needs and it seems to be conscious of a great job to be done to lift the standard of living and the general way of life of the masses out of the black hoplessness that has prevailed in the past.

I believe there is good and legitimate trade to be done. Other Western people are getting it. Canada will be negligent and unfair to herself if she does not get her share. She won't get it, however, without aggressive action.



OIL NEEDS OF EXPANDING WORLD POPULATION

THE long-term growth of oil consumption is influenced by many factors, one of which is the natural increase in the population. Other things being equal, the doubling of the world's population which may be expected well before the end of the present century would be expected to give a substantial boost to the demand for petroleum products. But it is evident that the degree of stimulation could differ widely with different patterns of population change. For instance, a big increase in the population of (say) India may be much less significant than a relatively small increase in (say) the U.S.A., where oil consumption per head is something like 250 times as much.

Population growth has an importance which far transcends its economic implications, and general interest therefore attaches to a recent U.N. publication which reviews past trends and revises earlier estimates of the likely expansion of the world's population between now and the year 2000. Though inevitably subject to wide margins of error, such projections are of especial interest to an industry with world-wide ramifications, such as oil; and the estimates made by the U.N. experts for the separate continents and areas are particularly illuminating.

The inhabitants of the world have been reproducing themselves at an accelerating rate in recent decades. In the third and fourth quarters of the nineteenth century, the rate of growth was 19 per cent. in 25 years. In the first quarter of the twentieth century, the rate rose to 23 per cent., while, in the second, it jumped to 31 per cent. These increases, which brought the world's population to some 2,500 million by 1950, were unprecedented. Nevertheless, the report envisages rates as high as 53 per cent. and 64 per cent. in 1950-75 and 1976-2000, respectively. Hence the broad general conclusion is that, "barring either a catastrophe or a deterioration of social conditions for progress in health, of global proportions, a world population of between 6,000 and 7,000 million by the end of the century should now be expected almost as a matter of practical certainty."

These latest estimates are considerably in excess of those previously made in U.N. studies, despite the continued decline in the Japanese birth rate and earlier overestimations of the population of the U.S.S.R. By far the most important reason is the upward revision of estimates of the present size and rate of growth of the population of China. The startling and disturbing nature of the result is underlined by the authors who point out that, whereas since the evolution of *homo sapiens* it has taken 200,000 years for the world's population to reach 2,500 million, it will take a mere 30 years to add another 2,000 million. For the oil economist, making his own projections of demand, the regional estimates—notwithstanding their possibilities of error—are particularly helpful. Here the broad conclusion is that the rate of population growth will be much higher in the technically advanced areas of North America, Europe, the U.S.S.R., Japan and Australasia. Whereas the developed countries accounted for rather more than one-third of the world's population in 1950, their share may be less than one-quarter by the end of the century and, on certain assumptions, it could be as low as one-fifth. The table below shows for the separate continents the rate of population growth envisaged for the third and fourth quarters of this century, compared with those recorded in the first and second:

(Percentages)

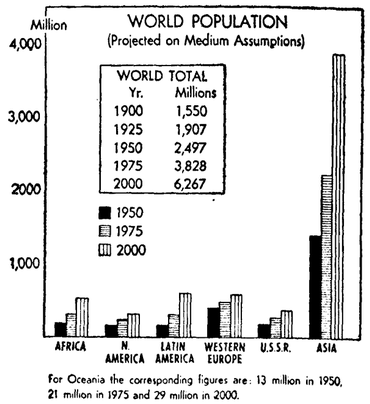
	1900-25	1925-50	1950-75	1975-2000
World total ..	23	31	53	64
Africa ..	22	35	52	71
North America ..	56	33	43	30
Latin America ..	57	65	86	95
Asia	19	35	60	75
Europe	19	14	21	19
U.S.S.R.			52	38
Oceania	57	36	59	40

The resulting changes in the distribution of the world's population are illustrated in the accompanying chart. The movements here depicted—based on medium assumptions—are arresting. For example, the population of N. America is expected barely to double during the second half of this century (from 168 to 312 million), while that of the U.S.S.R. will increase only slightly faster—from 181 to 379 million—whereas the population of Latin America will by the year 2000 probably be three and a half times what it was—592 million, against 163 million. Thus, Latin America's share of the world's population will rise from 6½ per cent. in 1950 to 9½ per cent. by A.D. 2000, outstripping that of North America and of Africa by 1975.

It is, however, the projections for Asia which excite most attention. Here a threefold increase is envisaged, from 1,380 million to 3,870 million in the 50 years—which would raise Asia's proportion of the world's total population from 55 to 62 per cent. In 1953 China had a population of 583 million; this is likely to rise to 900 million by 1975, when India's population will reach 563 million. Simultaneously, there will be a continued decline in the relative importance of Europe, where the envisaged increase is from 393 million in 1950 to 476 million in 1975 and to 568 million in A.D. 2000.

The fact that two-thirds of the expected increase in the world's population in the second half of this century (2,490 million out of 3,770 million) will take place in Asia has obvious implications for the oil industry: most of Asia has an extremely low standard of living and, therefore, of oil consumption. Outside Japan, the annual consumption of petroleum products there is of the order of two to five Imperial gallons per head, against an annual average of 75 gallons for Latin America, about 125 for the U.K. and the U.S.S.R., and over 600 gallons for North America. For gasoline alone, the annual consumption is of the order of one to two gallons a head for most of Asia, against averages of 20 to 30 gallons for Europe and Latin America and about 300 gallons for North America. Thus, the population increase of 2,490 million envisaged for Asia is of far less significance for the oil industry than the increase of 429 million in Latin America and of still less significance than the prospective gain of 144 million in North America. Assuming no change in oil consumption per head, the projected growth of the population in North America would add about 130 million tons a year to world oil consumption between now and 1975, whereas the increase foreseen in Latin America would add about 33 million tons and that in Asia a mere 7 million tons.

But will not Asian living standards be raised considerably in the years to come? If they were, then oil consumption would undoubtedly be expected to respond. This is particularly true of motor fuels, for not only is the motor vehicle a major agent of economic development, but car ownership is high on the list of satisfactions sought by people as incomes rise above the subsistence level. In the West, as also in the U.S.S.R., we have lately become accustomed to annual increases of the order of 2 or 3 per cent. in real income per head. Though many other factors are also involved—including the degree of industrialisation and the availability of other fuels—this rise in living standards has been a powerful added spur to the advance of oil consumption. A three per cent. increase every year means a doubling in just over 25 years. Assuming, however, that such an increase in oil consumption per head were achieved over the next quarter of a century, the extra oil required *for this reason alone* would be no more than 17 million tons in Asia outside Japan, as compared with over 50 million tons for Latin America and more than 400 million for the U.S.A.



For Oceania the corresponding figures are: 13 million in 1950, 21 million in 1975 and 29 million in 2000.

And can even a three per cent. advance in real income per head be regarded as a feasible objective for most Asian countries?

Broadly, there are two ways in which the much-desired advance in living standards could be brought about. One would be by means of an increase in production more than proportionate to the increase in population—particularly in the output of foodstuffs and agricultural raw materials. The methods by which such increases have been achieved in the recent past are familiar enough. They include the extension of the arable acreage, better control of pests, the development of plant strains with improved resistance to drought, disease, etc., and—perhaps most important of all—the mechanisation of agriculture. In recent years, attention has been drawn also to the vast untapped resources of the sea, to the possibility of harnessing solar energy, and to the likelihood that atomic energy will before many years have passed become generally available for the service of mankind.

It seems likely that these and other possibilities—which depend, be it noted, not only on the spread of adequate technical knowledge, but also on large injections of locally-created or imported capital—will have to be successfully exploited even to maintain existing standards of living in countries where population densities are already high and where the rate of growth envisaged is unprecedented. To raise income per head by expanding the available goods and services faster than the growth of the population would be a Herculean task.

If it proves impossible for the material resources available in Asia to keep pace with the increase in the number of consumers, the desired improvement in living standards could be brought about only as the result of a check to population growth—either by higher mortality rates than those assumed in the Report, or by birth control. The first alternative is morally inadmissible, while the second is fraught with difficulties in most Asian countries, where it is attended less by religions than by social obstacles of many kinds. Populations of hitherto high fertility constitute the majority of mankind. However, as the authors of the U.N. Report point out, the advocacy of policies designed to retard the growth of the population in India and, quite recently, also in China deserve the closest attention of the rest of the world. They may, eventually, succeed in lifting the millions of Asians above the starvation levels at which so many at present subsist.

The prospects of raising living standards and, therefore, of oil consumption per head, in the foreseeable future, seem considerably brighter in Latin America than in Asia. Here, oil production is already well in excess of local needs, there is a fair amount of industrial development to serve as the springboard for a further advance, and there is nothing like the same pressure of population on the considerable natural resources awaiting exploitation. In South America, the population density averages just over six persons per sq. kilometre (compared with eight in North America and the U.S.S.R., and 59 in N.W. Europe) and it may have risen to between 12 and 27 per sq. km. by the year 2000. In Japan, by contrast, the density is already 225, and is expected to be 340-430 by the end of the century, while elsewhere in the Far East it is at present about 40-90, and is expected to rise to between 80 and 280 per sq. km. These figures call for much qualification, but they do serve to emphasise that strong forces of population pressure are present, which, as before, may bring major changes in present frontiers and divisions of mankind.

Enough has been said to demonstrate the relevance of this study of population trends to oil industry affairs. Granting the possibility of substantial errors in the forecasts, it nevertheless appears certain that the extraordinary acceleration in rates of population growth will result in a doubling of the number of persons on this planet well before the present century is out. A major expansion of oil requirements will result from the projected growth of population in the industrialised nations, including the U.S.S.R. and Japan. However, by far the biggest increase in population will occur in areas where oil consumption per head is still pitifully low and where living standards will be very difficult to raise. The conclusion is that mere numbers are of comparatively little importance from the standpoint of oil consumption. What matters far more than the absolute size of the population is the standard of living it has attained and the possibilities of further economic advance which are open to it.—*By Special Arrangement with* Petroleum Press Service.

NEW PRODUCTS AND PROCESSES

Resin Curing Agent

A *CURING* for amino textile resins which has been developed by the Monsanto Chemical Company is now being manufactured in the United Kingdom. The material, which is called Catalyst AC, is said to promote faster and more uniform curing and maximum fabric performance, together with a minimum usage of resin when it is used with urea formaldehyde, melamine formaldehyde or modified urea resins. It is said to have excellent processing flexibility and bath stability and also, it is claimed, reduces the possibility of having to discard polymerised resin baths. It is compatible with most modifying and finishing agents and is said to be particularly effective with silicone water repellents. At the same time, there is less risk of residual odour formation when the catalyst is used.

Slot Safe for Petrol-filling Stations

For the purpose of defeating raids of petrol-filling stations and other establishments where a great deal of money is taken in the evening, a metalware factory of Netherlands has manufactured a special slot safe. Its internal dimensions are height 30 cm., width 32 cm. and depth 14.5 cm. The door of the safe is fitted with a slot which can be closed with a removable seal by means of a cylinder lock. Steel cash-boxes containing the receipts can be inserted in this slot. The employee at the depot only has the key of the slot lock, and not the key to the door. The latter is a steel, double-bit key. The built-in safe is embedded in the wall. Only the door is provided with a fireproof filling. For attachment to the wall or floor a slot safe of this type is supplied in an entirely double-walled design provided with fireproof filling between the walls. Continuous holes can be made in the rear wall or bottom of the safe for securing it by bolts from the inside.

Simple Hydraulic Load Lift

A Netherlands factory manufacturing transport trucks and equipment manufactures a hydraulic lift for loads of up to 660 lbs. for small plants in particular. The lift can be designed for handling crates or casks. The lift consists of a frame, fitted on four wheels, two of which are swivel wheels, on which is mounted a double, manually operated plunger pump which moves a platform by means of a hydraulic piston. When used for lifting crates the appliance has a maximum height of lift of 4.9 ft. in the standard design the platform measures 24"×32", although other dimensions can also be supplied. In the case of the cask lift the platform is designed with a fork. As the platform rises the fork turns from a horizontal to a vertical position. Depending on the position of the cask with respect to the fork, it either stands or lies on the platform when in the raised position. The minimum and maximum height of lift of the apparatus designed as a crate lift is 3.6 ft. and 4.4 ft. respectively. The lift can also be designed for use for various other purposes.

New Aluminium Alloy

The Argonne National Laboratory of the U.S. Atomic Energy Commission has developed an aluminium alloy which is expected to help reduce the cost of producing nuclear power. The experimental alloy, designated X-8001, will be used as a protective jacket (cladding) for fuel elements in the Argonne Low Power Reactor (A.L.P.R.), now being built at the National Reactor Testing Station for the Commission's Army reactors development programme. A.I.P.R. is a prototype unit of a portable boiling water reactor for power generation and space heating in remote areas, such as the Antarctic. Alloy X-8001, the fuel element cladding, was developed by adding small amounts of nickel to aluminium 1,100, a commercial alloy which contains iron. The addition of nickel made X-8001 much more resistant to corrosion by high temperature water than commercial aluminiums having iron as the primary alloy material.

High-Strength Steel

An air-hardening, ultra high-strength alloy steel has been developed in the U.S. for missiles and rockets and may have other applications in industry. The material, when cooled in air and tempered, is said to develop tensile strength in the range of 280,000 pounds per square inch, six times greater than that of sheet steel employed in motor-car bodies. Most other alloy steels require oil or salt quenching to attain equivalent mechanical properties. The high strength level, achieved after two years of research, is said, by the developers, to be the result of a balance of alloying elements found to be suitable for imparting air hardenability. Produced in annealed or "soft" condition, the new steel can be formed, cut or shaped readily and a fabricated part may then be allowed to harden by cooling in the open air after hating.

Top-dressing of Wheat and Maize

Staff workers of the laboratory of microbiology and physiology of the Agricultural Research Institute for the South-eastern areas of the U.S.S.R. have established that top-dressing of wheat and maize with organic phosphorus quickens their ripening. This discovery is said to be of great significance for the south-east of the country where plants with earlier periods of blossoming can escape the harmful influence of drought. The new agrotechnical method will also contribute to the advance of southern varieties further north. The research institute scientists are expanding their investigations with the aid of the tracer atom method.

WORLD MARINE INSURANCE

PROBLEMS AND PROSPECTS

THIS year's annual conference of the International Union of Marine Insurance was held in Salzburg, Austria, at a time when the outlook for world marine insurance appeared gloomier than ever before. Recent events and experiences of the past year showed that those who had made pessimistic forecasts and who were criticised for that, were not after all wrong. Fierce competition in world marine insurance markets continued throughout last year with the result that the downward trend in cargo rates, which began soon after the war and gathered momentum when the combined marine surcharge agreement was abandoned in 1949, showed little sign of abatement. The impact on premium income of the substantial reduction in cargo rates and the increasing amount of ships that was laid up in many parts of the world as a result of the general collapse of the freight market was more acutely felt.

Recent underwriting experience had shown that there was practically no margin in current marine rates for a serious casualty or a heavy particular average claim. The experience of last year and the second half of 1956 brought into bold relief the urgent need for a return to the elementary underwriting principle of a fair premium for a fair risk. Despite this, goaded by the thirst for premium income, covers and open policies continued to change hands with concessions in rates and conditions irrespective of past results.

Problem Reappears

More than 20 years have passed, comments *The Review*, London, in the course of an article on marine insurance recession in a recent issue, since marine insurers were called up on to face this problem, but it is now with them once more. Freight charges have fallen because the demand for shipping space has suffered a decline due to a corresponding reduction in international business dealings; fewer ships are in service because fewer cargoes are in transit, so that demand for insurance itself must be less. This time, it is felt, the problem will strike the hull market with a heavier impact owing to the wide disparity between the rates quoted for 12 months' navigation and those obtainable for the same period laid-up without cargo on board; reductions in world trade also bring reductions in commodity values; not only the number but also the value of the cargoes offered for insurance is less and what business is on offer is subject to more intense competition.

A substantial contribution to the fall in cargo rates to uneconomic level has been made by those who have employed conditions as a weapon of competition. It has been wielded by shippers, brokers, and underwriters alike each seeking to obtain or offer an ever wider cover in order to gain selfish advantage. In the absence of a rigidly observed tariff system, which is even less likely of attainment in the immediate future than in the past, observes *The Review*, an attempt to arrest the fall in rates through control of the cover given seems to offer the best hope of success. Zest for the task, the journal adds, should be provided by consideration of the stimulant which trade recession must give to the worsening of the additional hazards which have attached themselves to the traditional cover.

A first principle of insurance, as is common knowledge, is that it gives protection to an article or interest against a peril which may cause it injury but in most cases does not. If an insurer knew with certainty that a particular hazard would destroy 50 per cent. of an interest exposed to its action, then he would be bound to charge a premium for its insurance exceeding 50 per cent. of its value. An oversimplification of the problem, no doubt, but such simple arithmetic brings into sharp relief the discrepancy between the substantial menace of the extraneous risk as seen in isolation and the diminutive premium now charged all too often for cover against it.

In addition to fortifying their position by relating the rates quoted more nearly to the cover given, insurers can, the journal suggests, arrest the decline of standards in the transport and handling of merchandise by offering some form of inducement to those shippers who are willing to shoulder a proportion of the risk. Where such co-operation is refused, the share declined should be subject to higher rating than the proportion already accepted.

The Korean War and the Suez crisis provided the underwriting market with "shots in the arm" whose effects are now wearing off and bringing in their train the familiar symptoms of despondency and nervous upset. Pessimism in present circumstances, *The Review* points out, is a mood just as imprudent as the optimism which has misled earlier estimates of business prospects. It can be just as lacking in foundation if the situation is accurately appreciated and suitable measures of amelioration are taken.

Developments in the hull market already indicate that the pattern of events is likely to bear a close resemblance to the shape it assumed in the early 'thirties. As then, the older vessels are limping to the breakers' yards and there is a steady accumulation of tonnage in the backwaters and anchorage.

Significant Difference

Although the movement of shipping from full navigation to lay-up proceeds along familiar lines, there are significant variations between the two epochs. At that time there was a price fall throughout the economic range and the decline in freights and the withdrawal of ships kept pace with the general business recession. The pressures enforcing lay-ups were also less urgent because the foundation of the shipping industry was the general cargo trade which gave the owners the advantage of greater flexibility in the search for freights. Today the economic patterns have changed the world over and the shipping industry too has changed with it. The national policies pursued during the war and since have blurred the sharp distinction between the manufacturing countries and those former colonial territories. All are now sovereign States, very much in their own right, and many of the new ones have achieved greater or lesser measure of industrial self-sufficiency, while the older ones have replaced many imported raw materials with the products of their own chemical industries.

The new machines demand oil, not only for essential lubrication but for feeding the furnaces of the electric generators supplying them with driving power. Ships, locomotives, and aircraft have become likewise dependent on the same fuel. The foundations of shipping have, therefore, taken the tanks as their keystone in place of the general cargo ship and the method of bulk carriage, characteristic of petroleum transportation with its possibilities of rapid loading and unloading and discharge, has been widely adopted for the transport of other commodities. This emphasis on speed and technical excellence in the transport and handling of particular cargoes has promoted specialisation with the result that any slackening of demand quickly brings unemployment not to one or two ships but to the entire fleets.

Indications

The changes mentioned above, according to *The Review*, indicate that the shipping industry has moved away from its strong central position in the world economy to a position nearer the margin, where it must experience the effects of recession sooner than those enterprises based on direct consumer demand. This movement must draw hull insurance in its wake and the value of hull insurance to the overall economy will change in the same way. This conclusion is borne out by a comparison of the current stability of world prices in contrast to the fall in freights, and also the cold indifference of tenders for repair to the hardship inflicted on insurers by the steep decline in premium income. What is true today of hull insurance is also applicable to cargo insurance, if at a more distant date: what with growing economic self-sufficiency the demand for sea insurance will tend to grow smaller as time goes on, and the "shots in the arm," mentioned earlier, are likely to provide the only kind of boom period which shipping and marine insurance can hope to enjoy later on.

It is, however, probable that in future new demands of transportation and enterprise will have provided new opportunities for marine underwriters but programmes of activity in the present must cater for a recession which, as regards shipping in its present form, may to a greater or lesser extent prove lasting.

TRITON INSURANCE CO., LTD.

A sizable rise of Rs. 1.88 lakh in the net premium income is disclosed by the audited accounts of the Triton Insurance Company Ltd. (Managing Director: John Douglas Keith Brown), for the year ended 31st December 1957. The combined net premium income for the year amounts to Rs. 34.63 lakhs, as compared with Rs. 32.75 lakhs in the previous year. The improvement was remarkable in the fire department where net premium income increased from Rs. 21.92 lakhs in 1956 to Rs. 26.06 lakhs in the year under review, an increase of as much as 19 per cent. The miscellaneous department also shared in the improvement, but to a lesser extent from Rs. 1.51 lakh in 1956 to Rs. 1.68 lakh in 1957, while the marine department showed a decline in net premium from Rs. 9.32 lakhs in 1956 to Rs. 6.89 lakhs in 1957. Claims, commission and expenses also showed a rise. The year's working resulted in a profit of Rs. 1,24,812. The dividend has been maintained at 45 per cent., the same as in the previous year, on the ordinary shares of the Company. The following table shows the working results of the Company for the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1957	1956	1955
Fire—			
Net premium	26.06	21.92	20.40
Claims	11.14	9.49	7.22
Commission and expenses ..	12.56	10.59	10.27
Fire fund	18.08	10.96	10.20
Marine—			
Net premium	6.89	9.32	9.80
Claims	3.60	4.14	5.97
Commission and expenses ..	3.00	3.51	3.22
Marine fund	6.89	9.32	9.80
Miscellaneous—			
Net premium	1.68	1.51	1.37
Claims	0.88	0.84	0.96
Commission and expenses ..	0.53	0.45	0.34
Miscellaneous fund	1.84	1.76	1.69

Net premium income in the fire department aggregated Rs. 26.06 lakhs, as against Rs. 21.92

CAUSES OF INFLATION IN PRIMARY PRODUCING COUNTRIES

UNITED NATIONS' ANALYSIS

THERE has been a growing realisation on the part of primary producing countries of the need for, and importance of, stepping up the standard of living of their peoples. This is reflected in the unprecedented rate of new investment taking place in these countries. Such development programmes have, however, led to marked advances in prices and costs, which have tended to threaten the strength and stability of these economies. Although the pace of inflation in these countries was somewhat slower during the immediate post-war years than during the Second World War, it gathered renewed momentum as a result of the widespread devaluation of currencies in 1949 and the outbreak of Korean hostilities in 1950. Following the collapse of the Korean boom in mid-1951, domestic prices levelled off or even fell in some instances, but only for a short period. Prices in these countries continued to move upward once again after 1954. A glimpse of these trends can be had from the table on this page which shows the average annual rate of increase in the cost of living in 40 primary producing countries. At any rate, the growing inflationary pressures, despite integrated fiscal and monetary policies, have posed a serious threat to rapid economic development in these countries. In this context, the United Nations has done well to provide a succinct analysis of the nature and extent of the problem of inflation, in its *World Economic Survey* 1957.

In the underdeveloped countries, the capacity to produce consumption goods is limited by the level and pattern of economic development which has already been reached. Consequently, they find themselves incapable of matching the rapidly rising demand generated by developmental expenditure. This explains the progressive rise in prices. If the additional income generated in the economy were ploughed back to investment, there would, of course, be no inflationary pressure. This, however, is more easily said than done. As the *Survey* has averred, in most cases, investment involves a corresponding increase of money income; and, in an underdeveloped country with a very low standard of living, only a small fraction of such additional income is likely to be saved, the bulk of it adding to pressure of demand on the supply of goods and services. Again, owing to rigidities inherent in the economy of an underdeveloped country, the process of their development is accompanied by a fundamental break with the inherited structure of production, it accounts to a great extent for the stresses and strains found in a growing economy. The *Survey* has also thrown into sharp relief the major casual factors underlining forces of inflation in underdeveloped countries. The most pervasive sources of inflation, as already indicated, is the excess of aggregate demand in the economy created by additional investments. In the absence of excess capacity in the underdeveloped countries to cater to the growing demand, prices in general tend to move upwards.

Private Incomes

Increases in expenditure generated by budget deficits, private investment or the export balance provide additions to private incomes that have a special significance in the inflationary process. For, as these additions to private incomes are not derived from the production of consumer goods and services, the expenditure which they generate heightens demand for consumer goods and services in relation to available supplies. Accordingly, if no excess productive capacity is available, prices tend to rise under the pressure of increasing demand. The rise in prices, however, tends to change the distribution of income in favour of groups with relatively higher rates of saving out of income. When private savings have increased to the point where they matched the increase in demand for private savings generated by the budget deficit, private investment or the export balance, a new equilibrium is reached; at this point, the demand for, and the supply of, consumer goods and services are again in balance. Increases in demand for private savings, however, have not been the only source of inflation in primary producing countries. At times, an excess of aggregate demand over aggregate supply has emerged, not from a rise in the demand for private savings, but from a decline in the community's willingness to save. When, for example, there has been some relaxation of direct physical controls on consumption, the community has sometimes responded by increasing its expenditure relative to current income.

Besides the aggregate excess demand, there have been symptoms of excess demand in particular sectors. For instance, the lag in agricultural production in relation to the development in other sectors of the economy has been a prolific source of inflation in underdeveloped countries. The pressure of demand against insufficient supplies of foodstuffs has often been heightened by the rapid growth of urban populations; even where the output of foodstuffs has been increased, urban supplies have not necessarily kept pace with the high rates of increase in urban population, since producers have often increased their own consumption, and distribution facilities have frequently been inadequate.

Neither excess aggregate demand nor excess sectoral demand, however, wholly explains the magnitude of price inflation in these countries. The primary inflationary impulses generated by excess demand have also initiated secondary cumulative advances in prices and costs. A major inflationary mechanism activated by the primary inflationary impulses has been the wage-price spiral. By raising prices and redistributing incomes in favour of groups with relatively higher rates of saving, excess aggregate demand has encroached upon the real income of wage earners. The labour unrest created by such a situation has commonly given rise to demands for increased money wages, and these increases have then been the occasion for renewed increases in prices. Excess aggregate demand, however, has not even been a necessary condition for the activation of wage-price spirals. Advances in wage costs have also taken place because of the presence of excess sectoral demand. In view of the importance of food in the consumption of wage earners and of the widespread inflexibility in the supply of food real wages in the underdeveloped countries have been very susceptible to reduction occasioned by rising food prices. Moreover, at times an advance in money wages has been the outcome, not of domestic supply and demand conditions, but of a rise in foreign prices of imported commodities or of a change in governmental policy affecting domestic prices. Thus, rising foreign prices of imported commodities have not only had direct effects upon the level of domestic prices and costs but have sometimes been sufficient to activate a wage-price spiral; and similarly, changes in governmental policy regarding price controls, exchange rates, indirect taxes and subsidies have had both direct and indirect effects upon the level of domestic prices and costs.

Credit Mechanism

Apart from the wage-price spiral, the final effect upon prices produced by excess demand has been magnified by the operation of credit mechanism. Increases in private investment, in budget deficits or in wage bills, have been mainly financed by borrowing from the banking system, which has usually involved a rising supply of money. This has led to increased liquidity of the community. In the absence of organised capital markets and in the face of ever-present danger of inflation, however, there is little incentive to hold increases in the money supply in idle balances. These increases have, therefore, tended in time, to augment the flow of total money expenditure.

The instability of foreign trade has been another factor of major consequence in inflation in many primary producing countries. The particularly close links in these countries between investment and the foreign balance, and between government revenue and trade develop-

Annual rate of increase	Number of countries			
	Pre-war to 1946	1946 to 1948	1950 to 1953	1954 to 1957
26 per cent. and above	13	7	6	2

0 or decrease	..	6	5	6
Total	40	40	40	40

ments, have often caused sharp fluctuations both in the supply of many key commodities and in demand pressures. The *Survey* has pointed out that supplies, both for export and the domestic market, having been dominated by agricultural production, naturally leave them vulnerable to the vagaries of weather conditions. The removal or lessening of the instability of export markets of primary products goes a long way towards greater price stability in underdeveloped countries. But the central problem of securing additional resources to hasten the pace of economic development and, at the same time, of avoiding inflation would remain.

Various restrictive policies, both fiscal and monetary, have been consistently pursued so as to hold the rising spiral of prices in check in many of these countries. These measures are designed to restrain the level of aggregate demand. The authorities have also bestowed attention to the need for rectifying imbalance between demand and supply of specific commodities particularly those of food. The anti-inflationary budgetary measures have generally sought to arrest the rise in the budget deficit as a proportion of gross national product.

In many countries, inflation has been generated as much by sharp and irregular increases in export earnings as by domestic forces of a less variable character. Budgetary measures to counter inflation arising from this source have necessarily been of a flexible and short-run nature. The strictest form of such measures has been direct participation by the government in trade in the main export commodity; this has permitted it to set the price to domestic producers at a level substantially lower than the world market price, so that rising export profits have accrued to the government. The method most commonly employed, however, has been the absorption or rising export earnings through the manipulation of export duties or the application of penalty exchange rates.

The success of the anti-inflationary policy of diverting the income from export sector to the Government depends upon what the latter does with the increased revenue.

In conjunction with budgetary policy, many countries have also made increasing use of monetary policy in their anti-inflationary drive. Through a variety of means, central banks have sought to restrain the expansion in the volume of credit extended by the commercial banks to private enterprises and private persons; and, in so far as these restraints have been effective, monetary policy has contributed to a lessening of inflationary pressure. It is to be recalled that private investment in the primary producing countries is heavily dependent upon financing by the banking system; consequently, to the extent that monetary policy restricts the demand for, or supply of, credit, private investment expenditure may be reduced. Moreover, since such restrains place some limitation upon expansion in the supply of money throughout the country, the inflationary effect of an increase in the liquidity of the private sector may also be curbed. It must be recognised, however, that the efforts of central banks to restrain the expansion of credit by commercial banks have, in most countries, taken place in circumstances where the cash reserves of the commercial banks have been continuously augmented through increased governmental borrowing from central banks or through rising receipts of foreign exchange; generally, part of the primary increase in money supply created by governmental borrowing or rising foreign exchange receipts has been absorbed into the cash reserves of the commercial banks. Thus, while the central banks have sought to limit the volume of credit, other forces have been at work to facilitate its expansion. In these circumstances, monetary policy has not reduced the volume of credit but has, at best, only moderated its rate of expansion.

In many of the primary producing countries, according to the *Survey*, some tendency towards greater monetary stringency in the private sector has been evident. Nevertheless, it has disclosed that, in a number of these countries, the control exercised by central banks over the volume of private credit has been greatly vitiated by the increases in the supply of money that have taken place outside the private sector. It is to be borne in mind, at any rate, that, while restraints on the supply of credit to the private sector may have moderated the level of private investment expenditure and thus exerted a disinflationary influence, a large part of the actual expansion in credit was often necessitated by rising business costs generated by inflationary forces other than private investment expenditure.

FOR INTERNATIONAL EXPERIENCE & SERVICE...

Fly to KARACHI by PIA The airline for top-flight service

PIA offers you more than speed and efficiency. It believes in offering you the ultimate in luxury air service. Its seasoned commanders, gracious and trained hostesses bring safety and grace in your air travel.

Immediate connections with PIA's luxurious Super Constellation flights on Tuesdays and Saturdays to TEHERAN, BAGHDAD, DAMASCUS, ROME, GENEVA and LONDON.

Stop-over en route at no extra fare.

Refreshments and full bar service (outside Prohibition Areas) on all flights.

Reserved Air Cargo Space is available on all PIA flights: fast transit and prompt delivery is assured.

RESULTS OF MEGNA JUTE ENCOURAGING

SHARP RISE IN SALES AND PROFIT

CONSIDERING the difficult trading conditions experienced by the jute industry, the results of the Megna Mills Company Ltd. (Secretary: A. D. A. Alexander, Calcutta) for the year ended 31st March 1958 must be regarded as highly encouraging. It is common knowledge that for some years now the jute industry has been in a very unenviable position. Rise in manufacturing costs due to higher prices of raw materials, redundancy of workers and increased emoluments to labour on the one hand and decline in export orders, rendered more difficult by stiff competition from Pakistan, have been the serious handicaps of the industry. Some of the units have been trying to overcome them through modernisation of equipment and diversification of their production with varying degrees of success. Hence, many units have been reporting losses, while a few have been able to show a slight improvement. The working of the Company during the year under review makes a refreshing contrast to the discouraging performance noted in the previous year and seems to indicate that the Company has turned the corner. Needless to say, if this rate of progress is maintained in the years to come, the Company's future is assured. The proceeds from sale of gunnies have sharply risen, profits have substantially increased and reserves have been strengthened. The Company's shareholders will be particularly happy to know that their return in the shape of dividend has been more than trebled to 17½ per cent. from 5 per cent. paid for the few preceding years.

The gross profit at Rs. 33.62 lakhs makes a striking comparison with the mere, almost insignificant, Rs. 2.28 lakhs made in the previous year and represents an improvement of Rs. 31.34 lakhs over the year. It is also about thrice better than the profit of Rs. 10.51 lakhs for 1955-56 and Rs. 11.57 lakhs for 1954-55. After providing Rs. 6.48 lakhs for depreciation, as against Rs. 6.39 lakhs in the previous year and setting aside Rs. 5.84 lakhs for taxation, of which Rs. 1.14 lakh is on account of wealth tax (including Rs. 52,654 paid for assessment year 1957-58), the net profit at Rs. 21.30 lakhs compares well with a net loss of Rs. 4.11 lakhs for the previous year. Before enhancing the distribution to shareholders, the Directors have transferred Rs. 62,850 to development rebate reserve and another Rs. 3 lakhs to contingency suspense. It may be noted here that the latter amount, namely, Rs. 3 lakhs, is the exact equivalent of the sum withdrawn from contingency suspense in the previous year to meet a portion of the loss sustained. This deficiency has, therefore, been made up now.

Results Compared

The following comparative table will provide some idea of the progress in the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Gunny sales	3,41.76	2,82.42	2,88.92	2,55.86
Closing stocks of finished goods	17.78	10.54	5.48	2.61
Looms hours realisation ..	4.43	1.77	0.01	0.07
Raw materials consumed ..	2,00.15	1,47.79	1,70.92	1,45.16
Other expenses	1,21.20	90.29	1,10.79	1,01.99
Gross profit (+) or loss (—) ..	+33.62	+2.28	+10.51	+11.57
Depreciation	6.48	6.39	5.60	5.23
Provision for taxation ..	5.84	..	..	..
Net profit (+) or loss (—) ..	+21.30	—4.11	+4.91	+6.34
Provisions, etc., written back ..	0.06	7.10	2.81	0.95
Transfer to reserves ..	3.63	..	1.82	..
Expenses written off ..	..	..	2.00	1.12
Dividend	14.29	4.08	4.08	4.08
	(17½%)	(5%)	(5%)	(5%)
Carry forward	4.00	0.56	1.65	1.33

Despite the handicaps facing the jute industry, the Company's sale proceeds, as can be seen from the above table, made a sharp rise of Rs. 109.34 lakhs to Rs. 3.42 crores during the year under review. Indeed, it is this factor which has chiefly contributed to the substantial improvement in results.

The Company's mills worked 48 hours per week during the year under review, with 12½ per cent. of the total looms sealed, in accordance with the working time agreement of the Indian Jute Mills' Association. It purchased additional looms during the year and consequently the number of working looms was increased as from 8th April 1957, to 392 looms on double shift and 524 looms on single shift. The working of looms was subsequently increased and, towards the close, the mills were working 434 looms on double shift and 536 looms on single shift, that is, the equivalent of 1,404 looms on single shift against the normal complement of 1,132 looms on single shift.

The Company is actively carrying out a programme for the modernisation of its mills. It has been granted a loan of Rs. 22.84 lakhs by the National Industrial Development Corporation Private Ltd. for further modernisation of the mills, of which Rs. 6.97 lakhs were received during the year under review. By the end of the year under report, spinning machinery of the value of Rs. 8.91 lakhs had been received at the mills. Out of this, machinery of the value of Rs. 5.58 lakhs was actually installed. The Directors hope that the balance of machinery to be received against the loan will be installed during the current year.

Financial Position

The balance-sheet of the Company as at 31st March 1958 shows no change in its paid-up capital at Rs. 81.65 lakhs which consists wholly of ordinary shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating Rs. 29.29 lakhs. In this connection, it may be of interest to know that, in June 1949, the Company had capitalised Rs. 48.99 lakhs out of the reserve fund and 81,652 new ordinary shares of Rs. 60 each were created. These were issued to the then existing shareholders in the proportion of one new share for every old share held and subsequently consolidated into 81,652 shares of Rs. 100 each. The current liabilities stand at Rs. 105.66 lakhs, of which secured loans account for Rs. 63.84 lakhs. The gross block stands at Rs. 222.29 lakhs and depreciation provided at Rs. 138.72 lakhs, so that the net block is Rs. 83.57 lakhs. The current assets aggregate Rs. 133.04 lakhs and exceed the current liabilities and the provision for taxation by a comfortable margin.

The Directors have considered the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and feel that a nominal value of Rs. 10 per share would permit of greater freedom in transmission and transferability of the shares.

Messrs. Mackinnon Mackenzie & Co. Ltd., who were the Managing Agents of the Company, resigned their office and the Company came under the control of directors as from 1st April 1956. The present Board of Directors consists of Mr. C. L. Bajoria, Mr. H. Mackay Tallack, Mr. C. A. Groves, Mr. T. R. Jalan, Mr. S. L. Bajoria (alternate to Mr. C. L. Bajoria) and Mr. P. W. G. Adair (alternate to Mr. C. A. Groves).

The Rs. 100 fully paid-up ordinary shares are currently quoted at Rs. 152 *cum-div.* On an *ex-div.* basis and taking the dividend at 17½ per cent., the yield works out to 13 per cent. per annum.

BOMBAY SUBURBAN'S PROFIT IMPROVES

PROGRESS STEADY

THE working of the Bombay Suburban Electric Supply Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) during the year ended 31st March 1958 has proved to be satisfactory. The earnings, as well as profit, show a sizable improvement over the previous year. The improvement is, no doubt, due to the marked expansion in the sale of energy. From 60.47 million kilowatt hours in 1955-56, which itself represented an increase of 20.02 per cent. over 1954-55, sales of energy rose to 71.71 million kw.h. in 1956-57 and further to 83.58 million kw.h. in 1957-58. The latter represents an increase of 16.54 per cent. over the year. The sale of energy for lights and fans and general purposes rose by 15.42 per cent. and for motive power by 17.50 per cent. The rise of Rs. 2.38 lakhs in the gross profit at Rs. 29.95 lakhs for the year under review makes a welcome contrast to the modest decline noted in the previous year when the gross profit receded from Rs. 27.93 lakhs for 1955-56 to Rs. 27.57 lakhs.

The net profit at Rs. 18.56 lakhs also stands higher, as compared with Rs. 14.24 lakhs for the previous year, though it is a shade lower than Rs. 19.22 lakhs two years earlier. The provision for depreciation has been slightly lowered from Rs. 9.90 lakhs to Rs. 9.09 lakhs. Barring a sum of Rs. 85,000 set aside for wealth tax, no amount has been provided for taxation since the Company considers that there is no liability for taxation on the profits for the year owing to the incidence of income-tax depreciation allowances.

Reserves

Although the net profit is higher, the provisions for statutorily compulsory reserves have made a sizable reduction in the sum available for distribution of dividend. The Directors have, therefore, been obliged to withdraw Rs. 22,187 from the tariffs and dividends control reserve. The dividend to shareholders has been maintained at 7 per cent., the rate prevailing for the past several years. Of the sum of Rs. 6.43 lakhs allocated to reserves, development reserve accounts for Rs. 5.28 lakhs, contingencies reserve for Rs. 94,475 and dividend equalisation reserve for Rs. 21,000.

The following comparative table shows the progress in the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds of energy ..	86.91	77.56	70.66	61.40
Other income	8.48	2.97	3.08	2.82
Cost of energy purchased ..	37.67	30.36	29.30	20.75
Other expenses	22.72	22.60	20.46	18.21
Gross profit	29.95	27.57	27.98	24.26
Agents' commission ..	1.45	1.39	1.28	1.48
Depreciation	9.09	9.90	7.48	6.56
Provision for taxation ..	0.85*	2.04†	..	3.55

	(7%)	(7%)	(7%)	(7%)
Carry forward	..	..	..	..

* Provision for wealth tax.
† Includes Rs. 1.10 lakhs for wealth tax.

As can be seen from the table above, the sale proceeds have steadily risen from Rs. 61.40 lakhs in 1954-55 to Rs. 86.91 lakhs for the year under review. It will also be noted that, while the cost of energy purchased has appreciably increased over the previous year, other expenses have made only a modest rise.

During the year, 6,890 new consumers were connected to the mains, bringing the total number to 58,466 showing an increase of 13.36 per cent. over the previous year. The number of units of energy purchased from the bulk suppliers rose by 11.72 per cent. The maximum load on the Company's system was 20,940 kw., as against 18,666 kw. during the previous year—an increase of 12.98 per cent. The Company's transmission and distribution systems were maintained in good order and continued to give trouble-free service. There were at the close of the year 154 miles of high tension and 233 miles of low tension mains on the Company's system. During the year, again, 12 new sub-stations were added (making a total of 194) and the transformer capacity of 19 existing sub-stations was reorganised to ensure the most efficient use of the plant. The high tension system has been substantially strengthened and extended. The low tension network, including mains, services and street-lighting, has been expanded.

The Company's paid-up capital at Rs. 175 lakhs, which are in ordinary shares of Rs. 100 each, is supplemented by reserves and surplus aggregating Rs. 54.35 lakhs. The gross block of Rs. 330.22 lakhs, including additions to the tune of Rs. 42.81 lakhs during the year, stands written down at Rs. 252.94 lakhs. Capital work-in-progress accounts for Rs. 7.46 lakhs. Intangible assets, consisting mainly of promotion expenditure and new share capital issue expenses, have been written down from Rs. 1.98 lakh to Rs. 1.84 lakh. The current assets aggregate Rs. 39.01 lakhs, as against which current liabilities amount to Rs. 71.88 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 113.50 *cum-div.* On an *ex-div.* basis, the yield works out to 6.5 per cent. per annum.

NATIONAL TOBACCO FORGES AHEAD

Consumption of cigarettes in the country is on a steady upward trend. This is not surprising. The rapid industrialisation of the country has resulted in higher incomes for the people, particularly the working class, who now can afford to switch over to the luxury of a cigarette in preference to the traditional cheaper modes of smoking. This should inevitably reflect in higher sale proceeds for companies engaged in the manufacture of cigarettes, thereby helping to increase their profits. The working of the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias & Co., Private Ltd., Calcutta) during the year ended 31st December 1957 serves to illustrate the above facts. The sale proceeds of this Company which stood at Rs. 3.99 crores in 1955 steadily rose to Rs. 5.16 crores in 1956 and further to Rs. 6.54 crores in 1957, showing an improvement of Rs. 2.55 crores over a period of just a couple of years. Hence, despite the sharp increase in manufacturing costs, excise duty, etc., the Company's profits also show a steady rise from year to year. Thus, at Rs. 45.19 lakhs, the gross profit for the year under review has advanced by Rs. 11.49 lakhs from Rs. 33.70 lakhs for 1956 and it is Rs. 15.90 lakhs better than that at Rs. 29.29 lakhs for 1955.

The net profit at Rs. 15.93 lakhs also stands higher, as compared with Rs. 11.45 lakhs for the previous year. The provision for depreciation has been maintained at Rs. 5.06 lakhs (Rs. 5.04 lakhs in 1956) but that for taxation has gone up from Rs. 13.13 lakhs to Rs. 18.83 lakhs. The Directors have written back Rs. 24 lakhs from the provision for taxation, representing excess provisions in past years for which assessments have since been completed. This amount is being used for financing the Company's operations. Accordingly, they have transferred Rs. 23.86 lakhs to general reserve and Rs. 6 lakhs to reserve for capital expenditure. The latter amount, the Directors state, is for implementing a programme of production and quality improvement for which considerable finance will be required. A sum of Rs. 87,971 has also been set apart as development rebate. The dividend to ordinary shareholders has been stepped up to 9 per cent. from 7 per cent. for the previous year to which level it had been lowered from 8 per cent. paid in 1955. The dividend on ordinary shares absorbs Rs. 7.20 lakhs, on the 5 per cent. first preference shares Rs. 1.25 lakh, and on the 4½ per cent. second preference shares Rs. 89,910, leaving a sum of Rs. 8.88 lakhs to be carried forward, as against Rs. 9.03 lakhs brought in.

Expenses during the year have considerably increased from Rs. 500.11 lakhs to Rs. 637.41 lakhs. Of this, excise duty alone accounts for a rise from Rs. 129.54 lakhs to Rs. 198.28 lakhs and consumption of stores and spare parts from Rs. 84.91 lakhs to Rs. 120.26 lakhs.

The Directors say that, during the year under report, the Company's brands participated in greater measure in the increased business, though this increase in volume has been almost exclusively in one of the most important but relatively less remunerative price categories. Efforts to secure more business in other grades continue. On the prospects for the current year, the Directors say that several factors, particularly that of rising costs of leaf and stores, make it difficult to accurately gauge the Company's position but the sales volume in the first half of the year is satisfactory. It will, therefore, be reasonable to expect "results in 1958 to be no worse than in 1957."

The Company's paid-up capital stands at Rs. 124.95 lakhs, of which ordinary shares of Rs. 10 each account for Rs. 79.97 lakhs. The balance is accounted for by two categories of (5 per cent. and 4½ per cent.) tax-free redeemable cumulative preference shares of Rs. 100 each. The reserves and surplus stand at Rs. 77.77 lakhs, of which the general reserve amounts to Rs. 50 lakhs. The Company has a debenture liability of Rs. 12 lakhs carrying interest at 4 per cent. The gross block of Rs. 125.70 lakhs has been well depreciated, the net block being Rs. 59.91 lakhs. The current liabilities stand at Rs. 121.48 lakhs, against which the current assets aggregate as much as Rs. 276.30 lakhs.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 13.22 *ex-div.* at which rate and on the basis of the latest dividend, the yield is 6.8 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 24th September 1958. Dividend: Rs. 20.00 per share. Transfer books remain closed from 11th to 24th September 1958, both days inclusive.

HOOLUNGOOREE TEA CO., LTD. Annual General Meeting, Calcutta, 25th September 1958. Dividend: Rs. 12.50 per share. Transfer books remain closed from 11th to 25th September 1958, both days inclusive.

MOTHOLA TEA CO., LTD. Annual General Meeting, Calcutta, 26th September 1958. Dividend: Rs. 40.00 per share, on shares of Rs. 100 each. Transfer books remain closed from 15th to 26th September 1958, both days inclusive.

RESULTS OF ALEXANDRA JUTE BETTER

SARAN ENGINEERING MAINTAINS DIVIDEND

Alexandra Jute Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year after taking into account the overprovision of sales tax liability in respect of previous period written back, Rs. 1,91,298 (Rs. 36,889), and providing for doubtful debts Rs. 91,758 (Rs. 7,058), depreciation Rs. 2,11,262 (Rs. 1,53,016) and taxation Rs. 1,74,000 (Rs. 1,30,000) including wealth tax, amounts to Rs. 1,75,359 (Rs. 1,54,462). To this amount must be added the credit balance brought forward from the previous year of Rs. 1,70,290 (Rs. 1,38,329) and dividends forfeited Rs. 152 (Rs. 636) making a total of Rs. 3,46,301 (Rs. 2,93,427). From this amount must be deducted dividends previously forfeited now paid Rs. 50 (Rs. 137) and amount transferred to development reserve Rs. 56,600 (*nil*) leaving a balance of Rs. 2,89,651 (Rs. 2,93,290). The interim dividend for the year ended 31st December, 1957, on 9,000 preference shares at Rs. 3.50 per share absorbed Rs. 31,500 (*nil*) and on 6,000 ordinary shares at Rs. 5 (*nil*) per share Rs. 30,000 (*nil*) leaving an available balance of Rs. 2,28,151 (Rs. 2,93,290) which the directors recommend should be distributed as follows:—

To payment of a final dividend on 9,000 preference shares at Rs. 3.50 (Rs. 7.00) per share for the year ended 31st December, 1957 absorbing Rs. 31,500 (Rs. 63,000) and a final dividend on 6,000 ordinary shares at Rs. 5 (Rs. 10) per share for the year ended 31st December, 1957 absorbing Rs. 30,000 (Rs. 60,000) leaving to be carried forward Rs. 1,66,651 (Rs. 1,70,290).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st December, 1957, have been valued at market price.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, these mills were permitted to work 48 hours per week throughout the year with 12½ per cent. of the total looms sealed. Due to the purchase of loom hours the Mills worked 96 hours per week on a double shift basis working 264 looms on each shift up to the middle of June. From that date Alexandra Jute Mills took over the loom hours of Waverley Jute Mills which closed in June and until the end of 1957, 400 looms were worked 96 hours per week on a double shift basis.

During the year labour relations were satisfactory and the majority of the labour previously employed by Waverley Jute Mills was absorbed.

Certain modern sliver spinning machinery for sacking warp and sacking weft has been installed during the period. In order to complete the modernisation of this mill application has been made to the National Industrial Development Corporation Private Ltd. for a loan of Rs. 12,42,000. Despite difficult trading conditions throughout the year the working results show some improvement.

Accounts in brief are as under:—

Saran Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P. submit the audited accounts of the Company for the year ended 31st March, 1958.

The results for the year, after providing for all charges, including provisions for taxation and depreciation and adjustments, show a surplus of Rs. 1,69,638 (Rs. 1,92,736). From this amount has been deducted the transfer to rehabilitation reserve of Rs. 1,00,000 (Rs. 1,30,000) leaving a balance of Rs. 69,638 (Rs. 62,736). To this has been added the amount brought forward from the previous year of Rs. 12,000 (Rs. 9,264) making a total of Rs. 81,638 (Rs. 72,000). This amount, the directors recommend, should be disposed of as follows:—

In payment of a dividend of 40 (40) nP per share, free of income-tax, for the year ended 31st March, 1958 absorbing Rs. 60,000 (Rs. 60,000) leaving to be carried forward Rs. 21,638 (Rs. 12,000).

The turnover and order book are satisfactory, but considerable difficulty has been experienced, and it is anticipated that this will continue to be the case in obtaining supplies of pig iron and coke and import licences for such essentials as that plant for the expanded foundry which cannot be obtained in this country and for shafts for rollers.

The prospects for Saran are good provided a constant flow of raw material is available, and every effort is being made to ensure such supplies despite the overall shortage of pig iron in the country and difficulties with regard to transport.

The capital replacement programme referred to in previous reports is still in progress of completion. During the year under report, approximately Rs. 2.52 lakhs has been spent on that account. Existing commitments on account of capital expenditure amount to approximately Rs. 1.10 lakh. A sum of Rs. 1,00,000 has been transferred to rehabilitation reserve from the current year's profits which the directors have transferred to capital reserve. The Company's property has been maintained in good repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Gross block	29,83,251

Coimbatore Spinning & Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. R. G. S. Naidu & Co., Coimbatore) present the audited accounts of the Company for the year ended 31st December 1957.

The year's trading has resulted in a net loss of Rs. 7,30,221 (profit of Rs. 12,53,874) after meeting all expenses and providing a sum of Rs. 3,09,599 (Rs. 3,92,125) towards normal depreciation at income-tax rates. A sum of Rs. 50,000 has been provided towards minimum managerial remuneration in the absence of profits for the year. The bonus paid to the manager of the Company for the year 1956 amounting to Rs. 10,000 has been set off against the surplus carried forward from the previous year. After the set off, the balance of surplus, amounts to Rs. 415 (Rs. 21,921), and this has been deducted from the loss for the year amounting to Rs. 7,30,221 and it is proposed to carry forward the balance of loss of Rs. 7,29,806 (Rs. 10,415 after providing Rs. 5,00,000 for taxation, Rs. 2,00,000 to contingency reserve, Rs. 1,50,000 to bad and doubtful debts and after paying a dividend of 20 per cent. absorbing Rs. 4,15,380.)

The directors regret that the trade conditions during the year covered by the report were very unsatisfactory in as much as the prices of cotton remained at high levels and the prices of yarn and cloth showed a continuous decline. The Mills had to carry large stocks of yarn and cloth in the absence of a regular and steady demand. The Company had to meet heavier wage and electricity bills than last year on account of an increase in the basic wages of operatives and the imposition of a surcharge on electric energy consumed. The excise duty on cloth remained very high during 1957 and an additional sales tax was also levied by the State Government, both of which had a highly adverse effect on cloth sales, and such additional excise duty and sales tax could not be passed on to the customers on account of consumer resistance. Besides there was also a power cut for a period of nearly two months in the year which resulted in considerable dislocation of production. The Weaving Section of the Mills proved a drag upon the Company on account of the decline in prices in a stagnant market forcing the Company to sell its accumulated stocks whenever there was a demand in spite of sustaining losses thereby. In the circumstances the directors regret that the Company had to sustain a heavy loss for the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,76,900	Gross block	1,37,90,104

		Profit and loss account ...	7,29,806
Rs.	1,44,92,418	Rs.	1,44,92,418

Edward Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Puranmal Bubna Sons, Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The loss of Bombay Unit for the year ended 31st December 1957, after making a provision for depreciation of Rs. 3,49,884 (Rs. 3,91,622) amounts to Rs. 31,223 (Profit of Rs. 10,09,893) and the loss of Madras Unit for the year ended 31st December 1957, after making a provision for depreciation of Rs. 3,89,932 (Rs. 2,33,181) amounts to Rs. 11,89,434 (loss of Rs. 6,10,057). Thus the total loss for the year in the accounts amounts to Rs. 12,20,657 (Profit of Rs. 3,99,836). From this sum is to be deducted the amount brought forward from the last year's account of Rs. 2,28,479 (Rs. 2,83,643) after making provision for wealth tax liability for 1956 Rs. 30,918, additional provision for income-tax and Corporation Tax for 1956 Rs. 75,000 (Rs. 2,00,000) and the additional dividend for the year 1955 at Re. 1 per share Rs. 17,000 (*nil*). Thus there is a total loss of Rs. 11,15,096 (credit of Rs. 4,83,479). From this sum is to be deducted being amount transferred from general reserve for payment of proposed dividend for 1957 of Rs. 2,55,000 (*nil*). The directors recommend payment of a dividend on ordinary shares at Rs. 15 (Rs. 15) per share (free of income-tax) for the year ended 31st December 1957 absorbing Rs. 2,55,000 (Rs. 2,55,000) leaving a debit balance to be carried of Rs. 11,15,096 (credit of Rs. 2,28,479).

The year under review was a most difficult one for the Textile Industry in general. The heavy increase in the excise duty on Mill cloth levied in September 1956, reacted very unfavourably on the cloth market. Higher dearness allowance had to be paid to the workers on account of the Consumers Price Index Number for working class in Bombay, having gone higher compared to previous year, thus increasing the cost of production.

As per the agreement between the member mills of the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh, for the Mills in Bombay, regarding the payment of bonus to the employees for the years 1953 to 1957, the Company which is a member of the said Association will have to pay bonus, and accordingly, provisions have been made in the account for the year 1957 for the employees of the Bombay Unit.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,00,000	Gross block	1,12,98,983

*Reserves are shown after deducting the debit balance of Rs. 11,15,096 in the profit and loss account.

Radha Krishna Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. A. G. Gurusamy Naidu & Co., Peelamedu) submitted the audited accounts of the Company for the year ended 31st December 1957.

The year's trading has resulted in a net profit of Rs. 11,63,647 (Rs. 18,81,279). Out of this amount the following amounts have been written off—managing agency commission at 10 per cent. on the net profits of the Company as prescribed in the Companies Act, 1956 Rs. 72,444 (Rs. 2,44,017) and depreciation provided on assets Rs. 4,39,207 (Rs. 4,13,882) which leaves a balance of Rs. 6,51,996 (Rs. 12,23,380). Adding to this the previous year's balance brought forward of Rs. 3,882 (Rs. 4,862) the total amount available for distribution is Rs. 6,55,878 (Rs. 12,28,242). This amount the directors recommend to be disposed of as under:—To transfer to general reserve Rs. 1,60,189 (Rs. 3,00,000) to transfer to contingency reserve Rs. 1,89,196 (Rs. 4,20,000) and to pay a tax-free dividend at the rate of 12 (20) per cent. on the paid-up share capital of the Company as at 31st December 1957 absorbing Rs. 3,02,616 (Rs. 5,04,360) leaving a surplus to be carried forward to next year of Rs. 3,877 (Rs. 3,882).

The directors wish to report that the trade conditions during the year under review were not satisfactory. The prices of cotton remained at very high level and the prices of yarn and cloth were continuously on the decline. There was also large accumulation of stocks of yarn and cloth with the mills in the absence of regular and steady demand. Besides, the company had to meet heavier wage bills than last year on account of an increase in the basic wages of operatives. The excise duty on cloth during 1957 remained very high and most of this duty could not be passed on to the consumers on account of consumer resistance and accumulation of stocks. An additional sales tax was also levied by the State Government which was also a very heavy burden resulting in the cloth movement out of Madras State and the mills had to incur more transport charges. There was also an increase in the electricity rates by imposition of a surcharge. Besides, there was also a power cut for a period of nearly two months in the year dislocating production. On account of these several factors, the profits earned by the Company are very much less than last year.

The payment of bonus for 1956 equivalent to three months basic wages amounting to Rs. 1,97,776 and half month's basic wages for 1951 amounting to Rs. 25,420 making a total of Rs. 2,23,196 has been met out of contingency reserve. In respect of the year 1956 the operatives are demanding a higher bonus and the question is before the Special Industrial Tribunal appointed by the Madras Government for this purpose. The payment for the year 1951 is in addition to the bonus already paid.

The income-tax demand in respect of the year 1956 was made in the year 1958 and will come in for consideration in that year's account. A sum of Rs. 3,42,898 has been paid on this account during the year.

The Central Government has granted a licence to the mills for the installation of another 12,000 spindles for spinning staple fibre yarn. The expansion and the modernisation and renovation programmes of the mills will be completed in due course.

The directors have placed a resolution before the shareholders to authorise them to invest any sum or sums of money not exceeding Rs. 25 lakhs in the equity shares of the South India Viscose Limited. This Company has been incorporated with an authorised capital of Rs. 10 crores and has been formed for the purpose of manufacturing staple fibre, rayon, etc. The Company will establish a factory at Mettupalayam with foreign collaboration and an agreement has already been completed in this respect. It is expected that the factory may go into production by the end of 1959. It is proposed that this Company should join with other textile units of this place in establishing the factory which will produce essential raw materials like staple fibre, etc., required for the Company and others at cheap rates. In this connection it may be mentioned that the Company has already invested a sum of Rs. 3.4 lakhs in the equity shares of the United Bleachers (Private) Limited which is a joint enterprise with other textile mills in Coimbatore established for the purposes of processing the cloth manufactured by the member mills and other mills preference however being given to the former. The investment in the shares of the South India Viscose Limited will be on similar line and it is expected that such an investment will be highly advantageous and beneficial to this Company. This rayon and staple fibre industry is in a prosperous condition and is likely to continue to be so on account of the demand for staple fibre and rayon in the country and it is expected that the shares will be quoting at a premium when the factory goes into production.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25.30.420	Gross block	1,06.11,851

		Debts, deposits and advances ...	8,71,627
		Investments	4,12,387
		Cash ...	17,756
Rs.	99,31,676	Rs.	99,31,676

Banarhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit, after charging all expenses, of Rs. 4,88,713 (Rs. 26,76,881) of which taxation provision requires Rs. 2,86,000 (Rs. 10,30,000) leaving a balance of Rs. 2,02,713 (Rs. 16,46,881). The balance brought forward from last year was Rs. 4,50,485 (Rs. 4,09,604) and excess provision for taxation in previous years written back amounted to Rs. 50,000 (*nil*) making a total available for appropriation of Rs. 7,03,198 (Rs. 20,56,485). The directors now recommend that the following dividends be paid: On preference shares at the rate of Rs. 6.50 per share Rs. 26,000 (Rs. 26,000) and on ordinary shares at the rate of Rs. 20 (Rs. 40) per share absorbing Rs. 5,40,000 (Rs. 10,80,000) leaving a balance to be carried forward of Rs. 1,37,198 (Rs. 4,50,485 after transferring Rs. 5,00,000 to general reserve). Wealth Tax in respect of the years ended 31st December 1956, and 31st December 1957, is estimated to amount to Rs. 68,440 and this has been provided for by transfer from general reserve.

The severe drought conditions early in the 1957 season, referred to in the directors' last report, seriously affected the season's crop, and this with the drop in the general level of prices obtained for teas in 1957, accounts in the main for the disappointing results. Other factors are the increases in the cost of measures directed towards labour welfare such as the extension in April 1957, of staff provident fund facilities to all permanent garden labour which accounted for an additional Rs. 70,159 this year, while the loss on foodstuffs and the cost of firewood issues amounted to Rs. 96,630 more than in 1956.

A crop of 37,127 maunds was sold at an average price of Re. 1.84 per lb. This compares with a crop of 40,646 maunds in season 1956, sold at an average price of Rs. 2.47 per lb.

Estimates for the current season have been framed for a crop of 41,000 maunds to cost Rs. 51,92,520 and by the 14th August 1958, 16,776 maunds had been manufactured compared with 14,930 maunds to the same date last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Gross block	51,80,345
Reserves ...	28,56,560	*Less*—Depreciation ...	23,19,586
Provision for taxation*	6,65,602		
Liabilities ...	26,98,259	Net block ...	28,60,759

		Debts, deposits and advances ...	14,18,200
		Investments	79,166
		Cash ...	18,20,357
Rs.	94,57,619	Rs.	94,57,619

*Includes provision for wealth-tax Rs. 68,440.

Choonabhutti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit, after charging all expenses of Rs. 4,30,500 (Rs. 7,75,426) of which taxation provision requires Rs. 2,30,000 (Rs. 2,83,000) leaving a balance of Rs. 2,00,500 (Rs. 4,92,426). The balance brought forward from last year was Rs. 1,50,935 (Rs. 1,36,509) and excess tax provisions in previous years written back amounted to Rs. 20,000 (*nil*) making a total available for appropriation of Rs. 3,71,435 (Rs. 6,28,935). The directors have transferred to general reserve Rs. 60,000 (Rs. 1,50,000) and to investment realisation surplus Rs. 851 (*nil*). The directors now recommend payment of dividends on preference shares at Rs. 6.50 (Rs. 6.50) per share absorbing Rs. 13,000 (Rs. 13,000) and on ordinary shares at Rs. 20 (Rs. 35) per share absorbing Rs. 1,80,000 (Rs. 3,15,000) leaving a balance to be carried forward of Rs. 1,17,584 (Rs. 1,50,935).

A record crop of 14,951 maunds was sold, but owing to the general drop in the level of prices, the sale proceeds averaged Rs. 1.91 per lb. This compares with a crop of 13,052 maunds in season 1956, sold at an average price of Rs. 2.40 per lb.

Estimates for the current season have been framed for a crop of 14,000 maunds to cost Rs. 17,93,054 and, provided normal conditions prevail, it is expected that the estimated crop will be secured.

Accounts in brief are as under:—

Teen Ali Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

A crop of 8,020 (7,735) maunds was manufactured and has been disposed of for sale in Calcutta for export 7,278 (6,857) maunds, and for sale in Calcutta for internal consumption 742 (878) maunds. The teas realised an average price of Rs. 2.42 per lb. as compared with Rs. 2.60 per lb. obtained for the previous season's crop. The Company's export quota for season 1957 was 4,841 (5,060) maunds. The area under cultivation at 31st December, 1957, was 510.08 acres.

The revenue account shows a profit of Rs. 4,40,364 (Rs. 5,65,851) and after deducting from this manager's planting commission Rs. 193 (*nil*), staff commission and bonus Rs. 19,954 (Rs. 35,164), managing agents' remuneration Rs. 39,276 (Rs. 49,600), provision for taxation Rs. 1,70,000 (Rs. 2,00,000), depreciation Rs. 70,585 (Rs. 60,776) and initial contribution to superannuation fund Rs. 4,083 (*nil*) there is left a balance of Rs. 1,36,273 (Rs. 2,06,411). To this amount is added the interest on investments (*net*) Rs. 4,907 (Rs. 5,162), profit on sale of machinery Rs. 1,750 (*nil*), excess provision for sales-tax—written back Rs. 8,935 (*nil*) and excess provision of liabilities in respect of previous year, no longer required Rs. 4,674 (*nil*), giving a net profit for the year of Rs. 1,56,539 (Rs. 2,11,603 including forfeited dividends Rs. 30). After adding to this the adjusted credit balance of Rs. 28,053 (Rs. 24,540) brought forward from the previous year, there is a credit balance of Rs. 1,84,592 (Rs. 2,36,143) on profit and loss account. The directors recommend that this balance be disposed of as follows:

To pay a dividend of 25 (30) per cent. for season 1957 without any deduction for income-tax payable by the Company absorbing Rs. 1,12,500 (Rs. 1,35,000) and to carry forward Rs. 72,092 (Rs. 26,143 after placing to buildings and machinery reserve account Rs. 75,000).

Estimates for season 1958 have been framed for a tea crop of 7,200 maunds at a total cost of Rs. 10,38,459 which excludes capital expenditure to the tune of Rs. 4,61,700.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,000	Gross block	13,11,575
Reserves ...	8,50,000	*Less*—Depreciation ...	5,17,360
Provision for taxation ...	4,38,853		
Liabilities ...	4,85,016	Net block ...	7,94,215
Profit and loss account ...	72,092	Capital work in progress	5,851
		Stock-in-trade	6,16,990
		Stores and supplies ...	2,19,130
		Loans and advances ...	2,55,146
		Investments	1,97,912
		Cash ...	2,06,717
Rs.	22,95,961	Rs.	22,95,961

Ganges Rope Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year after charging depreciation of Rs. 1,05,615 (Rs. 92,884) amounts to to Rs. 7,18,628 (Rs. 3,37,376). Adding thereto the surplus on claim for assets destroyed by fire Rs. 11,879 (Rs. 65,536), forfeited dividends Rs. 525 (*nil*) and the balance brought forward from the previous account of Rs. 34,634 (Rs. 6.722) there is a total amount of Rs. 7,65,666 (Rs. 4,09,634). The directors have transferred to reserve for doubtful debts Rs. 3,000 (*nil*), to general reserve Rs. 1,00.000 (*nil*), to provision for taxation Rs. 4,07,000 (Rs. 1,90,327) and to provision for wealth tax Rs. 12,700 (Rs. 9.673) leaving an available sum for distribution of Rs. 2,42,966 (Rs. 2,09,634). This amount the directors recommend should be disposed of by payment of a dividend of Rs. 15 (Rs. 12.50) per share absorbing Rs. 2,10.000 (Rs. 1,75,000) leaving to be carried forward to next account Rs. 32,966 (Rs. 34,634).

An increased level of production was maintained throughout the year and the Company was able to sell its products profitably in the internal and external markets, despite severe competition.

Continued restrictions were imposed by the Government of India on imports of essential raw materials and production had, therefore, to be limited to the extent of the quantities of foreign fibres the Company was authorised to import under a licence.

Plans are afoot for the modernisation of certain sections of the factory, through a phased programme, by replacing uneconomic and obsolescent machinery with up-to-date equipment; this will reduce the operational costs and improve the trading results of the Company in the years to come.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,00.000	Gross block	36,71,778
Reserves ...	10,35,000	*Less*—Depreciation ...	20,74,954
Provision for taxation ...	2,93,486		
Liabilities ...	33,74,762	Net block ...	15,96,824
Profit and loss account ...	32,966	Stocks ...	19,68.975
		Stores ...	6,77,268
		Debts, deposits and advances ...	18,87,687
		Cash ...	5,460
Rs.	61,36.214	Rs.	61,36.214

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE COORLA SPINNING AND WEAVING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTY-SIXTH Ordinary General Meeting of the Company will be held at its Registered Office at Readymoney Mansion, Vir Nariman Road, Fort, Bombay, on Friday the 24th day of October 1958, at 4-30 p.m. (S.T.), to transact the following business:—

1. To consider and adopt the Audited Profit and Loss Account and Balance Sheet and the Reports of the Directors and Auditors for the year ended 31st March 1958,
2. To declare a dividend and a bonus.
3. To elect a Director in place of Mr. C. P. Wadia, who retires by rotation but being eligible offers himself for re-election, and for that purpose to consider, and if thought fit, to pass the following Resolution as a Special Resolution of which special notice has been given to the Company and is hereby given pursuant to Sections 261 and 281 of the Companies Act, 1956, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Mr. C. P. Wadia is a relative of the Directors of Cowasjee Jehangir & Co. Private Ltd., the Managing Agents of the Company, and hence an associate of the Managing Agents, and is liable to retirement by rotation, and as he has completed the age of 78 years:—

"RESOLVED that the Company hereby appoints and/or hereby approves of the appointment of Mr. C. P. Wadia as a Director of the Company and it is hereby declared that the age limit laid down in Section 280 of the Companies Act, shall not apply to him."

4. To elect a Director in place of Lady Hirabai Cowasjee Jehangir, who retires by rotation but being eligible offers herself for re-election, and for that purpose to consider, and if thought fit, to pass the following Resolution as a Special Resolution of which special notice has been given to the Company and is hereby given pursuant to Sections 261 and 281 of the Companies Act, 1956, in as much as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Lady Hirabai Cowasjee Jehangir is a relative of the Directors of Cowasjee Jehangir & Co. Private Ltd., the Managing Agents of the Company, and hence an associate of the Managing Agents, and is liable to retirement by rotation, and as she has completed the age of 65 years:—

"RESOLVED that the Company hereby appoints and/or hereby approves of the appointment of Lady Hirabai Cowasjee Jehangir as a Director of the Company and it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to her."

5. To elect a Director in place of Dr. Rustom C. Cooper who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under Article 125 of the Articles of Association of the Company, but being eligible offers himself for re-election, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and, if thought fit, to pass the following Resolution:—

"RESOLVED that the Company being satisfied that the insurance premia charged and other charges made by the Royal Insurance Co. Ltd. and the New India Assurance Co. Ltd. for insurance in respect of the Company's properties and assets, for loss of profits and other risks, are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, it hereby authorises Cowasjee Jehangir & Co. Private Ltd., the Managing Agents of the Company, to retain any commission or other remuneration already earned or to be hereafter earned by the Managing Agents as insurance agents of the said Insurance Companies, in respect of insurance policies or other contracts of insurance which have been or which may at any time hereafter be entered into by the said Insurance Companies with this Company."

An explanatory statement in respect of the above items 5 and 7 of business is herewith annexed.

PLEASE NOTE THAT A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THAT A PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,

COWASJEE JEHANGIR & CO. PRIVATE LTD.,
Managing Agents,

COWASJEE JEHANGIR,
Chairman.

BOMBAY, 11*th September* 1958.

The Transfer Book of the Company will remain closed from the 11th day of October 1958 to the 25th day of October 1958. If the dividend and bonus as recommended by the Directors are passed at the meeting, payments thereof will be made to those shareholders whose names are on the Company's Register on the 10th day of October 1958 and the payments will be made on and after the 27th day of October 1958.

EXPLANATORY STATEMENT

To

THE SHAREHOLDERS OF
THE COORLA SPINNING & WEAVING
COMPANY LIMITED.

Dear Sir/Madam,

As to item No. 5 mentioned in the accompanying Notice, on 19th May 1958 the Board of Directors appointed Dr. Rustom C. Cooper as an additional Director under Article 125 of the Articles of Association of the Company. Under the same Article he can hold office only upto the date of the ensuing Annual General Meeting of the Company. The Company has received Notice from two shareholders of their intention to propose Dr. Rustom C. Cooper as Director at the next Annual General Meeting, under Section 257 of the Act. Dr. Rustom C. Cooper is a well-known Chartered Accountant and it is desirable that he should continue to be a member of the Board.

As to item No. 7 mentioned in the Notice, it will be recalled that a Resolution was passed at the Extraordinary General Meeting of the Company held on 30th October 1956 whereby Cowasjee Jehangir & Co. Private Ltd. were authorised to retain the commission or other remuneration already earned or to be earned by them at any time thereafter as one of the Principal Agents of the Royal Insurance Co. Ltd. in respect of Insurance Policies or other contracts of insurance which had been or which might at any time thereafter be entered into by the said Insurance Company with this Company. With the introduction of the Insurance (Amendment) Act, 1957, Cowasjee Jehangir & Co. Private Ltd. ceased to be one of the Principal Agents but since then began to act in the capacity of ordinary insurance agents of the Royal Insurance Co. Ltd. and the New India Assurance Co. Ltd. and it has therefore become necessary under Section 359 of the Companies Act to pass the Resolution set out in item No. 7.

By Order of the Board of Directors,

COWASJEE JEHANGIR & CO. PRIVATE LTD.,
Managing Agents.

COWASJEE JEHANGIR,
Chairman.

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Sixty-fifth Annual General Meeting of the SHAREHOLDERS of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday the 14th October 1958, at 4-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February 1958.
2. To declare a Dividend.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To pay additional remuneration to the Managing Agents.

The Transfer Books of the Company will be closed from the 10th day of September 1958 to the 4th day of October 1958, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

(The holders of the 4½ per cent. Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting.)

Detailed notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,

N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,

V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 26*th August*, 1958.

N.B.—The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Friday the 24th October 1958, to those Shareholders whose names stand on the Register of Members on the 10th September 1958. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 30th September, 1958. The Preference Share Registers will be closed from the 24th September to the 30th September, 1958, both days inclusive. Payment will be made on or after 13th October, 1958, to those Preference Shareholders whose names appear on the Company's Registers on the 30th September, 1958, or in accordance with their instructions.

By Order of the Board,

L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW,
CALCUTTA 1, 10*th September*, 1958.

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT INTEREST for the half-year ending 30th September, 1958, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1958, or in accordance with their instructions.

L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW,
CALCUTTA, 10*th September*, 1958.

MONEY UNEVENTFUL

(*From Our Own Correspondent*)

BOMBAY, 17*th September*

With banks remaining closed on the 16th and 17th inst. on account of *Ganesh Chaturthi*, the week under review is a short one. There have been no outstanding developments during the week. The trend of the market continues to be easy with lenders over. Interest rates remain unchanged at the self-same levels. Inter-bank call money is quoted 2 per cent. with big banks and 2¼ per cent. with small banks. The rate for house money repayable on demand is 3¼-3¾ per cent. One to six months' deposits fetch 3½ to 4 per cent.

The response to 91 days' Government of India Treasury Bills was not very encouraging. As against an invitation for Rs. 2 crores, the total amount offered was Rs. 274.50 lakhs which compares unfavourably with Rs. 394.50 lakhs offered in the previous week against an invitation for Rs. 3 crores. The average rate of accepted tenders was a shade higher at 2.524 per cent. per annum, as against 2.523 per cent. per annum a week ago. Tenders for Rs. 2 crores of bills have been invited for next week.

As the Reserve Bank's statement for the week ended 12th September 1958 is not available at the time of writing, our customary analysis of this statement is not included here.

The Scheduled banks' statement for the week ended 5th September 1958 shows, as compared with that for the previous week, a decline of Rs. 9.58 crores in deposits, of which Rs. 5.11 crores have occurred under time deposits. Total net deposits amount to Rs. 1,528.92 crores; a year before, they stood at Rs. 1,291.08 crores. Borrowings from banks of both demand and time nature show a net fall of Rs. 1.38 crore. But borrowings from the Reserve Bank are higher by Rs. 3.24 crores at Rs. 5.96 crores. A small increase of Rs. 95 lakhs is seen in borrowings from the State Bank also. Bank credit is slightly lower by Rs. 1.26 crore, the total being Rs. 855.11 crores. The ratio of this asset to deposits is 55.93 per cent. as against 65.57 per cent. a year ago. Investments in Government securities have gone up from Rs. 572 crores to Rs. 578 crores, while cash balances are lower by Rs. 5.44 crores at Rs. 131.40 crores. Money at call and short notice have shrunk by Rs. 1.20 crore to stand at Rs. 54.63 crores.

The trend of the Gilt-edged market is quite steady with further small gains in some of the Government of India loans. The turnover, however, has fallen considerably. There is hardly any enquiry for State loans. The Reserve Bank continues to sell 3½ per cent. 1967 and 3½ per cent. 1968 at the rates enhanced towards the close of the last week, namely, Rs. 98.85 and Rs. 98.60, respectively. The Bank is also a seller in 4 per cent. 1972 and 4 per cent. 1973, but at slightly higher rates of Rs. 100.50 and Rs. 100.30, respectively, an increase of 5 nP. Over the week, a gain of 5 nP is shown by 2½ per cent. 1961 and 2¾ per cent. 1962 and of 10 nP in 2¾ per cent. 1976, 3 per cent. 1963-65, 3 per cent. 1964, 3 per cent. 1970-75 and 4 per cent. 1967.

The foreign exchange section of the money market was featureless, with hardly any change in rates. Only, Canadian dollars were a shade easy, with banks' selling rate for ready coming down from Rs. 494 per $100 to Rs. 490.25.

DEMAND FOR METALS LIMITED

(*From Our Own Correspondent*)

CALCUTTA, 16*th September*

There was only limited demand for metals during the week under review, as consumers were reluctant to enter into commitments for any large quantity on hopes that, with the expected liberalisation of import policy at least with regard to base metals, local prices might move down. Importers of copper said that the permits issued by the Controller had not been sufficient to ease their stock position after recent arrivals.

The aforesaid state of affairs certainly supports the demand, voiced by the Bombay Metal Exchange during the week, that the control on copper should be removed forthwith. Control has failed to control the prices of scrap and copper products, prices of which have no justifiable relationship with those for the raw material released through control. The result is that an unsatisfactory situation exists, and now importers are also finding difficulty, since permits have not been adequate enough to absorb arrivals. Further, market circles feel that, with the improvement in the country's foreign exchange position and the anticipated liberalisation in import policy, the time has come to end the control over copper and to allow the natural law of demand and supply to determine prices. It is noted that copper on the London Metal Exchange is fully firm at £206½ ready and at £207 for three months' delivery. The firmness is attributed to the possibility of production in Rhodesia being affected, since labour unrest exists there.

Lead at Rs. 68 was fractionally better. Some quantity changed hands, but the supply position was comfortable. Tin opened at Rs. 568 and eased to Rs. 465, as demand was small, while supplies were plentiful. Electrolytic zinc was unchanged at Rs. 67.50. Excepting for a tender by Tatas, there was little other activity in zinc.

ORTHODOX TEAS FULLY STEADY

(*From Our Own Correspondent*)

CALCUTTA, 16*th September*

A mixed trend was in evidence in tea export sales held yesterday, as well as at the last week's auctions for internal consumption. Dusts on offer during last week amounted to 19,740 chests. Orthodox teas were fully steady. The stronger liquoring powdery teas gained by 6 nP, while, in irregular trend, C.T.C. Assams were often sold at rates up to 50 nP below valuation. However, as the sales were coming to a close, a small improvement in trend was in evidence. The quotations—in rupees per lb.—with those of the previous week in brackets, were: Best Assam C.T.C. 2.45 to 2.70 (2.50 to 2.75); medium Assam C.T.C. 2.15 to 2.35 (2.20 to 2.40); medium Assam grainy dust 1.76 to 1.78 (1.74 to 1.78); and medium Dooars 1.74 to 1.76 (1.72 to 1.74).

There was fair general demand for leaf grades amounting to 1,439 chests. C.T.Cs were an exception to the general trend and remained quiet. Prices of other kinds rose above valuations.

Export quota met with business at 8¼ nP, 8 nP, and 8¼ nP.

Export offerings amounting to 61,447 chests, met with good demand during yesterday's sales. Bright liquoring orthodox Assams were keenly bid, while the B.O.Ps and O.Fs belonging to this category registered an irregular trend and gave way by 20 nP. A firmer tendency was recorded in plain liquoring brokens, but fannings of these kinds declined. The lower-priced C.T.Cs were about firm, but other lots of this category fell by 10 to 30 nP. Legg cut teas moved down by 5 to 10 nP. Whole leaf grades were bid at lower rates. Tippy teas sold well, but Darjeelings eased. The quotations were: Best Assam C.T.C. fannings Rs. 3.10 to 3.30 (3.20 to 3.40); best Assam C.T.C. B.P. Rs. 2.80 to 3.00 (2.90 to 3.10); clean black pekoe Rs. 2.05 to 2.10 (same); medium fannings Rs. 2.00 to 2.15 (same); plain B.P. Re. 1.70 to 1.74 (same); plain fannings Re. 1.78 to 1.86 (1.76 to 1.84); and medium B.P. 1.90 to 1.95.

BULLION A SHADE LOWER

(*From Our Own Correspondent*)

BOMBAY, 17*th September*

As in the previous week so also during the week under review, the bullion market had only three working sessions, owing to holidays on the 13th, 16th and 17th inst. The market presented an easy trend on Thursday and Friday, but picked up some strength on Monday. The earlier easiness was due to selling by Calcutta and Delhi operators. Consequently, prices tended to move down. A recovery was in evidence on Monday, thanks to short-covering and replacement buying, while offerings were limited on account of the uncertain international situation. The recovery, however, was not so marked as to make up for the initial losses, so that the closing rates for both silver and gold on Monday were lower than those at the end of last week.

Forward silver (*Bhadrapad* settlement) opened at Rs. 186-3, as against Rs. 186-6, and receded on selling pressure to Rs. 185-11 on Monday before recovering to Rs. 186-3. The net loss over the week was As. 3. *Aswayuj* delivery declined from Rs. 187 to Rs. 186-12, but finished higher at Rs. 187.

Ready silver eased from Rs. 185-11 to Rs. 184-14 and, after fluctuating between this level and Rs. 185-10, closed at Rs. 185-7 on Monday. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 15 bars, while offtake was 9 bars per day on an average.

Gold for forward delivery (*Bhadrapad* settlement) moved down from Rs. 107-7 last week-end to Rs. 106-13 on the 12th inst. It, however, recovered to Rs. 107-6 on Monday. *Aswayuj* delivery was quoted at Rs. 107-11-6, as against Rs. 107-11 on Wednesday last.

Ready gold, which stood at Rs. 107-7 last week, declined on selling pressure to Rs. 106-5 on Friday. Subsequently, it recovered, the closing rate on Monday being Rs. 107. The floating stocks of gold are reported to be 40,000 tolas. The daily average arrivals were 7,000 tolas, while offtake was of the order of 3,700 tolas.

The price of spot silver in London improved from 75¾*d.* on the 9th inst. to 76¼*d.* on Thursday, but eased thereafter to 75¾*d.* The price in New York was unchanged at 88⅝*c.* Gold prices in London declined from 250*s.* 7½*d.* to 250*s.* 6*d.* on Thursday, but recovered to 250*s.* 6¾*d.* on the 13th inst.

The following comparative table shows at a glance the trend of the market during the week under review:

	15-9-58	Highest	Lowest	10-9-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	107 4	107 8	106 5	107 7

HIDES ARRIVALS CONSIDERABLE

(*From Our Own Correspondent*)

KANPUR, 15*th September*

During the week under review, new arrivals of hides and skins were considerable. The local butcheries were yielding a greater volume of goods. The main purchasers were the local tanners and the exporters. Both the Madras dealers and the country tanners were lukewarm in their activities.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360 to Rs. 380, 2nd grade Rs. 280 and 3rd grade Rs. 140 to Rs. 180 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat, 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 175 to Rs. 200 per 100 pieces.

COTTON FUTURES EASY

(*From Our Own Correspondent*)

BOMBAY, 17*th September*

During a short week of only four trading days, the market having been closed yesterday and today on account of *Ganesh Chaturthi* and *Samvatsari*, respectively, the cotton futures market depicted a distinctly easy trend. Although there was optimism, which later turned out to be well founded, that the Cotton Advisory Board, at its meeting on Monday, would recommend abolition of export duty and release of fairly large export quotas, the market did not derive any strength from it. The Board recommended a quota of 275,000 bales of cotton comprising 150,000 bales of Bengal *Deshi*, 50,000 bales cotton stapling not above ¾" to be supplemented by a further quota of a like amount, and 25,000 bales of old crop Punjab cotton of stapling not above 13/16" staple. It also urged the abolition of the export duty of Rs. 50 per bale in view of competition from Pakistan. A somewhat similar plea was also made by the Indian Central Cotton Committee at its meeting held in Bombay on Saturday. That too failed to have any influence on the market. The sentiment of operators continued to be influenced by four chief factors: (1) expectation of a bumper crop of about 5.7 million bales, (2) lack of improvement in yarn and cloth market, (3) downward trend in mill consumption of cotton, and (4) weak spot advices and the none-too-happy export outlook. These considerations discouraged support and, on the emergence of fresh selling, cotton futures values suffered a sharp break.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 663, as against the previous day's close of Rs. 663.25 and, after having improved to Rs. 666.25 on short covering, reacted to Rs. 663 the same day. It declined further in subsequent sessions to reach a low of Rs. 655 on Monday. The closing was, however, fractionally higher at Rs. 655.50. The net loss over the week was Rs. 7.75.

The trend of price of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	15-9-58	*High*	*Low*	10-9-58
I.C.C. Moglai Jarilla (March 1959) ...	655.50	666.25	655	663.25

The spot section was devoid of much activity and values declined. Mill demand was on a very restricted scale. Interest was mainly confined to staple varieties like Hubli Jayadhar, Laxmi, 0394, etc. These were, however, quoted lower.

The export front also presented a dull appearance. Foreign enquiries were not encouraging. Shippers were moderately interested in Punjab 320F and Vijay. Hong Kong was said to be interested in the latter quality. Exporters were optimistic about the Government's announcing a liberal export policy. But the real problem, according to them, was not to procure quotas, but to find markets for Indian cotton in the face of severe competition. They were sceptical whether the quotas already issued and those which might be issued shortly would be absorbed unless these were accompanied by some export incentive.

The foreign section was quiet. Sudanese styles and selected East African growths received some attention. For instance, Sudan Sakels and A.R. Uganda varieties were well favoured. Importers welcomed the recommendation of the Cotton Advisory Board to permit import of 600,000 bales of cotton in the 1958-59 season consisting of 200,000 bales of Sudan and Egyptians and 400,000 bales of U.S. and East African growths. Half of this quality, the Board had suggested, should be imported as hitherto and the remaining balance should be under the incentive scheme proposed to be given in respect of cotton piecegoods exports.

The protest lodged by Indian importers against the decision of the Egyptian Government to reduce the discount on purchases of Egyptian cotton from the previous rate of 21 per cent. to 15 per cent. from 1st September 1958, would seem to have had some effect. Egypt has decided to allow the old rate of discount, namely, 21 per cent. on cotton shipped before 1st September 1958. This has also been confirmed by the State Bank of India. Whilst the concession thus given was welcome, what the trade was asking for was that the old rate should be made applicable to the import allocation of 30,000 bales of cotton issued by the Government of India on 6th August. Considerable amount of business in Egyptian cotton has been concluded in August against this allocation on the basis of the old exchange rate. Since, however, the import licences could not be obtained before the end of August against the mill allotment letters, the necessary exchange on the basis of old rate could not be secured. The unfortunate consequence of this, traders point out, would be that India would now be required to pay more in terms of rupees for the cotton already contracted for.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end rates:

Bengal *Deshi* 610 (625); Berar Jarilla 675 (680) Khandesh 725 (750); Vijay 850 (865); Hubli Laxm 950 (1,000); Jaydhar 880 (895). *Delivery contracts*: Bengal 593 (594); Mathia 612 (614).

Quiet conditions prevailed in the Karach cotton futures market during the week. Value showed a sagging tendency. Foreign demand con tinued to be dull. Favourable weather news an slack domestic demand influenced some sellin with the result that prices tended to recede. Trad ing in the spot section was featureless. N.T.R.G January shed two annas over the week, fron Rs. 78-4-6 last week-end to Rs. 78-2-6, and th March position dropped a like amount to Rs. 78-7-(
The following are the latest available quotations—

in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing in Karachi:

Sind *Deshi* 75-8; Punjab *Deshi* 71-8; 4F Punjab Roller 71-3; S.G. 77-3; L.S.S. Punjab Roller 74-3; S.G. 80-3; N.T. Roller 81-3; S.G. 91-11; 289F Punjab Roller 85-11; S.G. 89-3.

The Alexandria cotton futures market ruled subdued during the week. In the absence of encouraging export advices, support was lacking. Keen competition from Sudan and report of satisfactory crop progress imparted weakness to the market. The following are the latest available quotations—in tallaris per lb.—from Alexandria (the figures in brackets being last week's closing rates):

Karnak: November 72.20 (72.45); January 72.40 (72.55). *Ashmouni*: October 64.95 (66.05); December 65.00 (65.90).

Last month was a favourable one for the new crop. In Upper Egypt, as a result of leaf worm attacks and morning mists, the crop is expected to be smaller and high grades less plentiful than previously expected. In Lower Egypt there has been attacks of red spider and about 5 per cent. of the crop is said to have been affected.

Cotton values in Liverpool made modest gains during the week. Higher advices from New York and better activity in the spot influenced a better trading sentiment. Both the American and American type contracts advanced on mill fixations and buying by American interests. Sudan contracts were, however, neglected.

New York cotton futures market put on a better appearance during the week. Values moved higher on good support by Commission Houses and New Orleans traders. The main influencing factor was the feeling that, although the September crop forecast was higher than expected, the supply position would become light as the season advanced because of the heavier loan entry. Reports of unwanted rains in the north-west regions of the cotton belt and the Memphis area imparted further strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	16-9-58	9-9-58	2-9-58
Spot	36.10	36.15	36.20
October	35.55	35.39	35.25
December	36.03	35.83	35.59
March	36.53	36.30	35.98

SUGAR FIRM AGAIN

(From Our Own Correspondents)

BOMBAY, 17*th September*

Despite the release of 165,000 tons for free sale on Monday, the sugar market depicted a firm trend during the week under review. The demand from Malabar and South Indian sides was quite sustained. There was also the commencement of post-monsoon demand for sugar. Buying support, therefore, ensued and prices registered a further improvement.

Arrival of sugar by rail into the market during the week amounted to 13,800 bags, as aganist 9,000 bags last week.

Medium grain sugar advanced by a rupee to Rs. 107-Rs. 109 per bag. Large grain gained a like amount to Rs 110-Rs. 117. Small grain was higher by 50 nP at Rs. 105-Rs. 106.

The total production and despatches of sugar upto the end of August 1958 amounted to 1,968,000 and 1,704,000 tons, as against 2,021,000 and 1,800,000 tons, respectively, in the corresponding period of 1956-57. The closing stocks of sugar with mills as on 31st August were 699,000 tons.

* * * *

HAPUR, 15*th September*

Quiet conditions were witnessed in the local sugar market during the past week, thanks to lack of fresh support. Demand from consuming centres was slack and current quota stocks were reported to have been exhausted. Small crystal prices, which were being quoted below the controlled prices last week, registered modest gains during the week.

Demand was negligible in the Muzaffarnagar sugar market during the week under review. Only small business was done for destinations in Gujerat. Traders feared a fall in prices on release of fresh quota which was expected shortly. The latest prevailing prices (crystal wholesale mill delivery) were: Khatauli (A29) Rs. 37.75; Deoband (A28) Rs. 37.37; Iqbalpur (A29) Rs. 37.75; Mansurpur (A28) Rs. 37.37; Amroha (D29) Rs. 35.69; Saharanpur (D28) Rs. 35.69; Bijnore (E29) Rs. 35.50.

Heavy arrivals coupled with slack demand, accounted for quiet conditions in the Kanpur sugar market during the week. While superior quality prices were steady, inferior quality could not fetch even the controlled prices. The local stock was heavy at 25,000 bags. The mills were reported to be hesitant to sell superior quality sugar and were obviously looking forward to better prices in the near future when festive demand would increase. The latest prevailing ex-mill controlled prices were:— Rs. 36-12 per maund, spot (per bag) (C29), Basti Rs. 103-8; Gola Rs. 102-8, (D29) Gola and Burhwal Rs. 101-12, Waltergunj, Tulsipur and Balrampur Rs. 101-4, Lakhimpur and Haragaon Rs. 101.

Khandsari prices ruled quietly steady. They ranged between Rs. 33 and Rs. 36 per maund according to quality.

Gur stocks here were fast dwindling and new produce arrivals were expected after a fortnight by which time old stocks were expected to be exhausted. Local stocks at about 8,000 maunds were of dry-wet *kotha* quality and were being quoted at Rs. 19.75 per maund. Stockists were now anxious to exhaust their stocks before the new produce arrivals began. The condition of the standing cane crop was reported to be excellent and an increase in production over last year was predicted.

The ready *gur* market also ruled quiet at Muzaffarnagar where stocks were now put at 5,000 maunds. *Pansera* wet and *chaku* wet declined by 50 nP per maund. *Chaku kotha gur* and *deshi khandsari* were quoted at Rs. 22 to Rs. 22.50 and Rs. 33 to Rs. 36 per maund, respectively. *Fagun* declined sharply on active bear pressure. Opening at Rs. 14.17 last week-end, the delivery declined in successive sessions to be quoted now at the worst level of the session at Rs. 13.65.

YARNS LISTLESS

(From Our Own Correspondent)

BOMBAY, 17*th September*

Listless conditions prevailed in the yarn market during the week under review. Transactions put through were limited and prices moved narrowly. Both art silk and staple fibre yarns encountered selling induced by reports from important consuming centres indicating heavy accumulations of stocks with dealers. The imposition of control on distribution and prices of indigenous staple fibre announced last week had no significant effect on the market. For operators preferred to await more specific details regarding the control order and also to watch the price policy of the spinning mills. Some of them felt that, in view of its anxiety to help the mills engaged in the spinning of staple fibre yarns, the Government might relax, to some extent, imports of essential raw materials for the production of staple fibre. This feeling led to expectations of enlarged supplies in the future. Staple fibre yarn prices, as a result, tended to look down. Cotton yarns continued to remain dull despite reports that Burma had invited tenders for the supply of 6,000 bales of 20 counts yarn and 1,000 bales of 30 counts. The market was closed yesterday and today.

Staple fibre yarns (40 x 2) October delivery encountered selling and dropped Rs. 7 to Rs. 707. The question of opening business in December delivery will be taken up for consideration by the Yarn Merchants' Association and Exchange at its meeting to be held on the 27th inst. Spot 40 x 2 Citys receded by 9 nP to Rs. 3.72. Centurys shed 3 nP to Rs. 3.75. Kohinoors were neglected at Rs. 3.94.

In the art silk yarn section, 150 Japan retreated by 10 nP to Rs. 6.34. 120 Japan was dull at Rs. 5.97. Among indigenous yarns, National Rayons 120 bright cones first grade lost 3 nP to Rs. 6.09. 150 bright cones first grade were done at Rs. 5.03.

Cotton yarns were dull. Ten counts Podars were quoted at Rs. 12.37 and Moderns at Rs. 13.25. Twenty counts Indus were on offer, the quotation declining by 12 nP to Rs. 16.50. Moderns were stagnant at Rs. 16.75, as also Gokaks at Rs. 16.50. Among thirty counts, Hinds attracted some attention and gathered 25 nP to Rs. 20. Forty counts Minaxis were quiet at Rs. 25.25. But Moderns climbed up by 50 nP to Rs. 25.75. Among sixty counts, Finlays changed hands at Rs. 58, same as last week. Among eighty counts, Mahendras dropped Re. 1.50 to Rs. 70. Moderns and Finlays were done at Rs. 71.50 and Rs. 78, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those five days ago:

	15-9-1958	10-9-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.97	5.97
150 Japan (per lb.)	6.84	6.44
120 Italy (per lb.)	—	6.37
150 Italy (per lb.)	—	6.50
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	707.00	714.00
40 x 2 Kohinoor (per lb.)	3.94	3.94
40 x 2 City (per lb.)	3.72	3.81
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.37	12.37
20s Modern	16.75	16.75
30s Hind	20.00	19.75
40s Minaxi	25.25	25.25
60s Finlay	58.00	58.00
80s Mahendra	70.00	71.50

OILSEEDS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 17*th September*

The oilseeds market ruled distinctly irregular during the week under review. Thus, groundnuts and castorseeds were depressed, while linseed and other seeds presented a firm trend. Groundnut's encountered hedge selling from upcountry centres, particularly Saurashtra where conditions of the crop were reported to be very good, thanks to beneficial weather conditions. Castorseeds were subjected to stop-loss selling. The firmness of linseed was aided by reports that Australia was interested in purchasing 700 tons of linseed oil and depletion in the floating stocks of linseed. On Saturday, the old crop linseed rose much higher than the new crop, so that the backwardisation charges between September and May contracts increased from Re. 1.50 to Rs. 2. In the cottonseed section, the maturing contract tended to move up, while the distant delivery suffered a setback. On Monday, tenders of 400 candies of castorseeds were issued, bringing the total tenders so far to 1,200 candies. There were no tenders in linseed and cottonseed. The market remained closed yesterday and today.

Groundnut February 1959 contract came down on selling pressure from Rs. 167.75 to Rs. 164.62. Bold ready, however, evoked some support and rose by 12 nP to Rs. 41.12. Coromandel and Khandesh quality, both after improving from Rs. 41.25 to Rs. 41.75, declined to Rs. 41.62. Groundnut oil ex-mill dropped 12 nP to Rs. 21.25. Railway receipt fell by a like amount to Rs. 21.

Castorseed September 1958 contract receded by Rs. 2 to Rs. 158. May 1959 contract slided down from Rs. 159.62 to Rs. 155.25. Ready Madras eased by 25 nP to Rs. 31.75. Kanpur quality lost a similar sum to Rs. 30.50. Castor oil B.S.S. declined by 13 nP to Rs. 17.62. Commercial quality was done at Rs. 16, as against Rs. 16.25 last week.

Linseed September 1958 contract, as already stated, was well favoured, the quotation spurting from Rs. 33.50 to Rs. 34.62 on Monday. In contrast, May 1959 contract was subjected to selling and dropped 56 nP to Rs. 32.06. Bold ready rallied Re. 1.13 to Rs. 34.50. Linseed oil hardened by 32 nP to Rs. 17.94.

In the cottonseed section, September 1958 contract elicited continued buying support and strengthened by Rs. 2 to Rs. 128. February 1959 contract, on the other hand, came in for selling and moved down from Rs. 105.75 to Rs. 103.50.

Among other seeds, kardiseed bold ready was well supported, the rate moving from Rs. 22 to Rs. 22.50. Nigerseed Madras was also well supported, the rate advancing from Rs. 34 to Rs. 34.75.

The following table shows the closing prices of oilseeds and oils on Monday as compared with those a week and two weeks before:

	15-9-1958	10-9-1958	3-9-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	164.62	167.75	165.62
Bold ready (per cwt.)	41.12	41.00	39.00
Linseed—			
Sept. 1958	34.62	33.50	33.12
May 1959	32.06	32.62	32.37
Bold ready (per cwt.)	34.50	33.37	33.12
Castorseed—			
Sept. 1958	158.00	160.00	158.75
May 1959	155.25	159.62	158.25
Madras (per cwt.)	31.75	32.00	31.87
Cottonseed—			
Sept. 1958	128.00	126.00	121.50
Sept. 1959	103.50	105.75	105.50
*Groundnut oil**—

Linseed oil†—			
Ready	17.94	17.62	17.81

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

JUTE GOODS MOVE NARROWLY

(From Our Own Correspondent)

CALCUTTA, 16*th September*

Prices of jute goods moved within narrow limits during the week under review. Even the publication of lower stock figures relating to the month of August failed to attract an upward trend. There was, however, fair business done with overseas buyers. Buyers were inclined to consider offers only at lower rates, due to continued reports of excellent harvests. Foreign buyers were interested to carry on with accepting quantities required by them for immediate needs only on the belief that prices would decline as the new crop began reaching mills in greater quantities after current floods receded and the transport position eased. They believed that the time had not yet come to purchase against stocks. Stocks of manufactured goods at the end of last month at 121,900 tons registered a welcome decline of 4,700 tons. Hessian stock was 19,000 tons, representing a fall of 900 tons and forming 16.2 per cent. of the total stocks with mills. Sacking at 86,400 tons fell by 3,200 tons, but the percentage to total stocks was as high as 73.7, which was, indeed, a cause for worry. This was despite the transfer of a portion of sacking looms to manufacture of hessian, but it was satisfactory to note that, despite increased production, hessian stock declined.

Anxiety has been caused by the sacking stock which, despite the fall, is twice the monthly output rate and, if demand does not increase, such a huge stock will cause financial problems to mills and the trade alike. When stocks of finished goods continue to be high, it is surprising that the President of the Bihar Jute Growers' Association, Mr. L. N. Shudhansu, has suggested an increase in working hours of mills, so that demand for raw jute will increase and the existing price of Rs. 15 a maund which the cultivators in Bihar get for their produce, will rise. In point of fact, the mills have already begun worrying about the huge stock in sacking, as, at this time of the year, usually buyers are more active than at present. It is in view of these factors that the announcement of the reduction in overall stocks has not had any effect on the market trend, as normally a fall should have been replied by a rise in prices.

It is noted that hessian shipped in August amounted to 35,500 tons which was lower by 4,100 tons as compared with July. These figures included coastal shipments. If, despite lower shipment figures, stocks have declined, the circumstance is presumed to be due to higher purchases for consumption in and around Calcutta, as also for despatch to upcountry centres by surface routes. On the other hand, sacking shipped was 3,000 tons higher at 31,000 tons and this increase is fully reflected by a proportionate decline in stock. So the increase in offtake was on account of shipment to foreign countries as well as of coastal shipments. Although, during recent years after the conclusion of the Indo-Soviet trade agreement, jute exports to the U.S.S.R. have been increasing, they have never reached expectations in the market. However, a member of the Indian trade delegation which visited Russia, Dr. B. P. Kedia, thinks that India can increase exports of jute goods to the Soviet Union. Dr. Kedia has not mentioned the premises for his conclusion and the methods he would like the trade and industry to adopt so that the object can be achieved.

On Tuesday last, ready B. twills was unchanged at Rs. 47.40, while ready hessian 40" 10 oz. declined from Rs. 40.80 to Rs. 40.75. The stock details were announced on Tuesday and, for reasons already detailed above, the decline in stocks had no effect on prices. On the next day, the feature was Australian interest in sacks and packs and, eventually, deals in small quantities were put through. In the absence of fair interest, B. twills lost to Rs. 96.80 and hessian 40" 10 oz. to Rs. 40.65. At this stage, dull market reports from New York caused further nervousness in the market and, on Thursday, ready hessian 40" 10 oz. fell to Rs. 40.50. The expected increase in American interest was not in sight, but the figure relating to August consumption of burlap in the U.S.A. was awaited with much interest. For it was reported from New York that the August figure would, like the figure for the previous month, record an increase. On the other hand, in the sacking section, there was some covering business and, as a result, B. twills were better at Rs. 97.00. On Friday, the improvement continued and took B. twills up to Rs. 97.25. This followed Burmese interest in D.W. flour bags for delivery before January. Hessian 40" 10 oz., in sympathy, was fractionally better at Rs. 40.70. Over the week-end, business was dull, with ready B. twills quoting lower at Rs. 97.10 and ready hessian 40" 10 oz. at Rs. 40.60. Yesterday, there was some covering business done. Thanks to this and to better reports from the futures markets, the rates were steadier, with B. twills quoting at Rs. 97.50 and hessian 40" 10 oz. at Rs. 40.80.

In raw jute, mills showed fair interest. Sellers were reserved. During the week, heavy rains fell in West Bengal, affecting jute movements on account of floods. As a result, the price tended to move up, but the gain was only fractional. So far, however, the crop was not affected on account of the floods and reports of good harvests continued to cause cheer. Expectations of a bumper crop were, in fact, getting stronger, and market circles boldly dismissed Pakistan's reimposition of the price at Rs. 65 per bale c.i.f. Calcutta (£34 per ton to the U.K. and the Continent) for jute cuttings for export to India as of no consequence here. It may be noted that, in Pakistan markets, prices have fallen markedly, and cuttings are presently quoted at Rs. 30 per bale, which would mean Rs. 53 per bale c.i.f. Calcutta. Although the new schedules fixed by the Pakistan Jute Board are still lower than the prices for domestic fibre, Indian mills will be interested in imports of fewer Pakistan cuttings this season. Also, there are restrictions in the import of Pakistan cuttings, and market circles here consider quite possible that the Government of India might impose further restrictions, in view of the tight foreign exchange position. Also, New Delhi would have to ensure that the local fibre was bought by mills and, if imports from Pakistan continued, growers here might as well begin to complain about the need for adequate demand for their produce, and this would as well affect the next sowing.

The latest quotations for indigenous fibre, 1958-59 crop September-October delivery are:—

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	26.75	24.25
Assam	27.00	24.50
Orissa	29.50	27.00
Desal	26.00	23.50
Murshidabad	25.25	22.75
Jungli	24.25	21.75
Daisee	29.50	27.00
Uttar Pradesh	24.25	21.75
Pucca Bales, 1st marks ..	Rs. 157.50 per bale ready.	

TEAS STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 12*th September*

Dust sale 'S.' which was held on Thursday, the 11th inst., was the smallest dust auction to be held this year with the catalogues aggregating only 388,081 lbs. This small but useful selection of teas met with very strong general demand.

Buyers showed particular interest in the low medium and medium teas, and prices showed irregular advances of 5 to 15 nP per pound. There was also strong demand for the best liquoring highgrown dusts at dearer rates.

London Market.—Sale of 9th September 1958: Firm tending in sellers' favour.

Sale of 9th September 1958: Best steady, others weaker.

Colombo Market.—Sale of 8th September 1958: Strong demand for highgrowns and mediums were firm. Improved UVAS much dearer. Middle East types declined about five cents.

Sale of 9th September 1958: Dusts irregularly lower, while other sorts evoked good demand and were fully firm.

Calcutta Market.—Export: Fair general demand, strong at bottom. Commons and orthodox Assams showed slight decline. C.T.Cs. again weakest features and were 20 to 50 nP lower. Darjeelings and tippy teas sold fairly well.

Internal: 20,000 packages. Dust good demand. All orthodox firm to slightly dearer. C.T.Cs. irregular, but generally 15 nP easier.

Export Quota: Business has been very quiet over the week, with only a nominal quantity of quota being transacted. Business has been done at 7¼ nP, with buyers at this quotation.

Forthcoming Auctions: Dust sale 'T' will be held on Thursday, the 25th inst.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 28 was held on the 15th inst., with offerings amounting to 1,000,000 lbs. The market opened strongly. Highgrowns advanced considerably, with improved quality. Better liquoring mediums were dearer by 10 to 15 nP. Others were fully firm and occasionally dearer."

KIPS FULLY MAINTAINED

(From Our Own Correspondent)

MADRAS 15*th September*

Trading in kips with the U.K. is negligible, because importers have not shown any interest in the offers made, with the hope that, as is usual, Madras shippers will weaken and offer lower prices. As arrivals of cow hides are of moderate volume, it is not unlikely that prices will decline further to some extent till steady U.K. buying is resumed.

Demand for cow calf lower selections and buff calf all selections is good, while arrivals are small. Buff hides find good clearance. Low grade cow hides for inland trade is steady.

In the tanned skins section, arrivals of common tannages have been poor and are being taken up by exporters readily. There are good overseas enquiries for lightweight goat all selections, while other weights are quiet. The tanned sheep skins market is weak.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, 15*th September*

There was no change in the linseed market during the week. Prices moved within narrow limits and dull conditions generally prevailed. With availability limited, seeds prices continued to be firm, but millers showed little interest. Business in the oil market was slow, with buyers and sellers alike pausing. With overseas markets unchanged, export prospects were still remote.

The latest available quotations are: Ready Rs. 26-2-0 and September Rs. 26 per maund.

FOODGRAINS BEARISH

(From Our Own Correspondent)

HAPUR, 15*th September*

The foodgrains market ruled bearish, with a fall in the prices of all cereals. Arrivals of new crop maize into the market and good crop prospects for paddy, coupled with the various measures taken by the Union Government, are the main depressing factors. The Punjab Government has frozen large stocks of wheat which the U.P. traders are reported to have built there in the hope that Punjab and U.P. would be amalgamated into one wheat zone and that permits would be granted to bring wheat from the Punjab. This action unnerved stockists here in U.P. also and they are selling stocks in the market, with the result that wheat arrivals at Hapur have substantially increased. After banning exports of all foodgrains from U.P. last week, the Union Government has now enpowered itself to fix prices of gram, gram *dal* and barley in the States of Madhya Pradesh, Rajasthan and U.P., as well as to fix the prices at which peas can be sold in U.P.

All the aforesaid factors accounted for a fall in grain prices at Hapur during the week. Wheat lost about Re. 1.50 per maund to be quoted now at Rs. 21.25 per maund for average quality and upto Rs. 22.25 for farm produce. Local arrivals from villages continued to be small but a substantial quantity was received here during the week by road through trucks from other assembling centres. The local stock of wheat with the trade was small. Sales of wheat through fair-price shops at two *seers* 10 *chattaks* per rupee continued and was being regulated through ration slips.

The all-India forecast of wheat crop in 1957-58 puts the total produce at 7,654,000 tons, as against 9,314,000 tons in 1956-57. Barring Bihar where there has been some improvement, the fall in production has been registered in all the States. Output in U.P. is put at 2,714,000 tons, as against 3,115,000 tons last year. Rice output in the country has also declined in 1958 and stands at 24,821,000 tons, as against 28,282,000 tons last year and 26,846,000 tons in 1956.

Rice prices registered a fall of about Rs. 2 per maund, thanks to better supply position and good prospects of paddy crop. The week-end prevailing prices were:—*Basmati sela* Rs. 37 to Rs. 38.50 and *mainpuri* Rs. 29.

New crop maize had increased and a heavy quantity of maize was reaching here from the producing areas of the South and this accounted for easy trend in prices of all the coarse grains. Gram eased by about 75 nP per maund, although offtake during the week was heavy at 4 *khatties*, reducing local stocks to 25 *khatties*. Barley and *bejhar* eased by about Re. 1 per maund, despite reduction in local stock. New maize eased to Rs. 15.75 per maund. *Jowar* and *guwar* were depressed in the absence of ready demand. The week-end prices (in rupees per maund) were:—*gram punjabi* 16; barley 15.25; *bejhar* 14.50; maize 15.75; *juwar* 12.50 to 14.25; *guwar* 14.25.

Peas recorded a fall of about Re. 1 per maund. The week's offtake was mostly under previous commitments, as outside support was slack. *Arhar* also recorded a sagging tendency. Most of the *arhar* stocks—98 *khatties*—was in one hand. Other pulses were quiet. The week-end quotations in rupees per maund were:—peas *dara* 13.50; *khatti* 13.44; peas farm 14.25; peas *dal* 16.50; *arhar* 18; *khatti* 17.87; *arhar dal* 22.50; *urd* 18.50 to 19; *moong* 25; *massor* 16.50.

The preparation of land for *rabi* sowings, which was hampered due to water-logging over wide area, has again been delayed, due to adverse weather conditions in the last two days.

The total electricity produced by public utility power stations in May 1958 amounted to 1,037.9 million kw.h., of which 840.3 million kw.h. were sold to ultimate consumers. The corresponding figures for May 1957 were 930.2 million kw.h. and 756.7 million kw.h. and for May 1939, 218.0 million kw.h. and 180.8 million kw.h. respectively. Statistics for May 1958 cover 766 public electricity supply undertakings; as compared with 841 in April 1958. The reduction in the number of public utility units was due to the merging of small generating and distributing stations with major grid systems.

Notice

IN THE MATTER OF THE COMPANIES ACT, 1956

AND

IN THE MATTER OF SECTIONS 397, 398, 399, 404 AND 403 OF THE COMPANIES ACT, 1956,

AND

IN THE MATTER OF RICHARDSON & CRUDDAS LTD.

BY AN ORDER OF THE CALCUTTA HIGH Court in the above matter, dated the 23rd April 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the Shareholding in the above Company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the Company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars. Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:

"The Special Officer, Richardson & Cruddas Limited,
Post Box No. 965, Calcutta"

and superscribed "SHARES".

D. N. MITRA,
Special Officer.

Dated this 26th day of August, 1958.

TREND OF INVESTMENT IN U.K.

By John Kingsley

EVERY year towards the end of summer, the United Kingdom Central Statistical Office issues a Bluebook on national income and expenditure. This Bluebook revises and amplifies the preliminary estimates published earlier in the year and it contains a detailed survey of the trends in the British economy. This year's Bluebook contains striking evidence that investment by Britain has been rising very markedly since the last decade. Gross fixed investment (expenditure on building and works, plant, machinery, and equipment) increased in volume by three-fifths between 1948 and 1957. It has risen at a higher rate than the gross national product (the nation's total output of goods and services *plus* its net income from abroad). In 1948, investment took 14 per cent. of the gross national product, but, in 1957, its share reached 17.6 per cent. This compares with only 12.7 per cent. in 1938.

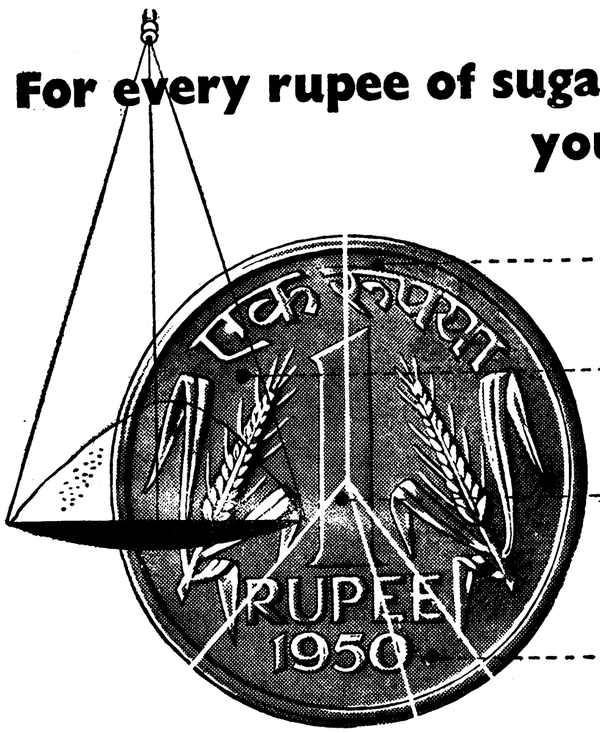
Gross fixed investment is calculated without making provision for capital consumption (the value of that part of the total stock of assets deemed to have been used up during the year). Net fixed investment is defined as gross fixed investment *minus* capital consumption. Net fixed investment at home—a better guide to the pace of economic development—reached 9 per cent. of national income in 1957. In 1938, its share was only 6.2 per cent. and, during the period 1949-52, it remained fairly constant at about 6.5 per cent., but it has steadily risen in recent years.

Then there is the country's net investment abroad. This equals the current surplus in balance of payments, which is used as investment whether in the form of an increase in the reserves, a reduction of old liabilities, or new investment overseas. (It should be recalled that, since 1948, Britain has had a current deficit in two years only, 1951 and 1956, and sizable surpluses—£266 million and £237 million—in 1956 and 1957.)

Total net investment (net fixed investment at home *plus* investment in stocks *plus* net investment abroad) reached a record last year, at 13.2 per cent. of national income. This share is almost three times as much as in 1938, when it was 4.7 per cent. From 1948 to 1952, it fluctuated between 8 and 9 per cent. of national income: from 1953 to 1955, it acounted for about 10 per cent., and in 1956 for 12 per cent. Investment must, of course, be financed out of savings—or the "forced savings" of inflation. Last year, personal savings continued the rise which started in 1952. Savings by companies also continued to increase. The savings surpluses of persons, companies, and the Central Government were sufficient to finance the needs of the public corporations (the nationalised industries), the local authorities (whose own savings did not cover their investment requirements), and the nation's net investments abroad.

The rise in the savings of the Central Government in 1957 was achieved without an increase in the rates of taxation. Government expenditure on goods and services was held at the level of the

(*Continued on page 496*)



For every rupee of sugar you buy . .

40 nP. for Statutory Cane Price.

38 nP. for Excise and other production levies.

16 nP. for manufacturing expenses including Salary, Wages and Packing.

6 nP. for overhead charges and profit subject to taxation.

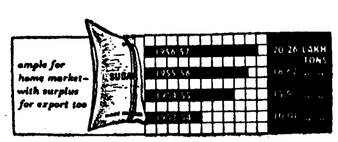
Now that there is enough sugar to go round, you can buy as much as you like—thanks to the magnificent job done by the Indian White Sugar Industry.

Consider the price ! High ? Low ? or Fair ? This is a point to be mooted upon. Every consumer certainly has a right to examine the cost structure. And here it is laid bare ! It may, however, prove interesting, for example, to know that the percentage of profit of the sugar industry is small—much smaller, in fact, than many people think it to be. And believe it or not, the percentage of profit is on the decline.

At the moment, however, with every rupee you pay for sugar, you make a large contribution to the Government to meet the needs of the Second Five Year Plan to which every sugar-consumer is a beneficiary. The consumers of white sugar as well as those connected with the White Sugar Industry are doing their best to meet the growing requirement of the country and the Government despite the fact that the cost structure of sugar has undergone radical changes.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees ; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries ; it supports 20 million cultivators ; it constitutes 12% of the total value of production of major Indian industries ; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.



Indian WHITE sugar . . .

vital to India's national economy

MARKET GOSSIP

(*Concluded from page 463*)

also be prepared to have their accounts audited by a panel of independent auditors chosen by the President of India and to publish the auditors' report, along with the statement of accounts, for the knowledge of the public.

* * * *

An important commodity committee like the Indian Central Cotton Committee, which has among its members top Government officials and leaders of the cotton trade and industry, certainly has an intimate knowledge of the raw cotton and textile position in the country. One wonders, therefore, why the Committee, in recommending, at its seventy-eighth meeting held in Bombay last week, tentative production targets for raw cotton for the third, fourth and fifth Five-year Plans, has relied upon estimates of *per capita* cloth consumption made in the second Plan which has turned out to be wrong. The Committee has proposed a target of 7.2 million bales, 8.1 million bales and 9 million bales for the third, fourth and Fifth Five-year Plans, respectively. This is based on the assumption of an estimated consumption of 9,600 million yards of cloth in the third Plan and 11,500 million yards in the fourth Plan which, in turn, assumes a *per capita* consumption of 22 yards in the third Plan, and 25 yards in the fourth Plan, as against the estimated 18.5 yards in the second and 14 yards in the first Plan, and a population of 403 million and 383 million. It is by now clear that a *per capita* consumption of 18.5 yards envisaged under the second Plan is not going to materialise. For instance, the Textile Enquiry Committee did not think that *per capita* consumption would exceed 17.5 yards. It was only 16.8 yards in 1957 which is barely one yard more than the pre-war consumption of 15.7 yards.

The reason why the *per capita* consumption of cloth envisaged in the second Plan has not materialised is well known and needs no repetition here. Unless the Government's textile policy is so reoriented as to facilitate higher offtake of cloth, actual consumption under the third Plan is also certain to fall short of the estimate. In that case, the cotton production target recommended for the third and fourth Plans, on the basis of an estimated *per capita* consumption of 22 yards and 25 yards, respectively, will prove to be too high. It is true that the proposed targets are only tentative. But even in suggesting them, the clear indications already present should have been taken into account. Indeed, there seems to be the possibility of a downward revision in the second Plan target of 6.5 million bales for cotton as a result of the fact that the *per capita* consumption of cloth has not risen to the extent anticipated in the Plan.

If, however, the estimated *per capita* consumption of 22 yards and 25 yards of cloth is to materialise, the textile policy should be so modified as to reduce the heavy incidence of duty on cloth and thereby make cloth cheaper. Will the Committee urge the Government to do that? Otherwise, it is meaningless to fix a target which everyone knows to be unrelated to the trend in cloth consumption.

It can be argued that, if actual production turns out to be in excess of indigenous consumption, the surplus could be exported. In a country like India where the bulk of production is absorbed indigenously, any fall in cotton prices as a result of a failure to export the usual quantity in one year might affect the volume of production next season to an extent out of all proportion to the fall in prices. It must be borne in mind that, apart from weather and other related factors, it is the trend of internal prices and consumption that sustain production and the textile and raw cotton prices policies should be such as will maintain them at a level that will bring forth a steady level of supply. It is, therefore, needless to add that, when the country plans for a big rise in cotton production, it should also have a firm programme for ensuring a fair price for the producer.

* * * *

No conclusion of import to the copper market emerged from the three-day session of the United Nations Conference on Copper which ended in London on Wednesday last week. For the Conference considered that there was no need at this time for inter-Governmental action on the metal, nor for the setting up of a working party, much less any international scheme to deal with the regulation of trading in the world copper market; even Chile, which is reported to be faced with the problem of a large surplus, did not press the idea of constituting a working party. It was, of course, noted that there was no procedural obstacle to the holding of a further meeting, if difficulties should arise at any time.

The aforesaid decision of the U.N. Conference may appear surprising, in view of reports of a burdensome copper surplus in the world, with marked fluctuations in prices. A number of delegates drew attention to the harmful effects of sharp variations in copper prices in recent years on both the producing and consuming countries. The effects, it was pointed out, extended beyond the copper industry, because they influence the external purchasing power of the countries concerned. But the Conference must have thought that, since the statistical data relating to copper industry in many countries were inadequate in varying degrees, no definite decision could be taken about the regulation of copper supplies or prices.

The Conference, it may be noted, emphasised the importance of maintaining full and up-to-date statistical information and urged greater uniformity in definition and promptitude in the availability of such information. It recommended to the Governments and the bodies concerned with the copper trade to improve statistical data by utilising the facilities provided by the U.N.

Notwithstanding the absence of any notable outcome of the U.N. Conference, the world copper market is ruling distinctly firm, and there has been an appreciable rise in prices of late. The latest available spot quotation for cash copper on the London Metal Exchange is £210¼ per ton, as against £206¼ prevailing before the Conference began. The firmness in copper would appear to have been aided by unsettled political events in the Far East and possibilities of lower production in the Rhodesian mines following labour unrest.

ASHOK LEYLAND

Demand continues to rise for both passenger and goods models in the Leyland Comet range manufactured in India by Ashok Leyland Ltd. Operators in Madras, Andhra Pradesh and Jammu and Kashmir have placed the latest orders for single-deck bus chassis of this make. As part of a replacement programme for about 160 old vehicles, the Madras State Transport has placed orders for 60 of these passenger chassis with Ashok Leyland Ltd. They will have bodies built on them at the Madras State Government Transport Workshop at Chromepet and will bring the total of Comet buses in their fleet to 150. Another large contract for these chassis has been placed by the Andhra Pradesh Transport Corporation which has ordered a further 60. The first order for bus chassis to be placed with Ashok Leyland by the Kashmir Government has also been received from the transport controller, Jammu and Kashmir State Government, Srinagar. Although this is their first order for Comet passenger chassis, 12 Comet goods chassis were ordered last year.

INSURANCE

(*Concluded from page 482*)

lakhs in the previous year. Premium from business written in India showed a substantial rise from Rs. 6.28 lakhs in 1956 to Rs. 9.80 lakhs in 1957 while that from business written outside India increased from Rs. 15.64 lakhs to Rs. 16.26 lakhs. The increase in premium income from India arose mainly out of improved reciprocation for reinsurances but there was also a larger volume of direct business written. Claims paid and outstanding aggregated Rs. 11.14 lakhs (43.74 per cent. of premium income), as against Rs. 9.49 lakhs (43.29 per cent.) in the previous year. The higher claims during the year was in part due to the bush fires in New South Wales in September 1957 on account of which the Company suffered substantial losses. After charging commission, expenses, the loss on exchange and providing for Rs. 13.03 lakhs (50 per cent. of premium) as the reserve for unexpired risks, the account shows a profit of Rs. 26,819.

In the marine department, net premium amounted to Rs. 6.89 lakhs, as against Rs. 9.32 lakhs in the previous year. Claims paid and outstanding aggregated Rs. 3.60 lakhs (52.24 per cent. of premium), as compared with Rs. 4.14 lakhs (44.42 per cent. of premium) in the previous year. After charging commission and expenses and the loss on exchange and providing for Rs. 6.89 lakhs (100 per cent. of premium) as the reserve for unexpired risks, a balance of Rs. 2,71,281 has been transferred to the profit and loss account.

Net premium income in the miscellaneous department aggregated Rs. 1.68 lakh, as against Rs. 1.51 lakh in the previous year. Claims paid and outstanding amounted to Rs. 0.88 lakh 52.32 per cent. of premium), as compared with Rs. 0.84 lakh (55.62 per cent. of premium) in the previous year. After charging commission and expenses and adjusting the reserve for unexpired risks at Rs. 1.84 lakh (50 per cent. of net premium) and taking credit for the sale proceeds of fixed assets, the accounts show a profit of Rs. 17,889.

After charging expenses of management of capital, the amount of depreciation by which the book value of investment has been written down, donations to recognised charities, amount reserved for doubtful debts and providing for taxation and adding back an amount of Rs. 5.708 out of the reserve for doubtful debts of the previous year, which provision is no longer required, there remained a balance of Rs. 1,24,812 which has been carried to the profit and loss account. This, together with Rs. 1,88,113 brought forward from the previous year, makes in all Rs. 3,12,925. The payment of a dividend of 45 per cent. on the paid-up shares of the company absorbs Rs. 2,58,750, leaving a balance of Rs. 54,175 to be carried forward.

TREND OF INVESTMENT IN U.K.

(*Concluded from page 494*)

previous year, though expenditure for subsidies and grants went up slightly. But—more important—the decline in the share of gross national product claimed by Central Government expenditure, which began in 1952, has continued. Last year, Central Government expenditure accounted for 29.6 per cent. of gross national product, as compared with 34.9 per cent. in 1952.

The Bluebook contains many other interesting data. Consumers' expenditure in real terms—the standard of living—increased by 20 per cent. between 1948 and 1957. This average gain of 20 per cent. is the result of considerable variations in the main categories of personal consumption. For instance, while the consumption of beer, coal, gas, and use of the public transport was little changed over this period, there was an increase of 400 per cent. in real expenditure on motor cars and motor cycles; of 100 per cent. on electrical and other durable goods; and of 43 per cent. on wines, spirits, etc. The British public's consumption of food and purchases of clothing both increased by 21 per cent. in real terms over this nine-year period.

VOL. XCVII. No. 2480 BOMBAY, 27th SEPTEMBER 1958 PRICE: Re. 1·50

REPORT ON WORLD LIQUIDITY

AN admirable study of the problem of international liquidity has been made by the experts on the staff of the International Monetary Fund. Their findings and conclusions are published *in extenso* on page 506 of this issue. They have looked at the problem dispassionately and presented it against the proper background. The value of their study lies in defining what exactly is the problem and how it could be tackled. They have argued impressively that the major determinant of the pace and the volume of world trade is not the level of liquidity but other events, such as war, preparations for war and repair of the damages of war. Another major factor that influences the level of world trade is the economic policies followed by the various countries of the world, leading either to a growth or to a contraction in economic activity. The conclusion of the I.M.F. experts is that the degree of international liquidity itself does not depend solely or even primarily upon the amount of international reserves as related to world trade but on a combination of factors, namely, the level, quality and distribution of reserves, facilities for international borrowing and commercial credit operations, the international financial structure, including the structure of exchange rates, which in turn is determined by the economic policies and actions followed by individual countries. Each one of these aspects has been examined by the staff of the I.M.F. and lucidly explained by them in their report.

The I.M.F. study clearly shows that it should not be assumed that a mere increase in reserves and liquidity will more or less automatically induce an increase in the volume of trade. Nor should it be assumed that a potential increase in the volume of trade can necessarily be no greater than the increase in the volume of international reserves. Thus, in 1928, the ratio of reserves to imports for countries other than the U.S. was 35 per cent., as compared with 17 per cent. in 1913. But this high level of reserves could not stave off the monetary disruptions in the following years and the contraction in world trade that followed. The reason for it was the continuation of the uncorrected maladjustments following the first World War. Dangerous credit policies were adopted throughout the twenties. Similarly, though the ratio of reserves to imports was as high as 63 per cent. in 1937-38, world trade stagnated. So far as the present position is concerned, the Fund's study reaches the conclusion that the current gold and foreign exchange reserves, amounting to the equivalent of about $52 billion, should not be considered inadequate, given certain fairly specific and broad conditions. It will be interesting to note here that, for all countries, excepting those in the Communist area, the ratio of official gold and exchange reserves to imports in 1957 was 51 per cent. This is distinctly higher than in 1913, when the ratio was 21 per cent. or in 1928 when it was 42 per cent., though lower than in 1937-38, when it was 100 per cent. The study is also of the view that the quality of the present level of reserves is sounder than in the earlier years and that the degree of international co-operation among the free countries is higher. The liquidity position, in the opinion of the I.M.F. experts, is intrinsically strong and there need not be any anxiety about the future of world trade on that score.

An interesting part of the I.M.F. study is the one pertaining to the prospect for foreign trade in the next decade and how the world's reserve position is likely to develop. The future level of trade, it is pointed out, will depend upon the growth of manufacturing production. The rate of world economic growth in the fifty years before 1914 was 3 per cent. per annum. For the periods from 1921-25 and 1926-29, manufacturing activity grew by 6.8 per cent. per annum, but trade grew at a slightly lower rate. For the years 1948 to 1956, manufacturing activity grew by 6.1 per cent. and trade by 7.5 per cent. per annum. For longer periods, including the years of war and depression, the rates of growth are naturally much smaller. Thus, from the years 1876-80 to 1936-38, manufacturing activity grew at the rate of 3.5 per cent. per year, while trade grew at about 2 per cent. Correspondingly, from 1938 to 1957, the annual rates of growth were 4.6 per cent. for manufacturing activity and 3.3 per cent. for trade. A notable feature after World War II was that trade expanded at a faster rate than industrial production. This was due to special factors, such as provision of liberal aid and credits, utilisation of sterling balances and dollar credits built up during the war years, and rapid expansion in the output and use of oil. But, since past experience shows that periods of very rapid expansion are usually followed by periods of moderate growth, the study has come to the cautious conclusion that "it would probably be not overoptimistic to retain the conventional 'normal' annual rate of about 3 per cent. for the growth of world trade."

If it is assumed, on the aforesaid basis, that reserves also should grow by 3 per cent., the additions to gold held by the central banking institutions will have to be of the order of $19 billion in ten years. But since countries which already have sufficient reserves—the U.S., West Germany, Switzerland and Venezuela, for instance—are unlikely to be desirous of adding to their gold reserves, the additions to the reserves of other countries will have to be of the order of $8 billion. As against this, it is estimated that the increase in gold reserves through acquisition of newly mined gold, even after making allowance for the hoarding demand, would be at least $700 million per annum. The I.M.F. report is, therefore confident that "gold production alone would go very far towards meeting the requirements for additional reserves," taking the price of gold at $35 an ounce. At the same time, during the past decade, war-time sterling balances have come down from their swollen heights. At the end of 1957, they were only £3.3 billion, as against £3.6 billion at the close of 1945. By the end of the first quarter of 1958, they were about the same as at the close of 1949, but, in terms of U.S. dollars and gold, they were actually less, because of the 30 per cent. devaluation in September 1949. For the immediate future, the possibilities are that the sterling liability of Britain will not grow. The I.M.F.'s report, therefore, concludes that "the reserves problem that the world will face in the next decade does not appear to be insoluble." On the face of it, this conclusion appears convincing.

But reaction in Britain, which has been contending for long that international reserves and liquidity are inadequate, shows that British opinion is not wholly satisfied with this explanation. The P.E.P., for instance, contends, in a pamphlet entitled "Problems of World Liquidity" published on the eve of the report of the I.M.F. experts, that the gold and dollar reserves of the Sterling Area are inadequate in relation to the operations of the Area and the high percentage of world trade financed by sterling. "It is commonly stated," says the P.E.P., "that sterling finances nearly half the world's trade, and, though recent estimates would put the share lower, it is certainly high if one considers the size of sterling holdings in relation to total world gold and foreign exchange holdings. Any sudden winding-up of the sterling system would involve a sharp contraction in world liquidity, with a consequent deflationary impact on world trade and production." Proceeding, this independent economic research body in Britain goes on to point out that "much more intensive use is clearly being made of the Sterling Area's reserves than is being made of other countries' holdings, with all the strain that implies." It further adds that "the trading problem is aggravated by the fact that the small ratio of reserves to liabilities leaves sterling dangerously exposed to speculative attacks and short-run capital movements." Remarking that international liquidity is likely to be a central issue for the next 10 years, the P.E.P. observes: "Indeed, the 1960s may well follow internationally the course which the 1930s followed nationally. The Great Depression stimulated wide support for national full employment policies. The recent recession in the United States has led to the reconsideration of economic problems in international rather than national terms, with the object of developing international monetary mechanisms to serve the aims of international full employment and long-term economic expansion. If the free world is to resist the Communist economic challenge and win the support of Asia and Africa, it must make international monetary mechanisms the servants rather than the masters of stability and growth."

The P.E.P., therefore, avers that, unless the supply of internationally acceptable units of exchange expands sufficiently, "there is no room for any hope of achieving the growth of world production and trade on which higher living standards depend." Its suggestions to achieve the end are four: (1) an increase in the price of gold; (2) pressure for consistent "good creditor" policies, especially by the U.S.; (3) the provision of foreign loans to underpin the Sterling Area's reserve position; and (4) the further development of international credit-creating agencies.

The I.M.F. study appears to be not in favour of any increase in the price of gold, and the U.S. Government is, in any case, strongly opposed to it. There is growing evidence that the U.S. is willing to play the role of a "good creditor," as witness the recent statements of President Eisenhower and Mr. Robert Anderson.

the U.S. Secretary of the Treasury, favouring (1) a general increase in the quotas assigned to member-Governments of the I.M.F., (2) an increase in the authorised capital of the World Bank, and (3) the establishment of an International Development Association. There are also moves to establish regional development banks, such as the Commonwealth Development Bank and Inter-American Fund for Latin America. Thus, barring the question of gold price, there is already a large measure of agreement in the U.S. with the suggestions made by the P.E.P.

Much of the discussion on the subject of world liquidity is academic, now that it has been recognised by all the important members of the International Monetary Fund, including the U.S. and Canada, that the resources of the Fund require to be raised. In fact, the whole scholarly study of the I.M.F. staff on the subject reaches a sudden climax when it ends up with a vigorous plea for increasing the size of the Fund's resources. Two important reasons have been advanced in support of the case for augmenting the Fund's gold and dollar holdings. First, as the fire brigade in the sphere of world trade and finance, the I.M.F. must always be kept in good strength, so that it may be ever prepared to meet diverse contingencies, many of which cannot be clearly defined in advance. While writing this chapter of the report, the I.M.F. experts seem to have had the Suez incident very much in their minds. For they have not only taken great pains to show how the Fund saved the pound sterling from cracking under the pressure of Britain's Suez adventure, and thereby rescued the whole Sterling Area from a serious breakdown but also clearly said in one place: "It may, perhaps, seem trite to remark that general political developments will be of decisive importance and not only to the extent that a major war is avoided. But the world will never be altogether calm, and periods of financial tension will recur. It is, therefore, wise always to have available safeguards of a financial character." While not minimising the validity of the argument, one will express the hope that the existence of this fire brigade in the financial world will not encourage the starting of political fires similar to the Suez or the continuance of such fires as the one in Algeria. The second reason for raising the resources of the I.M.F. is that, in view of the large loans given to Britain and France and, on a smaller scale, to India and others in the past two years, the balance of gold, U.S. dollars, Canadian dollars and deutsche mark available with the I.M.F. has shrunk, being no more than $1.7 billion. As against this, the unutilised drawing rights of its members—excluding the U.S., Canada, Germany and China, who may not need the funds of the I.M.F.—are of the order of $2.5 billion as of last June. While it is not possible to say what part of this will be utilised, it may be noted that the gross drawings in 1956-57 alone were $1.8 billion in all. It is thus apparent that the Fund has no longer any great margin left to grant full financial assistance to its members.

It is not known to what extent the Fund's resources will be increased. President Eisenhower has not indicated the scale of the increase, but the Canadian Prime Minister, Mr. Diefenbaker, recently proposed an all-round increase of 50 per cent. in quotas. Some doubt whether the U.S. will agree to go that far, because, as the largest quota holder, it will have to pay to the Fund no less than $1,375 million. But, whatever be the increase, the U.K. will be the largest beneficiary, for its quota is the second largest. If the primary object of raising the funds at the disposal of the I.M.F. is to be fully achieved, namely, expansion in world trade, the U.K. must be willing to assume greater risk than it has been inclined to do so far by providing larger credit to the needy members of the Sterling Area.

NO FINALITY ABOUT SECOND PLAN YET

THE acrimonious tone of the speeches in Parliament made in the course of the debate on the second Five-year Plan is an index of the popular reaction to the way things have been allowed to drift on the economic front. In one sense, the Government asked for such criticism, when it promised more than it knew it could fulfil. Indeed, more than one Treasury spokesman have gone on record with the view that the Plan erred on the side of overestimate. It is true that they have invariably qualified their statements with the remark that the Plan was the minimum which a country with a responsibility towards the less privileged sections should undertake. In any case, if the Plan has encountered obstacles in its path, its authors cannot plead ignorance nor even that they had not been warned. This, however, does not mean that all the Government's critics were entirely in the right. For so strong and deep-rooted are the leftist prejudices in the country that many of the Government's detractors have not hesitated to make political capital out of the economic setback which they attributed to India's association with the free world. The fact is that there is a case for strengthening this association and none whatever for snapping it. There is apparently insufficient recognition in this country of the role which the West has played in lifting our economy out of the morass in which it might otherwise have remained stuck. Strange are the distortions of truth produced by ideological passions.

Public dismay over the continuous revision of the Plan has, if anything, been deepened by the consistent failure of the Government to explain in what precise manner even the attenuated Plan will be accomplished. The Government's preoccupation with monetary targets and its unwillingness to let the country face the realities of the resources position are largely to blame for the apparent confusion which surrounds the Plan. The latest document, *Reappraisal of the Second Five-year Plan*, issued by the Planning Commission, is not as convincing a document as its forerunner, *Appraisal and Prospects of the Second Five-year Plan*. This must, at least partly, be attributed to the fact that the Government has been unable to estimate the resources position with a fair degree of accuracy. It is also partly due to the fact that, since the Commission issued its last report, the National Development Council, together with the various Ministries of the Government, have merrily claimed larger allocations. The result is that one is left with the impression that the "core" of the Plan is an uncertain entity, whether in monetary or physical terms, and that the only certainty about it is that it is bulging and will continue to bulge in all inconvenient directions. The Government has allowed itself to be caught between its own ambitious Ministries and the not-so-dynamic resources. It would be a near miracle if it extricated itself without further serious damage to the economy. Whether this damage takes the shape of additional doses of deficit financing or serious curtailment of the Plan, delayed till it becomes inevitable, the authorities must be prepared to face the political consequences of their economic policy. Even now, it is not too late to avert the painful drift by taking firm and realistic decisions in relation to both the size of the Plan and the no less important matter of agricultural and industrial policies.

Although the country is in the third year of the second Plan, no clear picture is available of the gap between the resources in sight and the outlay on the Plan. Since the efforts for obtaining foreign aid have borne fruit, it may be generally assumed that foreign exchange resources will be available at least for meeting the requirements of the more important projects in the Plan. The essence of the problem now is internal resources. In May last, when the Commission published its report on appraisal of the Plan, it was stated that, on the basis of the performance in the first three years of the Plan, the overall resources over the five-year period 1956-61 would amount to Rs. 4,260 crores and that the gap between available resources and the Rs. 4,500-crore outlay was thus of the order of Rs. 240 crores. The Commission suggested that the gap should be bridged by additional taxation Rs. 100 crores (Rs. 40 crores at the Centre and Rs. 60 crores in the States), loans and small savings Rs. 60 crores and economies in expenditure Rs. 80 crores. It would now appear that the gap might turn out to be larger than was orginally anticipated. This is because the National Development Council, which met in May after the Commission's report on appraisal of the Plan was prepared, has made certain additions to the Plan. The allotments for central schemes have thus increased from Rs. 2,452 crores to Rs. 2,581 crores or by Rs. 129 crores. Besides this increase, there are stated to be a few other proposals which have still to be considered. It is now believed that the additional outlay at the Centre would be of the order of Rs. 150 crores. The Commission observes that, if the outlay on State Plans were maintained at the anticipated level of Rs. 2,048 crores and the additional allotments, now suggested for the central schemes, were made, even Part A of the Plan might involve an expenditure of the order of Rs. 4,650 crores. It may be mentioned here that, in terms of the nomenclature, adopted by the National Development Council, Part A of the Plan, involving a total outlay of Rs. 4,500 crores, would include "core" projects, projects and programmes directly related to agricultural production and projects which had reached an advanced stage and other inescapable schemes; the remaining schemes, with a total outlay of Rs. 300 crores were to be included in Part B of the Plan and taken up to the extent to which additional resources become available.

What is now suggested is that the cost of even Part A of the Plan might swell to Rs. 4,650 crores, provided the State Plans are not allowed to be augmented by additional allotments. The Commission, in its latest report on reappraisal of the Plan, has reached the conclusion that, "on an overall view, having regard to possible shortfalls in expenditure and changes in estimates under individual heads," the gap in financial resources may be of the order of Rs. 300 to Rs. 350 crores, rather than of Rs. 240 crores mentioned in its earlier report on appraisal of the Plan. With each exercise in appraisal, the gap threatens to widen. And yet, there is no clear indication as to how the gap is sought to be bridged. The Commission has suggested that the States should raise an additional Rs. 140 crores, consisting of Rs. 60 crores of additional taxation, Rs. 50 crores under loans and small savings and Rs. 30 crores under economies in non-Plan expenditure. Apparently, the rest of the gap is to be covered by the Centre. In this connection, the Commission finds much comfort in the recent trends in Government borrowings (Central and State Governments) which have aggregated Rs. 225 crores this year, as against the earlier estimate of Rs. 137 crores.

The impact of the shortfall in resources and the failure to adopt right policies are bound to be felt in both agricultural and industrial spheres. It is now estimated that the total increase in production potential in agriculture in the three-year period 1956-59 may be less than one-half of the target for the Plan period. The Commission has rightly laid stress on the importance of implementing agricultural programmes with the "highest sense of urgency at every level of national life." In the sphere of irrigation, large and medium projects are likely to provide additional irrigation to 10.4 million acres, as against the target of 12 million acres. The total achievement in power may be of the order of 3 million kw. or 0.5 million less than the additional capacity envisaged in the Plan. Generally speaking, about 70 to 75 per cent. of the targets set for industries and minerals may be achieved. To take the private sector alone, the Plan had envisaged a total investment of Rs. 685 crores for industries, consisting of Rs. 535 crores of new investment and Rs. 150 crores of replacements. This estimate had to be raised upwards by Rs. 155 crores. But actual achievement is likely to be Rs. 575 crores (new investment Rs. 475 crores and modernisation and replacement Rs. 100 crores) or a shortfall of Rs. 110 crores, as compared with the original target of Rs. 685 crores.

In the light of the discussion in Parliament, it should be clear to the Government that what public opinion demands most is that attempts must be made to present firm estimates of resources and outlay, the revenue from additional tax efforts should not be dissipated in non-Plan schemes and all thinking should be oriented in terms of physical, as distinguished from monetary, targets determined by the availability of resources. Above all, constant scrutiny of Governmental expenditure, as a whole, is called for. The fact that four committees have been able to show savings to the tune of Rs. 1 crore in the Union Finance Ministry is a pointer to what can be achieved through continuous and earnest endeavour. The creation of resources for investment calls for austerity as much in Government's non-productive expenditure as in that of the average citizen.

SHARES AND GILT-EDGEDS HESITANT

TELCO—SUGAR—COFFEE—TIN

THURSDAY, 5 P.M.

THE bullish phase in equities and Gilt-edged securities alike is less bright than it was a fortnight ago. In shares, there seems to have been more profit-taking than fresh buying by speculators. This is only as it should be, for the rise has been rather steep and almost continuous. The markets would be healthy, if they digest the recent gains before making fresh advance. Moreover, this has been a settlement week, and most of the profit-taking may be of a pre-settlement nature. There is, however, no change in the undertone of the markets or in their sentiment. Basically, they are still bullish. In fact, not many operators have the courage to go short. What deters them from doing so is the unwillingness on the part of investors to book the profit by selling their holdings. From the point of view of yields and the unsatisfactory working of some of the major industries, several scrips appear to have moved well above their intrinsic merits. Nonetheless, many prefer to stick to their holdings in the expectation that the Government would give some relief in direct taxation in the next budget. The easy money conditions, as evidenced by the fall in short-term interest rates in recent months, the lack of scope for importers to reinvest their sale proceeds in their business on account of drastic restrictions on fresh imports, and the enormous profit made by dealers in imported articles, as well as in indigenous goods, that are in short supply, are also contributory factors.

MARKET GOSSIP

Again, in recent months, the bulls have been receiving payment in almost every settlement. This has put more pep into them. According to reliable sources, the volume of options in the leading counters has greatly increased. This apparently explains why the fluctuation in them has been narrow, though thousands of shares are reported to have been bought and sold. Options are, of course, illegal, but only on paper.

Although the Government has given no relief in direct taxation, the recent change in its policy in regard to the issue of new shares at a premium has served as a great stimulant. There is a strong impression in market circles that, henceforth, the Government will not insist upon issue of new shares at a premium, even if the company proposing such an issue is old, well-established, with plenty of reserves to its credit and with its existing shares quoting on the stock exchange several times their face value. This impression is based on the Government's decision on some of the recent applications for new issues. Further, at the annual meeting of the T.I.S.Co. last week, the Chairman confidently asserted that the proposed issue of new equity capital would only be at par. From this, market circles have inferred that he would not have spoken in such a categorical fashion unless he was sure of the change in the Government's policy.

Now that issue of bonus shares has become unpopular with company managements on account of the prohibitive tax of 30 per cent. on capitalisation of reserves, markets are hoping that the existing companies would issue new capital at par to cover the cost of their expansion and modernisation programmes, rather than borrow money from banks or through debentures. It is needless to add that such new issues at par have an element of bonus in them. This hope or desire on the part of investors is in refreshing contrast to the position a year or 18 months ago when the mere mention of the possibility of a company issuing new capital used to depress the value of that company's shares. Indeed, this writer was amazed at the enthusiasm with which shareholder after shareholder spoke at the annual meeting of the T.I.S.Co. last week in favour of additional equity capital. Again, at the annual meeting of Telco yesterday, some shareholders wanted the Company to raise more additional capital than the sum proposed by the Directors. It is hard to explain whether this change in the attitude of investors is based on a genuine increase in savings or reflects a return of confidence among them. It could be due to both. It may also be due to an improvement in the profit-making capacity of these two companies, in particular, and a few others placed in a similar situation, as, for instance, the Indian Iron and Steel Co., Ltd.

Recently, the Century Mills issued a small amount of new capital at par. This gave rise to expectations in certain circles that the Bombay Dyeing, too, would follow suit. What gave credence to them was the knowledge that the Company needed more working capital to finance the larger volume of stocks and the installation of automatic equipment. But these expectations have turned out to be mere wishful thinking. At an extraordinary general meeting of the Company held yesterday, Mr. Neville N. Wadia denied that the Directors were considering issue of new capital. He also made it clear that there would be no issue of bonus shares, in view of the heavy taxation on such issues. He said that the Company would find its requirements of additional finance through borrowings. Knowledgeable circles feel that those who are hoping that the Company would pay a higher dividend for 1958 are in for disappointment later.

The Gilt-edged securities are dull and quiet, though the short-term money market continues to be easy. The banks are not interested in taking up more. Evidently, with a slackening in the tempo of growth of deposits, they want to wait and see how the demand for money would develop in the coming busy season. Some of them feel that, if the present forecasts of bigger agricultural crops prove correct, there would be good demand for their funds. If the demand, however, turns out to be slack, they may go in for securities again, as they did in December last. Further, by raising its selling prices and bringing down the yield, the Reserve Bank has substantially reduced the incentives which the banks had earlier to take up Government loans. The Life Insurance Corporation has bought about a couple of crores worth of Central and State Loans. But for this deal the market would have been lifeless.

* * * * *

To the shareholders of the Tata Locomotive and Engineering Company, Ltd. (Telco), their Chairman, Mr. J. R. D. Tata, had some encouraging news to give when he addressed their annual meeting yesterday. For one thing, he expressed the hope that it should be possible to maintain the present dividend on increased capital. The Company's capital, as was indicated in its annual report for the year ended March 1958, is to be raised by Rs. 3 crores through the issue of 300,000 new ordinary shares of Rs. 100 each, which will rank *pari passu* with the existing 500,000 ordinary shares of Rs. 100 each. The Company hopes to collect the entire new capital before the end of the year, thanks to the existence of easy money conditions. The Chairman has made it clear to the shareholders that the entire subscription to the new shares would have to be paid at one stroke along with the application. If the Directors maintained the dividend on the enhanced capital, it would certainly be a creditable achievement, considering that the dividend has been stepped up to 9 per cent. for 1957-58, as compared with 8 per cent. for the previous year. From this, it should be clear that the management takes an optimistic view of the future earnings position of the Company.

It is true that there is one uncertain factor, namely, the issue of locomotive prices. Although the expansion programme for locomotives has been completed ahead of schedule and production is being maintained at an annual rate of 100 locomotives, no agreement could be reached with the Government over the issue of the prices to be charged by the Company. The dispute between the Company and the Government has been referred to arbitration. While it is to be hoped that the results of this arbitration would be favourable to the Company, a fact which deserves mention is that Telco's profits for the year 1957-58 were wholly accounted for by the operation of the Automobile Division. The prospects of the Company are thus intimately bound up with the progress of its automobile section. It would appear that progress in this division has been "most satisfactory." The phased programme of indigenous manufacture has not only been maintained but exceeded; the final stage of the Company's programme of manufacture should be completed according to plan by end of October 1959. Referring to the working of this division, Mr. Tata said: "We have not only invested in the most modern plant and highly specialised machine tools but we have built up a team of engineers and workers to use the equipment to the best advantage. We have made sure that our processes and techniques will be equal to the best found in the most modern factories abroad and that the production of our labour will be high." The quality of the products turned out by the Company's Foundry Division, as the Directors pointed out in their annual report, has been "upto the highest international standard." It must be heartening to many a shareholder to know that, far from resting on its oars, the management is constantly thinking in terms of newer lines of production. Mr. Tata revealed, in reply to a question at the annual meeting, that the Company's scheme for the manufacture of paper and pulp machinery, in collaboration with a Swedish firm, now awaited the Government's sanction.

* * * * *

Although the share markets might think very highly of the present trend of industrial profits, at least two industries do not appear to share that optimism. These are the paper and sugar industries. The Government has referred the claims of these industries for a fair ex-factory price to the Tariff Commission for investigation. There might be some justification for asking the Commission to deal with the paper mills' claim, but none whatever so far as the sugar industry is concerned. In saying this, we do not mean that the industry's case for a higher price is unjustified. What we mean is that there is no need for controlling the price of sugar at all. The rise in the price of this commodity has by no means been so large as to warrant Government intervention. In fact, it would appear that, in recent months, the price of *gur*, a commodity consumed more by the poor people than by the rich, has gone up to a much greater extent than white sugar. And yet it has not roused the ire of either the Government or Parliament. The Government of India first made the mistake of arbitrarily fixing ex-factory price for the factories in North India, for no other reason than that some of them sold their production at one or two per cent. above the price agreed to between the Government and the Committee of the Indian Sugar Mill's' Association. Some of the mills affected by this measure complained that the ex-factory price chosen by the Government was uneconomic to them. At the same time, several Members of Parliament also complained that the Government had allowed the sugar industry to profiteer. A few of them even demanded that the question of fair price to the mills should be examined by the Tariff Commission, to which the Food Minister, Mr. A. P. Jain, readily agreed. Perhaps, but for this incident in Parliament, the Government and the industry could have amicably settled the issue. There would have been no necessity for all this bother had not the Government and Parliament been supersensitive to even small increases in the price of white sugar.

On the Government's own admission, not all the sugar mills had broken the gentleman's agreement over the ex-factory prices. In fact, the Government had confined the control on ex-mill prices only to North India. The mills in Bombay, Andhra, Madras and other parts of South India were not brought under the Price Control Order, as they had played the game. Now, they, too, have been subjected to the scrutiny of the Tariff Commission. None knows what will be the outcome of this examination. Will the Commission fix a uniform ex-factory price, or differential prices, as it has done in the case of the cement industry? If the latter, it may mean that the more efficient sugar mills in the Deccan and the South may be penalised in favour of the less economic units in the North. It may also conceivably lead to pooling of the production of the entire industry and to controlled distribution by a centralised organisation. Anyway, the outlook for the sugar mills, particularly for those in the Deccan and the South, has been clouded by this latest development.

The Expert Committee on Coffee Marketing set up by the Government of India last month is expected to submit its report in February next. This was disclosed at a Press conference which the Committee held in Bangalore the other day. The Committee is presided over by Mr. A. N. Sattanathan and consists of Messrs. R. Radcliffe, R. Ramaswami and G. S. Sreenivasan, Chief Coffee Marketing Officer, as Member-Secretary. The Committee, we are told, has already issued a questionnaire, covering subjects like coffee curing and marketing, pool sales, promotion of coffee consumption in North India, expansion of exports to existing markets and opening up of new markets in East European countries, and methods of publicity and propaganda. It is in the light of the replies furnished by the different interests concerned to the questionnaire and on the basis of evidence collected in the course of its discussions, with the different parties, and results of its observation of pool auction sales and visits to coffee producing and curing centres that the Committee will formulate its recommendations on improving or changing the marketing system now adopted, in order to suit the present-day requirements.

The findings of the Committee and the decision that the Government will take thereon will be of far-reaching importance to the future of the coffee industry in India. The industry, as is well known, is expanding steadily. The pace of expansion has been particularly quick in the past seven years. The coffee crop actually harvested in the 1957-58 season (ended July 1958) is estimated at as high as 43,335 tons, which is more than double that (namely, about 20,475 tons) harvested in 1950-51. It is possible, according to a member of the Committee, to augment the production of coffee to 100,000 tons in the next 15 years with the existing pattern of holdings. About 80 per cent. of this output may be expected to be of high quality and, of this, nearly a half can be exported "with great advantage and without in any way causing hardship to the internal market."

The need for expanding and developing the coffee industry is all the greater, considering that coffee is a very good earner of foreign exchange. During the calendar year 1957, for instance, the 13,400 tons of coffee exported fetched a total foreign exchange of Rs. 7.73 crores. Indian coffee commands a quality preference in some foreign markets. Alluding to this, Mr. Sattanathan stated that the Committee proposed to explore how best such a reputation could be exploited with a view to enlarging exports and obtaining a better price for the coffee abroad. It is needless to emphasise that, though India produces some of the best coffee in the world, a part of it can be exported with great advantage to the country only if the quality of coffee offered in the world market compares favourably with that offered by the Latin American countries. To the extent the quality of coffee grown is improved, the competitive capacity will be higher and better prices can be realised. It is common knowledge that coffee is being sold abroad at prices considerably higher than those realised in internal sales and this is helping to keep internal prices slightly lower. But it is problematical whether this happy position will continue for ever, what with a large surplus of coffee in the world and the pressure of inflation within the country.

The most exciting development in the non-ferrous metals world has been the virtual breakdown of the International Tin Agreement. On Thursday last, the Buffer Stock Manager of the Tin Council withdrew his support from the market and, soon, the London tin market experienced a heavy landslide in prices. Cash tin (spot) collapsed from the floor level of £730 per ton to as low as £640, the lowest level for the past five years. Although the price has since recovered appreciably to £707½ (Tuesday the 23rd inst.), conditions in the market continued to be weak and nervous.

The withdrawal of support by the Buffer Stock Manager was, of course, not altogether unexpected. For some time now, there had been a widespread feeling that the resources of the Manager

SHARE MARKET QUIETLY STEADY

TEXTILES ENCOUNTER SELLING

(From Our Own Correspondents)

BOMBAY, *25th September*

BARRING steels, electricity and bank shares, which remained steady, the Stock Exchange presented a slightly easy trend during the week under review, in contrast to the firm undertone noted in the past two weeks. The bull operators were inclined to lighten their commitments at higher levels, thanks to deterioration in the Far Eastern situation. Fresh buying support was conspicuous by its absence. For operators preferred to await the possible changes that may be effected in the Government of India's economic policy after the return of the Finance Minister from Canada. The replies given by the Home and Planning Ministers in Parliament to the debate on the second Five-year Plan failed to give any indication of the future of taxation policy. An important statement of Mr. Gulzarilal Nanda which the market noted was that measures were being taken to check the rise in prices which was a danger to the Plan and the stability of the economy. Even reports that the Life Insurance Corporation (L.I.C.) had bought equities in sizable lots failed to have any significant bullish effect.

In particular, textiles were depressed. There was unloading by bulls on fears that the results of many cotton mills for the current year might show sizable losses or a sharp fall in profit. Cement shares came in for selling due to adverse reports of overproduction in A.C.C. plants. Sugar shares were weak on scattered profit-taking operations. Mining and engineering shares were subdued in the absence of any encouraging development. Steels, however, ruled steady, apparently because of the bright outlook held for the T.I.S.Co. by the Chairman at the annual meeting of the Company held in Bombay on Thursday last. There was heavy profit-taking by those speculators who had bought Tata Steels earlier in anticipation of this development, but it was easily absorbed and the fluctuation in values was narrow. It would appear that there is still a large bull interest in this scrip. Electricity shares were firm on buying by the L.I.C. and bank shares ruled steady.

Tata Ordinaries opened the week firm at Rs. 188.25, as against Rs. 186.25 last week-end, and advanced on encouraging outlook to Rs. 189.75 yesterday. Thereafter, profit-taking set in and the quotation slided down to Rs. 187 today. The net gain over the week was 75 nP. The new shares recorded a rise of Re. 1 to Rs. 182.50. Indian Irons improved from Rs. 25.95 to Rs. 26.25 on Saturday and, after declining to Rs. 25.85 today, they recovered to close at Rs. 26.

Several textiles scrips suffered losses. New Greats fell by Rs. 10 to Rs. 220. Svadeshis dropped Rs. 9.50 to Rs. 195. Standards receded by Rs. 8 to Rs. 424. Finlays and Khataus slipped down by Rs. 5 each to Rs. 290 and Rs. 182.50, respectively. Centurys declined by Rs. 3.50 to Rs. 464.50. Bombay Dyeings retreated from Rs. 63.50 to Rs. 61.40 on rumours of debenture issue and the denial of the Chairman, Mr. Neville Wadia, of the report that the Company was contemplating issue of new shares at par. Central Indias eased by Rs. 2 to Rs. 95. Gokaks lost a like amount to Rs. 150. Kohinoors and Shree Niwas shed Re. 1.50 each, the former to Rs. 281.50 and the latter to Rs. 151.50. Models, however, met with special buying support and rallied Rs. 7.50 to Rs. 175. Morarjis were also well favoured, the quotation spurting by Rs. 6 to Rs. 252. Tata Mills gathered 50 nP to Rs. 39.

The banking section was quite active with prices tending to move up. Jaipurs advanced by Rs. 3.75 to Rs. 43.50. United Commercials increased by Rs. 3 to Rs. 68. Barodas put on Rs. 2 to Rs 123. Bank of Indias hardened by Re. 1.75 to Rs. 138.25, 'A' shares gaining Re. 1.25 to Rs. 139.75. Central Banks strengthened by Re. 1.30 to Rs. 58.50 and 'A' shares by Re. 1.50 to Rs. 60.50. Union Banks gathered 12 nP to Rs. 7.40. Punjab Nationals, however, eased by 50 nP to Rs. 65 for lack of follow-up support.

Among electricity shares, Tata Powers strengthened by Rs. 25 to Rs. 1,245. Andhra Valleys rose by Rs. 6.25 to Rs. 1,172.50. Tata Hydros improved by Rs. 2.50 to Rs. 124. Surat Electrics gained 50 nP to Rs. 116 and Amalgamateds 8 nP to Rs. 11.04. Ahmedabad Electrics were fully maintained at Rs. 99, as also Poona Electrics at Rs. 120, Bombay Suburbans at Rs. 113 and Broachs at Rs. 7.48.

Sugar shares suffered a setback. Belapurs opened the week at Rs. 319.50, as against Rs. 319, and, after moving up to Rs. 324 on Saturday, slided down thereafter to touch Rs. 314 today. Towards the close, however, the rate was better at Rs. 315. The net loss over the week was Rs. 4. Walchandnagars dropped Rs. 3.75 to Rs. 291.25. Phaltans receded by Rs. 2 to Rs. 182. Bhopals, on the other hand, had buyers 65 nP higher at Rs. 26.80.

Among cement shares, Associated Cements fell by Rs. 3 to Rs. 160.50. Digvijays receded by Re. 1.50 to Rs. 151. Jaipur Udyogs declined by 52 nP to Rs. 14.16. Orissa Cements shed 28 nP to Rs. 12.64. Dalmias lost 4 nP to Rs. 10.08.

In the engineering and mining group, Premier Constructions were subjected to heavy selling and were pushed down by Rs. 9 to Rs. 233. Shivrajpurs decreased by Rs. 3.50 to Rs. 91. Indian Coppers shed 6 nP to Rs. 4.08. Tata Locomotives, however, evoked renewed buying support and hardened by Rs. 4.75 to Rs. 205; at one time today, they were as high as Rs. 208.50. Alcock Ashdowns were well supported at Rs. 277.50, as against Rs. 268.75 last week-end. Voltas picked up Rs. 4.50 to Rs. 141.50. Mahindras put on 80 nP to Rs. 17. Larsen and Toubros gathered 36 nP to Rs. 16.20.

Shipping shares lacked enquiries. Scindias moved down by 84 nP to Rs. 21.92. Great Easterns were quiet at Rs. 26.85. India Steamships were done at Rs. 14, as against Rs. 13.90.

Automobile shares came in for selling and suffered a decline in prices. Premiers fell by Rs. 2.50 to Rs. 92. Hindustan Motors receded by 24 nP to Rs. 8.04, after moving up to Rs. 8.28.

A sharp fall of Rs. 15 to Rs. 508 in the quotation for Bombay Burmahs was noted in the miscellaneous section this week. Wimcos were taken down by Rs. 7 to Rs. 196. National Rayons dropped Rs. 5.25 to Rs. 243.75. Tata Oils retreated from Rs. 43 to Rs. 40.75. B.B. Petrols shed 14 nP to Rs. 2.20. Gwalior Rayons, however, rose by 88 nP to Rs. 15.12 on reports that the prospects of the Company raising its production to 60 tons per day were bright. Killick Industries were also fancied and finished 50 nP higher at Rs. 150.

Calcutta Stock Exchange

CALCUTTA, *24th September*

Encouraging advices from Bombay closely on the heels of Mr. J. R. D. Tata's stimulating address to the shareholders of the Tata Iron and Steel Company, Ltd., indications that Tisco would issue fresh capital at par and not at a premium as hithertofore, and the outstanding success of the *debenture issue of Guest, Keen,* Williams (this was four times oversubscribed and the unofficial quotation is 3 per cent. higher) released buying activity to a marked degree on the Calcutta Stock Exchange during the week under review. Profit-taking, however, was intermittent, and this process contributed towards stabilisation of prices at each stage of the upward trend. For a time, activity was dull—this was so on Monday—as, following the discussion on the Plan in the Lok Sabha wherein it was indicated that extra expenditure depended on raising of funds, fears of additional taxation were entertained. But these fears did not last long, as market circles were prone to put their faith on Mr. Morarji Desai, who declared, while addressing the Foreign Policy Association in New York recently, that India was determined to achieve the right political and economic atmosphere to attract foreign capital. In this context, Mr. Desai's return was looked *forward to with great interest,* as his speech could be considered as one of essentially a policy only after concrete action followed. Such action was nothing other than to pursue a more realistic taxation policy.

Keen enthusiasm was shown to coal shares. Unions were an attractive feature, with the rise in quotation to Rs. 15.25 from Rs. 14.50 previously, following a *dividend of 3½ per cent. for 1957,* as against *nil* in the previous year. Bengals elicited good support and, at Rs. 292, added Rs. 15 before closing at Rs. 290. Amalgamateds were lifted up from Rs. 20.81 to Rs. 21 on interested support, while Equitables after gaining from Rs. 28.25 to Rs. 28.87 closed at Rs. 28.75. On the other hand, Pench Valleys fractionally lost to Rs. 24.25, as did Kalpaharis to Rs. 22.12.

Jutes continued to be in the forefront and the more popular counters added further gains. Aucklands moved up by Rs. 6 to Rs. 126 and Howrahs by 56 nP to Rs. 20.68. Kinnisons rallied Rs. 7.50 to Rs. 170. Birlas hardened from Rs. 19.90 to Rs. 20.75. Ganges at Rs. 67 added Rs. 2.25. Indias at Rs. 171 were fully steady, as were Belvederes at Rs. 128. Orients at Rs. 131 were better by one point. Keen interest raised Deltas from Rs. 138 to Rs. 143. Megnas were unchanged at Rs. 154 and Kamarhatties invited business at Rs. 141.

In minings, Indian Coppers were higher at Rs. 3.93 earlier, but gave way to Rs. 3.80. Likewise, in cements, Sone Valleys were fully steady early at Rs. 6.37 but subsequently receded to Rs. 6.12. Papers were subjected to profit-taking, with Orients falling from Rs. 34.90 to Rs. 34.60. Titaghurs had risen from Rs. 42.50 to Rs. 42.75 before closing at Rs. 42.25.

In the engineering section, Indian Irons opened at Rs. 25.90 and, after an irregular trend, hardened to Rs. 26.13 towards the week-end. On Monday, there was profit-taking to take the rate down to Rs. 25.68, but, since then, the upward trend again prevailed to push the quotation up to Rs. 25.95. Texmacos, after giving way to Rs. 22.95, regained to Rs. 23.10, while Jessop & Cos. at Rs. 24.00 recorded a smart rise.

Anxiety relating to disposal of common teas was duly reflected in the tea section, where interest shown was niggardly. Bishnauths declined from Rs. 21.37 to Rs. 20.75, while Hasimaras were unchanged at Rs. 20.25.

Miscellaneous industrials were steady. Dunlop Rubbers were fractionally better at Rs. 28.25. Hindusthan Motors realised Rs. 8.12, as against Rs. 8.00 previously. National Cables had buyers at the unchanged rate of Rs. 32. Martin Burns were fractionally higher at Rs. 28.00. Indian Aluminiums changed hands at Rs. 16.44, as against Rs. 16.31 earlier. Jardine Hendersons at Rs. 82.50 gained 50 nP, while India Steamships eased from Rs. 14.06 to Rs. 13.85.

• • • •

Madras Stock Exchange

MADRAS, *23rd September*

A firm trend was in evidence on the Madras Stock Exchange during the week under review. Operators appeared to take an optimistic view regarding the prospects for industries, especially those earning foreign exchange, thanks to the increasing stress laid on export promotion by the authorities. There were, besides, reports that the Life Insurance Corporation was contemplating to make sizable purchases of shares. Consequently, buying support ensued and equity values gained. If the gains were not quite handsome, it was because of profit-taking at bulge. The observations made by the Minister for Planning while replying to the debate on the second Five-year Plan in Parliament yesterday had no effect on the market. Plantation shares elicited renewed support. Tea shares were particularly well fancied, following the rising tendency in prices of both common and high-grown teas. Coffee and rubber shares also attracted attention on hopes of better export business. Textiles, bank and sugar shares, and miscellaneous industrials were also in good form.

Among tea shares in the planting section, Coonoor Teas picked up a rupee to Rs. 25. Devasholas firmed up by 75 nP to Rs. 20.75. Halleyburias strengthened by 40 nP to Rs. 16.50. Parksides advanced by 25 nP to Rs. 21.12. Twyfords put on 30 nP to Rs. 14.60. Chandramalais were quoted 13 nP higher at Rs. 3.58. Talayars and Nilgiris increased by 10 nP each to Rs. 9.60 and Rs. 7.90, respectively. Kil Kotagiris gathered 5 nP to Rs. 6.30 and Neelamalais 2 nP to Rs. 4.87. Peermades were fully maintained at Rs. 21.50 *cum-div.*, as also Woodcotes at Re. 1.50 and Woodlands at Rs. 8.62. Blue Mountains, however, lost 4 nP to Rs. 3.72. Periakaramalais were fractionally lower at Rs. 4.23.

Among coffee shares, Kumergodes and Consolidated Coffees rose by 10 nP each, the former to Rs. 7.50 and the latter to Rs. 29.10. Ouchterlonys were better by 3 nP at Rs. 5.45. Rajendras rallied 65 nP to Rs. 13.25. Balmadies were firm at Rs. 3.70 *ex-div.*, as against Rs. 3.50 *cum-div.* last week.

Among rubber shares, Teekoys were marked up by 60 nP to Rs. 7.10. Travancore Rubbers and Rajagiris hardened by 10 nP each to Rs. 16.25 and Rs. 18.85, respectively. Kallas gained 3 nP to Rs. 5.08. Cochin Malabars added 2 nP to Rs. 5.57. Nellithanams were firm at Rs. 13; also Thirumbadis at Re. 1.76. Vaikundams, on the other hand, shed 25 nP to Rs. 26. T.R. & Ts eased by 10 nP to Rs. 7.80.

In the textile group, Radhakrishnas provided the brightest spot and forged ahead by Rs. 10 to Rs. 140. Coimbatore Pioneers rallied Rs. 9 to Rs. 252. Coimbatore Spinnings strengthened by Rs. 3 to Rs. 45. Cannanores advanced by a rupee to Rs. 138. Rajalakshmis gained 50 nP to Rs. 65. Cambodias put on 10 nP to Rs. 9.40. Bangalore Woollens were firm at Rs. 167. Buckinghams at Rs. 180, Dhanalakshmis at Rs. 172, Metturs at Rs. 344 and Ranga Vilas at Rs. 57. Janardanas, however, declined by Rs. 4 to Rs. 66. Loyals receded by 50 nP to Rs. 33.50.

Among sugar shares, Kirlampudis jumped up by Rs. 2 to Rs. 52. Cauverys advanced by a rupee to Rs. 96. E.I.Ds improved by 75 nP to Rs. 29.50. Deccans put on 42 nP to Rs. 9.67. Travancores rose by 20 nP to Rs. 11.55. Indias strengthened by 15 nP to Rs. 12.65.

Among miscellaneous industrials, Aluminium Industries attracted good attention of operators and spurted by Re. 1.10 to Rs. 19.45. Singarenis advanced by 50 nP to Rs. 16.75. Indian Steel Rollings and India Cements increased by 25 nP each to Rs. 14.75 and Rs. 30.75, respectively. Mysore Chemical and Fertilisers rose by 16 nP to Rs. 8.06. Mettur Chemicals gathered 10 nP to Rs. 11.60. F.A.C.Ts put on 9 nP to Rs. 6.97. Spencers were fully maintained at Rs. 18.85.

MAHINDRA AND MAHINDRA LTD.

The application lists for the issue of 770,000 ordinary shares of Rs. 10 each and 33,000 preference shares of Rs. 100 each, offered by the above Company to its existing shareholders on 16th August 1958, closed on the 15th inst. The Company says that the issue has been oversubscribed.

Car exports from Germany are still booming, with the total for the January-August period touching 465,999 units, representing a rise of 27.9 per cent. as compared with the corresponding period last year. The total production in the same period was 959,155 units, as against 779,122 in January-August 1957 or an increase of 23.1 per cent.

NEWS IN BRIEF

THE question of determining fair ex-works prices and selling prices for the different varieties of paper other than paper-board manufactured in the country has now been referred to the Tariff Commission.

The percentage of imported components in refrigerators manufactured in India is 37 and the sale price of an 8.5 cubic ft. domestic refrigerator ranges from Rs. 1,775 to Rs. 1,880, according to the Minister for Commerce and Industry.

A uranium plant will be located in Singhbhum District, Bihar, where certain substances used as moderators in a reactor were already found. Bihar, it may be noted, accounts for the exclusive supply of coking coal in India and has rich mineral resources.

The question of the establishment of a Central Indian Medicinal Plants Organisation is under consideration of the Central Government. The main functions of the proposed organisation will be the collection, grading and systemic cultivation of wild-growing medicinal plants in India.

The foreign exchange earned from exports of Indian films during 1957-58 was Rs. 1,13,73,354, while the value of raw cinema film imported in the same period was Rs. 2,01,18,664. The length of exposed cinema films imported in 1957-58 was 16.9 million feet.

No fixed target for export earnings for the current year have been fixed nor can this be fixed, according to Mr. Nityanand Kanungo. The Government is, however, endeavouring to help exporters first to arrest the fall in the export earnings, and along with it to make every effort possible to step up these earnings to the maximum extent compatible with world trends.

The Minister for Commerce, Mr. Nityanand Kanungo, observed in the Lok Sabha that the treaty governing the European Common Market Scheme had already come into operation, but no measures affecting the trade of third countries were known to have been taken so far. Mr. Kanungo said that the question of the effect of the operation of the scheme on India's trade did not arise as yet.

The first training centre for insurance field workers in India was inaugurated at Bombay on the 15th inst., by Mr. P. A. Gopalkrishnan, Chairman, Life Insurance Corporation of India. This is the first of the 12 centres to be opened in different parts of the country. Three of these centres are to be located in the Western Zone; the other two will soon be started at Poona and Ahmedabad.

The Union Labour Ministry is considering a proposal to pay bonus (under the Coal Mines Bonus Scheme) on a weekly or monthly basis, instead of on a quarterly basis as at present. The implementation of the proposal, it is said, will encourage better attendance of colliery workers. A study of the pattern of absenteeism among workers, probably confined to Jharia coalfields, will be conducted shortly, with a view to ascertaining the merits of the proposal.

A "floating fair," the first of its kind in India, jointly sponsored by the Indian industrial and commercial community, at a cost of Rs. 18 lakhs, will be arranged on board the ship *Mohammedi*, the 8,130-ton passenger vessel of the Moghul Line. It will start from Bombay in December and will visit various ports in the Persian Gulf, the Red Sea, the East African Coast and Ceylon on a 100-day schedule to show other countries what India could export and what items were manufactured in the country.

For the twin purpose of relieving educated unemployment and expanding primary education, the Government of Bombay has created 1,500 posts of primary teachers during the current year under the second Five-year Plan. The services of these teachers are to be utilised primarily for opening junior basic or primary schools in villages having no such institutions, preference being given to villages in the Community Development Blocks located in backward regions. The Government of India will bear full financial responsibility of the scheme for the first three years of its implementation.

The Government of India, it is reported, proposes to take expeditious action on the recommendation made by a committee, headed by Mr. B. C. Mukherji, regarding the urgency of utilising oil refinery gases in Trombay for the manufacture of nitrogenous fertilisers. The Committee held the view that the Burmah-Shell and Stanvac refinery gases could yield 90,000 tons of nitrogen per annum and that the cost of the indigenous production would be Rs. 820 per ton of nitrogen, as against the landed cost of Rs. 1,440 per ton for the imported product. The cost of a plant with a capacity of 90,000 tons of nitrogen is estimated at about Rs. 24 crores, of which the foreign exchange component is expected to be about 40 per cent.

An eight-man productivity team (leader: Mr. T. R. Gupta), the first to be sponsored by the National Productivity Council, left New Delhi on the 19th inst., on a six-week tour of factories in West Germany, the U.K. and the U.S. The team will study the productivity techniques and processes adopted in these countries. In particular, it will study scientific management, human relations, methods analysis, wage and bonus incentives, plant layout and maintenance, materials handling and product design. On the basis of its study, the team will formulate recommendations as to how the improved techniques and processes adopted in advanced countries can be applied to increase productivity in large, medium and small industries in India. Seven more teams are proposed to be sent later to West European countries and America. The programme is being implemented with financial assistance from the U.S. Technical Co-operation Mission.

The fourteenth annual general meeting of the International Air Transport Association will be inaugurated by Mr. Jawaharlal Nehru, Prime Minister of India, in the *Vigyan Bhavan* at New Delhi on 27th October 1958. This will be the first meeting in Asia of the annual assembly of presidents of the world's scheduled airlines. Sessions will continue through 31st October. More than 350 delegates from the 85 I.A.T.A. member-airlines from approximately 50 countries are expected to attend. There will also be observers from other international organisations and Indian Government agencies. Mr. J. R. D. Tata, Chairman of Air-India International, will take office as President of I.A.T.A. when the meeting opens. He succeeds Dr. Tomas Delgado, President of Iberia Airlines of Spain. Sir William P. Hildred is the Director-General of the Association. The five-day programme will include a comprehensive review of the joint activities of the airlines carried on through I.A.T.A., as well as discussions of the problems of the air transport industry in its first year of jet operations.

The scheme to set up transport co-operative societies has been finalised. This was revealed recently by Mr. Raj Bahadur, Minister of State in the Ministry of Transport and Communications. To start with, it was proposed to introduce a pilot scheme in five States, namely, West Bengal, Bombay, Kerala, Madras and Delhi, under which five co-operative societies, each owning ten vehicles, would operate on intra-city as well as inter-State routes. The actual routes would be selected by the State Governments concerned. The membership of these co-operative societies would be restricted to workers like drivers, mechanics, booking clerks, depot managers, etc., who would be recruited from amongst educated unemployed, the minimum educational qualifications being matriculation. Each society would have 50 members, each member contributing Rs. 1,000 towards the capital of the society. There would be a board of directors headed by the Transport Commissioner of the State concerned, with the Registrar of Co-operative Societies and the officer-in-charge of the Employment Directorate as members. Two more members of the board might be selected from amongst the members of society. The selection of the members of the society would be made by the board. In making the selection preference would be given to those who already knew driving, possessed experience of operating goods vehicles or were mechanics.

From Abroad

The Japan Atomic Power Company has confirmed its decision to purchase a Calder Hall-type British reactor. The first team of high level technicians from Britain arrived in Japan on the 18th inst. to hold discussions in this connection.

The earnings from tourist expenditure in the U.K. touched a record figure of £181 million in 1957, the highest figure for any country in Europe. The total number of visitors was 1,180,430 which represents a rise of 7 per cent. as compared with 1956. The number is expected to double this figure by 1965.

A new synthetic textile fibre, known as Kodel, has been displayed by the Eastman Kodak Company at New York. The distinct advantages claimed for the fibre are outstanding resistance to wrinkling and mussing, a low specific gravity which will enable it to be used in lighter-than-usual fabrics, and good heat resistance. Kodel is now in limited commercial production.

Sweden has the largest ratio of self-service stores in Europe, according to a survey by Continmart, an international organisation for market consultation. While the average figure for food trade handled by self-service stores in Europe is 10 per cent. of the total turnover, the corresponding figure for Sweden is 20-25 per cent. By 1968, this figure is likely to increase to over 50 per cent.

Italy will not permit the Boeing 707 jet airliner to use Ciampino airport, Rome, as it is feared that, in view of the intense traffic at the airport, the airliner will lower the safety level. A new airport now under construction on the coast near Rome, and expected to be commissioned by next summer, will, however, be capable of receiving the Boeing 707, as well as the Comets when they go into service.

A new Bill has been introduced in the Australian Parliament which ensures to wheat growers a guaranteed price of 14*s.* 6*d.* a bushel on 100 million bushels of wheat exported in the first year of the new five-year stabilisation scheme. For the remaining four years, the price will be adjusted according to movements in costs. The home consumption base price for 1958-59 is placed at 14*s.* 6*d.* a bushel, free on rail, at ports.

The Scandinavian Airlines System's winter schedule, which will come into operation on 1st November, will be 11 per cent. bigger than last year's, with a total transport capacity of 1,500 million passenger kilometres. The fleet of aircraft aggregates 59 units, including the largest number of DC-7C aircraft operated by any airline outside the United States. The winter schedule comprises services to 84 cities in 42 countries.

China emerged as the best customer of Malaya's rubber during the month of August, its actual purchase being 15,469 tons out of the total exports of over 100,000 tons from Malaya. The U.K. (traditionally the leading customer of Malaya's rubber) bought 13,319 tons, Japan 10,301 tons and the U.S. 8,893 tons. In the first eight months of the current year, imports of Malayan rubber into China aggregated 58,902 tons and those by Russia amounted to 17,608 tons.

Ivory from India is helping a British firm, Messrs. H. Harris & Co., in Cornwall, to produce sufficient keys to equip 2,000 pianos each week. Established in 1880, the firm uses between 12 and 16 tons of genuine elephant tusk yearly, most of it from India, and the East African territories including Zanzibar. The tusks are cut with special saws, designed and made by the firm, and the yellow coloured piano and organ keys are then treated with chemicals, and bleached in a large glass house to achieve the beautiful white finish. About 90 per cent. of the ivory keys is exported.

The Argentine Government has accepted the offer of a British syndicate to provide a £50-million loan for the purchase of the U.K. petroleum equipment and other capital goods. The offer is the first major British bid to supply Argentina's big equipment needs. The syndicate comprises Henry Balfour Company, General Electric Company, Mitchell Engineering group, Paterson Engineering Company and William Press and Sons. The repayment of the loan will be at the rate of 5 per cent. when the orders are placed and 15 per cent. when shipping documents become available, the remaining 80 per cent. vary in half-yearly payments spread over five years. Interest of 1 per cent. over the U.K. Bank rate (with a minimum total of 6 per cent.) will be paid on the value of each cargo from the date of shipment.

A tea-growing centre is to be established in the Northern Province of Nyasaland, in the Central African Federation. First steps are already being taken by a London and Blantyre (Nyasaland) company which is clearing 3,200 acres for a tea estate. A report from Salisbury, the federal capital, says that thousands of young trees have been planted in nurseries and these will be ready for planting out when the ground is cleared. Analysis of soil shows that it is favourable for tea. It is expected that the first plucking will take place in 1961 and it will be several years after that before the bushes are fully mature. The scheme is expected to cost anything up to £200,000 and includes the setting up of a factory for processing tea for export.

Consumer prices in the United States dropped by 0.2 per cent. in August for the first time in the last two years. Lower food prices were mainly responsible for this decline, its price index for August having fallen to 123.7—still some 2.2 per cent. above a year ago. A 0.1 per cent. decrease was recorded in clothing cost also. At the same time, Americans were paying 0.6 per cent. more for private transportation, chiefly because of increased prices in used cars and in petrol, about 0.2 per cent. more for housing and 0.3 per cent. more for medical care. The "take-home-pay" of American factory workers, however, remained steady from July to August, with weekly earnings in the latter month ranging slightly above a year ago. Workers with three dependents averaged a weekly "take-home pay" of $75.90, while single workers averaged $68.48. "Take-home-pay" is the amount a worker receives after federal income and social security taxes are deducted.

PERSONAL

MR. S. N. Maitra, Acting High Commissioner for India in Pakistan, left Bombay for Karachi this week.

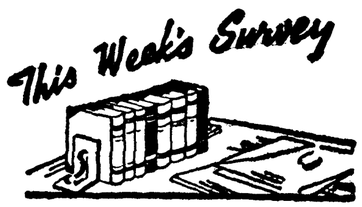
Mr. L. K. Jha, Special Secretary to the Ministry of Commerce and Industry, has been appointed Additional Secretary to the same Ministry.

Mr. M. Telinge has been appointed Permanent Representative of the Comptoir National D'Escompte De Paris, popularly known as the French Bank, at New Delhi.

Mr. George D. Woods, Chairman of the Board of the First Boston Corporation, New York, arrived in Bombay on the 23rd inst. He is on his way to New Delhi to attend the forthcoming annual meetings of the World Bank and the I.M.F.

Mr. Murarji J. Vaidya, President of the Indo-Pan-American Association, left Bombay for London *en route* to the U.S. last week, to attend the eleventh annual conference of the Far East America Council of Commerce and Industry.

Mr. O. H. Gheevala, Managing Director of the Bombay State Financial Corporation, left Bombay for Colombo *en route* to Japan on the 23rd inst. He is one of the members of a team of six persons selected by the Reserve Bank of India to study the methods adopted in Japan for financing small- and medium-scale industries.



TRADE MARKS LAW

WITH the growth of industrialisation, there is bound to be a wider appreciation of the importance of not only trade marks law but its *efficient enforcement*. From time to time, commercial bodies have emphasised the need for amending the law on trade marks, so that it could more effectively guard the interests of trade marks owners who are frequently exposed to losses through the nefarious activities of those who thrive on pilferage of their property. The Trade and Merchandise Marks Bill, which has been passed by both houses of Parliament, embodies many of the suggestions made by commercial organisations, in general, and the Trade Marks Owners Association, in particular. The Bill, as Mr. Nityananda Kanungo, the Union Minister for Commerce, in his address at the annual meeting of the Association, held last week in Bombay, pointed out, has a double purpose—to provide adequate opportunities for *inventions and to prevent their unfair exploitation*. The Bill also provides for the registration and better protection of trade marks and for the prevention of the use of fraudulent marks on merchandise.

Paying a well-deserved tribute to the authorities for their sense of responsiveness to public demand, Mr. K. T. Chandy, Chairman of the Association, stressed that the Bill had gone a "fair" way towards meeting the trade marks owners' problems. It had incorporated the suggestions made by the Association in the past, including the integration of the administration of all forms of industrial property under one Controller-General, the creation of a Part B register for trade marks in which such marks as are capable of distinguishing goods, though not distinctive, could be registered and the removal of ambiguities in certain provisions of the Trade Marks Act. The Bill has also enhanced the maximum punishment for false trade descriptions and made offences relating to trade marks in regard to food and drugs cognisable by the police. All this has certainly served to make the law more comprehensive than in the past. Nevertheless, there is, according to Mr. Chandy, room for improvement. In this connection, he suggested the setting up of a committee which will function in an advisory capacity and assist the Government in exercising its discretionary powers of approval of appointment of registered users by the owners of trade marks. Such a body is vitally necessary, because there is no provision for appeal from any decision taken by the Government in exercise of its discretionary powers.

A point to which Mr. Chandy drew pointed attention was the study of industrial law. He rightly stressed that the study of industrial property law should be given an important place in legal curriculum. It is to be hoped that this matter will be taken up by the academic bodies in the country. It would facilitate the study of this branch of law if the Government compiled and published periodically the decisions by the Controller-General of Patents, Designs and Trade Marks. This would permit a closer study of the case law on the subject. It would also assist expeditious disposal of cases by courts for which Mr. Chandy made a special plea. In commercial affairs, even more than in any other sphere, justice delayed might well mean justice denied.

PLACE OF ENGLISH

It is high time that India's language problem was dissociated from all kinds of emotions and sentiments which surround it. The need of the hour is to approach the issue with clear-eyed realism. Reduced to its essentials, the issue is: could Hindi, or any other Indian language, at present, or in the foreseeable future, replace English as the official language, as the language of central administration, inter-State communications and the medium of higher education? Have the people in the non-Hindi-speaking areas become, or will they become, sufficiently conversant with Hindi in this generation to warrant its being substituted for English for official purposes? The answer in both cases is certainly an emphatic 'No.' The only sensible and wise course open, therefore, is to retain English as the official language until such time as other languages become sufficiently developed to take its place.

A straightforward issue like this has been complicated by an excessive display of emotion. The protagonists of Hindi, in their enthusiasm to see the language raised to the pedestal of official language, tend to overlook all practical considerations. Questions of national prestige, which are totally irrelevant to the issue, have even been put forward as arguments for Hindi. But a strange, and factually incorrect, argument in favour of Hindi is that recently advanced in certain quarters that more people in the South know Hindi than English. For instance, Mr. Maganabhai P. Desai, Vice-Chancellor of Gujerat University and a noted educationist, recently stated that literacy in Hindi in the South was greater than literacy in English. This statement is certainly untenable and the case for Hindi is not in the least strengthened by advancing claims which do not stand up to statistical scrutiny. Writing in the *Statesman*, Calcutta, Mr. C. Rajagopalachari has characterised the claim as baseless and born of gross error in the interpretation of literacy figures. "Whatever the merits of the case for Hindi," points out Rajaji, "let it not be based on claims which every schoolboy in South India knows to be false."

Mr. Desai's conclusion, according to Rajaji, is vitiated by two fundamental errors: (1) The equal acceptance of the Census report standards as regards English literacy and the *Dakshina Bharat Hindi Prachar Sabha's* standard as to Hindi literacy and basing a comparison on that basis; (2) the calculation of Hindi literacy figures by adding up the figures of candidates appearing for Hindi examinations every year. The standard applied by the Census authorities for recording English literacy is the S.S.L.C. (matriculation) examination while that applied by the *Hindi Prachar Sabha* is the mere fact of appearing for even the lowest of its examinations, even the highest standard of which is much below that of the matriculation examination. The method of adding together the figures of candidates for all the various examinations of the *Sabha* held during five successive years and comparing it with the English literacy figures arrived at in the Census gives a totally distorted picture because the latter only refers to a particular date. Further, a single person appearing for the same or different examinations of the *Sabha* gets counted under this process as five.

Rajaji compares the literacy figures for Hindi and English in a different way. For the *Praveshika* (entrance) examination of the *Sabha, about 25,000 candidates appeared during the* three years ended 1956 from the whole of South India, while in the Madras State alone 220,000 candidates appeared for the S.S.L.C. of whom more than 100,000 passed. The ratio, on this basis, works out to 1 : 4 in favour of English. If the S.S.L.C. passes of all the areas covered by the Hindi *Praveshika* examination is taken into account, the figure for English would be multiplied three or four fold.

The fact is that, in spite of official patronage, Hindi has made very little headway in non-Hindi-speaking areas and there should be no running away from it. Of course, one would wish Hindi had made more progress. But State policies can never be based on wishful thinking. As it is, nothing should be done to dislodge English from the position of the *de facto* official and inter-State language in the country. The daily Press circulation figures published recently by the Press Registrar of India are, indeed, revealing in that they show the preference of the public. The figures show that, out of a total circulation of 3.15 million for the daily newspapers of India, English daily newspapers alone accounted for over one million, nearly one-third. Hindi papers came next but much behind, with a circulation of less than 400,000.

BUSINESS MEN IN SOUTH MEET

The two-day deliberations of the regional conference of the Chambers of Commerce in the Southern region (comprising the States of Mysore, Madras, Kerala and Andhra Pradesh), held at Bangalore last week-end, more than fulfilled the main intentions of its organisers, namely, to focus attention on the imperative need for speedy development of South India economically and industrially and to urge the powers-that-be to adopt a more helpful policy with a view to alleviating the major disquieting problems confronting the business community in the region. The success of the Conference would however, have been far greater if the organisers had endeavoured to throw some light on two important questions. First, what are the economic problems peculiar to the Southern region as distinguished from those obtaining in other regions? Secondly, has the pace of economic development in the region been hampered by any political force or forces? It is to be hoped that the Zonal Council, which the Conference decided to constitute as a consultative body representing all the chambers in the region affiliated to the Federation of Indian Chambers of Commerce and Industry or the Associated Chambers of Commerce will address itself in right earnest to a detailed study of these issues.

The common theme of the speeches made by several members at the Bangalore Conference was that the economic development of the Southern region had not received due attention at the hands of planners. Indeed, a special resolution was adopted by the Conference bitterly criticising that the allocation of funds under the second Five-year Plan for the development of the region was "totally inadequate and not commensurate with the contributions made by this area towards the economic prosperity of the country." The resolution urged the Planning Commission to redress such an inequality, particularly in respect of power development, irrigation and transport (road, rail and sea).

The charge that the South has been neglected economically holds true to some extent. The outlay on all the schemes of the aforesaid four States provided in the second Plan represents 19.8 per cent. of the aggregate Plan expenditure, whereas the States together account for as much as 26.4 per cent. of the total population of the country. Mr. D. N. Hosali (Mysore Chamber of Commerce) was perhaps right when he asked whether this was fair treatment. Stating that only 11.7 per cent. of the total tax receipts was collected from the South, Mr. Hosali emphasised that the region was economically very backward and that there was urgent need for developing it.

In particular, the taxation policy of the Union Government was the target of criticism at the Conference. How harmful has been the effect of the policy is clearly brought out in the following extract from the resolution on the subject adopted:

"The taxation policy of the Government of India continues to be a source of recurring anxiety to the commercial and industrial community. The recent accumulation of direct taxes in the form of the increased tax on companies by way of income and corporation taxes, aggregating 51¼ per cent., and the levy of wealth tax on companies have begun to weigh heavily not only on the distributable profits of companies but also on resources that can be ploughed back into business. Ploughed-back profits have been hitherto a very handsome source of capital for companies and have provided, in many instances, the entire means for expansion."

There is no exaggeration whatever in these observations. If the industries are to expand their manufacturing activity so as to augment production of quality goods at an economic cost, it is of the utmost importance that the Government should reduce the fiscal burden. The tax on bonus issue, as the Conference urged, must be abolished and the dividend tax lowered to enable companies to make reasonable distribution without paying heavy penalties for it. The Government may say that these steps will reduce the revenues to the exchequer, but such losses would be more than made good by expansion in investment and production. Further, the Government could tap alternative sources of revenue. Mr. M. G. Lakshminarasu, Chairman of the Conference, did well to stress that the abolition of prohibition and the imposition of a duty on salt were subjects which deserved earnest attention.

Besides the plea for a downward revision in the tax burden, the Conference put forward, in the course of separate resolutions, four other notable suggestions bearing on labour, exports, State Trading Corporation (S.T.C.) and transport problem. The resolution on labour appealed to the Government to approach the problem in a realistic way having regard to the need for the financial stability of industry and provision of resources for its expansion. It was suggested that single-man tribunals should be discouraged and that persons who had intimate knowledge of the economy of the industry concerned must be appointed as members of tribunals. The resolution on exports urged the modification of the fiscal, labour and other policies in a suitable way so as to boost sales of Indian goods abroad, while that on S.T.C. wanted a clear declaration of policy embodying the idea that the Corporation would confine its activities only to tr

for which it was originally meant. The resolution pertaining to transport called upon the Government to take early steps to provide adequate road, sea and inland transport facilities at appropriate centres, to formulate a policy for the development of national highways, and to recommend the removal of inter-State and other taxes on motor vehicles. All these suggestions are very pertinent ones which must be implemented without delay, if the pace of economic development is to be accelerated.

INDIA'S FOREIGN TRADE

While the announcement of the import policy for the last quarter of the current year is eagerly awaited, it would naturally be useful to have a glance at the recent trends in India's foreign trade. With the provisional figures of foreign trade for the month of July now at hand, it is possible to take stock of the country's performance in the field of trade during the first seven months of the year. It is regrettable, though not surprising, that there has been a substantial deficit in the balance of trade to the tune of Rs. 146 crores during the period under review. It is, however, gratifying to note that the position has improved as compared with the corresponding period of the previous year, when the adverse balance of trade was of the order of Rs. 202 crores. The value of imports aggregated Rs. 457 crores and exports Rs. 311 crores during the seven months ended July 1958, as compared with Rs. 570 crores and Rs. 368 crores in the corresponding period of 1957.

The following table shows the monthly variations in the trends of trade for the first seven months of 1958 against the corresponding figures for 1957.

(Value : In crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1957			
January	78.00	55.27	—22.73
February	70.80	54.43	—16.37
March	79.40	53.95	—25.45
April	90.65	47.85	—42.80
May	85.16	52.80	—32.36
June	85.60	48.29	—37.31
July	81.13	55.79	—25.34
Total ..	570.74	368.38	—202.36
1958			
January	66.05	53.24	—12.81
February	66.21	41.92	—24.29
March	70.60	46.73	—23.87
April	59.98	41.73	—18.25
May	63.29	44.71	—18.58
June	63.93	28.12	—35.81
*July	66.96	54.31	—12.65
Total ..	457.02	310.76	—146.26

* The figures for the month of July are provisional.

During the period under review, although imports were still at a relatively high level, they fell by Rs. 113 crores as compared with the corresponding period in 1957, thanks mainly to the austere import policy pursued by the Government of India. This substantial drop was responsible for the notable recovery in the balance of trade position. It may be noted, in this context, that imports on private account continued to dwindle, possibly with the exception of machinery, owing to controls and restrictions. On the contrary, the share of imports in the public sector moved up during the period.

Be that as it may, a contributory factor for the large deficits was lower receipts from exports. The value of exports was lower by about Rs. 58 crores during the first seven months of the current year as compared with the same period last year. There is no doubt that the decline in export earnings is due to the effects of the recessionary trends abroad and to increased competition in India's overseas markets. The fall in the export earnings from tea, in particular, was conspicuous, which, however, was probably the result of export duty, the excess stocks built up by the U.K. after the Suez episode and the high cost of inventory on account of the rise in interest rates. Significant and far-reaching as is the export promotion drive launched by the country, it is anybody's guess whether the earnings from exports can be stepped up, in the near future, in view of the recessionary conditions emerging in Europe and the fall in the export incomes of countries which import their requirements from India, including several South-East Asian countries. There may, however, be an improvement of seasonal nature in November and December 1958, when cash crops pertaining to the 1958-59 season arrive in the market.

RAILWAY TRAFFIC

It was generally felt when the second Plan was finalised that the sum of Rs. 1,125 crores allocated for railways in the Plan was inadequate to equip them to carry the additional traffic they would be called upon to do as the Plan progressed. Knowledgeable quarters had pointed out that the sum would be inadequate for development programmes, after meeting the need for replacement, renewals and rehabilitation. It was clear that better operational efficiency was more than ever necessary. It is, therefore, good news to be told by Mr. Jagjivan Ram, Union Minister for Railways, that there has been a general improvement in the operative position of railways in the country. Addressing the eighth meeting of the National Railway Users' Consultative Council at New Delhi last week, the Minister stated that, as a result of the general improvement in efficiency of handling equipment, as also the slight easing of the pressure of goods traffic, the outstanding registrations for wagons awaiting clearance had fallen substantially on both broad and metre gauges. Over many wide areas, according to the Minister, the traders were able to get wagons within two or three days of registration.

During the period January to July 1958, on the broad-gauge, the number of wagons loaded registered an improvement of 2.48 per cent., as compared with the total number of wagons loaded in the corresponding period of the previous year. On the metre-gauge, however, the total number of wagons loaded during January to July 1958 showed a decline of 1.78 per cent., as compared with the loadings of the previous year in the same period. Thus, there has been a small increase in loading on the broad-gauge and a slight decline in loading on the metre-gauge.

Loading on the broad-gauge was affected by the poor demand for loading manganese ore during the period, the strike at Jamshedpur in May, and the dock strikes in the ports of Calcutta, Bombay and Madras in June. The dock strike resulted in loaded wagons for the ports being held up and in suspension of further loadings to ports. On the metre-gauge, loading suffered on account of the poor sugarcane season. Acute summer conditions in many areas, diversion of traffic to the road services and generally less trade activity also tended to reduce loading on both broad and metre gauges in several regions.

As regards coal loading, there has been a marked improvement. For instance, as against a target of 3,500 broad-gauge wagons per day in the West Bengal and Bihar coal fields, the average daily loading of coal during the period under review was 3,811 representing an increase of about 6.1 per cent., as compared with the average loading of 3,592 wagons in the corresponding period of last year. During April 1958, loading of coal touched the peak level of an average of 4,018 wagons per day. There has been general improvement in the loading of coal from other collieries also. Improvement was registered in the number of wagons transhipped at break-of-gauge junctions and riverine points. Particularly significant was the rise in the number of wagon-loads transhipped from broad-gauge to metre-gauge across the Ganges.

As a result of the general improvement in the operating position and the slight easing of the pressure of traffic, the outstanding registrations in terms of wagon-loads awaiting clearance on the broad-gauge has been reduced to 26,020 at the end of August 1958, as compared with 57,145 at the end of January 1958 and 44,306 at the end of August 1957. On the metre-gauge also, the position improved and the outstanding registrations at the end of August 1958 were only 21,101, as compared with about 31,000 at the end of January 1958 and 22,040 at the end of August 1957.

The position with regard to passenger transport, however, showed no marked improvement. Overcrowding continued to be present in many sections of the railways. A census of passenger traffic taken on all the railways during November 1957 indicated that the overall average overcrowding on the broad-gauge was 16 per cent. and on the metre-gauge 19.9 per cent., as against the corresponding figures of 16 per cent. on broad-gauge and 30 per cent. on metre-gauge in the census taken in 1955. These figures are indicative of one thing. The various steps taken to even out the overcrowding, as is inevitable, have produced some results, at least so far as the metre-gauge is concerned. The daily average passenger train miles on the broad and metre gauges on 1st September 1958 were 194,570 and 122,197, as against 189,198 and 111,255, respectively, on the same date in the previous year.

As regards the future, it is common knowledge that, with the resources provided for in the second Plan, it will be possible to increase the capacity for passenger transport only to the extent of 15 per cent. at the end of the Plan period. This increase will, to a larger extent, be offset by the increase in passenger traffic caused by a rise in population and the increasing travel habit. The result will be that, even at the end of the second Plan, the same, if not a larger, amount of overcrowding, as obtaining now, will persist. As regards transport of goods, the slight easing of the traffic pressure witnessed of late is a temporary phenomenon and, as the Minister himself pointed out, there is no room for complacency. Surely, heavier demands will be made on railways in the near future when the giant steel works commence operations and they should be prepared and equipped to meet the challenge.

DECIMAL COINAGE FOR S. AFRICA

South Africa will switch over to a system of decimal coinage probably by February 1961, should the recommendations made by the Decimal Coinage Commission, just published, be implemented. The Commission, which was set up in August 1956 to examine the question, has advocated the introduction of a new monetary unit of the value of 10*s.* divided into 10 silver shillings and 100 bronze cents.

The Commission has expressed the hope that the Government would take an early decision on the matter so as to proceed with the introduction of legislation in the early 1959 session of Parliament. The entire task of converting the calculating machines to the new system is sought to be completed by September 1962. During the proposed preparatory period of about two years, the existing coinage system should remain the only official system. The report has, however, not proposed any name for the new unit but suggested that its designation should be distinctive.

Needless to say that the proposed scheme, involving as it does the standardisation of currency units, will go a long way towards simplifying the currency system in the country which, in turn, will help the evolution of metric system of weights and measures. By ensuring expeditious conversion, this simplest form of coinage will make calculations quick and easy. Viewed thus, it is but natural that the big five banks and altogether 56 out of 75 organisations who expressed their views to the Commission were in favour of the change-over to the new system. Indeed, manufacturers of calculating machines were practically unanimous in supporting the scheme.

Thus, it has become fairly certain that yet another member of the Commonwealth will join the ranks of about 106 countries with decimal coinage system of currency, out of the 140 countries in the world that issue their own coins. It must be noted, in this context, that, while the U.S.A. gave the lead by introducing decimal coinage with the dollar as the unit as early as 1786, the U.K. still keeps out of it, owing obviously to the fact that any shift in the present system would entail heavy loss on account of the widespread use of automatic counting machines in the country. Be that as it may, the change-over envisaged in South Africa will by no means be without some difficulty. It would, for instance, cost an enormous sum to effect the necessary conversion. It is estimated that about £9 million will be incurred by way of compensation for converting adding machines, electric petrol pumps, cash registers, price computing scales and other machines, besides the cost of replacing used machines earlier than normally necessary. It is, however, a price worth paying, considering the advantages the decimal system confers on the people.

The Deputy Minister for Commerce and Industry, Mr. Satish Chandra, stated in the Lok Sabha on the 22nd inst. that India's exports of cotton textiles, groundnut oil, light engineering goods and coal had been adversely affected by competition from China. He, however, said that it was too early to make an accurate assessment of the extent to which India's export trade had been affected.

NINE WEAK LINKS IN ECONOMIC CHAIN

MONEY MEANT FOR THE PLAN DIVERTED TO OTHER PURPOSES

From Our Special Correspondent

NEW DELHI, 23rd *September*

DELHI LETTER

IN the Lok Sabha debate last week on the Second Plan's reappraisal, perhaps the best speech was made by Mr. M. R. Masani. The Independent Member from Ranchi—East made a number of telling points which merit better coverage than has been accorded to them in the daily Press. At the outset, the speaker dwelt on what he called "the nine weak links in the chain of reactions that the Second Five-year Plan has set off." These weak links, as detailed by Mr. Masani are: (i) a substantial dose of deficit financing, aggravating inflationary pressures; (ii) an increase in wholesale prices and the cost of living; (iii) a stagnant standard of living for our people and an actual setback in the standard of living of the middle classes; (iv) a drop in savings; (v) a decline in agricultural production; (vi) a decline in the rate of increase in our industrial production and, indeed, as Mr. Asoka Mehta has shown from the Reserve Bank figures, an actual drop in the production itself; (vii) the imperilling of our foreign credit; (viii) mortgaging our future; and (ix) the additional taxation that has been inflicted in the last two or three years.

In dilating a little on the last item, namely, additional taxation, Mr. Masani made the telling point that "this money which was meant to be used for the Plan has quite frankly been misappropriated and diverted to purposes for which it was never raised and, as far as one can make out, about half of this taxation has been eaten up by non-Plan and non-development expenditure." "Would it be too harsh to say," he asked, "that this is a way of fraud on our people that money is raised for the Plan and then two years later we are told that half of it has gone elsewhere?" Mr. Masani was probably aware of only about half of this "fraud," if it can be so called.

Incidentally, it has been the contention of this correspondent since March last that *practically* no part of the additional tax effort at the Centre has really been available for the Plan. This contention finds fresh confirmation in an estimate which, I learn, has been made in the Planning Commission itself—an estimate not given in the Commission's latest note of reappraisal. According to this estimate, the Plan's original figure of Rs. 350 crores by way of a five-year aggregate revenue surplus at 1955-56 rates of taxation at the Centre now turns out to be a deficit of Rs. 190 crores. This means that the revenue surplus, which should have been available for the Second Plan at the 1955-56 level of civil and military expenditure, has now vanished. What is worse, the *minus* balance of Rs. 190 crores means that it has eaten into the revenue, now estimated at Rs. 640 crores for the five-year period, from additional taxation at the Centre. In the final analysis, all this would mean that the Plan will have accounted for not more than Rs. 125 crores after allowance is made, in terms of the Planning Commission's own admission, for that 50 per cent. of additional tax revenue utilised for non-Plan and non-development expenditure.

Adverting to the revision of the Plan target in May last and to the latest revision, Mr. Masani had the following to say:

"Therefore, we have now a gap of Rs. 240 crores *plus* Rs. 150 crores, that is, Rs. 390 crores in all. The original gap of Rs. 240 crores was sought to be covered by Rs. 100 crores of additional taxation, Rs. 60 crores from loans and savings and Rs. 80 crores from other sources. May I urge the Planning Commission to consider whether these are realistic expectations? Can they really hope to raise Rs. 100 crores more from additional taxation? Is it not a fact that the law of diminishing returns, according to the Law Minister, has already set in? ... And the savings drive has already shown that the people will not go in for small savings when the incentives they need are not given. So, these assumptions that you can raise further taxation, that you can get more savings out of the people, that the price level will be stabilised and inflation halted, have all been proved by the history of the last three years to be thoroughly unjustified. For any body of planners to insist on going on making assumptions which have been proved to be unjustified, shows a lack of the spirit of planning. It shows wishful thinking, a life in a world of make-believe; and that is why our targets and our realities never coincide."

Indeed, in the judgment of some circles in the Planning Commission itself, it would be reasonable to assume, in view of the reduction in excise and export duties at the Centre and of possible marginal changes in other tax items, that the five-year figure of resources would only be Rs. 4,260 crores. That this is not likely to be more than Rs. 4,000 crores has been shown by this correspondent in his last letter.

In view of the stress and strain to which the national economy has been subjected by the implementation of the second Plan, Mr. Masani emphasised that the primary function of further planning should be that of consolidation and of securing for the people the fruits of existing investment and effort. This consolidation, according to Mr. Masani, also meant appropriate effort in the next Plan period so as to convert the investments so far made, especially in Steel Plants, into real things which would mean something to our people—tools for the agriculturists with food following, motor trucks, better roads and bridges, consumer goods, machines to make consumer goods, and so on. Now that, in the second Plan, half of the third Plan has been mortgaged by way of heavy debt repayments in the early sixties, Mr. Masani made these telling points:

"Therefore, very little remains with us to expand with, unless we, indeed, go on being bankrupts again. Therefore, whether we like it or not, the most profitable way in which we can focus our energies for the period of the third Plan will be to consolidate the gains we have already made.... You cannot make the army march all the time. As Napoleon said, the army also marches on its stomach. You have got to give our people, who have been made breathless with the advance of the second Plan, a little time to relax and to enjoy the fruits of what they have already invested or saved. If we do not do that, then there is only one alternative—the end of democracy and taking up of the big stick with which to hit the people on the head. Since we have ruled out that alternative, we have got to go the democratic way of giving incentives."

A recent note submitted to Parliament's Consultative Committee on trade and industry deals succinctly with the shortage of raw materials for industries. It is officially admitted that some industries in India, particularly the engineering industries, are at present experiencing difficulties in the procurement of raw materials as these industries are mainly dependent on such raw materials as steel, tinplate, non-ferrous metals, processing materials, tools and alloy and special steel, which are imported. But, the note continues, the present difficult foreign exchange position permits only a very restricted import policy and the prospects of increasing imports seem rather remote. This should not be surprising, because the foreign exchange allocation for different purposes, including the import of raw materials, is made in the following order of priority:

(a) Commitments already made in regard to capital goods and machinery items; (b) requirements of the projects in the 'core' of the Plan; and (c) the current requirements of raw materials and components.

Broadly speaking, the main consideration underlying the present import policy is to reduce quotas in respect of items which are considered not strictly essential to maintain the economy of the country. Even in respect of essential items, quotas are fixed only to bridge the gap between demand and indigenous production. But, here, preference is shown for the import of raw materials required for existing industries to enable them to maintain levels of production. The allocation of raw materials for different types of industries is governed by the following principles:

(1) State Directors of Industries have been authorised to recommend import of raw material requirements for industries not included in the First Schedule to the Industries (Development and Regulation) Act, 1951. These recommendations are considered and permission is granted to the extent possible subject to the availability of foreign exchange involved. (2) Licences to actual users in small-scale industries for the import of essential raw materials, machinery and components are also considered on an *ad hoc* basis within the special ceiling fixed for the purpose. (3) Provision has been made under the Export Promotion Schemes for meeting the raw material requirements of items meant for export. (4) There is an *ad hoc* provision for licensing to meet demands not covered by the licensing policy in force.

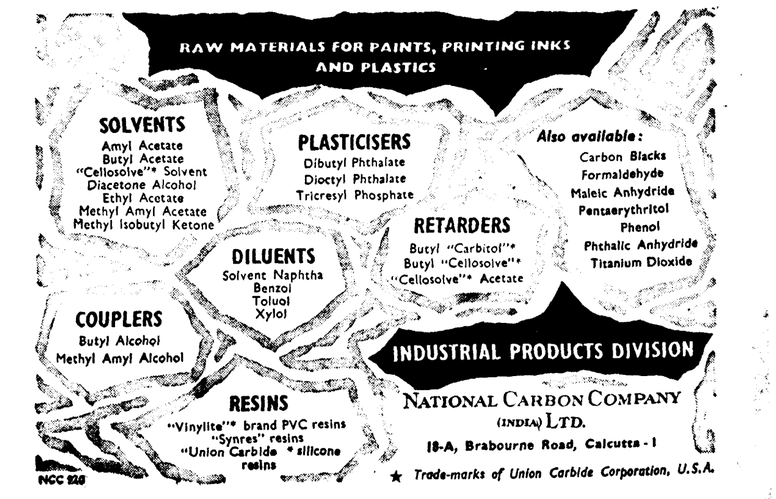
The note continues that, in the past, when the foreign exchange position was rather easy, the import of raw materials and components used to be of the order of about Rs. 480 crores per annum. As against this, for the current half-yearly period (April-September 1958), only about Rs. 160 crores of foreign exchange has been allotted for the import of raw materials and components other than iron and steel for industries. In 1957, a quantity of 1.6 million tons of steel worth Rs. 126 crores was imported. During the current half-yearly licensing period, Rs. 123 crores of foreign exchange have been set apart for the import of steel alone. It will not, therefore, be possible, the note says, to meet *all* the requirements of imported raw materials and components. The hope is, however, expressed that it may be possible to ensure supplies of imported raw materials to industries at least on the present scale, in view of the assistance likely to be forthcoming from friendly countries.

The note concludes by saying that the question of supply of raw materials to industries is, however, kept under constant review and efforts are made to effect supplies to the extent possible. The following steps, among others, have been taken by Government to meet the raw material requirements of industries:

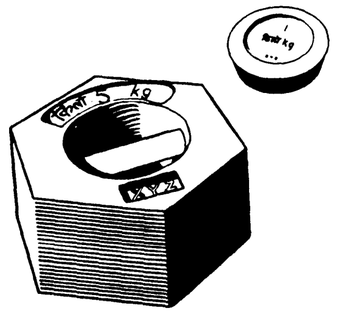
(i) Industries are being encouraged to export a part of their production on the understanding that they will be allowed to use the foreign exchange thus earned for the import of additional raw materials required by them. (ii) Efforts are being made for import of raw materials from Communist countries through the State Trading Corporation against export of listed goods. (iii) Schemes for the manufacture of some important raw materials which are required by the industries in the country involving foreign collaboration, in the shape of capital participation or supply of capital equipment in lieu, are encouraged because such schemes help to reduce imports and thus save foreign exchange.

LONDON LETTER

For this week's London Letter, please see page 543. The subject dealt with is World Sugar Conference.—ED.



First Phase



The first phase of the change-over to the Metric System of Weights and Measures begins on October 1, 1958. From this date, the use of Metric weights becomes legal in selected areas of the States.

Similarly, the Metric System will be introduced in government departments and industries like cotton textile, iron and steel, engineering, heavy chemicals, paper and cement. The jute industry adopted this system on July 1, 1958.

The reform will be gradually extended till the whole country is covered.

INTERNATIONAL RESERVES AND LIQUIDITY

CONCLUSIONS OF I.M.F. STAFF STUDY

AN important subject that will figure at the annual meeting of the International Monetary Fund due to be held at New Delhi on 6th October is whether the free world has enough liquid reserves to cushion the effects of any imbalance that may take place in international trade and to prevent such trade from going down. There are two schools of thought on this subject. One feels that there is not enough, while the other thinks that the reserves are adequate. There would have been less confusion, if the issue had been stated more precisely. It is well known that the International Monetary Fund is a sort of world bank to provide short-term credit to those countries which run short of external reserves. If the question was whether the I.M.F. had enough resources to discharge its functions effectively and whether there was not a case for raising them, it would have been easier to answer it. Anyway, the free world is richer for having posed the question in a complicated manner, for it has led to a better understanding of the problem than before, thanks to the research study on it by some prominent agencies. A fortnight ago, we published, in these columns, the views of the *Monthly Letter* of the First National City Bank of New York. We have now the findings of the staff of the International Monetary Fund consisting of several experts in monetary economics. Their study was published in Washington last week in the form of a "Staff Paper" and has been distributed to the Governments of its 67 member-countries. We are told that the study should not be regarded as necessarily representing the views of the Fund's Board of Executive Directors. In the foreword to the publication, Mr. Per Jacobsson, Managing Director of the Fund, says:

"An attempt has been made to review present problems in the light of past experience. The study takes account of very recent developments, and it has, therefore, fortunately been possible to consider the implications for international liquidity both of the extreme boom conditions of 1956-57 and of the subsequent recession. The consideration of the problems for the future has thus benefited from very recent experience in contrasting economic conditions."

On the question that matters now, namely, do the resources of the I.M.F. require to be expanded, the authors of the study clearly say that "it is doubtful whether, in the circumstances of the world today, with world trade greatly expanded in volume and value, the Fund's resources are sufficient to enable it fully to perform its duties." In other words, the experts are in favour of an increase in the Fund's resources.

Many Facets

The following is a summary of the findings and conclusions of the study by the I.M.F. staff:

International liquidity is a concept with many facets. In assessing liquidity from the point of view of any individual country, account has to be taken of the various ways in which it may be able to meet, without great embarrassment, a strain on its balance of payments. This will depend not only on the degree of the strain and its available cash reserves, but also on the possibilities of mobilising additional resources and on the effectiveness of the international credit system. The degree of strain will depend, in part, on general developments, such as world-wide fluctuations in business, and, in part, on the country's own inherent balance and its readiness to take corrective measures, if for any reason that balance is upset. For such measures to take effect, time is needed, and, therefore, the amount of monetary or international reserves at the country's disposal during the period of adjustment is a most important factor. Without neglecting these general considerations, a study of liquidity must, therefore, first direct its attention to the size of monetary reserves. While in the final analysis the reserves position of each individual country is important for the management of its affairs, it is useful to obtain an overall picture by outlining the total of reserves available to all countries and relating them to the volume of world trade.

For all countries, except those in the communist area, the ratio of official gold and exchange reserves to imports in 1957 was 51 per cent. This is distinctly higher than in 1913, when the ratio was 21 per cent., or in 1928, when it was 42 per cent. but lower than in 1937-38, when it was as high as 100 per cent.

What Determines the Trade

The effectiveness of reserves at these various dates is not necessarily indicated by the reserve percentages themselves, because conditions changed greatly during the period. Thus, reserves in 1913 were generally found to be adequate, even though they were very small in comparison with those in later periods. That was a time when there was a fair degree of balance among the various economies, when under the gold standard rules, corrective measures were taken speedily, and when the international credit system was working with great effectiveness. In 1928, despite substantially higher reserves, the world economy was headed for a disaster: there were still many uncorrected maladjustments following World War I; dangerous credit policies had been pursued throughout the 1920's, not least in the international field; and individual countries had a tendency to resort too readily to tariff measures and other hindrances to trade when difficulties confronted them. On the other hand, reserves in the late 1930's, which stood at an unprecedentedly high level, were not in themselves able to give an impetus to production or trade. The world economy had been disintegrating in monetary and other respects, movements of funds were determined largely by political and monetary fears, and, in many countries, little scope was given to the dynamic forces of the economy.

The conclusion that can be drawn from a comparison with the past is, therefore, that the contribution of reserves to the achievement of full employment, to the increase of world trade, and to the genesis of both inflation and deflation is not a dominant one. Major world trends of production and trade are not determined solely by liquidity. The developments of the last 40 years or so have been dominated not by changing liquidity ratios but rather by two major wars, several minor wars, vast expenditures preparing for wars, and large expenditures to repair the damages of wars.

In those periods, on the other hand, when war or warlike considerations are not the major factor, the broad cyclical or longer-run determinants of demand in the economically most important countries tend to dominate the world economy. If these factors are expansionary, production will rise and the value of world trade will also rise, whether world liquidity increases at the same rate or not. Therefore, the position of these larger countries is of outstanding importance, not least because the credit or fiscal policies they pursue and the role they play in the international credit system are vital factors for the trend of world liquidity in general. If their position is impaired, as it was in large measure in the 1930's, even an historically unprecedented increase in the world's stock of gold could not by itself reverse the situation.

The conditions prevailing in the late 1930's can, therefore, not be regarded as a useful basis for comparison with present conditions, since too many adverse factors of a non-reserve character then dominated the situation. In regard to the other years with which comparisons have been made, it must be said that, so far as the overall picture is concerned and on a purely statistical basis, the ratio of reserves to trade in recent years cannot be considered low in itself.

U.S. Position

The effectiveness of reserves depends, moreover, not only upon the total for all countries, but also upon their distribution among countries. After the one-sided flow of gold to the United States in the inter-war period (due largely to political fears), the reserves of that country rose to such an extent that, by the end of 1949, it held 74 per cent. of the world's gold stock and 56 per cent. of total gold and foreign exchange reserves. Since 1949, the trend has, however, run in the opposite direction. U.S. gold holdings have fallen and holdings of U.S. dollar exchange by the rest of the world have risen. This strengthening of the reserves of other countries, taken together with the fact that U.S. gold holdings are still sufficiently large to permit that country to pursue credit and fiscal policies in a large measure independently of the flow of gold, has clearly helped to improve world liquidity.

Another large country—the Federal Republic of Germany—has in recent years so strengthened its reserve position that it, too, now has great latitude in pursuing its fiscal and monetary policies. Recent statements of authoritative persons suggest that Germany has no particular interest in further increasing its monetary reserves.

U.K. Position

For the United Kingdom, the effects of the war, and especially the accumulation by many countries of large sterling balances, have made the country's monetary position in many respects more vulnerable to sudden movements of funds. Its balance of payments on current account has, with few exceptions, shown surpluses in the post-war years. While the funds thus becoming available did not lead to a net increase in the reserves, they nevertheless helped the work of the credit machinery centering in London, and they added to the long-term foreign assets of the United Kingdom. In 1957-58, however, stricter fiscal and credit policies, together with favourable terms of trade, led to a substantial increase in reserves, coinciding with some decline in sterling balances, so that the net position was appreciably improved. While balance of payments considerations still remain a major factor in the formation of British policies, there would now seem to be less danger of any acute exchange crisis. Nevertheless, it must be remembered that the credit system centering in London is, by its very nature, affected by major upsets of an economic and political character in all parts of the world, and that the strengthening of international liquidity is of interest to all who use sterling in their international transactions.

Non-industrial Countries

Many countries have been able to strengthen their reserve positions in recent years, though there are important exceptions. By and large, it may be said that it is the industrial countries which have either maintained or improved their reserve positions. On the other hand, many non-industrialised countries have decreased their reserves. In some countries, these decreases were planned, and used to finance development—though some of the decreases were perhaps greater or more rapid than had been anticipated. In some countries, the decreases in reserves followed the declines in recent years in the prices of primary products or were the natural consequence of sharp or prolonged inflation. The types of change may be outlined with a few illustrations. Thus, between 1948 and 1957, the ratio of reserves to imports was reduced in Ceylon from 84 per cent. to 48 per cent., and in India, from 195 per cent. to 43 per cent.; in fact, most sterling area countries drew upon the sterling savings which had been accumulated during the war. In Latin America, the reserve ratio percentage was reduced in Bolivia from 37 to about 1; in Peru, from 26 to 9; and in Uruguay, from 120 to 69.

While the non-industrialised countries have the urgent problem of obtaining international financial assistance, they realise, of course, that internal balance cannot be restored without further domestic measures.

Given this situation, it is necessary to reckon with a demand for monetary reserves from countries that now have insufficient reserves. Moreover, it is likely that, with the growth of their foreign trade, a number of other countries will also wish to strengthen their reserve positions. Sometimes, it seems to be assumed that, in order not to hinder the growth of foreign trade, the aggregate reserves of all countries must be increased in the same proportion as the average annual growth of foreign trade, say, something like 3 per cent. per year. Examination of past experience suggests, however, that there is no such fixed mathematical relation between the growth of foreign trade and the increase in reserves. It seems more realistic to assume that countries with really large reserves will not find it imperative to increase their holdings—and it may unfortunately also prove to be the case that some countries which ought to augment their reserves will not carry out the policies that would make such an increase possible.

Not Difficult

Since the amount becoming available for monetary purposes from current gold production, without allowing for any receipts from dishoarding, is likely at the present price of gold to be about $700 million a year, it would seem that gold output alone can make a very substantial contribution to satisfying the need for increased reserves. Since it is, moreover, likely that there will be some increase in exchange holdings, the reserve problem with which the world will be faced over the next decade does not seem to be too difficult, provided that further progress is made, by sensible policies in restoring and maintaining balance in the individual economies, in avoiding increased obstacles to trade, and in strengthening the international credit system.

These provisos are important, since the adequacy of reserves, both for the world as a whole and for individual countries, can be judged only in a broad international context. For example, a given level of reserves will have one degree of adequacy when economic conditions between countries are in reasonable balance and when exchange rates are appropriate. If these conditions are not satisfied, the same reserves will have a different degree of adequacy. Similarly, from the point of view of any one country, reserves that may be adequate if the country is following a programme of development with stability may appear totally inadequate when it has an unbalanced budget or active credit inflation. No amount of reserves is adequate to finance a continuous deficit in the balance of payments resulting from excessive spending or insufficient revenue. In these cases, the immediate task is clearly to adopt fiscal and monetary policies that will restore external and internal equilibrium.

Tradition and Convention

Over fairly long periods, some countries have had relatively large reserves (e.g., the United States, Switzerland, Portugal, and Venezuela), while others (e.g., the Scandinavian countries) have traditionally held rather low reserves in relation to their foreign trade. One cannot escape the conclusion that, in this matter, tradition and convention play a considerable role. Several of the countries with slender reserves have, even in the generally favourable economic environment of the post-war period, been beset by difficulties which those with larger reserves could take in their stride. Many countries may state that their reserves are too low or wish that they might be larger, without being prepared to take the steps necessary to strengthen them. An increase in reserves is part of a country's investments. It requires, like other investments, a counterpart in the form of uncommitted savings of one sort or another, as happens, for instance, when debts to the central bank are repaid from genuine budget surpluses.

Quality of Reserves

At the end of 1957, the official reserves of all countries (outside the communist area) consisted of $37.0 billion in gold and $15.9 billion in foreign exchange, making together $52.9 billion. The quality of reserves is now undoubtedly sounder than it was in the late 1920's. At that time, a large part of the foreign exchange holdings was the counterpart of short-term foreign credits; now for the most part, countries holding reserves are also their beneficial owners.

The short-term lending mechanism, which is an indispensable element in the liquidity of any international monetary system, may not yet be as efficient as it was in the days of supreme monetary confidence before World War I, but it is certainly better than in the period between the two world wars. Private holdings of foreign currencies, needed as working capital for the financing of trade and other international payments, have in a fair degree been reconstituted. About 40 per cent. of the foreign-owned dollar balances in the United States are privately owned and, after some rather violent fluctuations in the course of 1956-57, sterling balances were very largely replenished in the first six months of 1958. With an increase in monetary confidence and a relaxation of exchange controls, it is likely that, as was the case before 1914, equilibrating movements of funds will be facilitated. These, up to a point, should reduce the strain on official reserves. The fact that the monetary authorities in most countries have again begun to pursue flexible credit policies, including fairly frequent changes in interest rates, should be very helpful in encouraging such a development. It is certainly too early to conclude that the shifts in leads and lags, which from time to time during the post-war period have given rise to such disturbing movements of funds, will not occur again. Nevertheless, the way in which appropriate credit policies in the last few years have been able to reverse those movements is a hopeful sign for the future. Financial assistance from international institutions, including both the European Payments Union and the International Monetary Fund, have been helpful in this connection.

Marshall Plan

The important contribution of international institutions to liquidity has been a new development in the period after World War II. The financial activities of the International Monetary Fund were at a low ebb for several years. During these years, many countries in Europe met their needs with the help of funds provided by the Marshall Plan, and many countries outside Europe were able to use the liquid resources they had accumulated during the war (sterling balances in the British Commonwealth, and dollar balances in the Latin American countries). In connection with Marshall Aid, a system of intra-European settlements gradually evolved into the European Payments Union, which made an important contribution to liquidity, especially at the time when the private credit system had not yet been restored to working order.

For the Fund, the years of little business activity, stretching from 1948 to 1955, were used to get its working methods fully organised; to start the system of consultations with countries maintaining exchange restrictions required under Article XIV; to develop forms of technical assistance to member-countries; and, what has proved very important, to agree on the policies and principles to be applied to requests for the use of the Fund's resources.

Fund's Criteria

While requests for drawings of 25 per cent. of a country's quota, normally corresponding to its own gold subscription, are almost automatically approved, the principle has been established that, for the next 25 per cent., members are required to show that they are making a reasonable effort to solve their own problems. For drawings beyond these limits, more substantial justification is required: namely, that the drawings must be in support of a sound programme likely to ensure enduring stability at realistic rates of exchange. These principles are also applicable to requests for stand-by arrangements, and they proved to be of great practical value when, in the autumn of 1956, there was a distinct upturn in the business activity of the Fund—beginning with the financial assistance granted to the United Kingdom in connection with the Suez events, and followed by drawings and stand-by arrangements with a great number of countries in various parts of the world. In all these cases, when requests for drawings and stand-by arrangements were considered, the Governments made statements to the Fund concerning the monetary and other relevant policies they intended to follow.

It is important to remember that the Fund is not merely an additional source of reserve credit available to the monetary authorities of its members. It is recognised more and more as a source of credit which is available only to member-Governments that have satisfied the Fund of their intention and their capacity to restore balance in their monetary affairs. The Fund thus helps to restore some measure of that monetary discipline by which the gold standard in its way maintained balance before World War I, but it also supplies a measure of credit by which harshness may be mitigated.

Fund's Turnover

Total drawings on the Fund from its inception to the end of July 1958 amounted to $3.1 billion; in addition, at the end of July 1958, undrawn balances under existing stand-by arrangements amounted to $800 million. But the Fund's significance for international liquidity is greater than the amounts drawn would suggest, for several reasons: first, the Fund's resources constitute a particularly efficient form of reserves, since their use can be pinpointed to particular areas of financial strain; second, as already mentioned, drawings are generally coupled with specific undertakings with respect to monetary and fiscal policy on the part of the countries concerned; and, third, the favourable technical judgment of a country's economic and financial programme, implied in the approval of a drawing by the Fund, not infrequently simplifies that country's task in obtaining additional sums from other sources. Furthermore, the possibility of having access to the Fund's resources, even when no assistance is actually granted, may make countries more confident in their attempts to restore balance—making them willing to take stricter measures than if they had to rely on their own resources alone. They may be encouraged by the knowledge that a second line of defence is available to them. In practice, they may, therefore, exert more discipline than if these opportunities did not exist.

It seems sometimes to have been assumed that the Fund would be called upon to render assistance particularly in periods of recession in the United States which, in accordance with the experiences of the 1930's, were expected to put a strain on the balances of payments of other countries. As a matter of fact, by far the major part of the financial transactions of the Fund so far have occurred in the boom period of 1956-57. It is true that the largest of these transactions, the financial assistance to the United Kingdom at the time of the Suez events, was of an emergency nature not directly connected with the boom. Subsequently, some other important transactions were undertaken to bring temporary relief to countries with deficits in their balances of payments resulting from the strains of an exaggerated boom in their own domestic economies. There have recently been some transactions which can be associated with the recession that began in the latter half of 1957, but they have been for relatively limited amounts. While raw material producing countries have suffered from the decline in the prices of primary products, the fact that the 1957-58 recession in the United States has been accompanied by an outflow of gold from that country has helped many countries, especially in Europe, to strengthen their monetary reserves. It can, of course, not be concluded that a recession in the United States will always have similar results. Nevertheless, experience in the last two years clearly indicates that the need for assistance from the Fund may arise quite

Limestone and dolomite from the quarry quarries of Katni, steel and pig iron from the roaring furnaces in Asansol and Jamshedpur, coal from the dark depths of the earth in Bihar . . . each year, from all over this vast land a stream of materials worth about Rs. 3 crores, pours into our shopping bag. Out flows from Texmaco's production lines another stream, a stream of finished products manufactured to international standards—sugar, cotton and jute mill machinery, rolling stock, industrial and locomotive boilers, hydraulic dam equipment and other steel structurals. Thus playing its part in the complex pattern of India's developing economy, Texmaco is linked with a multitude of other enterprises, large and small. As Texmaco grows so too the other industries prosper.

TXC-47

WORLD POSITION OF MAN-MADE FIBRES

NON-CELLULOSIC FIBRE CAPACITY EXPANDING RAPIDLY

THE most significant development in the textile world during the past two decades has been the marked inroad made by man-made fibres in apparel-making *vis-a-vis* the natural fibres, cotton, wool and silk. The percentage share of the former fibres in the aggregate world production of apparel fibres has gone up from a bare 8 in 1937 to as much as 23 in 1957, while that of cotton and silk has declined from 81 and 1 to 66 and less than 0.5, respectively; the share of wool production which stood at 16 in 1927 came down to 11 in 1957. Such a division of the market underestimates the advance made by man-made fibres, considering that measurement by weight is an unsatisfactory way of comparing the contributions of the various fibres, because some combine light weight with great covering power. Thus, the actual production of rayon and acetate yarn and staple fibre has risen by three times since 1937, though their percentage share in the total output of all apparel fibres has improved by 2½ times only.

The bulk of the rise in the production of man-made fibres has been in rayon staple fibre, but rapid progress is now being made by the newer synthetic fibres—called non-cellulosic fibres—such as nylon, Terylene (Dacron), Acrilan, Courtelle, Courlene, Fibrolene and Saran. The total projected non-cellulosic fibres capacity of the world (excluding China) for the year 1959 is put at 1,756 million lbs., as against 1,263 million lbs. in 1958. Their actual production was 903 million lbs. in 1957, 680 million lbs. in 1956 and 585 million lbs. in 1955, according to the journal *Textile Organon*. The projected rayon and acetate capacity is put at 7,502 million lbs., for 1959, as against 7,194 million lbs. for 1958, their actual output being 5,436 million lbs., 5,238 million lbs. and 5,009 million lbs. in 1957, 1956 and 1955, respectively. In fact, the demand for ordinary rayon and staple fibre fabrics for personal wear in the U.S., the U.K. and other advanced countries is fast declining, consumer preference being pronouncedly in favour of textiles made of new non-cellulosic fibres, even though they are costlier than the old man-made fibres. This is not surprising because the new synthetic fibres are more durable, easy to wash and require little or no ironing.

Progress in India

In contrast to this trend in the Western world, in India rapid strides have been made only in the old man-made fibres, namely, rayon and staple fibre. The progress made by it in this field so far and the targets fixed for the second Five-year Plan are indicated below:

(In tons)

	Installed capacity	Production
Viscose yarn—		
1951	3,240	2,040
1956	8,160	7,296
1957	12,816	9,448
January-June 1958	16,380*	6,220
Target for 1960-61	30,491	30,358
Staple fibre—		
1954	5,400	3,084
1956	7,560	7,008
1957	14,400	8,004
January-June 1958	14,400	6,135
Target for 1960-61	14,286	14,286
Acetate yarn—		
1955	1,800	1,044
1956	1,800	1,416
1957	1,800	1,808
January-June 1958	1,800	867
Target for 1960-61	N.E.	N.E.

* June 1958. N.E.—Not estimated.

The question naturally arises as to why, when the world is moving so fast in expanding the production of non-cellulosic fibres, India has still not made any attempt to manufacture such fibres. The reason is not far to seek. As already stated, the new chemical (non-cellulosic) fibres are expensive. They require enormous capital investment. There must be a well developed petro-chemical industry, if they are to have adequate supply of raw materials. There must also be a large number of chemical engineers and research workers. Further, the market must be sufficiently large, as the fibres have to be mass-produced in order to be economical. Having regard to all these factors, manufacture of non-cellulosic fibres may not be an economically feasible proposition to underdeveloped countries. The standard of living of Indian people continues to be very much lower than that in the industrially advanced countries of the West, so much so that the demand for fabrics woven from synthetic fibres other than rayon and acetate is too limited to permit the commercial production of these fibres on a profitable basis. It is reported that, even in a country like Australia which has a high standard of living, manufacture of Terylene has not yet proved to be a financial success.

Be that as it may, the latest annual survey made by *Textile Organon* shows that there are in the world (excluding the U.S.S.R.) 413 plants producing man-made fibres, of which 73 are in the U.S., 51 in Japan, 39 in Italy, 34 in West Germany and 28 in the U.K. Capacity continues to rise rapidly, especially for fibres other than rayon and acetate. The total world capacity of non-cellulosic fibres in 1959 is expected to be nearly double the production in 1957, while that of rayon and acetate will be higher by 38 per cent. only.

Production and Capacity

The country-wise breakdown figures for both non-cellulosic fibres and for rayon and acetate are given in the table below:

(In million lbs.)

	Production		Capacity	
	1956	1957	1958	1959
Non-cellulosic fibres :				
U.S.A.	400	516	696	895
Japan	64	94	130	263
U.K.	50	70	90	144
France	33	44	62	77
W. Germany	32	42	60	76
Italy	25	35	69	69
U.S.S.R.	25	35	50	90
Canada	16	20	35	43
E. Germany	12	14	20	30
Rest of world (excluding China)	23	33	51	70
Total non-cellulosic	680	903	1,263	1,756
Of which				
Yarn and monofilaments	416	531	703	876
Staple and tow	222	316	478	743
Type unknown (U.S.S.R. and E. Europe)	41	56	82	137
Rayon and acetate				
U.K.	432	425	605	605
W. Germany	529	552	608	613
Italy	326	322	514	514
France	235	265	335	335
U.S.S.R.	260	300	370	450
Other European countries	1,046	1,111	1,305	1,411
N. America	1,291	1,276	1,739	1,745
S. America	137	144	167	180
Japan	917	967	1,428	1,475
Rest of world (excluding China)	65	74	123	174
Total rayon and staple	5,238	5,436	7,194	7,502
Of which				
Filament yarn	2,222	2,280	2,938	3,023
Staple and tow	3,016	3,156	4,256	4,479

The projected capacity of non-cellulosic fibres for 1959 in the U.K., Italy, the U.S.S.R., Canada and East Germany is more than double the 1957 production. The actual utilisation of capacity in these countries last year was 85 to 90 per cent. The relative order of the main producers will be altered by the rapid growth of capacity in the U.S.S.R. The increase shown in the rest of the countries arises from the appearance of a number of minor producers of new fibres. It is pointed out that there is a tendency for the greatest increase to be in the growth of acrylic and polyester fibres (Acrilan, Orlon, Terylene, Dacron); polyester fibres are produced in the form of both staple lengths and continuous filament.

Capacity Utilisation

In the rayon and acetate industries, a little more than 80 per cent. of capacity was used in 1957. With a similar percentage, the prospective increases of production would amount to about 6 per cent. a year, whereas the recent actual increases have been 4 per cent. only. World production of rayon, mainly concentrated on staple, has expanded in spite of an actual decline in the U.S. and the U.K. The output in West Germany and Japan has been advancing appreciably and, indeed, the projected Japanese capacity for 1959 is almost equal to that for the U.S., namely, 1,530 million lbs.

The constancy of world filament yarn output is expected to drop from the high 1955 figure for acetate yarn and for high tenacity tyre yarn, balanced by an improvement for regular and intermediate tenacity viscose, as well as cuprammonium rayon yarn. The actual production of all these types as between 1955 and 1957 suffered a sharp fall in the U.S. and a minor setback in the U.K., Japan and the U.S.S.R. have reported a substantial rise in the production of regular tenacity yarn. The upward trend in the staple fibre output has been shared by most of the countries.

The foregoing account of the position regarding man-made fibres excludes textile glass fibre (fibreglass, Stratimat and Gevetax). The available production data for 1957 place the out-

COTTON EXPORTS

MARKED FALL LAST SEASON

PRELIMINARY figures relating to shipment of cotton from India during the 1957-58 season which ended on 31st August 1958 confirm the earlier anticipation that exports during the season will be one of the lowest on record. Thus, exports from 1st September 1957 to 31st August 1958 aggregated only 278 983 bales of 400 lbs., as compared with 301,512 bales shipped in 1956-57, 611,731 bales in 1955-56, 318,845 in 1954-55, and 134,320 bales in the 1953-54 season.

Destination-wise, Japan, as usual, occupied the pride of place. Total shipments to that country aggregated 197,997 bales, or 71 per cent. of total exports, as against 195,530 bales in the previous season. The share of the U.S. and China also increased, the increase being more marked in the case of the former country. For instance, the U.S. accounted for 11,040 bales, as against only 2,409 bales in the previous season. China's offtake almost doubled from 3,437 bales in 1956-57 to 6,092 bales in the season under review. Shipments to other destinations like European Continent, Hongkong and the U.K. were lower, being 26,460, 19,708 and 16,580 bales, as compared with 30,208, 44,147, and 24,680 bales, respectively, in the previous season. The following table gives the destination-wise breakdown of export figures for the 1957-58 and 1956-57 seasons:

(In bales of 400 lbs.)

Destination	1st September to 31st August	
	1957-58	1956-57
Japan	197,997	195,530
Europe	26,460	30,208
Hongkong	19,708	44,147
U.K.	16,508	24,680
U.S.A.	11,040	2,409
China	6,092	3,437
Others	1,106	1,101
Total	278,983	301,512

The reasons for the poor export performance in the season under review are well known. They are mainly the recession in the world textile market and the consequent slack demand for raw cotton from India's customers, currency difficulties of buyer countries, competition from Pakistan and the U.S.A., improper timing of quotas and absence of firm export policy. The method of licensing, under which licences are made valid for a maximum of one month only, also stood in the way of exports, as many important consumer countries, faced with foreign exchange shortage, preferred to buy for more extended shipment period. As a result of the adoption, towards the end of the season, of the first-come-first-served basis for issuing licences, shipments, which were proceeding at a snail's pace earlier, were, however, speeded up. The Government's failure to make quota announcements at the appropriate time rendered it difficult for shippers to take advantage of the shifts and changes in the demand for cotton and the lack of a long-term export policy made it impossible for them to enter into firm export commitments.

The experience of the past holds out some lessons for the future. The export policy should take into account market realities. However exclusive the qualities of Indian short-staple cotton, it does not have a seller's market. In fact, Pakistan *Deshi* cotton and low grade U.S. short staples from the C.C.C. stocks are very serious competitors. In these circumstances, it requires a high degree of promptitude and business acumen to push through sales but all this will be of no avail if the Government and export control authorities fail to match them with equally businesslike methods in the matter of issuing licences, etc.

An early formulation and announcement of export policy is also important. In fact, the Cotton Buyers' Association, the Cotton Advisory Board, and the Indian Central Cotton Committee—all have urged the Government to make known its policy early enough. This would give the foreign buyer, as well as the Indian exporter, an idea of the minimum quantity that would be available for export during the year, and would help to ensure a steady supply.

It has been suggested in certain quarters that, as an incentive for export, shippers should be allowed to retain up to 10 per cent. of the exchange earnings for the purpose of importing raw cotton of staple length not grown within the country. The suggestion, which is probably inspired by a somewhat similar scheme existing in Pakistan and advocated in India also in regard to exports of cotton textiles, has not, however, found favour with the Cotton Advisory Board.

TRADE UNION "ALARM" ON YARN IMPORTS

FUTURE OF RAW COTTON MARKETING ASSESSED

From A Special Correspondent

MANCHESTER, 16*th September*

STILL the prime subject for discussion in textile trade circles in Lancashire is the coming visit by the "three wise men" to Hong Kong who are to make a final attempt to secure an agreement with millowners in the Colony on the curtailment of cotton cloth imports into the United Kingdom. The Lancashire mission is due to fly to the Colony at the end of this week. Most of the discussions have centred round the scope of the talks, as, in some quarters, it is felt that these were likely to be restricted merely to arrivals of grey cloth. Fears had been widely expressed that, in the event of an agreement, the Hong Kong spinners and weavers would shift the emphasis of their export trade to finished textiles and garments. It is understood, however, that the British team does not intend to confine its negotiations solely to the importation of grey cloth.

MANCHESTER LETTER

The question of yarn imports is another matter. At their present level, these represent annual arrivals of about 10,000,000 lbs. from the three countries concerned. However menacing this trade appears to the individual spinner in Lancashire, the overall view is being taken that it should not be allowed to jeopardise the chance of securing a pact covering the other goods. The negotiators hope to obtain safeguards to the effect that further discussions can be initiated should future arrivals of yarn reach proportions which are considered dangerous to Lancashire millowners and operatives.

Asian Yarn "Disturbance"

Trade union "alarm" has already been expressed on this topic by Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation. "A disturbing feature is the report of manufacturing firms using yarns from Asiatic countries for the fulfilment of their order books," he says in his latest quarterly report. He adds:

"If this policy becomes more widely adopted, the spinning section is likely to be most severely affected... If increased imports of yarn do emanate and are followed by negotiations with the Commonwealth countries concerned, the spinning section will, at the best, only be able to rely upon a portion of the manufacturing section for support."

In the course of this Letter last week, reference was made to the danger confronting the Liverpool Cotton Market, in view of the absence of support and the very limited effectiveness of its operations at the present time. Further background of these developments has been provided in the latest publication of the *Liverpool Raw Cotton Annual* now available.

The high spot of the *Annual* is the survey dealing with the future of marketing of raw material contributed by Mr. W. B. Hutchinson, an ex-President of the Liverpool Cotton Association. His article presents a well-reasoned plea for collaboration between the spinning trade and raw cotton interests.

While it is freely admitted that the growth of State marketing has been largely instrumental in curtailing the activities of raw cotton traders, the methods adopted by some of the larger groups in the Lancashire cotton industry since the re-establishment of the Liverpool futures market have certainly not assisted its continuation.

"Market Population" Dwindling

In considering whether the services of a market can be maintained under present circumstances, Mr. Hutchinson emphasises that the focal point of the problem must be the question of spot stocks. Another vital aspect is to secure an adequate "market population," in view of the present trend towards centralisation in the spinning industry.

The policy of cutting out all possible middlemen services would seem to indicate the gradual extinction of the cotton market. "This stage can be reached even before the time when the spinning trade becomes concentrated in a few large combines, since the trend itself, if seen as inevitable, will cause a progressive flight from activity or employment in the raw cotton trade," the writer adds.

World trading conditions are such that an organised market cannot survive and do its job efficiently without the active and continuing participation of the spinning industry itself. This is the main conclusion reached by Mr. Hutchinson, on the assumption that there is no reasonable alternative to the free market as a permanent system of raw cotton supply for British mills. The situation is one calling for decisions based on long-term considerations.

As a means of rescuing the Liverpool market from the desperate straits in which it appears to be foundering, Mr. Hutchinson has several practical suggestions to put forward. Spinners, he urges, should give preference to buying on "spot terms" from local merchants in order to foster the creation of a spot stock. As such supplies cannot be expected to exist without means of hedging, he contends that, where yarn prices are subject to regulation, they should be allowed to move parallel to cotton futures.

Without a reserve of buying power to offset seasonal pressure of selling when crops move or trade cycles bring a sudden preponderance of selling, hedge markets cannot have the necessary stability. In the absence of buying power from speculative or merchant sources, spinners who continue to import their own cotton, thus becoming merchants, should also be prepared to support the market as buyers in such circumstances. This is how Mr. Hutchinson sums up the position:

"There seems to be a case for examining closely how far centralisation of mill processing, selling and finance must necessarily lead to complete centralisation of raw cotton buying also. The restoration of confidence in the future of the market could largely be achieved if leading units of the industry could, on appropriate occasions, declare their general support for such a policy, as outlined above, and in due course take practical steps to carry it out. Others might then follow and the downward spiral would gradually be arrested and reversed."

Twin decisions, both of which can be assumed to have an adverse effect on British cotton textile trade with New Zealand, have been taken by the Dominion Government within a matter of days during the past week. By following the example of Australia in offering most-favoured-nation treatment to Japan, New Zealand was within her rights as a member of the British Commonwealth, but the development cannot be viewed in any other light than regretfully by Lancashire. So too the reduction in the preferential tariff margin enjoyed by Britain under the Ottawa Agreement is another major blow against local exporters.

Some slight comfort can be gained from the fact that, so far this year, shipments of cotton cloth to Australia have suffered only a minor reverse. Compared with 1957, the total exports to the end of July were 42,319,000 square yards, a drop of nearly 2,300,000 yards. Over the whole of 1957, cloth exports to Australia were 71,358,000 square yards, as against 80,314,000 yards in 1956 and 99,779,000 yards in the previous year.

Business with New Zealand has been remarkably steady for some little time past. Comparisons of shipments during the first seven months of the past three years show almost identical figures at around 21,000,000 square yards. In the whole of 1957, exports reached nearly 34,000,000 square yards, as against 32,640,000 square yards in the previous year, and 37,417,000 in 1955.

Much the same tale is told in the figures for rayon and synthetic fibre piecegoods. Shipments to New Zealand are now second only in importance to those to Rhodesia and Nyasaland, being 7,711,000 square yards for the first seven months of the year, a slight gain on the 1957 level. In the whole of last year, shipments to New Zealand took fourth place at 12,562,000 square, yards, after Rhodesia and Nyasaland, South Africa and Australia.

Japanese Imports

In the absence of detailed information on the new agreements, it is difficult for any immediate action to be taken by trade organisations. In any case, the documents are already signed and it can only be hoped that there are sufficient safeguards to avert any major inroads being made by Japan into what has always been an important market for Lancashire cotton goods.

It is significant that imports of Japanese cotton cloth into New Zealand have been rising during recent years, but only in ratio to the increased takings by the Dominion. Lancashire's share in the available trade has declined, although, in 1957, it still represented about 60 per cent. of the total, as against 12½ per cent. gained by Japan. In rayon and mixture piecegoods, the proportion remained at about 55 per cent. for Lancashire, but imports from Japan represented over 20 per cent. of arrivals.—*All Rights Reserved.*

INDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. STEWART M. PETRIE ON COMPANY'S PROSPECTING PROGRAMME

THE progress made so far in the implementation of the prospecting programme of the Indian Copper Corporation Ltd. was reviewed by Mr. Stewart M. Petrie, the Company's Chairman, at the Annual General Meeting of the Company for the year ended 31st December 1957 held at Calcutta on Wednesday, 24th September 1958. Mr. Petrie stated that the increase in copper ore production, though it was not spectacular, had resulted in appreciable additions to the Company's ore reserves. Alluding to the progressive rise in the working depth, he pointed out that, even to maintain production, numerous technical problems of considerable magnitude had to be overcome and that the prospect of increasing costs for the extraction of the copper ore must be faced.

The following is the full text of the speech of Mr. Stewart M. Petrie:

"GENTLEMEN,

"I have continued the precedent which your Chairman initiated last year of giving my statement on the Corporation's affairs at the Annual General Meeting, in preference to sending it out with the Accounts, which were published a month ago.

World Copper Markets

"You will have seen from your Directors' Report, together with the Accounts for the year 1957, that, following the decline in the world price of copper, the profit of your Company is appreciably less than that recorded in the previous year. As your Chairman rightly pointed out a year ago, the spectacular results for 1955 and 1956 could not be expected to continue. As the prices of your Company's copper and brass products must bear a close relationship to the world price of copper, I consider it desirable to give you a short account of the trends in world copper markets over the last year or so.

"From the high peak reached in March 1956 of £436.10 per ton on the L.M.E. (London Metal Exchange), the price of copper fell to £267 per ton at the beginning of 1957. There followed almost immediately a slight improvement, but this was not maintained, and thereafter throughout the year, the price of copper continued downward until at the close of the year L.M.E. quoted £182 per ton.

"The basic reason for this marked decline was overproduction and the market throughout the year was struggling against a growing weight of supplies. Certain of the larger producers announced cuts in production, but the slight bullish effect which this produced was quickly discounted on the realisation that the hoped-for-revival of American business in the autumn of that year could not be realised.

"In the year 1958, there has been an upward trend in price, which might be attributed to an improvement in business conditions in America, a strengthening of demand in Europe and the political situation in the Near East. For some time, the price has remained fairly steady around £207 per ton. The net indications seem to point to a more stable market in the not too distant future. Meanwhile, fluctuations below today's level will not be surprising and even likely, as it is impossible to predict future copper market developments, owing to its sensitivity to speculative influences.

"During the year 1958, the Indian Government imposed a price and distribution control over the sale of imported copper in India.

Working Review

"You will, I am sure, be gratified to see from your Directors' Report that the ore milled amounted to 440,671 short tons and the copper produced at 7,848 long tons constituted another record in the annals of the Company. Furthermore the ore reserves increased by 426,163 short tons to a total of 3,850,757 short tons at the end of the year, which, of course, adds to the life of the Company.

"You will further see from the Directors' Report that the production of rolled products increased. The market for our Flag brand sheets continues to be firm, but we are somewhat apprehensive as to the future, in view of the fact that the complementary metal—zinc—must be imported and the import policy of the Government concerning this metal has not yet been announced.

"Your Company, over the past few years, has undertaken an extensive prospecting programme throughout the whole of your leasehold property in an endeavour to find new copper lodes to supplement those now approaching exhaustion and with the ultimate object of increasing production. Our efforts in this direction have so far met with only limited success, but, in 1957, the ore obtained from prospecting development has materially assisted towards increasing production as compared with the previous year. Although this increase in production is not spectacular, we have, it will be noted, added appreciably to our ore reserves, which now stand at 3,850,757 short tons, as compared to 3,424,594 short tons at the end of the previous year. At Mosaboni—the main producing mine—we are now working at a depth approaching 3,000 feet from the surface and, provided the ore persists, the working depth will progressively increase. I mention this to illustrate that, even to maintain production, numerous technical problems of considerable magnitude have to be overcome and the prospect of increasing costs for the extraction of the copper ore must be faced.

Labour

"In January 1957, a tripartite agreement was signed by the management, on the one hand, and the mines and works unions on the other, whereby it was affirmed that the terms will be binding on all the parties for a period of three years. By virtue of that agreement, there appeared to be every prospect that the management and the recognised unions representing the mines and works would have been able to carry on in a spirit of mutual harmony and goodwill for at least that period. Unfortunately, peace was disrupted by a fresh outbreak of restiveness on the part of employees of our Moubhandar Works, due to the sudden emergence of an outside unregistered and unrecognised labour union who promised fulfilment of new demands in direct opposition to the three-year agreement. The result of this intrusion has created a split between the workmen at Moubhandar and resulted in a number of strikes of short duration during the year. Fortunately, these did not have any appreciable effect on production.

"Your Company has not been alone in the spread of industrial unrest caused by the infiltration of similar unrecognised unions in other large industrial concerns in Bihar and Bengal.

"As you are aware, the copper produced by the Corporation is fire-refined, containing a comparatively high nickel content making it unsuitable for industries requiring copper for electrical purposes. The Company has had under consideration for some time, in consultation with their technical consultants, a project to manufacture electrolytic copper. There is an increasing demand for copper of this grade in India which, at present, has to be imported from abroad, involving high foreign exchange expenditure. Last year, the Company was granted a licence by the Government of India for the manufacture of electrolytic copper, and our proposals have now been submitted to Government for a refinery at Ghatsila with a capacity for 8,400 tons of electrolytic copper and wire bar programmed for completion by 1961.

Kyanite

"The production and despatch of kyanite mined at your Kharswan property were fully maintained and the price at £23 per ton f.o.b. Calcutta remained steady throughout the year. The main markets abroad continued to be the European Continent, including the U.K., with limited quantities to the U.S.A. and Australia. Kyanite again enjoyed a free export market with total exports throughout the year increased by 955 tons over the previous year to 17,399 tons. I have nothing further to report on the two civil suits concerning the kyanite lease decreed in the Company's favour in the Subordinate Judges Court during 1956, which are still pending under appeal in the Patna High Court.

"Every endeavour is being made to increase exports by finding new markets, as, for some time now, there has been considerable buying resistance from abroad for this ore, due largely to the manufacture of indigenous synthetic substitutes necessitated by the high landed cost of Indian kyanite.

Accounts

"I shall now turn to the Accounts which disclose that the profit, before providing for taxation, depreciation and reserves, amounts to £1,123,749. Depreciation at £175,000, the same as the previous year, has been provided in view of the large capital expenditure required for prospecting and maintaining production. You will observe from the balance-sheet that the addition to fixed assets during 1957 was £305,330. Your Directors have transferred £175,000 to general reserve.

"The decrease in the provision for taxation, however, coupled with the reduced charge for dividend tax and the absence of any charge similar to the additional taxation on the bonus share issue in the previous year, has largely offset the decrease in profits and the nett disposable surplus is lower by only £22,045.

Staff

"On behalf of you all, I extend our thanks to the General Manager, Mr. N. A. B. Hill, to the staff both at the mines and at the works, and to all workers for the excellent services they have rendered to the Corporation throughout the year."

TRENDS IN SUGARCANE PRODUCTION

BOTH PER-ACRE YIELD AND QUALITY FALL

REVIEWING the discussions on the Sugar Export Promotion Bill in the Rajya Sabha in these columns last week, we observed that the realisation of the objective of improving the per-acre yield, as well as quality, of sugarcane was being hampered by the present system of paying for cane on the basis of only weight and not on that of both weight and quality. That there was no exaggeration whatever in this statement is clearly borne out by the none too encouraging progress made in the sphere of cane cultivation, despite the implementation all these years of several development schemes in the States entailing expenditure of crores of rupees. The per-acre yield of cane has not only not registered any improvement but has actually tended to decline. On an average, one acre of land sown to cane during the season 1957-58 yielded no more than 12.8 tons, as against 13.2 tons in 1956-57 and 13.3 tons in 1950-51, that is, the base year of the first Five-year Plan. Similarly, the quality of cane grown continues to be poor, the all-India average yield of *gur* per 100 tons of cane in 1957-58 being less than 10 tons, as against 10.5 tons in the previous year and 10.1 tons seven years before.

The conditions obtaining in the sphere of cane cultivation in India compare very unfavourably with those elsewhere in the world. The following table shows the average per-acre yield of cane, recovery per cent. of sugar in cane and quantity of sugar raised per acre of land in India as compared with the other sugarcane producing countries:

	Yield of cane per acre (Tons)	Recovery (Per cent.)	Sugar recovered Per acre (Tons)
India	12.07	10.00	1.268
Hawaii	62.05	10.48	6.489
Java	56.20	11.49	6.440
Peru	41.14	12.33	5.076
Japan and Formosa ..	28.27	12.93	3.657
Australia	21.34	14.33	3.060
Egypt	30.42	9.97	3.032
Puerto Rico	24.16	12.23	2.956
South Africa	22.36	10.90	2.439
Mauritius	19.63	12.08	2.370
Philippines	27.08	8.45	2.287
Cuba	17.12	12.25	2.095
Mexico	19.54	9.20	1.817

The continued low per-acre yield and quality of cane grown in India is disquieting. This state of affairs should be improved, if the cost of sugar is to be reduced. The only effective solution to the problem lies in the adoption of measures designed to encourage intensive cultivation, as distinct from extensive cultivation. These measures include not merely provision of irrigation facilities, establishment of seed nurseries, distribution of disease-free and improved varieties of seeds, distribution of manures and fertilisers, control of pests and diseases, organisation of demonstrations and crop competitions, but also a policy to link the price of cane to both weight and quality, instead of to weight alone as at present. It is only such a policy that will give real inducement to cultivators to grow cane with richer sucrose-content.

The need for improving conditions in the sugarcane economy is especially urgent in the present context when the sugar industry has embarked upon a large expansion and development programme. The programme envisages an addition of 760,000 tons to the rated capacity of the industry, in order to achieve the capacity target of 2.50 million tons and the production target of 2.25 million tons by 1960-61. These capacities will go on increasing year by year thereafter, in keeping with the expanding sugar-consuming capacity of the country as a result of the rise in population and improvement in the standard of living of the masses.

The successful implementation of the aforesaid programme will depend on the progress in the sphere of cane cultivation. The target of cane output fixed for 1960-61 is 78 million tons, as against 58 million tons in 1955-56, representing an increase of 35 per cent. Judged by this target, the actual performance during 1957-58—the second year of the Plan—is not at all encouraging. Thus, the all-India final estimate of the sugarcane crop for the season places the aggregate yield at 63.95 million tons, as against the partially revised estimate of 66.99 million tons for the previous season or a fall of 4.5 per cent. The decline in production is due largely to the drop in the per-acre yield—this has already been indicated—and partly also to the reduction in the area devoted to cane cultivation. The total area under cane during 1957-58 is lower by 0.7 per cent. at 5,021,000 acres, as against 5,057,000 acres in 1956-57. The quality of the cane grown is, as mentioned earlier, poorer.

An idea of the trend of per-acre yield of cane and recovery per cent. in the different States during the past two seasons can be had from the figures cited below:

States	Per-acre yield of cane (Tons)		Recovery of *gur* from cane (Per cent.)	
	1957-58	1956-57	1957-58	1956-57
Andhra Pradesh	27.3	29.0	8.17	10.00
Bombay	27.1	24.5	10.43	10.40
Madras	25.7	26.0	10.95	10.94
Mysore	24.1	25.2	10.01	10.00
Orissa	16.0	16.1	9.97	9.97
Kerala	15.8	18.6	10.05	9.91
West Bengal	14.6	19.5	10.04	10.00
Punjab	13.6	11.1	9.99	10.00
Tripura	11.0	10.4	10.38	9.58
Assam	10.3	10.6	9.95	9.90
Madhya Pradesh	10.2	12.8	10.04	9.88
Uttar Pradesh	10.1	11.4	9.99	9.99
Rajasthan	8.6	8.2	9.93	10.01
Bihar	8.4	9.1	9.97	9.99
Delhi	6.4	7.0	10.00	10.00
Himachal Pradesh ..	4.6	6.0	10.52	11.11
Jammu and Kashmir ..	3.0	3.0	11.11	11.11
All-India average ..	12.7	13.2	9.95	10.07

It will be seen from the above table that the per-acre yield of cane is highest in Andhra Pradesh, followed by Bombay, Madras, Mysore, Orissa and Kerala. It is, however, very low in the States of Uttar Pradesh, Bihar, Rajasthan, the Punjab, West Bengal, Assam and Delhi. It is thus obvious that the tropical conditions in the South of Vindhyas are more suitable for cane development than the sub-tropical climate in the North.

The detailed break-down figures relating to the area sown to cane and the estimated yield in the different States during 1957-58 as compared with 1956-57 is given in the following statement:

	Area (Thousand acres)		Production (Thousand tons)	
	1957-58	1956-57	1957-58	1956-57
Uttar Pradesh	3,017	3,066	30,542	34,973
Bombay	270	244	7,325	5,947
Punjab	494	487	6,742	5,388
Andhra Pradesh ..	176	180	4,907	5,227
Mysore	133	124	3,207	3,129
Bihar	376	403	3,183	3,673
Madras	121	115	3,104	2,989
Madhya Pradesh	122	131	1,245	1,672
Orissa	59	59	942	942
West Bengal	58	60	846	1,170
Rajasthan	83	83	715	679
Assam	65	63	673	666
Kerala	22	19	348	353
Tripura	7	7	77	73
Delhi	11	10	70	70
Himachal Pradesh ..	4	3	19	18
Jammu and Kashmir ..	3	3	9	9
Total India	5,021	5,057	63,954	66,998

The above statement reveals that the decrease in the production of cane and reduction in acreage have occurred mainly in Uttar Pradesh, Bihar, Madhya Pradesh and West Bengal. The setback is generally attributed to unfavourable weather conditions during the sowing period and damage caused by adverse weather during the growing period of the crop. The overall decline in cane yield has been offset to a large extent by increases registered mainly in the States of Bombay and the Punjab. The productive estimates in respect of Andhra Pradesh and West Bengal are based on the results of random crop cutting surveys.

(*Concluded from next column*)

calculation suggested that a substantial margin was left for covering the costs of the oil synthesis, with the comparative ex-refinery prices of premium gasoline currently averaging about 13*d.* a therm. On these theoretical assessments, the gross annual return from operations on the proposed scale worked out at about 20 per cent. on the capital.

At the present stage of developments, such figures are, of course, of merely academic interest, since they anticipate very substantial advances in synthesis techniques yet to be accomplished. Many more years may pass before they can, in fact, be realised, and by that time any major changes in the relationship of coal and oil prices and other cost factors might invalidate the present estimates. Mr. Wynn rightly warned against underrating the power of technology, but he equally stressed the harm that can be done by exaggerating its possibilities—a view amply borne out by past experience in the field of oil synthesis.—*By Special Arrangement with* **Petroleum Press Service.**

OIL FROM COAL

POSSIBILITIES OF ECONOMIC SUCCESS STILL DOUBTFUL

IT is a commonplace that one technical advance invariably opens new possibilities in related spheres. This is now occurring in the field of oil-from-coal, as a consequence of recent moves by the U.K. gas industry towards the adoption of novel methods of town-gas manufacture, based on the total gasification of small coals by the German Lurgi process. The advantages of this process over the traditional coal-to-gas conversion by carbonisation are threefold. It eliminates the by-production of coke, produces high-pressure gas for long-distance transmission and, not least, it operates economically on small low-grade coals which—in contrast to the still scarce high-grade carbonisation coals—are now becoming available in increasingly embarrassing abundance, as the result of the fast progressing mechanisation of coal cutting. But beyond the foregoing attractions for the gas industry, the total gasification of these small and comparatively cheap grades of coal offers new prospects for providing cheaper gas to be used in Fischer-Tropsch plants for conversion to oil.

Work on improving the techniques and economic prospects of oil-from-coal production has been going on almost incessantly on both sides of the Atlantic ever since the 1930s, when Germany first embarked on establishing a synthetic oil industry, based on the Bergius high-pressure coal hydrogenation and the Fischer-Tropsch synthesis processes. At that time, Imperial Chemicals in Britain also set up at Billingham a coal hydrogenation plant capable of turning out up to 150,000 tons a year of oil products. But all these, and a few similar pre-war or wartime ventures elsewhere, were prompted essentially by military considerations and the desire of gaining technical experience, rather than the expectation of making the synthesis of liquid fuels a commercial proposition. After the war, the production of oil from coal in the then existing facilities was abandoned everywhere, except behind the Iron Curtain.

The one and only free world country that has since attempted the manufacture of oil from coal as a commercial undertaking, South Africa, has not so far been able to make an economic success of it. Sasol, the Government-owned corporation in charge of this enterprise, completed the installation of its £48-million Fischer-Tropsch synthesis plant and associated facilities for chemicals production in the Orange Free State three years ago, but has by now reached only about half its production target of over 200,000 tons a year of liquid fuels. It is further still from paying its way, despite seemingly most favourable pre-conditions. For Sasol has at its disposal both coal and labour resources of unparalleled cheapness, as well as the latest versions of the Fischer-Tropsch process devised by German and American experts.

A vital stage of the Fischer-Tropsch process is the gasification of coal which, by reaction with oxygen and steam in a Lurgi plant, is converted to synthesis gas, a mixture of carbon monoxide and hydrogen. Further improvements in the Lurgi process would cheapen this part of the operation. Some significance attaches, therefore, to the fact that the U.K. Gas Council and the British Coal Utilisation Research Association are now engaged in developing an advanced type of Lurgi gas generator. This is designed to operate at higher temperatures with a consequent saving of steam, while the range of acceptable fine coals is to be extended to the smallest sizes by a special device for removing the residual ash in the form of liquid slag.

The paramount importance of this "slagging gas generator" for raising the efficiency of coal gasification, in general, and for lowering the costs of coal-to-oil synthesis, in particular, was underlined in a recent reference by Mr. A. H. A. Wynn, scientific member of the National Coal Board, to a tentative design study for a hypothetical oil synthesis plant, assumed to operate on low-rank East Midland coal. This envisaged the conversion of 2.3 million tons a year of coal into 630,000 tons of high-grade gasoline and diesel oil plus 56 million cu. ft. a day of gas—representing a thermal conversion efficiency of over 60 per cent. The cost estimates indicated that a plant of that capacity was about the economic minimum size to be contemplated; its total capital cost, including working capital, was put at £35 million. Assuming that low-grade coals of about 15 per cent. ash content cost 3.1*d.* per therm (that is, approximately £3 a ton) and the purified gas about 7*d.* a therm, the paper

METRIC UNITS IN JUTE INDUSTRY

CHANGE-OVER EXPECTED TO BE QUITE SMOOTH

NEARLY three months have passed since the metric system was introduced in the jute industry. The working of the system so far would appear to have caused no major difficulty to the interests concerned and there are indications that the change-over will be quite smooth. In the course of a special article on the adoption of the metric system, Mr. J. I. Jamieson, President, Indian Jute Mills Association, points out that arrangements are now well in hand for introducing the system completely throughout the industry and that, given continued co-operation from the Government, the change-over will be accomplished without disrupting relations between the various sections of the trade and, most important, the industry's relations with its overseas buyers.

With the introduction of the metric system in the jute industry, the basic unit of weight is now the kilogram, instead of the original units of maunds and tons, while the metre is the length measure in place of the yard. The previous existing units and measure will, of course, continue side by side with metric units for two years, that is, until the change-over is completed. The conversion factors in jute goods are: 37 kilograms=1 maund; 1,014.6 kilograms=1 ton; 1.83 metre=2 yards.

Mr. Jamieson recalls that, from the very beginning, the jute industry has felt that it is in the best interests of the country that all sections of the jute trade should co-operate wholeheartedly with the Government in adopting a new unified system of weights and measures in the form of the metric system. He is pleased to state that, again from the beginning, the Government of India realised the need for the utmost caution and flexibility in promoting the metric system in an industry which is so dependent on the wishes of overseas buyers, most of them in countries which have not adopted the system. The jute industry decided that, in order to make appropriate arrangements for the change-over, two joint sub-committees should be established, consisting, on the one hand, of representatives of the mills and the raw jute sellers and, on the other, of the mills, the gunny dealers and the shippers, to examine the difficulties likely to be encountered in adopting the metric system and to make recommendations as to the best means of effecting the change-over.

Position Complicated

According to Mr. Jamieson, the position in the jute industry is somewhat complicated, as the raw jute passes through many hands from the time it is sold in small bundles by the cultivators until it reaches the mills in the form of bales of varying maundages. Moreover, jute fabrics and bags are manufactured in the mills according to a very wide range of specifications, to suit the multifarious uses to which jute products are put, and the finished goods are sold in bales containing various yardages of cloth or quantities of bags as the case may be. He, therefore, emphasises that, on the one hand, there is the problem of educating the cultivators and the many others engaged in the raw jute side of the trade in the use of this altogether strange system of weights and, on the other, account must be taken of the requirements of overseas buyers, most of whom have expressed their wish to continue to receive goods according to the existing trade specifications.

Referring to the time-table for change-over, the I. J. M. A. President makes the following observations:

"Early in 1958, the Jute Controller convened a joint meeting of representatives of all sectors of the trade in order that a time-table might be drawn up and the dates fixed for the first stage of the introduction of the new system. It was here decided that the first practical date for instituting the metric system in the jute industry would be July 1958, the commencement of the new jute season. In the earlier stages, the system would be adopted on a voluntary basis and only then in the better organised sections of the trade, and initially the application of the new system would be confined to expressing weights (of jute bought and finished jute goods sold) in terms of kilograms and the content of bales of gunny cloth in terms of metres. For a period of two years, the old system was to be permitted to exist side by side with the new. Comprehensive metric conversion tables were prepared by the Indian Jute Mills Association and issued to the trade, and similar tables for use by raw jute dealers and sellers were compiled and issued jointly by the Bengal Jute Dealers' Association and the Jute Balers Association."

As mentioned earlier, overseas buyers, particularly in the U.S.A. and the U.K., on learning of the Government of India's intention to introduce the metric system in the jute industry, informed the I. J. M. A. and the Calcutta Jute Fabrics Shippers Association that, whatever system was operating in India, they would insist on their requirements of jute goods being met on the basis of the existing units of weights and measures, and the jute industry subsequently approached the Government of India in order that it might give assurances to its overseas buyers on the question. Alluding to this, Mr. Jamieson expresses satisfaction that the Government of India fully appreciated the importance of ensuring that the introduction of the metric system should in no circumstances be allowed to interfere with India's export trade, and issued the necessary assurances which were well received by the industry's overseas customers.

By 1st July this year, everything was ready in the trade for the initial change-over. It was at first confined to the Calcutta area, the mills buying their raw materials in terms of the existing weights, with the metric equivalents recorded in the documents of purchase/sale, and the finished fabrics being sold on the same basis. It is intended, Mr. Jamieson says, that this practice, so far as it relates to raw jute, will gradually work its way back through the trade channels until it reaches the jute-growing areas. In so far as it concerns internal sale of jute fabrics, it is not anticipated that any serious difficulties will arise. Such business is transacted almost entirely in Calcutta and domestic purchasers such as, for example, the sugar and cement industries, will be at liberty to indent in terms of the existing specifications or, at their option, in terms of metric units: if the latter, the mills will be able to supply their requirements by the simple process of conversion.

The Pakistan Jute Board has re-imposed the minimum prices fixed by it in January, 1956 for the export of jute cuttings in India, the U.K. and the Continent. In a notification to the Pakistan Jute Association, the Chairman of the Board has fixed these price levels at £34 per ton for the U.K. and the Continent c.i.f. 90 days sight, and Rs. 65 (Indian) per bale c.i.f. Calcutta for consignments intended for India. The notification adds that the measure is necessary because the export price of cuttings have fallen below the limits fixed in 1956.

RISE IN JUTE GOODS OFFTAKE

STOCKS WITH MILLS DROP

THE first quarter of the current jute year 1958-59 (July to June), which is drawing to a close, has been a very favourable one for both the industry and the trade. For the quarter has witnessed a marked improvement in the offtake of jute goods, internal as well as overseas. The aggregate despatches of hessian, sacking and other goods from mills during the first two months of July and August amounted to 191,800 tons, which compare very favourably with 140,800 tons in the previous two months (May-June 1958) and 149,700 tons in the corresponding period of 1957. In view of the rising offtake, perhaps, the Indian Jute Mills Association has decided not to change the minimum prices for jute goods. These prices, it will be recalled, were fixed towards the end of February last in order to arrest the downward trend. The minimum prices are: (1) Hessian per 100 yards: (a) 40"×10 oz. Rs. 39.50 and (b) 40"×7½ oz. Rs. 29.75; (2) B. twills per 100 bags: Rs. 100. The currently ruling price of hessian 40"×10 oz. is higher at Rs. 41.65, while that of B. twills is lower at Rs. 96.20.

Following the rise in offtake, stocks with mills have declined perceptibly. The total of these stocks at the end of August 1958 were no more than 117,200 tons, as against 134,000 tons two months before, but they are still higher than those held by mills at this time last year, namely, 92,500 tons. The decline in stocks is due also partly to the fall in production which aggregated 175,000 tons in July-August 1958, as against 177,300 tons in May-June 1958. The production is, however, much higher than that (167,800 tons) in July-August 1957.

The rise in offtake during the first two months of the year (July-August) as compared with the immediately preceding two-month period was of the order of 51,000 tons. The bulk of the rise—41,400 tons, to be precise—was accounted for by exports, the total of which was 134,100 tons, as against 92,700 tons. Offtake for internal consumption was higher by 9,600 tons at 57,700 tons, as against 48,100 tons in the previous two months. The share of hessian and sackings in the improvement of 41,400 tons in exports was 25,800 tons and 15,600 tons, respectively. The actual exports of hessian during July-August 1958 are estimated at 75,100 tons and of sacking at 59,000 tons. The upward trend in jute goods shipments has been due to the tendency on the part of overseas buyers, who had hitherto been adopting a hand-to-mouth buying policy, to enter the market for larger quantities with a view to augmenting their holdings. There was also the opening of more letters of credit for Argentina, following the removal of a ban imposed on imports of hessian early in June 1958. This tendency is attributable to unsettled political developments, especially in the Far East.

Stocks Lower

The fall of 16,800 tons in stocks of jute goods during the two months ended August 1958 as compared with the end of June 1958 is shared principally by hessian, the stocks of which declined by 12,000 tons to 19,000 tons. The stocks of sacking and other manufactures were also lower, albeit by a small amount, the former by 1,500 tons at 86,400 tons and the latter by 3,300 tons at 11,800 tons. The following table shows the stocks of jute goods at the end of June, July and August 1958 and August 1957:

(In tons)

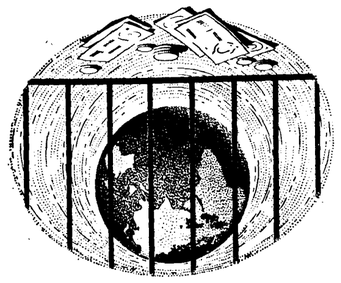
	31st Aug., 1958	31st July, 1958	30th June, 1958	31st Aug., 1957
Hessian	19,000	19,000	31,000	34,800
Sacking	86,400	89,800	87,900	51,100
Others	11,800	12,400	15,100	6,600
Total ..	117,200	121,900	134,000	92,500

The total quantity of jute goods actually produced during the first two months of 1958-59 was, as already stated, 175,000 tons, a fall of 2,300 tons as compared with May-June 1958 but an increase of 7,200 tons as compared with July-August 1957. The output during August 1958 was, of course, lower than in the previous month. The decline was accounted for solely by sacking, while the output of hessian was slightly higher and that of other manufactures unchanged, as the following figures will show:

(In tons)

	August, 1958	July, 1958	June, 1958	August, 1957
Hessian	35,400 (41.5)	35,300 (39.3)	31,300 (37.9)	33,900 (41.4)
Sacking	44,300 (51.9)	49,000 (54.5)	45,900 (55.9)	43,100 (52.6)
Others	5,500 (6.6)	5,500 (6.6)	5,200 (6.3)	4,900 (6.0)
Total ..	85,200	89,800	82,400	81,900

Note:—Figures in brackets relate to percentage share in the total production.



The World's Cashier

Providing a complete banking service in south and east Asia is only part of our business. A bank whose scope was limited to one such area could not have the wide knowledge of financial conditions possessed by our world-wide network of branches. With offices in Europe and the United States, the biggest bank established by the Far East for the Far East can indeed claim to be the World's Cashier.

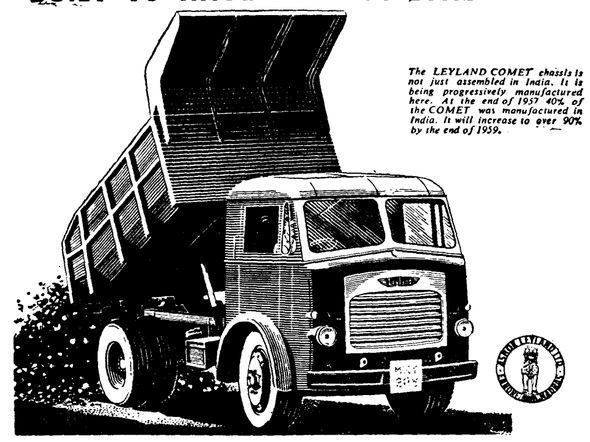
BUILT TO HAUL HEAVIER LOADS



The LEYLAND COMET chassis is not just assembled in India. It is being progressively manufactured here. At the end of 1957 40% of the COMET was manufactured in India. It will increase to over 90% by the end of 1959.

LEYLAND COMET

THE BIG CHASSIS FOR THE BIG JOB

The Leyland Comet carries in two trips what others do in three or more. That's true economy in time, saving on fuel and saving on maintenance. The fast, sturdy and powerful Leyland Comet trucks, tippers and tractors have proved their reliability and exceptional fuel economy in well over 50 countries around the world. Leyland Comet is truly the BIG chassis for the BIG job—the only 7½ ton payload chassis made in India.

DEMAND FOR STEEL RECEDES IN WEST

BRITAIN'S EXPANSION PLAN

IN the last decade, few basic industries have reported a more strident increase in output than the steel industry. Between 1945 and 1946, world steel ingot production increased from 113 million tons to 278 million tons. The question now is whether the world has reached the saturation point in steel supply. In any case, there is now a recession in demand for steel. No wonder, many observers are wondering whether the current recession in demand is something that can be dismissed as a mere temporary fluctuation in the steel industry's fortunes. In this context, much interest attaches to the fact that Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Ltd., in his address at the annual meeting of the Company, advised caution in fixing India's steel targets which have been provisionally set at 15 million tons by the end of the third Plan period. There are, of course, two reasons why India may be well advised to be cautious in finalising its steel plans. For one thing, the expansion of the steel industry or the establishment of new units implies immense capital expenditure, so that a country like India which is short of capital resources, has to consider whether the balance of advantage does not lie in going slow with steel and a little faster with other industries which may need relatively less capital. Secondly, since steel is not an end in itself but a raw material for other steel-consuming industries, the latter group of industries deserve high priority in development which will facilitate the offtake of all the steel that may be produced. A lop-sided development in which steel industry claims and receives all attention and the steel-consuming industries are allowed to fend for themselves may conceivably lead to a glut in steel. The suggested solution for such a problem, namely, export of steel, may not always be easy to implement, in view of the fact that India may not continue to possess the advantage of lower production costs and steel-importing countries may not be willing to break their established connections with steel-exporting countries.

U.S. and U.K.

The slackening in the demand for steel has affected adversely production in the two leading steel-producing countries, namely, the U.S. and the U.K. In the U.S. production is now running at only 63.5 per cent. of capacity. Although this is an improvement over the position early this year when the industry was working at only 50 per cent. capacity, it is below the level in September 1957 when the industry was working at 82.2 per cent. of capacity. In the U.K., steel consumption is currently running at about 5 per cent. less than a year ago. In August 1958, crude steel output fell to 70 per cent. of capacity; production fell to an annual rate of 15.6 million tons, as against 19.4 million tons a year ago. To some extent, this fall was caused by the holidays, but there seems also to have been a further deterioration in demand for most types of steel products other than sheet and tinplate. It may be mentioned here that, in the last ten years, the output of steel in the U.K. has expanded by one million tons a year, and, in 1957, crude steel output touched a high of 21.7 million tons.

Be that as it may, the current recession in demand for steel in the U.K. has not deterred the authorities from pursuing the £600-million steel expansion programme designed to add by 1962 another 5½ million tons to the pig iron and steel-making capacity. If the U.K. is determined to pursue its expansion programme in the face of the recession in demand, it is presumably because, in the first place, it feels that the current recession is a passing phase and, secondly, it must be prepared to meet the competition from steel producers in other Western countries. These considerations are not, of course, entirely applicable to India which has to balance the need to meet its own rising demand for steel against the equally imperative need to put its scarce capital and foreign exchange resources to the best possible use.

Exports of Steel

An important consideration which weighs with the British authorities in deciding the question of the expansion of steel output is the fact that exports of steel and steel manufactures are vital to its economy. Direct steel exports were valued at £200 million in 1957 while steel and steel-based exports together accounted for 52 per cent. of the total value of U.K.'s exports. The expansion programme for steel is based on the assumption of an annual increase of 3¾ per cent. in industrial production and 4¼ per cent. in steel consumption. So far, the industry has, as already stated, added one million tons in capacity every year. This increase in capacity has involved an increase in requirements of the country's basic raw material, iron ore, from 19 million tons in 1946 to 32 million tons in 1957. A large proportion of ore requirements is imported from foreign countries. In 1957, it imported nearly 16 million tons. By 1962, imports of iron ore are expected to go up to 22 million tons. At the same time, efforts are being made to increase domestic ore output. Although active exploration is proceeding in several areas, it is recognised that domestic ore reserves are strictly limited.

Over the period 1958-62, the U.K.'s industry is expected to spend £600 million on fixed assets alone and additional working capital may require about £100 million. A large part of this capital has to be found by the industry itself. In this connection, the spokesmen for the industry have stressed the need for creating facilities which will make self-financing possible. The total retained earnings per ingot ton for representative groups of companies in the U.K. are 77*s.*, as against 80*s.* in the U.S. In view of the importance of self-financing, recent changes in the U.K. Iron and Steel Board's method of determining maximum home trade prices are of considerable interest. For many years, steel prices have been based on the average production costs of all efficient producers, together with an allowance for depreciation and profit related to the total capital employed. The main criterion now is that prices should reflect the capital and production costs which might be expected at a new integrated plant, incorporating the most modern techniques, favourably situated for raw materials and markets, and operated efficiently. Henceforth, in theory at least, the price set should adequately remunerate investment in new plant and so should not discourage expansion.

Nationalisation

A part of the total capital expenditure has, however, to be raised through public issues. The chief obstacle to popular financial backing for the development plan is the continuing threat of re-nationalisation of the steel industry. The main argument—and a valid one at that—against nationalisation is that the present arrangements combine the best elements of both public and private enterprise. Thus, while the national interest is safeguarded by the overriding authority of the Iron and Steel Board, to which certain matters are reserved, particularly over prices and development, initiative is yet retained by the companies which are spurred to greater efficiency both by competition that exists between them and by the retention of consumer choice. It remains to be seen whether the Labour Party will abandon its intentions to nationalise the steel industry. If it is not returned to power, these intentions will have no practical significance for the future of the industry. The question is, what will be the industry's future if the Labour Party wins a majority of Parliamentary seats in the next elections? It would, however, appear that opinion in the Party is sharply divided over the issue of nationalisation. Some members are credited with the inclination to abandon nationalisation in favour of State acquisition of steel equities in the more prosperous concerns, while others are in favour of re-nationalisation of the industry.

"CORE" POWER PROJECTS

Mr. Jaisukhlal Hathi, Union Deputy Minister of Irrigation and Power, laid two statements on the table of the Lok Sabha, last week, giving the names of power schemes and projects included in the 'core' of the Plan, in Madras, Mysore, Andhra Pradesh, Kerala, Uttar Pradesh, Bihar, Bombay, Madhya Pradesh, West Bengal and Punjab. The projects included in the 'core' are:

Madras State: Transmission and distribution schemes; improvements to existing power houses; *Mysore State*: Bhadra hydro-electric project; Tungabhadra left bank station; transmission distribution schemes, normal capital works, frequency conversion, step-down sub-station, power supply to towns, villages and rural areas, extension of transmission lines, supply of bulk power from Mysore to Coorg, Jog-Karnatak Distribution Scheme, Rural Electrification (Coorg area), rural electrification (Madras area) and rural electrification (Hyderabad area); *Andhra Pradesh*: Transmission and distribution schemes—extensions costing over Rs. 10 lakhs under Machkund, extensions costing over Rs. 10 lakhs under Tungabhadra, and rural electrification; reorganisation of Hyderabad City supply system; *Kerala State*: Neriamangalam hydro-electric project; transmission, distribution and rural electrification schemes; *Uttar Pradesh*: Rihand dam project; Ganga grid transmission; electrification of State tube-wells; and rural and urban electrification; *Bihar State*: transmission and distribution schemes. *Bombay State*: Khaperkheda-Akola extension scheme; South Gujerat grid scheme; North Gujerat grid scheme; Development of Southern grid; Porbander steam power station; Sikka steam power station; Morvi steam power station or the alternative; Surendranagar steam power station or the alternative; Rajkot power station extension; rural electrification and nursery schemes; and conversion of D.C. to A.C. at Rajkot; *Madhya Pradesh*: Korba thermal power station; Chambal project; transmission and distribution schemes; *Madhya Bharat region*: H.T. line from Gwalior to Morena, extension of mains at Indore, improvement and extension to existing power houses, and rural and small town electrification; *Vindhya Pradesh region*: Step-down sub-stations and rural electrification schemes including distribution in Bundelkhand area; *Bhopal region*: rural electrification; *Punjab*: Bhakra-Nangal Project, distribution under Bhakra-Nangal Project; and Uhl river electrification scheme; *West Bengal*: North Calcutta electrification schemes; Kharagpur-Midnapur electrification scheme; Durgapur-Maldah transmission schemes; Howrah-Hoogly rural electrification; and rural electrification.

COMET 4

A de Havilland Comet 4 returned to Hatfield (Hertfordshire) aerodrome at 17.37 hrs. B.S.T. on 14th September, after flying the 7,925 miles from Hong Kong in 18 hrs. 22 mins. The aircraft has thus, on its present proving-flight to the Far East and back, beaten all commercial-airline flying times. It was piloted by Capt. John ("Cat's Eyes") Cunningham. Stops were made at Bombay and Cairo. Actual flying time of the big four-jet aircraft was 16 hrs. 16 mins. Average speed for the return flight was 487 m.p.h. The return time was considerably faster than that of the outward trip. On board the plane was a full B.O.A.C. crew and the Corporation's Managing Director, Mr. Basil Smallpeice. Mr. Smallpeice described the Comet as "a really magnificent aircraft. To go around a third of the world, starting at sun-rise, and to arrive with two hours of sun left is a remarkable achievement," he said. The Comet gave a remarkably smooth flight, was absolutely free from vibration and, in fact, gave a "floating-on-air" journey.

The B.O.A.C. Managing Director said he foresaw the new Comet as an extremely valuable aircraft for all general routes of the world, especially those where, he said, traffic density was perhaps not sufficient to require a high frequency of very large aircraft.

NEW PLASTIC PRINTING PLATES

Scientists of the E. I. du Pont de Nemours Company at Wilmington, Delaware, U.S., have developed a revolutionary type of printing plate made of plastic, not metal, that can be used on the kinds of presses that print newspapers and magazines, as well as those used in commercial printing. It may result in cheaper and faster newspaper printing. The du Pont plate is now being tested in printing and newspaper plants in various parts of the United States. Large-scale production is not planned until late in 1960. The advantages claimed by du Pont scientists for the new plate are that it will drastically reduce the time needed to prepare most material for printing, make the printed word easier to read, eliminate one or more steps in various types of printing, and will last longer than a metal plate. Metal type is not used in preparing the du Pont plate. Instead, a photographic process transfers an impression from film to the plastic surface. In a matter of minutes, the plate is ready for the presses. At first, the plastic plate is expected to cost slightly more than a metal one. Widespread acceptance by the industry, it is stated, would probably bring down the cost.

The works cost of one ton of ingot steel in the three State-owned steel factories, as calculated in the respective project reports, would be: Rourkela—open hearth steel, Rs. 117 per ton, L.D. steel, Rs. 98 per ton; Bhilai—open hearth steel, Rs. 112 per ton and Durgapur—Duplex steel, Rs. 104 per ton. This was stated by Sardar Swaran Singh, Union Minister of Steel, Mines and Fuel, in reply to a question in the Lok Sabha. An estimate of the likely costs of production, he said, was made by the consultants in the respective Project Reports. He further stated that, in each case, different assumptions had been made about the likely capital cost, the prices of raw materials and operating expenses. As such, it was difficult to compare the costs of production with any exactitude. The Department of Iron and Steel, in consultation with the Hindustan Steel Private Limited, was in the process of revising these estimates so as to bring them on a common basis and to take account, as far as possible, of changes in capital costs and in the costs of raw materials.

The de Havilland Aircraft Company has just announced that it has received a contract for two more Comet 4 jet airliners. This brings the total number of Comet 4s and 4-Bs on order to 33. The contract has been placed by East African Airways, and the aircraft will be used for mainline operations. They will be to the same specification as the fleet of 19 Comet 4s now being built for British Overseas Airways Corporation, with which East African Airways operates in association. The aircraft will be employed on the Nairobi-London and Nairobi-Bombay Services. British Overseas Airways expects to introduce the Comet 4 on the London-New York route by the end of this year and on the London-Tokyo service by next May. The Comet is also scheduled to take over the B.O.A.C. "Kangaroo service" from Britain to Australia in December next year.

MEASURES FOR PROMOTING EXPORTS

PRICE, PRODUCTION AND QUALITY ARE VITAL FACTORS

By Chinoobhai C. Javeri

AT no time was the country in such desperate need to earn maximum foreign exchange as at present. The obvious way to earn it lies through larger exports—a task which is in no way easy and simple, considering that world markets are in a state of turmoil and uncertainty and the monetary and economic conditions stringent and unstable. Paradoxically, while countries are anxious to increase exports on the one hand, more and more import restrictions are being imposed by most of them on the other. On our part, despite concerted and constructive efforts, the results of our export drive have fallen short of expectations. Many and varied are the causes for it, some of which are beyond our control, while others are remediable, provided they are handled with courage, vision and will.

Verily, production is the sheet-anchor of exports, and in order to increase exports, there must be more and more goods, and to have more goods, either existing consumption has got to be reduced or production accentuated, creating an exportable surplus. Notwithstanding vast irrigation projects and improved methods of intensive cultivation, our agricultural production, on the whole, has not kept pace with the increasing demands of the country. The landslide, particularly in the production of foodgrains, has necessiated their importation on a colossal scale entailing considerable expenditure of foreign exchange which otherwise could have been better used for importing other essential goods and thus averted the existing foreign exchange crisis.

Modernisation of the means and modes of farming is the primary need of the hour. Organisations should be set up throughout the country to provide the farmer with better seeds and fertilisers and maintain strict supervision to ensure their proper distribution and utilisation. He should be taught and made fully conversant with the technique and use of the improved methods of cultivation. In a nutshell, the whole problem of production needs to be reviewed. Our energy, our spirit of service, our ingenuity, our faith and perseverance should be pooled and utilised unsparingly in devising and enforcing constructive and dynamic means and measures for increasing production. The problem of production has yet another angle—the angle of "wastage" which is a drain on production. Virtually, the elimination of wastage in all forms and at all stages will have the same effect as increased production. A country-wide intelligent and vigorous propoganda should be launched against it.

Agriculture

Today, agricultural products are the backbone of our exports. On them we can lean and place reliance to earn us the maximum foreign exchange until such time as the result of industrialisation can bear fruit. Nevertheless, production has fallen behind the growing demand and exports can be stepped up only if a surplus over and above the regular supply is created. By and large, the proper and practical course under the circumstances would be to resort to intensive and extensive cultivation, supplemented by longer hours of hard work. Another way is to call upon the masses to tighten their belts and make a sacrifice by restricting their present needs to the minimum and thereby creating an exportable surplus. This expedient can work but not without leaving a deleterious effect upon the efficiency, morale and physique of the people because the standard of living of the masses is already low and their consumption of goods almost below the bare minimum. Such a sacrifice is too much to expect from the masses who have already reduced their needs on account of the rise in prices. It would be like advising a starving man to eat less. And sacrifice has its limitations. Thus, greater production constitutes the brick, mortar and stone with which export trade could be built up. Notwithstanding, wherever warranted, a certain percentage of the production of an industry should be earmarked for export without either creating scarcity or rise in prices. Now that an emergency has arisen the country may be put on war-time footing for some time. People should willingly co-operate and make sacrifice further. This, they will do if they are convinced that others will not take undue advantage of their sacrifice.

Production provides a durable basis for promoting exports and price is the touchstone of the marketability of goods in foreign countries. Significantly, the prices of our products, not being generally competitive compared with those of other countries, it is difficult to sell them in export markets. In a large measure, the objective of competitive prices is best achieved by greater production because it reduces cost and when the supply exceeds the demand, prices tend to fall, provided other things remain unchanged. Under the existing circumstances of our developing economy, greater production provides a fruitful answer to this vexed price problem. In the case of foodgrains, however, our calculations have gone wrong because the pace of production has not kept abreast of the rising demand necessitated by ever-increasing growth of population coupled with the rising standard of living and the influx of refugees. To crown it all, there have been floods, drought and famines. Again, all measures or schemes would prove futile and ineffective, unless the problem of ever-growing population, which is the root of our troubles and the main cause of our present-day economic stresses and strains, is boldly grappled and satisfactorily solved.

The Other Reason

The other reason for our goods being priced out of foreign markets is that various imported materials are used in the manufacture of our finished products. Since imports have been either drastically reduced or totally banned, the manufacturers are compelled to use indigenous materials in their manufacture which, in most cases, are expensive and not up to the mark. Due to scarcity, imported materials have also become costly. While it is not possible to maintain the quality of our products owing to irregular supply or non-availability of particular materials arising from the frequent changes in the import policy, the manufactruing conditions of the industrially advanced countries of the world with whom we have to compete for selling our products in foreign markets are quite different. Secondly, Indian industries use mostly the imported materials, charged with high import duty, the industries of our competitors use indigenous materials attracting no import duty. There is another point also where they score over us. Endowed as they are with superior technical knowledge, the products these countries manufacture are comparatively cheaper in price and better in quality.

While the value of an article is measured by the degree of service and satisfaction it gives in relation to the price paid for it, the factors that govern the price are utility, quality and demand. Of these, quality is of prime importance in marketing the goods abroad. While our products do not have the reputation for quality, the consumer's preference for quality products is ever increasing. Expensiveness, however, is not the hallmark of quality. Nor does cheapness mean that the goods should necessarily be of a lower price. The emphasis is on durability, uniformity and finish. Furthermore, attractive presentation and get-up and sound packing enhance the reputation and value of goods. Again, goods supplied should be serviceable and according to samples. In keeping with the times, most of the advanced countries of the world have made rapid headway in reducing production costs and improving the quality, whereas, in India, particularly in old-established industries, modernisation is not permitted by the Government. Either we must modernise the machinery and equipment or forget about export drive. One cannot hunt with the hounds and run with the hare at the same time.

In Japan legislation was lately passed, laying down quality standards for a larger number of articles for export, subject to compulsory inspection prior to packing. The implementation of standards is strictly enforced. Any failure to comply with them is subjected to a penalty. It is not advocated that we too should emulate Japan because conditions in India are different. But, we may prescribe minimum standards for a number of manufactured goods intended for export, and to ensure their compliance necessary machinery may be set up for voluntary *ad hoc* inspection of goods at the factory before packing.

Automatic machinery and modernised methods of production, by themselves, can neither bring down the cost of production, nor improve the quality of goods, unless a high standard of human efficiency is maintained. Efficiency is not like a tap which can be turned on at will. If a machine goes wrong one can find out the defect and set it right. But it is a complicated affair when one has to deal with human beings. In this sphere, efficiency is linked up with stability and harmony.

Reward

To get the most and the best out of a human being, he should be rewarded in proportion to his contribution. Rewards are not necessarily related either to bigger salaries or to shorter hours of work. It is the human relationship which is the mainspring of effort and accomplishment. The job one does must contain a certain minimum of human interest. There must be a measure of appreciation and recognition of his work and the work he does given a sense of dignity. To sustain his interest and enthusiasm in work he must have a sense of security, an opportunity to advance and an outlet for personal initiative. A sence of discipline should be created in him, born of patriotism and responsibility, for discipline can compel a man to work and to put forth the best effort in it. Strike, go-slow and other tactics do not offer a proper solution to disputes, differences and discontent. The constructive answer lies in mutual understanding, co-operation and goodwill. In the final analysis, it is hard work, coupled with discipline and co-operation, that can foster progress and development of a country. What is meant by hard work is not physical strength, but the will and capacity of a trained individual to do a job.

Most of these measures will take time to show results. Meanwhile, the country is in the grip of foreign exchange crisis and needs foreign exchange immediately. The rot that has set in in our export trade, if not stemmed in time, will lead to a precipitous fall in exports, resulting in the loss of foreign markets which will be difficult to recapture later on. The creation of incentives is one of the effective measures for boosting up exports immediately. There is no space to discuss here the various forms of incentives. Incidentally, it may be pointed out that Japanese firms, according to reports from Japan, are allowed to deduct 9 per cent. of the export earnings from the taxable income. Furthermore, in Japan, a percentage of foreign exchange is allowed to be retained by an exporter who can utilise it for importing any goods of his choice which are not banned. A suggestion which merits consideration is that licences to import machinery and raw materials may be granted to a manufacturer in proportion to the foreign exchange earned by him.

It is important that the consciousness of the people should be roused and geared to the export drive objective. Continued efforts are necessary to impart and sustain the tempo of enthusiasm. To achieve the goal, the will to greater labour and higher production should be created among people. A favourable psychological climate for it can come through intensive and extensive publicity and propaganda, as is being done for the Plan. There is a well-known saying that "they also serve who only stand and wait." In the strain of that metaphor, let people know that every one can play a very useful role in promoting exports by practising austerity and eliminating waste. Just as the manufacturers take pride in making higher profits or in producing quality goods, likewise they should take pride in selling their products for export. Just as in war, people stand united and work wholeheartedly for the cause, everyone should contribute his mite towards promoting exports and consider such work as of national importance. This can be achieved by appealing to the sense of patriotism of the people. Not only do exports earn a country the much needed and valuable foreign exchange but they also serve to widen the horizons of knowledge and outlook, increase efficiency, improve the quality of goods through competition and contacts and bring prosperity.

REPORT ON SLUM CLEARANCE

TERMINAL TAXES ON GOODS AND PASSENGERS ADVOCATED FOR FINDING FINANCE

A PROBLEM of national dimensions, slum clearance, to be expeditious, should have a national policy. In the past, attempts have been made to deal with it on a local basis. It is only now that an endeavour is being made to evolve a national slum clearance policy. The magnitude and complexities of the problem are now fairly well known, thanks to a number of seminars and studies undertaken by both official and non-official agencies. Out of these studies has emerged the conclusion that the problem of slums is not merely one of clearing the slums and putting up structures afresh. On the other hand, the problem, in the last analysis, is really one of urban development in its widest sense, of a development which will do away with disease and ignorance, unemployment and poverty with which life is associated in the most congested areas of the big cities. The elimination of this squalor and tragedy cannot be achieved overnight, but a composite and integrated approach should be brought to bear upon the problem so that the slum dweller could not only be provided with a decent place to live in but also the facilities to lead a life which has some meaning and purpose.

Slum clearance must, therefore, embrace the provision, nearby, of employment opportunities, of schools and dispensaries, and of centres of recreation and cultural activities. In fact, slum clearance should be viewed as part of the problem of urban development. This aspect is particularly stressed in the report of the Advisory Committee on Slum Clearance constituted by Prime Minister Nehru last January. The Committee, which had as its Chairman Mr. A. K. Sen, Union Law Minister, and contained representatives of the Ministries of Works, Housing and Supply, Health, Home Affairs, Finance and Commerce and Industry, was required to collect material on what has been done in this regard in the major cities of India and to present its report or suggestions on the various approaches to the problem of slum clearance. The Committee, in its report, has suggested that an approach somewhat similar to the one adopted for the rehabilitation of rural areas, should be applied to the urban areas as well. In the same way as the Community Development Projects are pegged to agriculture, slum clearance and reconstruction should, according to it, be linked to medium, small-scale and cottage industries. It will be desirable, observes the Committee, to entrust this urban community development to one Ministry at the Centre which could integrate the activities of other Ministries in respect of town planning, slum clearance, housing, health, education and industries in order to develop completely the particular slum areas chosen for development.

New Approach

"If the slum population," says the Committee, "can be provided with the wherewithals of employment and the basic facilities, we will have enlisted public co-operation and removed the greatest obstacle to the shifting of the slum dwellers from the existing congested areas." It, therefore, suggests that this approach should be tried, in the first instance, in the worst slum areas of half a dozen cities. In the States in which these experiments are to be conducted, the urban community development organisations may be headed by Administrators. These Administrators will draw up and implement, in consultation with the Ministry in charge of urban community development and with the State and local bodies concerned, the composite urban development scheme for the selected areas.

The report examines the Government of India's slum-clearance scheme which is operating throughout the country and suggests the manner in which it can be made more effective. The accent in this scheme is on slum clearance and the Committee points out that, while this should be implemented with vigour and expedition, the short-term objective of improving the slums by providing in them minimum basic amenities should not be lost sight of. The scheme, which envisages an expenditure of Rs. 20 crores in the second Plan period, is based on two basic principles. In the first place, there should be the minimum dislocation of slum-dwellers and efforts should be made to re-house them, as far as possible, at the existing sites of the slums. Secondly, in order to keep down rents within the paying capacity of slum-dwellers, the emphasis should necessarily be laid more on provision of the minimum standards of environmental hygiene and essential services rather than on construction of any elaborate structures. The pattern of financial assistance to the State Governments which must operate the scheme is a 25 per cent. subsidy and a 50 per cent. loan from the Centre. The States have to find the balance of 25 per cent. as subsidy from their own resources. The States should repay the 50 per cent. loan to the Centre through the collection of rents from the rehabilitated families.

This scheme, according to the Committee, should be given a fair trial. It enjoins on the State Governments to give priority to the worst slums and not fritter away the limited financial resources on the smaller slums in the mofussil areas. Local considerations and pressure groups working for limited interests, says the Committee, seem to have set at naught this salutary requirement. A much better impression on the problem could have been made, according to it, if the bigger slums in the larger cities were taken up. In order, however, not to hold up the activity in the States in the field of slum clearance, the Committee feels that the States should be allowed to proceed according to their own plans. It, however, recommends that the Centre should earmark some additional funds over and above the existing allocations, to be spent in the cities of Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad. The States concerned should be given during the Plan period an additional sum of Rs. 2 crores for each of these six towns so that this money is spent on the worst slums in these cities.

Pattern of Assistance

The Committee points out that though the central slum-clearance scheme is based on the principle that there should be the minimum dislocation of slum-dwellers from the fields of their employment, the pattern of financial assistance prescribed tends to work just in the opposite direction. The State Government, which is required to find 25 per cent. of the cost of slum projects from its own resources, more often than not, will try to find them by selling the cleared slum-sites by auction at the highest price for commercial and other purposes. The result will be to rehabilitate the slum-families away from their original location. And the farther they go away from this location, the more difficult it will be to find them employment by means of which alone they can pay the rent of their new buildings. It is, therefore, necessary that, to the extent it is possible, open developed plots and *pucca* tenements should be provided on the cleared sites of the original slum itself. It will, however, be necessary to come to a decision on two important points. The first point relates to the question as to whether the States should not be relieved of their present responsibility of finding the matching 25 per cent. subsidy from their own resources, so that the Centre provides the entire 50 per cent. required; and the second relates to the fixing by law the principle or formula which will determine the compensation to be paid for the acquisition of the slum area. "If it can be arranged soon," observes the Committee "that the Centre finds the entire subsidy for slum-clearance, in much the same way as it does for the housing of industrial workers, we will have arrested the tendency in the States to sell the cleared sites for purposes other than for rehousing the slum-families. Government seems to have accepted the policy of discontinuing the principle of matching subsidies in the future; it is important that this should be brought into play in the field of slum-clearance also, if not immediately, at least in the third Plan period, unless, of course, necessary funds could be made available earlier. To be really effective, this step must be combined with restricting the compensation to be paid for the acquisition of the slum area. Only then will it be possible to keep the economics of the problem under control and to arrest the tendency to locate housing projects on wrong sites because of the high price of land. Only then also will it be possible to ensure that as many families as possible are in fact rehabilitated in the original slum site which has been developed and made fit for occupation."

As regards finances for the slum-clearance scheme, the Committee strongly urges that the reduction in the Plan allocation for housing and slum clearance from Rs. 120 crores to Rs. 84 crores, as suggested by the Planning Commission, is not advisable. In view of the importance of the problem, it should be possible, according to it by some readjustment, to retain the Rs. 120 crores allocation for housing. "This is necessary," it adds, "not only because all housing programmes, as pointed out by the Report of the Team on Selected Buildings Projects, are either meant to clear existing slums or prevent the coming into being of additional slums, but also because the original allocation of Rs. 20 crores for slum clearance, out of the total Rs. 120 crores for housing, as it is, is inadequate to make even a slight impression on the problem. If this could be done, the Ministry of Works, Housing and Supply may be able to find the extra sum of Rs. 10 crores recommended for the cities of Bombay, Calcutta, Madras, Kanpur and Ahmedabad, with Rs. 2 crores for Delhi being obtained from elsewhere in the Plan."

The Committee also recommends that a sum of Rs. 25 crores should be given as loan to State Governments for acquiring and developing land. Unless this is done, according to it, the tempo of house-building activity will not only slow down in the current Plan but would virtually come to a stop during the third Plan.

Source of Revenue

It, however realises, that the retention of the original provision of Rs. 120 crores for the housing and slum-clearance programmes and finding Rs. 25 crores for the acquisition of land will be a difficult task when all the available resources are already committed in the second Plan. Extra sources of revenue should, therefore, be tapped to find the additional funds required. It suggests the levy of a terminal tax on goods and passengers carried by rail over a hundred miles to cities with a population of one lakh and over in order to initiate the programme of urban community development, to implement more effectively the present slum-clearance scheme and to acquire and develop land in advance. Such a tax according to the Committee, will yield an additional revenue of Rs. 1.15 crore per annum from passenger traffic and about Rs. 12 crores per annum from goods traffic. At places where terminal or some similar tax is already levied, an increase in the rate could be considered. This tax, the Committee maintains, would bring in sufficient revenue to maintain intact the provision of Rs. 120 crores in the second Plan. With this done, it adds, it should not be difficult, by some adjustment, to find the extra sum of Rs. 10 to Rs. 12 crores recommended for slum-clearance in the six cities and also anything upto Rs. 25 crores for the acquisition and development of land.

As regards the foreign exchange required, the Committee points out that if a target of 500,000 houses per year is fixed for the next three years the total cost of these houses, inclusive of land, would come to about Rs. 270 crores of which the foreign exchange component would be Rs. 55 crores. This is, if anything, a conservative estimate reached after cutting down the requirements of cement and steel to the barest minimum.

The Ford Motor Company of Detroit (U.S.A.) and the United Automobile Workers of America (U.A.W.) have agreed on a three-year contract covering 100,000 union workers in the company's plants throughout the nation. The agreement was announced by negotiators for the Company and the U.A.W. after a full day of meetings that included several hours during which the union workers had begun a scheduled strike. The pay-increase formula agreed upon would give workers 10 cents more an hour with retrospective effect from 1st July and guarantee seven-cent hourly raises in the two succeeding years.

The contract is expected to set a pattern for similar contracts with other automobile manufacturers—principally General Motors and Chrysler—who employ approximately 500,000 other workers in the industry. Three-year contracts with major manufacturers expired last June, but the union workers had remained on their jobs during negotiations that continued during the summer. In a joint statement, the union and company negotiators said, that "agreement had been reached on a sound and equitable" contract "fair to the workers, the company and the American public." Mr. Walter Reuther, President of the U.A.W., said the terms were "considerably better" than the company's previous offer of a two-year contract and a wage increase of 16 cents an hour. The union also obtained fairly substantial concessions in fields such as increased supplemental unemployment pay, increased pensions, compensation for workers on short work weeks, severance pay and cost-of-living allowances.

Foreign Exchange

— a top most priority

Never before has India stood in such dire need of foreign exchange as today. The Country's development projects on which our future prosperity depends, calls for straining every resource to earn this. Indian White Sugar Industry has risen to the occasion by increasing production, thus making White Sugar available for export. But the present poor yield of cane per acre and its low sugar content makes the cost of sugar production high. Yet in the national interest. Indian White Sugar must be sold abroad even at a loss—a burden to be shared by the industry and the people alike.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

THE TATA IRON AND STEEL COMPANY LIMITED

SPEECH OF MR. J. R. D. TATA AT ANNUAL GENERAL MEETING

EMPHASIS IN THIRD PLAN SHOULD BE LESS ON STEEL BUT MORE ON FINISHING INDUSTRIES

THE following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fifty-first Annual General Meeting of the shareholders of the Tata Iron and Steel Company, Limited, on Thursday, 18th September 1958.

"LADIES AND GENTLEMEN,

"Before I tell you something about matters of direct concern to us, I shall, as usual, take a little of your time to refer to one or two subjects of general interest in the economic sphere, for our destinies are affected just as much by economic developments and trends in the country and by Government policies, as by events in our own backyard.

Foreign Exchange Crisis

"By far the most serious development in the country's economic life in the past year has been the accelerated depletion of our foreign exchange balances which, standing at Rs. 746 crores in March 1956, are, today, below Rs. 185 crores. How serious the situation is can be judged from the fact that we need some Rs. 560 crores merely to meet our known commitments upto the end of the second Plan. Allowing for a minimum reserve against the note issue and taking Rs. 50 crores as the minimum practical working balance, we must somehow raise an additional Rs. 425 crores between now and March 1961 to honour our commitments.

"It is easy to be wise after the event and much could therefore be said, and has in fact been said, about this crisis, but to me the most surprising thing about it is not so much that it happened at all but that it was not foreseen at least two years ago. Little purpose, however, would be served by adding to the spate of comment and criticism already voiced on the subject in the last few months. Our Finance Minister is now abroad engaged in delicate discussions with the World Bank and the Governments of a number of countries. Our sincere wishes accompany him on his mission.

"Even assuming that all our commitments under the second Plan are fully met, the position thereafter will remain a grim one. Having used up practically the whole of our foreign reserves accumulated at such sacrifice in the war years, and having in addition drawn heavily upon the future, any surplus we may be able to earn is likely, for many years, to be absorbed in the servicing of our foreign debt. Unless, therefore, we can greatly increase our earnings in foreign exchange and also attract long-term foreign investments, we shall not only be unable to finance the foreign component of new development projects but will also have to exercise such a tight control over current imports that industries depending on imported raw materials and components will be hard put to it to maintain normal operations. The present plight of many steel-consuming industries whose allotments of steel have been slashed to a fraction of their requirements shows how stony the road to further industrialisation may be in the future.

"Never before has it been more necessary for us to be practical and realistic in our approach to economic problems and, in the process, to be willing to shed some of the prejudices and dogmas which have so heavily coloured some of our thinking in the past.

Self-sufficiency in Food

"The basic ingredients of further progress should be clear by now. First, it is imperative that we become self-sufficient in food. How vital that is can be judged from the fact that since 1946 we have had to spend Rs. 1,000 crores of precious foreign exchange to buy food in addition to the Rs. 300 crores worth generously gifted to us by the U.S. and others over the same period. There would be no foreign exchange crisis today if we still had that Rs. 1,000 crores in hand. Second, we must generate a sufficient annual surplus in our total balance of trade to pay for essential imports and to service our foreign debt.

"Any further major expansion of our economy thereafter, particularly in the industrial field, will depend mainly on our ability to ensure a continuous flow of fresh capital. Except for such success as we may achieve in bringing into use some of the accumulated and hidden wealth in our country, the amount of fresh savings from within India will clearly not be adequate to finance development of the magnitude, and at the rate, required. It must be supplemented by investments and loans from abroad which would, in any case, be required to provide foreign exchange for imports of new capital equipment.

Foreign Capital

"One of our main tasks, therefore, will be to induce our own people and people in foreign countries to invest in productive enterprise in India. This cannot be achieved unless we realise that capital flows most readily in directions where safety and opportunities of a good return and appreciation are greatest. If Puerto Rico has made such astounding progress in the last ten years and if Canada and other countries in the American Continent can attract all the capital and all the constructive enterprise they need, it is for the simple and obvious reason, constantly ignored or misunderstood in our own country, that it is made welcome and allowed both a safe harbour and an attractive return.

"If our Government and our Parliament, while by all means protecting the under-privileged, providing the maximum welfare services within our means and ensuring equal opportunities for all, were to let it be known that India was a land of opportunity for constructive and honest enterprise, where those who risked their savings or their surplus capital could reap a fair reward, we would see such a flow of capital from within and from abroad and such an upsurge of economic activity as would transform our land and our people's way of life in a few decades.

"The surest way, on the other hand, to drive Indian capital out of sight and to discourage foreign investment is to continue with those elements in our economic philosophy and policies which have done so much in the last ten years or so to inhibit or penalise enterprise and initiative. I would mention in particular the excessively complex and rigid controls imposed on industry under various enactments, the crushing burden of individual and corporate taxes, excise duties and other imposts, often of a discriminatory character, which we choose to call an integrated system of taxation but which in fact merely saps the will to work and the willingness to take risks and, finally, the ideological attitude of hostility and mistrust towards private enterprise.

Future Steel Capacity

"One matter of future economic policy of special interest to us is the question of the further expansion of the steel industry under the third Five-year Plan, which, I understand, is at present under the consideration of the Planning Commission. While the matter still seems to be at an exploratory stage, it is probable that decisions will be taken in the course of the next twelve months and I therefore think it appropriate to record my views on the subject here today.

"With India's large reserves of raw materials for steel making and her plans for rapid industrialisation, there is obvious scope as well as need for the continued expansion of the steel industry. There could be no disagreement on that but the question at issue is the rate of such expansion and its order of priority in relation to other industries. Over-emphasis on steel production in our future Plans would prove a costly mistake, and I wish to sound a note of warning against allowing the steel industry to run away with too great a proportion of whatever total resources will be available in future Plan periods. That this note of alarm is not unjustified may be judged from the fact that in the Explanatory Memorandum on the 1958-59 Budget laid before Parliament as recently as March this year, the third Plan target for steel production was stated to be of the order of 15 million tons per annum involving an increase in annual capacity of 9 million tons.

"Even assuming a substantially lower expenditure for the expansion of existing plants than that incurred on the three Government steel plants, the total cost of such additional capacity would not be far from Rs. 1,500 crores, of which something like Rs. 700 crores would be required in foreign exchange, as the heavy machine building plant to be put up by Government at Ranchi will not be ready in time to fabricate any substantial part of the new steel-making equipment.

"We may rely on our strong and realistic Finance Minister to support only those schemes of industrial development that can be justified on such practical considerations as availability of finance, demand in India and abroad and a sound order of priority as between one industry and another, but as some of these factors seem to have been consistently overlooked upto now in regard to plans for the expansion of steel capacity, it may be appropriate for me to draw attention to the fact that of all engineering industries steel manufacture requires the largest capital investment per rupee's worth of output and per worker employed. Put in another way, its annual output and the number of men it employs are the lowest per rupee of capital invested.

Exports ?

"If it is suggested that surplus steel capacity could be profitably used to earn foreign exchange from exports I would point out that there is already a surplus of steel capacity in the world, so that there is not likely to be an export market at all. But even if there were, all that could be earned in foreign exchange on steel exports would be about Rs. 500 per ton, whereas we could earn or save three to four times that much per ton of products made from steel.

"In view of my life-long association with the steel industry no one would be more pleased than I to see India one of the great producers of steel in the world, but a little practical thinking makes it clear that we would be better off if, for a while, we had less steel plants but more secondary and finishing industries using steel and if we made more trucks, cars, machine tools and capital and consumer goods of all sorts in preference to making raw steel, for, in return for the same amount of capital investment, we would thereby create much more wealth, earn and save more in foreign exchange, provide more employment and generally build up a more balanced and productive economy.

"In the context of the continued shortages of financial, technical and managerial resources which we must assume will exist for the next ten or fifteen years, it is supremely important that in our development plans priorities are based not on prestige but on a down to earth assessment of all relevant factors including the annual output and return per rupee of investment, foreign exchange earned or saved, value to the economy as a whole and employment.

Accounts

"Coming to our own affairs, and, to begin with, to the results for the year embodied in the report in your hands, I must apologise to the shareholders for the difficulty they must have had in following the accounts. Apart from the shock some of you may have suffered at the staggering increase in capital expenditure you may well have been bewildered by some of the entries in the balance-sheet and in the profit and loss and appropriation accounts, and by the unexplained disparity between some of the 1957-58 figures and those of the previous year. I shall do my best to make matters clear to you when answering your questions, but at the outset I should like to explain that if company accounts in India have become the most complicated and the most unintelligible in the world, our thanks are due to the Indian Companies Act (1956), to our much vaunted integrated tax structure, and to its interpretation by the authorities concerned.

"Apart, however, from these unnecessary complications imposed on us, comparisons between many of the figures for the two years have been vitiated by such factors as a change in the mode of valuation of stocks and by the effect of the enormous expenditure on the expansion and modernisation programmes, on allocations to taxation, depreciation and rehabilitation reserves.

No Cause for Alarm

"Discounting these special factors, the essential fact to be noted from the accounts is that our operations for the year have resulted in a profit which is about Rs. 1½ crores lower than in the previous year, due almost wholly to the lower production and despatches of saleable steel and other products, and that this reduction in profit was compensated by a large reduction in taxation, an upward revaluation of the stocks of raw materials and semi-finished and finished products, and by the writing back to profit of excess provisions made in previous years.

"While the setback in our profits is naturally to be deplored, there is no cause for alarm. The situation will retrieve itself automatically when the new plant goes into full production which, barring unforeseen troubles, should be by the end of the current financial year. In the meantime, taxed reserves are adequate to ensure that the shareholders' dividend will not be affected.

Golden Jubilee

"A happy event for us during this year was the celebration at Jamshedpur on the Ist of March of the Golden Jubilee of the Indian steel industry and the town of Jamshedpur. The Government of India were good enough to issue a special postage stamp on that day bearing upon it the portrait of Jamsetji Tata superimposed on a view of the Works, and Prime Minister Jawaharlal Nehru, busy as he is, made the gracious gesture of coming himself and taking a prominent part in the celebrations. He dedicated the 200-acre Jubilee Park created by the Company for the benefit and pleasure of the workers and people of Jamshedpur, and unveiled the statue of Jamsetji Tata presented by the employees, associates and friends of the Company. In the course of his speech that afternoon, and again at a mass meeting of the citizens of Jamshedpur later the same day, the Prime Minister paid a heart-warming tribute to the memory of J. N. Tata and said some kind things about the services rendered by our Company to India. We are deeply grateful to him both for his presence and for his words of appreciation and encouragement.

"All told, the celebrations were a great success, enlivened by the presence of the Governor and the Chief Minister of Bihar, the present Union Finance Minister and many other distinguished guests from far and near, and by the enthusiasm and gay spirit with which the citizens of Jamshedpur, consisting principally of our employees and their families, participated in, and reacted to, the occasion.

"The special warmth and sincerity of their traditional homage to J. N. Tata two days later, on Founder's Day, was in striking contrast to the hatred, violence and hooliganism stirred up a few weeks later by the Communists during the serious labour disturbances of last May to which I shall now refer.

Labour

"When I addressed you last year, I referred at some length to the worsening labour situation at Jamshedpur and the neighbouring areas and in particular to the signs of a well-laid Communist plan to acquire control over labour in the whole of the area which I called the industrial heart of India. The fast-moving events of subsequent months, culminating in the strikes and mob violence at Jamshedpur in May 1958, confirmed the correctness of the picture I had drawn of the situation.

"I shall not take your time with a detailed review of the events that led to the strike and of the strike itself. The facts are well known and have been ventilated in the Press and in Parliament. In addition, we have brought out a brochure called 'The Story of a Strike' which gives a full and documented account of this sad chapter in our Company's history. If any shareholder is interested, we shall gladly send him a copy in either the English or the Hindi version. Today I shall only draw attention to some of the highlights of the drama which overtook Jamshedpur last May, the ultimate result of which was that 4 men were killed, 114 persons were injured, over 400 men were dismissed or discharged, Rs. 25 lakhs of wages were lost to our employees, while 335,000 man-days of work and 45 000 tons of steel valued at Rs. 2¾ crores were lost to the country.

"The essential fact about this strike was that it was not a dispute between the Company and its employees. It was, in my view, a determined and premeditated attempt by the Communist Party to acquire power by force at Jamshedpur as part of a bigger plan to control the whole of the labour field in the Indian heavy industry. Jamshedpur, with its great complex of engineering industries grouped around India's biggest steel plant, was a bastion which must be conquered at all costs for, without it, control over other industries in that part of the country would be precarious.

"As a first step, the existing recognised I.N.T.U.C. Union had to be ousted. The Communist leadership probably thought that the preliminary process of agitation and localised action which they had carried on at Jamshedpur during the previous year had so softened the opposition that one hard push would be sufficient to topple the whole edifice of relationship between the Company and its employees and their Union, founded on years of goodwill, negotiation and successive agreements.

"If this well-prepared plot failed utterly, it is because the Company stood firm and the Government of Bihar which, from the start, had a clear understanding of the issues at stake, dealt with lawlessness, coercion and violence with a strong hand. An important contributory cause was the good sense of the men themselves who wasted no time in rejecting the Communist leadership as soon as they realised its true significance.

Violence and Mob Action

"A notable feature of the strike, which need surprise only those who refuse to recognise the consistent nature and pattern of Communist action in democratic countries, was the cold-blooded resort to violence and mob action. If it had not been for the firm stand taken by the Government of Bihar many more lives would have been lost in the wave of terror and crime unleashed on Jamshedpur to break down all opposition.

"In this connection, it may be pertinent to recall the tragic events which took place only a year previously at Gua, centre of the neighbouring mines of the Indian Iron and Steel Company. By a coincidence the judgment in the criminal case that followed was delivered by the Sessions Judge of Dhanbad only a few days after the abortive assault on Jamshedpur had been launched. As reported in the newspapers at the time, the Judge sentenced the Communist leader of the Action Committee to transportation for life and twenty-one of his colleagues and followers to terms of imprisonment ranging from five years to life for their alleged part in an attack by a mob armed with deadly weapons against the office of the recognised Union resulting in the death of some of its office-bearers and wounding of others.

Sabotage Attempts

"Another notable feature of the Jamshedpur struggle needs to be stressed. When events began to go against them at Jamshedpur, the strikers did not hesitate to interfere with certain operational measures—the lack of which would have caused such serious damage to the coke ovens and blast furnaces as to have required upto a year to repair. This was nothing less than sabotage which was countered only in the nick of time and which, if successful, would have resulted in prolonged unemployment for thousands of workers and in the loss of hundreds of thousands of tons of steel to the country, apart from immense financial loss to the Company.

D. R. VEDAMUTHU,
General Manager.

I may say that, since the strike, a number of individual cases of attempted sabotage of the new plant have been discovered. The high degree of technical knowledge and skill displayed and a certain similarity of pattern make it clear that these were not isolated acts of disgruntled individuals but part of a well-conceived and executed plan.

"The pattern is only too clear for those who are not blinded by the unending stream of literature and propaganda, most of it imported, to which the people of this country are subjected. While the Communists profess adherence to constitutional and non-violent means, love for the Five-year Plans and support for all-out production, their relentless pursuit of power continues unabated, under a cloak of respectability, and, when it suits their immediate objective, whether in the political or labour arena, they do not hesitate to use and provoke violence, and to sabotage industrial production.

"As is to be expected, the Communists leadership has not taken kindly to the reverse to their plans for Jamshedpur, as can be seen from the strident campaign of vilification against the Company, and Tatas generally, in the Communists and pro-Communists Press. Since May there has been a continuous stream of party leaders from various States visiting Jamshedpur, while it is reported that considerable funds have been made available to the Jamshedpur Mazdoor Union. They may be expected, therefore, to continue their efforts at causing trouble at Jamshedpur and there is no room for complacency either on the part of the Company or the Tata Workers' Union or the State Government.

"Thirty years of labour peace at Jamshedpur had perhaps dimmed to some extent the realisation that sound labour relations and enduring co-operation need unremitting vigilance and effort, particularly on the shop floor, as well as the maintenance and constant use of good channels of communication between management, supervisory staff and labour. The recent events, tragic as they were, will have served a useful purpose if they have helped to clear away the weeds of habit and complacency and exposed some of the underlying deficiencies previously concealed.

Responsibility of Trade Union Leaders

"The task of establishing and maintaining good industrial relations is particularly difficult in India, in comparison with highly industrialised countries where the workers are well-educated and disciplined and where unions are strong and responsible. With fifty years of industrialisation behind us, however, I feel it is time for the trade union movement in India to mature and organise itself on the lines followed with such success elsewhere. By and large, Indian trade unionism is still weak in organisation and finance and retains a primarily agitational character. Instead of concentrating on constructive work within the union membership and at the conference table, union activity in India still takes mainly the form of provocative speeches at mass meetings. The movement has been further weakened, and in fact almost destroyed, by the endless struggle for power between three politically affiliated groups.

"A heavy responsibility devolves on Indian trade union leaders who, helped by the striking change in the attitude of management to labour problems throughout Indian industry in recent years, and by the consistently pro-labour attitude of the Central and State Governments, have a great opportunity of constructive service to the growing mass of India's industrial workers. There is, unfortunately, no sign as yet of an improvement in the situation and we may rely upon the militant A.I.T.U.C. group to keep the cauldron boiling, for, as we have seen at Jamshedpur and elsewhere, labour unrest and disruption of industrial production are essential weapons in the armoury of the Party to which the A.I.T.U.C. is affiliated and from which it derives its financial resources.

Two-million-ton Programme

"I regret to say our hopes of completing the Two-million-ton Programme substantially by the 31st May have not been fulfilled. In retrospect, it would now seem that the original completion target dates were somewhat optimistic. The position today is that the coke ovens came into operation in January 1958; the new blast furnace, one of the biggest and most modern in the world, will be blown before the middle of next month. All the seven new open hearth furnaces of S.M.S. 3 which formed part of both the M.E.P. (Modernisation and Expansion Programme) and the T.M.P. (Two-million-

ton Programme) are in production. The first two started operations in March 1957 and the last one in July this year. Two of the three Bessemer Converters at S.M.S. 3, which, under the steel-making process adopted, are essential to the achievement of the full rated output of about 1.3 million tons of ingots per year, will be commissioned in a few days and the third will be commissioned in October. Of the three new rolling mills, the 46" blooming mill rolled its first ingot on the 18th of August. The sheet bar and billet mill is expected to be in operation in November and the medium and light structural mill by the end of December.

"Although it will have taken us quite a few months longer than the thirty in which we originally hoped to complete the project, the addition in three years of a million tons of capacity under Indian conditions and taking into account the many unforeseen difficulties and setbacks encountered is not an inconsiderable achievement. Our thanks are due to Messrs. Kaiser Engineers for the great effort they have put, and are putting, into the job and in particular to Mr. Edgar Kaiser, President of the Kaiser Group of Companies, who took the trouble to come out personally to India earlier this month and spent a week at Jamshedpur to help solve some current problems and ensure the earliest possible completion of the project.

Increase in Capital Costs

"Apart from the delay in completing the programme and in fact to some extent because of it, we are unfortunately faced with a substantial increase in capital cost. A year ago, the revised estimate of the total capital expenditure to be incurred over the quinquennium 1955-60 on the Modernisation and Expansion Programme, the Two-million-ton Programme, ancillary projects such as the Ferro-manganese Plant at Joda, normal replacements and renewals and on the Company's investments in subsidiary or associated projects such as the Indian Tube Company and Belpahar Fire Bricks, was Rs. 118.7 crores. Today the figure has risen to as much as about Rs. 133 crores, the increase being due to a number of factors including the addition of new items or improvements to existing ones, the operation of escalation clauses in respect of purchased plant, the delay of six months or so in construction involving the maintenance at Jamshedpur, at Company's cost, of many thousands of men, and increases in prices of our own steel, freight and the like.

"These increases in capital costs have put a severe strain on our financial resources, already burdened by the additional taxation introduced in the 1956-57 Budget, by the labour troubles of May, and aggravated by the much lower output of steel in the last two years as compared to the original estimate. All these factors have adversely affected our ways and means position either by increasing our expenditure or decreasing our revenues. Because of the easier conditions in the money market and the high creditworthiness of your Company, we hope to secure our increased requirements of finance from short-term borrowings. It is a sobering thought that we are likely to end the current financial year with total long and short-term borrowings of about Rs. 75 crores, excluding Government's Rs. 10-crore special advance.

"Ever since the completion of the greater extensions at Jamshedpur after the First World War, your Company had, over the years, painstakingly built up its financial position notwithstanding continuous capital expenditure on its plant, until, on the eve of the present programme of expansion, its liquid assets exceeded its current liabilities by about Rs. 8 crores. Within four years we shall have got into debt again to an extent which would have frightened us out of our wits twenty years ago. Times have no doubt changed, but your Directors' and Managing Agents' conservative instincts in matters of finance have remained, and it will be their endeavour over the coming years to reduce as rapidly as possible the heavy burden of debt incurred in our expansion and modernisation schemes.

Capital Structure

"One aspect of the problem which will have to be faced by the Directors and by yourselves from time to time is the relationship between the share capital of the Company and the capital invested in the business. There is an unduly wide disparity between the share capital of Rs. 30 crores and the total amount of about Rs. 135 crores invested in the business. The disparity will be still wider next year when our expansion projects are completed. From many points of view, it is desirable that the share capital of the Company should not lag too far behind the figure of its nett bloc. If we are to bring down our load of debt to manageable proportions in the course of the next few years, it is clear that we must make fresh issues of capital as suitable opportunities arise. If and when proposals for an issue of capital are made to you, your Directors will bear it in mind that in these difficult days the capacity of shareholders to produce additional money is limited, and also that any fresh issue should from the start be assured of a fair return based on current equity yields.

"While we shall be carrying for some time an uncomfortably large load of debt, the servicing of which will put us to considerable strain for some years, there is little doubt of our ability to bear it, as our capacity to earn will have grown in proportion. At the same time, it would be prudent to temper optimism with caution and to conserve our resources as best we can, for our increased revenue potential will, for some time, be subject to a number of uncertainties.

"For instance, we do not know as yet how much the new wage structure is going to cost us annually, nor how long the new plant will take to settle down, nor how the labour situation will develop. So long, however, as Government continue to fix prices on a basis which includes adequate provisions for replacements and expansion and for a fair return on capital employed, I see no reason why we should not continue to make steel as cheaply as anyone in India and why, therefore, shareholders should not continue to look to the future with confidence.

"Before closing, I would like, on your behalf, to offer a special word of thanks to the members of the management and the supervisory staff at Jamshedpur who met a most difficult and, at times, dangerous situation with fortitude and devotion to duty, working round the clock in their efforts at first to keep the plant running and then to close it down without damage. Our thanks are also due to the thousands of workers who resisted the campaign of threats and violence directed at them and at their families and who worked steadfastly during the strike or tried to do so as long as they could, often at great personal risk. I am sure the shareholders will join me in expressing our warm appreciation of the exceptional services these officers and men rendered to the Company at a critical juncture in its history."

Note: This is not a report of the proceedings at the above annual general meeting.

NEW PUBLICATIONS

Problems of Capital Formation—Studies in Income and Wealth. Volume 19. By The Conference on Research in Income and Wealth. Published by Princeton University Press, Princeton, U.S.A. Pages: 612. Price: $7.50.

THE papers read at the meetings of the Conference on Research in Income and Wealth and presented by the National Bureau of Economic Research in the U.S., have come to be acknowledged as some of the most important contributions to this field of studies. Devoted each year to one or more specific subjects within the broad field of national income and wealth, the Conference has determined the pace and character of research in this field in the United States. In fact, one can almost identify the development of the subject since 1937 with the history of the Conference, supplemented to some extent by the papers printed at the meetings of the International Association for Research in Income and Wealth, some papers published in economic and statistical journals and a few monographs.

The 1953 meeting of the Conference was devoted to the subject of capital formation. The part played by capital formation in connection with the spectacular increases in national income in the advanced countries of the world and the role it can play in bringing about the economic development of the underdeveloped countries has made this subject one of utmost importance.

While the importance of capital formation is generally recognised, there are still wide areas of disagreement on the exact content of the various concepts relating to capital formation and the correct methods of measurement of its various components in a particular country. The use of different sources of data for estimating the values of different components of capital formation raise new problems, calling for statistical ingenuity and intimate knowledge of statistical material. The development of input-output studies has also raised new questions regarding the utility of this kind of study for the measurement of capital formation. Finally, there are problems of explanation, studies on which must proceed side by side with, and interact with, the conceptual and methodological ones.

The papers at the Conference, which are concerned exclusively with private capital formation, are divided into three parts. Part I is devoted to the conceptual and methodological problems of the measurement of capital formation. In this part, three papers are devoted to estimates of various components of capital formation. Of these, two are concerned with the United States, while the third deals with Canada. The fourth paper in Part I deals with the financing of capital formation, approaching the problem from the viewpoint of the money-flow technique. The last two contributions of Part I deal with the conceptual problems which arise in the measurement of the gross and net stock of capital and hence in the valuation of real capital formation. Part II, still dealing with conceptual and methodological problems, contains papers examining the problems of the estimation of capital coefficients. These papers deal with that phase of input-output analysis which is directly concerned with the estimation of capital formation. The papers in Part III deal with the problems of explanation of capital formation. There are three papers in this part, two of which concern inventories and changes in them, while the third is methodological dealing with "Interview and Other Survey Techniques and the Study of Investment."

Of special interest amongst this set of highly interesting papers is the contribution by Mr. Edward F. Denison dealing with the intricate problems of quality change, capital consumption and net capital formation. Mr. Denison suggests that the only meaningful and yet feasible way of measuring the real stock of capital in existence at any point of time, say "t," is to define this stock as the reproduction cost in the year "t0" of the stock of physical assets actually in existence at time "t." This cost would, of course, have then to be written down by a suitable capital consumption allowance determined on the basis of age and life expectancy of each component.

Even in theory, as Mr. F. Modigliani points out in the introduction, this method has some disquieting features, namely, the asymmetrical effect on the stock of capital measured in this way of technological progress resulting in a reduction in the cost of a given type of equipment as compared with technological progress which makes such equipment more productive. Mr. Denison does not deny this, but he has no solution for the disturbing problem.

In practice, other problems would also arise. It is by no means an easy task to estimate the present cost of construction of capital assets already in existence. Apart from the immensity of the task, it can be easily seen that a gigantic amount of technical expertise would be required for the purpose.

The uniformly high quality of the papers included in the present volume makes it a fitting addition to the series which has already such a well-established reputation. As usual, the practice of including in the volume, some of the significant comments made by participants in the Conference, adds to the value of the work. It is easy to see how the process of discussion assists the development of the subject along sound lines. Now that the Indian Conference on Research in Income and Wealth has been formed, it is to be hoped that this practice of publishing papers and comments will also be adopted in this country.

The Economic Development of Andhra Pradesh 1766-1957. By A. V. Raman Rao. Published by Popular Book Depot, Lamington Road, Bombay. Pages: 384. Price: Rs. 18.75.

In a country of India's continental size, there are certainly many regions with divergent patterns of economy. It is, therefore, necessary to study the economy of each region. In fact, regional variations cannot be ignored in any overall survey of economic trends in the country. The book under review is a study of the economic development of Andhra Pradesh. The author, Dr. A. V. Raman Rao, has been at considerable pains to present a comprehensive review of Andhra's economy. Prof. D. R. Gadgil, in his foreword to the book, observes: "To my knowledge, Dr. Raman Rao's effort represents the first attempt at producing a connected account, over a long period, of economic developments in a specific region in India." There are, of course, many difficulties in compiling an account of Andhra's economy. This is because, until the time of reorganisation of the States, Andhra Pradesh had been under the administration of Madras and Hyderabad States. Dr. Raman Rao has had to delve into official records in both the States, in order to extract information relating to Andhra.

Dr. Raman Rao's book falls into four parts. In Part I, which covers the period 1766 to 1802, the economic conditions in Andhra in the eighteenth century are described. In Part II, which deals with the period 1802-65, land tenures, irrigation and communications, banking, overseas trade and other sectors of the economy are treated. In the third part, which covers the period 1865-1947, the growth of towns, agriculture, revenue, irrigation and navigation are among the developments surveyed. Part IV reviews post-independence developments. Thus, the chief merit of the book lies in the fact that, in treating Andhra's economy, the author does not lose the necessary historical perspective. The book is a commendable effort in the sphere of regional economic studies.

Andhra Pradesh is rich in agriculture and mineral resources. And if its leaders adopted farsighted and realistic policies, there is no doubt that the Andhra region could make an effective contribution to India's national wealth. The book under review should serve as a necessary introduction to more intensive study of Andhra's economic problems which should form the basis of official policies designed to improve the economy of the region.

SO-HO wonderful!

CHUTNEYS and *chillis*, *supari* and spices, mangoes and *masalas*—they're so-ho glad to get them in Soho! And that's just *one* of the wonderful English markets waiting for all kinds of Indian goods!

Satisfy these markets—fly your goods as cargo by Air-India International! We offer you *seven* flights each week to London, take such good care of your goods...and cargo by air is really economical, cuts down transit costs and risks to the minimum!

Fly It —they'll buy it!

7 flights a week to London, via Damascus, Beirut, Cairo, Rome, Geneva, Zurich, Prague, Dusseldorf and Paris

INDIA ADOPTS METRIC SYSTEM

MAJOR STEP TOWARDS UNIFORMITY IN WEIGHTS AND MEASURES

THE metric system of weights and measures will come into force on a country-wide scale with effect from 1st October 1958. The introduction of the system will be phased over a period of two to three years. During this transition period both the existing and new systems of measurement will continue side by side. To begin with, the new system will be introduced in trade generally in selected areas in the different States. It will be extended to other parts of the country in due course, where again a transitional period of two to three years will be allowed for the withdrawal of the existing units of measurement. The major industries which will adopt the metric system on 1st October 1958 are cotton textiles, iron and steel engineering, heavy chemicals, cement, salt, paper, refractories, non-ferrous metals, rubber and coffee. In these industries, the metric units will be used for the purchase of raw materials and sale of products. While the metric system will now be used for transactions between mills and their suppliers and customers, it will not apply to the retail trade for some time to come.

From 1st October onwards, in the areas selected for the new system, shopkeepers will have the option to sell foodgrains, provisions, vegetables, coal, etc., by kilograms instead of seers, or any prevalent unit of weight. Transactions by measure like retail sale of cloth will continue to be in the present units as, for instance, the yard. In such States as Madras and Kerala, where foodgrains are sold by measure, the use of the present measures would not be affected. Besides, Government departments and industrial undertakings may use the metric system in the purchase and supply of stores. The Indian Airlines and Air-India International will book cargo and luggage in metric weights and measures. New surveys of land and mines will also be on metric scales. Likewise, metric units will also find their place in technical, statistical, scientific and marketing data collected and published by Government departments. It may be recalled that the system has already come to stay in the jute industry, where it was enforced as early as 1st July 1958, in order to synchronise with the commencement of the new jute year.

Momentous Significance

The adoption of the metric system in India will be of momentous significance to the economic life of the country. It seeks to provide uniform weights and measures for the country as a whole. Although the seer and the maund are in common use in different parts of India, the weight of the seer varies from 24 tolas to as much as 112 tolas. There are over 150 different varieties of weights as well as linear measures and capacity measures in the country. In several cases, a seer or a common weight or measure denotes different things even within the same district, not to speak of the various districts of a State and various States in India. Thus, there may be one seer for foodgrains, another for milk, yet another for vegetables and fruits and so on. Clearly, the new system will eliminate these disparities when it is finally enforced throughout the country.

The metric system is essentially a decimal system, units of weights and measures going up in the ratio of ten. It is, therefore, a simple system to operate and to be understood by the common people. Thus, 10 grams make one dekagram, 10 dekagrams, one hectogram, and 10 hectograms one kilogram. Similarly, 10 millimetres make one centimetre, 10 centimetres one decimetre and 10 decimetres one metre, 10 metres one decametre, 10 decametres one hectometre and 10 hectometres one kilometre. It will be easy to understand the metric system if one remembers the meaning of prefixes to the multiples and the sub-units. The multiples of the unit have these prefixes: *deca* meaning ten times, *hecto* meaning hundred times and *kilo* meaning thousand times. The prefixes to sub-units are *deci* meaning one-tenth, *centi* meaning one-hundredth and *milli* meaning one-thousandth. With the decimal coinage already in force, it is not difficult to realise how simple and effortless our day-to-day calculations and, therefore, the conduct of business, will become when metric weights and measures are enforced. Only, in the initial stages, there will be some difficulty for the people to remember the names of the new units of weights and measures. Another difficulty will be the conversion of the existing units into new units during the transition stage. Both will cause a certain amount of mental strain on the public but it may be cheerfully borne for the benefit of the younger generation and posterity.

Many countries in the West and in the East have already adopted the system. The metric system is the only legally accepted units in 77 countries, while they are optional in 16 countries and have been authorised in four other countries. The Asian countries which have legally accepted the metric system are: Afghanistan (1926), Cambodia (1914), China (1930), Indonesia (1938), Iran (1935), Israel (1954), Japan (1952), Jordan (1954), the Philippines (1917), South Korea (1949), Suriman (1917), Syria (1935), Thailand (1936) and S. Vietnam (1911). Although the U.K. and the U.S.A. have not adopted the metric system in their trade, they recognised its use by law in 1864 and 1866 respectively. In fact, the yard in the U.S.A. is defined in terms of the metre and the pound in terms of the kilogram.

Dr. Raman's Views

Commenting on India's decision to adopt the metric system, Dr. C. V. Raman, India's leading scientist, observes as follows:

"Men of science all the world over have long recognised the immense advantages following from the adoption of internationally accepted units for physical measurements of all kinds. Further, scientific research is by its nature international, and hence the adoption of agreed standards for all physically measurable quantities is essential for its progress. Length, mass and time are the three irreducible entities accessible to physical observation which resist further analysis. Hence, the ideas and methods of science are directed towards expressing the measures of all other physical quantities in terms of the fundamental units of length, mass and time.

"The initiative in establishing the units of measurement adopted for these purposes came from France in the years following the great political revolution in that country. Fortunately for the world of science, the scientific prestige of France at that time was very great. In every field of exact knowledge, she led the world and there was therefore no hesitation anywhere in accepting the lead thus given and thereby establishing the metric system as a universal basis of scientific description and measurement.

"The basic principle of the metric system is that the fundamental units should be derived from permanent and naturally existing standards. It was also contemplated that the subsidiary units actually used in practice should be related to the basic units in multiples or sub-multiples of ten, the computational advantages of the decimal system thus being availed of. These objects have, indeed, been attained in the system, though not quite on the fashion originally intended. In practice, the standards actually used are certain internationally accepted prototypes, these being again reproduced as closely as possible in the national prototypes deposited in their respective countries.

"With the advance of civilisation, scientific knowledge and scientific results increasingly permeate all types of human activity. Machines of many kinds, mechanical and electrical energy, the artificial production of heat or cold, systems of illumination, electrical communication, radio and television may be mentioned as illustrative examples. All of them involve accurate measurements of some kind or other, and hence it is inevitable that the system of units which scientific men have adopted for their own purposes penetrate into other fields and thus become universal. This is a highly desirable result and the nation may, therefore, rightly acclaim and adopt the system with enthusiasm."

Areas Selected

It may be recalled that the change over to metric system was recommended by a special committee on Weights and Measures constituted by the Indian Standards Institution. On the advice of the Standing Metric Committee of the Government of India, the Standards of Weights and Measures Act was passed in 1956. The Act defined the 'metre' and 'kilogram' as the primary standards of length and mass on the basis of the international prototypes. It also standardised, among other things, the unit of time as 'second' and capacity as 'litre.' In one respect, the Act goes beyond the I.S.I. recommendations: it limits the change-over period to a maximum of 10 years instead of 11 to 15 years as envisaged in the I.S.I. Report. The areas selected in the different States for the application of the new system from 1st October onwards, are:

Andhra Pradesh: Districts of Visakhapatnam, Krishna, Guntur, Kurnool, Hyderabad, Warangal, Nizamabad.

Assam: Municipal areas of Gauhati and District of Nowgong.

Bihar: Divisions of Bhagalpur and Ranchi and the Municipal and Notified areas in the districts of Patna, Gaya, Arrah, Chapra, Muzaffarpur, Champaran and Durbhanga.

Bombay: Municipal areas of Bombay, Poona, Ahmedabad, Rajkot, Baroda, Nagpur, Aurangabad, Sholapur, Kolhapur, Akola, Amravati, Wardha and Yeotmal.

Kerala: Districts of Kozhikode, Ernakulam and Quilon.

Madhya Pradesh: Districts of Bhopal, Indore, Gwalior and Jabalpur.

Madras: Districts of Madras, Chingleput, South Arcot and North Arcot.

Mysore: Districts of Bangalore, Raichur and Dharwar.

Orissa: Municipal areas of Berhampur, Cuttack and Sambalpur.

Punjab: Districts of Amritsar, Jullundur, Ludhiana, Ambala, Patiala and Gurgaon.

Rajasthan: Districts of Ajmer, Bikaner, Jodhpur, Jaipur, Kotah and Udaipur.

Uttar Pradesh: Municipal areas of Meerut, Agra, Lucknow, Bareilly, Moradabad, Varanasi, Kanpur, Jhansi, Allahabad and Gorakhpur.

West Bengal: Municipal areas of Calcutta and Howrah.

In addition, the metric system will also be used in regulated markets in the States of Andhra Pradesh, Bombay, Madhya Pradesh, Madras, Mysore and the Punjab.

In the case of Union Territories, on 1st October 1958, the metric system will be introduced in the whole of Delhi, in the two districts of Mandi and Sirpur in Himachal Pradesh, in

THE KINNISON JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE KINNISON JUTE MILLS COMPANY, LTD. will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10.00 a.m. on Friday, the 17th day of October 1958, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1958 and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 1st October to 17th October 1958, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 30*th August*, 1958.

Note: (*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 24th October 1958 to those shareholders so entitled whose names appear in the Company's books on the 17th October 1958 or to their mandatees. No application for Dividend Warrants will be necessary.

THE LAWRENCE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE LAWRENCE JUTE COMPANY, LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10.10 a.m. on Friday the 17th day of October 1958, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1958 and to receive the Directors' and Auditors' Reports thereon.
2. To appoint a Director in the place of a retiring Director.
3. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 1st October to 17th October 1958, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 30*th August*, 1958.

Note: A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

THE STANDARD JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE STANDARD JUTE COMPANY, LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10.20 a.m. on Friday the 17th day of October 1958, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1958 and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 1st October to 17th October 1958, both days inclusive.

By Order of the Board,

A proxy need not be a member of the Company.

PROFIT OF RAZA BULAND SUGAR LOWER

DIVIDEND, HOWEVER, MAINTAINED

THE working of the Raza Buland Sugar Company Ltd. (Managing Agents: Messrs. Govan Bros. (Rampur) Private Ltd., Rampur, U.P.), during the year ended 31st October 1957, does not appear to have been quite so encouraging as in the preceding year. The Company's profit has suffered a sharp decline, despite a sizable improvement in proceeds from sale of sugar and molasses. The Directors attribute this reduction in profit to lower crushing of cane, fall in the selling price of sugar and drop in the income from investments. Thus, at Rs. 28.98 lakhs, the gross profit for the year under review has fallen by Rs. 11.62 lakhs or 28.6 per cent. from Rs. 40.60 lakhs for 1955-56. It is, however, better than Rs. 25.63 lakhs for 1954-55. It has to be stated here that the presentation of accounts for 1956-57 and 1955-56 differs from that for 1954-55. The scheme of amalgamation of the Raza Sugar Company Ltd. with the Buland Sugar Company Ltd., was implemented, it may be remembered, with effect from 1st November 1955. Hence, while the accounts for 1954-55 represent the combined working of the two companies in their individual capacity, those for the following two years relate to the working of the amalgamated company.

Fall in profit means lower income for the Government. Thus, the amount provided for taxation has been lowered from Rs. 17.50 lakhs to Rs. 12.50 lakhs, but that for depreciation has been slightly raised from Rs. 3.83 lakhs to Rs. 4.97 lakhs. The net profit after these provisions also stands lower at Rs. 10.06 lakhs, as against Rs. 15.60 lakhs a year ago and Rs. 13.01 lakhs two years earlier. In view of the decline in profits, the Directors have not transferred any amount to the reserves. In the previous year, it may be noted, they had made a liberal allocation of Rs. 6.50 lakhs to the general reserve. There is, however, no change in the distribution to shareholders, as the dividend is proposed to be paid at 15 per cent. which was the rate for the preceding two years. The dividend for the year under review and for 1955-56, it should be noted, is on a higher capital of Rs. 63.59 lakhs, raised by the creation of 299,400 fully paid-up ordinary shares of Rs. 10 each. The new shares were in exchange for 199,960 ordinary shares of Rs. 10 each (fully paid-up) of the Raza Sugar Company Ltd., according to the scheme of amalgamation.

The following comparative table brings out some of the salient features of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 31st October		
	1957	1956	1955
Sale proceeds of sugar and molasses	3,68.95	2,94.91	1,33.01
Other incomes	4.86	11.03	6.13
Closing stocks of sugar and molasses	37.13	85.56	64.86
Excise duty..	56.70	39.33	18.91
Manufacturing and other expenses	2,39.99	2,46.21	1,59.45
Gross profit	28.98	40.60	25.63
Managing Agents' commission ..	1.45	3.67	2.21
Provision for—			
Depreciation	4.97	3.83	3.06
Taxation	12.50	17.50	7.35
Net profit	10.06	15.60	13.01
Provisions written back	0.10	0.07	0.10
Transfer to reserves	—	6.50	4.89
Dividend	9.54	9.54†	8.04
	(15%)	(15%)	(15%)
Carry forward	0.89	0.28	0.65

† On a higher capital of Rs. 63.59 lakhs.

Sale proceeds for the year rose from Rs. 2.95 crores in 1955-56 to Rs. 3.64 crores. Income from other sources, however, dropped from Rs. 11.03 lakhs to Rs. 4.36 lakhs. The decline in the closing stocks from Rs. 85.56 lakhs to Rs. 37.13 lakhs and in manufacturing and other expenses from Rs. 2.46 crores to Rs. 2.40 crores indicate the setback to the Company's production activities.

Raza and Buland factories commenced crushing from November and December 1956, respectively, and concluded in June 1957. The crushing in both the factories fell below that of the previous season by 495,955 maunds and 386,484 maunds, respectively, due to go-slow tactics by workers for some time and diversion of cane by the Cane Commissioner, Uttar Pradesh, to other factories. Despite this, the percentage of recovery of sugar from cane improved to 9.93 per cent. for Raza and 10.27 per cent. for Buland which are the best yields since 1946-47. The price of cane during the year was maintained at the previous year's level of Re. 1-7 per maund for gate deliveries and Re. 1-5 per maund for deliveries at rail centres. The Indian Sugar Mills Association arranged for the export of about 150,000 tons of sugar to Middle and Far East countries. It is interesting to know that the Company's share in this export trade was as much as about 11,000 tons, the bulk of which went to Malaya.

The Company's application to the Government of India for licence under the Industries (Development and Regulation) Act, 1951, to expand the Buland factory's capacity to 1,500 tons has been turned down. The Directors have decided to balance the plants in order to improve the working of the factories. Permission towards this for the Raza factory has been received from the Government, but the application of Buland is still under consideration.

The paid-up capital of the amalgamated Company which stands at Rs. 63.59 lakhs on 31st October 1957 is supplemented by reserves and surplus aggregating Rs. 49.24 lakhs. The gross block of Rs. 81.90 lakhs stands written down at Rs. 50.47 lakhs. Additions during the year were of the order of Rs. 6.54 lakhs. Besides this, there is a sum of Rs. 2.56 lakhs by way of construction work in progress. As against current assets amounting to Rs. 130.57 lakhs, the current liabilities are of the order of only Rs. 70.77 lakhs. Of the current assets, the Company's investments in State Government securities and shares of joint-stock companies account for Rs. 16.96 lakhs, stores, spare parts, gunny bags, etc., for Rs. 20.89 lakhs, stock-in-trade for Rs. 37.13 lakhs, debts, deposits and advances for Rs. 25.99 lakhs and cash balances for Rs. 22.70 lakhs.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 16.75 *ex-div.*, at which rate and on the basis of the latest dividend, the shares provide a yield of 8.95 per cent. per annum.

(*Concluded from next column*)

sult, the requirements for our industrial activities will be met to a substantial extent by the Poona plant in the near future. During the year 1958, it is intended that a start should be made with the manufacture of some electrical components other than the types now being manufactured at the Calcutta factory. In addition to metal parts and electrical components, it is planned to extend the activities of the Poona factory to include the assembly of radio sets but this will not in any way interfere with the maintenance of the full capacity of the Calcutta factory. . . . The Government's sanction has been secured for importing certain essential equipment from abroad required for the purpose of expanding the Company's manufacturing activities."

Dealing with future prospects, the Directors state that the upward trend in the Company's turnover is likely to be adversely affected by the restrictions placed by the Central Government on the import of raw materials, components and finished goods. They, however, feel confident that, with the greater integration of manufacturing activities, the difficulty will be largely overcome in future years. Hence, despite difficulties in securing suitable supplies locally, an all-out effort is being made to obtain such supplies so that the Company's level of activity may be maintained.

As already indicated, the paid-up capital of the Company, as at the end of the year of review, stands at Rs. 220 lakhs, all in ordinary shares of Rs. 10 each. The reserves and surplus aggregate Rs. 42.85 lakhs, of which Rs. 38.75 lakhs represent premium on new shares. The provision for taxation stands at Rs. 44.41 lakhs and current liabilities at Rs. 479.61 lakhs. The gross block of Rs. 89.43 lakhs, which are inclusive of additions during the year of Rs. 29.07 lakhs, stands written down at Rs. 56.02 lakhs. Capital expenditure in progress at cost amounts to Rs. 13.56 lakhs. The current assets total Rs. 717.29 lakhs, of which cash balances alone account for Rs. 254.29 lakhs. The latter includes Rs. 186.76 lakhs being the amount refundable as a result of oversubscription to the new issue.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 14.75 *ex-div.* Assuming that the Company would be able to pay a dividend of 12 per cent. per annum (the equivalent of 2 per cent. for two months in 1957) for 1958, the yield works out to a little over 8 per cent. At the moment, many in the share market think that this assumption is on the optimistic side. Hence, the Company's shares have not moved up in value, though the whole market has been passing through a bullish phase. It remains to be seen who turns out to be right.

PHILIPS INDIA SHOWS GOOD PROGRESS

DEPENDENCE ON IMPORTS BEING MINIMISED

THE establishment of Philips India Ltd. (Chairman and Managing Director: Mr. P. C. Vink, Calcutta) as a public limited company is of recent origin, the conversion from a private limited status having taken place on 31st October 1957, when participation of Indian capital was allowed. But the name of "Philips" as manufacturers of quality electrical goods has been known in this country for very nearly three decades now. Making its appearance in India for the first time in January 1930 as a private concern under the nomenclature Philips Electrical Company (India) Ltd., the Company started its operations mostly with sales of electric lamps which were imported from overseas. From this modest beginning, the Company has, at the present day, grown into a large manufacturing and trading institution, covering the length and breadth of the country, with a network of offices, branches and sales representatives.

The first step towards local production was taken in 1938, when the manufacture of incandescent lamps was started in Calcutta by the Electric Lamp Manufacturers (India) Private Ltd. Since then, a vast majority of the lamps sold by Philips has been manufactured in this factory and also by Hind Lamps Private Ltd., Shikohabad, which started as a manufacturing unit in 1951. After the war, in May 1948, to be precise, assembly of radio receivers was commenced at the Calcutta factory. Within the framework of this assembly unit, the manufacture of electrical components was started in 1951. By the end of 1957, the number of workers employed in this factory had grown to 548 from a mere 68 on 1st May 1948. The Company has, in addition, acquired a plot of 60 acres in Poona where a modern metalware factory has been erected complete with a tool-room and an electroplating department. Foreign specialists are now busy training Indian staff there. It is the intention of the Company to commence assembling of radios and the manufacture of parts and components in Poona also, for which purpose a new building is already under construction.

As stated earlier, the Company was made public on 31st October 1957, when 500,000 ordinary shares of Rs. 10 each were offered to the Indian public at a premium of Rs. 2-8 per share. The issue was many times oversubscribed. The total issued and subscribed capital now stands at Rs. 220 lakhs, made up of 2,200,000 ordinary shares of Rs. 10 each. Of these, 1,200,000 shares are held by a subsidiary of the ultimate holding company.

The working of the Company during the year ended 31st December 1957 appears to have been satisfactory. Its sale proceeds increased from Rs. 422.65 lakhs in 1956 to Rs. 473.59 lakhs, a rise of Rs. 50.94 lakhs. The gross profit (before taxation and depreciation) at Rs. 55.04 lakhs is Rs. 6.72 lakhs higher, as compared with Rs. 48.32 lakhs for the previous year. The net profit at Rs. 18.05 lakhs, however, is substantially lower, having declined from Rs. 22.22 lakhs for 1956. This fall is due to the sharp rise in the provisions for both depreciation and taxation. The transfer to the former (depreciation) has been increased from Rs. 5.60 lakhs to Rs. 8.64 lakhs and that to the latter (taxation) from Rs. 20.50 lakhs to Rs. 35.85 lakhs. A part of this latter sum, Rs. 7.50 lakhs to be exact, representing the tax on bonus issue made during the year out of reserves, has been met from the general reserve. Again, the tax provision for the year includes Rs. 33,521 allocated as wealth tax for 1956 and another Rs. 1.54 lakh for 1957. A dividend of 2 per cent. has been proposed for the new shareholders. The rate is small because it represents the return only for the short period of 1957—two months—when they were members of the Company. The old shareholders have waived their claim for dividend for the year, as they had received a bonus share. Since the small dividend to new shareholders takes up only Rs. 4.40 lakhs, the Directors have credited the general reserve with Rs. 13.50 lakhs, leaving Rs. 64,000 to be carried forward.

Referring to the Company's programme of expansion, the Directors observe, in their latest report, thus:

"The work in connection with the erection of the new factory at Poona proceeded satisfactorily in the year under review. It is confidently anticipated that the manufacture of metal components which has started in early 1958 will expand progressively and the Directors expect that, as a re-

(*Continued in previous column*)

BURMAH-SHELL REFINERIES

SIZABLE DROP IN EARNINGS

THE Burmah-Shell Refineries Ltd. (Chairman: Mr. L. D. Mudie, Trombay, Bombay) with a capacity of approximately two million tons, completed three years of working on 31st December 1957 since it commenced operations at the end of January 1955. During the short period of its existence, the Company was able to maintain steady progress in its activities, though, from the financial angle, the third year, namely, 1957, had witnessed a setback. Thus, a sizable drop has occurred in the Company's earnings as well as profit for the past year, as compared with those for the preceding year. This is chiefly due to the reduction in duty protection following the Company's voluntary surrender of duty protection on motor spirit with effect from 1st October 1956 and, to a lesser extent, to the increased cost of maintenance of plants and other assets. It may be recalled in this connection that, in September 1956, the Directors, after taking into account the Company's satisfactory financial position resulting from the encouraging performance of the refinery, decided to inform the Government of India of its willingness to forgo the duty protection of two annas per imperial gallon enjoyed on its production of motor spirit. The benefit thus given up by the Company was approximately Rs. 2 crores. The amount of crude oil processed during 1957 was 2,333,614 metric tons which yielded 2,283,876 metric tons of finished products, the corresponding figures for 1956 being 2,351,266 and 2,189,265 metric tons, respectively.

The gross profit for the year under review at Rs. 7.55 crores represents a fall of Rs. 3.36 crores or 31.2 per cent., as compared with that (Rs. 10.91 crores) for 1956 but is Rs. 1.49 crore better than that (Rs. 6.06 crores) for 1955. The net profit at Rs. 4.24 crores, too, has declined, as compared with Rs. 6.32 crores for the previous year. In conformity with the reduction in profit, the provision for taxation has been substantially lowered from Rs. 3.10 crores to Rs. 1.62 crore. But the provision for depreciation has been raised from Rs. 1.49 crore to Rs. 1.68 crore.

The fall in profits had adversely affected the allocation to reserves as also the distribution to the shareholders. Thus, the general reserve which had been provided with Rs. 511 lakhs in the previous year gets only Rs. 105 lakhs. The large amount set apart in the previous year represented the difference between depreciation (including development rebate) allowed for taxation purposes up to that year and the provision made by the Company for depreciation in its accounts up to that date. Besides the credit to general reserve, a sum of Rs. 75 lakhs has been transferred to taxation equalisation reserve, as against *nil* a year ago. The dividend has been lowered from 22 per cent. in 1956 (representing a distribution of 3½ annas or 22 nP per rupee) to 15 per cent. (or 15 nP per rupee) on the amount paid-up on the 'A' and 'B' ordinary shares. As usual, the dividend consists of two payments, an interim and a final. The interim dividend amounting to 12.5 nP per rupee, was paid earlier in the year.

The following comparative table will give the reader an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1957	1956	1955
Income from refining	14,07.29	16,47.23	9,69.93
Other income	22.52	27.04	3.85
Expenses	6,75.06	5,82.96	3,67.44
Gross profit	7,54.75	10,91.29	6,06.34
Depreciation	1,68.43	1,48.80	1,23.17
Provision for taxation	1,62.52	3,10.00	..
Net profit	4,23.80	6,32.49	4,83.17
Preliminary, debenture issue and other expenses written off ..	..	..	16.19
To taxation equalisation reserve ..	75.00	..	2,91.00
General reserve	1,05.00	5,11.00	..
Dividends	2,07.80	3,02.81	..
	(15%)	(22%)	
Carry forward	41.66	5.15	1,85.98
	In thousand metric tons		
Crude oil processed	2,334	2,351	1,839
Finished products	2,284	2,189	N.A.

N.A.—Not available.

It will be seen from the above that the Company's income from refining has dropped from Rs. 16.47 crores in 1956 to Rs. 14.07 crores and other income from Rs. 27.04 lakhs to Rs. 22.52 lakhs. At the same time, expenses have increased from Rs. 5.83 crores to Rs. 6.75 crores.

The balance-sheet of the Company as at 31st December 1957 shows the paid-up capital at Rs. 13.82 crores in two categories of 'A' and 'B' ordinary shares of Rs. 100 each. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 10.14 crores, of which the general reserve alone accounts for Rs. 7.18 crores. The Company has a debenture liability of Rs. 8 crores carrying interest at 5½ per cent. per annum. While the entire capital is held by the Burmah-Shell holding company in London, a part of the debentures represents the only participation by Indian investors in the Company. The current liabilities amount to Rs. 6.22 crores and include a provision of Rs. 1.71 crore for taxation. The gross block appears at Rs. 25.75 crores, and the net block (that is, after depreciation amounting to Rs. 4.48 crores) stands at Rs. 21.28 crores. Construction works in progress amount to Rs. 9.99 lakhs. Miscellaneous expenditure to the extent not written off account for Rs. 26.17 lakhs. The current assets aggregate Rs. 16.54 crores and exceed the current liabilities and provision for taxation by a very wide margin.

COMPANY MEETINGS AND DIVIDENDS

PHILIPS INDIA LTD. Annual General Meeting, Calcutta, 27th September 1958. *Dividend*: 2 per cent. or Re. 0.20 per share. Transfer books remain closed from 8th to 27th September 1958, both days inclusive.

NAGRI FARM TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: Rs. 2.50 per share (*includes interim* dividend of Re. 1.00 per share). Transfer books remain closed from 22nd to 29th September 1958, both days inclusive.

BOR PUKHRI TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1958. Dividend: *Nil*. Transfer books remain closed from 26th to 29th September 1958, both days inclusive.

INDIA JUTE CO. LTD. Annual General Meeting, Calcutta, 29th September 1958. *Dividend*: Rs. 15.62 per share (includes interim dividend of Rs. 3.75 per share). Transfer books remain closed from 19th to 29th September 1958, both days inclusive.

KETTLEWELL BULLEN AND CO. LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: Rs. 5.00 per share. Transfer books remain closed from 15th to 30th September 1958, both days inclusive.

BIRPARA TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: Rs. 7.50 per share. Transfer books remain closed from 22nd to 30th September 1958, both days inclusive.

KOTAMULLAI TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. *Dividend*: *Nil*. Transfer books remain closed from 22nd to 30th September 1958, both days inclusive.

DESSAI AND PARBUTTIA TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: *Nil*. Transfer books will remain closed from 19th to 30th September 1958, both days inclusive.

BARADIGHI TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: Re. 1.50 per share. Transfer books remain closed from 19th to 30th September 1958, both days inclusive.

RYDAK TEA SYNDICATE LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: Rs. 2.00 per share. Transfer books remain closed from 19th to 30th September 1958, both days inclusive.

BATELI TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books remain closed from 23rd to 30th September 1958, both days inclusive.

BELGACHI TEA CO., LTD. Annual General Meeting, Calcutta, 30th September 1958. Dividend: 20 per cent. or Rs. 2 per share. Transfer books remain closed from 24th to 30th September 1958, both days inclusive.

MALANKARA RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam, 14th October 1958. Dividend: 17 per cent. or Re. 1.70 per share. Transfer books will remain closed from 1st to 14th October 1958, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th October 1958. Dividend: Rs. 2.00 per share (final), payable on and after 24th October 1958. Transfer books remain closed from 10th September to 4th October 1958, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 15th October 1958. Transfer books will remain closed from 9th to 15th October 1958, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER CO., LTD. Annual General Meeting, Calcutta, 15th October 1958. Transfer books will remain closed from 9th to 15th October 1958, both days inclusive.

KINNISON JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 17th October 1958. Dividend: Rs. 5.00 per share. Transfer books will remain closed from 1st to 17th October 1958, both days inclusive.

AUCKLAND JUTE CO., LTD. Annual General Meeting, Calcutta, 17th October 1958. Dividend: Rs. 5.00 per share. Transfer books will remain closed from 1st to 17th October 1958, both days inclusive.

DALHOUSIE JUTE CO., LTD. Annual General Meeting, Calcutta, 17th October 1958. Dividend: *Nil*. Transfer books will remain closed from 1st to 17th October 1958, both days inclusive.

COMMERCE AND INDUSTRY

(*Concluded from page 524*)

the municipal areas of Imphal in Manipur, in the municipal area of Agartala in Tripura and in Port Blair in the Andaman and Nicobar Islands.

There is no doubt that the metric system, as is envisaged at present, will not only simplify the entire process of physical measurements, but also provide a new impetus to step up the tempo of trade between the different parts of the country owing to the unified structure of the system. It cannot be gainsaid, however, that such a reform, affecting the whole gamut of economic activity, is bound to create certain difficulties, at least in the short-run. In order to minimise these difficulties, it is essential that there should be close co-operation between the Government and the business community. The various industries and trade will be in need of guidance, help and assistance at all levels of technique and operation, such as in regard to new machinery to be installed, adjustment and calibration of existing machinery to the metric system, new terms of trade contracts, etc. In most of the industries, the transactions are carried out on the basis of foot-pound system The markets will take time to attune themselves to the changing pattern. All the consuming points also will have to change over their weights and measures to the new system. There are bound to be other difficulties as well. Pointed attention is drawn to these difficulties by Mr. B. P. Singh Roy, President, Federation of Indian Chambers of Commerce and Industry. To quote him:

"The difficulties will be much more acute for the change-over in the actual process of production where, for instance, a number of processes are involved in the manufacture of a commodity and different machines are used at the various manufacturing stages. If a new machine based on the metric system is installed to carry out a certain process, it would create difficulties of a twofold nature: it would be difficult to integrate the new machine with the other machines based on the foot-pound system and to apportion work amongst the various machines, some based on the new and others on the old system. A flexibility of approach both regarding the schedules of introduction and installation on the part of Government by way of appreciation of the difficulties of industry and trade would go a long way towards alleviating such difficulties.

"I may attempt to explain concretely a few difficulties. The life-span of the machines at the various stages of the manufacturing process may be different for each particular type. Again, at any moment of time, machines at different stages of life may be employed in the same process. Hence every time a machine becomes old or obsolete and has to be replaced by a new one based on the metric system, not only the flow of production between the different stages in the manufacturing process but also the pattern or the volume of production at the same stage is likely to be upset.

"Keeping in view the phase of the regeneration of the economy through which the country is passing at the moment, it would hardly be proper to obstruct the smooth process of production. Manufacturing units in such cases should be allowed sufficient time to phase this switch-over to the new programme."

Further, it is imperative that new machines of production based on metric units usually built up after elaborate research work and experimental production should be made available in sufficient numbers to ensure continued production. Mr. Singh Roy, therefore, rightly points out that sufficient preparatory work would be necessary before turning over to the new system. He emphasises the need for ensuring adequate supply of new standard weights and measures, besides providing additional testing facilities at the mints to enable the manufacturers to test, compare and check their production programmes. Further, he wonders why the railways have been left out of the system at present. He feels that it is very necessary for the railways to revise expeditiously their published tariff rates and other special rates in terms of metric tons. The railway tariff rates for general merchandise would also have to be converted to the new system. He adds that the railways should admit claims from both sellers and buyers for shortages on the basis of metric units.

It is likely that, in the field of foreign trade also, the new system will present some difficulties. For instance, at present, India's trade is based almost exclusively on the foot-pound system and its trade relations are mainly with countries manufacturing machinery and equipment of all kinds on the foot-pound basis. In this connection, Mr. Singh Roy considers it useful to enter into some sort of overall agreement, formal or informal, with such countries as the U.K. and the U.S.A. for the supply of machinery and equipment suited to the metric system so that our large plans for industrialisation of the country are not impeded.

GONDALPARA JUTE PAYS MORE

PROFIT OF U.P. SUGAR HIGHER

Societe Generale Industrielle De Chandernagor (Societe Anonyme)—Gondalpara Mill

THE directors of the above Company (Calcutta), submit the audited accounts of the Company for the year ended 31st December 1957.

The result of the year's working has been a profit of Rs. 9,00,649 (Rs. 6,36,334). To this is added the amount transferred from taxation reserve of Rs. 59,017 (*nil*) and the credit balance brought forward from the previous year of Rs. 11,510 making a total of Rs. 9,71,176 (Rs. 6,36,334). From this amount is to be deducted provision for taxation including Rs. 25,000 (Rs. 15,000) for wealth tax of Rs. 1,84,017 (Rs. 33,720) and depreciation of Rs. 5,31,748 (Rs. 1,41,516) leaving an available balance of Rs. 2,55,411 (Rs. 5,87,426 including Rs. 1,26,328 being provision for loss on stock of jute etc. written back). The directors recommend that this should be disposed of as follows:—To payment of dividend at the rate of Rs. 60 (Rs. 50) per share free of insome tax payable by the Company absorbing Rs. 2,16,000 (Rs. 1,80,000) and to carry forward to next year Rs. 39,411 (Rs. 11,510 after deducting the previous year's loss brought forward of Rs. 3,95,916).

Pursuant to the working time agreement of the Indian Jute Mills Association, the Mills worked for 48 hours a week with 12½ per cent. of the total looms sealed throughout the year under review.

Results:—The directors are happy to report that, despite the difficult trading conditions in the industry during the year, the working results show some improvement over the previous year, which has made it possible for them to recommend a higher dividend.

Modernisation:—As reported last year, the directors have decided to modernise the mill machinery upto the spinning section by installing the latest type of equipments. The directors are glad to report that a loan of Rs. 25,47,000 has been granted to the Company for this purpose by the National Industrial Development Corporation Private Ltd. Orders for the new machinery have already been placed. Some of the machinery ordered have been received and its erection is in progress. It is expected that by early next year the modernisation scheme should be completed. The total amount required for completing the scheme would be about Rs. 35 lakhs.

The directors inform that the proposed change in the name of the Company and the alteration in its capital structure could not be given effect to so far.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,80,000	Gross block	76,64,785

* Includes wealth tax Rs. 40,000.

United Provinces Sugar Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 30th September 1957.

The net profit of the Company after providing for depreciation and other usual charges, amounts to Rs. 6,42,709 (Rs. 1,82,479). From this amount has been deducted provision for Central and State taxation of Rs. 3,75,000 (Rs. 75,000) leaving a balance of Rs. 2,67,709 (Rs. 1,07,479) to which falls to be added the credit balance brought forward from last year of Rs. 32,042 (Rs. 20,563) making a balance available for distribution of Rs. 2,99,751 (Rs. 1,28,042). The directors recommend that this amount should be dealt with as follows:

To payment of a dividend at 7½ (6) per cent. for the year ended 30th September 1957 Rs. 1,20,000 (Rs. 96,000) and to transfer to development reserve Rs. 1,50,000 (*nil*) leaving a balance to be carried forward of Rs. 29,751 (Rs. 32,042). The depreciation charges absorbed Rs. 63,682.

The acquisition and compensation proceedings under the U.P. *Zemindary* Abolition Act have been finalised by the Government of Uttar Pradesh as a result of which the Company has further received Rs. 16.650 in U.P. *Zemindary* Abolition Bonds which has been credited in the accounts. Full provision has been made in the accounts for Central and State taxation and provision made for depreciation is considered adequate.

The crushing season opened on 26th November 1956 and finished on 17th April 1957 with a total crush of 28,11,566 (24,24,797) maunds of cane and recovery being 9.97 (10.17) per cent. Of the cane crushed, 2,51,450 maunds were supplied from lands cultivated by the Company.

The cane price continued at the rate of Re. 1-7 per maund at the factory gate and Re. 1-5 outstations. Cane cess and Cane Co-operative Societies' commission remained at 3 annas and 9 pies per maund respectively.

The loss resulting from the Company's farming operations was mainly attributable to the low cane yields.

Season 1957-58 *Prospects*: This season's crush at 29,52,615 maunds and recovery at 10.89 per cent. are considered to be satisfactory. The results for the current year will, it is anticipated be fair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

India Jute Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit on trading of Rs. 14,18,516 which is an increase of Rs. 10.14,858 over that of the previous year. The profit for the year after providing for depreciation Rs. 4,75,746 (Rs. 4,51,193), income-tax Rs. 3,82,500 (*nil*) and wealth tax for assessment years 1957-58 and 1958-59 Rs. 79,693 (*nil*) and crediting dividend for the year from investment in the Megna Mills Co. Ltd. Rs. 9,51,177 (Rs. 2,71,765) comes to Rs. 14,31,754 (Rs. 2,24,230). Adding thereto the balance brought forward from the previous year of Rs. 94,993 (Rs. 2,57,287), items relating to previous years Rs. 1,392 (Rs. 4,048) and income-tax on interest on securities refundable of Rs. 789 (Rs. 797) there is a total of Rs. 15,28,928 (Rs. 7,50,043 which includes forfeited dividends; excess provision for taxation and other items). From this amount is to be deducted forfeited dividends paid of Rs. 1,978 (Rs. 300), transfer to development rebate reserve Rs. 51,474 (*nil*) and transfer to contingency suspense Rs. 3,00,000 (*nil*) leaving a balance of Rs. 11,75,476 (Rs. 7,49,743). The interim dividend for the year ended 31st March 1958, declared by the directors on 17th September 1957 at Rs. 3.75 per share absorbed Rs. 2,61,900 (*nil*) leaving an available balance of Rs. 9,13,576 (Rs. 7,49,743). This amount the directors recommend should be distributed as follows:—

To final dividend on 69,840 ordinary shares at Rs. 11.87 (Rs. 5.00) per share for the year ended 31st March, 1958 absorbing Rs. 8,29.001 (Rs. 6,54,750) leaving a balance to be carried forward of Rs. 84,575 (Rs. 94,993).

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed during the year under review. The Company purchased additional loom hours during the year and consequently the number of working looms was increased as from 8th April, 1957, to 70 looms on double shift and 591 looms on single shift. Double shift working of looms was subsequently increased and at the close the mills were working 126 looms on double shift and 539 looms on single shift, i.e., the equivalent of 791 looms on single shift against the normal complement of 691 looms on single shift.

On the 16th January, 1958, the Company was granted a loan of Rs. 14,80,500, repayable in fifteen instalments, by The National Industrial Development Corporation Private Ltd. for further modernisation of the mills against which the sum of Rs. 11,70,000 was received forthwith. By 31st March, 1958, spinning machinery to the value of Rs. 7,36,500 had been received and installed. It is hoped that the balance of the machinery to be received against the loan will be installed during the current year.

The directors have considered the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and have come to the conclusion that a nominal value of Rs. 12.50 per share would permit of greater freedom in transmission and transferability of the shares.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Jeewanlal (1929) Ltd.

The directors of the above Company (Managing Director: Mr. Himchand K. Shah, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

Sales, at Rs. 2,25,54,414 (Rs. 1,96,96,488) during the year 1957 represent an increase of about 15 per cent. over those of the year 1956. The gross profits have improved from Rs. 20,23,298 in the year 1956 to Rs. 22.83.701 in the year 1957. With miscellaneous income at Rs. 1,19,176 added to the total gross profits, the total trading income amounts to Rs. 24.02.877 (Rs. 21,61,304). Inclusive of provision for depreciation at Rs. 1,31,137 (Rs. 1,39,527) at rates prescribed by the Income-tax Acts, administrative and selling expenditures during the year amount to Rs. 16.80.063 as against Rs. 16.55,452 during the preceding year, showing a rise of Rs. 24,611 mainly due to higher rates of interest on bank's overdrafts. Bank loans have been reduced by over twenty-eight lakhs at the end of the year 1957. The directors, again, hope to reduce the bank loans further substantially in the year 1958 by reduction in stocks and outstandings. With the fulfilment of this programme the directors intend to revive its expansion programmes.

The overall result of the operations of the Company during the year 1957 is a net profit of Rs. 7,22,813 (Rs. 5,05,852). Out of the above sum of Rs. 7,22.813, provisions for income-tax and wealth tax for the current year and for the adjustment of provisions for income-tax for previous years, whose assessments have been completed, have been made at Rs. 40,892. This leaves a net trading profit of Rs. 6.81,921 as against Rs. 4,64,745 in the previous year. Profits during the current year from sale of fixed capital assets, surplus to requirements, were Rs. 47,148 (Rs. 41,278). The net result is a profit of Rs. 7,29,064 (Rs. 5,06,023.) This is no doubt an improvement indicating healthier conditions in face of manifold difficulties the Company has to contend with.

The directors view the results as encouraging. Yet, obviously, the improvement falls short of the essential requirements of the Company. The directors also feel sorry that in their view the conditions for the Company are not yet stabilised as they should have been, to demonstrate the vigorous health of the Company.

The directors much regret that in view of the above, no provision towards reserve for replacement of fixed capital assets or towards Reserve prescribed by the Controller of Capital Issues in the year 1951, as a condition precedent to the payment of dividends to shareholders in cash, has become possible in this year also.

The net profit of Rs. 7,29,064 has been applied to reduce the past accumulated losses which, as a result of this appropriation, stand reduced to Rs. 5,21,227 at the end of year 1957, with again no dividends for the shareholders for the *sixth year in* succession, which the directors very greatly regret. The uncovered losses at end of 1957 are being carried forward to the year of 1958.

In the main producing countries, the year 1957 has witnessed, admist the world's expanding economy, a sense of excess of supply of aluminium over demand. This has eased the general supply situation of aluminium ingot in the world markets at a reduced price. Again, the reduction in price of aluminium ingot has been occasioned by a vigorous forward sale policy initiated by Russia. Thus, the official price of ingot has come down from £206-16 in 1957 to £180 in 1958. On account of the policy of protection to the indigenous Aluminium Industry in India and restrictive import policy of the Government the aforesaid reduction in price of ingot has not affected the prices of indigenous aluminium products in India and the markets continue to remain steady with fluctuations in the prices of utensils due to seasonal factors and local economic repercussions engineered by the fast developing economy of the country.

In 1956, the Government abruptly removed the 25 per cent. import duty levied on aluminium scrap while it increased it on imports of aluminium ingot from 31½ per cent. to 35 per cent. At the insistent demand of a section of the industry, this discrimination between customs duties on imports of scrap and imports of ingot at Government level which worked very harshly against the interests of industry using virgin metal as their raw materials, in producing standard quality utensils, was re-examined by the Government. The latter section, with a concerted effort, persuaded the Government to appropriately revise this policy as a result of which the Government re-imposed duty but only at 15 per cent. on imports of scrap. This belated step while deeply appreciated by the Company has yet been found short of *needed relief* in view of the continued high level of 35 per cent. duty levied on imports of aluminium ingot on which pricing is based in India. The Company uses nothing but virgin metal in fabricating its wares. It is representing the matter *again to the* Tariff Commission to remedy this obvious discrimination at Government level, at its ensuing inquiry.

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit, after charging all expenses, of Rs. 88.902 (Rs. 1,04,941). The balance brought forward from last year was Rs. 17,516 (Rs. 15.950), making a total available for appropriation of Rs. 1,06,418 (Rs. 1,20,891). The directors have transferred to general reserve Rs. 40,000 (Rs. 62,500) leaving a balance of Rs. 66,418 (Rs. 58.391). An interim dividend at the rate of 7½ (7½) per cent. was paid on 20th February 1958 absorbing Rs. 20,438 (Rs. 20,438). The directors now recommend that a final dividend at the rate of 7½ (7½) per cent. be paid absorbing Rs. 20,437 (Rs. 20,437) leaving a balance to be carried forward of Rs. 25,543 (Rs. 17,516). Wealth tax in respect of the years ended 31st March 1957, and 31st March 1958, is estimated to amount to Rs. 1,868 and this has been provided for by transfers from capital reserve and investment realisation surplus.

Raisings for the year were 1,29,943 tons compared with 1,40,833 tons in the previous year, whilst despatches totalled 1,30,848 tons as against 1,46,680 tons.

Accounts in brief are as under:—

*Includes provision for wealth tax—Rs. 1,060.

Union Coal Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The year's working resulted in a profit on revenue account of Rs. 1,38,331 (Rs. 81,720) after providing Rs. 25,169 (Rs. 23,465). After transferring the above profit, making various adjustments, the balance on profit and loss account amounts to Rs. 1,91,077 (Rs. 77,105) from *which it is* proposed to pay a dividend of annas six (*nil*) per share absorbing Rs. 13.125 (*nil*) and carry forward Rs. 1,77,952 (Rs. 77,105).

The following are comparative statistics of raisings and despatches:—

	1955 Tons	1956 Tons	1957 Tons
Raisings	63,550	75,546	83.604
Despatches ...	60,615	69,728	81,964

Resignation of Managing Agents:—Williamson Magor & Co. Ltd., have resigned their office as the managing agents to this Company, with effect from 25th July, 1958, and their resignation will be formerly considered by a general meeting of members which will be convened within two to three months.

Accounts in brief are as under:—

Rydak Tea Syndicate Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) *submit* the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account shows a balance of profit of Rs. 6.79.163 (Rs. 11,88.940) to which *has to be added the amount* transferred from reserve for future super-tax Rs. 34,000 (*nil*) and the balance brought forward from *the previous year* of Rs. 52,112 (Rs. 1,01,012) making a total of Rs. 7,65.275 (Rs. 12,89,952). Out of this sum there has been *provided for taxation* Rs. 3.18,000 (Rs. 5,05.000) and for Wealth-tax Rs. 49,000 (*nil*). The directors have transferred to taxation equalisation Reserve Rs. 34,000 (Rs. 51,000) and to reserve for future super-tax Rs. 16,000 (Rs. 34,000) leaving a balance available for disposal of Rs. 3,48,275 (Rs. 4.99,952 after placing Rs. 2,00,000 to general reserve). The directors now recommend the payment of a dividend at the rate of 20 (30) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 298,560 (Rs. 4,47,840) leaving a balance at the credit of profit and loss account of Rs. 49,715 (Rs. 52,112) to be carried forward to the next account.

Reserves: The sum of Rs. 16,000 transferred to reserve for future super-tax represents the estimated liability for additional super-tax on the dividend now proposed by the directors, which will arise in the assessment based on the accounts for 1958. Super-tax on the dividend paid in respect of the previous year is included in the provision for taxation for the current year and the sum of Rs. 34,000 transferred to reserve for future super-tax representing the estimated liability is now written back.

Outturn and Sales: The crops of leaf harvested *from mature* plucking areas of 1,074 and 554 acres by Rydak and Kartick respectively produced 17,860 maunds and 8,284 *maunds of manufactured* tea against original estimates of 17,500 maunds and 8,000 maunds. The following is a comparative statement of tea marketed and average prices realised for the past two years:—

	1957	1956
Rydak	Lbs. 13,94,812	Lbs. 13,26,660
Average sale price per lb.	Rs. 2.16 nP.	Rs. 2.40 nP.
Kartick	Lbs. 6,36,091	Lbs. 6,49,887
Average sale price per lb.	Rs. 1.99 nP.	Rs. 2.36 nP.

The total costs per lb. for 1957 exclusive of depreciation were Re. 1.74 nP and Re. 1.68 nP for Rydak and Kartick *respectively*.

The total estimated crops for 1958 are as follows:—

Rydak: 17,500 maunds at a cost of Re. 1.54 nP per lb.

Kartick: 8,250 maunds at a cost of Re. 1.56 nP per lb.

(Based on the sale of all teas in the Calcutta Auctions.)

Improvements: At Rydak, improvements included 7.14 acres replanted. At Kartick, 8 acres were planted out in replacement of abandoned areas.

COMPTOMETER

Killcott Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st *December*, 1957. The accounts disclose a working profit of Rs. 2,30,620 (Rs. 6,12,052). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 45.000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 2,84,032 (Rs. 4,46.058), of which the directors have transferred Rs. 50,000 (Rs. 1,50,000) to revenue reserve, Rs. 37,767 (Rs. 50,000) to buildings and machinery reserve and Rs. 10.000 (*nil*) to development reserve. The directors recommend payment of a dividend of 15 (20) per cent., leaving Rs. 51,265 (Rs. 66,058) to be carried forward.

Tea crop was 10,79,600 lbs. as compared with 11,75,282 lbs. in 1956. The average selling price realized was Rs. 1.78 per lb., as against Rs. 2.12 per lb. in the previous year.

Estimates for 1958 provide for a crop of 10,40.000 lbs. at an outlay of Rs. 17,00,330, *including inland freight and sale charges.*

New Dooars Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit, after charging all expenses, of Rs. 3,47,581 (Rs. 10,70,191) of which taxation provision requires Rs. 2,15,000 (Rs. 4.10,000) leaving a balance of Rs. 1.32.581 (*Rs. 6,60,191*). The balance *brought* forward from last year was Rs. 1,98,116 (Rs. 1,95,925) and excess tax provisions in previous years written back amounted to Rs. 50.000 (*nil*) making a total available for appropriation of Rs. 3,80,697 (Rs. 8.56,116). The directors *have transferred to investment* realisation surplus Rs. 13,988 (*nil*). The directors now recommend that the following dividends be paid: On the preference shares at Rs. 6.50 per share absorbing Rs. 13,000 (Rs. 13,000) and on the ordinary shares at Rs. 20 (*Rs. 35*) per share absorbing Rs. 2,80,000 (Rs. 4.90,000) leaving a balance to be carried forward of Rs. 73.709 (Rs. 1.98.116 after placing Rs. 1,55,000 to general reserve). Wealth tax in respect of years ended 31st December 1956 and 31st December 1957, is estimated to amount to Rs. 29.440 and this has been provided for by transfer from investment realisation surplus.

A *crop of* 19,432 maunds was sold at an average price of Rs. 1.84 per lb. This compares with a crop of 19,225 maunds in season 1956 sold at an average price of Rs. 2.36 per lb.
