Estimates for the current season have been framed for a crop of 19,000 maunds to cost Rs. 24,68.051 and, provided normal conditions prevail, it is expected that a crop in the region of the estimated amount will be secured.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Gross block	24,35,562
Reserves ...	20,39,898	*Less*—Depreciation ...	10,48,172
Provision for *taxation**	2.71.156		
Liabilities ...	13,51,692	Net block ...	13,87.390
Profit and loss account ...	73,709	Stock of tea	11,93,285
		Stores and loose tools etc. ...	4,74,220
		Debts, deposits and advances ...	6,22.860
		Investments	6.52.448
		Cash ...	10.06.252
Rs.	53.36.455	Rs.	53,36 455

*Includes provision for wealth tax Rs. 29.440.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE ELLORE ELECTRIC SUPPLY CORPORATION, LIMITED

(*Registered Office*: MADRAS)

NOTICE OF THE 24TH ANNUAL GENERAL MEETING OF SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 24th Annual General Meeting of the Ellore Electric Supply Corporation Ltd. will be held at the Registered Office of the Company, No. 20, Second Line Beach, Madras, on Saturday, the 18th October, 1958, at 11 a.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1958.
2. To consider the declaration of a final dividend.
3. To elect Directors in the place of the retiring Directors, viz., Messrs. V. R. Ramanatha Iyer and T. T. Krishnamurti.
4. To appoint Auditors for the current year and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 7th October to 18th October 1958, both days inclusive.

By Order of the Board,

FOR CHANDRIE & CO. (PRIVATE) LTD.,

S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, 18*th September*, 1958.

Note:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The Dividend when sanctioned at the Annual Meeting will be paid on or after 25th October 1958 to those shareholders whose names stand on the Register of Members on 7th October 1958.

THE LANSDOWNE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE LANSDOWNE JUTE COMPANY, LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11.15 a.m. on Friday the 17th day of October 1958, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1958 and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA-27, 19*th September*, 1958.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 24 hours before the meeting.

METRIC SYSTEM IN SUGAR INDUSTRY

Apropos the metric system of weights and measures due to be introduced with effect from 1st October next, the following observations of Mr. P. Hadfield, President, Indian Sugar Mills Association, on the adoption of the system in the sugar industry will be read with interest:

"The problem divides itself into three parts—the raw material, the finished product, and the technical data relating to plant and machinery. With very few exceptions, sugarcane is delivered on wheeled transport, road or rail. Ideally, the change to the metric system should take place only when factory scales have been converted because to weigh in one system and record in another means using conversion tables and introduces one additional operation in which there is a chance for error attributable to the human element. Because of this, no prolonged period of using avoirdupois scales and recording in metric weights can be tolerated. Cane weighment chits will have to be made out in both systems for an initial period. It has been suggested that this should extend over two or three seasons. This is not necessary. Growers will very soon realise that a cart-load or a lorry-load of cane fetches the same reward in rupees, whether weighed by maunds or by kilos. To continue the dual system over long is an unnecessary complication.

"Sugar is bagged to a standard weight in a bag of standard tare. Alteration of the scale is unimportant, an arrow cut or painted on the steel yard or disc indicating the required gross weight is all that is required. Some of India's sugar is to be exported this year. The sugar bag recognised in all foreign markets is the 100 kilo bag and customers prefer to buy in this packing. There is, therefore, every inducement for the immediate introduction of the 100 kilogramme bag. It may be done from the commencement of the next season at each factory.

"In respect of the third item, great caution is necessary. There are many standards and, if the industry blindly accepts to change, it is not seen how haste can help and the changeover in this field may wait until other more pressing matters are set to rights.

"Going from the particular to the general: The metric system has been accepted; its implementation should be made as simple as possible. It should be introduced on an industry or product-wise basis and not, as appears to be the intent of some State Governments, on an area basis. This will tend to confuse inter-district transactions."

WAGE BOARD FOR SUGAR INDUSTRY

Although the Central Wage Board for Sugar Industry was constituted many months ago—the appointment was officially announced on 26th December 1957—it was only a month back that the Board completed the preparation of a questionnaire. It must, however, be said to the credit of the Board that it has taken care to make the questionnaire as comprehensive in coverage as possible, by including the wide and varied aspects of the sugar industry; even *khandsari* manufacture is included. Copies of the questionnaire have already been sent to all the vacuum-pan sugar factories in India, their trade unions, all the central organisations of employees and employers of sugar factories, various chambers of commerce and industry, labour departments of Central and State Governments, and institutions and persons who wish to make contributions on the subject. Arrangements are also being made to distribute copies of the questionnaire among the members of Parliament and State Legislatures. The replies to the questionnaire are required to be sent to the Board, Kasia Road, Gorakhpur, before the end of next month.

MONEY DULL AND EASY

(*From Our Own Correspondent*)

BOMBAY, 24*th September*

The short-term money market is featureless. The trend is easy and the rates of interest are unchanged. The demand for funds is slack, but, at the same time, the pace of growth in the deposits of banks seems to have slowed down somewhat. That from 1st October the understanding reached among the banks on the type of deposits to be accepted and the maximum rates of interest to be paid will come into force has been widely reported in the Press and warmly commended by the majority of papers. The present pattern of interest rates will, therefore, continue for one more week.

In the inter-bank section, day-to-day money fetches 2 to 2¼ per cent. with big banks and 2¼ to 2½ per cent. with small banks. Some banks are reported to have accepted from others one month deposits at three per cent. per annum.

The rate for house-money on call is nominal at 3¼ to 3¾ per cent. Short-term deposits are taken by banks at 3½ to 4 per cent. for one to six months. It is reported that some banks have been rather keen to have as much of these deposits as possible before 1st October 1958, when the new understanding among the banks comes into effect. They are said to have paid even 4¼ per cent. for one to four months.

Further evidence of lack of popularity of the Central Government's 91-day Treasury Bills among the banks is provided by the results of tenders accepted this week. Thus, while the amount invited remained unchanged at Rs. 2 crores, the offerings aggregated no more than Rs. 2.350 crores; a week ago these were Rs. 2.745 crores. The average rate of accepted tenders, too, have gone up further, from 2.524 per cent. to 2.529 per cent. Nevertheless, for next week, the Reserve Bank has invited tenders for another Rs. 2 crores.

A fall of Rs. 12.72 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 19th September 1958. As against this, there has been a rise of Rs. 14.12 crores in notes held in the Banking Department, as a result of which the total notes issued shows a minor increase of Rs. 1.40 crore. On the assets side of the Issue Department, rupee coin shows an increase of Rs. 1.40 crore which means that there has been a fall to that extent in the coins in circulation. There is no change either in rupee securities or in foreign securities. There has, however, been a small increase of Rs. 62 lakhs in balances held abroad. Consequently, the total foreign assets are a shade higher at Rs. 184.97 crores. In the Banking Department, while deposits of other Governments have gone up by Rs. 9.83 crores, those of the Central Government have fallen by Rs. 7.36 crores. Deposits of banks have improved by Rs. 6.03 crores. Loans and advances to Governments are lower by Rs. 4.36 crores, but other loans and advances have gone up by Rs. 4.15 crores. Of this increase, Rs. 1.72 crores represents the addition in the Bank's loans and advances to scheduled banks against usance bills. The total of this item stands at Rs. 3.43 crores, after going down to a low of Rs. 1.71 crore in the previous week. There has, however, been a decline of Rs. 2.47 crores in Treasury Bills purchased and discounted. The changes under other headings are of a very minor nature.

The Scheduled Banks' statement for the week ended 12th September 1958 shows, as compared with that for the previous week, a rise of Rs. 13.55 crores in demand deposits and a fall of Rs. 4.04 crores in time deposits. Borrowings from banks crores in time deposits. Borrowings from banks crores in time deposits. Borrowings from banks declined by Rs. 1.68 crore in the aggregate. Bank credit is down by Rs. 3.87 crores, the ratio of this portfolio to total deposits (net) having declined further from 55.93 per cent. to 55.33 per cent. Investments in Government securities have advanced by Rs. 6.59 crores and stand at a high level of Rs. 584.59 crores, representing 38 per cent. of total deposits. Money at call shows a small decline of Rs. 28 lakhs, but total cash is down by Rs. 5.12 crores. Accordingly, the ratio of cash balances to deposits has fallen from 8.59 per cent. to 8.21 per cent.

The only notable feature in the Gilt-edged market during the week under review was a sizable buying by the Life Insurance Corporation, mostly of long-dated securities, with 4 per cent. 1973 receiving the maximum attention. There was also a fair offtake of State loans by the Corporation. Enquiries from banks for Government securities were next to nothing. There was hardly any selling by the Reserve Bank of either the two new issues that were recently created or of the long-dated loans. The Bank was, of course, quite willing to sell, but there were no buyers. The trend of the market was on the whole steady, but the turnover was by no means significant. Indeed, it would have been very poor but for the interest taken by the Life Insurance Corporation towards the close. As compared with 15th September 1958, the last working day of our previous week, we find little change in the rates of Central Government loans. The 3 per cent. non-terminable is unchanged at Rs. 73.75. There has been a fall of 15 nP in the 3 per cent. 1986 Conversion Loan which finished at Rs. 74.10. 3½ per cent. 1965 is another loan to record a fall, albeit by 5 nP, to close at Rs. 99.70. The only security to record a gain over the week was 4 per cent. 1960-70; the closing rate for it at Rs. 100.65 shows a rise of 5 nP.

Among the State loans, 4½ per cent. 1971 Bombay improved by 10 nP to Rs. 100.70, while 4½ per cent. 1970 of both West Bengal and Madras have lost 10 nP to close at Rs. 100.40. 4½ per cent. 1970 Andhra also lost 10 nP to stand at Rs. 100.25.

There was a remarkable improvement in the value of sterling against U.S. dollars. Spot sterling in New York improved from $2.80½-2.80.3/16 to $2.80.15/32-2.80.17/32 during the earlier part of the week. Subsequently there was a slight decline, the closing rate being $2.80.11/16-2.80⅞. Three months' forward sterling, however, continued to gain, the closing rate at $2.80¼-2.80.3/16, comparing very favourably with $2.79.13/32-2.79.15/32 a week ago.

BULLION EASY AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 24*th September*

The firm trend noted in the bullion market on Monday last week continued unabated during the major part of the week under review. Silver was particularly strong, thanks to expectations about revival of seasonal demand, reports of sizable purchase (estimated at 150 bars) by a leading operator in the Calcutta market, and bear-covering which followed apprehensions of a deterioration in the Far Eastern situation. All these factors induced good buying support and prices registered handsome gains. There was, however, a minor setback today on account of profit-taking. In sympathy with silver, gold also tended to rise. But the upward trend was halted yesterday, when the metal encountered selling induced by rumours regarding unauthorised arrivals and the statement of the Union Minister for Planning in the Lok Sabha on Monday last to the effect that the proposal for mobilising gold stocks was not feasible. The fall in prices persisted today also.

Forward silver (*Bhadrapad* settlement) met with good enquiries and spurted from Rs. 186-3 on the 15th inst., to touch a high of Rs. 188-1 yesterday. The selling that ensued thereafter took the quotation down to Rs. 187-1. After recovering again to Rs. 187-10 today, it finished lower at Rs. 187-7. The net gain over the week was Re. 1-4. *Aswayuj* delivery advanced from Rs. 187 to Rs. 188-11 before closing at Rs. 188-3.

Ready silver strengthened from Rs. 185-10 on the 15th inst., to Rs. 187-11 yesterday. After easing to Rs. 186-14 today, it finished at Rs. 187-3. The floating stocks of silver are estimated at 900 bars. The daily average arrivals were 21 bars, while offtake was 11 bars per day on an average.

Forward gold (*Bhadrapad* settlement), which stood at Rs. 107-6 on Monday last week, evoked support and advanced to Rs. 107-15 on Saturday. It, however, declined to Rs. 107-3 today before finishing at Rs. 107-4. *Aswayuj* delivery improved from Rs. 107-11-6 to Rs. 108-2-6 before closing at Rs. 107-11.

Ready gold moved up from Rs. 107 to Rs. 107-12-6 on Monday this week. After fluctuating between this level and Rs. 107-12, it finished at Rs. 107-3. The floating stocks of gold are reported to be 35,000 tolas. The daily average arrivals were 5,800 tolas, while offtake was of the order of 4,400 tolas.

The prices of spot silver in London and New York were unchanged at 75⅛*d.* and 88⅛*c.*, respectively. Gold prices in London, however, declined from 250*s.* 6½*d.* on the 13th inst., to 250*s.* 2*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	24-9-58	Highest	Lowest	15-9-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	107 3	107 12½	107 1½	107 4
Forward*	107 4	107 15	107 3	107 6
Sovereign	70 12	71 0	70 12	70 14
SILVER				
Ready (.996 fine Mint) ..	187 3	187 11	185 2	185 10

COW HIDES DECLINE

(*From Our Own Correspondent*)

MADRAS, 22*nd September*

Arrivals of E.I. tanned cow hides were on the usual scale, but prices were a shade easier than last week. Clearance was limited, as shippers were finding it difficult to place fresh business for shipment. U.K. buyers did not evince interest at current offers and seemed to be testing the Madras market without placing definite business. Arrivals of buff hides were small and found ready clearance. Tanned buff calf and cow calf continued to be in short supply. The new season productions would be available for sale in November only.

Enquiries for E.I. tanned goat skins have been patchy, with emphasis on 5½/6 lbs. goat skins. Demand for sheep skins was slow and the market was quiet.

LINSEED DULL

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 22*nd September*

Dull conditions prevailed in the linseed market during the week under review, with small business passing. Despite firmness of groundnut and mustard oils, linseed oil was quiet and prices actually registered a small decline. Indian oil is unsaleable in overseas countries at current levels with large quantities offered cheap from South America.

The latest available quotation for Ready-September is Rs. 25.14 per maund.

COTTON FUTURES WEAK

(*From Our Own Correspondent*)

BOMBAY, 24*th September*

Bearish conditions prevailed in the cotton futures market during the week under review. There was a steep landslide in values which was a sequel to onslaught of heavy all-round liquidation. Report of clear and sunny weather, after the recent rains, in most cotton tracts, was the main factor which prompted the selling. Good weather indicated the possibility of a bumper crop in the season. Private estimates placed the crop at between 5.5 and 5.7 million bales. A crop of this size, together with a large carryover at the beginning of the season, would produce a larger total supply in the new season. In view of the downward trend in mill consumption of cotton, and the none too encouraging textile outlook, operators felt that the current level of cotton prices would not be maintained. Consequently, they rushed to liquidate their holdings, and values slumped. Nevertheless, rumours of a large export quota announcement and a probable abolition of export duty imparted some strength to the market on Saturday, but it was not sustained for long. The market again succumbed to heavy selling on Monday with Jarilla March contract declining to Rs. 637.50, one of the lowest levels reached so far. Yesterday, however, there was a mild recovery induced by news of cloudy weather in some cotton tracts. Rates moved higher today on Bank rate rumours. The market closed near the highest level of the day. It was, however, as much as Rs. 13.50 below last week-end quotation. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	24-9-58	*High*	*Low*	15-9-59
I.C.C. Moglai Jarilla				
(*March 1959*) ...	642	649.50	636.25	655.50

Influenced by the trend of the futures market, values in the spot section also registered a sharp fall Mill enquiry was mainly confined to good quality lots of Laxmi, Co2, Vijay, Surti, Jaydhar, etc.

In the export section, better activity was reported. Shippers bought sizable quantities of 25/32″ and ⅞″ staple cottons against previous export commitments. Moderate quantities of Khamgaon were booked. Some business was also reported in Punjab cotton. Export enquiries were noted for exportable Jarilla. Bengals and yellow pickings also attracted attention.

The shipment period of cottons released for export on 9th and 23rd August, has been extended till the end of November next. Accordingly, shipping bill will be made valid for 30 days or till the end of November, whichever is earlier.

The foreign section was quiet. Some business was reported in Californian G.N. 1-5/32″ staple at Rs. 2,050.

The East India Cotton Association has decided that, in all cotton transactions from 1st October, the equivalent of candy in terms of the metric system of weights will also be mentioned. The price will consequently be quoted in rupees per candy of 784 lbs. and its equivalent in metric system, which is 355.616 kilograms. The Association, it is reported, will soon examine the question of fixing a convenient unit of trading in terms of kilogram and also prepare ready reckoners for different weights.

The following are the latest available spot rates—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closings:

Bengal *Deshi* 610 (610); Berar Jarilla 660 (675); Khandesh 710 (725); Vijay 825 (850); Vijay 825 (850); Hubli Laxmi 930 (950); Jaydhar 850 (880). Delivery contracts: Bengal 588 (593); Mathia 595 (612).

Cotton futures values in the Karachi market suffered a sharp setback during the week. Weak export advice and keener competitors from exporting countries discouraged support. On the emergency of selling prompted by good weather, values reacted sharply. N.T.R.G. January declined from Rs. 78-2-6 on the 15th inst. to Rs. 76-1-0 and the March positions eased over the week by Rs. 2-0-6 to Rs. 76-7-0. Spot values also receded.

The Alexandria cotton futures market ruled easy during the week under review. Trade buying was practically *nil*. In the absence of export demand operators tended to liquidate part of their holdings. Bearish crop news accelerated the downward trend. Towards the close of the week, however, a recovery, which was mainly of a technical nature, was witnessed in the long-staple Karnak contracts. The earlier losses were more than made up.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closings. *Karnak*: November 72.45 (72.20); January 72.65 (72.40). *Ashmouni*: 63.70 (64.95); 63.90 (65.00).

A mixed trend was evident on the Liverpool Cotton Exchange during the week. While the American cotton contracts came under selling and eased, the mixed growth contracts received trade support and improved. Sudan contracts were neglected and values nominally unchanged. Intermonths and inter-contract witching especially from the near to the distant months, was a feature of trading. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closings:

American cotton one inch staple contract: October-November 23.68 (23.93); December-January

23.88 (24.00); March-April 23.90 (23.95); May-June 23.90 (23.88).

American cottons mixed growth contract: October-November 24.49 (24.35); December-January 24.42 (24.30); March-April 24.37 (24.25); May-June 24.35 (24.20).

Sudan September-October, November-December, January-February 29.75 (29.75).

Cotton futures values in New York scored handsome gains during the week on trade and Commission House support. The buying was in part attributed to better advices from the piece-goods market, and reports of unwanted rains in eastern parts of the cotton belt. Heavier entries into the Government loan also favourably influenced sentiment. Spot values were, however, a shade easy.

The U.S. Export-Import Bank has announced that arrangements had been completed to place in operation the 60-million-dollar cotton credit to Japan. The one-year credit was approved in July and loan papers were signed in August last. It was the tenth annual cotton credit for Japan approved by the Bank since 1948, bringing the total financing of cotton purchases by Japan to a total of $545,200,000.

The credit would bear interest at 3⅛ per cent. Purchases would be financed by drafts drawn by the shipper on the Bank of Japan pursuant to letters of credit issued by 23 U.S. commercial banks as designated by the Bank of Japan. At current prices approximately 400,000 bales of cotton can be financed for export by this credit which will be available till 31st July 1959. It is estimated that Japan will require imports of approximately two million bales of cotton during the 1958-59 crop year.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	23-9-58	16-9-58	9-9-58
Spot	35.90	36.10	36.15
October	35.75	35.55	35.39
December	36.18	36.03	35.83
March	36.66	36.53	36.30

YARNS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 24*th September*

Details regarding the fixation of prices under the Staple Fibre Control Order issued on the 9th inst., are now available. The prices, fixed on ex-factory basis, are Re. 1.75 for 1.5 denier bright 1.5 inch staple length and Re. 1.94 for 1.2 denier bright 1.5 inch cut length. For dull fibre, an extra price of 8 nP per lb. is to be charged. All these prices are exclusive of sales tax, excise duty, octroi duty and other statutory levies in existence. The buyers, however, are required to pay freight and other charges incurred. As regards distribution, preference is given generally to the requirements of the industrial undertakings registered or licensed under the Industrial Development Act exclusively for spinning staple fibre yarn. After that, permits will be issued to those undertakings which have spun staple fibre yarn during the period from 10th October 1957 to 31st March 1958. The Textile Commissioner has, of course, been empowered to take any other relevant factors into consideration while granting the necessary permits for purchase of the staple fibre from the indigenous manufacturers.

The yarn market ruled depressed during the week under review. In particular, staple fibre yarns were weak, thanks to rumours of the authorities issuing licences for more import of pulp to indigenous producers in order to enable them to increase the daily rate of output from 40 tons to 60 tons which represent the quantity required to meet the needs of the textile mills in full. There were, besides, reports that stocks of staple fibre yarns, particularly 2/40s, were very large while demand from important consuming centres, notably Surat, was at a low ebb. The stockists were busy unloading their holdings at an early date. Consequently prices of staple fibre yarns suffered a setback. In sympathy with staple fibre yarns, rayon and nylon yarns also declined, the latter by about 50 nP per lb. Cotton yarns continued to rule easy on persistent reports of accumulations of stocks and slackness in demand.

Staple fibre yarn (40x2) October delivery was subjected to heavy selling and slumped by Rs. 18 to Rs. 689. In the spot section, 40x2 Cityrs receded by 10 nP to Rs. 3.62. Kohinoors dropped 13 nP to Rs. 3.81. Centurys eased by 6 nP to Rs. 3.69. Among foreign yarns, Paramounts and Finlays were both quoted at Rs. 9.75.

In the art silk yarn section, 120 Japan declined by 16 nP to Rs. 5.81, 150 Japan climbed down by 22 nP to Rs. 6.12. 120 Italy fell by 19 nP to Rs. 6.25 and 150 Italy by 25 nP to Rs. 6.25. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 13 nP to Rs. 4.90. 120 bright cones first grade were quoted 19 nP lower at Rs. 5.90.

In the cotton yarn section, ten counts Moderns were neglected at Rs. 13.25. But Podars gathered 13 nP to Rs. 12.50. Among twenty counts, Moderns were stagnant at Rs. 16.75. Thirty counts Hinds receded by 25 nP to Rs. 19.75. Among forty counts, Minaxis shed 19 nP to Rs 25.06. Moderns fell by 50 nP to Rs. 25.25. Sixty counts Finlays were dull at Rs. 58. Eighty counts Mahendras were quoted at Rs. 70, Moderns at Rs. 71.50 and Finlays at Rs. 78.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those nine days ago:

	24-9-1958	15-9-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.81	5.97
150 Japan (per lb.)	6.12	6.34
120 Italy (per lb.)	6.25	—
150 Italy (per lb.)	6.25	—
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	689.00	707.00
40 x 2 Kohinoor (per lb.)	3.81	3.94
40 x 2 City (per lb.)	3.62	3.72
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.50	12.87
20s Modern	16.75	16.75
30s Hind	19.75	20.00
40s Minaxi	25.06	25.25
60s Finlay	58.00	58.00
80s Mahendra	70.00	70.00

OILSEEDS FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 24*th September*

After presenting fully steady conditions in the first three sessions of the week under review, the oilseeds market developed a sagging tendency on Monday which persisted till the close today when a steady trend came to prevail again. The earlier steadiness was due to rumours of fresh export quota for oilcakes, good buying of groundnut oil by *vanaspati* manufacturers, reports of Australian purchase of 300 tons Indian linseed oil and expectations of better overseas orders for castor oil based on news that the Brazilian castorseeds crop might not exceed 140,000 tons. Consequently, prices of oilseeds and oils receded a rise. The improvement was, however, halted on Monday when the market experienced some selling pressure induced by easy advices from North Indian commodity markets and weakness of cotton. The easiness gathered further momentum yesterday. Today, groundnuts and castorseeds continued to rule easy, while linseed, cottonseed and other seeds were well supported.

Groundnuts February 1959 contracts received good enquiries and advanced from Rs. 164.62 on Monday last week to Rs. 166.75 on Saturday. Thereafter, it tended to decline, today's closing rate being Rs. 184.87. Over the week, bold ready rose by Re. 1.38 to Rs. 42.50. Coromandel and Khandesh quality both recorded a gain of 88 nP to Rs. 42.50. Groundnut oil ex-mill rallied 75 nP to Rs. 22 and railway receipt 87 nP to Rs. 21.87.

Castorseed September 1958 contract attracted good attention of operators and forged ahead from Rs. 158 to Rs. 161.75. Today, however, it was a shade easy at Rs. 161.65. May 1958 delivery improved from Rs. 155.25 to Rs. 157.25 before finishing at Rs. 156.18. Ready Madras, after rising from Rs. 31.75 to Rs. 32.19, closed lower at Rs. 31.87. Kanpur quality gathered over the week 25 nP to Rs. 30.75. Castor oil B.S.S. hardened by 15 nP to Rs. 17.87. Commercial quality put on 19 nP to Rs. 16.19.

Linseed September 1958 contract picked up 38 nP to Rs. 35. May 1959 delivery, which stood at Rs. 31.69 on the opening day, strengthened to Rs. 32.12 on the 20th inst., and, after receding to Rs. 31.69 yesterday, recovered to Rs. 31.81 today. Bold ready increased by 50 nP to Rs. 35. Linseed oil, after declining from Rs. 17.94 to Rs. 17.62 yesterday, improved to Rs. 17.87 today.

Cottonseed September 1958 contract gained good buying support and spurted from Rs. 128 to Rs. 130. May 1959 contract, which had gone up from Rs. 101 on the opening day to Rs. 103 on the 20th inst., declined to Rs. 101 yesterday but receded to Rs. 101.50 today.

Among other seeds, kardiseed bold ready was well supported, the quotation advancing by a rupee to Rs. 23.50. Nigerseed Madras quality, after easing from Rs. 34.75 to Rs. 33.50 in the first two sessions, rose gradually thereafter, today's closing rate being Rs. 34.50.

The following table shows the closing prices of oilseeds and oils today as compared with those nine days and two weeks before:

	*24-9-1958	15-9-1958	10-9-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	164.87	164.62	167.75
Bold ready (per cwt.)	42.50	41.12	41.00
Linseed—			
Sept. 1958	35.00	34.62	33.50
May 1959	31.81	32.06	32.62
Bold ready (per cwt.)	35.00	34.50	33.37
Castorseed—			
Sept. 1958	161.65	158.00	160.00
May 1959	156.18	155.25	159.62
Madras (per cwt.)	31.87	31.75	32.00
Cottonseed—

* Rates include excise duty but exclude sales tax.
†Rates exclude both excise duty and sales tax.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 24*th September*

The sugar market continues to rule firm. There are rumours that, at the meeting to be held in New Delhi tomorrow, the Indian Sugar Mills' Association Sub-Committee may succeed in persuading the Union Food Ministry to permit at least a flat rate of Rs. 36.50 per maund in the whole of U.P., Bihar and Punjab, instead of the present price of Rs. 36 only for U.P. and Bihar. These rumours, together with the normal post-monsoon and festival demand for sugar, have induced good buying, but prices have not shown any rise as the ex-mill quotations for sugar in the Bombay-Deccan area remain more or less unchanged.

Arrivals of sugar by rail into the market were less than those in the previous week, being 7,500 bags, as against 13,800 bags.

Medium grain sugar is fully maintained at last week's level of Rs. 107-Rs. 109, as also large grain at Rs. 110-Rs. 117. Small grain has gained 50 nP to Rs. 105.50-Rs. 106.

Replying to a question in the Rajya Sabha recently, the Union Minister for Food and Agriculture stated that no ex-factory price of sugar had been fixed for factories in Bombay State. He stated that the Government had, however, undertaken to supply sugar f.o.r. Bombay at Rs. 39 per maund, after adding an average railway freight of Rs. 3 per maund to the ex-factory price of Rs. 36 per maund fixed for U.P. factories. The monthly consumption of sugar in Bombay was about 44,000 tons.

• • • •

HAPUR, 22*nd September*

Sugar prices ruled quiet during the week, as outside demand continued slack and the supply position eased further with the release of a fresh quota for free sale by the Government. Some business was reported for destinations in Gujerat. The following were the latest prevailing ex-mill delivery prices for wholesale sugar in the Muzaffarnagar market:—

Khatauli (A28) Rs. 37.37; Iqbalpur (B29) Rs. 37.12; Deoband (C29) Rs. 36.37; Shamli (A29) Rs. 37.75; Modinagar (B29) Rs. 37.12; Mawana (B29) Rs. 37.12; Amroha (D29) Rs. 35.50; Bijnore (E29) Rs. 35.37; Seohara (D29) Rs. 35.81; Saharanpur (D28) Rs. 35.69; Mansurpur (B29) Rs. 36.75.

Fresh incentive lacking, sugar prices ruled quiet around familiar prices in the Kanpur market during the week. The latest prices were:— Ex-mill spot (per bag) (C29) Basti Rs. 103.8; Gola Rs. 102-8, (D29) Gola and Burhwal Rs. 101-12; Waltergunj, Balrampur and Tulsipur Rs. 105-4; Lakhimpur and Hargaon Rs. 101.

Khandsari prices ruled quietly steady and prices ranged between Rs. 33 and Rs. 35.50 per maund. Rumours again revived that the Government was going to impose excise duty on *khandsari* production. New crushers were being installed to begin crushing cane into *gur* now and later to *khandsari*.

Old *gur* stocks were practically exhausted and were not more than 3,000 maunds, with prices for *kotha* dry-wet quality put at Rs. 20 per maund. A small quantity of new *gur* also reached the market which was lifted by up to Rs. 25 per maund by consumers.

New *gur* arrivals will soon increase as the weather clears up. Condition of the cane crop is fairly good in west U.P., but reports from east U.P. indicate that the conditions there are not so happy.

In the Muzaffarnagar market, old stocks of *gur* had been nearly exhausted. New *gur* arrivals were reported at Meerut and some other centres and were quoted up to Rs. 25 per maund.

Future *gur* at Hapur moved narrowly during the week. Opening at Rs. 13.50, *fagun* delivery touched the highest at Rs. 13.69 and lowest at Rs. 13.29 and was quoted today at Rs. 13.57.

BLACK PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 24*th September*

Malabar black pepper in specific delivery for September came down from Rs. 570 to Rs. 540, owing to poor demand from overseas and bear hammering, following discouraging advices from New York, and continued to hover around the level during the week ended the 17th inst. Some improvement, however, was noticed during the week under review, following short-covering induced by the news of deterioration in the Far Eastern situation.

Singapore exporters temporarily stopped selling to the U.S. on account of mass detentions of Lampong pepper shipped during July. Such a move was responsible for the easiness in Singapore which went down from Str. $75 to Str. $71 for Sarawak Special, as Continental demand, too, proved sparse and poor. At the time of writing, however, Singapore rallied to Str. $74, with undertone steadier.

Lampong black in Djakarta also improved to Rupias 810 from the lowest of Rupias 740, as pressure from arrivals was reported to be waning since the harvesting season was likely to end in October. In the total crop of about 9,000 tons of Lampong black, more than 4,000 tons were reported to have been already marketed.

Alleppey, after going down to Rs. 587½, improved to Rs. 600. October delivery rallied to Rs. 105-50, after going down to Rs. 104 and December moved between Rs. 103 and Rs. 101. Calicut was steady at Rs. 620.

In A.S.T.A. September moved between $0.25 and $0.25½, while December was nominally quoted at $0.25 and $0.24½.

In specific delivery, September and October were quoted at Rs. 542 and Rs. 550, respectively.

The present weakness in Malabar black is understandable, particularly in view of the healthy statistical position in India. The weakness appears more or less psychological, as pepper prices are moving up and down according to the commitments and mood of big speculators who are easily affected by the weakness or otherwise in other allied speculative markets. At times, secondhands purposely underquote growers to make them soft sellers, so that they may pick up cheaper against their foreign commitments.

Today's nominal quotations are: Ready delivery Rs. 79 per Bengal maund; September Rs. 542-47 and October Rs. 550-55 per candy of 5¼ cwts.

METALS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 23*rd September*

Expectations of a larger allotment of foreign exchange for base metals in the import policy for the six months beginning from 1st October were entertained in the metal market. The consumers were, therefore, not inclined to enter into fresh commitments except for meeting the day-to-day needs, with the result that prices were pushed down.

Earlier in the week, tin was quoted at Rs. 566. There was good demand from the alloy-making industry, and, once this was met, the price moved down to close at Rs. 553 in conformity with the noticeable fall in price in both London and New York. Electrolytic zinc declined by 75 nP to Rs. 67.00, while lead was unchanged at Rs. 67.50. The high trend of copper prices on the London Metal Exchange was noted. The allocations of copper made by the Government of India to small-scale manufacturers should lessen pressure in the scrap market. Of the 5,500 tons allotted, about 4,500 tons have already been distributed.

STRONG DEMAND FOR TEA

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 17*th September*

In sale No. 28, held on Monday the 15th inst., there were 978,160 lbs. on offer. There was a further marked improvement in quality, with some flavoury invoices on offer from the Nilgiri district. Good medium and medium descriptions were also much improved. The sale opened to a strong demand, but this eased a little as the sale progressed. Low medium teas met with some support and were fully firm to occasionally dearer. Medium teas with improved quality advanced by 10 to 15 nP. Improved quality high growns met with strong competition and prices advanced considerably and, in some cases, by as much as 50 to 70 nP. Whole leaf teas were slightly dearer on last rates. A small quantity of tippy teas sold well.

The quotations were: Low medium Rs. 1.55 to 1.70; medium Rs. 1.80 to 2.05; good medium Rs. 2.10 to 2.35; and quality Rs. 2.75 to 4.30.

Colombo Market.—Sale of 15th September 1958: Dimbula Dickoya B.O.Ps. opened lower, weakened further at close and declined by 20 to 30 cents. Uvas irregular. Following quality mediums below dearer by Rs. 2. Better sorts lower. Strongest feature useful liquoring fannings. Both medium and highgrown, appreciably dearer. Lowgrowns, including Gulf types, dearer by 5 to 8 cents. *Sale of 16th September* 1958: Active demand for useful liquoring, fannings and grainy dusts substantially dearer. Other kinds firm.

Calcutta Market.—Export: Better demand. Commons steady to occasionally dearer. Bright liquoring orthodox Assam sold well, though medium sorts easier by 15 to 20 nP. Better support from ordinary C.T.Cs, best kinds, however, lower by 10 to 30 nP. Tippy teas well supported, but Darjeelings generally easier. *Internal*: 20,000 packages. Dust good general demand. Orthodox all districts firm to dearer. Exportable C.T.C. well supported. Poorer C.T.C. easier by 10 nP. Internal leaf 1,300. Good general demand.

Export Quota: The market has remained steady throughout the week, with some business being transacted at 7¼/7⅜ nP. The latest quotation is sellers 7⅜ nP, buyers 6⅞ nP, with business going through at 6⅞ nP.

Auction Programme for October: In view of the August 1958 crop which is expected to be half million pounds short as compared with that for the corresponding period last year, the General Committee has accepted the recommendations of the Auction Sub-Committee to hold only two leaf sales in October 1958. Leaf sales during October have accordingly been fixed on the 14th and 28th October. There will be no changes in the dust sale programme for the month which will be 9th and 23rd October.

Forthcoming Auctions: Sale No. 29 will be held on Tuesday, the 30th inst.

TEA KEENLY BID

(From Our Own Correspondent)

CALCUTTA, 23*rd September*

In the internal tea sales held last week, buyers showed preference for orthodox teas. Dusts on offer amounted to 20,186 chests, and legg-cut teas added 4 nP on keen competition. In C.T.C. Assams, the few best liquiring lots rose above valuations and the plainer powdery teas were steady, while the poorer medium teas eased by 10 nP. The quotations in rupees per lb. with those of the previous week were: Best Assam C.T.C. 2.50 to 3.00 (nominal) (2.45 to 2.70); medium Assam C.T.C. 2.15 to 2.35 (same); medium Assam grainy dust 1.76 to 1.78 (same); and medium Dooars 1.74 to 1.76 (same).

Leaf on offer amounting to 1,365 chests met with good demand at lower rates.

Export quota declined from 7 nP to 6⅞ nP.

Market circles were looking forward to relief for common teas. It was realised that the delay was due not to lack of earnestness on the part of the Government but to the difficulty in working out a scheme by which common teas only would derive the benefit of reduction or complete cancellation of export and excise duties. It was, however, pointed out that the withdrawal of excise and export duties on common teas would not alone make them competitive in world markets, but would give only a temporary relief to the uneconomic producer.

On 17th September, a tea sale was held in Chittagong, when leaf grades amounting to 11,468 chests and dusts 3,074 chests, in addition to a supplement of 69 chests, were on offer. Prices improved as the sale progressed. Keen competition was offered to the fanning grades and best liquoring teas both of which rose by one to two annas. Legg-cut teas were fully steady. Tippy teas, however, were very quiet and interest in the thinner liquoring brokens was only casual. Green teas added 1½ to 2 as. The quotations in rupee per lb. were: P.F. 2-10-6 to 2-11; O.P. 2-14; B.P.S. 2-9-6 to 2 10; Pek 2-13-6; B.P. 2-8 to 2-8-6; and B.O.P. 2-11.

Dusts gained by an anna, with the plain Sylhet quoting at Rs. 2-11 per lb.

About 13,810 chests of leaf and 3,942 chests of dust would be the catalogues in the next auction scheduled for the 1st October.

There was good general demand at irregular prices during export sales held yesterday. Offerings aggregated 63,733 chests. Orthodox B.O.Ps. and O. fannings eased by 10 to 30 nP, but those lots possessing bright liquors received keen support. However, the B.P.S. teas were quiet, with the plainer types being pushed down noticeably. Plain brokens were about firm. Darjeelings were easy. The quotations were: Best Assam C.T.C. fannings Rs. 3.00 to 3.40 (nominal) (3.10 to 3.30); best Assam C.T.C. B.P. Rs. 2.70 to 3.00 (nominal), (2.80 to 3.00); clean black pekoe Rs. 2.00 to 2.10 (2.05 to 2.10); medium fannings Re. 1.98 to 2.10 (2.00 to 2.15); plain B.P. Re. 1.70 to 1.74 (same); plain fannings Re. 1.80 to 1.88 (1.78 to 1.86); and medium B.P. Re. 1.85 to 1.90 (1.90 to 1.95).

In export quota, business was done at 6 nP; subsequently, the rate declined to 5¾ and 5½ nP.

JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 23*rd September*

In the absence of incentives, quiet conditions were in evidence in the jute markets during the week under review. Selling pressure in the futures market and biding for time by overseas buyers were the two factors that lulled enthusiasm in the bazaar. Earlier in the week, the Indian Jute Mills Association did not favour any change in the minimum price policy, and this provided strength to the heavy goods section for some time. Real buying was, of course, much restricted and prices gave way. Further, the news of a fall in U.S. burlap consumption by one million yards to 67 million yards in August caused disappointment. For it had been anticipated that U.S. burlap consumption would enlarge, in view of the improvement in economy. The expected increase in American interest in hessian here had not yet materialised and, in the market, there were searching enquiries if there had been a shift to substitutes in the U.S.A. However, reports from New York indicated that the absence of larger demand was due to heavy arrivals against orders placed when the Middle East crisis had reached a climax. It was naturally thought, when once arrivals began to decline, American buyers would naturally be interested in increased quantities of hessian here. Market circles were keenly following every step taken by American buyers. There was no lack of confidence, as it was felt that fears relating to American shift of interest to substitutes would prove baseless.

It was noted that, in the U.S., at the end of August, burlap stocks were higher by one million yards at 230 million yards as compared with July. Market circles pointed to the keen demand on the stock exchange for shares of jute mills, and derived satisfaction in the thought that mills were, after all, doing better. The feature in the week was continued interest shown by Australian buyers for cornsacks. Deals were subsequently put through.

Early in the week, there was some covering business, and activity in futures also imparted steadiness. On Tuesday, there was business done in cornsacks on Australian account for prompt shipment, and ready B. twills at Rs. 97.60 put on a fractional improvement, with ready hessian 40" 10 oz. being steadier at Rs. 41.20, as against Rs. 40.80 on the previous day. It was noted that the hessian stock position was healthier. For, in spite of transfer of looms from sacking to hessian manufacture and increased production in hessian, stocks of hessian at the end of August had declined by 900 tons to 19,000 tons. On Wednesday, hessian 40" 10 oz. improved further to Rs. 41.40, following covering business. B. twills were steady although unchanged at Rs. 97.60. Deals were put through with the U.S. and the Continent for small quantities. On Thursday, however, the quotation for B. twills eased to Rs. 97.25 and hessian 40" 10 oz. to Rs. 41.40, following selling pressure in futures. On Friday, hessian 40" 10 oz. eased further to Rs. 41.30 and B. twills to Rs. 96.75. Towards the week-end, they recovered to Rs. 41.40 and Rs. 96.80, respectively on scattered support. On Monday, prices fell in view of lack of interest. Thus B. twills were quoted at Rs. 96.15, but hessian 40" 10 oz. was slightly better at Rs. 41.50.

Raw jute prices eased by 50 nP. Sellers were anxious for business, but mills were less keen than last week in entering into business. Arrivals showed some improvement, suggesting recession of floods. The quality of arrivals was good. During the week, there were reports from Pakistan of growers' dissatisfaction at the falling prices. The crop in Pakistan, as in India, it was expected, would prove a bumper one, and estimates of the Pakistan crop placed the figure at 7½ million bales, which would leave a large margin after meeting internal and export needs. It was no surprise, therefore, that prices in the interior were falling. The latest quotations here for the different varieties of the current season's jute, October-November delivery, are:

	Middles	*Bottoms*
	Rs.	Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50
Indian:

Bimli f.a.q.		Rs. 21.50

HIDES WELL SUPPORTED

(From Our Own Correspondent)

KANPUR, 22*nd September*

During the week under review, demand for upper grade cow and buff was quite strong. The Madras dealers and the country tanners were active. The main purchasers were the local tanners. New arrivals of goods were not as considerable as those in the previous week.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 260 and 3rd grade Rs. 200 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 22*nd September*

Quietly steady conditions were witnessed in the foodgrains market during the week. Prices in some sections declined and the fall was more marked in rice. Stockists were reported to have been unnerved following the various measures taken by the Union Government to bring down prices, and they were anxious to sell their stocks. A large quantity of wheat had been seized in the Punjab, while here in west U.P., gram and peas had been freezed which would be sold at the average price prevailing in the last three months.

Heavy imports of foodgrains, including wheat, rice, maize and *jowar*, will begin next month. The foodgrains will be supplied by the United States and Burma. Besides, Pakistan is understood to have made an offer of a substantial quantity of rice, while Canada and Australia have offered wheat. The Government of India's latest policy is to tighten the zonal system of food movement to ensure that there is no hoarding of stocks or unauthorised movement from one zone to another and, on the basis of reports from State Governments, the Centre will make additional allocations of foodgrains to the scarcity areas. Over 600,000 maunds of wheat have been seized in the Punjab and procurement operations have been intensified in Andhra for rice and paddy.

After recording a fall in the earlier part of the session, wheat prices recorded improvement towards the week-end, due to poor arrivals. Wheat *dara* quality was quoted at Rs. 22 and farm quality at Rs. 23.25 per maund.

Rice prices recorded a sharp fall of about Rs. 3 to Rs. 4 per maund and superior quality prices were reported to have gone further, thanks to good supply position and good paddy crop, the harvesting of which had begun in some areas. Prevailing prices of rice were:—*Basmati sela* Rs. 36, *mainpuri* Rs. 29, *coarse* quality Rs. 24 per maund.

Gram stocks to the extent of over 12,000 maunds were seized here during the week and, as yet, no sales of these stocks had been ordered by the Government, the supplies of gram in the market had become restricted and prices improved fractionally. Barley and *bejhar* also recorded a hardening trend in line with gram and wheat prices. Increased arrivals of new crop into the market, despite good consumer demand, accounted for a fall of about Re. 1 per maund in the prices of maize during the week. Maize was reaching here by road from Mainpuri side and eight wagon-loads of maize were due to arrive shortly from the producing areas of the South. *Jowar* and *guwar* prices were depressed in the absence of adequate demand. The week-end prices on Monday (in rupees per maund) were:—Gram 16.37 to 16.75; barley 15.50; *bejhar* 15; maize 15.25; *jowar* 13 to 14; *guwar* white 14.50.

Following the seizure of about 30,000 maunds of peas here by the Government, peas stock position deteriorated and, due to good outside demand, prices improved fractionally. *Arhar* continued steady in sympathy, while other pulses were mostly unchanged. The quotations (in rupees per maund) were: Peas *dara* 14.37; farm quality 15; *khatti* 13.75; peas *dal* 16.25; *arhar* 18.37; *arhar dal* 23.19; *arhar khatti* 17.87; *urd* 18 to 18.50; *moong* 23; *massoor* 16.75.

Owing to clear weather for about a week, preparation of land for *rabi* sowings is in full swing. As most of the land under maize and *jowar* crop has been cleared, an increased acreage in *rabi* sowings is expected.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 19th September 1958

* National income at factor cost—the aggregate of all incomes earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, June 1958.
† Preliminary estimates (at 1948-49 prices) are based on the 25th issue of the annual paper on national income issued by the Central Statistical Organisation.
†† Estimates based on budget-speech of Pakistan Finance Minister.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
M—Managed by the Board of Directors. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
N—New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
F—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.
‡—The dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share.

WORLD SUGAR TALKS

WILL BRAZIL AND PERU JOIN NEW AGREEMENT

(From Our Own Correspondent)

LONDON, *23rd September*

LONDON LETTER

NOW in session at Geneva is the International Sugar Conference convened under the auspices of the United Nations. The conference commenced yesterday and is expected to last for five to six weeks. It is being attended by the representatives of all the major sugar producing and consuming countries, the G.A.T.T., the Food and Agriculture Organisation, and the International Sugar Council. The major item on the agenda before the conference is to prepare the ground for a new world sugar agreement in place of the present one which is due to expire at the end of December next.

The existing Agreement, it will be recalled, came into effect on 1st January 1954. The Agreement provides for the fixation of initial export quotas of member-countries each year, based on estimated free market requirements according to price movements. The free market accounts for less than half of the total world sugar exports, the bulk of which is being covered under arrangements by individual countries.

The working of the Agreement in the past five years has not been fully successful in stabilising conditions in the world sugar economy. This is due to the fact that the Agreement does not include two large sugar exporting countries, Brazil and Peru, which together accounted for over 80,000 tons of sugar supplied to the free market during 1957. This quantity and the one million tons exported by other countries outside the Agreement resulted in a total supply of more than 1.8 million tons, which represented as much as 29 per cent. of the aggregate free market supplies of 6.2 million tons. Viewed thus, the main interest at the Geneva conference is naturally whether efforts will be made to persuade Brazil and Peru to join the new agreement. If these measures succeed, a number of non-member importing countries may be expected to view the agreement more favourably.

Meanwhile, conditions in the international sugar market have undergone severe changes since the present Sugar Agreement came into force. Heavy oversupply and depressed prices were the outstanding features of the free sugar market when 22 countries, among them Canada and Japan as two large importers, joined in efforts to stabilise sugar prices. The original aim of the Agreement was to maintain prices on a level of 3.25 to 4.35 cents per lb. This was to be achieved by estimating requirements and then fixing each year initial export quotas that would be in line with estimated requirements. These export quotas would undergo further corrections according to price movements on the markets.

The aforesaid stabilisation mechanism proved successful for a period of about two years, until November 1956: it maintained prices in the neighbourhood of the minimum target level of 3.25 cents. During that period, world stocks fell from 13.9 million tons to 12 million tons, and "excessive" stocks were practically eliminated. World consumption increased, at the same time, from 36 million tons to 41 million tons. Following the depression, prices began to rise rapidly from

MEMORABLE COMMONWEALTH ECONOMIC CONFERENCE

WHEN about a year and three months ago, Mr. Diefenbaker, the Canadian Prime Minister, proposed that a trade and economic conference of the Commonwealth be held at Montreal as early as possible, we were rather sceptical of the value of his suggestion. We had then three good reasons for holding that view. In the first place, the previous Commonwealth conferences had produced no tangible results, excepting some pious resolutions and pleasant platitudes on the value of the Commonwealth of nations. Secondly, Britain was passing through difficult times; the pound sterling was showing signs of weakness; and there was, therefore, little possibility of this keystone of the Commonwealth arch being in a position to provide any sizable assistance to the economically poorer members of the Commonwealth. And, thirdly, Mr. Diefenbaker, who had just then come to power in Canada, was pictured in a large section of the world Press as one nursing anti-American feelings and that he was seeking closer economic alliance with the Commonwealth presumably to counteract the influence of American capital. The impression that one gained was that he might try to convert the Commonwealth into a sort of anti-American trade club. We are now happy to find that these misgivings have been belied. The Montreal Conference has turned out to be the most memorable and momentous of all the Commonwealth conferences so far held. It has imparted a new economic life to the Commonwealth. The richer members of this unique voluntary union of the free peoples of the world have shown great statesmanship and made the Commonwealth bond meaningful to the poorer members of the union.

Mr. Diefenbaker and his Cabinet colleagues have acted in an exemplary manner. He has proved himself to be a liberal, with progressive views, and not a conservative diehard that some predicted he would be. The present Canadian Government, under the leadership of Mr. Diefenbaker, has not only maintained the policy of helping the underdeveloped countries followed by its predecessor but also actually made it more substantial. At the Commonwealth Trade and Economic Conference, which concluded on 26th September after lasting for about two weeks, Canada was wholeheartedly in favour of the developed countries rendering more assistance to underdeveloped countries. Mr. Diefenbaker strongly supported the idea of a Commonwealth Development Bank and straightaway announced that his country was willing to double its subscription to the World Bank, involving an additional commitment of $325 million, and to raise its quota to the I.M.F. by 50 per cent. Canada would also increase its aid through the Colombo Plan by 50 per cent. This would mean, according to Mr. Donald Fleming, the Canadian Finance Minister, an annual appropriation of $50 million, as against $35 million hitherto. Besides this, the Canadian Government is arranging to make special contributions of foodgrains to India and Pakistan. It has also expressed itself in favour of establishing at an early date a foodgrains bank, an idea mooted at the last meeting of the F.A.O. and voiced again at the Commonwealth Conference by the Pakistan representative. Another proposal made by Canada was that a Colombo Plan-type scheme should be evolved for helping Africa; indeed, it has already decided to set aside $500,000 for technical assistance to this area. Canada has thus made a significant contribution for strengthening the underdeveloped countries' faith in the Commonwealth. The tribute paid to Canada by Mr. Morarji Desai, India's Finance Minister, was, therefore, fully justified. He said that the fact that, though Canada was still a capital importing country, it nevertheless spared a portion of its resources to assist development in the Commonwealth, was a most heartening sign of Commonwealth co-operation.

Britain, too, has made a substantial contribution for making the Commonwealth meaningful to the less developed countries which were once part of its far-flung Empire. There is a sense of disappointment, especially in India and Malaya, that the British Government's spokesmen were lukewarm in their support to the scheme for establishing a Commonwealth Development Bank. Instead of actively pursuing and giving a definite shape to the proposal, they coldshouldered it. Consequently, it did not come up even for a detailed discussion. Why were the British Ministers not enthusiastic about this proposition, though business circles in London appeared to be in favour of it? Mr. Heathcoat Amory, Chancellor of the Exchequer, explained that, at one time, his Government had been attracted by the idea of a Commonwealth Development Bank, but, after a study, it had concluded that this would not necessarily stimulate more savings either within or outside the Commonwealth. He added that the U.K. was looking forward to the discussions at New Delhi next week on the proposals for expanding the capital of the World Bank and the establishment of International Development Agency. Although he did not favour a Commonwealth Bank now, he had an open mind about the future machinery for consultation on developments funds. It would appear from the comments of the *Financial Times*, London, that the main reason for the aforesaid decision of Britain is the belief that the proposal "ran the risk of putting overoptimistic ideas into the minds of potential borrowers, while arousing no enthusiasm among potential lenders." Be that as it may, the Conference generally accepted the line taken by the British Chancellor of the Exchequer and decided to consider the proposal after the meetings of the World Bank and the International Monetary Fund at New Delhi. It could have done nothing else, for there could be no Commonwealth Development Bank without the enthusiastic support of Britain, as a sizable part of its resources—initial resources at least—has to come from it.

Although the British Government has not been in favour of the Commonwealth Bank, it enlivened the Conference by announcing a wide range of measures, which, if effectively implemented, would mean a considerable increase in its economic aid to Commonwealth and Colonial territories. These are: (1) economic assistance loans to Commonwealth countries through credits under the Export Credit Guarantee Act at the same rate of interest at which the British Government is able to raise loans, *plus* a service charge of ¼ per cent.; (2) similar loans to Colonial territories direct from the British Government on the same terms but free of service charge; (3) Development Boards and similar subordinate authorities in the latter territories, as well as in the Commonwealth, to be allowed to raise funds direct from the capital market in London; and (4) the scope of the Commonwealth Development Finance Company, created by the Bank of England with the help of British banks, to be widened by asking the other Commonwealth Governments to participate in its capital. It is under the first measure that the British Government gave India a loan $108 million a few days ago. It has also given a similar loan of a little over $30 million to Pakistan and $10 million to Ceylon. Although the British Government could have always given loans under the E.C.G.D., it was all along opposed to Government-to-Government loans to independent countries. By departing from this outmoded stand, it has thus broken new ground and imparted to the E.C.G.D. a status similar to that of the U.S. Government-owned Export-Import Bank.

From all accounts of the proceedings of the Conference, it appears that Mr. Morarji Desai, India's Finance Minister, was able to make a deep impression on the members attending the Conference about the urgency of the capital needs of backward countries. It is a pleasant surprise to hear that the Conference accepted his thesis that each one of the more developed countries should be prepared to spare some capital for investment in the underdeveloped member-countries *even at a sacrifice* to itself. Until now, this idea was not very much relished in the Western countries. Critics in the West used to say that it was very unrealistic on the part of leaders in the East to suggest that the people in their countries should be asked to forgo a bit of their comforts, in order to make available more capital for investment in the poor countries in the East. Apparently, the Indian Finance Minister's contention, that the striking contrast between Eastern poverty and Western wealth was the most important international problem of our times and that neither the world nor the Commonwealth could continue to march forward if some countries and their people had nothing but poverty and stagnation to look forward to, must have gone home. It is needless to add that, even from a purely materialistic point of view, the idea of saving for international investment should have an appeal to the thinking sections in the West. For, as Mr. Desai rightly pointed out, "when all these investments fructify, they will set up a cumulative process of higher production, higher consumption and higher investment. The vast markets of Asia and Africa can be opened up only through such channelisation of savings from the industrially more advanced countries." Anyone who travels round the richer countries in the West will see for himself that peoples

there can easily save a little more than they are doing now without causing any discomfort to themselves or reducing their living standards. As will be seen from our London Letter this week on page 548, the British people, to give an example, spend more on expenditures of indulgence type than they save and invest.

Another pertinent point urged by Mr. Morarji Desai was that the industrially advanced countries should not impose restrictions on imports of manufactured goods from the less developed countries which were trying to industrialise themselves. A typical instance in point is provided by exports of cotton textiles by India and Pakistan to Britain. If simple manufactures of this nature were to be subjected to import restrictions, whether officially or unofficially, by the richer countries on the ground that their domestic industries making those very goods are adversely affected, how are the poorer countries to pay for the capital goods and essential raw materials which they have to buy from them? This point, it is gratifying to find, was readily appreciated and warmly supported by the British spokesmen and the whole Conference has accepted the thesis that "it is important not to place obstacles in the way of manufactured goods exported by underdeveloped countries." It is to be hoped that the Minister for the British Board of Trade and the Chancellor of the Exchequer will prevail upon the cotton millowners and the trade union leaders in Lancashire to withdraw their demand for a ceiling on imports of Commonwealth cotton goods into the U.K. and to drop the pressure tactics which they have been pursuing for several years now. By doing so, the British Ministers will actively demonstrate that they are implementing the principles agreed to at the Montreal Conference.

Allied to the question of exports from the less developed countries is the problem of stabilisation of commodity prices, a problem in which almost all the members of the Commonwealth are keenly interested. Frequent fluctuations in prices of primary commodities seriously upset the economies of producers and handicap their plans for development. This is a very complicated issue and is not easy of solution, because stability of commodity prices is dependent upon a variety of factors, besides the basic economic law of supply and demand. Pressure from domestic producers for protection, disposal of stockpiles and political rivalries are only some of them and can seriously disrupt the markets. Import restrictions placed by the U.S. to protect its producers of lead and zinc a few days ago is a typical example of the first factor. The unloading of stockpiles by Russia, the undercutting of prices of tin by Russia and of cotton textiles by China are notable instances of the second and third factors. It is said that the failure of the International Tin Agreement is due to dumping of Russian tin. There can, therefore, be no sustained stability in commodity markets, unless the agreements negotiated have the backing of all the principal producing and consuming countries. The attitude taken by the U.K. spokesmen on this subject was commendable, because it was pragmatic and realistic. Sir David Eccles, President of the U.K. Board of Trade, set down the following prerequisites for a successful working of commodity agreements:

(1) A steady and expanding industrial production should be the objective of all the countries, particularly industrial.

(2) A commodity scheme should not be inconsistent with long-term trends, lest it should stimulate substitutes.

(3) The problem must be tackled commodity by commodity.

(4) The great majority of both producers and consumers should be parties to stabilisation schemes.

There can be no two opinions about the pertinence of all the aforesaid conditions. In fact, we would like to add one more, and that is, producers of primary commodities themselves should take care not to follow a fiscal policy which would tend to distort either the supply or the demand for their produce. It cannot be denied that, during the post-war years, some of the primary producing countries have made quite a few serious mistakes in this respect.

Subject to the aforesaid conditions, Britain, it is noteworthy, has agreed to extend its full support to plans for stabilising commodity prices. It would appear from the summary of the official *communique* on the Montreal Conference that other members have broadly accepted the viewpoints of the U.K. delegate and that Britain has undertaken to participate in the preparatory discussions for renewal of the International Wheat Agreement, a decision which must have pleased Australia and Canada. The Conference has called for the setting up of an international study group without delay to examine the latest developments in the international trade situation in lead and zinc and for another group to study the problems of other commodities later on. It has also invited countries outside the Commonwealth to join the Commonwealth countries in their efforts to moderate short-term price fluctuations. This appeal will, it is to be hoped, evoke sympathetic response not only from the free world but also from the Communist countries. The Commonwealth countries have set for themselves an ideal which is conducive to international economic co-operation. And that ideal is an "expanding Commonwealth in an expanding world." It is true that the Commonwealth countries have decided not to give up the system of Commonwealth preferences. But this is not in any way an obstacle to expanding world trade. For the greatest beneficiaries of Commonwealth preferences today are the underdeveloped parts of the Commonwealth and the primary producers in New Zealand and Australia. It was agreed at Montreal that the Commonwealth should not be "inward looking" but "outward looking." It can, therefore, legitimately expect other trade area groupings such as the proposed European Free Trade Area to reciprocate this policy.

The question of convertibility of sterling also figured prominently at the Montreal talks. Canada was very keen that sterling should be made convertible without any further delay. We do not think that other members of the Commonwealth were very much concerned with this problem. This is natural, for almost all of them are short of foreign exchange, including sterling, and have found it necessary to resort to import restrictions in varying degrees. Nor does Britain feel that conditions are propitious for embarking on full convertibility now, though its trade and foreign exchange position has vastly improved during the past twelve months. But it has respected Canada's desire in a large way by freeing imports from the dollar area and by reiterating that convertibility is its ultimate goal. The removal of discrimination against import of goods from the hard currency area is undoubtedly a big step towards convertibility. The U.S. deserves to be thanked for this welcome development. There is no doubt that President Eisenhower's proposals to raise international liquidity, announced a few days before the Montreal Conference, must have induced Britain to make this bold move, which, in turn, has induced Canada to modify its discrimination against some of the British goods. The Montreal Conference has thus done more for the promotion of world trade and the progress of underdeveloped countries than any other previous Commonwealth conferences.

DEBATE ON SECOND PLAN

BY far the most useful purpose served by the Parliamentary debate on the second Five-year Plan was that it provided an opportunity for the Government to define the size of the Plan. Now that the Government has announced its intention to limit the monetary outlay in the Plan to Rs. 4,500 crores, can it be hoped that the earlier estimates of a larger size will be given up and that the confusion created by them will yield place to some definite targets? But even now, there is little room for this hope, because of other serious uncertainties which surround the Plan. The country has received no clear lead as to what would be accomplished within the outlay now agreed upon as the limit of expenditure. Nor is it certain whether the resources now in sight or in prospect will enable the Government to reach the Rs. 4,500-crore target. Following the Washington Conference of India's friends in the West in August last, it was generally assumed that the problem of foreign exchange resources had been solved. But now we are told that the foreign exchange position, in relation to the Plan as a whole, remains as doubtful as ever. From all this, it should be clear that the debate, far from clarifying the uncertainties, has only added to the confusion and created among the people an attitude of resignation to a policy of drift, so inimical to the progress of the Plan.

Much store was set by the Government and its supporters by flexibility in the Plan. It was pointed out that, from the very beginning, the Government had insisted on the Plan being a flexible one and that the adjustments which had been made were all in consonance with the "flexible" character of the Plan. Now flexibility is a great and useful concept, rigidity in planning being rightly condemned as a totalitarian device. It would, however, be wrong to extend the scope of flexibility to cover slip-shod planning, administrative failures and inefficiency and all increases in expenditure beyond the levels contemplated earlier. In short, the principle of flexibility should not be invoked to justify all errors in planning. Within limits, it is vitally necessary. But what has now happened is that, in the name of flexibility, changes are being effected which stem from the fact that all original assumptions have gone wrong and new ideas of what is important and what is not are entertained. The Government has got its forecast of resources, its estimates of non-Plan expenditure, its assessment of foreign exchange position all wrong, despite the fact that, in at least two of these three spheres, namely, in resources and in foreign exchange, there have been many favourable trends. Thus, in resources, its revenue has exceeded its earlier expectations, while, in the sphere of foreign exchange, it has received aid not contemplated earlier. If, in the face of these favourable factors, the Plan needs revision, it is because the earlier estimates of expenditure and investment were not always realistic and the execution of the Plan has lacked the necessary efficiency and direction.

In retrospect, it was certainly wrong to have embarked upon an ambitious plan, without clear conceptions of the availability of resources for implementing it. But some of those who criticise the Government today must plead guilty to the charge that they not merely supported but actually encouraged the authorities to adopt an inflexible attitude towards the Plan. It was not long ago that both the Government and the opposition were unanimous in demanding that the Plan, the entire Plan, should be carried through. Even in May last, when it had been abundantly clear that the position was difficult, the National Development Council did not hesitate to add to the Plan. Against this background, it is no small consolation that the Government has set its face against any increase in the Plan outlay. The Union Minister for Planning, Mr. Gulzarilal Nanda, made the point in the Lok Sabha and reiterated it in the Rajya Sabha that the Government had no intention of exceeding the Rs. 4,500-crore outlay. He stressed that the estimate of the additional outlay of Rs. 150 crores, given in the Planning Commission's report on the reappraisal of the Plan, is a reflection of the "indications of our pressing demands", but the Plan itself stood at Rs. 4,500 crores.

Nevertheless, it is somewhat disconcerting to note that Mr. Nanda suggested, at one stage of the discussion, that, if "more resources were raised, more things could be done." It would be better for the country if the Government gave up this attitude. It is true that large additional resources are not in sight. But, if they became available, it should not tempt the Government to take upon itself new responsibilities. The chief point is that the authorities, from now onwards, should be prepared to utilise any possible increase in revenue in order to give relief in taxation. Nor should such relief be looked upon as some unwelcome necessity. Actually, it is necessary in the interests of larger production and exports, both of which ought to form part of any scheme of planning. It is, perhaps, characteristic of the present composition of Parliament that the need for tax relief got so little emphasis. It was, however, emphasised that a minimum level of imports was necessary for the maintenance of the economy. But it was overlooked that a stage had been reached where relief in taxation was equally necessary for its maintenance.

What makes production and exports so vital for the progress of the Plan is that the foreign exchange gap now seems wider than was originally estimated—or to be more precise, feared. Indeed, a somewhat disturbing revelation in the debate was that the gap would be as wide as Rs. 1,850 to Rs. 1,900 crores. This is a far cry from the original estimate of Rs. 1,100 crores and also considerably higher than the estimate of Rs. 1,700 crores arrived at in May last. One thought that the external aid received since the beginning of the Plan, together with the carry forward from the first Plan, would have gone to reduce the gap and that the real problem was the raising of internal resources. It would now appear that, although the gap in external resources may not be as wide as Rs. 2,000 crores, it cannot be far short of that figure. A partial explanation for the deterioration in the foreign exchange position beyond the level originally envisaged is the fact that the country has had to import foodgrains on a large scale. Imports of foodgrains aggregated 2.4 million tons in 1956-57 and 3.5 million tons in 1957-58—imports in these two years were valued at Rs. 259 crores, of which the amount covered by special arrangements was Rs. 173 crores—and in the current year (1958-59), imports may aggregate 3.5 million tons. The outstanding foreign exchange commitments have, however, been reduced from Rs. 990 crores (as at the end of September 1957) to Rs. 888 crores at the end of March 1958, of which the commitments by the Government amounted to Rs. 547 crores, by the private sector to Rs. 300 crores, and imports of iron and steel for use in both sectors to Rs. 41 crores. It is said that the rate of decline in foreign exchange resources, which was Rs. 18.2 crores per month in the first year of the Plan and increased to Rs. 21.7 crores in the second year, is now running at a monthly rate of only Rs. 15 to Rs. 16 crores (first five months of 1958). But it must not be forgotten that the outstanding balances today are far less than they were a year or two ago. Again, the repayment of credits now arranged, it is estimated, will mean, an annual drain of Rs. 100 crores at the later periods of the second Plan and in the beginning of the third. It is not clear from what Mr. Nanda said whether or not the foreign exchange gap has now been fully covered. If it has been, why does he say that the gap has widened. In reply to the criticism that the country's future was being mortgaged for the present, Mr. Nanda stated that, so long as foreign exchange credits were utilised for strengthening the capital base, they could not be regarded as a burden on the future generations. This is a valid argument, provided the credits are utilised only for strengthening the economy, and not frittered away in other items of expenditure.

Analysing the broad pattern of the revised Plan, Mr. Nanda said that the Rs. 4,500-crore Plan relied on budgetary resources (50 per cent.), on external assistance (23 per cent.) and deficit financing (27 per cent.), as compared with 58.3 per cent., 16.7 per cent. and 25 per cent., respectively, in the original Rs. 4,800-crore Plan. He added: "Our dependence on external assistance and deficit financing is relatively very much larger than it should be. That is the crux of the whole situation." Even at the risk of facing the charge of trying to appear wise after the event, it is certainly arguable that the increased dependence on external assistance and deficit financing could have been avoided, if the country had not frittered away its foreign exchange resources on relatively less essential items and its budgetary resources on non-Plan items.

It is, however, gratifying to note that the Government has now staged a come-back to the two fundamental facts of Indian economic situation—agriculture and economy in expenditure. Mr. Nanda made it clear that agriculture ought to receive high priority. Only, here too, it is a tale of lost opportunities. For, if the Government had concentrated on fertiliser production through the grant of necessary facilities to prospective Indian and foreign manufacturers, the country could have had more fertilisers, more food production and eliminated, to a large extent, the imports of foodgrains. As regards economy in expenditure, the way in which non-Plan expenditure has been allowed to increase is a serious reflection on the Government's ability to control the national purse. It is true that the rise in defence expenditure could not be helped —security of the country comes above everything—but adequate allowance ought to have been made for this contingency in estimating the resources available for the Plan. Defence apart, Mr. Nanda stated that constructions alone would absorb Rs. 1,000 crores during the Plan period and that a 20 per cent. economy in constructional expenditure was possible. Indeed, a review of such expenditure will reveal that even a larger saving is well within the bounds of practical finance. Through prudent administration and resolute will, it should be possible to ensure that not only national expenditure is kept to a minimum but every rupee spent goes farther in physical terms than it does now.

Sir JOSEPH ASPDEN KAY, K.B.E.

UNDER SECRETARY TO GOVT. 6 - OCT 1958 PUBLIC DEPARTMENT

IT is with deep regret that we record the death, on 1st October, of Sir Joseph Aspden Kay, K.B.E., Chairman and Managing Director of Messrs. W. H. Brady & Co., Ltd. as well as of "Commerce" (1935) Ltd. He died in his home at Conway, North Wales. He was 74. By his long association with India, which extended over a period of half a century, this enlightened Britisher had come to symbolise all that is best in Western industrial and commercial traditions—a sense of willingness to face risks, high integrity and patient endeavour. It is these qualities which inspired in his assistants a sense of loyalty and also enabled him to build up the many industrial concerns which are part of the Brady enterprise. Indeed, the spontaneous tributes which were paid to him in February last on the completion of 50 years of his association with India by the numerous employees of the Brady concerns and business associates of Bradys showed in what great respect he was held by those who were connected with him. To this journal, which he helped so much to build up from a stage at which it was a losing concern, his death is a personal loss. Not many perhaps know that, if he had not taken over *Commerce* in 1935 and brought it down to Bombay from Calcutta where it was actually sinking, it would probably be not in existence today. Sir Joseph was one of those men who look upon commerce and industry as a way of life rather than a mere profession. The care which he bestowed on his concerns, even in his old age when he did not possess the physical energy of his earlier years, was something which younger men may have envied.

Sir Joseph was, however, more an institution than a managing director of a prosperous enterprise. The five decades of his intimate contact with the country provided him with an uncanny insight into the working of the Indian economy, in the shaping of which he had himself played a not inconsiderable part. His interests extended far beyond the business enterprises of Bradys—two cotton mills, a dyeing works, a large printing press, one of the largest and most modern of India's sugar mills—for he was thrice Chairman of the Millowners' Association, Bombay, once President of the Bombay Chamber of Commerce and of the East India Cotton Association, and Vice-President of the Indian Central Cotton Committee for three years and of the Bombay Gymkhana for 19 years. Among his services to the country must be mentioned the work he did as the Chairman of the Back Bay Enquiry Committee, the report of which exposed the folly of the Lloyd Reclamation Scheme which constitutes a very dark chapter in Bombay's financial history.

Of his many qualities, the one that most readily comes to mind is, of course, his unflinching courage. He was as undeterred by temporary setbacks in fortunes as he refused to be unduly elated by success. Those who have known him in the Great Depression of the thirties—the only depression which is still spelt with a capital letter—know him as one who faced the challenge of the period by hard work and a feeling that the economic world could not remain continuously dark. It is a measure of the man that he did not retrench any employee at the time, although it was a period when most business and industrial concerns cut their working force to the minimum. Economic prosperity, founded on free enterprise, is built by men precisely of his type, who will be neither intimidated by setbacks nor allow themselves to be easily swept off their feet by the first signs of success, who look beyond their life-time to a future whose fruits they may never live to see. His memory will remain vivid in the enterprises which, having received the benefit of his guidance in the past, are now established on strong financial foundations and possess the services of able men who have been nurtured in the high traditions he has left behind.

SHARES ENCOUNTER BULL LIQUIDATION

PRICES SUFFER MARKED SETBACK

(From Our Own Correspondents)

BOMBAY, 2nd October

THE share market had only three working sessions during the week under review, since it remained closed on 26th and 27th September, as well as today. This brief period witnessed a marked setback in equities. The bulls, who had gone long in previous weeks induced by encouraging reports of foreign aid and incentives for export promotion, were persistently liquidating their holdings. But buying enquiries were at a low ebb, thanks to the absence of any new development. Moreover, the yields on shares had gone down greatly, as a result of the appreciable rise in values, so that investment support was lacking. There were, besides, reports that the recent purchases of the Life Insurance Corporation were of a small order, even those being confined only to bank and coal shares. Textile shares were particularly depressed, following bearish advices from piecegoods markets where the domestic and overseas offtake continued to be poor. Although there was a notable recovery today on account of profit-taking, the closing rates generally were nevertheless lower than those at the end of last week.

Tata Ordinaries opened at Rs. 176.25 *ex-div.* on Monday, as against Rs. 187 *cum-div.* on Thursday last, and came down on selling pressure to Rs. 173 on Tuesday. After recovering to Rs. 176.25 yesterday, they finished lower at Rs. 175.75. The net loss over the week was Rs. 3. The new shares dropped Rs. 3.69 to Rs. 171.25 *ex-div.* Indian Irons fluctuated between Rs. 26.35 and Rs. 27 and finished at Rs. 26.75, a net gain of 25 nP. The Company announced on Tuesday the Directors' decision to issue bonus shares in the proportion of one share for five shares, subject to the consent of the Government. After the announcement, the market in this scrip was a little weak, but improved on Wednesday. There was a heavy turnover.

In the textile section, Centurys came in for heavy selling and slumped by Rs. 12 to Rs. 444.50. Kohinoors climbed down by Rs. 10.50 to Rs. 271 and Svadeshis by Rs. 9 to Rs. 186. Finlays receded by Rs. 7 to Rs. 283. Morarjis declined by a like amount to Rs. 245. Standards decreased by Rs. 6 to Rs. 418. Khataus, New Greats and Simplex shed Rs. 5 each to Rs. 177.50, Rs. 215 and Rs. 179, respectively. Indores eased by Rs. 4.50 to Rs. 103.50. Central Indias by Rs. 3.50 to Rs. 91.50. Shree Niwas by Rs. 3 to Rs. 148.50 and Gokaks by Rs. 2.50 to Rs. 147.50. Bombay Dyeings opened at Rs. 58.80 *ex-div.*, as against Rs. 61.40 *cum-div.*, and declined to Rs. 57.90 before finishing at Rs. 58.90. Tata Mills lost a rupee to Rs. 38. Osmanias eased by 75 nP to Rs. 41.25. India United Ordinaries by 60 nP to Rs. 9.36 and Apollos by 18 nP to Re. 1.48.

Bank shares suffered losses. Jaipurs fell by Re. 1.75 to Rs. 41.50. Bark of Indias slided down by Re. 1.25 to Rs. 137 and 'A' shares by 75 nP to Rs. 139. Central Banks declined by 50 nP to Rs. 58, 'A' shares easing by Re. 1 to Rs. 59.50. United Commercials retreated from Rs. 68 to Rs. 67. Barodas lost 50 nP to Rs. 122.50. Unions were neglected at Rs. 7.40.

Conditions in the electricity section were irregular. Tata Hydros lost 50 nP to 123.50, while Tata Powers forged ahead on special buying support by Rs. 12.50 to Rs. 1,257.50. Ahmedabad Electrics shed 20 nP to Rs. 98.80. Andhra Valleys were dull at Rs. 1,172.50. Bombay Suburbans were done at Rs. 113.50, as against Rs. 113 last week.

Sugar shares were subjected to persistent selling and prices continued their downward trend. Phaltans fell by Rs. 6.50 to Rs. 175.50. Walchandnagars dropped Rs. 3.25 to Rs. 288. Belapurs receded by Rs. 2 to Rs. 313; at one time on Tuesday, they were quoted at Rs. 308. Bhopals moved down from Rs. 26.80 to Rs. 25.55.

Among cement shares, Digvijays retreated by Rs. 3.25 to Rs. 147.75. Associated Cements fell from Rs. 160.50 to Rs. 156.50 before recovering to Rs. 157.75. Orissas eased by 16 nP to Rs. 12.68. Jaipur Udyogs declined from Rs. 14.16 to Rs. 13.72 and Dalmias from Rs. 10.08 to Rs. 9.76.

In the engineering and mining group, Premier Constructions and Alcock Ashdowns came in for nervous liquidation. The former slumped by Rs. 7.50 to Rs. 225.50 and the latter by Rs. 12.50 to Rs. 265. Tata Locomotives, which stood at Rs. 205 *cum-div.* last week, opened at Rs. 193 *ex-div.* and receded to Rs. 190. Voltas fell by Re. 1.50 to Rs. 39.25. Shivrajpurs eased by 50 nP to Rs. 90.50. Larsen and Toubros lost 44 nP to stand at Rs. 15.76. Indian Coppers shed 8 nP to Rs. 4. Mahindras declined from Rs. 17 to Rs. 16.72.

Deals in shipping shares were put through at reduced rates. Great Easterns climbed down by 95 nP to Rs. 25.90. Scindias fell by 72 nP to Rs. 21.20. India Steamships were a shade easy at Rs. 13.88.

Automobile shares encountered continued selling. Premier Automobiles dropped Rs. 2 to Rs. 90. Hindustan Motors declined by 20 nP to Rs. 7.84.

In the miscellaneous section, Bombay Burmahs receded from Rs. 508 to Rs. 499 on Tuesday, but recovered to Rs. 505.50 yesterday. Wimcos slumped by Rs. 8.50 to Rs. 187.50. National Rayons fell by Rs. 4.75 to Rs. 239. Tata Oils decreased by Re. 1.50 to Rs. 39.25. Gwalior Rayons eased from Rs. 15.12 to Rs. 14.72 for want of follow-up support. B.B. Petrols eased by 4 nP to Rs. 2.16. Killick Industries were neglected at Rs. 150.

• • • •

Madras Stock Exchange

MADRAS, 30th September

Steady conditions prevailed on the Madras Stock Exchange during the week under review. Although the volume of business put through was small, values generally tended to move up. Tea came in for moderate attention. The Government of India's decision to reduce the maximum export duty on common teas from 75 nP to 30 nP per lb. was widely welcomed by operators. A section, however, considered the relief to be inadequate, as it felt that, in view of the heavy fall in the value of exports to the U.K. during the first half of 1958 a more liberal attitude on the part of the Government was needed. Rubber shares also received support, while coffee shares were easy. The textiles section ruled fully steady, with many counters registering gains. Bank, sugar and miscellaneous industrials evoked scattered buying enquiries.

MINERVA MILLS LTD.

The Board of Directors of Minerva Mills Limited has decided to issue a first mortgage debenture loan of the face value of Rs. 18 lakhs (1966-70), interest payable half-yearly at 6½ per cent. per annum (taxable). The debentures will be in multiples of Rs. 500. The consent of the Controller of Capital Issues has been obtained for the issue. The Canara Bank Limited has agreed to underwrite the entire issue and the New India Assurance Co., Ltd., has agreed to sub-underwrite a part of it. The proceeds of the loan are intended to be utilised mainly for modernising and renovating the machinery and the balance for working capital.

I.I.S.CO.'S BONUS ISSUE

At a meeting held on 30th September, the Board of Directors of the Indian Iron and Steel Co., Ltd., authorised the Company's management to apply to the Government for consent to an issue of bonus ordinary shares in the proportion of one such share for every five existing ordinary shares held at a date to be determined in due course by the Directors. The bonus shares, the Company says, will rank in all respects *pari passu* with the existing ordinary shares save and except that they will not participate in any distribution in respect of any period ending on or before 31st March 1959.

DUNLOP'S DEBENTURES

The application lists for the Rs. 1-crore 6½ per cent. debenture stock 1968-73, issued by the Dunlop Rubber Co. (India) Ltd., were closed at 9.30 a.m., on Friday 26th September 1958; the lists opened on 23rd September. The Company says that, as the issue has been substantially over-subscribed, it is considering the basis of allotment to be adopted.

The Directors of the India Cements Ltd. have decided to issue 729 650 equity shares of Rs. 5 each at par to all the equity shareholders in the ratio of one new share for every three equity shares of Rs. 5 paid-up. It is stated that the new equity shares are entitled to participate in dividend that may be declared after 31st December 1958. The new shares will, in all other respects, rank *pari passu* with the existing equity shares. The last date for receipt of applications with remittance of the full amount of Rs. 5 is fixed at 30th November 1958.

HOW RICH ARE THE BRITISH?

(From Our Own Correspondent)

LONDON, 20th September

LONDON LETTER

THE wealth of a country is sometimes measured by its total industrial output, sometimes by the manner in which the inhabitants spend their income. The annual Government publication on national income and expenditure for 1958 attempts to combine both these facts in assessing the rate of economic progress of the country. The first thing that stands out is that the nation's total output of goods and services increased in real terms by 1½ per cent. last year, that is, only half the average rate of increase of the past 10 years which since 1948 has put up the true output of the country by no less than 30 per cent. But, in spite of this low increase in real terms of output, in the past year money incomes before tax rose by 6 per cent.; the difference is the measure of inflation.

Expressed in gross terms, the national income now stands at £19.4 thousand million, as against £14 thousand million in 1952, £10.4 thousand million in 1948 and only £5.2 thousand million in 1938. These figures naturally take account of the falling value of money over the whole period. For, in terms of the 1948, national income of £10.4 thousand million, that in 1952 was only £11.6 thousand million and in 1957 £13.5 thousand million.

Other nations will find it an interesting commentary on the British standard of living to note that one quarter of personal expenditure by consumers goes in indulgences and recreational spending. The total is no less than £3,400 million of which drinking and smoking account for more than £1,900 million and motoring for nearly £600 million. On the other hand, books, newspapers and magazines only absorb £200 million. Indeed, in the last 10 years, the British public has multiplied its expenditure on motoring four times (of course, petrol was rationed 10 years ago) and has doubled in real terms its purchases of durable household goods.

If one looks on the more serious side of personal spending, out of every 100 pence earned by the average British family 32d. was spent on food, 13d. on housing, fuel and light and 10d. on clothing. So only just over half the national income was spent on the essentials. A further 12 per cent. had to be spent on travelling about by public transport, mainly to get to work, and other essential services. Of the country's total income, some 30 per cent. is spent by the central Government—a total of £5,700 million, while, if one adds in the expenditure by other public authorities, then the total amount of public expenditure was no less than £7,000 million. How is this public money spent? The following table picks out the most important items:

	£ m.
Payment of debt interest	809
Military defence	1,616
National insurance and pensions assistance	1,143
Housing	408
Education and child care	883
Health services	688

The solicitude of the Government for agriculture is sown in expenditure on subsidies and other forms of assistance of £343 million, while industry and trade had £236 million spent upon it.

The total in the above of what are termed the social services amounts to £3,122 million; thus, in the Welfare State, these social services do not quite equal in value the individual indulgence of the consumer on his various forms of relaxation!

Finally comes investment. The total net investment of the country, including net investment abroad, has been rising steadily. One often has the impression that this country is not investing enough. But this is not true. Whereas in 1938 5 per cent. of the national product was invested, 10 years ago the figure was over 8 per cent. and since then it has risen steadily, and in 1957 amounted to a record of 13 per cent. So that, even if expenditure on the indulgence items and the social services looks high, and indeed the total under both these heads exceeds the total amount of investment, nevertheless it is encouraging to find that, in a year, in which total consumer expenditure rose in real terms by 2 per cent., there was also a further increase of 1 per cent. in the proportion of the country's product invested.—*All Rights Reserved.*

NEWS IN BRIEF

THE packing charge for cement for the current quarter of 1958 (October-December) has been fixed at Rs. 12.06 per ton, as against Rs. 12.71 for the previous quarter.

The value of iron ore exports increased from Rs. 6.98 crores in 1955-56 to Rs. 10.03 crores in 1956-57 and Rs. 11.86 crores in 1957-58. The exports of iron ore in the first quarter of 1958-59 were worth Rs. 2.48 crores.

Exports of manganese ore during 1957-58 were higher at Rs. 28.68 crores, as against Rs. 16.68 crores in 1955-56 and Rs. 25.81 crores in 1956-57. In the first three months of 1958-59, they stood at Rs. 3.47 crores.

The Government of India has decided to supply iron and steel to the manufacturers of engineering goods for fabricating products for exports at the controlled sale prices less an amount equal to the surcharge levied for the purpose of equalisation.

The Government of Kerala has exempted from payment of sales tax certain articles of food like tapioca, vegetables and milk, firewood and coir products, as well as the sale of coffee, tea and other food articles in hotels and restaurants with an annual income of no more than Rs. 15,000.

The Central Government has decided that the unspoilt one-anna revenue stamps, which have become invalid from the 1st inst. following the introduction of decimal series of such stamps, can be returned to post offices within a period of six months for refund of their value.

Nearly 9,000 candidates appeared for the I.A.S., I.P.S. and Central and Services examination which commenced on 18th September at 12 centres, including one in London. The approximate number of vacancies are 55 for I.A.S. (14 reserved for scheduled castes and five for scheduled tribes) and 45 for I.P.S. (9 reserved for scheduled castes and three for scheduled tribes).

The Madhya Pradesh Government is expected to request the Centre to grant permission to the Orient Paper Mills for purchasing in foreign countries on deferred payment system machinery required for a new paper factory to be set up in the Rewa division of the State. The plant, it is said, will have a capacity to produce 100 tons of paper per day and cost Rs. 10 crores, of which nearly 50 per cent. will be spent on machinery.

A scheme for the manufacture of box cameras by a Baroda firm in collaboration with two German firms has been approved by the Government of India. The annual capacity of the proposed factory will be 5,000 box cameras in the beginning which will be raised to 20,000 in due course. Another scheme, sponsored by a Bombay firm, to set up a plant at Thana for producing 36,000 folding cameras is under the consideration of the Government.

A six-man committee has been appointed by the Government of India under the chairmanship of Mr. G. Basu, a former President of the Institute of Chartered Accountants, to review the working of the Institute from the organisational and administrative aspects and also to suggest measures for improvement in order to meet the present and future needs. The Committee is expected to complete its work and submit its recommendations by the end of next month.

The State Trading Corporation is now endeavouring to export goods on c.i.f. basis and import them on f.o.b. basis as far as practicable, with a view to supporting Indian shipping and to engaging chartered ships on economic terms on long-term basis, according to the Minister for Commerce and Industry, Mr. Lal Bahadur Shastri. The S.T.C. has already organised a separate division called the Shipping Development and Marketing Development Division, for chartering ships and arranging freights on contract basis at an economic rate.

A scheme for co-operative farming in a village in the Ootacamund Community Development Block has been sanctioned by the Madras Government. The scheme envisages the formation of a joint farming co-operative society as soon as the reclamation of land covering an area of about 400 acres is completed. The society is expected to undertake cultivation of about 500 acres of land mainly for increasing food production, particularly paddy and potato. An interest-bearing loan of Rs. 61,300 and a subsidy of Rs. 7.500 have been granted for the construction of an office-*cum*-godown and a cattle shed.

The quota for exports of bicycle tyres and tubes by non-manufacturers during the period ending 31st March 1959 has been fixed at 20,000 each. The quota will be administered by the Joint Chief Controller of Imports and Exports, Calcutta. Exports will be licensed on shipping bills accompanied by firm contracts. Celestite and tungsten (wolfram) ores and concentrates will be licensed for export on an *ad hoc* basis. Base copper wires, conductors for electrical puposes, mercury oxide and mercury sulphide will be licensed freely for export to all destinations, except the Portuguese possessions in India.

The Rajasthan *Bharat Sevak Samaj* has submitted to the Planning Commission a Rs. 4-crore scheme designed to increase food production in the State. The scheme lays special emphasis on the need for providing more irrigation facilities by constructing wells and anicuts and repairing old tanks in 25 districts. Out of the total outlay, Rs. 2 crores are to be given by the Government to farmers as *taccavi* loan for constructing wells, the amount being refundable in instalments. A sum of Rs. 1 crore is to be collected by way of voluntary contributions from the people, the balance of Rs. 1 crore being borne by the Central and State Governments.

The provisions of the Central Sales Tax (Second Amendment) Act, 1958, has come into force with effect from the 1st inst. The Act is so designed as to facilitate the levy and collection of Central sales tax. It avoids multiple taxation of inter-State sales of goods involved in a single movement and levies the tax only once at the first point during a single movement from one State to another, defines the State entitled to levy the tax as the State from which the movement of goods commenced, provides for the levy of tax at a uniform concessional rate on all inter-State sales of goods made to Central or State Governments, and enables the manufacturing industries, processing concerns, mining industries and electricity undertakings to purchase prescribed goods in inter-State trade at the concessional rate of tax. Section 15 of the Act has been amended so as to give the States the option to fix the single point for the levy of tax on declared goods. The goods declared previously as of special importance in inter-State trade or commerce were cotton, cotton yarn, coal, hides and skins, iron and steel, jute and oilseeds. This list has been completed by the addition of certain items of textiles, sugar and tobacco on which additional duties of excise were levied in December 1957 in replacement of sales taxes and which had been added to the goods of special importance by the law imposing the additional duties.

From Abroad

Russia is expected to launch shortly the world's first all-plastic steamship. It will weigh one and a half tons and be capable of carrying 15 tons of freight. A distinct advantage claimed for the ship is that it can navigate even in very shallow rivers.

Motor car production in the U.K. is maintained at a high level, the number actually manufactured in the first eight months of the current year being nearly 681,000. The industry is confident of touching a record output of one million in 1958.

A new method of increasing harvest yields by means of radiation has been developed by a team of Swedish scientists. Although the method has been tried in ordinary barley, it is claimed that it can be applied to other kinds of vegetables and corn by means of ionising radiation.

The U.K. Government is to make a grant of $8.75 million to the West Indies over the five-year period 1959-63. The Federal Government of the West Indies will use this to make grants-in-aid to those constituent Governments the revenues of which are insufficient to cover their administrative expenses.

The West Australian Farmers Union Conference has decided to submit a plan to organise a wool stabilisation scheme in co-operation with New Zealand and South Africa. The Union has already endorsed an Australian Wool Board constituted on the lines of the Australian Wheat Board which negotiates overseas sales in a trustee capacity.

A programme for modernising bulk sugar loading methods in British Guinea is being started by the recently formed company, the Demerara Sugar Terminals. The cost is expected to be about $6 million excluding the expenditure on remodelling of coastal ships and extensive alterations to sugar estates. The Sugar Industry Rehabilitation Fund will grant a loan of about $4.8 million.

Western Europe has fully recovered from war's devastation and there is confident expectation of long-term growth. The combined gross national product of the European N.A.T.O. countries which was $85 billion in 1938 rose to $228 billion in 1957. A part of this increase is due to price changes and real growth has been impressive. The helpful economic situation is attributable in no small part to the N.A.T.O.'s protective shield.

PERSONAL

MR. Upendra Acharya has been elected Chairman of the Board of Directors of the Press Trust of India.

Mr. G. D. Birla, well-known industrialist and banker, returned from Geneva on Sunday this week.

Mr. T. N. Kaul, Ambassador of India to Iran, presented his credentials to the Shahinshah of Iran in Teheran on 27th September.

Mr. Ramchundur Goburdhun, Director, External Publicity Division, Ministry of External Affairs, has been appointed Ambassador of India to Morocco.

Mr. G. L. Mehta, former Ambassador to the U.S., has taken over charge as Chairman of the Board of Directors of Hindustan Shipyard (Private) Ltd.

Mr. Rao Raja Ramachandra Ganpat Rajwade, at present Charge d'Affaires A'Pied, Embassy of India, Morocco, has been appointed Indian Ambassador to Sudan.

Mr. K. D. Malaviya, Union Minister for Mines and Oil, left New Delhi for Moscow on 25th September. Besides Russia, he will visit Poland, Switzerland and Rumania.

Mr. M. J. Coldwell, Canadian socialist leader, has been appointed Chairman of a United Nations mission to India to evaluate the community planning needs of the country. He is expected to be in India by the end of November and will stay here until 1st March 1959.

Dr. Don Paarlberg, U.S. Assistant Secretary of Agriculture, has been appointed Personal Adviser on Economic Matters to President Eisenhower. Dr. Paarlberg has been responsible for working of the Agricultural Trade Development and Assistance Act (Public Law 480), under which the U.S. has agreed to sell India for Indian rupees farm commodities worth $664.2 million.

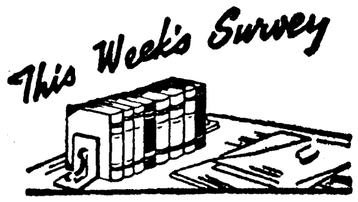
More women have been appointed to key posts in the U.S. Federal Government and in international affairs in the past five years than at any time in the history of the U.S. There are at present 533,800 women in the Federal Government service, representing 24.94 per cent. of the 2,142,800 persons employed; in 1923, the number was only 80,000. About 34,000 women are in the professional and semi-professional fields, as against 6,000 on the eve of World War II.

A restaurant in New York State has solved the problem of obtaining pure water through installation of a device for making brackish water fresh. After the restaurant was opened three years ago, it was found that the local well water was too salty for drinking and cooking and it was necessary to purchase bottled water at a cost of $1 for five gallons. The new device, manufactured by Ionics Inc. of Cambridge, Massachusetts, removes salt by passing an electric current through the water.

A British firm and a Canadian firm signed a contract in Montreal, Canada, on 25th September to build a major section of the proposed global Commonwealth link. A $2.050.000 (about £893,000) contract for a coaxial cable was signed by Submarine Cables Ltd. of London and Canadian Overseas Telecommunication Corporation of Montreal. The contract covers the manufacture of a 400 nautical-mile (about 460 statute miles) section across the Gulf of St. Lawrence (Canada) between Newfoundland and Quebec. The new transatlantic cable is due to be completed by 1961.

The Arab League has invited its member-States, Persian Gulf States and oil companies, experts, trade unions and associations in the Arab States to take part in the First Arab Oil Conference which will commence at Cairo on 1st November next. The First Arab Oil Exhibition will also be organised at the same time. Apart from far-reaching proposals for Arab-owned pipelines and tankers, the Conference will probably consider the question of establishing some unified principles for the granting of new concessions in the Arab world.

U.S. wheat supplies for 1958-59 are estimated at an all-time high of 2,312 million bushels. The estimate, based on the recent surveys by the U.S. Department of Agriculture, is 267 million bushels higher than the 1956-57 record and 445 million bushels above 1957-58. Supplies this year include the 1st July carryover of 881 million bushels, the 1958 crop of 1 421 million bushels (as of August) and the imports of 10 million bushels. Domestic consumption in 1958-59 is expected to be about 610 million bushels, leaving about 1,700 million bushels for exports and 1st July 1959 carryover. If exports are about the same as those in 1957-58—400 million bushels—the 1st July 1959 carryover will aggregate about 1,300 million bushels which will be the largest carryover in the U.S.



I. F. C. IN PARLIAMENT

MANY of those who participated in the debate on the International Finance Corporation (Status, Immunities and Privileges) Bill, 1956, in both the Houses of Parliament last week seem to have displayed a considerable lack of realism, for how else can one explain the irrelevant and unjustified statements made by some members of the Opposition Group criticising the Bill? Not only was the real object underlying the Bill completely overlooked—namely, to confer on this body the status, privileges and immunities customarily granted to a world organisation of a like nature—but the laudable purpose for which the Corporation has been set up—namely, to further the economic development of the less-developed member-countries—was also not recognised. Even the pertinent observations made by Mr. B. Gopala Reddy, Union Minister for Civil Expenditure, in the Lok Sabha and by Mr. B. R. Bhagat, Deputy Minister of Finance, in the Rajya Sabha failed to carry conviction to the Opposition members. That the criticisms hurled against the Bill were highly uncharitable and unnecessary will be evident from the following extracts from the speeches of four members:

Mr. Naushir Bharucha (Independent—Bombay): "It is surprising that the Government should have fallen to the inducement of giving more assistance to the private sector. It would finance both local and foreign private capitalists. It is an unusual and unheard of thing to allow a foreign capitalist body to indulge in such activities. I strongly protest against this. What right has this Government to barter away the money of the taxpayer? Are we not paying too big a price for this kind of thing? Why should private enterprise be assisted at the cost of the taxpayer? What are we going to get in return?"

Mr. Hiren Mukerjee (Communist—W. Bengal): "The Bill should be rejected, as it is an uncalled for measure and nothing is known about the working of this organisation. It is openly stated by the sponsors of the Corporation that its primary interest is to enrich the private sector. This is opposed to the declared policy of the Government that all 'strategic heights' in the economic sphere should be occupied by the public sector. Certain privileges and immunities have been granted to the Corporation and its officials which simply cannot be understood. The immunities are of an extremely dangerous character and they will enable foreigners to penetrate into India and, like wolves in sheep's clothing, bedevil the country's development."

Mr. Surendra Mahanty (Ganatantra Parishad—Orissa): "I strongly object to the Government's entering into international agreement without taking Parliament into confidence. In the interest of private capital, we should not be a party to the lessening of our sovereignty."

Mr. Balasaheb Patil (Peasants and Workers Party—Bombay): "The Articles of Association of the Corporation make it clear that it is a private institution which wants to invest money with the object of making profits. Why should we allow such a corporation to enjoy immunities and privileges in this country?"

These arguments are, to say the least, wide of the mark. At the very outset, it must be emphasised that the I.F.C. is not a private institution but an international one, affiliated to the World Bank which is an organ of the United Nations. It consists of as many as 55 members and India is the fourth largest shareholder, its subscriptions being $4.431 million (Rs. 2.11 crores). The Corporation, as already said, is entrusted with the task of aiding the development of the less developed member-countries by investing in productive private enterprises without any Government guarantee. We do not see anything wrong in India taking advantage of the assistance rendered by the Corporation, when it has already taken loans and grants from a number of countries and international bodies like the World Bank and the I.M.F. India has granted to the Corporation the same immunities and privileges which 54 other countries have granted and these, in the main, are:

The I.F.C. is invested with juridical personality and the capacity to contract, to acquire property and to institute legal proceedings. There is no immunity from being sued, though certain necessary restrictions are stipulated. There is no immunity from judicial proceedings to which the Corporation's assets would be duly subject. The inviolability of its archives is recognised. Certain privileges in connection with the official communications of the Corporation are also granted. Its property and assets are to be free from restrictions, regulations, controls and moratoria of any nature, but, as stated already, they can be attached in satisfaction of a judgment if it is against the Corporation. The officers and employees of the Corporation are conferred immunity from legal process with respect to their official acts only. Immunity from immigration restrictions, alien registration requirements, national service obligation, etc., is given to the same extent as is accorded to officers, etc., of comparable rank of other members. They are also granted similar freedom to travel within the country. The Corporation, its assets, income and its operations and transactions authorised under the I.F.C. Charter will be immune from all taxation and customs duties. It will also be immune from liability for the collection or payment of any tax or duty. Similarly, all member-countries have agreed that the salaries and emoluments paid by the Corporation to its directors, alternates and officials or employees, who are not local citizens, will be exempted from taxation. This obviates the possibilities of any anomalies arising from differing rates of tax in different countries or in certain countries subjecting an international body to a tax which would thereby have to be borne by all member-countries.

Certainly, there is, as Mr. Gopala Reddy pointed out, nothing abnormal and unusual in these privileges and immunities which are identical with those which India has already given to the World Bank and the International Monetary Fund. Similar privileges and immunities have also been made available by India to the United Nations and its specialised agencies such as the W.H.O., the F.A.O. and the U.N.E.S.C.O. What is more, the facilities are given only to the Corporation and not to the enterprises financed by it. Further, although the objective of the I.F.C. is to deal directly with private enterprises, there are, according to Mr. Bhagat, adequate checks for the Government to ensure that I.F.C. loans can be granted to companies in India only in accordance with the official industrial and economic policy from time to time as no loan can be given to any company without the Government's approval.

It may not be inappropriate if a brief reference is made here to the activities of the I.F.C. The Corporation was set up in July 1956, with a capital of $93 million, but it was only about a year ago that its investment operations commenced, because, in the beginning, the Corporation was preoccupied with organisational problems incidental to a newly established institution. The Corporation has so far sanctioned ten investments aggregating about $10 million. No Indian concern has received a loan from the I.F.C., but it is understood that it is considering applications made by a few firms. Now that the Bill conferring the privileges and immunities to the Corporation has been passed, the way has been paved, as Mr. Bhagat stated, for facilitating the I.F.C.'s operations in India.

JAPAN'S TEXTILE INDUSTRY

The export trade in Indian cotton textiles, which has already suffered a distinct setback, is expected to meet keener competition from the textile industry of Japan. A recent report from Tokyo avers that the Japanese Ministry of International Trade and Industry has formulated a scheme for boosting exports of textiles to the underdeveloped countries. The details of the scheme are not known, but it is gathered that it envisages sales of surplus textile stocks to these countries against payment in local currencies. The implementation of the scheme will, there is no doubt, result in greater demand for Japanese textiles from the underdeveloped countries in the Asian and African countries than for goods from other countries. Almost every country in Asia and Africa is faced with the problem of foreign exchange shortage, a large part of whatever exchange that is available having been earmarked for imports of plant and machinery and other goods required for carrying out their development plans. The heavy fall in prices of tin during the last fortnight will seriously affect the capacity of tin producers in this region to buy textiles. To them, in particular, the proposed offer of Japan will be a real boon.

The proposal of Japan has been prompted by the need to overcome the persistently difficult conditions confronting its textile industry for sometime now. It will be recalled that, following apprehensions of a possible recession in the textile trade and with a view to overcoming the same, the Japan Cotton Spinners' Association decided, in March last, to curtail output of yarn to about 182,000 bales per month in the quarter April-June 1958. The Association requested the Government to issue an official order recommending 30 per cent. sealing of the then existing nine million spindles. This was done and the actual production of yarn during the quarter was lower at 543,000 bales, representing a decline of 25,000 bales (or 4.4 per cent.) and 181,000 bales (or 25.0 per cent.) as compared with the previous quarter (January-March 1958) and the corresponding quarter of 1957 (April-June 1957), respectively. Following the fall in yarn output, the production of cloth also dropped sharply, the quantity actually produced in the quarter under review being not more than 789 million square yards, as against 817 million square yards in January-March and 961 million square yards in April-June 1957; the percentage fall is 3.3 and 17.9, respectively. The cutback in production was extended during the subsequent quarter also, that is, July-September.

Despite the decline in output, the position of the Japanese cotton textile industry continues to be disquieting. The stockpiles of cotton yarn at the end of July 1958, for instance, aggregated as much as 491,000 bales, as against stocks of 400,000 bales normally carried by mills. Even the slight improvement in exports during the past two months has not, it is said, helped. The textile industry continues to be facing difficulties, with more factories closing down and more workers being laid off. The cotton and rayon textile industries have been particularly hard hit, though the synthetic fibres sector is said to be enjoying a steadily expanding market. The Kanegafuchi Spinning Company, one of Japan's biggest textile concerns, recently announced a drastic curtailment and reorganisation of its activities, including closure of three major mills, laying-off of older workers and all-round wage cuts. These steps were necessitated by a loss of £931,000 (over Rs. 1.24 crore) during the six months ended April 1958 and a continuation of the same trend thereafter.

It is in view of the aforesaid developments and with a view preventing a possible crisis in the textile industry that the Japanese Ministry of International Trade and Industry has formulated the new scheme for promoting exports as outlined at the outset. It has also notified continuance of the 30 per cent. operational retrenchment during the current quarter (October-December) also. Consequently, the monthly production of yarn will be reduced to about 185,000-186,000 bales, as against the demand of about 195,000-196,000 bales. Although this measure is expected to cut back the stockpile to 430,000-440,000 bales, the operational reduction, it is pointed out, will probably have to be extended into next year, because of unfavourable export circumstances.

Meanwhile, the Government of Japan has announced its decision to spend 700 million yen (Rs. 94 lakhs) during the current financial year as part of a plan to help the recovery of the textile industry. The plan consists of five measures. They are: (1) purchase of 70,000 looms in the two financial years ending 31st March 1960; (2) prohibition of the installation of new looms for all kinds of synthetic fibres, including nylon; (3) a Government recommendation for weavers to set up a good system for purchasing yarn; (4) a suggestion that all cotton spinners, rayon yarn producers, dealers and weavers should form an organisation to help stabilise textile prices; and (5) aid for various organisations established recently to buy up unwanted textiles and stabilise prices.

PROVIDENT FUNDS ACT

An interesting case involving the scope of the Employees' Provident Funds Act was decided by Mr. Justice P. V. Balakrishna Aiyar of the Madras High Court, who held that the Act was not applicable to the petitioner Company, Messrs. V. Perumal Chetty and Sons, pencil manufacturers. The petitioner Company had appealed against the decision of the Provident Fund Commissioner who had declared that the Company came within the purview of the Act. The main issue was whether the Act applied to the Company which is engaged in the production of pencils and employs more than 100 workers; attached to the factory is a foundry and workshop where certain spare parts required for the use of machinery are fabricated, employing 23 persons.

In deciding the point at issue, His Lordship had to examine the scope of Section 1(3) and also the Schedule to the Act. Briefly, Section 1(3) of the Act lays down that the Act subject to the provisions of Section 16 which empowers the Government to exempt establishments from the application of the Act, extends to "every establishment which is a factory engaged in any industry specified in Schedule 1" and in which 50 or more persons are employed and to any other establishment, employing 50 or more persons, to which the Central Government may apply the Act. The industries included in Schedule 1 are, among others, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel and paper; it does not include the pencil industry. The Government Pleader, who appeared for the Provident Fund Commissioner, argued, in effect, that, although the pencil industry, as such, was not included in the Schedule, one of the operations carried on in the factory of the petitioner was the production of engineering products which constituted an industry included in the Schedule. Discussing this issue, His Lordship observed that he found it difficult to accept the view of the Government Pleader that, if any part of a factory was engaged in making an "engineering product," within the meaning of Schedule 1, then the factory must be considered to be one engaged in making an engineering product. The error in this view was the result of ignoring the difference between what was primary and what was incidental. If a factory, with a view to carrying on its primary activity, was incidentally engaged in something else, it would not alter its primary character. It was true that the Act did not say that a factory must be wholly engaged in a specified industry. But this did not mean that the construction put upon the section by the Government Pleader was correct.

Alluding to the argument that the Act was a benevolent enactment and that, therefore, they must try to extend its scope as far as possible, His Lordship observed: "It seems to me that it is for the Legislature to say how far it will go. A Court can only take the words as they are written in the Statute." In the present case, if a jury were taken round the factory and, if in the end, they were asked what the factory was engaged in, the only answer they would give was that the factory was engaged in making pencils. His Lordship had no doubt whatever that the word "engaged" in Section 1(3) referred to the primary activity of the factory. In his view, the factory run by the petitioner was not engaged in any industry specified in Schedule 1 of the Act, and so the Employees' Provident Funds Act did not apply to it.

HOUSING POLICY

If it took almost a year for the Union Government to finalise its views and arrive at decisions on the recommendations for expediting implementation of the housing programme envisaged in the second Plan, one can well imagine how much more time it will take to put these decisions into practice. It is surprising that important decisions having a direct and intimate bearing on the implementation of housing programmes included in the Plan have been postponed till half the Plan period is over. The policy-decisions now taken do not seem to indicate the possibility of speedy implementation of the programme as many measures still remain to be taken before the programme could be implemented.

The decisions are, by and large, realistic in that they reflect a welcome awareness of the difficulties arising mainly out of the shortage of resources, in the way of implementing the schemes. The Government has done well, for instance, to decide to postpone examination of the question of the integration of the urban housing schemes till the time of the formulation of housing programme for the third Five-year Plan. It has also been well advised not to favour compulsion to persuade employers to build houses for their workers.

The Government agrees with the recommendation of the Bangalore Conference that the State Governments should re-examine the present statutes to make the land acquisition process more speedy, that suitable administrative and technical machinery should be set up for this purpose and that, for long-range planning, land in important cities should be acquired. The Government has also decided to consider whether any enabling legislation is necessary to establish housing corporations or boards in each State not only for financing housing programmes but also for construction and management of housing estates for State Governments. The necessity of opening separate housing departments in States, with adequate technical (including town planning) and other personnel for co-ordination and implementation of various schemes, has also been emphasised.

As regards the recommendations made by the Conference on the various schemes of the Ministry of Works, Housing and Supply, the Government has decided that, in order to enable the State Governments to acquire and develop land for constructing houses themselves or for sale to employers or co-operatives of industrial workers on a no-profit-no-loss basis under the Subsidised Industrial Housing Scheme, loans at reasonable rates of interest repayable in 5-7 years, may be granted. The State Governments have been asked to consider without delay the passing of enabling legislation for purchase of land at reasonable prices for this scheme.

The Government has also accepted the view of the Conference that, in cases where the rent-paying capacity of industrial workers is so low that they cannot pay even the subsidised rents, the State Governments may consider the desirability of providing developed plots, provided land is available at reasonable price. It has endorsed the view that, in order to prevent employers from exploiting to their advantage the Government's anxiety for giving more housing for industrial workers, the State Governments should not take the initiative in building houses on behalf of employers. Employers themselves, according to it, should be persuaded to put up houses for their workers. In order to encourage them to do so, it has accepted the suggestion that the quantum of loan admissible to employers should be raised from 37.5 per cent. to 50 per cent. of the approved cost and that the modes of disbursement of loans and subsidies must be liberalised. The employers will be given the option to repay the loan either in 15 or 25 years.

Projects sent up for approval by employers may be technically scrutinised, processed and sanctioned by State Governments which will, however, have to furnish full details of these to the Ministry of Works, Housing and Supply for determining whether the projects conform to the provisions of the scheme. The Government also found no objection in permitting employers to give, at their option, guarantees from Scheduled banks as provisional security for the repayment of loans in cases where there is genuine difficulty in executing the mortgage deed immediately, subject, of course, to the condition that the guarantees are replaced by appropriate mortgage deeds with the least possible delay. It has also agreed that the Subsidised Industrial Housing Scheme should not be extended to Government undertakings not liable to pay income-tax.

In order to encourage workers' co-operatives to build houses, the Union Government has accepted the suggestion that a special unit should be set up in the Housing Board or Housing Department of each State to assist in the formation and registration of such societies and sanction grants to them. It has also been decided to raise the quantum of loan admissible to societies from 50 per cent. to 65 per cent. of the approved cost on the assumption that State Governments would continue to guarantee repayment. The mode of disbursement, it is felt, should also be liberalised.

CO-OPERATIVE MOVEMENT

The Co-operative Movement in India is slowly, but steadily, gaining momentum. This is revealed by the *Statistical Statements relating to the Co-operative Movement in India for the year ended 30th June 1957*, just published by the Reserve Bank of India. During the year under review, the number of co-operative societies of all types functioning in the country rose from 240,000 to 245,000, representing an increase of 1.8 per cent. over the year. It is also gratifying to note that their aggregate working capital went up from Rs. 469 crores to Rs. 568 crores—an increase of 21 per cent. What is more, the membership of primary societies recorded an increase of about 10 per cent. from 17,600,000 to 19,400,000. This is by no means a small achievement, in view of the fact that nearly 300,000 policyholders in the erstwhile co-operative life insurance societies went out of the sphere of co-operation consequent on the integration of the societies with the Life Insurance Corporation. As in previous years, much of the increase was in the membership of the primary agricultural credit societies, the number of new members being 1,326,000. Assuming that an average family comprises five members, it is estimated that, by the end of 1956-57, roughly 96,900,000 or nearly 25 per cent. of the population were served by co-operatives, as against 88,100,000 or 22.8 per cent. of the population at the commencement of the year. The loans and advances made by primary societies during the year under review increased by 23 per cent. to Rs. 143.2 crores. Bombay alone accounted for Rs. 63.20 crores or 36.5 per cent. of the aggregate advances.

The number of State Co-operative Banks stood at 23, as against 24 a year ago. Their membership also declined from 36,394 to 33,440, but their working capital rose by a little over 25 per cent. to Rs. 79.54 crores. Their advances to the member banks and societies made an impressive rise from Rs. 58.10 crores in 1955-56 to Rs. 113.77 crores in 1956-57.

The number of central co-operative banks and banking unions continued to fall during the year under review. The number of banks fell from 478 to 451, primarily owing to the merger of small banks with adjacent larger banks. In spite of this decline, their membership rose from 300,000 to 311,000 and their working capital from Rs. 92.67 crores to Rs. 110.26 crores during the year. There was, however, a marked increase in the overdues which were placed at Rs. 9.34 crores at the end of 1956-57, as against Rs. 7.88 crores at the beginning of the year.

It is well known that agricultural credit societies constitute the most important sector of the Co-operative Movement in the country. At the end of 1956-57, there were 161,510 such societies, with a membership of 9,100,000 and a working capital of Rs. 98.30 crores. Borrowings from state or central banks, which stood at Rs. 55.90 crores on 30th June 1957, formed the main component of the working capital. Loans advanced by them during the year amounted to Rs. 67.33 crores, while the year-end outstandings of loans stood at Rs. 76.82 crores. Overdues constituted about 22 per cent. of the outstandings on 30th June 1957, as against 25 per cent. at the end of 1955-56. The non-agricultural credit societies numbered 10,150 at the end of June 1957, as compared with 10,003 at the commencement of the year. Their membership rose by 166,000 to 3,239,000 during 1956-57. Their working capital recorded a fairly large increase from Rs. 85.74 crores at the beginning of the year to Rs. 100.41 crores at the end of June 1957. The land mortgage banks also intensified their activities during the year under review.

At the end of June 1957, the total contribution of State Governments towards the share capital of co-operative societies of all types amounted to Rs. 7.74 crores. Of this amount Rs. 3.28 crores or 42 per cent. is accounted for by primary agricultural societies (both credit and non-credit), Rs. 2.20 crores by State Co-operative Banks and Rs. 1.26 crores by central co-operative banks. Nearly 85 per cent. of the contribution to primary agricultural societies was made by the States of Bombay (Rs. 1.91 lakh) and the Punjab (Rs. 88 lakhs). Over 72 per cent. of the State contribution to central co-operative banks was accounted for by Bombay, Madhya Pradesh and Bihar. Bombay is the only State which had contributed to the share capital of many types of co-operative societies and in most cases the contributions have been larger than those in any other State. Consequently, about 45 per cent. of the total contribution by all the State Governments is accounted for by this single State.

The number and membership of State non-credit societies declined from 82 and 22,894 at the end of June 1956 to 56 and 15,644, respectively at the close of 1956-57. Correspondingly, their paid-up share capital also fell from Rs. 1.82 crore to Rs. 1.70 crore. Their turnover remained more or less at the same rate as that of last year at Rs. 14.52 crores. There were 31,905 agricultural non-credit societies of all types, with a membership of 2,758,000 and a working capital of Rs. 44.73 crores. Their turnover in 1956-57 was of the value of Rs. 43.96 crores, as against Rs. 31.16 crores in 1955-56. The number, membership and working capital of the non-agricultural non-credit societies at the end of the year under review stood at 28,522, 3,164,000 and Rs. 60.89 crores, respectively. Their turnover was of the value of Rs. 61.59 crores, as against Rs. 44.73 crores in 1955-56.

There was an all-round improvement in the profits made by co-operative societies, though they were not uniform among the different types of societies. The largest increase was noticed in the case of primary agricultural non-credit societies whose profit rose from Rs. 69 lakhs in 1955-56 to Rs. 165 lakhs in the current year. In view of the growing importance of manufacturing co-operatives, particularly in the textile and sugar industries, the Reserve Bank will perhaps do well to collect, analyse and present in a separate section all the statistical data relating to the working of such co-operatives. A year-to-year scrutiny of their progress is bound to prove both interesting and valuable.

PROGRESS OF SOME PUBLIC ENTERPRISES

STRIKING ADVANCE BY MACHINE TOOL FACTORY

From Our Special Correspondent

NEW DELHI, 30*th September*

DELHI LETTER

THE Ministry of Commerce and Industry, Government of India, has recently submitted to Parliament the annual progress reports for 1957-58 of four public sector enterprises, namely, the Hindustan Cables (Private) Ltd., the Hindustan Machine Tools (Private) Ltd., the Hindustan Insecticides (Private) Ltd., and the Export Risks Insurance Corporation (Private) Ltd. These brief reports are not intended to be the annual reports contemplated in Section 639 of the Companies Act, 1956. This despatch highlights the production performance of these public enterprises and their expansion plans, if any.

The Hindustan Cables (Private) Ltd. at Rupnaraimpur (West Bengal): The authorised capital of the Company is Rs. 3 crores. The subscribed and paid-up capital is Rs. 1.25 crore. The Government of India has advanced initially a debenture loan of Rs. 39 lakhs to the Company. In addition, a loan of Rs. 20 lakhs as part of another debenture loan of Rs. 50 lakhs approved for the Coaxial Cable Project has been granted by the Central Government to the Company during the year 1957-58. The provision for the advance of the balance of the loan, namely, Rs. 30 lakhs, has been provided in the Budget for 1958-59.

The total production during the year 1957-58 was 538 miles of cables, as against a scheduled programme of production for 500-550 miles. Though the total mileage was slightly less than the production of 591 miles during 1956-57, the real output was much more, as most of the cables were of large sizes. When converted to the standard, i.e., equivalent to 100 pr. 10 lbs. cables, the production for 1957-58 was 498 miles (of a money value of Rs. 98 lakhs), as against 427 miles (of a money value of Rs. 95 lakhs) during 1956-57.

Steps have been taken to double the armouring capacity of the factory. The work is very nearly complete. After completion of the projected expansion, it is expected that, by September 1958, it will be possible to manufacture upto about 1,000 miles of cables annually and thereby meet the full demands for telephone cables from the P. & T. Department as well as the requirements of some other departments. This will be about 25 per cent. more than the target capacity of 800 miles per year as envisaged for 1960-61 for this factory in the second Five-year Plan programme. The construction work of factory extension for coaxial cable has also commenced.

Copper wire and antimonial lead constitute about 60 per cent. of the factory's total requirement of raw materials. Whereas antimonial lead is available from indigenous sources only, about 60 per cent. of the Company's copper wire requirement is now met from indigenous sources; and the balance of 40 per cent. is still required to be imported. Other principal raw materials consist of steel tape, bitumen, hessian, timber and cable insulating paper. The steel tape and insulating paper are imported at present. The Company is constantly exploring the possibility of procuring both these materials from indigenous sources. Recently, it has been possible for an indigenous supplier to undertake manufacture of steel tape, though their immediate capacity for production is small as compared with the Company's requirement. The Company's requirement of bitumen, hessian and timber is available in the country.

The Company made a net profit of Rs. 9,93,000 during the year 1956-57 and declared a dividend of 2 per cent. Although the accounts of the Company for the year 1957-58 have not yet been finally closed, it is anticipated that the net profit, after providing for depreciation and payment of interest on the loan to the Government, will be higher than the previous year, 1956-57.

The Hindustan Machine Tools (Private) Ltd. at Bangalore: The authorised capital of the Company is Rs. 12 crores. The issued capital is Rs. 4 crores. The subscribed capital amounts to Rs. 3.9 crores. Besides, the Government of India has given advances to the Company. The amount outstanding on 31st March 1958 was Rs. 235.11 lakhs. Full provision for interest at 4½ per cent. per annum on this advance is being made.

The original production programme of the Company was to reach a production of 131 machines during the year 1957-58 and to reach a production rate of 400 machines per annum by 1960-61 working on single shift. As a result of the introduction of multiple shifts and several other steps taken to increase the efficiency and utilisation of the factory, the actual production during the year 1957-58 was 402 machines. An increase of 300 per cent. over the original target of 131 machines has thus been recorded. In the previous year, the actual production was 135 machines only. The factory has thus already reached the production target of 1960-61, three years ahead of schedule. The following revised production programme is contemplated:—

1958-59—610 machines consisting of 240 lathes, 360 milling machines and 10 radial drills.
1959-60—805 machines consisting of 240 lathes, 405 milling machines and 160 radial drills.

The production of 402 diversified machines in 1957-58 by the Company valued at Rs. 1.55 crore represents about two-thirds in value of the country's total production of machine tools.

Negotiations for licence rights and technical collaboration for the manufacture of radial drills were in progress during the year with several foreign manufacturers. The offer of Messrs. Hermann Kolb of Koeln, West Germany, for the manufacture of 10 types of radial drills of 1½" and 2" sizes in the factory has been accepted. It is expected that, by the end of December 1958, the Indian produced drills will be in the market. These 10 additional machines, together with two types of lathes and six types of milling machines which are already produced, will give further flexibility to the production in relation to the demand. The above production will help save considerable foreign exchange.

For the year 1957-58 the Company's net profit, on a preliminary survey, is expected to be of the order of Rs. 30 lakhs.

The Hindustan Insecticides (Private) Ltd., New Delhi: The authorised capital of the Company is Rs. 1 crore. The subscribed capital is

AMERICAN LETTER

U.S. ECONOMIC SITUATION CONFUSING

SPECTRE OF INFLATION ONLY PSYCHOLOGICAL

From Our Special Correspondent

NEW YORK, 25*th September*

RETAIL sales are, perhaps, one of the surest barometers of business and of the mood of the public. In the first eight months of the year, sales of retail stores throughout the United States were off only 0.9 per cent. from their 1957 peak.

From January through August, consumer expenditures in retail stores were $128,522 million. This compares with a record-breaking $129,703 million in the like 1957 period. In other words, sales were off only $1,181 million. This is quite an achievement in the light of the recessionary trends which prevailed in the early months of the year.

These figures are even more significant if it is taken into consideration that the public spent $3.661 million less for automobiles than they did in the same period last year. Retail sales, therefore, might have been over on the plus side, if auto sales had held up.

One might enquire how it was possible for retail sales to make such a showing in the face of relatively heavy unemployment. The answer is Government spending, unemployment benefits and a general step-up of Local, State and Federal construction projects.

Bankers' Verdict

The investment seminar of the New York State Bankers Association, in its summation of current conditions, declared that the economy was "most confusing." Here are the reasons for it, at least some of them.

Basically, the confusion stems from the recognition that, socially and internationally, the U.S. cannot afford to let "correctionary" forces of a recession or depression ruin the economy. Turning on the spending spigots in all areas, including labour contracts in the private sector of the economy, raises the spectre of inflation.

At present, this spectre is strictly psychological. The price levels have been fairly stable. One exception is auto prices. The 1959 models are higher than last year's cars.

Essentially, the dilemma is one of economic theory against the facts of life. It affects the thinking of business and Government officials. The Treasury argues, with a good deal of justification, for example, that, according to all sound principles, the primarily short-term debt of the Government should be lengthened. In trying to do so, however, the last offering was a failure as were previous ones. Also, the Government was in direct competition with State, Municipal and private, long-term borrowers. This is quite serious at a time when there is a deficiency of savings over projected capital demands from all quarters.

The only other alternative is, of course, bank-financed deficit financing which is inevitable, in view of the prospective Budget deficits. This means inflation. The latter seems inevitable, it seems to me, as long as an ever-increasing proportion of Government money is spent for defence, i.e., non-productive purposes. Aside from these considerations, which are not in the public domain, there is a widespread fear of inflation.

Popular Conception

The popular conception of inflation boils down to rising prices. In such a period, people go even into debt to acquire goods before they get dearer. In times of falling prices, everyone is apt to sit back and wait until he or she can make a purchase at still lower prices. It is a psychological behaviour pattern which cannot be denied.

At the present time, investors are demanding an extra premium for putting their money into bonds. Fears of inflation are to blame. Lenders think the value of the dollar is going to decline in the years ahead. Bankers' conventions are passing pious resolutions that inflation must be fought, must be prevented, must be stopped. This correspondent sees no way of stopping it. The only question is: "What will be the degree?"

Fears of inflation are also expressed in the tightening of money rates by the Federal Reserve system. The so-called "prime rate" which is charged by banks to such borrowers as General Motors and U.S. Steel, is now rising again. The same is true of the Federal Reserve discount rate.

To most non-analytical observers, this spells "good times"—higher wages, speedy recovery from the recession, a higher standard of living. However, inflation fears are well entrenched in high places—it is quite possible, the Government at Washington and its agencies may go too far in anti-inflationary measures by curtailing spending and, thus, impeding recovery. At least, this is a possibility.

The overriding consideration, however, will be the inevitable emphasis on day-to-day survival. The Middle Eastern crisis has been superseded by the new crisis in the Formosa Straits. The strong stand displayed by Washington is based on the assumption that Kremlin is bluffing and will do everything to avoid a major war. Suppose this is an erroneous assumption?

The East-West conflict continues. The build-up has been a long one. Inevitably, it has to be resolved at one time or another. The only question is when and by what means? The use of force is almost irresistible as long as it is available.

In the meantime, India's $350 million industrial aid programme, supported by five nations and the International Bank for Reconstruction and Development, was well received on this side. The hope is that it will keep afloat India's ambitious second Five-year Plan. Of the above amount, the U.S. has pledged $100 million. The World Bank has lent $85 million to improve and expand railways.

Mr. Morarji Desai, Indian Finance Minister, pleased American listeners by saying "it is the firm policy of the Government of India to encourage private industry." India feels, he added, that private capital in an underdeveloped country could make an effective contribution to its economic progress.

Mr. L. K. Jha, Secretary of the Ministry of Industry, said in an interview that India's problems, essentially, arose from the seizure of the Suez Canal by Egypt. It had the effect of increasing freight costs on India's imports. He also pointed to last year's drought and the recession in the U.S. as contributing factors.—*All Rights Reserved.*

U.S. EXPORT-IMPORT BANK

The Export-Import Bank of Washington, principal international lending agency of the U.S., authorised credits aggregating $855.62 million during the year ended on 30th June 1958, including $150 million to India for purchase of U.S. capital equipment required for India's economic development programme. In the Bank's annual report to the Congress, released on 26th September, Mr. Samuel C. Waugh, President, said that 191 new credits were authorised in 30 countries. In addition, the Bank approved 111 allocations and transactions amounting to $45.90 million under credits authorised prior to the period covered by the report. The 302 authorisations put a total of $901.50 million of the Bank's funds to work for specific purposes. The majority of new credits and allocations were to meet needs of both private enterprise and Governments for industrial expansion and economic development. Transactions to finance purchases of equipment, commodities and technical services in the U.S. were extended to five borrowers in Africa, 86 in Asia, 17 in Europe, and 194 in Latin America.

Under new legislation adopted by the Congress, the Bank has begun to use the currencies of 18 other countries for loans. The foreign currencies are obtained as part payment for U.S. agricultural commodities.

MANGO segments preserved in 'open-top' cans taste just as delicious in December as in April ... months after the luscious, ripe fruit is picked. This is an example of how special containers can erase time. Equally effectively they shorten distances; 'open-top' cans today carry Malabar prawns to the Punjab, Nagpur oranges to the South.

Scientific packaging enables efficient distribution of goods, finds new markets for them. And, by helping to consolidate these markets, scientific packaging generates the necessary incentive for still greater production. That is why modern packaging occupies a position of vital importance in India's expanding economy.

The designing and manufacture of functional packages—efficient and attractive—is the business of The Metal Box Company of India Ltd, who in 25 years have become India's largest manufacturers of containers and closures. Metal Box closures and containers today carry consumer goods made by over a thousand manufacturers—goods that once might have glutted, perished or not been produced at all—to millions of consumers who spend Rs 100 crores buying them.

As India's economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

BOMBAY STATE CO-OPERATIVE BANK

MARKED INCREASE IN ACTIVITY

THE Bombay State Co-operative Bank (Managing Director: Mr. G. M. Laud) continues to contribute substantially to the development of the Co-operative Movement in the Bombay region. Set up nearly five decades ago—it was registered in 1911—the Bank has been endeavouring to meet the credit requirements of agriculturists as much as possible by strengthening their co-operative efforts and bringing banking facilities to their door. It has also of late been helping to finance the establishment of co-operative sugar mills. Besides providing working capital to these mills, the Bank has also assumed the responsibility for providing credit in order to enable them to bridge the gap between their capital resources and capital expenditure. If, despite the efforts of this Bank as well as of other similar institutions, the Co-operative Movement has not made adequate progress, they cannot at all be blamed, for the handicap lies in the internal weaknesses of the Movement itself.

The activities of the Bank in the field of agricultural co-operative credit have expanded to a marked extent, especially in the past two years. The total advances of the Bank outstanding at the end of June 1958 amounted to more than Rs. 14.95 crores, as against Rs. 10.52 crores in 1956-57 and Rs. 6.17 crores in 1955-56. This figure, it will be interesting to note here, represented as much as 108.7 per cent. of the Bank's deposit resources. This is the first time in the history of the Bank, if our memory is right, that such a thing has happened. But there are, as we shall presently show, special reasons for this, the most important of which has been the large support given to the sugar co-operatives and other industrial co-operatives. Large advances from the Reserve Bank have enabled the Bank to lend in excess of its deposits. The exact increase in advances made during the year aggregated Rs. 4.43 crores. It would have been more marked but for the transfer of Rs. 1.26 crore of outstanding loans to the district co-operative banks following the closure of 18 branches in districts transferred to these banks.

Advances Given

The bulk of the improvement of Rs. 4.43 crores in advances—Rs. 2.82 crores, to be precise—was accounted for by dues from the central financing agencies under loans countersigned under the Reserve Bank of India Act aggregating Rs. 5.25 crores. Loans and advances to co-operatives for purposes other than seasonal agricultural operations were higher by Rs. 2.74 crores at Rs. 6.97 crores, of which the co-operative sugar factories accounted for Rs. 4.45 crores. Six factories were granted loans aggregating Rs. 3.43 crores as working capital and six were given temporary accommodation to the extent of Rs. 3.70 crores, pending disbursement of loans from the Industrial Finance Corporation. Intermediate-term loans for Rs. 51.94 lakhs were also sanctioned to the factories on Government guarantee for enabling them to complete their erection programmes. In addition, loans to the tune of Rs. 19.70 lakhs were sanctioned to three factories for honouring deferred payment on account of the delay in starting the factories. The credit made available to the industrial co-operatives was also higher. There was, however, a fall of Rs. 91.03 lakhs to Rs. 2.48 crores in the short-term agricultural loans outstanding, as a result of improvement in repayment and transfer of business to the central financing agencies.

The upward trend in the volume of credit made available by the Bank during 1957-58 was rendered possible partly by the increase in deposit resources, due to the sustained drive to attract deposits, including offer of higher interest rates, and largely to the more liberal assistance given by the Reserve Bank and the Government of Bombay. The Bank s total deposits—fixed as well as current, savings and call—outstanding as on 30th June 1958 amounted to over Rs. 13.75 crores, which compare favourably with Rs. 11.48 crores a year before. Borrowings from the Reserve Bank were higher at Rs. 6.65 crores, as against Rs. 3.41 crores and those from the State Government aggregated Rs. 1.25 crore, as against Rs. 48.64 lakhs.

Consequent largely on the rise in deposit resources and enhanced borrowings, the working capital of the Bank registered a notable increase, from Rs. 17.64 crores in 1956-57 to Rs. 24.47 crores in 1957-58. Out of the latter figure, deposits accounted for only 48.8 per cent., the percentage share of other components being: owned funds 7.4; borrowings from banks 34.8; borrowings from the State Government 5.1; and miscellaneous items 3.9. The percentage share of deposits as on 30th June 1957, it will be recalled, was 60.7, while that of borowings from banks was 26.4. The rise in deposits has thus not kept pace, as Mr. R. G. Saraiya, Chairman of the Bank, stated in his speech at the forty-seventh annual general meeting held in Bombay on 27th September last, with the increase in working capital, and the reliance on borrowings, particularly from the Reserve Bank, has been steadily growing.

Higher Interest

The narrowing margin between the cost of acquiring funds and lending rates, according to Mr. Saraiya, shrank further during the year under review. As against an increase of Rs. 9.53 lakhs in the interest received, the Bank had to pay Rs. 10.35 lakhs more by way of interest on borrowed funds, including deposits. Net interest income dropped by Rs. 82,000 to Rs. 28.12 lakhs, on account of higher interest on deposits, lowering of interest on Reserve Bank loans passed on to the central financing agencies and higher investment in Government securities. Roughly, a little over half the income was absorbed by the cost of acquiring funds and a third by establishment charges.

The net profit thus arrived at amounted to Rs. 8.10 lakhs, as against Rs. 6.84 lakhs for the preceding year. Adding to it Rs. 11,915 brought in from the preceding year, the amount available for distribution was Rs. 8.22 lakhs. The Directors transferred Rs. 1.49 lakh to the reserve fund so as to raise it to Rs. 21.75 lakhs, maintained the dividend at 5 per cent. and gave bonus to the employees equal to one-sixth of salary. As a result of the increase in the share capital, the provision for dividend was stepped up from Rs. 3.26 lakhs to Rs. 4.73 lakhs.

Financial Position

The financial position of the Bank as at the end of June 1958 with comparative figures for the three previous years is indicated in the following statement:

(In lakhs of rupees)

	As on 30th June			
	1958	1957	1956	1955
Capital paid-up	1,25.85	71.12	61.46	61.23
Reserves	53.83	59.28	51.33	61.94
Debentures	5.00	5.02	5.07	6.50
Deposits—				
Fixed	6,59.43	4,53.53	5,60.86	4,85.70
Current, savings and call	7,15.84	6,94.09	7,25.11	5,93.68
Deposits total	13,75.27	11,47.62	12,85.97	10,79.38
Borrowings	7,94.39	3,89.73	60.11	63.34
Bills for collection (contra)	9.04	15.19	9.80	10.40
Advances—				
To co-operative societies and central banks	14,77.03	10,18.26	5,65.83	4,63.72
To others	18.06	34.07	51.00	39.64
Advances total	14,95.09	10,52.33	6,16.83	5,03.36
Investments	7,37.56	5,45.14	6,25.44	5,21.24
Cash	1,13.67	99.00	2,45.02	2,50.56
Balance-sheet total	24,47.15	17,63.73	15,39.91	13,35.25
Ratio to deposits of—	%	%	%	%
Advances	108.7	91.6	48.0	46.6
Investments	53.5	47.5	48.6	48.3
Cash	8.2	8.7	19.0	23.3

It will be seen from the above table that the paid-up share capital of the Bank has gone up from Rs. 71.12 lakhs to nearly Rs. 125.85 lakhs. The increase was mainly the result of an additional contribution of Rs. 50 lakhs by the State Government. The contribution of individual shareholders declined moderately, while that of co-operative institutions rose from Rs. 29.57 lakhs to Rs. 34.36 lakhs. During the year, the Bank in turn contributed, on behalf of the Government, Rs. 34.75 lakhs to the share capital of 19 central financing agencies, as against Rs. 19.50 lakhs to 10 such agencies in the previous year, making a total subscription at the close of 1957-58 of Rs. 71.25 lakhs to 25 agencies. Similarly, Rs. 29.07 lakhs were given to 291 agricultural primaries through the central agencies.

The aggregate reserves of the Bank at the close of 1957-58 stood at Rs. 53.83 lakhs, the corresponding figure a year before being Rs. 59.28 lakhs. The decline reflects the bad debts and overdue interest written off during the year, the total amount involved being Rs. 7,50,440.

In pursuance of the policy to establish one central bank in each district, four central financing agencies were registered during 1957-58. Ten branches in the West Khandesh district, seven in Ahmednagar district and one in Nasik district were closed, and the areas served by them were transferred to three district central co-operative banks. The Bank opened four branches to serve better the farmers in Kolaba and Banaskantha districts and two in Greater Bombay. The number of branches at the close of the year was 44, as against 56 a year before.

Still Greater Role

It will be evident from the foregoing review that the Bombay State Co-operative Bank has given a good account of itself in the past year. The role of the Bank in the development of the Co-operative Movement is bound to be still greater in the coming years. Alluding to this point, the Chairman, Mr. Saraiya, said:

"The crop loan system operating in the State since 1950 is being reviewed in the light of the recommendations of the Crop Loan Evaluation Committee and this Bank, in collaboration with the central financing agencies, will willingly shoulder its responsibility as an apex bank of providing credit for strengthening the rural economy. It is also heartening to note that the State Government is pledged to the promotion of an integrated structure of co-operative credit and using co-operation as an instrument of development in many spheres of economic activity. Consequently, this Bank will have bigger and better opportunities to serve the people not only in the field of agricultural credit but also in the field of marketing and processing agricultural produce, and in the field of financing weavers' societies and other industrial co-operatives."

At the same time, Mr. Saraiya warned against the danger of the Bank being squeezed between the cost of administration and income. Here are his own words:

"The cost of administration is likely to go on increasing, owing to heavier responsibilities of detailed supervision and inspection and the rising scale of emoluments. The income, on the other hand is limited to interest on advances and on investments, mostly in Government securities. Interest rates charged cannot be raised without detriment to the farmers. For example, the Reserve Bank loans for agricultural credit are passed on to the central financing agencies at a margin of one-quarter per cent. In regulating the rates of interest, it is often forgotten that a bank has to provide not only for meeting the cost of administration but also for bad debts, delays in recoveries, a fall in the price of its investments, etc. In its pioneering work for forest labourers, for example, this Bank had to incur heavy bad debts. The advances to sugar factories—another pioneering activity of this Bank—in spite of all our precautions, are not without their risks, some of which can be foreseen and some of which cannot be foreseen. Further, I make bold to make the statement that there is no agricultural bank in the world which does not encounter bad debts.

Few would dispute the force of these observations. It would be folly on the part of the Government and the people to look upon the apex and other co-operative banks to provide cheap credit. to work on ever-narrowing margins and to take continuously increasing risks. Mr. Saraiya is quite right when he says that it is absolutely necessary to preserve the financial soundness of co-operative banking institutions, even if that entails a slight increase in the costs of credit and a smaller sphere of activity.

Libya has become a member of the International Monetary Fund and the World Bank with effect from 17th September. The quota of Libya in the Fund is $5 million. Its subscription to the capital stock of the Bank is 50 shares with a total par value of $5 million. The admission of Libya has brought the total number of members of the Fund and Bank to 68 with aggregate quotas in the Fund amounting to $9,193 million and the total subscribed capital of the Bank amounting to $9,510 million.

INTERVIEW WITH A U.S. BANKER

"FLAG DOES NOT FOLLOW INVESTMENT"

SEVERAL bankers from the U.S. have come to India to attend the annual meetings of the World Bank, the International Monetary Fund and the International Finance Corporation due to commence at New Delhi next week. Some of them are availing themselves of the opportunity to visit the important industrial and business centres, in order to get a firsthand impression of the progress made by the country in recent years. The earliest to arrive were: Mr. Howard C. Sheperd, Chairman of the Board of Directors of the First National City Bank of New York, Mr. George S. Moore, Executive Vice-President of the Bank in charge of its Overseas Operations and Mr. Alexander D. Calhoun, Vice-President in charge of the Eastern Branches of the Bank. They were in Bombay last week and, during their stay, Mr. Sheperd gave an exclusive interview to *Commerce*, covering a number of subjects of current interest.

As readers are aware, a much discussed subject in the country now is the prospect of getting foreign capital. Mr. Sheperd was optimistic. He said that more and more business men in the U.S. were taking interest in India. Several of them were visiting the country and making surveys, with the earnest intention of investing. He did not suggest that large sums of capital were waiting to move in overnight, as it were. It was difficult to make the boards of directors of companies to come to a quick decision; it takes time. But every country must remember that God helps those who help themselves. He was personally very much impressed with what India had been doing to raise itself economically. There was no doubt that others, too, were impressed. This was evident from the multi-nation assistance which India was receiving and the latest decision of the U.S., the U.K., W. Germany, Canada, Japan and the World Bank to help India complete its second Plan. But he felt that Government aid was not the answer. It had to be supplemented by a sustained flow of private capital. And private capital would come "only when the other fellow in the country is doing well." By this Mr. Sheperd meant that, unless both indigenous and foreign private investments already in the field were operating profitably and enthusiastically, others would not be tempted to invest. He was of the view that taxation in India was high enough to be a deterrent and required reduction. He pointed out that the same problem existed in the U.S., too. He did so apparently to show that these days Governments all over the world tend to keep the tax rates high. But this was not a right policy. He referred, in this connection, to the problem of heavy depreciation arising from rapid technological progress. Things were moving so fast that a plant installed today might become entirely outmoded in a few years, that is, before the cost was fully recovered. And, in a highly competitive economy, a manufacturer could afford to neglect plant replacement necessary to keep up with the times only at his peril. He revealed that many American manufacturers, who had budgeted for a smaller investment on capital equipment on account of the 1957-58 recession, had changed their minds in recent weeks and proposed to step up their capital expenditure. Accordingly, an important reform that was needed in taxation was to permit larger depreciation allowances.

Proceeding, Mr. Sheperd recalled how the economic growth of the U.S. was greatly helped by the large flow of European capital towards the close of the nineteenth century and the early part of the twentieth century. At this stage, our representative asked whether there was not a difference between India and the U.S., in that, while the U.S. and Europe belonged to the same blood stock, India did not have that advantage and was racially different. Mr. Sheperd promptly stated that racial differences did not constitute a barrier to the flow of private investment. He crisply remarked: "Capital needs employment, just as people needed it." He added that the world was on the move and was becoming one economic family. He debunked the idea that foreign private investment would endanger the independence of the receiving country. He said: "Flag does not follow investment."

There is an impression that the severe import restrictions necessitated by shortage of foreign exchange are responsible, to some extent, for inducing some of the foreign manufacturers adversely affected by these restrictions to establish factories in this country. How far is this true? Mr. Sheperd remarked that import controls worked both days. Several of the new projects proposed in this country would require specialised types of raw materials, stores, etc., besides plant and machinery. In these cases, import restrictions would act as a handicap. They are thus not such a great blessing in disguise as many in India seem to think.

The conversation then turned to the U.S. President's proposal to establish an International Development Association, in order to help the underdeveloped countries to accelerate the pace of their economic development. The question asked of Mr. Sheperd was whether it was necessary to establish another institution when there were already the World Bank and the International Finance Corporation. Mr. Sheperd's reply showed that he was not averse to Mr. Eisenhower's idea. While conceding that availability of capital was more important than agencies for distributing it, he felt that a Development Bank of the type proposed would be definitely useful. Different organisations would mobilise resources in different ways and try to meet the varying needs of the world. There would be healthy competition between them, which, in turn, would lead to an overall rise in the funds raised and disbursed for development. In this connection, he cited the example of what the U.S. Government itself had done for providing capital to other countries. In addition to the Export-Import Bank, the U.S. Government had established the President's Development Fund. While the former was designed mainly to promote U.S. exports, the latter's main objective was to help other countries to go forward economically. Similarly, the proposed International Development Association would be able to help underdeveloped countries in ways which the World Bank was not able to adopt.

Another subject that was discussed was the economic recession in the U.S. Mr. Sheperd said that his country had already made a substantial recovery from the recession. The main cause of worry today in the U.S. was not recession but the possibility of inflation in the near future, owing to the various measures taken to arrest the recession. This led to the question whether the goods produced in the U.S. were competitive and whether the export trade of the U.S. was not in danger of being affected by the high cost of its capital goods. His answers gave the impression that he was not unduly worried about the prospects for U.S. exports. He compared the U.S. economy with one who had both spaghetti and cheese, the spaghetti being the vast internal market and the cheese being the export trade. If the American manufacturers did not get the cheese, they could live on the spaghetti. But that apart, he did not share the view that the U.S. economy was not competitive. The initial cost of American capital equipment might be more, but its ultimate cost was favourable to the buyer, because of its superior quality and higher efficiency. American plant and machinery required less shut-down time for overhauls and their maintenance cost was smaller than others. In this connection, he gave the instance of an Eastern country which, after considerable experience of cotton looms made in the U.S. and the U.K., preferred the American loom as it gave higher productivity and needed less attention.

Two other remarks made by Mr. Sheperd are worth recording here, as they are of great value to this country. He said, in effect, that it was wrong to think that mechanisation and introduction of modern, up-to-date methods of production would lead to unemployment. He quoted an interesting anecdote. His grandfather was making buggy-whips; in those days horse-drawn vehicles were the principal means of transport in the U.S. When automobiles began to make their appearance, his grandfather was naturally very much worried about the effects of this modern vehicle on his fortunes and those of his employees. He strongly decried the automobile. Both of them fared badly, but that was only for a while, because the automobile industry soon turned out to be the creator of greater and more gainful employment. The other notable remark of his was that, in its anxiety to go fast with its plans for development, India should not forget the basic things. It should strike a suitable balance between industry and agriculture and attain self-sufficiency in food. "You have to feed yourselves first," he said.

Asked whether it was common in the U.S. for banks to get together and prevent competition amongst themselves for deposits through a mutual agreement on the rates of interest payable by them, Mr. Sheperd observed that such attempts were unlawful, for they would be regarded as monopolistic practices. The only authority which could regulate interest rates in the U.S. by placing a ceiling on them was the Federal Reserve System. Here is, in our opinion, some food for thought for the banks in India, which have just brought into force an inter-bank agreement fixing maximum rates of interest for all types of deposits.

FREE WORLD PRODUCING MORE COTTON IN CURRENT SEASON

TOTAL OUTPUT ESTIMATED AT 28.5 MILLION BALES

A LITTLE over two months have passed since the current cotton season—that is, 1958-59—commenced. The season is expected to witness a notable rise in the free world output of cotton. The preliminary estimate of the International Cotton Advisory Committee, Washington, places the aggregate output at 28.5 million bales (478 lbs. net weight), which represents an increase of 1.1 million bales or 4 per cent. as compared with the actual production of 27.4 million bales in 1957-58. The anticipated increase is due entirely to the improvement in the per-acre yield of cotton. For the total acreage devoted to this crop is put lower at 58.4 million, as against 59.2 million in the previous season. This acreage, together with that for the Communist countries, namely, 21.1 million (21.0 million 1957-58), brings the aggregate world acreage under cotton to 79.5 million, that for 1957-58 being 80.2 million. The estimate of the output in the Communist countries is, however, not given.

Despite the anticipated increase of 1.1 million bales, the total free world supply of cotton will be lower at 46.9 million bales in the current season than in the previous season when it was 48.0 million bales. This is because of a sharp reduction in the carryover stocks which at the end of July 1958 aggregated 18.4 million bales, as against 20.6 million bales.

Production Statistics

The following table gives the world cotton production statistics for 1958-59 as compared with the three preceding seasons:

Region	1958-59	1957-58	1956-57	1955-56
Acres (million acres)				
United States	12.4	13.6	15.6	16.9
Other free world countries ..	46.0	45.6	45.9	47.1
Total ..	58.4	59.2	61.5	64.0
Communist Countries	21.1	21.0	20.9	20.1
Total world ..	79.5	80.2	82.4	84.1
Production (million bales)				
United States	11.5	10.9	13.0	14.7
Other free world countries ..	17.0	16.5	15.9	16.2
Total ..	28.5	27.4	28.9	30.9
Communist countries	..	12.4	12.3	11.9
Total world ..	..	39.8	41.2	42.8

According to the first crop report in the United States, cotton in cultivation on 1st July is estimated at 12.4 million acres or about 12 per cent. less than a year ago. The national acreage allotment for this year was 17.6 million, but roughly 5.0 million acres were put into the Soil Bank programme. In May, the laws governing cotton acreage reporting were amended to require that the initial report relates to acreage actually planted. Planted acreage this year is estimated at 12.6 million acres, but about 1.4 per cent. of this had been taken out of cultivation by 1st July. If the percentage of acreage in cultivation on 1st July which is harvested equals to the 10-year average, the acreage harvested in 1958 would be 11.9 million, as compared with 13.6 million in 1957.

The cotton crop in the U.S. continues to make good progress in most sections. Hot dry weather over the western half of the Belt is favourable to plant development, and the prospective yields are much higher this season. The estimate of the U.S. Department of Agriculture, released on 8th September, places the average yield per acre at 486 lbs., as against the final yield of 388 lbs. in 1957-58. Excessive rainfall in some parts of the eastern half of the Belt has interfered with normal fruiting and dry weather is needed. On the basis of last season's yields, the crop would have been around 9.7 million bales, but the crop report as of 1st August estimates production at 11.5 million running bales, which is 6 per cent. higher than last season's outturn, despite a 12 per cent. reduction in acreage. Record high yields are in prospect in Texas, Oklahoma and California, and near-record highs in New Mexico and Arizona.

Outside U.S.

Preliminary reports indicate that production outside the United States may be higher this season. Planted acreage in Mexico, for instance, is estimated to have increased by some 200,000 acres or about 9 per cent. as compared with 1957-58, with the main expansion taking place in Matamoros and the West Coast States of Sinaloa and Somora. For the country as a whole, trade sources look for a crop of about 2.3 million bales or about 200,000 bales more than in 1957-58.

The crop in Egypt got off to a good start, but attacks by thrips and red spiders necessitated large-scale resowings. The total area planted is 1,977,000 acres, a rise of 6 per cent. over last year, a marked increase in Menoufi plantings being offset to a large extent by a decrease in the Karnak and Giza 30 varieties.

In Syria, water shortage at planting time has resulted in a significant reduction in acreage in the non-irrigated areas and the total acreage will be less than last year. However, yield prospects have improved under very favourable weather conditions and trade ideas are that the crop can be equal to the last season's record outturn, despite reduction in acreage.

Preliminary reports from Turkey indicate that the area planted to cotton in the Izmir and Adana regions this year has been reduced. There has been some switch to grains in the Izmir area and to rice in Adana. However, crop prospects are said to be generally good. The local industry now consumes 500,000 bales per year, but the current crop is expected to leave a balance for export. Production in 1957-58 was 600,000 bales.

Plantings in Uganda up to the end of May were ahead of a year ago, but this is not necessarily significant. The main planting period is from June through August. Germination is reported to be excellent. All B.P. areas will be planted with the new NC seed, an improved B.P. 52 strain with higher yield and greater resistance to diseases and pests. An advance guaranteed price of 46 East African cents per pound (seed cotton) has been announced or about 11 to 12 cents below the price paid for the 1957-58 crop. The final purchase price will be set before ginning starts later in the year, but this will not be less than the previously announced level of 46 cents.

According to the latest estimates, the area under cotton in Greece is 397,000 acres, as compared with 386,000 acres in 1957-58. Irrigated acreage is 222,000, as against 203,000. Yield prospects are enhanced by ample supplies of fertilisers and insecticides. Till the beginning of July, the weather had been favourable to the development of new crop and, if this continues, production can set a new record.

In India

The target for cotton production in India fixed in the second Five-year Plan is approximately 5.3 million bales, but, so far, production is running behind schedule. It is generally recognised that the future production potential depends primarily on India's ability to improve the yield per acre. The target for distribution of improved seed during 1958-59 is 1.2 million maunds (82.2/7 lbs. each), as against 900,000 maunds last season and the fertiliser target is 52,660 tons, as compared with 24,000 tons actually distributed in 1957-58. Sowing has been completed in the Northern States and germination has been normal. Sowing is in progress in the Southern States, but was delayed in Central India, due to the late arrival of the monsoons. On balance, trade reports expect acreage to be roughly in line with the last season's 20 million acres.

Pakistan's cotton acreage has stabilised at around 3.5 million during the last three seasons, and it seems that this will be the normal acreage expectation over the foreseeable future. However, production prospects in 1958-59 may be affected by shortage of water in the canal area. The Sutlej Valley section, representing about 15 per cent. of Pakistan's total cotton acreage, has been seriously affected.

Drought conditions prevailed over much of North Brazil during planting time and indications are that the crop may be only about half of last season's 675,000 bales with the Sertao crop showing the greatest decline.

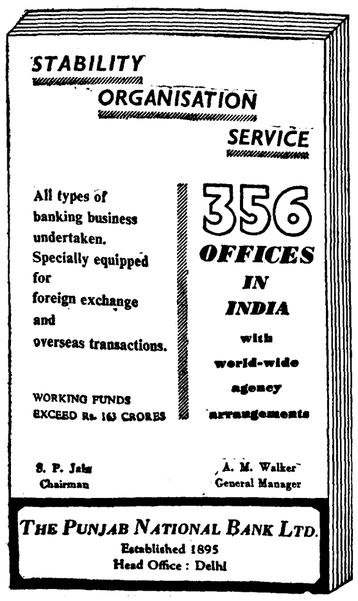
C. America

Planting is well under way in the Central American countries, but no information on acreage is yet available. Acreage increased in Guatemala and El Salvador last season, while it was reduced in Nicaragua because of drought at planting time. Yields in all these countries have been very high in recent years which should be an incentive to maintain acreage at a high level during the new season.

The bulk of the crop in South America and several African countries is harvested much later in the season and these crops are not yet planted. There has been a marked rduction in cotton acreage in South Brazil during the last two seasons, owing to the higher prices paid for coffee and other agricultural crops and adverse yields in 1956 and 1957. In 1957-58, reduced acreage was offset by much higher yields, but production is currently much lower than in former years. However, the future appears to be more optimistic. Acreage has been expanded noticeably in Argentina in recent years and production in 1957-58 set a new record. In part this increase was predicated on the even more rapid increase in domestic consumption and the present production trend is expected to continue in the current season.

Acreage in Peru has been reasonably stable during the last few seasons, but yields have declined. Production has averaged around 450,000 bales and this would seem to be the production potential for the 1958-59 season, given normal growing conditions.

The area under long-staple cotton in the Sudan is expected to increase by 70,000 acres in 1958-59. If the yield per acre were to return to anything like the normal level (the 1957-58 long-staple crop was a complete failure), there would be a marked increase in production this season.



FUTURES TRADING IN COTTONSEED

The Government of India has, on the recommendation of the Forward Markets Commission, granted recognition to the Madhya Pradesh Commercial Exchange Ltd., Akola, for a period of three years in respect of forward contracts in cottonseed. The Exchange was granted recognition for conducting forward trading in cotton on 28th January 1958. The hedge contract, which will be traded under the auspices of the Exchange, has Jarilla cottonseed grown in Berar as its basis. The varieties tenderable against the contract are 197/3 cottonseed, Verum cottonseed, Deshi (Gaorani) cottonseed, and Chandazadi cottonseed grown in the region. The months of delivery for the contract are January, March, May and July. Cottonseed can be tendered at all the important centres in the region numbering 16. It is hoped that the commencement of futures trading in cottonseed at Akola would provide necessary hedging facilities to the traders and other interests in that region.

TEXTILE DELEGATION TO AFRICA

A textile delegation to East and Central Africa sponsored by the Cotton Textiles Export Promotion Council left Bombay on Sunday this week. The delegation is led by Mr. Chinoobhai C. Javeri, a prominent textile exporter, and consists of Mr. Kumudchandra K. Mahadevia, a director of several cotton mills, and Mr. Suryakant C. Vaki', Vice-President of the Africa and Overseas Exporters Chamber. During its tour lasting two months, the delegation will visit Mombasa, Nairobi, Entebbe and Daressalaam in East Africa, Ndola, Lusaka, Livingstone, Bulawayo, Salisbury and Blantyre in Rhodesia and Nyasaland, Tananarive in Madgascar, Mauritius and Zanzibar, with a view to exploring the possibilities of expanding exports of Indian textiles to these countries..

MANPOWER LOSS IN TEXTILE MILLS PERSISTS

U.S. COTTON SUPPLY POLICY CRITICISED

From A Special Correspondent

MANCHESTER, 23rd September

MANCHESTER LETTER

"HOLIDAYS affected production in most districts"—such was the bare comment of the Cotton Board in distributing its latest figures of output and employment in the industry, covering the month of July. Seasonal influences cannot be divorced from such returns, but the further decline in the labour force and the volume of output cannot be wholly explained by the absence of operatives from the mills at the height of the holiday time of the year.

As can be seen from the following table, production of cotton and waste yarn is now practically 2,000,000 lbs. weekly below comparable averages in recent years and the reduction in activity in relation to the post-war peak in 1951 is very marked. The returns show the dwindling level of output in a relatively short space of time, taking the month of July in each case:

Average Weekly Production—July

Yarn (In million lbs.)	1958	1957	1955	1953	1951
Cotton and waste ..	10.01	11.98	11.91	12.97	17.78
Spun rayon and mixtures ..	2.10	2.23	2.11	2.49	1.93
Total	12.11	14.21	14.02	15.46	19.71
Cloth (In million yds.)					
Cotton	19.24	21.75	20.41	25.15	35.38
Rayon and mixtures ..	8.18	9.01	8.63	10.80	12.37
Total	27.42	30.76	29.04	35.45	47.75

A point to be borne in mind is that, from the beginning of 1952, spinning and weaving operatives were granted a longer holiday with pay. The Industrial Disputes Tribunal then increased the paid annual holiday from 110 to 144 hours. The introduction of a "Wakes fortnight," instead of the traditional "Wakes week," has made a considerable difference to the statistical position during the holiday months. This in itself is another example of the discrepancy which exists between Lancashire trade habits and those of some of her competitors, whose machinery works practically round the clock.

Drift from the Mills

The loss in manpower so far this year has just reached the 20,000-mark. As compared with the end of 1957 when 241,160 operatives were on the books of employers in spinning and weaving, the figure at the beginning of August was 221,150. In spinning, the fall has been 8,000, the labour force declining from 98,750 to 90,690. In weaving, the reduction has been slightly more, manpower now totalling 105,700, as against 114,330.

The section mainly affected by the loss of labour has been doubling, as these mills at the year-end provided employment for 20,560, but, by the beginning of August, the number available was only 17,370, a much sharper drop than in the other branches. In contrast, waste spinning still employs 7,390 operatives, as against 7,520 workers at the end of last year.

U.S. Cotton Supply Policy Criticised

An appeal to the U.S. Government to remove the uncertainties surrounding the current raw cotton supply situation has been addressed to Mr. Ezra Benson, Secretary of Agriculture, by the International Federation of Cotton and Allied Textile Industries. From its Manchester headquarters, the Federation issued a statement on raw cotton policy which indicated that the consuming countries of the world were extremely apprehensive about the policies adopted by the Washington Administration. The Federation represents 16 countries which between them consume more than 80 per cent. of the raw cotton which goes into international trade.

While commending the latest raw cotton legislation in the U.S. which "represents significant progress towards the Federation's stated objectives of encouraging cotton consumption by establishing a long-range policy assuring a continuity of supply of cotton at more competitive prices," the Federation urges the American Government to eliminate the two-price system as soon as possible. It says:

"The continuance of any cotton marketing policy, even for a limited time, under which export selling prices can be arbitrarily changed at any time with or without notice is detrimental to the free flow of cotton into consumption areas. It undermines confidence in forward buying and prevents traders throughout the world from reaching long-term dispositions regarding the importation and consumption of cotton and cotton goods."

The Federation emphasises that such policies make it most difficult for futures markets to provide their traditional cover against price fluctuations. It warns: "Unless there is a return at an early date to a one-price system and free marketing, the cotton futures markets in importing countries will cease to function to the great detriment of the cotton merchanting and consuming world." Other actions, such as sudden arbitrary changes in export selling prices, changes in export taxes and abrupt alteration in rates of exchange in other producing countries also tend to contribute to the prevailing uncertainty in the cotton consuming world. The Federation stresses the widespread consequences of such actions and most emphatically urges those responsible to adopt policies to remove these uncertainties.

Salesmanship Needed

Trade promotion is as old as the hills, even if it has only lately been so designated. The need for advertisement, either by word of mouth or visual stimulus, is recognised to an increasing extent and widespread publicity schemes have worked wonders for previously unknown products in this modern age. Textile manufacturers, with age-old traditions behind them, were slow to realise that consumers were drifting away from the idea that clothing came next in the list to food and shelter and that their goods needed selling in an era which looked on cars, television sets and the thousand and one domestic aids and gadgets as more essential than a constantly replenished wardrobe. In the past few years, efforts have been made to catch up in the race to attract the public eye and high-powered publicity campaigns have been sponsored by individual firms and trade organisations.

Examples have been provided by the International Wool Secretariat, the British Manmade Fibres Federation and, lately, by the Cotton Board, to interest the public in their particular fibres. A fresh development of this theme is in progress in South Africa, where a promotional drive has been launched under the campaign title—"Dress Right—You Can't Avoid Not To!" The scheme is directed towards men's wear and is felt by many to be long overdue.

The Native Product

News of the South African venture comes at a time when a big drive is being made in the United Kingdom to encourage the use of the "spun, woven and finished in Britain" label for cloth. Marks and Spence Ltd. have for long boasted that the supplies offered in their 237 stores are entirely home produced and the public will be in no two minds about the fact when they see the posters and leaflets proclaiming the fact displayed in the Company's premises up and down the country.

Easing of credit terms and the changes in hire-purchase regulations are developments which indicate an improvement in the country's general economy. Although industrial affairs in the Lancashire area do not reflect this mood of prosperity, the cash so made available can conceivably be used for a replenishment of textile stocks by the general public.

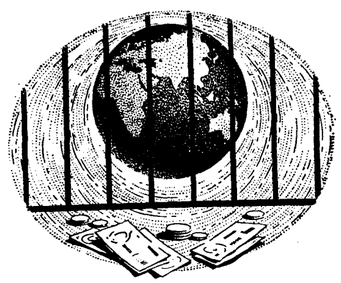
As yet, the movement has been slow and practically unnoticed. Weather conditions during the so-called "summer" have reacted against extensive clearances from distributing centres. The way is open for increased activity, if the shelves of wholesalers and retailers can be thinned. Quick delivery can be provided in practically all cases, but, in the absence of a revival of confidence among customers, the situation, as the months go by, grows more disturbing than ever for producers.

Variation in Trading

Expectations of any sharp improvement in earnings from British companies mainly devoted to cotton textiles could hardly be less prepossessing than they are at the moment. Even with the background of relatively fair trading towards the end of last year, the subsequent narrowing of margins and the length of order books must inevitably be reflected in results shortly to be published. For this reason, keen interest has been taken in the figures announced this week by two of the larger groups in the Lancashire industry. The statements present some contrast, as the Calico Printers' Association has reported a decrease in net profit of nearly £150,000, while, in the same period (to the end of June), the net profit of Tootal Ltd. was some £25,000 higher than in the previous year.

Both the companies are among those whose interests have lately been diversified, although not to any appreciable extent outside the main textile field. For an appraisal of the situation affecting the Tootal group, with its recent interest in plastics, glass fibres and non-woven goods, the trade will have to wait for the Chairman's remarks. A preliminary statement from the Calico Printers' combine makes no secret of the fact that commission printing "showed a very serious decline" compared with the total for the previous year, particularly during the first six months of 1958.

The Association's merchanting businesses have also had a difficult year, the Board reports, while the problems of meeting more intense competition in all markets have been aggravated in the home trade by the effects of poor weather on retail buying. A marked decline has occurred in sales since March. The part played by the invention of Terylene in maintaining the earnings of the Association has always been a matter for conjecture in the trade. Royalties this year rose by £63,000 to £300,000 and enabled the dividend to be maintained at 22½ per cent. for the year, the additional revenue being the source of a larger bonus. In view of the opposition to the claim to prolong the British patents for this synthetic fibre, the future is rather obscure.—*All Rights Reserved.*



The World's Cashier

Providing a complete banking service in south and east Asia is only part of our business. A bank whose scope was limited to one such area could not have the wide knowledge of financia conditions possessed by our world-wide network of branches. With offices in Europe and the United States, the biggest bank established by the Far East for the Far East can indeed claim to be the World's Cashier.

MERCHANT SHIPPING BILL PASSED

GOVERNMENT ACQUIRES POWERS TO REGULATE PARTICIPATION OF FOREIGN CAPITAL

AN important milestone in the progress of Indian shipping was crossed last week with the adoption of the Merchant Shipping Bill by the Rajya Sabha, the Lok Sabha having adopted it earlier (on 17th ultimo.) Besides consolidating the law relating to Indian shipping, the Bill envisages the creation of an Indian Register for ships and the setting up of a non-lapsable Shipping Development Fund and a National Shipping Board. Piloted by the Union Minister for Transport and Communications, Mr. S. K. Patil, the Bill is intended to give an impetus to the development of Indian shipping by providing the necessary legal and financial conditions.

The major change introduced in the Bill by the Government after its consideration by the Select Committee is the one which enables the former to vary the permissible limit of foreign investment in Indian shipping industry. In the original Bill, the permissible limit of foreign capital, which would entitle a ship to be listed in the Indian Register, was fixed at 49 per cent.; the rest (51 per cent.) was to be owned by Indians. The Select Committee, in response to the virtually unanimous demand of Indian shipowners, lowered the permissible maximum limit of foreign capital in an Indian ship to 25 per cent. and raised the minimum limit for Indian capital to 75 per cent. (*vide Commerce* 30th August 1958, page 376). When the Bill came up before the Lok Sabha, the Government sought and obtained powers to alter the proportions of foreign and Indian capital. The Union Minister for Transport and Communications, Mr. S. K. Patil, however, declared that the Government would use the power for increasing the proportion of Indian investment rather than for decreasing it. In fact, Mr. Patil categorically declared on more than one occasion that the Government of India did not welcome foreign capital for development of shipping.

Naturally enough, the clause which evoked considerable interest and discussion in Parliament was the one relating to participation of foreign capital in Indian shipping industry. Some members asked as to the reasons why the Government thought it fit to acquire new powers. Mr. Patil's reply was that the Government wanted powers to meet any possible emergency in future. Generally speaking, the members were opposed to participation of foreign capital in Indian shipping industry. Even so, there were several members (of these quite a number was from the Congress Party itself) who urged that, in view of the need for developing Indian shipping at as rapid a rate as possible, it was necessary to create conditions which would help attract foreign capital. Thus, Mr. C. R. Bassappa, speaking on the Bill in the Lok Sabha, averred that the national interests lay in the quicker development of Indian shipping by taking advantage of foreign capital and not in shutting foreign capital out. In the Rajya Sabha, both Mr. Himatsingka and Mr. Jaswant Singh urged the importance of participation of foreign capital in Indian shipping industry. A critical appraisal of the Government's attitude was made by Mr. H. N. Kunzru, who, speaking on the Bill in the Rajya Sabha, stressed that the 25 per cent. limit for foreign capital was "too conservative" and was in conflict with the best interests of the country. Besides, he said, the provision that managing directors were to be Indians would not be an inducement for foreign capital. He deplored that the Minister should have "needlessly committed" himself to the view that the Government would utilise its new powers to reduce, rather than increase, the percentage of foreign capital. He added: "I do not think that this obstinacy on his part is a sign of wisdom."

Proceeding, he observed that he did not understand how any danger to the country's security would arise by a greater participation of foreign capital in the shipping industry than that provided under the Bill. Presumably, he was referring to the general argument that, in an industry of strategic importance like shipping, it was wrong to permit foreign capital. Incidentally, this argument was also countered by Dr. P. V. Kane, who did not think that one of the objectives of the Bill should be to develop the mercantile marine as a "second line of defence"; if a war broke out in this age of atom and hydrogen bombs, "our small mercantile marine would be of no help."

Defending both the altered proportions of foreign and Indian capital and the Government's powers to vary them at will, Mr. Patil said that there was "nothing romantic, holy or unholy" in the fixation of 75 per cent. Indian capital and 25 per cent. foreign capital for purposes of registration of a ship in the Indian Register. He recalled that, in 1947, when India's national shipping policy was formulated, some people who were not nationals of India also held shares in some Indian shipping companies. It was, therefore, thought that the Indian and foreign capital should be in the ratio of 75 and 25 per cent. The fixation of foreign capital at 25 per cent. was purely "notional." It was not intended to attract foreign capital, nor did the Government expect such capital to flow in. In this connection, he pointed out that, in Italy, foreign participation in shipping was allowed to the extent of 49 per cent., and yet, not one share had been taken by outsiders in any shipping company there. This was also true of the U.S. where foreign participation in shipping was permitted to the tune of 33 per cent. By citing the instances of industrially advanced countries, the conditions in which differed from those in India, Mr. Patil was not strengthening his case. Again, his assertion that the Government did not anticipate any inflow of foreign capital into Indian shipping industry promptly drew forth the comment from a member as to why the Government was then so anxious to set a limit for the participation of foreign capital. Further, it does not square with one of his earlier statements in the House that there was an offer from a foreign source to invest $100 million in Indian shipping but the Government rejected it.

Mr. Patil referred, in the course of his speeches in Parliament, to three important issues—the role of the National Shipping Board, the importance of training personnel for ships and the need for achieving the target set for shipping under the second Plan. He stated that it was the desire of the Government that, in all policy matters affecting the mercantile marine, the advice of the Shipping Board should be accepted. He said: "By convention and by practice, I give this assurance, we shall make it a practice that the opinion given by such a representative body will be generally accepted by the Government." Emphasising the importance of trained personnel, he stated that along with the acquisition of new ships, more and more men should be trained for manning them. Finally, he disclosed that the Government would utilise $25 million out of the offer of a $100-million loan from a Japanese firm for purposes of augmenting Indian shipping tonnage. India, according to Mr. Patil, will not only be able to reach the target of 900,000 tons set under the second Five-year Plan, but also exceed the target by 200,000 tons.

A Great Sound of Machines...

WHEN BALBIR SINGH came to Jamshedpur from Bahrein in 1957, the site for the new Rs. 100-million Blooming Mill—a key unit of Tata Steel's Two Million Ton expansion programme—had just been cleared after levelling a large hillock.

Today this new 46" Blooming Mill, the largest of its kind in India, with a rolling capacity of two million tons, is all set to produce the blooms and slabs from which rails, structurals, plates, sheets and many other products will be rolled.

Despite the Suez Crisis which delayed vital supplies and other difficulties, the rapid completion of the Blooming Mill was made possible by the devoted service of men like Balbir Singh. He and hundreds of other Indians, assisted by American and German technicians, worked round-the-clock on this major expansion project to produce more steel to strengthen India's economy.

TATA STEEL

ON TO TWO MILLION TONS

The Tata Iron and Steel Company, Limited

This Chart Tells Our Story

Items	1946-47 Rs. np.	1957-58 Rs. np.	Percent increase (+) or decrease (−) over 1946-47
1. Cane price including transport charges	12 62	14 70	+ 16%
2. Government taxes-central excise duty, cane cess and co-operative societies commission.	2 97	13 16	+ 342%
3. Manufacturing charges including salary, wages and packing.	3 75	6 05	+ 61%
4. Overhead charges and profit subject to taxation	2 20	2 19	
	21 54	36 10	
Less for molasses	0 10	0 10	
Ex-factory price	21 44	36 00	+ 68%

This table dispels the common belief that the profits earned by the White Sugar Industry are unusually large. That the industry is not responsible for the increase of sugar price in the recent past is revealed by the figures given here. Most of the consumers are only concerned with the price they have to pay. But some of them are not aware that the gross profit and overhead charges together account for only 5% of the total cost of production. A comparison of the current price of sugar and the price prevailing 11 years ago will show that there is an increase in all the items of expenditure except in overhead charges.

It is, as it has always been, the concern of the industry to reduce the cost of production. The industry has done a magnificent job in doubling its production in the last 4 years with a consequent decrease in cost of overheads and reduction in the percentages of gross profits. It also holds a promise for the future to reduce the cost of production further.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

BIRKMYRE BROTHERS LIMITED

TRENDS IN INDIAN RUBBER

OUTPUT FAILS TO KEEP PACE WITH RATE OF CONSUMPTION

ANYONE who has cared to watch the developments in the Indian rubber growing and consuming industry will admit the need for an upward revision in the controlled prices of rubber. It was three years ago—in September 1955, to be precise—that the currently ruling prices were fixed by the Government of India on the basis of the Tariff Commission's formula of 1951. Since then, there has been an all-round rise in the prices of commodities and a substantial additions to the cost structure of the rubber industry. At the same time, there has been a tremendous increase in the demand for rubber and the indications are that this upward trend will continue for several years. If it is to be met effectively, every effort must be made to ensure a progressive rise in the production of natural rubber. Surely, a re-examination of the cost of production, replanting and new planting of rubber is overdue. The prices of rubber should be fixed at a reasonable level so as to give an incentive to producers to augment output, to do extensive replanting and to establish new plantations with a view to meeting the vast expanding requirements of the rubber manufacturing industry.

The aforesaid point would be appreciated better if one were to glance at the figures relating to the production and consumption of rubber. The quantity of rubber actually produced in the first six months of 1958 was at an annual rate of not more than 21,540 tons, as against the consumption rate of 35,000 tons—some estimate it even higher at 40,000 tons. In other words, the gap between production and consumption is of the order of 15,000-20,000 tons. This gap is expected to widen considerably in the next three years, the estimated consumption requirements for 1961 being placed at 60,000 tons, whereas output may be just 26,000 tons. Such a huge gap has to be filled in by large imports from abroad. Every ton of raw rubber bought overseas entails a foreign exchange of about Rs. 3,000. It is not suggested here that the entire gap can be closed by stepping up production of natural rubber. The capacity of the Indian raw rubber industry is not that large and cannot be expanded overnight, as it were. It takes at least a decade from the date of planting for a rubber tree to yield latex. But, unless an appropriate price policy is followed from now onwards, the situation will become more and more difficult in the years to come. The adoption of a right price policy will also enable the producers to raise the output to the maximum extent they can. Meanwhile, suitable encouragement should be given to those who are willing to establish synthetic rubber industry. It is encouraging to hear from Mr. Morarji Desai—*vide* his speech to a group of American business men in New York a few days ago—that the Government of India is not averse to the private sector establishing synthetic rubber industry and that foreign capital will be welcome for this purpose.

Replanting Scheme

The importance of raising rubber production to a level commensurate with the increasing trend of consumption has no doubt been recognised by the Government of India, as witness the implementation of the Rubber Board's scheme—sanctioned last year—for replanting 70,000 acres of old and worn-out rubber trees in the South Indian plantations with new, high yielding material at the rate of 7,000 acres per year spread over ten years. But the progress actually made has been none too satisfactory. It is said that, during 1957, not more than 2,766 acres were replanted and a large part of the expansion now taking place would appear to be in unselected strains and unsuitable areas. If this scheme, in itself inadequate, is to be carried out successfully, it is of the utmost importance that rubber producers must be assured of a more reasonable price for their product and larger quantum of assistance for cultivation and opening of new areas.

As already stated, production of rubber in India has not been keeping pace with the rate of consumption. This will be clearly evident from Table I. It will be seen from this table that the total production of raw rubber during the first half of 1958 as compared with that of 1957 was higher by 1,227 tons, while actual consumption by manufacturers was more by 1,317 tons, so that the gap between the two widened from 6,709 tons in January-June 1957 to 6,799 tons in January-June 1958. During the same period, the consumption of synthetic and reclaimed rubbers was higher by 178 tons and 321 tons, respectively. The aggregate consumption of all rubbers in the six months ended 1958 was 20,749 tons, which represents a rise of 1,816 tons over the corresponding period of 1957.

Synthetic Rubber

A striking feature revealed by the foregoing table is the marked increase in the consumption of synthetic rubber, the total of which is now running at an annual rate of over 3,000 tons, as against a bare 100 tons in 1955. All the synthetic rubber India uses is imported from the U.S. The total imports during the first six months of 1958 were 1,792 tons valued at Rs. 50.44 lakhs. The increasing consumption of synthetic rubber in India would appear to be in keeping with the trend elsewhere in the world. This is indicated by the continuously increasing output of synthetic rubber. The total world output of this rubber in 1957 was 1,262,000 long tons, which compared very favourably with 1,212,000 tons in 1956, 1,085,000 tons in 1955 and 574,000 tons annual average for the years 1946-50. The production of natural rubber has also gone up but at a reduced pace. Table II shows the trend of world natural and synthetic rubber production in recent years, as also consumption in the U.S. the U.K., France and Canada in 1957.

The proportion of synthetic rubber in the aggregate world output of rubber has gone up from 29.1 per cent. in 1946-50 (average) to as high as 39.9 per cent. in 1957, while that of natural rubber has receded from 70.9 per cent. to 60.1 per cent. Commenting on this trend, a recent world rubber survey contained in *The Times Review of Industry*, London, observes:

"While a part of the decline in consumption of natural rubber may be attributed to a lower level of industrial activity, especially in the United States, it seems clear that it has been principally caused by the further substitution of synthetic rubber for the natural product. The total consumption of natural and synthetic rubber increased by 97,500 tons in 1957, all the main consuming countries for which data are available, with the exception of Canada, showing increases. In the United Kingdom, the proportion of synthetics used rose from 17 per cent. to 24 per cent. For tyres, the increase was from 22 per cent. to 34 per cent. and for other uses from 11 per cent. to 13 per cent. In France, a similar trend towards the use of synthetics is reported. These proportions are well below those obtaining in the United States rubber industry, where, in 1957, synthetic rubber accounted for 62 per cent. of the total used for tyre products and 64 per cent. for non-tyre uses, but they indicate the current trend.

"The decline in prices during 1957 continuing into 1958 has brought natural rubber into a stronger competitive position in relation to the synthetic material; it may be that, in the United States, some substitution of natural for synthetic rubber will result. It is claimed that, for the manufacture of heavy tyres, natural rubber is superior to synthetic, since it has greater resilience and tensile strength and higher resistance to heat generation. These tyres at present take a high proportion of total rubber consumption. But many technical advances have been made in synthetic rubber production and, apart from strategic reasons, which demand that a healthy synthetic industry should be kept in existence, certain types have been developed with specific properties.

"Unless the price of natural rubber falls to a point which shows a decided financial advantage to the user, there is little likelihood of a reversal of the present trend towards the synthetic product. The prospect of increasing the demand for natural rubber may depend on a general increase in consumption rather than on any marked substitution of natural for synthetic rubber."

Scope for Rubber Growing

Although the rate of growth in natural rubber output has been levelling off, there is, it is felt, still scope for increased rubber growing in many tropical regions. In 1957, 93 per cent. of total world production originated in South-East Asia, but certain African countries, more particularly Liberia, Nigeria and the Belgian Congo, have been increasingly entering the picture, and the output in these areas has been consistently rising during the past 10 years. The outturn together has risen from 34,000 tons in 1947 to 112,000 tons in 1957. Although this is a small proportion of world output, it shows the possibilities of these areas. In Latin America, experience of rubber cultivation has been less fortunate. Total production at about 30,000 long tons is slightly higher than that of any year since 1953. Disease has retarded the growth of output. Some progress has, of course, been made in developing plants that are resistant to leaf-blight, and it is expected that this will encourage planting in the future. Since World War II, there has been much political unrest in the main rubber producing areas in South-East Asia, Malaya and Indonesia, and this has been reflected in variations in the level of output. But, in addition, the various replanting programmes have led to temporary reduction in output. Rubber trees do not mature quickly and the loss of output from older trees which replanting entails is sometimes not made good from other sources for some time. Since 1953, replanting has been done on some 25 per cent. of the acreage of the estates and 10 per cent. of the acreage of small holders in Malaya, and in Ceylon on about 15 per cent. of the estate acreage has been replaced by higher yielding trees.

The gap between world production and consumption of rubber during 1957 was not large in comparison with earlier years. The total stocks at the end of the year, while somewhat above those of twelve months before, were a little below the level of December 1955, but demand was weaker than in 1956. There was no sign of stocks being run down. In fact, commercial stocks in consuming areas rose slightly, but consumption in many countries suffered some contractions. This was true of both the U.S. and the U.K., the largest consumers, as well as of Canada, Australia, and Eastern Europe (including the U.S.S.R.). France and Germany showed slight increases and larger proportionate increases were reported from Japan and India. The estimated imports of natural rubber by the U.S.S.R. during 1957 aggregated 78,000 tons, as against 126,000 tons in 1956. During the first four months of 1958, however, there was a big revival in the demand from Russia, the actual buying being at an annual rate of over 200,000 tons.

TABLE I—*Rubber in India*

(In tons)

Years	Production (Natural rubber)	Consumption: Natural rubber	Synthetic rubber	Reclaimed rubber	Total
1955	22,481	27,543	100	3,073	30,716
1956	23,444	31,406	N.A.	N.A.	34,666

WHEEL BRAND GLYCERINE

in Indian industry

Glycerine is included in industrial formulae and processes all over the world. WHEEL Brand Glycerine is used in such widely varied industries as textiles, tobacco, leather tanning, printing, roller composition, paper, rubber, etc. Guaranteed to contain 98% Glycerol, WHEEL Brand Glycerine conforms to the highest standards of quality.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-seventh Annual General Meeting of the Company on the 25th September, 1958.

LADIES AND GENTLEMEN:

I have much pleasure in welcoming you to this the Forty-seventh Annual General Meeting of the Company.

With your approval, we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts, which have been circulated, as read and the Secretary will now read the Auditors' Report.

Early this year Mr. J. L. Bowring and Mr. P. Graham resigned from the Board of Directors. Mr. Bowring had served this Company for over 31 years, having been a member of the Board for 10 years, and we wish him health and happiness in a well-earned retirement. Mr. Graham's service with the Company was for 22 years, four of them on the Board, and it is regretted that his services are no longer available to us.

You will see from the accounts in your possession that the net profit this year is slightly less than last year, this being mainly due to increasing cost and greater taxation on tobacco products, which I envisaged when I addressed you last year. Before giving you a review of the Company's activities, I shall make one or two comments on the accounts.

Referring first to the Liabilities side of the Balance Sheet, you will have seen that in addition to the transfer to Development Rebate Reserve a further Rs. 20 lakhs has been appropriated to Fixed Asset and Stock Replacement Reserve. The Board makes periodical surveys of the replacement cost of both Fixed and Current Assets, and considers it essential to retain this additional amount in the business as a measure of protection against the pressure of rising prices and costs on the Company's resources.

Under the heading of Unsecured Loans, Security Deposits from Dealers and Contractors (Cash) show a further reduction. This is a consequence of the further implementation of our policy of carrying widely spread stocks of manufactured goods, thus reducing the need for Dealers to carry such stocks on secured credit.

On the Assets side, although the net value of Fixed Assets after depreciation shows an increase of only Rs. 33 lakhs, a reference to the Schedule of Fixed Assets reveals additions and transfers during the year of Rs. 115 lakhs. A large part of the expenditure on Fixed Assets was incurred in equipping the Company's cigarette and printing factories with plant necessary to increase existing production capacity to its highest potential, and as a result of this action an improvement in overall output was attained without difficulty. Plans for a new factory have had to be deferred.

Advances, etc.—unsecured show a very large increase over last year, and in the main represent earlier payments made to our suppliers of leaf tobacco because in Andhra Pradesh, the principal source of cigarette tobaccos, the harvesting and curing of the crop was earlier than last year.

Also under the heading of Loans and Advances a new item this year is Current Profits Deposit. This deposit was required to be made in accordance with Section 10 (2B) of the Income-tax Act, and it was a considerable relief firstly when the Finance Minister announced that no deposits would be required in respect of the current year and secondly when a notification was issued that deposits already made would be refunded. The amount of Rs. 43 lakhs was returned to us in July this year, and it is hoped that this item will not again have to appear in the Company's accounts, though it should be noted that the provisions of Section 10 (2B) have not been removed from the Act.

Cash and Bank Balances show a considerable reduction this year, mainly because of the two items of Advances referred to earlier. The introduction of additional Excise Duties, to which I shall refer later, also made it necessary to invest more money in stocks of Manufactured Goods.

From the Profit and Loss Account you will see that Sales have increased by Rs. 50 lakhs, but higher costs and duties have fully offset this increase. Incidentally this Account shows a decrease of Rs. 2 lakhs under the heading of Workmen and Staff Welfare Expenses; this is attributable to certain benefits previously given to workers having now been absorbed in the wage.

The Company now not only meets its full printing requirements from its own printing factories at Tiruvottiyur and Monghyr, but relies entirely on India's resources for its general requirements of cigarette paper, printing board and papers, aluminium foil and packet wrappings. Our encouragement of the growth of leaf tobacco in India, which has become a major export industry, is well known.

Although our long term policy of promoting the production of our raw materials inside India has now come to fulfilment, there remain some vital items which it is neither practicable nor economic to produce in this country at present. I refer in particular to elaborate spare parts for machinery. Although the shortage of foreign exchange is severe, we feel sure that Government appreciate that the benefits of the large imports of capital goods which have been permitted during the last few years must be much diminished if exchange cannot be found for the importation of essential spare parts to maintain those capital goods.

The Board would like your Company to contribute more directly to the country's export trade, but import barriers and long established protected local industries in many overseas countries impede efforts to export cigarettes or smoking tobaccos. Our main contribution in this field therefore continues to be the conservation of foreign exchange, not only by reducing imports to the barest minimum but also by the encouragement of local industries, some of which, having been largely brought into being to meet our requirements, have already grown to the point where they are themselves substantial exporters.

When I last addressed you I made a reference to the proposal to centralise the Sales Taxes levied by State Governments on tobacco products. Since then, at the request of the Government of India, the various States agreed to withdraw their Sales Taxes on tobacco products, but the additional Excise Duties imposed by the Centre in December, 1957, placed an even heavier burden on the industry than had been the effect of the Sales Taxes which they were framed to replace. While we welcomed this centralisation of taxation as a contribution to the stabilisation of prices throughout the country, the consequent overall increase in the burden of tax forced us to increase the prices of some of our leading brands, with consequent loss of sales volume, and to accept a lower return for others. This was the third occasion during the year on which we had to make a price revision, the first having been necessitated by the introduction of the decimal coinage on 1st April, and the second by an increase in the Tobacco Excise Duty on air-cured tobaccos in the Budget of May, 1957. Such frequent changes in prices naturally have an adverse effect on the buoyancy of our trade and consequently on Government revenue, as the consumer, faced with rising costs everywhere, finds it necessary to re-adjust the pattern of his personal expenditure.

Your Board is of the opinion that these adverse trends cannot be held in check unless the industry is given a period of freedom from upward revision of taxation, whether in the form of increased rates of tax or through, for example, any simplification of the tax structure or the application of the metric system. The Budget of 1958 was a welcome one in that it gives us an opportunity to start to consolidate our position, and we must most sincerely hope that expressed intentions to raise substantial sums by further taxation will not result in additional imposts on the tobacco industry.

I have already referred to the imposition of additional Excise Duties in replacement of State Sales Taxes, as a measure of simplification both wise and welcome, but there has been a noticeable attempt by various Municipalities throughout the country to endeavour to enhance their revenues by introducing or increasing octrois on tobacco products, and even on the raw materials for our factories. We maintain that our raw materials, and their products, on which the Centre levies Excise Duty, and now additional Excise Duty, should be kept outside the taxable scope not only of the States but also of Municipalities. If this is not done, an inevitable effect must be a reduction in Central revenue because of distribution difficulties brought about by these barriers raised to trade and the free movement of goods.

In the field of direct taxation on companies, your Board believes that the total weight of company taxation is too high, especially for a country which seeks to stimulate capital formation and attract foreign investment. Even if the present level of taxation could be justified, there would be scope for the structure of company taxation to be remodelled and simplified. It is surely difficult to justify wealth tax on companies, nor can the imposition of super tax on the capitalization of retained profits fail to discourage capital formation. Moreover, desirable though it undoubtedly is to increase capital investment, this end will not be achieved by penalising companies which pay dividends at a rate higher than the modest figure of 6% on issued capital, which normally means an even lower percentage on the real capital invested in the business.

I should like now to turn to an aspect of our business which receives more and more attention each year; that of the development and training of personnel. On the management side, the Company conducts its own planned training courses and members of the staff regularly participate in the courses recently, and most successfully, inaugurated at the Administrative Staff College of India. On the workers' side, Training Within Industry is already established, while certain other schemes, including Job Evaluation, calculated to increase production and benefit the worker, are in an experimental stage. We believe that such measures are important to the maintenance of good relations between employer and worker, but success is equally dependent on the attitude of the Trade Unions.

There is, however, one factor which your Board views most seriously; the high degree of absenteeism in industrial concerns. This is not an evil which is confined to our business, but is being experienced by industry throughout the country. The number of man-hours lost through high absenteeism during the year must have been astronomical, and this is a matter which a well organised Trade Union can and should help to deal with in the firmest possible way.

The management's relations with workers during the year under review have been reasonably happy; there have been stoppages of work, there have been differences of opinion, but on the whole the management and workers have been able to work together to the common good, and I should like to thank them for their co-operation.

I must now make reference to the Employees' Provident Funds Scheme and the Employees' State Insurance Scheme. At a recent conference at Naini Tal it was proposed that employers' contributions to the two Schemes should be substantially increased. Your Board welcomed these Schemes when they were first applied to this industry, and they remain welcome, but any betterment of the benefits accruing to workers should be accompanied by a greater productive effort on the part of workers themselves.

Further, the benefits of the Insurance Scheme are at present given only to industrial workers in certain areas, a small percentage of the working population. We believe that benefits should be given to all workers throughout the country before they are extended to families of workers now insured, since otherwise the advantages enjoyed by those now insured over other workers will be still further accentuated.

It was suggested also that industry should be given the responsibility for housing its workers, and while such a course might be possible and even desirable when new factories are installed in remote rural areas, it is quite beyond the resources of existing industry, particularly when in urban areas. The task of housing workers is one of such magnitude that it should of necessity be the responsibility of the Government and we would recommend that Government extends its policy of providing loans and subsidies through co-operatives, thus enabling the worker to own his house in due course, and so provide him later in life with adequate and rent-free accommodation acquired largely at his own expense and not at the expense of consumers as a whole.

Industry must be prepared to play its full part, but it must not be burdened with much more than its fair share of taxation if it is to survive, still less if it is to thrive and expand to the benefit of the country's economy. The strength of industry is being eroded on two sides; on the one hand it is subject to ever increasing taxation and on the other to the unending demands for greater rewards for workers whether in wages, welfare or amenity measures, frequently unrelated to higher productivity or even to regular attendance.

During the first five months of the current financial year sales volume has been held to last year's levels despite increased competitive activity and the re-aligned prices resulting from the additional Excise Duties introduced in December. Your Board therefore felt justified in declaring an unchanged interim dividend of 2%, free of Income-tax, in respect of the year to 31st March, 1959. Nevertheless, the two-pronged attack on profits, even at the reasonable level which your Company attains, must make the future less certain.

I now formally move the adoption of the Report and Accounts for the year ended 31st March, 1958, including the proposed payment on 27th September next of a Final Dividend of 3%, free of Income-tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the accounts, it will be a convenient time to do so.

(*Note.*—This is not a report of the proceedings of the Annual General Meeting.)

KURASHIKI RAYON CO., LTD.

2, Umeda, Kitaku, Osaka, Japan Cable Address: "KURARAY OSAKA"

THE FIRST DECADE OF THE G.A.T.T.

WHAT OF ITS FUTURE?

By Eric Wyndham White

EXECUTIVE SECRETARY, G.A.T.T., GENEVA

THE biographies of public men throw much light on the history of the events in which they have played their part. Similarly, an account of the first ten years of the evolution of the General Agreement on Tariffs and Trade provides a revealing insight into the changing circumstances of international trade in the post-war world.

The G.A.T.T. opened its career in a characteristically practical and pragmatic manner. For many years, the war-time allies had sought an agreement on commercial policy which would not only provide the necessary complement to the financial agreements of Bretton Woods, but would also consummate the settlement envisaged in the well-known Article 7 of the Lend-Lease Agreement. The attempt to agree upon a blueprint for world trading relationships failed in the particular form that was attempted, but the I.T.O. negotiations gave rise directly to the negotiation of the General Agreement and the commercial policy code which it embodies. The Agreement was negotiated as a tariff agreement and the trade rules were embodied in it essentially as a means of protecting the tariff concessions from being nullified by restrictive measures of other kinds. The tariff agreement was a major achievement and made a significant contribution to the remarkable recovery of international trade which took place as soon as productive resources had been restored. The existence of the tariff truce was a valuable element in trading relationships, particularly as balance-of-payments difficulties progressively lessened and Governments began to dismantle abnormal trade restrictions. Further, the G.A.T.T. furnished an impressive demonstration of the willingness of the creditor countries to make tariff concessions effective in their own markets, at a time when the counterpart they obtained in negotiation was being nullified by restrictions and discriminations in the debtor countries. This act of faith has so far not proved ill-placed, since the gradual improvement of the balances of payments of the debtor countries has been accompanied by a progressive dismantling of restrictions and a softening of their discriminatory impact. The existence of the G.A.T.T. rules and its procedures for consultation played an important role in maintaining international solidarity throughout this period of restrictionism.

Early Years

It was during this period that the first stage of G.A.T.T.'s evolution took place. Given the adverse economic climate which prevailed, it may sound somewhat paradoxical to say that this evolution took place in exceptionally favourable circumstances. However, too many organisations have sprung fully armed into the arena ony to find that circumstances condemned them to a period of frustration and inactivity. The G.A.T.T. escaped this disheartening experience, since it embodied no elaborate blueprint, and was not hampered by a large-scale organisational structure. If it has developed to the point it has reached today, this is a result of empirical progress in response to the needs of a constantly changing situation and on the basis of cautious experiment in handling practical problems.

Those early years were years of unobtrusive and unspectacular growth. More and more countries were added to the G.A.T.T. membership through the accession conferences of Annecy and Torquay, and the area of tariff stability was progressively and significantly widened. The original membership of 23 countries increased to 37, accounting for nearly 80 per cent. of international trade. Moreover, the habit developed for the signatory countries—described in their collectivity as Contracting Parties—to meet in annual sessions to discuss the application of the Agreement and to carry out the consultations for which it provides. These annual meetings of senior trade officials came to have an importance transcending the technical and generally unspectacular work with which they were involved. They bred a growing awareness of the value of objective rules as the basis for trading relationships and of a forum where trade problems could be discussed in an atmosphere of technical competence and of confident understanding. The G.A.T.T. techniques of consultation and friendly settlement of disputes came gradually to enjoy an enviable degree of international prestige, to which the modesty of its establishment and of its budget made no small contribution.

During this fruitful period of growth, there were also important changes in national attitudes. In the initial stages, many countries regarded the G.A.T.T. with very moderate enthusiasm. Whilst welcoming—in different degrees—the tariff benefits which it offered, many countries chafed under the restrictions which the rules imposed on their traditional freedom of action in commercial policy and were distrustful of submitting to international discussion the delicate matters which had hitherto been jealously guarded national and bilateral preserves. At best, their attitude was one of reluctant acceptance of an apparent necessity.

By the time the period of acute post-war difficulties had come to an end, the atmosphere had changed substantially for the better. There was general recognition of the value of the G.A.T.T. trade rules and of the General Agreement mechanism. Moreover, in the administration of the Agreement, the Contracting Parties had given ample and repeated proof of realism and objectivity. The years of relatively pleasant domesticity within the G.A.T.T. had bred a strong reluctance to revert to the perhaps more exciting but dangerous and unpredictable law of the jungle.

The 1954-55 Review

Thus matters stood, as the world emerged from the transitional period of reconstruction. The Contracting Parties deemed the G.A.T.T. strong enough to throw it open to a thorough review designed to examine each of its provisions in the light of experience and to see whether the Agreement could be equipped to play an even more effective role in the future. It was conceived, also, that this review would put an end to the provisional character of the Agreement and establish it as a permanent international institution.

This progress in the evolution of the G.A.T.T. closely paralleled the evolution of the international economy. Great progress had been made in the restoration of the trading position of the principal European countries, thanks to Marshall Aid and the imaginative and energetic activities of the O.E.E.C. The affairs of the British Commonwealth had also begun to prosper. This favourable conjuncture led the Commonwealth countries at the conference of 1952 to propose a collective approach to convertibility. The "collective approach" included a number of conditions as a prerequisite for the restoration of currency convertibility, amongst them the strengthening of the trade rules embodied in the General Agreement. As the principal sponsor of the collective approach, the United Kingdom looked to the review of the General Agreement as an opportunity for strengthening its disciplines and, in particular, the provisions relating to the use of quantitative restrictions for balance-of-payments reasons and the rule of non-discrimination.

Unhappily, by the time the review began—that was in the autumn of 1954—the prospects for this collective approach had been seriously impaired. The Commonwealth initiative had been coolly received in Washington by a new Administration which was absorbed almost exclusively with domestic financial policy and in no mood to react positively and imaginatively to international initiatives in this field. In Europe also—with the exception of some elements in Germany—the British initiative raised little enthusiasm. The European countries were on the whole more concerned to preserve and build upon the regional economic co-operation which had made such significant progress under the ægis of the O.E.E.C. Already, the adventurous spirits were speculating on more ambitious programmes of regional co-operation which were later to bear fruit in the Rome Treaty. Even within the Commonwealth, there was no uniform enthusiasm for tightening the G.A.T.T. rules as opposed to providing for more effective administration of the rules as they stood.

The review of the G.A.T.T. opened, therefore, without exaggerated optimism as to the results to be expected from it. Expectations were still further lowered, when it became known that the United States would find it necessary to seek a waiver to enable that country to maintain import restrictions on agricultural products, in order to make effective its domestic programme of supporting the prices of agricultural products above world levels.

Thus, it was clear from the outset that the most that could come from the review would be a reaffirmation of the Agreement and a more secure and permanent basis for its administration. These results were attained and they should not be underestimated. Some of the basic provisions were significantly strengthened and improved. In particular, there was evolved a more sympathetic and realistic approach to the delicate problems of the underdeveloped countries and to the possibilities of their co-operation within the G.A.T.T. In addition procedures were devised for dealing with residual problems likely to arise in countries which, following the restoration of the convertibility of their currencies, would no longer be justified in maintaining import restrictions for balance-of-payments reasons. Less noticed, but of great importance, was the strengthening of the procedure for multilateral consultation, so that an individual country should be in a position to call the international trading community into consultation on any matter affecting the operation of the Agreement, if bilateral consultation should prove abortive. This provision has great potentialities, particularly during periods of economic adversity.

Finally, it was agreed to establish an Organisation for Trade Co-operation, to administor the General Agreement and generally to sponsor international consultations and negotiations on trade matters.

All in all, therefore, there was good cause for satisfaction with the outcome of the review session. But new challenges—I use this term rather in the sense of stimulants than of threats—were not slow to emerge, mainly in connection with the dramatic acceleration of economic plans and developments in Europe.

New Problems Created by Developments in Europe

The discontent of the low tariff countries in Europe had for long been a subject of concern to both the G.A.T.T. and the O.E.E.C. These countries made no secret of their disappointment with the processes of tariff negotiations in the G.A.T.T.—negotiations in which they felt themselves without arms or prospects. Their disillusionment was complete when they failed to secure acceptance in the G.A.T.T. of plans for automatic across-the-board tariff reductions which, by requiring a proportionately larger contribution from high tariff countries would have contributed to a lessening in the disparity of tariff levels. The low tariff group then turned its main attention to the O.E.E.C., making it clear that no advance in intra-European trade liberalisation could be expected unless they could obtain some satisfaction on tariff levels, and indeed that it was doubtful how long the trade liberalisation programme could be maintained if circumstances remained unchanged. For them, a liberalisation programme directed only to the suppression of quantitative restrictions appeared a one-sided affair. The removal of the protective incidence of import quotas exposed their producers to the full impact of competition subject only to a low tariff protection, whereas other countries' producers were sheltered behind high tariff walls. Other forces were also stirring in Europe. Discussions began between France, Germany, Italy and the Benelux countries on the possibilities of establishing a customs union between them. Confounding the sceptics, these discussions moved with unexpected rapidity and the preliminary report of the Messina Conference was followed by the initiation of negotiations which were to result with relative speed in the drafting of the [Rome] Treaty Establishing a European Economic Community.

These challenges were met by the United Kingdom with a historic proposal for the establishment of a free-trade area in Europe. Indeed, so fundamental was this change in British policy, that it raised suspicion in many quarters as to the genuineness of the proposal. In some quarters, it was thought that the proposal was a tactical device designed to sidetrack the pressures of the low tariff countries. Others saw in it an attempt to counter the incipient moves for the formation of a customs union between the six countries of "little Europe." However, the energetic efforts of the British Government to win widespread support in the United Kingdom for the free-trade area idea was an effective answer to these suspicions. Moreover, the rapid progress of the common market negotiations gave deeper meaning and greater urgency to the United Kingdom proposals. The free-trade area then became of vital importance as a means of maintaining access for the United Kingdom to the rich European market, and also as a means of avoiding a dangerous split between the western European countries which had hitherto co-operated with such fruitful and encouraging results through the O.E.E.C.

Anxieties Caused

It was obvious that these developments posed new and far-reaching problems for the G.A.T.T. and placed new and heavy responsibilities upon it. It is true that the possibility of the formation of a customs union in Europe had been foreseen in the drafting of Article XXIV of the General Agreement. The drafters had also foreseen both the desirability and the difficulty of the association of the United Kingdom with such a union. This latter problem gave rise to the elaboration of the new concept of a free-trade area which, unlike a customs union, does not affect the external tariff of the constituent countries. Nevertheless, apart from a few enthusiasts, it is doubtful whether anyone really thought at that time that the European customs union was a serious possibility. Nor had the implications and consequences of a union embracing so large a sector of world trade been envisaged. Thus, the provisions of Article XXIV are somewhat general in character and in some respects lacking in precision. The Article contains principles and rules designed to ensure that customs unions shall have a liberal character and, in particular, aim at removing barriers within the union, while not erecting new barriers to trade with the outside world. There are also procedures for consultation and discussion designed to ensure the application of these principles and rules and so to afford safeguards for the interests of third countries. Nevertheless, the rules themselves are open to different interpretations and there is wide scope for disagreement as to the ways in which they should be applied. The Rome Treaty, moreover, is in a form which was not entirely foreseen by the drafters of the General Agreement, in that many of the basic features of the Economic Community are left to be worked out over a period of time through the institutions of the Community. In particular, in the vital agricultural sector, what appears to be proposed is a managed market for agriculture rather than free trade. It should also be noted that the Treaty provides for the establishment of an economic union of much greater scope than a customs union.

The discussions in the G.A.T.T., following the presentation of the Rome Treaty to the Contracting Parties, have given ample evidence of the anxieties which have been aroused in many parts of the world. It is clearly in the interest of everybody, not least that of the six Governments themselves, that these anxieties should be set at rest and that the European Economic Community should make a contribution to the general expansion of international trade. It is here that the G.A.T.T. has an essential role to play—a role which it is difficult to see being fulfilled elsewhere or by other means.

Similar problems will arise if a free-trade area convention is signed and comes under discussion by the Contracting Parties. Indeed, it is already clear from the negotiations in Paris that the concept of a free-trade area—which does not have the established theoretical and historical background of the customs union concept—gives rise to serious difficulties in its application, above all when it is sought to apply it to a group of countries with differing tariff structures and commercial policies, and, in some cases, in widely differing stages of economic development.

Trade in Primary Products and Foodstuffs

It is not, however, only from these developments in Europe that the G.A.T.T. has to meet challenges. One of the most difficult problems which came very strongly to the fore in the ministerial discussions at the last G.A.T.T. session is the trade in agricultural products and foodstuffs. This is an issue which, it must be admitted, has been evaded in the G.A.T.T. and was not squarely faced at the 1954-55 review. The text of the General Agreement makes no distinction between trade in industrial products and in agricultural and food products, except that the use of import restrictions is admitted in the case of agricultural products where there is a domestic support programme including restrictions on domestic production or sale. This legal situation, however, bears no relation to the facts. In most countries of the world, trade in agricultural products is subjected to import restrictions and a variety of protective devices other than the customs tariff. Both the Rome Treaty and the free-trade area projects recognise this state of affairs; the former contains a special regime for agriculture and the latter will clearly not be negotiable unless it includes a similar special regime. We have also seen that the emergence of Germany as a powerful creditor nation has brought her into conflict with the G.A.T.T. over the import restrictions which are maintained in the agricultural field. It is clear that this wide divergence between law and practice, as far as the G.A.T.T. is concerned, is no longer tenable, and the agricultural exporting countries have insisted that this whole matter be faced realistically at an early date in the G.A.T.T. The problem is not one which concerns agricultural exporters alone, although an expanding and prosperous multilateral trading system is inconceivable unless those countries—themselves important markets for industrial goods—can be assured of a fair share of this expansion and prosperity. The problem is one which must also increasingly concern the countries which find themselves in the toils of excessive agricultural protectionism. These policies seem to be rapidly approaching self-defeat. The maintenance of artificially high prices is tending to hamper the normal expansion of consumption and is contributing to the accumulation of burdensome surpluses which cannot be sold even in the protected home market and have to be dispersed in one form or another in world markets.

Mounting Dissatisfaction

There is a mounting dissatisfaction—accentuated by the present sharp decline in prices—on the part of the producers of primary products, owing to the instability of their export incomes consequent upon acute short-term fluctuations in prices. This problem is not a new one, but it is more acute today, because the principal exporters of primary products are characteristically countries in an early stage of economic development, driven by overwhelming political pressures to undertake ambitious schemes of economic development and diversification. These programmes are producing inflationary pressures and other disturbances in the national economy which bear hard upon their export interests. At the same time, the determining factor in the capacity of these countries to import, whether capital or consumer goods—despite aid programmes and loans—is their export earnings. It is not surprising, therefore, that the underdeveloped countries should seek a greater degree of stability in the conditions of trade in primary products.

The concern of underdeveloped countries has been increased by the failure of their exports to the industrial countries to share in the general expansion of international trade in anything like the same proportion as the trade between industrialised countries. The export proceeds of the non-industrial countries in their trade with the industrial areas in 1957 accounted for only 23 per cent. of world exports, as against 25 per cent. a year earlier. Since their imports from the industrial areas rose roughly in line with the total value of world trade, they incurred an import surplus which reached the value of $1,500 million in the first six months of 1957 alone. Unless the export earnings of the non-industrial areas in their trade with the industrial countries can be maintained, balance-of-payments difficulties and sharper import restrictions would appear to be inevitable, with consequent adverse effects upon their development programmes.

This group of problems—agricultural protectionism, trade in primary products and the apparent lag in the development of the exports of the less industrialised countries to industrial destinations—was discussed at a meeting of Trade Ministers at the last session of the Contracting Parties. It was decided to establish a panel of experts to examine current trends in international trade, with particular reference to these three problems. The Panel consists of Professors Haberler, Meade, Tinbergen, and Dr. Campos. They will draw up a report in the course of the summer months and it is hoped that it will be available at least for preliminary examination at the forthcoming session of the G.A.T.T. in October 1958.

I come finally to a brief consideration of the United States scene. The Reciprocal Trade Agreements Act, in the national plane, and the G.A.T.T. on the international, are the symbols of the liberal trade policies inaugurated by Cordell Hull and continued by successive United States Administrations. As such, they have been more or less continuously assailed by protectionist forces in the United States, with the result that the hard-won renewals of the Reciprocal Trade Agreements Act have consistently contained a clause specifying that renewal of the Act, which is the basis of United States participation in the G.A.T.T., implies neither approval nor disapproval of the latter. Characteristically, the United States was among the first to approve of the revised G.A.T.T. resulting from the review session—an act within the competence of the Executive—whereas it has proved impossible to secure Congressional approval of the Organization for Trade Co-operation despite the warm commendation of the Administration expressed in the strongest terms by the President himself.

Even if the United States Administration has been able to do little more in the last few years than hold the line, with some backsliding to appease the more furious onslaughts of particular protectionist interests, we should not underestimate progress over what has gone before. The business recession, which has caused such grave concern in the United States, might well have generated a protectionist tidal wave. It has not done so. It remains true, however, that, during the last few years, the United States has not been in a position to give the leadership in the field of international trade policy which its dominating trade position requires. This is very apparent in the G.A.T.T., in the launching and building of which United States leadership was fundamental.

Further to the north of the American continent, there is much uneasiness in Canadian opinion about future trading policies and particularly about the dependence of Canada on the United States market and on United States capital, as well as the persistent trading deficit which Canada runs with the United States. These feelings have been intensified in the minds of many Canadians by the establishment of the European Economic Community which they fear may still further limit the outlets for Canadian exports. The anxieties of Canada have found expression in the convening of a Commonwealth Economic Conference in Montreal.

Conclusions

From this review of contemporary problems, it will be clear that the expectations which might reasonably have been entertained following the review of the Agreement, that the Contracting Parties should continue serenely upon their course, have been rudely shaken, and that many of the basic elements of the General Agreement will again have to be carefully considered and discussed internationally. It would be a most unfortunate turn of events if the strong regional impulses which have developed, not only in Europe but in other parts of the world, should resolve into a splitting of the international trading community into discriminatory trading blocs. It is also fundamental to the future of the international economy that an acceptable settlement of the conditions of trade in agricultural and food products should be arrived at. It is equally essential that constructive and imaginative international action should be directed towards the basic problems of the primary producing underdeveloped countries.

The fate of the General Agreement and, much more important, the fate of all that the General Agreement stands for will turn upon the energy and wisdom with which these difficult problems are faced over the next few months and years. They are all problems which seem to be manageable in a climate of an expanding international economy, but which can easily become unmanageable if, through the revival of restrictionism, the present check in the expansion of international trade were to be prolonged and eventually turned towards decline. Whichever of these occurs turns largely on the willingness and ability of the major trading countries—and here the European Economic Community emerges as a new and powerful force—to give the necessary energetic leadership. Meanwhile, it must remain uncertain whether this fragment of biography of an international institution is an account of childhood and adolescence, leading to a long and fruitful career, or of a promising youth doomed to an untimely end.—*Adapted from a recent address to the London School of Economics and Political Science, London.*

TATA LOCOMOTIVE AND ENGINEERING CO. LTD.

COST OF LOCOMOTIVES FALLS—PROGRESS OF AUTOMOBILE DIVISION STRIKING

MR. J. R. D. TATA DEPLORES REPETITION OF UNFAIR CHARGES BY PUBLIC ACCOUNTS COMMITTEE

THE following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Thirteenth Annual General Meeting of the shareholders of the Tata Locomotive and Engineering Company, Limited, on Wednesday, 24th September 1958:

"LADIES AND GENTLEMEN,

"The annual report and accounts before you reflect the progress which the Company continued to make during the year under review. The construction programmes have proceeded apace. All the buildings have been completed and most of the plant and equipment installed. The total output of locomotives and diesel commercial vehicles and their indigenous content have both exceeded the targets. The Steel Foundry is steadily building up production and the Alloy Iron Foundry is just coming into operation. The improved results of the year's operations have enabled your Directors to recommend an increase in the dividend on ordinary shares from Rs. 8 to Rs. 9 per share. Even with the increased rate of dividend paid this year, the average return of 2.7 per cent. to the ordinary shareholders over the whole period of their investment is still well below what they are entitled to expect. The annual bonus to the employees has been raised from one-and-a-half months' to two months' basic wages, an increase of 33⅓ per cent.

"For the benefit of members, who may not be aware of it, I may explain that the somewhat involved procedure followed in disposing of the profits for the year and in declaring the dividends has been adopted because the income-tax authorities do not treat dividends as free of tax unless they are expressly shown in the accounts as paid out of taxed profits, whether of the year of account or of previous years.

"As stated in the Directors' report, the profits for the year were wholly accounted for by the Automobile Division. The Foundry Division started making castings in June 1957, initially for our own use, and production began to build up only towards the end of the year. The new Welding and Fabricating Division was hardly in production during the year. As regards the Locomotive Division, about which I shall have something more to say later in my speech, while its operations yielded no profit, it may be noted that, in addition to bearing in full its legitimate share of plant and general overheads, it earned full depreciation and development rebate.

Issue of Capital

"I had indicated in my speech last year the need for raising additional finance to meet the heavy commitments for capital as well as operating purposes. Since then, the progress made by the Company and the improvement in the investment market have rendered it both possible and desirable to make a fresh issue of equity capital. As you will see from the notice of the meeting and the Directors' report, it is proposed, subject to the sanction of the Controller of Capital Issues, to raise Rs. 3 crores of additional capital by the issue at par of 300,000 new ordinary shares of Rs. 100 each in the ratio of three new ordinary shares to five existing ordinary shares.

Locomotive Prices

"As mentioned in the report, the expansion of the Locomotive Division of the Company was completed well ahead of schedule and production at the rate of 100 locomotives per year is being maintained. The prices fixed by the Tariff Commission covered deliveries only upto 31st March 1958. The price for locomotives delivered after that date had to be fixed by negotiation with Government. Although the Company's present offer represents a reduction in price of over Rs. 52,000 per unit as compared with the price of the previous period, no agreement could be reached and it has been mutually agreed to refer the matter to the arbitration of Mr. J. N. Majumdar, ex-Judge of the Calcutta High Court, as sole arbitrator.

"As the shareholders are aware, the prices paid to us for locomotives under our agreement with the railways was the subject of an important debate in the Lok Sabha in September last year. The debate took the form mainly of an attack on our Company, although the Railway Board were also criticised for having entered into a long-term agreement with us on terms allegedly favourable to the Company and for being too lenient in its implementation. The Company was charged with low production, high costs and even with taking unfair advantage of the agreement to the detriment of the railways. Facts and figures were quoted in respect of an earlier period when operations were still hampered by construction and development activities. The rapid progress subsequently made towards achieving full production and reducing costs, notwithstanding many unforeseen difficulties and obstacles, was totally ignored.

"Perhaps, the most regrettable feature of the debate was an attack on the Tariff Commission, who had made an exhaustive inquiry into the operations and costs of the Company, with the assistance of a foreign expert selected by the Railway Board, and had come to conclusions different from those sought to be drawn by the movers of the debate. Their findings were challenged and the members of the Commission were charged with partiality in favour of the Company. The preservation of public confidence in such statutory bodies as the Tariff Commission is almost as vital to the stability of a Democratic State as the preservation of public faith in Parliament and Courts of Law. Upto now, their competence and integrity have rightly been unquestioned in our country, and I hope it will be appreciated that an attack on the integrity of the Tariff Commission and similar institutions undermines democracy itself, almost as much as would an attack on Law Courts and Legislative bodies.

Unfair Charges

"In order to correct the one-sided picture which this debate might have created in the public mind about our operations under the agreement with the Railway Board, we published a booklet in December 1957, giving the full facts about Telco and also issued Press statements. I have no wish to reopen this controversy now, but I must express regret that, subsequent to the debate, the Public Accounts Committee of the Lok Sabha has, in its report on Railway Appropriation Accounts for the year 1954-55, repeated some of the old charges against the Company based on the production and costs of years ago without recognition of the vastly different situation prevalent at the time the report was issued.

"It is perfectly true that the railways have paid higher prices for locomotives and boilers purchased from us in the initial years when production was low and manufacturing costs high than those at which they could have been imported; similarly, costs at Chittaranjan in the first years of production were also higher than the corresponding import prices. As output rose and efficiency improved, costs have come down in both factories to a level which today compares favourably with import prices other than the subsidised prices quoted by some countries. The Chittaranjan Works were completed about two years earlier than the Telco Works and it is natural that they should have reached their lowest costs correspondingly earlier. While, according to a recent statement of the Ministry of Railways and Transport, their costs have risen since 1956-57, Telco costs are still declining and the railways will get the full benefit of such reduction in the current and coming years.

"For anyone to find fault with the inability of newly established industries to supply their products from the very start of their operations at prices equal to or lower than the lowest import prices, particularly where, as in the case of the dying steam locomotive industry, such prices are clearly uneconomic or subsidised, is to ignore elementary industrial realities. The principle of protection to essential young industries and the consequential acceptance for some years of higher indigenous costs has been so well recognised and approved a part of our country's economic policies for the last thirty years or more that I am surprised such an uproar should have been created over the normal working of this same principle in the case of locomotive manufacture.

"While it may not be possible to convince all our critics, the fact that, contrary to the complaint that the Company has made large profits out of the railways, it is actually supplying locomotives at no profit or even at a loss, will, I hope, at least convince some of them that the agreement is not so favourable to the Company and unfavourable to the railways as it is alleged to be.

Automobile Division

"As indicated in the report, the progress of the Automobile Division has been most satisfactory. Despite several adverse factors including shortages and delays resulting from the acute scarcity of foreign exchange, the phased programme of indigenous manufacture has not only been fully maintained, but has been exceeded by a significant margin. The parts and components which are now being made at Jamshedpur and for which we shall not have to depend on imports hereafter, include the complete frames with springs, all sheet metal parts, the front and rear axles and the complete transmission including the gear box. The only important item left now is the diesel engine for the manufacture of which preparations are well advanced. With the arrival on site of most of the machine tools and equipment for the Engine Shop and the completion of the Alloy Iron Foundry which has just started operation, the final stage of our programme of manufacture should be completed according to plan, by the end of October 1959, or even earlier.

"Already, within four years, we have achieved both the highest indigenous content as well as the highest output of all manufacturers of commercial vehicles in the country, despite the fact that we were the last to enter the field. This striking and gratifying progress has been made possible by a number of factors. We have not only invested in the most modern plant and highly specialised machine tools but we have built up a team of engineers and workers to use the equipment to the best advantage. We have made sure that our processes and techniques will be equal in every way to the best found in the most modern factories abroad and that the productivity of our labour will be high. We have had the benefit of splendid collaboration from our partners Messrs. Daimler-Benz A.G., who have made available to us a large number of highly competent German engineers and technicians under the fine leadership of Mr. Hans Stoehr.

Housing

"As mentioned in the report over 40 per cent. of the Company's staff are now housed in Company-owned quarters; but since the Company's Works are situated in an area where other suitable housing is scarce, we shall have to continue enlarging our township to provide adequate accommodation for the majority of our staff. Substantial additional housing will be required also for the additional staff we shall be engaging for the expansion of the Works in the next few years. Therefore, to the extent that our resources will permit, the growth of the colony must go hand in hand with the growth of the Works. To meet the additional expenditure, we have requested the Government of India for assistance under the Subsidised Housing Scheme for Industrial Workers.

Labour

"At the end of my speech last year, I had referred to the deteriorating labour situation at Jamshedpur and to the illegal strike accompanied by violence, in August 1957, organised by the communist-led Jamshedpur Mazdoor Union as part of a campaign of disruption in most of the industrial establishments in Jamshedpur in preparation for the assault on the main target, namely, the Tata Iron and Steel Works.

"As most of you are aware, this campaign came to a head in May this year in the Steel Works and the town of Jamshedpur and erupted in an orgy of violence. Thanks to the firmness of the Steel Company's management, the strong action taken by the Government of Bihar to re-establish law and order and to the good sense of the men themselves, the communists failed to achieve their main purpose which was to oust the long-established I.N.T.U.C. leadership and to place themselves in full control of all labour at Jamshedpur. So far as our Company is concerned, we suffered only one day's stoppage as part of the backwash of the main struggle in the neighbouring Steel Works. In view of the illegality of the strike which took place in our Works during the pendency of adjudication proceedings, the Company had no option but to take deterrent disciplinary action against the principal offenders. The labour situation in our Works returned to normal immediately and is better today than it has ever been. Discipline is being maintained, the men are working well and their morale is high.

"Unfortunately, we have not up to now been able to re-establish as good relations as we would like to have with the Telco Workers' Union. After the failure of the Jamshedpur Mazdoor Union to capture the labour movement at Jamshedpur, the Telco Workers' Union has made special efforts to re-establish its leadership and control amongst our workers. I must confess I am disappointed at some aspects of this effort on their part as I feel that the way to acquire support and loyalty from the workers is by sustained constructive work and not by keeping them in a state of agitation through the maintenance of continuous disputes with the management over minor points. I hope, however, that, with mutual understanding, we shall, in due course, re-establish cordial relations and co-operation with the Union. Our men are amongst the highest paid in the industry. Besides good wages, they enjoy excellent conditions of work in a factory equipped with the best of modern machinery; they live in a beautiful township which provides them with high standards of housing, medical facilities and other amenities. They have a fine and safe future before them with varied opportunities for further training and advancement and the relations between them and the management have, on the whole, been excellent. Despite the intensive agitation to which they have been submitted during the last year, a great majority of them have maintained an independent outlook and a high morale.

"In closing, I should like, on your behalf, to welcome our new General Manager, Mr. R. G. da Costa, and to offer our thanks to him and the able team of our officers and workers whose initiative and efforts were mainly responsible for the year's excellent results."

Note: This is not a report of the proceedings at the above annual general meeting.

ELECTRIC MOTORS INDUSTRY

FURTHER ENQUIRY ON CLAIM FOR PROTECTION TAKEN UP

THE Tariff Commission has now taken up the question of continuance of protection and assistance to electric motors industry beyond 31st December 1958. A public enquiry was opened by the Commission at its office on 23rd September, Mr. G. Ramasubban, Chairman, presiding. This is the fourth tariff enquiry on this industry, the previous enquiries having been held in 1947, 1949 and 1955. The scope of the present enquiry covers squirrel cage induction motors of brake-horse-power not exceeding 100 including fractional brake-horse-power, slip ring motors of brake-horse-power not exceeding 100 but excluding flame-proof motors and variable speed commutator motors. Besides, component parts of electric motors, other than control gear, are also included in the purview of the enquiry.

The industry has been enjoying protection for the last 10 years. It, no doubt, passed through various vicissitudes in the early stages of its development. But it is now on the path of steady development and has plans for diversification of production. It may be recalled that the electric motors industry was granted protection for the first time in 1947, on the recommendation of the then Tariff Board. The then revenue duty of 10 per cent. *ad valorem* on electric motors was converted into an equivalent protective duty which remained in force till 31st March 1950. Following the second tariff enquiry (1949), protection was extended to another period of three years. A revenue surcharge of 5 per cent. of the then existing duty on electric motors was levied under the Finance Act of 1951, which raised the effective duty to 10½ per cent. *ad valorem*. Subsequently, the period of protection was once again extended upto 31st December 1955.

Third Enquiry

There was then a third enquiry as a result of which the Government accepted, in 1955, the recommendation of the Commission for the continuance of protection for a further period of three years. The Government also accepted the advice of the Commission that a protective duty at the rate of 15 per cent. *ad valorem* should be levied on imports of squirrel cage motors of horse-power not exceeding 100 but not less than 1/4 of one brake-horse-power and slip ring motors of brake-horse-power not exceeding 100 but not less than 1 brake-horse-power, excluding flame-proof motors and variable speed commutator motors. Besides, it was decided to levy a protective duty at the rate of 20 per cent. *ad valorem* on selected varieties of component parts.

The industry has made great strides since the last enquiry three years ago. Thus, there are at present 21 units manufacturing electric motors as against 12 units in 1955. Of the 21 units, seven are in W. Bengal, six in Bombay, seven in Madras and one in Mysore. Six of these units came into existence only recently. The remaining 15 units account for an annual rated capacity of 359,100 h.p. on single-shift basis, which compares favourably with the figure of 340,545 in 1955. Mr. Ramasubban disclosed that some of these units had already secured permission to expand their capacity At present, the additional capacity licensed to them is 602,340 h.p. Further, it is said that 22 new units have also been licensed with an aggregate capacity of 349,550 h.p. Thus, it is estimated that, when the expansion schemes of the existing units and the installation of new units are completed, the total annual rated capacity of the industry would go upto 1,310,990 h.p. on single-shift basis.

The present trend shows that production is increasing at a fairly rapid pace. The aggregate production of electric motors in the country has gone up from 251,915 h.p. in 1955 to 475,216 h.p. in 1957. During the first six months of 1958, production was about 288,743 h.p. (including the turnover of the six newly started units) or at an annual rate of 577,000 h.p. The Development Council for Heavy Electrical Industries expects the production in 1958-59 to be about 650,000 h.p. and the target it envisages to attain by 1960-61 is 800,000 to 1,000,000 h.p.

In the course of his speech, the Chairman observed that a few schemes for the manufacture of motors of higher horse-power had also been sanctioned by the Government. Jyoti Ltd., Baroda, has made all arrangements for the manufacture of motors upto 500 h.p., 16-pole of slip ring induction type. The firm is said to have already supplied in large numbers squirrel cage totally enclosed motors upto 200 h.p. 4-pole size. In addition, Bharat Bijlee Ltd., Bombay, it is learned, has plans to manufacture, in collaboration with Siemens, (i) motors with flame-proof enclosure suitable for mining and petroleum industries, (ii) variable speed motors for the textile and sugar industries, (iii) special motors for marine purposes, and (iv) motors for cranes and hoists.

Domestic Demand

There is no doubt that, in view of the development efforts in the country, the domestic demand for electric motors will also move ahead. Indeed, the Tariff Commission had estimated in 1955 that domestic demand, then placed at 317,000 h.p., would rise by 10 per cent. annually during the following three years. The Planning Commission, in its programme for Industrial Development 1956-61, has assessed the requirements of electric motors upto 200 h.p. at about 600,000 h.p. a year. According to the Indian Electrical Manufacturers' Association, Calcutta, consumption, on the basis of indigenous production and imports, at 489,316 h.p. in 1956 and 601,124 h.p. in 1957, would move up to 874,245 h.p. by 1961.

It is said that, so far as quality is concerned, consumers in general have expressed satisfaction of the indigenous product. The producers, we are told, are maintaining the quality of electric motors by adopting quality control and better inspection at every stage of their manufacture. The industry has accepted the standard specification ISS-325/1951 (amended in 1956 under ISS-325/1956) laid down by the I.S.I. A few defects, however, are pointed out by certain consumers. These are: (i) weak coils are used in electric motors, (ii) frame sizes of indigenous motors are too big as compared with imported motors of identical h.p., (iii) inferior quality of ball bearings are being used, (iv) faults occur out of bolts, nuts and washers used for balancing of rotor, etc.

Despite the restrictive import policy on electric motors, imports have been on the increase. The value of imports rose from Rs. 1.44 crore in 1955 to Rs. 1.95 crore in 1956 and further to Rs. 4.51 crores in 1957. In the six months ended June 1958, the imports were of the order of Rs. 2.29 crores. Most of the imports of protected categories of electric motors were from the U.K., W. Germany and Switzerland. Exports, on the contrary, were negligible. Electric motors were freely licensed for exports prior to 4th September 1958; since then it has been removed from the controlled list. While there were no exports of electric motors in 1955 and 1956, a negligible quantity valued at Rs. 5,518 was exported during 1957 and the first half of 1958. The Engineering Export Promotion Council, it is to be hoped, would explore further avenues for exports.

It will not be out of place to refer to some of the difficulties experienced by the industry at this juncture. The major difficulty is with regard to the availability of raw materials. The principal raw materials required by the industry are pig iron, steel rods, and bars, electrical steel stampings, copper winding wires and strips, insulating materials such as leatheroid, empire cloth, micamite and impregnating varnish, ball bearings, welded rods and paints. Although most of these materials are produced in the country, the industry depends on imports for a major part of its requirements of ball bearings of larger sizes and some of the insulating materials. The industry has complained about the inadequate supply of certain raw materials, namely, electrical steel stampings, enamelled copper wire, and steel. As regards steel, the general complaint is that actual deliveries do not materialise against the quota allotted to the manufacturers. The industry has also asked for reduction of rates of customs duty on insulating materials.

In so far as the supply of electrical stampings is concerned, the bulk of it is met by Sankey Electrical Stampings Ltd., Bombay. It may be observed in this context that the Tata Iron and Steel Company Ltd., had to cut short its supply of electrical steel sheets to Sankeys as the Company had to close down its plant for repairs and overhauling. It is, however, gratifying to note that Sankeys are making efforts to meet the demand for electrical stampings in the country and stabilise their prices. Nevertheless, the producers of motors have complained that prices of electrical stampings have been on the increase. Further, it is said that the enamelled wires are not readily available in the country. The producers are experiencing difficulties with regard to the quality and price of ball bearings also. Indeed, the Indian Electrical Manufacturers' Association has suggested that facilities should be given for importing the types of bearings which are not manufactured in the country or the production of which are not sufficient to meet the country's demand.

ATOM AND TRANSPORT

Soviet scientists are actively preparing to develop atomic power plants for transport, first of all for sea-going vessels. The plants will lead to a radical technical reconstruction of the U.S.S.R.'s means of transportation, writes Professor A. Yermokov. Nuclear energy will be cheaper than energy obtained from the combustion of coal or any other fuel used today. Energy obtained through the nuclear reaction of uranium is 2.5 million times as much as that obtained from approximately the same amount of coal and 1.5 million times as much as from the same quantity of oil. In order to double the speed of a vessel, the engine-weight and horse-power, consumption and stock of fuel will have to be increased by roughly eight times. At the same time, if the dimensions and weight of transportation means are increased, speed is reduced. Atomic power plants are free of this defect. As they do not require a large stock of fuel, they can sharply increase speed and make it possible for the vessel to cover greater distances without refuelling. It is not easy to develop such power plants. It is necessary to select the best kind of reactor, determine what kind of plant is best suited for each form of transport, and to provide the technical and operational basis for them.

The heart of the plant is the reactor, the source of radioactive radiations, which are dangerous to life. The weight and overall dimensions of reactors equipped with protective devices are very great, whereas transport needs reactors of minimum dimensions and weight. Besides, they have to be cheap, reliable and safe during jolts, pitching and vibration, or sudden shifts of the load in the course of switches. When it is possible to build such a reactor, atomic energy will be used to drive all types of transport, rail, water and air. The Institute of Overall Transportation Problems of the U.S.S.R. Academy of Sciences, it is stated, is working on this problem. Research already completed has made it possible to arrive at a number of conclusions. If a reactor and a turbine saturated with dry vapour are to be installed in sea-going ships of more than 10,000 tons capacity, the latter will be able to carry 15 per cent. more cargo. By switching all such ships to atomic power, it will be possible to cut down by that much the annual capital investments for a particular volume of transportation. The atomic ice breaker that the Soviet Union has already launched, will be able to sail a whole year without having to go into a port.

There are two ways of using atomic power on railways. One is to build atomic locomotives. According to rough estimates, such an atomic locomotive of 3,000 to 4,000 h.p. could pull a train a whole year without refuelling. It will depend on stocks of fuel and water incomparably less than an electric, diesel, gas-turbine or steam locomotive. However, it is more practical and economical to build large nuclear electric stations to supply railways with power. The U.S.S.R. plans to follow this method and go on electrifying railways. Use of atomic energy will eliminate the need of carrying coal or oil, which will mean a sharp reduction in the volume of freight on every kind of transport; it will mean a 14 per cent. reduction on river transport, 26 per cent. on rail, and 39 per cent. on coastal shipping. It will be possible to save every year almost a third of the operating costs of transportation and do away with the need of capital investments to expand its traffic capacity.

This does not exhaust the advantages in store from the use of nuclear energy. After calculating the cost of shipping fuel it can be seen that atomic power stations located hundreds of kilometres from coal basins can already today compete with those using coal. Steam boilers will pass out of the picture and there will be no more soot, smoke or slag.

According to figures published by the U.N. Economic Commission, mineral fuel (coal, oil, shale, and so on) provide 4.4 per cent. of the world's total potential energy, and nuclear fuel (uranium and thorium) 95.6 per cent. These figures do not include the water power or timber-reserves potential. Nevertheless, one can form some idea of the immense prospects that the use of atomic energy holds for the future, for the reserves of mineral fuel are growing less and less all the time. The explored oil deposits will be exhausted in approximately a quarter of a century, whereas the reserves of nuclear raw materials are practically inexhaustible. The earth's crust contains millions upon millions of tons of uranium, and even more of thorium, and either of these elements can be converted in reactors into plutonium or uranium-233, that is, fissionable matter. The rapid development of technology indicates that, in the period of the generation, the boldest dreams can come true much earlier than expected. Atomic energy is already beginning to be used in transport. The time is not far off when atomic locomotives, ships and planes will replace the present means of transport.

NEW PRODUCTS AND PROCESSES

Salt-resistant Paints

PAINTS and varnishes said to be superior to the latest alkyd resin coatings in resistance to salt water, high temperatures and oils have been produced in the laboratory through a new technique, a New York University scientist has reported. The technique, which achieves in advance part of the change that normally occurs during the drying of a paint or varnish, also imparts superior pliability to the film coating, it is claimed. Coating materials made by this method may be applied in the same manner as conventional resin formulations, adhere well to many surfaces and are said to provide excellent baked finishes. As a varnish dries, or cures, it undergoes two principal chemical changes. One is polymerisation—the linking of small molecules in the oil to form large molecules, or polymers. The second is the combining of large molecules with the oxygen of the air. Together, these processes make a continuous solid film coating. The polymerisation can be made to occur in advance by heating the drying oil, such as linseed oil, with peroxide. The rubbery, jelly-like polymer material thus formed has the desirable qualities of the normal polymer, but it does not mix with untreated drying oil. The insoluble polymer can then be redispersed in additional oil by heating the materials with a metal-soap (substance formed by combining some of the oil with a certain metal-containing compound). Thereby, stable film-forming dispersions are produced which have the visual appearance of solutions, but which are actually dispersions of the polymer matter in a new coating material. Coatings made from these dispersions are said to be more resistant and to produce insulating films of greater pliability than it is possible to achieve by the incorporation of resins into oils. In tests, the coatings reportedly preserved their coherence during exposure to temperatures of 250 to 300 degrees Fahrenheit for 456 hours—a much longer period of time than had been possible with resinous products.

Process for Manufacturing Magnesium Carbonate

A process for producing light basic magnesium carbonate has been developed at the Central Salt Research Institute, Bhavnagar. Light magnesium carbonate, it is common knowledge, finds wide applications in the rubber industry and in manufacture of cigarette and other high quality papers. It is extensively used in magnesia insulation lagging. Indigenous production is very insignificant, and is not sufficient to meet the requirements of many consumer industries which have to depend upon imports for their needs. Imports of light magnesium carbonate during 1957 amounted to nearly 1,193 tons, valued at about Rs. 11.99 lakhs. At the Bhavnagar Institute, conditions for the production of light magnesium carbonate have been studied with sea bitterns, so far wasted, used as the basic material. A sea bittern solution of requisite strength is treated with decolorised and upgraded sambhar bittern solution under controlled conditions to precipitate magnesium carbonate. The precipitated mass is filtered and washed. Air is bubbled through the slurry. The precipitate is then filtered, washed thoroughly and dried before pulverising. Alternatively, soda ash can also be used in place of sambhar bitterns. The process has been studied on a semi-pilot plant scale and 80 per cent. conversion efficiency was obtained. The product has a bulk density of 3-6 lbs. per cu. ft. with the following average analysis: Magnesium oxide: 42.1 per cent; iron and alumina: 0.07 per cent; carbon dioxide: 36.01 per cent; sulphates: 0.25 per cent; chlorides: 0.155 per cent; combined water: 20.33 per cent; moisture: 1.08 per cent. Total loss on ignition: 54.4 per cent. Machinery required consists of reaction vessels, rotary vacuum filter, drier, pulveriser and storage tanks. Plant having a capacity of one ton per day is estimated to cost about Rs. 2.5 lakhs. Parties interested in undertaking the commercial development of the process may contact The Secretary, National Research Development Corporation of India, New Delhi.

New Soldering Tool

A new tool for continuous soldering of industrial parts which is of unusually small size, has been developed recently. The tool is now to be made available for commercial use. The tool is said by the scientists responsible for developing it, to be especially efficient in soldering miniature connectors where extreme precision and yet rapid speed of action is required. It has two very thin metal alloy electrodes arranged at an angle of three degrees. These electrodes can be adjusted inwards or outwards to give a working gap at the tip of from 1/32 of an inch up to 3/16 of an inch. It uses a resistance soldering technique and is relatively cheap. The device is also designed so that it can be used with varying heat outputs.

New Wetting Agents for Textiles

A new series of wetting agents which are said to be more efficient than those previously available has been developed. The compounds are expected to be especially useful in the dyeing, finishing, bleaching, de-sizing, and scouring of textile materials. Their efficiency is said to be such that yarn which has been treated with the compound will sink rapidly in water containing only one part of the material in every 4,000 parts of water. At the same time these new agents are said to have excellent solubility and also tolerance to salt. They are also said to have interesting detergent and emulsifying properties. The agents are now at an early stage of commercial development.

NEW PUBLICATIONS

Economic Synthesis. By Boris Ischboldin. Published by New Book Society of India, Post Box No. 250, New Delhi. Pages: 543. Price: Rs. 30.00.

MANY streams of thought have contributed to the development of economics. It is not surprising that they reflect fundamentally different approaches to economic phenomena and problems and even basically different understanding of their nature. Even to present these varying approaches to some single aspect of economic thought and to analyse their relationships to each other is a difficult task. It requires not merely a clear understanding of the views of each of the economists whose writings are examined but a careful clarification of their concepts and ideas and an exposition of these so as to convey an adequate picture of the problems involved. To attempt a synthesis of such varied approaches even over a limited field would be an immeasurably difficult task. It has in fact been rarely attempted, most writers being content to present the separate theories of different writers together with a critical comparison between them. A synthesis, with all that it implies in terms of reconciliation and integration, has rarely been attempted. Even more rarely has such an attempt been successful.

A synthesis of the entire body of economic thought would, therefore, appear to be a task best not attempted. Yet it is exactly this task which Prof. Ischboldin claims to have attempted. "The author of this book believes," says Prof. Ischboldin in his preface to the book, "that his analysis contributes a genuine synthesis of socio-economic problems, not only because he establishes a distinct synthesis between the theories of the permanent and the relative economic laws, but also because he reconciles, in some degree at least, the sound hard core of neo-classicism, momentarily *declasse*, and the modern, popular, and somewhat arrogant Keynesian train of thought." A study of this work does not unfortunately support the author's claim. Whatever else may be the merit of Prof. Ischboldin's work, it does not really succeed in producing an economic synthesis as suggested by the title and claimed in the preface.

The book is in fact only a straggling survey of the various strands of thought that have been presented so far on each of a wide variety of concepts, ideas and problems within the field of economics. On almost every concept or problem, the various views or possible approaches are classified and briefly explained. As he does this, the author makes his own comments and criticisms, which are unfortunately not always clearly distinguished from the views of the economists under discussion. Occasionally the interrelationships between the views of different economists are described briefly. The exposition is not always clear and the book in fact makes difficult reading.

What makes the book so difficult to read is in fact the attempt of the author to cover every possible aspect of each of the problems that are covered and to look at each aspect from every possible point of view. As this approach is followed for a wide variety of problems covering in fact the whole range of economic analysis, one is left with a disturbing doubt about the exact purpose that such a work could serve. One gets no synthetic view of the subject at all, but is left rather with a confused impression of irreconcilable variety.

This is not to suggest that the book does not possess its good points. It draws the attention of English-speaking readers to riches of continental European economic thought. It helps to give the reader a sense of perspective in considering the validity or utility of particular lines of thought with which he is familiar or which he considers to be widely accepted. By its scholarly classification of different approaches to every concept and problem and its study of every aspect of each question in this analytical way, it helps to widen the reader's horizon. Finally, there is the placing of each problem in its philosophical setting, which serves to broaden the basis of the understanding of economic theory.

Economic Synthesis is thus a very special type of book. It is clearly in the German tradition of scholarly study. Though this fact makes it rather difficult for the reader to concentrate his attention on the line of thought evolved through its five hundred and odd pages, it nevertheless serves as a good introduction to this type of writing. It is not a good textbook, yet in many ways it could serve as such, not for the undergraduate student but rather for one who, having already completed his post-graduate studies, is prepared to understand the intricacies with which Prof. Ischboldin deals in this book.

Investors' Encyclopædia 1957-58. Compiled by Messrs. Kothari and Sons, Share, Stock and Exchange Brokers, Oriental Buildings, Post Box No. 267, Madras-1. Pages: 2,567. Price: Rs. 20 (plus Rs. 5 for packing and postage).

The *Investors' Encyclopædia*, which is now in its twenty-first edition, has deservedly earned the reputation of being the most voluminous work of its kind covering, as it does, almost all joint-stock companies in India. Year after year, the utility of the publication is being enhanced not only by adding to the list of companies, the statistics and history of which are given, but by taking care to see that they are made as up-to-date as possible and by providing more useful information of interest to investors.

The two main features of the publication are the general review of economic conditions during the past year and an introductory review of the progress of each industry, which precedes each section. Summing up the present state of the general economy, in the course of their review of 1957-58, the publishers observe:

"The general economy now is that prices are rising, especially in food articles, and have cut into the purchasing power of money. Claims for increase in wages and other emoluments are being made. Taxes are higher. Company reserves are lower and credit for expansion is dearer. Export earnings are small and prospects of external assistance are uncertain. Non-plan expenditure is also running at a high level. All the major industries in both the public and the private sectors are well ahead with their development programme. Several of these have reached a stage, when their slowing down would not only result in arresting their production but also make their eventual completion more expensive."

The introduction to each section, wherein the historical progress of the industry to which the section refers is reviewed, has been made up-to-date and provides an invaluable guide. Since the publication of the last edition, a large number of new industries have come up and these have also been analysed under various sections. A new and welcome feature of the latest edition is the inclusion of the quotations, as on 2nd January 1954, of the shares quoted on Bombay, Calcutta and Madras Stock Exchanges. This will facilitate the assessment of one's tax liability under Capital Gains Tax and Wealth Tax. In short, every attempt has been made to meet the requirements of investors in equities, fixed-yield shares, debentures and Gilt-edged securities.

Fertiliser Statistics, 1957. Issued by the Fertiliser Association of India, 85, Sundar Nagar, New Delhi. Pages: 171. Price: Rs. 3.50.

This is an excellent compilation of agricultural statistics of India, with special reference to the production and consumption of fertilisers. World agricultural statistics has also been included. Diagramatic representation of fertiliser production and consumption and targets of agricultural production and allied data have also been presented. We have seldom seen so much useful information compressed into so few pages. The book deserves high praise indeed.

EMPLOYEES' STATE INSURANCE

1957-58, A YEAR OF "CRISIS"

DURING the brief period of six years of its operation, the Employees' State Insurance Scheme, which was originally inaugurated in Delhi and Kanpur, in 1952, has had to face two "major crises." The first crisis emerged when the employers in the region resented the introduction of the scheme on the ground that, by reason of having to pay regular contributions, their competitive position *vis-a-vis* their rivals in other parts of the country would suffer. The problem was solved by an amendment of the Employees' State Insurance Act, by virtue of which the employer's contribution, which according to the original Act was payable in implemented areas only, was extended to employers throughout the country. The second crisis, which occurred last year, arose out of fortuitous circumstances. The scheme, according to the annual report of the Employees' State Insurance Corporation for the year 1957-58, was put to a severe and exacting test when the epidemic of influenza threatened to dislocate its working. Special and timely measures, says the report, however, helped the scheme to tide over the emergency. Nevertheless, coverage during the year was very small, only 34,000 new employees were covered, as compared with 109,000 in 1956-57, bringing the total coverage to 1,234,000 employees. The scheme now operates in 64 centres spread over 11 States, including the Union territory of Delhi.

Many factors accounted for the small coverage during the year. By the end of 1955-56, all major industrial centres, excluding Allahabad, Sholapur, Bangalore, rest of Greater Calcutta and those in Bihar had been covered. Although the number of centres covered in the two subsequent years was almost as large as in earlier years, they did not compare in density with those covered earlier. The remaining centres with heavy concentrations, have been fighting shy of implementation for a variety of reasons, principally insistence on simultaneous inclusion of families, lack of resources with the State Governments and absence of agreement with the medical profession in regard to the capitation fees for provision of medical care to families in panel areas.

Benefits to Families

As regards extension of medical benefits to families of insured persons, the report says that the Corporation has been anxious to follow a uniform policy in all States, as far as practicable, so that employees in all the implemented areas may draw identical benefits. It may be recalled that the Act gives power to the Corporation to extend medical care to families and it can do so if the finances permit and the State Governments agree. The demand for extension of medical care to families had been voiced ever since the scheme was first implemented in Delhi and Kanpur in 1952. At that time, it was too early to decide whether the resources would permit such an extension. After three years of experience, it was found that, if a certain level of income was assured, the Corporation could provide medical care to the families of insured workers on a restricted scale.

The Government of India agreed to take steps to assure the level of income envisaged and the Corporation decided to extend it to any State which was prepared to do so. As the State Governments share the cost of medical care with the Corporation in an agreed ratio, the States had to consider their financial position. Since quite a few of them found it difficult to make this provision, the Corporation agreed to reduce their liability from one-fourth to one-eighth on extension of medical care to families. The Planning Commission also reviewed the State Government's allocation to make provision for the programme of extension of coverage and inclusion of families to go through as planned. But these measures, the Corporation points out, did not seem to help and at the end of the year it appeared that the Corporation would have to go ahead with provision of medical care to families only in such States as are willing to do so. While this is a matter for regret, adds the report, quite a few Governments, fortunately, have signified their intention to provide medical care to families. The State Government of Mysore is the first to extend the benefit to families with effect from 26th July 1958. Other State Governments are expected to follow suit.

In contrast to the slow trends in coverage, progress in other directions, it is claimed, has been very satisfactory. The standard of medical benefits has been raised to a level which includes not only the provision of modern drugs of proved therapeutic value but also provision for hospitalisation and specialist treatment. Specially reserved bed accommodation and construction of annexes to existing hospitals are bringing up in-patient treatment facilities to the prescribed scale. Besides, says the report, there is every prospect of construction of hospitals for the exclusive use of insured persons in Bombay, Madras, Kanpur, Bangalore and Calcutta in the coming year. Permanent dispensaries are also expected to be constructed in a number of areas in the near future.

Much improvement has been made on the cash benefits side also. Cash benefits have been extended to T.B. patients. Facilities have also been provided to grant allowances and compensation for wages lost in attending Medical Boards and for paying cash benefits by money order without cost. The total amount of cash paid to insured persons during the years 1954-55 to 1957-58 is given below:

(In '000 rupees)

	1957-58	1956-57	1955-56	1954-55	Total
Sickness benefit ..	17,281	10,430	5,735	3,580	37,026
Maternity benefit ..	517	414	214	12	1,157
T.D. benefit ..	1,475	1,859	1,125	641	4,600
P.D. benefit ..	309	193	84	49	635
Dependants' benefit..	133	80	38	25	276
Others	65	34	17	7	123
Total ..	19,780	12,510	7,213	4,314	43,817

Steps have been taken by the Corporation to simplify procedures to ensure prompt service to the beneficiaries under the scheme. For instance, an important measure introduced on an experimental basis enables the benefit rate to be determined on the spot at the local office itself, without any reference to the regional office. This experiment, it is said, has proved successful and has resulted in expeditious payments and it is now being extended to other local offices.

Administrative Delays

While this is certainly welcome news, one wonders whether the steps already taken are adequate to set matters right. For complaints are frequently heard from panel doctors as well as insured persons, of inordinate administrative delays and red-tape in the dealings of the Corporation and the regional offices. There are also complaints of lack of co-ordination between the various departments of the regional offices of the Corporation and of delay in collecting the contributions from the employers. Consequently, insured persons are put to a number of difficulties, such as issue of disentitlement notices even when contributions are regularly being cut from the wages of the insured.

The Corporation should, therefore, concentrate efforts to ensure a reasonable standard of promptness and efficiency before seeking to extend the scheme to other areas and to the families of insured persons. It is true that, in view of the fact that there are about one million workers still to be brought under the scheme, efforts should be made to extend the coverage of the scheme. But, unless the scheme is made to work satisfactorily in areas already covered, there is no justification for bringing additional workers under it. It will certainly serve no purpose to be able to produce impressive statistics of fresh coverage when those already covered still remain dissatisfied with the way in which the scheme is working. Further, services by specialists and hospital facilities available to the insured persons are far too inadequate and particular attention needs to be devoted to this aspect.

ATOMIC INSURANCE

With the prospect that the atom will play a growing role in the years to come in the generation of electric power for peaceful purposes, problems of insuring atomic plants against nuclear hazards has taken on a new and obvious significance. Atomic insurance was one of the subjects which received more than a passing reference at the international Atoms-for-Peace Conference held at Geneva from 1st to 13th September. It is encouraging to find that this kind of insurance coverage is already being offered by private companies in a few countries, notably the United States. Indeed, according to Mr. Ambrose B. Kelly, General Counsel of the Associated Factory Mutual Companies of the U.S., the coverage offered against nuclear hazards "is regarded as the broadest property insurance yet developed in the American insurance market."

Addressing a meeting of the Insurance Section of the American Bar Association in Los Angeles, California, Mr. Kelly recently pointed out that atomic insurance policies "provide a degree of protection now available on non-nuclear risks." This can be taken as an indication of the willingness of the insurance industry to enter new fields. But it also reflects the effective safety measures devised for atomic stations and the excellent safety record established by nuclear plants already in operation.

It is interesting to note, in this connection, that atomic insurance has concentrated on nuclear risks in which catastrophic losses, such as could affect any industrial plant, are of primary importance and in which radiation exposure is incidental. By pooling their resources, insurance companies are able to provide insurance on a single nuclear risk of $65 million or more. Describing the extent of coverage offered on these risks, Mr. Kelly pointed out that the rate established by the insurance industry's Nuclear Insurance Rating Bureau (N.I.R.B.) took into account the perils of fire and other conventional coverages, including boiler and machinery coverages, as well as the nuclear peril. The scores of risks currently insured have each been specifically rated by the N.I.R.B.

Radioactive contamination on the insured property is, of course, included in the coverage offered, under a special "all risk" provision. Insurance against this kind of contamination also is available for other non-nuclear property owned or occupied by the insured.

Mr. Kelly recalled that, after a study of the atomic problem back in 1956, it was generally agreed in the insurance industry that a new kind of insurance contract would be required—one which would give protection against all risks of physical loss or damage, but with specified exclusions for such clearly non-nuclear factors as floods. Since it is difficult to determine, in case of a loss, how much of the damage was due to a machinery or valve breakdown and how much to a fire or explosion, a comprehensive contract, covering incidents of both types, was devised to solve the problem.

All this does not mean that every problem of nuclear insurance has been successfully overcome. One problem still to be resolved, for instance, concerns the field of nuclear-powered vessels and it involves the question of liability for damage caused to the ship's cargo, passengers, and other property and persons. Existing marine insurance is adequate at present to cover the owners of the ship itself and the cargo it carries against physical loss or damage from a nuclear incident. As in the case of atomic industrial plants, this in itself is a measure of the excellent safety factors being built into atomic ships. But with nuclear ship propulsion now a reality and destined to assume a growing role in maritime commerce—witness the successful U.S. nuclear submarines and the soon-to-be-completed American nuclear surface ship, *Savannah*—this liability subject is bound to claim increasing attention. In fact, it has been the subject of some discussion at the latest meeting in Salzburg, Austria, of the International Union of Marine Insurance, which was attended by representatives from 28 countries. In time, a solution to this and other remaining atomic insurance problems can be expected, if the advances already scored in this new and important field are any indication. The very fact that these insurance problems arise is, of course, a reflection of progress being made in harnessing the atom for the benefit of mankind.

HERCULES INSURANCE COMPANY, LIMITED

A sizable improvement of Rs. 4.24 lakhs in the net premium income of the Hercules Insurance Company, Ltd. (Managing Director: E. K. Srinivasan), is disclosed by the audited accounts of the Company for the year ended 31st December 1957. Net premium income in the fire, marine and miscellaneous departments during the year aggregated Rs. 58.30 lakhs, as against Rs. 54.06 lakhs in the previous year. All the three departments shared the improvement, the rise in net premium being the most marked in the marine department where it increased from Rs. 11.40 lakhs in 1956 to Rs. 15.18 lakhs in 1957, a rise of as much as 33 per cent. Commission and expenses showed a relative decline. The year's working resulted in a profit of Rs. 4.35 lakhs. The dividend has been maintained at Rs. 2 per share (20 per cent.), without deduction of income-tax. The following table shows the working results of the Company during the past three years:

(In lakhs of rupees)

	1957	1956	1955
Fire—			
Net premium	35.17	35.03	
Claims	16.76	13.35	31.77
Commission and expenses ..	14.71	14.03	11.09
Fire fund	17.58	17.51	14.13
Accident—			15.88
Net premium	7.95	7.63	
Claims	2.86	2.60	7.39
Commission and expenses ..	2.55	3.29	2.88
Accident fund	3.97	3.81	2.90
Marine—			3.69
Net premium	15.18	11.40	
Claims	9.22	5.84	7.85
Commission and expenses ..	2.82	3.07	5.62
Marine fund	15.18	11.40	8.24
			7.85

Net premium income in the fire department amounted to Rs. 35.17 lakhs, as against Rs. 35.03 lakhs in the previous year. Claims paid and outstanding were of the order of Rs. 16.76 lakhs (47.7 per cent. of premium), as against Rs. 13.35

COMPOSITE SYSTEM OF SALES TAX FOR BOMBAY STATE

SUGGESTIONS OF INQUIRY COMMITTEE ANALYSED

A COMPOSITE system of sales tax which provides for taxation at the stage of first sales of certian goods and of last sales of certain others and also for exemptions from sales tax, has been the unanimous recommendation of the Sales Tax Inquiry Committee (Chairman: Mr Babubhai J. Patel), appointed by the Government of Bombay in December last. By its terms of reference, the Committee was asked to recommend a system of sales tax, capable of application to all the component units of the State and to suggest in what manner the administration of the tax could be improved. The Committee's recommendations are based upon its own expert probe into the levy and administration of sales tax, in the course of which it examined over 500 replies received from trade associations and interviewed 33 individuals and representatives of 201 associations.

The administration of sales tax in the Bombay State has proved more arduous than in any other State, because, apart from the fact that it is a large and industrially advanced State, it now includes as many as five regions which were formerly under different administrations—the original Bombay State, part of Madhya Pradesh, Kutch, Saurashtra and Marathawada (part of former Hyderabad State). Each of these territories has had a different history of sales tax. A general sales tax was introduced in Madhya Pradesh by the C.P. and Berar Sales Tax Act 1947 which was made applicable to Kutch State with certain modifications in 1952, though the law was actually enforced only in 1955. Sales tax was introduced in Saurashtra in 1950. In the Marathawada region, a selective form of sales tax was introduced by the Hyderabad State Government in 1947.

Bombay State

In the original Bombay State, the genesis of sales tax can be traced to the tax on sales of tobacco, imposed in March 1938. This was followed by the Bombay Sales Tax Act 1939 which levied a sales tax on motor spirit and manufactured cloth. The Bombay Sales Tax Act 1946 provided for the levy of a tax at the last stage of sale of goods. An expert official committee (Chairman: Professor D. R. Gadgil) appointed in 1946 by the State Government, recommended, among others, a general turnover tax. The Government accepted many of the Committee's recommendations, except the suggested change in the basis of tax. A change-over to the multi-point system was made in 1952. In April 1954, the Government introduced what has now come to be known as the "two-point" system of tax on sales. Under this system, which prevails in the original Bombay State, the turnover limits attracting liability to tax are Rs. 10,000 per year for manufacturers and importers and Rs. 25,000 in the case of all other dealers. Briefly, a sales tax is levied at the first stage of the sale of goods; a general sales tax is also levied on every transaction in addition to the sales tax, though this general levy is postponed, where the sale is to a wholesale dealer, to the stage where the last wholesaler resells the goods to a retailer. This is done through a system of licences which are issued to dealers whose turnover consists substantially of sales to other dealers and purchases are made free of general sales tax against such licences. The rate of sales tax varies from commodity to commodity, the maximum being 8 per cent., while the rate of general sales tax is uniformly fixed at 3 per cent.

It is against this background that the Committee's recommendations must be viewed. Before the Committee completed its work, it felt that it was advisable to communicate to the Government its views on sales tax in relation to the textile industry which was "passing through a difficult phase." In its communication to the Government, the Committee stated that it did not favour a system of tax-free purchases or of set-off of sales tax paid against purchases in respect of any of the goods required by the cotton textile industry as raw material, processing material, fuel, lubricant, machinery, expendable stores and packing material. It felt that whatever relief was to be given to the industry should be by way of fixing such a low rate of tax on the sale to the industry of these commodities that it could be absorbed in the price of the finished goods without unduly affecting the competitive position of the industry in the market inside the State or in inter-State or export trade. Accordingly, it recommended the following rates of sales tax:

(a) Cotton—ginned or unginned—1 per cent.

(b) Coal, coke, furnace oil, lubricants and other petroleum products, expendable mill stores, dyes, chemicals, other processing materials, and such items of machinery, plant and accessories and spare parts thereof, as Government may, by notification, prescribe in this behalf—2 per cent.

The Committee further recommended:

(a) that the tax be levied at the last stage of sale in respect of all the above goods except coal and coke which, the Committee suggested, may be taxed at the first stage of sale; (b) when the rate of tax leviable in respect of the sale of any of the above items (other than cotton) was higher than 2 per cent. the cotton textile mills should be required to furnish the prescribed certificate against the sale to the mills of every such item at this concessional rate of 2 per cent., and (c) when cotton or any other item of the goods mentioned above was purchased by a textile mill from a person other than a registered dealer, purchase tax should be payable thereon at the same rate as would have been payable had the purchase been made from a registered dealer.

Revenue

A notable feature of the Committee's experience gained by its discussions with trade and industry is that all sections of opinion readily acknowledge that sales tax "has come to stay." In Bombay State, the revenue from sales tax, excluding the tax on motor spirit and intoxicants, has increased from Rs. 44.58 crores in 1951-52 to Rs. 60.53 crores in 1955-56. The Committee observes that the sales tax "owes its special position in Bombay, as, indeed, in other States in India, not merely to the size of its yield but also to the expansiveness which its inherent elasticity and wide coverage imparts to the fiscal structure of the State." In the course of its inquiry, the Committee found that there was a large body of opinion which favoured the substitution of excise duty for sales tax. This solution, however, cannot be implemented in respect of all commodities. It would also need the prior concurrence of all States in India. The Committee has, however, emphasised that "whenever there is a specific proposal from the Central Government for levying an additional excise duty in lieu of sales tax on certain excisable commodities, the Government of Bombay should examine such proposal dispassionately."

After weighing the advantages and disadvantages of the various systems of sales tax, the Committee has come to the conclusion that a composite system would be the most convenient "from the point of view of simplification, uniformity of application and incidence in all areas and the revenue requirements of the State." Accordingly, the Committee has formulated three lists of commodities. The commodities listed under List I will be taxed at the first stage alone, all subsequent transactions being exempt from the tax on the furnishing of suitable certificates. The articles in List II will be charged at the last stage alone. A separate treatment is recommended for the first 13 items of List III and all other goods.

List I

There are 69 entries in List I, on which the rates of tax vary from 2 per cent. to 25 per cent.

Briefly, this list contains the following:

artificial silk yarn, betel-nuts, coal, coke in all its forms, dyes and chemicals, furnace oil, gunny bags and hessian, iron and steel, raw silk and silk yarn, safety matches (excluding matches used as fireworks), staple fibre and staple fibre yarn, starch made from maize or tapioca, agricultural machinery and implements—2 per cent.;

drugs and medicines, machinery spare parts, vegetable non-essential oils (other than hydrogenated)—3 per cent.;

bricks and roofing tiles, caustic soda and soda ash, coal gas, electrical goods, footwear, furniture, non-ferrous metal sheets, rods, etc., stainless steel and sheets and rods, paper including newsprint, petroleum products including diesel oil and vaporising oil (except furnace oil and except kerosene oil and motor spirit declared as tax-free under the list of exempted goods), pipes and fittings of pipes, razor and razor-blades, sewing machines, soaps, spectacles and spectacle frame of all kinds, strawboard, sweetmeats and farsan, timber other than firewood—5 per cent.;

aerated waters, bicycles and cycle combinations, tyres, tubes, etc., cement, hydrogenated vegetable oil including vanaspati, ice, paints, lacquers and varnishes, tea, coffee and chicori—6 per cent.;

motor vehicle spare parts, tyres and tubes, photographic and other cameras and enlargers, lenses, paper, etc.—7 per cent.;

clocks, timepieces and watches, fireworks, articles made of glass, china, porcelain or glazed earthenware, vacuum flasks of all kinds and thermoses—8 per cent.;

aeroplanes, air-condition plants, arms and ammunitions, binoculars and opera glasses, cigarette cases and lighters, cinematographic equipment, dictaphones and other similar apparatus, domestic electrical appliances including electric fans, foamed rubber sheets, pillows, cushions, mattresses and other articles, furs and skins, furniture made of iron or steel and upholstered furniture, gold and silver filigree, lifts, motor vehicles as defined under the Motor Vehicles Act and chassis of motor vehicles, pile carpets, refrigerators and mechanical water coolers, sound transmitting equipment including telephone, tabulating calculating and other machines, typewriters, duplicating machines and mechanical duplicators, wireless reception instruments and apparatus and radio gramophones, transistors, batteries, electrical valves, amplifiers and loudspeakers and X-ray apparatus and equipment—10 per cent.;

spirituous medicinal preparations (other than those declared not to be capable of causing intoxication)—25 per cent.

List II

The 20 items in List II, which will be taxed at the last stage alone at rates varying from ½ per cent. to 10 per cent., are:

bullion and specie, articles made of gold and silver—½ per cent.;

cotton, that is to say, all kinds of cotton (indigenous or imported) in its manufactured state, whether ginned or unginned, baled, pressed or otherwise, but not including cotton waste, cotton-seed, cotton waste, raw wool, wool tops and woollen yarn (other than knitting yarn)—1 per cent.;

chillies and chilly powder, *gur* including *kakavi*, or *kakab*, hides and skins in a raw or dressed state or tanned, oilseeds, jute, ready-made garments, tamarind, turmeric and turmeric powder—2 per cent.;

milk products including butter, ghee—3 per cent.;

dried fruits and dried vegetables, pepper and other spices—5 per cent.;

jari thread and embroidery materials, synthetic jewellery, cultured pearls and synthetic precious stones—6 per cent.;

jewellery—10 per cent.

List III

The scheme of taxation in respect of the first 13 items in List III and all other goods is as follows:

(i) in respect of goods not required by manufacturers and processors, there will be three types of taxes: the "sales tax" which will be paid at the first stage, that is, by the manufacturer or other producer and importer, a "general sales tax" which will be paid at the last wholesale or semi-wholesale stage, and the "retailers' turnover tax" which will be paid on the turnover of his sales by a retailer who has purchased the goods from the manufacturer, importer, wholesaler or semi-wholesaler, as the case may be;

(ii) goods required by manufacturers as raw and processing or packing materials other than basic raw materials mentioned in List II, should be purchaseable free of all taxes against a "recognition" granted to manufacturers and processors.

The "general sales tax" will be uniformly at a flat rate of two per cent. but the "sales tax" will vary from three per cent. to eight per cent., depending on the comparatively more or less essential nature of the goods. The "retailers' turnover tax" which the retailer will pay on his total turnover of sales of taxable goods will be 0.25 per cent. of the retail sales price whether he sells the goods to another registered or unregistered dealer or to a consumer. Where a licensed dealer sells goods directly to a consumer, the "general sales tax" payable by him will be only 2 per cent.

The rate of general tax and the rate of retailers' turnover tax on goods in List III, as already stated, are fixed at 2 per cent. and 0.25 per cent. respectively. Only, the rate of sales tax varies from 4 per cent. to 8 per cent. In the following entries, which constitute List III, only the rate of sales tax is indicated:

cakes, biscuits, chocolates, floor and wall tiles, foodstuits and food provisions of all kinds and toilet articles—4 per cent.;

braids, borders, laces and trimmings, ladies' handbags, suitcases—6 per cent.;

articles made of ivory, sandalwood or blackwood, marble and marble articles, musical instruments, perfumes and cosmetics, stainless steel articles, table cutlery—8 per cent.;

all non-exempt goods (other than those in List I and List II)—3 per cent.

Purchase Tax

As regards purchase tax, the Committee notes that complications are commonly alleged to have followed in the train of the provisions made for purchase tax in the Bombay law. It has contrived that, as far as possible, the system it suggests should operate without this tax. It finds, however, that in any system which incorporates a levy wholly or partially at the first stage, purchase tax must be provided for as a safeguard against avoidance of tax on considerable scale, though not amounting to evasion. Manufacturers buying materials from primary producers like agriculturists, will be required to pay the purchase tax on such purchases; otherwise, the legitimate established intermediaries between the primary producer and the manufacturer would be ousted. It, therefore, recommends the imposition of a purchase tax in respect of the purchases of goods from persons other than registered dealers, in the following circumstances:

(i) in the case of goods on which tax is leviable only at the first stage, a licensed dealer should pay the purchase tax on such goods purchased for resale or consumption. An unlicensed registered dealer buying such goods for consumption alone should also pay the purchase tax. A pure retailer, who will normally hold no licence, should on the same class of purchases pay the purchase tax only if the annual turnover of such purchases exceeds Rs. 2,500;

(ii) in the case of goods taxable only at the last stage, a licensed dealer buying the goods for consumption alone, and not for resale, should pay the purchase tax. On the same type of purchase, a registered dealer who is a manufacturer buying the goods for consumption or a pure retailer whose turnover of such purchases exceeds Rs. 2,500, should pay the purchase tax, while other unlicensed retailers will not;

(iii) in the case of goods in List III, where a licensed dealer buys goods from a person other than a registered dealer for use in manufacture, he will pay purchase tax equal to the sum of the "sales tax" and the "general sales tax"; a licensed dealer who buys such goods for resale will, however, pay purchase tax equal only to the "sales tax."

A registered dealer who is a manufacturer, or is a pure retailer whose turnover of such purchases exceeds Rs. 2,500 per year, will pay purchase tax equal to the sum of the sales tax and the general sales tax. Any other registered dealer who is a pure retailer, will not pay the purchase tax. It is, of course, the intention that where purchase tax is leviable on a transaction, there should be no question of the levy of any other tax on the same transaction or any tax on the resale of the same goods by the person liable to pay the purchase tax.

Exempted Goods

In drawing up the list of goods, which will be exempt from all sales tax, the Committee has endorsed the view of the Gadgil Committee which held that the list of exemptions should be as small as possible. However, it had to consider the fact that "not merely the trade, but also the community as a whole, has long since become accustomed to the lists of exemptions which have been in force for an appreciable period." Briefly, the list of exempted goods which the Committee has drawn up consists of:

Certain agricultural implements, including ploughs and plough points, pick-axes, shovels and sickles, betel leaves, bread in loaf or rolls or in slices, toasted or otherwise, buttermilk, curds and lassi, books, journals and periodicals including almanacs and panchangs, cattle, sheep and goats, cattle-feed including fodder and concentrates but excluding cottonseed, cereals and pulses in all forms (except when sold in sealed containers), charkha and other implements used in the production of handspun yarn, cloth woven on handlooms (other than cloth woven of pure silk with or without jari, all varieties of cloth manufactured in mills or on power-looms excluding pure silk cloth), cooked food and non-alcoholic drinks served at one time at a cost of not more than Re. 1 per person, country bullock-carts, dhabla, ghanghadi kumbli or kambla or pachhedi woven on handloom exclusively out of handspun woollen yarn and sold at a rate not exceeding Rs. 15 each, eggs, fertilisers, firewood and charcoal, fish (except when sold in sealed containers), flour including atta, maida, besan, sujl and bran (except when sold in sealed containers), flowers, footwear made by hand without using power at any stage (when sold at a rate not exceeding Rs. 7 per pair), fresh fruits, fresh vegetables and edible tubers, glass bangles, handlooms and parts thereof, articles and utensils made of kansa, kerosene, kumkum, mangalsutra with black glass beads but not containing pearls or precious stones, manures including oil cakes, meat excluding flesh of poultry and feathered game (except when sold in sealed containers), milk, whole or separated including toned milk.

The regulations for registration recommended by the Committee are that dealers who are importers or are manufacturers, processors, etc., and have a turnover exceeding Rs. 10,000 per annum, of which the value of imports or of manufactures is not less than Rs. 2,500, should be liable for registration. The minimum turnover limit in this respect for other categories of dealers should be Rs. 30,000. There should be no provision for voluntary registration or for registration on reaching a specified turnover lower than the minima prescribed for liability to tax. Again, dealers should not be made liable for registration or payment of tax (i) if their turnover is exclusively of non-taxable goods or (ii) their annual turnover of sales or purchases of taxable goods is less than Rs. 2,500, although the aggregate of such turnover together with that of non-taxable goods may exceed the minimum limit prescribed for registration or payment of tax. Further, dealers having a turnover of sales to other registered dealers exceeding Rs. 50,000 per annum, should be granted licence and be enabled to make purchases for resale free of the general sales tax. The system of authorisation incorporated in the Bombay Sales Tax Act of 1953 should be extended to all areas of the new Bombay State. The minimum turnover limit for the grant of authorisation should be Rs. 30,000 per annum of sales in the course of export or inter-State (but not inter-regional) trade. Registered dealers who may not be eligible for authorisation should be allowed refund or set-off of tax paid on purchases on proof of export of inter-State sales.

Commission Agents

The Committee has also suggested that the law should provide for the business of commission agents who transact business on behalf of their principals. Such agents should be enabled to make purchases against their own licences and authorisation certificates on account of their non-resident principals on payment of tax at the reduced rate of 1 per cent. provided that both the commission agents and the non-resident principals are registered under the Central Sales Tax Act of 1958. A commission agent should similarly be enabled to make tax-free purchases against his own licence on behalf of a resident principal who is himself the holder of a licence. Such agents should also be enabled to make tax-free sales to holders of licences or of authorisation or recognition certificates. They should pay tax due on the principals' sales effected through them; their principals should show these sales in their returns but should be deemed to have discharged their liability to pay tax by producing certificates given by commission agents which commit them to the payment of tax or show that the sales have been made to dealers entitled to make tax-free purchases. Purchases made for transfer to branches outside the State should be allowed to be made in such a manner as to bear a burden of tax equal to that borne by a similar transaction in the course of inter-State trade. Should such a purchase have been made on payment of tax in full, refund should be given of the excess tax paid. If goods initially purchased free of tax are eventually transferred to a branch outside the State, the dealer's turnover liable to tax should be suitably increased so as to yield an amount of tax equal to that leviable on the sale of the goods in the course of inter-State trade. Sales on consignment basis through a non-resident dealer should be treated in the same manner as transfers to a branch outside the State.

Administration

In the administrative field, the Committee has suggested certain measures which, it feels, will bring about a better understanding between the taxpayer and the administration. The appointment of a sales tax advisory committee at State level for consultation, among other matters, on draft rules and amendments has been proposed. Committees at the divisional level to deal with local problems have also been suggested. It has also been recommended that the time at present given for the submission of quarterly returns and revised returns should be extended and that unlicensed retailers who are not manufacturers should be given an option to submit an annual return although paying the tax quarterly.

The Committee has looked into the working of the sales tax department and has recorded its impression that, in general, this is not unsatisfactory. It has also found that the complaints in the particular cases examined were not substantiated. However, it has made a number of detailed recommendations conducive to greater efficiency and to the convenience of the trade. Greater facilities, both for the dealers and the staff as well as for informing the public and individual dealers, strengthening of the administrative machinery for compilation of statistics on sales tax and allied matters, adoption of higher standards in making appointments to the junior cadres of the sales tax department and adequate training facilities, both for the staff of the department as well as of the dealers, are some of the recommendations on this point. A suggestion has been made to the effect that examinations must be held in order to test the knowledge and ability of the large number of sales tax practitioners enrolled under the present law who do not have specialised accountancy or legal qualifications, with a view to eliminating those who are not adequately equipped.

Evasion

The Committee has dealt comprehensively with the problem of evasion and corruption and has emphasised the need for a close check on the movement of goods by road so as particularly to curtail abuse of concessions given to the inter-State and export trade. It has also recommended that, in the case of contravention of the sales tax laws involving no moral turpitude, the department should have power to levy a fine. This would, in its view, eliminate the present need for prosecuting dealers for offences such as the non-submission of returns, which need arises today only because the department cannot have recourse to any other form of penalty.

In dealing with complaints of harassment in connection with visits to dealers' premises, the Committee has recommended that such visits should be paid only after the highest sales tax authorities in the area have satisfied themselves that, in view of the extent of the evasion, the visits are necessary. Books of accounts and other records seized in the course of searches of premises should be returned as soon as possible and, in the meantime, permission to take copies or extracts from those books and records should not be withheld initially for more than a month and, with the permission of the head of the department, for a further period not exceeding two months.

IMPERIAL TOBACCO'S PROFIT DECLINES

TAX BURDEN HEAVY—PRODUCTION COST HIGH

YET one more year of unencouraging working is disclosed by the audited statement of accounts of the Imperial Tobacco Company of India Ltd. (Chairman of the Board of Directors: Mr. G. H. J. Clarke, Calcutta) for the year ended 31st March 1958. The Company's profit has suffered a recession for the second year in succession. Coming as it does against the background of a steady upward trend noted in its profit in the three years preceding 1956-57, the performance of the Company during the year under review is, if anything, disappointing. This has resulted in a further curtailment in the allocation to reserves and the repetition of the lower dividend paid for 1956-57.

The gross profit at Rs. 356.79 lakhs has further declined by Rs. 19.26 lakhs from Rs. 376 05 lakhs for 1956-57 to which level it had fallen by Rs. 39.66 lakhs from that (at Rs. 415.71 lakhs) for 1955-56. The gross profit for the year under review is even lower than that (Rs. 363.57 lakhs) for 1954-55. The dividend of 7 per cent. for the year under review (consisting of two interims of 2 per cent. each and a final of 3 per cent.) is the same as that for the previous year. It compares unfavourably with 8 per cent. per annum for 1954-55 and 1955-56, though it is a little better than 6 per cent. paid for 1953-54.

The net profit at Rs. 132.12 lakhs has declined by Rs. 5.83 lakhs. The relatively lower decline in the net profit is due to the substantial cut in the provision for taxation from Rs. 196.33 lakhs to Rs. 178.58 lakhs. The provision for depreciation, however, has been slightly raised from Rs. 41.77 lakhs to Rs. 46.09 lakhs. The provision for taxation, it may be noted, includes a sum of Rs. 12.38 lakhs by way of wealth tax. The reduction in the provision for taxation does not mean that the incidence of taxation on the Company has fallen. It may be noted here that the provision made for 1957-58 is a little over 50 per cent. of the gross profit (before depreciation). Besides, the Company has had to pay a large sum by way of customs and excise duties. The inroads made by both direct and indirect taxation are thus large indeed. While taxation has thus remained high, manufacturing and other expenses have increased sizably.

As stated earlier, the fall in the profit has adversely affected the allocation to reserves. Thus, a sum of only Rs. 27 lakhs has been conserved, as against Rs. 31.72 lakhs a year ago and Rs. 65.50 lakhs two years earlier. Of the sum of Rs. 27 lakhs, as much as Rs. 20 lakhs have been credited to fixed assets and stock replacement reserve. This reflects the Directors' anxiety to make sufficient cover for the additional sums required to replace fixed assets and raw materials, so that the Company might have a cushion against any adverse fluctuation in the value of these assets. The balance is made up of Rs. 3.03 lakhs to development rebate reserve, Rs. 2.65 lakhs to capital reserve and Rs. 1.32 lakhs to general reserve.

The table given below makes a comparative study of the Company's trading and financial results during the past three years easier:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	32,61.20	32,11.58	30,36.37	28,44.15
Other income	66.16	60.84	52.81	19.66
Closing stock of finished goods ..	2,92.07	2,53.65	1,71.81	1,85.20
Customs and excise duties ..	12,99.13	12,73.86	11,58.95	*
Expenses including raw materials consumed	17,09.82	16,22.52	15,14.50	25,00.24
Gross profit	3,56.79	3,76.05	4,15.71	3,63.57
Provision for—				
Depreciation	46.09	41.77	49.12	45.89
Taxation	1,78.58	1,96.33	1,79.88	1,49.81
Net profit	1,32.12	1,37.95	1,36.71	1,68.87
To reserves	27.00	31.72	65.50	49.68
Dividend	1,06.12 (7%)	1,06.12 (7%)	1,21.28 (8%)	1,21.28 (8%)
Carry forward	24.05	25.04	24.94	26.01

* Separate figures showing this expense not available.

It will be seen from the table above that the rise in the Company's sale proceeds has not maintained the pace noted in the previous years. Thus, they have increased by only Rs. 49.62 lakhs in the year under review, as against an increase of Rs. 175.21 lakhs in 1956-57 and Rs. 192.22 lakhs in 1955-56. This is partly due to the ever-increasing competition in the industry, despite the popularity of the Company's manufactures among the consuming public. A part of the small rise in turnover is accounted for by the rise in taxation of tobacco and in the cost of raw materials consumed and other expenses, so that, in the final analysis, there appears to have been no improvement in the actual turnover. It will be seen from the table that, apart from the rise in customs and excise duties from Rs. 12.74 crores to Rs. 12.99 crores, other expenses have also shot up from Rs. 16.22 crores to Rs. 17.10 crores. Of this, salaries, wages and bonus alone show a rise from Rs. 386.33 lakhs to Rs. 410.07 lakhs.

The balance-sheet of the Company as at 31st March 1958 shows that the total assets stand at Rs. 27.07 crores, of which goodwill and trade marks (at cost) account for Rs. 4.90 crores and written down value of fixed assets for Rs. 3.67 crores. The gross value of the fixed assets amounts to Rs. 5.71 crores, including an addition of Rs. 1.15 crore made during the year. Investments amount to Rs. 78.10 lakhs (having gone down from Rs. 1.13 crore at the end of March 1957), of which those in Government securities (at market value) alone account for Rs. 64.55 lakhs. The other current assets aggregate Rs. 17.72 crores; these include stocks of raw materials and manufactured goods Rs. 9.75 crores, debts and advances Rs. 5.09 crores and cash balances Rs. 2.15 crores. The current liabilities and provision for taxation aggregate Rs. 2.61 crores. The net assets thus amount to Rs. 24.46 crores and these are represented on the left side of the balance-sheet by paid-up capital amounting to Rs. 15.16 crores and reserves and surplus Rs. 9.30 crores. Of the reserves, general reserve accounts for Rs. 4.65 crores and fixed assets and stock replacement reserve for Rs. 3.70 crores.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 12.06 *ex-div.* At this rate and, on the basis of the dividend for the year, the yield works out to 5.8 per cent. per annum, free of income-tax.

COORLA MILLS MAINTAIN DIVIDEND

In common with other units in the textile industry, the Coorla Spinning and Weaving Company Ltd. (Managing Agents: Messrs. Cowasjee Jehangir & Co. Private Ltd., Bombay) also has reported a decline in profit in its working during the year ended 31st March 1958. The Company's gross profit for the year under review amounts to Rs. 12.93 lakhs. This represents a fall of Rs. 9.25 lakhs from Rs. 22.18 lakhs for the previous year, to which level the gross profit had increased from Rs. 17.80 lakhs earned in 1955-56. The net profit at Rs. 5.91 lakhs, after paying Managing Agents' commission, depreciation and taxation, is only but a fraction of Rs. 15.66 lakhs for 1956-57.

A sum of Rs. 5.26 lakhs has been provided for depreciation, as against Rs. 4.79 lakhs in the previous year. Taxation absorbs Rs. 1 lakh as against *nil*. This amount includes Rs. 25,000 set aside for wealth tax. The directors have written back Rs. 1 lakh from the dividend reserve and another Rs. 1.64 lakh from taxation reserve, representing excess provision made in previous years. This, the Directors explain, is due to their decision to pay a part of the dividend from the net profit for the year and the balance from amounts set aside from taxed profits in the past and credited to reserves. The object is to enable the shareholders to get exemption from payment of income-tax since the distribution is made from taxed profits of earlier years.

The fall in profit has necessitated a reduction in the allocation to reserves from Rs. 11.18 lakhs in the previous year to Rs. 5.10 lakhs. Having regard to the withdrawal of Rs. 1 lakh from the dividend equalisation reserve, the net addition to reserves this year is only Rs. 4.10 lakhs. As regards details of allocations, the amount set aside to development reserve has been reduced from Rs. 6.93 lakhs to Rs. 4.80 lakhs. But a sum of Rs. 30,189 has been transferred to development rebate reserve, as against *nil*. The general reserve, which had been credited with Rs. 4.25 lakhs in the previous year, has not been provided with anything. The provision for gratuity has been pruned from Rs. 80,000 to Rs. 22,000. The distribution to shareholders is proposed to be maintained at the rate of 12½ per cent., the same as that for 1956-57 and 1955-56. It consists of a dividend of 7½ per cent. and a bonus of 5 per cent. and absorbs Rs. 3.25 lakhs and leaves a sum of Rs. 58,223 to be carried forward, as against Rs. 61,033 brought in.

The Company's financial position, as disclosed by its balance-sheet as at 31st March 1958, is satisfactory. Its reserves and surplus amount to Rs. 29.19 lakhs, as against a paid-up capital of Rs. 26 lakhs, all in ordinary shares of Rs. 100 each. The gross block of Rs. 113.37 lakhs stands well written down at Rs. 45.57 lakhs. Additions during the year were of the order of Rs. 9.29 lakhs, of which those on account of plant and machinery alone amounted to Rs. 7.60 lakhs. The current assets aggregate Rs. 67.36 lakhs, against which the current liabilities amount to only Rs. 57.74 lakhs.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 135 *cum-div.* On an *ex-div.* basis, the dividend together with the bonus works out to a yield of 10.2 per cent. per annum.

INDIA CEMENTS' PROFIT HIGHER

PROGRESS FULLY MAINTAINED

A DISTINGUISHING feature of the results of the India Cements Ltd. (Managing Agents: Essen Private Ltd., Madras) for the year ended 31st March 1958 is the sharper rise in the Company's turnover as well as profit, a welcome change from the rather slow and measured progress noted in the preceding years. Sale proceeds of cement rose from Rs. 109.07 lakhs in 1954-55 to Rs. 123.81 lakhs in 1955-56. Although there was a recession to Rs. 107.43 lakhs in 1956-57, the lost ground has been once again regained by the substantial rise of Rs. 35.91 lakhs to Rs. 143.34 lakhs during the year under review. The gross profit at Rs. 39.34 lakhs represents an improvement of Rs. 10.43 lakhs or 36 per cent. from Rs. 28.91 lakhs for the previous year, thus maintaining the upward trend for the fifth year in succession, and compares well with the meagre rises in the preceding years when it improved from Rs. 28.02 lakhs in 1954-55 to Rs. 28.63 lakhs in 1955-56.

As against the improvement in gross profit, the net profit at Rs. 15.49 lakhs, however, shows a decline from Rs. 19.04 lakhs for 1956-57. But this does not in any way minimise the excellent progress made by the Company during the year under review, for it is due to the marked rise in the provision for depreciation from Rs. 8.02 lakhs in the previous year to Rs. 11.90 lakhs. Further, whereas no provision for taxation was made for 1956-57, a sum of as much as Rs. 8.82 lakhs (including Rs. 82,132 for wealth tax), has been provided this year for that purpose. Out of the net profit, a sum of Rs. 4 lakhs has been transferred to mortgage loan redemption reserve and another Rs. 20,000 to reserve for development rebate. The allocations in the previous year consisted of Rs. 4 lakhs to mortgage loan redemption reserve, Rs. 3.58 lakhs to taxation reserve, Rs. 2 lakhs to dividend equalisation reserve and Rs. 1 lakh to investment reserve. The dividend on ordinary shares has been modestly raised to 9 per cent. from 8½ per cent. for the preceding two years, to which level it had been stepped up from 7½ per cent. for 1954-55.

The following comparative table clearly brings out the progress in the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Cement sales ..	1,48.84	1,07.43	1,23.81	1,09.07
Closing stock of cement ..	0.85	2.35	0.75	14.93*
Manufacturing and other expenses	1,06.96	82.97	93.87	80.58
Gross profit	39.34	28.91	28.68	28.02

Carry forward	0.71	1.81	2.97	3.31

* Includes raw materials and cement in process.
† 5 per cent. preference.

It is unnecessary to dwell at length on the Company's progress in the sphere of expansion, as it was lucidly explained by the Chairman in his speech at the annual meeting of the Company last month, *vide* page 442 of our issue dated 13th September 1958. Suffice it to say that the Company is pushing itself forward and is taking active part in the plans for expanding cement production.

It may be recalled that the Company had made an issue of fresh capital for Rs. 40 lakhs in 160,000 ordinary shares of Rs. 25 each at par to holders of equity capital as on 11th August 1956, in the proportion of four shares of Rs. 25 each for every Rs. 175 held, that is, one ordinary share of Rs. 25 for every Rs. 50 paid-up capital, and holders with more than Rs. 175 not being a multiple of Rs. 175 were offered one ordinary share of Rs. 25 for every Rs. 50 paid-up of equity capital. The new shares were entitled for any dividend that may be declared after 31st December 1956. In April 1957, the authorised capital of the Company was increased from Rs. 2 crores to Rs. 5 crores and the then existing 150,000 fully paid-up deferred shares of Rs. 5 each were converted into 150,000 fully paid-up ordinary shares of Rs. 5 each.

The paid-up capital of the Company as on 31st March 1958 stands at Rs. 139.30 lakhs consisting of 29,850 7½ per cent. taxable cumulative preference shares of Rs. 100 each, 407,790 ordinary shares of Rs. 25 each and 150,000 ordinary shares of Rs. 5 each. At the recent annual meeting of the Company, it was decided that all equity shares should be only denominations of Rs. 5 each, and that shares of Rs. 25 each be sub-divided into five shares of Rs. 5 each. The reserves and surplus aggregate Rs. 31.43 lakhs. The current liabilities stand at Rs. 102.93 lakhs, of which secured loans from the Industrial Finance Corporation of India by a charge on the fixed assets of the Company account for Rs. 45 lakhs. The gross block of Rs. 218.27 lakhs, which includes additions made during the year of the value of Rs. 9.90 lakhs, has been written down to Rs. 144.88 lakhs. In addition, there is a small unallocated capital expenditure amounting to Rs. 1.11 lakh. The current assets aggregate Rs. 127.67 lakhs and cover the current liabilities and the provision for taxation by a comfortable margin.

The Rs. 25 fully paid-up ordinary shares are currently quoted at Rs. 30.87 *ex-div.*, at which rate and on the basis of the latest dividend, the yield is 7.29 per cent. per annum.

NEW COMPANY REGISTRATIONS

During the first two months of the fiscal year 1958-59, that is, April and May, 168 companies, with a total authorised capital of more than Rs. 28 crores, were registered in different States under the Companies Act, 1956. Of these, six were public companies with an authorised capital of Rs. 14.6 crores. The remaining 162 were private companies with an authorised capital of about Rs. 13.6 crores.

In April, three Government companies, namely, the Hindustan Salt Company (Private) Ltd., the Kerala Water Transport Corporation (Private) Ltd., and the Indian Handicrafts Development Corporation (Private) Ltd. were incorporated in the States of Rajasthan, Kerala and Delhi respectively. Each of these three companies has an authorised capital of Rs. 1 crore. In addition, a company, Parke Davis India (Private) Ltd. was registered in Bombay with an authorised capital of Rs. 2 crores. Two other companies, Roche Products (Private) Ltd. and Orion Chemicals Ltd. were formed during the month in the States of Bombay and West Bengal with an authorised capital of Rs. 2 crores and Rs. 1 crore, respectively.

Three big companies were registered in May, two of these in Bombay and one in Mysore. The companies registered in Bombay were the Baroda Rayon Corporation Ltd. with an authorised capital of Rs. 10 crores and Special Steels (Private) Ltd. with an authorised capital of Rs. 1 crore. The company registered in Mysore is the Mysore Cements Ltd. which has an authorised capital of Rs. 3 crores.

The State-wise distribution of the companies registered during these two months shows that the largest number of new registrations took place in West Bengal, while Bombay led the other States in regard to the authorised capital.

HYDERABAD STOCK EXCHANGE

The Securities Contracts (Regulation) Act, 1956, which has been enforced with effect from 20th February 1957, envisages existence of only recognised stock exchanges. Under Section 4 of the Act, the Government of India recognised in 1957 the Stock Exchange, Bombay, the Ahmedabad Share and Stock Brokers' Association, Ahmedabad, the Calcutta Stock Exchange Association Limited, Calcutta, the Madras Stock Exchange Limited, Madras, and the Delhi Stock Exchange Association Ltd., New Delhi. The Central Government has now decided to grant recognition to the Hyderabad Stock Exchange Limited, Hyderabad, for a period of five years with effect from 29th September 1958, subject to the condition that a membership security deposit of Rs. 3,000 is taken from every member of the Stock Exchange. Section 13 of the Act has also been declared to apply to the area covered by the limits of the Municipal Corporations of Hyderabad and Secunderabad with effect from the same date. As a result of the application of Section 13, every contract in securities in this area which is entered into after 29th September 1958, otherwise than between members of the Hyderabad Stock Exchange Limited, which has now been recognised by the Government, or through or with such members will be illegal. The Government has also simultaneously brought into force in this area Section 19 of the Act which prohibits any person, except with the permission of the Central Government, to organise or assist in organising or to be a member of any stock exchange (other than the recognised Stock Exchange) for the purpose of assisting in, entering into or performing any contracts in securities.

The Hyderabad Securities Contracts Regulation Act, 1353 Fasli (VII of 1353 Fasli); under which the Hyderabad Stock Exchange Ltd. was recognised, has been repealed with effect from 29th September 1958.

Subject to the sanction of the Controller of Capital Issues, the Directors of the Balrampur Sugar Company, Ltd., have decided to issue 70,000 ordinary shares of Rs. 5 each, as fully paid-up bonus shares in the ratio of one share for every four shares held. It is learnt that these shares will not participate in any dividend for the period ended 30th June 1958. The issue will be made to those shareholders whose names are registered in the Company's books as on 29th September 1958.

Points From The Chair

Tax on Companies

"I HAVE already referred to the imposition of additional excise duties in replacement of State sales taxes, as a measure of simplification both wise and welcome, but there has been a noticeable attempt by various municipalities throughout the country to endeavour to enhance their revenues by introducing or increasing octrois on tobacco products, and even on the raw materials for our factories. We maintain that our raw materials, and their products, on which the Centre levies excise duty, and now additional excise duty, should be kept outside the taxable scope not only of the States but also of municipalities. If this is not done, an inevitable effect must be a reduction in Central revenue because of distribution difficulties brought about by these barriers raised to trade and the free movement of goods. In the field of direct taxation on companies, your Board believes that the total weight of company taxation is too high, especially for a country which seeks to stimulate capital formation and attract foreign investment. Even if the present level of taxation could be justified, there would be scope for the structure of company taxation to be remodelled and simplified. It is surely difficult to justify wealth tax on companies, nor can the imposition of super-tax on the capitalisation of retained profits fail to discourage capital formation. Moreover, desirable though it undoubtedly is to increase capital investment, this end will not be achieved by penalising companies which pay dividends at a rate higher than the modest figure of 6 per cent. on issued capital, which normally means an even lower percentage on the real capital invested in the business."

G. H. J. CLARKE.
Imperial Tobacco Co. of India Ltd.

Copper Prices

"From the high peak reached in March 1956 of £436.10 per ton on the L.M.E., the price of copper fell to £267 per ton at the beginning of 1957. There followed almost immediately a slight improvement, but this was not maintained and thereafter throughout the year the price of copper continued downward until at the close of the year L.M.E. quoted £182 per ton. The basic reason for this marked decline was overproduction and the market throughout the year was struggling against a growing weight of supplies. Certain of the larger producers announced cuts in production, but the slight bullish effect which this produced was quickly discounted on the realisation that the hoped for revival of American business in the autumn of that year could not be realised. In the year 1958 there has been an upward trend in price, which might be attributed to an improvement in business conditions in America, a strengthening of demand in Europe and the political situation in the Near East. For some time the price has remained fairly steady around £207 per ton. The net indications seem to point to a more stable market in the not too distant future. Meanwhile, fluctuations below today's level will not be surprising and even likely, as it is impossible to predict future copper market developments owing to its sensitivity to speculative influences."

STEWART M. PETRIE,
Indian Copper Corporation Ltd.

An Untenable Complaint

"For anyone to find fault with the inability of newly established industries to supply their products from the very start of their operations at prices equal to or lower than the lowest import prices, particularly where, as in the case of the dying steam locomotive industry, such prices are clearly uneconomic or subsidised, is to ignore elementary industrial realities. The principle of protection to essential young industries and the consequential acceptance for some years of higher indigenous costs has been so well recognised and approved a part of our country's economic policies for the last 30 years or more that I am surprised such an uproar should have been created over the normal working of this same principle in the case of locomotive manufacture. While it may not be possible to convince all our critics, the fact that, contrary to the complaint that the Company has made large profits out of the railways, it is actually supplying locomotives at no profit or even at a loss, will, I hope, at least convince some of them that the agreement is not so favourable to the Company and unfavourable to the railways as it is alleged to be."

J. R. D. TATA.
Tata Locomotive and Engineering Co., Ltd.

Outlook for Coffee

"The prospects ahead for coffee prices are rather worrying. Export prices for coffee have come tumbling down in the last few auction sales, due to, we understand, the large carry-over of stocks in Brazil and increased world production of coffee, and the margin over internal prices has narrowed to quite near the internal price. Since internal sales of coffee are made at below the figure of guaranteed return to the grower, these must of necessity be subsidised from export sale proceeds. The good price Indian coffee has fetched abroad during the past few years was due to the general scarcity of coffee in the world markets. The Government are trying very hard to re-establish the traditional popularity for Indian coffee in the principal foreign markets, and growers are asked to give every possible attention to the drying and curing operations on the estate in order to preserve the inherent quality that most of the coffee produced here possesses. It would be unwise at present to anticipate a return to the grower of more than Rs. 2.30 per point at the very most for the seasons immediately ahead."

W. F. INMAN,
The Savamalai Estates Ltd.

COMPANY MEETINGS AND DIVIDENDS

SONE VALLEY PORTLAND CEMENT CO., LTD. Annual General Meeting, Calcutta, 13th October 1958. Dividend: 6 per cent. or Re. 0.30 per share, payable on or after 30th October 1958. Transfer books remain closed from 1st to 13th October 1958, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th October 1958. Dividend: 10 per cent. or Rs. 5.00 per share (includes interim dividend of Rs. 3.00 per share). Final dividend of Rs. 2.00 per share, is payable on and after 24th October 1958.

RANICHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 16th October 1958. Dividend: Re. 0.50 per share. Transfer books will remain closed from 7th to 16th October 1958, both days inclusive.

NEW CINNATOLLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 18th October 1958. Dividend: Nil. Transfer books will remain closed from 9th to 18th October 1958, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 18th October 1958. Dividend: 5 per cent. Re. 0.50 per share (final), payable on or after 25th October 1958. Transfer books will remain closed from 7th to 18th October 1958, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 24th October 1958. Dividend: Rs. 12.50 per share (includes bonus of Rs. 5.00 per share), payable on and after 27th October 1958. Transfer books will remain closed from 11th to 25th October 1958.

MUKAND IRON AND STEEL WORKS LTD. Annual General Meeting, Bombay, 24th October 1958. Transfer books will remain closed from 10th to 24th October 1958, both days inclusive.

THOMSON AND TAYLOR LTD. Annual General Meeting, Bombay, 25th October 1958. Transfer books will remain closed from 15th to 25th October 1958, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Bombay, 25th October 1958. Transfer books will remain closed from 29th October to 8th November 1958, both days inclusive.

SURAT ELECTRICITY CO., LTD. Final dividend of Rs. 4.50 per share, for the year ended 31st March 1958. Transfer books will remain closed from 7th to 28th October 1958, both days inclusive.

PEERMADE TEA CO., LTD. Interim dividend of 6¼ per cent. or Re. 0.62 per share, on ordinary shares, for the year 1958. Transfer books will remain closed from 4th to 14th November 1958, both days inclusive.

COWCODY ESTATES LTD. Final dividend of 40 per cent. for the year ended 30th June 1958. Transfer books will remain closed from 18th October to 1st November 1958, both days inclusive.

KASTURI MILLS LTD. No dividend for the year ended 31st March 1958. Transfer books will remain closed from 15th to 31st October 1958, both days inclusive.

JANARDANA MILLS LTD. Dividend of 6 per cent. or Rs. 3.00 per share, for the year ended 31st December 1957.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Dividend of Rs. 10.00 per share, for the year ended 30th June 1958, payable on 14th November 1958. Transfer books will remain closed from 13th October to 10th November 1958, both days inclusive.

DHRANGADHRA CHEMICAL WORKS LTD. Dividend of Rs. 6.00 per share, on old and new shares, for the year ended 31st March 1958. Transfer books will remain closed from 7th to 17th October 1958, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Dividend of Re. 1.80 per share, on old shares and Re. 0.90 per share, on new shares, for the year ended 30th June 1958. Transfer books will remain closed from 3rd to 27th November 1958, both days inclusive.

COMPANY REGISTRATIONS

SHREE SADAN PROPERTIES LTD. (First Director: Mr. K. B. Daga.) Business: Purchase and deal in movable and immovable properties. Authorised capital: Rs. 25,00,000. Private company. Address Shree Sadan, 15 Narayan Dabholkar Road, Bombay 16.

D. L. AMORE PRIVATE LTD. (First Director: Mr. D. L. Amore.) Business: Manufacturers and dealers in pharmaceuticals. Authorised capital: Rs. 5,00,000. Private company. Address: Cecil, Court, Lansdowne Road, Bombay.

CHANDRAKANT MANUFACTURING INDUSTRIES PRIVATE LTD. (First Director: Mr. B. N. Sanas.) Business: Electrical engineers etc. Authorised capital: Rs. 5,00,000. Private company. Address: 857, Bhawani Peth, Poona 2.

RESULTS OF BIRD-HEILGERS GROUP JUTE COMPANIES

PROFIT OF MALANKARA RUBBER HIGHER

Kinnison Jute Mills Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account after providing for all charges and including Rs. 72,729 (*nil*) on account of provision for sales tax contingency no longer required, shows a profit of Rs. 11,01,206 (loss of Rs. 11,46,064 after providing Rs. 8,05,356 for depreciation). From this amount is deducted depreciation Rs. 9,92,459 and provision for wealth tax Rs. 66,000 (*nil*) leaving a balance of Rs. 42,747 (debit of Rs. 11,46,034). After adding the balance brought forward from the previous year of Rs. 28,774 (Rs. 41,637) and the amount transferred from general reserve of Rs. 2,99,129 (*nil*) there is an available balance of Rs. 3,70,650 (Rs. 1,33,774 after transferring Rs. 2,30,000 from jute stock reserve; Rs. 38,201 from taxation reserve; Rs. 1,47,000 from development rebate reserve and Rs. 8,23,000 from tax contingency reserve). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax payable by the Company Rs. 1,05,000 (Rs. 1,05,000), by payment of a dividend on the ordinary shares at the rate of Rs. 5 (*nil*) per share without any deduction of income-tax payable by the Company Rs. 2,40,000 (*nil*) and by carrying forward Rs. 25,650 (Rs. 28,774).

General Report.—In accordance with the working time agreement of the Indian Jute Mills Association your mills worked 48 hours weekly with 12½ per cent. of the total looms sealed.

Reference was made in last year's report to the arrangement with the Standard Jute Company Limited for the utilisation of that Company's loom hours. This has worked satisfactorily for both parties and with a view to arriving at a permanent arrangement, equitable to the shareholders of both Companies, a scheme of arrangement has been submitted to, and approved by, the shareholders at Meetings held on 12th August 1958. This scheme has now to be submitted to the Calcutta High Court for its approval and directions under Section 391 of the Indian Companies Act. As far as this Company is concerned, the final outcome proposed is that Standard Jute Company Limited's shareholders should receive shares in this Company in the ratio of one Kinnison share of Rs. 100 each for two Standard shares of Rs. 70 each, following which Standard Jute Company Limited will become a 100 per cent. subsidiary of this Company.

Owing mainly to labour trouble culminating in a two weeks strike in May 1957, the first quarter's results were far from satisfactory and the Company only resumed profitable working from July 1957. Since then there has been a steady improvement and results to date for the current year are encouraging. In view of this, the directors have felt justified in making a transfer from reserves to permit the payment of an ordinary dividend.

With regard to the 35 wide hessian loans to which reference has been made in the last report, the directors are pleased to advise that exemption from Clause 18 of the I.J.M.A. working time agreement was granted with effect from 29th July 1957. Due to intense competition, the margin of profit on wide cloth has been greatly reduced.

Regarding the claim for sales-tax referred to in the last report a sum of Rs. 1,22,783 was realised as at 31st March 1958.

During the financial year under review there was an ample supply of raw jute to meet the Industry's needs but prices generally were relatively high in comparison with those for manufactured goods with the result that profitable simultaneous trading was only possible for a few months of the period.

The East India Jute and Hessian Exchange Limited which became the official body for hedge contracts with the concurrence of the Forwards Market Commission, has at the time of this report been functioning for approximately six months and although it has helped greatly to stabilise prices there are still quite heavy fluctuations due to certain operators with no stake in the Industry using the "Futures" market for speculative purposes.

Although the world trade recession in business has not greatly affected the offtake of jute goods, prices dropped considerably due chiefly to delayed buying by consuming markets. Speculators also forced prices down to uneconomic levels but with the introduction of minimum prices by the Indian Jute Mills Association on the 26th February, the market took a decided turn for the better.

The recent Middle East crisis gave a further boost to prices but with the lessening of political tension rates have eased substantially and Overseas buyers again are following the usual pattern of hand to mouth buying.

The overall hessian stock position in Calcutta is very sound but the steady rise in stocks of sacking goods serves to indicate over-production of these manufactures. It is hoped, however, that the switch over from sacking to hessian which is presently taking place within the Industry will gradually rectify matters in this respect.

The main redeeming feature with regard to future prospects is the increased availability and quality of raw jute in India and a stage has been reached whereby approximately ninety per cent. of the needs of the mills are now available from sources within the Union. Reports of the current jute crop are most satisfactory and the directors feel that, unless something untoward happens, virtual self-sufficiency in long jute should be achieved this year.

Accounts in brief are as under:—

Rs.	2,70,69,496	Rs.	2,70,69,496

Standard Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after providing for all charges and including Rs. 10,077 (*nil*) on account of provision for sales-tax contingency no longer required, shows a profit of Rs. 15,31,175 (loss of Rs. 15,23,258 after providing Rs. 4,70,940 for depreciation). From this amount is deducted depreciation Rs. 87,650, loss brought forward from the previous year Rs. 8,76,083 (Rs. 4,87,127), provision for wealth-tax Rs. 17,600 (*nil*) and reserve for stores and spare parts Rs. 2,00,000 leaving a balance available of Rs. 3,49,842 (debit of Rs. 8,76,083 after transferring Rs. 11,33,438 from general reserve, Rs. 65,000 from welfare reserve, Rs. 28,864 from jute stock reserve and Rs. 7,000 from tax contingency reserve). The directors propose to dispose of this amount as follows:

By payment of dividends on cumulative preference shares of 6 per cent. per annum without any deduction for income-tax payable by the Company in respect of the years ended 31st March 1956 and 1957 Rs. 1,08,000; preference dividend for the year ended 31st March 1958 Rs. 54,000; by payment of a dividend on the ordinary shares at the rate of Rs. 5 (*nil*) per share without any deduction for income-tax payable by the Company Rs. 1,25,980 (*nil*) and by carrying forward Rs. 61,862 (debit of Rs. 8,76,083).

General Report.—The reasons for the closure of the Mill were fully covered in the previous report and it is now satisfactory to record that the Company's overdraft with its Bankers and the Rs. 25 lakhs Debenture issue have been repaid in full. Realisation of other liquid assets and the sale proceeds of the land and buildings has now made it possible to put before shareholders a scheme involving *inter alia* the repayment of the preference capital and a part repayment of the ordinary capital. This scheme was placed before the shareholders on August 12th and approved but will now require submission to the Calcutta High Court for its approval and directions as provided under Section 391 of the Indian Companies Act. In view of the inevitable delay that will occur it has been decided by the directors that it is desirable, despite the fact that it is an integral part of the above mentioned scheme, to proceed forthwith with the payment of the arrears of dividends on the preference shares. It is also satisfactory that the results of the year's working permit the payment of an ordinary dividend. Since it is proposed that Standard Shareholders, apart from a part repayment in cash, should receive shares in Kinnison Jute Mills Co., Ltd., it is appropriate to record that the directors of the latter Company report a substantial improvement in profits for the current year to date as compared with the year ended 31st March 1958 during the early months of which losses were incurred.

As it is probable that a loss will be incurred in respect of realisation of stores and spare parts for obsolete machinery and plant, a reserve of 2 lakhs has been made for this purpose.

Accounts in brief are as under:—

Rs.	41,92,239	Rs.	41,92,239

Auckland Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after providing for all charges and including Rs. 19,792 (*nil*) on account of provision for sales-tax contingency no longer required, shows a profit of Rs. 15,37,939 (loss of Rs. 9,09,079 after providing Rs. 7,04,893 for depreciation). From this amount is deducted depreciation amounting to Rs. 7,82,708, loss brought forward from the previous year of Rs. 3,79,016 (credit of Rs. 11,377) and provision for wealth tax Rs. 48,000 (*nil*) leaving a balance of Rs. 3,28,215 (debit of Rs. 8,87,702). To this amount is added the amount transferred from general reserve of Rs. 1,20,000 (*nil*) making a total of Rs. 4,48,215 (debit balance of Rs. 3,79,016 after transferring Rs. 3,00,000 from development rebate reserve, Rs. 1,55,500 from tax contingency reserve and Rs. 63,186 from jute stock reserve). The directors propose to dispose of this amount as follows:—

By payment of dividend on cumulative preference shares at the rate of 5½ per cent. per annum without any deduction for income-tax paid by the Company in respect of year ended 31st March, 1957 Rs. 55,000 and preference dividend for the year ended 31st March, 1958 Rs. 55,000, by payment of dividend on redeemable cumulative preference shares at the rate of 4½ per cent. per annum without any deduction for income-tax paid by the Company in respect of the year ended 31st March, 1957 Rs. 67,500 and for the year ended 31st March 1958 Rs. 67,500, by payment of a dividend on the ordinary shares at the rate of Rs. 5 (*nil*) per share without any deduction for income-tax payable by the Company Rs. 2,00,000 (*nil*) and by carrying forward Rs. 3,215 (debit of Rs. 3,79,016).

The labour situation throughout remained quiet and the complement at the mill was maintained at full strength.

The installation of 35 wide hessian looms was completed in October, 1957 and the directors report they are working satisfactorily. Exemption from Clause 18 of the I.J.M.A. working time agreement was granted with effect from the 29th July, 1957. The price of wide cloth has, due to intense competition, now fallen to a level where the margin of profit is greatly reduced.

In order to absorb the loom hours pertaining to 317 looms of The Lawrence Jute Company, Limited, triple shift working of the Mill and double shift working of the Factory was introduced from 7th April, 1958. A reduction in overhead costs will result from the increased production obtained due to the above arrangement and prospects for the current year appear favourable.

Accounts in brief are as under:—

Union Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after providing for all charges, and including a refund of tax Rs. 1,343 (*nil*) in respect of a previous year, and Rs. 36,271 (*nil*) on account of provision for sales tax contingency no longer required, shows a profit of Rs. 35,28,521 (loss of Rs. 19,11,274 after providing Rs. 5,10,906 for depreciation). From this amount is deducted depreciation Rs. 4,91,954, loss brought forward from the previous year of Rs. 13,51,940 (credit of Rs. 18,334), provision for wealth tax Rs. 46,000 (*nil*), transfer to reserve for tax contingency Rs. 2,00,000 (Rs. 3,28,000), reserve for development rebate Rs. 1,00,000 (Rs. 5,000), reserve for jute stock Rs. 1,00,000 (Rs. 2,50,000), reserve for stores and spare parts Rs. 2,00,000 (*nil*) and general reserve Rs. 4,00,000 leaving a balance available of Rs. 6,38,627 (debit of Rs. 13,51,940). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax payable by the Company Rs. 42,000 (Rs. 42,000), by payment of a dividend on the ordinary shares at the rate of Rs. 15 (*nil*) per share without any deduction for income-tax payable by the Company Rs. 5,39,790 (*nil*) and by carrying forward Rs. 56,837 (total debit of Rs. 13,51,940).

Union South Mill was closed down on the 22nd June, 1957. By working treble shift in the mill and double shift in the factory, it has proved possible, with the purchase of certain additional modern machinery, to absorb the South Mill's loom hours at Union North Mill. The objective of combining the two small units, one of which was steam-driven and non-modernised, into one economic sized and fully modernised unit has thus been successfully achieved.

In March, 1958, the deed of conveyance in respect of Union South property together with buildings, certain machinery, etc., was signed. At that date Rs. 20 lakhs had been received from the purchasers, while the balance Rs. 10 lakhs, carrying interest at 5 per cent. per annum is payable by instalments over the next four years. Receipt of this sum has permitted the withdrawal of the Rs. 13 lakhs additional debentures that were lodged with Lloyds Bank Ltd., as security for the extra financial accommodation required in connection with the expenditure incurred on the closure of Union South Mill.

Regarding the claim for sales tax referred to in the directors' last report a sum of Rs. 98,186 was realised as at 31st March 1958, and a further sum of Rs. 28,739 has subsequently been received.

Although the current year's results will not include the non-recurring profit arising from the sale of Union South Mill, there is every indication that manufacturing profits will be at a satisfactory level.

Accounts in brief are as under:—

Lansdowne Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after providing for all charges and including net refund of tax Rs. 12,424 (*nil*) in respect of a previous year and Rs. 27,834 (*nil*) on account of provision for sales tax contingency no longer required, shows a profit of Rs. 5,05,208 (loss of Rs. 8,79,721 after providing Rs. 5,10,999 for depreciation). Against this amount is to be set off depreciation amounting to Rs. 5,29,403 leaving a debit balance of Rs. 24,195 (Rs. 8,79,721). To this amount is added the loss brought forward from the previous year of Rs. 9,08,440 (Rs. 2,12,719) making a total debit of Rs. 9,32,635 (Rs. 10,92,440) and from which is deducted the amount transferred from general reserve of Rs. 52,500 (*nil*) making a total of Rs. 8,80,135 (Rs. 10,92,440). The directors propose to pay a dividend on the preference shares at the rate of 7 per cent. per annum for the half-year ended 31st March, 1956, without any deduction for income-tax paid by the Company absorbing Rs. 52,500 (*nil*) and to carry forward the total debit balance of Rs. 9,32,635 (Rs. 9,08,440 after transferring Rs. 1,14,000 from tax contingency reserve and Rs. 70,000 from jute stock reserve).

The labour situation throughout the period remained quiet but there is still considerable difficulty in obtaining the necessary number of efficient workers in certain categories.

Regarding the claim for sales tax referred to in the directors' last report a sum of Rs. 77,878 was realised as at 31st March, 1958 and a further sum of Rs. 10,274 has subsequently been received.

As from 5th May, 1958, to enable the loom hours of 317 looms of the Lawrence Jute Co., Ltd., to be worked at this mill, double shift working in the factory and treble shift working in the mill has been introduced. It has also been necessary to hire certain additional spinning and ancillary machinery from Lawrence Jute Co., Ltd., to cater for the increased loom complement. A considerable reduction in overhead costs has been obtained due to the higher tonnage of goods produced and it is therefore hoped that results for the current year will show a considerable improvement.

QUALITY

★ ELECTRIC MOTORS : First manufacturer in India to receive ISI mark for quality

★ CABLES : A.C.S.R. & A.A.C. of ISI quality

Northbrook Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after providing for all charges shows a profit of Rs. 3,02,354 (loss of Rs. 2,98,883 after providing Rs. 4,75,629 for depreciation). Against this amount is to be set off depreciation amounting to Rs. 5,55,398 leaving a debit balance of Rs. 2,53,044 (Rs. 2,98,883). After deducting the balance brought forward from the previous year of Rs. 9,227 (Rs. 70,116) and the amount transferred from general reserve of Rs. 82,500 there is left a debit balance of Rs. 1,61,317 (Rs. 2,28,767). The directors propose to pay a dividend on the preference shares at the rate of 5½ per cent. per annum for the year ended 31st March, 1958 without any deduction for income-tax paid by the Company absorbing Rs. 82,500 (Rs. 82,500) and to carry forward the total debit balance of Rs. 2,43,817 (credit of Rs. 9,227 after transferring Rs. 1,50,000 from jute stock reserve; Rs. 1,10,000 from development rebate reserve, Rs. 50,000 from dividend equalisation reserve and Rs. 10,494 from taxation reserve).

The labour situation has been far from satisfactory and has contributed to the adverse results. In December, 1957 a rationalisation scheme was introduced under which certain work loads were increased to levels already effective at all other mills in the group, and resulted in a strike.

Apart from the labour situation, which has now shown a considerable improvement, the two main problems have been the small size of the mill at 496 working looms and the steady fall in the sales price of the mill's speciality fabrics, resulting not only in a reduction in income but also in having to write down the value of unsold stocks by substantial amounts.

In May 1958 a re-organisation scheme was introduced under which the mill has become an entirely sacking plus speciality fabric unit. The increased tonnage resulting therefrom has led to a reduction in overhead costs and in the current year to date the mill has operated at a profit despite substantial payments of a non-recurring nature in connection with the re-organisation scheme.

With effect from July, 1957 the 45 wide looms have been exempt from I.J.M.A. working time agreement and have been operating in addition to the ordinary loomage. Prices have fallen to a level where the margin of profit is greatly reduced but further reductions are not anticipated.

Progress has been made in eliminating the duplication of facilities at the mill and Dalhousie next door. To date a common workshop has been established and the possibility of a common stores is under consideration.

The four circular looms were put into operation by August, 1957, but the level of operating efficiency obtained is most disappointing.

Malankara Rubber and Produce Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. John Sons' Estates & Agencies (Private) Ltd., Kottayam] submit the audited accounts of the Company for the year ended 31st March 1958.

Rubber—The crop harvested during the season was 6,84,116 lbs. at an estate cost of Rs. 4,28,740 i.e., 62.67 cents per lb. compared to 6,12,797 lbs. at 59 cents per lb. during the previous season. The average price obtained for the season's rubber was 149 cents per lb. including excise duty. Even with the substantial increase in crop during the season compared to the previous season, the estate cost had gone up by over 3 cents per lb., the higher cost being mainly due to the increase in labour wages introduced during the year, the increase in the pay scales of estate staff with retrospective effect from 23rd October 1956 as per the A.P.K./ESUSI agreement and also the extension of the provisions of the Emp'oyees Provident Fund Act 1952 to daily rated workers of rubber estates also as from May 1957. The Company had to pay in addition to the usual yearly bonus to labour a further bonus of 2¾ per cent. of the total earnings for each of the years 1955 and 1956 as per Tripartite decisions and as recommended by the Association of Planters of Kerala.

Cocoanuts—The crop for the season was 6,39,806 nuts as compared to 6,68,551 nuts obtained during the previous season. The average price obtained for the season's crop was Rs. 19.54 per 100 nuts as compared to Rs. 15.17 per 100 nuts for the previous season.

Pepper—A crop of 8,075½ lbs. pepper including rejections was collected during the season.

The net profit for the season was Rs. 2,57,584 (Rs. 2,38,847) after writing down depreciation on buildings, machinery etc., amounting to Rs. 31,230 (Rs. 30,943) and after providing Rs. 2,45,000 (Rs. 2,25,000) against income-tax both agricultural and non-agricultural for assessment year 1958-59 and also Rs. 153 (Rs. 62) against short provision of income tax etc., for assessment year 1957-58. After adding Rs. 6,347 (Rs. 3,46,670) brought forward from last year's profit, the amount available for allocation is Rs. 2,63,930 (Rs. 5,85,517). The directors propose to pay a dividend of 17 (22½) per cent. amounting to Rs. 2,29,500 (Rs. 2,02,500) free of State and Central Income tax. The directors have transferred the balance available amount of Rs. 34,430 (Rs. 6,347 being previous year's profit brought down and Rs. 28,084 from the current year's profit) to general reserve account to cover part of the capital expenses.

Bonus Issue—During the year under report 45,000 shares of Rs. 10 each were issued to the then existing shareholders as fully paid bonus shares. Consequently the present distribution of dividend is on a paid-up capital of Rs. 13,50,000 as against the dividend of 22½ per cent. declared during the previous year on the then paid-up capital of Rs. 9,00,000.

The estimate for the current season is for a crop of 6 lakhs lbs. dry rubber at an estate cost of 75.25 cents per lb. excluding income-tax and super-tax and managing agency commission and Head Office expenses. From the result obtained so far it is expected that the actual crop for the current season will exceed the estimate.

During the current season 71.42 acres of the old rubber area has been replanted under the Rubber Board's subsidy scheme. Further 61 acres of cocoanut area badly affected by leaf disease has been cleared and planted up with rubber this year.

Janardana Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. G. Venkataswamy Naidu & Co. Uppilipalayam, Singanallur P.O.) submitted the audited accounts of the Company for the year ended 31st December 1957.

After deducting all working expenses and interest and providing Rs. 75,875 (Rs. 1,49,072) for depreciation, the year's working has resulted in a net profit of Rs. 96,267 (Rs. 4,85,896). From the profits of the year, Rs. 1,226 (Rs. 5,475) has been expended by way of donations. The directors recommend to appropriate the balance of Rs. 95,041 (Rs. 3,88,687) as follows:—To pay a tax free dividend of 6 (20) per cent. absorbing Rs. 53,400 (Rs. 1,78,000) and to provide for taxes Rs. 41,641 (Rs. 2,10,687).

The decrease in the profits of the year is mostly due to the continued high price of cotton and the unremunerative prices of yarn. The prospects for the year 1958 do not seem to be encouraging at all as the slump in the textile trade is continuing.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,90,000	Gross block	35,60,221
Reserves ...	10,66,553	*Less*—Depreciation ...	20,68,005

		Cash ...	3,11,377
Rs	30,95,295	Rs	30,95,295

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE MORARJEE GOCULDAS SPINNING AND WEAVING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 87th Annual General Meeting of the Company will be held at its Registered Office at Soparibaug Road, Parel, Bombay-12, on Saturday, the 8th November 1958, at 11 a.m. (I.S.T.), to transact the following business:—

1. To adopt the Directors' Report and Audited Statements of Accounts for the year ended 30th June, 1958.
2. To declare a dividend on Preference and Ordinary Shares.
3. To appoint a Director in place of Shri Gopikisan Piramal who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

"Resolved that Shri Gopikisan Piramal who retires by rotation and who is a Director, Member and an associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio Director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in Paragraph 1 of the Explanatory Statement annexed to this Notice.

4. To appoint a Director in place of Shri Manoharlal Jwalaprasad Tibrewala who was appointed an Additional Director of the Company by the Board of Directors and who shall cease to hold Office under Section 260 of the Companies Act, 1956, but who being eligible offers himself for re-appointment and, to consider and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

"Resolved that Shri Manoharlal Jwalaprasad Tibrewala who is a member and an associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio Director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in Paragraph 2 of the Explanatory Statement annexed to this Notice.

5. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"Resolved that pursuant to the provisions of Section 260 of the Companies Act, 1956, the Company hereby approves of Contracts being entered into with the firm of Messrs. Banarsilal Newatia and Company, an associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company, for the sale or supply to them of goods manufactured by the Company on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required by Messrs. Banarsilal Newatia & Co. at prevailing market rates, the aggregate value of such sale or supply not to exceed in any one Financial Year of the Company Rs. 20 lakhs and on the terms that in respect of any goods supplied or sold by the Company to the said associate firm, it shall make payment to the Company within one month from the respective dates of supplies or sales of the goods."

6. To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

The Share Transfer Books of the Company will be closed from Monday, the 20th October 1958 to Saturday, the 15th November 1958, both days inclusive.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
GOPIKISAN PIRAMAL,
Director,
Agents.

BOMBAY, *30th August*, 1958.

The dividend, if sanctioned, will be payable from Monday, the 17th November 1958 to those Shareholders whose names stand on the Register of the Company in the evening of Saturday the 18th October, 1958.

Dividend Warrants will be posted in due course to the Registered Addresses of the Shareholders. Change of Address, if any, should be notified without delay.

AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS IS HEREWITH ANNEXED.

Explanatory Statement under Section 173 of the Companies Act, 1956, and Annexure to the Accompanying Notice

1. *Item No. 3.*

Shri Gopikisan Piramal is a Director of the Company who retires by rotation and is eligible for re-appointment. A Special Notice has been received from a Member proposing the appointment of Shri Gopikisan Piramal as a Director in accordance with the provisions of Section 261 of the Companies Act, 1956. Shri Gopikisan Piramal has been a Director of the Company for several years and it is in the interest of the Company to receive the benefit of his advice as a member of the Board. As set out in the Special Notice received by the Company, the reasons which make it necessary to have the Special Resolution are as follows:—

(*a*) The Managing Agents of the Company are authorised by its Articles and by its Managing Agency Agreement to appoint a Director on the Board.

(*b*) Shri Gopikisan Piramal is liable to retirement by rotation of Directors.

(*c*) He is an associate of the Managing Agents.

2. *Item No. 4.*

Shri Manoharlal Jwalaprasad Tibrewala was appointed an Additional Director in March 1958 by the Board of Directors under Section 260 of the Act. He can hold Office only upto the date of the ensuing Annual General Meeting. Notice under Section 257 of the Act has been received by the Company from a Member for proposing him as a candidate for the Office of a Director. A Special Notice has also been received from a Member pursuant to the provisions of Section 261 of the Act, proposing the appointment of Shri Manoharlal Jwalaprasad Tibrewala. As set out in the Special Notice received by the Company, the reasons which make it necessary to have a Special Resolution are as follows:—

(*a*) The Managing Agents of the Company are authorised by its Articles and its Managing Agency Agreement to appoint a Director on the Board.

(*b*) Shri Manoharlal Jwalaprasad Tibrewala is liable to retirement by rotation of Directors.

(*c*) He is an associate of the Managing Agents.

3. *Item No. 5.*

Messrs. Banarsilal Newatia & Co. carry on business in Cotton Piecegoods. Shri Banarsilal Newatia, the Proprietor of the firm, is a relative of Shri Gopikisan Piramal, Shri Mohanlal Piramal and Shri Manoharlal Jwalaprasad Tibrewala, three of the Directors of the Company, and is an associate of the Managing Agents of the Company. Hence in view of the provisions of Section 360 of the Companies Act, 1956, a Special Resolution is required to enable the Company to sell its products to the said firm. Except that the said Shri Banarsilal Newatia is a relative of the said Directors and an associate of the Managing Agents, none of the said Directors or the Managing Agents have any interest in his said firm or in the transactions of sale proposed to be effected by the Company with him. The terms of the agreement between him and the Company are set out in the said Special Resolution and there is no document recording the same.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
GOPIKISAN PIRAMAL,
Director,
Agents.

BOMBAY, 30*th August* 1958.

INSURANCE

(*Concluded from* page 570)

lakhs (38.4 per cent. of premium) in the previous year. After charging commission and expenses of management, the accounts show a surplus of Rs. 3.62 lakhs. The fire fund stands at Rs. 17.58 lakhs as against Rs. 17.51 lakhs in the previous year.

In the accident department, net premium increased from Rs. 7.63 lakhs in 1956 to Rs. 7.95 lakhs in the year under review. Claims paid and outstanding amounted to Rs. 2.86 lakhs (36 per cent. of premium), as against Rs. 2.60 lakhs (34 per cent. of premium) in the previous year. After charging commission and expenses of management, a sum of Rs. 2.38 lakhs has been transferred to the profit and loss account. The accident fund stands at Rs. 3.97 lakhs, as against Rs. 3.81 lakhs in the previous year.

Net premium in the marine department showed a smart rise of Rs. 3.78 lakhs to Rs. 15.18 lakhs, as compared with Rs. 11.40 lakhs in 1956. Claims paid and outstanding aggregated Rs. 9.22 lakhs (60.7 per cent. of premium) as against Rs. 5.84 lakhs (51.2 per cent. of premium) in the previous year. After charging commission and expenses, the account shows a surplus of Rs. 1.05 lakhs. The marine fund stands at Rs. 15.18 lakhs, as against Rs. 11.40 lakhs in the previous year.

After providing Rs. 3.40 lakhs for taxation, the disposable balance of the year, including Rs. 3.85 lakhs brought forward from last year, is Rs. 8.20 lakhs. The distribution for shareholders at the rate of Rs. 2 per share, without deduction of tax, will absorb Rs. 4.80 lakhs leaving a balance of Rs. 3.41 lakhs to be carried forward.

HOUSE MONEY AT CALL GONE

(From Our Own Correspondent)

BOMBAY, 1st October

The all-India Inter-bank Agreement on maximum rates of interest on deposits came into force today. The main features of the agreement, which applies only to banks having deposits of Rs. 5 crores or more as per their latest balance-sheets, are as follows:

1. *Current Accounts*: On current accounts, interest at ¼ per cent. on daily or minimum monthly balance at the option of the banks except at Bombay, Calcutta, Madras, Delhi and New Delhi where interest at ¼ per cent. should be allowed only on minimum monthly balances of Rs. 4,000 and over.

Interest should be paid only if it amounts to Rs. 5 and over per half-year. Existing special arrangements to be terminated on giving three months' notice from the date of agreement. Banks which are parties to the agreement should inform the Committee, without disclosing the details of the special arrangements, that they have terminated them on giving the required notice from the date of agreement.

Banks are free to make special interest arrangements not exceeding 1 per cent. per annum for charity accounts.

Exceptions: If countervailing interest is paid on a credit balance against a debit balance in the same name, the rate shall be at least one per cent. lower than the rate at which interest is charged on the advance, provided, however, that countervailing interest on a credit balance may be allowed at the same rate as that charged on the debit balance if the separate accounts are maintained only to meet the accounting requirements of the Reserve Bank of India Bill Market Scheme. Interest shall not be paid on any amount in excess of the debit balance, at a rate higher than ¼ per cent. per annum.

2. *Call and Time Deposits*: The maximum rate of interest on any time deposit for less than three months and deposit at notice of seven days or more shall not exceed 3½ per cent. per annum and the maximum rate of interest for any time deposit for three months and over shall not exceed 4 per cent. per annum. The minimum period for a deposit shall be 7 days or shall be subject to a minimum notice of 7 days. The minimum amounts for which deposit receipts may be issued shall be: (*a*) Rs. 25,000 for money at 7 days' notice, and (*b*) Rs. 10,000 for money at more than 7 days' notice, upto one month. A deposit of less than Rs. 10,000 can be received for a period of more than one month. Any interest allowed on a time deposit after its maturity date, or on a deposit payable on notice after the expiry of notice given, shall not exceed ¼ per cent. per annum.

Exceptions: When a bank is subsequently asked to renew a deposit either wholly or partially for a further period not less than the period for which it has remained overdue or seven days whichever is longer, interest may be allowed on the portion renewed at a rate appropriate for the period of renewal or the renewal receipt may be issued as being effective as of the date the original receipt became due for payment.

No interest shall be paid on deposits payable on call or on notice of less than 7 days.

Banks in their discretion may make payment of time deposits before due date, but, in such cases, either no interest shall be paid or a loan may be granted against the time deposit, at a rate of interest of 1 per cent. above the deposit rate. Overdraft or cash credit may be allowed against a time deposit at 1½ per cent. above the deposit rate.

No optional terms shall be allowed on time deposits. Time deposits for more than two years should not be accepted, except by way of Cash Certificates mentioned in the agreement.

3. *Savings Bank Accounts*: On savings accounts, the maximum amount on which the interest will be paid shall be Rs. 50,000. The maximum rate of interest shall be 2½ per cent. per annum on minimum monthly balance. Withdrawals by cheque may be permitted, but the account should not be used as a Current Account.

4. *Cash Certificates*: Cash Certificates shall not be issued for a period of less than 3 years and the rate of interest shall not exceed 4 per cent. compound per annum on Cash Certificates for less than five years and 4½ per cent. compound per annum on Cash Certificates for five years and more. Amounts of Cash Certificates may be paid before their due dates at the option of the banks and interest may be allowed for the expired period at a rate which shall be at least ½ per cent. less than the rate allowed on the full period. No interest shall be paid for a period less than six months and thereafter they shall be payable on a minimum 7 days' notice. Printed terms and conditions in respect of rate of interest, issue prices and notice period for withdrawals should not be relaxed. If any banks have any cumulative or recurring deposit schemes already in existence, they may continue the scheme, provided that the rate of interest paid does not exceed 4 per cent. compound per annum.

5. *No Other Deposits*: No deposits of any class or type other than those described in the agreement should be accepted.

6. *Rates of Interest*: The rates of interest on the various types of deposits mentioned above will be effective for a period of six months at a time, and may be varied at the end of such period by a referendum, but may be revised during such period, by the Executive Committee according to changes in the Reserve Bank of India rates.

Brokerage shall not exceed ¼ per cent. per annum. It shall not be paid to the depositors. Banks with head offices in India having deposits of between Rs. 25 crores and Rs. 5 crores as shown in their latest balance-sheet will be allowed a latitude of ¼ per cent. interest per annum for term deposits.

The foregoing agreement does not cover inter-bank transactions. An important effect of the agreement is the cessation of house money at call. Even from 29th September, banks stopped quoting for this type of call money. Instead, the new type of deposit, namely, seven days' deposit, came to be quoted. Although the rate for it is said to be 3½ per cent. to 3¾ per cent., most of the business has been only at the maximum rate. There has been no change in the rates for term money; 3½ per cent. to 4 per cent. is the rate for one to six months' deposits. Inter-bank call money is quoted at 2 per cent., with big banks and 2¼ per cent. with small banks. The trend is extremely easy.

The amount tendered for 91-day Treasury Bills this week was a shade higher at Rs. 2.45 crores, as against Rs. 2.35 crores in the previous week, the amount invited being Rs. 2 crores during both the weeks. The average rate of accepted tenders was lower by a fraction at 2.527 per cent., as against 2.529 per cent.

The Gilt-edged market has been absolutely dull, with very little business. With the busy season not far away, the banks are not interested in adding to their Gilt-edged portfolio. The L.I.C. has not made any fresh purchases since last week, apparently because it is awaiting the directions of its new investment advisory committee.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 1st October

The bullion market ruled distinctly easy during the major part of the week under review, but there was a slight recovery today on account of short-covering. Earlier, silver was subjected to bull liquidation, thanks to persistently heavy arrivals. Even reports of duty having been paid only on 30,000 Tibetan coins failed to enliven sentiment. Offtake was restricted, the daily average being 8 bars, as against the arrival of 39 bars per day on an average. In sympathy with silver and on continued slackness in demand due to the *shradha* period, the yellow metal also staged a retreat. The daily average arrivals were 7,250 tolas, while offtake was of the order of 3,250 to as. On Monday, the carryover charge rose from As. 7 to As. 11, with the result that a margin of Rs. 10 per tola was applied on every outstanding sale under Bye-law 33 (B) (I) (ii).

Forward silver (*Bhadrapad* settlement), which stood at Rs. 187-7 last week-end, encountered selling and came down to Rs. 185-13 yesterday before recovering to Rs. 136-4. The settlement ended at this rate. *Aswayuj* settlement receded from Rs. 188-3 to Rs. 186-12 yesterday. Subsequently, however, it recovered to Rs. 187-3 on reports that a leading bear had covered about 300 bars of his outstanding sales. The delivery order rate for the *Bhadrapad* settlement was fixed at Rs. 187 and the clearing rate for the *Aswayuj* settlement at Rs. 188. Business in the latter settlement was done today at Rs. 187-13.

Following heavy arrivals of unrefined silver from upcountry centres, ready silver fell from Rs. 187-3 on Wednesday last to Rs. 185-12 yesterday. It, however, recovered to Rs. 186-13. The floating stocks of silver are estimated at 1,000 bars.

Forward gold (*Bhadrapad* settlement) terminated on Monday at Rs. 109-9-6—the contango being As. 11-6—as against last week's closing rate of Rs. 107-4. *Aswayuj* settlement lacked support and dropped from Rs. 107-11 to Rs. 106-9 before finishing at Rs. 107-3-6. The delivery order rate for *Bhadrapad* delivery and clearing rate for *Aswayuj* delivery were determined at Rs. 107 and Rs. 107-8, respectively.

Ready gold was easy, the quotation declining from Rs. 107-3 last week-end to Rs. 106-2 yesterday. Thereafter, a slight recovery was in evidence, today's closing rate being Rs. 106-12-6. The floating stocks of gold are reported to be 40,000 tolas.

There was an improvement in the prices of spot silver in London and New York, today's quotations being 76d. and 89¼ cents, as against 75½d. and 88⅜ cents, respectively. Gold prices in London rose from 76½d. to 76⅝d. yesterday, but declined to 76½d. today.

The following comparative table shows at a glance the trend of the market during the week under review:

	1-10-58	Highest	Lowest	24-9-58

LINSEED WELL MAINTAINED

(Messrs. A. Bradley & Co.)

CALCUTTA, 29th *September*

Linseed prices have been rather firmly held, but business is negligible. Many mills are now idle owing to uneconomic crushing margins and a limited number of small mills are operating on a hand-to-mouth basis. The oil market is dull and prices have shown no change. Enquiries are limited. Only small transactions of a purely local nature have been reported.

The latest available quotations are: Ready Rs. 26-2 and October Rs. 26 per maund.

COTTON FUTURES DEPRESSED

(From Our Own Correspondent)

BOMBAY, 1st *October*

The cotton futures market continued to rule depressed during the week under review also. Prices registered a further steep decline on persistent heavy liquidation. Selling reflected traders' disappointment over the delay in the announcement of export quota and reduction in export duty on cotton. The Cotton Buyers' Association, the Indian Central Cotton Committee and the Cotton Advisory Board had, as is common knowledge, urged the Government to make known the cotton export policy early enough. The Government's failure to take a decision, even after the relapse of two weeks since the Board made its recommendation, was a matter of considerable disappointment to the trade. Operators felt that foreign buyers were keeping off the market because they expected a reduction in export duty, as recommended by the various cotton bodies, and a further fall in prices. Concerned over the delay, the Board of the East India Cotton Association, in a telegram addressed to the Union Finance and Commerce Ministers, endorsed the Cotton Advisory Board's recommendations and urged the immediate removal of export duty on cotton as the only way to facilitate sizable exports. It also pointed out that, since the crop was still in the hands of growers, this was the time for supporting prices so as to prevent it from falling below reasonable levels. In spite of these repeated appeals, nothing materialised. Consequently, sentiment was completely demoralised. Bears seized the opportunity to hammer down prices. On heavy panicky unloading, prices suffered a sharp break. For instance, the Jarilla March contract slumped to the lowest level of its career on Tuesday, the quotation falling to as low as Rs. 619.50. The large carryover, the prospect of a good crop and the none-too-encouraging textile outlook imparted further weakness to the market.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 637, as against the previous close of Rs. 642. The contract came under heavy selling pressure and steadily declined to Rs. 619.50 yesterday. Opening at Rs. 625 today, it improved to Rs. 628.75 before declining to Rs. 628.50. The net loss over the week was Rs. 13.50.

The trend of prices of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	1-10-58	*High*	*Low*	24-9-58
I.C.C. Moglai Jarilla (March 1959) ...	628.50	637	619.50	642

In the spot section, trading was dull. Prices showed a declining trend. Mill enquiry was small. Demand was mainly confined to staple varieties. Stray deals were put through by needy mills at progressively declining rates. The chief varieties which attracted attention were Vijay, Surti, 197/3, and 0394.

Activity on the export front was subdued. Enquiries from Hong Kong were noted for Bengals and 25/32" and 1" staple cotton. Moderate quantities of low grade Khamgaon and Malegaon were booked by shippers. Some small business was also reported in Punjab cotton.

Exporters point out that, due to the uncertainty regarding the cotton export duty, foreign buyers are keeping off the market. The latter are inclined to cover their requirements at the current prices, as they expect a further price fall. As far as Japan is concerned, foreign exchange shortage is said to be the major obstacle in the way of larger cotton purchases by that country.

The foreign section was quiet. Spinners were reluctant to make large purchases of foreign cotton in view of the poor offtake of yarn and cloth. Nevertheless, East African and Sudanese styles received some attention. There were expectations that, soon after the arrival of Mr. Morarji Desai from his tour, something definite will be known of the possibility of importing U.S. cotton.

It is reported that the Egyptian Government has decided that all sales of Egyptian cotton effected prior to 1st September 1958 should be given the benefit of the old rate of discount of 20.95 per cent. and that all subsequent transactions should be based on the new discount rate of 15 per cent. This would provide some relief to such of the Indian mill buyers who had booked business prior to 1st September. The State Bank of India has not yet received confirmation in this respect but it is thought quite probable such confirmation would be received shortly.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end quotations:

Bengal *Deshi* 610 (610); Berar Jarilla 650 (670); Khandesh 700 (710); Vijay 820 (825); Hubli Laxmi 900 (930); Jayadhar 820 (850); *Delivery Contracts*: Bengal 590 (588); Mathia 580 (595).

Quiet conditions prevailed in the Karachi cotton futures market during the week. In the absence of fresh development, trading interest was at a low ebb. Lack of export enquiries discouraged buying. A moderate amount of selling met with only limited buying. Values consequently receded. N.T.R.G. January, which had closed at Rs. 76-1 last week-end declined to Rs. 75-12-6, while the March position receded from Rs. 76-7 to Rs. 76-2-6. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 74: Punjab *Deshi* 71; 4F Punjab Roller 71-4; S.G. 75-4; L.S.S. Punjab Roller 73-4; S.G. 78-4: N.T. Roller 79-4; S.G. 89-4; 289 F Punjab Roller 83-4; S.G. 96-4.

Alexandria cotton futures market ruled easy during the week under review. Absence of export

demand and keener competition from Sudan adversely affected the sentiment of operators. Favourable weather news, indicating the possibility of a good crop and a comfortable supply position, prompted selling. Prices consequently staged a retreat. Towards the close of the week, however, the medium staple *Ashmouni* contracts received support and prices rose. The earlier losses were not only made up but the contract closed higher, as compared with last week-end closing. Exports of Egyptian cotton during the 1957-58 season, which ended on 31st July 1958, aggregated 782,808 bales, as compared with 714,200 bales in the previous season.

The following are the latest available quotations—in tallaris per lb.—from A'exandria, the figures in brackets being last week's closing quotations:

Karnak: November 72.95 (72.45); January 72.30 (72.65); *Ashmouni*: October 63.45 (63.70); December 63.70 (63.45).

Cotton futures values in **Liverpool scored** handsome gains during the week. Support by American interest in Liverpool, trade covering and occasional mill fixation lifted values. The rise would have been more marked but for the uncertainties regarding the U.S. cotton export policy and the unencouraging news from the yarn and piece-goods markets. Sudan contracts, however, met with selling and values eased. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: October-November 23.80 (23.68); December-January 24.00 (23.88). *Sudan*: November-December 29.25 (29.75).

Firm conditions prevailed in the New York cotton market during the week. Values improved on good Spot House support and trade buying. The main supporting factor was the heavy entry into the Government loan. Higher levels, however, met with resistance induced by fears of the possibility of larger hedge offerings as the new crop movement gathered momentum.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)		
	30-9-58	23-9-58	16-9-58
Spot	36.05	35.90	36.10
October	35.89	35.75	35.55
December	36.22	36.18	36.03
March	36.67	36.66	36.53

SUGAR FIRM AGAIN

(From Our Own Correspondents)

BOMBAY, *1st October*

The firm trend noted in the sugar market during the last fortnight continued unabated during the week under review. The ex-mill quotations for sugar in the Bombay-Deccan area were higher by 50 nP per bag and the demand from the interior was normal. Even the large arrivals of sugar by rail into the market had no effect. The arrivals aggregated 22,400 bags, as against 7,500 bags in the previous week. The Export Agency of the Indian Sugar Mills' Association purchased about 7,000 bags of sugar in the open market during the week.

Large grain sugar picked up a rupee to Rs. 111-Rs. 117. Medium grain advanced by a like amount to Rs. 107-Rs. 110. Small grain was done at Rs. 105-Rs. 106.

The total production and despatches of sugar up to 15th September 1958 in the current season amounted to 1,970,000 and 1,799,000 tons, as against 2,022,000 and 1,864,000 tons, respectively, in the corresponding period of last year. Stocks with factories as on 15th September stood at 606,000 tons.

* * * *

HAPUR, *29th September*

The sugar market is quiet and listless in the absence of fresh interest. Crushing for the new season has not yet begun. The supply position is easy and outside demand is practically dormant. Some of the factories are quoting the inferior quality below the controlled prices.

Dull conditions continued in the Muzaffarnagar sugar market during the week under review, as fresh demand was at a low ebb. Moderate business was done for Delhi and Gujerat. The rates of smaller grains declined further by 19 nP per maund and Amroha was being quoted below the controlled price by 62 nP per maund. Bijnore E29 quality prices eased to Rs. 35.19, as against Rs. 35.81 fixed by the Government. Prices of bo'd crystal, however, maintained their level. The latest prevailing ex-mill delivery prices there were: Khatauli (A28) Rs. 37.37; Deoband (C29) Rs. 36.37; Ichalpur (B29) Rs. 37.12; Mansurpur (B28) Rs. 36.75; (C29) Rs. 36.37; Buland (B29) Rs. 37.12; Mawana (B29) Rs. 37.12; Daurala (C29) Rs. 36.37; Amroha (D29) Rs. 35.25; Bijnore (E29) Rs. 35.12; Meerut (D29) Rs. 35.50.

Trading in ex-mill delivery sugar was practically at a standstill in the Kanpur market as buyers were unwilling to transact even at controlled prices. Some of the smaller factories were trying hard to dispose of their individual al'otment at As. 4 a maund below the controlled rates. The main depressing factor was the market's overstocked position at principal consuming centres and at Kanpur stocks with the trade were put at 45,000 bags. Prevailing prices were: Control'ed ex-mill Rs. 36-12; s~~oft~~ (per bag) C29 Basti Rs. 103-8; Gola Rs. 102-4: D29 Gola and Burhwal Rs. 101-8; Tulsipur and Balrampur Rs. 101-4; Lakhimpur and Hargaon Rs. 100-12; Walterguni Rs. 101.

Khandsari ru'ed quietly steady, as old stocks were small and production for new had been delayed due to heavy rains received now. The price ranged between Rs. 32 and Rs. 35 per maund.

Old *gur* stocks here as well as in other producing areas this side had nearly been exhausted and were about 1,500 maunds here. New arrivals this week, which were lifted at Rs. 25 per maund, had been stopped due to heavy rains received in the last two days. Dry quality was nominally quoted at Rs. 25 and *kotha* dry-wet at Rs. 19.87 per maund.

The condition of the cane crop is fairly good, but crushing is being delayed for at least a fortnight.

Stocks of old *gur* in the Muzaffarnagar market were reported to be negligible and the prices ruled quiet in the past week. *Chaku* wet prices were unchanged at Rs. 20 to Rs. 20.50 per maund.

Gur futures recorded a steady to firm trend on Punjab bull support. Fagun opened at Rs. 13.57 last Monday, touched the highest in mid-session at Rs. 13.92 and was quoted today at Rs. 13.88.

YARNS SLUMP

(From Our Own Correspondent)

BOMBAY, *1st October*

It looks as though the morale of the yarn market has been lost. Operators are nervously liquidating their holdings, while buyers are extremely scarce. Consequently, prices have slumped. In particular, staple fibre yarns have suffered a sharp setback. Several mills in Bombay State, South India and other places are offering supplies, especially of 2 x 40s, at markedly lower prices. The weakness has been accentuated by expectations of a rise in the indigenous production of staple fibre from 40 tons to 60 tons per day. Naturally, the speculators, who had made bulk purchases of yarn in anticipation of better prices immediately after the introduction of the Staple Fibre Control Order, are unloading their stocks. In sympathy with staple fibre yarn and following rumours of a possible relaxation in imports for the current licensing period (October 1958—March 1959), rayon yarns are ruling bearish. It is reported that the premium on import licences for rayon yarn has come down lately from 110 per cent. to 80 per cent. The reduction is attributed to the large number of licences issued against export of rayon fabrics; the total value of these licences is estimated at Rs. 1.25 crore. The traders anticipate that, with better export performance during the month of September, still more licences will be granted and that the authorities will not change the actual users' quota of yarn for the current licensing period. Cotton yarns continue to remain depressed, thanks to decline in raw cotton prices, heavy accumulation of stocks with mills, and fall in export orders on account of heavy pressure of sales by China, Hongkong, Pakistan and other countries at lower prices. Demand from hosiery manufacturers is also at a low ebb.

During the week, staple fibre yarn (40 x 2) October delivery came in for long liquidation and were hammered down by Rs. 34 to Rs. 655. Business in the December delivery commenced at Rs. 680 on 29th September. It fell to Rs. 664 today. In the spot section 40 x 2 Citys receded by 18 nP to Rs. 3.44. Kohinoors dropped 25 nP to Rs. 3.56. Centurys declined by 22 nP to Rs. 3.47. Among foreign yarns, Paramounts eased by 13 nP to Rs. 9.62. Fujis were neglected at Rs. 9.75.

In the art silk yarn section, 120 Japan fell by 25 nP to Rs. 5.56. 150 Japan shed 6 nP to Rs. 6.06. 150 Italy eased by 13 nP to Rs. 6.12. 120 Italy were dull at Rs. 6.25. Among indigenous yarns, National Rayons 150 bright cones first grade lost 18 nP to Rs. 4.72 and 120 bright cones first grade 20 nP to Rs. 5.70.

In the cotton yarn section, ten counts were neglected, Moderns being quoted at Rs. 13.25 and Podars at Rs. 12.50. Twenty counts Moderns were unchanged at Rs. 16.75 as also Gokaks at Rs. 16.50. Among 30s, Hinds were stagnant at Rs. 19.75. Forty counts Minaxis receded by 12 nP to Rs. 24.94. Moderns changed hands at Rs. 25.25, same as last week. Among sixty counts, Finlays were quiet at Rs. 58. Eighty counts Mahendras dropped a rupee to Rs. 69. Finlays were on offer at Rs. 78. Moderns, however, gathered 50 nP to Rs. 72.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	1-10-1958	24-9-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5 56	5.81
150 Japan (per lb.)	6 06	6.12
120 Italy (per lb.)	6.25	6.25
150 Italy (per lb.)	6.12	6.25
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	655 00	689.00
40 x 2 December	664 00	—
40 x 2 Kohinoor (per lb.)	3 56	3.81
40 x 2 City (per lb.)	3 44	3.62
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 50	12 50
20s Modern	16 75	16 75
30s Hind	19 75	19 75
40s Minaxi	24 94	25 06
60s Finlay	58 00	58 00
80s Mahendra	69 00	70.00

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 1st October

The oilseeds market was in the grip of bears during the week under review. Reports of favourable weather conditions, lack of fresh incentives and easy advices from cotton market let loose a wave of selling which brought about a landslide in prices. The selling pressure was intensified by the heavy application of new put options on Monday, while the bear operators did their best to depress the market by additional sales. Yesterday, there was a slight recovery following profit-covering and scattered bargain hunting. Today, again, the market staged a relapse and prices suffered a setback. The closing rates were substantially lower than those at the end of last week.

Groundnut February 1959 contract slumped by Rs. 5.12 to Rs. 159.75. Bold ready, coromandel variety and Khandesh quality all fell from Rs. 42.50 to Rs. 40.50. Groundnut oil ex-mill dropped 75 nP to Rs. 21.25. Rail'way receipt lost a like amount to Rs. 21.12.

Castorseed May 1959 contract, which stood at Rs. 15 5.18 last week-end, came down on continued selling to touch a low of Rs. 147.50 today. September 1958 contract expired yesterday at Rs. 152.50, as against Rs. 161.65 on Wednesday last week. Tenders of 5,100 candies were issued yesterday. Ready Madras receded by Re. 1.50 to Rs. 30.37. Kanpur quality declined by Re. 1.69 to Rs. 29.06. Castor oil B.S.S. moved down from Rs. 17.87 to Rs. 17.25 and commercial quality from Rs. 16.19 to Rs. 15.62.

Linseed May 1959 contract retreated by Re. 1.12 to Rs. 30.69. September 1958 contract terminated yesterday at Rs. 34 25, as against Rs. 35 last week. Tenders of 450 tons were issued yesterday. Bold ready receded by 88 nP to Rs. 34.12. Linseed oil dropped 50 nP to Rs. 17.37.

Cottonseed May 1959 contract was on offer at Rs. 98.75 today, as against Rs. 101.50 on Wednesday last. September 1958 contract came down from Rs. 130 to Rs. 124.50 at which rate it terminated. Tenders of 100 candies were issued against this contract.

Among other seeds, kardiseed bold ready receded from Rs. 23.50 to Rs. 22.50 before recovering throughout the week at Rs. 34, as against Rs. 34.50. Today, however, it was higher at Rs. 34.50.

The following table shows the closing prices of oilseeds and oils today as compared with those of the two previous weeks:

	1-10-1958	24-9-1958	16-9-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	159 75	164 87	164 62
Bold ready (per cwt.)	40 50	42 50	41 12
Linseed—			
Sept. 1958	34 25§	35 00	34 62
May 1959	30 69	31 81	32 06
Bold ready (per cwt.)	34 12	35.00	34.50
Castorseed—			
Sept. 1958	152 50§	161 65	158 00
May 1959	147 50	156 18	155 25
Madras (per cwt.)	30 37	31.87	31.75
Cottonseed—			
Sept. 1958	124 50§	130 00	128 00
Sept. 1959	98.75	101.50	103 50

BLACK PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, *1st October*

Malabar black pepper eased further during the week under pressure of selling by bears who were emboldened by their recent success in depressing the market. Exporters who went blank in overseas market continued to hammer December position in forward at Cochin, the latest quotation for December delivery having been brought down to Rs. 96 from Rs. 101. The weakness in December naturally affected ready and October which are now quoted at Rs. 100 and Rs. 101 respectively.

U.S.A. dealers who were buyers for Malabar black at roundabout $0.25 withdrew when they saw that their counterparts in India were trying to depress the market. Sarawak was reported to be out of the field as far as New York market was concerned, its production this year being much inferior to the A.S.T.A. quality. Lampong was the only competitor of Malabar at present but there too, owing to financial instability and various export regulations, Indonesian growers and dealers were not so eager to press sales as was the case in the beginning of the season. They were said to prefer to keep their money in pepper rather than in paper currency.

After the release of the detained Lampong pepper, spot in New York was reported down from $0.26½ to $0.25½ but steady despite poor demand from grinders. Some of the dealers there were reported to be willing to entertain offers for long forward. Singapore, after improving to Str.$75, once again went down to Str.$71 for paucity of foreign enquiries. Knowledgeable sources on the Malabar Coast estimate the coming crop between 25,000 and 27,000 tons and expect that the exportable quality will move some time in the last week of November. The future of the market at the moment, appears to be uncertain but majority of the dealers here as well as overseas are said to be marking time for the market to become stabilised at a certain level for starting their purchases both for investment and trading. Ungarbled at Cochin is quoted at Rs. 581½ and at Calicut at Rs. 600. In A.S.T.A., October is nominally quoted at $0.24½ and December at $0.24. In delivery the tender for 1,500 bags having been issued, market looked depressed. At the time of writing, October delivery is quoted at Rs. 520. Following are today's quotations: Ready Rs. 75 per Bengal maund and October Rs. 520.30 per candy of 5½ cwts.

CLEAN LEAF TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *26th September*

The fortnightly export auctions continue to be held in Cochin; the next sale will be on Tuesday, the 30th inst. There was a dust auction held on Thursday, 25th inst., which aggregated 654,072 lbs. The larger and improved selection met with good demand at lower rates. The decline was particularly applicable to the low medium and medium dusts which were irregularly easier by 10 nP to 15 nP. Coloury clean leaf teas were firm to dearer, the best liquoring highgrowns were considerably dearer, and advances of up to 30 nP were recorded.

London Market—Sale of 22nd September 1958:—Buyers were following quality closely. Otherwise, prices were unchanged.

Sale of 23rd September 1958: Steady following quality.

Colombo Market:—Sale of 22nd September 1958:—Quality declined. Dimbula, Dickoya and medium brokens down by 20 to 30 cents. U.V.A.S. much lower. Following quality lowgrowns firm to dearer.

Sale of 23rd September 1958:—Strong demand. Better liquoring U.V.A. type broken-mixeds and grainy dusts substantially dearer. Other sorts firm.

Calcutta Market—Export:—Fair general demand. Commons firm to occasionally dearer. Bright liquoring orthodox Assams sold well. Others generally declined by 10 nP to 20 nP. Best C.T.Cs well supported. Poorer kinds generally lower by 10 nP to 20 nP.

Internal:—19,600 packages. Dust continued to evoke good demand. All orthodox firm to dearer, Thick liquoring powdery types strongest feature. C.T.Cs easier by 15 nP. Few Best C.T.Cs firm to dearer.

Export Quota:—Business opened this week at 5½ nP.

On Wednesday, the 24th inst., the Government of India announced a further release of export quota amounting to 5 per cent. of the B.C.B. This brings the total release so far for the 1958-59 season to 65 per cent. of the B.C.B. In view of the fact that the total release for the last season was only 63.4 per cent. the market reacted sharply and business was done at 2½ nP. There has since been a slight improvement and there are now sellers at 3½ nP and strong buyers at 3 nP.

Forthcoming Auctions:—Sale No. 'U' will be held on Thursday, 9th October 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 29 was held on 30th September. Offerings amounted to 1.8 million lbs. Demand was low. Low mediums easy by 5 nP to 10 nP. Medium and good mediums were lower by 10 nP to 20 nP. Best liquoring highgrowns irregular, but following quality whole leaf was steady and tippy teas were strong."

RELIEF TO COMMON TEAS

(From Our Own Correspondent)

CALCUTTA, *30th September*

At long last, the much-awaited announcement granting relief to common teas has been made in New Delhi in the form of a Bill introduced in Parliament with corresponding notifications, so that the changes in the duties made would take immediate effect. The announcement has caused no enthusiasm whatsoever in tea trade and industry circles. The announcement had claimed that the changes in duties made wou'd boost exports, but, during yesterday's auctions, no change in trend was in evidence. Even during yesterday's auctions, common teas could realise prices much below production costs. It was stated here that prices of teas would, in fact, tender to move higher, in view of collection of non-refundable excise duty from the producers. A point to be noted here is that the revenue loss to Government wou'd be Rs. 1.5 crore as a result of the reduction in the excise and export duties. The changes made are such that this relief would go into the pockets of shippers and not those of common tea producers.

A member of the Tea Board, Mr. B. C. Ghosh, candidly said here yesterday that the changes in duties would neither boost exports nor give relief to gardens producing common teas. Market circles were in agreement with the view expressed by Mr. Ghosh. For it was noted that, from the highest excise duty zone, most teas are exported. The new rate of export and excise duties in this zone are near'y equal to the old rates. Hence it is difficult to see how the changes would boost exports, as the Minister for Revenue, Mr. B. R. Bhaghat, claimed while introducing the Bill in Parliament. Excise and export duties combined from the other two zones have been reduced, but the reductions made are too small and it is doubted here whether such sma'l reductions would boost exports of common teas.

The growing areas have been divided into three zones based on the weighted average prices, and the key note of the scheme is that teas of different grades, whether exported or consumed within the country, would be taxed on a graduated scale based on their prices. The inclusion of Darjeeling in the highest excise duty zone surprised many here, since cost of production in Darjeeling is comparatively higher than the other two zones.

The maximum rate of export duty would now be 30 nP per lb, as against 75 nP, and the maximum rate of excise duty 19 nP for loose tea and 21 nP for package tea plus the duty leviable on loose tea. The excise duty on all teas sold in the internal as well as export auctions would be 2 nP in the first zone, 4 nP in the second and 10 nP in the third. The duty on package tea would be 21 nP over and above the loose tea.

The average rate of export duty would be 26 nP per pound for the present. The refund of excise duty has been withdrawn except for package tea the refund for which is 21 nP per pound.

It was noted that, the relief would amount to 10 nP per pound in the first zone, 8 nP in the second and 2 nP in the third, based on the export duty at present applicable, i.e., 38 nP. The relief accorded is, indeed, small and has fallen below expectations in the market. The point stressed in trade circles is that India's common teas have to meet severe competition with teas from East Africa and other producing countries most of which levy no duties. Also, cost of production in these countries is much lower than in India.

In the internal auctions held last week, dusts offered aggregated 19,386 chests. There was more demand and prices improved. Orthodox teas were dearer. The prices for the stronger liquoring powdery teas rose above valuations. In C.T.Cs., the best kinds, the offerings of which were limited, were paid keen attention and prices for these rose above va'uations. On the other hand, the plainer liquoring medium teas lost by 15 nP. Legg-cut Dooars were irregular, although there was good demand. The quotations (in rupees per pound) with those of the previous week in brackets were: Best Assam CT.C. 2.50 to 3.00—nominal (same—nominal); medium Assam C.T.C. 2.10 to 2.30 (2.15 to 2.35); medium Dooars 1.76 to 1.78 (1.74 to 1.76); and medium Assam grainy dust 1.78 to 1.80 (1.76 to 1.78).

Leaf on offer amounted to 1,810 chests. Prices rose on good demand.

In the export auctions held yesterday, there was good demand. Common fannings received keen attention and their prices rose, whi'e other grades in this category eased. C.T.C. Assams and bright liquoring orthodox teas were steady, while others were lower. The commencement of the auction was delayed for clarification from New Delhi regarding the new rates of excise and export duties.

Export quota changed hands at 4¼ nP and declined to 3½ nP.

JUTE PRICES DROP

(From Our Own Correspondent)

CALCUTTA, *23rd September*

The week under review in the jute markets witnessed sizab'e fall in the prices of both goods and fibre. Goods were affected mainly by selling pressure in the futures market. Following this, foreign buyers kept away from the market for a time, as they desired to resume purchases only after the downward trend had spent its full force and prices had touched rock-bottom levels. Further, launches carrying goods from mills to steamers for loading did not work, as their crews were on strike. This was early in the week, but that marked the beginning of the fall in prices. Indeed, there was covering demand throughout the week, but that alone could not sustain prices. It was on'y towards the end of the week that the U.S. showed keen interest and purchased a fair quantity. In heavy goods, sales here and there in small quantities took place, the buying being mainly on account of Aust'a'ia and the Continent. The recession took the price of ready B. twills to as low as Rs. 93.60. This was on Friday last. Market reports from New York were a'so far from encouraging, as it was stated that, although burlap manufacturers had only limited stocks, they were disinclined to enter into commitments, in view of the dullness in the market here.

Bur'ap consumption figures from the U.S. indicated that the monthly average for the eight months ended August was 68 million yards, as against 69 million yards in the first eight months of 1957. The fall of one mi'lion yards in the average was attributed here to the economic recession. It had been believed here that the recession had reached its climax and that the movement back had started. Burlap consumption in August, however, was only 67 mil'ion yards, as against 68 million yards in July. In this context, the figure for this month was awaited with interest, as, in fact, the economic recession in the U.S. had been arrested and, in the ordinary course, the consumption of burlap should increase.

Despite the setback to shipping following the strike by crews of launches, there were reasons to believe that the month as a whole should record higher shipment figures than August. In this view, the month-end stock figures were keenly awaited, as, if these figures would be lower in accordance with market anticipations, a firm recovery in prices would follow. There was indeed nervous selling but, at the same time, there was covering demand. The fall in prices of raw jute was also a cause for quietness in the goods. This followed a remarkable increase in arrivals from upcountry, which was indicative of the unmistakable nature of a bumper crop. Sel'ers naturally became nervous, as their stocks were increasing. For most part of the week, mills showed sparse interest, but a recovery set in on Saturday last when about 50,000 maunds were purchased by mills.

On Tuesday last, the goods market opened on an extreme'y quiet note, and selling pressure in the futures market lowered prices for both hessian and heavy goods. At lower levels, however, there was some buying, as a result of which, after the fall, ready B. twi'ls firmed up to Rs. 96.00 and ready hessian 40" 10 oz. to Rs. 41.60. However, the recovery was only short-lived and, although some scattered deals in heavy goods were put through with Australia and the Continent, the vo'ume of business was not adequate enough to sustain prices. Hence B. twills were lower at Rs. 95.25, with hessian 40" 10 oz. moving down to Rs. 41.50. On Thursday, conditions took a turn for the worse on account of the heavy bearish pressure in futures. B. twills declined to Rs. 94.20 and hessian 40" 10 oz. to Rs. 41.50. At lower levels, there was good covering business, but the selling pressure in the futures market continued unabated and, on Friday, the lowest levels of the week were touched, with B. twil's at Rs. 93.60 and hessian 40" 10 oz. at Rs. 41.40. In the week-end, U.S. buyers turned active, signifying which ready hessian 40" 10 oz. recovered to Rs. 42.25. In sympathy, B. twills improved to Rs. 94.35. Yesterday, prices improved with good short-covering demand. Also the East India Jute and Hessian Exchange announced heavy margins on bear sales in the futures. In the ready market, B. twills improved to Rs. 94.90 and hessian 40" 10 oz. to Rs. 42.65.

For most part of the week, the raw jute market was lifeless. Sellers became nervous, as their stocks had increased in view of more arrivals in the week. From Rs. 23.25, Assam northern bottoms fell to Rs. 22.50, but recovered to Rs. 22.75. Local daissee bottoms had fallen to Rs. 25.50 from Rs. 26.00 before recovering to Rs. 25.75, following some buying interest. The latest quotations for the different varieties of the 1958-59 crop, October-November delivery are:

	Middles	Bottoms

ZINC FIRMS UP

(From Our Own Correspondent)

CALCUTTA, *30th September*

The feature of trading in the metal market during the week under review was the improved demand for electrolytic zinc, as a result of which the price was better at Rs. 68, after opening at Rs. 67.00. Consumers lifted sizable quantities, with the result that the stock in the market fell. There was also a small increase in the forward rate also. Fresh arrivals were anticipated in the near future. Tin opened at Rs. 555 and, after receding to Rs. 553, rose to Rs. 556, following the rally in price on the London Metal Exchange.

The London recovery to £712 from £672 was due to increased purchases by the United States. It was also reported that enthusiasm was shown by Continental buyers. The earlier fall in the price of tin on the London Metal Exchange was due to heavy offerings, as a result of which the Buffer Stock Manager under the International Tin Agreement could no longer continue purchasing. The floor price being £730, the Manager should purchase as soon as the price moved below £730. In fact, the price had slumped to £640, immediately after the Manager withdrew his support. Earlier, the U.S.S.R. took the opportunity to offer second grade tin in sizable quantities and to avail the profits. Since the offerings at the floor price of £730 increased, a stage was reached when the Manager could no longer continue purchasing, and he had to withdraw support from the market. It was subsequently announced in London that the International Tin Council would make no change in the floor price of £730 and that the Agreement would continue to be in force. It was realised here that the supply had exceeded demand and that, if only the law of supply and demand were to operate, the price should move down. However, market circles thought that the export restrictions enforced on producing countries by the Tin Council would be continued.

Lead was quiet at Rs. 67.25. The stock position continued to be good, and a Government enquiry for 95 tons invited keen enthusiasm of stockists. Copper scrap was fully steady.

ENQUIRIES FOR KIPS PATCHY

(From Our Own Correspondent)

MADRAS, *29th September*

Trading with the U.K. in E.I. tanned hides and calves was spasmodic, and prices declined by 3 nP to 6 nP per lb. Enquiries were patchy and buying was selective. Arrivals in the local market were moderate and offtake by shippers good at unchanged levels. Tanned calf skins met with good clearance.

There was no change in the tanned skins market. Arrivals of common tannages continued to be short and were in good demand. Importers showed interest in lightweight goat and sheep skins, mostly lower grades.

Notice

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England)
The Liability of Shareholders is Limited

DIVIDEND

NO DIVIDEND HAS BEEN RECOMMENDED by the Directors for the year ended 31st March, 1958.

The Share Transfer Books will be closed from the 23rd October, 1958, to 5th November, 1958, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

(Sd.) D. FORDWOOD,
Secretary.
Agents.

CALCUTTA, *24th September, 1958.*

MONTREAL CONFERENCE

MAIN DECISIONS REVIEWED

THE Commonwealth Trade and Economic Conference closed its 14-day deliberations at Montreal, Canada, on 26th September, 1958, with a *communique* containing a strong reaffirmation of the interdependence of the Commonwealth countries in economic affairs. An outstanding feature of the conference was a series of measures which give expression to this interdependence and which will increase the trade and development of individual member nations.

Outstanding on the trade side is the agreement to try to remove any discrimination in trade between Commonwealth countries, unless necessary for balance-of-payments reasons, and the recognition of the importance of not hindering the export of manufactured goods from less-developed Commonwealth countries.

On the need to mitigate the adverse effects of heavy falls in commodity prices, the conference agreed that the Commonwealth countries concerned would be ready to examine the problems of individual commodities not already covered by price stabilisation arrangements to see what could be done by concerted action to moderate excessive short-term price fluctuations. They hoped to secure the co-operation of non-Commonwealth countries in these aims. At the same time, they recognised that any action on commodity prices must pay due regard to long-term trends in prices and supply-and-demand factors on development. They affirmed the supreme importance of securing an increased flow of capital, and agreed that Commonwealth countries able to provide capital would do all they could "even to the extent of some sacrifice."

During the conference, the United Kingdom announced it was now ready to supplement a great flow of capital to the rest of the Commonwealth from private United Kingdom businesses and through the London capital market by new "Commonwealth assistance loans."

By means of these, the Governments of independent Commonwealth countries would be able to borrow money at the interest rate paid by the United Kingdom Government itself, plus a management charge of one-quarter of one per cent. These loans would enable countries to buy urgently-needed United Kingdom exports and thus maintain their development programmes.

Loans from the United Kingdom Exchequer would also be made available to colonial Governments on an expanded basis. In addition, some subordinate authorities—such as local authorities and public-utility undertakings in underdeveloped countries—would now be given direct access to the London market in suitable cases.

Canada also announced increased aid for development, mostly through the Colombo Plan; it is planning to give aid to the West Indies, and is initiating a programme of technical assistance to Commonwealth countries in Africa.

As a step towards broadening the basis of the Commonwealth Development Finance Company, which has hitherto worked only with private United Kingdom capital, it was announced that the Bank of England would consider the provision of further finance, and that the Company had invited other Commonwealth banks and Governments to participate. Indications at the conference were that some countries will agree to participate.

The Commonwealth must also seek capital for development from non-Commonwealth sources, and the conference paid tribute to the great impetus to economic development given by the International Bank, a third of whose lending has gone to the Commonwealth. The delegates noted with appreciation the United States' announcement that it would propose at the forthcoming New Delhi meeting that consideration be given to enlargement of the Bank's resources. Clear undertakings were given by the United Kingdom, Canada, and others that they would increase—perhaps double—their own subscriptions to the Bank if such a proposal were put forward.

The conference also warmly supported a proposal to consider enlarging the resources of the International Monetary Fund, which greatly assists countries in temporary balance-of-payments difficulties.

It was not only in the field of trade, finance, and development that important decisions were taken. On education and training fundamental to economic development, it was proposed by Canada, and agreed unanimously, that a new scheme of annual awards up to 1,000 scholarships and fellowships would be established on an exchange basis within the Commonwealth. The United Kingdom announced that it would assume responsibility for half the programme, and Canada assumed responsibility for a further 25 per cent.

At the same time, the United Kingdom drew attention to the fundamental need to stimulate primary education in underdeveloped countries, and proposed that a conference be held in London not only to plan the scholarship scheme, but also to consider what might be done to expand and improve mutual assistance in the field of education generally, with special reference to the supply and training of teachers.

In another field, it was proposed, and agreed in principle, that a Commonwealth round-the-world telephone cable system be established, based on a new coaxial cable manufactured in the United Kingdom and now used with such remarkable success across the Atlantic. The United Kingdom agreed to make a substantial contribution to such a Commonwealth service if the plan was carried through.

Finally, in the field of continuing economic consultation, it was agreed that existing arrangements should be co-ordinated under the care of a Commonwealth Economic Consultative Council. The United Kingdom offered to provide a Commonwealth House in London for consultuent bodies of the Council and for other Commonwealth meetings —an offer which was warmly received.

DELHI LETTER

(*Concluded from page 552*)

Rs. 97 lakhs. The Government of India has advanced a sum of Rs. 15.33 lakhs. as debenture loan to the Company at 4½ per cent. interest and repayable within a period of 5 to 10 years.

A factory for the production of about 700 tons of DDT has been set up in the Industrial Area, New Delhi. In order to meet the country's requirements of DDT for the anti-malarial campaign, it was decided to double the capacity of the Delhi plant. The construction of another factory at Alwaye in Kerala State, having an annual capacity of 1 400 tons of technical DDT, was started in January 1957. Both the Factories are managed by the Hindustan Insecticides (Private) Ltd.

The total production of Technical DDT in the Delhi plant during the year was 694 tons. Had it not been for the delay in supply of additional chlorine the increased production would have been registered long before. The progress in production of formulated DDT was not so encouraging.

The accounts of the Company for the year 1957-58 have not yet been finalised. It is, however, expected that the excess of income over expenditure, which will have to be refunded to the Health Ministry, will be roughly the same as in the previous year, namely, Rs. 8,70,000.

The Export Risks Insurance Corporation (Private) Ltd., Bombay: The authorised capital of the Company is Rs. 5 crores. The subscribed capital is Rs. 2½ crores and paid-up capital is Rs. 50 lakhs.

The Corporation offers facilities to the exporters to insure risks arising in the course of export trade which are not normally covered by the commercial insurance companies. It covers risks involved in exports on credit terms. The Corporation issues policies to cover all the shipments of commodities of allied nature made by an insured exporter in a period of 12 months and guarantees that, if the value of the goods exported on credit terms is not received in India due to commercial and political causes, it will pay to the insured exporter a percentage of his loss. The percentage is 80 or 85, according as the causes of loss are commercial or political.

From 14th October 1957 upto 30th April 1958, the Corporation received 181 proposals for insurance. Acceptance letters have been issued in 173 cases. The others are pending for want of necessary information. The total face value of the proposals for which acceptance letters have been issued is Rs. 11,76,98,000. Out of these proposals, 87 policies of the face value of Rs. 4,38,45,000 have been issued. Thirty-three proposals have been dropped because the proponents have not paid the initial premia within the prescribed period.

The following table gives an analysis of proposals accepted, policies issued and proposals dropped according to their face value:

	Proposals accepted	Policies issued	Proposals dropped	Proposals pending
Not exceeding Rs. 50,000 ..	35	17	6	12
Exceeding Rs. 50,000 but not exceeding Rs. 1,00,000 ..	26	16	2	8
Exceeding Rs. 1 lakh but not exceeding Rs. 2 lakhs ..	31	16	5	10
Exceeding Rs. 2 lakhs but not exceeding Rs. 5 lakhs ..	44	23	8	13
Exceeding Rs. 5 lakhs but not exceeding Rs. 10 lakhs ..	11	5	4	2
Exceeding Rs. 10 lakhs but not exceeding Rs. 20 lakhs ..	17	6	4	7
Exceeding Rs. 20 lakhs but not exceeding Rs. 50 lakhs ..	4	3	..	1
Exceeding Rs. 50 lakhs ..	5	1	4	..
Total ..	173	87	33	53

It will be observed from the above statement that, at present, the policies that have been issued are mainly in favour of small and medium-size exporters. Big exporters have so far not taken advantage of the benefits which the Corporation offers and the main reasons advanced are: (i) The premium rates are high, (ii) insurance on the basis of whole turnover should not be insisted upon, (iii) risks on non-acceptance of goods is not covered. These points are under examination. Credit insurance is new to India and exporters will take time to fully appreciate its benefits. It is expected that, in course of time, the Corporation will be able to render greater service.

WEEK'S STOCK EXCHANGE TREND

VOL. XCVII. No. 2482 BOMBAY, 11th OCTOBER 1958 PRICE: Re. 1·50

FUND-BANK MEETINGS

INDIA is fortunate to have had the opportunity of playing host to the Bretton Woods Twins and their child—the International Finance Corporation (I.F.C.)—this week. It is so for two reasons. First, by arranging to have the annual meetings of the International Monetary Fund (I.M.F.), the World Bank and the I.F.C. at New Delhi, it has been possible for India to show the leading financiers, industrialists and the Finance Ministers of the free world its achievements and acquaint them with its problems. Secondly, these meetings must have, we hope, enabled the officials and the Ministers at New Delhi to appreciate the importance of private enterprise to a free society. The large amount of foreign help which this country has received in the last ten or eleven years has come mostly from countries where economic growth has been made possible chiefly through a system of private enterprise. Other underdeveloped countries also have benefited by New Delhi being the venue of these annual conferences. Since New Delhi's atmosphere is that of an underdeveloped country, it has provided a fitting background for a discussion of their problems.

Appropriately enough, India's Prime Minister, Mr. Jawaharlal Nehru, chose the problems of underdeveloped countries as the theme of his address to the joint inaugural session of the aforesaid three international bodies. In an extempore speech, delivered fluently and cogently, Mr. Nehru made out a convincing case for aid to underdeveloped countries by the industrially advanced nations. He argued effectively that the wealthier countries would do well to help the poorer countries not only in their individual interest but for the larger good of humanity as a whole. He maintained that there was a tremendous ferment of change in Asia, that the demands of people in this part of the world for more food, more clothing and better housing were irresistible, and that, unless they were met quickly, there could be no hope of peace. While not minimising the importance of correct economic policies, he advised the 800 distinguished delegates gathered at the air-conditioned massive hall of the *Vigyan Bhuvan* not to overlook the human element. It is gratifying to find that Mr. Nehru's attempt to present the problems of underdeveloped communities against their appropriate background was greatly appreciated by the vast majority of those present at the meeting and the sentiments expressed by him were echoed in the speeches of some of the leading members.

High tributes were paid to India by several prominent delegates. In the case of most of them, their praise for India was something more than the customary courtesy shown by a guest to his host. The most striking of these tributes came from Mr. Eugene R. Black, President of the World Bank. "India," he said, "has become a symbol of mankind's hope in economic development—the hope that the material wealth necessary for human dignity and self-respect can be created without destroying individual freedom which is the foundation of human dignity and self-respect . . . modern India has not felt the urge to narrow nationalism in earning the important place that she holds in our world of today. India is now taking economic development into the centre of her life, with all the radical changes that economic development inevitably entails. No one privileged to play even a small part in India's great adventure today can help but feel that the destiny of humanity in the twentieth century will be profoundly influenced by the extent of India's success in absorbing these changes without sacrificing respect for individual liberty." The first sentence in this quotation is a compliment to India's efforts to raise its living standards, the second is praise for India's political philosophy and foreign policy, and the rest of the quotation, reminds India of its responsibility. Mr. Black's compliments to India are by no means an exaggeration and gain significance in the light of the proclamation of dictatorship in Pakistan just a few hours after his observations. While our leaders have every reason to take pride in their achievements, they must also temper their sense of elation by the thought that heavy responsibilities lie ahead and that India's economic progress would, in fact, have been even sounder and more impressive but for the several mistakes they have made in the past decade.

This year's annual meetings of the I.M.F. and the World Bank will doubtless go down as a prominent landmark in their history and New Delhi will be remembered as much as Bretton Woods. We are not referring here to the excellent arrangements made by the Government of India for the meetings and for the accommodation of the delegates; the *Vigyan Bhuvan* compares quite favourably with similar conference halls in the rest of the world. The meetings are of historical importance, because of the decision taken by the Governors of the Fund and the Bank to raise, for the first time after these institutions came into existence, their resources. The Governors of the Fund have unanimously agreed to the U.S. proposal asking the Executive Directors promptly to consider the question of enlarging the resources of the Fund through increases in quotas of member-countries. A similar resolution pertaining to the World Bank will have been adopted by the time these lines appear in print. The sense of urgency displayed by the Governors is evident from their directive to the Executive Directors to submit their appropriate proposal for action either at a special meeting of the Board of Governors or by vote without a meeting. The choice, it may be noted, has been left to the Executive Directors. The U.S. Secretary of the Treasury, Mr. Robert B. Anderson, actually suggested in his speech that the Executive Boards of both the Fund and the Bank should submit their reports by the end of December 1958.

The resolution is a general directive. It does not contain any details about the extent of increase in the quotas. But there has been considerable discussion on this subject behind the scenes. Both the United Kingdom and Canada have expressed themselves in favour of a 50 per cent. increase. It would appear that the U.S. is not averse to this suggestion, though at one time it was said to have preferred a somewhat smaller percentage. India and France, too, seem to be agreeable to the figure suggested by Britain and Canada, though their respective Governors did not mention any specific figure in their speeches welcoming the proposal. The total resources of the Fund are now equivalent to $9,088 million. Of this, gold, U.S. dollars and Canadian dollars amount to $2,343.6 million (as on 30th April 1958). If allowance is made for the stand-by arrangements, that is, commitments already made by the Fund with some of its member-countries, the uncommitted balance of hard currency resources is only $1,459.3 million. A 50 per cent. increase in the quotas will mean an addition of a little over $4,500 million. But only a part of the contributions will be in gold and dollars, excepting those of the U.S. and Canada, amounting to $1,375 million and $150 million, respectively. In the case of others, usually, 25 per cent. of the additional quota will have to be paid in dollars and gold. For want of sufficient reserves, some members, however, may not be able to do so. Making allowance for this factor, an increase of $2,000 million in the gold and dollar resources of the Fund can be expected. This is a sizable addition and should induce in the member-countries confidence in their future and restrain them from resorting to restrictive trade practices when they run into balance of payments difficulties.

Although the resolution for an increase in the Fund's quotas has been unanimously adopted, a few members have given their consent only with some mental reservation. Belgium, Holland and the Philippines are not enthusiastic about the proposals, because they do not think that there is any need for it. Australia and South Africa appear to hold the view that an increase in the price of gold also should be allowed in addition to the increase in the quotas. The South African representative contended that an increase in the quota without a rise in the price of gold would unduly enhance the powers of the Fund to exercise monetary discipline over member-countries suffering from balance of payments difficulties. Germany, however, seems to hold the opposite view, in that its representative stressed that, encouraged by the increase in the resources at its disposal, the Fund should not be tempted to relax its conditions for giving assistance to member-countries. He further suggested that all members must be directed to pay the gold and dollar part of the quota in full. In contrast to this view, several underdeveloped countries, including India, Pakistan and Brazil, have proposed that the increase in quota should be effected without causing any strain on their foreign exchange reserves. There is much force in their contention. To ask these countries already suffering from insufficient foreign exchange reserves, to supply 25 per cent. of their increased quota in gold and dollars is tantamount to asking them to tighten their belt further.

Another issue pertaining to the quotas of the Fund is the demand for a higher quota for Germany and Japan. These countries were given only provisional quotas and both have a legitimate claim for a larger quota. There are misgivings in certain circles in India that, when the demands of these countries are conceded, India's status in the Fund will be adversely affected and that it might lose its representation on the Executive Board of both the Fund and the Bank. It may be mentioned here that only the first five biggest quota holders have the privilege of being represented on the Executive Board as ex-officio Directors and India is at

present holding the fifth place. These misgivings may not be unwarranted and, surely, India must be on the alert and watchful. Further, a section of opinion in the West has been advocating a reduction in the size of the Executive Board of the Fund on the ground that it is too unwieldy and is not conducive to taking quick decisions. But, in the present climate of goodwill towards India from the other members of the Executive Board, as also from West Germany, and having regard to India's excellent record of co-operation with, and services in the cause of, all the United Nations' agencies, there is reason to hope that no attempts will be made to dislodge India from its present position. Although anything may happen these days, it is hard to believe that either the U.K. or the U.S. will be interested in pushing India down in order to admit Germany to a higher level. India, however, should handle the issue in a dignified manner; it should wait and see what happens, rather than seek immediate assurances.

While the question of securing an increase in the resources of the Fund is thus a little complicated, that of raising the capital of the Bank is a relatively simple affair. The Canadian proposal that the Bank's capital should be doubled has a large measure of support. Only 20 per cent. of the proposed increase has to be paid by the members and, of that, the share in gold and dollars is only 2 per cent. This means that, in effect, only 2 per cent. has to be paid to begin with, though, in the case of the U.S. and Canada, of course, it will mean paying into the Bank much larger sums. The U.S. has also to carry the additional liability of guaranteeing the loans and bonds issued by the World Bank to augment its lending resources. Even though this is only a contingent liability, there are reasons to doubt whether the U.S. Congress would be willing to sanction simultaneously the additional resources required for the I.M.F., the World Bank and the proposed International Development Association. It is, therefore, not surprising that the U.S. delegation has not come to the New Delhi Conference with a blue-print for the Development Association. Apparently, the U.S. administration is keen on getting the other two proposals through first, leaving the Development Association to be taken up at a later stage. There are also reasons to feel that the European countries have not yet reconciled themselves to this latest move of the U.S., though the Commonwealth, as a whole, has welcomed it. All this will undoubtedly cause considerable disappointment to the underdeveloped countries, because President Eisenhower's statement in August had given rise to high hopes among them. It is, however, to be hoped that the interval for bringing the idea of the Development Association to fruition will not be too long. The underdeveloped countries are now badly in need of economic assistance on the lines of Marshall Aid to Europe and the I.D.A. is the nearest approach to it.

Although the idea of establishing International Development Association has been relegated to the background, the discussions on the annual report of the I.M.F. clearly show a keen awareness among the Western countries of the need for helping underdeveloped areas. There is, however, a fundamental difference in this approach. Pointed attention was drawn to this aspect by Mr. Jean Van Houtte, Governor of the Bank for Belgium, who was the Chairman of the opening session. He said that the tendency of underdeveloped countries of looking exclusively towards officially organised financial assistance was disturbing and that it was time someone emphasised the role of private capital and the importance of encouraging its movement. While conceding that there was still scope for governments and international institutions investing in public utilities, they were, he averred, ill adapted to the needs of diversified industries. He, therefore, urged the underdeveloped countries to create a suitable climate for attracting private capital. "Tax concessions," he remarked, "while they only entail limited sacrifices, can be a powerful incentive to private investment." He was not opposed to planning, but he thought that it could be done without involving an intrusion by the State in all sectors of economic activity. His advice to underdeveloped countries was that they should not minimise the importance of monetary stability for orderly economic development. Such stability was essential both for stimulating domestic savings and attracting foreign private capital.

This point was even more emphatically stated by Mr. Per Jacobsson, Managing Director of the International Monetary Fund. To the underdeveloped countries, the temptation to rely excessively on credit creation for the financing of public and private investment was, he said, great, but experience had shown that this was a risky process. If these countries were to attract private capital from abroad, they should pay attention to their credit-worthiness. Answering, in a few words, the question as to what was meant by credit-worthiness, he said that it was "avoidance of inflation and fair treatment to foreign investments." "These are pregnant words," he went on to add, "for avoidance of inflation means the preservation of a monetary order under which an impetus is given to both exports and internal savings, and this goes a long way towards assuring fair treatment for foreign investors and thus towards attracting foreign capital and techniques on reasonable terms." To those who are inclined to be sceptical of the prospects of getting foreign capital, Mr. Jacobsson's remarks should provide some food for thought. He said: "Were it not for the heavy burden of armaments expenditure in so many countries, more free resources for development would, of course, be available. But even in the troubled world we live in, it seems that more funds are becoming available now that post-war reconstruction is over and so many post-war adjustments have been completed. This applies particularly to Western Europe, which, barring major emergencies, should no longer, on balance, require financial resources from abroad but rather be able to contribute its share to the financing of countries in less developed areas. There have already been interesting examples of such financing and more should be possible in the future."

It is generally agreed that the Fund-Bank annual meetings at New Delhi will help to increase the awareness of the problems and potentialities of underdeveloped countries among the developed countries and that they will provide an impetus to the search for solutions to the complex problems of the economically backward nations. This should not lead one to think that the World Bank and the I.M.F. would relax their conditions for giving loans. Mr. Jacobsson has reiterated the view that the Fund would help only those members who are prepared to adopt corrective measures to restore monetary balance. Quoting M. Clemenceau, he said: "Liberty is the right to discipline oneself in order *not* to be disciplined by others or to be forcefully restrained by the hard facts of life." He hoped that this spirit would permeate the member-countries and that the task of the Fund in ensuring monetary stability would be made easier. Mr. Black, the President of the World Bank, was quite candid on this subject. "I cannot accept," he asserted, "a claim on the limited supply of international development capital which nearly demands relief for a government from the unpleasant and politically unpopular necessity of putting its own financial and economic house in order. I particularly cannot accept such a claim when it is supported only by arguments completely irrelevant to development needs—by appeals to sentiment or by the exploitation of strategic position in the international political line-up. After all, there is little advantage to be gained if money is poured continually and continuously into a purse, if, in that purse, there is a great hole." These remarks are clear enough to dispel the illusion that the World Bank has become, or is likely to become, soft in applying its standards for giving loans to member-countries.

FERTILISERS

BY far the most important feature of the new thinking on the second Plan is the widespread realisation that any neglect of agriculture is fatal to the country's economy. The increase in food production has failed to keep pace with the increase in the country's population. Thus, whereas population has exceeded a total of 392 million and is now running at an annual increased rate of well over 1.4 per cent.—such increase calls for additional production of one million tons of foodgrains each year—food production, far from showing a similar increase, has actually declined. Between 1956-57 and 1957-58, the net production of cereals receded from 50 million tons to 46 million tons. Imports have had to be stepped up from 2.4 million tons in 1956-57 to 3.5 million tons in 1957-58. Although the special arrangements made so far have served to reduce the foreign exchange expenditure which would otherwise be involved in the import of foodgrains, the fact remains that the country with all its agricultural potential has failed to meet the food requirements of its population. In the ultimate analysis, the food problem resolves itself into a question of increasing per-acre yield through irrigation, adoption of superior agricultural practices, and application of manures and fertilisers. In the short run, much progress could be obtained through the use of fertilisers.

The ex-Finance Minister, Mr. C. D. Deshmukh, has expressed the view that a careful analysis of the correlation of yield per acre of cultivated land and the quantity of fertilisers applied to land would show that increased production is above all the function of the quantity of manure or fertilisers. He said: "It follows that our planning was probably more inadequate in this single respect than in any other respect in not having provided for ten more fertiliser factories like Sindri. Had we done so, instead of designing to have a fourth iron and steel plant, I think, we would have been well on the way to the solution of increased agricultural production." It is, however, gratifying to note that Mr. Gulzarilal Nanda, Union Minister for Planning, averred at the recent Parliamentary debate on the Plan, that fertiliser imports and establishment of new fertiliser plants would have first claim on the additional resources available.

Farmers in India are becoming more and more fertiliser-conscious. This ought to be a matter for gratification. However, in view of the inadequacy of fertiliser production, it has not been possible to satisfy the farmer's commendable hunger for fertilisers. The consumption of ammonium sulphate increased from about 675,000 tons in 1956 to 800,000 tons in 1957. The total supply of ammonium sulphate in the central pool in 1957 was about 720,000 tons, of which 345,000 tons had to be imported from abroad. The consumption of superphosphate also increased from 100,000 tons in 1956 to 150,000 tons in 1957. Although India's production of superphosphate increased from 83,000 tons in 1956 to 145,000 tons in 1957, the production of ammonium sulphate declined from 389,000 tons to 381,000 tons. At the recent annual meeting of the Fertiliser Association of India held in New Delhi, the Union Minister for Agriculture, Mr. A. P. Jain, said that India's demand for fertilisers would move up to 2.5 million tons by 1961 and 5.0 million tons by 1966. He stated that we would need by 1966 some 13 plants of the size of the Sindri factory. From Press reports, it would appear that there was some difference of opinion between Mr. Jain and the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, over the question as to whether India would be able to reach the target of production for fertilisers set under the second Plan. Be that as it may, Mr. Jain felt that the establishment of the fertiliser factories which figured in the Planning Commission's list of industries would be delayed. "This is very disconcerting," he said, adding, "we have made the farmer fertiliser-conscious and now we are not able to meet his demand. This produces an adverse effect on the mind of the farmer."

Between fertilisers and foodgrains, the country would certainly be well advised to spend its foreign exchange on the imports of fertilisers, rather than of foodgrains. It has been estimated that every rupee spent on imported nitrogen saves the country some Rs. 1.6 of wheat imports, Rs. 2.9 of rice imports and Rs. 5.7 of cotton imports. However, the important thing to do is to step up the production of fertilisers itself.

If the Government had been more realistic in its attitude towards private enterprise and foreign capital, India would by now have had more fertilisers. Because of its doctrinaire outlook, the Government has prevented the private sector from taking a lead in this field. From this point of view, it is noteworthy that Mr. Shastri announced that, if any of the members of the Fertiliser Association of India or others put forward any specific proposal for the establishment of fertiliser factories, they would have the Government's "full and hearty co-operation." As Mr. D. R. Morarji, Vice-President of the Association, pointed out, it would help the private sector in the matter of inviting collaboration from foreign manufacturers, if the Government indicated the conditions on which such collaboration would be sanctioned and the facilities which might be made available at the sites. In view of the great importance of fertilisers to India's agricultural economy and the long leeway to be made up in order to reach a level of supply which will satisfy the demand for fertilisers, the authorities would be well advised to create all facilities which would encourage the establishment of new fertiliser factories.

SHARE MARKET IN A CHEERFUL MOOD

COTTON EXPORT QUOTA—IMPORT POLICY FOR METALS

THURSDAY, 5 P.M.

THE share market is in a very cheerful mood and values have surged forward on a wide front. The sentiment of operators would appear to have been influenced favourably by hopes of a change in the Government of India's economic and fiscal policies. Whether or not these hopes will prove correct, time alone can reveal. This much, however, can be said. In the light of the deliberations of the international financial agencies' annual meetings at New Delhi and the discussions privately held by the Union Finance Minister with the chiefs of the agencies as well as the Government officials and bankers of other countries, New Delhi may adopt a more helpful attitude towards private enterprise. In this context, the operators have noted the statement of Mr. Robert L. Garner, President of the International Finance Corporation, made at a Press conference yesterday, that there is a reasonable prospect of Indian private enterprise securing from the Corporation investments "running into quite a few million dollars in the not too distant future."

MARKET GOSSIP

The aforesaid factors, together with the continued easy money conditions and the lack of scope for importers to reinvest their sale proceeds in their business on account of continued restrictions on fresh imports, have greatly fanned the bullish fervour in equities. Profit-taking has, of course, been quite heavy at times, but it is being well absorbed by fresh bull support and short-covering. Equity prices might have gone up more markedly but for reduced inflation psychology following the declaration by Mr. Morarji Desai made during the discussions on the I.M.F.'s Annual Report that the Government proposed to exercise the "greatest care" in regard to deficit financing.

In particular, steels and textiles are ruling distinctly firm. The firmness of the former has been aided by rumours of an early announcement of the increase in the retention price of steel, as also by expectations of higher production, as a result of the blowing of the new blast furnaces at both T.I.S.Co. and I.I.S.Co. shortly. Textiles are meeting with professional support induced by the feeling that the authorities would follow a more helpful policy in the light of the advice to be rendered by the newly set up Cotton Textiles Consultative Board.

• • • •

Appropriately enough, a point which was emphasised at the annual session of the international financial agencies was importance of foreign private investment. Referring to this, Mr. Jean Van Houtte, Governor of the Bank for Belgium and Chairman of the opening joint session, made the following interesting observations:

"I believe that the true renaissance of the flow of private capital is dependent on two basic conditions. The first is that the effort of development be made in such a way that private enterprise and initiative is encouraged where appropriate. Planning is doubtless necessary, but it can be done from above without involving an intrusion by the State in all sectors of economic activity. In this connection, I should like to praise India which, while pursuing steadfastly, for ten years and despite extremely complex problems, a broad and varied programme of development, has not lost sight of the need to seek a proper balance between the private and public sectors of the economy. Provided that an adequate field of action is left to it, private investment can and should play an increasingly important part, but it will do so only if no obstacle seems likely to prevent the repatriation of the capital or of the income from it to the country of origin. This is the second basic condition for the resumption and expansion of the international movements of private capital.

"The confidence of foreign investors will depend not only on formal guarantees offered by the borrowing country but also on its ability and willingness to maintain a satisfactory equilibrium in its balance of payments or restore it whenever it is disturbed, so that, in my opinion, there is no more effective method available to a country which wishes to attract foreign private capital than to establish a liberal exchange system based on the firm maintenance of conditions of internal and external monetary stability. Once again, the principles included in the purpose of the charter of the I.M.F. were sound and realistic. It goes without saying that the importance of monetary stability for orderly economic development does not end with the incentive it gives to foreign exporters of private capital. It is also the key to the formation of larger amounts of internal savings."

Clearly, there is no getting away from the fact that, in the ultimate analysis, the maintenance of monetary stability is an important factor in attracting foreign private capital.

• • • •

The first cotton export quota for the new season, which was announced by the Government of India on Tuesday, is more or less in line with trade expectations. Since a number of cotton bodies and trade associations had with one voice urged the Government to release a substantial quantity of cotton for export and because the domestic supply and demand position of cotton also warranted such a step, a liberal quota was more or less taken for granted. Only, the delay in making the announcement had caused considerable anxiety to the trade. The present quota is for 250,000 bales of cotton, comprising 150,000 bales of Bengal *deshi* and 100,000 bales of cotton (other than Bengal deshi) of staple length not above 1".

The quota has been welcomed by the trade, but there is disappointment over the Government's silence on the question of the much-awaited reduction in export duty. It is, however, expected that, in the light of the recommendation of the Cotton Advisory Board and the East India Cotton Association, the Government would persuade itself to abolish the export duty on cotton. The expectation has imparted strength to the futures market and there has been a rise in prices. The Jarilla March contract, which declined yesterday from the opening rate of Rs. 628.50 to Rs. 625, has since advanced the closing rate today being Rs. 632.50.

A reduction or abolition of duty will no doubt make Indian cotton cheaper and more competitive *vis-a-vis* Pakistan cotton. However, Indian short-staples are even now cheaper than Pakistan cotton. The latter is subject to an export duty of Rs. 230 per candy, whereas the duty in India is only Rs. 100 per candy. The duty on *deshi* varieties in both countries is the same, namely, Rs. 100 per candy. Some quarters point out that a reduction in duty would not be of much help in stimulating exports. For, in spite of the recent fall in export prices, foreign demand has not improved to any significant extent. This is due to the uncertainty regarding export duty and to seasonal factors. The prospects for the absorption of the current quota are, therefore, not considered bright at present. Nevertheless, if the duty relief were to materialise and prices fall further as a result of it, foreign demand might revive and the quota would be absorbed in about six months. The critical political situation in Pakistan, it is felt, may lead to better enquiries for Indian cotton.

While there may be difference of opinion as to whether a duty reduction will stimulate foreign demand and thereby enable larger exports, there is no doubt that the prevailing uncertainty is a positive hindrance to export business. As long as the prevailing suspense continues, foreign buyers, who have deferred their purchases ever since the rumour about duty reduction started, will continue to keep off the market. It is, therefore, imperative that New Delhi should make up its mind forthwith and make it known, too, immediately.

• • • •

The non-ferrous metals trade is rather disappointed at the interim import policy for the current half-year (October 1958-March 1959) announced by the Central Government on Tuesday last week. For the policy imposes a drastic cut in imports of tin, the quotas to established importers having been reduced from 85 per cent. to 40 per cent., and makes no mention about quotas for lead, zinc and copper, for all of which a quota of 65 per cent. had been fixed in the last quarter. The scheduled industries coming under the Development Wing (Metals) are, however, permitted to apply for licences to import all the four primary non-ferrous metals, namely, copper, lead, zinc and tin, in accordance with the procedure in vogue during the April-September 1958 period.

Immediately after the above policy was announced, the metal market staged an impressive rally in prices, tin advancing by Rs. 3 to Rs. 140 per quarter, zinc by Rs. 2 to Rs. 68.50 per cwt. and lead by Re. 1 to Rs. 69 per cwt. Since then, however, the prices have declined markedly. Not only have the earlier gains been completely erased but the latest available rates are lower than those prevailing before the import policy was announced. Tin is quoted at Rs. 138.50, zinc at Rs. 68 and lead at Rs. 68. The recent fall in prices must be attributed to hopes that the Government may permit the established traders to import copper, lead, and zinc on the same basis as tin, the overall quota being 40 per cent. A section of traders even feels that the quota may be fixed higher at 50 per cent. to be distributed between importers and the State Trading Corporation.

Meanwhile, the overseas non-ferrous metals markets are ruling distinctly bullish. The following table indicates the trend of prices on the London Metal Exchange:

(£ per ton)

	Latest available	*A week ago*
Tin (spot)	738	731
Copper (cash)	219½	213½
Lead (first half October) ...	72½	71½
Zinc (first half October) ...	66½	66½

The notable rise in tin prices is particularly significant. It will be recalled that, only three weeks ago, tin had collapsed from the floor level of £730 to as low as £640, following the withdrawal of support from the market by the Buffer Stock Manager of the International Tin Council. The substantial improvement since noted has been brought about not by any increase in consumer demand but by the reluctance on the part of sellers to part with their holdings on hopes of better prices. The upward trend in copper prices is due to strikes in the Rhodesian and North American copper mines, while that in lead and zinc has been the result of the repercussions of new U.S. import quotas and the uncertainty still surrounding the American policy for these metals.

THE LIGHT THAT FAILED

From Our Own Correspondent

LONDON, *27th September*

AS if to anticipate all the criticisms that would arise over the results of the Montreal Conference, the final *communique* uttered all the excellent propositions which that Conference might have put into effect. But these propositions have remained aspirations only! Of course, good has come, particularly in the gestures of countries such as Great Britain and Canada. There is not to be sterling convertibility yet—no one expected it—but Canadian goods costing dollars will be able to come into the United Kingdom free of quota restrictions. Canada will in exchange not raise tariffs on British goods but she will not restore Imperial preference. Canada is also increasing her contributions to the funds available for Commonwealth development and the United Kingdom has made the more important gesture of permitting money to be borrowed for Commonwealth development at only one quarter of 1 per cent. higher than the rate at which the British Government itself borrows. Unfortunately, the British Chancellor was not able to say that this could mean any increase in the volume of funds made available for investment in the Commonwealth. The average of £200 million a year is not likely to be exceeded. But it is nevertheless valuable to the borrowers that the sum that they can raise in the London market will carry a lower rate of interest. Independent countries can get, under comparable terms, credit through the Export Credits Guarantee Department.

LONDON LETTER

Non-Government bodies in the Colonies can come into the London market and attempt to borrow there and the Commonwealth countries are finally invited to contribute to the Commonwealth Development Finance Company if they have funds to spare. All this amounts to cheaper borrowing for the Commonwealth and a wider availability of London market facilities.

Why then should one be despondent about the results of the Conference? The first reason is that the concessions made by the United Kingdom reflect primarily the real strength of sterling and the confidence that the British Government has that, in a time when British exports are falling, it can afford every financial boost to improve those exports. In other words, there is a real British interest in this sort of liberalisation. But what has been done to expand Commonwealth trade in an expanding world—which the final *communique* says is the central theme of the Montreal discussion? There has been talk of price stabilisation but such schemes too often amount to devices for keeping prices up by keeping the least efficient producers in business. This sort of theorising surely reached its most absurd point when the reaction of the Commonwealth countries to bigger and cheaper exports by the Soviet and China were considered.

The Commonwealth has been bothered by discrimination against its agricultural and mineral exports by countries even such as the United States which pays much lip service to freedom of trade. When it comes to the point, the United States, as in the recent case of lead and zinc, leaps in to protect its high cost primary producers. Of course, the Commonwealth countries are against that, but then their own attitude towards low cost producers is identical. Britain is afraid of cheap goods from India and the possibility of cheap textiles from Africa and the Commonwealth countries are afraid of cheap industrial exports from the United Kingdom or from the U.S.S.R. or China. So the final *communique* is full of statements about being impressed by the problems of Commonwealth countries, by the realisation that it is important to avoid placing obstacles in the way of the export of manufactured goods from the less developed countries in the Commonwealth, and by the hope that countries outside the Commonwealth would accept the objectives of the Commonwealth. But what does all this come to in terms of allowing the low cost producers to supply the goods they are best equipped to provide to the Commonwealth as a whole? One cannot avoid the impression that the admirable objectives have been swamped in a sea of words and the Commonwealth will go on after this Conference much as before, possibly borrowing a little more and a little cheaper.—*All Rights Reserved.*

SHARE MARKET BULLISH

SHARP RECOVERY IN PRICES

(From Our Own Correspondents)

BOMBAY, 9th October

AFTER an early setback which was quite marked, in continuation of the previous week's downward trend, the share market staged an impressive rally from Monday this week. There was fresh buying induced by the low prices which prevailed last week and short-covering by those who had sold earlier hastened the recovery. As a result, most counters scored gains over the week which were appreciable in selected counters like Tata Steels, National Rayons, Tata Locomotives, etc.

The market's sentiment seemed to have changed again favourably following encouraging reports from New Delhi about the brighter prospects of India getting more foreign aid. In the first instance, there was the Austrian Finance Minister's offer to provide India specific credits for short-term periods of three to five years and in exceptional cases for periods up to ten years. Secondly, West Germany and India reached a three-point accord on the former's assistance to India, under which the repayment of loans taken earlier and which were due to be repaid between now and 31st March 1959 would be postponed, West Germany would give India $11.4 million by way of aid at the beginning of 1962 and credits amounting to $28.6 million would be extended at the commencement of 1964. Thirdly, the I.F.C. President stated at a Press conference that there was a reasonable prospect of Indian private enterprise securing a multi-million dollar aid from the I.F.C. in the not too distant future. The Japanese Finance Minister also said in Calcutta on his way to New Delhi that his country would give India a further $10 million credit to maintain its balance of payments and currency reserve. Hopes of a reasonable increase in retention prices of steel and prospects of sizable increase in T.I.S.Co's production as a result of the coming into operation of a new blast furnace also aided sentiment. Textile shares too followed the upward trend, but the gains over the week were only small.

In the steel section, Tata Ordinaries declined early in the week from Rs. 175.75 to Rs. 170.50, but this loss was more than made good from Monday this week onwards. Today, they closed at a high of Rs. 178 which represented a gain of Rs. 2.25 over the week. The new shares rose by Re. 1.75 over the week to Rs. 173. Indian Irons came up to Rs. 27.05 from last Saturday's low of Rs. 25.75 and closed at Rs. 26.95, as against the previous week's close of Rs. 26.75.

In the textile group, Bombay Dyeings dropped from Rs. 58.90 to Rs. 57.50 before rallying to Rs. 59.50 at the close today. Centurys drifted from Rs. 444.50 to Rs. 435, but improved to close at Rs. 446. The Company has received the consent of the Central Government for the issue of 125,000 preference shares of Rs. 100 each at par. The shares will be offered for subscription at par and will carry a cumulative preferential dividend at the rate of 6 per cent. (free of income-tax). The shares will be redeemed at par at the end of 15 years after the date of allotment. It is understood that the whole issue is being underwritten by a prominent bank. Kohinoors finished with a gain of Re. 1.50 at Rs. 272.50 after touching a low of Rs. 264. Central Indias showed no notable change over the week at Rs. 91, while Finlays were unchanged at Rs. 283. Gokaks suffered a loss of Rs. 3 at Rs. 144.50. Indu Ordinaries were done at Rs. 9.32, as against Rs. 9.36 a week ago. Indore Malwas recorded a rise of Rs. 2.50 to Rs. 106, while Khataus showed no change at Rs. 177.50 and Models lost Rs. 2.50 to Rs. 172.50. Morarjee Mills were lower by a rupee at Rs. 244. New Greats picked up Rs. 5 to Rs. 220. Shree Niwas Cottons were steady at Rs. 149. Simplex drifted from Rs. 179 to Rs. 176 before advancing to Rs. 180.

Among sugar shares, Belapurs suffered a setback from Rs. 313 to Rs. 305, but staged a good recovery in consonance with the general trend to Rs. 312. Bhopal Sugars rose by Re. 1.45 to Rs. 27, Changdeo Sugars by 50 nP to Rs. 32.75 and Phaltans by Rs. 3 to Rs. 178.50. Walchandnagars were done 75 nP higher at Rs. 288.75. Maharashtra Sugars shot up by Rs. 13 to Rs. 180, while New Swadeshis changed hands Rs. 9 lower at Rs. 250 and Ravalgaons Re. 1.50 down at Rs. 137.50. In the cement group, Associated Cements moved between Rs. 158.75 and Rs. 156.25, before closing at Rs. 158.25. Their new shares gained Re. 1.75 to Rs. 153. Digvijays lost Re. 1.75 to Rs. 146 and Orissa Cements 4 nP to Rs. 12.64.

In the engineering and mining group, Alcocks did not show any change over the week at Rs. 265. After a sharp dip from Rs. 190 to Rs. 182.50, Tata Locomotives advanced briskly to Rs. 198 before closing at Rs. 196.25. Premier Constructions gained strength from Rs. 225.50 to Rs. 228.75, while Larsen and Toubros showed no change at Rs. 15.76. Mahindras were done 12 nP lower at Rs. 16.60 and Texmacos 16 nP down at Rs. 22.60. Shivrajpurs were featureless at Rs. 90, while Indian Coppers were a fraction better at Rs. 4.08.

Shipping shares were steady, with a rise in values over the week. Scindias suffered a mild setback early in the week from Rs. 21.20 to Rs. 20.76, but gained ground to close at Rs. 21.88. Great Easterns staged a marked improvement from Rs. 25.90 to Rs. 27.10 and their new shares put on 84 nP to Rs. 19.32. Bharat Lines, were, however, lower by 28 nP at Rs. 13.16. Automobile shares were featureless. Premier Automobiles were higher by 50 nP at Rs. 90.50, while Hindustan Motors showed no change at Rs. 7.84.

In the miscellaneous group, Bombay Burmahs (old) slipped down from Rs. 505.50 to Rs. 485, but the loss was not made good in the subsequent recovery and the shares finished at Rs. 499. The new shares suffered a loss of Rs. 8.25 at Rs. 173. National Rayons closed at Rs. 246 with a gain of Rs. 7 over the week, the lowest level touched being Rs. 234.75. Gwalior Rayons were featureless at Rs. 14.76. Tata Chemicals were quiet at Rs. 17.04, while Tata Oils rose by a fraction to Rs. 40. Hindustan Levers were done at Rs. 24.12, while Wimcos recorded a gain of Rs. 2.50 to Rs. 190.

• • • •

Calcutta Stock Exchange

CALCUTTA, 8th October

There was intermittent profit-taking on the Calcutta Stock Exchange during the week under review, and closing quotations were lower on balance. This was mainly a balancing of ups and downs, as a result of which the technical position was all the healthier. It was noted that the Prime Minister's call for help to the underdeveloped countries was cheerfully received by the delegates to the meetings of the I.M.F., the World Bank and the International Finance Corporation. Also enthusiastically noted was the likelihood of acceptance of the U.S. proposal to increase the resources of the Fund. It was, therefore, thought that India would be able to attract further capital from abroad, both public and private, and this factor added to the prevailing sober optimism. Following the announcement of the proposed issue of bonus shares by capitalising the share premium reserve in the proportion of one for five, which was in accordance with market anticipations and which the market had already discounted, Indian Irons were subjected to heavy selling for most part of the week under review. Other sections were also affected, and the lack of enthusiasm for tea shares clearly indicated that market circles had not yet shed the disappointment created by recent changes to the excise and export duties, wrongly called as relief to common teas. On the other hand, jutes were able to command fair attention, as, following the imposition of heavy margin deposits in futures, prices of jute goods improved, and more business with foreign countries took place.

• • • •

Madras Stock Exchange

MADRAS, 7th October

The steady conditions noted on the Madras Stock Exchange last week proved short-lived. During the week under review, the market ruled easy. Business put through was rather restricted, with prices moving generally downward. Tea shares were depressed. It was reported that the plantation workers in Kerala, who are members of the unions affiliated to the A.I.T.U.C., had decided to strike with effect from 13th inst., to press their demands. There were also reports of inter-union fights in a few estates. These reports, together with the feeling that the latest relief in excise and export duty on tea was too negligible to boost both internal and external offtake, especially of common teas, let loose selling which brought down values. Coffee shares lacked support, thanks to uncertain export outlook. Rubber shares, however, attracted good attention of operators on rumours of an upward revision in the controlled price of rubber from Rs. 155.75 to Rs. 170 per 100 lbs. Textiles were subjected to selling owing to continued heavy accumulations of yarn and cloth stocks with mills. Bank, sugar and miscellaneous industrials lacked support in the absence of any encouraging developments.

Tea shares, as already stated, came in for selling and suffered losses. Nonsuch Teas dropped 30 nP to Rs. 26.60. Haileyburias receded by 25 nP to Rs. 16.25. Alageswars retreated by 20 nP to Rs. 2.65. Periakaramalais fell by a like amount to Rs. 3.80. Blue Mountains and Kalasas shed 10 nP each to Rs. 3.60 and Rs. 3.60, respectively.

Among coffee shares, Consolidated Coffees were marked down by Re. 1.15 to Rs. 27.50. Coffee Lands dropped a rupee to Rs. 33.50. Kumergodes were quoted 23 nP lower at Rs. 7.12. Sheveroys lost 8 nP to Rs. 2.10.

In the rubber group, Thamarapallys firmed up by a rupee to Rs. 26.50. Travancore Rubbers and Nenmenys advanced by 40 nP each to Rs. 16.80 and Rs. 14.40, respectively. Peninsulars improved by 30 nP to Rs. 18.80. Mercaras were better by 11 nP at Rs. 8.56. Tropicals gathered 12 nP to Rs. 20.62 and Teekoys 10 nP to Rs. 7.20. Velimalais put on 5 nP to Rs. 6.30.

The textile section ruled distinctly easy. Coimbatore Pioneers climbed down by Rs. 4 to Rs. 250. Coimbatore Cottons declined by Rs. 3 to Rs. 154. Buckinghams shed a rupee to Rs. 179. Maduras eased by 75 nP to Rs. 31.50, Krishna Rajendras by 50 nP to Rs. 67.50, Cambodias by 30 nP to Rs. 9.10 and Travancore Rayons by 29 nP to Rs. 14.56. Rajapalayams were neglected at Rs. 129, reflecting disappointment of operators over the cut in dividend to 8 per cent. for the year ended 31st March 1958, as against 12 per cent. for the previous year.

Among miscellaneous industrials Textools receded by a rupee to Rs. 201. Rallis and Aluminium Industries decreased by 50 nP each to Rs. 36.50 and Rs. 17.95 respectively. India Cements lost 25 nP to Rs. 30.25, Dalmia Cements 10 nP to Rs. 9.80 and Orissa Cements 5 nP to Rs. 12.75. General Papers, on the other hand, picked up 75 nP to Rs. 12.25 on support by some parties.

COMPANY LAW ADVISORY COMMITTEES

The Government of India has constituted an informal Technical Advisory Committee and an informal Research Programme Committee to advise the Department of Company Law Administration, Ministry of Commerce and Industry, on legal and accounting matters and research in company accounts and statistics. The first Committee will help the Department in a consultative and advisory capacity on all major issues of policy in regard to legal and accountancy matters arising out of the administration of the Companies Act, 1956. The Committee consists of legal and accountancy experts and persons with experience of industry and commerce. The members have been selected in their personal capacity and not as representatives of any organisation. It is presided over by Mr. D. L. Mazumdar, Secretary, Department of Company Law Administration, Ministry of Commerce and Industry (Chairman), and consists of Messrs. N. R. Mody, G. Basu, S. P. Chopra (Chartered Accountants), G. P. Kapadia, President, Indian Merchants' Chamber, Bombay, J. D. K. Brown of Messrs. Jardine Henderson, J. M. Lall of Imperial Chemical Industries and C. C. Shah, Solicitor, Bombay. The Committee will work on the lines of the Consultative and Technical Advisory Committees associated with the Insurance and Companies Department of the Board of Trade in the United Kingdom.

Since its inception three years ago, the Department of Company Law Administration has been aware of the important role assigned to it in the purposive regulation of the organised private sector in conformity with the accepted social and economic policy of the country. It was necessary that the new department should be properly organised and adequately manned to be able to discharge its new responsibilities satisfactorily. In addition to the purely routine policing functions that the Registrars of Joint Stock Companies under the State Governments had performed so far. This task is nearly over and the informal Technical Advisory Committee has now been set up to be associated with the Department to help it in tackling the difficult technical questions.

The informal Research Programme Committee will suggest suitable research at studies to be undertaken by the Company Law Department, the scope of such studies and the methods and techniques of analysis. It will generally assist the Department in making the best use of the data available from company records. The Chairman of the Committee is Mr. D. L. Mazumdar. The other members are Messrs. S. P. Chopra, S. N. Desai, C. C. Chokshi and R. C. Cooper (Chartered Accountants). In addition, there will be official members also.

NEWS IN BRIEF

THE Government of Bihar has decided to open an employment exchange in the coalfield area of Jharia.

The Government of India has decided to decontrol lead pipes for purposes of exports. The lead alloy will be licensed freely for export.

The export of dust teas are now allowed to all destinations under licences without being required to be covered by export quota rights if applications for such licences are received in the Tea Board's Office in Calcutta or Cochin, as the case may be, before 31st March 1959. The licences will remain valid upto 31st May 1959.

The earnings of Indian railways during the first five months (April-August) of the current financial year aggregated Rs. 156.27 crores, as against Rs. 152 crores in the corresponding period last year. Of this amount, coachings accounted for Rs. 60.10 crores, goods traffic for Rs. 93.44 crores and other traffic for Rs. 2.73 crores.

The latest sale of the U.S. farm surplus commodities to India valued at $238 million, has provided the U.S. Government Export-Import Bank with nearly $60 million in rupees available for lending to private Indian firms. In addition, the Bank has at its disposal the rupee equivalent of $14.2 million as a result of a previous similar sale.

The Government of India has set up a Road and Inland Water Transport Advisory Committee with a view to ensuring planned development and to securing the maximum co-ordination among the various modes of transport. The functions of the Committee will be to examine problems relating to road transport and inland water transport and to make recommendations to the Transport Development Council for final decisions.

Information centres for disseminating facts relating to the second Five-year Plan will be set up shortly in seven residential universities, namely, Annamalai, Jaipur, Lucknow, Patna, Roorkee, Vishva Bharati and M.S. University, Baroda. The expenditure involved in maintaining the centres will be shared equally by the Government of India and the universities concerned. The Government's share to be given as grant is estimated at Rs. 1,400 per centre.

The Andhra Pradesh Government has advised the municipalities in the State and the city municipalities in Telengana not to receive any monetary benefit from the Community Development funds. Class 1 *panchayats* in Andhra and town municipalities in Telengana, however, are eligible for assistance from the Community Development Programme, monetary or otherwise, for the various schemes relating to agriculture, animal husbandry, co-operation, minor irrigation, social welfare, people's organisation and sanitation.

Hyderabad will soon have a pharmaceutical plant. This will be set up by the Government of India with the assistance of the U.S.S.R. A team of experts from the U.S.S.R. visited Hyderabad last week in order to work out the details in this regard. The plant is one of a series of five pharmaceutical projects—antibiotics, synthetic drugs, phytochemical, surgical instruments and glandular projects—proposed to be established in the country at a total cost of Rs. 30 crores with the assistance of the U.S.S.R.

Studies regarding the location, size and relative costs of the proposed aluminium plant in India to be set up by Birla in collaboration with Kaisers of the U.S. have already been made. This was revealed by Mr. Edgar F. Kaiser, President, Kaiser Industries Corporation of the U.S., at a Press conference held in the offices of Messrs. Mahindra and Mahindra, Bombay, on Friday last week. Kaiser's participation in the proposed plant is expected to be 25 per cent. in the form of equity capital.

The Committee of the Federation of Indian Chambers of Commerce and Industry has constituted a high-powered committee to study the difficulties faced by the different industries in importing capital equipment as a result of the scarcity of foreign exchange. The Committee will also consider the manner in which the foreign exchange and rupee finance for industries can be adequately met. The Committee consists of Messrs. B. P. Singh Roy, Madan Mohan Ruia, Shri Ram, Tulsidas Kilachand, Shanti Prasad Jain, Naval H. Tata and C. H. Bhabha.

The Government of India has constituted a committee (Chairman: Raja Surendra Singh, Adviser to the Union Ministry of Food and Agriculture) to examine the question of increasing food production in the "inaccessible areas" of the country and making these areas self-sufficient in the next two years. The areas include the Chini and Punge areas of Himachal Pradesh, the Kulu Valley of the Punjab, the hilly districts of U.P., the Ratnagiri district of Bombay, the hilly areas of Assam, and the territories of Tripura and N.E.F.A.

Amendments to the Industrial Disputes Act and legislation to regulate the working conditions of motor transport workers are among the subjects to be discussed by the Standing Labour Committee at its next session to be held at Bombay on the 28th and 29th inst. The Committee will also consider the question of superannuation age for industrial workers. Apart from reviewing the evaluation and implementation of labour enactments, awards and agreements, the Committee will consider a proposal that a study of major strikes be undertaken by observers from the point of view of the code of discipline. The other items to be discussed relate to the scheme of workers' participation in management and the working of the Employees' State Insurance.

The requirements of washed coals for the three new steel plants in the public sector and the expanded steel plants in the private sector are estimated at about 9 million tons. The washery at Kargali, set up by the National Coal Development Corporation, will supply 1.1 million tons to Rourkela and 500,000 tons to Bhilai. Two washeries owned by Tatas, one at Bokaro and the other at Jamadoba, would, after certain improvements, supply 1.5 million tons of washed coals. The washery at Lodna, which supplies the Indian Iron and Steel Works, has an output of 220,000 tons. With the establishment of the washery at Kargali and the improvements to the Tata washeries, capacity has to be set up only for the balance of about 5.5 million tons. A washery is included in the contract for the steel plant at Durgapur to wash Jharia coals to meet their requirements of that plant. The balance—about 4.8 million tons—is proposed to be met from three washeries to be put up, one in Dugda, another in Bhojudih and the third in Patherdih. The washery in Dugda will supply washed Jharia coals to Bhilai and Rourkela, the one in Bhojudih to the Tata Iron and Steel Works, and the Patherdih washery to the Indian Iron and Steel Works.

From Abroad

The British Overseas Airways Corporation inaugurated the first transatlantic service by pure-jet airliner on the 4th inst.

With effect from the 1st inst., Canada has decided to import tin only from those countries which are members of the International Tin Agreement.

A six-man mission representing the Japanese Chamber of Commerce and Industry is now on a business tour of South America examining the possibilities of extending Japan's technical co-operation programme there.

The downward trend in the U.K. industrial production continues unabated. Industrial production in the month of August was the lowest for the two years. On a seasonally adjusted basis, the index in August is provisionally estimated at 133/134 (1948=100), as compared with 138 in August 1957 and 135 in each of the three preceding months.

The Governments of the Malayan Federation and Singapore have imposed a curb on the unrestricted import of cotton textiles from China in order to protect the young Malayan weaving industry from dumping and unfair competition. Individual licences are now required to be applied before ordering Chinese textiles irrespective of the country from which they are bought.

The Italian General Confederation has accepted the British views on the need for majority voting and strong institutions for the Free Trade Area. The decision is contrary to the views held by the Italian Government. The Federation's present decision is the result of a series of industrial discussions held between its representatives and those of the Federation of British Industries.

P. H. KOTHARI, B.Com., LL.B., General Manager.

PERSONAL

MR. M. C. Chagla, Ambassador-designate of India to the U.S., has been concurrently appointed Ambassador of India to Mexico.

Mr. Ronald Coleman has been appointed a Director of Imperial Chemical Industries (India) Private Ltd. Mr. Coleman joined the I.C.I. in 1934. During the last five years, he was the Regional Manager at Calcutta and later at Madras.

Mr. Murdo MacIver, Vice-President and Financial Co-ordinator, Caltex, and Mr. Albert E. Ernest, Vice-President, Special Assignments, arrived in New Delhi on the 3rd inst., to attend the annual meetings of the I.M.F. and the World Bank.

Col. B. H. Zaidi, Vice-Chancellor of the Aligarh Muslim University, and Mr. G. Parameswaran Pillai, Chairman of the Travancore Bank, have been nominated by the Government of India as members of the Central Board of Directors of the Reserve Bank of India.

Mr. F. E. H. Goddard has taken over charge as Manager of the Chartered Bank, Bombay, *vice* Mr. G. Dodds, who retired after 33 years of service in India, Malaya and the Far East. Mr. Goddard will also be the Chairman of the Bombay Exchange Banks' Association and the Foreign Exchange Dealers' Association of India, Director, Refinance Corporation for Industry (Private) Ltd., and Member, Council of the Institute of Bankers and the Committee of the Bombay Chamber of Commerce and Industry.

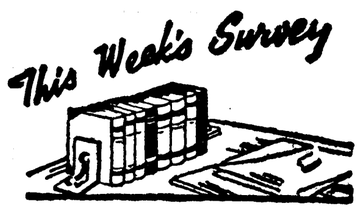
Emeritus Professor J. H. Richardson, who formerly held the Montague Burton Chair of Industrial Relations at Leeds University, is shortly arriving from Britain in India on a technical assistance mission at the request of the International Labour Organisation and the Government of India. He is to tour the main industrial centres, including Bombay, Calcutta and Madras, studying industrial relations problems and wages policy connected with the second Five-year Plan. Prof. Richardson will have his headquarters in the Union Labour Ministry at New Delhi and will stay in India for six to eight months.

World agricultural production declined slightly in 1957-58, the first check to expansion in the last 13 years. The check was felt in the output of world forests and fisheries also. The volume of international trade in agricultural products rose in 1957-58 by 3 per cent., as against the average increase of 8 per cent. in the two preceding years. Aggregate stocks at mid-1958 remained more or less the same as in the previous year, despite measures to restrain production and dispose of surpluses in some countries.

The U.S. and Ghana have recently signed an investment guarantee agreement designed to encourage private American investment in this African nation. Under the agreement, potential American investors who first obtain approval of the Ghana Government may apply for a U.S. Government guarantee of their investment against possible losses from inability to convert local currency earnings to dollars and against expropriation of their assets in Ghana. The U.S. investment guarantee programme has been in operation for ten years. At present, the U.S. has investment guarantee agreements with some 30 countries in all areas of the world.

The U.S. Federal Maritime Board has sponsored a research project to develop a cargo submarine capable of sub-polar transit. A contract has been awarded by the Board to Electric Boat Division, General Dynamics Corporation, to prepare studies as to the optimum sizes and speeds for submarine tankers ranging in size from 20,000 to 40,000 tons dead-weight carrying capacity and of 20 knots and above. The Maritime Administration is presently interested in slower speed submarine tankers, which, though not economically superior to surface ships, can be constructed for much less than faster vessels and should demonstrate the advantages and point to the solution of the actual problem of submarine construction and commercial operation.

The Japanese Cabinet has submitted to Parliament a new Bill which seeks to ease the existing Anti-Trust and Fair Trade Law. The proposed revisions of existing laws include (1) easing of provisions concerning cartels to fight a recession particularly those concerning restriction of production sales and equipment; (2) relaxation of the provisions concerning cartels to promote rationalisation by specifying new terms for cartels for market sharing disposal of redundant equipment joint "freezing" of surplus stocks, and provision of investment to expand facilities; (3) introduction of new provision to eliminate excessive competition and establish fair trade practices; and (4) easing of restrictions on the amalgamations of enterprises in cases where they are believed to contribute to rationalisation and of the restrictions on stock-holding and interlocking directorship.



TEXTILES CONSULTATIVE BOARD

THE move of the Central Government to set up a cotton textiles consultative board, though belated, will be widely welcomed. The terms of reference of the Board are quite broadbased, in that they cover all the important matters concerning the textile industry. The advice of the Board, says the official Press note, will be particulary sought in regard to production, distribution and exports of cotton textiles, as well as imports and exports of cotton. Advice will also be sought in matters relating to the procurement of raw materials, machinery and accessories required for the industry.

Since the scope of the Board's functions is very comprehensive, the Government has done well to appoint as members of the Board persons who have intimate knowledge of the problems of the cotton textile industry. Thus, the Board is presided over by Mr. Nityanand Kanungo, Union Minister for Commerce, and consists of Messrs. Manubhai Shah, Minister for Industry (Vice-Chairman), Kasturbhai Lalbhai, Krishnaraj M. D. Thackersey, Madanmohan R. Ruia, Neville N. Wadia, Piarelal Seksaria, J. K. Srivastava, R. Venkataswami Naidu, C. S. Ramachandran (Joint Secretary, Ministry of Commerce and Industry), and D. S. Joshi (Textile Commissioner). The non-official members have been nominated for a period of two years. One, however, fails to understand as to why the Government has not included any person or persons representing labour. After all, it must be remembered that a high-powered body like the one now constituted should, if it is to function effectively, consist of the workers' spokesmen as well.

The appointment of the Cotton Textiles Consultative Board has come not a day too soon. For quite a long time now, textile interests had been urging the Government to set up a board which could be consulted before any decisions bearing on the industry were taken. This suggestion was forcefully put forward by the Textile Enquiry Committee (Chairman: Mr. D. S. Joshi) in its report submitted in July last. The Committee pointed out that an advisory committee consisting of *all* interests and Government representatives from all important centres should be set up. The Board now formed is presumably a sequel to this recommendation. There are, of course, two significant departures. First, the Government has not, contrary to the view of the Joshi Committee, given representation to labour interests. Secondly, the terms of reference of the Board differ from those envisaged by the Committee. Thus, the Committee wanted the advisory body to advise the Textile Commissioner on all important matters affecting the working of the units of the textile industry, to assist him in examining cases of marginal and sub-marginal mills, and to suggest ways in which suitable remedial measures may be taken.

SMALL BUSINESS MEN: THEIR PROBLEMS

The position of the small business man in the present economic set-up of the country is by no means an enviable one. Many and varied are the difficulties from which he suffers. Grouped in the general category of business men, which includes also big business, his case often goes by default and want of proper representation. The position is rendered worse by the popular misunderstanding among the public that the average middle class business man is in a far better state than other middle class people, while in actual fact, many of such business men are in a much worse condition than many of their brethren in the professions and salaried posts. The truth about their actual problems and sufferings was ably brought out by Mr. K. L. Dhandhania, President of the Bharat Chamber of Commerce, in his illuminating address at the half-yearly general meeting of the Chamber held recently at Calcutta.

Explaining the paradox of the plethora of bank money and scarcity of finance from which the common business men suffer, Mr. Dhandhania stated that the middle class and small business men had to pay as high a rate of interest as 8 to 15 per cent. He stressed the importance of better integration of the system of bank credit and the financial requirements of the overwhelming majority of business men. In this connection, he deplored that the bill market scheme was still not available to the smaller business men and to traders in general. A situation of easy money had developed in Britain also but some of the banks there had gone even to the length of extending loans and advances on mere personal credit. Again, in the field of hire-purchase finance, banks in the U.K. had liberalised their investment policy. Banks in India could help business men to develop hire-purchase business in the country; such assistance would also benefit middle class consumers at large. Mr. Dhandhania rightly averred that it was wrong to relate high prices to high profits for business men. Middle class business men were as much affected by the rise in the cost of living as other classes in the society. He maintained that, more often than not, higher prices resulted in lower profit for business men because of the lower turnover which must result from high prices.

RELIEF TO COMMON TEAS

At long last, the Government of India has announced the grant of tax relief to common teas. The relief, which came into effect immediately after the notifications were issued simultaneously with the introduction of a Bill in the Lok Sabha on 27th September, takes the form of the reduction in the maximum rate of export duty from 75 nP per lb. to 30 nP, the *maximum* rate of excise duty being 19 nP for loose tea and 21 nP *plus* the duty leviable on loose tea for package tea. The tea-growing areas have been divided into three zones depending upon the weighted average price of all teas in a particular zone sold in the internal and export auctions in India. The excise duty on all teas is fixed up 2 nP in the first zone, 4 nP in the second and 10 nP in the third. In respect of package tea, the duty will be 21 nP over and above the duty on loose tea cleared from the tea gardens. The average rate of export duty is put at 26 nP per lb. for the present. The refund of excise duty paid on tea exported has been withdrawn, except for package tea which is entitled to a refund of 21 nP per lb. The effect of these charges on teas exported is indicated below:

Zone	Total incidence at present	Relief granted as compared with the export duty hitherto applicable
	nP.	nP.
I	28	10
II	30	8
III	36	2

It will be recalled that, on 1st June last, the Government of India reduced the cess on export of tea from Rs. 4 per 100 lbs. to Rs. 2 and cut the excise duty on tea not used in the manufacture of packaged tea from 6 nP to 3 nP per lb. As a result of these changes, the revenue yield from tea was expected to be down by Rs. 1.2 crore per annum. The cut in export cess, it was stated, was only a temporary relief, effective till the Government was able to formulate a scheme of giving relief to the tea export trade on a permanent basis. The anticipated loss in revenue as a result of the latest changes is estimated at Rs. 1.5 crore in a full year.

A welcome feature of the aforesaid changes in the levy of export and excise duties on teas is that teas of different grades, whether exported or consumed internally, now bear taxes on a graduated scale more in accordance with their prices. But the quantum of relief accorded to common teas is very small and will not help the industry much in improving its competitive position in foreign markets. For the common teas exported from India are meeting severe competition with teas from East Africa and other producing countries, most of which do not levy any duties. Also, the cost of production in these countries is much lower than in India. There is certainly no exaggeration whatever in the following remarks of Mr. B. C. Ghosh, Member, Tea Board:

"..the proposal to reduce the present tea export and excise duties of Rs. 22 crores by Rs. 1½ crore would neither boost exports nor give relief to the producers of common teas. The total relief proposed for common tea zones even falls short of the Plantation Inquiry Commission's recommendations. On the other hand, the higher rate of excise duty of India's total export income of Rs. 25 crores, tea on a non-refundable basis would add to the hardships and production costs of tea producers. Out alone used to pay Rs. 18 crores. Though 60 per cent. of India's tea is of common variety, it used to pay nearly Rs. 11 crores. I fail to understand why Indian common teas should be priced out of export markets by this higher rate of non-refundable excise duty. The proposed concession is no relief."

While the variable effect of the latest decision of the Government may benefit teas from low areas, its benefit is negligible in so far as the South Indian plantations are concerned, inasmuch as only 5 per cent. of the total output of these plantations, we are told, attract the maximum cut of 10 nP per lb. The relief obtained is just 2 nP per lb. on 30 per cent. output and 8 nP on 65 per cent. output. Taking the whole of South India, the aggregate relief granted is assessed at no more than Rs. 31 lakhs annually. The quantum of relief is, therefore, considered in planting circles at Coonoor to be inadequate to make much difference in the competitive capacity of Indian teas. It is to be hoped that all these factors will be taken note of by Parliament when it takes up the Bill for consideration at its next session.

HOUSING PROBLEMS

It now appears almost certain that the overall provision of Rs. 120 crores for housing made in the second Plan will be reduced to Rs. 84 crores. Indicating this, Mr. K. C. Reddi, Union Minister for Works, Housing and Supply, told the third conference of Housing Ministers held in Darjeeling from the 1st to the 4th inst., that the question now was how best to utilise even this amount. Assuming that all the States would be able to spend the amount budgeted for the current financial year, the total expenditure on all the housing and slum clearance schemes in the first three years of the Plan would aggregate Rs. 36 crores only, that is, an average annual expenditure of Rs. 12 crores. All the States put together would therefore have to spend at the rate of Rs. 24 crores per year for the next two years of the Plan in order to utilise even the reduced provision of Rs. 84 crores. This means that the current rate of spending will have to be doubled in the next two years. The Minister emphasised that there was therefore immediate necessity for giving a high priority to housing in the annual State plans.

This priority, it should be underlined, must be real. It should not only ensure that housing gets its due *pro rata* share of finance but also its corresponding share of building materials like steel. It will not be much use getting an assurance that the requisite money will be found for housing from the State allocation unless the Government can also release from its quota of building materials the quantities that are required to implement the housing and slum clearance project.

An important aspect of housing is the one which relates to costs. The first and obvious implication of this question, as the Minister himself pointed out, is that the architects, engineers, town-planners, and civil servants in charge of the housing schemes must realise that "what is required is not housing of any sort or housing in the abstract but housing that the great masses of the people can afford." The emphasis must, therefore, continue to be on low-cost housing. It is for this reason that the setting up of regular housing departments, which could devote their entire attention to building costs, is important.

Whether it is a housing department, a housing corporation or a housing board, the powers given to it must be real and complete. Also, it is not just enough to tell the engineers and architects to draw up a project and commence work. If this is done the chances are that they will plan and build according to the orthodox standards. What is required is the closest scrutiny of their plans before the projects are sanctioned. Mr. Reddi suggested that if a small cell of engineering and architectural talent is set up in every State Housing Department, expressly charged with the responsibility of cutting down costs, consistent with quality of work, then those very engineers and architects who were today prone to think little of cost would become cost-minded and produce what is required of them.

Now that the States have the powers to sanction projects themselves, without coming up to the Centre, it is essential that each State Housing Department should at least have a technical officer of sufficient seniority to scrutinise all projects received from the districts, municipalities, corporations, etc., with a view to effecting all economies wherever possible. For example, in drawing up the estimates for

housing for industrial workers, regard should be paid to the fact that there is an amount of rent more than which the worker cannot pay. If the capital cost can be kept down, the resulting subsidised rent will also work out to a reasonable figure and the tenements built for them will, in fact, be occupied by them. The same considerations should apply to the slum clearance schemes as well. The capital cost of clearance should bear some relation to the rentals that the slum dwellers are expected to pay. The need is to think more in terms of open developed plots for this population and even for the industrial workers, and it is the consideration of the low rent-paying capacity of these persons that has prompted the Ministry of Works, Housing and Supply to suggest something which, while not being just simply an open developed plot, is not, at the same time, a *pucca* tenement whose rent is beyond the paying capacity of those who have to live in it. The subsidised rent of a *pucca* tenement is normally about Rs. 12.5 while that of an open developed plot is between two and three rupees. It is not beyond the capacity of Indian engineers to put up something—a skeletal house as it has been called—whose rental is somewhere in between the two figures and which can be paid by the slum dweller or the industrial worker, as the case may be.

If bringing down cost is important, more so is the need to ensure that whatever money is spent is spent to the best advantage. In view of the great demand for house-building loans under the low income group housing scheme, Mr. Reddi suggested that it was necessary to examine whether the scheme could be modified so that, instead of giving 80 per cent. of the cost of a house as loan, only 60 per cent. is given. If this is done, it will, according to him, help the construction of a large number of houses within the same allocation and also ensure the mobilisation of private capital for the construction of houses.

The question of the agency that is employed for construction sometimes plays a very important part in the economics of a project. There are certain types of works in which popular participation will produce the best result. In the case of a slum clearance scheme, for instance, and particularly where the aided self-help method is employed, it should not be difficult, where possible, to band the slum population itself, or at least a sizable portion of it, into a co-operative and entrust the construction work to it, under proper guidance and supervision. Normally, the cost of the work under these circumstances should work out to less than it would otherwise have been. The Minister recommended for the consideration of the conference the enlistment of the help of social and voluntary organisations to help in the construction and other works involved in the execution of housing and more particularly, slum clearance or improvement projects in the State.

WORLD BANK AND NUCLEAR POWER

Since its inception in 1945 the World Bank has, as is well known, endeavoured consistently to keep up the morale of the less developed countries. Its activities, however, have not been confined merely to the financing of development projects. The growing interest shown by the Bank in the exploitation of atomic energy for the purpose of generating electric power is an instance in point. Finishing touches are now being given to a scheme for the establishment of a nuclear electricity plant on the west coast of Italy, according to the *Annual Report of the Bank for* 1957-58. The emerging possibilities of nuclear power, the *Report* pertinently points out, are of considerable interest in view of the Bank's large and growing investment in electric power projects.

It may be recalled that a reference to the nuclear project in Italy was made in last year's *Report*. Mention was then made of the joint study launched by the Bank and the Italian Government with a view to assessing the commercial feasibility of using atomic energy for the production of electric power in Italy. The study, we are now told, was nearing completion as the fiscal year 1957-58 ended. The direction of the study, it may be noted in this context, was entrusted to a two-man Steering Group consisting of the Secretary General of the Italian Nuclear Research Committee and the Bank's Adviser on Atomic Energy. In addition, co-operation was sought from the Atomic Energy Authority of the U.K. and the Atomic Energy Commission of the U.S.

The procedure adopted for the study was to invite tenders on an international competitive basis for the construction of a nuclear power station of a given output on a chosen site. This invitation was open to bids to build different types of nuclear power systems, and the resulting tenders received provided the first comparable data on relative costs of alternative systems. They also enabled those conducting the study to make a comparison of the economics of a nuclear power station with those estimated for a thermal station of the same output.

After the invitation to bid had been approved by the international panel, it was sent at the end of October last to 17 companies, eight American, five British, two French, one Canadian and one Belgian-American, calling for the submission of tenders on a firm price basis for a 130,000-150,000 kilowatt nuclear power station to be erected on a site on the west coast of Italy and to be completed in approximately four years. Nine bids were received, one from France and four each from the United States and the United Kingdom. As the fiscal year ended, technical reviews of the tenders were being studied by the international panel. The panel's reports were to be given to the consortium of Italian power companies which is to own and operate the new power station when it has been constructed. It is for this consortium to decide on the successful bidder and to award the necessary contracts for construction work.

The proposed project, no doubt, is bound to provide a new impetus to the economic development of Italy. Admittedly, the electric power system of Italy is suitable in many ways to the application of nuclear power. The comparative lack of conventional fuel in Italy is yet another factor which calls for an early consideration of the installation of nuclear reactors.

It cannot be gainsaid, however, that there are certain limitations to the universal application of nuclear reactors. It must be admitted that, to be economic at their present stage of development, the nuclear reactors must be of high capacity and must also be operated at a high percentage of their capacity. In other words, they will be economic and appropriate only in countries with large electric power systems and high demand. As the Bank's *Report* itself points out, apart from all these established facts, much remains to be known about the economics of nuclear power. It is to be hoped that the Bank's study will lead to a realistic understanding of the factors affecting the economic application of this technique of power generation. Needless to say that its findings will prove beneficial to other countries as well.

TECHNO-ECONOMIC SURVEY OF BIHAR

RESEARCH BODY'S SUGGESTIONS FOR INDUSTRIAL EXPANSION

From Our Special Correspondent

NEW DELHI, *5th October*

DELHI LETTER

AT a Press conference held here over the week-end, Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research, presented a summary of the recommendations made in the Economic Report of the Council's Techno-Economic Survey of Bihar. This survey, he said, was undertaken for the first time in Bihar State, a year ago, by the National Council. In this pioneer attempt, Dr. B. Natarajan, the Project Director, has had the benefit of the consultational assistance of a number of foreign and Indian experts. The first phase of the survey has been completed and the Economic Report prepared. The second phase is in progress and, so far, three Industrial Appraisal Reports and nine Preliminary Industrial Studies have been completed. In the meantime, the new technique employed in Bihar has created such widespread interest that other States soon have asked for similar surveys to be undertaken in their territories. A techno-economic survey of Madhya Pradesh is in full swing and one in Madras State was inaugurated on 2nd October. Assam, Andhra and Orissa are other States which will shortly proceed to make an appraisal of their resources by the employment of the new technique.

The National Council believes that the key to successful overall growth of an economy lies in its industrial development. But such development in turn requires a close and careful appraisal of all the available material, human and financial resources of the territory, their current utilisation, unused surpluses as well as existing and future potentials and problems. A techno-economic survey seeks to make such an appraisal of the resources with the combined knowledge of economists, engineers, technicians and specialised consultants in diverse fields such as agriculture and animal husbandry, forestry, fishing, mining, power and transport. The main objective of the survey is to suggest a list of candidate industries which would be technically and economically feasible in a given territory, and to give industry profile reports containing such adequate economic and technical data as would lead to prudent investment decisions.

Main Recommendations

In view of the merits claimed by the Council for the technique of techno-economic surveys, it would be of interest to study critically the full economic and technical reports of the Bihar survey. But these reports have not been made available to the public because they could be published, it is stated, only by the Bihar Government. In the circumstances, this despatch merely highlights the main recommendations, without any comment, in the following paragraphs:

The Bihar Government should consider the possibilities of inter-State migration through the setting up of an inter-State Migration Board to relieve population pressure. Intra-State migration should also be stepped up substantially with a readjustment of population balance towards districts which can economically support large industrial populations. The aim should be to effect permanent emigration, intra-State, of 1.5 million or 8 per cent. of the population from North Bihar. Two measures to induce movement of labour should be tried by Government: (i) provision of properly organised housing as the basis of a well-knit community life for industrial labour, and (ii) organised recruiting agencies to disseminate correct knowledge of employment opportunities.

Agricultural Base

The Government should institute an enquiry into the high incidence of water rates for tube-well irrigation. It should also effectively implement the scheme under tube-wells and arrange for the full utilisation of the area covered. There should be effective use of minor irrigation works and introduction of labour-saving devices in lift irrigation methods. The scope for mixed farming in Chota Nagpur, particularly for sheep farming, should be fully examined.

Effective implementation of the provisions of land legislation and a continuous review of the effects of reform on agricultural development are recommended as essential. While progress in land reform should be quickened, such reforms should form part of an integrated agricultural development programme aimed at better utilisation of available land through consolidation, ample credit and better marketing facilities and towards this end Government should organise service co-operatives of a multi-purpose character at the primary level to aid agriculture in production, processing and marketing. The provision of credit requirements of Rs. 20 crores in agriculture, short, medium and long-term, is recommended. Government should organise the private markets in agricultural produce and develop regulated markets in important commodities, distributed internally and exported outside.

Highest Priority Wanted

The implementation of a vigorous programme of agricultural development to strengthen the agricultural base should be given the highest priority. The cropped area should be increased by 5 million acres through (1) reclamation of waste land and (2) breaking up the fallow lands. The total irrigation potential of about 16 million acres should be fully exploited before the end of the third Plan. The entire gross sown area of 30 million acres should be covered with improved seeds. The target of fertiliser consumption should be doubled during the second Plan. The target for urban compost should be more than doubled in the third Plan. Area under green manure should be increased to cover at least 10 million acres. Government should aim at an increase of 80 per cent. in the production of foodgrains and 300 per cent. in commercial crops in the third Plan period with an approximate investment of Rs. 250 crores.

The expenditure on livestock improvement in the third Plan should be doubled. Short-term measures should be undertaken for better feeding of livestock. The adequacy of fodder reserves should be annually surveyed by the N.E.S., fodder should be distributed freely to farmers and cultivated on scientific lines on modern farms and demonstrated to agriculturists. Surplus fodder grasses should be conserved in N.E.S. Blocks in silo-pits; there should be fenced grazing in the hilly regions, and forest areas should be tapped for good quality hay.

Pisciculture has much potentiality and should be taken up on an organised scale. A programme directed to (1) wider exploitation of inland fisheries, (2) extensive stocking and manuring of tanks, and (3) training of fishermen in improved methods of pisciculture should be undertaken. The experiment of growing paddy with fish should be extended. Better distribution of fish should be effected through distribution of vans, and cold transport as also storage facilities and salting of fish.

The development of a mature coal industry with ancillary chemicals should be regarded as a major objective of Government's policy. In expanding coal-mining activity the neglected thin seams should be mined economically by scraping the overburden when it is light and working them on the surface. Amalgamation of the small units scattered over the entire mining belt would strengthen their financial structure and render mechanisation and other improvements possible. Laws aimed at checking selective mining should be enforced. The public sector will have to step up production as the private sector is hesitant to expand. Plants for mica processing operations should be set up within the State. Manufacturing of ground mica and mica bricks from mica wastes should commence. Amalgamation of uneconomic units should be undertaken. For long-range production of iron ore a State undertaking on the model of the Orissa Mining Corporation is recommended. The possibilities of development of industries other than cement like bleaching powder, calcium carbide, magnesia and other calcium and magnesium salts need to be more thoroughly examined for greater utilisation of limestone. Exploration of pyrites in the Amjor region should be speeded up as a Government undertaking.

The Government should develop for the mineral industry the economic and social overheads, in railways, roads, power, etc., and arrange for other requirements such as extension of siding facilities, increased wagon availability and adequate water-supply. Along with technical education, technical assistance to the mineral industry should be provided with much wider effectiveness. Marketing centres need to be fostered within Bihar, so that the business returns of mining establishments are retained in Bihar. The Government should plan for the fabrication of mining machinery within the State; this will not only provide an essential requirement but will also save considerable foreign exchange.

Transport and Communications

In planning transport development, first priority should be given to bridge construction which is an urgent necessity. The Government should take up with the Railway Administration the stepping up of operational efficiency of the railway system in North Bihar to all-India standards. Provision should be made for larger locomotives hauling, longer and heavier goods trains, and for the use of high capacity wagons of 40 and 60 tons to increase the carrying capacity and expedite movement on the railways. Immediate consideration should be given to the question of providing refrigerated wagons and lorries.

The need for new and better roads is urgent, and should be met rapidly and adequately. A State Road Fund, as in Bombay and Uttar Pradesh, should be created. The Government of Bihar should take up with the Central Government the implementation of the proposal made by the Taxation Enquiry Commission for a Central All-India Rural Communications Fund. It is desirable to set up an autonomous State Road Transport Corporation to run the State passenger transport efficiently. The Government should give attention to the implementation of the provisions of the amended Motor Vehicles Act, extension of credit facilities to operators under the amended State Bank Act, and extension of the moratorium on goods transport nationalisation by at least another ten years.

Quick action must be taken to render the Bhagirathi river navigable throughout the year as this will considerably shorten the distance between Calcutta and Bihar by about 400 miles. To run the river transport efficiently, the Government should establish a public corporation controlling a majority of shares, and with the participation of interested neighbouring States.

Power Supply

The Government should examine carefully the utilisation of the several river valleys in this State for the generation of hydro-electric power. Until the supply of power can be increased by the completion of the hydro-electric plants planned for construction, the immediate demand for power should be met by the building of thermal stations near the washeries in the colliery area using low grade coal. In view of the urgent need for power the building up of a thermal station with a capacity of 200,000 kw. is recommended.

Industrial Expansion

The following industries are recommended for expansion on large-scale basis: (1) iron and steel, (2) heavy chemicals, (3) aluminium, (4) cement, (5) asbestos, (6) tin plate, (7) foundry, (8) insulating wires and cables, (9) ceramics, (10) glass and glassware, (11) radio and radiograms, (12) distilleries, (13) sugar, (14) cotton (15) cold storage, (16) concrete and hume pipes, and (17) bicycle parts. The industries, recommended for expansion on large- and small-scale basis are: (1) printing, (2) aluminium utensils, (3) bricks and tiles, (4) fine and pharmaceutical chemicals.

The industries, recommended for expansion on small-scale basis, are: (1) buttons, (2) cutlery, (3) stone dressing and crushing, (4) electrical porcelain ware, (5) automobile leaf springs, (6) industrial fasteners, (7) surgical instruments, (8) builder's hardware, (9) wood screws, wire nails and panel pins, (10) general engineering, (11) hand tools, (12) food preservation, (13) padlocks, (14) shellac and (15) tea chests. The industries recommended for expansion on cottage basis, are: (1) hand-pounding of rice, (2) palm *gur* and (3) silk. For the suggested expansion of industries the investment potential should be of the order of Rs. 25 crores spread over a period of six to seven years. The following new industries are recommended as practicable production schemes:

(1) alloy steel, (2) structural shop, (3) light forge plant, (4) light bar grinding plant, (5) malleable casting shop, (6) electric motor and generator plant, (7) sulphur and sulphuric acid from pyrites, (8) production of caustic soda and chlorine, (9) low-temperature carbonisation of coal, (10) calcium carbide, (11) sorbitol, ascorbic acid and riboflavin from sugar, (12) silican carbide, (13) manufacture of ethanol from molasses, (14) pulp from bagasse, (15) manufacture of high grade paper from linseed straw, (16) artificial graphite, (17) china-clay washing plant, (18) electrical porcelain plant, (19) sanitary ware, (20) quartz grinding plant, (21) refractory silica plant, (22) mica brick and insulation plant, (23) sewer and irrigation pipe, (24) mica grinding plant, (25) potato flour from dried potatoes, (26) bonemeal fertilisers, (27) phosphates from apatite.

Other possible small-scale industries are: (1) chinaware burning, (2) small abrasive stone plant, (3) graphite crucible kiln, and (4) inferior quality cement. The 27 new industries suggested would require an initial investment of about Rs. 22 crores with 65 per cent. of foreign exchange component. Project reports have been prepared for seven industries and outlines for project reporting for eight others out of the 27 industries.

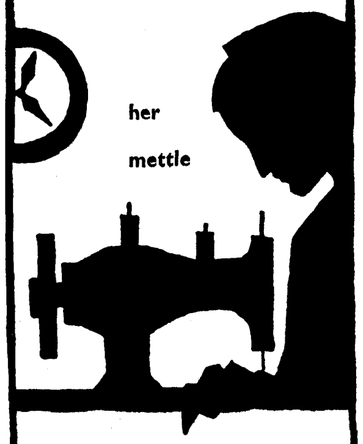
Financial assistance to industry should be made more adequate and the procedure of granting loans simplified. Investment trusts, with Government guarantee, should be established, entrusted with the function of guidance and actual investment for prospective investors. Government should formulate a common production programme for the development of small-scale industries by sub-contracting components of large-scale industries. A marketing corporation at State level with chain stores should be established. A detailed survey of all cottage and small-scale industries should be conducted.

Third Plan

An investment outlay of Rs. 480 to Rs. 600 crores of which three-fourths would be in the public sector, is recommended for the third Plan, for implementing the programme of development suggested. The State should consider the possibility of paying compensation to *zamindars* in terms of shares in enterprises instead of bonds and cash. There is urgent need for more than doubling the expenditure on general as well as technical education. Considering the high employment potentialities of consumer goods industry, a good case exists for establishing a network of consumer industries, if need be, with active State assistance. Investment priorities, it is stated, should be clearly established, the suggested order being: (a) strengthening of agricultural base; (b) development of economic and social overheads such as transport, power, and education and (c) public works including extensive rural housing programme.

She is the hub of the house, the focus of the family—she is the Indian housewife.

The clock that wakes her up for the day's work, the sewing machine that sharpens her talent and deepens her interest in embroidery etc., and the hundreds of utensils and household wares she uses, are all made of metals. For millions like her metals have a very great role to play.



Innumerable are the ways we serve the country as the largest single importers of *non-ferrous metals and alloys.*

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14

WORLD BANK—A LIVE-WIRE INSTITUTION

NEW RECORDS SET IN OPERATIONS

IT has been acknowledged for a long time that, of the Bretton Woods twins, the International Bank for Reconstruction and Development—the World Bank, for short—has been a real live-wire institution. It has been making a splendid contribution to the removal of poverty and the lessening of international tensions. Indeed, it will be no exaggeration to say that the Bank has done much for the promotion of peace. Its working during the year ended 30th June 1958 provides impressive evidence to support this view. The past year was a record one in the history of the Bank. Not only were the loans given by the Bank larger than in any previous year but even its non-credit activities were of wider range. It rendered a distinctly invaluable service in settling the dispute between the United Arab Republic, on the one side, and Britain and France on the other, in regard to compensation payable to the shareholders of the Suez Canal Company. Again, it continued to render its mediation service to India and Pakistan in respect of their dispute over the sharing of the waters of the Indus basin. That the Bank is keeping itself alive to the needs of the nuclear age is proved by its co-operation with the Italian Government in a study of the commercial feasibility of using of atomic energy for the production of electric power. Another instance of the promptness with which the Bank acts when economic emergencies arise is provided by its initiative in bringing together, in August last, important countries for finding a solution to India's foreign exchange difficulties following the implementation of the second Plan.

Banking

In its primary field of activity, namely, banking, the World Bank set new records in both lending and borrowing operations during the year under review. It sanctioned 34 loans covering a total equivalent to $711 million, an increase of 75 per cent. over the average of the three previous years. It raised $650 million by selling bonds and notes to investors in the U.S. and other countries. Actual disbursements amounted to $499 million, also a new record, the corresponding figure for the previous year being $332 million. The 34 loans for an aggregate U.S. dollar equivalent of $711 million compares very favourably with 20 loans involving $388 million in the year ended 30th June 1957. By 30th June last, the number of loans made by the Bank had risen to 204, the amount provided being $3,729 million net of cancellations and refundings. Of this amount, no less than $2,795 million had been disbursed.

Asia was helped more than any other country during 1957-58. Of the total of $711 million, more than half—$379 million to be precise—went to this ancient continent. Among the Asian countries, India received the largest amount of loans, aggregating $165.5 million. The balance of the year's lending was made up of $121 million for Latin America, $112 million for Africa and $99 million for Europe. Nigeria and the Philippines were the two countries to borrow for the first time from the Bank during the year under review, thereby leaving the total number of member-countries indebted to the Bank to 47. A classification of the loans made by the Bank from the beginning upto 30th June 1958 according to purpose and area is given in the table published at the bottom of this page.

Loans to India

The position pertaining to India may be briefly stated, as it must be of greater interest to our readers. As already stated, India received four loans during 1957-58, amounting to $165.5 million, raising the cumulative total to 18 loans and $397 million. This compares with $948.3 million provided to Asia as a whole. Pakistan, it may be noted, has received $126.45 million. Since the close of the year, India has received two loans—one for $25 million for the D.V.C. and another for $85 million for the development of railways, raising the total borrowings from the Bank net of cancellations, to $507 million. India ranks as the largest recipient of loans from the Bank. It has also the distinction of being the largest single borrower in the private sector, namely, the Tata Iron and Steel Company, Ltd., which was granted two loans amounting to $107.5 million in the aggregate. Of the original principal amount of $515.6 million loaned to this country up to the end of September last, a little over $320 million have been given to the public sector and the balance of $195.0 million to the private sector. The railways have so far received $209.01 million, ports $43 million, aviation $5.6 million, power supply (electricity) $44.50 million ($18.50 million in the public sector and $26 million in the private sector, that is, the Tata Group of power companies), multi-purpose projects $43.50 million, iron and steel industry (all in the private sector) $159.00 million and financial corporation (I.C.I.C.I.) $10 million. It will thus be seen that the largest amount of the Bank's loans has gone to development of transport; next in order of importance comes iron and steel and then, power. India has also benefited to a considerable extent from the non-credit services of the Bank. Although the Bank's mediation on water disputes with Pakistan has not yet yielded any tangible results, it has prevented a collision and kept up the hope of finding a peaceful solution. Its advice on economic planning and policies has been very much resented by a section of politicians, but there is no doubt that it has contributed albeit in an invisible manner, to sobriety among the planners and administrators.

Basic Services

To revert to the Bank's world-wide operations during its fiscal year 1957-58. The strengthening of basic services continued to be the main purpose of Bank financing. Nearly half the year's loans were for improvements in transportation. Of the total of $322 million lent for this purpose, two-thirds was for the improvement and expansion of rail services in seven member-countries: Ecuador, India, Nigeria, Pakistan, Peru, Rhodesia and South Africa. The greater part of the total of $60 million lent for highway improvement is accounted for by a loan for projects included in the ten-year plan in the Belgian Congo. The remainder of the year's lending for transportation was for reconstruction and expansion in the Indian ports of Calcutta and Madras, and to improve the canal serving the coal and steel centres of southern Belgium. Electric power which for several years had held first place among the purposes for which Bank loans were made, received this year somewhat less than transport. The $242 million lent was for the expansion of generation, transmission and distribution systems in nine countries. While this lending included assistance for thermo-electric plants in Italy, Mexico and Pakistan, the greater part was for hydro-electric projects, which often present difficult financing problems because of their higher capital cost and longer construction period. Loans for such projects were made in Austria, Brazil, Ecuador, Italy, Japan, Mexico, the Philippines and Thailand. Loans made for industry totalled $107 million and were largely concerned with expansion programmes in steel and coal. This lending will help to complete an increase of nearly 100 per cent. in the steel capacity of the Tata Iron and Steel Works in India; in Japan, another private company, the Kawasaki Steel Corporation, is receiving funds for the expansion of pig iron production. In Chile, the efficiency of the coal industry is being increased by two loans for the sinking of new shafts and for carrying out other modernisation work being undertaken by the two largest coal mining companies.

In Southern Italy, the Bank's industrial lending is helping the cassa per il Mezzogiorno to finance the introduction of potash mining and processing in Sicily, the expansion or improvement of several consumer goods industries. In addition to lending directly to industry, the Bank also made loans during the year to newly established development banks in two countries. In Pakistan, the Bank helped to establish the privately owned Industrial Credit and Investment Corporation and to enlist the participation, in co-operation with local capital, of the United Kingdom, the United States and Japanese capital. A loan from the Bank will provide part of the foreign exchange required for the Corporation's initial operations. The Corporation will assist small and medium-scale industrial ventures by the investment of its funds and also by furnishing advice and assistance on managerial and technical problems. In Austria, the Bank made a loan to a new institution, Investitionskredit A.G., to provide a source of capital for private industrial enterprises, many of which are in urgent need of modernisation and expansion. Investitionskredit will re-lend the Bank funds to ten private companies in the pulp and paper textile and electrical industries.

Agriculture

As in earlier years, the growth of agriculture continued to benefit from Bank lending, particularly for new highways which, by providing access to markets and reducing transport costs, provide a new stimulus to farmers. In addition, three of the year's loans were for projects of direct benefit to agriculture. The Yanhge project in Thailand, in addition to providing large amounts of electric power, will provide year-round supplies of water to a downstream barrage already completed with Bank Assistance, and will make possible higher yields on 2¼ million acres. In Japan, another project promising substantial benefits for agriculture was supported by an irrigation and power loan in the Aichi region of Honshu Island. This loan will assist the first large-scale experiment in the irrigation of hill-land in Japan, where lowland farming is particularly intensive but little attempt has hitherto been made to cultivate the uplands. The balance of the Bank's agricultural lending supported irrigation, flood prevention and drainage in the Volturno and Tavoliere plains in Southern Italy.

Explaining the marked increase in the Bank's lending operations, the latest, that is, the thirteenth annual report, says that it must not be attributed either to the worsening of the terms of trade of the less developed countries or to the economic recession in the U.S. The main explanation for it is to be found "in the longer term factors which are operating to make a larger number of development projects ready and eligible for financing." "One of these factors," adds the Report, "is the long period of planning and negotiation on development programmes which has been carried out by borrowing countries and by the Bank." As for the future, the Report observes that the large number of projects now under consideration indicates that "the rise in lending during 1957-58 may have signalled the start of a new and higher level of operations."

Surplus

The Bank continued to cover out of its own resources all its operating expenses and to show a surplus of earnings over expenditure. Net income during the year amounted to $42 million, the highest figure to be recorded so far, and compared with the previous high of $36 million in 1956-57. There was an increase of $60 million in the Bank's reserves, which reached a total of $350 million. Of this amount, reserves built out of net earnings were of the order of $236 million and those out of the commission of 1 per cent. charged on the outstanding balance of all loans, $114 million.

I.M.F. ON WORLD ECONOMIC CLIMATE

REMEDIES FOR REDUCING CYCLICAL FLUCTUATIONS SUGGESTED

THE keynote of the review of the world economy by the International Monetary Fund in its latest Annual Report—that covering the fiscal year ended 30th April 1958—is that, in one form or another, every nation in the world has to grapple with the problem of creating conditions favourable to a satisfactory rate of economic growth and to the maintenance of stable prices and high employment. The optimism implied in the view that the problem of business cycle, at least in its most serious manifestations, has ceased to trouble the world, the Fund says, is not fully justified. For it feels that, in economies where capital goods and consumer durable goods form a large share of total output, there is still likely to be a tendency in certain sectors for periods of concentration of heavy demand to alternate with periods of readjustment to a less intense demand. It accordingly stresses the need for ensuring that neither the expansion nor the subsequent contraction should be magnified by adverse circumstances affecting costs and prices, the level of personal income or the flow of international trade and investment to the point where a general oscillation of activity is generated which affects the whole of the economy.

In order to deal with recessionary tendencies, the I.M.F. considers that it is not sufficient merely to take measures to stimulate the overall demand for goods and services; there are other essential aspects which have to be considered carefully. One of the most important is said to be the tendency of certain branches of economic activity, especially of the durable goods industries, to develop, during a boom, beyond the absorptive capacity of the markets for the goods and services they produce.

The Remedies

In the opinion of the Fund, the remedies for reducing the cyclical fluctuations to tolerable proportions include a wide variety of measures for some of which arrangements of a rather permanent character may be required. In particular, the following measures are emphasised:

Continuous attention must be devoted to strengthening the structure of the economy, so that any tensions that appear may be more easily withstood, and any tendencies to self-perpetuating movements in one direction or another may be checked. For example, a strong and well-developed banking structure, including institutional arrangements that will make it possible for the monetary authorities to maintain effective control of the flow of credit, is of vital importance.

"Sound practices are required for financing stock exchange transactions, and even more important is an adequate system of mortgage financing.

"The importance of the role of consumer durable goods in a modern economy suggests the wisdom of moderation in the use of instalment credit for their acquisition as one means of avoiding abrupt oscillations.

"Caution in the use of sliding-scale clauses that link wages rigidly to changes in the cost of living, or associate other contractual obligations with cost changes, would generally facilitate the restoration and maintenance of a proper balance in the economy.

"The main purpose of the more direct action, which is expressed in decisions on credit and fiscal policy, is to restrain demand when it is excessive and to stimulate it when it is inadequate. During a recession, measures should be chosen in such a way as to ensure that demand is increased without at the same time increasing costs."

The I.M.F. notes that, while the risks of a revival of dangerous inflationary pressures should not be overlooked, there are a number of factors which suggest that, in the industrial countries, the prospects are now favourable for greater price stability than has generally been experienced since the end of World War II. It observes:

"The excess liquidity built up during the war seems now to have been worked off, and, in many countries, the pre-war ratio of money volume to gross national product has been re-established. In a number of industrial countries, the backlog of demand, which had accumulated during and immediately after World War II, for housing and public utility and industrial plant has gradually been satisfied, and it should be increasingly possible to finance investment of this kind out of current savings without recourse to inflationary methods. Monetary and fiscal policies that have price stability as their objective now command wide support and may be expected to be more effective in future, even in boom periods, in limiting the pressure of demand. In the industrial countries, in general, wage costs have shown an upward trend. However, this trend has already become less steep, as more attention is paid to the relation between wage increases and increases in productivity. In several countries other than the United States there has been evidence of greater price stability."

According to the I.M.F., the authorities in some important countries are now able, with less difficulty than in the past, to take effective measures to deal with the business cycle. Whatever embarrassments the current world distribution of gold reserves may present to certain countries, it is reassuring to know that some of the large industrial countries are able to face the task of preventing excessive cyclical fluctuations without being hampered by any insufficiency of international reserves.

Economic Developments

The review of the developments on the world economic front as made by the I.M.F. reveals that industrial activity has slowed down in some countries, mainly because of a cyclical decline following a boom generated at home. But a decline may also be a consequence of a slackening in activity abroad, or it may be an autonomous development determined by the credit and other policies adopted to defend the foreign exchange position. In some countries, indeed, not one but several of these influences have been at work. It follows that no sweeping generalisations are possible, even if attention is confined to the industrialised countries about either the general economic conditions of these countries at the present time or the policies that would be most appropriate for them.

While the volume of world trade did not grow in 1957 at the same rate as in previous years, the fairly satisfactory level at which it was maintained made it easier to defend policies of monetary stability and fiscal and credit measures to strengthen the balance of payments position. There are several countries which did not have to take any measures to counteract a recession arising from either external or internal disturbances. In administering their fiscal and credit policies, they were, of course, still concerned with the maintenance of a healthy balance in their own economies, while they could also take into account the fact that any lowering of interest rates abroad made it easier for them, too, to reduce their own interest rates, in so far as that seemed appropriate. Many of the primary producing countries present a less happy picture. The prices of many industrial raw materials have been weakening since the second half of 1955, a movement to which many causes have contributed, including rapidly expanding output and, for some commodities, increased competition from substitutes or new products, such as artificial rubber, textile fibres or aluminium.

The I.M.F. expresses satisfaction that, although there is still a danger of inflationary tendencies becoming overwhelming in some countries, the desire is growing to restore stability both internally and in the balance of payments. Many countries, it is said, have adopted comprehensive stabilisation programmes. Nevertheless, the I.M.F. urges that, during the time when these measures are taking effect, financial assistance from abroad is needed. To several such countries, the Fund has furnished financial resources as well as technical help.

Fiscal and Credit Policies

It is gratifying to be told that, despite the marked differences between the situations of different countries and groups of countries, appropriate steps are being taken in more and more countries to deal with their problems by means of fiscal and credit policy. But we are informed that there are still many dangers to guard against. To quote the I.M.F.:

"In conditions of recession, it is even more important than in conditions of boom that financial and economic policies should be compatible with the maintenance and expansion of the volume of world trade. While countries with balance of payments difficulties would certainly run great risks in applying expansionary policies at such a time, countries in a strong position have a special responsibility to maintain internal demand and production at high levels, thus ensuring a buoyant market for imports and contributing to the expansion of world trade. The prevention and correction of excessive fluctuations is a responsibility primarily for the large industrial countries—a task which they should undertake both in their own interest and in the interest of the rest of the world. There will, however, be a better prospect for the success of their efforts, if the less developed countries are fully aware that stability cannot be assured to them merely by the efforts of others, and that they cannot be spared the obligation to adapt their own economies to fluctuations between high and low demand. This has special importance for countries whose exports consist mostly of raw materials; it may also apply to exporters of foodstuffs, such as coffee, whose prices may fluctuate widely, even if demand is reasonably stable, in response to the impact of the fluctuations in supply to which these commodities are liable."

Special attention has been drawn by the Fund to the fact that recession conditions create a dangerously fertile ground for the growth of protectionist sentiment. There is considerable force in the Fund's remarks that increases in trade barriers constitute a short-sighted method of obtaining temporary relief from the pressures recession. "Such reliefs," to quote it, "will create distortions in the economies where the restrictions are applied; and, since it is necessarily obtained at the expense of other countries, it may quickly provoke reactions sufficient to destroy even the short-term benefit that it appears to promise." The I.M.F. has assured its members that it will continue to be readily available in any situation where the expectation is justified that the members too will do whatever lies within their power to complete the adjustments demanded by changing circumstances. The record of 1957-58 has shown that, both in boom conditions and as the effects of recession began to appear, many members have been able to act on this assurance.

Emergency Measures

Another factor to which the I.M.F. has drawn special attention relates to some risk that a country, overwhelmed by immediate heavy pressures upon gold and foreign exchange reserves, may feel obliged hurriedly to take emergency measures which are likely to be harmful to itself and ultimately to distort the pattern of world trade and delay the resumption of the normal long-term processes of economic growth. This risk is, of course, diminished if such countries are able to draw upon financial assistance from outside. In the opinion of the Fund, there is a strong justification for provision of international credit to help the countries bridge any temporary gaps arising from the normal course of world trade fluctuations.

The I.M.F. has reiterated the view first expressed in the Annual Report of 1952 that the cure for a depression requires national measures to maintain or stimulate effective demand, especially in the great industrial countries. It rightly urges that, as the Fund's resources, even if they are much larger than they are, cannot be the decisive factor in dealing with recession, all countries must share in the responsibility for effective action. In any event, the important immediate task when a decline in activity sets in is, as the Fund pertinently avers, to ensure that the deterioration will be checked as soon as possible and that, by the establishment of a strong monetary structure, the members of the Fund will build a firm foundation for renewed recovery and expansion of world trade.

World Payments Situation

The Annual Report of the I.M.F. contains the customary analysis of the world payments situation in the past year. It will be seen from this analysis that the growth of world trade from 1956 to 1957 was much less than in preceding years. The volume of world exports, which had risen by some 10 per cent. from 1954 to 1955 and by 8 per cent. in the following year, rose by 5 per cent. from 1956 to 1957. In recent years, world trade has grown markedly relative to world production. Save from 1955 to 1956, however, when the ratio of imports to production increased in most countries, this has been due largely to the fact that, in the U.S. where this ratio is much lower than in most countries, industrial production has been growing more slowly than in the rest of the world. The fact that trade increased less from 1956 to 1957 than from 1955 to 1956 is explained partly by the exceptional factors operating to expand trade in 1956 and partly by the slowing down during 1957 in the rate of expansion of economic activity. The decline in the rate of growth of international trade was common to the exports of both industrial and non-industrial countries affecting their volume as well as their value. The total value (f.o.b.) of world export (excluding the Soviet block and Mainland China and U.S. military exports) during 1957 was $98.7 billion, as against $91.6 billion in 1956 and $82.8 billion in 1955. Of this, exports from industrial countries accounted for $60.3 billion ($54.5 billion in 1956 and $47.8 billion in 1955) and those from non-industrial countries for $38.4 billion ($37.1 billion and $35.0 billion).

The market prices of primary products in general declined during 1957, but, for the year as a whole, they were still higher than in 1956. For this reason and owing to the fact that the movement of prices obtained by exporters tends to lag behind market quotations, the f.o.b. export prices of primary producing countries in 1957 as a whole appear to have been some 1½ per cent. higher than in 1956. Over the same interval of time, the export prices of industrial countries, however, rose by more than 3 per cent. Moreover, freight rates probably increased on balance between 1956 and 1957. Tramp rates fell by about 20-30 per cent., owing to the diminishing scarcity of shipping, but liner rates continued to rise because of increasing costs. Therefore, the average terms of trade of primary producing countries—which, of course, covers a considerable diversity in the experience of individual countries—may have deteriorated by some 2 per cent. from 1956 to 1957, following a decline of 5 per cent. in the previous year.

Balance of Payments

The I.M.F. next reviews the balance of payments developments and resources. The review shows that the payments surplus of industrial countries other than the U.S. has been falling year by year since 1954 and, in 1957, there was a sizable deficit. The comparative fortunes of these industrial countries with respect to their payments surpluses and deficits depended to a small extent on special factors affecting the demand for their exports but mainly on the comparative degree of inflationary pressure which these countries maintained and, in some countries, on large and disequilibrating capital movements. The aggregate trade balance of the non-industrial countries deteriorated by $1 billion in 1955 to 1956 and by $2 billion from 1956 to 1957. While from 1955 to 1956, increases in their capital imports and in certain invisible receipts were so great that the aggregate payments balance actually improved, only a part of the deterioration in the trade balance from 1956 to 1957 was offset by improvements in other items. The payments balance thus deteriorated by $1.5 billion, from a surplus of $400 million to a deficit of more than $1.1 billion.

According to the I.M.F. Report, the net addition to the gold and dollar reserves of countries other than the U.S., which amounted to $1.8 billion in 1954 and to $1 billion in 1956, declined to less than $300 million in 1957. Indeed, the official gold and dollar reserves of the rest of the world were reduced by $1.4 billion as a result of transactions with the U.S., to which short-term capital movements made a substantial contribution. This, however, was more than offset by substantial drawings from the Fund and by an exceptionally large net contribution to gold reserves from current production and Soviet sales. The rest of the world received some $890 million from the Fund in the calendar year 1957 in drawings (net of repayments and new gold subscriptions), as compared with $480 million in 1956, while the excess of new gold production and Soviet sales over consumption and hoarding is estimated at $800 million in 1957, as against less than $500 million in the previous year. Gold production outside the U.S. and the Soviet area increased between 1956 and 1957 by some $40 million, and Soviet sales are thought to have been about $100 million higher in 1957 than in 1956. Despite rumours of currency devaluation, there was considerably less gold hoarding in 1957 than in 1956. The reserves of foreign exchange other than dollars declined by some $150 million during 1957. E.P.U. balances increased by $180 million; reserves held in sterling may have declined by $350-400 million, while holdings of Deutschemarks and yen increased by nearly $300 million. These movements suggest a net decline of some $250-300 million in all other reserve holdings. The total reserves of countries other than the U.S. rose in 1957 by less than $100 million, in contrast to $1 billion in 1956.

Payments Difficulties

As in previous years so during 1957, payments difficulties arose mainly as a result of excessive demand pressures in deficit countries. Here, the I.M.F. alludes to the role played in certain important industrial countries by disequilibrating capital movements, often of a speculative kind, and, in many producing countries, by export price declines which, whether or not they were considered temporary, at any rate called for adjustments that countries would find it very difficult to make all at once. It is felt that, where payments deficits arise because of such temporary factors as reversible or non-recurrent capital movements, or where time is required to enable more fundamental measures of adjustment to take effect, it may be appropriate to finance the deficits by the use of reserves or by borrowing. The need to draw on reserves was, therefore, particularly great in 1957. However, in many deficit countries, reserves had already been reduced to a low level by the end of 1956. It is, therefore, not surprising that 1957 was remarkable for the extent to which the countries resorted to international financial assistance from various sources as a means of alleviating pressure on their reserves. The principal source of such assistance was the Fund, which, in the course of the year, provided almost $980 million to member-countries, including substantial sums to France, India, Japan, the Netherlands, and Argentina. In addition, the Export-Import Bank of Washington made loans to countries in payments difficulties, including notably the U.K. and Japan. The reserves of the U.K. also benefited from the postponement of interest and capital repayments due on the North American loans and from the special sterling deposit acquired by Germany against its future debt repayments. The various primary producing countries with payments deficits, notably India and China, also borrowed from a variety of sources.

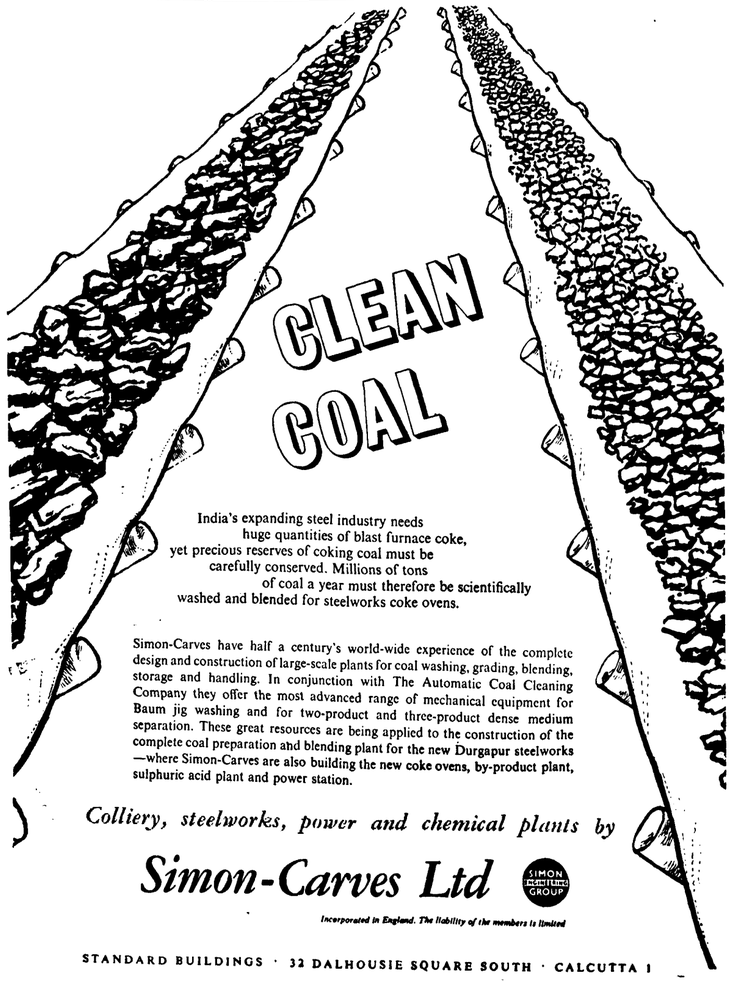
For the most part, industrial countries continued, as has become the rule over the past five or six years, to use disinflationary financial measures as a means of dealing with, or forestalling payments difficulties, and, especially in some countries, for checking capital outflows. In general, such policies served a double purpose, in that they also tended to curb price increases that were undesirable for domestic reasons; in some countries, however, anxieties regarding the possible effects of these policies on production and employment began to be felt toward the end of the period.

In the primary producing countries that were in payments difficulties, import restrictions and exchange rate adjustments played a much more important role than in industrial countries in a similar case. However, corrective action usually included, and in some countries consisted entirely of, monetary and fiscal measures to curb credit and to slow down the pace of development expenditure. A number of primary producing countries adjusted to internal inflation or to the fall in export prices by depreciating their exchange rates. Of those countries that have been in substantial external surplus, only the U.S. and W. Germany are large enough for their policies to have a substantial effect on the payments problems of other countries.

Domestic Financial Developments

An interesting account of the domestic financial and economic developments has been given in the I.M.F. Report. Referring to the industrialised countries, the I.M.F. points out that the authorities in most of these countries succeeded, by means of monetary and fiscal measures, in preventing inflation from getting out of control, and, with a few exceptions such as France, these countries avoided major inflationary movements. In most of them, restrictive internal policies helped to limit the rise in prices. In both the period of increasing economic activity and the early months of the recession in those countries where recession had begun, monetary measures were, as a rule, used more extensively than fiscal measures in order to make the necessary adjustments in the economy. Industrial production, employment, and national income in real terms continued to expand in nearly all countries during the first half of 1957, though at a slower pace than in 1956. Prices and wages also continued to rise. With the demand for investment funds tending to increase further and savings lagging behind, interest rates in the financial centres of many industrial countries continued to rise during the first half of 1957. The increases in interest rates were due in part to the influence of restrictive credit policies, including the raising of the discount rate in a number of countries. As in 1956, most economies, when faced with restrictive credit policies

(Continued on page 631)



India's expanding steel industry needs huge quantities of blast furnace coke, yet precious reserves of coking coal must be carefully conserved. Millions of tons of coal a year must therefore be scientifically washed and blended for steelworks coke ovens.

Simon-Carves have half a century's world-wide experience of the complete design and construction of large-scale plants for coal washing, grading, blending, storage and handling. In conjunction with The Automatic Coal Cleaning Company they offer the most advanced range of mechanical equipment for Baum jig washing and for two-product and three-product dense medium separation. These great resources are being applied to the construction of the complete coal preparation and blending plant for the new Durgapur steelworks —where Simon-Carves are also building the new coke ovens, by-product plant, sulphuric acid plant and power station.

FLEXIBLE APPROACH IN TALKS WITH HONG KONG TEXTILE INDUSTRY

EARNINGS OF MILL WORKERS DROP

From A Special Correspondent

MANCHESTER, *30th September*

MANCHESTER LETTER

AT a distance of 10,000 miles or more, reports of progress (or lack of it) in the talks between Lancashire and Hong Kong industrialists must be treated with reserve. Prospects of a settlement, however, are far from bright at the time of writing. Despite some rather optimistic comments which were made in "inspired" quarters before the mission left for the Far East, official views regarded the chance of success as only "fifty-fifty."

The stumbling block, as had always been feared, has been the unwillingness of Hong Kong to do other than negotiate on the basis of grey cloth imports only. The British team has been equally unyielding in its determination to conduct the talks on a wider front to include made-up goods and finished textiles. Bridging such an extensive gap before getting to grips on the details of an appropriate plan presents a fundamental problem which may well prove fatal to the discussions. The latest news is that the talks now appear to be following new lines. An official statement issued by the Cotton Board on 29th September, gave the following summary of the situation:

"A further meeting of the Cotton Board delegation and the Hong Kong Textiles Negotiating Committee was held this morning. A spokesman of the Cotton Board explained that, in view of difficulties which arose last week, the Cotton Board delegation had put forward fresh proposals in a wholehearted desire to bring the views of the two industries into closer relationship. A spokesman for the Hong Kong delegation said that these proposals are now being considered by the Hong Kong Textiles Negotiating Committee. In the meantime, the Cotton Board delegation have deferred their departure for some days."

No comment on the fresh proposals which have been tabled was immediately forthcoming from official sources in Manchester, but, unofficially it was felt that this in no way indicated a weakening of the attitude widely held in Lancashire. It is believed that a more flexible approach is being introduced into the talks in an effort to meet the opinions of the Hong Kong millowners who also have their problems. It was stressed in Manchester that the fresh basis for discussions will in no way sacrifice Lancashire's interests.

Well-timed Once More

Those who favour the cause of Hong Kong have proved before that they are well versed in the practice of publicity. What is more, they know the value of timing. It was surely no coincidence that the distribution of a pamphlet setting out Hong Kong's resistance to the establishment of limitation of imports into the United Kingdom should have reached the British Press at the same time as Lancashire's delegation reached the Colony.

Drawn up by the Hong Kong General Chamber of Commerce, the survey of the situation covers well-trodden ground. Great stress is laid on the apparently minor effect of competition from Hong Kong until recent years. Yet the admission that the Colony's millowners did not enter the British market to any considerable extent until 1953 can become a two-edged weapon. If so much ground can be gained in five years, what can happen in ten or even less? The pamphlet points out that Hong Kong's total cloth shipments to the United Kingdom last year were only 20 per cent. of British imports from all sources, but the situation has already altered very substantially in the first eight months of 1958, during which time arrivals from Hong Kong have risen to 30 per cent. of the total. Nor is it true to labour the fact, as the booklet does, that Lancashire regards the import problem as the single reason for its decline as a textile producing centre. Local traders are well aware that there are many aspects to be considered, of which imports from Hong Kong are only one, although a major, influence.

Hong Kong has, throughout the negotiations, stressed the difference between the cotton textile position and the "overall picture." Sales to Hong Kong last year from Britain aggregated £41,000,000, the report states, purchases being £21,000,000. These figures do not quite tally with the trade and navigation accounts published by the Board of Trade which show imports from Hong Kong valued at £23,500,000 and exports and re-exports to the Colony of £36,500,000.

Gap Narrows

The latest Board of Trade returns indicate a very substantial narrowing of the gap. For the eight months to the end of August, Britain imported goods worth £17,965,957 from Hong Kong, while exports were valued at £20,592,504. The comparative figures for the eight months of last year were imports of £15,443,578 and exports of £24,796,676.

Picking out the highlights of the British monthly overseas trade returns is no easy task —so far as exports are concerned, at any rate. Cloth shipments remained at around their recent low levels in August, barely exceeding the 30,000,000-yard mark. The volume of yarn sent abroad showed a slight gain as compared with the previous two months, but, at 2,273,000 lbs., kept very much below the rate achieved in recent years. It is significant that exports of man-made fibre yarns in the first eight months of the year are substantially higher than cotton yarns.

Supplies of grey cloth coming from Hong Kong still provide the chief feature of interest. In August, they accounted for practically half the total arrivals; over eight months, they amounted to 67,929,000 square yards, as against 43,085,000 square yards last year. India's share of this business has shrunk from 130,000,000 square yards to not quite 80,000,000 square yards.

Hong Kong's cloth is a costly item in Britain's import budget. This year's purchases to the end of August were valued at £5,126,594, as against imports from India which cost little more than £4,000,000 for a larger quantity. Arrivals from the Colony by value accounted for considerably more than one-third of total purchases of grey cloth.

Reaching A Plateau?

Although the trend of wage rates in British industry as a whole continues to move upwards, there are indications that the less active conditions in some areas are beginning to cause a levelling out of the former apparently limitless advance. The increase in average earnings of some 7,000,000 workers whose pay packets were investigated by the Ministry of Labour in April was the smallest in any six-monthly period since the war.

Average weekly earnings were £10 14*s.* 2*d.*, a rise of 1*s.* 9*d.* as compared with October 1957. On a percentage basis, this is rather more than double the April 1947 figure, the main advance being in the wages paid to youths and boys under 21. The average number of hours worked weekly in April showed a slight decline to 46.2, as against 46.4 six months peviously and the post-war peak of 46.9 hours in 1955.

Among the industries whose returns pulled down the general average were the textile group; the earnings secured by cotton workers showed a drop over the six months. In view of the prevailing short-time which had already begun to affect Lancashire mills by the end of April, this trend will cause no surprise. Wages gained by cotton operatives have declined on three occasions since the war—in 1952, 1955 and now in 1958. Details are shown below:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers

October 1956 ..	220 1	107 3	114 11	88 6	183 8
April 1957 ..	227 7	111 8	118 11	86 1	191 2
October 1957 ..	231 9	113 8	120 5	89 9	193 11
April 1958 ..	229 6	113 8	121 0	89 7	192 7

Although the average payments to workers in cotton spinning and weaving decreased by more than 4*s.* a week, as compared with October 1957, the April returns show that the spinning section suffered the most, particularly adult male workers, mainly employed in mule spinning. In weaving, earnings in April, although lower than in the previous October, were substantially above the corresponding levels a year earlier.—*All Rights Reserved.*

INDUSTRIAL FINANCE CORPORATION OF INDIA

TENTH ANNUAL GENERAL MEETING

MR. K. R. K. MENON, CHAIRMAN, REVIEWS PROGRESS MADE IN THE PAST DECADE

ADDRESSING the Tenth Annual General Meeting of the shareholders of the Industrial Finance Corporation of India held at New Delhi on Saturday, 27th September 1958, Mr. K. R. K. Menon, the Chairman, stated that the total volume of work handled by the Corporation during the ten years of its existence was of considerable size, involving the examination of loan applications for an aggregate amount of nearly Rs. 125 crores. Loans sanctioned amounted to Rs. 63 crores and actual disbursement to Rs. 35 crores. Reviewing the working results of the Corporation for the year ended 30th June 1958, the Chairman said that it fared better during the year as compared with the previous one. Profits for the year amounted to Rs. 58.25 lakhs, as against Rs. 43.06 lakhs during the previous year. The Corporation has thus been able to pay the guaranteed dividend out of the profits, as also Rs. 5.45 lakhs as the first instalment in repayment of the subvention drawn from the Government. As regards the loan operations of the Corporation during the year, the Chairman observed that loan applications received by the Corporation during the year showed a further decline. This was because of the increasing difficulty experienced by industrial concerns in securing the necessary licence for importing capital equipment which should be produced before the Corporation takes up loan applications for consideration.

The following is the text of the Chairman's speech at the meeting:

"GENTLEMEN,

"The accounts of the Corporation and the report of the Board of Directors for the year ended the 30th June 1958 which I place before you today are the tenth of their kind, and are, therefore, of particular interest, as marking the completion by our Corporation of a decade of service in the field of industrial finance. Printed copies of the accounts and the report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

Factual Details

"A decade is but a short period in the life of an institution like ours, particularly in a field like industrial financing of a long-term nature in which, at the time our Corporation was set up in 1948, we were the pioneers. It is, therefore, perhaps too early yet to draw any firm conclusions of a general nature from such modest achievements as stand to our credit at the end of this ten-year period, but the factual details given in the report that is placed before you will no doubt interest you.

"Of these factual details I will pick out just a few as deserving of your special notice.

"First, the total volume of work that was handled by the Corporation during this decade was of a considerable size, involving the examination of loan applications for an aggregate amount of nearly Rs. 125 crores. Loans sanctioned amount to nearly Rs. 63 crores, and the actual disbursement of loans comes to about Rs. 35 crores.

"Secondly, in the year which has just closed, we have been able not only to dispense with subvention from Government to enable us to pay our shareholders their guaranteed dividend, but we have also been able to repay to Government a substantial amount towards the subvention that we had been obliged to draw from them previously.

"Thirdly, we have been able to raise funds aggregating Rs. 12.37 crores by the issue of bonds, mainly from institutional investors, several of whom had also already subscribed liberally to our share-capital.

"Fourthly and finally, we were able to help concerns in the relatively less industrially advanced States of the country to the tune of Rs. 32 crores in all during this period. Out of this amount a sum of Rs. 22 crores was sanctioned as loans to *new* concerns alone in these States.

"Turning now to the accounts for the year under report, you will observe that we have done even better than last year, as our profits, after paying for expenses on administration and interest on borrowings, amounted to Rs. 58.25 lakhs, as against Rs. 43.06 lakhs during the previous year. We have, after a lapse of nearly five years, been able to transfer a sum of Rs. 11½ lakhs to the general reserve fund thereby raising the balance in this fund to Rs. 17 lakhs. As I have already mentioned, this year we are also paying the guaranteed dividend out of our profits, and, in addition, we are paying back to Government a sum of Rs. 5.45 lakhs as a first instalment in repayment of the subvention that we drew from them during the previous years.

"You will recollect that, last year, we had made adequate provision for our anticipated bad and doubtful debts and that I had stated that no further provision would be required, though our auditors were of the view that an increase in the provision by Rs. 5 lakhs would be desirable. I am glad to state that, on a review of the accounts at the end of the current year, our auditors have agreed that the existing provision of Rs. 15.14 lakhs is adequate. We have not, therefore, found it necessary to transfer any amount from our profits this year to the reserve for bad and doubtful debts.

Debts Due

"In the schedule attached to the balance-sheet in which certain particulars in respect of the loans and advances outstanding are given, you will find an item headed '(d) debts due by concerns in which the Directors of the Corporation are interested as Directors and shareholders, Directors or members of the Managing Agency concerns.' As the word 'interested' used in this heading is apt to be misleading in this connection, we have given a detailed analysis of the relevant figures in the annual report. You will observe from the analysis given in appendix 'A' to the report that a sizable portion of the loans in which our Directors are stated to be 'interested' represents loans given to concerns in which some of our Directors were interested as shareholders or Directors even *before* they came to be elected or nominated as Directors of this Corporation. Attention had also been drawn to the fact—and I wish to emphasise it here—that, when a loan application is under consideration by your Board of Directors or the Central Committee, every Director, who has any kind of interest in the concern whose application is under consideration, withdraws from the meeting as an invariable rule.

"The number of applications received by us during the year showed a further downward trend from last year's figure. The most important reason for this is the increasing difficulty experienced by industrial concerns and *entrepreneurs* in the matter of securing the necessary licences for importing the capital goods required for starting new industries or expanding existing ones. We insist on the production of the necessary import licences before we take up loan applications for consideration.

Loans Sanctioned

"An analysis of the loans sanctioned during the year shows that States which are not industrially as advanced as the foremost ones like Bombay and Bengal came in for a substantial share this year also. The State-wise figures in this regard are perhaps worth special mention:

Andhra—Increase from Rs. 2.61 crores at the end of June 1957 to Rs. 3.11 crores at the end of June 1958.

Madras—Increase from Rs. 5.58 crores at the end of June 1957 to Rs. 8.57 crores at the end of June 1958.

Mysore—Increase from Rs. 3.80 crores at the end of June 1957 to Rs. 4.80 crores at the end of June 1958.

Orissa—Increase from Rs. 2.30 crores at the end of June 1957 to Rs. 2.94 crores at the end of June 1958.

Punjab—Increase from Rs. 2.66 crores at the end of June 1957 to Rs. 2.97 crores at the end of June 1958.

Uttar Pradesh—Increase from Rs. 3.86 crores at the end of June 1957 to Rs. 5.01 crores at the end of June 1958.

"The general pattern of industrial units that were sanctioned loans during the year under report has, as you will observe from the analysis given in Appendix 'C(i) (B)' to the report, changed somewhat slightly. While sugar still occupies the predominant position as before, paper and cement have moved up to the second and third position respectively, leaving chemicals and textiles behind.

"Co-operative societies continued to receive our special attention. The financial assistance sanctioned to them now aggregate Rs. 13.24 crores which represents an increase of Rs. 2½ crores, as compared with the Rs. 10.73 crores as at the end of the previous year. Hitherto, applications from the co-operative sector have been confined to the sugar industry; we have lately been approached for assistance from certain textile concerns also in this sector.

Loan Commitments

"You will have observed from the annual report that the commitments of the Corporation in respect of loans sanctioned up to 30th June 1958 amounted to roughly Rs. 17½ crores. Out of this amount, a sum of nearly Rs. 7½ crores represented loans sanctioned during the last four months of the year. In respect of these loans, the Corporation was in the process of negotiating the terms and conditions of the loans with the borrowers in the case of some and, in the case of certain others, was in correspondence with the Central and State Governments. The balance of Rs. 10 crores comprises:

	Rs. crores
(i) Amount awaiting disbursement according to the requirements of the borrowers ..	3.5
(ii) Amount held over for fulfilment by applicants of specific terms and conditions prescribed, including proof of title	5.0
(iii) Amounts held over for miscellaneous reasons such as changes made by applicants in their original schemes and consequent need for re-examination of the loan applications, etc.	1.5
Total ..	10.0

"I may mention in this connection that when borrowers do not draw the loan according to the dates agreed upon in the mortgage documents, a commitment charge is levied until such amounts are actually drawn by them. In regard to amounts awaiting disbursement pending legal formalities being completed we grant interim loans liberally.

Reports From Borrower Concerns

"You will be glad to learn that the periodical reports received by us from our borrower concerns of the progress made by them as well as the inspections carried out by our officers indicate that, on the whole, our loanee concerns are doing well. Quite a few of them have done so well indeed that, with our previous permission, they have declared dividends in excess of the standard rate of 6 per cent. It seems reasonable to hope that this will prove to be an incentive to investors and thereby help to broaden the investment market.

"Most of our borrower concerns met their obligations to us promptly in the course of the year. You will have noticed from the annual report that the percentage of defaults in the repayment of principal by our borrower concerns has declined from 8.4 in 1957 to 6.1 in 1958, and that the percentage of defaults in the payment of interest has likewise come down from 2.7 to 1.7.

Deferred Payment Guarantees

"In the annual report mention has been made of certain amendments that had been made to the Industrial Finance Corporation Act during the year under review. One of these amendments now enables us to give guarantees in respect of deferred payments for imported machinery. This is a very useful facility which has been eagerly sought for. You will find in the annual report the main criteria that we apply in examining applications for guarantees, and the more important terms and conditions that we prescribe for the grant of such guarantees by us. We have so far sanctioned three schemes for guaranteeing deferred payments; these aggregate Rs. 3.96 crores in all. We expect that the transactions in this behalf will be finalised shortly.

"In the year under review, we have made our first venture into the field of underwriting, and I hope this transaction, particulars of which are given in the report, will be the forerunner of many more in the coming years.

"You will no doubt recollect that in my speech last year I had invited your attention to

Men and Oil . . . 1

THE GEOLOGIST

Geologists are people whose main business in life is to know rocks, to work and live among them. In the oil industry they look for certain types of rocks that hold oil.

In 1865, a Government geologist was sent to the coal areas of Assam. He reported the presence of several oil shows south of the Dihing river and advised testing, by experimental boring, those near Makum. A well was drilled there in 1867, followed by more wells at Makum and Jaipur. Several of these wells yielded a little oil but went dry in a short time. But in 1889 the first well at Digboi was drilled and the Assam Oil industry was born.

Geologists still play an important role in the Assam Oil industry. They decide the new locations, examine the rock cuttings during drilling and guide the industry in its search for more oil.

At present, the Geological Department of the Assam Oil Company is manned entirely by a number of well qualified and highly experienced Indian geologists.

SUGAR INDUSTRY IN BIHAR STATE

CONFERENCE OF ALL INTERESTS TO BETTER ITS POSITION HELD

THE joint conference of sugar millowners and cane growers of Bihar State held at Patna recently was worthwhile. For it provided an opportunity to both the sections to ventilate their grievances and to the spokesmen of the Government to indicate the official point of view. The representatives of the sugar industry, especially Mr. K. K. Birla, must be congratulated for having put forward several constructive suggestions designed to alleviate the difficulties confronting the industry with a view to setting it right on a sound basis. The cane growers also fully recognised the vital importance of this aspect. It is, however, regrettable that some growers opposed the proposal for linking the price of cane to both quality and quantity, instead of to quality as at present.

The apprehensions about the future of the sugar industry in Bihar, expressed by the millowners at the conference, were not at all exaggerated. The production of sugar in the State has suffered a distinct setback of late. The total quantity that actually came off the crushing plants of mills during the 1957-58 season was not more than 275,000 tons, as against 311,000 tons in 1956-57 and 319,000 tons in 1955-56. In contrast, the production in Uttar Pradesh and Bombay has registered a notable improvement. The downward trend in sugar production in Bihar has been due to such factors as adverse weather conditions, incidence of pests and diseases, diversion of cane from sugar factories to *gur* manufacture, etc. Whatever may be the factors, the downward trend must be checked, if the cane growers' prosperity is to be ensured. Dr. Sri Krishna Sinha, Chief Minister of Bihar, did well to stress this aspect and to urge that long-term, as well as short-term, programmes must be organised for checking the declining tendency. In particular, he pleaded for the co-operation of all sections of the industry.

Roads in Factory Areas

Dr. Sinha drew pointed attention to the deplorable condition of roads in sugar factory areas which, he said, constituted a serious impediment to increasing cane production, as it entailed heavy cartage payable by growers and also put undue strain on bullocks. He alluded to the official measures taken by the authorities to improve the condition. The review reveals that the State Government had undertaken in the first Five-year Plan a scheme for constructing 76 miles of cement roads at a cost of Rs. 10 lakhs per mile. In the second Plan, it has allotted Rs. 1.5 crore for the construction of *pucca* roads in the factory areas. The Indian Central Sugarcane Committee has agreed to contribute Rs. 50 lakhs towards this scheme and a further sum of Rs. 50 lakhs is to be raised from the factories and cane growers. It is, however, not surprising to be told that the response from the factories and cane growers' unions has not been encouraging. The State has already subjected the industry to so much taxation that it cannot legitimately expect the latter to make further contributions. As for the trade unions, it is well known that they are meant more for creating discontentment among the workers than for making any constructive contribution to the well-being of either the workers or the society as a whole.

Another handicap of the sugar industry to which Dr. Sinha referred related to the continued low recovery of sugar. He was right when he said that the solution to the problem lay in gearing up research work with a sense of urgency, as also in drawing up and implementing "a purposeful programme" for evolving the requisite varieties of cane with high sugar-content. With regard to the pests and diseases which continued to be a constant menace to cane cultivation in Bihar, he revealed that a joint and co-ordinated campaign under the ægis of the Central Sugarcane Committee was being organised to eliminate the focal points of infection of red-rot in the border areas of Uttar Pradesh and Bihar. Dr. Sinha only reiterated the well-worn point when he emphasised that the results of research for improving the cane crop should be brought to the door of the cultivator immediately. Incidentally, he hoped that, with the facilities now made available to the sugar industry and the large-scale research that was being carried on, the sugarcane production would go up and the percentage recovery be higher. This hope has been repeatedly voiced for several years now, but it still remains unrealised. There are no signs yet to believe that it will fare better in the coming years. Nevertheless, one has to hope for the best and take appropriate measures to realise it, for, if hope is lost, all is lost.

In the course of his speech, Mr. K. K. Birla, deplored the displacement of Bihar by Bombay from the second place it occupied in the sugar industry. Commending the efforts made by the State Government to help the sugar industry and cane growers, he requested the Government to continue the assistance, so that better quality cane could be grown. Mr. Birla suggested the formation of a development council for the sugar industry in the State and advisory bodies in all factories. He pointed out that there was a steep fall in the sugar-content of cane after the month of March every year and urged that this and other problems of the industry should be carefully investigated.

Cane Policy

The State Government's policy relating to sugarcane was criticised by the representatives of growers. Mr. Nandkishore Narainlal, for instance, declared that the Government could have played a more positive role than it did now to improve the economic condition of the peasants in North Bihar's cane-growing areas; instead, it had allowed other States to steal a march over Bihar in sugar production. He complained that "the cane growers do not get full irrigation facilities. Despite this handicap and natural calamities like floods and drought, the peasants of Bihar have enriched the Central and State exchequers with cess, excise and income-tax. Yet the Government has not given facilities in return, except *taccavi* loans."

This is not the first time that the Bihar Government has laid itself open to the criticism of not paying due attention to the development of sugarcane cultivation. It is common knowledge that the amount which the Governments spent directly on cane development every year is not even a fraction of that realised by way of cane cess. The rate of cane cess itself is so large that it is a misnomer to call it a cess. Really speaking, it tantamounts to an excise duty. Accordingly, none expects the States to devote the entire collection by way of this levy to development of cane. But in fairness to the sugar industry and the cane growers at least, a reasonable amount must be expended. Incidentally, the cess collections are included in the general revenue receipts, so that it is not known as to what part of it is actually spent on cane development. Even if the entire proceeds of cane cess were to be utilised exclusively for this purpose, the results obtained might not be significant, so long as the present defective system of linking cane prices to quantity irrespective of quality considerations continues. Mr. Narainlal was unjustified in opposing the scheme for determining cane prices on the basis of both quantity and quality, instead of on quantity alone as at present. Unless this system is changed, the disquieting conditions in the sugarcane economy are bound to persist. It is only a rational method of fixing cane prices that can ensure a marked improvement in the production of quality cane at an economic cost and, consequently, lower prices of sugar for the consumer.

PALM "GUR" INDUSTRY

In the article entitled "Development of Palm *Gur* Industry" published on page 224 of our issue dated 9th August 1958, the following remarks appear:

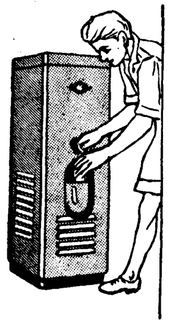
"In this industry, there is a number of middlemen and brokers who come in for a good share of the profits of the industry. And it would be desirable for firms like Messrs. Parry & Co., Ltd., Madras, to devise, in their own interest, better methods of collection of *jaggery*. At present, the workers are entirely in the clutches of the brokers and private capitalists who take an unusually big share of their legitimate income.

"Palghat and the surrounding country have extensive growth of palmyras and the *izhuvas* extract sweet toddy from them and manufacture *jaggery*. The production in this area is so large that the firms of Messrs. Parry & Co. and Sri Ram Sugar Works of Podanur are able to draw large supplies of *jaggery* for their sugar works. The average production of *jaggery* in a year exceeds 10,000 bags."

We are now informed by Messrs. Parry & Co., Ltd., that they "gave up refining of *jaggery* at Nellikuppam in 1943 and at Samalkot and Thuckalay (old Travancore) in 1949; the production of sugar from *jaggery* is quite uneconomical." There is thus no question of Parrys being a party to exploitation of workers. The error is regretted.

Eskimoes in Greenland need it . . .

. . . what about the staff in your office ?



PROVIDE THEM WITH AN ACCOOLER FOR CONSTANT SUPPLY OF HYGIENICALLY COOLED DRINKING WATER

Accooler advantages :

- All parts coming in contact with water are made of stainless steel.
- Stove-enamel finish makes cleaning easy and helps retain newness for years.
- Reliable, efficient hermetic type compressor eliminates V belts and noise and reduces wear and tear.
- Simplicity of mechanism makes installation easy.
- Compact construction saves floor space.

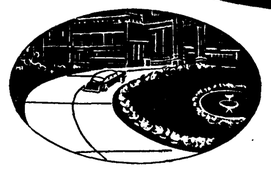
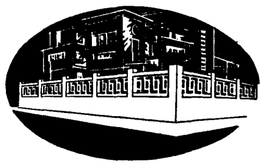
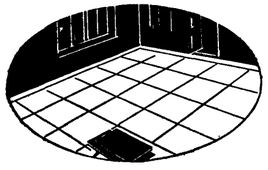
Plenty of ACC Cement available at controlled price!

★

No permit formalities required







Here's how just 20 bags of ACC Cement can make *lasting* improvements to your property.

For instance:-

20 bags of ACC Cement will

lay a flooring for a 3-roomed house (650 sq. ft.)
or
plaster the walls of 3 rooms of your house (1300 sq. ft.)
or
suffice for a driveway 50′ long, 8′ wide, 3½″ thick
or
build a compound wall 45′ long by 4′ 8″ high
or
make 135 pre-cast fence posts, 6′ high 4″ square
or
modernise your kitchen by providing for a cooking platform, wall shelves, a sink, etc.

For further information and free technical advice on specific problems, write to:

CEILING ON PLANTATION HOLDINGS

AGRICULTURISTS FEDERATION'S MEMORANDUM

IN the course of a memorandum addressed to the Land Reforms Sub-Committee of the All-India Congress Committee, the All-India Agriculturists Federation (President: Mr. Lal Singh) has stressed that the land reforms measures proposed in many States, far from helping to remove the fundamental defect in Indian agriculture, namely, low productivity which is the result of lack of funds and technical know-how, would only intensify the existing weakness in the agricultural sector. The proposed ceilings on land holdings, according to the memorandum, will drive resourceful and enterprising farmers, having sufficient funds, away from the profession, leaving agriculture as the exclusive monopoly of the ignorant, the poor and the illiterate. The Federation strongly urges that plantations should be exempted from the ceiling and points out that the basic facts about the plantation industry cannot be ignored without grave consequences to the whole agricultural economy of the country. Plantations, the memorandum points out, require heavy capital investments and can be economic only if run on a big scale. Ceiling on plantations, as suggested by the Jatti Committee in Mysore, would, therefore, spell disaster to the efficiently run and prosperous commercial plantations.

The Federation points out that plantation crops such as tea, coffee, arecanut, coconut, cardamom and spices are all foreign exchange earners, their share being 28 per cent. of the total export earnings in 1957. Tea, the biggest item, alone earns about Rs. 127 crores annually. The expansion of the area under these crops is, therefore, of the utmost importance. But the raising of plantations of these crops requires enormous capital—anything like Rs. 4,500 to Rs. 8,000 per acre—depending upon the kind of crop, up to the time the plants reach full bearing stage. During this period, the planter must have some alternative source of income which means that it is out of question for resourceless people to take to plantations on individual basis.

Because of the specialised nature of these crops, and the heavy expenditure involved not only in planting and bringing the plants to the bearing stage but also in fertilising, providing irrigation facilities, spraying, etc., points out the Federation, only the well-managed big plantations can give the maximum yield. In fact, generally speaking and ignoring exceptions, the yield per acre of coffee is in proportion to the size of the plantations. As the Plantation Enquiry Commission had pointed out, the average yield per acre of big plantations is about two and a half times more than that of small plantations. On the other hand, the cost of production per cwt. of coffee in the case of small plantations is about three times more than in the case of big plantations. This means that a big planter is able to grow coffee at practically one-third of the cost of a small planter. Not only is the yield less in small plantations but the quality of the coffee produced is also inferior, fetching about 35 per cent. less price than the price of crops produced in big plantations.

The yield of coffee in India is about half of that in Kenya and Indonesia, that is, 1.96 cwt., as against 3.74 cwt. per acre. India produces only one per cent. of the total world production while the area under coffee is two per cent. of the world acreage, indicating that the average yield per acre in India is only about 50 per cent. of the world yield. The Plantation Enquiry Commission, therefore, rightly emphasised the importance of raising the standard of cultivation and increasing the yield per acre. This is particularly important, inasmuch as India has a surplus in coffee and has to export one-third of its present production.

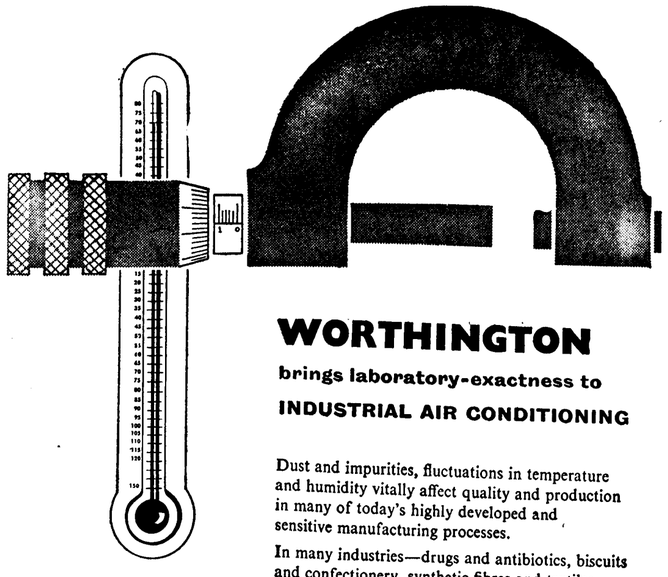
Growth of coffee plantations all over the world is making it difficult for Indian coffee to compete in the world market in price. Considering that larger plantations give three times higher yield per acre, and on weight basis at a cost one-third of that of the small planters, the quality of coffee being also inferior, it is obvious that only the establishment of big plantations can enable India to compete in the world market. But as the Plantation Enquiry Commission pointed out, holdings of size below 5 acres between 1933-54 have increased by 53 per cent., as against the 12 per cent. increase in holdings of the average size of about 10 acres, even though small plantations were already uneconomic. All this goes to show that India can never expect to compete in foreign countries if small plantations are to be encouraged, as recommended by Jatti Committee's report. The Commission had rightly come to the conclusion that big plantations should not be broken up into small plantations, and that there should be no ceilings on land holdings in plantation industry. Likewise, the Arecanut Committee appointed by the Central Government had also disapproved of ceiling on areca gardens.

The fact is that crops like rubber, tea, coffee, coconut, arecanut, etc., cannot flourish as an industry unless their cultivation is taken up on plantation basis. For instance, whereas rubber is a native of Brazil, it has made no progress there as it was not grown there on plantation scale. On the other hand, Malaya, Indonesia, Ceylon and India, which had imported seed from Brazil, are now supplying 99 per cent. of all the natural rubber in world trade merely because rubber was grown on a plantation basis in these countries. Again, China was the world's tea supplier for over 100 years. But because tea was grown there as a peasant crop while India, Ceylon and Indonesia raised it on plantation scale, India ousted China from the dominating position in the world market 55 years ago. In the case of coconut products, India had a surplus till 1921, but because this industry had not so far been run on plantation lines in India, this country has been left behind by Ceylon, Indonesia and Malaya from where, India is importing coconut (to the extent of Rs. 14.8 crores in 1957) although there are 15,00,000 acres under coconut in the country. To take the example of pepper, which is a native of Kerala, it did not make any great progress until it was taken up recently on a plantation scale while Indonesia and Malaya account for 94 per cent. of the pepper appearing in the world market.

The Federation points out that there is no dearth of land in South India for expanding the plantations. In Coorg district alone, according to it, out of a total area of 10 lakh acres, only two lakhs are cultivated (taking farm and plantation crop together) and the rest is either cultivable waste land or is under forests. There are tens of thousands of acres of most fertile land that can be brought under plantations without much difficulty. It is also noteworthy that total area under coffee in Mysore State in 1896 was 3 lakh acres, besides 90,000 acres in Coorg, but because of depression in coffee price and incidence of certain pests and diseases, and lack of technical know-how, the area dwindled both in Mysore and Coorg to almost one-third of the original figure. In spite of the considerable increase in the area in Coorg recently, the total area under coffee in Coorg is only 45,000 acres and in the whole of Mysore State 144,730 acres. Half of the former area under coffee is thus still available for planting coffee.

The special officer appointed by the Government of India for arecanut survey reported that India is deficit in arecanuts and large quantities were imported annually; imports were valued at Rs. 4.36 crores, in 1955-56. There are 40,000 acres of waste land suitable for areca cultivation in Mysore State. According to the estimates of the special officer, in order to bring 35,000 to 38,000 acres under areca cultivation and to raise the plants to maturity, a capital investment of Rs. 12.87 crores would be required. It is obvious that this can only be done by private enterprise, as the Government cannot find sufficient funds for it.

The history of plantations in places like Coorg is a history of the successful struggle of enterprising people against the forces of nature in regions where there were no roads, no houses or hospitals but only jungles infested by malaria and other pests and diseases. But for the enterprising spirit of the early planters, these places would have remained jungles. If plantations are destroyed by ceiling on land holdings, before long places like Coorg, which are now the pride of India, may revert to their original jungle conditions.



WORTHINGTON

brings laboratory-exactness to INDUSTRIAL AIR CONDITIONING

Dust and impurities, fluctuations in temperature and humidity vitally affect quality and production in many of today's highly developed and sensitive manufacturing processes.

In many industries—drugs and antibiotics, biscuits and confectionery, synthetic fibres and textiles... efficient 'climate' control by WORTHINGTON provides ideal conditions of manufacture.

BLUE STAR have engineered and installed hundreds of WORTHINGTON air conditioning systems for many complex industrial applications. If you have a temperature or humidity problem, call in BLUE STAR.

ST. LAWRENCE SEAWAY AUTHORITY

TOLLS COMMITTEE'S REPORT

LAKES, rivers and seaways know no man-made national frontiers. Communications involving the utilisation of these waters necessarily imply close international co-operation. An excellent instance of such co-operation is furnished by the St. Lawrence Seaway Navigation Project in which both Canada and the U.S. are interested. Pursuant to the instructions of the President of the St. Lawrence Seaway Authority, a Canadian Tolls Committee (Chairman: Mr. J. C. Lessard) examined the nature and amount of the tolls required to recover the Canadian expenditure on the project, while a similar committee in the U.S. (Chairman: Mr. E. Reece Harrill) studied the tolls and allied issues connected with the recovery of the U.S. expenditure. Separate and joint meetings of the two Committees, held from time to time, have now resulted in an agreed structure of tolls to be charged for the use of the facilities offered by the project.

Two Parts

The entire Seaway navigation project consists of two parts—Montreal to Lake Ontario and the Welland Canal (Lake Ontario to Lake Erie). Canadian legislation, authorising the construction of the project, provides for recovery from Seaway users of expenditure by Canada for Seaway operations and maintenance, interest and amortisation of capital within a 50-year period. Legislation in the U.S. carries similar authorisation in respect of the U.S. expenditure. The prime objective of the Canadian Tolls Committee, as well as of the U.S. Tolls Committee, was to determine the lowest tolls consistent with the encouragement of traffic and with the need for revenues sufficient to make the project self-liquidating within the 50-year period required by legislation and to evolve a simple toll structure and the most convenient method of collecting tolls. The cost of construction and the interest during construction of the first part of the project (Montreal to Lake Ontario) is placed at $442 million, of which Canadian expenditure is $311 million and the U.S. expenditure is $731 million. A similar estimate of the second part of the project (Welland Canal), which is met by Canada alone, is $29 million. Thus, the total capital costs amount to $471 million. Canada's share and the U.S.'s share being $340 million and $131 million, respectively. Average annual charges, covering operation and maintenance, interest and amortisation of capital cost on 50-year basis, amount to $28.1 million, comprising the Canadian share ($20.9 million) and the U.S. share ($7.2 million).

The Canadian and the U.S. Tolls Committees have together estimated the total traffic through the St. Lawrence Seaway between Montreal and Lake Ontario at 25 million short tons, rising to 50 million short tons by 1968 and the traffic through the Welland Canal at 40 million short tons in 1959, increasing to 60 million short tons by 1968. About 10 to 12 per cent. of the traffic is expected to be in general cargo and the balance in bulk cargo. In recovering total charges over a 50-year period for operation and maintenance, interest and amortisation of capital, the Committees point out, it is desirable that the tolls assessed per registered ton of vessel and per ton of cargo should be as constant as possible over the period. This means that the estimated traffic during the initial years of a development period is not expected to produce revenues sufficient to meet total annual charges. Recovery of such deferments will be realised later, as the volume of traffic increases and, therefore, over the whole 50-year period, all charges will be met. The division of tolls between Canada and the U.S. for the portion between Montreal and Lake Ontario in the ratio of the respective total annual charges (for operation and maintenance, interest and retirement of invested capital) is cosidered the most equitable arrangement.

The main features of the proposed toll structure are:

(Per ton of 2,000 pounds)

For each passage through the entire Seaway—Montreal to Lake Erie: A vessel will be assessed 6 cents per gross registered ton of the vessel; and, in addition, 42 cents per ton of bulk cargo and 95 cents per ton of general cargo carried.

For each passage—Montreal to or from Lake Ontario only: A vessel will be assessed 4 cents per gross registered ton of the vessel; and, in addition, 40 cents per ton of bulk cargo and 90 cents per ton of general cargo carried. For partial transit of the new seaway facilities—between Montreal and Lake Ontario—where there are seven locks, the user will be charged 15 per cent. of the applicable toll for each lock transited.

For each passage through the Welland Canal only: A vessel will be assessed 2 cents per gross registered ton of the vessel; and, in addition, 2 cents per ton of bulk cargo and 5 cents per ton of general cargo carried. In the Welland Canal, a partial transit will be assessed 50 per cent. of the toll, irrespective of the number of locks used.

Commercial vessels carrying passengers will be charged 50 cents per passenger for each lock transited between Montreal and Lake Erie in addition to the vessel charge.

Bulk cargo, as defined in the proposed tariff, will include such commodities as grain and grain products, loose or in sacks, ores and minerals (as described), liquids in ships' tanks, pulpwood, poles and logs, wood-pulp, waste paper, iron and steel scrap and pig iron. Domestic package freight of each country will also take the bulk cargo rate. All commodities not included in the definition of bulk cargo will be classified as general cargo.

A simple method of toll collection is proposed, based on the necessity of non-interference with prompt passage by any user. Provision is to be made for prior registration of any vessel and satisfactory security being given for the payment of charges, either with the St. Lawrence Seaway Authority or with the Saint Lawrence Seaway Development Corporation subsequent to which passage will be permitted. Toll collection and invoicing of accounts, as well as the preparation of statistical data is proposed to be assigned to the St. Lawrence Seaway Authority. The Saint Lawrence Seaway Development Corporation has agreed to participate and share in the annual cost of these services. Charges will be billed to the owner or agent promptly, and will be payable within seven days after the passage of the ship. For through passage to or from Montreal and Lake Ontario, the invoice will show two amounts to be paid: (1) in Canadian funds to cover the proportion applicable to the St. Lawrence Seaway Authority, which has been determined at 71 per cent. of the total charges; and (2) the balance of the account, or 29 per cent. in U.S. funds, representing the proportion applicable to the Saint Lawrence Seaway Development Corporation, payable at any designated bank in Canada or in the United States. Tolls collected for use of the Welland Canal will be for the St. Lawrence Seaway Authority account and payable in Canadian dollars. The Committees stated that the division of tolls indicated above is based upon current figures of estimated capital and operating costs, and can be subject to variation as actual costs are determined.

The projection of traffic volume and financial requirements, it is stated, has been made, bearing in mind the legislative requirements on the one hand, and on the other the desirability of establishing tolls which in the early years will be conducive to the development of traffic. If future events should indicate that traffic conditions or future financial requirements have been either overestimated or underestimated, the necessary adjustments can be made in the toll structure.

NEW USES FOR SOLAR ENERGY

Industry is beginning to find a number of new uses for solar cells' the devices that convert sunlight into electricity. The cells are now being used in radios, clocks, industrial control instruments, power relay stations and an experimental telephone system. Their successful use as solar batteries to provide electricity for one of the United States "Vanguard" earth satellite's radio transmitters is probably their most widely-known application up to this time. Solar cells were first developed by the Bell Telephone Laboratories in the United States after its scientists discovered that small cells made of crystallised silicon would convert sunlight and, to some extent, incandescent light, into usable amounts of electricity.

The Hoffman Electronics Corporation of Chicago, Illinois, was one of the first companies to put this discovery to commercial use. In 1957, it began to market a portable radio that converts sunlight into electricity and stores it in the radio's battery. Other companies are now actively following the Hoffman Corporation's lead. The General Time Corporation of New York is marketing a solar clock that will run for a month on the electricity obtained from one day of sunlight. Other companies believe that solar cells will be most useful in industrial control instruments. Thus, both the General Electric Company and the Westing house Corporation are making them for temperature detectors for controlling the rate of withdrawal of steel ingots that have been heat treated. When the proper temperature is reached. the cells automatically start the machinery that removes the ingots. Without a solar cell an operator has to examine each ingot during the heat treatment process and remove it manually at the proper time.

The U.S. Coast Guard is using solar cells to provide electric power for coastal lights that are in isolated locations, and the U.S. Forestry Service is putting the cells in power relay stations. In an experimental telephone system, the Bell Laboratories linked together several solar cells on a square plate. The joined cells converted enough solar power into electricity to permit the transmission of conversations over the wires of the system. Excess energy was stored in batteries for use at night. Bell reports that the cells produced 100 watts of electrical power per square yard. This means that 11 per cent. of the solar energy was converted into electrical energy. This efficiency is about the same as that of a good gasoline engine.

It has been estimated that solar cells will be as widely used as vacuum tubes, or valves, in about 10 years. In the near future it is possible that electric fans, phonographs and even lawnmowers may get their power from solar cells that use the energy contained in sunlight or from a strong electric light bulb.

The Hoffman Electronics Corporation is currently studying the possibility of building houses that would get all their electric power for lights, radios and electric appliances from solar cell shingles on their roofs. The shingles would generate power that would be stored in batteries. Five days of sunlight, it is said, would create enough electricity to take care of all the electrical needs of an average house for a year.

HEAVY PLATE ROLLING MILL FOR ROURKELA

In one of the numerous Krupp workshops at Essen there is to be seen at present an exceptionally heavy piece of mechanical equipment which is not a usual sight there. This is a plate rolling mill now in the process of shop assembly, which is intended for shipment to Calcutta. This plant has been designed and constructed by Krupp in accordance with modern engineering principles for the Hindustan Steel Private Limited. It is scheduled for commissioning in the spring of 1960, after the steelmaking plant, also to be supplied by Krupp, has gone into production. With this rolling mill, India proposes to cover its domestic needs for rolled steel plate.

The shop assembly, to which every major plant unit is subjected, affords the purchaser the possibility of inspecting and accepting the plant prior to shipment. The unit consists of a 14 m. high rolling mill stand with four heavy rolls and two roller tables each 30 m. long. Initially, the mill is to produce 300,000 tons of plate, but this production can be considerably increased after the mill operators have acquired sufficient operational experience and skill.

4¼ PER CENT. BIHAR STATE DEVELOPMENT LOAN 1970

ISSUED AT Rs. 99.50 AND REDEEMABLE ON 13th OCTOBER 1970

The Government of Bihar announce the issue of their new loan for Rs. 250 lakhs bearing interest at 4¼ per cent. at an issue price of Rs. 99.50 per cent. The Government reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

The loan will be repaid at par on 13th October 1970.

The loan will open for subscription on 13th October 1958 and close on 18th October 1958 or earlier without notice. The loan will bear interest from 13th October 1958.

Subscriptions may be in the form of cash/cheque.

Applications will be received at the Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore and at the branches of the State Bank of India and treasuries and sub-treasuries in Bihar State.

Copies of Notification and Application Forms may be obtained at any Receiving Office.

THE JAY ENGINEERING WORKS LTD.

SIR SHRI RAM'S SPEECH AT ANNUAL GENERAL MEETING

GOVERNMENT REQUESTED TO TAKE VARIOUS STEPS EARLY TO HELP EXPORTS

THE following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of The Jay Engineering Works Ltd., at the Twenty-first Annual General Meeting of the shareholders of the Company held at Calcutta on 1st October 1958:

"GENTLEMEN,

"The balance-sheet and the profit and loss account and the Directors' report have been in your hands for some time, and these, with your permission, I will take as read. You will be glad to learn that your Company continued to make steady progress in the year ending 31st March 1958.

		For the year ended	
		31-3-1957	31-3-1958
Sales	Rs.	3,89,49,999	4,71,60,120
Profit before providing for income-tax	Rs.	35,76,491	38,52,326
No. of sewing machines made		1,34,284	1,57,945
No. of fans made		1,33,119	1,99,073
No. of workers		3,506	3,906
No. of schools		196	386
No. of students		15,000	30,000

"In our schools, regularly examinations are held and diplomas are given to successful candidates. In Calcutta last time, the diplomas were given by the Hon'ble Mr. I. D. Jalan, Minister for Local Self-government, to 202 students.

"When speaking to you in 1954, I told you that we had reduced our prices of sewing machines from Rs. 220 to Rs. 200. We again made a further reduction on 1st December 1954 and reduced the price to Rs. 175. I am glad to say that, on 1st of January this year, we again reduced the price from Rs. 175 to Rs. 160. This further reduction of Rs. 15 per machine, as I have stated above, is in consonance with our policy of improving quality and reducing prices.

"It will be noticed that, while there is increase in production in numbers and in amount of sales values, the increase in profit is proportionately less; this is due to the reduction in prices.

Two-sided Difficult Problem

"While on this subject of reducing the price of our products, I may draw your attention to the two-sided difficult problem that we have to face. On the one hand, higher costs of raw material and articles of food are pushing our costs upward. Whereas, on the other hand, the purchasing power of our customers is strained by the rising prices of all kinds of food articles and other necessities of daily living. Our customers, in the main, are from two groups—middle class housewives and tailors. Over the preceding year, the purchasing power of both has been adversely affected—the housewife on account of the high prices of foodstuffs and the rising costs of living in general; and the tailor by the lower offtake of cloth which means less work for him.

"To meet the difficulty of our customers, particularly the tailors, who earn their livelihood by use of sewing machines, we have started selling machines on hire-purchase on easy terms. We hope, in course of time, this will be of great help to them.

Exhibition

"To popularise our machines, in March this year, we organised an All-India Sewing and Embroidery Exhibition at Calcutta, in which no less than 3,000 entries were received. Most of them were the work done on Usha machines. About half a million people visited this Exhibition. We have been asked by our well-wishers who visited this Exhibition that we should hold similar Exhibitions in various parts of the country and steps are being taken towards that end.

"While we have our selling arrangements very nearly in 1,200 places, to reach the remotest village we have got a big fleet of jeeps and vans in different parts of the country that go from village to village popularising our machine, and in these jeeps and vans, we send our mechanics also, so that, if any of our customers find any difficulty, they help them and attend to their machines.

"While we have succeeded to a great extent in improving the quality and reducing the prices, the reduction in costs for reasons mentioned has not been possible. While on the question of quality, you will be glad to learn that we have been able to sell a fairly big number of our sewing machines in the United States, Canada, England, Holland, Belgium, Italy, etc., and we hope to sell in some other European countries also. So far as Asian and African countries are concerned, we have been exporters for many years now. We could with some justification say that the foreign buyers find our sewing machines the cheapest quality sewing machines.

"Our exports last year were higher than the previous year, and we hope they will be very much higher in the current year.

"During the year, showrooms of their own have been opened by our agents in Singapore and Bangkok for the sale of our machines. The credit of introducing our sewing machines and fans in countries which are themselves makers of sewing machines goes, on the one hand, to our engineers and workers under the guidance of our General Manager, Mr. T. R. Gupta, and for sales in these countries to Mr. Agarwal and his assistants, in particular Mr. Ravindra Nath.

"You will be glad to know that Mr. Agarwal is doing excellent work as Vice-Chairman of the Engineering Export Promotion Council, and that our Production Manager, Mr. T. R. Gupta, is leading the first productivity team to America and other countries. We are naturally proud of these people.

"While it is not possible to sell fans in Western countries, as they are all cold countries, but the sale of our fans in African and Asian countries is also increasing.

Exports

"Our approach to the question of exports is from three different angles. First of all, there is the duty which we owe to ourselves—the duty to keep our factory running and not to allow production to suffer for want of raw material, including imported items. Secondly, we owe a responsibility to our workers, whom we would have to discharge if we don't keep the factory running. Thirdly, there is a duty that we owe to our country, which today is facing a serious shortage of foreign exchange resources, and that in my humble opinion should be the approach of all manufacturers.

"Since Independence, industry in general, has been helped either by the grant of direct protection or by the restriction of imports. For the last two or three years, there has been a very severe restriction on imports of foreign goods, and it is this severe restriction, which, to an extent, is helping industry in making profits. It is true that, in exports, there will be less profits or perhaps no profits. In some cases, perhaps, even a slight loss might occur, but taking a broad and long view, it is incumbent upon all manufacturers, in individual industries, to join together and take immediate steps for higher exports. It is in these days when profits are good, that by a little sacrifice, we can establish markets abroad to our permanent benefit.

Government Measures

"While the manufacturers owe it to themselves, to their workers and to the Government to do all they can for exports may I also request the Government to take the various steps early for helping exports. Many questions have been pending before the Government for a long time. For instance, the concession in railway freights, income-tax, in rates of interest, and allowing a percentage of foreign exchange for imports of various things needed by industry, etc. An early decision on all these points will certainly help exports.

"When I say this, I am fully aware and grateful for what the Government have already done, but more has got to be done.

Pig Iron

"In the interest of engineering concerns, I would draw the attention of the Government to one fact which affects the production of the engineering industry. The pig iron normally supplied by the steel concerns is of poor quality, and on account of this the rejections both in the foundry and at later stages in production are higher. Also on account of hardness of the castings the output in machine shop is much lower than it would be otherwise. I have no doubt that the industry will not mind paying slightly higher prices for first quality pig iron, but it is very necessary for manufacturing industries to get good quality pig iron. I do hope that it will be possible for the Government to induce the steel mills to do so.

"The Government, as is well known, wants some sort of ancillary industries to be helped by big-scale industries, and I am glad to say that the number of those who work for The Jay Engineering Works outside the factory is steadily increasing and our payment to these outside people last year amounted to Rs. 31,49,851 and the figure is steadily increasing.

"The fan section has been completely shifted to the new factory at Bansdhani. The production there is steadily going up and the efficiency is improving. The needle-plant has also

THE INDIA UNITED MILLS, LIMITED

SPEECH OF THE CHAIRMAN, MR. N. K. PETIGARA

BURDEN OF EXCISE DUTY ON TEXTILES EXCESSIVE

THE following is the speech of the Chairman, Mr. N. K. Petigara, at the Thirty-eighth Annual General Meeting of the shareholders of the India United Mills, Limited, held in Bombay on Monday, 29th September 1958:

"GENTLEMEN,

"Mr. Dharamsey Mulraj Khatau should, as elected Chairman of the Company, have been addressing you today. That I do so instead of him is due to the fact that he is out of India on a two months' business tour. Mr. Dharamsey's absence abroad, at this juncture, is a loss to us because this annual general meeting, which he would have otherwise addressed, is an important one from all points of view, and his expert knowledge of the textile trade and great business acumen and the particular knowledge that he had gained during his brief recent association with the India United Mills Ltd., would have enabled him to explain to you better than I can ever do the facts regarding the Company. We are looking forward to his reassuming the chairmanship by about the end of October.

"In his place, I have been asked to speak to you and I do so with considerable hesitation. I am not familiar with the textile trade as Mr. Dharamsey is or the Directors other than myself are or even as a number of you gentlemen must be. I am also at a handicap in that my association with the Company as a Director thereof has been extremely brief and you will appreciate that in respect of a concern of this size where the losses for the year have been so great and where you would naturally want explanations and reasons, I am at a disadvantage.

Arbitration

"First let me tell you why and how the three of us are here on your Board today. The report of the Directors tells you briefly why we accepted the invitation extended to us to join your Board and joined it on 22nd July 1958. You are aware that, some years ago, differences arose between the partners of your Managing Agents firm. At that time, they were resolved as a result of an arbitration by the Honourable Mr. Morarji Desai and Mr. G. D. Birla. They were not as interested in the differences as in the fact that the existence and continuance of any such differences reacted considerably and adversely on the general body of shareholders, on the very large staff the Company has and generally on the textile industry in which your Company has a foremost place.

"There were then 13 partners of your Managing Agency firm and several of them retired due to the directions of the Arbitrators. There were only six partners left. Thereafter, two of the partners, who were individuals, were replaced by a private limited company. The net result, which the Company has ratified and accepted, is that at present the partnership firm of your Managing Agents is constituted of five partners, out of whom two are private limited companies and one is a public company.

Differences Again

"Now, unfortunately differences again arose amongst these partners and there was danger of these differences resulting in accentuating risks for the Company. This can be easily appreciated. The respective partners were in individual charge of the different units of your Company. For example, No. 1 Mill was managed by a particular member and the other Mills by others. If differences exist, there might quite likely be general disarrangement in the management of the affairs of the Company. These disputes have again been referred to the arbitration of the same two gentlemen and their public spirit and their anxiety to care for the interests of the shareholders as well as the employees have made them take up the onerous task of arbitration, so that, the differences may be resolved in the interest of the disputing partners, of the numerous workmen and employees of the mills, of the shareholders and, very generally speaking, of the textile trade. Your Company is one of the largest in India. It employs on an average 18 thousand workmen, besides, about 12 hundred managerial, office and clerical staff. Your Company purchases cotton and stores on an average of about Rs. 5 to 6 crores a year. It would be disastrous for everybody concerned, if, combined with the difficulties the textile trade has been facing for a long time, there are greater difficulties still in this particular Company.

"I must refer in this connection also to the Honourable Mr. Shantilal H. Shah, Bombay's Minister for Law and Labour. He has shown the greatest interest in the working of these Mills, paying particular attention to the interests of labour, and, if the solution of arbitration has been achieved and actual solution of all the difficulties which the Company has been labouring under is to be achieved, it will be due to a great extent to the initiative and assistance of Mr. Shantilal H. Shah.

Various Suggestions

"Various suggestions have been put forward before the Arbitrators such as resignation of one or the other of the disputing parties and the taking over of the managing agency by one or two partners or the division of the Company into different units. Which course will bring about peace and be in the interest of the shareholders and the workmen is not easy to say. It will take time before a solution can be worked out. No results can be achieved in the short time after the Arbitrators were appointed.

"You must appreciate that there are very important issues for consideration. Enormous amounts are at stake. Today with the very complex interest involved of shareholders, labour, staff and the Managing Agents and also I may add, of the Revenue, highly complicated questions arise because a balance has to be struck between the different interests which at times can clash.

"As an interim measure, it was directed by the arbitrators and accepted by all the partners of the Managing Agents firm that the Board of Directors should be advised to invite some outsiders, who would not be partisan between the differing partners of the Managing Agents firm, and upon whose integrity and business experience, reliance could be placed. The names of the three of us, Mr. Dharamsey M. Khatau, Mr. Gajadhar Somani and myself, were finally suggested and accepted and I can assure you that it was with considerable hesitation and after deep consideration of the responsibilities that are being undertaken by us that the three of us agreed to become Directors in your Company.

Generous Support

"We knew at that time that the working results of the Mills had not been satisfactory. We also knew that the Company was finding difficulties in arranging for its finance notwithstanding the constant and, I may say, generous support of its bankers, the Punjab National Bank Ltd. We also knew that we would have to exercise the greatest care in maintaining our impartiality because it is easy for one side or the other to believe that one or the other or all of us could be partial.

"We realised that we had a very great responsibility towards the shareholders, as well as the employees and the staff, and that the proud name of this Company must not be soiled by any mistake or misadventure. Our heaviest responsibility, we felt and feel is towards the two very great personages, who have placed their faith in us that we may be able to cope with the onerous task of restoring normality in the working of the Company. How heavy the responsibilities that we had undertaken are in fact, I do not think that we realised fully at the time of acceptance. At any rate, we have done, whatever we could reasonably do, during the two months of our directorships. We have attempted to do some constructive work, and in the task of doing that work, we appeal for your support. It appears that we have the support of the Managing Agents as well of the other Directors.

"In the task set to the Board it is assisted by Mr. S. A. Kher. We have been fortunate in securing the services of an expert with the very high quality of integrity. The administration of the Mills is, we feel confident, in safe hands. Mr. S. A. Kher who was the General Manager of the Calico Mills (Chemical Division), Ahmedabad, has been persuaded to join our Company on a five-year contract. His knowledge of the textile industry in all its aspects is proving to be of the greatest assistance to the Board of Directors. It will be his task to carry out the policies which are being considered and laid down in regard to such complicated matters as the obtaining of finance, the running of the mills, the manufacture of good textiles and the sale thereof. I am not sure how many hours of the day he keeps working to keep pace with the requirements of the Company. I can only say that we could not have had a harder working man. The Directors have felt the necessity of giving him adequate assistance. In the matter of sales we are attempting to adopt a triple policy of employing first class salesmen, as also sales agents in different places and a special staff for export promotion. In the matter of administrative control we are attempting to revitalise our various departments and rationalise and modernise the working of the mills. Rationalisation is a word used in a particular context in India in connection with the textile industry. I can assure you that no such rationalisation is intended or can be attempted at this stage. What we propose to do I shall indicate later on. At this stage, I say only this that we are confident that we have one of the best men possible that we could have at this stage of crisis.

Crisis

"I said crisis. And I will be quite frank with you. I shall tell you the position of the Company and I shall not hide the fact that we have serious difficulties to contend with and that we are facing a serious crisis. There are difficulties surrounding us on all sides. There are very large accumulated stocks which have to be disposed of, and it is certain that there is going to be heavy loss and serious delay in the course of the disposal. There is the question of finance which is presenting considerable difficulties. With a company of this size and to work it efficiently, we must have about Rs. 4 crores by way of credit from our bankers.

"Our bankers are the Punjab National Bank Ltd. You will find a resolution recommended to you for being passed. You are requested to sanction that the borrowing powers of the Directors be raised to a limit of Rs. 5 crores. It is felt that there must be a minimum limit of Rs. 4 crores available to the Directors. For some considerable time to come, there is hardly any prospects of the money invested in stores and stocks being lower than between Rs. 3 crores and Rs. 3.5 crores which means that the Company must have another Rs. 50 lakhs for other purposes, such as buying badly needed machinery to the extent of about Rs. 15 lakhs and for enabling the purchase of cotton and stores and paying for it at appropriate times and at appropriate rates. We have approached these bankers for extending the present facilities that they give us and the matter is under their consideration.

"Our Company is producing mainly greys. With the export market being what it is, and competition arising from various other countries, we have fallen back in the matter of exports. So far as local sales are concerned, notwithstanding our reputation in the market, it must be remembered that production of greys in Bombay is fast becoming an uneconomic problem, having regard to the competition from other centres in India, where wages and dearness allowances and, therefore, production costs are lower. Therefore, arises the question of changing over, if possible, from coarse and medium greys to finer counts. We want to do this but we must have for that purpose machinery, which we have not got and we must have imported cotton and stores of the kind that we have not got in sufficient quantities. Our cotton purchases are at present being done in driblets. We buy such cotton as we need at such prices as we can get.

"Then there is the question of getting cleared of income-tax difficulties. The assessments have been completed only upto the year 1953-54. The assessments have been heavy and Appeals are pending and the advice received has been that there is a fair chance of succeeding in the Appeals. If that is so, then there should be a considerable relief by way of refunds. The Company has paid approximately Rs. 1.48 crore towards the assessment orders and it is the Company's feeling that they should not have been asked to make the payments. However, the Department is pressing for payments, and we have asked them to desist from doing so, pending the final decision of the Appeals. If they continue their pressure, I can bluntly say that we will be facing further difficulties. There is provision made in the balance-sheet to meet liabilities. But in view of the ready cash position, it is impossible to go on making payments.

Report and Balance-sheet

"I have spoken so far our difficulties generally. I shall now refer to the report of the Directors and the balance-sheet and profit and loss account and be very specific in regard to various matters.

"First of all, let me tell you why the report and the balance-sheet have been signed by only four Directors, though there have been in the year 1957, ten Directors and, there were at the time of the signing of the report and the balance-sheet nine Directors. During the year 1957, there were certain resignations from the Board of Directors Mr. L. N. Birla resigned on 10th December 1957. Mr. Dhirajlal Maganlal and Mr. Bhaidas Maganlal resigned on 23rd and 24th April 1958, respectively. Mr. Basudev Somani resigned on 25th April 1958. I am given to understand that the record of service of these Directors was very good. So far as Mr. Dhirajlal Maganlal and Mr. Bhaidas Maganlal were concerned, they were appointed as truly representing the shareholders. I understand that Mr. Dhirajlal Maganlal, in particular, made a number of suggestions for the improved working of the Company. I think it is a matter of regret that the present Board has not the help and support of the Directors who have resigned.

"To go back to the report and the balance-sheet, those Directors who had resigned could not join in the signing of the report and the balance-sheet. On the day of the Directors' meeting where the signatures were affixed Mr. Shri Gopal Nevatia and Mr. Sanwal Ram More were not present. So far as the three of us were concerned, we considered that it would not be proper for us to make a report to you and to certify the balance-sheet and accounts, of a period, during which we were not Directors, and which were in respect of matters with which we could not familiarise ourselves, during the few days that we had joined the Company. Thus, it is that the remaining Directors have signed the report and the balance-sheet.

"You have by now had ample time to have gone through the Directors' report and the accounts for the year 1957. With your permission, I will take them as read. Let me try to explain some of the important factors which have affected the working results for this year.

Excise Duty

"I have already referred to the differences amongst the partners of the Managing Agency firm, which have affected the working of the Mills adversely. There have been other difficulties which the Company has faced also. The Indian textile industry has been in a state of crisis almost from the beginning of 1957. Barring a few exceptions, the Mills, particularly those on the coarse and medium counts, have been working at a loss and in a large number of cases with heavy losses. They are carrying huge stocks of grey goods, for which the demand has been, and is, distinctly poor. The dear food allowance has gone up; the cost of stores, chemicals and spare parts has risen steeply and is still rising, and the mills on coarse and medium counts are caught between the two evils of high cost and unremunerative prices on the one hand and distress sales on the other hand. The incidence of the excise duty in the year 1957 affected the industry badly. When this duty was increased in 1956, it appeared from statements made by or on behalf of the Government that the purpose of this duty was to restrict consumption as it was believed that the supplies then were inadequate and excess profits required to be mopped up by the Treasury. The conditions have certainly changed, if they existed. The heavy undisposed stocks of cloth indicate that supplies are more than plenty and the balance-sheets the various textile companies have issued, make it clear that, apart from there being no excess profits to be mopped up, the question before several of them is that of survival. All the same, the excise duty seems to have come to stay. Recently, the incidence has been reduced, bringing badly required relief to the coarse and medium counts mills. It can be contended that ultimately the burden of excise duty, as that of any other item of cost, is borne by the consumer. This may be true as an economic proposition of ultimate validity. But in the context of plentiful supplies, coupled with poor offtake and high cost due to various reasons, every pie by way of taxation must make a cut into competitive prices, bringing at times disastrous results. This is what has happened in the case of the prices of textile piecegoods. The following figures may prove helpful to you in forming an estimate of the difficulties facing your Mills:

	1956 (In lakhs of Rs.)	1957 (In lakhs of Rs.)	*Difference* (In lakhs of Rs.)
Dearness allowance to workers and staff	150.53	162.49	11.96
Stores, spares, dyes and chemicals ..	69.70	79.78	10.08
Repairs and maintenance	16.88	19.32	3.44
Interest	2.22	12.59	10.37
Excise duty on cloth sold and delivered	134.75	164.90	30.15
	373.08	439.08	66.00

"I might add that, in respect of your Mills, the excise duty incidence was on an average ex-mill value of the cloth 9.75 per cent. in 1955, 16.2 per cent. in 1956, 23.33 per cent. in 1957 and 30 per cent. in January-June 1958. With the recent reduction, the burden of excise duty is somewhat less. It has come down to 22 per cent. All the same, looking to the market conditions and the price trend, even this incidence is a definitely excessive burden on the industry. It is to be hoped that the heaviness of the burden is recognised soon and lifted.

Profit and Loss

"Contrary to the usual practice in this Company having regard to the peculiar circumstances, you may like me to analyse the balance-sheet and the profit and loss account which are before you. You will naturally desire to ask questions thereon and I think that I should anticipate these questions so far as I can. The net loss for the year is Rs. 52,70,935. A further provision for Rs. 7,42,146 has been made in respect of taxation for previous years upto 1952, notwithstanding that there are appeals pending and, as I have said above, the possibilities are that there may be a refund. The total loss, therefore, after setting off last year's small surplus, amounts to Rs. 58,83,112, which has been taken to the balance-sheet and deducted from the reserves and surplus which stood at Rs. 70,18,800. This amount of Rs. 70,18,800 is made of the general reserves carried forward from last year of Rs. 55,18,800 and adding thereto a sum of Rs. 15,00,000 from the provision of Rs. 20,00,000 against stores shown in the balance-sheet for the year ended 31st December 1956. Thus, there is a total loss this year of over Rs. 58 lakhs, as against a profit in the year 1956 of about Rs. 49 lakhs before provision for taxation of previous years.

"You will see that expenditure has increased considerably in the year in question. I have already referred to an increased expenditure of about Rs. 36 lakhs on account of dearness allowance, stores and interest and of about Rs. 30 lakhs on account of increased excise duties.

"I should say a word or two about the considerable increase of over Rs. 10 lakhs in the item of interest on loans. You will see that, at the end of 31st December 1957, the advances from the Bank amounted to Rs. 3,26,33,196, as against the previous year's amount of Rs. 1,45,20,270. Not only was the amount borrowed much higher but the rate of interest was higher by about 1¼ per cent. The rate was in conformity with the rate generally charged by banks.

"As regards sales, we are down by about Rs. 1.5 crore and the stocks held at close are correspondingly higher than the stocks in the previous year by about Rs. 1.80 crore. It is regrettable that, notwithstanding that the price of cotton remained fairly constant, the sales realisations were about 7 per cent. lower. I hope I have explained fairly the causes for the lower production and the poor offtake. Even with all adverse factors affecting the industry in general this drop of 7 per cent. must be admitted to be a steep fall.

New Machinery Purchase

"As against this gloomy picturisation, I must also draw attention that, during 1956 and 1957, the Company expended about Rs. 40 lakhs on the purchase of new machinery. This was essential to keep the Mills as far as was possible in a position to manufacture its goods properly. These purchases also render any partial change-over of the Company's operations from greys to somewhat finer counts easier.

"You will note that the depreciation this year for which we can take credit is only Rs. 14,18,422. For the purpose of renovating our old machinery, an absolutely essential matter, very large sums would be required which at present the Company has not the capacity to procure. It appears to me that the Company must be prepared to spend a minimum of Rs. 30 lakhs each year for renovation purposes.

"It is not my intention to divert your attention with statistics. There are obviously various other important factors which have added up to our difficulties and the above figures do not explain the whole of our loss for the year. But, these figures will enable appreciation of some of the difficulties, which are common to all, and act as handicap to all mills and to your group of Mills, in particular, in their present circumstances.

"As you know, your Mills form perhaps the biggest group in the Indian textiles. They are known as the 'Big Six.' They have been manufacturing grey goods mainly suited to the requirements of the masses, and these were being principally marketed in Uttar Pradesh, Bihar, Orissa and Bengal. Mills in upcountry centres where the dear food allowance is lower, are able to manufacture and supply such piecegoods, at relatively lower prices. Competition from those centres is now very keen. This is also a serious handicap to your group of Mills. A number of the mills from the Bombay State are losing these traditional markets of theirs, in competition with mills where labour costs are lower.

New Distribution Policy

"Changes in the pattern of production and construction of cloth is, therefore, of prime importance. Proper marketing is equally a matter of vital importance. Two or three States, and especially those where the purchasing power of the people is relatively lower, cannot give a proper and adequate field for goods manufactured by us. Our sales policy, therefore, requires a complete overhaul. We will have to, and we propose to, evolve a new policy to sell and distribute our goods all over India, and in these days of foreign exchange stringency, we will also do our best to export a part of our production to foreign countries. The popular demand in India these days is for bleached, mercerised and fancy sorts. We will, therefore, have to change the pattern and production technique, and we have to do with the machinery that we have which is old and outmoded. There is no possibility of replacement by modern machinery in the near future. We will have to utilise our dye works to its full capacity. Upto now about 80 per cent. of our production was sold as grey and the remaining which was processed and sold included printed and khaki cloth. On account of our difficulties as to colours and chemicals we were not able to utilise even half of our basic quota. With the equipment we have at the dye works, it should be possible for us to process about 40 per cent. to 50 per cent. of our total production. Similarly, greater and fuller utilisation of combers, and renovation of machines in the spinning and weaving sections, will have to be speedily undertaken.

"These problems are engaging the attention of your Directors. The machinery that we have is not fully suited for an immediate change-over to the popular fancy goods. The supervisory staff also would require to be

BOMBAY - 18.

strengthened, by the addition of qualified and competent men, with specialised experience of manufacturing and processing fancy goods. Statistical and quality control, detailed study of work-load, scientific research and laboratory experiments, which are all fundamentals of modern business, have to be introduced in this group of mills. Reconstruction and radical change in the various departments is therefore the need of the day.

"The cloth stocks are unusually heavy. There were 53,788 cloth bales in stock valued at about Rs. 3.80 crores as at the end of the year 1957. At present, we have 40,970 cloth bales in stock. An enormous amount of capital is thus being locked up in the finished goods, and this comes in the way of following a purchase programme, to cover the cotton requirements during the season, to get a fair average and ensure quality. On account of the financial stringency, and the non-availability of ready cash, the Company is obliged to buy its cotton outside the season, when qualities are indifferent, and prices often completely out of parity. This again results in distress sales of cloth at unremunerative prices.

Complicated Problems

"Inadequate finance, shrinking supplies of foreign cotton, difficulties in obtaining dyestuffs, and chemicals and stores, are all complicated problems. We are trying to do our best now, with our efforts, to dispose of the accumulated stocks. One can only hope that the target set by us, to dispose of all such stocks by the end of this year, will be achieved. At one time, we had expected that, with the co-operation of the Managing Agents, this would not be impossible. We are now doubtful as the offtake is still far below our target figures.

"Abnormally heavy stocks appear to be the difficulty not only of ourselves but of a good number of mills. It is difficult to expect economic working, so long as such stocks are not cleared. From amongst us, Mr. G. D. Somani advises that there can be two ways of dealing with this situation. Either there must be a planned curtailment of production for a temporary period, say of six months, something on the lines the Indian Jute Mills' Association have formulated. If, for any reason, this is not found feasible, then there might be evolved a scheme to take up about 150,000 to 200,000 bales of cloth from mills in distress to a common pool and assistance should be rendered in marketing these bales when conditions improve in the usual way. We must look to the Millowners' Associations and the Federation of the Textile Millowners' Associations to evolve a scheme of assistance to mills who may like to keep their surplus stocks under some arrangements of this kind which the Federation may supervise in a manner that will help the mills in the disposal of their surplus stocks without the necessity of incurring losses. If the mills and the mercantile community can feel confident that there will not arise the compulsion of thrusting heavy stocks on the market when it is not in a position to absorb them, then an improvement in the condition of the industry is possible. It should be possible to arrange loans upto 90 per cent. or so of the value of the stock from either the State Bank of India or a pool of banks and work the scheme in such a manner that while it will not impose any liability on the pool, it will help the mills to overcome genuine temporary difficulties. Once the present heavy stocks are cleared, trade should revive.

Tackling the Problem

"The next two to three months are very critical for the industry and your Company, in particular. If, contrary to expectations, the demand proves inadequate and our Company and other mills are unable to dispose of their stocks, a very serious situation will arise. It is necessary, therefore, that both the Government and the industry should seriously consider and tackle the problem. In every crisis, it is of vital importance that measures that might be deemed essential should be taken promptly and effectively. Half-hearted and belated efforts, sometimes, far from relieving distress they are intended to, help inflict greater injury to the industry. The administrative machinery of the Government and the trade, should move promptly to cope with the rapid changes that take place in the economic field. The textile industry, as everybody knows, plays a vital role in our national economy, and the need for its smooth running cannot be over-emphasised.

Prospects

"Questions are bound to be asked of the prospects of the Mills and its working during the year 1958 and I think it is but right to tell you that, so far as the year 1958 is concerned, there is no possibility of the losses being appreciably less than during the year 1957. Since July last, the trend of increasing losses has been lessened, but, with the millstone of old stocks lying with us and our present difficulties which I have outlined above, it is certain that there would be appreciably heavy losses in the year 1958 also. What the year 1959 will bring is a matter of conjecture. We can only hope for the best, but it would be a brave person who can prophesy that any dividends would be payable in the next couple of years. If the changes which are proposed to be made and which have been outlined above are successful then it will be the task of the Company to build up again its reserves to a reasonable figure and then to distribute any profits it may make, amongst the shareholders. At present, one must be frank and advise patience.

"I am now at the end of my review of the working of the Company for the year 1957. I am sorry if the effect has been depressing, but facts cannot be gainsaid and must be intimated to the shareholders. Your Directors hope that the future will be brighter for the Company and, that for the next year, that is for 1959, they may be able to report better results. In respect of the year ending 31st December 1958 better results than for 1957 are not possible. We may do better in the year 1959, once our accumulated stocks of cloth are disposed of and we begin manufacturing and selling according to the needs of the market. Your Directors are convinced that with our present production and sales policy we cannot progress. The impact of new policies can only be felt in the course of time. I have indicated to you the new policies proposed to be followed by your Directors and to be put into effect under the guidance of Mr. Kher.

Co-operation

"In the work of regenerating the Company, the utmost co-operation will have to be forthcoming from you and from the staff and all our workmen. I have been told that the staff have worked loyally and faithfully and our thanks go out to them accordingly. On the staff there is a large number of old and experienced hands, several of whom have put in long years of service with the Mills. They were with the Sassoons and they have been with you since the incorporation of your Company. Now that the new policies are proposed to be adopted, we can confidently rely upon their co-operation in carrying them out.

"It is regrettable that, having regard to the financial condition of the Company, it has been found impossible to declare any bonus for the staff or the workmen beyond the minimum payable in accordance with the agreement between the Millowners' Association and the workmen.

"Trade unions naturally play an important part in all industrial organisations. The relations between the management and labour are on the whole satisfactory and we expect them to continue on a harmonious basis. When the new policies are put into effect, there would necessarily be several adjustments which we would expect will be done with the full co-operation of the workers. There cannot be industrial expansion and prosperity in India or anywhere in the world without co-operation between capital and labour, and your Directors trust that, so far as this Company is concerned, there would be no lack of co-operation.

"It remains for me to thank you all for coming here and listening to me. If there are any questions in respect of any matter where I can properly give information, I shall be happy to answer them."

Krishna's daughter is going to College

Krishna is a happy father these days. His daughter, Saroja, is the first girl in his family to attend a college. And she can mix freely with the children of the wealthiest, because her Rayon sarees, though inexpensive, look as pretty as anything they wear. And Krishna can afford to buy them too.

We were the first to set up a plant in India for manufacturing rayon in 1950. Our production is constantly on the increase and it is helping to keep thousands of weaving establishments humming all the year round in many towns and villages of India.

We now produce yarn in finer and bleached varieties, and also make available *coloured yarn* for the first time in our country. In pioneering the rayon industry in India and in fostering these new developments, we are happy that we continue to play a vital role in the developing economy of our country.

INDIA JUTE COMPANY LTD. AND MEGNA MILLS COMPANY LTD.

CHAIRMAN'S SPEECH AT ANNUAL GENERAL MEETINGS

ADDRESSING the Annual General Meetings of The India Jute Company, Ltd., and The Megna Mills Company, Ltd., held on Monday the 29th September 1958, the Chairman stressed that the outlook for the Indian jute industry was now brighter than it had been for several years. He also emphasised the importance of adopting intensive methods of cultivation so that the per-acre yields of raw jute might be stepped up.

The following is the text of the Chairman's speech:

"GENTLEMEN,

"I have pleasure in welcoming you to the annual general meetings of your respective Companies. The audited accounts and the Directors' reports of both Companies, for the year ended 31st March, 1958, have been in your possession for some time and, with your permission, I shall take them as read.

"As the accounts show, the working results of both Companies for the year under review have been outstanding and your Directors take great pleasure, mixed with a measure of legitimate pride, in recording these achievements. The profit for the year, before providing for depreciation, income-tax and wealth-tax, amounted in the case of The Megna Mills Company, Ltd., to Rs. 33,62,776, which is an increase of Rs. 31,34,024 over the previous year and for The India Jute Company, Ltd., to Rs. 23,69,693 which is an increase of Rs. 16,94,270 over the previous year

Dividend

"The Board of Directors of The Megna Mills Company, Ltd., have recommended a final dividend of Rs. 12.50 nP per share. Together with the interim dividend of Rs. 5 per share, already declared, this amounts to Rs. 17.50 nP per share for the year. This is the highest dividend paid over the past ten years. In the case of The India Jute Company, Ltd., the Board of Directors have recommended a final dividend of Rs. 11.87 nP per share. Together with the interim dividend of Rs. 3.75 nP per share already declared, this amounts to Rs. 15.62 nP per share for the year. This is the highest dividend paid since 31st March, 1921.

Outlook

"The outlook for the Indian jute industry is now brighter than it has been for several years. The long period of frustration, declining profits and, in some cases, heavy losses, seems, at last to have ended and it is possible to view the future with a measure of confidence and optimism. It is evident that the experience, resourcefulness and high level of managerial ability which enabled the industry to survive the vicissitudes of a century of existence, will again enable it to tide over current difficulties. Your Directors are reasonably confident that, unless some exceptional adverse developments occur, it should be possible, not only to maintain, but to improve on these working results.

"Of the factors that have contributed to the improvement in the position of the industry, the most important has been the progress towards modernisation and rationalisation. Your Companies have not lagged behind in this matter. It is expected that, by the end of this year, in both Companies, the spinning side will be 80 per cent. modernised. In both, increased production was possible by working a part of the loomage in double shift. We worked 791 looms in India Mills and 1,404 looms in Megna Mills, as against the normal complement of 691 looms and 1,132 looms respectively (the normal complement is after deducting 12½ per cent. sealed looms).

Loans

"The loans received by the Companies from The National Industrial Development Corporation Private Ltd., have helped notably towards the implementation of the modernisation programme. The Boards of Directors of the Companies, on behalf of the shareholders, thank the Corporation for their timely assistance.

"If the industry as a whole, is to maintain the improvement already achieved and make further progress, it is imperative that the movement towards modernisation and rationalisation should proceed unimpeded. The closing down of uneconomic units and the transfer of their loom hours to others, who are able to make more efficient use of them, has already produced good results and could, with advantage, be carried further. The spread of overheads over a larger output will reduce costs and increase the power of the industry to face the threat of substitutes and competition from jute manufacturing units in other countries. The movement towards more healthy conditions in the industry would receive a setback, if the current improvement resulted in it being called upon to shoulder additional burdens, in the form of higher labour cost.

Raw Jute

"The easier availability of raw jute has contributed substantially towards the improvement in the industry. Progress towards self-sufficiency has been satisfactory and dependence on Pakistan has fallen from 75 per cent. at the time of partition to a mere 10 per cent. With good weather conditions, full self-sufficiency is possible even now, but there is still much that remains to be done in the matter of improving the quality of raw jute grown in India. The low prices fetched by Indian raw jute are largely due to its poor quality. Both in the interests of ensuring an adequate supply of good quality jute at reasonable prices to the mills and in order to give a fair return to the cultivator, it is necessary to induce growers to produce good quality fibre and to adopt intensive methods of cultivation so that the yield per acre may increase. The raw material requirements of the industry could then be met with a smaller acreage under jute cultivation and the rest of the land now used for growing jute could be diverted to food crops.

Speculation

"Towards the beginning of the year under review, as a result of the reaction that followed stock-piling purchases during the Suez crisis, the market for jute goods was quiet and prices eased. The decline in prices was greatly accentuated by speculative activity in the *Fatka* market. This was a serious matter, not only for the mills, but for the nation's foreign exchange earnings and for raw jute prices and the drive towards self-sufficiency. With the object of stabilising prices and curbing speculation, the Indian Jute Mills Association fixed minimum prices for gunnies. This had an immediate steadying effect and, though the minimum prices have not always been effective in the jute goods market, there can be no doubt that they have had a moderating influence. Without them, the price decline would have been greater than has occurred.

"I am glad to be able to say that there has been no major labour trouble during the year in either of the Companies' mills.

"I would be failing in my duty if I did not express, on your behalf and on my own, our warm thanks to the executives, staff, and workers of both Companies for their unstinted co-operation and hard work. Without their devotion and loyalty, the fine results of the year under review could not have been achieved.

"I now invite you to pass the accounts as presented."

(*Concluded from next column*)

cent. for marine, we have transferred to the profit and loss account Rs. 3,67,298 from fire, Rs. 8,569 from miscellaneous insurance, and Rs. 34,043 from marine.

After taking into account the balance brought forward from last year, the total amount to the credit of profit and loss appropriation account was Rs. 4,25,976. The Directors proposed to transfer to taxation reserve Rs. 1,75,000, to staff gratuity account Rs. 40,000, and to pay ninth dividend on ordinary shares at Rs. 2.00 per share free of income-tax amounting to Rs. 2,00,000, as against Rs. 1.50 last year.

Note: This does not purport to be a record of the proceedings of the annual general meeting of the Company.

THE NEW GREAT INSURANCE COMPANY OF INDIA LTD.

SPEECH OF THE CHAIRMAN, MR. TULSIDAS KILACHAND

PRESIDING over the Fifteenth Annual General Meeting of the shareholders of the New Great Insurance Company of India Ltd., held at Baroda on 20th September 1958, and in moving the adoption of the Directors' report and accounts, Mr. Tulsidas Kilachand, Chairman of the Company, made a brief survey of some of the current economic and monetary trends.

Speaking of the second Five-year Plan, Mr. Tulsidas mentioned that two problems should be solved to enable the acceleration of national progress, namely, agricultural production and foreign exchange. Whilst every effort should be made to increase foodgrains production, export crops should not be neglected, in view of the fact that they were capable of providing a substantial amount of foreign exchange within a short period. The principal bottleneck to industrial growth was the difficulty of importing raw materials and capital goods due to shortage of foreign exchange and the solution of this difficulty would quicken the pace of industrial progress.

Code of Conduct

Dealing next with the problems facing the insurance industry, Mr. Tulsidas mentioned that, whilst the cash collection provision of the Code of Conduct had been of great benefit to the industry, he regretted that there was not any improvement in the market conditions. He was not very hopeful of the Committee's succeeding in their laudable and benevolent mission so long as there was one uniform pattern of working for different types of units. In business of any kind, there must be an element of competition. Secondly, controls merely led to resort to questionable methods. The Chairman was emphatically of opinion that removal of all unnecessary controls and such of those statutory provisions that contributed to the prevalence of malpractices, and freedom to insurers to carry on their business on normal competitive lines were the only panacea for the quick and inevitable disappearance of all malpractices in the industry. For their part, the companies, both big and small, should formulate some kind of mutual agreement, so that the smaller units also got a fair share of the business and might not have to close down, as had, unfortunately, been the case during the last seven years of the operation of the Code when about a dozen companies had to stop their business. The present machinery set up to work the Code had also become very expensive and, since these expenses were in the ultimate borne by the insurers, it was no use making it more elaborate and expensive.

Mr. Tulsidas also took the opportunity to point out that, had only these and other suggestions made by him and co-directors of some other insurers over seven years ago and ever since then been carefully examined and accepted, the evil of rebating and other malpractices would have by now become things of the past. He, however, hoped that it was still not too late for the Executive Committee to examine these suggestions.

Fire Rates Revision

Adverting next to the move to effect yet another downward revision in fire premium rates, Mr. Tulsidas refuted the notion entertained in certain quarters that the malpractices resulted from the fact that fire premium rates were very high, and explained how past revisions, based on this notion, did not stop rebating. His suggestion to the Tariff Committee which was examining a revision was that they might reduce the rates wherever experience showed favourable results, but, at the same time, they should not hesitate to make increases where experience was otherwise.

Company's Accounts

Coming next to the departmental accounts, Mr. Tulsidas stated that the gross direct income for the year 1957 was Rs. 37,28,302 in fire, Rs. 19,92,315 in miscellaneous insurance, and Rs. 34,80,926 in marine, whilst the net premiums were Rs. 28,89,395, Rs. 21,48,989, and Rs. 15,52,299, respectively. After providing for losses and expenses, and reserve at 50 per cent. in respect of fire and miscellaneous insurance and 100 per

ANNUAL GENERAL MEETING OF JESSOP & CO., LTD.

SIR B. P. SINGH ROY ON RAPID INCREASE IN FIXED ASSETS

ADDRESSING the Twenty-sixth Annual General Meeting of the shareholders of Jessop & Co., Ltd., held in Calcutta on the 29th September, 1958, the Chairman, Sir B. P. Singh Roy, referred to the appointment of the present Board of Management by a Government notification dated 15th May, 1958 under the Industries (Development and Regulation) Act, 1951, and said:

"The effect of Government's action is, that your Company has been protected from further harm and has been placed under the control of a body whose sole duty it is to restore it to full strength as soon as possible. As a further result of this action Government has been able to take effective measures to strengthen the financial resources of your Company so that its proper working is now assured and thus there is now no reason why it should not be fully rehabilitated in a reasonably short period of time.

"Your Company"

"You will note that I have been using the phrase 'your Company,' and I have done so deliberately, for the ownership of the Company has not changed, though your rights as shareholders are somewhat curtailed during the period of office of the Board of Management, in that, you may not propose or pass any resolution nominating or appointing any person to be a Director. Further, any other resolution you may think fit to pass shall be given effect to, only after its approval by the Central Government. Accordingly, should you, within these limitations, desire to pass any resolutions today or to make any suggestions for the Company's well-being, it will be submitted to Government for its consideration.

"I regret that for the second year running our annual general meeting has been held later than usual, but I am sure that, knowing the circumstances, you will excuse the delay. In the first place, your then Directors had requested the Company's Auditors to make a very special check of the Company's books in the light of the disclosures at the last annual general meeting so that all could be satisfied that no further unknown factors existed, and this naturally caused some delay in finalising the accounts. The findings of the Auditors after their investigation are given in their report.

New Board

"Secondly, there was the appointment of the Board of Management in mid-May. You will appreciate that it took some time for the new Board to acquaint itself thoroughly with the position and to decide on what action should be taken in each case after taking any necessary legal and financial advice.

"All this took time and as a result we were not able to hold the annual general meeting any earlier than today, but in future years we can hope that such unusual factors will not be present and that your Company will be able to revert to its old practice of holding its annual general meeting about the middle of the year.

"I believe there will be some among you who will wish to enquire what action the Board is taking in respect of the losses your Company has sustained. As you will see, we have, from the accounts point of view, made full provision for all known losses and we have had and are still having discussions with our legal advisers on what steps can be taken to safeguard the Company's interests. Some have already been taken in this matter and other steps will doubtless follow, but I do not consider it would be in the Company's best interests to divulge more at this juncture and so I will ask for your forbearance in this matter today. At the same time I assure you that everything that can properly be done will be done.

All-time Record

"As you will see from the report and accounts already with you, the results of the Company's working for the year ending 31st October 1957 constituted an all-time record. As previously forecast, the Company's agency business continued to dwindle and in fact it has now virtually ceased but the works sales rose by over 40 per cent. as compared with the previous year, from Rs. 380 to Rs. 534 lakhs, so that the total sales figure is still a record at Rs. 594 lakhs.

"The Board of Management, however, regrets that in spite of these extremely satisfactory working results and the high net profits earned by your Company, it is not possible for it to declare a dividend because of the serious financial loss suffered by the Company as a result of mismanagement during the financial years 1955-56 and 1956-57. Shareholders, therefore, are once again being called upon to agree to sacrifice their dividend in the interest of the financial rehabilitation of the Company. I have no doubt that this is only a temporary deferment of your participation in the profits of the Company and I hope that you will accept this decision in a proper spirit.

"During the present year, we could well have expected the improvement registered last year to continue but, unfortunately, your Company is no exception in the engineering industry which, over the last six months or so, has increasingly felt the growing shortage of its principal raw material, steel. It is expected, in fact, that this year's working will be satisfactory but it certainly cannot be as good as it would have been, had not production been hampered by shortage of raw materials.

Extensions Active

"I am sure that you will have noticed the rapid increase in the value of your Company's fixed assets as shown by the accounts for the last few years. Neglecting the figures for 'block in progress' which are those for plant and buildings still in course of construction or installation, the values are about Rs. 46 lakhs in October 1955, Rs. 62 lakhs in October 1956 and Rs. 109 lakhs in October 1957. By the end of October 1958, this figure will be about Rs. 170 lakhs, so that, in three years your fixed assets will have been multiplied over three-and-a-half times. While these increases represent a very considerable addition to your Company's earning capacity, they have also been a heavy drain on its financial resources during the period of their installation. You will be glad, therefore, to know that almost all these extensions are now in active use as far as the raw material situation permits. Provided the supply of materials improves, of which there is now some hope, their output should add very materially to the Company's turnover during the years to come.

"Of the extensions now virtually complete, by far the most important is your Company's new coach works which in size and scope is larger than any of the three previously existing units. Those of you who travel by air cannot have failed to see these new works which lie along the Jessore Road to the north of our older works. The photographs reproduced on the end covers of the report in your hands will give you some idea of their size. They consist of four bays, each 84 feet by 640 feet, giving a single covered area under heavy cranes of over two hundred thousand square feet while paint shops, stores, canteens, offices, etc., cover another eighty thousand square feet of floor space.

"These new works, which are exceedingly fine by any standard, are now actively engaged in the manufacture of metre-gauge passenger coaches and they are also busy on electric multiple unit broad-gauge coaches for the Calcutta electrification project. In this latter case, I am afraid, we are still severely hampered by shortages of steel, but there is some hope that missing supplies will be received within a few months.

Diesel Road Rollers

"The second of your Company's new projects, the manufacture of diesel road rollers, has been very badly affected by shortages of steel. We started well in January 1957 and rapidly built up production to 12 rollers a month with the intention of raising this figure to our target of 18 to 20 a month. Unfortunately, we very soon were affected by shortage of steel, with the result, that this department was completely closed during October to December 1957, and since then has limped along at an average of six machines a month, entirely, I must emphasise because of shortage of steel and also due to subsequent restrictions on the quantum of imported components. As a result, we have up to date completed only some 150 rollers whereas we could, if given supplies, have completed about 300.

"From a Government publication entitled 'Directory of Government Purchases during the year 1956-57' it appears that Government imported road rollers from abroad to the value of Rs. 32 lakhs 41 thousand, over double what it spent on the indigenous article. I believe that for this expenditure abroad Government procured about 100 rollers. On the other hand, if we had been granted the same amount of foreign exchange, we could have imported all the components and—this is important—all the steel to allow us to make an additional 140 rollers besides those we actually turned out. We could have provided India with 40 per cent. more rollers for the same foreign exchange and we could have kept our works fully occupied instead of half employed.

Foreign Exchange

"I might add that the foreign exchange that we require for our rollers has dropped from about 65 per cent. of our selling price to Government, on the first batch, to less than 40 per cent. today. This excludes exchange required for any items we purchase locally but the total effect of these can only be small.

"The sales from your Company's works are almost entirely to such Government or quasi-Government bodies as the Railway Board, Port Trusts and various Irrigation Projects, or else to such institutions of national importance as the Tata Iron and Steel Company or the Indian Iron and Steel Company. Thus, it may be said that whatever the Company produces represents, by and large, a saving in foreign exchange, for one may assume that the requirements of these customers are of such importance that if they were not obtainable from indigenous sources they would have to be imported.

Travelling Cranes

"In the case of your Company's standard overhead travelling cranes, the indigenous content is now about 90 per cent. The balance 10 per cent. or less, covers such items as electrical equipment and ball or roller bearings not yet made in India and such minor items as oil seals which are essential but cost very little. Is it not better that we should be granted import licences for 10 per cent. or so of any given value, so that, we can then add 90 per cent. locally rather than that the article should be 100 per cent. imported? Yet import is still sometimes preferred, on the grounds that foreign prices are a little cheaper, or more often, that delivery is better. Yet our delivery, and for that matter, our capacity and to some extent our ability to reduce prices are all governed by the rate at which we can secure materials, including this proportion of imported components.

"I appreciate that I have chosen a good example for my case, but even in your Company's Wharf Cranes where the electrical gear is very special and mostly imported, the indigenous content is well over two-thirds, while such items as sluice gates for irrigation projects, it will again be well over the 90 per cent.

"We fully realise the difficulties of the foreign exchange situation of our country. This situation can be eased only in two ways, by exporting more and by importing less. In a heavy industry such as ours, export is extremely difficult and takes many years of patient work to achieve, but our ability to save foreign exchange by reducing imports by making things here has never been fully exploited. We, however, expect a change in Government's policy in this regard as outlined by the Hon'ble Sri Lal Bahadur Shastri, the Commerce and Industry Minister, at the meetings of the Export and Import Advisory Councils held in New Delhi last month.

Order Book

"Returning to our own affairs, you will be pleased to know that your Company still has a very satisfactory order book, though one must remember that orders without the raw materials to execute them are of not much use. However, as I have already indicated, almost all of our contracts carry a very high priority and there is no doubt that we shall get our full share of whatever materials are available. As regards this latter, we can at least look forward to the time when indigenous steel supplies will improve and, in the meantime, I hope and trust that Government will keep factories such as ours supplied to the fullest possible extent, as in doing so, they will not only be reducing overall imports, but they will also be building up an important industry for the future.

"Gentlemen, I feel that I have said enough for this occasion, but before I sit down I am sure that you would wish me to express our thanks to all those in the Company's employ who have contributed to the excellent results shown in the accounts now before you. These results have been achieved during a period when a great deal of time and energy was also being spent on major extensions and amidst the disruptions that such extensions always bring in their train, so they are even more commendable than they appear at first sight. I feel you would all wish that this should be recognised."

(This does not purport to be a record of the proceedings of the Annual General Meeting.)

ALL-INDIA GENERAL INSURANCE CO., LTD.

STEPS TAKEN TO EXPAND BUSINESS

THE results of the working of the All-India General Insurance Company, Ltd., for the year ended 31st December 1957, reflect the full effects of the nationalisation of life insurance on the business of the Company and also the adverse experience in the accident section, especially in respect of the business effected in the South. As a result of these two factors and also because of the heavier motor claims in Ceylon, the Company has suffered an overall loss of Rs. 7,224 during the year. The total net premium in the three departments, namely, fire, marine and miscellaneous, suffered a setback from Rs. 14.66 lakhs in 1956 to Rs. 11 lakhs in 1957, all the three departments sharing in the fall. Total expenses of management has shown a welcome decline from Rs. 5.42 lakhs in 1956 to Rs. 5.18 lakhs in the year under review.

Net premium in the fire department aggregated Rs. 6.28 lakhs, as against Rs. 8.76 lakhs in 1956. Claims paid and outstanding declined to Rs. 2.97 lakhs, as against Rs. 3.49 lakhs in the previous year. Net commission and expenses also registered a drop, aggregating Rs. 4.04 lakhs, as against Rs. 5.30 lakhs in 1956. After providing a sum of Rs. 2.51 lakhs as reserve for unexpired risks (40 per cent. of the premium income) for the year, and an additional reserve of Rs. 12,555 making a total reserve of Rs. 2.64 lakhs, a sum of Rs. 21,719 has been transferred to the profit and loss account as against Rs. 14,641 last year. Net premium in the marine department amounted to Rs. 63,782, as against Rs. 88,788 in the previous year. Net claims paid and outstanding dropped from Rs. 44,376 to Rs. 22,518. Net commission and expenses amounted to Rs. 30,922, as against Rs. 23,185 in 1956. After earmarking Rs. 47,836 as reserve for unexpired risks (75 per cent. of the premium income) and Rs. 3,189 as additional reserve, the account shows a profit of Rs. 32,885.

Net Result

The accident and miscellaneous department brought a premium of Rs. 4.07 lakhs, as against Rs. 5.00 lakhs in the previous year. Claims paid and outstanding were higher at Rs. 3.35 lakhs, as against Rs. 2.74 lakhs in 1956, while commission and expenses dropped from Rs. 2.45 lakhs in 1956 to Rs. 2.15 lakhs during the year under review. After providing for Rs. 1,63,001 as reserve for unexpired risks (40 per cent. of premium income) and Rs. 8,150 as additional reserve, the account shows a loss of Rs. 1,09,199 as against Rs. 8,046 in the previous year.

After taking credit for Rs. 17,730 being compensation for acquisition of the life business of the Company by the Life Insurance Corporation of India and Rs. 1,562 being compensation for vesting of management of controlled business in the Central Government, the profit and loss account shows a loss of Rs. 7,224. This has been made good out of Rs. 11,284 brought in from last year, leaving Rs. 4,060 to be carried forward to the next year's account.

The funds of the Company as on 31st December 1957 stood as under:

	Rs.
Capital paid-up	10,00,000
Fire fund	2,63,654
Marine fund	51,025
Accident and miscellaneous fund	1,71,152
Capital reserve	2,197
Investment reserve	2,96,597
Profit and loss appropriation account	4,063
Total ...	17,88,688

Chairman's Review

The main events of the year, which affected the business and the working results of the Company, were reviewed by Mr. Pannalal Bansilal Pitty, Chairman of the Company, in the course of his speech at the fourteenth annual general meeting of the Company held on 30th September 1958. Mr. Pitty said:

"GENTLEMEN,

"First of all let me thank you for electing me to preside over this meeting.

"I welcome you all today to the fourteenth annual general meeting of the Company.

"The Directors' report and audited statement of accounts for the year 1957 have been with you for some time, and with your permission, I shall take them as read.

"Before moving the resolution for the adoption of the report and accounts, I shall make a few observations.

"The year 1957 has not been a happy year for general insurers in this country. So far as your Company is concerned, the working of the fire and marine departments has resulted in a profit, but there has been a heavy loss in the accident department. You may be aware that your Company is writing substantial motor business in the South, and this business has been profitable to the Company in the past. Contrary to experience, your Company suffered during last year heavy loss in the accident department in the South. There was also deterioration in the motor claims in Ceylon last year. As a result of these adverse factors, the working of the Company, in the final analysis, has resulted in a small loss during the year under report.

Arrangement with "New Great"

"You are aware that last year your Company entered into an arrangement with the New Great Insurance Company of India Ltd. I feel confident that with this arrangement with the 'New Great,' who have got technical knowledge and initiative for working, we can look forward to an improvement in the development side of our business.

"The gross direct premium written by the company during 1957 amounted to Rs. 12,61,552 as against Rs. 14,60,074. Full effects of nationalisation of life insurance business were felt last year. In the past, some of the branches were doing both life and general insurance business. With the coming into being of the life Insurance Corporation of India, these branches were taken over by the Corporation with the result that your company lost the general insurance business from those units. We had also to close the units where the premium income was comparatively small. I am, however, glad to say that steps have been taken to see that the business of the Company expands.

"The total expenses of management incurred was Rs. 5,18,418 during the year under report, as against Rs. 5,41,741 in the preceding year. As a result of the introduction of provident fund benefit and graded scale of salary to staff both at the head office and the branches, there has been an upward trend in the administrative expenses of the Company, but efforts are continuously being made to reduce expenses wherever possible.

Code of Conduct

"I would like to say a few words about the working of the Code of Conduct. Abolition of the credit system has indeed been a great boon to the industry. But that is not all that was expected of the introduction of the Code. It is, therefore, necessary to consider whether the expenses involved in implementing the Code are still justified, if the aims and purposes of the Code have not been fulfilled. It is no use blaming the Government for this unsatisfactory state of affairs still existing in the industry. The business community owes a duty to itself to come forward to oppose the continuance of the evil of rebating. Secondly, the executives running the industry should also sit round to consider what other means can be devised to root out this evil practice.

"Surely, the cut in rates is no remedy to cure the industry of the evils of rebating. General insurance industry in our country would have to travel a great deal before it can build up resources to take up greater responsibilities, which our counterparts in other parts of the world are doing today so ably.

"Before I conclude, I would like to take this opportunity to thank one and all, who have supported the Company during last year. I have also to express my thanks to all agents, field workers and staff for their co-operation."

INSURANCE AGENTS' COMMISSION

Replying to a question in the *Lok Sabha*, Mr. B. Gopala Reddi, Union Minister for Revenue and Civil Expenditure, stated that the Life Insurance Corporation had in effect made no reduction in the commission payable to the insurance agents and that the allegation that the commission paid by the Corporation had affected its new business adversely, was baseless. Recalling that certain sections of the Insurance Act, 1938, had been applied to the Life Insurance Corporation with or without modification in pursuance of the provisions of sub-section 2 of Section 43 of the Life Insurance Corporation Act, 1956, the Minister said that one of the sections of the Insurance Act, 1938 applied to the L.I.C. was Section 40A which dealt with the commission or remuneration payable to the agents in respect of any policy of life insurance issued in India by an insurer. This section enjoined that "no person shall pay, or contract to pay, to an insurance agent or no insurance agent shall receive, by way of commission or remuneration in any form in respect of any policy of life insurance issued in India, through an insurance agent, an amount exceeding 35 per cent. of the first year's premium, seven and a half per cent. of the second and third year's renewal premium and thereafter five per cent. of each renewal premium payable on the policy."

One of the cardinal principles on which prosperity of insurance business and safety of the policyholders' money depends is that the expense ratio is maintained as low as possible, and the aforesaid provisions of the Insurance Act are in consonance with this principle.

Mr. Reddi said that the Life Insurance Corporation, acting in conformity with the letter and spirit of this provision, paid in all, approximately 35 per cent. of the first year's premium as commission, though in different forms; 25 per cent. of it has been named as commission and about 5 to 10 per cent. as new business bonus depending upon the quotas of new business secured. The payment in the form of bonus has been considered necessary so that the agents do not lose proper incentive. Even before the Life Insurance Corporation, most of the leading insurers had followed a similar practice of paying commission on sliding scale related to the amount of business brought in by individual agents. It is, therefore, not correct to say, he added, that the commission payable to the insurance agents has been reduced by the Life Insurance Corporation.

There is, of course, the Minister emphasised, a proviso to the above provision of the Insurance Act which says that "an insurer during the first ten years of the business may pay to an insurance agent and an insurance agent may receive from such an insurer, 40 per cent. of the first year's premium payable on the policy." This proviso was meant to help the new companies to stabilise their business in the early stages, in the face of competition from well-established big insurers. In the case of the Life Insurance Corporation, which is the sole insurer in respect of the controlled business, such a situation does not arise. Nor has it been felt necessary to take recourse to this proviso.

Refuting the allegation that the commission paid by the Life Insurance Corporation had affected its new business adversely, Mr. Reddy said that though there might have been a slight setback in the initial stages of the setting up of the Life Insurance Corporation owing to changes in its set-up, the recent figures had shown an upward trend as compared with the previous years. Figures for the period 1st January 1958 to 25th August 1958 showed that, far from registering a fall, the new business completed by the Life Insurance Corporation had shown a definite increase, as compared to the business completed during the corresponding period last year as well as the previous years. In fact, he added, the total new business this year upto 25th August 1958 has exceeded last year's by Rs. 5.3 crores."

PAPER INDUSTRY IN INDIA

PROBLEMS AND PROSPECTS ANALYSED

FOR sometime now, the Indian paper industry has been in the limelight. The Tariff Commission has taken up for consideration the issue of fixing a fair price for paper. It may be noted that some of the mills found it necessary to raise the price of paper by 3½ nP per pound. This has apparently caused considerable concern among consumers. The Government of India tried in vain to arrive at an agreement with the producers over this question. The Government seems to hold the view that the industry, by virtue of its expansion in production, which has doubled itself during the last decade, must be in a position to reduce the cost of production. A part of the benefit thus accrued could be passed on to consumers. However, the mills, on their part, have to face certain difficulties arising out of a rapid increase in their production costs, for no fault of their own. Pointed attention has been drawn to this problem by Mr. A. K. Jain in his presidential speech at the recent annual general meeting of the Indian Paper Mills Association held at Calcutta.

Mr. Jain sought to highlight the fact that, although the cost of production of paper had been steadily increasing for the last few years, the mills had done their best to keep prices at a minimum. For instance, the cost of production has increased allround on account of several items such as labour, electricity duty and electricity rates, coal, stores and chemicals, freight on raw materials and finished goods, and cost of important raw materials like bamboo, waste paper, etc., which are completely beyond the control of the mills. Mr. Jain disclosed that the mills themselves had absorbed part of the increase in cost and only a portion of the increased cost had been passed on to the consumers. While the mills were doing their best to keep prices at the minimum, the State Governments were not adopting a helpful attitude in the matter. He felt that production costs of some of the mills situated in the Punjab, Bombay and Orissa had been pushed up owing to the levy of one duty or another by the State Governments and the enhancement of royalty on lease of bamboos.

Production of Paper

It is, however, gratifying to note that, despite these overwhelming odds the industry has given a good account of itself. Production of paper and paperboard reached the record figure of 210,000 tons in 1957 as against 193,404 tons in 1956. While the general index of industrial production has gone up by 42.3 per cent. between 1952 and the first quarter of 1958, the index for the paper industry has shown an increase by 83.5 per cent. during the same period. Similarly, the rate of growth of paper industry in 1957 was about 8.7 per cent., as against 3.5 per cent. for the industries as a whole. Indeed, the rate of increase in the first quarter of 1958 has been even more spectacular—15.2 per cent. which compares favourably with the figure of 3.7 per cent. for industries in general. The installed capacity of the paper industry at present stands at 252,000 tons. In view of the difficulties in securing foreign exchange, the capacity of the industry is not likely to reach the original target of 450,000 tons by 1960-61. At any rate its capacity is expected to be of the order of 410,000 tons on the basis of schemes now in progress. In this connection, he averred, "With the present tempo of production being maintained, it would not be difficult for the industry to reach the production target of 350,000 tons by 1960-61 even with an installed capacity of 410,000 tons."

Needless to say that, with the spread of education and the improvement in the economic condition in the country, the demand for paper is bound to increase at a rapid pace in the years to come. On the basis of the figures of production and imports during the last five years, the consumption of paper and paperboards in the country has increased at the rate of approximately 14 per cent. on an average every year. The requirements of paper are expected to be of the order of 400,000 tons by the end of the second Plan. Mr. Jain has claimed that, in spite of all-round increase in consumption of paper and paperboards, the industry has been able to meet the entire requirements of the country in almost all kinds of paper. In this context, he referred to the shortage of printing paper in the country. To quote him:

"Only recently for the last nine months scarcity is being felt for ordinary white writing printing paper. Several factors beyond the control of the mills have caused this shortage. On the one hand, expansion programmes of the mills were delayed for about a year partly due to the Suez crisis and partly due to the foreign exchange difficulties. At the same time heavy restrictions were imposed on import of printing paper and the requirements of the Government departments also increased considerably. Besides these three important factors, the mills also experienced difficulties in procurement of important chemicals like caustic and chlorine. All these factors combined caused scarcity of white writing printing paper in the market. The expansion programmes of the mills which had been delayed will now be completed within the course of the next few months and the position will ease to a considerable extent."

Scarcity of Foreign Exchange

One of the major handicaps in carrying out the industry's expansion schemes, as is well known, is the scarcity of foreign exchange. Referring to this problem, he observed:

"The industry is prepared to meet the situation and to go ahead with its expansion plans in a still larger manner to meet the increasing demands of the country in the future. But it is a matter of regret that the Government is of the view that paper is not an essential commodity as is evident from the low priority of allotment of foreign exchange for this industry. Several units have not been able to take effective steps regarding their licensed expansion schemes due to non-allotment of foreign exchange even though they have been able to obtain long-term deferred payment terms from machinery suppliers. Since it takes nearly four years to install a paper factory it is essential that the Govenment should allot adequate foreign exchange immediately to the industry so as to enable it to meet the requirements of the country during the third Plan period. I hope, the Committee recently set up by the Government of India to go into the question of expected consumption of paper by the end of the second Plan period and during the third Plan, will consider this suggestion carefully and recommend to the Government the urgent necessity of allotting sufficient foreign exchange to the paper industry immediately."

Another problem that confronts the industry is with regard to the availability of raw materials like bamboo and sabai grass, at reasonable rates. The Raw Material Resources Sub-Committee of the Pulp and Paper Panel emphasised the difficulties experienced by the producers in this regard. The Planning Commission also recommended measures like reservation of forest areas for the paper industry, large-scale fresh plantation of bamboos, etc. Mr. Jain deplored that the State Governments had been rather lukewarm in introducing these measures. Dealing at length with this problem, he urged the State Governments to follow a rational policy in this regard and help the paper industry by assuring it continued supply of raw materials through long-term leases of forests to the paper manufacturers, instead of annual leases as at present. Regarding waste paper, he called for necessary arrangements for proper collection and sorting of waste paper as well as standardisation of qualities. He made particular reference to the difficulties caused to the industry through burdensome transport and freight policies as well as excise duties. In view of the need for greater efforts to expand this industry, especially in the context of serious foreign exchange difficulties, the Central and State Governments will do well to give the necessary incentives for the expansion of the paper industry's output. The expansion programme envisaged for the industry cannot possibly be implemented without adequate allotment of foreign exchange to paper producers for purposes of securing capital equipments from abroad.

AUTOMOBILE BATTERIES

Self-sufficiency has been achieved in India in regard to automobile batteries. There are 13 manufacturing concerns in India with a total installed capacity of 316,500 storage batteries per year. The production during 1957 was over 324,000 batteries as compared with 314,000 batteries in 1956. The total licensed capacity by the middle of June this year was over 500,000 batteries per year as against the second Plan target of 350,000. The quality of batteries manufactured in India compares favourably with that of well-known foreign brands.

Of the existing manufacturing concerns, six are in Calcutta, three in Bombay, two in Bangalore and one each in Delhi and Madras. Besides these, there are about 100 small-scale manufacturers of automobile batteries with a total annual capacity of about 125,000 batteries. A beginning has been made in exports of Indian automobile batteries. Exports in 1957 were valued at over Rs. 15,000 as against a little over Rs. 14,000 in 1956. In the first six months of this year, Ceylon imported storage batteries of the value of over Rs. 13,000. Parts of storage batteries valued at over Rs. 4,000 were exported to Burma and Ceylon during the same period. Several measures have been adopted to push up exports of automobile batteries.

U.S. ECONOMIC RECOVERY

The recovery of the U.S. economy from its slump of last spring is developing faster and on a broader scale than most people anticipated, according to Mr. Sinclair Weeks, Secretary of Commerce. In an address before the annual convention of the National Association of Retail Druggists, Mr. Weeks forecast good business through the fall and during the Christmas season. He pointed out that retail sales aggregated $16,900 million in the month of August, only slightly below the all-time high of August 1957. There are indications of firm trends in the expenditures of business men for plant and equipments. This, together with other major economic indicators, averred Mr. Weeks, pointed to a marked rise in national output and income for the balance of the year. Personal income rose again in August to an annual rate of $335,500 million. Meanwhile, a Labour Department Survey released recently shows that unemployment dropped in 125 out of the nation's 149 major industrial centres from mid-July to mid-October.

RICE PRODUCTION

The total production of rice all the world over (excluding the U.S.S.R.) was about 215 million metric tons in 1956. Of this, Asia accounted for over 200 million tons. China leads other rice-producing countries, its aggregate yield having gone up to 82 million tons in 1956. India stands second with 43 million tons. Though India and China have the largest area under rice cultivation, the highest per hectare (1 hectare=2½ acres approximately) yield was achieved by Spain 5,810 kilograms (1 kilogram=1 seer and 1.2 ch.), followed by Egypt (5,430 kg.) Australia (5,290 kg.), Italy (4,690 kg.), Portugal (4,230 kg.) and Japan (4,220 kg.). In India the area under rice cultivation extends over 78 million acres. The yield per acre is only about 544 kilograms. In 1957-58, the top five producers of rice among the States were West Bengal (41,85,000 tons), Andhra Pradesh (34,68,000 tons), Madras (31,34,000) tons, Uttar Pradesh (22,84,000 tons) and Bihar (21,98,000 tons).

MYSORE SPINNING SUFFERS LOSS

DIVIDEND LOWER—FINANCES SOUND

THE Mysore Spinning and Manufacturing Company, Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay), has produced highly unsatisfactory results for the year ended 28th February 1958. They are in distressing contrast to the encouraging performance noted in the previous year. It is well known that, in view of the depression prevailing in the textile industry, many mills have been reporting either a decline in profit or even a loss. The Company under review belongs to the latter category. The gross profit amounts to a mere Rs. 7,890, at which level it is next to nothing when compared with Rs. 11.56 lakhs for the previous year and Rs. 10.92 lakhs two years ago. It may be noted here again that the gross profit for 1956-57, namely, Rs. 11.56 lakhs, was more than twice that (Rs. 5.61 lakhs) for 1954-55. A sum of Rs. 3.64 lakhs has been provided for depreciation, as against Rs. 3.93 lakhs in the previous year. In view of the loss, the Company has no tax to pay, except, of course, the Wealth Tax, for which a provision of Rs. 59,070 has been made. This we are told is for both 1956-57 and 1957-58. After these essential provisions, there is a net loss of Rs. 4.57 lakhs, which compares unfavourably with a net profit of Rs. 6.35 lakhs for 1956-57, and Rs. 6.16 lakhs for 1955-56. In order to wipe out the loss, to provide for gratuity for workers and staff and also to declare a modest dividend, the Directors have withdrawn Rs. 8.82 lakhs from the general reserve. The amount transferred to provision for gratuity at Rs. 1.23 lakh is the same as that for the previous year.

Despite the loss incurred, the Directors have thought it fit not to deny the shareholders a decent return. They have accordingly proposed a dividend of 10 per cent. for the year under review. This includes the interim dividend of Rs. 3 per share paid earlier in the year. No fair-minded person can seriously object to this decision of the Directors, as the Company has strong reserves wisely built up in the preceding years. It may be relevant to note here that, for 1956-57 and 1955-56, the Company had paid as much as 18 per cent. per annum, consisting of a dividend of 12 per cent. and a cash bonus of 6 per cent. The Company paid 17 per cent. for 1953-54 which included a bonus of 5 per cent. but, for 1954-55, the bonus part was dropped and a dividend of 12 per cent. only was declared. In the following year, that is, 1955-56, the bonus part of the distribution was not only restored but was actually enhanced to 6 per cent.

The following comparative table shows at a glance the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended February			
	1958	1957	1956	1955
Sale of yarn, cloth and waste ..	180.30	167.59	168.39	133.53
Stocks of yarn, cloth and waste.	68.35	50.87	40.23	38.11
Cotton consumed ..	124.79	116.34	95.65	82.39
Stores, spares and fuel consumed	14.19	14.64	13.70	8.77
Other expenses	53.38	49.05	40.96	46.61
Gross profit	0.08	11.56	10.92	5.61
Managing Agents' commission..	0.42	1.28	1.28	0.38
Depreciation	3.64	3.93	3.48	2.89
Taxation	0.59*	..	..	..
Net profit (+) or loss (—) ..	—4.57	+6.35	+6.16	+2.54
Transfer from reserves ..	8.82	..	..	6.25

Ordinary	3.48 (D. 10%)	4.47 (D. 12% +B. 6%)	4.47 (D. 12% +B. 6%)	2.98 (D. 12%)
Carry forward	0.28	0.36	0.19	0.24

* Provision for wealth tax.

It will be seen that, though the Company's sale proceeds of yarn, cloth and waste had increased by Rs. 12.71 lakhs to Rs. 180.30 lakhs, the year ended in a loss. This was because the increase in sale proceeds had been more than neutralised by the rise in the cost of cotton consumed by Rs. 8.45 lakhs and in other expenses by Rs. 4.33 lakhs. The rise of Rs. 7.48 lakhs in the closing stocks of yarn, cloth and waste is a reflection of the slump in the textile industry.

Explaining the causes for the loss sustained, the Directors state that, with the rising cost of production and continued disparity between the prices of raw material and the finished product, the working of the mill became very unremunerative. The financial burden of the Company increased owing to the very poor offtake of cloth and yarn and consequent accumulation of stocks. The trading conditions continued to deteriorate and, in order to reduce stocks, sales had to be made at heavily losing prices. The year under review was a very bad one for the textile industry as a whole and particularly for mills, the production of which is mostly of the coarse and medium varieties. The Mysore Spinning belongs to this category.

The Company's paid-up capital, as at 28th February 1958, remains unchanged at Rs. 32.30 lakhs and is supplemented by reserves and surplus aggregating Rs. 40.26 lakhs, of which the general reserve alone accounts for Rs. 31.77 lakhs. The current liabilities stand at Rs. 114.27 lakhs, inclusive of secured loans from banks amounting to Rs. 74.14 lakhs. The gross block of Rs. 113.65 lakhs stands well written down to a book value of Rs. 41.15 lakhs. Additions during the year amounted to Rs. 2.39 lakhs. The current assets aggregate Rs. 145.68 lakhs, of which the stock-in-trade, including cotton at cost, alone accounts for Rs. 87.09 lakhs. The current assets cover the current liabilities and the provision for taxation by a margin of Rs. 31.41 lakhs. The financial position of the Company is thus quite satisfactory.

The Rs. 50 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 95 *cum-div.* (final dividend Rs. 2). On *ex-div.* value and on the basis of the dividend for the year, the yield is 5.37 per cent. per annum.

ADMINISTRATION OF COMPANIES ACT

The Government of India has delegated some of the powers vested in them by the provisions of the Companies Act, 1956, to the Regional Directors or the Department of Company Law Administration stationed at Bombay, Calcutta, Kanpur and Madras. The powers delegated to these officers include authority to approve the change of name by a company; to call the annual general meeting of a company where the management has failed to hold such meeting in time; to appoint auditors for a company where no auditor has been appointed; and to empower the Registrar of Companies to present a petition to the court for the winding-up of a company in certain cases.

Regional Directors also have powers to grant extension of time to the liquidator for calling a general meeting of a company or of creditors where the period of extension does not exceed six months; to sanction payment to the contributories out of the companies liquidation account, where the claim does not exceed Rs. 500; and to allow inspection of documents filed with the Registrar along with a prospectus; and right to apply to a High Court for the production and inspection of books and papers of a company where offences are suspected.

Companies and members of the public in Bombay State are advised that correspondence on matters falling under the relevant sections of the Companies Act should hereafter be addressed to the Regional Director, Bombay, through the Registrar of Companies, Bombay.

(Concluded from next column)

continued to be maintained and improved upon. The prospects of the Woollen Branches for the current year are good, although, it is stated, the Branches' production programme in the future may be affected by the restrictions on the import of raw materials.

The Company has a paid-up capital of Rs. 406 lakhs, made up of 81,000 preference shares of Rs. 100 each and 6,500,000 ordinary shares of Rs. 5 each. This is supplemented by reserves and surplus aggregating Rs. 127.73 lakhs. A sum of Rs. 29.50 lakhs, representing reduction in valuation of investments, has been charged to investments reserve which now stands at Rs. 15.20 lakhs. Loans from banks, secured against stores, stocks and other assets amount to Rs. 358.70 lakhs. The other current liabilities amount to Rs. 135.93 lakhs, inclusive of a provision of Rs. 5.04 lakhs for taxation. There has been an addition of Rs. 51 lakhs to the gross block during the year, bringing its total value to Rs. 351.40 lakhs. This has been well written down to Rs. 108.38 lakhs. This is inclusive of expenditure on buildings and machinery in course of construction and installation amounting to Rs. 4.18 lakhs. Investments in Government securities and shares of companies account for Rs. 138.54 lakhs and other investments for Rs. 3.09 lakhs. The other current assets aggregate Rs. 778.35 lakhs and include, among other things, stores and spare parts at Rs. 79.53 lakhs, stock-in-trade at Rs. 377.54 lakhs, sundry debtors at Rs. 122.05 lakhs, loans and advances at Rs. 100.58 lakhs, and cash balances at Rs. 87.45 lakhs.

B.I.C. REPORTS ADVERSE RESULTS

PREFERENCE DIVIDEND IN ARREARS

THE encouraging performance of the British India Corporation Ltd. (Chairman of the Board of Directors: Mr. H. S. Chaturvedi, Kanpur) during the year ended 31st December 1956 which gave rise to hopes that its prospects had been switched on, once again, to an era of improved earnings, have been belied. The Company's working during the year ended December 1957 has resulted in a sharp decline in its profit. It may be recalled that the Company witnessed unfavourable working conditions during 1954 and 1955, of which the latter year, namely, 1955, proved to be the more adverse. It sustained a substantial loss, entailing the holding in arrears of even the dividend on its preference shares, for the first time since the early thirties. The working results for the year under review differ only in one respect and, that is, that the loss sustained is not so pronounced as that incurred two years ago. The preference and ordinary dividends have been withheld once again and a sizable loss has been carried forward. The Directors attribute the unsatisfactory results to the losses suffered by the Cawnpore Cotton Mills Branch and the Cooper Allen Branch.

The Company's gross profit for the year under review amounts to only Rs. 19,727, in marked contrast to that at Rs. 28.58 lakhs for the previous year. It is also substantially lower than the modest Rs. 5.20 lakhs for 1954 but better than the gross loss of Rs. 15.24 lakhs suffered in 1955. After setting aside Rs. 13.42 lakhs for depreciation, as against Rs. 11.52 lakhs for 1956, the net loss amounts to Rs. 13.22 lakhs which compares unfavourably with a net profit of Rs. 17.06 lakhs for the previous year.

The sum written back from provisions no longer required amounts to Rs. 56,829 and the profit on realisation of investments and surplus on sale of machinery and items relating to previous years accounts for Rs. 19.16 lakhs. Out of the amounts thus realised, a sum of Rs. 17.73 lakhs has been transferred to reserve for investments—the full amount of the profit on realisation of investments. After writing off Rs. 1.36 lakh, being expenses relating to previous years, there is a debit balance on the profit and loss account of Rs. 11.36 lakhs which has been adjusted against the reserves. As stated earlier, the adverse results for the year under review have once again compelled the management to hold in arrears the dividend on the Company's preference shares and to skip over the dividend on ordinary shares. The Company had paid a small token dividend of 2 per cent. on the ordinary shares in the previous year.

The salient features of the working results of the Company for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	7,64.48	7,61.45	6,15.54	6,08.29

* For 1955 and 1956.

The Corporation's sale proceeds for the year show only a modest rise of Rs. 3.03 lakhs, as compared with the substantial improvement of Rs. 145.91 lakhs in the previous year. As against this, raw materials and manufacturing charges have increased by Rs. 50.11 lakhs, and other expenses by Rs. 28.56 lakhs.

The Directors state that, due to continuing losses and shortage of capital required to rehabilitate the mill and working capital, the Cawnpore Cotton Mill Branch was compelled to institute an indefinite "lay-off" from 2nd December 1957. They add, however, that the production and sales of the Corporation's Woollen Branches and the trading results achieved continue to be satisfactory. The traditionally high quality of Lalimli and Dhariwal woollen goods

SONE VALLEY CEMENT FARES BETTER

DIVIDEND CUT RESTORED

ENCOURAGING results are disclosed by the audited statement of accounts of the Sone Valley Portland Cement Company, Ltd. (Chairman: Mr. A. L. Poddar, Calcutta), for the year ended 31st December 1957. The Company's working during the year under review has resulted in a sizable improvement in its profit. Coming as this does in refreshing contrast to the downward trend in profits which persisted for the preceding five years in succession, the performance of the Company during 1957 will be welcomed. The gross profit at Rs. 10.38 lakhs has advanced by Rs. 6.56 lakhs from Rs. 3.82 lakhs for the previous year. It is, however, lower than Rs. 12.40 lakhs for 1955 but the redeeming feature is that the downward trend has been reversed for the first time after half a decade.

After providing Rs. 4.85 lakhs for depreciation, as against Rs. 4.60 lakhs in 1956 and setting aside Rs. 89,000 for wealth tax (including Rs. 44,139 in respect of the previous year), as against Rs. 1.50 lakh short provided for taxation in 1955, the net profit at Rs. 4.64 lakhs compares well with a net loss of Rs. 2.63 lakhs for the preceding year. In view of the better results for the year under review, the Directors have proposed to restore the dividend to 6 per cent. from 3 per cent. for 1956, to which level it had been cut from the same rate, namely, 6 per cent. paid in 1955. For this purpose, they have transferred Rs. 4.50 lakhs, the actual amount required for payment of the dividend, from the general reserve No. 1. Lest it should be thought that the Company's profit for the year is not sufficient to pay the dividend, the Directors explain that this procedure is proposed in order to enable the shareholders to get credit for income-tax paid by the Company on such accumulated profits in the previous year under Section 49(b) of the Income-tax Act. Out of the net profit, they have transferred Rs. 4.50 lakhs to general reserve No. 2 in order to distinguish and keep the same apart from the existing general reserve constituted of taxed profits.

A word about the Company's dividend policy in the past may not be out of place here. The Company had paid a dividend of 10 per cent. for 1952. This was progressively reduced to 7½ per cent. for 1953 and 5 per cent. for 1954. A modest upward revision to 6 per cent. was however, made for 1955, only to be halved to 3 per cent. for 1956.

The following table will help readers to make a comparative study of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds	1,46.18	1,23.66	1,25.08	1,26.26

† Provision for wealth tax.

The Directors state that, although the Government of India has granted a licence to the Company for expansion of the installed capacity, the Company has not yet been able to secure requisite import licence on account of the difficult foreign exchange situation. Efforts are, however, being made to import machinery for increasing the production capacity of the Company's cement works at Japla by 500 tons per day under the U.S. Economic Development Loan Fund. The Central Government has increased the price of cement manufactured by the Company by Rs. 4.75 per ton with effect from 1st July 1958. The Company's production of cement during 1957 amounted to 177,210 tons, as against 174,630 tons in 1956. Despatches during 1957 were 173,640 tons, as compared with 173,187 tons a year earlier.

The balance-sheet as at 31st December 1957 shows no change in the Company's paid-up capital at Rs. 75 lakhs, all in ordinary shares of Rs. 5 each. As against this, the reserves and surplus amount to only Rs. 17.89 lakhs. The gross block of Rs. 218.92 lakhs stands written down at Rs. 64.03 lakhs. Additions during the year amounted to Rs. 9.05 lakhs. The prospecting and development expenditure on Hutar Coalfield stands at Rs. 2.14 lakhs. The current assets aggregate Rs. 80.61 lakhs, against which the current liabilities amount to only Rs. 53.90 lakhs.

The Rs. 5 paid-up shares of the Company are currently quoted at Rs. 6 *ex-div.*, at which rate and on the basis of the dividend for the year, the yield is 5 per cent. per annum.

Points From The Chair

Helping Exports

"WHILE the manufacturers owe it to themselves, to their workers, and to the Government to do all they can for exports, may I also request the Government to take the various steps early for helping exports. Many questions have been pending before the Government for a long time. For instance, the concession in railway freights, income-tax, in rates of interest, and allowing a percentage of foreign exchange for imports of various things needed by industry, etc. An early decision on all these points will certainly help exports. When I say this, I am fully aware and grateful for what the Government have already done, but more has got to be done."

LALA SHRI RAM,
Jay Engineering Works Ltd.

Forced Industrialisation

"A rapid private capital flow from capital-surplus countries will assist the solution of the basic economic problem of the underdeveloped countries in many ways. Apart from accelerating the pace of industrialisation and providing gainful opportunities for employment, it will also ease the foreign exchange problem. As you are aware, our country is now confronted with a serious foreign exchange crisis. In spite of heavy import cuts, credit drawals from the International Monetary Fund and loan assistance from other countries, the draft on our foreign exchange resources has continued to be rather serious. It is sometimes suggested that the import cuts have proved a blessing in disguise at least in one sense: it has greatly encouraged the setting up and expansion of many industries in the country. But to my mind, this type of 'forced industrialisation' is not a very happy phenomenon viewed in the context of planned development. This will promote non-durable consumer industries at the cost of heavy and basic industries. It also necessitates retrenchment of staff in the short period among the importing firms. A high level of international trade is always an aid and not a deterrent to rapid economic growth. Moreover, these import cuts have created shortages accentuating the inflationary trend of prices. Prices of many consumer articles have greatly increased."

B. L. JALAN,
General Assurance Society Ltd.

Smooth Running of Textile Industry

"If the mills and the mercantile community can feel confident that there will not arise the compulsion of thrusting heavy stocks on the market when it is not in a position to absorb them, then an improvement in the condition of the industry is possible. It should be possible to arrange loans up to 90 per cent. or so of the value of the stock from either the State Bank of India or a pool of banks and work the scheme in such a manner that, while it will not impose any liability on the pool, it will help the mills to overcome genuine temporary difficulties. Once the present heavy stocks are cleared, trade should revive. The next two to three months are very critical for the industry and your Company, in particular. If, contrary to expectations, the demand proves inadequate and our Company and other mills are unable to dispose of their stocks, a very serious situation will arise. It is necessary, therefore, that both the Government and the industry should seriously consider and tackle the problem. In every crisis, it is of vital importance that measures that might be deemed essential should be taken promptly and effectively. Half-hearted and belated efforts, sometimes far from relieving distress they are intended to, help inflict greater injury to the industry. The administrative machinery of the Government and the trade should move promptly to cope with the rapid changes that take place in the economic field. The textile industry, as everybody knows, plays a vital role in our national economy, and the need for its smooth running cannot be over-emphasised."

N. K. PETIGARA,
India United Mills, Ltd.

Saving Foreign Exchange

"We fully realise the difficulties of the foreign exchange situation of our country. This situation can be eased only in two ways, by exporting more and by importing less. In a heavy industry such as ours, export is extremely difficult and takes many years of patient work to achieve but our ability to save foreign exchange by reducing imports by making things here has never been fully exploited. We, however, expect a change in Government's policy in this regard as outlined by the Hon'ble Sri Lal Bahadur Shastri, the Commerce and Industry Minister, at the meetings of the Export and Import Advisory Councils held in New Delhi last month."

B. P. SINGH ROY,
Jessop & Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

SONE VALLEY PORTLAND CEMENT CO., LTD. Annual General Meeting, Calcutta, 13th October 1958. Dividend: 6 per cent. or Re. 0.30 per share, payable on or after 30th October 1958. Transfer books remain closed from 1st to 13th October 1958, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th October 1958. Dividend: 10 per cent. or Rs. 5.00 per share (includes interim dividend of Rs. 3.00 per share). Final dividend of Rs. 2.00 per share, is payable on and after 24th October 1958.

RANICHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 16th October 1958. Dividend: Re. 0.50 per share. Transfer books remain closed from 7th to 16th October 1958, both days inclusive.

NEW CINNATOLLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 18th October 1958. Dividend: *Nil*. Transfer books remain closed from 9th to 18th October 1958, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 18th October 1958. Dividend: 5 per cent. Re. 0.50 per share (final), payable on or after 25th October 1958. Transfer books remain closed from 7th to 18th October 1958, both days inclusive.

NORTH WESTERN CACHAR TEA CO., LTD. Annual General Meeting, Calcutta, 24th October 1958. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 10.00 per share). Transfer books will remain closed from 14th to 24th October 1958, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 24th October 1958. Dividend: Rs. 12.50 per share (includes bonus of Rs. 5.00 per share), payable on and after 27th October 1958. Transfer books remain closed from 11th to 25th October 1958.

MUKAND IRON AND STEEL WORKS LTD. Annual General Meeting, Bombay, 24th October 1958. Dividend: Re. 1.20 per old ordinary share (includes bonus of Re. 0.40 per share) and Re. 0.30 per new ordinary share (includes bonus of Re. 0.10 per share). Transfer books remain closed from 10th to 24th October 1958, both days inclusive.

THOMSON AND TAYLOR LTD. Annual General Meeting, Bombay, 25th October 1958. Transfer books will remain closed from 15th to 25th October 1958, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Bombay, 25th October 1958. Dividend: Re. 1.20 per share (includes interim dividend of Re. 0.30 per share). Transfer books will remain closed from 29th October to 8th November 1958, both days inclusive.

BRITISH INDIA CORPORATION LTD. Annual General Meeting, Kanpur, U.P., 25th October 1958. Dividend: *Nil*.

TIRUPATI COTTON MILLS LTD. Annual General Meeting, Madras, 27th October 1958. Transfer books will remain closed from 13th to 27th October 1958, both days inclusive.

KASTURI MILLS LTD. Annual General Meeting, Coimbatore, 27th October 1958 Dividend: *Nil*. Transfer books will remain closed from 15th to 31st October 1958, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th October 1958. Final dividend of Rs. 4.50 per share. Transfer books remain closed from 7th to 28th October 1958, both days inclusive.

PEERMADE TEA CO., LTD. Interim dividend of 6¼ per cent. or Re. 0.62 per share on ordinary shares, for the year 1958. Transfer books will remain closed from 4th to 14th November 1958, both days inclusive.

COWCODDY ESTATES LTD. Final dividend of 40 per cent. for the year ended 30th June 1958. Transfer books will remain closed from 18th October to 1st November 1958, both days inclusive.

JANARDANA MILLS LTD. Dividend of 6 per cent. or Rs. 3.00 per share, for the year ended 31st December 1957.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Dividend of Rs. 10.00 per share, for the year ended 30th June 1958, payable on 14th November 1958. Transfer books will remain closed from 13th October to 10th November 1958, both days inclusive.

DHRANGADHRA CHEMICAL WORKS LTD. Dividend of Re. 6.00 per share, on old and new shares, for the year ended 31st March 1958. Transfer books remain closed from 7th to 17th October 1958, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Dividend of Re. 1.80 per share, on old shares and Re. 0.90 per share, on new shares, for the year ended 30th June 1958. Transfer books will remain closed from 3rd to 27th November 1958, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Dividend of Re. 1.00 per ordinary share, for the year ended 30th April 1958. Transfer books will remain closed from 31st October to 14th November 1958, both days inclusive.

RAJAPALAYAM MILLS LTD. Dividend of Rs. 8.00 per share, for the year ended 31st March 1958. Transfer books will remain closed from 12th to 25th October 1958, both days inclusive.

RESULTS OF BRITANNIA BISCUIT GOOD

NEW CINNATOLLIAH TEA SUFFERS LOSS

Britannia Biscuit Co., Ltd.

THE directors of the above Company (Managing Director: Mr. K. Julian Scott, Calcutta) present herewith the audited accounts of the Company for the year ended 31st March 1958.

After providing Rs. 5,98,034 (Rs. 5,78,075) for depreciation and reserving Rs. 11,80,000 (Rs. 4,80,000) for income-tax and super-tax, and Rs. 89,943 for wealth tax the profit and loss account shows a net profit for the year of Rs. 10,36,359 (Rs. 8,16,344). To this amount must be added the amount brought forward from the last year of Rs. 1,84,683 (Rs. 1,79,277) making a total amount available of Rs. 12,21,042 (Rs. 9,95,621). The directors have transferred to reserve for taxation contingencies the sum of Rs. 2,00,000 (Rs. 1,50,000) and to general reserve Rs. 2,50,000 (Rs. 2,00,000) leaving a balance of Rs. 7,71,042 (Rs. 6,45,621). The half-yearly dividend on preference shares and the interim dividend of 3 (3) per cent. on ordinary shares absorbed Rs. 1,38,529 (Rs. 1,38,529). The directors recommended that the balance of Rs. 6,32,513 (Rs. 5,07,092) at the credit of the profit and loss account be dealt with as follows:—

To payment of a dividend on preference shares without deduction of income-tax amounting to Rs. 618 (Rs. 618) to pay a final dividend of 9 (7) per cent. without deduction of tax, making 12 (10) per cent. for the year on ordinary shares amounting to Rs. 4,13,731 (Rs. 3,21,791) and to carry forward a balance of Rs. 2,18,164 (Rs. 1,84,683).

The accounts for the year ended 31st March 1958 show that the Company has again established new records of production and sales. This has enabled the Company to carry the increased costs, but the additional profit is small in relation to the total turnover figure.

In the previous year's report, the directors sounded a note of warning that the fiscal measures adopted by the Government coupled with restrictions imposed on imports would further raise the cost of production. This forecast has unfortunately come true and there has been a very considerable increase in production costs. The upward trend in operating expenses noted in last year's report is still continuing and the directors again refer to this matter so that the effects of inflationary pressure are amply appreciated.

The directors' endeavours to expand exports at substantially reduced prices continue, but progress will remain restricted until the Government recognises the necessity of affording manufacturers realistic assistance.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,12,470	Gross block	1,15,02,202
Debentures	15,00,000	*Less*—Depreciation ...	42,92,212

New Cinnatolliah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working loss of Rs. 2,03,531 (profit of Rs. 21,565). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs 25,000 (*nil*) from revenue reserve, Rs. 1,21,000 (*nil*) from buildings and machinery reserve, Rs. 15,000 (*nil*) from hail reserve and Rs. 1,623 (Rs. 5,000) from provision for taxation, being a reserve no longer required, there is a balance at debit of the profit and loss account amounting to Rs. 38,569 (Rs. 5,481 after transferring Rs. 25,000 from revenue reserve) to be carried forward.

Crop was 4,16,646 lbs. as compared with 4,74,400 lbs. in 1956. The average selling price realised was Rs. 2.17 per lb. as against Rs. 2.30 per lb. in the previous year.

Estimates for 1958 provide for a crop of 4,80,000 lbs. at an outlay of Rs. 10,68,314 including inland freight and sale charges. Planted area is now 801.11 acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Birpara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a working profit of Rs. 1,46,034 (Rs. 4,82,143). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 35,000 (Rs. 40,000) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 1,83,350 (Rs. 4,31,289) of which the directors have transferred Rs. 50,000 (Rs. 1,50,000) to revenue reserve and Rs. 10,000 (*nil*) to development reserve. The directors recommend payment of a dividend of 8 (8) per cent. on the preference shares and 7½ (25) per cent. on the ordinary shares, for season 1957 leaving Rs. 47,850 (Rs. 48,289) to be carried forward.

Crop was 11,23,916 lbs. as compared with 12,42,950 lbs. in 1956. The average selling price realised was Rs. 2.04 per lb. as against Rs. 2.17 per lb. in the previous year.

Estimates for 1958 provide for a crop of 12,80,000 lbs. at an outlay of Rs. 21,77,460 including inland freight and sale charges. Planted area is now 1,380.52 acres.

Accounts in brief are as under:—

North-Western Cachar Tea Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit of Rs. 1,10,482 (Rs. 2,51,506). On transfer of this sum to profit and loss account and after making necessary adjustments there remains a balance of Rs. 1,30,447 (Rs. 2,51,506), provision for taxation absorbs Rs. 75,000 (Rs. 1,30,000). With the balance brought forward from the last year of Rs. 1,37,855 (Rs. 1,21,654) there is a total amount available of Rs. 1,93,302 (Rs. 2,42,855). The directors recommend to dispose of this amount as follows:—

To interim dividend on 7,000 shares at Rs. 10 (*nil*) per share free of income-tax (paid already) Rs. 70,000 (*nil*) and to pay a final dividend at Rs. 5 (Rs. 15) per share (free of income-tax) absorbing Rs. 35,000 (Rs. 1,05,000) leaving a balance to be carried forward of Rs. 88,302 (Rs. 1,37,855).

Outturns and average selling prices compared with those of the previous year are as follows:

Crop	1957 Mds.	1956 Mds.
Kurkoorie	4,712	4,399
Bicrampore	4,117	4,433

Average selling prices per lb.:—

	1957 Rs. nP.	1956 Rs. as. ps.
Kurkoorie	1 62	1 14 0
Bicrampore	1 81	2 0 6

Rs.	22,73,706	Rs.	22,73,706

Gaekwar Mills Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) submitted the audited accounts of the Company for the year ended 31st December 1957.

The accounts show that the profit for the year after deducting depreciation of Rs. 4,10,000 (Rs. 3,51,000) amounts to Rs. 6,97,560 (Rs. 9,88,311) to which is added the balance brought forward from last year of Rs. 35,479 (Rs. 56,168) making a total of Rs. 7,33,039 (Rs. 10,44,479). The directors have transferred from dividend equallisation fund Rs. 2,00,000 (*nil*) and from rehabilitation fund Rs. 2,00,000 (*nil*) making a total amount available for disposal of Rs. 11,33,039 (Rs. 10,44,479). The directors have made the following appropriations out of this sum:—

To general reserve from current year's profit Rs. 4,00,000 (*nil*), to development rebate reserve Rs. 3,15,000 (Rs. 1,09,000) and to payment of proposed dividend free of income-tax:—

[From 1956 taxed profits not already distributed] 34th dividend on 40,000 shares of Rs. 100 each at Rs. 10 (Rs. 12.50) per share free of income-tax absorbing Rs. 4,00,000 (Rs. 5,00,000) leaving a balance to be carried forward to next year's account of Rs. 18,039 (Rs. 35,479 after transferring Rs. 2,00,000 to rehabilitation fund and Rs. 2,00,000 to dividend equalisation fund).

It will be observed that the values of Mills building and plant and machinery show an increase of Rs. 1,21,908 and Rs. 12,36,230 respectively due to building extensions and the new machinery added. Most of the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	1,04,10,424
Reserves ...	48,88,644	*Less*—Depreciation ...	77,05,801
Provision for taxation ...	61,000	Net block ...	27,04,623
Liabilities	1,03,13,290	Stock-in-trade	90,08,114
Profit and loss account ...	18,039	Stores, spares etc. ...	18,21,301
		Debts, deposits and advances ...	34,73,404
		Investments	16,58,284
		Cash ...	6,15,241
Rs.	1,92,80,973	Rs.	1,92,80,973

Navsari Cotton and Silk Mills Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) submitted the audited accounts of the Company for the year ended 31st December 1957.

The accounts show that the profit for the year after deducting depreciation of Rs. 3,90,000 (Rs. 2,52,500) amount to Rs. 3,24,499 (Rs. 7,09,630) to which is added the balance brought forward from last year of Rs. 56,004 (Rs. 47,374) making a total of Rs. 3,80,503 (Rs. 7,57,004). With the amount transferred from dividend equallisation account of Rs. 1,00,000 (*nil*) the amount available for disposal is Rs. 4,80,503 (Rs. 7,57,004). The directors have made the following appropriations out of this sum:—

To development rebate reserve Rs. 56,000 (Rs. 2,03,500), to payment of proposed dividends free of income-tax.

[From 1957 taxed profits Rs. 3,03,000 and from the previous years' taxed profits (not already distributed) Rs. 1,00,000]: 5,000 cumulative 5 (5) per cent. preference shares of Rs. 100 each free of income-tax Rs. 25,000 (Rs. 25,000) and on 31,500 ordinary shares of Rs. 100 each at Rs. 12 (Rs. 15) per shale free of income-tax Rs. 3,78,000 (Rs. 4,72,500) leaving a balance to be carried forward to next year's account of Rs. 21,503 (Rs. 56,004).

It will be observed that the values of Mills' buildings and plant and machinery show an increase of Rs. 7,131 and Rs. 2,37,719 respectively due to building extensions and the new machinery added. Most of the machines have been installed and are working satisfactorily.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,50,000	Gross block	54,93,256
Reserves ...	49,27,009	*Less*—Depreciation ...	38,93,987
Provision for taxation ...	2,25,000	Net block ...	15,99,269
Liabilities ...	51,29,114	Stock-in-trade	60,70,354
Profit and loss account ...	21,503	Stores, spares etc. ...	10,47,090
		Debts, deposits and advances ...	32,71,517

Rs.	1,39,52,626	Rs.	1,39,52,626

Tirrihannah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation of Rs. 1,71,183 (Rs. 4,70,476) to which must be added the balance of profit brought forward from 1956 of Rs. 14,644 (Rs. 29,519) making a total of Rs. 1,85,827 (Rs. 4,99,995). From this amount must be deducted adjustment account Rs. 6,989 (Rs. 7,214), provision for taxation Rs. 40,000 (Rs. 1,50,000 including wealth tax) provision for wealth tax Rs. 4,000 and amount written off stores for obsolescence etc., Rs. 147 (Rs. 2,623) leaving a balance of Rs. 1,34,691 (Rs. 3,29,644 after providing Rs. 10,514 for labour bonus). From this amount the directors have set aside to buildings and machinery reserve Rs. 25,000 (Rs. 2,50,000) leaving an available balance of Rs. 1,09,691 (Rs. 79,644) which, the directors recommend, should be dealt with as follows:—

In payment of a dividend of rupee one per cumulative preference share for the year ended 31st December 1957, on 10,000 cumulative preference shares, absorbing Rs. 10,000 (Rs. 10,000) and in payment of a dividend of Rs. 3.00 (Rs. 2.50) per ordinary share for the year ended 31st December 1957, on 22,000 ordinary shares, absorbing Rs. 66,000 (Rs. 55,000) leaving to be carried forward Rs. 33,691 (Rs. 14,644).

The saleable crop weighed out at 8,010 maunds against an estimate of 8,300 maunds and was disposed of at an average price of Rs. 1.89 per lb. The usual comparative statement for previous seasons is given below:—

Season	Crop Mds.	Average Price per lb. Rs.
1956	8,084	2.22
1955	8,585	1.93
1954	7,116	2.64
1953	6,503	1.83

The estimate for season 1958 provides for a saleable crop of 9,000 maunds at a total revenue expenditure of Rs. 9,75,762.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Gross block	13,61,474
Reserves ...	9,75,250	*Less*—Depreciation ...	5,52,735
Provision for taxation ...	4,52,564	Net block ...	8,08,739
Liabilities ...	4,05,930	Stock of tea	5,61,026
Profit and loss account ...	33,691	Stores, etc. ...	1,59,599
		Debts, deposits and advances ...	2,15,914
		Investments	2,401
		Cash	4,39,956
Rs.	21,87,435	Rs.	21,87,435

Sungma Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation, of Rs. 2,14,954 (Rs. 3,61,018) to which must be added the balance of profit brought forward from 1956 of Rs. 23,482 (debit of Rs. 33,802) making a total of Rs. 2,38,436 (Rs. 3,27,216). From this amount must be deducted adjustment account Rs. 17,990 (Rs. 8,219), provision for taxation Rs. 69,500 (Rs. 68,618), provision for wealth tax Rs. 2,000 (*nil*) and amount written off stores for obsolescence Rs. 148 (Rs. 349) leaving a balance of Rs. 1,48,798 (Rs. 2,41,414 after providing Rs. 8,616 for provision for bonus to garden labour and staff). The directors have set aside to general reserve Rs. 75,000 (Rs. 1,24,182) leaving an available balance of Rs. 73,798 (Rs. 1,17,232). This amount the directors recommend, should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1957, at the rate of 75 (Re. 1.50) naye Paise per ordinary share on 62,500 ordinary shares, absorbing Rs. 46,875 (Rs. 93,750) leaving to be carried forward Rs. 26,923 (Rs. 23,482).

The saleable crop weighed out at 4,418 maunds against an estimate of 5,000 maunds and was disposed of at an average price of Rs. 3.49 per lb. The usual comparative statement for previous seasons is given below:—

Season	Crop Mds.	Average Price per lb. Rs.
1956	4,725	3.60
1955	4,685	2.46
1954	4,497	3.40
1953	4,127	2.33

The estimate for season 1958 provides for a saleable crop of 5,000 maunds at a total revenue expenditure of Rs. 9,45,540.

The smaller crop made in 1957 was due to adverse weather conditions experienced early in the season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,25,000	Gross block	16,47,148
Reserves ...	7,73,767	*Less*—Depreciation ...	4,38,738
Provision for taxation ...	1,40,100	Net block ...	12,08,410
Liabilities ...	2,78,060	Work-in-p r ogress ...	49,390
Profit and loss account ...	26,923	Stock of tea ...	2,23,237
		Stores, etc. ...	1,26,086
		Debts, deposits and advances ...	90,077
		Investments	3,802
		Cash	1,42,848
Rs.	18,43,850	Rs.	18,43,850

Margaret's Hope Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation for 1957, of Rs. 81,446 (Rs. 1,21,432) to which must be added the balance brought forward from 1956 of Rs. 28,470, making a total of Rs. 1,09,916 (Rs. 1,21,432). From this amount must be deducted depreciation in respect of previous year Rs. 10,528, adjustment account Rs. 22,362 (Rs. 10,976), provision for taxation Rs. 24,000 (Rs. 20,190) and provision for wealth tax Rs. 1,300 (Rs. 1,328) leaving a balance of Rs. 15,726 (Rs. 68,470 after adjusting the debit balance brought forward from the previous year). The directors distributed this amount as follows:—

In payment of a dividend of seventy-five naye Paise (Re. 1.00) per share for the year ended 31st December 1957, on 40,000 equity shares, absorbing Rs. 30,000 (Rs. 40,000) leaving to be carried forward Rs. 21,726 (Rs. 28,470).

The saleable crop weighed out at 4,283 maunds against an estimate of 4,960 maunds and was disposed of at an average price of Rs. 3.06 per lb. The usual comparative statement for previous seasons is given below:—

Season	Crop Mds.	Average Price per lb. Rs.
1956	4,059	2.95
1955	4,419	2.29
1954	4,238	3.62
1953	3,869	2.65

The estimate for season 1958 provides for a saleable crop of 4,600 maunds at a total revenue expenditure of Rs. 9,29,285.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Gross block ...	7,43,042
Reserves ...	4,00,225	*Less*—Depreciation ...	3,82,245
Provision for taxation ...	1,76,300	Net block ...	3,60,797
Liabilities ...	1,93,650	Work-in-p r ogress ...	6,013
Profit and loss account ...	21,726	Stock of tea	2,63,411
		Stores, etc. ...	1,26,179
		Debts, deposits and advances ...	2,36,723
		Investments	2,702
		Cash	1,96,076
Rs.	11,91,901	Rs.	11,91,901

Bhatkawa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation of Rs. 2,22,666 (Rs. 5,51,425) to which must be added the balance of profit brought forward from 1956 of Rs. 45,241 (Rs. 39,426) making a total of Rs. 2,67,907 (Rs. 6,55,851 including Rs. 65,000 being provision for taxation overprovided). From this amount must be deducted adjustment account Rs. 9,522 (Rs. 16,550), provision for taxation Rs. 98,000 (Rs. 1,46,473) and provision for wealth tax Rs. 12,000 (*nil*) leaving a balance of Rs. 1,48,385 (Rs. 4,36,755 after providing Rs. 50,624 for labour bonus and after writing off Rs. 5,449 from stores for obsolescence). The directors recommend that this amount should be dealt with as follows:

In payment of a dividend for the year ended 31st December 1957, at the rate of Re. 1.50 (Rs. 3.00) per ordinary share on 90,000 ordinary shares, absorbing Rs. 1,35,000 (Rs. 2,70,000) and leaving to be carried forward Rs. 13,385 (Rs. 45,241 after placing Rs. 46,514 to general reserve).

The saleable crop weighed out at 15,648 maunds against an estimate of 17,000 maunds and was disposed of at an average price of Re. 1.95 per lb. The usual comparative statement for previous seasons is given below:

Season	Crop Mds.	Average Price per lb. Rs.
1956	15,778	2.14
1955	17,728	1.85
1954	17,698	2.62
1953	17,469	1.92

The estimate for season 1958 provides for a saleable crop of 17,000 maunds at a total revenue expenditure of Rs. 20,97,703.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Gross block ...	21,72,529
Reserves ...	17,75,000	*Less*—Depreciation ...	11,20,841
Provision for taxation ...	5,58,790	Net block ...	10,51,688
Liabilities ...	7,48,473	Work-in-p r ogress ...	10.853

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *8th October*

Easy conditions continued to prevail in the short-term money market for yet another week. Thanks to the plentiful supply of funds, money was almost unlendable, but this did not affect the interest rates. The volume of business was also small. Inter-bank call money continued to be quoted at 2 to 2¼ per cent. (the former was the more common rate) among the big banks and at 2¼ to 2½ per cent. among the small banks. Seven days' deposits were offered 3¼ to 3⅜ per cent. and short-term deposits 3½ to 4 per cent. for one to six months.

The amount offered against this week's Rs. 2 crores 91-day Treasury Bills was Rs. 3.20 crores, against Rs. 2.45 crores tendered in the previous week. The average rate of accepted tenders was Rs. 2.525 per cent. per annum, which was again a shade lower than the previous week's rate of Rs. 2.527 per cent. Tenders for a further sum of Rs. 2 crores have been invited for next week.

An expansion of Rs. 11.72 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 3rd October 1958, in contrast to the contraction of Rs. 13.75 crores noted in the preceding week. Notes held in the Banking Department were lower by Rs. 12.43 crores. There has been no change in the holdings of foreign securities, and balances held abroad (in the Banking Department) show only a fractional drop. Central Government's deposits are up by Rs. 4.23 crores, while other Governments' deposits have declined by Rs. 8.80 crores. Deposits of banks too show a fall of Rs. 8.12 crores. Loans and advances to Governments and other loans and advances do not show any notable change. Barring a sum of Rs. 11 lakhs, bank's borrowings against usance bills have all been repaid. Investments show a decline of Rs. 1.41 crore.

The Scheduled banks' statement for the week ended 26th September 1958 discloses a fall of Rs. 2.87 crores in demand deposits and a rise of Rs. 7.98 crores in time deposits. Borrowings from the Reserve Bank have declined by Rs. 3.81 crores. of which borrowings against usance bills account for Rs. 2.35 crores. Advances show a drop of Rs. 8.57 crores and bills purchased and discounted Rs. 71 lakhs. A further addition of Rs. 2.38 crores is noted in investments and of Rs. 8.23 crores in cash balances.

Activity in the Gilt-edged market continued to be dull, despite the extremely easy money conditions. While there was small selling in selected counters, buyers were mostly reserved. 3 per cent. 1986 Conversion Loan closed a shade lower at Rs. 74.05. 3 per cent. 1970-75, however, picked up 10 nP to Rs. 90. 3 per cent. 1966-68 was unchanged at Rs 94, 3 per cent. 1964 at Rs. 96.75 and 3 per cent. 1963-65 at Rs. 96.70. 3 per cent. 1959-61 gained 10 nP to Rs. 99.95. 3½ per cent. 1961 was done a fraction lower at Rs. 100.15, while 3½ per cent. 1963 was unchanged at Rs. 100.05, 3½ per per cent. 1964 at Rs. 99.90 and 3½ per cent. 1965 at Rs. 99.70. 3½ per cent. 1967 was maintained at Rs. 98.85 and 3½ per cent. 1968 at Rs. 98.60. 3½ per cent. 1967 were a shade better at Rs 100.40 and 4 per cent. 1960-70 at Rs 100.65.

After a lapse of nearly three months, another State Government has announced its intention to enter the capital market. The Government of Bihar proposes to issue a 4½ per cent. Development Loan for Rs. 2.50 crores, the issue price being Rs. 99.50 per cent. This State did not fall in line with the 10 other States which entered the market in July last. The loan will have a currency of 12 years, being repayable at par on 13th October 1970. The list for subscriptions will open on the 13th inst. and close on the 18th or earlier without notice.

In tune with the improvement in sterling abroad, the rupee also gathered some strength. Banks' selling rate of ready dollars declined from Rs. 477 to Rs. 476.50 per $100 and their buying rate from Rs. 473.50 to Rs. 473.25 per 100. In New York, spot sterling rose from $2.80-23/32—2.80-25/32 to $2.80-13/16—2.80⅞, while three months' forward shaded off from $2.80-11/32—2.80-13/32 to $2.80-9/32—2.80-11/32.

HIDES AND SKINS STEADY

(From Our Own Correspondent)

MADRAS, *6th October*

Arrivals of E.I. tanned cow hides were of the usual volume, and of cow calf and buff calf small. Prices of lightweight cow hides and cow calf and buff calf were steady, while medium weight cow and heavies were easy, because U.K. demand was poor for the latter averages.

Though there was good call for fifths selections, sellers were not keen to offer them unless combined with run and fourths selections. U.K. buyers paid increases of ½d. to 1d. for lights in some cases but declined to improve the price levels further. Tanners are holding out but might not succeed in pushing prices up.

Tanned skins market locally was steady. Shipment business was small with stray demand for lightweight goat and medium class sheep skins from the Continent and Japan. The next tanned skins public auctions commence on 13th inst. when 450,000 goat skins and 550,000 sheep skins will be offered for sale. Prospects of good prices in the auctions do not seem bright.

Shipments during September were 2.679 bales tanned cow hides, 265 cow calf, 37 buffs, 172 buff calf 903 goat, 582 sheep to U.K.; 58 cow, 15 cow calf, 5 buff calf, 748 goat, 207 sheep to Continent; 6 cow, 5 cow calf, 64 buffs, 5 buff calf, 95 goat to U.S.A. and 155 sheep to Japan.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *8th October*

After presenting an easy trend in the first two sessions of the week under review, the bullion market picked up strength on Monday which persisted practically till the close today. The earlier easiness was due to heavy arrivals, particularly of silver, while follow-up support was lacking. Consequently, prices tended to recede. On Monday, the market staged an impressive recovery induced by fresh buying as well as short-covering. At higher levels, profit-taking set in and values staged a decline on Tuesday. Today, the market again ruled distinctly firm, thanks to large buying by operators who were hitherto not inclined to make purchases due to the marked fall in commodity prices. The bears also were somewhat anxious to even up their contracts. Not only the earlier losses were completely made up but the closing rates stood higher than those at the end of last week.

Forward silver (*Aswayuj* settlement), which stood at Rs. 187-13 last week-end, declined to Rs. 187-8 on Saturday. After recovering subsequently to Rs. 188-10, it eased to Rs. 188-1 yesterday. Today, however, it firmed up to Rs. 188-8 before finishing at Rs. 188-6. The net gain over the week was As. 9. Business in *Kartik* delivery commenced on Monday at a premium of As. 12 over the *Aswayuj* delivery, the starting rate being Rs. 189-2. The delivery declined to Rs. 188-15 yesterday, but moved up to finish at Rs. 189-2 today.

Ready silver opened the week at Rs. 186-8, as against Rs. 186-13 on Wednesday last. It encountered support and advanced to Rs. 187-6 on Monday. After receding to Rs. 187-3 yesterday, it recovered to Rs. 187-8 today. The daily arrivals of silver averaged 30 bars, while offtake was 14 bars per day on an average. The floating stocks of silver are estimated at 1,000 bars.

Forward gold (*Aswayuj* settlement) was well supported, the quotation moving up from Rs. 107-3-6 to Rs. 107-14 on the 6th inst. After receding to Rs. 107-11 yesterday, it rose to Rs. 108-1-6 before finishing at Rs. 108-1. The net gain over the week was As. 13-6. Business in *Kartik* delivery commenced today at Rs. 108-1. Towards the close, the delivery stood at Rs. 108-5.

Ready gold attracted good attention of operators on expectations of revival of demand. The quotation forged ahead from Rs. 106-12-6 last week to Rs. 107-12-6 today. At the close, it was a shade easy at Rs. 107-12. The daily average arrivals were 6,000 tolas, while offtake was of the order of 2,875 tolas. The floating stocks of gold are reported to be 40,000 tolas.

The improvement in the price of spot silver noted in London last week continued during the week under review also, today's quotation being 76¼d., as against 76d. last week. The prices in New York, however, remain unchanged at 89⅛ cents. The price of gold in London also rose from 76¼d. to 77⅛d.

The following comparative table shows at a glance the trend of the market during the week under review:

	8-10-58	Highest	Lowest	1-10-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	107 12	107 12½	106 15	106 12½

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *7th October*

Prices of base metals recorded a small recovery during the week under review. This was due to the uncertainty created by the announcement of the interim import policy, according to which the quota for tin has been cut in a marked way. Other base metals are not included in the interim policy at all. This caused disappointment and contributed to hardening of prices. In view of the importance of base metals to the development of industry, the non-inclusion of metals like copper, zinc and lead in the interim policy announcement kept market circles wondering whether this was a preliminary to quota cut in the policy expected to be announced by the end of this month. Actually, the circumstances demand an increase in the import provision, but as against this, even if the current quotas are cut, the inconvenience that would be caused could well be imagined. Electrolytic zinc advanced from Rs. 68.00 to Rs. 70.50. Although the demand was limited, the restricted supply position as well as the lack of mention in regard to zinc in the interim import policy were factors that caused the uptrend. Tin rose to Rs. 565 from Rs. 554. The rise was due to the quota cut from 85 per cent. to 40 per cent. in respect of established importers of tin in the interim policy. Lead was better at Rs. 67.50 after opening at Rs. 67. There were good enquiries on Government and public corporation accounts. Hindusthan Steels being in the market for as high a quantity as 300 tons.

EXPORT QUOTA FOR COTTON

(From Our Own Correspondent)

BOMBAY, *8th October*

The long-awaited export quota announcement has at last been made. The Government of India notified yesterday of its decision to release 150,000 bales of Bengal *Deshi* cotton and 100,000 bales of cotton (other than Bengal *Deshi*) not about ⅞" in staple on a first-come-first-served basis. The announcement has been greatly welcomed by the trade which was getting concerned over the delay in issuing the quota. There was, however, disappointment that the expected reduction in export duty did not materialise.

Earlier in the week, in anticipation of the export quota, the cotton market ruled steady. Support was forthcoming from spot houses and up-country buyers. The general feeling was that, in view of the prospect of a good crop, the higher carry-over and the downward trend in mill consumption, the Government would certainly release a sizable quantity of cotton for export. A reduction or abolition of export duty was also regarded as more than a probability. Reports of unfavourable weather in the Punjab and damage to crop favourably affected sentiment. Nevertheless, the prolonged delay in announcing the quota gave rise to misgivings and this was responsible for some selling which led to a price fall on Saturday. The market again picked up strength on Monday which gathered momentum yesterday on rumours of an imminent quota announcement. Due to persistent buying, especially by Akola and Ahmedabad operators, cotton futures advanced. Rumours of a possible reduction in export duty on cotton imparted further strength to the market today so that it closed at the best levels of the day. Over the week, cotton futures registered an improvement of Rs. 4.25.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 627 and after advancing to Rs. 629 declined to Rs. 617.50 on Monday. The contract firmed up on good support to Rs. 630.75 yesterday. Opening at Rs. 628.50 today, it improved to Rs. 633 before closing fractionally lower at Rs. 632.75. The following table indicates the trend of price during the week:

	8-10-58	High	Low	1-10-58
I.C.C. Moglai Jarilla (March 1959) ...	632.75	633	617.50	628.50

In the spot section activity was subdued. Prices of most varieties receded. Mill buying was mainly confined to covering immediate requirements. A prominent mill group continued to buy moderate quantities of good quality cotton. Main varieties which attracted attention were Kalyan, Cambodia, 0394, 197/3, Surti, etc.

In the export section, enquiries were noted early in the week for permissible varieties but business reported was small. Berar Jarilla and Wagad in particular evoked interest. Moderate activity was noted in Zoda and yellow pickings. After the quota announcement, however, renewed enquiries were reported. But the uncertainty regarding the export duty was a factor inhibiting business.

The foreign section presented a dull appearance. Selected East African varieties and higher grade Sudanese styles found buyers.

The news that the Sudanese Finance Minister, who is now in New Delhi, will reach the City on the 14th inst. for talks with representatives of the cotton trade and industry, has given rise to speculation regarding the possibility of concluding a barter trade agreement with that country involving import of Sudan cotton against sale of textiles from India. Knowledgeable quarters point out that such deal will be mutually advantageous in that while helping Sudan to sell off its cotton, it will also enable India to buy more cotton from that country which has not so far been possible owing to foreign exchange difficulties.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end closings: Bengal *Deshi 610* (*610*); Berar Jarilla 625 (650); Khandesh 675 (700); Vijay 810 (820); Hubli Laxmi 870 (900); Jayadhar 800 (820). *Delivery contracts*: Bengal 588 (590); Mathia 570 (580).

Cotton values in Karachi suffered a sharp setback during the week as a sequel to persistent heavy liquidation. Fears that the Government of India will reduce the export duty of its cotton and release large quantities of cotton for export adversely affected sentiment. Absence of any revival in export demand unnerved bulls who were holding on in anticipation of better overseas demand and they rushed to sell. Prices consequently declined sharply. Bearish crop reports accelerated the downward trend. N.T.R.G. January reacted from Rs. 75-12-6 last week-end to Rs. 72-5 and the March position dropped from Rs. 76-2-6 to Rs. 72-9. Spot values also suffered a sharp break. For instance, Sind *Deshi* declined from Rs. 74 to Rs. 70 and Punjab *Deshi* from Rs. 71 to Rs. 68-8. The following are the latest available quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week-end quotations:

4F Punjab Roller 70-2 (71-4); S.G. 74-10 (75-4); L.S.S. Punjab Roller 71-2 (73-4); S.G. 76-2 (78-4); N.T. Roller 76-10 (79-4); S.G. 86-10 (89-4); 289F Punjab Roller 79-10 (83-4); S.G. 92-10 (96-4).

The Alexandria cotton futures market ruled quiet during the week. Trading was devoid of interest and prices moved in a narrow range. While the long-staple Karnak contracts were a shade easy, the medium-staple *Ashmouni* contracts improved slightly on support prompted by reports of quality deterioration in new crop.

Total export sales of Egyptian cotton during the 1957-58 season aggregated 877,650 bales (of 720 lbs.), as against 726,095 bales in 1956-57. Actual

shipments amounted to 779,605 bales, as against 711,441 bales exported in the previous season.

The latest available quotations—in tallaris per lb.—from Alexandria are as under: *Karnak*: November 72; January 72. *Ashmouni*: October 65.15; December 64.80.

Cheerful conditions prevailed in the Liverpool cotton futures market during the week. Both American and American type contracts were bid up. Support was mainly influenced by firm New York advices and better news from the yarn and piecegoods market. Sudan contracts, however, were quiet and values nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton 1" staple contract: October-November 24.25; December-January 24.30; March-April 24.20; May-June 24.00.

American cotton mixed growths contract: October-November 24.97; December-January 24.88; March-April 24.68; May-June 24.53.

Sudan: November-December, January-February, May-June 29.25.

The New York cotton futures market, after ruling fully steady earlier during the week, declined towards the close. The steadiness was due to reports of unfavourable weather in most parts of the cotton belt. The consensus of opinion among the traders was that the next official forecast will be lower than the September estimate. The prospect of a smaller crop and heavier entry into the Government loan prompted buying. Towards the close, values receded on speculative selling.

The Secretary of Agriculture, Mr. Ezra Taft Benson, has proclaimed a national marketing quota of 12,167,000 bales and national acreage allotment of 16 million acres for the 1959 U.S. crop of Upland cotton. Mr. Benson also announced that a referendum on the short-staple cotton marketing quotas would be held on 15th December. At least two-thirds of the cotton farmers voting in this referendum must approve the marketing quotas established by Mr. Benson if they are to become effective. If the quotas are approved farmers will be offered two support programmes: (1) regular farm allotments with supports at not less than 80 per cent. of parity and (2) larger farm allotments—40 per cent. above the farm's regular allotment—and on the extra 40 per cent. planted to cotton, farmers would be supported at 65 per cent. of parity. The proclamation was ordered by the recent farm legislation passed by Congress. U.S. farmers last December approved marketing quotas on the 1958 upland cotton crop. The national acreage allotment for that crop was about 17.6 million acres but farmers placed about 4 million acres in the Soil Bank programme, removing them from production.

Under the law, the Department must determine what will be "normal supply" of cotton for the 1959 year. The total supply of upland cotton for the 1958-59 marketing year is estimated at 20,369,000 running bales. This is 4,379,000 bales above the normal supply of 15,990,000 bales. The normal supply, as defined in the legislation, is the current marketing year's estimated domestic consumption of 7,800,000 bales and exports of 4,500,000 bales plus a 30 per cent. reserve of 3,690,000 bales. The total supply figure of 20,369,000 bales includes a carry-over of 8,405,000 bales, a 1958-59 crop (September estimate) of 11,904,000 bales and estimated imports of 60,000 bales. The marketing quotas and acreage allotments for the extra long-staple cotton will be made known not later than the 15th inst.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	7-10-58	30-9-58	23-9-58
Spot	36.20	36.05	35.90
October	35.76	35.89	35.75
December	36.20	36.22	36.18
March	36.67	36.67	36.66

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, *8th October*

The yarn market continued to be in the grip of bears during the week under review. Staple fibre yarns were subjected to persistent selling pressure from holders who had made large purchases in the past on expectation of getting higher prices. Values, as a consequence, moved further downward. Rayon yarns were also distinctly easy on rumours that the Government of India was contemplating to liberalise imports of rayon yarn for the current licensing period. Demand from North Indian markets for rayon fabrics was also reported to be still not encouraging.

The quantity of art silk yarn imported into Bombay port during the month of September amounted to 1.69 million lbs., that for the previous month being 1.91 million lbs. Cotton yarns continued to remain depressed due to persistent slackness in demand and absence of any encouraging developments.

Staple fibre yarns (40 x 2) December delivery encountered heavy selling and fell by Rs. 13 to Rs. 651. October delivery dropped Rs. 9 to Rs. 646. In the spot section, 40 x 2 Citys receded by 4 nP to Rs. 3.40. Kohinoors eased by 3 nP to Rs. 3.53. Centurys retreated by 6 nP to Rs. 3.41. Among forty yarns, Fujis lost 6 nP to Rs. 9.69. Paramounts were dull at Rs. 9.62.

In the art silk yarn section, 120 Japan were quoted 3 nP lower at Rs. 5.53. 120 Italy came down by 56 nP to Rs. 5.69. 150 Italy shed 6 nP to Rs. 6.06. 150 Japan was quiet at Rs. 6.06. Among indigenous yarns, National Rayons 150 bright cones first grade was unchanged at Rs. 4.72. 120 bright cones first grade, however, gained 17 nP to Rs. 5.87.

Cotton yarns ten counts Moderns were dull at Rs. 13.25. Twenty counts Moderns receded by 13 nP to Rs. 16.62. Thirty counts Hinds were unchanged at Rs. 19.75. Among forty counts, Moderns declined by 25 nP to Rs. 25. Minaxis were stagnant at Rs. 24.94. Sixty counts Finlays changed hands at Rs. 58, same as last week. Eighty counts were neglected, Mahendras being quoted at Rs. 69, Moderns at Rs. 72 and Finlays at Rs. 78.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	8-10-1958	1-10-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.53	5.56
150 Japan (per lb.)	6.06	6.06
120 Italy (per lb.)	5.69	6.25
150 Italy (per lb.)	6.06	6.12
Staple fibre yarn (per case of 200 lbs.)—		
40×2 October	646.00	655.00
40×2 December	651.00	664.00
40×2 Kohinoor (per lb.)	3.53	3.59
40×2 City (per lb.)	3.40	3.44
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	..	12.50
20s Modern	16.62	16.75
30s Hind	19.75	19.75
40s Minaxi	24.94	24.94
60s Finlay	58.00	58.00
80s Mahendra	69.00	69.00

OILSEEDS WELL SUPPORTED

(From Our Own Correspondent)

BOMBAY, *8th October*

The bearish trend noted in the oilseeds market last week abated during the week under review. In fact, the market put on a firm appearance. Groundnuts were very well supported, thanks to rumours of additional oilcake export quota and purchases of groundnut oil by *vanaspati* interests, while arrivals of seeds and oil in Bombay were low. Castorseed elicited enlarged buying enquiries induced by hopes of better export business in oil with the U.K. and the U.S. Linseed was firm, following covering at lower levels by Punjab operators and encouraging overseas advices. Cottonseeds were fully maintained on account of hardening tendency in cotton prices.

The Government of India has decided to extend the shipment period of the unutilised quotas of undecorticated cottonseed oilcakes, linseed oilcakes, nigerseed oilcakes and kardiseed oilcakes up to the end of March 1959.

Groundnut February 1959 contract met with bull support and forged ahead from Rs. 159.75 last week-end to Rs. 164.25 today. Bold ready was fully steady at Rs. 37 today, as also both Coromandel and Khandesh variety at Rs. 38.50. Groundnut oil ex-mill advanced by 50 nP to Rs. 21.75. Railway receipt picked up 38 nP to Rs. 21.50.

Castorseed May 1959 contract spurted from Rs. 147.50 to Rs. 149.50. Ready Madras was done at Rs. 29.50 today and Kanpur quality at Rs. 28.37. Castor oil B.S.S., however, came in for selling and declined from Rs. 17.25 to Rs. 16.62. Commercial quality also receded from Rs. 15.62 to Rs. 15.25.

Linseed May 1959 contract, which stood at Rs. 30.69 last week-end, attracted good attention of operators and jumped up to touch Rs. 31.56 at the close today. Bold ready was quoted at Rs. 34 today, as against Rs. 33.62 on Friday. Linseed oil hardened from Rs. 17.37 to Rs. 17.50.

Influenced by good buying orders, cottonseed May 1959 contract registered a rise of Rs. 3.75 to Rs. 102.50.

Among other seeds, kardiseed bold ready rose from Rs. 22.50 on Friday to Rs. 23 today. Nigerseed Madras quality opened at Rs. 34, as against Rs. 34.50, and after receding to Rs. 33.75, recovered to finish at Rs. 34.25 today.

The following table shows the closing prices of oilseeds and oils today as compared with those of the two previous weeks:

	8-10-1958	1-10-1958	24-9-1958
Groundnut—	Rs.	Rs.	Rs.
Feb. 1959	164.25	159.75	164.87
Bold ready (per cwt.)	37.00	40.50	42.50
Linseed—			
May 1959	31.56	30.69	31.81
Bold ready (per cwt.)	34.00	34.12	35.00
Castorseed—			
May 1959	149.50	147.50	156.18
Madras (per cwt.)	29.50	30.37	31.37
Cottonseed—			
Sept. 1959	102.50	98.75	101.50
*Groundnut oil**—			
Ex-mill ready (per quarter) ..	21.75	21.25	22.00
Castor oil†—			
Commercial (per quarter) ..	15.62	15.62	16.19
Linseed oil†—			
Ready	17.50	17.37	17.37

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

DEMAND FOR PEPPER LOW

(Messrs. Parekh & Co.)

BOMBAY, *8th October*

During the week under review, Malabar black pepper moved within a narrow range, with uncertain undertone, it tended to drift lower in view of poor overseas demand and under pressure of bear hammering. Weakness in other commodities, news of cease-fire in Formosa and upheaval in Pakistan proved depressing factors.

Ready ungarbled at Cochin was marked down to Rs. 575 under the impact of tired long second-hand selling though the growers were still holding for higher prices. October delivery in the forward market moved irregularly between Rs. 102.50 and Rs. 101.50 while December from Rs. 97.50 to Rs. 96.50. For the time being, markets at Bombay and Cochin seemed to be under the control of bears. Proximity of last due date for issuing orders against October made market more vulnerable since few liked to take delivery in view of the availability of December contract at discount.

New York was reported to be steady at $0.25½ for spot. But buyers were unwilling to pay more than $0.24 for afloat or nearby. As a result, no important business was listed. London operators were reported buyers for long forward at about 185*s*. A.S.T.A. terms. Some exporters from Cochin and Bombay were reported to have sold sizable quantity for October-March and November-February shipment at about $0.24 in anticipation of lower prices when the new crop begins moving.

Singapore was reported fairly steady. Dealers who were refusing to offer Lampong to New York for fear of detention are now sellers at prices to cover possible loss in detention.

In A.S.T.A., there are sellers at $0.24 for October and at $0.23½ for December. In specific delivery, there are sellers at Rs. 515 for October.

The future of the market appears uncertain as buyers prefer to await development pending arrivals of new crop in the market. Growers and dealers are looking forward to the reappearance of buying interest from overseas importers like the U.S.S.R. and the U.S.A.

Following are today's nominal quotations:

Ready Rs. 75 per Bengal maund; October Rs. 515-25, December Rs. 520-30 and February Rs. 528-38 per candy of 5½ cwts.

TEA GENERALLY FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *3rd October*

Export sale No. 29 comprised 1,842,738 lbs., and the auction was held on Tuesday, 30th September. Teas from the Nilgiri and Annamalai districts showed some improvement in quality, with some flavoury teas being offered from the former district. Teas from the other areas were a little disappointing. There was less demand, particularly from exporters, although internal buyers showed renewed interest in the lower descriptions, but in spite of this low mediums declined five to ten naye Paise. Mediums and good mediums were 10 to 20 nP lower. The best liquoring highgrowns were irregular but followed quality closely. Whole leaf teas were about steady. Tippy teas met a strong demand, and sold at dearer rates.

The quotations were: Low medium Re. 1.52 to Re. 1.65; medium Re. 1.70 to Re. 1.90; good medium Rs. 2.00 to Rs. 2.20; and quality Rs. 2.75 to Rs. 4.25.

London Market—Sale of 29th September 1958.—Best following quality, others fully firm. *Sale of 30th September 1958.*—Irregularly firm.

Colombo Market—Sale of 29th September 1958.—Quality declined generally, less demand, except best Dimbula dickoyas down 20 to 25 cents, mediums down 15 to 20 cents, uvas substantially lower, following quality, lowgrowns declined 10 to 15 cents. *Sale of 30th September 1958.*—Good demand, good liquoring sorts firm, others slightly lower.

Calcutta Market—Export.—Good demand, though prices generally irregular and easier. Commons 4 to 8 nP, whilst medium B.O.Ps and orange fannings 10 to 20 nP lower, C.T.Cs met better enqury than last sale but prices declined 10 to 20 nP generally.

Export Duty.—The long-awaited announcement regarding the reduction of the export duty was made on 27th September. The export duty is now 26 nP instead of 38 nP as at present. Similarly, excise duty and export duty are completely divorced from each other. A varying levy of excise duty will be imposed, based on the average prices, and for this purpose three zones are envisaged: zone 1 suffering only 2 nP excise duty, zone 2 suffering only 4 nP excise duty and 3 suffering only 10 nP excise duty.

At the time of writing there has been no official announcement as to the grouping of estates into different zones.

Export Quota.—Immediately on receipt of this announcement the export quota market rose from 3 nP sellers to 4½ nP, at which rate business was transacted. There has since been a decline to sellers at 3½ nP, buyers 3¼ nP, and business has been done at 3½ nP.

Sale No. 30 will be held on Tuesday, 14th October 1958.

TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, *7th October*

The tea industry had had time to study the details of the so-called relief granted to common teas, and could only confirm the first impressions already reported in these columns a week ago. How the changes in excise and export duties announced can be termed "relief" passes one's comprehension. The industry had been kept waiting for long, and the expectation was that Government would produce a scheme which would not only grant relief to producers but also increase exports. That both these needs have not been met by the present changes clearly shows that those who chalked out the scheme failed to understand the present ailings of the tea industry, and this in spite of the lucid and convincing presentation of the case to Government departments time and again by both industry and trade.

It was feared that, as a result of the actual increase in the duties in the 10 nP excise-duty-zone, export of quality teas was likely to be affected. For, this zone includes the Darjeeling district gardens, the major output of which is quality teas. Cost of production in the hilly area is already too high, and the increased duties now announced add to the problems of the Darjeeling planter.

In the meantime, in the internal auctions held last week, a firmer trend was in evidence. Dusts on offer totalled 19,672 chests, which met with a strong general demand. This improved demand was not attributed to the changes in the excise and export duties but to the normal feature of increased demand. Orthodox teas were fully steady, and the better liquoring powdery kinds were favourites of bidders. There was also good support to legg-cut Dooars. C.T.Cs. opened easier, but as the sales progressed a better demand was in evidence and prices improved, albeit in an irregular way. The grainy exportable teas advanced. The quotations in rupees per lb. with those of the previous week in brackets were: Best Assam C.T.C. 2.50 to 3.00 nominal (same); medium Assam C.T.C.: 2.15 to 2.35 (2.10 to 2.30); medium Assam grainy dust: 1.82 to 1.84 (1.78 to 1.80); and medium Dooars 1.78 to 1.80 (1.76 to 1.78).

Leaf on offer amounted to 1,973 chests. There was good demand, but the green teas were easier.

A firmer tendency was the feature during yesterday's export sales, offerings for which aggregated 69,199 chests. Teas for price were keenly sought. Prices for plain and medium B.Ps were fully steady, and fannings of the same category advanced. While the poorer liquoring medium C.T.Cs declined by 10 to 20 nP, the C.T.Cs possessing useful liquors and the lower-priced lots were firm. Plainer Dooars B.O.Ps and legg-cut teas eased by 4 to 8 nP. Whole leaf grades were in good demand, while tippy teas and Darjeelings eased. The quotations were: Best Assam C.T.C. fannings Rs. 2.90 to 3.10; best Assam C.T.C. B.P. 2.70 to 2.80; clean black pekoe 2.00; medium fannings 1.90 to 2.00; medium B.P. 1.85; and plain fannings 1.85.

Export quota changed hands at 3½ nP. Subsequently, buyers were prepared to offer only 3¼ nP.

JUTE PRICES RECOVER

(From Our Own Correspondent)

CALCUTTA, *7th October*

This week's trend in the jute markets went to show that the imposition of additional margin deposits by the East India Jute and Hessian Exchange Ltd. on futures trading below certain minimum prices in B. twills, hessian 40" 10 oz., and Assam bottoms (raw jute) was a step in the right direction. For, not only did it arrest the gradually declining trend in both goods and fibre, but a much needed recovery set in, thereby bringing confidence to the market. Prices soon touched the I.J.M.A. minimum levels, although subsequently B. twills moved down. As a result of the stabilising nature of prices, during the week more business took place in both goods and raw jute. In the meantime, it was fully realised in the market and among mills also that prices of raw jute had moved down much to the disadvantage of the cultivators.

There is no gainsaying the fact that persistent reports of a bumper crop has slowed down purchases. Moreover, this year there has been no damage to standing crops on account of floods, and the monsoon has already started waning. Viewed thus, the imposition of an additional margin of Rs. 2.25 per maund on sales below Rs. 22.50 per maund on the futures exchange was hailed here as a welcome measure. This was so, because raw jute prices in futures had been moving down, influenced by the bumper crop reports. Also, on account of the comfortable stock position in raw jute, futures transactions could be put through without regard to delivery. Depression in raw jute prices naturally caused some anxiety to the Indian Jute Mills Association, whose Committee, however, thought the depression as being unjustified. The I.J.M.A., therefore, advised its member-mills to accord support to the raw jute market, by purchasing fibre requirements for three months' consumption. The Association also reaffirmed its recommendation to member-mills, first made in February last, to sell jute goods at or above the minimum levels. The decision of the futures exchange to impose additional margin deposits on sales below Rs. 95 per 100 bags of B. twills and Rs. 39.50 for 100 yards of 40" 10 oz. hessian was also aimed as indirect support to raw jute.

Following the above steps, the goods market opened on a steady note on Tuesday last, and overnight ready B. twills moved up to Rs. 95.50 from Rs. 94.90 and ready hessian 40" 10 oz. to Rs. 43.10 from Rs. 42.65. At this stage, scattered sales in heavy goods took place with the Continent and Australia, and there was also covering business in hessian for the near delivery position. The steadiness and the uptrend resulted in increased demand from foreign markets, and it was reported that prices were also moving up in the New York burlap market following the decision by the Indian Jute Mills Association not to make any changes in the minimum prices. A welcome indication from New York was that spot and afloat goods were not as readily available as in the past, and that primary demand was moving up. These favourable reports fanned the enthusiasm generated by the fixation of the additional minimum deposits in the futures market. The result was that on Wednesday, hessian 40" 10 oz. further improved to Rs. 43.40 and B. twills to Rs. 96.40. The market was closed on Thursday on account of *Gandhi Jayanthi* and on Friday fully steady conditions were in evidence. Prices were moving up in the morning session, but since mills were increasing their offers indiscriminately at the higher levels, by evening prices closed below the best levels of the day. Australia continued to buy cornsacks. Hessian 40" 10 oz. closed at Rs. 43.40 and B. twills at Rs. 96.15. Over the week-end, there was no activity, but B. twills were quoted at Rs. 95.85 and hessian 40" 10 oz. at Rs. 43.45. Yesterday, activity was restricted and hessian 40" 10 oz. declined to Rs. 41.75 with ready B. twills improving to Rs. 96.15.

Earlier in the week, there was fair support to raw jute, and Assam bottoms recovered to Rs. 24 from Rs. 22.50. Since, however, there was not much follow-up support, the rate sagged to Rs. 23.75. Latest quotations for the new crop, October-November delivery are:

WHEAT MOVES UP

(From Our Own Correspondent)

HAPUR, *6th October*

Wheat prices at Hapur touched new heights to be quoted at Rs. 23.50 per maund for average quality and upto Rs. 25 for farm produce. Local wheat arrivals continue scanty and supply position is tight, with the result that consumers' demand is being switched on to coarse grains mainly maize. Rice prices, however, ruled quiet, thanks to good crop prospects and the State Government's ban on export. Harvesting has begun and new paddy has begun to arrive in the market. Arrivals will soon increase. Latest prevailing prices were: basmati sela Rs. 32 to Rs. 33.50, mainpuri Rs. 26, coarse quality Rs. 23 per maund.

Firm Punjab advices, coupled with restricted supplies due to the sealing of local stocks by the State Government, accounted for substantial gains in gram prices during the week. Barley and other coarse grain prices improved in sympathy with gram prices; local stocks of these grains also are poor. Maize arrivals from outside centres having been hampered during the week due to breach in rail and road traffic, following heavy rains and local arrivals being scanty due to failure of crop, the prices of maize rose during the week. Consumers' demand is brisk. *Jowar* prices also registered gains and prevailing prices on Monday (in rupees per maund) were: gram punjabi 18.75, barley 16.75, *bejhar* 16.12, maize 16.25, *jowar* 14.75, *guwar* white 14.50; stocks (approximate) are: barley one, *bejhar* five *khatties*.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *6th October*

The sugar market was quiet and listless during the week in the absence of fresh interest. The supply position is quite satisfactory and outside demand is slack. Inferior quality recorded a further downward trend. Crushing of cane for new sugar has not yet begun in west U.P. and cane interests have urged the Government to ask the factories to begin crushing early by 15th October so that the acute fodder scarcity following abnormally heavy rains may be met and the land vacated may be used for *rabi* sowings.

Lack of demand from the consuming centres accounted for quiet conditions in the sugar market at Muzaffarnagar and some business in boid crystals was done for Gujerat side. Small grain sugar is being sold below the Government fixed rates. D29 of Amroha is being quoted at Rs. 35.31, as against controlled price of Rs. 36 per maund. Latest prevailing ex-mill delivery prices (in rupees and annas per maund) were: Khatauli (A28) Rs. 36-6; Deoband (C29) Rs. 36-6; Mansurpur (B28) Rs. 36-12; Saharanpur (D28) Rs. 36-12; Amroha (D29) Rs. 35-5; Bijnore (E29) Rs. 35-3; Seohara (E29) Rs. 35-8.

Khandsari prices ruled quiet and new production has been delayed due to heavy rains. Cane crop has also been adversely affected due to waterlogging and *khandsari* prices ranged between Rs. 32.50 and Rs. 35 per maund.

Notices

MACHINERY MANUFACTURERS CORPORATION LIMITED

NOTICE

THE TWELFTH ANNUAL GENERAL MEETING of MACHINERY MANUFACTURERS CORPORATION LIMITED will be held on Friday, the 7th November 1958, at 5.00 p.m., at the Registered Office of the Company, Gateway Building, Apollo Bunder, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st March, 1958.
2. To appoint a Director in place of Mr. Jal H. Mehta who is a Director and associate of Mahindra & Mahindra Ltd., the Managing Agents and who retires by rotation under Articles 143 and 144 but who, being eligible, offers himself for re-election, and to pass the Special Resolution of which special notice has been duly received.
3. To appoint a Director in place of Sir Sobha Singh who retires by rotation under Articles 143 and 144 but who, being eligible, offers himself for re-election, and to consider and if thought fit to pass the resolution of which special notice has been duly received.
4. To appoint a Director in place of Mr. Mathuradas M. Parekh who retires by rotation under Articles 143 and 144 and who, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration.
6. To consider and if thought fit to pass resolutions to approve the transactions between the Company and Mahindra & Mahindra Limited, Managing Agents of the Company and their constituents and principals.
7. To consider and if thought fit to pass resolutions to approve the transactions between the Company and Turner Hoare & Co. Private Limited, Press Syndicate Ltd., Indian National Diesel Engine Company, Ltd. and Mahindra Engineering Company Private Limited, associates of Managing Agents of the Company.

For and on behalf of the Directors,
MACHINERY MANUFACTURERS CORPORATION LIMITED,
K. C. MAHINDRA,
Chairman.

BOMBAY, *7th October*, 1958.

(1) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

(2) The Transfer Books of the Company will be closed from 24th October 1958 to 7th November 1958, both days inclusive.

Explanatory statements as required under Section 173 of the Companies Act, 1956, relating to the items for which special resolutions are required to be passed have been posted along with the notices in full to all shareholders of the Company to their addresses as registered in the Company's Books.

To the Shareholders of MACHINERY MANUFACTURERS CORPORATION LIMITED, and in particular to:

Mrs. Maryam Akhund, Bai Bachubai Sorabji Anklesaria, Messrs. British Cotton Growers Association Ltd., Mrs. Tehmina Hormasji Dalal, Mr. C. De Souza, Mr. Nadarshaw M. Dinshaw, Mr. R. C. Fernandes, Hon'ble Mr. Gulam Mohamed, Mr. Sorabji Hormusji Shahookar, Dr. (Miss) Shaikh Amna, Mr. Zaka Rahmatulla, Mr. Barkatullah Khan, Mr. William Dick Brown, Mr. Andrew Dollar Gillespie, Mr. Donald Gladding, Major Alastair Cameron, Mr. Mirza Ahmed Ispahani, Sir William Roberts, Major General Shura Shum Shere Jung Bahadur Rana, Mr. Nootan Deb Pant, Sardar Soma Prasad Upadhya, Senior Comdg. General Baber Shum Shere, Mr. Pitamber Prasad Pantha, Messrs. John Inglis Company Limited, Rokia Sultan, Sogra Sultan, Khatija Begum, Robaba Khanum, Mr. John Lees, Mr. William Lindsay, Mr. G. B. Gilby, Mono Shum Shere Jung Bahadur Rana, Major General Nara Shum Shere Jung Bahadur Rana, Rani Jagdamba Kumari Debi, Padma Narsingha Rana, Mohamed Khalil Serage, Bahadur Shum Shere Jung, Maj. General Krishna Shum Shere Jung Bahadur Rana, H.H. Maharani Gamvir Kumari, Bibudhandra Prasad, Mr. Keshava Ram Bhandary, Comdg. General Ugni Shum Shere Jung Bahadur Rana, Mr. Piyusha Raj Sharma, Mr. Mahendra Prasad, Mr. Shivirendra Prasad and Mr. Ramchand Khushiram Advani.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE Company will be closed from MONDAY, the 3RD NOVEMBER to SATURDAY, the 29TH NOVEMBER 1958, both days inclusive.

By Order of the Board,
FOR THE ASSOCIATED CEMENT COMPANIES, LIMITED,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, *19th September*, 1958.

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. 1=Interim Dividend. 1=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year 1956. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
N—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

BANKING

(*Concluded from page 594*)

Reflecting the trend of interest in world capital markets, especially in the New York market, there were several changes in the Bank's loan interest rate during 1957-58. In July 1957, the Bank's rate was 5½ per cent. By October that year, it had risen to 6 per cent., but was lowered to 5½ per cent. in December 1957. Thereafter, it was reduced in successive steps and became 5⅜ per cent. in 1958.

In order to facilitate the expansion of its lending activities, the Bank borrowed larger sums from the capital market than in earlier years. The net borrowing of $625 million raiscd the Bank's funded debt to $1,658 million. More than half the new funds came from public issues of long-term bonds in the United States; the year's three issues totalled $375 million. The remaining $250 million was raised by private placements of short-term United States dollar bonds with the Beutsche Bundesbank, the central bank of the Federal Republic of Germany. Pointing out that a world-wide market exists for the Bank's bonds, the Report notes that, at the end of the fiscal year, an estimated 47 per cent. of the total outstanding debt was held by investors outside the United States. The Bank continued to replenish its resources by sales of parts of its loans. Banks and other institutions agreed to participate in this way in 22 out of the year's 34 loans. Approximately $48 million was thus raised. Nearly as large a sum was raised through sales of parts of loans already made. Funds available for lending were also increased by further releases made by member-countries from the 18 per cent. of their capital subscriptions which is payable in their own currency and can only be used with their permission. These releases were equivalent to $149

RAISING THE CAPITAL OF THE WORLD BANK

THE Board of Governors of the International Bank for Reconstruction and Development—the World Bank for short—unanimously decided at the annual meeting held at New Delhi, last week, that "the Executive Directors should promptly consider the question of enlarging the resources of the Bank through an increase in its authorised capital" and that "they should submit an appropriate proposal" at an early date, having regard to the views expressed by the representatives of the member-countries. The relevant resolution introduced by the U.S. does not, as in the case of the International Monetary Fund (the I.M.F.), mention the extent of rise in the Bank's capital. The U.S. delegate, Mr. C. Douglas Dillon, merely expressed the view that an increase in the capital of the Bank should be of sufficient magnitude to permit the Bank to sustain its lending operations at a substantially expanded level over an extended period. But it was the U.K. delegate, Mr. Reginald Maudling, who suggested that the capital be doubled. None of the other members who spoke on this subject stated any specific figure. It is rather surprising why no one reiterated theless, the general impression is that the theless, the general impression is that the Bank's capital would be doubled. The Bank's staff has already started work on it. Mr. Eugene Black, President of the Bank, stated, before he left India, that specific proposals would be put forward by December 1958, so that the U.S. Congress and the Parliaments of other member-nations might be able to give their approval to them in the first quarter of 1959. Actually, a plea to this effect was made by Mr. Maudling in his speech on the Bank's annual report. It would thus be seen that the leading member-countries and executive authorities of the Bank are quite earnest about the proposal.

Before examining how the increase in the capital of the Bank would work, it is desirable to explain why the capital has to be raised. The following quotation from Mr. Black's speech will answer the question:

"Up to now, there has been no reason for me to suggest at these meetings that the financial resources available to the Bank were insufficient in amount for the task the Bank is designed to perform. In our earlier experience, the most significant limitation on our operations was the lack of suitable projects; this is still the limitation in some member-countries. Later, weakness in fiscal management and its effects on what we in the Bank call 'creditworthiness' emerged as another limitation on our lending; it is still a substantial limitation. But, despite the persistence of these limitations, we are now confronted with a situation of another kind. We are approaching the day when the Bank may be getting a larger number of meritorious applications from its member-countries than we shall be able to find money for on reasonable terms. As the increased tempo of our lending implies, many of our member-countries are satisfying the tests of project preparation and fiscal management; moreover, among our rapidly increasing membership, all our new members are capital-hungry. For the first time in the Bank's existence, the quantity of financial resources available to the Bank may soon be seriously inadequate."

There was not a single dissenter. On the contrary, every member who spoke at the meeting agreed with Mr. Black and welcomed the move to raise the Bank's capital. This quick understanding and approval of the proposal signify three things. First, they reflect the member-countries' appreciation of the excellent work that has been done by the World Bank as a mobiliser of private capital for international development and confidence in its ability to carry on this job. It may be noted, in this connection, that the Bank has so far raised over $2.4 billion from the private capital market—over $2 billion through the sale of its bonds and about $400 million by the sale of its portfolio to private investors. The second significance is that countries all over the world have come to realise the need for, and the value of, international economic co-operation to an extent that was not comprehended before World War II or even during the initial post-war years. Mr. Black's remark that "more and more economic development is the way out of the whirlpool of ferment and frustration in which so much of the underdeveloped world finds itself" received the approval of nearly all members. And, thirdly, there is widespread awareness that it is infinitely better to channel movement of foreign investment capital through international economic agencies, such as the World Bank, which measure the need for development capital objectively, than through bilateral negotiations between Governments which are liable to become complicated by extraneous considerations of international politics.

Unlike in the case of the I.M.F. and contrary to our earlier understanding, the proposed increase in the capital of the World Bank does not, we are told, involve any payment at all by the member-countries into the Bank, because no such payment is contemplated. In fact, Mr. Maudling expressed the hope that the Bank's operations would be so managed that the additional capital would all remain uncalled. This is undoubtedly one of the reasons why all member-countries are readily agreeable to a doubling of the Bank's capital. As many may not understand as to how the Bank could expand its activities if the proposed increase in its capital does not bring in any additional funds by way of share money, the point requires to be explained. The Bank's capital, it may be recalled, consists of three parts. First, the authorised (and subscribed) capital. This consists of shares (quotas) allotted to each country and goes on increasing as more and more countries become members. The second part is equivalent to issued capital in a joint-stock company. This constitutes 20 per cent. of the authorised capital. The third part represents the actual paid-up capital, being 2 per cent. of the authorised capital. This portion is payable in gold and/or U.S. dollars. The balance of issued capital, that is, 18 per cent. of the authorised capital, is callable by the Bank only with the consent of the member-countries concerned and for the purpose of its business. In practice, the Bank negotiates with each member-country and obtains this portion of the capital in instalments over a period of years, taking into consideration the balance of payments position of the country and its own need for currencies other than U.S. dollars. The U.K., for instance, has not yet paid in full the 18 per cent. subscription. The U.S.

and Canada are the only two countries to pay the entire 20 per cent. of the authorised capital at one stroke when the Bank was established.

According to the Bank's charter, 2 per cent. of a member's subscription should be in gold and/or dollars, 18 per cent. in member's own currency callable subject to negotiation between the Bank and the member and the balance of 80 per cent. is to remain as uncalled liability. This 80 per cent., together with the uncalled portion of the callable 18 per cent., constitutes a reserve in the last resort, on which the Bank can fall in order to meet its losses and liabilities to its bond-holders. This is a contingency which may never arise, because the Bank is being well managed, its investments are sound and guaranteed by the Governments of the countries concerned, and it has already built up a sizable reserve amounting to over 20 per cent. of its funded debt. In our last issue, it was assumed that, on the basis of the Bank's Charter, its members would have to pay 2 per cent. of the proposed increase in capital in gold and dollars and that the U.S. and Canada would pay their entire share of 20 per cent. (2 per cent. plus 18 per cent.) in dollars, as they did when it was established. This will not take place, if the whole idea is, as it seems to be, only to raise the authorised capital. In that case, the Bank's Charter will have to be suitably amended, reducing the 2 per cent. payable in dollars to 1 per cent. and the 18 per cent. callable in national currency to 9 per cent. and increasing, at the same time, the uncalled liability to 90 per cent. Or, alternatively, the existing percentages may be frozen, and not made applicable to the proposed increase in the authorised capital. This can be done by creating a new class of shares, say, 'B' stock, and designating the existing shares as 'A' stock. It will be interesting to see how the management of the Bank decides to solve the problem, which is mainly a task for its lawyers.

The total authorised (and subscribed) capital of the Bank, as on 30th June 1958, is $9,405 million. The paid-up capital is only $1,881 million, of which $758 million are in U.S. dollars and the balance in other currencies. The uncalled liability, subject to call to meet the Bank's obligations, is $7,524 million, of which the U.S. share is $2.540 million and that of the U.K. $1,040 million. When the proposed doubling of the capital is carried out, this reserve liability will go up by about $9,500 million (the exact amount will depend upon the number of members and the quota given to the new members), that is, to the large figure of $17,024 million. Of the latter amount, the U.S. share will be $5,715 million. The reserve liability, it must be noted, is guaranteed by the Governments of all member-countries. Investors who lend to the Bank are thus assured of full protection up to the size of its capital. It is this guarantee, among other things, that imparts strength to the Bank to raise resources in the capital markets of the world. Accordingly, when the Bank's authorised (and subscribed) capital is raised, its capacity to borrow from private investors is also raised to a corresponding extent. This is how even a mere increase in the authorised capital will enable the Bank to increase its activities in the coming years.

Although every member-country is liable to meet the Bank's liabilities to the extent of its subscription to capital, investors in the U.S., Canada and Europe attach greater, if not sole, importance to the share of the U.S. This is understandable, because the U.S. economy is immensely strong and its currency is readily convertible. The general belief is that, once the Bank's borrowings reach the total U.S. uncalled liability of $2,540 million, it may not find it easy to raise additional funds from the capital markets. And, as against the current U.S. liability of $2.5 billion, the Bank's net outstanding funded debt is $1.7 billion, so that the margin left for future borrowings is not appreciable. The net increase in the Bank's funded debt in one year—1957-58—alone was no less than $625 million. A similar increase this year will bring the total very nearly to the level of the uncalled liability of the U.S. The importance and urgency of raising the Bank's capital are thus obvious. As more and more currencies become strong, stable and convertible, there will, of course, be a significant improvement in the Bank's capacity to raise resources from capital markets. If, for instance, sterling becomes convertible, it will greatly strengthen the borrowing power of the Bank. The uncalled liability of the U.K., it may be noted, is equivalent to as much as 1,040 million U.S. dollars.

Even though no immediate payment is involved in the proposal to raise the capital of the Bank, there will be an addition to the contingent liability of every member-country. In the case of the U.S., this liability is large, $3,175 million to be precise. Will the U.S. Congress readily give its consent to the assumption of this liability by the Administration, in addition to voting $1.375 million for the I.M.F. payable in cash? The mood of the Congress is by no means quite favourable and the Administration has, indeed, a tough job ahead. But its task will be rendered easier, to some extent at least, if the Parliaments of all the other member-countries give their approval to the proposals quickly. It is needless to add that it is in their own interest to do so, for their countries stand to benefit most by the increase in the resources of the Bank and the Fund. Viewed in this context, the announcements made by a number of member-Governments at the annual meeting last week that they are ready to make available to the Bank fuller use of the 18 per cent. of their capital subscriptions constitute a welcome development. The Governments of underdeveloped countries, in general, and India, in particular, can help the U.S. Administration to win the support of the Congress by showing greater evidence of their faith in private enterprise through provision of more scope and encouragement. It is common knowledge that almost all the representatives of Western countries who spoke both within and outside the *Vigyan Bhavan* at New Delhi emphasised the need for stimulating individual initiative and enterprise, so that economic growth may be speedier and on sounder basis. Surely, it will be politic on their part, if the underdeveloped countries pay heed to this well-meant advice of their Western friends, from whom they are expecting help in a variety of ways, instead of turning a deaf ear to it. They have to bear in mind that the Governments of all Western countries, unlike their counterparts in the Communist world, can help them only with the approval of their respective Parliaments, which means public opinion that is organised and vocal.

A PLAN FOR AGRICULTURE

A COMMENDABLE attempt at reappraisal of India's agriculture and formulation of an imaginative, and at the same time practical, plan for it has been made by Messrs. B. P. Singh Roy, C. H. Bhabha, Tulsidas Kilachand and B. M. Birla, to whose brochure, entitled *Suggestions for Agricultural Self-sufficiency*, further reference has been made elsewhere in this issue. The blueprint of the plan envisages an investment of Rs. 1,305 crores over a period of ten years, during which time the additional income from agriculture is expected to go up steadily to reach a total of Rs. 1.350 crores at the end. There is no doubt that the blueprint will be widely welcomed in that it once again focuses public attention on agriculture—an issue which has been the subject of animated Parliamentary discussion. The authors rightly pin their faith to four main factors which determine agricultural output—provision of irrigation and water facilities, adequate supply of fertilisers and their application to different types of soil, mechanised ways of farming and use of tractors, and supply of better quality seeds. Appropriately enough, each of these factors figures prominently in the plan. For reasons which are too well known to need reiteration, the authors have urged that the food problem must be given "an overall priority and placed on a war footing." They add: "Without giving a sense of urgency to this vital problem, nothing worthwhile could be achieved." In the last ten years, India has imported foodgrains valued at Rs. 1,200 crores. If we had saved only half this amount—in other words, produced enough to meet 50 per cent. of our food deficiency—we would not have had a foreign exchange crisis to contend with. The failure to increase agricultural production, as the authors point out, has not only "affected our economic progress but also impaired our reputation abroad, as much publicity has been attached to this major deficiency in our economy." It is to be hoped that this brochure will induce the authorities to draw up a bold and constructive plan for agriculture.

A great deal of emphasis is placed by the authors on the provision of irrigation facilities. The major requirements under their plan will be to provide adequate irrigation facilities for 100 million acres of land for purposes of intensive farming. At present, about 60 million acres of land are under irrigation out of a total of about 330 million acres of cultivable land. The authors also attach great importance to minor irrigation schemes such as tube-wells, pumps and repairs to old tanks. Intensive work, it is said, will have to be done on the village unit level so that all possible sources of water supply are tapped for purposes of irrigation. In this context, a somewhat intractable issue has been the problem as to how best the time-lag between the creation of irrigation facilities and their utilisation could be reduced.

The first Five-year Plan envisaged an addition of 14 million acres to the irrigated area which at the beginning of the Plan was some 51 million acres. The second Plan envisages an addition of 21 million acres of irrigated land. No reliable estimate of the actual land brought under irrigation in the second Plan is available. But it is known that only half of the water potential so far created has been used. This is certainly a deplorable development. After all, the non-utilisation of water facilities built up at such heavy expenditure implies a national waste. A recent article in the *Yojana* summed up the essence of the problem when it indicated some of the reasons why this time-lag persists. It would appear that, in a number of States even if the headworks and reservoirs are ready, the feeder canals are not; in some places, both are ready, but main canals are not. Again, the Government creates irrigation facilities up to the nearest Government channel. Beyond this point, the network of bunds and field channels has to be set up by the cultivators themselves. This has not been done. Litigations and complaints relating to field channels dog the progress of the utilisation of water potential.

There is also the somewhat difficult issue of water rates. Many farmers would rather not use the water than pay the cess. Naturally, the State Governments are anxious that the farmer should pay, in the shape of water cess, a part of the increased income which he would derive as a result of the utilisation of water facilities. While this may be a legitimate economic argument, especially considering that these irrigation works are highly capital-intensive, it cannot be denied that, from the overall national point of view, it is necessary that the rates should be kept attractively low, if not abolished altogether, in order to induce the farmer to utilise the available water supply. Further, the farmers should be given ample credit facilities so that they will be in a position to construct the necessary network of bunds and field channels. A system of phased levy of cess has been implemented in certain States. Under this system, a farmer gets free water in the first year; in the following years, the rate is steadily raised.

Emphasising the need for appropriate water tax policy, the authors of the brochure suggest that, in the early stages, the Government should make water available to agriculturists without insisting on immediate cash payment and that it should be possible later on to recover the cost, including interest and depreciation, from the agriculturists when agricultural output increases as a result of the increased irrigation facilities. This and other issues relating to the utilisation of irrigation facilities are bound to be examined closely by the official team which was appointed in August last to collect information regarding the water potential created by irrigation projects and the area actually irrigated or to be irrigated. Although the team is presumably intended to collect only factual data, it should be perfectly within its competence to indicate the lines on which a correct water tax policy should be evolved. The report of the team, which is expected to be ready by the end of next month, will be awaited with interest.

Finally, the authors have done well to stress the importance of a right land policy. Ideological considerations, as they insist, should be avoided as far as possible, if "agricultural production is to be tackled effectively and the agriculturist is to be assured of his place in the economy of the country." They also make the point that agriculture should be placed on a business footing. In this connection, they observe: "In the same way as the price of an industrial product must be related to the cost of production, the price of agricultural produce should be such that the agriculturist is able to get adequate return. The agriculturists should at least be able to earn as much as industrial workers." Surely, if the farmer, instead of being treated merely to a series of hortatory discourses, were to be given the necessary incentives in the shape of an assurance of minimum prices for his produce and easy availability of credit and material facilities, there would be a significant increase in agricultural output in the country. Because of their neglect of the need for appropriate incentives, our plans for agriculture have often missed the essence of the problem.

STEEL RETENTION PRICES RAISED

FOREIGN AID STATISTICS—STERLING CONVERTIBILITY—SUDAN COTTON

THURSDAY, 5 P.M.

THE share market is in a hesitant mood. Last week's bullish phase has virtually come to a halt and the operators do not appear to be inclined to stretch it further. Sentiment no doubt remains intact, thanks to the steadiness of steels, which do not appear to be dissatisfied with the increase in retention prices announced on Monday this week. Textiles, however, prove to be a drag on the market, despite hopes that some more incentive might be offered by the Government to encourage cloth movement. Thus, while Tata Ordinaries remain steady around Rs. 177 and Indian Irons at Rs. 27, prominent counters in textiles have lost sizable ground. Bombay Dyeings are Re. 1.30 lower over the week at Rs. 58.20, Centurys have dropped Rs. 8.50 to Rs. 437.50 and Kohinoors have lost Rs. 5 to Rs. 267.50. Bombay Burmahs continue their downward trend, having lost in the course of the last four weeks (since the shares were listed *ex-right* Rs. 33 to stand at Rs. 490.

MARKET GOSSIP

The increase of Rs. 14 per ton in the retention price now granted to T.I.S.Co. and I.I.S.Co. is on top of an increase of Rs 12 per ton announced in July 1957. The latest increase, like the one granted last year, will be equated over the entire period of five years 1955-56 to 1960-61. This does not, however, take into account the additional excise duty levied on 16th May 1957. Adjustments to compensate this increase will be allowed only on despatches from that day. Based on the effect on finished steel, the incidence of the additional duty will be Rs. 45.74 per ton and will be adjusted from the date of levy. It was in February 1956 that the Tariff Commission fixed the retention price at Rs. 393 per ton for the five-year period 1955-56 to 1960-61. Since then, excluding the incidence of excise duty, the increase in retention price (to compensate for the rise in costs) granted to companies is Rs. 26 per ton. This brings the present retention price of steel to Rs. 419 per ton. If the incidence of excise duty is also taken into account, the retention price comes to Rs. 464.74 per ton.

While the share market may not be dissatisfied with the latest increase in retention price, there is reason to believe that the companies may not feel happy over it. So far as the T.I.S.Co. is concerned, it had asked for an increase of Rs. 64 per ton, including the incidence of additional excise duty. If the element of excise duty is excluded, the increased price asked for was Rs. 18 per ton, as against which it has now been granted only Rs. 14 per ton. Thus, in all, the Company has so far received, as already pointed out, an increase of only Rs. 26 per ton for the five-year period on account of rise in manufacturing costs brought about by the increase in freight rates, rise in statutory prices of coal and other fuel, raw materials, stores and machinery, labour costs, etc. This rise, which works out to no more than 6.6 per cent., does not compare well with the trend of prices in other commodities. It is also stated that the latest increase in retention price does not take into account the recent increase in railway freight structure, so that the industry's case for a still further rise in retention price is not unjustified.

* * * *

There are now definite indications of further large-scale financial assistance forthcoming from abroad. Dr. Ludwig Erhard, Deputy Prime Minister and Minister for Economic Affairs of West Germany, has announced that his country will be offering about Rs. 29 crores ($60 million). Simultaneously, Mr. S. Horie, President of the Bank of Tokyo Ltd., has revealed that the Export-Import Bank of Japan is negotiating for another yen credit of Rs. 24 crores ($50 million) to India. Meanwhile, the Canadian Finance Minister, Mr. Donald M. Fleming, has announced a further Rs. 4-crore ($8.8 million) wheat loan. These are the only commitments so far in respect of the estimated foreign exchange requirements of Rs. 309.40 crores ($650 million) for the rest of the second Five-year Plan period. Talks for raising the balance are expected to be initiated at Washington by Mr. B. K. Nehru, Commissioner-General for Economic Affairs, sometime next month.

While the results of the proposed negotiations for further aid will be watched with interest, one would want to know the exact quantum of foreign assistance actually received by India. This aspect must be specially stressed because the information available about it is so confusing, thanks to the conflicting statements made by different spokesmen of the Government on different occasions. It will be recalled that Mr. T. T. Krishnamachari, ex-Finance Minister, stated in the course of his speeches in the U.S. during the last quarter of 1957 that what India needed was the sum of Rs. 600 crores ($1,260 million) by way of foreign help in order to bridge the gap in the Plan. After his visit, four countries came out with loan authorisations aggregating Rs. 234 crores, of which the U.S. accounted for Rs. 107 crores ($225 million), W. Germany for Rs. 75 crores (DM 660 million), France for Rs. 28 crores (25 million francs) and Japan for Rs. 24 crores (18 billion yen). Subsequently, the World Bank announced two loans—one for Calcutta and Madras ports (Rs. 20 crores or $43 million) and another for the D.V.C. project (Rs. 12 crores or $25 million)—the U.S. granted Rs. 27 crores ($57 million) for grains under P.L. 480, and Japan offered Rs. 10 crores ($20 million) for development of iron ores in Orissa State. All these aggregate Rs. 69 crores ($145 million), which, together with the loans mentioned earlier, bring the total aid received after Mr. Krishnamachari's return from abroad to Rs. 303 crores.

If the aforesaid amount of Rs. 303 crores were deducted from Rs. 600 crores mentioned earlier, the gap in the Plan would come to Rs. 297 crores. But Mr. Morarji Desai, the present Finance Minister, stated in the Lok Sabha on 13th August 1958 that the foreign exchange requirements for the three years (1958-59, 1959-60 and 1960-61) were of the order of Rs. 560 crores. Such a discrepancy in the foreign exchange balance-sheet is ununderstandable.

Apart from the above discrepancy, the official figures relating to the quantum of foreign assistance authorised so far are widely divergent and greatly confusing. In the *Appraisal and Prospects* of the second Five-year Plan (dated 26th April 1958), the Planning Commission put the foreign assistance authorised between April 1956 and April 1958 at Rs. 774 crores (including the I.M.F. credit of Rs. 95 crores). The amount mentioned by the Commission in its *Reappraisal* (September 1957), however, is lower at Rs. 747 crores. Still lower is the figure of Rs. 513 crores which the Finance Minister mentioned in the Lok Sabha on 13th August 1958 when he said: "As on 1st April 1958, the foreign aid already promised which amounts to Rs. 513 crores was fully taken into account." Obviously, this sum is exclusive of credits aggregating Rs. 234 crores granted by the U.S., W. Germany, Japan and France. Adding this sum to Rs. 513 crores, the total comes to Rs. 747 crores which is the same as that given by the Planning Commission in its *Reappraisal*.

If foreign aid authorised during the first two years of the Plan is taken as Rs. 747 crores and the total foreign aid offered since then is placed at Rs. 427 crores ($897 million), the total aid comes to Rs. 1.174 crores, or Rs. 136 crores more than the Rs. 1,038 crores assumed in the *Reappraisal;* the latter aid (Rs. 427 crores) is the result of the conference on aid to India held at Washington in August under the auspices of the World Bank and is made up of World Bank Rs. 154.7 crores ($325 million); U.S. Rs. 144.3 crores ($303 million); U.K. Rs. 54.3 crores ($114 million); W. Germany Rs. 47.6 crores ($100 million); Canada Rs. 21.4 crores ($45 million); and Japan Rs. 4.8 crores ($10 million). Taking into account the Rs. 427 crores offered since the third year of the Plan began, the uncovered gap of Rs. 560 crores in foreign exchange requirements mentioned by Mr. Morarji Desai on 13th August last will be only Rs. 133 crores.

The foregoing account will reveal how confusing is the picture of the foreign exchange gap. The Union Finance Ministry or the Planning Commission will do well to make a detailed assessment of the assistance authorised, so that the public will have the benefit of accurate and latest idea of the position in respect of external resources required for implementing the Plan.

The discussions which the representatives of the cotton trade and industry had with the Sudanese Finance Minister, Mr. Sayed Ibrahim Ahmed, during his brief sojourn in the City on Tuesday, underlined the point that, considering the nature and pattern of the trade between Sudan and India, the initiative for a barter deal with Sudan involving import of raw cotton from that country against export of cotton piecegoods from India rested with the Government of India. The Minister said that his country was anxious to have increased trade relations with India. He appreciated India's difficult foreign exchange situation which made increased purchases of Sudan cotton rather difficult. Sudan, too, according to him, was facing a similar situation. Moreover, since cotton was the only major export item for that country, its economy was intimately bound up with that commodity. Nevertheless, he pointed out, his country had even gone out of the way to help countries like France and to have a satisfactory barter arrangement under which cotton exports from Sudan were matched by import of wheat flour from France. A similar deal was also concluded with China.

To mill buyers in India, Sudan cotton is cheaper than other comparable cotton from Egypt, the alternative source for getting long-staple cotton. Imports of Sudan cotton into India in the last season, that is 1957-58, aggregated 79,789 bales (of 400 lbs. each), as compared with 67,621 ba'es in the previous season. In view of the attractive price and the reduced stocks of long-staple cotton with mills in India, there is considerable scope as well as need for importing more Sudan cotton. But the main difficulty at present is that imports have to be paid for in sterling. A barter deal will, no doubt, obviate this difficulty.

The overall trade between the two countries shows a surplus in favour of India. Total exports from India to Sudan in the calendar year 1957 were valued at Rs. 9.73 crores, while imports were of the order of Rs. 7.8 crores. Thus, India had a favourable trade balance of Rs. 1.93 crore. It will, therefore, be beneficial to both countries, if, by a satisfactory trade arrangement, Sudan is enabled to pay for its imports from India by more of its cotton, much in need by our mills.

The trade and mill representatives did well to utilise the occasion to ventilate some of their grievances in respect of the cotton export policy adopted by Sudan. They pointed to the inconsistencies in respect of the policy followed regarding export duty and marketing of Sudan cotton. It was emphasised that any variation in export duty, as and when made, should be passed on to the ultimate buyer. It was also stressed that a comprehensive marketing policy, which would safeguard the interests of both the spinners and the traders, should replace the "wavering and undefined policy" so far adopted by that country.

Financial circles of London are somewhat inclined to feel that the convertibility of the pound sterling will be a reality within a year. The feeling is based on the words "convertibility of the pound . . . is our objective" uttered by the British Chancellor of the Exchequer in his speech to the Board of Governors of the International Monetary Fund at the meeting held in New Delhi recently. Commenting on these words, our London Correspondent, in the course of an interesting despatch, observes:

"In themselves, they do not represent anything new and, in this case, the Chancellor reaffirmed the need to achieve the necessary conditions, but their context was different. The Chancellor had recently come from the Commonwealth Trade and Economic Conference in Canada, and he and the Finance Minister of Canada had let it be known that the maximum freeing of trade and payments was the uppermost article of faith in their minds. But it was also the Chancellor who put forward the case for an increase of 50 per cent. in the resources of the International Monetary Fund, and it is this and the Chancellor's pressure for a decision by the end of this year that have convinced the City that convertibility is intended within a year."

The Correspondent recalls that the financial crisis through which Britain passed just over a year ago was primarily due to the low level of internationally liquid resources. The British balance of payments was active, but the weight of hot money in the City was such that its movement could cast down the resources to disquieting levels. This could obviously happen again, the more so with the convertible pound. He, therefore, points out that the Chancellor is very conscious of the need to be able to rely upon the resources of the Fund to meet temporary difficulties and that the U.S., for which convertibility of European currencies has long been a major objective, fully supports the need to increase the resources of the Fund by 50 per cent.

According to our Correspondent, an increase in the resources of the Fund would normally be made by the contributing countries handing over half the increase in gold and half in their national currencies. This puts the managers of the Fund in a position to make temporary loans to needy and *deserving* members. But the Fund is largely under American control and the effect of the U.K. relying upon the Fund to help it out of any temporary difficulties would be to rely upon American approval of the origins of the difficulties and the purposes of the help. In this connection, he observes:

"The Chancellor hurried from New Delhi to the Tory Conference at Blackpool in England. At the Labour Conference, there was a prescient reference to the danger of a Tory-engineered scare in the event of a Labour win at the next election that might endanger sterling. The Labour leaders have every right to be apprehensive, because, although the world is no longer fearful of what a socialist Government would do in office and would normally look at the realities of the country's balance of payments in assessing the strength of the currency, yet one cannot ignore the factor of goodwill. With the pound convertible, a Labour Government could be embarrassed by a sudden outflow of funds from which embarrassment only a higher co-operative Fund could rescue it. A convertible pound is a likely means of ensuring that a Labour Government pursues Conservative economic policies."

In the opinion of the Correspondent, a higher volume of liquid resources to finance international trade could be ensured, in the long run, either by an increase in the world prices of gold or by permitting the Fund to create credit in terms of its own international unions, or finally in the way now proposed of an increase in subscriptions. In the short-term, he says, there is not likely to be a problem of international liquidity, since the outflow of gold and dollars from the U.S. is continuous and the volume of world trade is receding. But the feeling in London is that the Fund is right to look ahead at this time. There is, however, another very important factor and that is the relative size of the subscriptions of different countries. These were based on the pre-war pattern of trade and have not been revised to increase substantially, for instance, the German share. Alluding to this, the Correspondent says: "The Treasury is anxious to spring the act of convertibility on the world as a surprise when everything, including the support of the Fund in adequate measure—that is, after an increase in subscriptions—has been settled. So little more public action is likely to be seen in the matter for the time being, but, behind the scenes, work is fervently proceeding."

* * * *

Will Britain continue to be the citadel of currency conservatism, eschewing all attempts at decimalisation? Hitherto, it has shown no great signs of any willingness to decimalise its currency. If Britain remains the only island surrounded by a decimal sea, will it not lose, rather than gain, by its stubborn adherence to its ancient coinage? The

EQUITIES MOVE DOWN

A.C.C. IN DEMAND

(From Our Own Correspondents)

BOMBAY, 16*th October*

THE share market ruled dull during the week under review and the trend of prices was slightly downward. Early in the week, end-of-account considerations resulted in some liquidation and equity prices drifted down. The new account on Monday opened on a slightly better note, but in the absence of fresh incentives prices tended to move down. The announcement of an increase of Rs. 14 per ton in the retention price of steel paid to the Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd., on Monday evening was no doubt well received by the market, but, as the news had already been discounted in prices, there was no favourable reaction to the announcement. Nevertheless, prices would have gone up but for the easiness in the textile section in the absence of any encouraging news from the cloth market.

In the steel section, Tata Steel Ordinaries receded from Rs. 178 to Rs. 176.50 on end-of-account liquidation. In the new account, they fluctuated between Rs. 179.25 and Rs. 175.50 before closing at Rs. 177. The new shares lost Re. 1 over the week to Rs. 172. Indian Irons moved up from Rs. 26.95 to Rs. 27.25, but subsequently gave way to Rs. 26.75 and closed at Rs. 27.

Though hopes were held that there would be further relief in taxation or some incentive to reduce the accumulation of cloth, they were not reflected in prices. On the contrary, prices over a wide front gave way. Bombay Dyeings dropped from Rs. 59.50 to Rs. 57.40 before finishing at Rs. 58.20. Centurys dipped from Rs. 446 to Rs. 433, but towards the close improved to Rs. 437.50. Kohinoors gave way from Rs. 272.50 to Rs. 264, but the loss was partially made good when the shares closed at Rs. 267.50. Central Indias lost Rs. 4 to Rs. 87. Edward Textiles were done at Rs. 225 *ex-div.*, which on a *cum-div.* basis represents a loss of Rs. 17.50 over the week. Finlays were Rs. 2.50 lower at Rs. 280.50 and Gokaks lost a like amount at Rs. 142. Indu Ordinaries shed 56 nP to Rs. 8.76 and Indore Malwas Rs. 3.50 to Rs. 102.50. Models were done Rs. 5 lower at Rs. 167.50. Morarjee Mills declined by Re. 1 to Rs. 243, Mysore Spinnings by Rs. 15 to Rs. 80 and Podars by Rs. 2 to Rs. 136. Shree Niwas Cottons changed hands Re. 1 lower at Rs. 148 and Simplex Rs. 2.50 down at Rs. 177.50. Standards were marked down by Rs. 6 to Rs. 408. Svadeshis lost Rs. 2.25 to Rs. 187 and Tata Mills 75 nP to Rs. 36.75.

Bank shares too were quiet. Baroda shed a rupee to Rs. 121 and Centrals a fraction to Rs. 57.70, while their new shares were unchanged at Rs. 59. Bank of Indias, however, moved up by Re. 1 to Rs. 138.25 and their new shares were maintained at Rs. 140. Jaipur Banks lost a rupee to Rs. 42 and Punjab National's 70 nP to Rs. 61.30, while United Commercials gained 80 nP to Rs. 68.80.

In the insurance section, All-India Generals showed no change at Rs. 2.50, while British India Generals had business Re. 1.48 lower at Rs. 14.24. Empire of Indias changed hands at Rs. 240 and Orientals at Rs. 3,800. New Indias were stagnant at Rs. 47.50, while their new shares advanced by Re. 1.50 to Rs. 48.25. Vulcans were placed at Rs. 19.52, as against Rs. 19.24 a week ago.

The electricity section attracted good attention and select counters staged a smart rise. Ahmedabad Electrics rallied from Rs. 98.50 to Rs. 99.60. Bombay Suburbans were done at Rs. 109.50 *ex-div.* as against Rs. 113.50 *cum-div.* a week ago. Surat Electrics gained a fraction to Rs. 117.50 as also Tata Hydros to Rs. 123. Tata Powers stood Rs. 2.50 lower at Rs. 1,257.50, while Andhra Valleys were marked up by Rs. 16.25 to Rs. 1,190.

In the sugar group, Belapurs advanced early in the week from Rs. 312 to Rs. 314, but reacted to close at Rs. 309. Bhopals were unchanged at Rs. 27 and Changdeo Sugars at Rs. 37.75. Phaltans fell by Rs. 4.50 to Rs. 174 and Walchandnagars by Rs. 1.25 to Rs. 287.50. Among cement shares, Associated Cements provided a feature with a spurt from Rs. 158.25 to Rs. 164.25 on expectations of a bonus issue. Towards the close, there was a setback to Rs. 162 on profit-taking. The new shares rose over the week by Rs. 5 to Rs. 158. Digvijays were, however, lower by Rs. 2.25 at Rs. 143.75 and Orissa Cements by 20 nP at Rs. 12.44. Jaipur Udyogs shed 16 nP to Rs. 11.12. In the engineering and mining group, Alcocks ruled strong, shooting up from Rs. 265 to Rs. 273.75. Tata Locomotibes closed at Rs. 159 *ex-right*, as against Rs. 196.25 *cum-right*. Premier Constructions dropped by Rs. 4.75 to Rs. 224, while Cooper Engineerings were take up at Rs. 121, as against Rs. 115. Brady Engineerings also gained Rs. 2.50 to Rs. 62. Shivrajpurs were Re. 1.50 lower at Rs. 88.50 and Indian Coppers 10 nP at Rs. 3.94 *ex-div.*

Among shipping shares, Scindias moved within a narrow range and closed at Rs. 21.76, a loss of 12 nP over the week. Great Easterns showed no change at Rs. 27.10, while their new shares gathered 48 nP to Rs. 19.80. Bharat Lines were 12 nP higher at Rs. 13.28. In the automobile group, Hindustan Motors were dull at Rs. 7.80, while Premier Automobiles lost Rs. 2 to Rs. 88.50.

Among the miscellaneous industrials, Bombay Burmahs (old) lost further ground from Rs. 499 to Rs. 484 before closing at Rs. 490. National Rayons drifted lower from Rs. 246 to Rs. 241.50, before gaining strength to Rs. 245.75. Tata Chemicals receded from Rs. 17.04 to Rs. 16.60 and Tata Oils from Rs. 40 to Rs. 39. W. H. Bradys had transactions at Rs. 280, while Killick Industries were Re. 1 lower at Rs. 149. Wimcos lost Re. 1 to Rs. 191.

• • • • •

Calcutta Stock Exchange

CALCUTTA, 11*th October*

With restricted turnover, the Calcutta Stock Exchange witnessed dull conditions during the week under review, although earlier in the week a cheerful note was taken of the possibility of international institutions like the World Bank and the I.M.F. being able to increase their lending activities, as their resources were being increased. Similarly, the proposal for the establishment of an International Development Association to facilitate repayment of loans in local currencies in order to ease the payment difficulties of the borrowing countries was also received with satisfaction. The worsening of conditions in Pakistan caused alarm and anxiety for some time, but subsequently it was generally thought that the likelihood of the military administration's realistic approach towards Indo-Pakistani disputes might result in better economic relations between the two countries. Another factor noted with enthusiasm earlier was the assurance given by the British Chancellor of the Exchequer, Mr. Heathcoat Amory, of the U.K.'s continued assistance to India's industrial progress and prosperity. The Commerce Minister's reiteration of the Government's policy against nationalisation of shipping industry also evoked cheer, but in the general dullness that followed all the welcome factors noted above were not reflected in trading, and were, in fact, considered as long-term factors.

Madras Stock Exchange

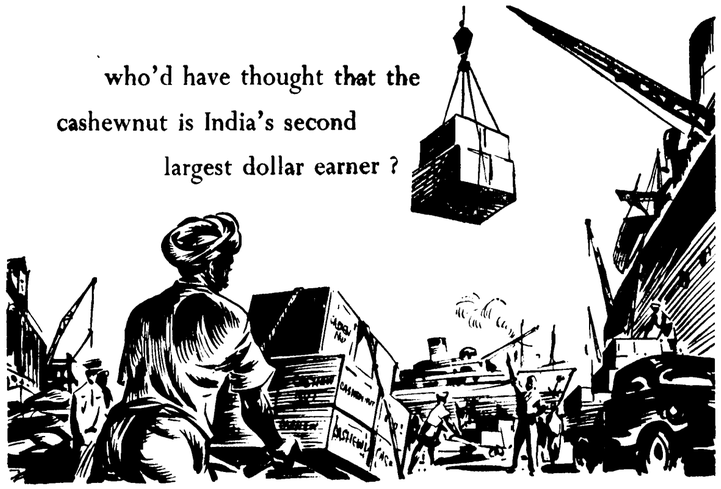
MADRAS, 14*th October*

The Madras Stock Exchange ruled steady during the week under review. There was some revival of buying support induced by encouraging prospects of India getting more foreign financial assistance. Transactions put through were, of course, only moderate. Thanks to investment support, planting shares generally tended to move up despite reports of strike threat and acts of violence by workers in Kerala plantations. Coffee shares, however, were easy. Textiles evoked scattered buying enquiries, as also certain select sugar, electric and miscellaneous industrials.

Among tea shares in the planting section, Haileyburias were marked up by Re. 1.75 to Rs. 18, and Twyfords by Re. 1.55 to Rs. 15.95 on bonus issue considerations. The former Company proposes to issue one share free for every three held and the latter three shares free for every five held. Nonsuch Teas rallied Re. 1.65 to Rs. 28.25. Devasholas hardened by 60 nP to Rs. 21.35. Balanoors strengthened by 50 nP to Rs. 17. Parksides improved by 25 nP to Rs. 21.50, Periakaramalais by 10 nP to Rs. 3.90, Emerald Valleys by 5 nP to Rs. 6.55 and Blue Mountains by 2 nP to Rs. 3.62. Coorg Teas, however, receded by 45 nP to Rs. 13.30.

In the rubber group, Travancore Rubbers climbed up by 45 nP to Rs. 17.25. Malankaras were quoted 40 nP higher at Rs. 20. Kalpettas strengthened by 30 nP to Rs. 13.75. Midlands advanced by 18 nP to Rs. 12.98, Nenmenys by 22 nP to Rs. 14.62, Rajagiris by 15 nP to Rs. 18.90 and Tropicals by 13 nP to Rs. 20.75. Pullangodes gathered 3 nP to Re. 1.69. Be Bes were better by 10 nP at Rs. 3.75.

In the textile section, Vijayakumars rallied Rs. 3 to Rs. 103. Janardanas improved by Rs. 2 to Rs. 69. Ranga Vilas advanced by a rupee to Rs. 59. Coimbatore Spinnings gathered 75 nP to Rs. 47.75. Buckinghams put on 50 nP to Rs. 179.50. Bangalore Woollens rose by a like amount to Rs. 168.50. Travancore Rayons gained 4 nP to Rs. 14.60.



who'd have thought that the cashewnut is India's second largest dollar earner ?

Twenty-five years ago, India exported only small quantities of cashewnuts. The big problem was their short-lived freshness—and, nothing is so unpalatable as a stale cashewnut !

But today, the humble cashewnut has become the second largest dollar earner for India ! The major problem of keeping the nuts fresh was solved by a special gas-sealed container which keeps them crisp and full of flavour for long periods. And that's the way cashewnuts are wanted abroad.

Today, as a consequence of a determined export drive, India is developing her export trade in processed foods, sandal-wood oil, biscuits and confectionery. And the export of these and similar consumer goods calls for carefully designed, superbly printed packages for protection and sales-appeal. The Metal Box Company of India Ltd, by making available packages specifically designed for diverse products, are helping to open up new export markets for Indian goods.

In the years that lie ahead, the country is bound to go through a phase of unparalleled expansion in the production and export of consumer goods. Automatically this will place an increasingly greater, more complex burden on the packaging industry. As leaders in the field, Metal Box are ready to meet the challenge of the future with all their resources and all their experience.

NEWS IN BRIEF

A CONTRACT for the erection of a factory to manufacture electric motors and switching gear has been given to a West German firm, Allgemeine, Elektrizitaets Gesselschaft (A.E.G.).

The West Bengal Government has decided to take over the management of the Oriental Gas Company under the Industries (Development and Regulation) Act for a period of about three years.

An exhibition on the second Five-year Plan organised by the Union Ministry of Information and Broadcasting was inaugurated at Mussoorie by Mr. B. N. Datar, Minister for Home Affairs, on the 11th inst. The exhibition is held every year with a view to attracting tourists to this hill station.

A Rs. 30-lakh ceramics factory is expected to be set up shortly at Jammu by the Kashmir Government. A team of Czechoslovakian experts which visited the State recently has recommended the site for locating the factory. Raw materials for ceramics are said to be available in abundance in the Manthal area.

The Indian Standards Institution has issued four draft Indian standards relating to internal combustion engines for eliciting comments. The draft standards prescribe codes for rating test and type testing of constant speed and variable speed internal combustion engines.

Production of cloth by the cotton mill industry in September 1958 is provisionally placed at 410 million yards. The final figure of cloth production in August this year was 408 million yards. Yarn production in September 1958 is estimated at 142 million lbs., that in August being 140 million lbs.

In connection with the *rabi* crop campaign, the Andhra Pradesh Government has decided to sanction loans to agriculturists expeditiously at a rate of Rs. 25 per acre, subject to a maximum of Rs. 50 per individual, in kind, namely, seeds and fertilisers, on the certification of village officers. The loans thus advanced will be recovered after the harvest of the *rabi* crop.

The Andhra Government has requested the Union Government to suspend the procurement of rice and paddy for a fortnight in the four surplus districts of the State, namely, East Godavari, W. Godavari, Krishna and Guntur. This step is taken to enable the rice mills there to function and to ease the difficult food situation created by the closure of mills.

Extension work of the Madras harbour is expected to start soon. The project is estimated to cost over Rs. 2 crores and will be completed within two years. The contract for the extension of the harbour has been awarded to a consortium, the leading firm being Larsen and Toubro Limited and their affiliated company, Engineering Construction Corporation Private Limited. The other firms of the consortium are J. L. Kier & Co. Ltd. of London, J. Saabye and O. Lerche A/s. all well-known specialised construction contractors.

The permanent tenants of the former royal lands in the Travancore area of Kerala will be conferred full proprietary rights over the lands they cultivate on payment of compensation. A ceiling of ten acres for each tenant has been fixed for registration. All lands in excess of this ceiling will have to be surrendered to the Government. The rate of compensation is fixed at 8½ times the annual rent of the land in respect of rural areas and 25 times in respect of municipal or corporation areas.

The Government of India has, with a view to promoting exports, decided to allow drawback of customs duty paid on imported raw materials used in the manufacture of card staves, and rebate of customs and Central excise duty paid on materials used in the manufacture of pyrethrum extract, motor cycles and scooters, including three-wheelers, when such goods are exported from India. In addition, the rates of drawback on the export of ivory products and potassium citrate have been enhanced. A scheme for manufacture in bond of handicrafts has also been authorised.

India exported 3,456 sewing machines valued at Rs. 3.78 lakhs in the first half of the current year, as against 4,465 worth Rs. 5.51 lakhs in the whole of 1957. During the first six months of 1958, India exported 1,000 machines to the U.K., 682 to Afghanistan, 540 to Thailand, 329 to Ceylon, 200 to the Federation of Malaya and 170 to Singapore. The other countries which imported Indian sewing machines included Kenya, Jordan, Madagascar, Tanganyika, the Sudan, Pakistan, Uganda, Iraq, Sierra Leone, Rhodesia, Saudi Arabia, Zanzibar, Mauritius, Burma, Nepal and Vietnam.

With a view to intensifying the small savings drive, the Punjab Government has decided to mop up surplus and reserve funds lying with semi-official and non-official institutions like *panchayats*, district boards, municipalities, marketing societies and educational institutions. The Government hopes that all public servants would invest one month's salary in National Plan Certificates within the next two months. It has also been suggested that, in Government and privately-run educational institutions, at least 50 per cent. of prizes to students should be given in the form of National Plan Certificates.

The Government of Bombay has drawn the attention of the public, particularly industrialists, to Section 44 of the Electricity (Supply) Act, 1948, under which any licensee holding an electric licence or any other person desiring to establish or acquire a new generating station or to extend or to replace any major unit of plant or work pertaining to the generation of electricity in a generating station, is required to obtain the previous consent of the State Electricity Board. Instances have come to the notice of Government where private generating plants have been installed by some industries without the permission of the Bombay State Electricity Board as required by law.

The leader of the Soviet Expert Team on Drugs and Pharmaceuticals, Mr. A. G. Natradze, presented a report on the development of the basic drug industry in India to the Minister for Industry, Mr. Manubhai Shah, in New Delhi on the 14th inst. Mr. Shah thanked the Soviet experts for the work they had done in the last two months and said that their report would receive the highest consideration. The expert team arrived in India in the beginning of August last at the invitation of the Government of India to advise on the development of the drugs and pharmaceutical industry. The experts had discussions with an Indian technical team headed by Dr. A. Nagaraja Rao, Joint Secretary, Ministry of Commerce and Industry, and also toured different parts of the country to study the progress achieved by the Indian pharmaceutical industry.

A Bill seeking to fix ceilings on land holdings in Rajasthan will be introduced in the next session of the State Legislative Assembly, in pursuance of the recommendations made by the Ceilings Committee. The proposed ceiling is related to the income derived from the land in the possession of a family consisting of seven persons, the income adopted for the purpose being Rs. 2,400 per year, exclusive of the labour of the tenant and his family but inclusive of all subsidiary income from land. Exemption from ceiling will, however, be given to mechanised farms, groves and orchards, constituting reasonably compact blocks, sugar farms operated by sugar factories, efficiently managed co-operative farms and specialised farms set apart for breeding cattle, horses and sheep, raising wool and dairying. Compensation for lands surrendered will be fixed at 20 times the annual rent.

A meeting of the Advisory Committee of the U.N.E.S.C.O. Research Centre, Calcutta, is expected to be held at the time of the general conference of the U.N.E.S.C.O. which will commence in Paris on 3rd November. Among other things, the research activities of the Centre will be discussed. The important research project on which the Centre has been engaged now for some time, namely, social and cultural factors affecting productivity of industrial labour, is nearing completion and the report will be submitted to the Committee in Paris. The Centre now proposes to launch another research project on small-scale industries. Consistent with its objectives of stimulating social science research in the countries of South-East Asia, the Centre will organise a regional seminar on "Techniques of social research" for a week beginning from 15th December. Mr. C. D. Deshmukh, Chairman, University Grants Commission, will inaugurate the seminar.

From Abroad

Pakistan is reported to have agreed to limit its textile exports to the U.K. to 30 million yards annually.

The recent relaxation of hire purchase controls in the U.K. has pushed up the retail trade in furniture, bicycles and rental T.V. substantially in the past three weeks.

Unemployment in the U.S. fell by 600,000 to 4,100,000 in the month of September, a much larger drop than usual at this time of the year.

The U.S.S.R. has commenced the construction of a new port near Hodeida, Yemen, which is expected to become the leading Red Sea port. A modern highway from the port to the capital of the country is also designed to be built with Chinese help.

The French visible trade gap fell to £19 million in September, as against £20 million in August and £26 million in September 1957. Exports at nearly £90 million were £10 million higher than in August. Imports also moved ahead to £109 million.

Personal spending on consumer goods and services in the U.K. during the second quarter of the current financial year (April to June) as compared with the previous quarter was higher by 5.3 per cent. at £3,685 million. Taking, however, the rise in prices into account, the rise in expenditure was only about 1.5 per cent.

The sliding scale of tariff duties recently introduced in Australia, it is said, will adversely affect the Indian and Japanese trade with that country. The new duty is a specific rate less a percentage on the value for duty. Under this method, the duty on an article exported to Australia from India costing 4s. will be higher than the duty on a similar article coming from Germany costing 10s.

A £1,000,000 oxygen plant, the largest to be commissioned in Britain, for supplying oxygen to steelworks, was opened at Scunthorpe, Lincolnshire, on the 7th inst. The plant, which has a daily output of 200 tons of oxygen will enable the three steel works in the town to increase output without adding to capital costs. It is unique in Britain in that it is the first to be erected to serve more than one steelworks. Others will shortly be set up in the North-East and in South Wales. Oxygen supplies will be carried to the Scunthorpe steelworks from the new plant along 4½ miles of pipelines.

A method for making predictions of total U.S. industry dyestuff and pigment sales that have been accurate within three percentge points has been evolved by two members of General Aniline and Film Corporation's Commercial Development Department. The technique is to establish a mathematical relation between dye and pigment sales and total textile production. Experimental predictions over a six-year past period that range from 99.8 to 97.7 per cent. accurate have already been made by adopting the new method.

Co-ordinated wage negotiations on the Swedish labour market were recommended by the Confederation of Trade Unions at a recent meeting in Stockholm. The individual trade unions have been requested to give their opinion on this scheme by 25th of this month. No wage claims have been put forward so far and are not likely to be made until price developments can be foreseen better. This applies particularly to agricultural prices for which special negotiations are to be held this autumn. The labour market negotiations will probably start in December.

New orders for machinery in the U.S. have registered an improvement of late. During the month of August, the index of these orders (1950=100) stood at 146, as compared with 136 in August 1957. The index of new orders for construction and mining machinery was 168, as against 151 a year before. The other types of machinery have also gained similar benefits. The only category to show a decline from last year is metal working machinery, the index number of which being lower at 79, as against 106 a year before.

A new high-speed electronic computer, known as the "Emidec 2400," now beng constructed by a British firm will be capable, when completed, of absorbing all the information which 300 expert typists working all-out could pour into it simultaneously. If applied to a mail-order company with 2,000,000 accounts, its data control system will handle all the invoicing stock control and accounting and produce the standard letters used by the company requesting payment of accounts by customers. The development of "Emidec 2400" has been sponsored by the U.K. National Research Development Corporation. When completed, it will be one of the most advanced data processing systems in the world.

In a report submitted to the 13th session of the General Agreement on Tariffs and Trade (G.A.T.T.) which commenced at Geneva on the 16th inst., the panel of leading economists has put forward several recommendations designed to improve the position of primary producing countries in international trade. The recommendations cover extension of more economic aid; more adequate domestic measures against business recessions; provision of greater international liquidity; provision of funds for buffer stock action; reduction of certain revenue duties in countries consuming tropical food and beverages; moderation of agricultural protectionism in W. Europe and N. America; shift of methods of agricultural protection in such countries away from price support towards deficiency payment systems; reduction of protection against imports of minerals; and avoidance of trade diverting measures in regional economic arrangements.

PERSONAL

MR. Manubhai Shah, Union Minister for Heavy Industries, returned from London on Sunday last.

Mr. V. Shankar, I.C.S., formerly Revenue Secretary, Government of Bombay, took over charge as Director-General of Posts and Telegraphs at New Delhi on the 14th inst.

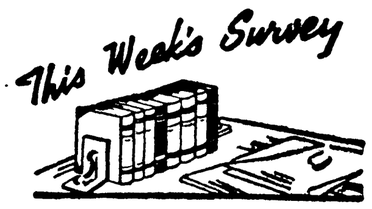
Mr. D. N. Shroff and Mr. Shantilal Mehta have been re-elected President and Vice-President, respectively, of the Silk and Art Silk Mills' Research Association for the year 1958-59.

Mr. Om Prakash Aggarwal, Managing Director of Devidayal Stainless Steel Industries Private Ltd. and Vice-President of the All-India Stainless Steel Industries Association, returned last week after a business tour of Japan.

Mr. L. V. Apte has been appointed a member of the Wage Board for the Sugar Industry in the pre-reorganised State of Bombay (excluding the transferred territories) *vice* Mr. Gulabchand Hirachand who has resigned.

Mr. K. P. Mathrani, I.C.S., Secretary, Industries and Co-operation Department, Government of Bombay, has been appointed Joint Secretary to the Central Cabinet and Director of the Organisation and Methods Division.

Mr. Nityanand Kanungo, Union Minister for Commerce, is the leader of the Indian delegation to the 13th session of the General Agreement on Tariffs and Trade (G.A.T.T.) which commenced at Geneva on the 16th inst. The other members of the delegation are: Messrs. L. K. Jha, Additional Secretary, Ministry of Commerce and Industry, who is currently Chairman of the G.A.T.T.; T. Swaminathan, Commissioner-General for Economic Affairs in Europe; M. G. Mathur, Deputy Secretary, Ministry of Commerce and Industry, and D. N. Chatterjee, Consul-General in Geneva.



"INDIA 1958" EXHIBITION

IN his characteristic way, Mr. Nehru termed the "India 1958" exhibition at New Delhi, which he declared open on the 8th inst., as a "symbol of the hopes and aspirations of a great people with an ancient civilisation and culture on the march." The exhibition, which was planned and executed in the record time of less than five months, at a total cost of Rs. 1.25 crore, is the first national exhibition of its kind. It presents, over an area of 123 acres, a co-ordinated and comprehensive picture of the nation's march towards economic well-being, social regeneration and cultural advancement. The exhibition, which was sponsored by the Finance Minister, has provided an opportunity to the people to know what has been and what still remains to be achieved. The opening of the exhibition was so timed as to provide the delegates to the Fund-Bank-I.F.C. meeting a glimpse of an ancient nation in the throes of regeneration, to serve as a reminder to the distinguished visitors of the immensity of resources in this part of the world and the need for sustained co-operative effort in building up a world free from want and fear.

More than 100 major industries in the private and public sectors and ministries and departments of the Central and State Governments have attempted to give a panoramic and detailed account of their achievements in the past eleven years of independence and their future role in the planned development of the country. The number of pavilions and stalls exceeds 160, but the total number of participants is several times larger. These pavilions and stalls are set up in a bewildering variety of architectural styles, varying from the most utilitarian to the most ornate. It is to be hoped that the exhibition will instil in the people fresh faith and confidence in the nation's future.

TECHNICAL ASSISTANCE

Technical assistance has been recognised from the beginning as an integral part of the joint effort of the Colombo Plan countries to accelerate their economic development. It has a special meaning and significance in the context of the idea and the goal of co-operative economic development which the plan represents. Seven years of the Colombo Plan have now elapsed, years which witnessed the emergence of unforeseen problems as well as of unexpected results. During the seven years of its operation, the technical co-operation scheme of the Plan has developed a highly flexible and effective technique for applying a combination of external aid and national effort to speed up the process of social and economic development. At the same time, it has also developed a vigorous philosophy of mutual help and common effort, rather than the mere giving and receiving of aid, that carries a natural appeal to the self-respect of all member-Governments and their people. Through the operation of the technical co-operation scheme, as the Colombo Plan Council for Technical Co-operation in South and South-East Asia, the principal body which co-ordinates the technical co-operation scheme, has pointed out, the dividing line between the receiving and donor countries is gradually getting blurred and more and more countries of the area are providing assistance to one another.

Technical assistance under the scheme, although forming only a small percentage—about four per cent.—of the total assistance provided under the Colombo Plan, is of much larger value since it enables a small but significant amount of skill and knowledge in the form of an expert or a returned trainee or crucial technical equipment to be applied with precision at some critical point in the national economy where it can produce catalytic effect. Since the beginning of the scheme in 1951 till the middle of June 1958, according to the Annual Report for 1957-58 of the Colombo Plan Council for Technical Co-operation in South and South East Asia, 1,002 experts have been provided to the countries of the area. 6,888 students from the area received advance training in various technological fields in the member-countries. During 1957-58 alone, according to the report, 1,264 training places and 210 experts were provided. Special equipment for the training and use of experts, valued at over £2 million, was provided under the scheme. By December 1957, the total value of technical assistance provided under the scheme by the member-countries amounted to about £9.8 million as against a total of about £6.8 million at the end of 1956, constituting an increase of £3 million in the calendar year 1957.

During the last two years, there has been a mild falling trend in the number of trainees from the high level attained in 1956. This is attributed to the increasing lengths of the training period and the corresponding lesser number of trainees over a year, than any substantial reduction in volume of technical assistance offered. Expenditure on the provision of training has maintained a progressive rise and amounted to £1.56 million in 1957. Training facilities and services of experts provided under the scheme cover all the major fields of development.

There has been a progressive increase in the flow of technical assistance from countries inside the area to one another which, starting from a trickle, is gradually gaining in volume and substance. During 1957-58, according to the report, a new trend has been noticed. This has been the flow of assistance from countries inside the area to a few countries outside. This flow is at present very small. Nonetheless, its emergence is a significant feature.

INTERNATIONAL TEA AGREEMENT

The stage for the revival of the International Tea Agreement, which has been defunct from 1st April 1955, was set ready last week when India and Ceylon, the two main producers of tea and two of the four signatories to the old agreement, agreed upon the disirability of reviving it, after a three-day informal conference between the representatives of tea growers in India and Ceylon held in Colombo last week. Tea was the first of the commodities which subjected itself to an international regulation of its affairs as early as in 1933 and remained in force by periodical revivals and with changes in membership till March 1955. The International Tea Regulation Scheme worked well until the war. After 1946, its working was not quite satisfactory, the main reason being that the basis on which the first agreement was signed was found out of date, as production in Africa, which was not a signatory to the scheme, rose rapidly. Moreover, the shortage of tea in the immediate post-war years made it unnecessary to regulate its exports. Nevertheless, India, Pakistan, Ceylon and Indonesia signed an agreement, effective from 1st April 1948, on the lines of the previous ones. This remained in force for three years before being extended up to 31st March 1955. It was not thereafter renewed.

The bodies of tea planters represented at the conference were the Indian Tea Association and the Planters' Association of Ceylon. A *communique* issued after the conclusion of the talks said that the producing interests were of the view that, subject to the approval of the Governments and producer interests concerned, it was desirable to renew the International Tea Agreement, so that the machinery for the regulation of exports could be introduced, should the necessity arise.

The *communique* added that it was not possible to do anything more at this stage than to agree upon certain basic principles which appeared fair and reasonable and to offer a good chance of enabling the signatories of the old agreement to accept a new one. Should India, Ceylon, Pakistan and Indonesia—the four signatories to the old agreement—agree initially to this proposal, the *communique* went on, every endeavour should be made thereafter to persuade other tea-producing countries to join. In pursuance of the talks, Indian and Ceylonese tea producers will hold further discussions on the subject and it is considered likely that the next meeting between Indian and Ceylonese tea growers will be held in December.

The decision of the conference, as will be seen from the *communique*, is nothing more than an expression of the desirability of reviving the International Agreement, for neither of the bodies which participated in the talks have any power to sign an agreement to regulate output or export. They can only work out a scheme for the acceptance of their respective Governments. Even this was not possible within the short period of discussions. In fact, the working out of a basis on which exports of tea should be controlled represents a major step towards signing the International Agreement.

Though the working of the International Tea Regulation Scheme was not satisfactory during the post-war years, it was not until the expiry of the agreement in 1955 that the effect of the world surplus in tea began to be felt. But the international control on tea exports could not be revived till now. Even if a new basis for export is worked out by India and Ceylon during its proposed further deliberations during the next few months, doubts are being raised about the prospect of bringing all tea producers of the world within the agreement. In the first instance, Africa, which has increased its tea crop substantially during the last few years, is not in favour of an international regulation of exports, for it has successfully been competing in the world markets with other producers of common teas. Secondly, internal consumption of tea is rising in Pakistan and the country is, therefore, anxious to raise its internal production. Even if Indonesia, the third largest producer in the world and a signatory to the old agreement, is unwilling to join the scheme of international regulation, it cannot be said that the agreement between India and Ceylon alone, if successfully worked, may not have its own effect on stabilising world tea prices, for they together account for more than three-fourths of world output and exports.

The talks between India and Ceylon on the revival of the Tea Agreement would appear to have given rise to speculation in world tea trade circles that the two countries were trying to restrict tea production and thus avert a slump in prices. Dispelling this misapprehension, Mr. J. L. Llewellyn, Deputy Chairman of the Indian Tea Association, categorically affirmed that there was no question of restricting the production of tea. It was wrong, he added, to suppose that an agreement would, in effect, mean a restriction on tea production. He agreed that when the International Tea Agreement was first mooted, it was meant mainly to restrict production and exports, but he pointed out that circumstances were quite different. "The world was experiencing such a severe slump in the thirties that many people committed suicide by jumping from skyscrapers. Instead of doing that ourselves, those in the tea trade got together and formulated the International Tea Agreement." Mr. Llewellyn disagreed that the tea industry was moving towards a slump in prices. He declared that supply was not in excess of demand. Unlike the jute industry, the tea industry did not have stocks which could not be sold. All that was being produced was being consumed. But when there was more tea in the market, he said, that alone tended to depress prices. He added that the world demand for tea would increase. Asked why there should be an international pact, if tea industry was safe from a slump in prices, Mr. Llewellyn said that the proposed pact would be something like a U.N. for tea-producing countries, under which members could get together and discuss problems. It was also of vital importance to have an International Tea Committee which could gather and compile all statistics about the tea industry. If agreement could be reached between India and Ceylon, it would be conveyed to other tea-producing countries like Pakistan and Indonesia. These countries would then be invited to join the pact. Steps would also be taken to have the machinery ready to restrict production or exports in the event of a slump in the future.

T.I.S.C.O'S NEW BLAST FURNACE

The new Rs. 7-crore blast furnace of the Tata Iron and Steel Company was put into commission on Friday last week by Mr. B. N. Jha, Bihar's Labour Minister. The furnace is one of the biggest and most modern in the world; it is equipped for high-pressure operation, a production technique employed for the first time in India. With this furnace, the T.I.S.CO. has now in all six blast furnaces ranging in capacity from 600 to 1,500 tons per day. The smallest of the furnaces is proposed to be kept as a standby for use when any of the other furnaces is down for relining.

The "blowing in" ceremony of the new blast furnace marks the beginning of the final stage in the implementation of the T.I.S.CO's two-million-ton expansion programme. The programme, it will be recalled, commenced in December 1955; it was grafted on to an earlier Rs. 25-crore project which had envisaged an increase in steel output from a million ingot tons to 1.3 million tons through modernisation and expansion. Forming part of the programme is a new Rs. 10-crore blooming mill completed in August 1958. Between this new mill and the existing mill, the T.I.S.CO's primary rolling capacity will aggregate about 3.0 million tons, leaving scope for further expansion to that level of production at a fairly low capital cost. After primary rolling in the blooming mill, finished steel will be produced by the new continuous sheet bar and billet mill and the medium bar and light structural mill, both of which are expected to be in operation by the end of December next. Thus, at the year-end, the expansion programme will have been virtually completed. Revealing this, Mr. Jehangir Ghandy, Director-in-charge of the Company, stated that production by 1959-60 would be 1.2 million tons of finished steel, while the full rated capacity of 1.5 million tons (equivalent to 2.0 million ingot tons) might be obtained in the following year.

The revised total estimated outlay on the programme, including ancillary schemes and annual replacements, is put at Rs. 133 crores. The scope of the programme ranges all the way from the mining of ore and other raw materials to the finishing mills. It embraces practically every phase of production and also involves improvement and expansion in services such as electrical distribution, water, fuel, roads, sewers, and transport.

The responsibility for all the engineering, procurement, construction and supervision services for the aforesaid project was entrusted to the Kaiser Engineers Division of the Henry J. Kaiser Corporation of Oakland, California, in accordance with a Rs. 61-crore ($130 million) contract entered into by the T.I.S.CO. It must be said to the credit of the Kaiser Engineers that they have discharged the responsibility very efficiently and at top speed. As Mr. J. R. D. Tata, Chairman of the Company, stated at the Company's recent annual meeting, the addition in three years of a million tons of capacity under Indian conditions and taking into account the many unforeseen difficulties and setbacks encountered is not an inconsiderable achievement.

In the course of his speech at the "blowing in" ceremony, Mr. Jehangir Ghandy stated that, at the end of the expansion programme, the T.I.S.CO. would be in debt to the tune of over Rs. 75 crores, excluding the special advance of Rs. 10 crores from the Government out of the Iron and Steel Controller's Steel Equalisation Fund for the earlier expansion project. Naturally, the Company's thinking today is, as Mr. Ghandy observed, in terms of consolidating and stabilising the works. There is, of course, no doubt whatever that the Company will in the not distant future "be in a position to put to still greater service the experience and organisation built up over a half century." In this task, the labourer must fully co-operate with the management. Mr. B. N. Jha, Bihar's Labour Minister, did well to stress that he had no qualms in deprecating any attempt to misguide labour and that any shortfall in production as a result of stoppage of work, whether by strikes or by lockouts, would adversely affect the country's economy.

AGRICULTURAL SELF-SUFFICIENCY

Although agriculture is the mainstay of the Indian economy, employing as it does 70 per cent. of the total population, it is a pity that the country should continue to depend on imports for its requirements of food. Productivity of land, as is well known, is still deplorably low. For instance, the yield per acre of rice in India is 700 lbs., as against 3,750 lbs. in Japan, 2,387 lbs. in China and 3,000 lbs. in the U.S.A. The average yield of wheat is estimated to be 600 lbs. in India whereas it is 1,800 lbs. in Japan. The overall production is less than what we need. The position has not materially changed even after the country has gone half-way through the second Plan. The net production of cereals, for example, was of the order of 50.09 million tons in 1956-57, as compared with 50.99 million tons in 1953-54. It is widely recognised that the Plan will be in jeopardy in the absence of sustained increase in agricultural production. At any rate, the actual experience in the country so far gives the lie to the claim that integrated and concerted efforts are under way to rehabilitate the rural sector. In this context, the brochure entitled *Suggestions for Agricultural Self-sufficiency*, embodying the views of some of the leading industrialists in the country (Messrs. B. P. Singh Roy, C. H. Bhabha, B. M. Birla and Tulsidas Kilachand) makes interesting reading.

The authors have attributed the existing maladies to the lack of co-ordination between

a timeless craft

A common sight on many a sandy beach and village is this rustic man spinning yarn from a ball of cotton. He uses a simple implement, the 'thakli'. A flick of the fingers and round spins the 'thakli' while a practised hand gently draws out the fine thread. Flourishing together with this fine but primitive cottage craft, in India, is the giant modern textile industry. Today, there are more than 420 textile mills, in our country, with about 12 million running spindles. Texmaco, the manufacturer of the first ring spinning frame in India, accounts for nearly two million of these spindles. Aided by the world's best technical know-how, Texmaco is today equipped to manufacture and supply the entire range of spinning machinery for cotton and staple fibre.

JAPAN'S SMALL-SCALE INDUSTRY

A CRITICAL APPRAISAL

From Our Special Correspondent

NEW DELHI, 14*th October*

THE latest Administration Report of the National Small Industries Corporation has given full details of the various forms of assistance provided for the development of small industries. With the continuing operation of the Corporation's expanded small industries programme and with the recent establishment of the Refinance Corporation for providing financial assistance to medium industries, the view that small and medium industries can be developed to the point of ensuring "rapid but balanced industrialisation" appears to be gaining ground. Already the National Council of Applied Economic Research has outlined the possibilities of a series of small and medium industries in its techno-economic survey of Bihar and may be expected to emphasise the importance of such industries in its surveys of other States. In the planned development of these industries, it may be that India will draw upon the experiences of "Small Business" in the United States, "Handwork" in Germany and "Medium and Small industry" in Japan.

DELHI LETTER

Since the small industry of Japan is stated to be of a broader range than its counterpart in the other two countries, India has perhaps much to learn from Japanese experience. What this experience has been may soon be learnt from a series of critical technical studies—on organisation, administration, finance, technique, management and operation of the current small and medium industries in Japan—made by Mr. Teru Sasaki, formerly associated with the International Labour Organisation as an expert on small industry and at present heading the Japan Reference Unit of the Indian Statistical Institute. This despatch is based on a preliminary study entitled *The Evolution of Japan's Small and Medium Industry*, just made available by the author to this correspondent.

Plans for the economic development of underdeveloped countries, writes Mr. Sasaki, have recently focussed a good deal of attention on the problem concerning the financial aspect of industrialisation, the maintenance of adequate and balanced rates of saving, the investment criteria for the selection of development projects, the problems of labour supply, etc. But, at the same time, unless the problem of adjusting the native economy to the existence of an industrial section in its midst is squarely faced and wisely solved at an early stage of development, serious and enduring problems of social and economic maladjustment are liable to arise, as they did in Japan.

Instability

Japan is generally regarded, continues Mr. Sasaki, as an outstandingly successful example of industrialisation. But it is because the foreign students' study of Japan's industrial development has been concerned primarily with the development of modern industry itself and only secondarily with long-range effects on the rest of the economy. Doubtless, Japan has been successful in solving the former out of the abovementioned two problems of economic development but it has been very far from successful in solving the latter. It is suggestive that the persistence and intensity of the economic and social maladjustments and inconsistencies collectively known as the "problem of medium and small-scale industry" are a measure of Japan's socio-economic instability, or as symptomatic of basic structural maladjustment connected with the peculiar course of Japan's modern industrial development. An analysis of the problem of "Small-medium business" in Japan is, therefore, of particular significance for the planners and administrators of the developing countries since problems of like nature are bound to occur in the process of industrialisation in the underdeveloped areas.

The great weight of Japanese small-medium industries derives, of course, from the weakness of the industrial structure in Japan and is not due, in the opinion of Mr. Sasaki, to the intrinsic superiority or strength of small-medium industries in themselves. Yet small-medium industries not only cannot be ignored because of their relative importance, but they are a vital factor in Japan's industrial structure.

The unprecedented pressure upon small-medium industries from both flanks which has been continuing ever since the post-war deflationary period, in the form of the heavy weight of big capital, on the one hand, and the labour offensive for higher wages by the organised workers in large industries, on the other, has driven small-medium industries into a very difficult situation, so that they are now conducting a counter-attack against big capital and labour. This counter-attack, especially the unity of small-medium industries, which has recently been markedly increasing, is compelling both big capital and organised labour to seek countermeasures to meet the problems of small-medium industries.

A Basis

Mr. Sasaki's present studies which will be soon available are intended to provide a basis for developing objective theories concerning policies relative to small-medium industries. If no such basis is provided, says Mr. Sasaki, Japan would be renouncing its claim to constructive co-operation with the developing countries, especially in this part of the world, in one of the most significant industrial fields, namely, smaller industry, by supplying valuable information and lessons—both positive and negative (by "positive" are meant such lessons which may be copied or imitated in other developing countries and by "negative," warnings not to repeat the mistakes which might as well cause deformity of industrial structure).

The relative position of small-medium industry in Japan is brought out in the following table:

Japanese Industry in 1955

(In percentages)

Scale	Enterprise	Employee	Delivery value	Value added
Petty (less than 3 employees) ..	56.8	10.0	3.1	..
Small (4—29 employees) ..	36.9	31.5	19.2	19.0
Medium (30—299 employees) ..	5.9	31.6	33.9	32.8
Large (300—999 employees) ..	0.3	12.3	20.3	20.9
Giant (more than 1,000 employees)	0.1	14.6	23.5	27.3
	100.0	100.0	100.0	100.0
Medium and small (less than 299 employees)	99.6	73.1	56.2	51.8
Large (more than 300 employees)	0.4	26.9	43.8	48.2

The development of small-scale production in Japan over the last 90 years, according to Mr. Sasaki, has been just as far-reaching, if not so spectacular, as that of large-scale modern industry. It is scarcely too much to say that without the rapid development of small-scale native industry and its adaptation to the changing situations the programme of industrialisation of Japan could not have been carried through at all. From the beginning, it was largely the increase in "native" production on small-scale which provided the exports needed to balance international accounts over the period of industrialisation. It also helped to curve the heavy population pressure on land by absorbing "peasant-turned unskilled workmen" into its realm with less capital investment. Corresponding to the stages of cottage industry, dispersed manufacture and small factory industry, various forms of industrial organisation have been evolved and still survive in medium and small-scale industry.

(*Concluded from next column*)

"*democratic* socialism" could finally guarantee the right to work, the right to leisure, the right to comfort and the right to peace. It is perhaps not fair to search his speech for precise indications of how expansion was going to take place, but the shadow Prime Minister wanted to leave no one in doubt that the Labour Party stood for freedom from "fear, insecurity, poverty, servility and snobbery," and that they had a practical programme which would mean full employment, a better deal for the old people, the abolition of slums, better education, help for underdeveloped areas of the world and a society of free men and women living dignified, secure and happy lives. These were the words that brought him rousing cheers and allowed the Conference to break up in a mood of optimism.—*All Rights Reserved.*

LABOUR CONFERENCE

From Our Own Correspondent

LONDON, 4*th October*

IN the interim between the end of the summer holidays and the re-opening of Parliament the traditional Conventions of the political parties take place. The Labour Conference has just concluded and the Conservative Conference is about to begin. They meet in a very different atmosphere from that of a year ago when the Conservatives were downcast by the result of local by-elections and public opinion polls, and the Socialists were correspondingly in the ascendant. But public opinion has shifted markedly over the past year and the Conservatives feel they have a very good chance of forming a third Administration. The Labour Party has, therefore, been obliged to subject all its policies to the stern criterion of election winning.

LONDON LETTER

Every proposal for more socialism has had to be measured against that test—will it win the Party votes or lose them? In these circumstances, it is not surprising that very little startling should emerge from most of the discussions. For instance, a day was devoted to discussing the nationalisation of land. The former Minister of Agriculture confessed he did not know whether it was a good thing or a bad thing to nationalise land. He said the question had never been properly examined—the costs and the administration. The Party leaders reckon that their gentle land policy might win them 30 agricultural seats but if they went forward with proposals to nationalise land they would arouse a wave of antagonism that would go from the countryside into the homes of urban dwellers. So land is not to be nationalised if Labour comes to power. Nevertheless, there were many supporters of the Party at the Conference who wondered whether Labour's agriculture policy would in fact catch them any more votes.

Public Education

Then came the question of public education and there again the true gospellers of socialism wanted to see all the schools of the country brought under the State umbrella. This would mean taking out of private hands the great so-called public schools—schools which have the highest standard of education but which are reserved for a minority mainly on a high-fee-paying basis. Again, the leaders of the Party argued that their hands would be quite full enough with raising the standard of general education in the State schools, without at this stage trying to pull the public schools into the stream.

The Trades Union Congress made their contribution to the general philosophy when their leaders pointed out that the Trade Unions would not take political action against a Conservative Government. They were not dangerous men, they were opposed to Government intervention into industrial disputes, no matter whether that Government was Labour or Conservative, and Party politicians should not meddle with these industrial matters. They were as anxious to change the Government for a Labour Government as anyone else but they would do it in their capacity as private citizens and not by taking any industrial action.

So the Conference closed on the major discussion on economic progress. This was the field in which Mr. Gaitskell, the shadow Prime Minister, and Mr. Wilson, the shadow Chancellor of the Exchequer, ran foremost to convince the Party and to convince the country that they stood for full employment and economic expansion without inflation. They would be as staunch guardians—nay stauncher—of the stability of sterling as the present Government. The present Government had taken deliberate decisions to retard production and as a result, the long shadow of unemployment was falling across the country. In the great industrial areas, unemployment was several times the level of a year ago and the present indications were that it would increase; a Labour Government would alter all that. It would increase productive investment above all, for only by an increase in productive capacity and in production could the real wealth of the country be enlarged. Mr. Gaitskell paid lip service to the principles of socialism by declaring that only

AMERICAN LETTER

LARGE-SIZED AUTOMOBILES CREATE GARAGE PROBLEM

INCREASE IN SAVINGS AND BORROWINGS

From Our Special Correspondent

NEW YORK, 6*th October*

AS this is being written, India is being host to the annual meetings of the International Bank for Reconstruction and Development and of the International Monetary Fund. It is realised in United States financial circles that important decisions will be made at New Delhi. These include increases in the capital of the World Bank and the Fund. There has been an ever-increasing need for new funds for various purposes all over the world. Since India has been one of the most deserving beneficiaries in the first decade of its independence, it seems only fitting that such decisions should be formulated in that country's capital.

In the United States, the recession is all but a word in the vocabulary at this time. Prices on the New York Stock Exchange have broken through the highs made in 1956 and they are now higher than they were in 1929 shortly before the crash. Obviously, the latter comparison means very little since there is a whale of a difference between 1929 and 1958 prices. But since 1929 was such a remarkable year, mention seems permissible so far as a statistical phenomenon is concerned.

Peace now reigns in the automobile industry. New labour contracts have been signed but sales are still lagging. All models but Chrysler received a good applause from the re-viewers. The 1959 models are still longer and wider than their predecessors. Indeed, the sizes of cars have become so large that garages in several cities refuse to take the new monsters because they take so much space.

Garage operators in St. Louis have agreed not to take for storage the new 1959 Cadillac because of its size. At Boston, this practice has been prevalent for some time, except that the method used there is more subtle. The attendant looks at the car, as one drives up, and merely says "sorry, we are filled up."

A Real Problem

It's a real problem and not as silly as it may sound. The automobile designers and manufacturers justified their action of marketing bigger and wider models by a public opinion poll. This showed that the majority of those asked were in favour of the trend. Presumably, most of the respondents must live in the country or in suburbia where garage space is no problem.

Another reason for these changes is what is known technically as "planned obsolescence." New automatic gadgets, models that look really new and modern, will attract buyers who would continue to drive the old car otherwise. Chrysler has the least changes and, therefore, received the least favourable notices in the Press. The small foreign cars show few, if any changes, and sales in this group are rising continually. Perhaps, Chrysler is right, perhaps Chrysler is wrong. Time will tell.

Savings

As the recession is fading into memory, people are saving more and borrowing more. Deposits in 13,144 commercial banks and 239 mutual savings banks, insured by the Federal Deposit Insurance Corporation, rose to $229,500 million on 25th June. This compares with $225,500 million on 1st January. This represents about 96 per cent. of all bank deposits.

The buying mood of the public was indicated by higher borrowings. Consumer credit increased in August for the first time since January.

On a seasonally adjusted basis, such debt rose $30 million to $33,200 million. At the same time, automobile credit fell $112 million. There are other indications of widespread business improvement. Steel output has returned to the highest level since last November. Construction awards aggregated $3,400,000 million last month, up 23 per cent. from the corresponding 1957 level. More than half of the drop in industrial production of the recession has now been regained.

The farm picture is also fairly bright. Prices of farm products gained 2.79 per cent. to 258 per cent. of the 1910-14 average in the monthly period, ended 14th September. The index was 251 in mid-August 1957. It compares with a record high of 313 in February 1951.

Another issue which has made the headlines here is the school integration in the Southern States, or the lack of it. It is the worst clash between State and Federal constitutional authority since the war between the States in the last century. The U.S. Supreme Court has decreed integration. The outstanding proponent of non-integration, Governor Faubus of Arkansas, up to this writing has refused to open the schools on an integrated basis, for both whites and coloured youngsters, and he thus is depriving thousands of boys and girls of their regular education.

Nobody can foretell the outcome of the dispute except to say that the issue already has produced grave international implications. The land of the "brave and the free," upon analysis of foreign eyes, does not seem to be so "free" after all.

Election Campaign

Another development on the home front is that the election campaigns for Governors of the various States and for the Congress are now getting serious. In New York, the contest between Governor Harriman and Nelson Rockefeller is real. It is unusual in the sense that two millionaires are running against each other.

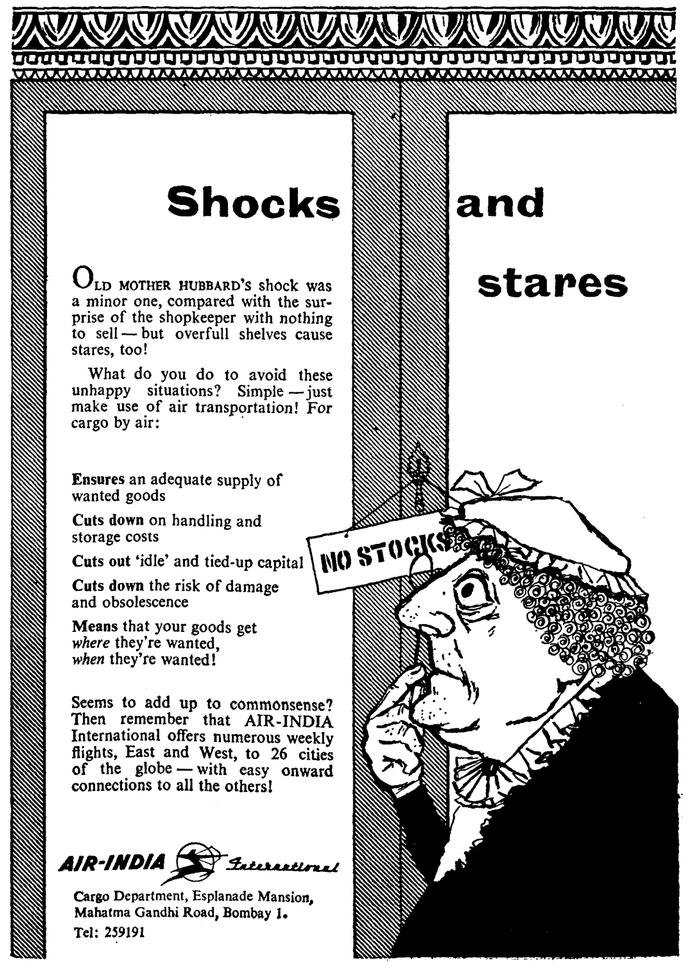
While peace has been re-established in the automobile industry, a strike was begun affecting a majority of American-flag passenger liners. The walk out was by ships' officers belonging to the International Union of Masters, Mates and Pilots. Wage increases were not the real issue. The union called its demands fringe benefits, while the companies called it feather-bedding. Ship captains, for example, wanted 90 days' vacation a year, instead of the present 48 days. Their basic earnings are $1,280 a month plus overtime. How far foreign trade and surface mail will be affected, remains to be seen.

Otherwise, U.S. public opinion is very much concerned about developments overseas. The first place is occupied by the explosive situation in the Formosa Straits. Nobody knows how far-reaching the Sino-American commitments are. There is a deep-seated dilemma, though. The outlying islands, it is felt, are indefensible. Yet, if the U.S. should withdraw its protection from Nationalist China, it would be the beginning of further Communist aggression in both Europe, the Middle East and Asia proper.

France

On the more cheerful side, against all expectations here, General de Gaulle won an overwhelming victory for his new constitution for "metropolitan" France, even though Guinea in French West Africa decided to be independent. Anglo-American withdrawals from the Middle East are also in this category of good news. They will eliminate friction.

In the meantime, the East-West contest continues. A U.S. submarine has been submerged for more than 60 days and the Soviet Union has resumed its atom tests which was the subject of so much propaganda recently when Moscow urged Britain and the U.S. to discontinue the practice for the benefit of mankind.—*All Rights Reserved.*



I.F.C. OF INDIA COMPLETES A DECADE OF USEFUL SERVICE

PROFIT AT A FRESH HIGH—FALL IN LOANS

A DECADE in the life of an institution which provides long-term finance to industries, as Mr. K. R. K. Menon, Chairman of the Industrial Finance Corporation of India, pointed out in his address at the tenth annual meeting of the Corporation held recently, is but a short period for the tasks ahead of it. It is, therefore, too early to draw any conclusions of a general nature from its achievements during the last 10 years. However, as a pioneer in the field of long-term industrial financing in this country, the Corporation has played a very useful role. During the last 10 years ended 30th June 1958, it has received applications for loans to the tune of Rs. 124.34 crores and more than half of this amount has been sanctioned, the exact sum being Rs. 62.9 crores. The actual amount of loans disbursed during these 10 years aggregate Rs. 34.84 crores. The outstanding amount of loans and advances as at the end of June 1958 is Rs. 28.94 crores. During the last 10 years, the Corporation has augmented its resources by no less than Rs. 12.37 crores by the issue of bonds which have been taken up by institutional investors who have already subscribed liberally to its share capital. Another feature of the Corporation's working during this 10-year period is that it has sanctioned loans amounting to Rs. 32 crores to concerns in relatively less industrially developed States of the country; of this amount, as much as Rs. 22 crores was sanctioned to new concerns alone in these States.

To crown these efforts, the working of the Corporation during the year ended 30th June 1958 proved to be the most successful one, in that the profit earned was a record, having gone up by Rs. 15.19 lakhs to Rs. 58.25 lakhs. With this rise, the profit has more than doubled itself within the last three years. Yet another feature of the year's working is that the Corporation has been able not only to dispense with the subvention from the Government of India to pay the guaranteed dividend of 2¼ per cent. (this is the second year in succession for which it has not taken the subvention) but it has also been able to repay to the Government a sizable amount of the subvention taken in earlier years.

Main Features

The main features of the year's working are compared in the following table with those of the previous three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Interest	1,54.36	95.93	67.19	50.71
Other income	0.54	0.40	0.43	
Interest paid	86.85	44.17	26.99	26.52
Other expenses	9.68	8.96	7.82	9.85
Depreciation	0.14	0.13	0.13	0.15
Profit	58.25	43.06	32.68	24.69
Provision for—				
Taxation	25.21	8.56	10.18	9.69
Doubtful debts	..	22.25	22.50	15.00
Discount and brokerage on bonds	4.83	..	..	..
To reserve for contingencies	..	1.00	..	..
,, general reserve	11.50	..	..	..
,, dividend	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)
Subvention from Government	..	..	11.25	11.25
Subvention returned to Government	5.45	..	..	..
Loan applications received	14,88.50 (48)	21,36.25 (67)	27,70.02 (86)	11,27.00 (49)
Applications sanctioned	7,78.50 (22)	11,90.75 (51)	15,13.00 (44)	7,34.00 (27)
Loans disbursed	8,38.35	9,77.50	2,20.23	1,64.80

It will be noted that the provision for taxation has been substantially raised, while no provision has been made for doubtful debts, for which a sum of Rs. 22.25 lakhs had been set aside a year ago and Rs. 22.50 lakhs two years back, as the existing provision of Rs. 15.14 lakhs has been found adequate. For the first time after a lapse of five years, the Corporation's general reserve has been strengthened by Rs. 11.50 lakhs from the profit of the year under review.

For the second year in succession the number of applications for loans, as well as the amount sought for, has declined, the most important reason for this being "the increasing difficulty experienced by industrial concerns and entrepreneurs in the matter of securing the necessary licences for importing the capital goods required for starting new industries or expanding the existing ones." The Corporation insists on the production of the necessary import licences before it takes up loan applications for consideration.

Of the loans sanctioned during the year under review, amounting to Rs. 7.78 crores, all but a sum of Rs. 5 lakhs (representing additional loan) were granted during the second half of the year only. No new loan was sanctioned during the first six months of the year due to paucity of funds. Of the 48 applications received during the year for loans amounting to Rs. 14.88 crores, 20 applications were from the sugar industry for Rs. 7.49 crores, 12 applications for amounts aggregating Rs. 1.98 crore from the textile industry and five applications were for Rs. 2.95 crores from the cement industry. The remaining 11 applications received for Rs. 2.46 crores were from other major industries, such as engineering, refractories, paper, chemicals, automobiles, etc.

Loans Sanctioned

A State-wise analysis of the loans sanctioned shows the following trend:

State	Up to June 1957		Up to June 1958	
	No. of units	Amount (Rs. lakhs)	No. of units	Amount (Rs. lakhs)
Bombay	57	17,84.65	58	18,09.65
W. Bengal	26	5,98.50	27	6,83.50
Madras	17	5,58.00	19	8,57.00
Bihar	12	4,77.75	12	4,77.75
Kerala	6	4,27.50	6	4,27.50
U.P.	13	3,85.60	14	5,00.60
Mysore	16	3,80.00	17	4,80.00
Punjab	11	3,65.50	11	2,96.50
Andhra	9	2,61.00	10	3,10.50
Orissa	4	2,80.00	5	2,94.00
Rajasthan	3	74.50	3	74.50
Assam	1	45.00	1	45.00
Delhi	1	20.00	1	20.00
Madhya Pradesh	1	3.50	1	3.50
Total	177	55,11.50	185	62,90.00

Co-operative societies continued to receive the Corporation's special attention. The financial assistance sanctioned to them up to the end of the year under review aggregates Rs. 13.24 crores, as compared with Rs. 10.73 crores at the end of June 1957. Hitherto applications from the co-operative sector had been confined to the sugar industry. The Corporation has lately been approached for assistance from certain textile concerns also in this sector.

As stated already, the Corporation did not sanction any loan during the first half of the year due to paucity of funds. The ways and means position of the Corporation was improved thereafter by the receipt of Rs. 8.50 crores from the Government. Since the close of the year under review, the Government has sanctioned a further loan of Rs. 7.25 crores for the rest of the second Five-year Plan. This brings the total loans due to the Government to Rs. 22.25 crores, carrying interest at 4½ per cent. per annum. In November 1957, the I.F.C. issued, privately, bonds of the value of Rs. 4 crores. These bonds carry interest at the rate of 4½ per cent. per annum and are repayable in 1967. As against the sum of Rs. 4 crores invited, the subscriptions received aggregated Rs. 4.56 crores, the whole of which was retained by the Corporation. This brings the total amount of bonds outstanding at the end of the year to Rs. 12.37 crores, including the bonds amounting to Rs. 7.80 crores issued in 1949. From out of the proceeds of the bond issue, the Corporation repaid the outstanding borrowings from the Reserve Bank amounting to Rs. 2.79 crores. The rate of interest charged by the Reserve Bank on these borrowings was 4 per cent. per annum. The Corporation could not avail of the cheaper loan facility from the Reserve Bank, because the borrowing limit of Rs. 3 crores has almost been reached. The Corporation's reserves stand at Rs. 55.95 lakhs. While outstanding loans and advances aggregate Rs. 28.94 crores, cash balances amount to Rs. 3.84 crores.

Underwriting

The Corporation made its venture in the field of underwriting for the first time during the year. Jointly with the Industrial Credit and Investment Corporation of India Ltd., and the Life Insurance Corporation of India, it underwrote the issue of 6½ per cent. (subject to income-tax) redeemable and convertible debentures for Rs. 1.60 crore, issued by a borrower concern, from which a loan of Rs. 4.5 crores was already outstanding. The Corporation's share of commitment under this underwriting arrangement was Rs. 75 lakhs, inclusive of the loan of Rs. 45 lakhs which was to be redeemed out of the proceeds of the debenture issue.

Another new field of activity for the Corporation was the guaranteeing of deferred payments due from industrial concerns in respect of capital goods imported from abroad. Up to the end of June 1958, the Corporation received six applications from a like number of industrial concerns for guaranteeing deferred payments in respect of machinery and equipment to be imported to the tune of Rs. 5.24 crores. The Corporation was enabled to provide this "very useful facility" through an amendment of the I.F.C. Act during the year under review.

U.S. CAPITAL ADVANCES

Gold reserves and dollar holdings of foreign countries trading with the U.S. moved up by over $1,000 million during the second quarter of 1958. The rise was attributed to the cessation of previous declines in U.S. exports and imports of goods and services and a further rise in the outflow of U.S. private capital. The increase accrued mostly to Europe, Canada and Japan. The total U.S. expenditure in foreign countries on goods and services through private remittances, Government grants and related capital movement, and through U.S. capital advances amounted to over $6,900 million in the second quarter, about $100 million less than in the second quarter of last year. Sales of agricultural commodities for foreign currencies dropped by about $140 million. Loans by the Export-Import Bank were higher. The net outflow of funds through private investment was nearly $1,100 million, that is, $400 million higher than in the previous quarter. Private investment abroad, which had fallen off during the second half of 1957, increased again in 1958, the rise being mainly in new issues of foreign securities. Foreign expenditure in the U.S. on goods and service and long-term investment during the second quarter were about $5,900 million. After seasonal adjustments, these were slightly higher than in the preceding quarter but approximately $1,200 million or 17 per cent. less than a year earlier.

DEBENTURES GUARANTEED BY THE GOVERNMENT OF ANDHRA PRADESH

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LIMITED

Post Bag No. 257, Gunfoundry, Hyderabad-Dn.

President: **SHRI BHOGARAJU VENKATRATNAM**

Paid-up Capital and Reserves .. .. .. **Rs. 55.29 lakhs**

Subscriptions are invited for	*Amount of Issue*	*Issue Price*
4½ per cent. Debentures 1964-66 ..	**Rs. 35 lakhs**	**Par**
4½ per cent. Debentures 1968-73 ..	**,, 35 lakhs**	**Par**

The issue is open for subscription till 15-11-1958 and will be closed earlier when subscriptions to the 4½ per cent. debentures amount approximately to Rs. 35 lakhs and subscriptions to 4½ per cent. debentures amount approximately to Rs. 35 lakhs.

The Debentures are Trust Securities under the Indian Trusts Act and are also approved securities under the Insurance Act 1938 and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the debentures on maturity.

Full amount to be remitted with the application.

Other particulars and application forms can be had from the Secretary or from any Banker or Broker.

M. DATTATRAYULU, *Secretary.*

INTERNATIONAL FINANCE CORPORATION

WAY CLEARED FOR OPERATION IN INDIA

THE *International Finance Corporation* is an affiliate of the World Bank (established a little over two years ago). It is a new institution, born of international co-operation. Its purpose is to further economic development in its less developed member-countries through private enterprise. It differs from its parent organisation—the World Bank—in five important respects. First, unlike the World Bank, it deals directly with private business without Government intervention. It does not ask for the guarantee of the governments of countries in which it invests; the World Bank does. Secondly, the I.F.C. finances only private enterprises and does not invest in undertakings which are government-owned and operated or in the management of which the government participates to any significant extent. It is, however, not precluded from financing private enterprise concerns in which some public funds have been invested. The World Bank lends to both private and public enterprises. Thirdly, the I.F.C. is essentially an investing rather than a lending institution; the World Bank is a purely lending institution. The I.F.C. invests in productive private enterprises in association with private capital and management. It does not exercise management functions, nor does it compete with private capital. It is intended to help and supplement private investment. Fourthly, whereas the World Bank operates all over the world, the I.F.C. is intended to invest only in the less developed areas—Africa, Asia, the Middle East, Australia, Latin America and a few special areas in Europe. Fifthly, whereas the World Bank lends to big institutions and to all types of public utility undertakings, whether owned by the public or the private sector, the I.F.C. is meant for helping medium-sized, predominantly industrial, enterprises in the private sector. It can invest for expansion or improvement of existing enterprises, as well as for creation of new ones. The I.F.C. considers that, in most cases, it is not practical for it to invest in enterprises with total assets of less than about $500,000, that is, about Rs. 24,00,000.

Functions of I.F.C.

One cannot hope to establish a new enterprise purely with the funds of the I.F.C. Indeed, it will not finance more than half of the total cost of an enterprise. It does not provide equity capital to begin with. Its investment first takes the form of loan capital entitled to a fixed rate of interest and some right to participate in the profits and growth of the business. It considers earning power and balanced capital structure more important than a lien or mortgage on assets. The participation in future profits and growth of the business may take the form of (1) a right to convert the loan or some part of it into some type of share capital or an option to subscribe to share capital or (2) a right to some additional income related to earnings or (3) both. The exact form of investment and other conditions are matters for negotiation.

The I.F.C. is an affiliate and not a subsidiary of the World Bank. All the members of the Bank are entitled to become members of the I.F.C., but they have to contribute to its capital in U.S. dollars. At present, 57 countries are its members. Its total capital, as at the end of June last, is $93.28 million. India's share is $4.75 million. The U.S. is the largest shareholder, accounting for $37.70 million. Next comes the U.K., with $15.44 million and thereafter France with $6.23 million. India ranks fourth and is an *ex-officio* Director of the Board, along with the other three. There are 12 other countries on the Board, but they are elected annually.

Since its inception and up to 8th October 1958, the I.F.C. has entered into 11 commitments in six countries involving investments of $10.60 million. Four of these took place in the period covered by its first annual report, six in that of the second annual report, and one after the latter report went to press. The eleventh deal was for $200,000 for financing a flour mill in Guatemala in Latin America. The particulars of the remaining 10 deals are shown in the table published on this page. It will be seen therefrom that, in Asia, Pakistan is the only country in which the I.F.C. has invested so far and that, barring an investment of $660,000 in Australia, all other deals have been in Latin and Central Americas. It is true that the I.F.C. had negotiated a deal with the Tata Chemicals Ltd. in India, but it fell through as the Company could get its requirements of capital from the Export-Import Bank at a relatively lower rate of interest following the $150 million credit line given by that Bank to India early this year. Currently, quite a few enterprises are negotiating with the I.F.C. and there are good reasons to believe that by the time its third annual report is published in September 1959, the Corporation will have made some commitments in this country.

Net Commitments

Of the net commitments (that is, excluding cancellations) of $9.47 million by June 1958, the total effective operational investments were $5.39 million of which $3.32 million had been disbursed; of the latter amount, $2.80 million were in U.S. currency and $520,000 in Mexican pesos. For the year ended 30th June 1958, gross earnings were $3.41 million, of which $93,311 were from operational investments and the balance from investments in U.S. Government bonds. After expenses, the net income was $2.36 million, which, together with $1.64 million for 1956-57, took up the total funds at the disposal of the Corporation to $99.49 million. It will be interesting to note here that the total disbursements so far have been less than the aggregate net income for the past two years.

The I.F.C. has been in existence only for two and a half years. It is, therefore, too early to judge its working. But, generally speaking, it has been subjected to two criticisms. One is that it has been slow in expanding its activities. Its founders had hoped that, helped by the experience of the World Bank, it would make a quick start, but this hope has not materialised fully. The second criticism pertains to its terms of investment, especially the rate of interest. The terms are regarded as hard and the rate of interest unduly high. The condition that payment of interest and the principal should be in U.S. dollars has deterred many applicants. Many entrepreneurs in India hold the view that the rate of interest is too high and not in keeping with the I.F.C.'s objective of helping underdeveloped countries. Mr. Robert L. Garner, President of the Corporation, gave a detailed reply to these criticisms in his speech at the second annual meeting of the Board of Governors held at New Delhi on Wednesday the 8th inst. He explained the position further at a Press conference after the meeting was over.

The I.F.C.'s teething troubles have been more or less similar to those experienced by the Industrial Finance Corporation of India in its initial stages. This is evident from the following remarks of Mr. Garner:

"It is inherent in sound developmental investment that most projects require considerable time in preparation. Careful investigation of most of the prospects submitted to us is necessary to get all the pertinent facts, without which a decision is more or less a guess than a judgment. Too often, we find that essential information has either not been developed by the applicant or is in error. The widespread geographical area of our activities increases the time required and the difficulties of investigation. Sometimes the sponsors themselves tell us that months, even years, may be required for them to make final decision whether to proceed. On the other hand, we are pleased that the expert advance preparation of the two projects in which we have joined enabled us to approve the investments within a few weeks after they were submitted to us. One of the problems confronting private financial investors who are willing to put capital into new ventures outside their own countries is the cost and effort of investigation, particularly if the investment contemplated is of moderate size. Frequently, the game does not seem worth the candle."

It may be interesting to note, in this connection, that in the first half of 1958, the Corporation received as many as 235 proposals. Of these, 40 per cent. turned out to be negligible, as not falling within the requirements of its charter and operating policies. Of the remaining 60 per cent., most were in a very preliminary stage. Sometimes merely possibilities of projects. In a large number of cases, information given was scanty. Certain proposals were defective either technically or financially or the representation of the sponsors was not good. Consequently, only 7 per cent. of the applications turned out to be promising prospects for near-term action. It will thus be seen that, if the projects are good and well prepared, it would be possible for the I.F.C. to speed up its activities. Accordingly, those who want to take up the assistance of the I.F.C. will do well to have their plans scrutinised by competent consultants.

Assistance of Local Banks

The cost of investigating a project and the creditworthiness of the parties concerned could be kept down if the I.F.C. takes the assistance of some of the local commercial banks and the local development and other investment institutions. It would appear from Mr. Garner's speech that the I.F.C. is aware of this possibility and examining it carefully.

Another factor that has been holding up the progress of the I.F.C. is the condition that, save in exceptional cases, the repayment of the principal and some part of the return on the investment should be in U.S. dollars, the currency in which its capital is held. This is a strong deterrent to would-be customers of the I.F.C. In these days of inflation how can any business man be certain that the external value of his local currency will remain steady in terms of the U.S. dollar? There is, indeed, no insurance for him against the risk of devaluation. In order

Summary of I.F.C.'s Commitments

(As at 10th September, 1958)

Country, obligor and type of business	Date of commitment	Terms	Commitment*
AUSTRALIA			$
Duncan's Holdings, Ltd. (Lumber milling)	27th Sept. 1957	7% interest and additional payments contingent on profits; maturities 1961-67; option on shares.	660,000
BRAZIL			
Siemens do Brasil Cia. de Electricidade. (Electrical equipment)	20th June 1957	6% interest; maturities 1962-68; option on shares.	1,000,000†
Olinkraft S.A. Celulose e Papel (Pulp and paper)	16th Jan. 1958	7% interest; maturities 1963-70; option on shares.	957,000‡
D.L.R. Plasticos do Brasil, S.A. (Automotive parts)	30th April 1958	7% interest; maturities 1961-68; participation in profits; option on shares.	450,000
Willys-Overland do Brasil S.A. Industria e Comercio (Motor vehicles)	30th June 1958	7% interest; maturities 1962-65; participation in profits; option on shares.	2,450,000
CHILE			
Empresa Minera de Mantos Blancos S.A. (Copper mining and smelting)	20th Aug. 1957	7% interest and additional payments related to dividends; maturities 1964-68; option on shares.	2,200,000
MEXICO			
Engranes y Productos Industriales, S.A. (Industrial equipment)	12th Aug. 1957	7% interest and additional payments contingent on profits; maturities 1961-67; option on shares.	600,000
	25th Aug. 1958	6½% interest; maturity 1960, with provision for extension on modified terms in certain events.	200,000
Bristol de Mexico, S.A. (Aircraft engine overhaul)	10th Sept. 1958	7% interest and additional payments contingent on profits maturities 1960-66; option on shares.	520,000
PAKISTAN			
Steel Corporation of Pakistan, Ltd. (Steel products)	16th June 1958	7% interest plus additional payments contingent on profits; maturities 1964-68; option on shares.	630,000
Adamjee Industries Ltd. (Cotton textiles)	8th July 1958	7% interest; maturities 1964-68; option on shares.	750,000
			$10,417,000

* The investments are repayable in U.S. dollars in all cases except the original Engranes commitment and the Bristol commitment, where 50 per cent. of the investments are repayable in Mexican pesos.

† During the year, Siemens revised its expansion programme and requested that the Corporation's commitment of $2,000,000 be reduced to $1,000,000.

‡ Original commitment was $1,200,000; $243,000 was cancelled by Olinkraft as not required.

to overcome this difficulty, Mr. Garner suggested that the governments of member-countries should make available to the I.F.C. local currencies out of counterpart funds or similar funds, so that the Corporation could use them to supplement dollar funds. Elucidating this suggestion, Mr. Garner said:

"The amounts required need not be large, in terms of the amounts existing, to enable the Corporation to prove how usefully it might employ them. As in the case of its dollar capital, these other currencies would act as a catalyst to draw other funds into productive private enterprise and thus act as a multiplier in development financing. I am convinced that the availability of usable amounts of various currencies would be the greatest single factor in expanding the Corporation's activities. The I.F.C. would be more than ready to work with any of our member-governments on developing appropriate means to this end."

Funds

So far as India is concerned, the counterpart funds are growing in size and are helping to swell the deposits of the banking system. Not all such funds are "employed" in the fullest sense and it should not be difficult to spare a part of them for the purpose suggested by Mr. Garner. Even so, it does not provide an effective means of removing the deterrent. The best solution to the problem is to relieve the business man who wishes to have the assistance of the I.F.C. from the liability of paying back the principal, etc., in U.S. dollars. There is no reason why the I.F.C. itself should not assume this risk. Other foreign private investors take that risk; not all of them have the facility of insuring against it. The I.F.C. is an international agency. While it should, of course, be run on business lines, profit motive is not its exclusive ideal. It could set apart a part of its net income to a special fund for covering the risk of devaluation. Or it could ask the governments of member-countries concerned to provide general cover against the risk on mutually agreed terms. There is thus need for fresh thinking on this question by the I.F.C.

Rate of Interest

Mr. Garner's arguments to show that the rate of interest charged by the I.F.C. is not prohibitively high are, however, convincing. Here is the gist of his case:

(1) The I.F.C.'s investments are usually of longer term than the loans secured from other sources. They hold a middle place between medium-term (running from two to five years) credits, frequently secured against lien on the equipment, etc., and equity capital. They consist of notes or bonds, usually without security repayable after eight or ten years, or even longer and hold a junior position as compared with the other lenders.

(2) The objective of the Corporation is not to provide cheap money for which there are other agencies. It is meant to operate without government guarantee of any sort and if on top of this condition it is to operate as a provider of cheap credit, it would not be in a position to augment its resources through borrowings in the capital markets of the world.

(3) If the private segment of an economy is to maintain its basic private character, the largest amount of capital going into it must come from private and not public, sources. Provision of cheap Government credits will *generally* retard development of private enterprise. If the I.F.C. is not to depend upon Government credits in future it must be run on commercial principles. Moreover, the question to what extent should public funds be made available to a limited number of private business men at rates much lower than other business men can obtain has to be squarely faced.

These arguments are pertinent. That part, an interest rate of 6¼ per cent. or 7 per cent. for long- or medium-term obligations with no security is by no means excessive as compared with what even first class industrial borrowers are paying today in this country for secured loans and debentures. In any case, it is much cheaper than the terms of the deferred credits arranged by the Government and business men with the foreign suppliers of capital equipment. credits which are repayable in five to seven years. It is also worth remembering that almost all of those who have so far taken the I.F.C.'s assistance are large companies with wide international interests. Apparently, they have found it worthwhile taking capital from the I.F.C. at 6¼ to 7 per cent. Further, it is significant that the Government of India which was once of the opinion that a rate of 7 per cent. was too high and would not permit the I.F.C. to finalise deals with Indian business men on that basis, has changed its mind. It has now agreed that it would not stand in the way of such deals provided the rate of interest does not exceed 7 per cent. It has also agreed that the method of the I.F.C.'s participation in projects in which it proposed to invest was a matter of agreement between the I.F.C. and the sponsors of the particular project. The only condition that the Government of India has imposed is that the projects chosen should fit in with its plan and policies for the development of the country. This is, indeed, a reasonable attitude and it is gratifying to hear from Mr. Garner that there are now no differences of opinion between the I.F.C. and the Government of India and that the way is clear for it to do business in this country.

Catalytic Agent

The main function of the I.F.C. is to act as a catalytic agent in stimulating private investment in member-countries. Its success, therefore, is to be measured not merely in terms of the actual investments made by it but by their multiplying effect in supplementing and attracting larger amounts of private capital. It is estimated that, in the first two years of its existence, every dollar invested by the I.F.C. has attracted new investment of about $3.50. While this is, indeed, a creditable achievement, the management of the I.F.C. must always bear in mind the following pertinent remarks of Dr. Ludwig Erhard, the German Minister for Economic Affairs, in drawing up the terms of investment:

"The founders of the International Finance Corporation endowed it with the task of effecting investments not for the sake of returns but for the sake of encouraging private capital also to invest and, at a later stage, of channelling further private capital into the developing countries from the sale of its participations. Consequently, the Corporation is faced with a very delicate task. It must act similarly to a private investor, because, otherwise, it could not offer conditions under which private capital would be prepared to participate. On the other hand, however, it must not use exclusively the cautious approach of the private investor, for then only such projects might be taken up for which private capital could be found anyway. But that would mean that the I.F.C. could not live up to its task. Consequently, the Corporation must always wriggle between the approach of the investor preferring security and that of the risk-loving pioneer."

Dr. Erhard has, in our opinion, summed up the task before the I.F.C. admirably. The I.F.C.'s terms should be flexible and pragmatic and not rigid and conservative. They should reflect the changing trends in the capital markets. It is encouraging to be told that in the I.F.C.'s latest deal with a flour mill in Guatemala, the fixed interest on investment has been fixed at 5 per cent. with additional return dependent on a stock option and profit participation. This instance suggests that the I.F.C. is alive to the significance of Dr. Erhard's advice.

... target to be reached ahead of time

Unparalleled in progress by any other industry, the Indian White Sugar Industry has doubled its production in four years—from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. *This Industry today is the second largest in India,* and is a vital factor in the nation's economy. Pledged to maintain its trend of progress, it will soon emerge as a leading producer of white sugar. Today it is contributing substantially to the success of the Second Five Year Plan.

The increase in production has been so remarkable that the Second Plan target of 22.5 lakh tons of Sugar will be achieved well ahead of time.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian WHITE sugar ...

ample for home market—with surplus for export too

FUTURE OF BRITISH TEXTILE INDUSTRY

HIGHER TARIFFS ON IMPORTS ADVOCATED

From A Special Correspondent

MANCHESTER, *7th October*

MANY documents, some produced by official organisations and others by interested individuals, have been written about the Lancashire cotton trade and its difficulties which seem to have persisted throughout the years even in eras which now appear almost too prosperous to be true. The latest in a long line of memoranda setting the trade to rights has been compiled by Mr. John Crabtree, a textile manufacturer himself and prospective Parliamentary candidate. In the past, Mr. Crabtree has been an outspoken critic of the present British Government's policies towards the textile industry.

MANCHESTER LETTER

His survey, addressed to the Conservative Party Organisation, bears the stamp of authenticity, though some of his ideas may not be capable of adoption without radical changes in the political structure not only of this country but also abroad. He sees the future of British textiles as a co-operative venture in which the Government and the industry must each play their part. In return for breathing space, represented by a five- or ten-year protection plan, Lancashire must be prepared to modernise on a much wider scale, adopt shift working, and reorganise by breaking up obsolete and redundant machinery for scrap.

The proposals for Government action seem almost in direct opposition to what has been happening lately. Mr. Crabtree calls for increased Imperial Preference in all Colonies and Dominions and higher tariffs against foreign textiles entering those territories. What do Australia and New Zealand say to this?

Even more far-reaching are the author's plans for a revision of the G.A.A.T. and Ottawa Agreements. In the last resort, this might mean Britain ceasing to subscribe to the first of these pacts, while Mr. Crabtree wants a new Imperial Trade Conference called to bring about a set of up-to-date Commonwealth agreements.

Efficient Working

This new survey for the future covers every aspect of the industry from the opportunities provided by expanding markets to the need for stimulating selling methods, which most people will agree could do with modernisation. Mr. Crabtree urges the trade unions to collaborate more effectively in the use of shift working and permit the mills to operate what he calls a "maximum working year."

The installation cost of modern shuttleless automatic looms on a 45-hour single shift represents 1¼d. per yard in depreciation and interest, he asserts. On three-shift working, even under current regulations, this would be reduced to ¾d. per yard, while, if Lancashire's working year on three shifts of approximately 5,512 hours could be lifted to the 8,088 hours common in America, the depreciation and interest figure would drop again to about ½d. per yard. The "split personality" of the present Cotton Board comes under fire. Mr. Crabtree suggests a Textile Industry Council made up only of the productive elements. "Such a Council," he says, "would be able to speak to the Government with one voice."

Price Control and Surplus Plant

The scheme comes out in favour of minimum price agreements on similar lines to those operated in the spinning, doubling and finishing sections of the cotton trade. It is suggested that the Board of Trade should licence agreements of a similar kind for all other sections but that they should be subject to control to ensure that they remain flexible so as to take account quickly of changes in taxes, wages, raw material costs and production improvements, with provision for the introduction of new fibres, blends and mixtures.

Redundant plant should be put under the hammer, according to the plan, and not sold through brokers to go abroad to compete with Britain on a cheap capital basis allied to cheap labour. A new organisation on the lines of the old Spindles Board should be set up to buy and take out of production any plant not scheduled for participation in the reorganisation programme.

New Import Scheme

Any series of proposals such as those outlined by Mr. Crabtree must of necessity rely on the co-operation of large sectors of industry, although some form of compulsion seems to be inherent in parts of the plan. The Government's contribution to provide the industry with "an injection of confidence in its future" rests on early restrictive control on imports.

In this connection, Mr. Crabtree has an idea which is worth consideration by the authorities. He points out that, in the first quarter of this year, imports of cotton grey cloth from China and Japan amounted to 45,000,000 yards, mainly for re-export after finishing. "I propose these imports should be severely curtailed and, in order to help Hong Kong to agree to limitation, this 45,000,000 yards should be supplied from Hong Kong and Indian mills, thus taking this amount off our home market," he declares.

Arrivals of grey cloth from countries outside the Commonwealth in the first eight months of the year exceeded 70,000,000 yards, of which 62,000,000 yards came from China and Japan. Imports from Hong Kong were 68,000,000 yards and from India nearly 80,000,000 yards. Some adjustment in this trade might have the effect of smoothing current negotiations without interfering unduly with the system of importation, finishing and re-export.

While on the topic of foreign cloth arrivals, it should be put on record that the prospects of Lancashire gaining concessions from any future Labour Government seem almost as remote as the assistance rendered by the Conservatives. The problems of the cotton industry received scant attention at the Labour Party Conference. A resolution calling for the imposition of restrictive quotas on imports was not acceptable to the executive, as such a scheme "could cause difficulties with Colonial and Commonwealth countries."

According to Mr. Harold Wilson, the former President of the Board of Trade, if the Hong Kong talks fail to secure an agreement, the situation must be solved "by what is in effect nationalisation of the business of importing cotton goods." The cotton unions' *Plan for Cotton,* now generally accepted as the basis for Labour Party policy for the industry, proposed the establishment of a Government-sponsored commission to control foreign cloth purchases in accordance with the existing state of trade.

Import Trade

Although imports of cotton cloth into Britain fell in the second quarter of the year as compared with the first quarter, shipments from Hong Kong continued to increase, according to the latest Cotton Board's *Quarterly Statistical Review.* Cloth imports declined from 117,000,000 square yards in the first three months of the year to 85,000,000 in the second quarter, and aggregated only 51,000,000 square yards in July and August. "The decline in imports in the second quarter as compared with the first was due to the sharply reduced receipts from India and China, the latter due to quota restrictions, outweighing increased receipts from Hong Kong and Japan," said the report.

Reviewing the situation in the Lancashire textile industry, the review says the unfavourable influences affecting the industry continued without abatement during the second quarter. Export shipments had declined considerably and showed few signs of improvement in the near future. Many mills were working short time and taking extended holidays, while mill closures were taking place at a steady rate. In the first seven months of the year, the industry lost 21,000 workers.

Diversification Plans

Further reference to the keener competition now being experienced in textile production in many parts of the world is made in the annual statement issued by Mr. T. A. Fairclough, Chairman of Tootal Ltd., the Lancashire textile group which deals not only in spinning and weaving but has a large merchanting organisation. "The industry," he says, "is essentially one of mass production and more and more countries are competing for the international trade in textiles. Proceeding, he observes: "The effect of this trend on the United Kingdom textile trade is clear when one considers the figures of yardage exports of cotton and rayon piecegoods from the United Kingdom; in 1939 the total volume of these exports amounted to 21 per cent. of the corresponding figure for the year 1912, whilst, in 1957, the yardage exported (including re-export of foreign produced loom-state goods processed here) had fallen to just over 8 per cent. of the 1912 figure. It is perhaps not without significance that there are indications now that even some of the Eastern countries are finding difficulty in keeping their textile industries running at full capacity."—*All Rights Reserved.*

TEXTILE INDUSTRY IN CHINA

NEW ERA OF EXPANSION AND DEVELOPMENT

THE textile industry in Communist China is now on the threshold of a new era of expansion and development. The current calendar year—the first year under the second Five-year Plan for National Development—is expected to witness a significant rise in the production of textiles. The estimated output of yarn in 1958 is placed at as high as 2,574 million lbs. which represents an increase of 40 per cent. as compared with the 1,839 million lbs. spun last year. This figure is said to be higher than the original State quota by 25 per cent. Following improvement in yarn output, the production of cloth is estimated substantially higher at nearly 6,542 million yards, that for 1957 being 4,673 million yards.

The greater part of the anticipated rise in textile output during 1958 is due to the full utilisation of old mills and only a small part is the result of the new mills put into operation in the year, according to an interesting review of the recent trends in China's textile industry by Mr. Chen Wei-chi, Vice-Minister of Textile Industry, People's Republic of China, contained in a recent supplement to *China Today*. The cotton mills in Shanghai, for example, have increased, we are told, production by 30 to 40 per cent. simply by the workers' bold acceleration of the speed of machines and other technical improvements.

The review reveals that, side by side with the quantitative increase in production, the quality of cotton, woollen, linen, and silk products have also improved greatly. In all the cotton mills in Shensi, for instance, the workers exerted their utmost efforts and the managers and workers got rid of all their conservative ideas. After 40 days of hard work, all the mills, either large or small, succeeded in producing cotton yarn of extremely fine quality. All the long-standing problems were also quickly solved. The problem of shrinkage in dyeing, for instance, which had had no satisfactory solution in the old days, was solved by the use of simple sanforising and high temperature drying machines made by the workers themselves. High-grade products such as 6A grade raw silk, non-breaking silk and white shining noil pongee, which was thought impossible to make, were also produced.

The varieties and floral patterns have been increased, too. The textile mills in Hopei Province alone have successfully produced over 1,100 new varieties this year. Many high-grade products, undreamed of before, were quickly manufactured. Special mention is made of high-grade pongee woven from 300 count yarns manufactured with ordinary native-grown cotton, crepe georgette with colourful floral prints made by the electric flocking-printing method, and cylinder-like wax-cloth for insulation in electrical industry, and seamless nylon blood vessels for surgical use. Great progress was also made in utilising new materials.

Changes in Technology

The aforesaid notable progress in the textile industry would not have been possible but for the radical changes in the field of technology. Among them, three changes stand out prominently. They are: first, to investigate and try to make textile equipment of high efficiency to take the place of those of low efficiency. For example, a new high speed carding machine made in Tsingtao and Shanghai can work four times as fast as the present one. Certain regions have made a double-piece fabric weaving loom, which has greatly increased the productivity of the present loom. Several places are now actively trying to make centrifugal spindles and pneumatic looms. Secondly, to shorten the manufacturing process or the sequence of processes through high-draft cotton-spinning, woollen-spinning, flax-spinning, and spun-silk machines which will greatly shorten the spinning process. Thirdly, to mechanise, partially mechanise or automatise heavy manual work. For example, the newly made automatic corduroy cutting machine has increased the daily output by 10 times that of manual work. New achievements in science such as semi-conductors and supersonic equipment are being actively studied as to how to apply them to the textile industry. If semi-conductors can be used to measure the moisture and control temperature, it will, it is felt, be of great significance in promoting automatisation and continuous flow in the textile industry.

Mr. Chen Wei-chi emphasises that, in order to make the textile industry catch up with the new situation in the supply of raw materials and the demand of the market, further steps must be taken to speed up the construction of new cotton mills. The only way to do so is, it is said, to carry out resolutely the policy of centralised leadership, overall planning and co-operation combined with division of labour. Some textile enterprises run by the Central Government have been handed over to various provincial and municipal governments, thus greatly developing the initiative of local Governments.

According to the Plan, two million additional spindles will be installed in the current year. This number represents about 80 per cent. of all spindles installed in the past eight years or about 40 per cent. of those installed in 60 years prior to the liberation. Notable advances have also been made in the woollen, flax and silk textile industries. These new additions to the textile industry are made by Provincial and municipal governments. While large enterprises are the backbone, the great majority of them are medium and small-sized mills. For instance, the Anhwei Provincial Government will build 306 textile factories this year. Of these, three are large mills and 14 are medium-sized, while the small-sized factories number 289.

Distribution of Mills

Owing to the reliance on local governments to manage their own industries and the co-ordination among large, medium and small-sized industries, the geographical distribution of the textile mills covers now a much wider area than before. For instance, the newly built textile mills this year with a total of 2,000,000 spindles are distributed over eighteen provinces and cities. Such places as the Chuang People's Autonomous Region in Kwangsi and the provinces of Kweichow, Fukien, Chinghai and Kansu which had no cotton mills at all have now new cotton mills. A single province now may have several textile centres. Thus, a network of textile mills is spread all over China. Investments in capital construction have been greatly reduced as compared with previous years, as attention is given to seeing that everything fits into local conditions, that the best use of local materials is made and that the standards are not set too high.

The Yutsu county in Shansi Province spent only a little over 8,000,000 yuan in building a textile mill of 50,000 spindles, cutting down capital investment by 5,000,000 yuan for a cotton mill of the same capacity. The Anhwei Province has built a cotton mill of 2,000 spindles by utilising old equipment and buildings, spending only 200,000 yuan. Its construction was completed in a little over a month.

The big leap in the textile industry has been rendered possible to a large extent by the marked strides made in textile machinery manufacture. Besides producing the technically rather complicated equipment on the basis of the achievements in technical production, attempts are being made to produce simpler and easily-made textile machines.

Alongside of developments in the spheres of textile production, technology and capital construction, attention is concentrated on the need for augmenting the production of the most important raw material, cotton. The cotton harvest of the present season is expected to be a bumper one, the total yield being put at 70 million piculs (1 picul=133⅓ lbs.) or double the output in 1957. Many textile mills in China have put forward the slogan of "Racing with the big leap in agriculture and meet the challenge of the bumper cotton harvest."

The year's achievements of the textile industry, says Mr. Chen Wei-chi, mean only the beginning of a big leap for the second Plan. For, according to him, the magnitude and scale of next year's capital construction in the industry will be several times those of 1958.

WORLD WOOL PRODUCTION

The total production of raw wool in the non-communist world during the 1958-59 season is provisionally estimated by the Commonwealth Economic Committee at 4,085 million lbs. (greasy basis). This is about 1 per cent. less than the revised total of 4,115 million lbs. for 1957-58. The reduction is due almost entirely to an estimated fall in the Australian clip. While the non-communist world output seems likely to decline for the second season in succession, the total world production—including that of the Soviet Union and China—is estimated at about the same figure as in the previous season, namely, 5,000 million lbs.

The first official estimate of Australian production is 1,386 million lbs. (greasy) or 3 per cent. below the revised total of 1,426 million lbs. for 1957-58. The fall is ascribed to widespread drought conditions during the growing season. South Africa has also been affected by drought, and the South African Wool Board anticipates a production of 306 million lbs., about 1 per cent. lower than last season. A preliminary estimate by the New Zealand Wool Commission puts New Zealand output at about 505 million lbs., or 2 per cent. more than the revised total of 496 million lbs. for the previous season. Of the other principal exporting countries, wool production in Argentina is provisionally estimated at 408 million lbs., or much the same as the total for last season. Unfavourable whether has been reported from Uruguay, but, although the clip may suffer in quality, the size is not expected to show much change and the total is provisionally estimated at 200 million lbs. The aggregate production in the U.S.A. is put at 295 million lbs. or 1 per cent. higher than a year earlier. In the United Kingdom, although the sheep population is higher, wool production is not expected to exceed the previous season's total of 112 million lbs. In the Soviet Union, states the Committee, sheep numbers in 1958 showed a sharp rise and a further increase in wool production of 3 to 4 per cent., to a total of about 620 million lbs., is estimated. The wool output estimates for certain other Eastern European countries in the light of fuller data now available are also placed higher.

FREE WORLD COTTON STOCKS

LOWEST ON RECORD SINCE 1953

WITH consumption continuing to exceed production during the last (1957-58) season, free world carryover stocks of cotton at the beginning of the current season, namely, 1st August last, registered a further decline. The International Cotton Advisory Committee, Washington, estimates the aggregate free world cotton stocks on 1st August 1958 at 18.3 million bales, as compared with 20.4 million bales a year ago and the 1956 peak level of 22.2 million bales. At this level, stocks on that date were lower than at any time since 1953 and, in terms of monthly supply, are even smaller by virtue of the higher consumption rate.

The following table gives the distribution of free world cotton stocks as on 1st August 1958.

(In million bales of 478 lbs.)

Region	As on 1st August 1958*	1957	1956
United States	8.7	11.4	14.5
Other net exporting countries	3.7	3.0	2.7
India	2.0	1.9	2.0
Other net importing countries	3.2	3.6	2.8
Of which:			
Western Europe	2.3	2.6	2.0
Japan	0.5	0.6	0.5
Others	0.4	0.4	0.3
Afloat	7.0	0.5	0.2
Total	18.3	20.4	22.2

* Preliminary estimate.

As will be seen from the table, the United States was again able to dispose of a major portion of its cotton surplus and stocks are now estimated at 8.7 million bales. Of this amount the Commodity Credit Corporation (C.C.C.) holdings declined to under three million bales, as compared with 5.2 million bales a year ago. The catalogue of C.C.C. stocks of Upland cottons from the 1956 and earlier crops at the beginning of the present season contained about 344,000 bales of which about 95 per cent. were in staples 15/16" and shorter. On 1st August the C.C.C. took possession of 2.6 million bales outstanding from the 1957 loan programme. Private holdings on that date remained unchanged at around 6 million bales. U.S. mills stepped up their purchases of cotton towards the end of last season in anticipation of the increase in domestic price following the higher support prices and mill stocks are at present higher than a year ago. At the end of June last mill stocks aggregated 1.7 million bales, which was over half a million bales more than a year ago.

In the aggregate, stocks in other countries on 1st August 1958 increased by an estimated 600,000 bales, and there have been distributional changes too. Exporting countries, with few exceptions, now hold larger stocks than a year ago, significantly so in some instances. Higher production during last season increased export availabilities but actual exports registered little, if any, gain when compared with 1956-57.

Returns are as yet incomplete and precise stocks figures for individual countries are, therefore, not available. Nevertheless, it would appear that there has been a significant increase in the United Arab Republic, Pakistan, Argentina and Central America; in many instances, the build-up in carryover did not reflect adverse trading results but merely that the market was unable to absorb increased supplies. In Egypt and Mexico, for example, exports actually increased but not at the same rate as production. At the end of June, stocks in Mexico amounted to 150,000 bales but no doubt increased in July because of the slow movement of the new Metamoros crop.

Peru experienced some difficulties earlier in the season but stocks on 1st August were probably higher than a year ago but no higher than average holdings for this time of the year. To a large extent, the increase in stocks in Argentina can be construed as an assurance of more adequate supplies for the domestic industry and no surplus problem exists there or in Brazil.

A decline in consumption, with exports still under quota, caused an increase in stocks in India and this might make more cotton available for export during the 1958-59 season. Proportionately, the most significant increase in carryover stocks was in Pakistan where stocks are presently much higher than for several years. The Government is alert to the situation, however, and late in July an export incentive programme was put into effect to facilitate the export of *Desi* type cottons.

Contrary to the general trend, the combination of lower production and increased exports relieved the surplus situation in the Sudan and stocks are now more normal. With few exceptions, importing countries are now holding smaller stocks than a year ago. To a large extent, this can be attributed to the general downturn in cotton consumption during the last few months but the deterioration in the foreign exchange position of some countries and some uncertainty over the future trend of cotton prices may also have exerted some influence on cotton trade. With consumption much lower, stocks in Canada have been sharply reduced and may be near their low for the post-war period. In France, the downturn has been very pronounced and stocks are now little more than half what they were a year ago and near the minimum level for the post-war period. Foreign exchange difficulties may have been the main cause of the decline in imports, for consumption has been well maintained.

In other West European countries, the trend has been to lower stocks but stocks in nearly every instance are still higher than in 1956. This may have some bearing on international trade during the present season. If circumstances warrant it, stocks could be reduced still further but only to a limited extent and, in the main, the volume of imports should reflect the level of consumption this season. In Japan, where consumption is now seriously curtailed, stocks are also noticeably lower as compared with a year ago.

MILL CONSUMPTION OF COTTON

Figures relating to mill consumption of cotton in India, compiled by the office of the Textile Commissioner, indicate that consumption of Indian cotton by mills during the past season, that is, 1957-58, declined from 4,665,581 bales (of 400 lbs. each) in 1956-57, to 4,433,239 bales, a fall of as much as 232,342 bales. Foreign cotton consumption, on the other hand, has been more or less maintained. It was 565,650 bales in 1957-58, as compared with 567,468 bales in the previous season.

The following table gives the breakdown of the consumption figures:

(In bales of 400 lbs.)

	Indian Cotton		Foreign Cotton	
	1957-58	1956-57	1957-58	1956-57
September	399,125	377,978	49,310	53,732
October	372,781	369,923	48,415	49,494
November	390,784	389,505	51,031	48,413
December	391,490	407,605	51,858	49,018
January	392,007	416,282	48,804	47,378
February	350,474	383,121	43,868	43,662
March	354,288	399,609	47,643	46,428
April	348,743	409,989	41,749	41,084
May	360,868	401,784	47,564	49,089
June	324,757	380,645	42,762	42,921
July	377,532	392,614	48,217	50,029
August	370,390	376,526	44,329	45,620
Total	4,433,239	4,665,581	565,650	567,468

It may be noted from the above table that the consumption of Indian cotton during the first three months of the season were running at a rate higher than that in the corresponding period of the previous season. But it was lower since December 1957.

Details of licensing procedure in respect of the export quota of 150,000 bales of Bengal *deshi* cotton and 100,000 bales of cottons (other than Bengal *deshi*) not above ¾ inch stapling, released on 8th October, has been announced. Out of the above quantity, fifteen per cent. will be reserved for co-operative societies. Allotment letters will be issued valid for shipment by 31st March 1959 on the principle of 'first-come-first-served', subject to a maximum of ten per cent. per shipper from all ports, of the quantity available for exports, after deducting the quantity reserved for co-operative societies. Co-operative societies may apply through the respective Registrars of Co-operative Societies in their States to the Joint Chief Controller of Imports and Exports, Bombay, on or before 15th November 1958. Licensing on the allotment letters will be made valid for shipment within 15 days from the date of issue or 31st March 1959, whichever is earlier.

Miss Career Girl
and Airconditioning...

Miss Career Girl dresses elegantly and likes everything in her home or office to be elegant, too.

When she chose the ACCAIRE it was its ultra-modern, beautiful design that attracted her. The rest she took on trust.

Most of the sales talk didn't quite register in her mind. When the salesman said it was dependable and low in power consumption she just smiled and nodded. When he went on to say it was a full capacity 50 cycle unit, she looked a trifle bewildered but nodded pleasantly.

Now she congratulates herself on having made the right choice because her ACCAIRE gives her trouble-free service and is very economical to maintain.

BUILDING UP SUGAR EXPORT MARKET

COST OF PRODUCTION MUST BE REDUCED

THE progress made by the scheme to export sugar abroad has not been very encouraging. Although nearly four months have elapsed since the Central Government announced the decision to permit exports of 50,000 tons of sugar before the end of the current month, the quantity actually sold up to now is said to be not more than 30,000 tons. In view of the slow tempo of export business, the Government has extended the last date for effecting shipment by a month, that is, till the end of November next. Even the small quantity sold has been at a very low price. The average price fetched is put at just Rs. 526 (£34) per ton f.o.b.

The currently ruling world prices of sugar are no doubt slightly higher than those prevailing when the sugar export ordinance was issued on 27th June 1958; spot Cuban raw sugar is now quoted in New York at about 3.45 cents per lb. (f.o.b. Cuba), as against 3.42 cents, and raw sugar in London at £31 per ton, as against £30½. Nevertheless, these prices are still very much lower than Indian prices, so that the loss on sugar exports continues to be very considerable. In terms of rupees, the world price of sugar stands at present at about Rs. 413 per ton, whereas the average price for Indian sugar even after the full remission of excise duty (Rs. 291.20 per ton) and cane cess (Rs. 50.90), comes to Rs. 750. The loss on every ton of sugar thus comes to Rs. 337. Even at such heavy sacrifice, export business in sugar has not been, as already stated, very encouraging.

World Sugar Conference

This journal has ere now questioned the wisdom of trying to export sugar for the sake of earning foreign exchange at a disproportionately heavy cost to the country. The official spokesmen have, however, repeatedly stressed that it is the Government's definite policy to export sugar. Indeed, India, although it is not a party to the International Sugar Agreement, is actively participating in the deliberations of the World Sugar Conference now in session at Geneva under the auspices of the United Nations. The Indian delegation to the Conference is led by a Minister of the Central Government, Mr. A. M. Thomas. Incidentally, Mr. Thomas has been elected the second Vice-Chairman of the Conference.

Addressing a plenary meeting of the Conference on 24th September, Mr. Thomas declared that his country was in favour of international collaboration in the widest sense of the term. India, which had not been able to accede to the present Agreement, was endeavouring to develop its economy under a Five-year Plan. He urged that a new agreement should take into account the evolution of national economies and emphasised that India would have in future a surplus sugar production which would be available for export.

Whether or not there will be surplus sugar for export in future, time alone can reveal. Much depends on the position in respect of cane supplies which, in turn, will be influenced by weather conditions and trend of *gur* prices. Assuming there will be a surplus, the point is that the amount of foreign exchange earned from sugar exports will be disproportionately low as compared with the enormous loss of internal revenue by way of income-tax, corporation tax, excise duty and cane cess and the reduction in the national income brought about by lower price realisation. If India is to build up a stabilised permanent export market for sugar, it is of the utmost importance that prices, which are high in all conscience, must be reduced and, unless this is effected, India's competitive capacity in world sugar markets will continue to be very low.

How can the cost of sugar manufacture be reduced? The answer to the poser lies partly in lowering the burden of taxation—direct and indirect—and partly in reducing the incidence of heavy cane price through the adoption of a more rational system of fixing the price for cane, in the place of the present system of basing cane prices only on the basis of weight irrespective of quality considerations. The low cost of sugar production in many countries of the world has all along been due to a large extent to the highly encouraging conditions obtaining in the sphere of cane cultivation. How the average per-acre yield of cane, the recovery per cent. of sugar in cane and the quantity of sugar raised per acre of land in India compare unfavourably with the other countries was indicated in these columns three weeks ago, so that it is unnecessary to discuss the issue again.

It will not be out of place here if a reference is made to the latest move of the Central Government to request the Tariff Commission to make a fresh examination of the cost structure of sugar manufactured in India and submit a report on the fair price payable to the sugar industry. Announcing this decision in the course of a Press Note issued on 20th September 1958, the Union Ministry of Commerce and Industry said:

"In its report on protection to the sugar industry, the former Tariff Board had recommended the preparation of a new schedule for working out the cost of production of sugar. A schedule was accordingly prepared by an expert committee. This was further examined by another committee which suggested amendments to the schedule. The second committee had also suggested that a fresh schedule should be prepared on the basis of recent data and the amended schedule should be used in the meantime.

"The sugar industry has represented that the manufacturing expenses allowed under the schedule prepared by the first committee, even after the additions suggested by the second, do not fully cover the increases in the cost which have taken place during the past few years. The industry has also represented that the allowances provided for rehabilitation charges and profits are inadequate. On the other hand, representatives of sugarcane growers have a feeling that the costs provided for in the schedule are on the high side. Government are, therefore, of the view that a fresh examination of the cost structure of sugar is necessary.

"The Tariff Commission has been requested to conduct necessary enquiries. The Commission has been asked to submit a preliminary report within three months on the allowances for rehabilitation charges and profits and a final report covering the other items as early as possible thereafter. Firms or persons interested in the matter who desire that their views should be considered, should send their representations to the Secretary, Tariff Commission, Bombay."

It is to be hoped that, in its report, the Tariff Commission will impress upon the Government the urgency of taking steps to bring down the cost of sugar production, particularly through the reduction in the incidence of heavy cane price. Such a reduction can be ensured greatly by the adoption of a policy to link the price of cane to both weight and quality, instead of to weight alone as at present. It is only such a policy that will, we repeat, give real inducement to cultivators to grow cane with richer sucrose-content and at a lower cost.

(Concluded from next column)

It, however, seems doubtful whether India will be able to meet the competition from China which has increased its production from 36 million metric tons in 1936-38 to 130 million tons in 1957 and expects to raise it further to 230 million tons in another five years. It will be interesting to note here that the Deputy Minister of Commerce and Industry, Mr. Satish Chandra; admitted in the Lok Sabha recently that India's exports, which included coal, were facing competition from China, though he added that it was too early to make an accurate assessment of the extent to which India's exports of these commodities had been affected by China's competition. Even if India were to find a market for its coal, it is doubtful whether it will be able to get a reasonable price for the sacrifice it makes in depriving Indian industries of the small quantity of metallurgical coal proposed to be exported.

The total output of hard coal in West Germany during the first half of 1958 was 66,735,000 metric tons, as against 66,922,000 metric tons in the corresponding period of 1957. The corresponding figures for soft coal were 46,261,000 metric tons and 46,866,000 metric tons, respectively. West Germany's imports of hard and soft coal during this period declined from 10,841,000 metric tons to 8,704,000 metric tons and its exports also fell from 13,085,000 metric tons to 11,041,000 metric tons. Nevertheless, stocks at pitheads rose from 185,000 metric tons at the end of June 1957 to 7,419,000 metric tons at the close of June this year. Of W. Germany's public power generation total ling 56,600 million kw.h. in 1957, about four-fifths were generated from coal; 24,665 million kw.h. (43.8 per cent.) were generated from hard and 21,049 million kw.h. (37.2 per cent.) from soft coal, while 10,589 million (18.7 per cent.) were hydraulic energy, and the remainder of 300 million kw.h. (.5 per cent.) was generated by liquid fuels, such as diesel oil, etc.

METALLURGICAL COAL EXPORTS

GOVERNMENT DECISION NEEDS RECONSIDERATION

THERE was a brief but interesting discussion on coal exports from India in the Lok Sabha on 23rd September last. The discussion was raised by Mr. Raghunath Singh who said that India was losing its coal markets abroad and, during the last 10 years, the exports of coal had gone down considerably. Replying to the discussion, Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, stated that the Government of India was taking all steps not only to preserve the existing overseas markets for coal but also to explore new ones. In order to earn foreign exchange, the Government, the Minister revealed, had decided to permit export, during the remaining part of the current year, of 200,000 tons of metallurgical coal and it was proposed to increase this quantity next year to 500,000 tons, though such exports would be at some sacrifice, as the steel plants which required metallurgical coal were reaching an advanced stage.

Mr. Swaran Singh alluded to the peak coal exports of 3.3 million tons touched in 1952 and observed that such was due to a variety of causes. This figure, he added, should not be taken as normal for the annual exports of Indian coal and the present exports should not be compared with past ones. Referring, in particular, to purchases of Indian coal by Japan, he said that, since these purchases varied from year to year, this country could not be regarded as a stable buyer of Indian coal.

Two Aspects

There are two aspects from which the problem of exports of coal from this country should be studied. First, whether the country can afford to lose even some quantity of its high grade coal, particularly at a time when every effort is being made to conserve the resources of metallurgical coal for its rising consumption by steel plants. It may not be out of place to point out here that the Karnail Singh Committee, in its recent report on coal consumption by the railways, anticipated a serious deficiency in high grade coal required for the railways at the end of the second Plan period and expected the position to deteriorate further during the third Plan period. In other words, all efforts should be made to conserve high grade coal and to increase the utility of lower grade coals by proper washing for use in spheres where high grade coals are used at present. In fact, despite the advent of nuclear energy and the rivalry of oil and hydro-electricity as alternative sources of power, it is estimated that not only India but even advanced countries like the U.S., the U.K., the U.S.S.R., France, etc., have to depend on coal as the chief source of energy for industrial and other purposes for several years to come. According to Mr. A. B. Guha, one of the leading mining engineers of India, the total annual coal requirements of India will reach 300 to 350 million tons in another 15 years, while the present production is of the order of only about 44 million tons and the prospect of reaching the target of 60 million tons per annum set for the second Plan period has almost been ruled out by the Planning Commission in its reappraisal of the Plan. In these circumstances, the decision to allow exports of metallurgical coal, though they may bring much needed foreign exchange, deserves to be reconsidered.

The second aspect of the question is whether the country will be able to compete sucessfully in the overseas markets. It is true that exports during the first half of the current year have been encouraging, as will be seen from the following table:

Exports of Coal and Coke

	Quantity (in tons)		Value (in lakhs of rupees)	
	January to June		January to June	
	1958	1957	1958	1957
A. "Coal" Anthracite, Bituminous—				
I. Rich volatile coal bituminous, etc.	594,998	603,996	167.63	179.86
II. Low volatile coal bituminous, etc.	240,080	144,152	80 28	46 23
III. Pit coal anthracite, etc.	23,675	23,427	8 71	8 56
IV. Pitch coal	7	52	0 02	0 24
V. Others	5,022	32,691	0 96	8 57
Total	863,782	804,328	257.59	243.31
B. Coke of Coal and of Lignite—				
I. Hard coke	46,487	41,743	10 99	24.47
II. Soft coke	5,918	2,222	1.72	0.59
Total	52,405	43,965	22.71	25 06
Grand Total of A & B	916,187	848,293	280 30	268.37

LADY, YOU'RE LATE!

Who cares! She knows that the occasion demands the most careful selection—saree—choli—jewellery. And she spares no pains in making the right choice, for charm and refinement are a family tradition.

Nearly eighty years ago when BINNY'S started manufacturing their quality cloth, it was mainly suitable for men's wear. When ladies noticed how smart and handsome their men folk looked in BINNY'S cloth, they wished they too could obtain the same *variety* and *quality* in women's wear, and they were not disappointed. BINNY'S introduced silks and union fabrics designed to suit the taste of the most fastidious women. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for these reassuring BINNY'S trade marks on the cloth they buy.

BINNY'S —
a great name in textiles

WORLD GOLD PRODUCTION AND PRICES

I.M.F. REVIEW OF RECENT TRENDS

[A lucid and interesting review of the recent trends in world gold production and prices is contained in the latest Annual Report of the International Monetary Fund, namely, that covering the fiscal year ended 30th April 1958. The review also includes an analysis of the growth of monetary gold reserves and a brief account of the service which the Fund provides to its members with a view to bringing together the buyers and sellers of gold. In view of the paucity of information on this subject in India and in accordance with our customary practice, the I.M.F.'s review is published on this page.—ED.]

TOTAL world production of gold, excluding output in the U.S.S.R. and countries associated with it, amounted to 29.1 million fine ounces in 1957, or about 1.1 million ounces more than in 1956 and about 8 million ounces more than the 1945 post-war low. Valued at U.S.$35 per ounce, the 1957 output was $1,020 million, as compared with $980 million in 1956, $944 million in 1955, and $897 million in 1954. Production in 1957 (a new post-war high) was about the same as in 1937, but it was about 19 per cent. less than the all-time peak production of about $1,264 million in 1940.

The increase in total output from 1956 to 1957 was due almost entirely to the continued expansion of gold mining in the Union of South Africa. Output in that country expanded from 15.9 million ounces ($556 million) in 1956 to 17.0 million ounces ($596 million) in 1957, the highest ever recorded in the Union and representing about 58 per cent. of total world production. It was about 7 per cent. greater than in 1956 and about 43 per cent. greater than in 1953, when the current rise began after several years of relatively constant output. A little more than half of the increase in 1957 was due to expanding operations in the Orange Free State, whose production rose by the equivalent of $21.1 million, to $132 million. The output of the Witwatersrand mines also increased by the equivalent of $19.7 million, to $447 million. The output of the new mines in both these areas is expected to increase further in the next few years. A mining lease has been granted for the first "ultra-deep" mine in South Africa, in which mining will start at a depth of 5,500 feet and will ultimately go to 12,500 feet. The joint production of gold and uranium is becoming an increasingly important factor in South African mining.

Elsewhere in the world (excluding the U.S.S.R.), increases in gold output in some countries in 1957 were approximately equal to decreases in others. The second largest absolute increase was recorded in Ghana, where output increased by $5.3 million, to about $27.6 million. Smaller increases were recorded in Australia, Canada, and Venezuela. In Colombia, on the other hand, output declined by about $4 million, to $11.4 million, and there were also declines in the United States, the Philippine Republic, India, Brazil, and Mexico.

Trend of Gold Output

The following table indicates the trend of gold production in different countries:

(In millions of U.S. dollars at U.S.$35 per fine ounce)

	1937	1940	1954	1955	1956	1957
Union of South Africa ..	411	492	463	511	556	596

* These figures include estimates for missing data.
† All-time peak production.

As prices and costs in general continued to rise, the gold mining industry was again affected by a further increase in its production costs. This problem has been a matter of concern to the industry in most major gold-producing countries throughout the post-war years. Average working costs per ton milled in South Africa rose from 42*s.* 11*d.* in 1956 to 45*s.* 4*d.* in 1957. Despite this increase, the total working profit from gold and uranium rose by £18 million to £91.1 million in 1957. Working profit from gold rose by £9.3 million to £57.8 million, and profit from uranium increased by £8.6 million to £33.3 million. Dividends paid by gold and uranium producers during the year amounted to £37.6 million, as compared with £29.1 million in 1956. The average grade of ore milled rose from 4.563 dwts. to 5.000 dwts. per ton. The increased profitability of South African gold mining is attributable mainly to the newer mines in the Orange Free State and Western Transvaal and to the expansion of uranium production. Although the general position of the industry in the Union may be regarded as sound, the aggregate figures mentioned above obscure the difficulties of the older mines on the Rand that have no higher grade ore to which to turn during a period of rising costs. Of the 31 non-uranium producers, 17 had working profits smaller than in 1956; and of the £9.3 million by which working profits from gold increased, £8 million accrued to only six out of a total of 54 mines.

The gold subsidy programme of the Governments of Australia, Canada, and Colombia, discussed in previous annual reports are still in operation. The Philippine programme, which was initiated in June 1954, following consultations with the Fund was allowed to expire on 18th July 1957. At the same time, the Philippine monetary authorities extended the scope of the policy that permits, under certain conditions, the remittance abroad of pesos held in blocked accounts by foreign firms and nationals. This policy, which was adopted on 19th February 1957, permitted the use of blocked pesos for the purchase in the free market of up to 25 per cent. of the output of local gold mining companies. This privilege was restricted, however, to any unremitted returns from investments as reported on 30th September 1956. Subsequently, the use of blocked pesos for the purchase of bullion in the free market was extended to all blocked peso accounts, provided that they were reported to the Exchange Control Department. In the second half of 1957, sales took place at prices ranging up to P128 per fine ounce. Bullion purchased by this means must be sold for delivery in San Francisco to the account of the Central Bank of the Philippines at the official price of $35 per ounce, payable in U.S. dollars. The sales outlet for domestically mined gold was later narrowed, when the Monetary Board prohibited the use for the purchase of gold of blocked pesos acquired from the sale of the capital assets of non-residents.

In Australia

In September 1957, the Government of Australia announced modifications of its gold subsidy scheme introduced in 1954. The rates of assistance to gold producers were increased, the maximum rate for large producers rising by 15*s.* per ounce, to £A2 15*s.*, and the flat subsidy rate for small producers (those whose production does not exceed 500 ounces per annum) by 10*s.* per ounce, to £A2, but there was no change in the basic structure of the scheme described in the Fund's Annual Report for 1955. The maximum expenditure on mine development allowable in ascertaining costs of production for subsidy purposes was also raised from £A3 10*s.* to £A5 5*s.* per ounce. Large producers are entitled to claim three quarters of their average costs of production in excess of £A13 10*s.* per ounce, until the maximum subsidy rate of £A2 15*s.* is reached. The purpose of these increases is to keep in production marginal mines whose continued operations since the introduction of the gold subsidy scheme has been threatened by increases in costs. The Fund deemed the modified scheme to be consistent with the objectives of the Fund's statement of 11th December 1947 on gold subsidies.

Governments frequently feel obliged to grant protection of one kind or another to marginal producers in certain sectors of the economy whose operations threaten to become unprofitable as a result of rising costs. The gold subsidies described above are one such method of protection. However, the Fund has a responsibility to see that the gold policies of its members do not undermine or threaten to undermine exchange stability, and accordingly any member which proposes to introduce or modify a gold subsidy has an obligation to consult with the Fund on the measures to be applied.

Gold Reserves

The growth of monetary gold reserves was substantially greater in 1957 than in any other post-war year. The stock of gold held by the monetary authorities in the world (excluding the U.S.S.R. and the countries associated with it, but including the Fund and the Bank for International Settlements as well as the European Payments Union) is estimated to have increased by approximately $800 million, as compared with increases of about $550 million in 1956, $600 million in 1955, and a post-war low of $150 million in 1951. Some 30 per cent. of the increase in 1957 is probably to be attributed to increased sales of gold by the U.S.S.R. in Western European countries. At the end of 1957, world monetary gold reserves, as defined above, amounted to $38.7 billion, $5 billion or nearly 15 per cent. more than they had been at the end of 1947. All of this increase was absorbed by countries other than the United States and by international organisations; the gold holdings of the United States were approximately the same, $22.9 billion, at the beginning and the end of this 10-year period. The holdings of other countries rose during these 10 years by about 50 per cent., from $9.45 billion to $14.25 billion. The proportion of the world's monetary gold held by the United States at the end of 1947 had been 68 per cent. and, at the end of 1952, 65 per cent. By the end of 1957, it had fallen to 59 per cent., so that U.S. gold holdings still substantially exceeded the total holdings of the rest of the world.

Total sales of gold by the U.S.S.R. in 1957 have been estimated at about $260 million. As the value of last year's gold output outside the U.S.S.R. was some $1,020 million, the amount of gold available to the rest of the world was thus increased during the year by about $1,280 million. A comparison with the estimated aggregate increase in official gold holdings (about $800 million), therefore, suggests that the amount of gold going into the arts and industries or to private hoards in 1957 was considerably smaller than in 1956.

Shifts in Gold Stocks

In both 1956 and 1957, especially in 1957, there were substantial shifts in the world's gold stocks. The largest increase in monetary gold reserves during the past two years was in the Federal Republic of Germany, whose gold holdings increased by $574 million in 1956 and by $1,047 million in 1957. The increase in Germany in each of these years exceeded the estimated total increase in official gold holdings for the world as a whole. The United States, which had increased its monetary gold stocks in 1956 by purchasing $200 million worth of gold from the Fund and about $80 million from other countries, increased them further in 1957 by $799 million, of which $600 million were purchased from the Fund. Other countries whose gold reserves increased substantially in 1957 include Australia, Austria, Italy, Lebanon, Mexico, Portugal, Switzerland, and Venezuela. At the end of the year, gold reserves were less than at the end of 1956 by $10 million or more in Argentina, the Belgian Congo, France, the Netherlands, the Philippine Republic, Sweden, and the United Kingdom.

The gold stocks of the United States, the Federal Republic of Germany, and the Union of South Africa declined during the early months of 1958. By the end of April, the decrease in the United States amounted to $815 million, most of which corresponded to substantial increases in Western European countries, particularly in the United Kingdom, Belgium, and the Netherlands, where gold reserves had fallen during the previous year, and in Switzerland. On 30th April 1958, the gold holdings of the United States amounted to $22.0 billion, or 57 per cent. of the world's monetary gold stock.

At the end of 1957, about 75 per cent., or $28,879 million, of the total gold holdings—$38,700 million—of the monetary authorities of the world (as described above) was physically located in the United States. Gold to the value of about $6 billion was held under earmark in New York by the Federal Reserve Bank of New York for the account of foreign central banks and Governments and international banking institutions. Many central banks and Governments find it to their advantage to leave a portion of their gold reserves in the United States to meet current and future requirements, since the United States is prepared to buy and sell gold for official monetary purposes at a fixed price. There were substantial transfers on official account in 1957 between the earmarked gold accounts held by the Federal Reserve Bank of New York. These movements of gold between foreign accounts were caused mainly by purchases from and sales to the United States, monthly E.P.U. settlements in gold, and gold transactions facilitated by the services of the Bank for International Settlements and the Fund.

Gold Markets and Gold Prices

The general easing of restrictions and the granting of greater freedom for domestic and international gold transactions by Belgium-Luxembourg, Canada, and the Federal Republic of Germany, do not appear to have had any significant effect upon the pattern of international gold trading that developed after the reopening of the London gold market in March 1954. Nor have the measures adopted since early 1952 by these and other countries for freeing the movement of gold led to any substantial increase in the amount of gold going into private hoards. On the contrary, the estimated amount of gold that went into the arts and industries or private hoards in 1957 was about $100 million less than in 1956. The willingness of London bullion dealers to engage in gold transactions on a world-wide basis, against dollars or registered sterling and under the supervision of the Bank of England, has made London the world's main gold trading centre. The Union of South Africa and other sterling area producers, together with the U.S.S.R., continued to be the source of most of the fresh supplies in the gold market, where Western European central banks also continued to be active. Private operators purchased gold for export to the Middle East and the Far East. Gold producers and private and central bank gold operators are most immediately concerned with the U.S. dollar price of gold in London, which is linked very closely with the sterling-dollar rate of exchange. As a general rule, the dollar price of gold in London has moved with the weakness or strength of sterling against the dollar. Other factors, such as the inflow of fresh supplies of gold and central bank demands for gold, also have a great influence on the price. The U.S. policy of a buying price of $34.9125 per fine ounce and a selling price for governmental monetary purposes of $35.0875 keeps the dollar price of gold in London within close range of these two extremes.

During 1957, the United Kingdom imported gold bullion worth £300 million ($840 million), of which £71 million ($198.8 million) came from the U.S.S.R.; most of the remainder was from gold-producing countries in the sterling area. These imports were equivalent to about 65 per cent. of the total new supply of $1,280 million made available in 1957 to countries other than the U.S.S.R. and the countries associated with it. The marketing of these supplies tended to keep the U.S. dollar price of gold in London below $35 per ounce during most of the year.

Dollar Prices of Gold

The range between the maximum and the minimum dollar prices of gold during the year ended 30th April 1958 was about 21 cents per ounce, as compared with 24 cents per ounce in 1956-57. For most of the period from 1st May through 31st December 1957, the U.S. dollar price (converted at the sterling-dollar rate at the time of daily fixing) was below $35, rising above that figure only on 6th June and 1st August. In mid-January 1958, the U.S. dollar price rose above $35; it advanced to $35.12 per fine ounce on 8th April 1958, the highest price at "fixing" since the reopening of the London market in March 1954. The monthly average dollar price of bullion during March and April was slightly above the U.S. selling price; thus, for transactions in which shipping costs—about $0.14 per fine ounce—were not involved, central bank buyers found it cheaper to acquire gold in New York than in London. The demand which maintained the price of gold was in large part a result of normal reserve practices of the United Kingdom and other countries with surpluses in their balances of payments, and of some sales of dollars by private individuals to their central banks, which then converted them into gold. During the year under review, the price of bar gold in sterling at fixing fluctuated between a high of 251*s.* 5½*d.* per fine ounce in August 1957 and a low of 248*s.* 8½*d.* in January 1958, the lowest since April 1954. On 30th April 1958, it was 249*s.* 2½*d.*, equivalent to $35.10 at the day's dollar exchange rate.

Sovereigns

During the year, an official announcement in London stated that 2,072,000 sovereigns had been minted in the calendar year 1957. These sovereigns, together with others recently minted, are to be used to increase the stocks of sovereigns in the gold reserves of the United Kingdom. This minting also enables sovereigns to be released for circulation abroad to meet a demand that had given rise to counterfeiting. The sales of sovereigns are made from the Exchange Equalisation Account at current market prices against dollars or other convertible currency. It has been reported that sales were made in the bullion market to authorised dealers whose bids have been accepted at a price of about $9.25 per sovereign, which is equivalent to about $39 per fine ounce and, after allowance for seignorage, gives a profit of about 11 per cent.

The price at which bar gold is traded directly for U.S. dollars in other markets remained within a few cents of the London dollar price during the year under review. In Zurich, for example, it was usually quoted at a few cents per fine ounce above the London price, increasing from a low of $34.93¾ per fine ounce in the last week of May 1957 to a high of $35.15½ on 8th April 1958. The price on 30th April 1958 was $35.13 per fine ounce.

In markets where gold is traded in local currencies, the day-to-day movements of the U.S. dollar equivalent prices often diverge from the movements of London prices because of the special characteristics of each market. However, in Brussels, this price did not deviate from the London price by more than ½ per cent., and in Beirut by more than 1 per cent. In Milan, the deviations were sometimes wider but did not exceed 2½ per cent. These prices are probably a result of the stability of the exchange rates used for conversion as well as of the magnitude of the flow of gold through the countries in which the markets operate. Gold imports and exports are not restricted in Lebanon and Belgium; in Italy, they remain under the control of the Italian Exchange Office. In Beirut, the U.S. dollar equivalent price of bar gold increased from a low of $35.11 per fine ounce on 22nd July 1957 to $35.33 on 17th September 1957, declined to $34.99 in December, and on 30th April 1958 was equivalent to $35.24 per fine ounce. Though Brussels is not a transit centre, as Beirut is, the price of bullion there tended to follow the London price more closely. It was about $34.94 per fine ounce at the end of August 1957 and about $35.19 per fine ounce at the end of April 1958. The dollar equivalent price in Milan fluctuated between a high of $35.83 per ounce on 20th September 1957 and a low of $35.14 on 24th March 1958. On 28th April 1958, it was $35.30.

In view of the strict restrictions on both imports and exports of gold imposed in France and India, the U.S. dollar equivalent prices in Paris and Bombay should not be thought of as premium prices to be compared with the prices of gold in London or Zurich. The local currency prices for gold in those countries reflect local habits and customs and are subject to wide fluctuations, depending upon the interplay of local political and economic forces. The currencies of those countries are not freely convertible into U.S. dollars, and the rates used for conversion into U.S. dollar equivalent prices are, for India, the official exchange rate and, for

WHAT CLIMATE WILL AID PRIVATE ENTERPRISE?

IMPORTANCE OF STABLE CURRENCY AND APPROPRIATE FISCAL POLICY

[Many important topics figured prominently in the Panel Discussion, organised last week by the International Finance Corporation at New Delhi. The participants included industrial leaders from several countries. As was to be expected from such a group, each speaker made a unique contribution to the discussion. Among the participants, Dr. Gunter Henle, General Manager, Kloeckner & Co., Duisburg, Germany, who spoke on the "Climate for Private Enterprise," dealt at length with the factors which will enable private enterprise to take an active part in economic growth. In view of the comprehensiveness of Dr. Henle's approach to, and analysis of, the subject, we are sure the copious extracts from his speech given below will be read with interest.—ED.]

WHAT sort of climate does private enterprise look for in a developing country if it is to take an active part in its economic growth? When I say climate, I mean the complete picture of legal, economic, political and psychological conditions which exist in the nation. If these conditions are favourable, then private enterprise will engage itself in a country. However, in cases where the present climate is still unfavourable and troublesome, it is, fortunately, in the hands of the government to bring about appropriate changes to improve the climate, provided, of course, that the government in question attaches value to the co-operation and assistance of private enterprise.

There are certain fundamental matters, such as the country's geographical situation, its natural characteristics, which types of raw materials are available, whether there are domestic oil or coal deposits or whether there is sufficient or little water power at hand. These are all points of the greatest significance for potential economic success, but they are beyond the control of any government. A conditioning factor is the stage of development already reached, which varies from country to country, but which must be the starting point for consideration of any economic expansion. This stage depends on circumstances belonging to the past and, consequently, can no longer be changed.

I believe, however, it lies within the power of a government to establish or implement the conditions which regulate the *speed* of the *economic growth*. The determination of that speed will depend largely on the degree of development which has already been reached. We are keenly aware that there are, on the one hand, countries that are still completely undeveloped and, on the other, countries which are already so far advanced that they can scarcely fall in this category. Yet, this much is certain: the form in which private enterprise can successfully participate in the economic build-up depends on the existing stage of development of basic facilities, that is to say, the construction of means of communication, harbours and power plants, and I would add the rational growth of the country's agricultural economy since it forms the natural basis of subsistence in every country. Given these factors, one should initiate cautiously, and without undue speed, a simultaneous programme designed to develop industrialisation. Once the production of domestic raw materials is running smoothly, then foreign private enterprise can effectively and helpfully step in with direct investments and capital commitments. It may be that for the basic development of native raw materials, a new and special form of co-operation between the government, the local economy and foreign private capital will have to be found. If, however, the stage of expansion of domestic industry is already well under way, then the foundation is laid for stimulating a continuing growth of the entire economy. The unrestricted participation of private enterprise would contribute dynamically to the intensification of this growth.

Political Conditions

This brings me to the *political conditions*. They are decisive in determining whether the climate is one, in which private enterprise can participate. As regards the general political situation in a country in which private investments are envisaged, it is obvious that private entrepreneurship prefers countries which maintain political continuity and stability and in which social disturbances and political upheava's are not at all times within the bounds of possibility. As self-evident as this proposition may seem to be, it touches upon a most difficult problem. For transition from a hitherto stagnant economy to one of rapid growth must perforce induce changes and regroupings in the social structure which will inevitably call forth political reactions. These reactions may often create a disturbing element that can easily imperil the political continuity and stability. This means that development can never be a purely economic process but is, at the same time, one of social and political growth to the new living conditions or way of life and the new state of mind arising therefrom.

Apart from these general requirements, there are numerous other conditions depending on governmental measures, which are conducive to the establishment of a favourable climate for private entrepreneurship and foreign capital investments—a broad field in itself. First *financial policy* is to be considered. We all realise that naturally a stable currency creates a favourable climate. Exporters of capital can be expected to be reluctant to invest in a country where there is open or latent inflation which presents in any case an additional risk. But here too it is easier to recognise the danger than to obviate it. It is very difficult to initiate, with the aim of progressive industrialisation, the economic development of a country without conjuring up at the same time a certain danger of inflation.

Special Caution

This danger is greatest in the earlier stages of industrialisation. Ready cash is required for investments where domestic savings are either insufficient, or cannot be obtained, by cutting down the consumption even temporarily. Indeed, the process of industrialisation is usually accompanied by a great demand for imports; for consumption increases as soon as the rise in income resulting from increased production becomes apparent. The process of importing goes on in a developing economy until the whole industrial complex is in balance. For this reason, special caution at that stage is always advisable. A too rapid absorption of foreign capital by a national economy can easily exceed the saturation point and as a consequence either inflation occurs or else the projects are finally left half finished.

The problem, therefore, is to find a sound middle course which will ensure that the process of development is a balanced and a healthy one. Occasional difficulties in connection with price increases and the balance of payments may well be unavoidable. They should not be taken too seriously as they can be overcome. On the other hand, what must be avoided is resorting to a state-controlled economic policy, which leads to a shutting off of the world market and its free trade as well as blocking the sources of foreign private capital.

Fiscal Policy

The important role played by *taxation* is also the responsibility of governmental financial policy. I may perhaps count on your indulgence if, in the presence of so many ministers of finance from all over the world—with whom we so generously share our income—a private businessman cannot resist the temptation to touch at least briefly on this subject. A great deal can certainly be achieved through taxation and fiscal policy, but such measures can also easily inhibit or thwart completely the activities of private enterprise. This will specially be the case if the screw of income-tax is turned too tightly, or if profits above a certain level are altogether wiped out by taxes. The price-raising effect of excessively high taxation and the concomitant inducement to wasteful economy are certainly no longer disputed by anyone, but experience has shown that a long road separates the correct assessment of a position from its political realisation. This can be said of governments of both kinds of countries, the industrialised and the new nations. Conversely, by promoting developing industries through benign tax rules, governments have at their disposal a suitable means of stimulating private enterprise to investments. The new nations need revenues. They are tempted to create these by inflation. Inflation results in a greater need and, consequently, we are faced with the vicious circle of more inflation and spiralling prices. These countries must face the major problem of how much taxation can they take without stifling or impeding economic growth, particularly that of private enterprise.

Yet another point, which applies to the developing countries in particular, is the accumulation of savings. This is of fundamental importance; for taxation, which is too heavy, impedes savings. There can be no successful economic growth without the formation of capital through savings. The function of foreign capital can only be to give the initial impetus to, and invigorate, the process of development. It never can, and never should, be the sole supporter of such a developing process.

Economic Policy

Besides the problems of financial policy, there are those of *economic policy*. Laws, regulations and rules should be designed to utilise to the fullest the dynamic force of private enterprise—domestic and foreign. Foreign companies envisaging direct investments must be able to obtain licences for the operation and expansion of private enterprises. Furthermore, the existing regulations must permit the importation of equipment and, if necessary, of requisite raw materials as well. The same is true as regards the export of finished products, since industrialisation is only then placed on a sound basis, if not only domestic consumption but also the world market and its conditions have been duly taken into account. It stands to reason that during the period of expansion and growth no developing country can completely dispense with a reasonable protective tariff. However, this should never lead to the development of industries that have no prospect of ever competing in the free world market.

Foreign business must have some assurance of laws and regulations remaining the same over a long period. But private enterprise, if it is to operate, must have some freedom of action. There is a necessity for certain rules, but these must not put it in a strait jacket, for the nature of private enterprise is flexibility. The positive thing which can be done by the governments of the developing countries is to bring their laws up-to-date and to clear away obsolete laws. It might even be suggested that they look perhaps to some extent at the laws of the capital-rich countries, where private enterprise has brought it to a state of great perfection. It was able to reach this state by following the principles of a market policy governed by competition, which was decisive for its development. The element of competition has made the economic life of the countries dynamic, and has led to continuing progress. It can, of course, also make decisive contributions to the new nations which effectively stimulate all aspects of their economic growth. Only, formation of cartels would have to be avoided at the same time, because if they are permitted without strict limitation, they can only too easily force the economy off its healthy course.

Last, but not least, let me mention in this connection the *social* and *labour market policies*. Even in the most highly rationalised and automatised modern plants manpower or labour force is a fundamental factor of the economy. And this being the case, the labour laws of every country seeking the co-operation of private enterprise are of the utmost importance for the creation of the requisite climate.

It is, of course, impossible to lay down any general rules, since conditions in the individual countries differ too widely. One country has a surplus; another lacks manpower. But for the question of direct investment by private business it is of vital importance whether a country has a sound social and labour policy, and especially if it permits or excludes foreign skills. For the development of new industries, the admission of foreign labour is often indispensable until a sufficiently large number of adequately trained and practised home operatives are available. A restrictive policy about the admission of foreign personnel automatically deters private enterprise from long-term commitments.

Psychological Conditions

Thus, governments have a broad field and the extensive means at their disposal to create a favourable climate for private enterprise if they desire. And now I turn briefly to what I believe is the most important factor within the framework of the topic under discussion, the *psychological conditions* that determine the climate for private undertakings. Let us not *deceive ourselves*: herein lie the greatest problems, and here are the most difficult obstacles to overcome. First of all, there is a quite general reason for this: in countries which are not aware that over the past century and a half, the character of private enterprise has changed and kept pace with the great technological progress of this period, there is often great *prejudice against* private entrepreneurship. Such a prejudice is, in addition, purposely exploited by those who reject private enterprise in principle. According to them, it consists only of avaricious profiteers bent on exploiting their fellow men and of whom one must therefore carefully beware. Even the profit motive is suspect.

An atmosphere charged with such assumptions and such distrust naturally creates a situation in which private enterprise would find it hard, even impossible, to flourish. The real truth behind all this is something very simple and easily comprehensible. The function of a businessman is not, by nature, that of rendering a public service; private undertakings are true creatures of economic life, that is, they belong to that sphere of human activity which aims at producing and marketing commodities under conditions that permit or encourage a *profit*. But that is true of all economic activities, even those which are fully State-controlled, except that in the latter case all the profits go to the *government*. It was Samuel Gompers, that now legendary old man of American trade unionism, who characterised "failure to operate at a profit" as a company's worst crime!

But the really important question here is, who is to gain by such an economic pattern. First of all, the idea that only the entrepreneur is to profit is absolutely wrong. Profit constitutes an increase of property values and this increase is divided among all those who have an active share in the economic undertaking concerned. The bulk of the profit will be reaped, first of all, by the entire economy of the country in which the business activity is located, and thus *it goes to the people themselves*. For every investment envisaged by a private enterprise stimulates and invigorates the economy of the country and supplies the people with commodities that were formerly unobtainable, or only so at much higher prices. It provides employment and with it earnings and savings for the people. Not only the producer profits, but also every *consumer*. For every private enterprise, it is important to win partners in other countries not to make profits *from* them, but to achieve profits *with* them, and thus to increase the general *prosperity* for the community and *for the individual*. To say, therefore, that only the entrepreneur realises a profit is no more than relating a fairy tale.

Return on Capital

Of course, private enterprise also aims at realising a justifiable and proper return on its capital investment. The possibility of realising such a prospective profit for *all* participants, including *the entrepreneur*, has from the very beginning of time been the vital spark of economy and with it also the fundamental prerequisite of private economic investments in one's own, as well as in foreign, countries. Investment means an investment of capital, and every investment expects a sufficient return on the money employed. It is essential that profits be offered to capital, or capital will not be attracted. Therefore, a minimum limit has been set which must be adhered to if there is to be any monetary investment at all. That limit is determined by the *interest rate* which, as you know, fluctuates according to the time and the country and is affected by various financial and economic factors. Only when it reaches the non-competitive and unreal low rate of 2½ per cent. (at which credits have already been granted) does it indicate that political considerations have been a co-determining factor.

However, for private enterprise and its readiness to invest, interest rates provide no more than a general clue. For the question of interest plays a much smaller role in direct investment and participation of private business than it does in the loans and credits of the large financing institutions. On the other hand, business undertakings must attract *venture* capital which has an opportunity to earn more than straight loan capital. For the higher the profit opportunities are, the higher are the loss possibilities. Venture capital wants a run for its money. The more risk-loving the enterprise is, and the more capital it has at its disposal, the more ready it will be to forgo rapid profits at the beginning and during the period of development, in anticipation of the later prosperity of the project in which it invested its capital. Further, whereas loans always require commensurate amortisation payments in addition to interest, the equity investments of private enterprises abroad are, as regards returns, dependent on the degree of profits realised, and the success of the undertaking. During periods of business recession revenues decline automatically and decrease the pressure on the country's foreign exchange balance since the amount due for transfer is correspondingly reduced. Often such a transfer does not take place at all because the private enterprise reinvests the profits in industrial expansion. Moreover, in direct investments there is, in any event, hardly any repayment of capital. It should also be mentioned here that in direct investments and capital participation the capital flows directly into production. It can therefore lead less easily to an over-extension of credit with inflationary tendencies and thereby endanger the stability of the currency.

Thus, viewed soberly and I hope dispassionately, is the whole problem of profit-making. Naturally, it is possible for abuses to occur and they do. It would be an exaggeration to claim that the big private industries of the free world are everywhere and under all circumstances models in observing a strict code of ethics. But the caricature of the modern capitalist bent on defrauding and exploiting his business partner and the public is, of course, a caricature and nothing more. An enterprise guilty of unfair business methods soon loses its standing and with it, its competitive ability. As regards the business partners in the developing countries, difficulties occur not so much because of differences of ethics, but simply because they are frequently not to be found, or if so, in only insufficient numbers and without adequate experience. This is not surprising and lies in the nature of the case. It will take time before this gap is closed.

Hopeful Augury

I trust that I have covered the essential points of my theme. It is a hopeful augury for private enterprise to hear that recently the Government of a South-East Asian country has given recognition, in an extensive plan, to those legal principles which alone are suitable and qualified to bring the problem of private enterprise in the developing countries decisively closer to a solution. In order to attract foreign capital to Asia and protect it there, that project envisages an international charter, which will safeguard the investor from one-sided restrictions or expropriations. In return, the capital-importing countries are to receive guarantees that the capital investments would not serve exclusively projects exploiting their natural resources but that the countries themselves would receive a commensurate share of the profits. This is reasonable and complies largely with the request made repeatedly by capital-exporting countries, that reliable guarantees should be given which protect them against one-sided restrictions or expropriations. In fact, this appears to be a point of special importance; for the lack of such guarantees is a serious obstacle which deters offers of private foreign capital for the economic growth of other countries.

These, then, are the contours of the general prerequisites to a healthy climate for the co-operation of private entrepreneurship in the economic expansion. After all, those who guide private firms are themselves sensitive enough to find it not particularly pleasant to be looked upon as a necessary evil as long as they are needed, and whose activities and efforts are immediately restricted, or who are politely ushered out as soon as they are thought to be wanted no longer. There is something quite imponderable but most important as far as the attitude of the people in these countries is concerned. It makes a big difference whether they are hospitable or whether they just tolerate private enterprise or whether they are suspicious of it.

Closer Contacts

However, I do not wish to create the impression that it depends only upon the governments and the people of development countries, whether a favourable climate for private enterprise exists, or is created. Private business itself must take its own contribution. Further, the contribution of private undertakings would be greatly facilitated by closer contacts and exchanges of experience betweeen businessmen from all over the world interested in the economic growth of the new nations. It would be most desirable that such mutual contacts and exchanges of information be organised as soon as possible.

What the world needs—and this is equally true of private enterpreneurship—is *confidence* and security. Confidence is based on reciprocal understanding and hardly anything appears to be more appropriate to achieve this in our world, grown small by science, than economic collaboration on a secure legal basis, and in good-neighbourly spirit. Today we must all work together. Mr. Nehru remarked in a speech in Washington in 1956: "Today the whole world is our neighbour and the old division of continents and countries now means less and less." Everyone would agree with him. Neighbours must learn to understand one another and to work together to a profitable and mutually advantageous end. The more direct and mutual the human contact, the easier it will be to achieve this aim. No other possibility offers an equally advantageous way to realise that aim than the development of private enterprises, wherein local born and foreigners work together in conditions of mutual trust. For, after all, less depends on dead capital than on the living men whom a great task brings together.

INDIA REINSURANCE CORPORATION

FIRST YEAR'S NET PREMIUM EXCEEDS RS. 93 LAKHS

THE hope expressed by Mr. A. D. Shroff, Chairman of the India Reinsurance Corporation, Limited, at the first annual general meeting of the Corporation last year that, during the first year of its operation, the Corporation would bring in a net premium income of Rs. 70 to Rs. 80 lakhs, has been more than fulfilled. For, during the year ended 31st December 1957, the first full working year of the Corporation, the net premium income in the three departments, namely, fire, marine and miscellaneous, amounted to Rs. 93.80 lakhs, comprising Rs. 35.54 lakhs in the fire department, Rs. 26.09 lakhs in the marine department and Rs. 32.17 lakhs in the miscellaneous department. The fire, marine and miscellaneous business thus accounted for 37.9 per cent., 27.8 per cent. and 34.3 per cent. of the aggregate premium. Gross premium written was over Rs. 2.30 crores.

It must be borne in mind that this creditable performance was put up by an organisation which was established as late as October 1956 and commenced business still later, that is, from 1st January 1957, in a year which was none too favourable for insurance business. It is true that as far as insurance business in India was concerned, the year 1957 was a good one but the results of the foreign markets were not satisfactory and it can be classed as a very difficult year for the general insurers who write sizable business abroad. The U.K. fire experience in 1957 was not very unfavourable but in the United States it was definitely so. The business in other parts of the world also was not satisfactory. This adverse trend of overseas business, as the Chairman, Mr. A. D. Shroff, pointed out in his speech at the second annual general meeting of the Corporation, held in Bombay on 29th September, did affect the Corporation but its effect on the net account of the Corporation was not very pronounced. Nevertheless, as a result of the strain of building up reserves in respect of fire, marine and miscellaneous business, together aggregating Rs. 37.79 lakhs, the year's working results showed a net loss of Rs. 4,51,608. This was inevitable in the first year.

Departmental Results

As regards departmental results, the net premium in the fire department amounted to Rs. 35.54 lakhs. Net claims paid and outstanding amounted to Rs. 16.30 lakhs (45.9 per cent. of premium). Commission and other charges amounted to Rs. 12.83 lakhs (36.1 per cent. of premium). Expenses of management, aggregating Rs. 1.32 lakh, worked out to 3.7 per cent. of premium. After providing for increase in reserves amounting to Rs. 5.08 lakhs, a balance of Rs. 475 has been transferred to the profit and loss account. The fire fund stands at Rs. 14.21 lakhs.

In the marine department, net premiums amounted to Rs. 26.09 lakhs and net claims paid and outstanding to Rs. 12.77 lakhs (48.9 per cent. of premium). Commission and other charges amounted to Rs. 7.19 lakhs (27.5 per cent. of premium) and expenses of management to Rs. 46,905 (1.8 per cent. of premium). After providing for increases in reserves amounting to Rs. 10.70 lakhs, the account shows a loss of Rs. 5.04 lakhs. The marine fund is maintained at Rs. 10.70 lakhs.

Net premium in the miscellaneous department aggregated Rs. 32.16 lakhs. Net claims paid and outstanding amounted to Rs. 9.29 lakhs (28.9 per cent. of premium) and commission to Rs. 11 lakhs (34.2 per cent. of premium). Expenses of management aggregated Rs. 86,726 (2.7 per cent. of premium). After providing for increase in reserve amounting to Rs. 12.75 lakhs, the account shows a loss of Rs. 1.75 lakh. The miscellaneous fund stands at Rs. 12.87 lakhs.

After crediting interest, dividend, etc., amounting to Rs. 2,27,966 and other miscellaneous receipts to the profit and loss account and after crediting the profit of the fire department and debiting the loss of the marine and miscellaneous departments and expenses of management not applicable to any particular fund, a sum of Rs. 4,51,608 has been transferred as loss to the profit and loss appropriation account. This, together with the loss of Rs. 56,031 brought forward from last year, amounting in all to Rs. 5,07,639, has been transferred to the balance-sheet.

The capital and reserves of the Corporation as on 31st December 1957 aggregated Rs. 1.13 crore, comprising a paid-up capital of Rs. 75 lakhs, and departmental reserves aggregating Rs. 37.78 lakhs comprising a fire fund of Rs. 14.21 lakhs, marine fund of Rs. 10.71 lakhs and miscellaneous fund of Rs. 12.87 lakhs. It may be noted here that subsequently, the Directors have made call of Rs. 250 per share so that the paid-up capital now stands higher at one crore of rupees.

Reviewing the main features of the working of the Corporation during the year, Mr. Shroff pointed out that, 1957 being the first year, the Corporation naturally confined its activities to writing of "agreed cessions" from members, and to obtaining a good measure of reciprocity from abroad. This had to be so, as most of the time and energy was devoted to devising and perfecting the underwriting pattern and in putting it in operation, as also in building up the office organisation from scratch. The Chairman was happy that the system devised was working properly and was producing the desired results. The magnitude of the problem, he said, would be seen in the proper perspective when it was realised that the total gross premium written during the year was over rupees two crores and thirty lakhs.

Retrocession Obligation

The Corporation, according to Mr. Shroff had been able to fulfil its retrocession obligation to members in full. In the fire department, the members were given as retrocession, premium equal to 50 per cent. of the premium ceded by them. In the marine department, those members that have accepted retrocessions, got their full quota. On the other hand, quite a few members who have been ceding business by way of "surplus treaties," had not been able to give their full quota of business to the Corporation. This being the first year, the Chairman added, their difficulty in gauging the exact proportion of business to be ceded was understandable. But he expressed the hope that members were alive to the problem and were taking steps to make up the shortfall.

The Chairman referred to the expansion of the field of operation of the Corporation. During the current year, the Corporation commenced reinsurance activities beyond the writing of "agreed cessions." The Corporation started a department for accepting facultative business in the fire and accident sections. A branch office was opened at Calcutta to give better facilities to the members and, particularly, with a view to writing fire and accident facultative business from that leading centre. This department was working well and the Corporation would be writing a large volume of facultative business and would be able to render good service and assistance to the insurance market. With a view to be of service to members, the Corporation had initiated a Reinsurance Exchange in Bombay, where the representatives of participating members gathered together and placed and accepted fire facultative reinsurances. A portion of the premises of the Corporation had been set aside for the purpose. Mr. Shroff hoped that, in course of time, this Exchange would be the nucleus around which a strong reinsurance market would develop in the country.

The Chairman disclosed that another field in which the Corporation was trying to expand its activities was that of accepting, from member companies and others, additional shares of the automatic reinsurances over and above the "agreed cessions." The Corporation had been able to secure quite a few treaty participations in fire and accident departments and, in course of time, this section of business was expected to expand materially. It had been the Corporation's endeavour to provide to the companies that give extra participation, the same facilities, terms and advantages as were being obtained by them from the foreign markets at present. This being the case, it would certainly be in their interest, the Chairman pointed out, to pass on the business to the Corporation. By doing so, he added, they would not stand to lose anything, but, on the other hand, would get satisfactory service on the spot, and also, would indirectly gain by building up the Corporation, which was their own, and hence increase the intrinsic value of their participation in the capital of the Corporation.

VULCAN INSURANCE CO., LTD.

Despite the fact that 1957 was a none too happy year for general insurers, the Vulcan Insurance Company Ltd. (General Manager: Mr. V. C. Setalvad) put up a very satisfactory performance during the year. There has been an all-round improvement in the net premium income in all the three departments of the Company. From Rs. 34.30 lakhs in 1956, the total net premium income from the fire, marine and accident and miscellaneous departments improved to Rs. 37.94 lakhs in 1957. The claims ratio, barring the fire department where it was higher, showed a welcome decline. It was 35.07 per cent. in the fire department, 43.82 per cent. in the marine and 34.51 per cent. in the miscellaneous department, as against 32.75 per cent., 55.78 per cent. and 46.59 per cent. respectively, in the previous year. Commission and expenses of management, however, showed a slight increase. Nevertheless, the overall working of the Company during the year resulted in a net profit of Rs. 3.04 lakhs. The dividend has been maintained at Rs. 1.50 per share, free of income-tax. In view of the satisfactory working result, the Company has been able to grant bonus equal to two months' basic salary, to its administrative staff as well as organisers and inspectors, subject to certain conditions. The following table indicates the salient features of the working of the Company during the three years ended 31st December 1957.

(In lakhs of rupees)

	1957	1956	1955
Fire :			
Net premium	25.91	23.64	22.50
Claims paid and outstanding	9.09	7.74	6.93
Commission and expenses	12.95	12.19	11.08
Fire fund	16.41	15.27	14.70
Marine :			
Net premium	3.41	2.80	2.65
Claims paid and outstanding	1.49	1.56	1.39
Commission and expenses	0.95	0.96	1.05
Marine fund	3.41	2.80	2.92
Accident and miscellaneous :			
Net premium	8.62	7.86	6.89
Claims paid and outstanding	2.98	3.66	3.16
Commission and expenses	4.15	3.79	3.27
Accident and miscellaneous fund	5.61	5.23	5.28

In the fire department, net premium amounted to Rs. 25.91 lakhs, as against Rs. 23.64 lakhs in 1956. Net claims paid and outstanding amounted to Rs. 9.09 lakhs, as against Rs. 7.74 lakhs, being 35.07 per cent. of the premium. Commission and expenses of management aggregated Rs. 12.95 lakhs, as compared with Rs. 12.19 lakhs in the previous year. After debiting commission and expenses of management and providing reserves for unexpired risks at 50 per cent. of premium and additional reserves of Rs. 3,45,000, a sum of Rs. 3.05 lakhs is transferred to the profit and loss account. The fire fund stands at Rs. 16.41 lakhs, as against Rs. 15.27 lakhs at the end of 1956.

Net premium in the marine department amounted to Rs. 3.41 lakhs, as against Rs. 2.80 lakhs in 1956. Net claims paid and outstanding amounted to Rs. 1.49 lakh, being 43.82 per cent. of net premium. Commission and expenses were lower at Rs. 0.95 lakh, as against Rs. 0.96 lakh in the previous year. After deducting commission and expenses of management and providing reserves for unexpired risks at 100 per cent. of premium, the accounts show a surplus of Rs. 43,874. The marine fund stands at Rs. 3.41 lakhs, as against Rs. 2.80 lakhs in the previous year.

In the accident and miscellaneous department, the net premium income rose from Rs. 7.86 lakhs in 1956 to Rs. 8.62 lakhs in the year under review. Net claims paid and outstanding were of the order of Rs. 2.98 lakhs, as against Rs. 3.66 lakhs in the previous year, being 34.51 per cent. of premium. Commission and expenses of management aggregated Rs. 4.15 lakhs, as compared with Rs. 3.79 lakhs in 1956. After debiting commission and expenses and providing for reserves for unexpired risks at 50 per cent. of net premium and additional reserves to the tune of Rs. 1.3 lakh, a sum of Rs. 1.25 lakh has been transferred to the profit and loss account.

The departmental profits aggregated Rs. 4.75 lakhs which, together with other receipts, makes in all Rs. 7.46 lakhs. Out of this, after charging expenses not applicable to other accounts, repairs to property, depreciation on property, loss on sale of investments, etc., and after making a provision of Rs. 3.20 lakhs for taxation, a sum of Rs. 3,03,647 has been transferred to the profit and loss appropriation account. This, together with the previous year's net balance of Rs. 78,665, makes in all Rs. 3,82,312. Out of this, Rs 40,000 has been earmarked as reserves for doubtful debts, leaving a balance of Rs. 3,42,312. A dividend of Re. 1.50 per share, free of income-tax, will absorb Rs. 2,29,811, and bonus to the staff Rs. 72,350, leaving a balance of Rs. 40,151 to be carried forward.

CALCIUM CARBIDE INDUSTRY

PERIOD OF PROTECTION EXTENDED BY ANOTHER THREE YEARS

THE period of tariff protection provided to the calcium carbide industry is extended for another three years. The Government of India has accepted the recommendation made by the Tariff Commission that protection to the industry should be continued for a further period of three years beyond 31st December 1958, at the existing rate of protective duty, that is, 50 per cent. *ad valorem*. The Government has also accepted the recommendation of the Commission regarding the fair prices to be charged for calcium carbide.

There is no denying the fact that the industry is still in its infancy and that it deserves to be given protection in view of its importance to the national economy. The process of manufacture, no doubt, is difficult and involves some amount of hazard. Nevertheless, the industry has been able to establish the process of production and to train a nucleus of staff in the technique of manufacture. According to the Tariff Commission, the quality of the product, though inferior to that of the imported material, has been found to be, generally acceptable. Indeed, the Birla Jute Manufacturing Company, Ltd., the major manufacturers of calcium carbide in India, has made efforts to improve the quality of the product and has plans for investing additional capital of the order of Rs. 26 to Rs. 27 lakhs on replacement and expansion. A few other units have obtained licences for undertaking the manufacture of carbide and are prepared to invest large sums of money.

Rated Capacity

There were three units manufacturing calcium carbide in the country in 1956, when the last tariff enquiry was held, namely, Birla Jute Manufacturing Company, Ltd., Calcutta, Industrial Chemicals Ltd., Madras, and Travancore Electro-Chemical Industries Ltd., Kerala. The effective annual rated capacity of the industry has gone down from 5,050 tons in 1956 to 4,050 tons in 1958, presumably because of the closing down of the Travancore Electro-Chemicals. Production, however, has actually gone up, as is shown in the table below:—

(In tons)

Producer	Present annual rated capacity	Actual production		
		1956	1957	1958*
Birla Jute Manufacturing Co., Ltd.	3,300.00	2,781.00	3,418.00	567.50
Industrial Chemicals Ltd...	750.00	108.50	178.00	39.70
Total ..	4,050.00	2,889.50	3,596.00	607.20

* January and February.

There are at present a few schemes for the expansion of the existing units and the establishment of new plants. If the Birla Jute Manufacturing Company and the Industrial Chemicals expand their capacity and the Calico Mills (Chemical Division) succeed in erecting its plant as scheduled, the effective annual capacity would rise to 23,200 tons by the end of 1960. Further, the Travancore Electro-Chemicals Ltd., is expected to be reopened and efforts are being made to put up a bigger plant in collaboration with the Government of Kerala. Another plant, namely, Indian Carbide Corporation, will also be set up at Thana, Bombay, shortly.

The domestic demand of calcium carbide, based on indigenous production and imports, is estimated to have been 9,381 tons in 1956 and 11,567 tons in 1957. The Tariff Commission has estimated that the demand would go up to 13,000 tons in 1958 and 14,000 tons in 1959. Subsequently, as the domestic engineering industry will expand as a result of the rapid tempo of steel production envisaged at present, the demand for calcium carbide is expected to move up to 16,000 tons in 1960 and 18,000 tons in 1961. Imports of calcium carbide, it may be noted, aggregated 7,085 tons in 1955-56 (valued at about Rs. 39 lakhs), 5,976 tons (Rs. 37 lakhs) in 1956-57 and 4,698 tons (Rs. 29 lakhs) during the period April-October 1957.

The Commission has observed that there has been some improvement in the quality of calcium carbide, but that it falls short of the specification prescribed by the Indian Standards Institution. In this connection, the Commission has urged the industry to make efforts to bring them to the standard quality of 'A' of the I.S.I. specification.

As regards raw materials, the Commission has pointed out that one of the serious obstacles to achieve radical improvement in the quality of calcium carbide produced by the Birla Jute Manufacturing Company is the inferior quality of raw materials, namely, limestone and coke. It has, therefore, called upon the Company to exercise better quality control for the materials charged into the kiln and the furnace. The Commission has rightly insisted on the need for a careful assessment of the demand for high grade electrode paste, and for establishing one or more units to manufacture such paste in the country as quickly as possible. It has sought to highlight the importance of setting up capacity for the manufacture of superior high grade coke. For the time being, the Commission stressed that there should not be any restriction on the supply of coal to the calcium carbide industry from the railway coke plant at Giridih.

Fair Price

The prices charged for calcium carbide by the manufacturers have been a subject of controversy for some time past. The Commission has recommended that the fair ex-works selling prices of different grades of calcium carbide should be fixed as indicated below and should hold good upto 1960.

Size	1-cwt. packing	2-cwt. packing (per cwt.)
4/80 m.m.	Rs. 43.50	Rs. 48.00
25/80 m.m.	Rs. 45.50	Rs. 44.25
15/25 m.m.	Rs. 41.50	Rs. 40.50
4/15 m.m.	Rs. 35.00	Rs. 34.00

These prices are exclusive of charges such as transportation, local taxes, if any, and selling commission payable to agents. In this context, it has been recommended (i) that the system of differential prices between the two classes of consumers, namely, dissolved acetylene manufacturers and others should be abolished forthwith and (2) that the next review of the fair selling prices should take place at the beginning of 1961 or should be held earlier if the cost of production goes down appreciably after a new furnace and additional equipment have been commissioned by the Birla Jute Manufacturing Company, Ltd. As regards the selling commission payable to agents, the following arrangements have been approved by the Government:—(i) The manufacturer will continue to supply carbide directly to all dissolved acetylene gas manufacturers (Indian Oxygen Ltd., Asiatic Oxygen and Acetylene Co., Industrial Gases Ltd., Modi Vanaspati Manufacturing Company, Limited) for their acetylene bottling plants at their net ex-factory rates without any addition on account of selling commission or other charges. (ii) For all other parties, supplies will be made as usual, through their agents who may charge selling commission at not more than Rs. 5 per drum of 50 kg. on their net ex-factory rates.

TRADE STATISTICS

Apropos our comments on the official publications relating to India's foreign trade, in our issue dated 6th September (*vide* page 377), the Director General of Commercial Intelligence and Statistics, Calcutta, in a communication addressed to us, observes:

"(i) The latest issue of the *Monthly Statistics of the Foreign Trade of India*, available on the 6th September 1958 (the date of your issue) was that for June 1958 (copy enclosed). As this was published on the 30th August, I presume that your statement that the latest issue was that for May, 1958 was due to the fact that it had not reached you at the time of going to press. (ii) With reference to your statement that 'it is difficult to distil any sense from this voluminous medley of figures,' I should like to point out that every issue contains a 'Summary of India's Foreign Trade' (cf. pp. XXIII to XXXIV of the June issue). Another table showing the value of India's trade with each foreign country is also included (pp. XL to XLII ibid). There is also, in addition, the publication *Supplement to the Monthly Statistics of the Foreign Trade of India* (copy enclosed) which contains the following tables:

"(1) Value of foreign trade; (2) overall balance of trade; (3) foreign trade of custom zones; (4) foreign trade with each country and currency area; (5) foreign trade in groups of commodities with each currency area; (6) foreign trade of neighbouring countries, passing through India; (7) index numbers; (8) value of principal articles of exports; (9) value of principal articles of imports; (10) articles warehoused under bond; (11) foreign trade in treasure; and (12) foreign trade with selected countries.

"(iii) I might also mention that the summary of India's foreign trade is published in the *Indian Trade Journal* as soon as the compilation has been completed in this Department and in advance of the publication of the *Monthly Statistics*. A specimen copy containing the summary is enclosed. (iv) A bilingual (Hindi-English) publication containing the annual statistics for 1957, analysed custom zone-wise, is under preparation at present. (v) The *Monthly Statistics of the Foreign Trade of India* is on the same lines as the comparable American publication, except that the Indian publication is larger and more easy to read. Together with the summaries, the supplement and the projected annual publication, the *Monthly Statistics* appear to provide the same information as is available in most modern countries. I should, however, be glad to receive any specific suggestions which you may have to make for the improvement of the statistics or their presentation. There would, of course, be no question of going back to the pattern which existed before January 1957, to which you refer in your article, as that pattern is an outmoded one. (vi) You have referred to the fact that the publication does not contain comparable figures for previous years. The reason is explained below: "The *Accounts relating to the Foreign Trade of India* followed a classification which provided for the separate specification of only a very limited number of items, viz., 1,047 for imports, 460 for exports and 210 for re-exports. This classification has been replaced as from January 1957, by the very elaborate *Standard International Trade Classification* recommended by the Economic and Social Council of the United Nations and this latter classification separately specifies some 4,850 items. As you will appreciate, there are no figures available for years previous to 1957 in respect of most of these 4,850 items, and this is why the monthly statistics do not give them. The new classification was adopted in 1957, and as from 1958 one previous year's figures are available regarding these items. The monthly statistics are, however, reproduced by the photostatic method from tabulation sheets emerging from the I.B.M. machine and that machine is unable to include figures for previous years in the tabulation; it is, therefore, impossible to give them in the publication. I may mention that many modern countries do not give previous year's figures in the monthly publication.

"(vii) As regards the promptness of the publication, it may be mentioned that, after the teething troubles of the first year of the change-over to the new classification, the interval between the close of the month to which an issue relates and its publication has been brought down to less than two months. It is hoped shortly to reduce the interval to six weeks; further expedition would not be possible in a publication of over 1,000 pages.

"(viii) As regards trends in invisible trade and the overall balance of payments position, this Department does not have the necessary data, and in any case they would have no place in a publication giving figures of merchandise trade. (ix) As regards your suggestion that a simpler and summarised version be published, such versions are, as stated earlier in this letter, already being published."

We appreciate the prompt reply, the reasons for the absence of figures for corresponding months of the previous year in the *Monthly Statistics* relating to foreign trade and the efforts which are being made to bridge the gap between the close of a month and the publication of statistics relating to trade during the month. Nevertheless, we feel that the absence of figures for totals of quantities under each group and sub-group and for values of sub-groups greatly detracts from the utility of the publication, not to mention the optical strain involved in referring to photostatically reproduced data, unrelieved by commas.

STAINLESS STEEL *VERSUS* BRASSWARE

The All India Stainless Steel Industries Association, in a communication addressed to us, has answered the points raised by Messrs. Binani and Company, Bombay, in a letter published in our issue dated 30th August. The issue relates to the relative advantages of stainless steel and brassware utensils. The Association says:

(1) Concerning the life of stainless steel utensils, some of our member manufacturers have had such utensils in constant use from 1927 and, to say the least, they are still in use and serviceable. (2) On the other hand, brass utensils in daily constant use do not last for over five years. We still maintain this view not only gained by experience by our members who were manufacturing utensils from brass previously, but also on the authority of the attached letter from the Copper and Brassware Manufacturers and Sellers Association Ltd. (3) It is with regret we note that Messrs. Binani have overlooked the fact of cost of tinning which is necessarily required for brass utensils every two months, while stainless steel utensils require no tinning at all. Incidently, the longer the life, the higher will be the cost at the end of that period, in regard to brass utensils. (4) As regards the scrap value of stainless steel, this varies from time to time according to the value of finished products of stainless steel. The price of scrap has never fallen below 25 per cent. of the value of stainless steel sheets. It is wrong to state that such scrap fetches only 5 per cent. of the value of sheets. (5) As regards exports of stainless steel articles, it amounted during five months ended 31st May 1958 to Rs. 1,65,000. The export trade is still in its infancy.

It would appear that the Secretary of the Copper and Brassware Manufacturers and Sellers Association Ltd., in a letter to the All India Stainless Steel Industries Association, has stated that from the experience of the members of the former Association the normal life of a brass utensil "cannot be said to exceed five years."

MUKAND IRON'S OUTPUT HIGHER

PROFIT, HOWEVER, DECLINES

THE profit of the Mukand Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeewan Private Ltd., Bombay) for the year ended 31st March 1958 has suffered a setback, in distinct contrast to the sharp rise noted in the previous year. Thus, the gross profit has dropped to Rs. 24.44 lakhs from Rs. 30.39 lakhs earned in 1956-57. It is, however, better than that of Rs. 17.38 lakhs earned two years before. A similar trend is noted in the net profit, too, which at Rs. 10.56 lakhs does not compare well with that of Rs. 16.72 lakhs for the previous year, to which level it had risen from Rs. 10.54 lakhs. This may seem odd in the face of higher production achieved by the Company; the output of steel bars and rods has risen from 32,123 tons to 33,982 tons and that of castings from 4,153 tons to 4,869 tons. The Company's production constitutes a record, though the rise over the year is less marked than in 1956-57.

The decline in profit is due to several factors including increase in dearness allowance by an award of the Industrial Tribunal. The conversion charges for rolling billets into steel bars and rods were also reduced by the Government from 1st January 1957 pending receipt of the report of the Tariff Commission. The net result was a recession in profits.

The fall in net profit has resulted in a substantial reduction in the amount allocated to reserves. Thus, a sum of only Rs. 5.80 lakhs has been ploughed back, as against Rs. 14 lakhs in the previous year. This consists of Rs. 4 lakhs transferred to general reserve, Rs. 1 lakh to rehabilitation and development reserve and Rs. 80,000 to development rebate reserve. The allocation in the previous year was all for rehabilitation and development reserve. The Directors have declared a dividend of 12 per cent. for the year under review on the ordinary shares and a *pro rata* dividend at the same rate on the new ordinary shares. This consists of a dividend of 8 per cent. and a bonus of 4 per cent. The Company paid a dividend of 10 per cent. in the previous year. It may be stated here that, during the year under review, that is, in January 1958, the Company issued for subscription new ordinary share capital amounting to Rs. 20.47 lakhs to the existing shareholders at par in the ratio of one new share for every old share held. The issue was fully subscribed and paid up. The Directors have recommended that the amount of dividend and bonus payable on ordinary shares (old and new) and on deferred shares be paid by distributing to the shareholders fully paid-up first and second ordinary shares of Batala Engineering Company, Ltd., held by this Company. The Company holds 24,043 first ordinary shares of Rs. 10 each (fully paid) and 6,243 second ordinary shares of Rs. 50 fully paid of the Batala Engineering Company, Ltd. It is stated that both types of these shares rank *pari passu* in all respects. The Auditors of the Company have certified that the fair value of these shares is their par value. In making these recommendations, it must be noted, the Directors have not given the option to those shareholders who do not want to take up the shares of Batala Engineering Company, Ltd., to receive the dividend and bonus in cash. It is, however, left to the shareholders to decide for themselves whether to receive the dividend and bonus of Mukand in cash or in kind.

The Company's progress during the past three years is shown in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March		
	1958	1957	1956
Sale proceeds	3,03.01	2,71.12	1,72.40
Closing stocks	23.43	8.52	20.71

Deferred	1.29 (D. 25% + B. 78%)	0.70 (D. 55.8%)	..
Carry forward	0.80	0.35	0.32

* For 1949-50 and 1950-51.

It will be seen from the table that the Company's sales during the year advanced by about Rs. 32 lakhs to Rs. 3.03 crores. The cost of raw materials, stores, power, etc., consumed, has increased from Rs. 1.70 crore to Rs. 2.32 crores as also other expenses from Rs. 59.42 lakhs to Rs. 66.14 lakhs.

It is stated that considerable improvement has been carried out in the Company's plant facilities and layout both in the steel foundry and in the rolling mills. Hence, production and productivity are both on the increase. The supply position of billets was fairly good during the year. With the expansion of the major steel producers nearing completion and with regular imports, it is hoped that billet supply would remain fairly good. The Company is now supplying a wider variety and more intricate types of castings.

The Company's paid-up capital as at 31st March 1958 stands raised from Rs. 30.48 lakhs to Rs. 50.96 lakhs, due to the issue of shares as aforesaid. This is supplemented by reserves and surplus aggregating Rs. 25.39 lakhs.

The current liabilities stand at Rs. 72.14 lakhs and these include secured loans from the Industrial Finance Corporation of India and banks amounting to Rs. 33.79 lakhs. As against a gross block of Rs. 83.16 lakhs, depreciation of Rs. 31.99 lakhs has been provided, so that the net block is Rs. 51.16 lakhs. The current assets aggregate Rs. 97.33 lakhs and cover the current liabilities and the provision for taxation by a substantial margin.

The Rs. 10 fully paid up ordinary shares are being currently quoted at Rs. 14.36 *cum-div.* On an *ex-div.* basis, the dividend together with the bonus works out to a yield of 9.1 per cent. per annum.

JESSOP'S RESULTS ENCOURAGING

The working of Jessop and Company Ltd. (Chairman: Mr. B. P. Singh Roy, Calcutta), during the year ended 31st October 1957, has produced highly encouraging results. The Company's sale proceeds for the year at Rs. 594.19 lakhs is stated to be a record, having advanced further from Rs. 525.14 lakhs in the previous year. It should be noted that the Company's income from agency business has dwindled from Rs. 145.35 lakhs to Rs. 60.52 lakhs, but this has been more than made good by the sharp rise of over 40 per cent. in works sales from Rs. 379.79 lakhs to Rs. 533.68 lakhs. The gross profit at Rs. 87.64 lakhs shows a rise of Rs. 18.55 lakhs over Rs. 69.09 lakhs for 1955-56.

The net profit at Rs. 38.83 lakhs is more than double that of Rs. 18.34 lakhs earned in the previous year. The provisions for depreciation has been slightly raised from Rs. 5.10 lakhs to Rs. 6.81 lakhs, but that for taxation has been lowered from Rs. 45.65 lakhs to Rs. 42 lakhs. Despite the extremely satisfactory results and the substantial rise in the net profit, the Directors have, in the larger interests of the Company, decided not to declare any dividend on the ordinary shares for the year under review, in view of the "serious financial loss suffered by the Company during 1955-56 and 1956-57, as a result of mismanagement." They have accordingly ploughed back a large amount of Rs. 37.83 lakhs into the reserves, as against only Rs. 12 lakhs made in the previous year. This consists of Rs. 26.77 lakhs to general reserve and Rs. 11.06 lakhs to provision for doubtful debts and sundry assets. The Company had paid a dividend of 12½ per cent. for 1955-56, as against 30 per cent. for 1954-55, to which level it had been doubled from 15 per cent. for 1953-54. It should be noted here that the dividend of 12½ per cent. for 1955-56 was on a higher capital of Rs. 102 lakhs, doubled by a fresh issue of 510,000 ordinary shares of Rs. 10 each.

The following comparative table will provide an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1957	1956	1955	1954
Sale proceeds	5,94.19	5,25.14	6,78.32*	5,03.38*

* Include "on-account" payments.
† Approximate.
‡ On the increased capital of Rs. 102 lakhs.

The report states that, although the major part of the new expansions in the works came into production only towards the close of the year, the output in the year under review showed considerable increase over the previous year's production. In view of the decline in the Company's trading business, the Directors decided early in 1958 to close down its import and trading departments completely, only retaining a few agencies which are of particular importance to the Company's manufacturing activities. This decision is being implemented. It is expected that funds at present employed in an unproductive part of the Company's activities will be released for more useful employment on the manufacturing side. The working during the current year is expected to be satisfactory, although, it is stated, it cannot be as good as it would have been if production had not been hampered by shortage of essential raw materials. The Company has a very satisfactory order book and since almost all its contracts carry a very high priority, supplies in regard to its full share of whatever materials are available are almost assured.

The Company's paid-up capital as at 31st October 1957 stands at Rs. 121.99 lakhs, of which 5 per cent. cumulative preference shares of Rs. 100 each account for Rs. 20 lakhs, the balance being accounted for by ordinary shares of Rs. 10 each. As against this, the reserves and surplus aggregate Rs. 54.76 lakhs. The current liabilities stand at Rs. 410.13 lakhs including a provision of Rs. 88.26 lakhs for taxation. The gross block of the value of Rs. 172.18 lakhs, which includes additions during the year of Rs. 53.93 lakhs, has been written down to Rs. 109.49 lakhs. Besides this, there is "block in progress" amounting to Rs. 61.90 lakhs. The current assets aggregate Rs. 415.50 lakhs and are enough to cover the current liabilities and the provision for taxation.

GANNON DUNKERLEY FARES BETTER

Encouraging results are disclosed by the audited statement of accounts of Gannon Dunkerley and Company, Ltd. (Chairman: Mr. M. R. Morarka, Bombay), for the year ended 31st March 1958. The Company's sale proceeds in the trading department increased during the year from Rs. 48.15 lakhs to Rs. 61.95 lakhs. Work bills in the contract section also rose from Rs. 101.83 lakhs to Rs. 122.52 lakhs. Although expenses also increased from Rs. 167.13 lakhs to Rs. 202.13 lakhs, the rise was not enough to affect adversely the Company's profit margin. Thus, the gross profit at Rs. 8.25 lakhs shows an improvement of Rs. 2.33 lakhs from Rs. 5.92 lakhs for the previous year.

The net profit at Rs. 2.59 lakhs also is higher, as compared with Rs. 1.55 lakh earned in 1956-57, after raising the provision for depreciation from Rs. 86,561 to Rs. 90,679 and that for taxation from Rs. 3.50 lakhs to Rs. 4.75 lakhs, including Rs. 75,000 representing provision for the previous year's taxation. A dividend of 6 per cent. has been declared for the year under review which is the same as that for the previous year. Although the dividend has thus been only maintained, it is gratifying to note that the Directors have transferred Rs. 72,000 to dividend reserve and Rs. 38,350 to development rebate, as against nothing in the previous year. The dividend absorbs Rs. 2.16 lakhs, leaving a sum of Rs. 29,608 to be carried forward, as against Rs. 96,319 brought in.

The report states that a mechanical engineering department was started to undertake machinery erection, pipe fitting and fabrication works. Although the results for the year under review are better than those of the previous year, the Directors say that the acute foreign exchange position of the country and the consequent import restrictions may make conditions difficult for the trading department in future. The civil and mechanical engineering departments, however, have a fair volume of contracts still to be completed. The highlight of the year's activity is that the construction of the engineering workshop for the manufacture of liquefied petroleum cylinders is nearing the final stage. The main building is ready, erection of the machinery has considerably advanced and the factory is expected to go into production before the end of the current calendar year.

The Company has a paid-up capital of Rs. 36 lakhs, all in ordinary shares of Rs. 100 each. The reserves and surplus are very small, amounting to only Rs. 3.53 lakhs. The gross block of a value of Rs. 24.87 lakhs has been written down to Rs. 15.65 lakhs. The current assets aggregate Rs. 84.56 lakhs, against which the current liabilities amount to only Rs. 60.68 lakhs.

DUNLOP'S DEBENTURE ISSUE

The number of applications received by the Dunlop Rubber Company (India) Ltd. in connection with its issue of Rs. 1 crore 6½ per cent. debenture stock 1968-73 was about 6,000, the total value of stocks applied for being about Rs. 4.74 crores. Of these 62 large applications accounted for Rs. 2.87 crores. In view of the larger sum applied for and having regard to all the circumstances, the Company decided that the basis of allotment should be by ballot, the condition being that no applicant should receive more than the amount applied for, or Rs. 1 lakh, whichever was less. It is stated that letters of allotment, letters of regret and refund warrants will be posted within the next few days.

ORIENTAL GAS COMPANY

The West Bengal Government has decided to take over the management of the Orient Gas Company of Calcutta for two years under section 31A man of the State Government, the Government will have to spend immediately about Rs. 25 lakhs for repair and maintenance of the machinery. After about two years, when supply from the Durgapur gas grid was expected to be available, the Government, he said, would either take over the Company or give back its management to the present owners.

KHATAU MILLS' GROSS PROFIT LOWER

DIVIDEND MAINTAINED

AN appreciable improvement in sales turnover, followed, paradoxically enough, by a further decline in the gross profit, are the main features of the working results of the Khatau Makanji Spinning and Weaving Company, Ltd. (Agents: Messrs. Khatau Makanji and Company (Private) Ltd., Bombay), for the year ended 30th June 1958. The Company's sale proceeds for the year under review have increased by about Rs. 44 lakhs to Rs. 4.70 crores. Despite this, the gross profit, at Rs. 29.12 lakhs, has dropped by Rs. 11.33 lakhs from Rs. 40.45 lakhs earned in 1956-57, to which level it had fallen from Rs. 50.54 lakhs for 1955-56.

The net profit is, however, higher, having gone up from Rs. 1.24 lakh to Rs. 8.44 lakhs. This improvement in the net profit is due to the substantial reductions in the provisions for both depreciation and taxation. Thus, the provision for depreciation has been lowered from Rs. 22.59 lakhs to Rs. 13.63 lakhs. The amount set apart for taxation has been reduced from Rs. 14.15 lakhs to Rs. 5.50 lakhs, which includes a provision of Rs. 66,000 for wealth tax. The rise in the net profit has enabled the Directors to maintain the dividend on the ordinary shares at the rate of 10 per cent. for the fourth year in succession. While in the previous year the Directors had to draw a sum of Rs. 9 lakhs from the general reserve to pay this dividend, they have not done so this year. On the contrary, they have set aside Rs. 1.16 lakh to development reserve and Rs. 57,680 to development rebate reserve.

The following comparative table presents the salient features of the Company's working during the four years ended 30th June 1958.

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	4,70.49	4,26.57	4,26.54	4,16.99
Closing stocks	76.11	98.54	77.24	69.97
Raw materials and stores consumed	2,36.06	2,42.52	2,21.81	2,22.11
Wages, establishment and other expenses	1,84.28	1,67.02	1,58.02	1,71.40
Gross profit	29.12	40.45	50.54	34.84
Agents' commission	1.55	2.47	4.33	3.43
Depreciation	13.63	22.59	15.03	18.70*
Taxation	5.50	14.15	13.00	5.00

Carry forward	0.80	0.76	0.20	0.26

* Includes development rebate of Rs. 5.70 lakhs.
† Additional dividend on ordinary shares at Rs. 4.25 for the year ended 30th June, 1954.
‡ Additional dividend on ordinary shares at Rs. 2 for the year ended 30th June, 1955.

Explaining the causes for the decline in the Company's profit, the Directors state that there was a steep fall in the first half of the year in the offtake of cloth which resulted in lower prices. Added to this were the increasing incidence of excise duty on superfine fabrics and restricted supplies of foreign cotton. The latter is reflected in the cost of raw materials and stores consumed which has come down from Rs. 2.42 crores to Rs. 2.36 crores. Wages, establishment and other expenses, on the other hand, have increased by Rs. 16.36 lakhs.

The balance-sheet as at 30th June 1958 shows that the Company's paid-up capital is unchanged at Rs. 89.79 lakhs, divided into 59,850 ordinary shares of Rs. 100 each and 29,925 four per cent. tax-free cumulative preference shares of Rs. 100 each and a sum of Rs. 1,750 received from forfeited shares. As against this, the reserves and surplus aggregate Rs. 48.15 lakhs. Secured loans from banks against stocks and stores, guaranteed by the agents, have come down from Rs. 138.77 lakhs a year ago to Rs. 83.98 lakhs. The other current liabilities amount to Rs. 124.53 lakhs and these include Rs. 8.58 lakhs being the provision for taxation. The gross block stands at Rs. 332.61 lakhs which has been written down to a net block at Rs. 93.16 lakhs. Additions to the gross block during the year amounted to Rs. 24.22 lakhs. Besides this, orders for new machinery of the value of Rs. 4.77 lakhs were placed during the year. The current assets aggregate Rs. 253.30 lakhs and exceed the current liabilities and the provision for taxation by a margin of Rs. 44.79 lakhs.

The Rs. 100 fully paid up ordinary shares of the Company are being currently quoted at Rs. 178.25 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.94 per cent. per annum, free of tax.

Points From The Chair

Deferred Payment Guarantees

"IN the annual report mention has been made of certain amendments that had been made to the Industrial Finance Corporation Act during the year under review. One of these amendments now enables us to give guarantees in respect of deferred payments for imported machinery. This is a very useful facility which has been eagerly sought for. You will find in the annual report the main criteria that we apply in examining applications for guarantees, and the more important terms and conditions that we prescribe for the grant of such guarantees by us. We have so far sanctioned three schemes for guaranteeing deferred payments; these aggregate Rs. 3.96 crores in all. We expect that the transactions in this behalf will be finalised shortly. In the year under review, we have made our first venture into the field of underwriting, and I hope this transaction, particulars of which are given in the report, will be the forerunner of many more in the coming years."

K. R. K. MENON,
Industrial Finance Corporation of India.

Raw Jute

"The easier availability of raw jute has contributed substantially towards the improvement in the industry. Progress towards self-sufficiency has been satisfactory and dependence on Pakistan has fallen from 75 per cent. at the time of partition to a mere 10 per cent. With good weather conditions, full self-sufficiency is possible even now, but there is still much that remains to be done in the matter of improving the quality of raw jute grown in India. The low prices fetched by Indian raw jute are largely due to its poor quality. Both in the interests of ensuring an adequate supply of good quality jute at reasonable prices to the mills and in order to give a fair return to the cultivator, it is necessary to induce growers to produce good quality fibre and to adopt intensive methods of cultivation so that the yield per acre may increase. The raw material requirements of the industry could then be met with a smaller acreage under jute cultivation and the rest of the land now used for growing jute could be diverted to food crops."

CHAIRMAN,
India Jute Co., Ltd., and Megna Mills Co., Ltd.

Code of Conduct

"I would like to say a few words about the working of the Code of Conduct. Abolition of the credit system has indeed been a great boon to the industry. But that is not all that was expected of the introduction of the code. It is, therefore, necessary to consider whether the expenses involved in implementing the code are still justified, if the aims and purposes of the code have not been fulfilled. It is no use blaming the Government for this unsatisfactory state of affairs still existing in the industry. The business community owes a duty to itself to come forward to oppose the continuance of the evil of rebating. Secondly, the executives running the industry should also sit round to consider what other means can be devised to root out this evil practice. Surely, the cut in rates is no remedy to cure the industry of the evils of rebating."

PANNALAL BANSILAL PITTY,
All-India General Insurance Co., Ltd.

Transport Problem

"Our Government instead of giving priority to steel should now turn its attention to other industries, for example, manufacture of basic chemicals, modern antibiotics, sulpha group of drugs, etc., which are needed by our country and are imported in large quantities. Very recently a Russian team came to explore the possibilities of manufacturing basic chemicals, etc., in our country and visited our factory. A few years back another team of experts from Russia also visited our factory but we never heard anything about their report. I hope we shall have the privilege of being acquainted with the report of the Russian experts made this time and the Development Department will give effect to the suggestions made by them. Our transport problem has been solved to a great extent by private road transport concerns who carry our goods quickly and efficiently to distant places like Patna, Muzaffarpur, Kanpur and various other places from godown to godown quite safe and sound. Insurers are now readily covering such carriage of goods. We have not to complain any longer over the problem of despatch by railways. But our difficulty of getting shipping space is still continuing in spite of our best efforts and this hampers to some extent our overseas trade. The present system of analysing and checking by the authorities of our drugs and chemicals after the goods have been sent to the jetties for export is also contributing to our export difficulty."

DR. B. N. GHOSE,
Bengal Chemical and Pharmaceutical Works Ltd.

Quality Tea

"In the 20 years, our cost of production has apparently increased 3½ times. I say apparently because I would not hazard a guess what it would have cost us if our crop per acre had not doubled over the same period. Fortunately, our selling price has also increased by about three times and, as long as we can produce good quality flavoury high grown teas, and consumers can afford to pay the bit extra for quality, I think we should be all right, and of course, provided Government does not tax us out of existence."

E. H. STANES,
United Nilgiri Tea Estates Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

J. BONAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 24th October 1958. Dividend: *Nil.* Transfer books remain closed from 17th to 24th October 1958, both days inclusive.

MUKAND IRON AND STEEL WORKS LTD. Annual General Meeting, Bombay, 24th October 1958. Dividend: Re. 1.20 per old ordinary share (includes bonus of Re. 0.40 per share) and Re. 0.30 per new ordinary share (includes bonus of Re. 0.10 per share). Transfer books remain closed from 10th to 24th October 1958, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th October 1958. Final dividend of Rs. 4.50 per share. Transfer books remain closed from 7th to 28th October 1958, both days inclusive.

BHARAT NIDHI LTD. Annual General Meeting, New Delhi, 31st October 1958. Transfer books will remain closed from 24th October to 15th November 1958, both days inclusive.

NUDDEA MILLS CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: 5 per cent. or Rs. 2.50 per share. Transfer books will remain closed from 23rd October to 5th November 1958, both days inclusive.

GOUREPORE CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: 20 per cent. or Rs. 20.00 per share. Transfer books will remain closed from 23rd October to 5th November 1958, both days inclusive.

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Transfer books will remain closed from 23rd October to 5th November 1958, both days inclusive.

MACHINERY MANUFACTURERS CORPORATION LTD. Annual General Meeting, Bombay, 7th November 1958. Dividend: *Nil.* Transfer books will remain closed from 24th October to 7th November 1958, both days inclusive.

GRELLE TEA CO., LTD. Annual General Meeting, Calcutta, 7th November 1958. Transfer books will remain closed from 25th October to 7th November 1958, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, Kerala State, 7th November 1958. Dividend: Re. 0.50 per share—final, payable on and after 7th November 1958. Transfer books will remain closed from 1st to 7th November 1958, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 8th November 1958. Dividend: Rs. 15.00 per share, payable from 17th November 1958. Transfer books will remain closed from 20th October to 15th November 1958, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 10th November 1958. Dividend: Rs. 10.00 per share, payable on 14th November 1958. Transfer books remain closed from 13th October to 10th November 1958, both days inclusive.

GANNON DUNKERLEY & CO., LTD. Annual General Meeting, Bombay, 10th December 1958. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 8th to 23rd December 1958, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Annual General Meeting, London, 18th December 1958. Dividend: 2½ per cent. free of tax. Transfer books will remain closed from 5th to 18th December 1958, both days inclusive.

TALAYAR TEA CO., LTD. Dividend of Re. 0.60 per share, for the year ended 31st March 1958. Transfer books will remain closed from 20th to 29th November 1958, both days inclusive.

KARAIKKAL ELECTRIC SUPPLY CO., LTD. Dividend of Re. 0.80 per share, for the period ended 31st March 1958. Transfer books will remain closed from 21st to 29th November 1958, both days inclusive.

BERHAMPUR ELECTRIC SUPPLY CORPORATION LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the period ended 31st March 1958. Transfer books will remain closed from 23rd to 29th October 1958, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Dividend of Re. 1.80 per share, on old shares and Re. 0.90 per share, on new shares, for the year ended 30th June 1958. Transfer books will remain closed from 3rd to 27th November 1958, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Dividend of Re. 1.00 per ordinary share, for the year ended 30th April 1958. Transfer books will remain closed from 31st October to 14th November 1958, both days inclusive.

COMPANY REGISTRATIONS

NEW BHARAT COMMERCIAL SERVICES PRIVATE LTD. (First Director: Mr. R. S. Seth Gopikisan Agarwal.) Business: Transporting and warehousing agents. Authorised capital: Rs. 5,00,000. Private company. Address: 1st Floor, "Badrika," 82, Marine Drive, Bombay 2.

BAKHTAWAR CONSTRUCTION CO., PRIVATE LTD. (First Director: Mr. Bhogilal Leherchand.) Business: Construction work. Authorised capital: Rs. 10,00,000. Private company. Address: "Meher House," 15, Cowasji Patel Street, Bombay.

BRAMMER V. LINK BELTING INDIA PRIVATE LTD. (First Director: Mr. Bhogilal Leherchand.) Business: Manufacturers and dealers in V-belts, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 134—136, Zaveri Bazar, Bombay.

BOKAKHAT TEA PASSES OVER DIVIDEND

SHARP FALL IN PROFITS OF DHRANGADHRA CHEMICALS

Bokakhat Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

A crop of 4,556 (4,450) maunds was manufactured and has been disposed of for sale in Calcutta for Export 4,207 maunds and for sale in Calcutta for internal consumption 349 maunds. The average price per lb. realised was Rs. 2.59 as compared with Rs. 2.51 per lb. obtained for the previous season's crop. The Company's export quota for season 1957 was 2,962 maunds.

The revenue account shows a profit of Rs. 89,550 (Rs. 1,19,491) and after deducting from this provision for gratuity and pension Rs. 3,522 (Rs. 7,595), staff commission and bonus Rs. 4,694 (Rs. 7,168), managing agents' remuneration Rs. 15,000 (Rs. 12,368), loss on machinery discarded Rs. 12,550 (*nil*), depreciation Rs. 30,743 (Rs. 24,570), short provision of labour bonus, 1956 Rs. 13,262 (Rs. 8,568 for 1953, 1954 and 1955), and initial contribution to superannuation fund Rs. 4,045 (*nil*) there is a net profit for the year of Rs. 5,734 (Rs. 43,443 after adjustment). After adding to this the adjusted credit balance of Rs. 41,226 (Rs. 25,488) brought forward from the previous year, there is a credit balance of Rs. 46,960 (Rs. 68,931 from which the directors paid a dividend of 5 per cent. absorbing Rs. 30,000; leaving to be carried forward Rs. 38,931) on profit and loss account, which is carried forward.

The estimates for season 1958 have been framed for a crop of 5,100 maunds at a total cost of Rs. 8,60,768 excluding capital expenditure amounting to Rs. 49,900.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Gross block ...	13,10,965

Dhrangadhra Chemical Works Ltd.

The directors of the above Company [Managing Agents: Messrs. Sahu Bros. (Saurashtra) Private Ltd., Dhrangadhra] present the audited accounts of the Company for the year ended 31st March 1958.

The statement of accounts for Salt Works has not been set forth separately this year but is amalgamated with the figures of Chemical Works as suggested by the Company Law Administration. Likewise the figures shown separately in the balance-sheet for the preceding year for both the Chemical Works and Salt Works have also been amalgamated.

The working result of the Company during the year under review after providing for all expenses and operation and for normal depreciation of Rs. 9,52,386 (Rs. 9,86,033) and development rebate reserve of Rs. 11,099 (*nil*) shows a net profit of Rs. 2,71,306 (Rs. 11,96,148). To this is added the balance brought forward from last year of Rs. 53,684 (Rs. 1,11,234) making available for appropriation a total of Rs. 3,24,990 (Rs. 13,07,382). The directors have made the following appropriations out of this amount: To provision for bonus for 1952-53/1953-54 as per award Rs. 3,15,001 (*nil*) leaving a balance of Rs. 9,989 (Rs. 53,684 after transferring Rs. 9,00,000 to general reserve and providing for wages, bonus to agarias and other items amounting to Rs. 3,53,698) to be carried forward to the next year's account. No provision for income-tax liability is made for this year because of the carry-over of unabsorbed depreciation and development rebates from earlier years.

Dividend.—The directors recommend that dividends at the following rates be declared and paid for the year ended 31st March, 1958 from the balance of the tax-borne profits of the years 1950-51, 1951-52 and 1952-53 transferred to the dividend equalisation fund in 1956: A dividend of 6 (6) per cent. per annum, free of income-tax on the preference shares of the Company, pro-rata on the paid-up amount thereon, a dividend of 6 (7½) per cent. per annum, free of income-tax on the fully paid-up old ordinary shares of the Company, and a dividend of 6 (7½) per cent. per annum, free of income-tax on the new ordinary shares pro-rata on the paid-up amount thereon. The directors recommend that the balance of Rs. 3,50,000 in the contingencies reserve being profits of 1953-54 be transferred to the dividend equalisation reserve.

Working Results.—The directors are glad to report that the Company's average production during the year under review was better than in the previous year. The production could not, however, reach the full-rated capacity, as the new compressor ordered earlier was received only in the year under review. The erection of this compressor was completed very recently. The Company hopes to attain the rated capacity very shortly.

But it will be observed from the accounts that despite this increase in the production, there was a decline in the profits of the Company. This is attributable mostly to a rise in the cost of production as a result of an increase in wage rates and dearness allowance, higher prices of raw materials, stores and spares, increased cost of power and fuel, higher costs of packing materials and enhanced railway freight rates. These factors were beyond the control of the Company. Besides, the levy of wealth tax also affected the profits of the year.

In this connection, the directors would like to point out a special difficulty regarding the cost of transporting salt from Kuda to the factory at Dhrangadhra. The wagons allotted carry less salt than the marked capacity, while freight and surcharge are paid on the marked capacity of the wagons. This entails a considerable loss to the Company. In spite of repeated representations, no decision appears to have been taken by the railway authorities.

Heavy Imports.—Owing to large imports of soda ash by the State Trading Corporation, the market was loaded with heavy supplies during 1957. There was, therefore, difficulty to dispose of the indigenous soda ash. The Company's sales were also greatly affected and a considerable quantity of the stocks, accumulated as a result, had to be sold at a freight disadvantage. Naturally this resulted in a lower realisation to the Company.

With a view to avoiding a similar situation in the market, the Company made strenuous efforts to get the import policy revised, and as a result imports were restricted. The Company also impressed upon the State Trading Corporation the need for releasing stocks only when there was shortage or when prices rose unduly in any area due to transport bottlenecks, speculative hoarding, etc. The directors are happy to state that the Corporation responded favourably to the wishes of the Company.

Plant Extension at Dhrangadhra.—The directors inform that the extension work to increase the rated capacity of the existing plant to 150 tons per day is almost over. However, owing to the delay in the supply of electric power by the Government of Bombay, probably it may not be possible to switch on to the full rated capacity of the plant immediately. Ceaseless efforts are being made to get power soon from the Bombay State Electricity Board. However, the Company has been assured that the power will be made available before the end of the year. After the extended plant goes into operation, the earnings of the Company will improve. The installed capacity of the soda bicadb. plant was increased during the year. The scheme for the manufacture of potassium chloride has been deferred for the present.

Caustic Soda Unit at Kayalpatnam village in Tinnevelly District.—The directors report satisfactory progress in implementing the programme for the manufacture of caustic soda. Almost all the lands required for the new unit have been acquired. The deliveries of foreign machinery are more or less according to the schedule. The construction of factory premises is well under way and the erection work of the plant will be taken in hand very shortly. The Company hopes that the new plant will be able to go into production before the end of the year.

Future Outlook.—With both the extended plant at Dhrangadhra and the new caustic soda plant in Tinnevelly District going into commission and with the growing demand in prospect for the Company's products under the stimulus of development schemes, the directors look forward to a bright future for the Company.

RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/-, postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/50 nP including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14.

Pankaja Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. C. S. Ratnasabapathi Mudaliar & Sons, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1957.

The year's trading has resulted in a net loss of Rs. 3,31,908 after providing a sum of Rs. 36,000 towards remuneration payable to the managing agents in the case of absence or inadequacy of profits as sanctioned by the Central Government and depreciation at normal rates allowed under the Income-tax Act. Adding to this the previous year's loss of Rs. 9,85,216 the total loss amounts to Rs. 13,17,124 and this is proposed to be carried forward.

The directors regret that the working during the year covered by the report was not satisfactory in as much as the prices of raw materials remained high and more or less steady and the prices of yarn during the year showed a declining tendency with the consequent accumulation of stock in the absence of a regular and steady demand. The Company had to meet heavier wage and electricity bills than last year on account of an increase in the basic wages of operatives and the imposition of a surcharge on electric energy consumed. There was also a power cut for a period of nearly two months in the year which resulted in considerable dislocation of production. In the circumstances the directors regret that the Company had to sustain a heavy loss for the year under review. The directors report that the prospects for the current year viz. 1958 are also not encouraging.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Gross block ...	35,52,714
Liabilities ...	41,74,487	*Less*—Depreciation ...	19,72,637
		Net block ...	15,80,077
		Stock-in-trade	19,09,895
		Stores & spare parts ...	3,12,658
		Debts, deposits and advances ...	5,10,457
		Investments	7,750
		Cash ...	36,526
		Profit and loss account ...	13,17,124
Rs.	56,74,487	Rs.	56,74,487

Bengal Potteries Ltd.

The directors of the above Company (Managing Agents: Messrs. Bharat Ram Bhagat & Co., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year amounts to Rs. 13,90,720 (Rs. 14,92,751) to which is added the amount brought forward from last year of Rs. 10,978 (Rs. 12,631) making a total of Rs. 14,01,698 (Rs. 15,05,382). The directors have provided for depreciation Rs. 2,64,060 (Rs. 2,65,669), for taxation Rs. 2,65,250 (Rs. 5,67,000) and for super-tax on 10 per cent. dividend Rs. 16,447 (Rs. 20,559) leaving a balance of Rs. 8,55,941 (Rs. 6,52,154). The directors recommend payment of a dividend at 10 (10) per cent. on fully paid-up shares of Rs. 2-8 each absorbing Rs. 3,17,066 (Rs. 3,17,066), a dividend of 10 (10) per cent. on partly paid-up shares of Rs. 2 (Re. 1) each absorbing Rs. 1,87,962 (Rs. 94,111) and transfer to general reserve Rs. 3,30,000 (Rs. 2,30,000) leaving to be carried forward Rs. 20,913 (Rs. 10,978).

The directors report that since the appeal by the Hon'ble Minister for Industries and Commerce not to raise prices due to the shortage caused by restrictions of imports, the Bengal Potteries have not increased their prices in spite of the fact, that they had to pay railway freight at higher rates, higher prices for coal, coke and various raw materials, and stores, and on account of the Company's higher contribution towards the provident fund in the year 1957. The total of all these increased payments made by the Company amounts to about Rs. 2,50,000. It will be noticed that the figures of production and sales for this year are higher than last year. The slightly lower profits are due to the abovementioned fact.

The building and erection of machinery of the new factory have been completed satisfactorily. The directors hope that by this time next year, the factory will be in full production and show good results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,50,273	Gross block	1,20,18,973

UNITED NILGIRI TEA ESTATES CO., LTD.

MR. E. H. STANES' SPEECH AT THIRTY-SIXTH ANNUAL MEETING

THE Thirty-sixth Annual General Meeting of the United Nilgiri Tea Estates Company, Ltd. was held in Coimbatore on 29th September 1958. Addressing the shareholders on the occasion, Mr. E. H. Stanes, Chairman of the Company, referred to the mounting cost of production of tea and high level of taxation which left nothing worthwhile out of the profit to meet the high cost of development of new land and to provide a reasonable return to the shareholders.

The following is the full text of Mr. Stanes' speech:

"GENTLEMEN,

"You have before you our Thirty-sixth annual report, and I am proud that your Company, in spite of many adverse factors, has been able to present again such a satisfactory result for the year. Profits are considerably lower, and the dividend recommended is also slightly reduced. As we have commented in the Directors' report, the cost of production has increased by 25 nP per lb. and the selling price of our teas has fallen by 14 nP per lb., both being results of factors outside our control to a large extent. However, it is interesting to compare our costs over the past four years.

"These were:

All-in cost of production	*Sale price per lb.*
7 as. 0.99 pies per lb.	9 as. 11.69 pies per lb.
7 as. 9.37 pies per lb.	10 as. 7.36 pies per lb.
8 as. 2.60 pies per lb.	12 as. per lb.

"In 1955, tea export quota purchases cost us Rs. 1,57,593, and in 1956 Rs. 81,455, on crops of 11,11,000 lbs. and 12,95,000 lbs., respectively. Deducting the cost of quota and which have cost us very little in the last two years, the adjusted costs of production were—1955, Rs. 1.60, and 1956, Rs. 1.61, as against Rs. 1.57 for 1957. Costs were increasing in each of those years, but the cost of production was held steady by increase in crops. The point I want to make is that, although our crop was again higher by 32,000 lbs. made tea, our cost still went up by 25 nP and, therefore, actually by even more. There comes a stage when an increase of manure does not increase our crops further, but we can look forward to some increase from our about 100 acres young tea.

Salaries, Wages, etc.

"The Directors' report has mentioned one item in the year's costs of Rs. 64,776 for leaving gratuities. In addition, salaries and wages have increased by Rs. 1,41,520, provident fund by Rs. 45,850, welfare by Rs. 32,554, miscellaneous cultivation expenses by Rs. 64,175. These items total by themselves 24 nP per lb.

"The following are taken from our reports for the years 1938, 1939 and 1940:

All-in cost of production	*Sale price per lb.*
7 as. 0.99 pies per lb.	9 as. 11.69 pies per lb.
7 as. 9.37 pies per lb.	10 as. 7.36 pies per lb.
8 as. 2.60 pies per lb.	12 as. per lb.

"In 1938, the crop was approximately 500 lbs. per acre on our then 1,053 acres of mature tea. Last year, the crop for Chamraj Group was 1,072 lbs. made tea per acre.

"In the 20 years our cost of production has apparently increased 3½ times. I say apparently, because I would not hazard a guess what it would have cost us if our crop per acre had not doubled over the same period.

Selling Price

"Fortunately, our selling price has also increased by about three times, and as long as we can produce good quality flavoury high grown teas, and consumers can afford to pay the bit extra for quality, I think we should be all right, and of course, provided Government does not tax us out of existence.

"As I commented last year, the balance of profits left with the Company do not now make it worthwhile to pay the very high cost of development of new land. There is insufficient return on the capital sum that would have to be invested. Furthermore, we have to put by all that we can spare out of our profits for housing and other requirements of the Plantation Labour Act, and our shareholders also have to get a fair deal, or else the industry would fade out of existence, as it is rapidly doing in our neighbouring country of Ceylon.

"In Ceylon, as well as making it very difficult for Tamil labour to live and work on estates, a most fantastic nationalisation scheme has been put forward, which I have just been reading in *Planting and Commerce*.

"It seems to have operated as follows:

"First, threaten nationalisation of all foreign interest, to put down the price of shares.

"Secondly, put a very high export duty on tea, and put a very high income-tax on what is left, so that there is virtually nothing left for shareholders.

"The procedure to follow is then to take the depressed Stock Exchange value of the shares, deduct the value of liquid assets and to say that fair compensation will be Rs. 875 per acre, and that that can be paid over a period of 10 years!

"The cost of buildings alone on any tea estate will be a good deal more than Rs. 875 per acre, as we all know.

"I trust Ceylon does not really intend to resort to such expedients which can only be described as confiscation. It is no wonder that investors are shy of putting their all into commercial companies. This is, I am afraid, a digression from our own affairs.

Mr. N. J. Stanes

"We are very grateful to Mr. N. J. Stanes for having again agreed to act as Group Manager on our estates for the four months whilst Mr. Hoare is on leave. It is a very great advantage to us to have a man with Mr. N. J. Stanes' ability and experience to help us on these occasions. As our Visiting Agent, he knows the estates intimately, and I am personally grateful to him for taking on this very arduous job.

"The estates are in fine condition. The teas, we make are fetching satisfactory prices in Cochin, and are amongst the best teas being produced in South India.

"Mr. N. J. Stanes advises me that he wishes to retire next year. I certainly hope that I can persuade him not to do so and that we may continue to have him with us, in an advisory capacity, even if he cannot again act as Manager of our Estates.

"I would also like to wish Mr. K. A. Subramania Iyer who retires today a long and happy retirement and to thank him for his 36 years of service to this Company."

Proposed Ordinary Dividend of 2½% f.o.t.	17,500	32,957
leaving to be carried forward to Shareholders' Account		54,500

In view of the strike which closed down all services from the 12th August to 22nd September 1958, it has become necessary to conserve the Company's resources. The Board regrets, therefore, that it is unable to recommend a greater dividend than 2½ per cent. for the year 1957.

The Annual General Meeting will be held at 30, Cursitor Street, London, E.C. 4, at twelve o'clock noon on Thursday, the 18th December, 1958, on which day the warrants for the Ordinary Dividend, if sanctioned, will be posted.

The Ordinary Share Transfer Books will be closed from the 5th to the 18th December 1958, inclusive.

By Order of the Board,
A. C. T. BLEASE,
Agent.

P. 4 MISSION ROW EXTENSION,
CALCUTTA, *6th October*, 1958.

JESSOP AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Management have sanctioned payment on 1st November 1958 of the Dividend on 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 31st October 1958, without any deduction in respect of Income-tax which is payable by the Company.

The Preference Share Transfer Register will be closed from 30th October to 31st October 1958, both days inclusive.

Dividends will be paid only to the Registered Shareholders or their Mandataries.

By Order of the Board,
D. D. MARKAN,
Secretary.

63 NETAJI SUBHAS ROAD,
CALCUTTA-1, *9th October*, 1958.

THE PUNJAB NATIONAL BANK LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Punjab National Bank Ltd., New Delhi, will be held at the Registered Office of the Bank at Parliament Street, New Delhi, on Wednesday the 29th October 1958, at 3.30 p.m., for considering and if thought fit, passing the following Ordinary Resolutions, with or without modifications:

1. "RESOLVED (*a*) That the existing 8,00,000 shares of Rs. 25 each whether issued or not, comprised in the Authorised Capital of Rs. 2,00,00,000 of the Bank be sub-divided into 20,00,000 shares of Rs. 10 each and that 12,50,000 issued shares of Rs. 10 each resulting from such sub-division of the present subscribed capital be credited as fully paid-up.

   (*b*) That the existing certificates of shares be called in by the Directors and cancelled and that new certificates be issued in exchange thereof subject to the terms and conditions of the Articles of Association.

   (*c*) That the Directors be and are hereby authorised to take all the necessary steps to give effect to this sub-division of the shares and to issue fractional certificates or coupons in lieu of fractional certificates wherever necessary on such terms as they consider proper and to issue in lieu of every two such coupons one full share of Rs. 10 each."

2. "RESOLVED that the present clause 5 of the Memorandum of Association of the Bank be and is hereby substituted by the following clause, namely:

   5. The Capital of the Company is Rs. 2,00,00,000 divided into 20,00,000 shares of Rs. 10 each."

The Transfer Books and Register of Members of the Company will remain closed from 23rd October to 29th October, 1958 (both days inclusive).

Any shareholder unable to attend personally is authorised to appoint another person (whether a member or not) as his proxy to attend and vote instead of himself subject to the provisions of Section 176 of the Companies Act, 1956. Such proxies on the enclosed form should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the General Board of Directors,
R. L. TULI,
Secretary.

PARLIAMENT STREET,
NEW DELHI, *3rd October*, 1958.

Explanatory Statements under Section 173 of the Companies Act, 1956

Item No. 1 (*a*): The Authorised Capital of the Company is Rs. 2,00,00,000 divided into 8,00,000 shares of Rs. 25 each. Out of this, capital of Rs. 1.25 crores stands subscribed and fully paid-up. In order to make our shares more popular, it is considered desirable and expedient to sub-divide the 8,00,000 shares of the face value of Rs. 25 each comprised in the Authorised Capital of Rs. 2 crores of the Bank into 20,00,000 shares of the face value of Rs. 10 each, whether issued or not.

Resolutions No. 1 (*b*), 1 (*c*) and 2 are consequential to the passing of resolution No. 1 (*a*).

ANGLO-INDIA JUTE MILLS COMPANY LIMITED

THE BOARD OF DIRECTORS AT THEIR meeting held on 22nd September 1958, decided to recommend to the shareholders in General Meeting, the following Dividends for the year ended 31st March 1958, without any deduction for Income-tax paid by the Company.

On the Cumulative Preference Shares at 7 per cent.

On the Ordinary Shares at 10 per cent.

The Share Transfer Books of the Company will be closed from 24th October to 5th November 1958, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LTD.,
Managing Agents.

CALCUTTA, *22nd September* 1958.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

TENDERS ARE INVITED FROM ESTABlished foundries in India having experience in the manufacture of Cast Iron Sleeper Plates for supply, by 31st December 1959, of about 2,50,000 tons of cast-iron CST9 sleeper plates, both B.G. and M.G.

2. Quota Certificates for pig iron will be issued by the Railway Board according to the requirements of the supplier, upto a maximum of 100 per cent. of the quantity of sleepers ordered on the firms. The firms are expected to make up the melting losses under their own arrangements.

3. Applications for copies of tender documents should be made to the Joint Director, Railway Stores (Steel), Railway Board, New Delhi. Tender documents embodying conditions of contract, relevant drawings, etc., will be supplied at Rs. 10 per set and will be available for sale on any working day during office hours.

4. Tenders will be received upto 13.00 hours on the 14th November 1958 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

SECRETARY,
Ministry of Railways
(Railway Board).

NEW DELHI, *11th October*, 1958.

GILT-EDGED QUIET

(From Our Own Correspondent)

BOMBAY, *15th October*

Extremely comfortable conditions continued to prevail in the short-term money market. While the onset of the traditional busy season is only a few weeks ahead, there was no sign of any demand for credit picking up and supply of funds continued to be plentiful. There was no change in interest rates either. Inter-bank call money was offered at 2 per cent. among the big banks; the corresponding rate among the small banks was 2¼ to 2½ per cent. House money at seven days' notice placed at 3¼ to 3½ per cent. and short-term deposits at 3½ to 4 per cent. for one to six months.

The response to the 91-day Treasury Bills was slightly better this week, the amount offered against the invitation for Rs. 2 crores being Rs. 3.90 crores, as compared with Rs. 3.20 crores in the previous week. Tenders at Rs. 99.370 and above were accepted in full and those at Rs. 99.365 allotted approximately 16 per cent. The total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Rs. 2.521 per cent. per annum, as against Rs. 2.525 per cent. in the previous week. In view of the *Dasara* holidays, the Government of India Treasury Bills auction will not be held during the period from 20th to 25th inst. Tenders for the auction on the 28th inst., have been invited for a higher sum of Rs. 3 crores.

The Reserve Bank of India statement for the week ended 10th October 1958 discloses a further expansion of Rs. 17.46 crores in notes in circulation. Notes held in the Banking Department are lower by Rs. 18.25 crores. For yet another week, foreign securities show no change, while balances held abroad are slightly lower by Rs. 79 lakhs. There has been no change in Central Government deposits, but other Governments' deposits have gone up by Rs. 1.53 crores. Deposits of banks have shrunk by Rs. 8.60 crores. Loans and advances to Government show a rise of Rs. 6.58 crores, and other loans and advances Rs. 28 lakhs. An increase of Rs. 4.09 crores is noted in investments and of Rs. 4.79 crores in Government Treasury Bills purchased and discounted.

A sharp fall of Rs. 22.61 crores in demand deposits and a rise of Rs. 18.34 crores in time deposits are disclosed by the Scheduled Banks' statement for the week ended 3rd October 1958. Borrowings from banks are also higher by Rs. 5.60 crores. Advances have gone up by Rs. 5.40 crores, while bills purchased and discounted are lower by Rs. 1.19 crore. Investments stand strengthened by Rs. 1.13 crore. While cash balances have shrunk by Rs. 4 crores, money at call and short notice show an increase of Rs. 3.92 crores.

The 4½ per cent. State Bihar Government loan for Rs. 2 crores, which opened for subscription on the 13th inst., was oversubscribed on the same day, the actual amount subscribed being Rs. 2.99 crores. Applications up to and including Rs. 10,000 will receive full allotment. Subscribers for amounts over Rs. 10,000 will receive allotment at 92 per cent., subject to a minimum allotment of Rs. 10,000.

The Gilt-edged market ruled quiet during the week under review and business was very scanty. In the absence of any enquiry from institutional investors, values of some of the loans tended to decline slightly. 3 per cent. 1986 Conversion Loan was on offer and it declined by 40 nP to Rs. 73.60. 3 per cent. 1970-75 was unchanged at Rs. 90, while 3 per cent. 1966-68 shed 10 nP to Rs. 94. 3 per cent. 1964 and 1963-65 each declined by 10 nP to Rs. 96.60. 3 per cent. 1959-61 was placed 5 nP lower at Rs. 100.05. 3½ per cent. 1961 shed 5 nP to Rs. 100.05, while 3½ per cent. 1963 and 1964 were unchanged at Rs. 100.05 and Rs. 99.95, respectively. 3½ per cent. 1965 shaded off by 5 nP to Rs. 99.65. In the State loans section, though the undertone was dull, some of the issues gained a little. Thus, 4 per cent. West Bengal 1967 and 1968 put on 10 nP each to Rs. 99.30. 4 per cent. Madras 1968 lost 5 nP to Rs. 99.30, 4½ per cent. 1970 gained a like amount to Rs. 100.25. 4 per cent. U.P. 1968 was better by 5 nP at Rs. 99.30, while 4½ per cent. 1970 lost 15 nP to Rs. 100. The new 4½ per cent. Bihar loan commanded a premium of 25 nP over the issue price of Rs. 99.50.

In the foreign section, bank's selling price of ready U.S. dollars was quoted at Rs. 476.75, having risen from Rs. 476.50 per $100. Their buying price also moved up from Rs. 473.25 to Rs. 473.50 before declining to Rs. 473.25 per $100. In New York, spot sterling gained from $2.80-21/32-2.80-23/32 to $2.80-25/32-2.80-27/32 and three months' forward from $2.80-2.80-13/32 to $2.80-13/32-2.80-½. Transferable sterling also gained from 278.85-278.95 cents to 279.15-279.20 cents.

BASE METALS FULLY STEADY

(From Our Own Correspondent)

CALCUTTA, *12th October*

Base metal prices were fully steady during the week under review, following highly encouraging advices from foreign markets. It was noted here that the price of copper on the London Metal Exchange was improving on account of expectations of increased purchases by Government for stock. Moreover, the U.S. customs smelters again raised the price by ¼ cent to 27 cents. There was also the fear that output in Rhodesia might be affected on account of labour troubles. Demand for copper scrap here was good.

Tin continued to rise on the London Metal Exchange, and the possibility of the U.S.S.R. joining the International Tin Agreement and agreeing to reduce its exports had a bullish effect in sentiment.

Prices of lead and zinc were well maintained.

GOLD SPURTS

(From Our Own Correspondent)

BOMBAY, *15th October*

The main feature of the trading in the bullion market during the week under review is the sudden spurt in price of gold today. Though the undertone during the earlier sessions of the week was firm, and the trend was upward, on expectations that the military rule in Pakistan would check smuggling of yellow metal, the movement was rather slow. However, the opening of the traditional demand gave a momentum to prices today. Silver also ruled steady, but the fluctuations were narrow. The decline in arrivals was mainly responsible for the steady tone in the white metal.

Forward silver (28th October settlement) moved up from Rs. 188-6 to Rs. 189-4. After a setback to Rs. 188-8, the forward metal gathered strength to Rs. 189-3 and closed at Rs. 189. The next settlement finished with a gain of As. 12 at Rs. 189-14.

Ready silver closed at Rs. 188-4, as against Rs. 187-6. The ready discount, which stood at Re. 1 below the current settlement last week, narrowed down to As. 12, reflecting an encouraging position in the ready section. The floating stocks of silver are estimated at 1,000 bars. The daily average arrivals were 50 bars (including unrefined metal), while the offtake was 15 bars per day on an average.

Gold for forward delivery (27th October) edged forward from Rs. 108-1 to touch a high of Rs. 109-11 before closing at Rs. 109-7. The next settlement moved up from Rs. 108-5 to Rs. 110, and finished at Rs. 109-11.

Ready gold advanced from Rs. 107-12 to Rs. 109-7. The floating stocks of gold are reported to be 40,000 tolas. The daily average arrivals and offtake were equal at 3,000 tolas.

The price of silver at New York rose from 89½c. to 90⅜c. The price at London moved up further from 77½d. to 78¼d. for spot and from 76⅝d. to 78⅛d. for forward. Gold gained from 250*s.* 3½*d.* to 250*s.* 4½*d.* in the earlier half of the week, but later on declined to close at 250*s.* 2½*d.* yesterday.

The following comparative table shows at a glance the trend of the market during the week under review:

	15-10-58	Highest	Lowest	8-10-58

†27th October settlement.

TEA PRICES IMPROVE

(From Our Own Correspondent)

CALCUTTA, *11th October*

Tea prices during the last week's internal sales improved. The increased demand was due to the fact that teas which had already left gardens before the recent changes to excise and export duties were announced became cheaper, in view of the present excise duties in the two zones being 4 nP and 10 nP, respectively, as against 3.125 nP per lb. only previously.

Dusts on offer aggregated 22,704 chests. Orthodox teas advanced by 10 nP and legg-cut Dooars were sold above valuations. Among C.T.C., there was keen demand for the better grainy exportable teas, but the plainer liquoring teas gave way by 10 to 15 nP per lb. Darjeelings met with keen demand. The quotations per lb. were: Best Assam C.T.C. Rs. 2.80 to 3.10 (nominal); medium Assam C.T.C. Rs. 2.10 to 2.30; medium Assam grainy dust Rs. 1.88 to 1.90; and medium Dooars Rs. 1.86 to 1.88.

Leaf on offer amounted to 1,936 chests which met with good demand. Prices also improved.

In export quota, business took place at 3½ nP. Subsequently, sellers demanded 3¾ nP, but buyers were prepared to pay only 3¼ nP.

LINSEED DULL

(Messrs. A Bradley & Co.)

CALCUTTA, *13th October*

Prices have moved within narrow limits during the week; although a small advance has been recorded, about eight annas per maund in the price of seed as well as oil, business has been rather dull. As with demand, production of oil has fallen off to a great extent locally and arrivals of seed from upcountry have diminished. Activity in the oil market has been negligible. Overseas markets are quiet, and the prevailing disparity in Indian prices remains at around £8 to £10.

Latest quotations are as follows:—Ready-October Rs. 25-8 per maund.

COTTON FUTURES REACT

(From Our Own Correspondent)

BOMBAY, *15th October*

The cotton futures market, after having ruled fully steady during the first half of the week under review, encountered heavy selling on Monday and values sharply reacted. The downward trend of prices continued yesterday also. But a mild recovery was in evidence today which persisted till the close of the session. The earlier steadiness was due to support prompted by reports of damage to the cotton crop owing to cyclonic weather in Saurashtra and excessive rains in Berar and Khandesh. The expectation that the Government would soon announce the details of the proposed export incentive scheme for cotton and textiles also favourably affected sentiment. Another helpful factor was the hope entertained in some quarters that the Government would persuade itself to abolish the export duty on cotton. Monday's reaction was influenced by the news that the extent of damage to the crop was exaggerated. Upcountry operators in particular started heavy liquidation with the result that prices came down precipitously. The disappointment over the absence of any reduction in export duty, and the Government's continued silence over the export incentive scheme, accelerated the downward trend. Since the new crop was expected to start moving in a fortnight, a further fall in price was anticipated. This factor, together with the bleak textile outlook and the downward trend in mill consumption, discouraged buying. However, as noted earlier, short-covering led to a partial recovery towards the close.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 632 and, after advancing to Rs. 638 on Saturday, declined to Rs. 622 on Monday and further to Rs. 615.75 yesterday. Commencing at Rs. 620 today, the contract gathered Rs. 3 before finishing the week at Rs. 621.25. The net loss over the week was Rs. 11.50. The trend of price of the contract during the week is indicated below:—

(In rupees per candy of 784 lbs.)

	15-10-58	*High*	*Low*	8-10-58
I.C.C. Moglai Jarilla (March 1959) ...	621.25	638	615.75	632.75

The spot section ruled weak. Prices registered a decline. With increasing arrivals in most upcountry markets, especially in Punjab and Berar, offering of new crop increased while demand was poor. Early in the week, enquiries for staple styles such as Punjab 320F, Laxmi, Jayadhar, Khandesh, etc., were noted. But demand dried up later. Mill buyers were keeping off the market due to expectations of further fall in prices.

In export cotton, Bengal *Deshi* prices staged a moderate recovery early in the week on stray rumours that the duty on the growth would be abolished very soon. But towards the close prices declined as no duty reduction materialised. Steady enquiry was reported from Japan for Bengals. About 30 to 40 thousand bales of Bengals were already sold to Japan prior to the latest quota announcement, subject to availability of export licence. Subsequent to the grant of quota two to three thousand bales of Bengals were sold to the destination, apart from the 10-12,000 bales of Dholleras sold earlier. There were strong rumours that the import quota system for cotton prevalent in Japan for the non-mill sector might be abolished soon. This, it was said, would have the effect of making Indian cotton cheaper and thus improve the prospects of more Japanese purchases from India. It was also felt that Japan might buy more cotton from India in view of the serious situation in Pakistan. Apart from Japan, Germany was interested in C.P. and Rajasthan *Deshi*.

In the foreign section, Sudan Sakels and A.R. Ugandas attracted the attention of mills. There was growing disappointment in both industrial and trade circles over the delay in the announcement of the import quota. Very restricted imports last season had led to large-scale use of carryover stocks which had been consequently reduced at the commencement of the current season to a level hardly sufficient for about three months' consumption. It is pointed out that unless the industry has a broad indication of the quantum of imports likely to be permitted during the season, it would be impossible for the textile units to plan a production programme suited to consumer preferences here and abroad. Spinners were anxiously looking forward to some import quotas and it was hoped that the official announcement on imports would not be delayed much longer.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates: Bengal *Deshi* 590 (610); Berar *Jarilla* 615 (625); Khandesh 665 (675); Vijay 800 (810); Hubli Laxmi 860 (870); Jaydhar 790 (800). *Delivery Contracts*: Bengal 575 (588); Mathia 570 (570).

The Karachi cotton futures market continued to rule weak during the week under review also. There was fear that the abnormal political situation in Pakistan would adversely affect cotton export prospects. This, coupled with the news that the Government of India might abolish the export duty on cotton, caused nervousness among operators. Weak advices from upcountry centres also adversely affected sentiment. As a sequel to selling prompted by these factors, the market suffered a setback. N.T.R.G. January declined by Rs. 2-14 from Rs. 72-5 last week-end to Rs. 69-7 and the March position fell by a like amount to Rs. 69-11.

Listless conditions prevailed in the Alexandria cotton futures market during the week. Volume of business was small. Price fluctuations were narrow. The long-staple Karnak contracts were practically neglected. The medium staple *Ashmouni* made small gains earlier in the week, reflecting the scarcity of quality cottons of high grade in the new crop of Ashmouni and export enquiries from East European countries. But, towards the close,

the Ashmouni contracts eased. In the spot section, premiums for top grade Ashmouni tended to harden while those for other varieties were unchanged.

The first official estimate of the 1958-59 Egyptian cotton crop has placed production (excluding Scarto) at 9,698,000 kantars, as against 8,827,000 kantars harvested last season. The staple-wise breakdown of the estimate is: cotton over 1⅛" 5,710,000 kantars; over 1⅛" 813,000 kantars; over 1¼" 3,175,000 kantars. Commenting on the progress of the new crop, a prominent shipper observed recently: "Cottons are coming down to the spot market in bulk, especially Menufis; Giza 30 is definitely much better in style and staple than last year. Menufi good style cottons of high grades are scarce and fetching fancy premiums. The same applies to Ashmouni. Karnak arrivals have been few."

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end quotations.

Karnak: November, January 72.00 (72.00).

Ashmouni: October 64.90 (65.15); December 64.05 (64.80).

Cotton futures values in Liverpool made some small gains during the week. There was a fair volume of forward transfers of outstanding hedge positions and moderate trade covering in the near position. Values, especially of near positions, consequently moved higher. The distant positions, however, encountered selling with the result that they tended to look down. But support from American interest in Liverpool and local operators imparted strength to the market. A lower U.S. crop forecast by the Crop Reporting Board did not exert any marked influence on the market. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 24.50; December-January 24.60; March-April 24.30; May-June 24.05. *American cotton mixed growth contract*: October-November 25.28; December-January 24.88; March-April 24.70; May-June 24.48. *Sudan*: November-December 29.25; January-February, May-June 29.25.

The most important development of the week as far as the New York cotton market was concerned, was the publication, on the 8th inst., of the October estimate of the cotton crop by the Crop Reporting Board. The Board placed the season's crop at 11,675,000 bales (of 500 lbs.). This compared with the 12,105,000 bales forecast a month earlier and the final crop 10,964,000 harvested in the 1957-58 season. The yield per acre was estimated at 469 lbs. as against 486 lbs. in the previous estimate.

The forecast had very little effect on the market. In fact, the lower estimate instead of leading to a rise in price, resulted in a mild reaction. This was because a reduction of as much as half a million was expected and discounted in the recent rise in prices. Nevertheless, Commission House buying and mill fixation, based on the continued heavy entry into the Government loan, have imparted some strength to the market. Over the week, prices showed a slight decline only.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	14-10-58	7-10-58	30-9-58
Spot	36.25	36.20	36.05
October	35.74	35.76	35.89
December	36.09	36.20	36.22
March	36.57	36.67	36.67

YARNS SLUMP

(From Our Own Correspondent)

BOMBAY, 15*th October*

Bears predominated in the yarn market during the week under review too and there was a further sharp break in prices. Several mills in Bombay were reported to have sold staple fibre yarns (40x2) at markedly reduced rates, while offtake from important consuming centres such as Surat and the Punjab was very much restricted. There were reports of other mills also contemplating to sell at lower prices. Even at low and attractive prices, operators were not inclined to enter into fresh commitments. It was said that the high prices of staple fibre yarn (and also of rayon yarns) prevailing until recently had considerably enhanced the cost of weaving fabrics, so that weavers were finding it difficult to dispose of their stocks. Indeed, many weavers were said to have switched over their looms for weaving cotton fabrics. Rayon yarns also encountered persistent selling induced by bears of enlarged supplies, following the issue of licences for importing art silk yarn against fabrics exported. The traders noted that exports of rayon fabrics were quite encouraging. Cotton yarns continued to be depressed. Internal demand was still at a low ebb. Nor was export business encouraging, thanks to keen competition from China in the traditional Asian markets.

The Government of India has announced that a reduced rate of import duty will be applicable to Indian cotton yarn exported to West Germany. The Federal Republic of Germany has applied in regard to trade with India the most-favoured-nation clause under which, among other items, cotton yarn from India would be imported at a reduced rate of import duty. The quantity thus importable annually would be upto 120 per cent. of the quantity imported from India into Germany in 1950 calculated according to weight. In order to get this concession, Indian exporters of yarn to Germany should obtain from authorised Chambers of Commerce in India a certificate of origin in the form prescribed and present it to the German customs authorities along with the necessary export documents. The list of the Chambers of Commerce in India authorised to issue the certificate of origin in this regard can be obtained from the office of the Textile Commissioner, Bombay.

Staple fibre yarns (40x2) October delivery was subjected to heavy selling and slumped by Rs. 27 to Rs. 619. Likewise, December delivery fell by Rs. 24 to Rs. 627. In the spot section, 40x2 Konnoors dropped 23 nP to Rs. 3.30. Citys retreated by 16 nP to Rs. 3.24. Centurys climbed down by 13 nP to Rs. 3.28. Among foreign yarns, Fujis shed 8 nP to Rs. 9.61. Paramounts, however, improved by 19 nP to Rs. 9.81.

In the art silk yarn section, 120 Japan declined by 16 nP to Rs. 5.37 and 150 Japan by 25 nP to Rs. 5.81. 150 Italy eased by 6 nP to Rs. 6. But 120 Italy improved by 31 nP to Rs. 6. Among indigenous yarns, National Rayons 150 bright cones first grade retreated by 22 nP to Rs. 4.50. 120 bright cones first grade dropped 34 nP to Rs. 5.53.

Cotton yarns, ten counts Moderns were neglected at Rs. 13.25, as also Podars at Rs. 12.25. Among twenty counts, Moderns shed 12 nP to Rs. 16.50. Thirty counts Hinds were stagnant at Rs. 19.75. Forty counts were dull, Minaxis being quoted at Rs. 24.94 and Moderns at Rs. 25. Among sixty counts, Finlays noted some support and gathered a rupee to Rs. 59. Eighty counts Mahendras were on offer at Rs. 69, Moderns at Rs. 72 and Finlays at Rs. 78.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	15-10-1958	8-10-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.37	5.53
150 Japan (per lb.)	5.81	6.06
120 Italy (per lb.)	6.00	5.69
150 Italy (per lb.)	6.00	6.06
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	619.00	646.00
40 x 2 December	627.00	651.00
40 x 2 Kohinoor (per lb.)	3.30	3.53
40 x 2 City (per lb.)	3.24	3.40
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	...
20s Modern	16.50	16.62
30s Hind	19.75	19.75
40s Minaxi	24.94	24.94
60s Finlay	59.00	58.00
80s Mahendra	69.00	69.00

GROUNDNUT OILCAKE EXPORT QUOTA

(From Our Own Correspondent)

BOMBAY, 15*th October*

After presenting a distinctly firm trend in the first two sessions of the week, the oilseeds market staged a relapse on Saturday and Monday but recovered again subsequently. The groundnut section ruled particularly buoyant earlier on renewed speculative buying and short-covering induced by scarcity of spot stocks. There was also good support from crushers and *vanaspati* manufacturers. On Friday, the quotation for groundnut February contract closed above Rs. 165, so that the margin of Rs. 15 per candy became operative on bulls. The market developed a sagging tendency on Saturday. The release of a further quota of 10,000 tons of groundnut oilcake (expeller variety) for export during the period ending December next disappointed the operators who were expecting larger quota. The orders issued by the Joint Chief Controller of Exports, Bombay, to the effect that H.P.S. groundnuts in shells would not be allowed for export against a quota of 10,000 tons of H.P.S. groundnuts (kernels only) announced on 3rd June last also acted as a damper. Prices, as a consequence, suffered a setback. Castorseeds ruled easy on reports of beneficial weather, while castor oils met with support induced by revival of overseas enquiries. It is stated that Brazil was not a keen seller in the U.K. and the U.S. The U.K. import houses showed interest in B.S.S. castor oil at £112 per ton. Business in about 100 tons was reported to have actually been put through. Linseed ruled quiet due to lack of buying support.

Groundnut February 1959 contract forged ahead from Rs. 164.25 last week-end to Rs. 167.37 on Friday. Subsequently, it encountered selling and came down to Rs. 163 on Monday. It, however, recovered to Rs. 163.75 today. Bold ready spurted from Rs. 37 to Rs. 41 before finishing at Rs. 39.50. Over the week, Coromandel variety rallied Re. 1.50 to Rs. 40. Khandesh quality gained a rupee to Rs. 39.50. Groundnut oil ex-mill, after improving from Rs. 21.75 to Rs. 22.19, receded to Rs. 21.50. Railway receipt rose from Rs. 21.50 to Rs. 22 on Friday. Today, however, it was lower at Rs. 21.25.

Castorseed May 1959 contract was subjected to selling pressure, the contract moving down from Rs. 149.50 to Rs. 146.87. Ready Madras, which stood at Rs. 29.50 on Wednesday last week, firmed up to Rs. 29.94 on Saturday. It, however, declined to Rs. 29.37 subsequently. Kanpur quality fluctuated between Rs. 28.06 and Rs. 28.50 and finished at Rs. 28.25. Castor oil B.S.S. put on 25 nP to Rs. 16.87. Commercial quality gathered 6 nP to Rs. 15.19.

Linseed May 1959 contract was dull practically throughout the week. It was quoted at Rs. 30.87 yesterday, as against Rs. 31.56 last week-end. Today, however, it was better at Rs. 31.06. Bold ready, after rising from Rs. 34 to Rs. 34.25, eased to Rs. 34. Linseed oil moved up from Rs. 17.50 to Rs. 17.69, but declined in the subsequent sessions, today's closing rate being Rs. 17.44.

Cottonseed May 1959 contract received some support, the rate increasing from Rs. 102.50 to Rs. 103.75 on the 10th inst. After declining to Rs. 101 yesterday, it recovered to finish at Rs. 102 today.

Among other seeds, *kardiseed* bold ready was quoted at Rs. 22.50 throughout the week, as against Rs. 23 last week-end. Nigerseed Madras quality, which had improved from Rs. 34.25 to Rs. 34.50 in the first three sessions, declined to Rs. 34 today.

The following table shows the closing prices of oilseeds and oils today as compared with those of the two previous weeks:

	15-10-1958	8-10-1958	1-10-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	163.75	164.25	159.75
Bold ready (per cwt.)	39.50	37.00	40.50
Linseed—			
May 1959	31.06	31.56	30.69
Bold ready (per cwt.)	34.00	34.00	34.13
Castorseed—			
May 1959	146.87	149.50	147.50
Madras (per cwt.)	29.37	29.50	30.37
Cottonseed—			
Sept. 1959	102.00	102.50	98.75
*Groundnut oil**—			
Ex-mill ready (per quarter) ..	21.50	21.75	21.25
Castor oil†—			
Commercial (per quarter) ..	15.19	15.62	15.62
Linseed oil†—			
Ready	17.44	17.50	17.37

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 15*th October*

Proximity of new season and lack of foreign demand made Malabar black pepper rather jittery. Bears continued to hammer to bring forth distressed selling. Ungarbled in Cochin went down to Rs. 550 to improve to Rs. 556¼. December positition, which was a bull's eye for the bears, went down to Rs. 93¼. Ready garbled and October delivery were quoted at Rs. 97.50 and Rs. 98.50 respectively. During mid-week, there appeared some short-covering. As a consequence, prices rallied to a small degree but the improvement proved short-lived as Bombay market, which was under the control of bears, failed to revive. Calicut remained fairly steady at Rs. 590. Bombay market being the lowest, ready demand was reported good. If the present tempo of demand continued for a month or so, there would be scarcity of quality goods as no fresh arrivals were expected, Bombay being below the replacing parity.

Recent developments in Pakistan proved a depressing factor. Weakness in other agricultural commodities was also responsible for the present stalemate in pepper. Singapore ruled steady throughout the week at Str. $72 for Sarawak black. Lampong was reported quiet but unwilling to sell quantity at the present low price. Lower offering from India affected spot in New York which came down to $0.25. The future at the moment appears uncertain though majority of the trade does not like to go short at the present price in view of the overall world production of pepper which is estimated to be lower than that of last year.

Following are today's nominal quotations:—Ready delivery Rs. 73 per Bengal maund and October Rs. 500-510. December Rs. 505-515 and February Rs. 510.20 per candy of 5¼ cwts.

SUGAR BULLISH

(From Our Own Correspondents)

BOMBAY, 15*th October*

The sugar market rules distinctly bullish, thanks to rumours of delay in the issue of the normal monthly release. Arrivals of sugar by rail into the city are small—they aggregated just 10,200 bags in the past week—while the festival demand from the Malabar side and the interior centres is quite good. Consequently, sugar prices have registered an improvement. The ex-mill quotations for Bombay-Deccan sugar are reported to be firm.

Medium grain sugar is quoted at Rs. 109-Rs. 111 per bag, as against Rs. 107-Rs. 110 a fortnight ago. Large grain is higher by a rupee at Rs. 112-Rs. 117 and small grain by 50 nP at Rs. 105.50-Rs. 106.

The Indian Sugar Mills Association's export programme for the month of October from Bombay port is stated to be around 2,000 tons. Sugar from the Bombay-Deccan mills continues to arrive in the harbour and the movement is satisfactory. In the case of delay in arrivals of despatched sugar or short arrivals, the Association will buy from the open market as before in order to complete the export programme. It is, however, said that no purchases from the open market may be made by the Association, as satisfactory advanced arrangements have been made to cope with the commitments of export from this port during the month.

Production and despatches of indigenous sugar up to 30th September 1958 in the current season amounted to 1,972,000 tons and 1,895,000 tons, as against 2,024,000 tons and 1,942,000 tons, respectively, in the corresponding period of last year. Stocks with factories as on 30th September 1958 stood at 517,000 tons.

* * * *

HAPUR, 13*th October*

The sugar market continued quiet and listless during the week thanks to increased selling pressure in the wake of good supplies and poor outside demand. The crushing season has not yet begun in west U.P., but is likely to commence by the end of the month. Prices of inferior quality showed a further sagging tendency.

Quiet conditions prevailed in the Muzaffarnagar sugar market also owing to lack of consumer demand. Prices of inferior quality declined further by 6 nP to 25 nP per maund. Rates of Amroha, Seohara, Bijnore, Dhampur, Kashipur, Pilibhit and Raja-ka-sahaspur mills were being quoted below the controlled prices fixed by the Government. During the week-end business for about 5,000 bags of Seohara D28 quality was done at Rs. 35.37 a maund as against the Government's control price of Rs. 35.69, for different destinations of Gujerat, Saurashtra and Punjab. Latest prevailing ex-mill delivery prices were: *Amroha* (D29) Rs. 35-4, *Bijnore* (E29) Rs. 35, Iqbalpur (B29) Rs. 37-2, Khatauli (D29) Rs. 36, Seohara (D29) Rs. 35-6, Raja (E29) Rs. 35-10, Meerut (D29) Rs. 36, Saharanpur (D28) Rs. 35-11. Sugar prices also ruled quiet and listless in the Kanpur market due to absence of outside support and satisfactory supply position.

Khandsari prices were quiet. Although new crushing season with the crushers have begun, production of *khandsari* is being delayed as crusher-owners prefer to crush cane into *gur* due to prevailing high prices for new quality rather than crush it for *khandsari*. Ruling prices ranged between Rs. 32 and Rs. 35.50 per maund, according to quality.

New *gur* arrivals mounted to an average of 300 maunds daily, but prices have remained steady, thanks to good consumer demand on the eve of the coming *Puja* festival. Old *gur* stock is put at about 1,000 maunds which for dry-wet quality is being quoted at Rs. 20 per maund. New *gur* arrivals are expected to gather momentum as tilling operation in some areas are being delayed due to water-logging and cultivators in order to meet the fodder scarcity and fetch favourable prices, will begin crushing cane into *gur* in larger quantities. New *gur* arrivals have also begun in other centres of the district. The conditions of the standing cane crop is fairly good except in some areas where water-logging have been responsible for some damage to standing cane crop. New *gur* prices were quoted between Rs. 22 and Rs. 25.50 per maund.

Gur futures recorded sharp gains in the earlier part of the session, but prices eased slightly towards the week-end due to profit-taking. Opening at Rs. 13.85 for *fagun* delivery last week-end, and touching the highest of the week at Rs. 14.10 and lowest at Rs. 13.76, *gur fagun* is today quoted at Rs. 14. The undertone is bullish.

GOOD DEMAND FOR DUST TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 11*th October*

There was a slightly larger quantity on offer in dust sale 'U' which was held on Thursday, 9th October and offerings aggregated 654,435 lbs. The larger and more useful selection met with a very strong general demand. This demand was particularly noticeable for the milled dusts and lowest descriptions also met with keen competition and were fully firm to dearer on last rates. The sole exception to this was for some of the better mediums which were at times easier on valuation.

London Market—Sale of 6th October 1958.—Market steady, except for better C.T.C. which were 3d. lower following quality.

Sale of 7th October 1958.—Firm lowest dearer.

Colombo Market—Sale of 6th October 1958.—Strong general demand. Dimbula dickoya brokens irregularly dearer. Corresponding fannings lower. Mediums firm to dearer. All Uva teas considerably lower following quality. Lowgrowns declined 5c. price tea declined 10c.

Sale of 7th October 1958.—Active demand black leaf fannings dearer dusts advanced 20c. Others firm.

Calcutta Market—Export.—Good general demand. Commons firm to occasionally dearer. Other descriptions irregularly easier. Best C.T.Cs. sold well, but medium sorts declined 10 to 20 nP.

Internal.—22,000 packages dust. Strong active demand. Orthodox up to 10 nP dearer. Darjeelings steady. C.T.C. irregular with plainer types up to 15 nP easier. Few exportable C.T.Cs. firm to dearer.

Export Quota.—The market has remained fairly steady throughout the week and a fair quantity of business has been transacted at 3½ nP. Business closed on 9th October at 3½ nP.

Forthcoming Auctions.—Dust sale 'V' will be held on Thursday, 23rd October 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale* 30.—1,400,000 lbs. For all tea up to Re. 1.55 very strong demand. Mediums much less enquiry and considerably lower. Good mediums and best liquoring very strong."

JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 12*th October*

Quiet conditions were in evidence in the jute markets during the week under review. Overseas enquiries were for nibbling quantities for near delivery positions only, and the announcement of lower stock figures did not change buying sentiment. However, prices at lower levels resulted in brisk covering demand for the forward delivery positions fact that hessian in the forward delivery positions was quoting at a discount, buyers were interested in only near positions. This tendency suggested that foreign buyers refrained from purchasing to replenish stocks. In the meantime, raw jute prices fell again, and foreign buyers of goods thought that prices would fall further. Hence, they were not interested in forward offers. The fall in raw jute prices caused renewed anxiety. If only cultivators could wait, they would probably realise better prices. However, cash requirements for the forthcoming *Poojas*—the biggest festival of the year in this part of the country—have severely curtailed growers' holding power.

On Tuesday last, ready B. twills were quoted at Rs 96.35 and hessian 40" 10 oz. at Rs. 41.70. Overseas business was lacking. Moreover, conditions in the futures market were also quiet. On Wednesday, the stock figures as at the end of September were available. The decline by 8,600 tons had no effect on sentiment, as market circles had anticipated a much higher decline. Hessian 40" 10 oz. sagged to Rs. 41.60 and B. twills to Rs. 96.00. At these levels, brisk covering demand developed and there was also business done with the United States, albeit in small quantities here and there. These factors pushed up the price of hessian 40" 10 oz. to Rs. 42.00 and ready B. twills to Rs. 96.35 on Thursday. By the week-end, a steadier tendency developed, with B. twills being pushed up to Rs. 96.55, and hessian 40" 10 oz. to Rs. 42.25.

The weak reports in the goods market affected sentiment in raw jute, prices of which also declined. Moreover, arrivals from upcountry increased, as growers were selling in larger quantities to meet cash needs for the forthcoming *Poojas*. Buyers here were reserved. Northern bottoms were quiet at Rs. 22.50. The latest quotations of the different varieties of raw jute for the October-November delivery position are:

	Middles	*Bottoms*
	Rs.	Rs.
Pakistani:		
District	29.00	26.00
Northern	29.00	26.00
Indian:		
Northern	25.00	22.50
Assam	25.50	23.00
Orissa	28.00	25.50
Desal	24.50	22.00
Murshidabad ...	23.75	21.25
Jungli	22.75	20.25
Daissee	27.50	25.00
Uttar Pradesh ...	22.75	20.25
Dessi mesta ...	23.75	21.25
Bimli f.a.q. ...	Rs. 21.00	

Pucca bales 1st mark Rs. 150 per bale ready.

GOOD CALL FOR COW HIDES

(From Our Own Correspondent)

MADRAS, 13*th October*

There was no noticeable change in the E.I. tanned hides and skins market during the week. U.K. trading was selective, with good call for all grades cow hides in 5/5½ lbs. good marks and fifths selection in all marks of 8/8½ lbs. and 10/12 lbs. Sellers were reserved and were offering at higher prices without business fructifying.

Shipment business in tanned skins was small, as importers were probably awaiting the results of the tanned skins London public sales this week.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 13*th October*

Steady conditions continued to prevail in the foodgrain markets during the week ended 13th October. But the rising trend seems to have been checked, thanks to arrivals of *kharif* crop grains in the market. *Kharif* crop has been fairly good in most parts of the country and in some areas paddy crop has been bumper and arrivals of rice will soon increase in all the *mandies*. Heavy quantity of foodgrains from outside is soon to reach the country and prices are expected to decline shortly.

Wheat prices at Hapur touched new heights in the past week and wheat *dara* is now quoted at Rs. 24 and farm quality upto Rs. 25.25 per maund. Local arrivals continue to be scanty and, as there has been no arrivals from outside by truck, the supply position has become very tight; but the consumers' demand is now being diverted to new maize, the arrivals of which are fairly heavy from east U.P. and from the producing areas of the South. Sales of wheat here through fair-price shops are insufficient to meet the day-to-day requirements of the locality. Preparation for *rabi* sowings has begun in some areas while most of the land is still water-soaked and is not yet ready for tilling. Thanks to the westerly winds, things are expected to improve very soon and timely sowings of *rabi* crops would be possible.

Rice prices ruled quiet, with inferior quality recording a downward trend as supplies of new rice in the market are increasing due to dry weather enabling increased threshing of new rice. The ruling prices of rice were: *Basmati* sela Rs. 32 to Rs. 33, *mainpuri* Rs. 25.75, coarse quality Rs. 23 per maund. Gram prices, which had touched new heights last week-end upto Rs. 19 per maund, lost Re. 1 per maund during the week, thanks to new maize arrivals from outside destinations. Gram supply position, however, is tight as Government seized stocks is being moved to east U.P. for seed purposes. Barley and *bejhar* prices ruled quietly steady as stocks now left are small. Maize arrivals from outside is an average of one to two wagons daily, besides some quantity reaching here by road. Maize prices recorded slight fall during the week due to good supply position, despite good consumers demand. *Jowar* prices advanced by Re. 1 per maund due to paucity of local stocks, while *guwar* prices were quiet. Week-end prices were: Gram *punjabi* Rs. 17.75, barley Rs. 16.50, *bejhar* Rs. 16.25, maize Rs. 15.75, *jowar* Rs. 15, *guwar* Rs. 14.50 per maund.

Owing to good outside demand due to export from the ports and reluctance on the part of the stockists to sell stocks due to general adverse food situation in the country, pulse prices continued steady during the week, registering gains. Week-end prices were (in rupees per maund): peas *dara* Rs. 16, *khatti* Rs. 15.25, farm quality Rs. 17, peas *dal* Rs. 18.12, *arhar* Rs. 20.25, *khatti* Rs. 19.50, *arhar dal* Rs. 24.75, *urd* Rs. 18.50 to Rs. 19, *moong* Rs. 25, *massoor* Rs. 17, stocks with the trade: peas 35 and *arhar* 89 khatties.

WEEK'S STOCK EXCHANGE TREND

MARKET GOSSIP

(*Concluded from page 635*)

well-known columnist "Lombard," writing in the London *Financial Times*, has expressed the opinion that Britain, by continuing to cling to existing practice, is "not only depriving herself of the benefits that would flow from the adoption of the decimal currency system, she is also going to complicate the task of keeping London to the forefront as an international financial centre." After recalling that many Commonwealth and non-Commonwealth countries have switched over to decimal coinage, he points out, in effect, that Britain may find it difficult to function as a non-decimal country, especially because it has close trading links with many of these countries. There is, of course, the important question whether the gains from a decimal coinage would be worth the trouble and capital costs involved in the conversion to the new system. In this connection, he notes that, in South Africa, many banks and business concerns expressed themselves in favour of the change to a decimal system; the cost of the changeover has been estimated at £10 million. He adds: "Bearing in mind the extent to which it would facilitate the execution of their business in the longer run, most British commercial concerns would also probably be willing to accept the inconvenience of the switch, while a total cost of, say £100 million, might be worth shouldering for the sake of the savings that would result in the longer run." It remains to be seen whether Britain would be induced to take the plunge into decimal coinage. If it did, it would indeed be a great victory for the decimalists.

SURVEY

(*Concluded from page 639*)

the various Ministries concerned with the different aspects of agriculture and between the Central and State Governments and to the conflict between ideology and practical expediency as far as Government policies are concerned. They have outlined a scheme for intensive cultivation, a thorough reorganisation of the Agriculture and Food Ministry in the Centre, the formation of a six-member Central Food and Advisory Council and five regional zonal organisations for the co-ordinated implementation of development programmes. This tentative plan is calculated to increase the food production in the country by 50 per cent. in the next 10 years at a capital cost of Rs. 1,305 crores.

In order to increase the yield per acre in the country substantially, they have advocated provision of more irrigation facilities, adequate supply of fertilisers, mechanised farming, the use of tractors and distribution of better quality seeds. To quote them:

"We feel that although it may not be possible to reach the level of productivity in foreign countries in the near future, we should, however, be in a position to increase the yield substantially by using methods of intensive farming of 100 million acres of irrigated land in ten years. The existing land under all crops is about 350 million acres. If we are able to increase the yield in ten years in 100 million acres by about one-third of a ton per acre, we shou'd be in a position to increase food production by about 50 per cent. in the next ten years. In these estimates we have not taken account of the possibility of having two crops in the country which will add to the agricultural output considerably. In fact, if we could raise surplus cash crops, it will help us to develop our export trade. We would like to mention in this context that the agricultural prosperity in the East Punjab during the last ten years or so has indicated that with better methods of cultivation it is possible to increase production substantially.... The larger land holdings in the Punjab also helped to make it possible to adopt modern methods of farming."

One of the major hurdles in the way of scientific farming has been the ideological, as distinct from practical, approach adopted by the Government towards land reforms. Redistribution of land in the form of uneconomic holdings will not in any way improve production. Besides, the ceilings on landholdings will render large holdings, which at present lend themselves to scientific cultivation, unfit for the purpose. The authors have rightly sought to emphasise the imperative need for evolving schemes in which the agriculturist is able to use mechanised and scientific method of farming and at the same time take personal interest in his land which brings him increased earnings, more employment and higher purchasing power.

What is now urgently needed is a proper organisation which should form a close link between the man behind the plough and the policy-makers. For this purpose, the authors have urged the creation of a single Ministry at the Centre which will have effective control over all matters concerning food production such as irrigation and power, planning, distribution of fertilisers and agricultural implements and raw materials, rural credit, land reclamation, forestry, pest control and supply of seeds. It has also been suggested that there should be an Advisory Council at the Centre and five zonal organisations for the country as a whole.

These suggestions, as is obvious, do not purport to give any new solutions. Nevertheless, the eminently practical approach outlined in the brochure is highly commendable. Indeed, these suggestions have served to highlight the basic problem, namely, increase in agricultural productivity.

INDO-U.S. AGREEMENT

The Indo-U.S. agreement, signed on 26th September, providing for financing the sale by the U.S. to India of $238.8 million worth of agricultural commodities, brings the total value of such commodities sold to India under Title I of the U.S. Agricultural Trade and Assistance Act of 1954 (P.L. 480) to $664.2 million. The two previous agreements were together of the value of $425.4 million. The latest agreement, which is the first to be concluded under Title I of the Act since its recent amendment, provides for financing the sale for Indian rupees of 2.8 million metric tons of wheat. 100,000 metric tons of corn and 200,000 metric tons of milo. Also included in it is $43.7 million to finance 50 per cent. of the cost of ocean transportation.

The U.S.'s generous gesture of goodwill comes at a time when, owing to a shortfall in production, the country is hard put to it to procure sufficient foodgrains to arrest the rise in prices. It is noteworthy that a substantial portion of the rupee received in return for the foodgrains will be loaned back to India to finance development projects in both the public and private sectors. A part of the sum will also be utilised to make grants, and to finance U.S. expenditure in this country. Reports indicate that an additional agreement, involving unspecified quantities of rice and cotton, to supplement the one already signed, is being discussed by officials of the two Governments. It is to be hoped these discussions will bear fruit.

INDUSTRIAL PRODUCTION IN YUGOSLAVIA

Industrial production in Yugoslavia during the first eight months of this year increased by 10.7 per cent. as compared with the corresponding period last year. During the same period, Yugoslavia exported goods valued at 87 billion dinars (300 dinars equal one dollar), that is, 11.20 billion dinars more than the exports in the first eight months of 1957. Export of agricultural products increased considerably, while total industrial exports were somewhat lower. Exports to the West European markets increased by 16 per cent. whereas those to the East European countries were maintained at the level reached during the last few years. Exports to African countries increased by 54 per cent. as compared with the corresponding period last year, and so did exports to Asian countries. Commercial exchanges between Yugoslavia and foreign countries in the last six years have grown by about 70 per cent., exports having increased by 60 per cent. and imports by 76 per cent. As for exports, whereas in 1952 a total of 55 per cent. of the overall exports was agricultural and 45 per cent. industrial products, in 1957, this relationship changed, so that the ratio was 60 to 40 per cent. in favour of industrial goods. The rate of rise in exports during the first half of this year was greater than that of the rise in imports. The deficit of Yugoslavia's trade balance in this period was 4.00 billion dinars less than during the first six months of 1957.

WORLD GOLD PRODUCTION AND PRICES

(*Concluded from page 651*)

France, the rate for U.S. dollar bank-notes in Paris. Movements in the prices of gold in these centres should, therefore, be regarded primarily as responses to changes in local conditions.

The price of bar gold in Paris rose from the year's low of 462,000 francs per kilogram on 2nd May 1957 to a high of 590,000 francs on 14th November 1957, the highest since March 1952. The price of bullion gradually declined after November 1957 to 513,000 francs per kilogram on 2nd April 1958. When converted into U.S. dollars at the day's parallel market rate for U.S. dollar bank-notes in Paris, the price was equivalent on those three dates to $36.29, $36.20, and $36.35, respectively. The U.S. dollar equivalent price of bar gold in Paris, which reflects movements in the franc rate for U.S. dollar bank-notes, fluctuated between a high of $37.13 on 7th August and a low of $35.76 on 22nd August 1957. The franc rate for U.S. dollar bank-notes rose from 396 francs on 2nd May 1957 to a high of 507 on 14th November and then fell to 439 francs on 2nd April 1958. On 30th April 1958, the price of bullion was 523,000 francs per kilogram, equivalent to $36.47 per fine ounce at the day's rate of 446 francs per dollar.

In Bombay, the price of bullion rose from the year's low of Rs. 104.87 per tola (equivalent to $58.73 per fine ounce at par value) on 4th July 1957 to a high of Rs. 114.62 ($64.19) on 28th April 1958.

In contrast to Paris and Bombay, the Hong Kong gold market may be described as an international entrepôt market where the Hong Kong dollar is freely convertible into any foreign currency or gold. The transhipment of gold not owned by residents is permitted to any destination, and gold may be imported for re-export to countries that permit the import of gold. Accordingly, gold is usually imported into Hong Kong for re-export to Macao (where an import fee equivalent to approximately $2 per ounce is imposed), while at the same time or subsequently gold is also transhipped from Macao through Hong Kong to markets in South-East Asia. The difference between the London and the Hong Kong prices of gold is largely a result of the cost of diverting gold to Macao and back again and of transporting it from the United Kingdom. The price of bullion in Hong Kong decreased from the year's high of HK$278.875 per tael (equivalent to $39.14 per fine ounce at the day's T.T. Hong Kong dollar rate for the U.S. dollar) on 24th May 1957 to a low of HK$252.125 ($38.13) on 24th April 1958.

The principal feature in the markets for gold coins during the year under review was the fall in the price of the sovereign, which contrasted with a rising tendency during the previous two years, and a further rise in the premium for 20-mark coins in the Federal Republic of Germany. The release by the United Kingdom of a substantial quantity of sovereigns for sale abroad was largely responsible for a general decline in the U.S. dollar equivalent price of the sovereign. At the end of April 1958, the price of the sovereign in both Paris (about $41.00 per fine ounce) and Brussels ($39.00) was about $3.50 less than a year before; in Milan the price fell during the year by $3.00 to about $40.50, and in Beirut by $2.50 to $40.85. The market price of the German 20-mark gold piece in Frankfurt rose from DM. 47 in April 1957 to DM. 52 at the end of April 1958. The price of the napoleon at the end of April 1958 as compared with the end of April 1957 declined by the equivalent of about $2.00 per fine ounce to about $45.75 in Paris, and by about $1.50 to about $41.50 in Beirut; in Milan, the price rose by about $0.50 to about $44.00.

Gold Transaction Service

As from March 1952, the Fund has provided its members with a technical service which brings buyers and sellers of gold together. Members intending to buy or sell gold and wishing to use the Fund's service are requested to furnish the Fund with all the necessary information, as far in advance as possible. For the service of matching buyers and sellers, the Fund asks each partner in a completed transaction to pay a charge of 1/32 of 1 per cent. in U.S. dollars. The Fund pays the normal charges and out-of-pocket expenses of the gold depository which are incidental to the transfer of gold from the seller's account to the buyer's account with that depository. This service has been extended since its inauguration to three international organisations and several non-member countries.

Since March 1952, the central banks of 24 member-countries and three international organisations have effected purchases and sales of gold through the facilities provided by this service. During most of the year under review, that is, from 1st May 1957 through 15th January 1958, when the London dollar price of gold remained for the most part below $35 per fine ounce, supply exceeded demand. Most of the transactions completed by the Fund during the year were accomplished during this period. From 15th February 1958 through 30th April, when the London dollar price reached or exceeded the New York selling price of $35.0875, there were no sellers of gold through the Fund's services, and central bank requirements were met to a great extent by direct purchases of gold from the United States. During the year under review, 15 transactions amounting to a total of about $107 million were completed by the Fund. The total number of transactions since March 1952 is 86, amounting to about $670 million.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2484 BOMBAY, 25th OCTOBER 1958 PRICE: Re. 1.50

ECONOMIC LESSONS OF MILITARY COUP IN PAKISTAN

THERE are several economic lessons which India can learn from the epidemic of coups in Asia, provided it has the will to do so. Of all the coups that have taken place in recent months and weeks, those in Pakistan and Burma have evoked greater interest and anxiety in this country. This is natural, because both of them were once part of this sub-continent and are our close neighbours now. Between these two neighbours, the developments in Pakistan are of even greater import for both political and economic reasons. Besides, while Burma has been a friendly and co-operative neighbour, Pakistan has been antagonistic to India all along. Again, whereas the coup in Burma was brought about with the consent of the lawfully established Government, in Pakistan it was carried out behind the backs of the political parties. All this makes a lot of difference in the impact made on this country. It will not be wrong to say that it is the events in Pakistan more than those in Burma or in Thailand that are exercising the minds of the public in India.

The first economic lesson that India has to learn from the events that led to military rule in Pakistan is that inflation is the worst enemy of democracy. It is, of course, the enemy of any established government, but it is a deadly one for democracy and that, too, for democracy in an underdeveloped country. A dictatorship may indulge in deficit financing and get away with it, perhaps for some years, by resorting to conscription of labour and savings and by building up some emotional objectives through subtle propaganda among the masses. It is obvious that a country that wishes to be a democracy cannot do these things. Even a dictatorship, however, cannot exist on the basis of inflationary financing, as it will, sooner or later, crumble under the accumulating weight of discontentment among the masses. A highly developed democratic country can resort to credit creation to iron out cyclical changes and to give a definite momentum to economic growth. The risks taken by it are relatively modest, because its capacity to step up production is high. But, for an underdeveloped democratic country, the dangers involved in financing long-term investment through credit creation are far greater, because its productive capacity cannot be quickly built up. If these dangers are ignored, prices will go up willy-nilly, despite all the controls that may be enforced. When prices rise continuously, that is, when the purchasing power of money consistently falls, the ground becomes fertile for growth of military dictatorship.

There is, of course, nothing new in this thesis. But it has been nearly forgotten by the politicians and administrators in this country, as they have been deeply engrossed in their passion for speedier economic development at any cost. They should remember that there is no substitute for sound money. They should also disabuse their minds of the belief that sound money means economic stagnation or the opposite of inflation, namely, deflation. Indeed, "sound monetary conditions are," as Mr. Per Jacobsson rightly observed at New Delhi a fortnight ago, "the only true basis for expansion." What has happened in Pakistan reflects the public's strong distate for inflation. It also shows that inflation cannot be restrained or incorrected through controls, whether direct or indirect or both, that controls only delay the effects of inflation and that, when the effects come to be felt, there is a violent explosion. The Civilian Governments of Pakistan, it is pertinent to recall here, had adopted all sorts of controls for keeping the upward tendency in prices under check, but, ultimately, they were of no avail. Prices went on mounting up and production tended to fall. The only thing that grew fast was corruption of all sorts which ate up the vitals of the nation.

Today, the Military Government in Pakistan is popular, because it is said to have succeeded in bringing down the prices of almost everything and taken strong action to deal with corruption. But it is rather premature for the Pakistani public to feel jubilant over this development. For, what happens after the hoarded goods are brought to the surface and consumed? The Military Government has already introduced informal rationing in many goods. What certainty is there that these controls will not corrupt the military personnel themselves? There is grave risk of the military forces earning the contempt of the public in the same way as the politicians did, unless the present Government quickly succeeds in eliminating the basic causes of inflation. It must skim the country of the excess money supply in the same way as was done by Belgium and Holland after World War II, drastically cut its military expenditure and take prompt measures for raising the production of food and consumer goods. Failure to do so will soon undermine its own stability. The military regime may try to divert the public mind by highlighting extraneous issues, but its politicians have already so nearly exhausted the scope of this remedy to hold themselves in power that there is very little room for exploiting it.

There is a lesson to be learnt from Pakistan by all sections of the public in this country. The common man should understand that there is a lot that he himself can do for his salvation. He should discipline himself, at least to the extent necessary to keep his home and surroundings clean and healthy, and to do his work conscientiously. As Mr. Jayaprakash Narayan said this week, India is the dirtiest country in the world today. This is chiefly due to the carelessness of the common man and his indifference to cleanliness. Surely, it is not necessary to enforce military discipline to keep our streets and markets clean if only every one had a better civic sense. One of the things that General Iskander Mirza's Government has done in the last few days is to clean up the cities and impose deterrent punishment on those who commit nuisance in the streets and public places, and throw rubbish on the roads and inside the compounds of their houses. Here is something which the police and our city fathers ought to do but have so far failed to do.

The business men in this country must wake up to their responsibilities as the trustees of the consumers and their employees. They should get together with a new spirit of service to the public. They should undertake a certain amount of self-policing and eliminate from their ranks those who are known to be indulging in anti-social activities. This is an obligation on their part long overdue. It is undoubtedly a difficult one, but it should be possible to do something worthwhile, if they are united and scrupulously eschew the practice of currying favour with politicians. They must stick to the principles of a free, competitive enterprise and not use their influence with the authorities for securing excessive protection and controls that favour monopolies and breed inefficiency. They should not try to persuade ignorant politicians in power and officials to adopt measures which serve their own interests but not those of the public as a whole. They must realise that, ultimately, their future depends on the goodwill of the public and not on that of a few politicians. If they are firm on, and faithful to, the fundamental principles of free enterprise and follow a high standard of rectitude, the politicians are bound to respect them in due course. Barring a few exceptions, the record of Indian business men in all these respects is by no means exemplary.

The political leaders who are in power, as well as those who aspire for positions of power, have to devote more of their time to economic problems confronting the country and not to such petty issues as communalism and linguism, issues that divert men's minds from the serious task of producing wealth to dangerous fissiparous tendencies. They should train their minds to think more on practical lines than letting them wander in the ideological clouds. The common man needs gainful occupation, food, clothing and housing. These cannot be provided by following economic policies designed chiefly for reducing disparities in wealth and incomes rather than for providing incentives to production. They may yield the initial advantage of political popularity and success in the hustings, but the gain will be transient. In the meantime, the springs of initiative and enterprise will have dried up, the number of have-nots will have multiplied thanks to the rising trend of population, and the tendency to look to the Government for everything will have become stronger. In short, the democratic forces will have suffered a marked setback. It is true that politicians have to fight and win elections. But they should try to do so not by making rosy promises which cannot be fulfilled in a reasonable time nor by denouncing wealth and property that constitute the fruits of hard work and diligence, but by telling the public the real facts as they are and by inspiring them to give the country of their best. The political leaders in India, who honestly believe in the democratic way of life, would be well advised to read carefully and think calmly some of the points made by Dr. Erhard on this subject when he was in this country. We have reviewed them in the next article for their benefit.

The military coups cannot but be a source of great concern to the civilians for obvious reasons. It is, therefore, in the self-interest of civil servants not to encourage the politicians in power to adopt such policies as socialisation of economic activities, or to introduce excessive controls, or to depart from sound monetary policies. It is true that the civilians have to

carry out the policies of their ministers and we should not be misunderstood as saying that they should disobey them. But they owe their ministers the duty of giving correct advice. They can, if they have the will, help the ministers to take realistic decisions by acting within this legitimate sphere of theirs. Controls breed corruption. Unsound monetary policies bring about exasperation among the people and lack of confidence in the future. Socialisation accentuates the powers of bureaucracy, encourages red-tapism and retards economic growth. For all this, the civil servants—high and low—are blamed and fall in the estimation of the public. Look at what has happened as a result of nationalisation of life insurance. The civilians have suffered more than the politicians and the public even more. It is no exaggeration to say that the economic bunglings by politicians undermine the civilians' authority and influence over the public, while they are liable to enhance those of their counterparts in the defence services. This is undoubtedly a risk inherent in the very nature of their work, but it would be folly on the part of civilians deliberately to enhance that risk by joining hands with politicians in the drive for more and still more bureaucratisation.

DR. ERHARD IN INDIA

THE West German Minister for Economic Affairs, Dr. Ludwig Erhard, who was in India this month, to represent his country at the joint session of the World Bank and the International Monetary Fund, at New Delhi, made quite a few thought-provoking observations on the lines on which an underdeveloped country could develop, the way in which his own country, starting from scratch at the end of the war, moved up to new high levels of economic activity and the importance of ensuring individual freedom in any plan designed for material advancement. Representing, as he does, a country which has made remarkable progress in recent years, and as one who has himself been largely responsible for stimulating the country's economic recovery, the West German Minister is certainly entitled to be heard with respect. Small wonder, his utterances received a wide and generally appreciative Press.

West Germany, as is well known, has compressed a great deal of economic progress within a period of a decade. When it emerged from the world war, its economy was in a worse shape than any victor or vanquished nation's. It had also to contend with the problem of ten million refugees, who had to be fed and clothed and for whom jobs had to be found. And yet, today—so rapid has been the transformation—W. Germany is one of the serious competitors to other Western countries. Its economy has been rejuvenated. Its foreign exchange purse is filled to capacity. "Germany has performed an economic miracle"—this has been the unanimous verdict of impartial observers. Dr. Erhard, when he was in India, could not, of course, explain all that Germany had accomplished or how it came to achieve so much. The occasion did not also demand such a complete explanation. Nevertheless, he tried to indicate the basis on which German recovery was built. With becoming modesty, he refused to call it a miracle. He said he rejected this flattering slogan, because "what happened in Germany was not a miracle." He attributed it to an economic policy "based on the principles of freedom." This policy made human labour again appear valuable and useful." The industriousness and devotion of a people were again made to serve human well-being." There was only one overriding consideration—"to work in order to live, and yet spare enough from the field of economic efforts, by sacrifices and restraining from consumption, to invest in higher productivity and efficiency, so that Germany might regain its competitive ability and thus lay the basis on which a better and freer life for everybody could be assured."

Dr. Erhard expounded what he called the "social market economy" which now forms the basis of his country's economic policy. Germany, he said, was a free economic community. But it was a "social market economy," in that it repudiated the old type of liberalism which assigned for the State "nothing but the poor role of a night watchman." He said: "Social market economy means, therefore, that the State is not only asked but firmly committed to establish certain basic principles for the economy which are set up by political decisions and to apply the numerous instruments of its economic policy in such a way that the free decisions of persons acting in all economic categories will nevertheless produce the desired effect. The social market economy is based on the principles of freedom and order which, if there is to be harmony, cannot, in my opinion, be separated from each other." Dr. Erhard insisted, in effect, that a nation could not be politically free and yet remain economically regimented. He said: "A country's economic existence can hardly be separated from its political destiny.... It would lead us too far if I were to show in detail why a democratic order must necessarily go with a system of economic freedom while totalitarianism must be based on, or lead to, compulsion. That these concepts pair up as indicated is logical and has been proved by history."

At the same time, he stressed the need for utmost international co-operation. He felt that a "full development of world economy requires not only liberalisation of imports of goods and services but also of the flow of capital." At another place, he declared that he was "enough of an optimist to believe that the handicaps in the way of national economic development, which at times seem to be insurmountable, can be overcome, if the idea of closer multilateral co-operation, which has already assumed shape in the International Monetary Fund and the International Bank, is pursued with even more intensity than before, and, if at the same time, the world economy can develop free of trade barriers and other obstacles, thanks to mutually adjusted national policies which work in the same direction."

How far is Germany's experience relevant to India? Although Dr. Erhard was understandably reluctant to indicate what India could and should do, he did not fail to give expression to his ideas of what seemed right. In applying lessons of German economic development to India, one must be careful to note a distinguishing feature. Germany's economy, no doubt, was in a worse shape at the end of the war than India's is today. But it is a country with a long and extensive technical tradition. Although it lacked the necessary capital and equipment, it did not lack the technical know-how, nor managerial skill. At the same time, it must be recognised that neither the capital and equipment which Marshall Aid supplied nor the technical knowledge which it possessed could by itself have provided the fillip for progress. It required an appropriate economic policy to bring out the best in Germany. And this was supplied by Dr. Erhard's concept of social market economy.

To revert to Dr. Erhard. In effect, he recognised that each country had to develop its own way and what suited one country might not fit in elsewhere. Speaking at a Press conference at New Delhi, he said he was appreciative of the second Plan. He felt that it was important that the State should assume leadership and responsibility for big projects. But he insisted that "there should be a broad basis in private enterprise also." This obviously stems from his view that human nature could not be ignored. Explaining this, he observed at the Indian Council of World Affairs:

> "I share the view that the economic and social development of India does not permit the mere imitation of any pattern, as it is only the creative force of this country and its people which will show the right way. However fully economic planning may be accepted, in any particular phase of economic development, economic life is not shaped at the draft board, but by human beings, and anybody who thinks he can disregard basic human nature is heading for frustration. This means that the human individual must be rendered conscious of the sense and value of his work and effort, and must be shown that his own better performance leads to the personal advantage of a better life. He must be given the chance of individual development and must enjoy the fruits of his own success."

Two points to which Dr. Erhard drew attention deserve notice—the importance of creating purchasing power in India and the need for evolving a balanced structure of interest rates. He said that, in India, purchasing power should be created among the masses. This could be done by producing goods of economic value. It was not important that production should fit in too closely with planning. What was important was that those things should be produced which working people like to have. He said that, if private enterprise were encouraged, it would produce things that would sell. The other point he made was that, since savings and investment determined economic progress, the rate of interest should be such as to bring about an equilibrium between supply and demand for capital. He added: "I appreciate that there could be cases of what we call infra-structure rates which are not immediately profitable in commercial terms but which help the economy in general and in the long run. This infra-structure investment cannot be grasped by commercial bookkeeping scheme and you cannot compare the input and output. Therefore, it would be right for the State to provide for a lower rate of interest in order to enable these projects to be carried through. But, for economic life and business life in general, I do not think it would be a good idea. I think the right way would be to have a proper balance between supply and demand of capital."

Naturally enough, there has been some speculation as to whether Germany will be prepared to make investments in India. Although Dr. Erhard did not commit himself to any specific figure of aid or investment, he said that just as Germany had received aid from other countries, notably Marshall Aid, it felt a "moral commitment" to assist other countries. Germany, as is well known, has contributed $40 million to the $350 million aid which India's creditors have agreed to provide by the end of April next as a result of the talks at Washington held under the auspices of the World Bank. It has also agreed to contribute $60 million out of a total sum of $600 million aid promised to India before the end of the second Plan period. As regards capital, Dr. Erhard made it clear that the fact that Germany had foreign exchange surpluses did not warrant the conclusion that it could spare capital for export. He said: "Foreign exchange surpluses reflect a country's international competitive ability, while the abundance or otherwise of capital must be judged only from the situation of the capital market." There was, however, no ban on export of capital from Germany. But its own capital requirements for public and private uses continue to be high and while "its short-term money market is liquid, genuine long-term capital is, on the whole, still in short supply." Nevertheless, since interest rates in both sectors are nearly on the same level, it has been "possible for the German capital market to provide loans for outside borrowers."

Industrially advanced countries, according to Dr. Erhard, could help India not only through long-term loans but also by sending out *entrepreneurs*. He said: "If I know German industrialists, they will do it. Only, they should feel assured they could give their own entrepreneurial policies." He also felt that conditions in India were favourable and German capital would be prepared to come to this country. In this connection, he emphasised what would suit this country was the establishment by foreign interests of medium-sized units employing, say, 50, 100 or 250 men. German business men, he thought, would like to have 51 per cent. share in capital. This did not mean that they wanted to dominate the enterprise; only, they would want to put their ideas of good commercial business into practice.

In the course of the discussion on the World Bank's annual report, Dr. Erhard, as already stated, emphasised that a full development of world economy required not only liberalisation of imports of goods and services but also the flow of capital. Private capital, he said, must be in a position to go without restrictions to any place which offers promising investment opportunities. An increase in the flow of private capital should also make it possible, in important fields, to get away from export credits tied to specific deliveries and to "turn more and more to purely financial loans which, as the classical form of financing, are more in line with a free world economy." Referring to what Germany could do in the sphere of financing capital investments in overseas countries, Dr. Erhard reiterated that, although Germany's capital potential was limited, he regarded the problem of capital export with confidence. He, however, was unwilling to induce an artificial outflow of capital. At the same time, he stressed that it was up to the capital receiving countries to create an "atmosphere of security and legal rights in which credit which, as its name implies, is a matter of confidence, finds its safe basis and justification." He added: "In addition, a sound economic and financial policy must be pursued by those countries which guarantee that their development efforts are successful and that the foreign investor can be sure that the money made available by him will keep its real value and will be put to good use." Finally, he urged the capital importing countries to regard foreign private capital as a "partner working *bona fide* alongside with them in building up their economies." Obviously, in the world as it is today which is very different from what it was 100 or 150 years ago, an investor must feel that he is wanted before he ventures into foreign countries.

HOPE OF TAX RELIEF STILL STRONG

DEFENCE MINISTRY MAKES A DEPARTURE

THURSDAY, 5 P.M.

THE share markets have been active and strong during the major part of this week. Almost all the counters have registered further gains over the week, though the closing rates are well below the best levels. This is due to some profit-taking today, mainly induced by settlement considerations; the present fortnightly settlement ends tomorrow. The statement of Mr. Morarji Desai yesterday, at a grand reception given to him by prominent industrial and business organisations at the Cricket Club of India, that he would not entertain any suggestions from the business community that would bring down the resources available to the Government, has also had a restraining effect on the bullish fervour. This remark has been taken as a broad hint that it would be unrealistic to expect any relief in taxation. There has also been another hint to the same effect. Replying to the Kanpur industrialists' plea for help to the cotton mill industry, Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, observed early this week that there would be no further reduction in the excise duty on cloth. The Government's reluctance to abolish or lower the export duty on raw cotton, as well as the insignificant relief given to the tea industry a few days ago, clearly suggests that the authorities are anxious not to lose revenue. Despite these indications, the undertone of equities is still bullish. Apart from the speculative long position of a very sizable nature in the leading counters such as Tata Steel, Indian Iron and Bombay Dyeing, there has been a steady growth in investment buying as is evident from the high levels to which such investment scrips as Dunlop Rubber, Indian Oxygen, National Carbon, Guest Keen Williams, Telco and Larsen-Toubro have moved up.

MARKET GOSSIP

Lest wrong inferences should be drawn by the authorities, it is necessary to explain the trends in share markets. The aforesaid investment scrips, and others similar to them, have been advancing, because they belong to companies engaged in new industries that have received considerable fillip through the investment expenditure under the first and second Five-year Plans. These companies have their own plans for expansion, some of which have already been completed. Their shares are, therefore, gaining in value purely on intrinsic merits. It will not be right to interpret the boom in these shares to mean that the industries as a whole are passing through prosperous days and have no problems at all.

On the contrary, the old-established industries such as coal, cotton textiles, jute goods and tea, as well as a number of engineering units, barring the iron and steel industry, are having a difficult time and their profit margins are far from remunerative. Even if their position is slightly better than, say, four or five months ago, it is by no means as bright as the ruling prices of their respective shares seem to suggest. It may be argued that the share markets are looking ahead. As far as one can see, all probable favourable factors have been fully discounted. Nevertheless, if the markets are still taking a bullish view, it must be attributed to two causes. First, the growing pressure of money rendered idle by import restrictions and the accumulation of counterpart funds, both of which are depressing interest rates, have changed the ideas on equity yields in a downward direction. The second reason is the hope that the next budget will contain some features in favour of investors. This hope persists, notwithstanding the hints thrown by the Government's spokesmen to the contrary. Evidently, the operators are confident that the Government cannot afford to turn a deaf ear to all the advice given to it by the leading financiers of the free world who visited India this month in connection with the Fund-Bank meetings.

In this atmosphere of optimism, there is no inclination among the operators to go short. Almost every broker is advising his clients to hold on to their shares, with the result that, in the case of most scrips, the floating stock is not large.

* * * *

Is there any real basis for the belief that the next budget will contain some relief to investors and that the advice tendered by the Western friends of India for creating a more favourable climate for encouraging venture capital has gone home among the authorities? To those who have not taken seriously the remark of Mr. Morarji Desai yesterday at the Cricket Club of India, the following quotation from his speech at the annual meeting of the World Bank should provide some food for thought. Replying to the plea by the spokesmen of several foreign countries, as also of the President of the World Bank, that the underdeveloped countries would do well to encourage private enterprise, Mr. Morarji Desai said:

> "The underdeveloped countries face no easy task. They must raise resources domestically to the maximum extent possible; they must, therefore, adopt measures to restrain consumption and increase savings. Only this way can they sustain programmes of advancement that hold promise of results satisfactory for the maintenance of democratic conditions. There are, at the same time, limits to this process of restraining consumption, and the question has constantly to be asked whether the economy can stand the stresses and strains inevitably associated with a rising tempo of development. There is no doubt that a developing country needs an inflow of investible resources from abroad over a pretty long period, and these resources must be secured from every possible source, through encouragement of private foreign investment, through government-to-government assistance and from agencies like the International Bank. It would take me too far afield, if I were to attempt a review of the potentialities of each one of these sources. The development of underdeveloped economies will require investment on a massive scale, and conscious effort will be necessary to mobilise the needed resources. Foreign private capital has a part to play in fostering development, but such capital has its limitations. Its supply is limited; it goes only into certain types of enterprises; and, paradoxical though it may sound, it is, I think, true that private capital from abroad is likely to flow more rapidly into countries which have already advanced some way and have built up the infra-structure of development rather than into those which are still taking their first few hesitant steps."

It will be noted from the aforesaid extract that Mr. Desai, while admitting the need for foreign private investment, has some misgivings about the quantum of such capital available to underdeveloped countries. It is, therefore, doubtful whether this consideration will weigh with him to any significant extent when he draws up the 1959-60 budget in February next. It is, however, too early to speculate on the next budget. Quite a few representations have been made to the Government, especially from the U.S., that the complex tax structure of India has frightened foreign business men. There is, therefore, a possibility of the tax structure being simplified, but it remains to be seen whether this would mean any sizable concession to investors.

* * * *

As we go to press, we understand that the Government of India has given up the idea of trying to stimulate exports of cotton textiles by allowing the mills to keep five or 10 per cent. of the foreign exchange proceeds for importing raw materials, essential stores and machinery. It would appear that this method was not regarded as a sound means of export promotion by some of the international financiers who happened to be in Delhi in the first half of this month to attend the Fund-Bank meetings. They are said to have expressed the view that, if India were to resort to this desperate method of pushing its exports, it would have learnt nothing from the experience of other countries, especially Latin America which had tried them with disastrous consequences to the external value of their currencies.

* * * *

The move of the Union Defence Ministry to set up a unit for turning out M.A.N. trucks in collaboration with Messrs. M.A.N. of W. Germany has caused much understandable concern among automobile manufacturers. In India, where the market for automobiles is strictly limited even for the existing manufacturers, it is certainly deplorable that a proposal should be mooted for setting up an additional unit. It might well prove to be more than the proverbial last straw on the manufacturers' back, for it might cripple the entire automobile economy, already sorely pressed by a limited market, and production bottlenecks caused by the Government's failure to permit liberal imports of automobile parts.

Automobile manufacturers rightly point out that the Government's proposal goes counter to the policy towards the automobile industry it announced last year. It has been unanimously held and accepted by the Government that what the country needs today is maximum scope for expansion of the existing units in the industry rather than the establishment of additional units. The Government has assured the industry that additional capacity required for commercial vehicles should be installed in existing units rather than in new ones. This assurance was given, following the emphatic declaration by the Tariff Commission, made in the course of its report on the industry's case for protection, that "priority should be given to expansion of the existing units over establishment of new units, even though this may mean slower development." It averred that "if planned development is the objective, it would be an admission of failure, if, for the purpose of keeping costs and prices under control, it was found necessary to promote internal competition at the expense of economic volume, since this would involve a waste or uneconomic use of resources which it is the very object of planning to avoid." Clearly, what induced the Tariff Commission to stress repeatedly the principle of restricting the number of units was that only through such restriction could economic production be ensured. This does not mean that the Commission favoured the emergence of monopolistic conditions in the industry. Only, it emphasised that first things must come first; "the claims of internal competition could be considered only after an economic volume is assured to all units." The Government's present move to set up an additional manufacturing unit is certainly not calculated to advance the cause of "economic production" in the units of existing automobile producers.

The Government's proposal is also defective in several other respects. As the manufacturers, in a communication addressed to the Government, point out, the establishment of the new unit will imply a large expenditure of foreign exchange and, in the initial stages, the production costs will remain high. Again, in so far as this unit will reduce the Government's offtake of vehicles produced by the existing manufacturers, it will make it particularly difficult for them to attain economic production. Further, the vehicles produced by the new unit cannot command spare part services in all parts of the country. This would reduce their utility as defence equipment. After all, in an emergency, it is of great advantage to use a vehicle, for which ample supplies of spare parts are available. Perhaps, the only advantage in a M.A.N. truck is that it has a multi-fuel engine. But automobile manufacturers are confident that, for defence purposes, they will be able to supply trucks with such engines. It will thus be seen that there is little justification for setting up a new automobile unit.

Finally, it seems undesirable that, in India, the Defence Ministry, which, in all other countries, is the strong ally of the private sector, should have chosen to engage itself in competition with that sector. This is not to suggest that the Defence Ministry should not produce what it wants, especially when overriding strategic considerations demand it. In the present case, however, there seems to be no compelling reason why the Defence Ministry should embark upon automobile production. In fact, the "spare parts" argument, advanced by private manufacturers, shows that the proposal is not a sound strategic proposition. On the contrary, there is much strategic gain in permitting a wide dispersal of productive effort undertaken in the cause of defence. It has also a psychological value, in that it will enable larger sections of people to feel a certain sense of national pride that they are playing their role in the defence of the country. The Ministry will, therefore, do well to abandon the move to set up an automobile unit of its own. It ought to be able to get its requirements from the existing manufacturers. It could, of course, insist upon such standards of quality as it deems necessary in the interests of efficient defence. And we have no doubt that the automobile manufacturers have the necessary equipment and technical skill to conform to any set of rigid defence standards.

* * * *

India, as is well known, continues to be dependent upon imports for its rayon yarn requirements. The production of yarn is running at an annual rate of some 29.3 million lbs. (25.7 million lbs. viscose yarn and 3.6 million lbs. acetate yarn), as against the overall demand estimated at 68 million lbs. Indeed, in the next five years, the demand is expected to go up to 100 million lbs. Clearly, in the absence of any considerabe increase in capacity, the gap between production and demand will not only persist but widen. In this context, much interest attaches to the formation of the South India Viscose Ltd., the summary of the prospectus of which appears elsewhere in this issue. (See page 677).

This new company is notable for two outstanding features. One, it has the wholehearted support of the entire textile industry in South India which has agreed to take up about 30 per cent. of the share capital. Thus, out of the present issue of Rs. 3.5 crores in shares of Rs. 100 each, the South Indian mills are providing Rs. 1 crore. And, (2), it has secured the co-operation of an Italian company, the Italviscosa Eastern Trading S.P.A., Milan (Italy), for the supply of technical know-how and plant and machinery on deferred payment basis. This Italian concern is also participating in the capital of the Company to the tune of Rs. 85.5 lakhs.

As the Directors and their friends have agreed to subscribe Rs. 25 lakhs, the balance available for public subscription is Rs. 1,39,50,000. Since the Company is assured of competent help on the technical side and also of a ready market for its finished yarn, it appears to have a good future. It may be interesting to note here that the mills in South India decided to participate in this venture because they keenly felt the necessity to ensure an uninterrupted supply of staple fibre, as a result of the substantial number of spindles allotted by the Government to them for purely staple fibre spinning.

It is common knowledge that there is a great demand for rayon and staple fibre yarns in the country. The present production of rayon filament yarn in India, as stated at the outset, is markedly below current levels of demand. There are, at present, only three factories in India manufacturing rayon yarn by the viscose process and their total production is 25.74 million lbs. per annum. There is another factory producing acetate rayon yarn and its present capacity is 3.6 million lbs. per annum. With production falling short of demand, the needs of the art silk weaving industry is being met out of imports. Imports of rayon filament yarn aggregated 42.34 million lbs. in 1956-57 and 55.84 million lbs. in 1955-56.

As regards staple fibre, only one unit is producing it on a commercial scale. Under the Textile Control Order, only 15 per cent. of the installed capacity, subject to a maximum of 10,000 spindles, could be engaged by spinning mills in the manufacture of staple fibre yarn. The Government of India has allotted in recent months to mills in the Coimbatore area alone about 150,000 spindles for staple fibre spinning. For engaging these 150,000 spindles, leaving others apart, on the basis of two shifts a day, the staple fibre needs will be almost 50,000 lbs. a day, that is, more than double the initial output of the proposed factory. In regard to filament yarn, the demand in South India is placed at 40,000 lbs. a day, that is, almost double the initial production of the factory.

The factory will be located at Mettupalayam in Coimbatore district, the site having been chosen

(*Continued on page 711*)

RAISING THE CAPITAL OF THE WORLD BANK

In the first paragraph of our leader with the above heading, which appeared last week, the sentence beginning with the words "It is rather surprising," should read: "It is rather surprising why no one reiterated what Mr. Maudling said on this point." The next sentence should read: "Nevertheless, the general impression is that the Bank's capital would be doubled."

EQUITIES STAGE A RALLY

PROFIT-TAKING AT CLOSE

(From Our Own Correspondents)

BOMBAY, 23rd *October*

EQUITIES shook off their sluggishness and staged a rally during the week under review, on revival of buying, under the leadership of steel shares. The good prospects for the steel industry, following the "blowing in" of the new blast furnaces in the T.I.S.Co. and I.I.S.Co. recently, induced holders to cling to their stocks which pushed the shares to fresh high levels. Tata Ordinaries touched a peak of Rs. 182 and Indian Irons Rs. 27.70. The Commerce and Industry Minister's statement in Kanpur, at the Upper India Chamber of Commerce annual meeting, that the Government was in the process of finalising the export facilities to be offered to the industry and that its resolution on the Textile Enquiry Committee's recommendations was almost ready, was greeted at the textile counters and there was a moderate rise in prices. His categorical declaration that there could be no question now of thinking in terms of any further relief in excise duty on cloth, however, had a dampening effect and restrained any sharp jump in values. Activity was somewhat hectic in National Rayons on sustained buying from interested quarters.

There was heavy profit-taking at the close today on end-of-account considerations. As the next settlement period will be a longer one, extending over three weeks, *budla* charges are expected to be higher and this also induced some selling. Consequently, the closing rates were well below the best levels for the week.

Tata Steel Ordinaries rallied from Rs. 177 to Rs. 182 before profit-taking brought them down to Rs. 180.75 at the close. The new shares finished with a gain of Rs. 4 at Rs. 176. Indian Irons came up to Rs. 27.70 from the previous week's closing of Rs. 27, but closed lower at Rs. 27.55.

In the textile section, Bombay Dyeings picked up from Rs. 58.20 to Rs. 59.20, but this gain was partially wiped out when the shares were done at Rs. 58.60 at the close today. Centurys jumped sharply from Rs. 437.50 to Rs. 451.50 before reacting to Rs. 448. Kohinoors gained from Rs. 267.50 to Rs. 271, but finished with a loss of Re. 1 over the week at Rs. 266.50. Central Indias stood Rs. 3 higher at Rs. 90. Edward Textiles gathered Rs. 5 to Rs. 230, Finlays Re. 1 to Rs. 281.50 and Gokaks Rs. 2 to Rs. 144. Indu Ordinaries changed hands 16 nP higher at Rs. 8.92. Indore Malwas improved by Re. 1 to Rs. 103.50, Models by Rs. 2 to Rs. 169.50 and Morarjees by Rs. 6 to Rs. 249. Mysore Spinnings jumped by Rs. 10 to Rs. 90, New Greats by Rs. 5 to Rs. 217 and Osmanshahis by Rs. 2 to Rs. 43.50. Shree Niwas Textiles gathered Rs. 4 to Rs. 152. The Company proposes, subject to the sanction of the Controller of Capital Issues, to issue shortly 6½ per cent. taxable debentures of the value of Rs. 40 lakhs, to finance its renovation and expansion programme. Simplex improved from Rs. 177.50 to Rs. 180 before closing at Rs. 178. Standards recorded a gain of Rs. 6 to Rs. 414 and Svadeshis Rs. 5 to Rs. 192. Tata Mills were, however, unchanged over the week at Rs. 36.75.

Bank shares provided a bright feature with an all-round rise in prices. Barodas were done 75 nP higher at Rs. 121.75. Centrals rose by Re. 1.50 to Rs. 59 and their new shares by Re. 1.80 to Rs. 60.80. Bank of Indias improved by Re. 1.75 to Rs. 140 and their new shares by Re. 1.50 to Rs. 141.50. Punjab Nationals changed hands 70 nP higher at Rs. 62 and Bank of Jaipurs were done 75 nP better at Rs. 42.75. Union Banks gained 24 nP to Rs. 7.60 and United Commercials 50 nP to Rs. 69.30.

Sugar shares were firm, Belapurs advancing from Rs. 309 to Rs. 316.50 and closing at Rs. 315. Bhopals were higher by 20 nP at Rs. 27.20 and Phaltans by Rs. 4 at Rs. 178. Walchandnagars hardened from Rs. 287.50 to Rs. 290. Cement shares were featureless. On profit-taking Associated Cements dipped to Rs. 160.50 after an earlier rise from Rs. 162 to Rs. 163.50. Their new shares improved by Re. 1 to Rs. 159. Digvijays were dull at Rs. 143.50, while Orissa Cements gained 20 nP to Rs. 12.64 and Jaipur Udyogs 36 nP to Rs. 11.48.

In the engineering and mining group, Alcocks maintained their upward trend with a further rise from Rs. 273.75 to Rs. 285, before profit-taking brought them down to Rs. 281.25. Tata Locos moved between Rs. 158.25 and Rs. 162.75 and closed with a gain of Re. 1 at Rs. 160. Interested buying lifted Premier Constructions from Rs. 224 to Rs. 239.25. Larsen and Toubros attracted attention on the announcement of new manufacturing programme and were done Re. 1.36 higher at Rs. 17.08. Their rights jumped from Rs. 4.08 to Rs. 5.28. Mahindras rose by 88 nP to Rs. 17.56. Mysore Kirloskars had business at Rs. 130. Shivrajpurs rallied from Rs. 88.50 to Rs. 94. Indian Coppers improved a little to Rs. 4.02.

Among shippings, Scindias were fully steady, moving narrowly between Rs. 22.08 and Rs. 21.68. Great Easterns advanced by 80 nP to Rs. 27.50 and their new shares by Re. 1.20 to Rs. 21. Bharat Lines gained 32 nP to Rs. 13.60. In the automobile section, Hindustan Motors picked up 24 nP to Rs. 8.04 and Premier Automobiles Rs. 2.20 to Rs. 90.70.

Among miscellaneous industrials, Bombay Burmahs (old) appreciated from Rs. 490 to Rs. 503.50, before finishing at Rs. 499.50. The partly paid-ups recorded a rise of Rs. 6.25 to Rs. 178.75. National Rayons shot up from Rs. 245.75 to Rs. 258.50, but the closing was lower at Rs. 255. Gwalior Rayons were a shade quiet at Rs. 14.92. Tata Chemicals shed 20 nP to Rs. 16.40. The Company has cut the dividend on the old ordinary shares from 80 nP to 75 nP for the year ended 30th June 1958. The distribution on the new shares is 3.125 nP, including interest payable out of capital at 4 per cent. Hindustan Levers had transactions at Rs. 25, as against Rs. 24.48 a week ago. Tata Oils picked up 75 nP to Rs. 39.75. While Ceat Tyres attracted good attention and rose by Rs. 6.50 to Rs. 67. Voltas moved down by Rs. 2.25 to Rs. 143.25. Wimcos gained Rs. 3.50 to Rs. 194.50.

• • • •

Madras Stock Exchange

MADRAS, 22nd *October*

The Madras Stock Exchange had only a limited number of trading days during the week under review. The market was closed on the 20th, 21st and 22nd inst., on account of *Ayudha Puja*. Steady conditions prevailed in the market during this short period. The volume of business put through was, however, small. Select tea, rubber and coffee shares met with sustained investment enquiries, despite the worsening labour situation and threats of a widespread strike in the Kerala plantations. Textiles lacked support due to discouraging advices from the yarn and cloth markets. Electric shares were dull, but bank shares were easy. Sugar and miscellaneous industrials were steady.

Among tea shares in the planting section, Mlamallays were well fancied and forged ahead by Re. 1.75 to Rs. 36. Haileyburias rallied 50 nP to Rs. 18.50. Twyfords climbed up by 45 nP to Rs. 16.40. Balanoors and Devasholas strengthened by 25 nP each to Rs. 17.25 and Rs. 21.60 respectively and Peermades by a like amount to Rs. 22.25. Periakaramalais added 10 nP to Rs. 4.

In the rubber group, Tropicals and Nilamburs hardened by 75 nP each, the former to Rs. 21.50 and the latter to Rs. 14. Karikodes were lifted 50 nP higher to Rs. 10. Teekoys and Mercaras gained 10 nP each to Rs. 7.25 and Rs. 8.60, respectively. Kailas gathered 3 nP to Rs. 5.08. Midlands, however, lost 18 nP to Rs. 12.80.

Among coffee shares, Coffee Lands advanced by 25 nP to Rs. 33.50. Badras improved by 30 nP to Rs. 4.50. Ouchterlonys were maintained at Rs. 5.52. But Consolidated Coffees shed 20 nP to Rs. 27.25.

In the textile section, Lakshmis, Meturs and Ranga Vilas lost a rupee each to Rs. 102, Rs. 336.50 and Rs. 58, respectively. Maduras eased by 50 nP to Rs. 30.75. Kotharis softened by 10 nP to Rs. 15. Coimbatore Spinnings, however, put on 25 nP to Rs. 48.

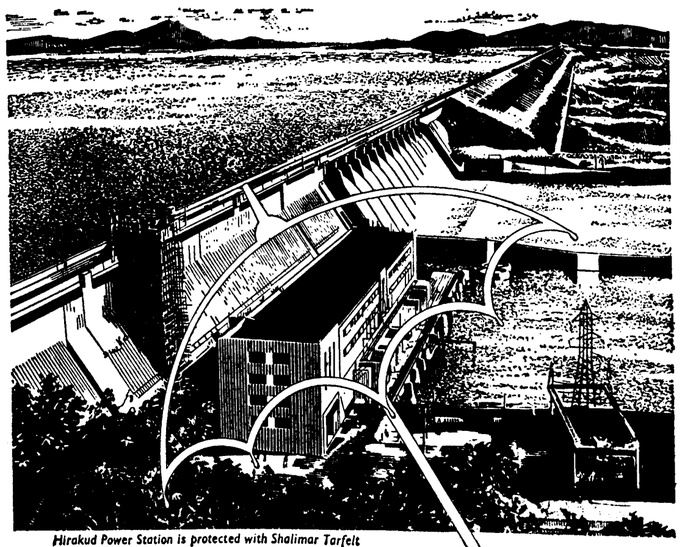
In the sugar group, Cauverys were in the limelight, the quotation rising by Rs. 4 to Rs. 100. Deccans increased by 17 nP to Rs. 9.75. E.I.Ds were firm at Rs. 30.10 as also Indias at Rs. 12.60.

Among miscellaneous industrials, Rallis were on request Re. 1.75 higher at Rs. 37.75. Mysore Papers spurted by 50 nP to Rs. 17.75. Spencers rose by 35 nP to Rs. 19.65. Hindustan Levers improved by 25 nP to Rs. 24.50, Aspinwalls by 15 nP to Rs. 7.50 and Travancore Cements by 10 nP to Rs. 9.40.

CENTURY MILL'S PREFERENCE ISSUE

Details are now available about the new preference share issue by the Century Spinning and Manufacturing Company, Ltd. The Company has offered 125,000 6 per cent. (tax-free) redeemable cumulative prefsrence shares of Rs. 100 each at par. The shares are redeemable at par at the end of 15 years from the date of allotment. Of these shares, 109,428 are offered in the first instance to the existing shareholders of the Company on the basis of one share for every ordinary share held by them as on 27th October 1958. The remaining 15,572 preference shares, as also such of the shares as are not being taken up by the existing shareholders, will be available for subscription by non-shareholders. It will be remembered that the Company offered last month 13,679 new ordinary shares of Rs. 100 each at par in the ratio of one share for every eight shares held on 15th September and this offer is being kept open till 31st October 1958 and the holders of these new ordinary shares are not, therefore, entitled to participate in the new preference capital. The whole issue has been underwritten by the Central Bank of India. This list will open on 1st November and will be closed on or before 24th November 1958.

The object of the present issue is to bring the Company's paid-up capital more in line with the written-down value of its fixed assets. The present paid-up capital is only Rs. 1.09 crore and, if the right shares offered last month are taken up, the capital will rise to Rs. 1.23 crore, as against which the net block is over Rs. 4.75 crores. Even with the present preference issue, the paid-up capital, at Rs. 2.48 crores, will only be a little over 50 per cent. of the net fixed assets.



Hirakud Power Station is protected with Shalimar Tarfelt

Project proofing with Shalimar TARFELT

Waterproofing is our business and has been so for several decades now. As a result, in every corner of India, you will find scores of buildings from thermal power stations to the shell arch roofed working bays of new and expanding industries, from public buildings, old and new, to vast labour colonies, all waterproofed by Shalimar Tarfelt — manufactured, applied and guaranteed by Shalimar Tar Products.

Over 12,000,000 sq. ft. of Shalimar water-proofing Tarfelt were supplied in one year to protect the roofs of India.

NEWS IN BRIEF

THE Reserve Bank of India has reduced the limit upto which Indian and foreign currency notes may be taken out of India from Rs. 270 to Rs. 75 per person.

The Government of India will not, according to an official Press release, ordinarily entertain applications for the grant of licences for the setting up of new re-rolling units or for substantial expansion of existing units, in view of the adequacy of capacity already installed in the country.

Water was released for the first time in the Bhakra Canals network last week for the sowing of the *rabi* crop. The Bhakra Canal system was commissioned in July 1954, when seasonal irrigation started from the dam. The winter canal water supplies will be useful to the food and oilseed crops in the southern districts of the Punjab.

The production of copper ore in India has gone up to 103,883 tons in the second quarter of the current year from 94,144 tons in the preceding quarter. It represents an increase of 4,187 tons over the level attained in the corresponding quarter of 1957. Copper metal produced during the quarter was 2,027 tons as compared with 1,667 tons in the preceding quarter.

A six-man trade mission from the United States, led by an official of the Department of Commerce, will arrive at New Delhi on the 8th November. The mission, which includes representatives of American industry, commerce and banking, will, during its nine-week stay in India, visit major industrial and commercial cities and discuss ways of expanding trade between the U.S.A. and India. Of the nine weeks, about a month will be spent in New Delhi itself.

A college to train textile workers, the first of its kind in India, will be declared open at Indore by the Prime Minister on 3rd November 1958. It will be run by the *Hindustan Mazdoor Sevak Sangh*. A building costing about Rs. 3 lakhs has already been erected in the campus of "Shram Shibir," headquarters of the Madhya Pradesh Branch of the I.N.T.U.C. The major share of the cost has been met by the textile workers of Indore.

Twenty-two textile units in the Bombay State, employing 100 or more workers each in the cotton, silk, woollen and hosiery industries, have been closed down during the period January 1957 to August 1958. Among these, seven units have been reopened, four with full and three with partial complements. Thirteen other units, involving over 4,000 workers, have already put up notices of closure, on the grounds of uneconomic working, trade depression and accumulation of stocks.

The Government of India has approved three schemes for the production of X-ray equipment, each able to produce Rs. 30 lakhs worth of equipment yearly. The first, to be located in Delhi, will manufacture 170 sets in the first year, 300 in the second, 400 in the third and 510 in the fourth. A U.S. company will collaborate. The second scheme, at Bombay, will produce 70 sets in the first year, 105 in the second, 150 in the third and 200 in the fourth, in collaboration with a West German concern. The third undertaking, working in collaboration with the French at Bombay, already is producing nine sets of different types.

The production of lead and zinc ores in India during the quarter ended June 1958 was 24,133 tons, as against 23,694 tons in the preceding quarter, and 22,095 tons in the corresponding quarter of 1957. The entire production was reported from the Zawar mines of Rajasthan. The recovery of lead and zinc concentrates from the ores during the second quarter of 1958 aggregated 936 tons and 1,050 tons, respectively, as compared with 1,170 tons and 1,546 tons in the preceding quarter. The lead concentrates are sent to the smelting plant at Tundoo in Bihar. In the absence of a zinc smelter in India, zinc concentrates are sent to Japan for smelting.

Persons desirous of setting up *khandsari* units are advised by the Government of India to refrain from setting up such units in or near factory zones. With the doubling of excise duty on vacuum pan sugar in May 1957 and imposition of an additional excise duty in December 1957 in lieu of sales tax, the *khandsari* industry now enjoys a high tax advantage over the vacuum pan industry. On account of this, a large number of units for manufacturing *rab* and *khandsari* sugar have been set up or are in the process of being set up. Although plenty of cane is available elsewhere, some of these units have been located in or near the factory zones, effecting adversely thereby the cane supplies to vacuum pan factories. If more and more of these *khandsari* units are established in factory zones, the production of refined sugar by the factories may be seriously affected. In order to prevent diversion of cane from vacuum pan factories to *khandsari* manufacture, the question of regulating the establishment of *khandsari* units is being examined by the Government.

From Abroad

Leading textile organisations in Japan will shortly investigate charges that Communist China is pirating Japanese textile designs.

A pulp-drying plant, with a capacity of 400 tons of pulp per 24 hours, claimed to be the biggest in the world, produced by a Swedish firm, Svenska Flaktfabriken, has been sold to a U.S. mill, Bowaters Carolina Corporation, Catwaba.

The Japanese Government has decided to allow exchange banks to buy or sell spot sterling in overseas financial markets without reservations. The measure, taken along the line of exchange liberalisation, reflects the Japanese Government's confidence in long-term stability of the pound sterling.

The U.K. emerged as the largest single exporter of new cars to the U.S. during the first seven months of the current year, accounting for 86,907 units, as against 50,514 in the corresponding period of 1957. France came next with 76,421 units, as against 54,247.

All businesses and schools run by K.M.T. Chinese in Indonesia have been brought under State control. This was the effect of a decree issued by Lieut.-Gen. Abdul Haris Nasution, the Army Chief acting as War Administrator, while the country is under a form of martial law.

The American United Aircraft Corporation has acquired a 43 per cent. interest in the W. German firm, Weserflugzeugbau. The capital of the latter concern has thus gone upto DM. 7 million. It will manufacture helicopters developed by the Sikorsky division of United Aircraft.

America's biggest September building boom in eight years took place this year. Work began on 118,000 homes and apartments, or 28 per cent. more than in September 1957. The month's spurt in non-farm housing units pushed up the seasonally adjusted annual rate to 1,220,000 new units.

Two out of ten people running their own business in W. Germany are women. It is estimated that about 606,000 business women in the country employ about one-sixth (3 million) of West Germany's total labour force. They manage a wide range of industries including iron foundries, cement plants, chemicals, road building and cigar-making.

A new uniform currency, to be named the "Arab Dinar," will be introduced in the United Arab Republic by July next, replacing the existing Egyptian pound and the Syrian lira. With a view to bringing about complete unity between the two segments of the Republic, it has also been decided to abolish all customs and trading barriers between them.

The Railroad Workers' Union of Indonesia has opened a new clothing factory at Djakarta to provide clothing for distribution at low cost to members. At full production, the plant, built with American aid, is expected to produce 300 shirts and pairs of trousers daily. The American aid consisted of modern machinery and the services of a work clothing specialist.

A new and inexpensive device, called a synchronous detector, which will boost the message-carrying capacity of telephone cables twelvefold, has been discovered by a team of scientists belonging to the International Telephone and Telegraph Corporation, Chicago. The device can be put into operation without doing any work on existing cables buried underground or running through conduits.

Imperial Chemical Industries Ltd., London, has concluded an agreement with the Czech patentees of the carbon dioxide-sodium silicate process for making foundry moulds. The process is said to be simple. It will produce accurate moulds rapidly, as it eliminates the slow stoving operation. If the Patent Office restores the patent, which has now lapsed, I.C.I. will obtain an exclusive licence.

A Land Reforms Commission, with Mr. Akhtar Hussain, the Governor of West Pakistan, as Chairman, has been appointed by the Pakistan Government to report on the question of land reforms in the country. The terms of reference of the Commission are: "To consider problems relating to ownership and tenancy of agricultural land and to recommend measures of ensuring better production and social justice as well as security to the tenure for those engaged in cultivation." The Commission has been asked to submit its report within the shortest possible time.

The problem relating to the disposal of the surpluses of key farm products, particularly in the U.S., was the principal subject of discussion in the Tenth Congress of the International Federation of Agricultural Producers, held at Brussels last week. The carry-over of wheat in the exporting countries is expected to touch 50 million tons—twice the amount consumer nations are prepared to import. The Congress passed a resolution urging the formation of a new International Wheat Agreement to follow the existing Agreement which expires on 31st July 1959.

Hastings Belting

BIRKMYRE BROTHERS LIMITED

PERSONAL

MR. N. C. Sen Gupta, Joint Secretary, Indian Ministry of Finance, left New Delhi last week for Japan to discuss the terms of loan to India.

Dr. M. A. Rauf, India's Ambassador to Belgium, presented his credentials to His Majesty the King of Belgium at Brussels on the 15th inst.

Mr. Jayantilal Shah and Mr. Saradchandra Maheshwar have been elected President and Vice-President respectively of the All-India Wool Trade Federation.

Mr. Nityanand Kanungo, Union Minister of Commerce, has returned to India from Geneva, where he participated in the G.A.T.T. Conference.

Mr. J. Hodkinson has been appointed a Director of Wickman Ltd. He will retain, at the same time, his present position as Managing Director of Machine Tools (India) Private Ltd., an associate of Wickmans.

Dr. B. C. Roy, Chief Minister of West Bengal, left Bombay for Zurich on a three-week tour of Europe and America. He will discuss with foreign industrialists matters relating to the construction of a gas grid from Durgapur to Calcutta and the establishment of a fertiliser factory in the State.

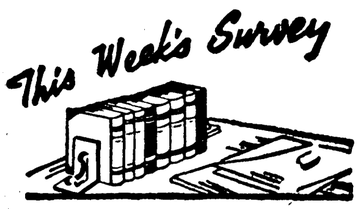
A power station with a capacity of about 50,000 kw. and an annual output of about 200,000,000 kw.h. is planned by joint Swedish and Norwegian interests. The water course to be harnessed is a border river known as Linnvasselven in Norway and Brannalven in Sweden. The water would be conducted through a 5-kilometre (3-mile) tunnel from Lake Limmingen in Norway to a power station which would be located under Lake Kvarnbergsvattnet in the Swedish province of Jamtland. Construction is planned to start as soon as the necessary permits have been obtained from the authorities in the two countries.

The U.K.'s trade gap widened by £27 million to £59.9 million in September 1958 as compared with the previous month, as a result of decline in exports and a rise in imports. Imports accounted for £311.2 million, as against £304 million. Total exports at £251.3 million are almost £20 million less than in August. For the nine months ended September 1958, total U.K. exports have been 3½ per cent. lower than in the same period in 1957. The fall in exports has been more than offset by the 10 per cent. reduction in imports. As a result, the trade gap this year has declined to a monthly average of £33 million as against £56.5 million during the same months of 1957.

The Scandinavian Airlines System (S.A.S.) and Swissair have concluded an agreement on extensive collaboration in the field of jet airliner operation. The agreement seeks to enable them to meet the ever keener competition in international passenger air transport. By 1960, the two companies will operate altogether 31 jet airliners, ten Douglas DC 8s, five Convair 880s and 16 Caravelles. Under the agreement Swissair is to lease two Convairs to S.A.S. for a period of four years, while S.A.S. will lease four Caravelles to Swissair for the same period. The two companies are to form a joint organisation for the maintenance of the aircraft. The three types of aircraft are to have identical equipment in order to facilitate a flexible adjustment to different operational demands and to make possible a temporary exchange of aircraft between the two companies.

Soviet-occupied East Germany will soon be deprived of any privately-owned business and hence of competitive incentive, if the hitherto observed trend of nationalisation is to continue. While the so-called "State-owned" industries accounted for 76.5 per cent. of total gross industrial production in 1950, their share has risen to 89 per cent. during first half of 1958, leaving but a tiny slice of 11 per cent. to private entrepreneurial initiative. The still largest sector of private property is found in agriculture (67.1 per cent. of all arable land in 1957 against 94.3 per cent. in 1950). In retailing, only 28.9 per cent. of sales were handled by private shops last year (1950: 52.7 per cent.). In building and construction, the "private" percentage of total production was cut to 19.7 per cent. against 45.3 per cent. in 1950.

Under an Incentive Award Programme initiated in 1954, employees of the U.S. Government have won $16,000,000 in cash bonuses for suggestions on improving procedures and operations in federal agencies. The U.S. Civil Service Commission, which supervises the programme, estimates the total number of suggestions made by the workers since the plan was introduced at well over a million. Of this number, some 200,000 ideas were found useful and resulted in savings to the Government of $312,000,000. The largest award given to date by a civilian agency was $12,000. It was shared by three employees of the Interior Department, who invented an inexpensive system of vertical louvres to be placed across rivers to guide fish into the safety of a bypass. The system saves millions of spawning or newly hatched fish from certain death in pumping stations or irrigation projects.



I.C.I.C.I

THERE has been a welcome change in the organisational set-up of the Industrial Credit and Investment Corporation of India Ltd., an institution meant for promoting industrial projects in the private sector by underwriting capital issues of both new and existing undertakings, as well as by giving long-term loans. It will be recalled that this unique institutional credit organisation was brought into being through the co-operative efforts of the World Bank, institutional investors in the U.S., the U.K., and India, and the Governments of India and the U.S. A part of the counterpart funds belonging to the U.S. Government has been lent to the Corporation with the consent of the Government of India, thereby strengthening the rupee resources of the Corporation. The World Bank has lent $10 million and this has enabled the Corporation to give loans in foreign exchange also.

The Board of Directors consists of prominent Indian business men—all of them belonging to the group of elders—and a few foreigners representing British and American investors. The Chairman of the Corporation is Dr. Ramaswami Mudaliar. Until about six months ago, the administrative responsibility was in the hands of Mr. P. S. Beale, an official of the Bank of England, who consented to serve the Corporation for a period of three years as its General Manager. A little over a year ago, Mr. H. T. Parekh, an expert in investment, a keen student of economics and author of two books pertaining to capital markets in India, joined the Corporation as its Deputy General Manager.

Mr. Beale's term expired in April last and he went back to Britain. Following his departure, the reorganisation of the Corporation's administration has been receiving the serious attention of the Board. The problem has been solved with the help of Mr. George D. Woods, Chairman of the First Boston Corporation, and Mr. Eugene R. Black, President of the World Bank, both of whom are the real godfathers of the Corporation, and were in this country in connection with the Fund-Bank meetings. The search for a foreign banker to take over the General Managership has been given up. Mr. G. L. Mehta, India's Ambassador to the U.S. till recently, a former Chairman of the Tariff Commission and a member of the Planning Commission when the First Plan was drawn up, has agreed to join the Board and will be the Chairman with full executive powers. In fact, Mr. Mehta has already commenced working for the Corporation, in addition to being the Chairman of the Hindustan Shipbuilding Yard at Visakhapatnam. Dr. Ramaswami Mudaliar has graciously agreed to step aside from the chair but is willing to assist the Corporation as a Director. Mr. H. T. Parekh has been appointed the General Manager of the Corporation. The administration of the Corporation is thus completely in the hands of Indians now.

The choice of Mr. G. L. Mehta for the post of chief executive of the Corporation is a happy one for more than one reason. The most important is the fact that Mr. Mehta enjoys the confidence of the Government of India and the business community in this country, on the one hand, and of the American and British investors, on the other. His popularity with American business men, in particular, is phenomenal. Almost all bankers, the management of the Export-Import Bank, top executives in the U.S. Administration and prominent leaders of the U.S. Congress are all known to him. As India's Ambassador to the U.S. for over five years, he has played an important part in securing several loans from the World Bank, including the one which the Corporation obtained in 1955. He is thus known to the Bank intimately and in fact held in great esteem. He is well known to bankers and business men in Britain too. Sir Roger Makins, Permanent Secretary to the British Treasury, was his fellow Ambassador for Britain in the U.S. All these contacts together with his intimate grasp of Indian economic conditions and business practices, will help Mr. Mehta to render highly useful service to the country in his new capacity. One of the functions of the Corporation is to act as a catalytic agent for attracting foreign private capital. The Corporation has so far played only a negligible role in this respect. Given a more positive investment climate, Mr. Mehta can, thanks to his wide contacts and knowledge of men and matters, enable the Corporation to play this role effectively. In fine, the Corporation, now in its fourth year, has been fortunate in securing the services of Mr. Mehta, for it has reached a stage when it has to raise more foreign and rupee resources in order to expand its activities. There is every reason to feel confident that Mr. Mehta will be able to raise several crores of rupees for the Corporation, as he has the enviable distinction of possessing the goodwill of the Government of India, the U.S. Government and the World Bank.

INCIDENCE OF TAX

It is always stimulating to study a country's taxation system against the broad pattern of its national income. For one thing, it will reveal where the tax shoe pinches most. Secondly, it may point to the scope for, and the appropriate mode of, relief. A gratifying feature of the study of India's taxation, presented in the brochure entitled *Impact of Taxation on Industrial Economy*, published by the Society for the Propagation of Democratic Thought, is the attempt made to examine, in the context of India's national income, the impact of taxes on the industrial sector. The main conclusion of this interesting study is that India's manufacturing sector is made to bear a disproportionate share of the tax burden. That this is not altogether an overdrawn thesis, prompted by a sense of imaginary grievance, is clear from the recent trends in Indian economy—the increasing difficulty, experienced by industrial units in undertaking self-financing and the measures of fiscal relief, albeit halting and not always generous, which the Government has been compelled to adopt in respect of several industries.

Briefly, the view that the taxes weigh heavily on the industrial sector is based upon the analysis that this sector, which accounts for 20 per cent. of the national income, contributes some 62 per cent. of the total revenue of the Central and State Governments. It is argued that the total revenue of the Central and State Governments amounted to Rs. 1,352 crores in 1958-59, of which the contribution of the industrial sector was Rs. 837 crores. Explaining these figures, the author of the brochure observes:

"Out of the total tax revenue of Rs. 730 crores of the Government of India for 1958-59, the share of the industrial sector has been estimated at Rs. 677 crores. The composition of Rs. 677 crores is the full amount of direct taxes, namely, income-tax, corporation tax, wealth tax, expenditure tax, gift tax and estate duty amounting to Rs. 238 crores; more than 90 per cent. of indirect taxes, namely, export duties, import duties and excise duties amounting to Rs. 438 crores; and only 8 per cent. of other taxes and duties amounting to Rs. 1 crore. The industrial sector's share of Rs. 160 crores out of the total State tax revenue of Rs. 322 crores for 1958-59 is constituted as: 80 per cent. of indirect taxes, such as State excise, general sales tax and sales tax on motor spirit, entertainment tax, motor vehicles tax, etc., amounting to Rs. 147 crores; and only 10 per cent. of other taxes and duties amounting to Rs. 13 crores. The total contribution of the industrial sector, therefore, to the tax revenue of the Central and State Governments came to Rs. 837 crores."

A point made by the brochure is that the tax element forms a high proportion of the cost for manufactured products. It is estimated that between 40 and 70 per cent. of the ex-factory cost of many commodities is accounted for by the tax element. In the case of cloth, it varies from 42 per cent. to 60 per cent. It is 68 per cent. in sugar, 67 per cent. in cement, 36 to 45 per cent. in tea, 51 to 54 per cent. in steel and 37 to 64 per cent. in paper. During the last three years, the increase in wholesale prices has been of the order of 17 per cent. whereas the tax revenue of the Central and State Governments has moved up by 40 per cent. This suggests that "prices have been kept low despite such high increase in the incidence of taxation and whatever rise in prices there has been it reflects to no small extent the impact of higher taxation.

We commend the method of study adopted by the author. Perhaps, a fuller and more detailed probe into the tax yields in relation to national income and the profits of the industrial sector is indicated in the interests of evolving a structure of taxes which will be rewarding to the Government without in any way disturbing the springs of enterprise which alone can generate incomes and thereby make their taxation possible.

ECONOMIC PROJECTS FUND

To those countries which had spearheaded the proposal for a Special United Nations Fund for Economic Development (S.U.N.F.E.D.), which has not materialised, it is a matter for some consolation that at least the element of the S.U.N.F.E.D. has been incorporated in the proposed Special Economic Projects Fund. A resolution calling for the establishment of the Fund was unanimously passed by the U.N. General Assembly on the 14th inst. It was evolved by the U.N. Economic Committee after 13 days of deliberation and represented a compromise between a 17-power Indian resolution and a 20-nation Pakistani draft. The compromise resolution was tabled by Mr. T. Hagiwara of Japan, Chairman of the Committee, and adopted unanimously after the Indian and Pakistani resolutions were withdrawn and the Committee had rejected several amendments thereto.

The resolution sets out how the Fund should be used and administered and incorporates a suggestion made in the Committee by India and sixteen other Asian nations for the introduction of the element of S.U.N.F.E.D. into the Special Projects Fund, so that the Fund itself could be converted into a capital development fund after the General Assembly has reviewed its scope and activities and adequate resources have been assured. Thus, the Indian concept of multilateral and international economic aid through the agency of the U.N. in the field of capital development without any partisan political and economic influence has been reintroduced. In fact, many countries which supported the resolution did so in the hope that the Special Projects Fund was only a transitional stage and that it might ultimately evolve into a universal fund for economic development of underdeveloped countries, that is, a *de facto* S.U.N.F.E.D.

The Fund is to be used to assist underdeveloped countries on their economic and social developments and differs from the U.N. programme of technical assistance in that it limits itself to selected and relatively large projects which may accelerate the economic development of a country. The United States has pledged $38 million for the expanded U.N. programme of technical assistance and the Fund. It is not known how much of this would be applied to the Fund itself. The U.S. contribution is, of course, subject to the limitation that it does not exceed 40 per cent. of the total amount contributed by all other countries. It may be noted that, for the calendar year 1958, the U.S. pledged $15.5 million to the expanded technical assistance programme subject to the limitation that the U.S. share would not exceed 45 per cent. of the total contribution. India has pledged to the Fund $525,000 in rupees, Pakistan $274,998 in rupees, Afghanistan $18,500 in Afghanis, Iran $50,000 in rials, and Israel $50,000 in Israeli pounds.

It is true that the broad objective of the Fund, namely, to meet the capital needs of newly developing countries which cannot be fully provided by the expanded programme of technical assistance, is certainly laudable. But one wonders whether the need for a separate agency like the Fund was so urgent as was sought to be made out by the sponsors of the proposal. No one will deny that, considering the world shortage of capital funds in relation to the need the little that is available, should be dispensed through institutions fully competent for the task. And there is no dearth of international institutions functioning in the field which have already proved their worth. Could not such institutions have served equally well, if not better, the purpose for which the Fund has been proposed? The most pressing need is not for more and more agencies dispensing aid but for more funds.

HOUSING IN EUROPE

A post-war record in the number of dwellings completed was achieved in Europe as a whole in 1957. This conclusion is reached by the U.N. Economic Commission for Europe (E.C.E.) in its report entitled *European Housing Trends and Policies* in 1957. Since there has now been a tendency in many West European countries to reduce new housing activity, it is

expected that there will be some decline in new construction in the current year and the next. In East European countries, however, there has been a sharp increase in housing activity and further increase in construction is under way. So far as these countries are concerned, it must be remembered that the level of housing activity has been extremely low since the war, so that the impetus, now being given to it, reflects probably the need to make good the slow start in earlier years.

Despite the improvement in housing situation, there is a general shortage of houses in a number of both Eastern and Western European countries and also shortages in particular regions or for certain population groups. It would, however, appear that private building activity has increased in relative importance, thanks to the changes in the Government's financial policy, to liberalisation of building licensing policies and to improved supply of building materials. The supply of these materials, according to the report, was sufficient for current levels of building activity in nearly all West European countries. Nevertheless, some specific shortages persisted in a few Eastern and South European countries. Generally speaking, building prices, costs and wages rose in nearly all European countries.

Fearing the impact on housing of the tight money market and higher interest rates, which continued unabated throughout 1957, the Governments of most West European countries temporarily provided capital and guaranteed loans in order to encourage social housing. In particular, Eastern European countries announced large housing programmes within the framework of revised long-term economic plans. In West European countries, on the other hand, there is a shift in housing policies, designed to encourage construction programmes more in favour of particular population groups, such as large families or low-income groups and those who have plans for modernising their old dwellings.

BRITISH BALANCE OF PAYMENTS

The fear that the U.S. recession and the fall in the earnings of primary producing countries would hit hard the resilience of the British economy has been proved false by the strident recovery it has made in the balance of payments position during the first six months of the current year. Britain's surplus stood at £334 million for the six months ended 30th June 1958, more than for any full year since the war, as against £118 million for the corresponding period of 1957. The lower import prices alone are said to have accounted for a surplus on visible trade of the order of £137 million, representing a record for this century. The fall in tramp shipping freight rates and the gradual recovery of oil earnings after the Suez crisis together yielded some net benefit. Besides, the decline in exports, anticipated as a result of the lower buying power of the primary producing countries, was not fully felt in the half-year.

The U.K. has gained not a little from the distinctly favourable terms of trade. The sharp drop in the commodity prices can be gauged from the fact that its imports during the period under review cost £191 million less than much the same volume had cost in the corresponding period last year, whereas export earnings dropped by only £29 million. The balance of invisible trade, excluding Government transactions, also moved up, as a result of higher net shipping earnings and net overseas earnings of oil companies. The Government transactions, on the contrary, registered a decline, mainly because of lower receipts from U.S. defence aid and offshore purchases.

It should be noted in this context that about three-quarters of the improvement in the current balance was with the rest of the sterling area, most of the change being in visible trade. The current balance with the dollar area also provided a sharp gain. Nevertheless, there was deterioration in the balance of trade with the O.E.E.C. countries. On long-term capital account, the net outflow in the half-year of £114 million may be regarded as a more normal level after several periods affected by special factors, such as the drawing on the U.S. Export-Import Bank loan and the postponement of capital repayments on the North American loans in July-December last year, and the free-market security transactions in the preceding half-years. The other sterling area countries raised £24 million on the London market during the period under review. Net investment by the U.K. in the rest of the sterling area in the six months was £127 million. There was a net flow of capital into the U.K. from the non-sterling world.

The total sterling balances held by the overseas countries at £3.902 million has remained more or less the same during the period. Of this amount, sterling area countries accounted for £2.624 million. The other financing items were favourable to the reserves and, together with the balance of current and long-term capital transactions of £220 million, led to a rise of £287 million in the gold and dollar reserves. The current balance of the rest of the sterling area with the non-sterling world was a deficit of £193 million. A sum of £131 million was earned from sales of gold in the U.K. and capital receipts from the non-sterling world were £184 million, yielding an overall surplus for the rest of the sterling area with the non-sterling world of £119 million.

A striking factor behind the improvement in the balance of payments of the U.K. is the increasing confidence in sterling. This has been amply demonstrated by the closing of "the Kuwait Gap" and the drop in acceptance credits in the U.K. Further proof is provided by such developments as the rebuilding of London balances by foreigners, the drop in sales of sterling throughout European markets and the reduction in speculative purchases of dollar commodities for sterling. There is no reason, however, to believe that the second half of the year will be as favourable to the U.K. as the first half. The provisional figures for July, August and September suggest that the addition to Britain's reserves will be at a slower pace.

The Prime Minister of Ceylon, Mr. Bandaranaike, has decided against nationalisation of foreign-owned tea and rubber estates. Conveying this decision to the Planters' Association, the Lands Minister said that, although nationalisation of estates was an election pledge, the Government felt it was foolish to take over developed lands when there were hundreds of thousands of undeveloped Crown land which could be exploited for economic betterment of the country.

BASIS OF GERMAN ASSISTANCE

CAPITAL CAN BE HAD CHIEFLY FROM PRIVATE INVESTORS

From Our Special Correspondent

NEW DELHI 21*st October*

DELHI LETTER

DR. Ludwig Erhard, Vice-Chancellor and Minister of Economics of the Federal Republic of Germany, has just concluded his goodwill mission to India and is now on a similar mission to the other developing countries of East Asia. Here, in the Capital, he has created a massive impression of increasing Indo-German co-operation. This co-operation will be the result of a well-conceived and far-sighted policy of effective German assistance for developing (hitherto called 'underdeveloped') countries. Besides the German support to multilateral co-operation within the large international organisations in carrying out its obligations to developing countries, there is, in this policy, the positive element of bilateral arrangements, the objective of which is that the countries concerned will obtain quickly and directly the benefits of the achievements of German research and engineering.

In particular, this bilateral technical assistance programme contemplates co-operation on the basis of partnership between West Germany and a developing country. But development funds, under this programme, are made available only if the Government of the developing country concerned has itself decided which works and installations it wishes to establish and has expressly desired German assistance therefore. As a rule, under such an arrangement, the developing country will carry out that part which can be produced locally and involves no foreign currency, while the Federal Republic takes over that part for which the developing country would otherwise have to employ foreign exchange. No outright grants are involved here; only, the financial assistance rendered by Germany as a partner will cease after some years and the materials and equipment supplied will then become, without reservation, the property of the recipient country.

Two Projects

Two distinctive types of projects have been developed so far under this bilateral assistance programme. One is the establishment of "technical and economic training centres" in developing countries. These centres facilitate the training of local experts in their own country and in much greater numbers than would be possible by accepting students or trainees for instruction in West Germany. Such establishments so far planned include a technical college, industrial training centres, trade schools and other technical schools. The other type of project is the creation of "model establishments" in the developing countries. These establishments demonstrate good practice in their particular fields simultaneously with theoretical training. They include prototype workshops in the industrial sector and model agricultural communities. The latter, in particular, are intended to improve agricultural methods and general productivity on a co-operative basis. Besides these two types of projects, there are also plans for sending German instructors and experts to the developing countries and for training scholarship students in West Germany.

Financial Aid

The Federal Republic, it is authoritatively stated, realises that an effective contribution to development cannot be limited entirely to the aforementioned technical assistance. It should also include financial aid to ensure the necessary rate of investment. Both types of assistance are closely related to each other, since no technical contribution can be effective without sufficient capital being available for investment. This interrelationship, it is further stated, is clearly recognised in West Germany. But a necessary condition for the export of capital from Germany, it is emphasised, consists in the developing countries themselves providing the required basis for confidence in the stability and continuity of their economic development; it also implies that they make possible a more intense private investment within their boundaries by protecting such investments against seizure and by safeguarding transfer of profits.

Such export of capital from Germany can only be from the private sector of that country, for it has been a basic tenet of the Bonn Government's policy to leave decisions relating to capital investment to the free initiative of the individual. Although the Government is in a position to influence the flow of goods and currency by various political and economic measures, in the last analysis the critical decisions depend on commercial and, therefore, private considerations. The principal source of such efforts as export guarantees, medium and long-term credits and foreign investments by private firms has been the initiative of German private enterprise. In this connection, there is some frank criticism in Germany of the trend of an ever larger proportion of the credits placed at the disposal of developing countries being granted by foreign Governments, instead of being invested by private enterprise. Such credits lose thereby their commercial nature and begin to assume the character of subsidies.

Basic Principles

Here, therefore, is a background to the German policy in the matter of export of capital to developing countries. Some basic principles governing such foreign investment have also been spelt out as follows:—Imported capital should stand in reasonable proportion to the actual wealth of the receiving country, and should serve purposes of consumption only so far as is absolutely necessary to maintain the population's standard of living. It must be sufficiently large to guarantee the normal development of the whole complex of related branches of the given business enterprise. The investments made at any given time should correspond to the current condition of the receiving country in regard to roads, developed energy, etc. The investments should be of profit to the available sources of production factors and other aids, and should be limited to production set-ups for whose goods a long-term market seems assured. The amount of credit borrowed must depend also on the amortisation of existing projects.

If both sides agree to be governed by these considerations, it is stated, a "climate" can develop in which it will be easier for private enterprise in Germany to increase its foreign investments. The possible adoption, by a developing country like India, of measures aimed at reducing the risks of foreign investors by means of transfer guarantees, as well as protection against confiscation and sequestration, would do much to dispel the caution of many German exporters of capital. This way probably lies a greater measure of Indo-German economic co-operation.

TEXTILE EXHIBITION

A textile exhibition, called "The World of Fabrics," sponsored by 'Sanforized,' will be held in Bombay from 7th to 17th November. The purpose of the exhibition is to bring into focus the excellence of Indian mill-made cotton textiles. The exhibition will comprise two sections, stall display of fabrics and a daily fashion parade. It will show the developments achieved by Indian manufacturers in the field of cotton textiles. Twenty-four mills licensed to use the registered trade mark 'Sanforized' will display a vast variety of material in specially designed kiosks. Each kiosk will differ in appearance and atmosphere from its neighbour. The exhibits will cover a wide range of fabrics from simple poplins and useful wash and wear cottons to sophisticated prints.

The uses to which the cottons can be put will be demonstrated every evening at a fashion parade, called "Mirror of Fashion." This feature of the exhibition is directed to appeal to a cross-section of people—to men, women, and children, who wear either Indian or Western clothes. Designs for the parade were created by the international section of *Vogue*, New York, and executed by a local *couturiere*. Mannequins drawn from all communities will model day wear, evening wear, sports clothes, suits, coats, cocktail dresses, pyjamas and housecoats. The "World of Fabrics," it is said, will be unique in more than one respect. No sale of textiles will be transacted at the exhibition grounds. Its twofold purpose is to display the best of Indian manufactured cotton textiles and to translate their potential uses into eye-catching reality.

POINT OF VIEW

From Our Own Correspondent

LONDON, 17*th October*

LONDON LETTER

WHICH is more significant? The biggest ever recorded surplus on the balance of payments or the highest level of unemployment for seven years?

The news of both broke on the same day and while a part of the British Press found cause for rejoicing in the favourable balance, another part was more distressed with the figure of half a million unemployed. But the two things are different sides of the same medal and therein lies the danger. World recession and falling prices of primary products mean unemployment, on the one hand, and low import costs, on the other. It is as a result of the low import costs that the visible trade balance for the first half of this year showed an improvement of £162 million, but, unless the earned surplus is ploughed back by way of investments into the primary producing countries, the purchasing power of the latter is bound to fall sharply over the months ahead and that would obviously cause a collapse in the level of British exports. The favourable balance is, therefore, not soundly founded.

For the first half of this year, the visible trade surplus was £137 million and, in addition, there was a surplus on invisible account of nearly £200 million. The total favourable balance for the six months was thus £334 million. Against this, there was a net outflow of long-term capital of £114 million, which is more or less a normal level, and this leaves a net gain on trade account to the reserves of £220 million. Together with other items which moved favourably, the gold and dollar reserves rose by £287 million in the half-year.

For the whole year ended in June 1958, the picture is equally attractive. There was an overall surplus on visible trade of £106 million—an almost unheard of occurrence. In addition, the invisible trade balance was not less than £382 million. The total surplus was, therefore, £488 million, the highest figure to be achieved since balance of payments estimates have been officially prepared. Again, one must stress that the principal factor in the improvement is the fall in the payments for imports which were £191 million less in the first half of 1958 than a year earlier, mainly as a result of lower prices. This trend continues and imports on a c.i.f. basis in the third quarter of this year are £316 million against their level a year ago of £332 million *per month*. On the other hand, British exports at £261 million monthly average in the third quarter of this year were only £4 million less than a year ago. The visible trade balance was, therefore, £14 million per month better in the third quarter of this year than last.

About three-quarters of the improvement in the balance for the first half of 1958 was with the sterling area. There was also a sharp improvement in the current balance with the dollar area, and, again, it is noteworthy that exports to North America are being maintained in the third quarter of this year at the level of a year ago. It is only with the European countries that the British balance of trade has deteriorated.

In all this lies the explanation of the optimistic attitude which Mr. Macmillan and the Chancellor of the Exchequer, Mr. Amory, are taking towards the possibility of early convertibility. Incidentally, the total of sterling balances held by the sterling area in London fell by £76 million in the first half of this year. This was counter-balanced by an almost equal rise in the holdings of non-sterling countries. The latter are, of course, hot money, but the rise of nearly £300 million in the gold and dollar reserves should be able to cover a great deal of hot money, provided convertibility is not extended beyond the balances of overseas holders. It is indeed not likely to apply to the balances of British residents.—*All Rights Reserved.*

The Directors of Lloyds Bank Ltd. have announced a one-for-two scrip bonus and an enhanced dividend for the year 1958. The scrip issue is to be made by the capitalisation of £9,282,535 from the reserves. It is proposed to restore the reserve fund to its existing level at the end of the year. The final dividend of 5¾ per cent. now recommended is on the increased capital, bringing the total distribution for the year on the enlarged capital to 10 per cent., as against a corresponding distribution of 8¾ per cent. on the same capital for 1957.

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 15th October, 1958, has been DELIVERED FOR REGISTRATION TO THE REGISTRAR OF COMPANIES, MADRAS, AS REQUIRED BY SECTION 60 OF THE COMPANIES ACT, 1956.

Subscription List will open on 27th October 1958, *and close at any time at the descretion of the Directors.*

Copies of the Prospectus and application forms can be had from the Official Brokers, or the Registered Office of the Company or the Bankers of the Company.

SOUTH INDIA VISCOSE LIMITED

(INCORPORATED UNDER THE COMPANIES ACT 1956)

COIMBATORE

AUTHORISED CAPITAL

6,00,000 Equity Shares of Rs. 100 each	Rs.	6,00,00,000
4,00,000 Cumulative Preference Shares of Rs. 100 each	,,	4,00,00,000
	Rs.	10,00,00,000

PRESENT ISSUE

3,50,000 Equity Shares of Rs. 100 each .. .. Rs. 3,50,00,000

Out of the present issue of Equity Share Capital of Rs. 3,50,00,000, the Textile Industry of South India, which is keenly interested in sponsoring this Undertaking, is subscribing for Equity Shares of the nominal value of about Rs. 1,00,00,000, i.e., about one lakh Equity Shares of Rs. 100 each.

The signatories to the Memorandum of Association and the Directors and their friends are subscribing for Equity Shares of the nominal value of Rs. 25,00,000, i.e., twenty-five thousand Equity Shares of Rs. 100 each.

Further, under the agreement with Italviscosa Eastern Trading S.P.A. of Milano (Italy), they have agreed to subscribe for Equity Shares of the nominal value of Rs. 85,50,000 and therefore, 85,500 Equity Shares of Rs. 100 each are reserved for allotment to them and/or to their friends, at par, after shipment of the machinery. Therefore, the balance of only 1,39,500 Equity Shares of Rs. 100 each, i.e., of the nominal value of Rs. 1,39,50,000 is now offered to the public at par in terms of this Prospectus, and Memorandum and Articles of Association of the Company, complete copy of which is open for inspection at the Registered Office of the Company at "Kamala Nilayam," Peelamedu, Coimbatore.

Payable as follows :

(1) On application Rs. 20 per share. On allotment Rs. 20 per share, payable within 30 days from the date of allotment.

(2) Balance of Rs. 60 per share will be payable in such calls as may be determined by the Directors. No call shall exceed Rs. 20 per share.

Note : Application for shares must be for a minimum of five shares and/or for multiples of five shares.

The consent in writing of the above-named Bankers, Legal Advisers, Auditors and Brokers, to act in their respective capacities has been obtained and none of them has withdrawn the consent given.

OBJECTS

The Company was incorporated on 22nd August, 1957, generally for the purposes set forth in the Memorandum of Association, a copy of which is attached to this Prospectus, and in particular to undertake the manufacture of staple fibre, viscose rayon yarns and auxiliary chemical products and towards this end have entered into an agreement with Italviscosa Eastern Trading, via Borgonuovo, 14 Milano (draft of which, for purposes of identification has been signed by Dr. C. Rossi, representing the Italviscosa Eastern Trading, and Sri R. Venkataswami Naidu, for the South India Viscose Ltd., and is open for inspection at the Registered Office of the Company) for the supply of machinery on deferred payment terms, technical collaboration, etc. The terms and conditions of the agreement are set forth in detail elsewhere in this Prospectus.

MACHINERY SUPPLY AND TECHNICAL ASSISTANCE

The main processing Machinery which Italviscosa Eastern Trading S.P.A. have agreed to sell to the Company will be of the manufacture of the world-famous manufacturers of rayon and staple fibre plants, namely, SNIA VISCOSA, S.p.A. of Milan, Italy. Plants and machineries manufactured by them have been installed in factories all over the world. They have vast experience and technical knowledge and information in respect of the production of rayon yarn and staple fibre and their technical skill is indisputable and recognised by experts all over the world. They are themselves producers of rayon yarn and world including this country. As such, they have great knowledge and experience about market conditions in this country. They would accordingly be manufacturing the latest type of machinery and plant, suitable to the conditions of this country. Italviscosa Eastern Trading S.P.A. have also agreed with the Company to arrange for technical training of Indian personnel nominated by the Company, in the factories of the said Snia Viscosa in Italy. The Indian personnel of the Company will thus derive great benefit of the experience and technical skill afforded to them in the course of their training in Italy, in the works of Snia Viscosa S.p.A.

IMPORT LICENCE

The Company has secured Licence No. 002067/HQ/Non-Govt./C.G./CCICG dated 6-5-1958 from the Government of India for the import of machinery from Italy for the approximate c.i.f. value of Rs. 4,90,00,000 on deferred payment basis, for repayment starting from 1st April, 1961, and ending in November, 1964, with the interest payable for the deferred payment period arrived at Rs. 96,00,000, to total a sum of Rs. 5,76,00,000, and to be defrayed as under:

Rs. 85,50,000 to be subscribed by foreign suppliers as share capital for participation in the scheme.

Rs. 4,90,50,000 to be paid in a period of five years.

FINANCIAL REQUIREMENTS

The total cost of the proposed plant having a capacity for the manufacture of 10 tons a day of STAPLE FIBRE, 10 tons a day of RAYON FILAMENT YARN of average 120 deniers (with the possibility of manufacturing finer deniers also depending on the demand), 35 tons a day of Sulphuric Acid and 7.5 tons a day of Carbon Disulphide (all per day of 24 hours) has been estimated, including the working capital as follows:

		Rs.
1.	Payable to M/s. Italviscosa Eastern Trading, Milano, Rs. 4,50,00,000 towards f.o.b. value of plant and machinery, (on deferred payment basis) plus freight and insurance of Rs. 30,00,000 plus Interest of Rs. 96,00,000 on this deferred payment, i.e. a total of	5,76,00,000
2.	Customs Duty, etc.	30,00,000
3.	Cost of Land and Buildings	50,00,000
4.	Cost of equipment to be fabricated in India	75,00,000
5.	Cost of Erection and implementation Expenses	25,00,000
6.	Preliminary Expenses	2,00,000
7.	Brokerage and other share issue expenses	2,00,000
8.	Working Capital	80,50,000
	Total	8,40,50,000

SOURCES OF FUNDS

The above-mentioned cost of the project is proposed to be met as under:

		Rs.	Rs.
1.	Total amount due to be paid under the deferred payment arrangement inclusive of interest	5,76,00,000	
	Less—Share Capital participation by the Italian Firm and/or their friends	85,50,000	4,90,50,000
2.	By the issue of Equity Share Capital under this Prospectus (out of which Rs. 85,50,000 nominal value of shares is reserved for allotment, to M/s. Italviscosa Eastern Trading, Milano, and/or their friends)		3,50,00,000
	Total		8,40,50,000

PROSPECTS

Under an arrangement for the distribution of staple fibre, the selling price has been fixed at cost (including depreciation and selling charges) plus 12½ per cent. profit, or the market price, whichever is less, vide pages 13 and 14 of this Prospectus, under the heading "contracts." In the case of viscose rayon yarn, the entire output is to be sold on the market at about the prevailing prices. Therefore in arriving at the profit figures below, the Directors have reckoned at a profit of 12½ per cent. over the cost of production of staple fibre, while in the case of viscose rayon yarn, they have taken the cost at Rs. 2 10 per lb. and the selling price at Rs. 4, which is the ex-factory price of the other indigenous producers in India. The figures given below are on the assumption that the factory has been in full working at the capacity proposed right through a full year from 1960, and given normal trading conditions. Therefore, in the opinion of the Directors, based on broad estimates, the Company should be able to earn reasonable profits even from the first year of commercial production, sufficient not only to provide for repayment of instalments due under the deferred payment arrangements, but also pay a dividend to the shareholders.

	Rs.	Rs.
Sale Proceeds of 80,00,000 lbs. viscose RAYON YARN (average: Rs. 4.00 per lb. of 120 den. 1st quality, bright on cone)	3,20,00,000	
Less manufacturing cost of 80,00,000 lbs. of viscose RAYON YARN (average: Rs. 2 10 per lb. of 120 den. 1st quality, bright, on cones—(including depreciation and selling charges)	1,68,00,000	1,52,00,000
Sale Proceeds of 80,00,000 lbs. viscose STAPLE FIBRE (average: Rs. 1 40 per lb. of 1½ den. 1½" bright, bleached).	1,12,00,000	
Less manufacturing cost of 80,00,000 lbs. of viscose **staple fibre** (average: Rs. 1.25 per lb. of 1½ den. 1½" bright, bleached—(including depreciation and selling charges)	1,00,00,000	12,00,000
PROFIT		1,64,00,000

It will be seen from the profit estimates given above, that the profit estimated (subject to taxation) is a shade under 47 per cent. of the Equity Capital. New Industrial undertakings have the benefit of a five-year wealth tax exemption. The Company will also enjoy the special benefits available to new projects under the Income-tax Act as regards Development Rebate, Depreciation Allowances, etc. Therefore, all things going on as per schedule and programme, and provided the factory is in full working to its capacity for a full year, and given normal trading conditions, the Directors anticipate that the Company will be able to pay a dividend of 10 per cent. per annum to the Equity Shareholders.

MINIMUM SUBSCRIPTION

The programme for the import of machinery has been so arranged that the first set to arrive will be for the manufacture of Staple Fibre. The machinery for the manufacture of Rayon Yarns will be received after this. The import of all the machinery needed is spread over a period of eighteen months and is to be financed on a deferred payment basis. Hence, as aforesaid, the immediate capital needed to meet the cost of land and buildings, Customs duty, erection and fabrication in India (all at the initial stages), and the initial requirement of working capital, preliminary expenses, and brokerage and other share issue expenses all are estimated at Rs. 1,00,00,000, as under :—

		Rs.
1.	Cost of Land and Buildings immediately needed	25,00,000
2.	Customs Duty, etc., etc.	30,00,000
3.	Cost of Equipment to be fabricated (in the first stage) in India, and erection and implementation expenses	30,00,000
4.	Preliminary Expenses	2,00,000
5.	Brokerage and other Share Issue expenses	2,00,000
6.	Working Capital	11,00,000
	TOTAL	1,00,00,000

PRELIMINARY EXPENSES

The promoters of the Company, Sri R. Venkataswami Naidu and Sri G. K. Devarajulu, have been expending the amounts needed in the formation of the Company. Although the exact amount cannot be specified today, as there are other expenses to be incurred before the Company obtains the Certificate of Commencement of Business, the preliminary expenses are placed at about Rs. 2,00,000 and this will be paid to the promoters, who had incurred the expenditure, from and out of the share capital that is now being raised.

BROKERAGE

The promoters of the Company, Sri R. Venkataswami Naidu and Sri G. K. Devarajulu, have been assured by those connected with the Mill Industry of South India, particularly in and around Coimbatore, that subscriptions will be forthcoming to this issue from the Mill Industry of South India or their nominees to the nominal value of about Rs. 1,00,00,000, i.e., about 1 lakh Equity Shares. The signatories to the Memorandum and the Directors and their friends are subscribing for a nominal value of Rs. 25,00,000, i.e., 25,000 Equity Shares. **No Commission or Brokerage is payable to the promoters, Sri R. Venkataswami Naidu and Sri G. K. Devarajulu, in respect of their agreeing to get subscription for Equity Shares of the nominal value of about Rs. 1,25,00,000 mentioned above. No Commission or Brokerage is payable in respect of the 85,500 Equity Shares reserved for allotment, after the machinery is received, to Messrs. Italviscosa Eastern Trading and/or their friends.**

BROKERAGE will be paid at the rate of 1¼ per cent. to the OFFICIAL BROKERS, while the brokerage payable to the other recognised Brokers and/or Bankers, will be 1 per cent. on the nominal value of shares allotted on applications, bearing their rubber stamps.

DOCUMENTS

The following documents can be inspected at the Registered Office of the Company during the office hours from 10 a.m. to 5 p.m. on any working day.

(1) Memorandum and Articles of Association of the Company.

(2) Consent letter of the Central Government to this issue.

(3) Licence No. L/10(0488/57 given to this Company for the erection of L/19(7)15 a Factory with a capacity of 10 tons of Rayon Yarn and 10 tons of Staple Fibre a day.

(4) Licence No. 002067/HQ/NON-GOVT. C.G./CCICG dated 6th May 1958 obtained by the Company for the import of the capital goods.

(5) Draft of the agreement between this Company and Messrs. Italviscosa Eastern Trading, Milan, for purposes of identification duly signed by Dr. C. Rossi for the Italviscosa Eastern Trading, and Sri R. Venkataswami Naidu, for the South India Viscose Ltd.

(6) Draft of the agreement between the Company and the 19 (Nineteen Mills), *vide* pages 13 and 14 of this Prospectus, for the supply of staple fibre.

(7) Draft agreement to be entered with EFI Banca, Italy, for the deferred payments for the purchase consideration of the machinery.

GOOD RECOVERY IN BRITISH ECONOMY

DANGER OF INFLATION IF RISE IN WAGES OUTSTRIPS PRODUCTIVITY

NEVER do we come across in India a single occasion on which the three important personalities closely associated with the economy of the country, namely, the Finance Minister, the Governor of the Reserve Bank of India and a Stock Exchange President meet and speak from a common platform on subjects of topical importance, while this is an annual feature in Britain, and the occasion is provided by the banquet given by the Lord Mayor of London to bankers and merchants of the City of London at the Mansion House. This year's Mansion House banquet held last week was notable in two respects. First, this is the first time that Mr. Heathcoat Amory, in his capacity as Chancellor of the Exchequer, was a guest of honour. Secondly, unlike in the previous year, when the bankers and merchants met under less happy circumstances—it was only three weeks earlier that the British Bank rate had been stepped up to the crisis level of 7 per cent.—this year's banquet was held in a healthier climate, the intervening twelve months having proved, in many respects to be a period of marked progress for Britain.

As usual, the Chancellor of the Exchequer, the Governor of the Bank of England (Mr. C. F. Cobbold) and the Chairman of the London Stock Exchange (Sir John Braithwaite) were the main speakers. Those who had expected Mr. Amory, who for the first time addressed this gathering, to announce any notable relaxation of the restrictive policies introduced by his predecessor a year ago, would have been disappointed with his speech, the main burden of which was the note of warning on the effect of wage increases without a corresponding expansion in productivity. In fact, the Chancellor of the Exchequer made no secret of his anxiety over the increase in wages which, on an average over the past twelve months, was in excess of productivity. The Chancellor's views on this danger were fully endorsed by the Governor of the Bank of England.

Confidence in Sterling Restored

Reviewing the progress made by Britain during the past twelve months, the Chancellor pointed out that there had been a "very marked restoration of confidence in sterling," and expressed his satisfaction over the continuous rise in the sterling area's gold and dollar reserves, despite the seasonal pressure during autumn, although a third of this rise had been due to special borrowings. If Britain could continue to conduct its affairs with restraint and a full regard for sterling, the Chancellor hoped to be able to look back to 1957 and 1958 as a "decisive turning point" in the country's economic affairs. Another favourable indication of Britain's economic strength is the record balance of payments position achieved during the first half of this year—a surplus of £334 million, more in six months than in any twelve-month period since the war. These favourable developments owed much to the fall in import prices and the stability in the volume of U.K. imports. The Chancellor, however, hastened to warn that these conditions could not be expected to last. "Indeed, our exports are already falling; we shall have to work very hard to do anything like as well in the year to come, and we shall need a sustained and vigorous export effort."

Alongside these encouraging developments in the British economy there has been a further rise in wages, a fall in production and an increase in unemployment. Referring to the wage rise, without a corresponding expansion in output, Mr. Amory warned that, if a similar increase were to be repeated during the coming year, the result could not fail to involve an appeciable element of cost inflation. Britain could not afford to have inflation at present, when it was most important that its industry should continue to be competitive in world markets. "If, through increased costs, we price our exports out of the markets of the world," the Chancellor pointed out, "our balance of payments and the strength of sterling would once again be put in jeopardy."

Answering the criticism that the Government had deliberately created unemployment and a stagnant economy, the Chancellor declared that Government had always wanted to keep employment at as high a level as possible without endangering the foundations on which employment itself rests. He emphasised the importance of a stable currency and added that, since the war, very few, if any, countries had attained it. It would be extraordinary if Britain could do so without some sacrifices. One of the sacrifices undoubtedly was the small increase in unemployment of a little over 2 per cent. But this figure, in the face of a world-wide recession, the Chancellor claimed, was "a far lower figure than practically in any industrial country today and one which before the war would have been thought of as impossible of achievement.

Mr. Amory denied that British economy had become stagnant. In this connection, he pointed out that both investment and consumer expenditure had reached record levels and personal savings were also at a new high—in the last six months alone the investment in national savings had risen by over £100 million. The external position too had been steadily strengthened. Thus, he observed:

"Our objective has always been clear, as rapid a rate of growth as is sustainable, without a return to inflation. Economic growth comes mainly from growth of real capital; and our rate of investment is still at record levels, far above what was achieved before the war or at any time since. In 1938, investment took 13 per cent. of the gross national product; in 1957, it took 18 per cent. of a far larger total. A high proportion of this investment is in productive machinery and equipment—a higher proportion than in the United States. Moreover, the proportion of investment needed for mere replacement has gone down. The rate of real expansion—of net investment—has doubled since 1948. This is not stagnation. Consumption has continued to rise and in the first half of 1958 it has been about higher than a year ago."

Recent Steps

In these circumstances, the temptation for the Government to provide a greater stimulus to the economy cannot be considered as unnatural, but it must be said to the credit of the British Government that it did not allow this temptation to overcome caution, lest the fruits of the labour should be allowed to perish. No doubt, it took several steps to promote investment in the private sector, namely, the relaxation of the credit squeeze and the increase of 50 per cent. in the initial depreciation allowances to industries. These measures, along with the initiative of banks in encouraging "personal loans" and the reduction, and in some cases abolition, of initial deposits on hire purchase, the Chancellor was confident, would contribute to orderly expansion, with particular emphasis on investment in the private sector. "Of one thing I am completely confident," Mr. Amory averred, "the long-term prospects for British industry are now firmly based and new opportunities are opening out."

While this confidence did not induce the Chancellor of the Exchequer to announce any change in Government policy, he revealed a departure the Government felt it right to make. "In our latest review of public sector investment," he declared, "we have been able to permit a resumption, after a year's pause, of the increase in the total." The total investment in this sector during 1959-60 is likely to be quite appreciably higher than this year or last.

Mr. Cobbold was in favour of a more restrained policy, for he said that the monetary authorities must always be ready to moderate a saving in the economy in either direction, which, unless checked early enough, would always lead to trouble later. Over the long-term, the next decade or so, the Governor of the Bank of England was convinced that, in their task of helping to create conditions for sound and steady development, monetary authorities would be more often required to restrain than to force the pace. "With a new industrial revolution in full swing, with developing markets in Asia and Africa, with ever-increasing social programmes and with a prospect of continuing high defence expenditure," the Governor added, "the forces of longer-term expansion seem well assured."

Short-term Outlook

The short-term picture, according to Mr. Cobbold, is somewhat different. Describing this, he said:

"Happily the recession in North America seems to have turned more quickly than many anticipated. Nor has there been much sign of reduced consumption spending in Britain. But we may still have to feel more strongly the effects of the world-wide change in the last year or so from a seller's to a buyer's market. We may not yet have felt the full effects of lower commodity prices on some of our best customers' spending power. And the process of digesting recent capital development, coupled with the present less rapid extension of markets, has been having its effect on investment plans. I myself doubt whether some of the boom talk one has heard recently in the City is well founded. Whatever else may be uncertain, it is surely a fair guess that profits will be harder to come by than they were in the post-war period."

Thus caught between the horns of a dilemma, namely, the short-term and long-term aims, Britain, the Bank of England Governor desired, must "try to prevent the economy, only recently recovered from long years of overstrain, from running down fast or far, but in meeting this threat, we must not build in new hostages to inflation in later years." Emphasising the need for keeping a watch on costs, Mr. Cobbold added:

"We must try to encourage investment: but it should be in ways which will have early effect on efficiency rather than in ways which will involve snowballing commitments for expenditure in future years. We must try to maintain a high level of demand and of employment: but we must not allow costs to run ahead of production. Only if we come through the slacker period with our industry efficient and our prices competitive shall we be able to take our full share as world trade rises again."

No Large Increase in Credit

Referring to the relaxation of credit restriction in July last and the new developments in British banking, the Governor said that, consequent on the relaxation of credit squeeze, there had been "no violent upsurge in bank lending," but the first returns showed a significant increase for general purposes, an increase which, the Governor expected, might well go further. He welcomed the new link between the banking system and the hire-purchase industry, as one in the public interest, and said:

"I am sure that the banks have been wise to participate indirectly through specialist companies rather than attempt direct management of two quite different types of lending. Hire-purchase has come to stay as a permanent and important part of our financial machine. It would not have suited anybody for hire-purchase to have remained indefinitely outside the circle of the more traditional credit machinery.

"I do not, however, see this link-up with the banks as a solution of all the problems of the hire-purchase industry. It has grown very quickly, in large and small units. A more comprehensive organisation is needed within the industry, both to maintain safeguards for customer and depositor and also to provide the necessary statistical information. I hope that the contacts already existing between the Bank of England and the industry may be developed to our mutual benefit.

"It also seems to me in the public interest that the banks should now have resumed their normal individuality and competition in the services which they provide to their customers and in the way in which they choose to run their business. If each of the banks in its own way can encourage the banking habit in wider sections of the community they will be helping to strengthen the economy."

CEILING ON CLOTH IMPORTS INTO U.K.

MOVE CONTRARY TO UNDERSTANDING REACHED AT MONTREAL

AS a result of negotiations which lasted for a fortnight between representatives of the British cotton industry and the Hong Kong textile interests, the latter have agreed in principle to the voluntary limitation of exports of all type of cotton goods to Britain. This is certainly not a surprise, because, as we had pointed out in one of our earlier issues (*vide* page 45 of *Commerce* dated 12th July 1958), since India and Pakistar. had yielded ground and had voluntarily agreed some time ago to limit their exports of textiles to Britain, provided a similar agreement was reached with Hong Kong, it was clear. that this little colony, politically subservient to Britain, could not, by itself, hold out for long. The fact that Lancashire's understanding with India and Pakistan was made valid and operative only when a similar agreement was reached with Hong Kong gave fresh impetus for Lancashire to press its demand. And, indeed, Lord Rochdale, leader of the Lancashire Cotton Board delegation to Hong Kong, pressed it hard. As Mr. John Clague, chairman of the negotiating committee representing the Hong Kong textile interests observed, the British delegation "drove a very hard bargain" and Lord Rochdale took "full advantage" of Hong Kong's goodwill towards Britain.

The negotiating body representing the Hong Kong textile interests submitted firm proposals for a three-year agreement providing for quotas on grey cloth, made-up goods and garments. The details of the proposal, especially the operative clauses and quota figures, have not yet been published. But a statement officially issued by the Hong Kong cotton interests soon after the conclusion of the talks said that the quotas represented a substantial sacrifice by Hong Kong and that they would stand irrespective of whether or not Britain also made limiting arrangements with India and Pakistan. The Hong Kong committee had unanimously agreed that, with a few minor exceptions, cloth and made up articles to be shipped against the ceiling shall be spun, woven or, where applicable, finished in the colony. Yarn-dyed cotton cloth towels and towelling would be excluded, but, if India and Pakistan felt that a quota was essential, Hong Kong would be prepared to negotiate a supplementary agreement covering these items.

Proposed Quotas

Although lacking official confirmation, reports indicate that Hong Kong's textile industry has laid down 97.6 million square yards as the minimum annual quota to which it would agree as the limit on its exports to Britain. This figure is in respect of grey cloth only while exports of finished textiles and ready-made garments will be in addition to this basic minimum of 97.6 million square yards. At the time of writing (21st October, 1958) these proposals are under consideration by the Cotton Board and its final decisions are awaited.

Addressing a conference of the U.K. Cotton Board arranged to discuss Lancashire's problems arising from the import of "cheap cotton goods" from India, Pakistan and Hong Kong, Mr. Harold Macmillan, the U.K. Prime Minister, hoped that the British industry's agreement with India and Pakistan on cotton imports would be rounded off by a satisfactory arrangement with Hong Kong. Certainly, he would indeed be very glad if the agreement materialised, because his Government had played a significant role to bring about the agreement between India and Pakistan and that now proposed with Hong Kong. Mr. Macmillan said that he was certainly aware of the problems of the industrially backward countries. For some of these countries, he admitted, the production and export of manufactured goods was vital to their development. The problem was how to reconcile, on the one hand, the fact that the desperate needs of the poorer countries in the Commonwealth could only be met if they could expand their exports with the risk that increased exports by them would threaten to disrupt long-established industries in the richer countries. Proceeding, Mr. Macmillan said that this was not merely an economic question but a political question of the first importance.

A right and fair solution to the aforesaid problem must, in our view, take into account as much the economic aspect as the political aspect. Persuading the underdeveloped countries to agree to voluntary limitation of their exports, which they do reluctantly, lest they should lose some of the more tangible benefits of their association with Britain in the Commonwealth, certainly does not take into consideration the economic aspect. It is surprising that the Lancashire textile interests should still persist in pressing their demand which runs counter to the spirit of the thesis accepted by the Commonwealth Economic Conference at Montreal. At this Conference, the Indian Finance Minister had urged that the industrially advanced countries should not impose restrictions on imports of manufactured goods from the less developed countries which were trying to industrialise themselves. The question posed was how could the poor countries pay for their imports of capital goods, if restrictions were placed on the exports of such items of manufacture as textiles on the ground that they adversely affected the domestic industries in the advanced countries, which, owing to a variety of factors, have lost the advantages they once possessed. This point of view was readily appreciated and supported by the Conference and even by the British delegation. Did the British spokesmen at the Conference really mean what they said or was it the expression of a pious sentiment knowing full well that it was going to be more honoured in the breach than in the observance? By supporting the attempts that have been made by Lancashire interests to secure for themselves virtually a closed market even after the Commonwealth Conference at Montreal, Mr. Macmillan has exposed himself to the charge of running with the hare and hunting with the hounds. As the leader of the British Government, it is surely his responsibility to win the support of British people for the decisions reached at the Commonwealth Conferences. Instead of doing so, he seems to be tacitly supporting and sustaining the pressures and moves that run counter to the spirit of such decisions.

Limitation of Exports

Limitation of exports, voluntary though it might be, is a step which the underdeveloped countries can ill afford at this juncture. As a result of unfavourable balance of trade and adverse terms of trade, consequent on the fall in prices of primary products, the primary producing countries are hard put to match their mounting volume of imports with their traditional export items. Industrially advanced countries like Britain, which depend on imported raw materials, have been the chief beneficiaries of the fall in prices of primary products. For instance, one of the main factors which contributed to the striking improvement in Britain's balance of payments in the first half of 1958—its surplus was as much as £334 million, a post-war record—was the fall in import prices. To insist, on top of this gain which has been at the expense of underdeveloped countries, that they should make a further sacrifice of even the little advantages they possess in certain items of export, is sheer selfishness.

No one denies that Lancashire too has its problems. But it must learn to adjust itself to the changed circumstances. After having held the field for more than a century, it must now persuade itself to recognise that there are other countries which can do better in the field of cotton textiles. It would not be too difficult for a country like Britain, having a very diversified export trade and a dynamic and flexible industrial structure, and where there is a high degree of mobility of capital and labour, to specialise in other fields which are still beyond the competence of underdeveloped countries to enter.

Reaction of British Press

It is gratifying to note that some of the leading British newspapers have displayed a better understanding of the real nature of the problem. Commenting on Mr. Macmillan's speech to the Cotton Board, the London *Times* said that "the British cotton industry must reconcile itself to the fact that it can look forward only to such an amount of special protection as will enable it to carry through some readjustment in an orderly manner, not to any policy of preserving the home market as its monopoly or preserving the industry at its present size as an end in itself."

Reminding Lancashire that it too had certain responsibilities, the *Times* added: "That the countries of the Commonwealth should be able to develop their trade with the West and especially with the mother country is a primary political and economic necessity and many of them cannot develop their trade and prosperity without exporting some kinds of manufactured goods." The *Manchester Guardian* declared that "the best that can be done is to smooth the path of an industry faced with the need for radical change. This is a bitter pill for Lancashire to swallow, but the more farsighted leaders of the industry are already thinking ahead to the use that may be made of breathing space. The future," according to the paper, "is likely to see a greater share of output in the hands of larger companies with more vertical integration. No one can say with assurance that it is possible to retain a large cotton textile industry in this country. But, if it is to be done, it can only be by exploiting our technical superiority to offer better quality, design and finish."

In a similar vein, the *News Chronicle*, another liberal daily, commented:

"Mr. Macmil'an made it quite plain that the interest we have in general trade expansion, especially in Western Europe and the Commonwealth, is far greater than the importance of any one British industry. The future of Lancashire depends on diversity in industry—not on clinging to cotton. Morally we have a duty to make it possib'e for the desperately poor peoples of Asia to raise their standards of living. Economically, Britain depends on international trade to live. Politically, it would be disastrous to return to restriction. If the arteries of trade between Britain and the Asian members of the Commonwealth were cut the whole conception of Commonwealth co-operation would collapse and communism would be the gainer."

NEW COTTON STRAINS

The work carried out at Surat under the auspices of the Indian Central Cotton Committee to evolve new cotton strains, is not only unique but is a'so, to some extent, different from that carried out at other cotton research centres, in that an attempt was made for the first time in India to hybridise the Asiatic varieties with the American types with a view to combining the hardiness of the former with the superior economic characters of the latter, by the use of the modern breeding technique. It is not possible, ordinarily, to cross the Asiatic varieties with the American species but, after a very strenuous effort, a few hybrid seeds were obtained and plants raised therefrom proved to be sterile. With a view to making these sterile plants fertile, resort was made to the application of an alkaloid known as colchicine. Subsequently, with the object of incorporating the economic characters and long staple, attempts were made to back-cross the hybrids with the acc'imatised American types available in the country. The progenies of the back-crosses have not yielded economic types and two of them which have gained immediate popularity are 170-Co. 2 and 134-Co. 2. M. Both the strains are now popularly known as Indo-American strains (Deviraj and Devitej) and mostly grown in Sabarkantha, Kaira, Panch Mahals, Baroda, Broach and Surat districts as a'so Deccan Canals area of Bombay State. 134-Co.2-M is particularly suited to the light soils of North Gujerat, while 170-Co.2 has been found suitable for black and deep *goradu* soils.

These two Indo-American strains have combined extra long staple of the American variety with the hardiness and adaptability of the Asiatic cottons. Further, they possess a high degree of resistance to pests and diseases compared to American types. Their superior qualities have earned for them a great popularity in the tract and their production has arisen from 40,000 bales in 1954-55 to about 120,000 bales in 1955-56. Notwithstanding the long-staple which these strains possess, it has been found that their spinning capacity is not very high, being adjudged suitable for spinning 36's highest standard counts under laboratory conditions. This has been attributed to the weakness of the fibre. As a result the strains have been utilised for spinning lower counts. There has, therefore, been some slight setback in their popularity particu'arly with the textile manufacturing industry. Attempts are, therefore, now being made at the Surat experiment station to isolate types with necessary fibre strength coupled with the required staple length.

COTTON SIZING

A process for controlling the tension of warp threads during the chemical processing of cotton has been developed by the British cot on industry's Research Association. It depends on the use of a new device which is said to provide for precise continuously adjustable control of the stretch or draft, applied during sizing to a warp as it passes between the squeezing rollers and the draw roller of the tape frame. The mechani m which was designed at the Shirley Institute, enables the draft to be pre-set or re-set during running to any desired value with an accuracy of plus or minus 0 1 per cent. Such accuracy of setting is not possible with the usual type of infinitely variable gear working alone. By combining this type of gear with a differential motion, as in the Shirley device, it is possible, it is claimed, to contract the speed change ratio of the system by any desired factor. The system is expected to enable the efficiency of the sizing of cotton to be considerably improved.

HONG KONG MILLOWNERS CAPITULATE

WORLD TRADE IN COTTON GOODS SHRINKS

From A Special Correspondent

MANCHESTER, 14*th October*

MANCHESTER LETTER

AFTER so many "alarms and excursions" about the Hong Kong talks, the comment which accompanied the report of their successful conclusion—"a miracle has been achieved"—was fully justified. To many people in Lancashire the apparent capitulation of the Colony's millowners at what seemed to be the eleventh hour of the discussions was somewhat inexplicable.

In some quarters, it has been contended that the Prime Minister's message had a bearing on the final phase of the negotiations. although the published text did not indicate any implied threat of Government action in the event of failure. The sudden switch from reported breakdown to a basis for agreement within 48 hours had an air of mystery about it.

Naturally, local textile traders are keenly interested in the details of the proposed pact, which has yet to be ratified. Some sections of the industry already take the view that any limitation of imports at, for example, the 1957 level is still too high to be of much value to Lancashire. On the other hand, the general opinion favours the imposition of some ceiling, in order to provide greater stability for the market at home and a basis on which producers can gauge their future machine activity.

Both Lord Rochdale and Mr. Macmillan can now face the industry's delegates at Harrogate this week-end with overwhelming confidence. Sniping there may be at individual aspects of the agreement, but, after so many years of campaigning for a degree of protection. the industry at large can hardly condemn either the Government or its negotiators for achieving at least a three-year standstill order, however the individual quotas are made up.

Without such an arrangement in prospect, the mood of the week-end conference would have been sternly critical. Many observers were forecasting an explosive undercurrent, only waiting to be brought into the open by an ill-judged comment.

Vital Talks

The three-man delegation of Lord Rochdale, Chairman of the Cotton Board, Sir Cuthbert Clegg, a Vice-President of the Cotton Spinners' and Manufacturers' Association, and Mr. James Broatch, Director General of the Cotton Board, reported on the negotiations at a full meeting of the Cotton Board in Manchester today (Tuesday).

Later details of the talks were being outlined to representatives of all sections of the industry who constitute a special Consultative Committee set up by the Cotton Board to consider the import problem.

A spokesman said it was unlikely facts and figures would be given at the end of the day about the quotas Hong Kong was prepared to accept and any of the conditions attached to them. It might well be, he said, that the industry's leaders would want to go back to their own organisations to discuss the proposals and contact might also be necessary with the Government.

From unofficial sources, a clearer picture of the situation is emerging; conflicting reports arriving from Hong Kong while the negotiations were in progress left Lancashire bewildered about just what was going on.

The situation seems to be that no agreement has been signed. The Lancashire delegation is believed to have returned with a provisiona. agreement which, of course, is subject to the industry approving the terms on which Hong Kong is prepared to do a bargain.

The industry is anxious to know by how much the delegation departed from its original position when it put forward fresh proposals to Hong Kong negotiators at a time when the talks appeared to be heading for breakdown. The underlying fear is that, although textile leaders in Hong Kong have indicated they have made a "sacrifice" to meet Lancashire's wishes, the "ceiling" figures on exports they are prepared to accept would make no material impact on the present problems of the United Kingdom cotton industry.

Some millowners fear Hong Kong may be willing only to limit shipments at about the current level. This would bring little comfort to Lancashire apart from, perhaps, providing a little more confidence from the knowledge that the volume of arrivals would not get any higher.

Export Survey

Confirming the opinions expressed by contributors in the *International Cotton Bulletin*, the latest statistical review published by the Cotton Board tabulates the decline in production and exports—an almost universal factor in cotton textile trading just at the moment. In the second quarter this year, there was a drop of about 6 per cent. in output in all major producing countries, as compared with the first three months of the year, whereas activity was about 9 per cent. lower than the corresponding quarter a year ago. France was the only important country where production showed any expansion on the 1957 level.

World trade in cotton fabrics declined by 16 per cent. in the second quarter, as compared with the same period last year. Hong Kong, significantly, was the only country to increase its shipments substantially over this period. Details of overseas trade attained by leading exporters of cotton, rayon and synthetic cloth during the first half of this year and last are shown in the table on this page.

Although Lancashire shipments showed a further decline during this period, other countries were equally affected by the general unwillingness of buyers to operate with any freedom. Japan's shipments were maintained as a result of very much improved business in the man-made fibre section, as cotton cloth exports were sharply reduced. At their current level, the quantity of Lancashire-made goods now being sent abroad is not very far in excess of those exported from France and Germany.

The Cotton Board's report has no fresh light to throw on the situation, most of the comments only accentuating the general gloom. Yarn output in August, allowing for working days lost through normal holidays, was 21 per cent. lower than in November 1957, while cloth production was 14 per cent. down.

As a sidelight on the talks between British and Far Eastern trade leaders on the future of imports, the Board refers to the concern expressed in American trade circles about the increasing threat of arrivals of made-up goods from Hong Kong. Several trade associations in the United States have urged the Washington Government to seek a voluntary limitation of exports on the same lines as the existing agreement with Japan.

The United States Government is to finance a five-year programme of fundamental research estimated to cost £76 000 at the Shirley Institute, Manchester, the headquarters of the British Cotton Industry Research Association. The work will centre on the weaving and finishing departments with the object of developing new or improved uses of American raw cotton.

The grants have been made available from funds at the disposal of the U.S. Department of Agriculture from the sale in this country of surplus agricultural products.

Financial backing expected to involve up to £100,000 is also to be given to the Association by the National Research Development Corporation for long-term research in the spinning department.—*All Rights Reserved.*

STOCKS OF GUNNIES DECLINE FURTHER

CONCERN OVER RAW JUTE PRICES

THE recent decision of the Committee of the Indian Jute Mills' Association to continue the minimum price agreement, entered into by its members towards the end of February this year, shows that, despite the sizable reduction in stocks of jute goods with mills in recent months, the industry is not yet out of the woods. Reviewing the recent trend of prices in the jute and gunny markets, the Committee found that there had been a persistent and unjustified depression of prices. In addition to maintaining the minimum prices, the Committee made a strong recommendation to the members of the I.J.M.A. to accelerate their purchases of raw jute to the extent of three months' consumption, as a step to arrest the unwarranted decline in prices. The Government of India, which is also said to be perturbed by the recent fall in prices, has expressed its approval of and full support for the decisions of the Committee of the I.J.M.A.

Since the announcement of the I.J.M.A. decision, there has been no improvement in the raw jute and jute goods markets, despite the more favourable statistical position as at the end of September and reports of larger burlap consumption in the U.S. during September. Prices continue to be depressed. This is attributed to heavy selling in the futures market, but this explanation only begs the question. There must be a cause for speculators preferring to sell rather than buy. What is it?

The stocks of jute goods with mills as at the close of last month show a further substantial fall, notwithstanding an expansion in output during the month. At 108,600 tons, the stocks are lower by 8,600 tons, as compared with those at the end of August. With this fall, the downward trend in stocks has been maintained for the third month in succession, having shrunk from the peak level of 134,000 tons at the close of June last. It will be recalled that the stocks with mills began to rise from November last onwards when they stood at a low of 71,000 tons and the upward trend was almost maintained till the end of June last, when the stocks stood at 134,000 tons, a rise of more than 50 per cent. in seven months. This increase has, no doubt, been partially wiped out by the reduction of 25 400 tons during the first quarter of the current year (1958-59), but they are still 31 600 tons more than those at the end of September last, as will be seen from the following comparative table:

(In tons)

	As on 30th September 1958	As on 31st August 1958	As on 31st July 1958	As on 30th September 1957
Hessian	17,000	19,000	19,900	30,300
Sacking	79,800	86,400	89,600	39,100
Others	11,800	11,800	12,400	7,600
Total ..	108,600	117,200	121,900	77,000

The decline in stocks during September was more precipitous than that noted in the previous month and was shared by both hessian and sacking. With the fall of 2,000 tons, hessian stocks have dwindled during the last three months by 14,000 tons and stand at the lowest level in recent years. At this level, the stocks represent only half a month's output. Sackings have dwindled by 6,600 tons on top of a decline of 3,200 tons in the previous month and the aggregate fall of 9,800 tons in two months has brought the sacking stocks equal to seven weeks' production.

As stated already, production of jute goods during the month of September went up by 2,100 tons, thus reversing the previous month's trend, when the output dwindled by 4 600 tons. The bulk of the increase in production, which is mainly to be accounted for by the increase in the number of hours worked at 197.5 to 209.0, has occurred in sacking, as the following comparative table shows:

(In tons)

	September 1958	August 1958	July 1958	September 1957
Hessian	35,900	35,400	35,300	33,700
Sacking	45,700	44,300	49,000	47,300
Others	5,700	5,500	5,500	5,000
Total ..	87,300	85,200	89,800	86,000

Though the increase in hessian output has been small, it has helped maintain the upward trend since June last and raise it to the highest level since April 1957. The rise of 1,400 tons in the output of sacking is in distinct contrast to the fall of 4,700 tons noted in the previous month.

The total production of jute goods for the first three months of the current year (1958-59) aggregates 262,300 tons, as compared with 253,800 tons in the corresponding period of 1957-58. Production in the first nine months of the current calendar year comes to 796,500 tons, which, as compared with that (761,700 tons) in the corresponding period of last year, represents a fall of 34,800 tons.

The decline in stocks with mills as at the end of September 1958, despite the higher production during the month, has been mainly due to the higher offtake of gunnies, as will be seen from the following figures of shipments (gross) based on bills of lading during the month:

(In tons)

		Bags	Cloth	Total
Hessian—				
September	1958	1,817.0	36,240.7	38,057.7
August	1958	6,300.8	29,163.1	35,413.9
September	1957	3,460.1	31,666.7	35,126.8
Sacking—				
September	1958	41,214.0	709.2	42,013.2
August	1958	31,358.1	292.3	31,615.4
September	1957	52,124.2	547.0	52,671.2

The break-down figures of despatches of gunnies from mills during the month under review also show an encouraging trend, as will be seen from the following table:

(In tons)

				(*For export*)		
				September 1958	August 1958	September 1957
Hessian	.. .. ..		..	30,234	34,862	36,685
Sacking	.. .. ..		..	44,977	39,328	47,602
Others	.. .. ..		..	3,404	3,444	1,960
		Total	..	80,615	66,634	86,147
				(*For internal consumption*)		
Hessian	.. .. ..		..	1,728	1,447	1,753
Sacking	.. .. ..		..	10,357	8,307	11,370
Others	.. .. ..		..	2,486	1,986	1,484
		Total	..	14,581	11,740	14,607
				(*Grand total*)		
Hessian	.. .. ..		..	37,962	36,309	38,438
Sacking	.. .. ..		..	52,344	47,635	58,972
Others	.. .. ..		..	4,890	5,430	3,444
		Total	..	95,196	89,374	100,764

With the increase in external as well as internal consumption during the month under review, the sharp fall noted in August has been made good to some extent. But the total despatches for export during the first three months of 1958-59 are lower, amounting to 246 200 tons, as against 254,400 tons in the corresponding period of 1957-58. There has, however, been a slight improvement in the deliveries for internal consumption from 37,200 tons to 40,400 tons.

Consumption of burlap in the U.S. during September is also reported to have gone up by 8.7 million yards to 75.7 million yards, in refreshing contrast to the slight decline of 1 million yards in the previous month. It is too early to draw any definite conclusion from this trend

INTERNATIONAL TEA AGREEMENT

NEED FOR REVIVING IT EVEN ON A LIMITED SCALE

VERY little can be gathered from the brief *communique* issued by the representatives of the Ceylon and Indian tea industry at Colombo on the 10th October, to which a reference was made in our last issue. With such major producers as Indonesia, East Africa, Japan, China and Pakistan outside the Colombo conference, there was, however, need for restraint in any decision taken at Colombo. What representative producers in the two countries decided at Colombo was to agree in principle on the desirability of reviving the International Tea Agreement. Secondly, there seems to be an implicit understanding that an international agreement would not be practicable if it is to await the entry of every producing country into such an agreement. The Colombo conference had to face a number of questions not only likely to be asked by producers outside the two countries directly concerned but also producers within the two countries themselves.

The 1933 agreement was not the first but the third attempt at an international agreement for tea. But it was most successful and existed till March 1955. Tea has been one of the most important commodities in world commerce for more than a century and in India's trade with Britain it was by far the largest commodity of export. During the great economic depression of the early 'thirties, one of the commodities to be most severely hit was tea, and the International Tea Agreement of 1933 took its form from the world-wide recession in tea trade.

The world tea industry of 1933 was particularly well placed to reach quick agreement, because the leading world producers were controlled by two countries, namely, Britain and the Netherlands. The tea industry of India and Ceylon was controlled largely from London and the Indonesian tea industry was almost wholly owned and controlled from Amsterdam. An agreement between these two controlling interests could cover the world tea trade. The rest of the world tea trade comprised Japan and Chinese exports which formed an insignificant part of the total.

Change in Position

In 1958, the position is totally different. India, Ceylon, Indonesia and Pakistan, comprising the major producers, are independent to pursue their own policies even if the tea industry in all the four countries are owned and controlled by interests outside these countries. In fact, in all these producing countries, the Governments have come to take an intimate interest in the affairs of the tea industry and no agreement is possible without their co-operation and support. In other words, the place of decision has shifted from the West to the producing countries.

Many things have happened in the 25 years since the 1933 International Tea Agreement was signed. India has been divided and Pakistan now forms a separate country with its own rights for export quota. Indonesia suffered greatly during the war and produces only about 50 per cent. of what it did before the war. Ceylon's output has increased by 173 million lbs., a rise of 77 per cent. over what it produced in 1933. Ceylon's export has risen from 290 million lbs., in 1934 to 368 million lbs. in 1957, a rise of 70 per cent. or 149 million lbs. As for India, without Pakistan, the rise has been by 261 million lbs. in production and 89 million lbs. in export. Between these two countries, namely, India and Ceylon, there has been a total rise in production of 434 million lbs. Their combined exports have increased by 238 million lbs. In other words, these two countries between themselves have contributed to a world increase of over 50 per cent. since 1933 both in production and export.

The most startling increase in production and export has, therefore, taken place not in East Africa or any other part of the world but in India and Ceylon. The move for a world agreement should, of course, emanate from these countries, since both in terms of their industries, their respective national economies and the sizes of the trade they both control in the world impel them towards protective measures which would cover them both. It was, therefore, natural that India and Ceylon should have first got together and considered the possibility of an agreement relating to their most important item of export trade.

In the development of the tea industry in Ceylon and India, the principal characteristics were different. The tempo of expansion in production was also dissimilar. For instance, Ceylon's expansion of production was by 77 per cent. as against 63 per cent. of India. Ceylon's permitted export quota in 1933-34 was 228 million lbs., as against 368 million lbs. actually exported last year. Whereas Ceylon's exports increased by 70 per cent. during the 25-year period. India's export increased by only 26 per cent. Whereas in Ceylon, internal consumption rose from 6 to 30 million lbs., in India it increased from 66 to 238 million lbs. These vital changes posed dissimilar problems to the two countries. Although Ceylon's internal consumption rose by 24 million lbs., during the same period India's absorption increased by 172 million lbs. In other words, Ceylon's dependence on the growth of the internal market is considerably smaller than India's and, according to Ceylon, any evenly calculated rise in export quota between India and Ceylon for a new agreement would spell gigantic problems. Even if India fulfils her second Five-year Plan target of 700 million lbs. by 1961, she would have a home market capable of absorbing 250 million lbs., leaving the same 450 million lbs. for export, as in the past few years. For Ceylon a 400-million lbs. production by 1961 would leave her with an exportable surplus of at least 370 million lbs. So Ceylon's case is that she should allow an outlet for her increasing production. For India the question posed is whether an international agreement would be worthwhile, if each country is allowed to expand at will and then to demand a disproportionate increase in exports for the reason that their expansion has been greater than their neighbours. If, on the other hand, internal production is to be restricted, it would more severely hit India than other producers, because, in addition to maintaining its share in the world market, there is a lustily growing internal market of considerable expansive potential.

It was, therefore, natural that, while agreeing to the principle of a world agreement in tea, the *communique* issued by the representatives after their Colombo meeting could not expand into the details of an agreement.

East Africa

Another problem posed at Colombo was: What about other producing countries, particularly East Africa?

The development in East Africa has been drawing more attention in the rest of the tea world than the actual figures of production or export would seem to warrant. In 1934, East Africa had a total production of 10 million lbs. The territory exported 7 million lbs. in that year and retained 3 million lbs. for internal consumption. By 1957 the same territory was producing 73 million lbs. and it exported 66 million lbs. For internal consumption 7 million lbs. were retained. During the period, internal consumption advanced by 133 per cent. whereas production increased by 530 per cent. and export by 775 per cent. Expressed in percentages, the threat posed is alarming, but, taken as a percentage to world production and exports on the combined Indo-Ceylon production and export, the East African threat falls into more modest proportions. East Africa's total exports in 1957 formed only 8 per cent. and production 5 per cent. of the combined output of India and Ceylon in that year. It would, of course, be wrong to judge the East African threat merely by the present weight of output and export of this colony. To what extent could it expand? How soon would it be able to overtake the gigantic production levels of India and Ceylon?

It would be foolish to overlook the fact that East Africa is nearer to the Western markets where most of the tea is sold and, by geographical and political facts, East Africa enjoys certain advantages denied to both independent India and Ceylon. Another fact of considerable importance is that East Africa produces just the kind of common teas which is the hardest to move and forms the largest part of India's output. About 350 million lbs. of Indian common tea is pitted against 70 million lbs. of the same kind of tea from East Africa. The East African threat is, therefore, not evenly spread over to the total tea produced in India or Ceylon but against the limited quantity of common teas in India. The quantitative comparison, therefore, has to be related to the common teas in the two countries. Then, it is a more serious problem than a comparison of the total weight of production in the respective countries. It is calculated that, other things being equal, the freight rates, insurance and the cost of financing for a shorter duration in transit allows East African teas an advantage of 9d. to 1s. per lb. over Indian teas.

The abolition of the export duty in India would reduce the margin which works in favour of East Africa to about 3d. to 4d. a pound. Apart from the fiscal measures directly affecting tea and the natural advantage enjoyed by East African producers, there is the question that the simultaneous policy of maximisation of wages in India increases costs; the African producer has not to contend with such a problem.

India's Own Creation

The African producer is free to introduce innovations in mechanisation or the reorganisation of planting in such a way as would reduce the cost on manual labour. The Indian policy is diametrically opposed to such basic changes in employment. These and the general attitude to privately-owned enterprise, combined with indiscipline among labour, are forcing not only repatriation of capital invested in Indian tea gardens but directly contributing to the speed of development of the tea industry in East Africa. The East African competition is, therefore, something of India's own creation and it is not a mere inclusion of East Africa in a world agreement that would overcome the marginal advantage directly created for East African benefit by the various Indian and Ceylon policies. If the discussions on a world agreement bring these facts out to the full realisation of the Government of India, they would serve a salutary purpose. If these advantages were denied to East Africa, the quantitative weight of East African production and export would have very small influence on the exports of India and Ceylon.

Even if a world agreement cannot be contrived on the basis of export regulations or production in each country, there are several non-regulatory and beneficial activities possible within the framework of a world agreement. One is the organised collection of tea statistics and market intelligence and their periodical dissemination to the world community of tea producers. Another is economic research in tea. A third is the collection and dissemination of information on technological aspects of tea. A fourth is a world organisation for the promotion of tea consumption. A fifth is the study and representation on fiscal and restrictive practices affecting world tea trade and consumption. India is not in a particularly disadvantageous position even if its export quota is reduced in relation to Ceylon, for the reason that India has a much bigger potential of internal expansion than any other producing country. It is not beyond the ingenuity of Indian producers to arrive at a formula which would satisfy Ceylon's complaints on a comparative quota of 1933 being applied to 1958. The framework of a world tea agreement to which India can give shape should not be made infructuous merely for the reason that other producing countries have not joined this scheme at the initial stages.

COMMONWEALTH TEA TRADE

Consumption of tea per head in the United Kingdom in 1956 reached the highest level yet recorded—that of 10.1 lbs.—says a review of plantation crops just published in London by the Commonwealth Economic Committee. Of tea exports, the review notes that the record world figure for 1956 (1,140 million lbs.) largely reflected the increase in the Commonwealth, where consignments from India reached the new high level of about 524,000,000 lbs. The bulk of the recorded trade in tea continues to be carried on between Commonwealth countries. Supplies to the United Kingdom continue to represent one-half of world imports of tea—other Commonwealth countries and the United States together accounting for most of the remainder.

The report records some recovery in 1956 in imports of tea into Commonwealth countries as a whole (mainly as a result of the large shipments to the United Kingdom)—although the high figure of 1954 was not equalled. At the same time, consignments from Commonwealth producers reached a record level of 940,000,000 lbs.—shipments from India being particularly large—with the result that the export balance of the Commonwealth rose to one of the highest figures recorded. The report notes that, outside China, the bulk of the world's tea consumption is in the Commonwealth, the high level of use per head in the United Kingdom and the immense population of India making these two countries the greatest markets.

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

ROLE OF PRIVATE ENTERPRISE IN ECONOMIC GROWTH

STATE MUST ENSURE HEALTHY COMPETITION AND NOT MONOPOLIES

By Neville N. Wadia

CHAIRMAN, BOMBAY DYEING AND MANUFACTURING CO., LTD.

THE object of economic growth in a democracy is to supply the material wants of a society, which already enjoys freedom of speech, association and religious worship. This is achieved by giving the maximum scope to the individual to develop his talents for the benefit of all concerned. In a totalitarian State, the primary object is political and military power, usually at the expense of the fundamental freedoms, the desires of the citizen being of secondary importance.

In a country wishing to develop rapidly, all must put their shoulders to the economic wheel. The totalitarian method would be to bind men and resources to its spoke and to sacrifice freedom ruthlessly and permanently to the pace of progress. Where freedom reigns, the rate of advance is subject to the limit, to which the people are prepared or can be persuaded to allow temporarily an encroachment on their liberty. In the early stages, when the effort required to turn the wheel is the greatest, the encroachment may be extensive but will only be tolerated if relaxation is assured as speed is gained.

The primary duty of the Government of any country is to show the way by presenting to the nation a carefully considered realistic plan, to guide and direct its efforts and to channel its financial resources into projects which should be given priority. It should keep a constant watch on signs of inflation, and in particular the amount of deficit financing.

The road to prosperity is so broad and long that there is little point in the argument as to what should be done by the State or the citizens on their own. Few will dispute that roads, railways and large irrigation works may be the concern of the State. For the projects which the Government decides to undertake it is most important that it should employ the best means to carry them out. While undoubtedly credit must go to the engineers who are responsible for the Bhakra Nangal dam, the fact that the Government of India engaged the most experienced man available is most praiseworthy. If the State devotes its attention to major schemes of this nature, it will find that it is as much as it can do with the limited financial and administrative resources at its disposal, besides performing its primary duty of governing the country. Turning to the other end of the industrial scale, none will dispute that light industry and consumer goods are best handled by private enterprise. Even where the picture is not so clear, the criterion should be: "Who can do it most efficiently, quickly and economically?"

Difficult Operation

Planning itself is no easy task, but implementing a plan is a most difficult operation. The shortage of good executives, technicians and skilled artisans immediately becomes apparent. It is, therefore, vitally important that every one of them must not only be utilised to the best advantage, but must be made enthusiastic enough to give of his best. Only the spirit of these men will lead the nation to economic victory.

Most projects in the private sector are designed to bear fruit in a comparatively short time, thus providing fresh capital for subsequent ventures. Only with more individuals striving to develop more industries can the wealth of a nation grow more rapidly. The financial resources, therefore, for the private sector must be generated from within, while those for the Government projects are derived from taxes and loans subscribed by private institutions and individuals.

Excessive draw off by these means will make the private sector anæmic and result in diminishing returns. On the other hand, inadequate transport due to lack of funds, may stifle distribution and cause indigestion. But the basic fact remains that, in a democracy, the Private Enterprise cow must be adequately fed, if she is to produce enough capital to meet all the needs of the nation.

As long as the wealth inside the country is insufficient to meet its capital requirements, it must be augmented by supplies from abroad. If these are made available on a Government level, there is the necessity of guarding against political strings. The international organisations, which are assembled here at this moment, offer alternative sources. One would like to see greater use being made of them. This could be brought about by larger contributions from their members, and by keeping rates of interest in line with those prevailing in the borrowing countries. Foreign private investment is completely free of political considerations, but must be weaned away from its preference to stay at home. If the climate is sufficiently attractive, there will be many joint ventures bringing in not only capital but the "know-how" essential to go with it. Capital in this form, of course, will be subject to the laws of the State, and the alterations made from time to time by its Parliament.

Basic Difference

To say that private enterprise is interested in industrial development is to utter a platitude. In underdeveloped areas, the State takes up industrial promotion with the object of covering the lag. Thus, both sectors have the same purpose. There is a vague feeling that the difference lies in the attitudes of the two to profits, that private industry alone is interested in profits and that State undertakings are, or should be, indifferent to them. This must not be so. Whether in private industry or in State enterprises, inability to make both ends meet and have a little over is a sure indication that something is wrong somewhere. Either it is bad management or there is some other consideration to which the objective of adequate returns is subordinate. And this is a point which cannot be too strongly emphasised—there is in industry no more important motive, which can be economically and basically justified and more honestly expressed than the profit motive. It is ironical that all too frequently a well-managed company is treated with suspicion, because it makes good profits; whereas a poorly run concern which loses money, often gets undeserved sympathy.

The benefits which a well-managed and prosperous industrial enterprise brings to everyone, are far and wide. What was a poverty-stricken village yesterday, is a flourishing small town today. Local raw materials are consumed in volume—ancillary workshops spring up to feed the main industry—subsidiary industries arise feeding on it. With more money to spend, the commercial life of the community grows apace. Products beyond the pockets of the previous inhabitants are now in daily demand. New shops spring up to supply them. More houses are built, and with the growth of the community come new schools, hospitals, roads and recreation. A middle class is born and with it ambition, initiative and enterprise anew. Who amongst us can appreciate what our home town looked like when our fathers were boys?

Private enterprise has many advantages. There are benefits for all who participate in it, whether he be investor, owner, technician, worker or consumer. The investor has the choice of spreading his investments, not only in the whole range of industries, but choosing which particular units suit his purpose best. Some may be interested in a steady income, others may look for capital appreciation. Whatever it may be he has the freedom to use his intelligence and to place his hard-earned savings with the concerns he trusts.

None will deny that management, in the private sector, is free to act and take prompt decisions. The ability of an executive to judge and operate in the markets in which he buys his raw materials or sells his finished products, is one of the greatest factors in the results of the year. A successful managing director must have the personality to lead his team, the knowledge to demand their respect and, after studying the facts and listening to the opinions of his lieutenants, the courage to take the right decision. He must be able to select and adopt new ideas, and organise their implementation. There are many qualities required to make a good executive, but few who have sufficient of them. That there is room at the top is true everywhere in every business, and there is no limitation to anyone proving his worth.

It is said that an ounce of practice is worth a ton of theory. Apart from the employment a private industry provides him, the technician is given the opportunity to test his theory and develop his individual talents. The confidence he gains with the respect for his opinions will strengthen his desire for constant improvement. What is of supreme value is the recognition which his worth is bound to receive in a free economy. So long as it is fully recognised in the concern where he is working he will not seek to go elsewhere. And so long as he is free to go elsewhere, the concern will give the fullest recognition to his worth. Without an alternative employer to go to, this advantage is denied to him.

State and Labour

The remarkably high standard of living of the worker in the industrially advanced democracies is due to the continually rising wages made possible by the share he has acquired in the prosperity of the industry in which he works. He has been free to demand and fight for his rights, and in the vast amount of cases agreement has been reached with a ready understanding between his representatives and those of management. When negotiation has failed, reference has often been made to a third party, usually the State. In a mature economy, direct negotiations are the rule, and third party awards, even when the third party is the State, are given with a view to healing wounds and surmounting emergencies. In the case of a Government-run organisation, reference to a third party is difficult, as the employer is the State. However strong the case of a particular section of Government workers for an increase in pay, the repercussions and the cost of applying that increase to all Government servants, frequently, makes even independent awards impossible to implement. Such decisions are difficult for the worker to appreciate, and lead to discontent and frustration.

Variety is the spice of life. No private concern can ignore this. Its object must be to please the customer just that much more than its competitor, and to keep ahead necessitates constant change. One of the greatest benefits to consumers is the choice made available by competition. Quality, price, style and pattern are all designed for their pleasure.

Value of Competition

Modern competition is a complex picture, consisting not only of these points, but such things as reputation, service, market research, advertising and public relations. But the advantages of competition would take many chapters to recount. Its use as a cut-throat weapon to eliminate all others in the field, is a thing of the past. Several countries have taken steps to ensure its continuation—the Anti-Trust Laws in America and the Monopolies and Restrictive Practices Act 1948, in England, are two good examples. Even the giants of industry in those countries dare not expose themselves to the law.

In advanced countries where competition abounds, the duty of the State is to ensure that the public are sold wholesome, healthy, hygienic and not fraudulent goods. As long as there is sufficient to meet the demand, price and quality take care of themselves.

The elimination of competition sets in train a series of undesirable consequences. It destroys the criterion by which production can be gauged. Without competition, there is no way of telling whether output is efficient or economic. The public must take what they are given, not choose what they like. Almost any quality has to be accepted at any price. No amount of self-criticism can replace the hard school of keen competition. Those, who have never been through it, belittle its value and display a false sense of achievement, when projects go into production years behind schedule at costs far exceeding the original estimates. A mentality is created which just assumes that some one must find the extra funds and little attempt is made to work within a capital or revenue budget. In the case of a private project, the management have to make do with the capital subscribed, and account for every penny to a board of experienced businessmen. Executives who are

ROLE OF SOCIAL SCIENTIST IN POLICY-MAKING

HIS LIMITATIONS ANALYSED

By Dr. M. H. Gopal

PROFESSOR OF ECONOMICS, FORD FOUNDATION UNIT, UNIVERSITY OF MADRAS

RECENTLY in his Laski memorial lectures, Prof. D. R. Gadgil of Poona remarked that the Planning Commission had proved impotent and failed to insist on right policies, because, as an advisory body, it mixed itself up with the actual process of deciding public policies. This raises the basic issue of the relationship between the policy-making politician and the social scientist adviser. Some of the implications of this relationship are analysed below.

In all countries, and particularly in underdeveloped ones, the desire for rapid progress in all directions in the social field is intense. Enthusiasm and efforts to develop at a rapid pace characterise specially the newer democracies where inexperience in administration and in policy-making is very common. The pattern of the Indian Five-year Plans as evidenced from the current resources crisis and even the composition of the Planning Commission as commented upon by the Lok Sabha Estimates Committee (21st Report, April 1958) are examples of enthusiasm overstepping experience.

Constituents of Policy

Policy may be defined as the conscious and rational adjustment of the available means in a given environment to a given end. It may be either at the national level, i.e., public policy, or at the private level, i.e., business policy as in a corporation. Although the following analysis applies *mutatis mutandis* to both levels, the paper has in view policy at the public level.

In the course of policy-making three categories of problems arise, and these may be called the constituents of social policy. There is, first, the *foundational type* of policy, for instance, the socialist pattern of society, land reforms, and the Hindu code. This category of social policy affects the very basis of society. Next, we have the *structural type*, such as, changes in the tax system—introduction of expenditure and wealth taxes—deficit financing and free trade *versus* protection. This category touches, not the social base, but only the superstructure. Finally, there is the *adjustmental variety*, for example, changes in bank rate, volume of note issue, the rates of taxation, etc. Another way of looking at the constituents is on the time basis of the effects. Foundational policy is *secular* in approach, structural one is of the *long run* variety, and the adjustmental one pertains to the *short period*. Foundational policy affects the fundamental elements of society and is mostly qualitative. Its implications are multi-sided, bringing in different social sciences for the effectiveness of the analysis; thus, the socialist pattern may bring in the economist, public administrator, sociologist, and so on. Structural policy, relating to the details of economic and social organisation, is less fundamental and is both qualitative and quantitative, while the adjustmental type is very largely quantitative. Both in the formulation and in the operation of the former, fewer facets of social sciences are involved, while the latter, most often, is unicentred.

Whatever the variety of policy, the policy-maker, whether he is one or many, has neither the time nor the technical competence to weigh all the causes and effects. While he has the power to legislate and even to execute, he does not have the knowledge of the implications. He, therefore, has to depend on the technical man to advise him on important policy aspects—advisability, consequences, cost and so on. And here enters the social scientist with his knowledge and technique.

Role of Social Scientist

Any kind of policy involves three distinguishable stages. There is, first, the *preliminary stage of survey and collection*. A problem having been posed by the politician, (say, the role of the public sector), it is necessary to obtain a knowledge of the background in which the policy originates and is to operate, to delimit the problem and to size it up correctly and state it and to collect the relevant statistical and theoretical data. This is to get an idea of the main structure of the problem and would comprise the main elements of aim, situation and possible action. This is the stage where analysis predominates. Next comes the *planning and formulating stage*. This is a stage of synthesis; it deals with the dimensions of the solution in terms of its economic and social cost, the clarification and defining of the aim in terms of the alternatives, the assessment of the data and interactions in terms of time and space and the projection or forecasting of the extent to which the policy will succeed and affect the environment. For, all solutions, that is, policies, must be in terms of available resources and anticipated developments. The forecasting may be based on empirical data or on theoretical analysis of causal connections. Finally, there is *the stage of execution or operation of the policy*.

First Stages

The social scientist could help greatly in the first two stages in many ways. First, in pointing out the factors bearing on the policy, the interactions of different policies (e.g., effect of changes in the Hindu Code on the Estate Duty), the long- and short-range effects, the available means, alternatives to the policy, and the financial, cultural, social and political implications. Secondly, he could act as a link between the successive administrations, for, whether it is a democracy or a dictatorship, the policy-makers, by and large, tend to change. For instance, in Britain, the policy of nationalisation has undergone changes under the Labour and Conservative Governments. In India, the tax structure has been changing even basically with successive finance ministers. In the U.S.A. as well as in the U.S.S.R., changes may be noticed. In this process of change, the social scientist would act as a bridge and make any transition smoother even as the permanent Civil Service does in British administration. Thirdly, the social scientist could, in the process of advising, build models. One of the areas in policy-making where the social scientist can best—and perhaps, he alone—help is in the region of forecasting the cause and repercussions of the policy. Forecasting involves many difficulties such as unascertainable changes in data, but these can be resolved, specially in medium period forecasting up to, say, five years by studying available trends in population, consumption, etc., and by assumptions of rational behaviour. "Perhaps the best course is to be short on forecasting but long on assumption."

In the process of formulating, projecting and advising on policy, the social scientist, particularly the economist, could utilise 'models,' which merely reconstruct in a simplified way the existing situation, study the reactions and interpret back. While remembering that the multiform reality cannot be reproduced completely in the model to elucidate a concrete case and that statistical tests never can prove a certain causal relation to be true, the device is useful in defining and concretising the problem. The closer the reconstruction is to the real situation and the more significant variables it includes, the less invalid its suggestions would be. To perform these functions, the social scientist is better qualified than anybody else, by training, tradition, technique, objectivity and anonymity, so essential for a proper and all-sided assessment of the problem and the solution suggested.

Three Limitations

Although there is thus scope for a social scientist in the matter of tendering advice in policy-making, there appear to be some basic limitations to his effective achievements. These limitations are of three types. One is the intrinsic limitation of the social scientist's own knowledge; for instance, a problem like the socialist pattern of society or prohibition or land reforms is many-sided, both in its base and in its economic, legal, social and other implications. But the social scientist is becoming more and more of a specialist and is, for instance, either an economist or a lawyer or a sociologist and that too of a particular hue or branch. The value of advice of any one of these scientists, therefore, represents a very limited, partial and one-sided view of the problem, similar to the blind man's impressions of an elephant. As the whole is often greater than the parts put together, the politician policy-maker becomes really the final authority not only to decide but also to assess the aggregative effects of the policy. A second limitation is that it is not always that a policy-maker, who is mostly a politician, whether at the government or the legislature level, would care to accept the advice of the technical man simply because it is not in agreement with his own preconceptions.

There is, also, a third limitation arising from the hesitation of the technical man to speak out. The intellectual, interested in policy-making, is either one who enters the bureaucracy—for example, an economic adviser or a member of a panel, or one who is unattached, for example, a university man. The former exercises advisory and technical functions *within* a bureaucracy and has a staff function to perform. In such a performance certain restrictions arise. The first is in the process of recruitment of the intellectual. The story of underdeveloped countries is strewn with examples of the policy-maker selecting his technical staff not always for their scientific knowledge and experience and independence of judgment. Secondly, when an intellectual gets into a staff position, he naturally is affected by certain extraneous but personal factors. Being human, his own advancement and security influence his thought, advice and action. There are, next, institutional or group pressures.

Further, there is the effect of bureaucratisation on the scientists' outlook itself. In effect, this converts the intellectual in a bureaucracy into a technician, who has to accommodate himself to the higher powers, ceasing to be a policy adviser and becoming merely a translator of the policy-maker's purposes into a programme of action. Most often, he may provide information but not even indicate his opinion. He accepts a dependency relation to the executive. There is also the further limitation of indeterminacy in a social scientist's findings. By tradition, training and approach, the scientist is hesitant to draw definite conclusions because of the presence of innumerable and uncertain variables affecting the situation. Such indeterminacy, however desirable in a scientist, is a drawback in a policy-maker, so that the man of action that the policy-maker is, naturally overlooks any advice tendered.

There is the second category of the intellectual, the unattached university man, for in-

NEW PRODUCTS AND PROCESSES

Tin-coating Cast Iron

A NEW process for tinning cast iron has been developed in the laboratories of the Tin Research Institute, England. Cast iron is a rather difficult material to tin because of its graphite content and in the past somewhat complicated processes have been used for this purpose. Moreover, the results achieved have not always been satisfactory. The new process, which is called the "Direct Chloride" process, is said to provide an uncomplicated solution to this problem. Its operation depends on preparing the castings by blasting with very fine grit coupled with the use of a special, but inexpensive tinning flux. The process may be used for tinning articles such as food-handling equipment, where a smooth hygienic coating is the first consideration. It can also be used for tinning cast iron bearing shells where a strong bond is the essential quality desired. Several companies in the U.K. and abroad are now using the process, which is said to be yielding satisfactory results.

Cotton Pulp

A new type of pulp for use in making cotton-content paper has been developed in the U.S. It is expected to be useful to paper manufacturers who have been using cotton rags as raw material but have been finding it increasingly difficult with the growing use of synthetic textile fibres, to obtain all-cotton rags. The new pulp is made from cotton linters, the fibres remaining on cottonseed after removal of the staple cotton. A chemical treatment is used to modify the natural molecule in the linters and obtain a tighter bond. As a result of the chemical modification process, stronger papers, it is claimed, can be produced than hitherto possible from pulps of this type.

Iron Ore Reduction

A method of reducing iron ore, which bypasses the blast furnace and may bring substantial savings in steel production costs, has undergone pilot plant tests and is said to be ready for commercial development in the U.S. A new corporation has been formed by the Republic Steel Corporation and the National Lead Company to promote the development. The process calls for reduction of iron ores under controlled atmosphere and temperature conditions in a rotary kiln. Temperatures are kept below the melting point of iron. Briquets containing from 90.7 to 97 per cent. iron, depending upon the type of ore, and ranging in weight from 5 to 25 lbs., are produced and, it is claimed, may be fed directly to open hearth, or electric furnaces.

Potassium Chloride from Sea Bitterns

A simple and economic process for the recovery of potassium chloride from sea bitterns, which are now largely allowed to go waste, has been developed at the Central Salt Research Institute, Bhavnagar. Bittern is the name given to the oily liquid which remains after the extraction of salt from sea water. India's annual production of sea salt is about three million tons. The bitterns let to waste after the recovery of sodium chloride have been found to contain appreciable quantities of potassium chloride and it is estimated that as much as 80 to 85 thousand tons of potassium chloride could be recovered from them. The researches carried out at the Bhavnagar Institute constitute the first and the most important step taken by the Government and the salt works in the country towards utilisation of this waste for the recovery of potassium chloride, which is widely used as a fertilizer in agriculture. The new process for winning potassium chloride from sea bitterns is as follows: The bitterns are concentrated to the required degree by solar evaporation and treated with lime slurry to precipitate the magnesium sulphate. The supernatant liquor containing mostly potassium chloride and chlorides of sodium and calcium is further concentrated until most of the sodium chloride and potassium chloride crystallise out. From the product, so obtained, potassium chloride is separated by further crystallisation.

Detecting Impurities in Drugs

An ionisation detecting instrument, which can identify large numbers of gases and vapours in parts per billion concentrations, has been developed in the U.S. It is said to work instantly. Concentration is measured in an ionisation chamber, excited by a radio-active substance. The new instrument is expected to be useful in detecting trace contaminants in drugs, chemicals, petrochemicals, petroleum, and certain steel metallurgical processes. In addition, it can be used for air pollution and industrial hygiene studies to detect, measure and control harmful toxic gases in and around plants. One large U.S. city is applying the device to determine the amount of toxic gases and vapours in the atmosphere and to enforce compliance with air pollution laws.

Detection of Ghee Adulteration

Here is a bit of good news for the housewife. She can now easily detect whether the quantity of *ghee* she got from her dealer is pure, as he says, or adulterated with *vanaspati* or other oils. This has been made possible with the help of a cheap and simple ghee testing kit devised by the Central Food Technological Research Institute, Mysore. The kit consists of a marked test tube, a sealed capsule containing a little acid, a sealed capillary containing some other chemicals, and a cutter. The testing itself is a simple process and can be easily understood and mastered. The main attraction of the kit, however, consists in its inexpensiveness. The entire kit (including chemicals) costs about eight nP and the recurring cost of each test does not exceed three nP.

SONE VALLEY PORTLAND CEMENT CO., LTD.

NO JUSTIFICATION FOR STATE TRADING IN CEMENT, SAYS MR. ANANDILALL PODDAR

ADDRESSING the Thirty-fifth Annual General Meeting of the Sone Valley Portland Cement Company, Ltd., held in Calcutta on 13th October 1958, Mr. Anandilall Poddar, Chairman of the Company, said that, now that the cement industry had proved its ability to meet the entire demand of the country at present and in the foreseeable future, the justification for the continuance of State trading in cement had to be reviewed.

The following is the full text of Mr. Poddar's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you to this the Thirty-fifth annual general meeting of the Company.

"With your approval we shall take the notice convening this meeting, report of the Directors and the audited accounts, which have been circulated and are in your hands for some time, as read.

"I am glad to state that the activities of your Company have considerably grown and despite the very old plant and worn-out equipment which came to the lot of the present management, the production of cement increased to 177,210 tons, as against 174,630 tons during the previous year. There was no reason why this figure would not have gone upto 200,000 tons, had not production been paralysed for nearly three months due to strike in your quarries which solely feed the works with limestone, the main ingredient that goes to make portland cement.

Important Role of Cement

"Gentlemen, I need hardly invite your attention to the important role that cement has to play in the building up of the country. Cement is among the basic requirements not only for industrial growth but in other fields of planned development as well, and as such the steady achievement by this industry is one of the most encouraging features of development under the second Five-year Plan. The output of this material in 1951 was of the order of only 2.7 million tons which increased to about 4.8 million tons in 1956 and by 1957 the total production had exceeded 5.6 million tons. The current year has made a still better stride and I am inclined to predict that production by the end of this year should be in the vicinity of 7 million tons.

"In order to be able to play its due part in this programme of expansion, your Company had duly offered its services and, as you may be aware, the Government of India has been pleased to issue necessary licence for increasing its capacity by another 750 tons per day. Unfortunately, however, the desired progress could not be attained due to lack of financial resources mainly on account of the delay on the part of the Industrial Finance Corporation of India to sanction our application for a loan of Rs. 1 crore which is still under consideration for the last 25 months.

Problem of Accumulating Stocks

"Meanwhile, gentlemen, the cement industry has been facing a new problem of accumulating stocks and consequent slowing down of production. In your own factory, in recent months, we have to carry over huge stocks at times and we do not know how the needs of the nation can be duly met under present arrangement of distribution and pricing. As you know, the State Trading Corporation, which has taken over the responsibility of distributing the entire production of cement in the country, was originally instituted mainly with a view to equalising the prices of imported cement and indigenous cement by a process of unified control and price pool. Now that Indian cement has proved its ability to meet the entire demand of the country at present and in the foreseeable future, the justification for continuance of State trading in the commodity has to be reviewed and I may be pardoned, if I take this opportunity to invite the attention of the authorities to the same. The days of selling cement on telephone instructions while sitting in comfort in air-conditioned chamber are almost over and in the near future a high order of salesmanship, publicity and organisation for storage and distribution throughout the country, and possibly in some neighbouring countries, will have to be called for. There is yet another aspect of the trade which requires close study and research, viz., the scope for exploring new and hitherto unknown fields of consumption to tide over the present glut in the cement market.

"I welcome the announcement of a hundred-mile Express Highway to be constructed between Calcutta and Durgapore. Projects like this, apart from rendering a potent field for the utilisation of a good quantity of cement, go a long way in providing work to thousands of unemployed and at the same time, by linking the growing industrial townships to the big marketing centres, make it possible for a good portion of the finished products to be more conveniently and economically distributed. It is high time that the State Trading Corporation now fulfils its pledge to assist from out of its profits in the welfare schemes and improvements in and around cement works and let me hope the approach of roads to your Japla factory from the Grand Trunk Road, on the one hand, and the Ranchi Road, on the other, would be remodelled and reconstructed.

Excise Duty

"Another great handicap to which I must refer is the crippling policy of the Government in seeking to realise excise duties on an ever-increasing scale, which at present, has reached the figure of Rs. 24 per ton starting from Rs. 5 only a few years ago. This works out to more than 40 per cent. of Rs. 59 which is the retention price now fixed for your cement. This is a situation which can hardly be sustained when the buyer's market has already set in.

"On the recommendation of the Tariff Commission, the retention price of your cement has been increased by Rs. 4.75 per ton with effect from 1st July 1958. This increase barely covers the increased costs of production resulting from sharp rise in the cost of stores, spares and raw materials and of labour and administrative expenses generally. Further rise in the railway freight rates from the 1st October of this year has aggravated the situation all the more and representations have been made to the Tariff Commission to review the fixation of the retention price in the light of new conditions thus obtaining.

"I am glad to be able to inform you that your Company has arrived at a suitable agreement with labour under which it can be confidently hoped that complete industrial peace will be maintained and henceforth our work will proceed unhampered both at Japla factory, as also at the Baulia quarries.

Great Changes

"Gentlemen, great changes are happening in the world around us and events are taking place which should be an eye-opener to all. After the recent installation of military dictatorship in Pakistan the field of democracy from Cairo to Djakarta has been confined to India and Ceylon and the repercussions of the world situation and of the situation in Asia on our socio-economic life must be far-reaching. We are proud of India's stand for democracy, freedom and tolerance as much in our internal affairs as in our international relations. The maintenance of this stand has been possible only through the untiring efforts of our great leader, Pandit Nehru. In whatever field we are and however much we feel that certain measures of the Government require examination and review, I have no hesitation in extending our wholehearted support to the national and international policies pursued by our Government and I trust we shall be equal to the task for building up a happy and prosperous India.

"In the end, I must thank all the executives, and the staff both at the head office as also at the works. I need hardly say that their fate is bound up with the industry as much as ours and I have every hope that with our combined efforts we would be able to take a further march towards progress and prosperity and I am absolutely sure that God willing, I would be able to present a still better picture when we meet next.

"I thank you all."

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting of the Company.

THE CALCUTTA ELECTRIC SUPPLY CORP. LTD.

TOTAL ENERGY SOLD HIGHER BY 107 MILLION UNITS

SIR HARRY BURN'S SURVEY OF ACTIVITIES

THE Sixty-first Annual General Meeting of the Calcutta Electric Supply Corporation Limited was held on 23rd October 1958 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the Chairman, presided.

The following is his statement, which had been circulated with the report and accounts:—

"In my last review I drew attention to the rules brought into force by the Government of India making it obligatory for our accounts to be made up to 31st March of each year instead of 31st December as was previously the case. It was, therefore, necessary to submit accounts covering the period of the 15 months that ended on 31st March 1957. The accounts now submitted cover the 12 months ended 31st March 1958, a fact to be borne in mind when studying the comparative figures shown in the revenue account and net revenue account.

"During the year under review there was an increase in demand from all classes of consumer. Comparison with the energy sold during the corresponding 12 months ended 31st March 1957, demonstrates the expansion that has taken place. The total energy sold increased from 1,394 million units to 1,501 million units, an increase of 107 million units.

Area of Supply and Power Sales

"The Company's area of supply covers 200 square miles. The approximate population in this area is 8½ million. As stated in last year's review, our constant aim and endeavour has been to supply power to run the wheels of industry and transport and also meet the increasing domestic requirements of our area of supply and thus make our contribution towards the prosperity and welfare of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the City.

"The bulk of the low tension load, both domestic and industrial, is concentrated in the heavily built-up areas of Calcutta itself, and also in Howrah on the opposite bank of the River Hooghly; whereas the high tension industrial load is spread over the whole area on both banks of the river and particularly so throughout the 20 odd miles from Calcutta and Howrah to the northern boundary of the area. Reference is made later on in this review to the commissioning during the year of the Bauria electrification scheme in the south-western portion of the area on the western bank of the river bringing further industrial load on to our system.

"Sales for power purposes cover industrial consumers, public water works, and small power for domestic purposes. Industrial consumption, most of which is supplied at high tension voltages, covers 90 per cent. of all power sales. The jute industry is the most important, accounting for 40 per cent. of high tension sales, consumption having increased from 331 million units to 359 million units. Trading conditions for the jute mills have again been difficult and the following extract from a recent Press note issued by the Indian Jute Mills Association is pertinent:—

"'The unrelenting competition from jute substitutes, the gradual introduction of new marketing methods such as bulk handling, the steady growth of jute manufacturing industries overseas—all these are indisputable facts, requiring no substantiation, and it is these factors which have dictated the policy of rationalisation and modernisation of the Indian jute industry.'

Industrial Consumption

"The mill closures that have taken place with the adoption of rationalisation have not resulted in a curtailment of the industry's total output and the impact on labour has been reduced to the minimum. Workers have been concentrated into the more efficient units just as loom hours have; the result has been no more jobs lost than would have disappeared in the normal process of wastage. Steel works and engineering workshops are next in importance with 21 per cent. of the total high tension sales. Consumption by cotton mills, chemical works, and paper mills is also of significance; the remaining high tension power consumers cover a broad cross-section of industry. In almost every case consumption has increased and I am glad to state that there were no major labour disturbances during the year. The increased demand for low tension industrial power reveals the activity of small works and factories, much expansion having occurred in the Calcutta and Howrah areas during the course of the last few years. It has been possible for the smaller concerns to manufacture many items which previously had to be imported; our sales increased from 85 million units to 91 million units. Consumption from public water works and sewage pumping rose from 65 million units to 73 million units and was mainly due to larger requirements from the Calcutta Corporation. There was again a marked increase from 43 million units to 50 million units in power sales for domestic purposes. Domestic power consumption has doubled during the last five years due to the growing use of domestic appliances and small air-conditioning units in private houses.

Sales

"The ordinary domestic and commercial load at the flat rate has grown steadily for some years past; 14 million more units were sold during the year, sales increasing from 199 million units to 213 million units. The increase is chiefly due to the construction of further houses and shops to the south of Calcutta and on the fringes of most small towns in the company's area of supply.

"Public lighting again shows a steady increase, reflecting the progress in the Calcutta Corporation's expansion programme. The Calcutta Tramways Company, Ltd. is the sole consumer for traction purposes and there is no immediate prospect of any increase in their demands upon us.

"There are seven distributing undertakings taking bulk supplies from the Company. Of the total sales of 44 million units 75 per cent. was supplied to the North Calcutta Grid of the West Bengal Government. Sales increased by 6 million units during the year.

"The increased consumption under special contracts was mostly due to sales of high tension energy under our special tariff to owners of large buildings. Sales increased from 44½ million units to 50 million units during the year. The special tariff gives considerable relief to our low tension network.

Expansion of Revenue

"The increased energy sold is reflected in the Company's revenues as can be seen from a comparison with the figures for the years 1954 and 1955 and the 15 months ended 31st March 1957, which are set out in the Directors' report. Receipts amounted to £7,467,390 (15 months 1956-57 £8,101,785). Apart from the receipts arising from the sale of energy, it will be seen from the revenue account that miscellaneous receipts show a large increase. Under this head has been included £43,120 for the hire of the jetty crane at our new Cossipore generating station for the unloading of steelwork required for the extensions to the Tata Iron and Steel Company. Expenditure, including the depreciation charge of £843,551, amounted to £5,577,904 (15 months 1956-57 £5,907,907 including depreciation £999,579).

Revenue Expenditure

"Coal prices and railway freights again increased and the average cost of coal per ton delivered to our stations during the year was 13 per cent. higher than during the 15 months ended 31st March 1957. This major item of expenditure amounted to nearly £2 000,000 and represents 72 per cent. of the total generation cost. Higher wages costs also had a significant effect. A new item of expenditure appears in the revenue account, namely, £569,560 for the cost of power purchased. This is the sum paid to the Damodar Valley Corporation for the bulk supply which they have afforded us since April 1957, and to which reference was made in my last review. Management expenditure has also been affected by higher wages costs. Another new item in the nature of an annual tax charge is £73.960 for the Wealth Tax that has been imposed from 1st April 1957, by the Government of India on companies, including overseas companies operating in India.

"The new appropriation in the net revenue account of £286,130 to development reserve has been made in accordance with an amendment to the Electricity (Supply) Act, 1948. It is equivalent to the special tax relief granted by the Government of India on new capital expenditure and can only be used for investment in the undertaking. The transfer of £144,166 from the net revenue account is the fifth and final appropriation to a special reserve as directed by the Government of West Bengal. The circumstances which gave rise to these appropriations have been explained at length in the Chairman's annual reviews for 1953 and 1954. The creation of this special reserve, now completed and built up from our reasonable return over a period of five years to the figure of £961,113, follows on the conditions laid down by the State Government in connection with special appropriations to this extent permitted by them during the years 1949 to 1952 under the Sixth Schedule of the Electricity (Supply) Act, 1948, to finance the expansion of the machinery of production.

Taxation

"The Company became an overseas trade corporation for purposes of income-tax and profits tax on 6th April 1957. The Finance Act 1957 exempted trading income (though not investment income) from income-tax and exempts any trade or business carried on by an overseas trade corporation from profits tax. Under the Act an overseas trade corporation will be liable for income-tax (subject to double taxation relief) on the amount of its trading profits applied in payment of dividends. Non-resident shareholders in overseas trade corporations will be entitled to repayment of income-tax relating to dividends paid out of exempt trading income.

"The United Kingdom taxation charge for the year amounted to £85,049 and was arrived at after making allowance for double taxation relief—as far as this is at present ascertainable—and adjusting an over-provision for taxation relating to previous years. In so far as the Indian tax position is concerned, the balance of unabsorbed depreciation allowances—to which I made reference in last year's review—has now been extinguished and a charge for tax arises in respect of the year's profits. Assessments are under appeal in respect of certain items of expense in dispute; nevertheless, pending the result of appeals which may not be known for a considerable time, the Board has made full provision in the accounts in accordance with the Electricity (Supply) Act for tax on the basis as now charged, which amounts to £378,693.

"The clear profit for the year is slightly less than the reasonable return to which the Company is entitled by the sum of £77,951 and this has been made good by a transfer from the tariffs and dividends control reserve permitted by the Electricity (Supply) Act, 1948. This small shortfall can be related to the new statutory provision which became effective from 1st April 1957 for the creation of a development reserve—to which I have already referred—which entailed a charge against revenue of £286,130.

"We have made the usual allocation for the contingency reserve fund as required by the Act and propose to make the normal contribution to the retiring gratuity fund. Provision has been made for the interest and sinking fund charges in connection with the debentures. In order to conserve our finances for the continued expansion of the Company's operations we have deemed it advisable to appropriate a sum of £225,000 to 'Special Appropriations' for plant expansion and replacements.

"The dividend on the preference stock and an interim dividend on the ordinary stock have been paid and we propose to pay a final dividend of 3½ per cent. (free of tax) on the ordinary stock, making 7 per cent. (free of tax) for the year. The balance left to be carried forward on net revenue account is £119,341.

Capital Expenditure

"The balance-sheet shows a considerable reduction in the bank overdraft. Capital expenditure during the year totalled nearly £1½ million and was almost entirely for our distribution system. Two large projects together costing over £900,000 were commissioned during the year, namely, the Howrah Receiving Station scheme and the Bauria Electrification scheme. The bulk supply that has been taken since April, 1957, from the Damodar Valley Corporation is fed from the Howrah Receiving Station into our 33,000 volts transmission system; our switchgear and cables for that project cost over £400,000. The Bauria scheme supplies energy to the south-western portion of the Company's licensed area on the western bank of the river Hooghly. This is the last area within our licence in which the main distribution system remained undeveloped. The current for this scheme is fed at 33 000 volts from the Howrah Receiving Station through 1½ miles of double circuit gas-filled cable, one of the first of its type to be laid in Asia, and thence by over 14 miles of double-circuit overhead line to three distribution stations. From those points some 10 miles of 6,000-volt cables lead to the new consumers, comprising seven jute mills and one cotton mill with an initial demand of 11.000 kilowatts. Another cotton mill and a foundry are also coming on to this supply and in the near future the total load in this new area will approach 20,000 kilowatts. It has been a difficult scheme to commission as communications are poor and much of the terrain is flooded for many months of the year. As a provision for the capital expenditure during the year there was available the sum set aside for depreciation, approximately £845,000, and the allocations to special appropriations for plant expansion and replacement, special reserve and development reserve, amounting to £655 000 thus making a total provision of £1½ million. Between 1st January 1951, and 31st March 1958, capital expenditure amounted to £9.400,000 and the depreciation provision together with reserves and special appropriations during the same period amounted to £9,200,000. I give these figures to demonstrate what has been done during recent years—within the limit of earnings permitted by the reasonable return on the capital base—to provide internal finance for the expansion of the Company's undertaking.

Visit to Calcutta

"In January and February of this year I was in Calcutta for a period of seven weeks and visited all sections of the Company's organisation and was afforded ample evidence of the care and attention which our officers and staff devote to their work in maintaining efficiency and promoting the interests of the Company.

"Our relations with the authorities continue cordial. I had the pleasure of meeting Dr. Roy, the Chief Minister, and discussed the affairs of the Company with him. Dr. Roy and his officers show a great interest in the Company's activities and fully appreciate all our problems. I also met leaders of commerce and industry in Calcutta.

"I took the opportunity of touring Calcutta and Howrah and the suburbs in order to see building developments which have taken place in those areas and on which I have made comment in this review.

"During the course of my stay I had the pleasure for a period of four weeks of the company of Mr. Hobson, a member of the Board and our Technical Adviser. Through the courtesy of the Chairman and Board of the Damodar Valley Corporation we, along with our Agent Mr. Macpherson, spent some days in going over the irrigation and hydro-electric projects of that Corporation and were thus able to get a first-hand picture of all that has been accomplished and of the magnitude of the schemes in hand. At the kind invitation of the West Bengal Government during the course of this tour, we visited the Damodar Barrage and the headworks of the irrigation and navigable canals; the latter, now under construction, will connect up with the River Hooghly some miles north of Calcutta. We were also taken over the coke oven gas plant and thermal power station, also in course of erection by the West Bengal Government at Durgapore. The tour was in all respects an interesting one and I wish to express my warm thanks to the officials of the Damodar Valley Corporation and the West Bengal Government for the hospitality shown to us.

Technical Training

"Our technical training scheme for the training of young Indian graduates in the United Kingdom has now been in operation for nearly 12 years. During the same period we have also given training in the United Kingdom to a number of our permanent Indian staff. There are usually at least four men under training at any one time; at present three men are on their way back to Calcutta after completion of their training, two men are in the United Kingdom and two men are about to arrive. We are grateful to the Electricity Council, the Central Electricity Generating Board, the Area Boards and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

"I desire to express our thanks to the staff in Calcutta. The continued progress and development of the Company reflect the interest, efficiency and zeal which members of the staff and employees devote to the Company's affairs. Mr. Macpherson, our Agent in Calcutta, has carried out his onerous duties with great ability and in all respects has justified the confidence which the Board repose in him. To him and all members of our organisation, we express our high appreciation for the services rendered during the year. I also wish to record the Board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as Secretary."

The report and accounts were adopted.

Note:—The above statement is not a report of the proceedings of the Annual General Meeting referred to.

A proposal has been submitted to the International Council of Scientific Unions conference calling for "an international co-operative attack on the scientific problems of the Indian Ocean." The Special Committee on Oceanic Research, which advanced the survey idea, envisages participation of "at least 16 ships from 11 different countries" in "an international collaborative effort" during 1961-62. The combined scientific party would total about 125 persons, with at least 25 scientists from countries bordering the Indian Ocean. Final action on the survey proposal is yet to be taken.

The Oceanic Research Committee says marine physicists are interested in an opportunity to study the response of density layering and currents to the changing monsoon winds; marine biologists "are keenly interested in the high and varying productivity of different parts of the Arabian Sea," and geologists and geophysicists "have emphasised the lack of knowledge of the submarine topography, sediments and structure of this vast region." It was noted that, partly because of the Committee's "emphasis on the problem," the United States and the U.S.S.R. have undertaken preliminary explorations in the Indian Ocean during the International Geophysical Year (I.G.Y.), and further expeditions are being planned for 1959-1960. Because of a desire to climax this effort with a wider participation, other nations are urged to join in the 1961-62 undertaking on a year-long basis.

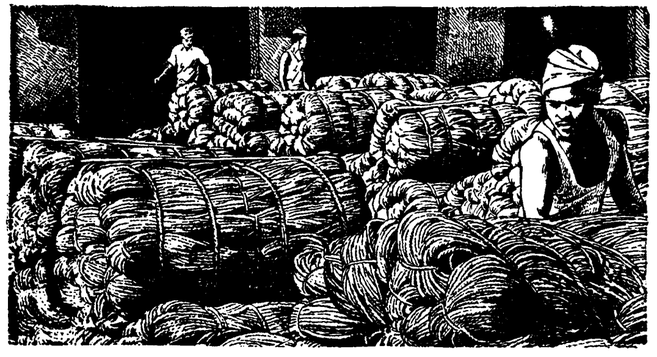
How banking serves the COIR INDUSTRY



INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

* * *

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

Head Office: PALAI—KERALA

Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

INCIDENCE AND DURATION OF INDUSTRIAL DISPUTES

CONCLUSIONS OF AN I.L.O. STUDY

THE disagreements and conflicts of interest in the modern industrial economy are reflected in industrial disputes which often lead to stoppage of work. Employers and workers in most industrial countries are constantly joining issue over such questions as a fair rate of pay, working conditions, output or productivity, the interpretation of contracts of employment or trade union privileges. These clashes are in themselves as old as mankind, but, in their present form, far from being a product of chance, they reflect a major development in society. Industrial disputes, in the broadest sense, have always existed, but the circumstances in which they arose and were resolved had nothing whatever in common with those of modern industrial disputes. A most significant thing about the latter is that, in society today, it is not only the routine everyday relations between employers and workers that are ordered and indeed regulated in some detail but also the exceptional relations arising out of disagreements, tension or loss of confidence between the parties. This, indeed, marks a great advance in the history of human relations and is no less significant because of the existence of certain lapses, which should rather be considered as exceptions confirming the rule.

Some revealing light on the incidence and duration of recent industrial disputes in 28 leading industrial countries* of the world is thrown by a study of this important subject by the International Labour Organisation. The main conclusions of the study are published in a recent issue of the *International Labour Review*. Since the data available for this purpose are sufficiently complete only for 28 countries, the study is confined to these countries. It may be noted that the number of man-days lost through industrial disputes in them since 1949 represented nearly 95 per cent. of the total man-days lost in the 61 countries and territories for which data are available.

Number of Days Lost

The figures assembled in respect of the 28 countries showed that the number of man-days lost through industrial disputes, which rose from 49 million in 1954 to 58.1 million in 1955, continued to increase in 1956 when it reached 73.5 million. In 1957, however, it fell back to around 55 million. Although it is high, the figure for 1956 is still well below that for 1949, 1950 or 1952 when it reached nearly 100 million. The 1957 figure is among the lowest for the post-war period. Table I on this page gives the total number of man-days lost through stoppage of work in the 28 countries during the period 1949 to 1957.

The number of workers involved in industrial disputes in the 28 countries rose from 7.9 million in 1954 to 8.9 million in 1955 and again to 9.8 million in 1956. The information available for 1957 is so fragmentary that it is not possible to calculate even an approximate total figure.

Country-wise figures are, indeed, revealing. For the United States, the average number of man-days lost through disputes between 1949 and 1950 was some 35 million per year. For the four countries, namely India, France, Japan and Italy, the corresponding figure was 5 million or more per year. These five countries together accounted, on the average, for about 80 per cent. of the total number of man-days lost through industrial disputes in the countries for which figures are available. For the United Kingdom, the average number of man-days lost per year was 2.2 million.

Duration of Disputes

As regards duration of disputes, a comparison of the figures for the number of workers involved in disputes and the number of man-days lost shows that they do not move in step. Thus, between 1949 and 1950, the number of workers involved in the 28 countries covered by the study fell from 13.8 to 10.6 million, that is, by 23.2 per cent., while the corresponding number of man-days lost fell only by 1.4 per cent. Moreover, between 1952 and 1955, the number of man-days lost fell by 34.4 per cent., whereas the number of workers involved rose sharply (by 29.8 per cent.).

For the 28 countries as a whole, the average annual duration of disputes between 1949 and 1956 remained less than 10 days (the average for the period being 7). The average duration varied widely from one country to another. For the years 1953-56, it was 23.2 in Canada, 18.2 in Norway, 17.3 in Sweden, 13.7 in the U.S., 12.6 in Ireland, 12.2 in the Philippines, 11.4 in Switzerland, 10.6 in Chile (for the period 1953-55 only), 10.5 in Hawaii, 10.2 in Argentina, 9 in Puerto Rico, 8.7 in India, 8.5 in Finland, 6.0 in Denmark, 6.3 in Israel, 6.2 in Belgium, 5.9 in Burma, 5.3 in the Federal Republic of Germany, 4.5 in the Netherlands, 4.2 in the U.K., 3.7 in Japan, 3.6 in Ceylon, 3.4 in Pakistan (for the period 1953-55 only) 2.7 in France, 2.5 in Italy, 2.4 in Australia, 1.6 in New Zealand and 1.6 in South Africa.

It will be seen that, in North America (Canada and the U.S.), Ireland, Norway and Sweden, industrial disputes have lasted far longer than in France, Italy, or Australia (between two and three weeks in the former, as compared with two to four days in the latter). This difference between one country and another is not simply a feature of the years 1953 to 1956. It is permanent. In some countries, the average duration of disputes is fairly constant and this is particularly striking in the case of the U.K. It is clear, too, that industrial disputes in Canada and the U.S. were much shorter during the Second World War than either before or after. The same is true of Australia and the U.K., but, since the average duration in these latter countries is usually shorter than in Canada or the U.S., the fall was naturally less sharp.

Causes Differ

The differences between the countries in the duration of industrial disputes are certainly due to a variety of reasons, in the main, probably to differences in their social, economic and legal systems. In countries such as France and Italy, widespread political or semi-political strikes involving large numbers of workers and lasting usually for 24 hours at the most have a very marked influence on the average duration. The Latin countries, on the whole, are more given to "warning-strikes" than the other countries. In Canada and the U.S., on the other hand, where the unions have substantial financial resources, a strike is more likely to be a fight to the finish; it may, perhaps, be called less readily but, once begun, it usually goes on till one side or the other is forced by economic pressure to give way.

The foregoing analysis is based on the figures for all disputes in each country, no distinction being drawn between the branches of economic activity in which they occurred. But, in actual fact, these disputes are generally due to working conditions, the structure of firms and the labour force, the type of relations between management and workers and the pattern of trade union organisation in each branch of the economy. These factors vary not only from one country to another but also from one industry to another. For example, sources of dispute in the mining industry, owing to its very special working conditions, are far more plentiful and varied than in other industries, because questions of safety, working conditions, health facilities, ventilation and working methods are more important in mining than elsewhere. Thus, in Canada, out of 14 major strikes which occurred in the coal mines in 1956, nine were concerned exclusively with working conditions. It is, therefore, worth analysing the trend of labour disputes in each branch of economic activity.

Substantial Increase

A break-down of man-days lost in 1956 in seven countries, namely, Australia, Canada, France, Japan, Italy, the U.K. and the U.S., which accounted for 84 per cent. of the total number of workers involved in the 28 countries under study and 80 per cent. of the man-days lost during the same period, shows that there was a substantial increase (22 per cent., as compared with 1955) in the number of man-days lost in manufacturing activity, though the total number of man-days lost in all branches of economic activity in these seven countries remained virtually unchanged. The proportion of days lost in manufacturing was higher in 1956 (70 per cent.) than during the whole of the remainder of the period under review, in which it did not exceed 60 per cent. This increase in the incidence of disputes in manufacturing, as compared with 1955, can be ascribed in part to the strikes which occurred in the United States iron and steel industry in July 1956. As regards other branches of economic activity, transport lost fewer working days in 1956 than in any year since 1949 and disputes in agriculture, commerce and services in the seven countries accounted for a relatively small number of working days in 1956. Lastly, though disputes in the mining industry were slightly larger than in 1954-55, they were far from causing the same loss in man-days as in the years from 1949 to 1952. Table II on this page gives the number of man-days lost through industrial disputes in various branches of economic activity in the seven countries.

A study of the comparative incidence of industrial disputes in each branch of economic activity deserves to be taken further than a mere statement of the absolute number of days lost. For example, the number of days lost in each branch of the economy should be related to the number of workers in that branch, in order to judge the relative incidence of disputes in each industry. These ratios have been calculated for mining, manufacturing, construction, and transport and communications.

TABLE I

Number of Man-days lost (Country-wise)

(In millions)

Year	France	India	Italy	Japan	United States	23 Other Countries	All 28 Countries
1949	7.1	6.6	16.6	4.3	50.5	11.1	96.2
1950	11.7	12.8	7.8	4.5	38.8	19.3	94.9
1951	3.5	3.8	4.5	6.0	22.9	11.2	51.9
1952	1.7	3.3	3.5	15.1	59.1	10.8	93.5
1953	9.7	3.4	5.8	4.3	28.3	9.8	61.3
1954	1.4	3.4	5.4	3.8	22.6	12.4	49.0
1955	3.1	5.7	5.6	3.5	28.2	12.0	58.1
1956	1.4	7.1	4.1	4.6	33.1	23.2	73.5
1957	3.3	5.7	4.5	3.3	15.5	22.7	55.0

INDO-JAPANESE TRADE RELATIONS

INDIA WAIVES PROTECTION PROVIDED BY ARTICLE 35 OF THE G.A.T.T.

THERE are unmistakable signs of a growing measure of friendliness and co-operation between India and Japan. The latest gesture in this connection has been the decision taken by India to waive the protection offered by Article 35 of the General Agreement on Tariffs and Trade (G.A.T.T.). India has thus extended full privileges of the most-favoured-nation treatment to Japan. This was formally announced by Mr. Nityanand Kanungo, Union Minister for Commerce, at the Geneva Conference of the G.A.T.T. last week. Although Japan became a contracting party to the General Agreement on 9th September 1955, 15 nations, particularly the members of the Commonwealth including India, invoked an escape clause (Article 35) to deny to Japanese exports the favoured-nation treatment to which all G.A.T.T. members are eligible. India's present move, no doubt, is of momentous significance not only from the point of view of trade relations between the two countries but also from that of the smooth functioning of the General Agreement.

Announcing the decision of the Government on the 16th inst., Mr. Kanungo stated that the decision, which reflects a fundamental change in India's foreign trade policy, became effective immediately. He pointed out that ever since the question of Japan's accession to the G.A.T.T. came up, the Indian delegation had throughout given its strongest support to the proposal. Nevertheless, if India had invoked Article 35, it was because of its natural concern over the newly developed indigenous industries and a fear of the intensive, and sometimes unfair, competition which Japan had offered to them in the past. But, in actual practice, India had all these years endeavoured to establish the most friendly and fair relations with Japan. Thus, it scrupulously avoided using against imports from Japan any measure not consistent with the Articles of the General Agreement. It never invoked Article 35 of the Agreement. This policy of friendliness yielded good results. Mr. Kanungo observed confidently:

"The experience we have gained through these years, the mutual understanding that the two countries have built up over this period and the fact that Japan has been demonstrating a sympathetic attitude to our industrial development have led us to the conclusion that we could and should remove the application of Article 35.

"It is our firm belief that this course will not be to the detriment of Indian industry and it is also our expectation that, should at any time a situation arise in which any specific problem affecting a particular industry arise, we shall be able to find a solution to it by mutual discussion between the two Governments and without taking any measures which will not be consistent with the Articles of the Central Agreement."

Confidence Justified

The Government of India's confidence in Japan is not misplaced. In recent years, Japan has conducted itself in an exemplary manner in the sphere of international trade. It has tried to be co-operative with all the countries and endeavoured to remove the stigma born of its bad practices in pre-war years. No country has complained of dumping by Japan in post-war years. Indeed, when a country thought imports of Japanese goods were tending to be excessive, the Government of Japan readily agreed to restrict their exports. Thus, it has accepted a ceiling on exports of cotton and woollen textiles to the U.S. and the U.K. Again, when complaints arose that Japanese manufacturers were indulging in piracy of patents, trade marks, designs and patterns, prompt steps were taken by the Japanese Government to prevent such malpractices. Today, it is not Japan which is resorting to unfair trade practices but the Communist world, notably Soviet Russia and China. It is common knowledge that Russia has nearly wrecked the International Tin Agreement and China is trying to oust India and Japan out of their markets in Asia for textiles.

In any case, the continuation of the reservation under Article 35 of the Agreement would not be in tune with the Indo-Japanese Trade Agreement signed in February last. The agreement provided for the most-favoured-nation treatment between the two countries in respect of a number of subjects including customs, tariff, imports and exports and foreign exchange transactions, entry, stay, travel, residence, all kinds of business and professional activities, and shipping and navigation. Japan, however, is not entitled to claim the benefit of preference or advantages accorded by India to adjacent countries in order to facilitate frontier traffic.

Under the agreement, each country undertook that, if it established or maintained a State enterprise wherever located, or grants to any enterprise or agency special privileges, such enterprise or agency would not, in its purchases or sales involving either imports or exports, act in a manner that would nullify or impair any benefits accruing to the other under the agreement. Such agencies or enterprises are required to make purchases or sales solely in accordance with commercial considerations, including price, quality, availability, marketability and other conditions of purchases or sales and shall afford to the enterprises of the country adequate opportunity in conformity with customary business practices to compete for participation in such purchases or sales.

It may be recalled, in this connection, that two other agreements—one regarding the supply of textile machinery on deferred payment basis and the other regarding grant of an 18 million yen (Rs. 24 crores) loan by Japan to India—were also signed simultaneously with the trade agreement. Japan has thus shown great interest in the economic development of this country and has been trying to help solve its foreign exchange crisis. Negotiations for the following three loans have already reached fairly advanced stages: (1) Fifty million dollars in yen for the purchase of Japanese capital goods for implementing India's second Five-year Plan, (ii) ten million dollars in yen for alleviating India's foreign exchange shortage, and (iii) an unspecified amount for the development of India's iron reserves. They are expected to be finalised in the near future.

Mutually Advantageous

There is thus a growing awareness on the part of both the countries of the need for strengthening economic and trade relations to their mutual advantage. Japan urgently requires at present an expanding market abroad for its products and an assured source of supply of raw materials for its industries. India, with its plans for economic development, will be able to meet both these requirements of Japan to a considerable extent. Closer economic co-operation between the two will, therefore, be to their mutual advantage and make a significant contribution to the growth of world trade.

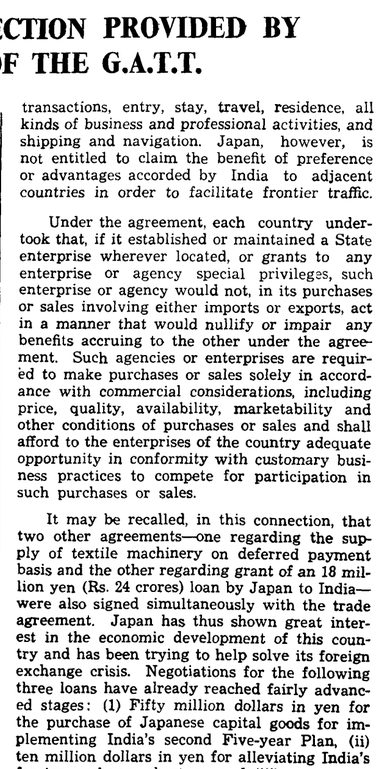
Incidentally, a brief reference to the trend of trade between India and Japan will be of some interest in this context. In more recent years India has had an unfavourable balance of trade with Japan, in contrast to the favourable balance it enjoyed during 1952-53 and 1953-54. The following table shows at a glance India's exports to and imports from Japan, as also the net result:

(In crores of rupees)

	Exports	Imports	Balance
Year ended March—			
1953	31.18	15.82	+15.36
1954	23.16	13.06	+10.10
1955	16.10	20.57	— 4.47
1956	13.15	33.37	—20.22
April-December, 1956	20.39	34.21	—13.82
Calendar Year 1957	27.21	54.42	—27.21
Four months ended April 1958	8.33	14.54	— 6.21

Admittedly, the deficit is likely to widen in the coming years in view of the anticipated rise in Japanese exports to this country of plant and machinery as well as other manufactured goods, including ships.

At one time, there used to be a lot of antipathy towards Japan among the business men of this country. But all that is past history. This is evident from the welcome accorded by them to the withdrawal of Article 35 of G.A.T.T. It is the result of both the good behaviour of Japan in the post-war years and of the keen interest evinced by the latter in India's economic development. It is to be hoped that nothing will induce Japan to revert to its pre-war trade practices and that the Government of India's action extending to Japan the full privileges of G.A.T.T. membership will be emulated by the other 14 members, so that Japan may have no cause for grouse against them. It is high time Japan was given full status in the comity of nations.



EXPORT PROMOTION

Free flow of trade, exchange of technical knowledge, sufficient incentives for export, intensive market research and extensive and intensive campaign of publicity for Indian products abroad are the fundamental pillars on which India could build her programme of export promotion, according to Mr. Werner Steltzer, a W. German expert. Mr. Steltzer, who has been invited by the Government of India for consultations regarding export promotion measures, observed, at a recent meeting of the Committee of the All-India Exporters' Association in Bombay, that Germany after the war passed through conditions similar to those prevailing in India today. Germany's balance of trade, particularly with the U.S., he averred was alarming. But Germany was able to stabilise and strengthen its trade, thanks to the co-operative efforts of the Federation of German Chambers of Commerce, the German Chambers of Commerce and the Government. He said that it was the result of intense labour in market research and publicity carried out in the U.S. by specialised agencies of Germany. They manufactured goods and delivered them in time according to people's tastes and requirements. Thus, Germany was able to earn and build up sound foreign exchange reserve.

As regards India's trade prospects with W. Germany, Mr. Steltzer pointed out that German importers were not fully informed about goods manufactured in India. The other handicaps were Indian exporters' apathy to maintain regular delivery and the tendency to make quick profit. He regretted that Indian businessmen were more import-minded than export-minded. He was of the opinion that, if proper approach was made, Germany offered a good market for Indian products, especially coffee, cashewnuts, manganese ore, iron ore, jute, cotton yarn, etc., and even small and medium-scale industrial products, including machinery.

An electrolytic copper refinery plant, with an installed capacity of 8,400 tons, is proposed to be set up at Ghatsila (Bihar) by the Indian Copper Corporation Ltd. The copper produced at present at Maubhandar, near Ghatsila, by the Corporation is fire-refined. It contains a comparatively high nickel content which is unsuitable for industries requiring copper for electrical purposes. The Government of India has already issued licence for starting the new plant, which is expected to be commissioned by 1961.

PROGRESS OF ALUMINIUM INDUSTRIES GOOD

HEAVY TAXATION HAS AFFECTED GROWTH OF NET PROFIT

THE performance of the Aluminium Industries Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Kundara, Kerala State) during the year ended 31st March 1958 was highly encouraging. The Company's production of aluminium conductors, accessories, tools and aluminium rod were a record high. Turnover also showed a substantial increase. As is to be expected in such circumstances, the Company's profit staged a commensurate rise. The gross profit at Rs. 35.48 lakhs represented a notable rise of Rs. 11.16 lakhs or about 46 per cent. over that (Rs. 24.32 lakhs) for 1956-57. It was more than twice that of Rs. 16.96 lakhs for 1955-56.

The net profit, after making higher provisions for depreciation and taxation, was also higher at Rs. 10.58 lakhs, as compared with Rs. 9 02 lakhs for the previous year. But this is by no means a high record. In 1954-55, the Company made a net profit of Rs. 12.64 lakhs on sale proceeds amounting to Rs. 185.67 lakhs. The relatively modest increase in net profit was the result of the sharp rise in the incidence of taxation. For the year under review, a sum of no less than Rs. 14.63 lakhs was set aside as provision for taxation, as against Rs. 6.95 lakhs for 1956-57 and Rs. 6.30 lakhs for 1954-55. The latest provision, of course, includes Rs. 1.22 lakh to cover the shortfall in the amount reserved for tax liability in the previous year. Even then, it will be admitted that the incidence of tax has gone up tremendously. The Wealth Tax on the Company amounts to Rs. 35,873. In keeping with the growth in the Company's capital assets, depreciation was higher at Rs. 7.53 lakhs, as against Rs. 6.58 lakhs in the previous year. In view of the small rise in net profit and the need for maintaining the dividend on a capital enhanced by the issue of additional capital, the amount of profits ploughed back has been reduced from Rs. 4 lakhs to Rs. 2 lakhs. This has been done by maintaining the transfer to the dividend equalisation reserve at Rs. 2 lakhs. No amount has been appropriated to the general reserve which had been credited with Rs. 2 lakhs in the past year. The dividend has been maintained at the rate of 12½ per cent. per annum for the eighth year in succession. The amount required for this purpose is Rs. 8.75 lakhs, that is, Rs. 3.75 lakhs more than that a year ago. This is due to the fact that 400,000 shares of Rs. 10 each of the new issue which were called up in April and October 1957 also rank for proportionate dividend on the amounts paid up.

The following comparative table, giving the salient features of the Company's profit and loss account for the past four years, provides an idea of the Company's progress in recent times:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	375.85	317.21	208.52	185.67
Closing stock	34.03	13.51	24.26	13.98
Manufacturing and other expenses	361.35	292.29	191.65	158.65
Gross profit	35.48	24.33	16.96	27.00
Managing Agents' commission ..	2.74	1.77	1.33	2.71
Depreciation	7.53	6.58	5.74	5.44
Taxation	14.63	6.95	2.50	6.30
Net profit	10.58	9.02	7.39	12.64
To reserves	2.00	4.00	3.75	10.00
Dividend	8.75	5.00	3.75	2.71
	(12½%)	(12½%)	(12½%)	(12½%)
Carry forward	0.50	0.66	0.65	0.76
How the money was spent (percentage each to total earnings)				
Raw materials	77.28	79.70	78.03	72.54
Repairs and maintenance ..	4.43	4.25	5.07	5.12
Selling expenses	1.68	1.57	1.81	1.33
Administration	1.13	0.77	0.93	1.73
Interest and bank charges ..	2.05	1.25	2.13	1.41
Employees	4.31	4.81	3.86	4.19
Depreciation	2.00	2.03	2.75	2.94
Government	4.30	2.58	1.88	3.93
Retained in business	0.49	1.42	1.74	5.35
Dividend	2.33	1.57	1.80	1.46

The Company's sale proceeds rose by Rs. 58.64 lakhs to Rs. 3.76 crores, representing an increase of 18 per cent. over the year. This, however, falls far short of the spectacular rise of Rs. 108.69 lakhs noted in the previous year. The slight fall in the pace of demand for the Company's products is reflected in the closing stocks which stood higher at Rs. 34.03 lakhs, as against Rs. 13.51 lakhs at the end of 1956-57. Production of bare aluminium conductors during the year under review amounted to about 22,300 miles, or a little over 7,700 tons, the highest so far achieved. The output of accessories, tools and aluminium rod were also at levels higher than those attained in previous years. In addition, about 1.3 million core-yards of covered aluminium conductors, a new product of the Company, were manufactured. All this was possible on account of the "fairly satisfactory" availability of raw materials, thanks to the assistance received from the Central Government. It is stated that the demand for the Company's products continued to be good.

Steady progress has been made in the construction of the Company's factories at Hirakud since the first breaking of ground in April 1957. According to the original schedule, the rod mill was to be commissioned towards the end of 1958 and the cable mill early in 1959. It was, however, subsequently decided to give priority to the completion and commissioning of the cable mill. The Directors expect to have the cable mill in operation by November 1958, with the rod mill coming into service around March 1959. The new share capital which was called up in April and October 1957 was fully utilised for financing the Hirakud project.

The balance-sheet as at 31st March 1958 shows that the reserves and surplus amount to Rs. 34.75 lakhs, supplementing a paid-up capital of Rs. 79.96 lakhs, all in ordinary shares of Rs. 10 each. The current liabilities stand at Rs. 168.74 lakhs and these include secured loans from banks of the order of Rs. 81.04 lakhs. The gross block of the value of Rs. 105.40 lakhs stands written down to Rs. 71.02 lakhs. The gross block includes additions during the year of Rs. 11.10 lakhs and Hirakud project at cost at Rs. 28.90 lakhs, besides other construction work in progress amounting to Rs. 2.43 lakhs. The current assets aggregate Rs. 212.42 lakhs and cover the current liabilities and the provision for taxation by a margin of Rs. 43.68 lakhs.

A commendable feature of the Directors' report and accounts is the inclusion of charts depicting the Company's progress which makes it easier to appreciate what has been achieved. The chart on shareholding shows that the Company has 1,062 shareholders with shares of the face value of Rs. 1,000 each, 703 holders with shares ranging from Rs. 1,001 to Rs. 5,000, 122 shareholders from Rs. 5,001 to Rs. 10,000, 73 shareholders from Rs. 10,001 to Rs. 20,000, 14 shareholders from Rs. 20,001 to Rs. 50,000, 13 shareholders from Rs. 50,001 to Rs. 1,00,000 and six shareholders from Rs. 1,00,000 and above.

The shares of the Company (Rs. 10 paid-up) are being currently quoted at Rs. 16.79 *ex-div.* at which rate and on the basis of the dividend for 1957-58, the yield is 7.44 per cent. per annum.

ROHTAS INDUSTRIES LTD.

The Directors of Rohtas Industries Ltd. have decided to capitalise Rs. 16,20,209 from the amount standing to the credit of the share premium account and Rs. 6,59,791 out of the general reserve and to issue the same in the form of fully paid ordinary bonus shares of Rs. 10 each in the proportion of one share for every 10 existing ordinary shares of Rs. 10 each, to those shareholders whose names stand registered in the Company's books as on 31st October 1958. The ordinary bonus shares will rank *pari passu* in all respects with the existing ordinary shares, except that they will not be entitled to any dividend declared for the financial year ended 31st March 1958. Requisite consent for the above issue has been obtained from the Controller of Capital Issues and the Industrial Finance Corporation of India.

The Directors of Tata Chemicals Ltd. have recommended the payment of dividend for the year ended 30th June 1958, at the rate of 75 nP per share on old ordinary shares, as against 80 nP per share paid for 1956-57 and at 3.125 nP per share on new ordinary shares (including interest payable out of capital at 4 per cent. per annum, amounting to 1.667 nP per share, as sanctioned by Government).

The Coorg Tea Company, Ltd. has decided to issue 16,000 fully paid equity shares of Rs 5 each as bonus in the ratio of one bonus share for every five equity shares held and to subdivide the equity shares of Rs. 5 each into shares of Rs. 2 each. The Government's sanction for the bonus issue has been obtained.

MORARJEE MILL'S GROSS PROFIT HIGHER

DIVIDEND RAISED SLIGHTLY

IN refreshing contrast to the adverse results disclosed by a number of cotton textile mills, the Morarjee Goculdas Spinning and Weaving Company, Ltd. (Managing Agents: Messrs. Piramal Sons Private Ltd., Bombay), has reported encouraging results in its working during the year ended 30th June 1958. Not only have the Company's sale proceeds improved, thus reversing the downward trend noted in the preceding two years, but its profit has also recorded a sizable rise over that for the previous year. The gross profit for the year under review at Rs. 34.11 lakhs, has risen by Rs. 12.20 lakhs from Rs. 21.91 lakhs earned in 1956-57. The net profit after providing for depreciation and taxation amounts to Rs. 11.21 lakhs, as against Rs. 12.46 lakhs in the previous year. It must, however, be noted that the figure of net profit for the year under review and for 1956-57 are not strictly comparable because of the changes in the provision for depreciation in respect of the two years, as will be explained shortly.

The year's provision for depreciation at Rs. 17.25 lakhs appears to be substantially higher than that of Rs. 6.97 lakhs set apart in the previous year. This is due to the fact that the provision for the year under review includes normal, special and extra shift allowances to which the Company is entitled on the capital expenditure incurred during the year, whereas the previous year's provision represented only normal depreciation. The Company was entitled to special and extra shift allowances in respect of 1956-57 also, but the provision for these had been transferred to and included in development rebate reserve. The provision for taxation has been raised from Rs. 1 lakh to Rs. 3 lakhs. The tax provision would have been higher but for the adjustment of Rs. 2.55 lakhs from the excess provision made in previous years.

Out of the net profit, the Directors have transferred Rs. 5.88 lakhs to development rebate reserve, as against Rs. 13.62 lakhs in the previous year. The latter amount, as already stated, included the accelerated depreciation allowance allowed under the Income-tax Act on the new capital expenditure incurred during that year.

The Directors have recommended an increase of one per cent. to 15 per cent. per annum in the dividend on ordinary shares for the year under review, besides the usual 4½ per cent. tax-free cumulative preference dividend, thus restoring the cut made last year. It should be noted, however, that this has been made possible only by drawing Rs. 3.20 lakhs from the general reserve.

The following comparative table presents some of the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	366 06	323 53	362 50	371.78
Closing stocks	121 96	106 32	73 90	81 68
Cotton consumed	159.10	158 95	146.44	166.76
Other raw materials, stores, fuel and power consumed ..	53 16	46 86	39 83	39.66
Wages and other expenses ..	136 01	128 68	117 40	135.11
Gross profit	34 11	21 91	39 72	19 87
Managing Agents' commission.	2 05	1 48	3 57	1.94
Depreciation	17 25	6 97	18 46	4.95
Taxation	3 00	1 00	8.00	1.11
Net profit	11 21	12 46	9 69	11.40
Transfer from general reserve ..	3 20	8 02	—	—
Transfer to reserves	5 88	13.64	—	4.20
Dividends—				
4½% preference	0 78	0 78	0 78	0.78
Ordinary	7 76	7 24	7 76	7 24
	(15%)	(14%)	(15%)	(14%)
Carry forward	0 22	0 23	1 41	0.27

It will be seen from the table above that the Company's sale proceeds of cloth, yarn and waste for the year have increased by Rs. 42.53 lakhs to Rs. 3.66 crores. Although the cost of cotton consumed has made only a modest rise, other raw materials, stores, fuel, etc., have increased by Rs. 6.30 lakhs and so also wages and other expenses by Rs. 7.33 lakhs. The rise of Rs. 15.64 lakhs in the clothing stocks is small, compared with that at Rs. 32.42 lakhs in the previous year and this evidently reflects the better offtake during the year under review.

The Company has a paid-up capital of Rs. 69 lakhs, made up of 17,250 4½ per cent. tax-free cumulative preference shares of Rs. 100 each and 51,750 ordinary shares of Rs. 100 each. Of this, as much as Rs. 34.50 lakhs of the ordinary capital and the entire amount of Rs. 17.25 lakhs of the preference capital represent amounts capitalised out of reserves in the past. Even after such large capitalisation, the reserves and surplus aggregate Rs. 41.22 lakhs. The current liabilities stand at Rs. 148.90 lakhs. Of these, secured loans from banks stand reduced from Rs. 115.90 lakhs a year before to Rs. 99.97 lakhs and unsecured loans from Rs. 2.62 lakhs to Rs. 73,909. The fixed assets stand well written down from Rs. 275.33 lakhs to Rs. 74.91 lakhs, the difference, namely, Rs. 200.42 lakhs, being the total depreciation provided up to the end of the year of review. The net written down value of the fixed assets includes Rs. 12.32 lakhs, being the cost of additions made to the gross block during the year under review. Of these additions, as much as Rs. 10.54 lakhs represent the amount spent on new plant and machinery alone. It may be of interest to know that in the previous year a sum of Rs. 30.09 lakhs had been spent by way of additions to the gross block. The current assets, which are large enough at Rs. 184.21 lakhs, cover the current liabilities and the provision for taxation by a wide margin. The financial position of the Company is, thus, quite satisfactory.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 242 *cum-div.* and, on an *ex-div.* basis, offer a yield of 6.6 per cent. per annum, free of income-tax.

UNITED NILGIRI TEA ESTATES

Despite a record tea output, the profit of the United Nilgiri Tea Estates Company Ltd. (Managing Agents and Secretaries: Messrs. T. Stanes & Co., Ltd., Coimbatore) for the year ended 31st March 1958 shows a sizable decline from that earned in the previous year. There were two reasons for this somewhat paradoxical situation: a rise in the all-in cost of tea per lb. and a fall in selling price. The gross profit of the Company for the year under review at Rs. 11.76 lakhs is Rs. 5.65 lakhs lower than the Rs. 17.41 lakhs earned in 1956-57, to which level it had smartly risen from Rs. 12.33 lakhs for 1955-56. The net profit at Rs. 4.29 lakhs has also declined from Rs. 5.63 lakhs for the previous year and Rs. 6.22 lakhs for 1955-56. The net profit has been arrived at after making provision for Managing Agents' remuneration, depreciation and taxation. While the provision for depreciation has been slightly raised from Rs. 1.75 lakh a year ago to Rs. 1.90 lakh, that for taxation has been substantially cut from Rs. 8.80 lakhs to Rs. 4.77 lakhs. The fall in the profits had their unfavourable reaction both on the amounts allocated to the various reserves and on the distribution to shareholders. The transfer to development reserve has been pruned from Rs. 1 lakh to Rs. 60.000 and that to furlough reserve from Rs. 11,875 to Rs. 9.000. No amount has been allocated to gratuities reserve which had been the recipient of Rs. 55.000 in the previous year but a sum of Rs. 7,734 has been transferred to development rebate, as against nil. A dividend of 16 per cent. has been declared for the year under review. This is lower, as compared with 17½ per cent. for 1956-57 and 20 per cent. for 1955-56. The dividend absorbs Rs. 3.51 lakhs, leaving a sum of Rs. 1.20 lakh to be carried forward, as against Rs. 1.19 lakh brought in.

The Company's sale proceeds for the year under review at Rs. 34.49 lakhs show only a modest rise from Rs. 34 lakhs in the previous year, although they are substantially higher when compared with Rs. 27.73 lakhs two years before. As against this, expenses have increased from Rs. 19.93 lakhs to Rs. 24.90 lakhs and this has inevitably led to the decline in profit.

A total crop of 1,427.000 lbs. of made tea was harvested during the year, which exceeded the previous year's crop of 1,395,000 lbs. by as much as 32.000 lbs. This is stated to be the highest on record. The all-in cost of production of tea during the year was Rs. 1.82 per lb. as against Rs. 1.57 in the previous year. The average price realised was Rs. 2.42 per lb., as against Rs. 2.56 per lb. a year before. Thus, there was an increase of 25 nP per lb. in costs but a reduction of 14 nP per lb. in the selling price. The report states that the increase in costs is almost entirely due to extra costs of labour, wages, bonus, etc. The current year's crop is estimated at 1,400,000 lbs. to be produced at a cost of 152.15 cents on the Chemrai group of estates and 175.25 cents on Korakundah estate. The Company has a total area of 3,641.62 acres, of which tea in bearing accounts for 1,753.50 acres and immature and nurseries for 19.50 acres. The balance is taken up by timber, fuel and acacia (640.50 acres) and reserves, roads, buildings and waste (1,228.12 acres).

The Directors observe that the ever-increasing cost of production has assumed such serious dimensions that the agricultural operation of tea cultivation is fast becoming non-remunerative, while many other unorganised agricultural activities are still making attractive profits with the minimum capital outlay.

The Company has a paid-up capial of Rs. 21.93 lakhs, all in ordinary shares of Rs. 10 each. Its reserves and surplus aggregate Rs. 12.26 lakhs. The gross block of the value of Rs. 41.38 lakhs stands depreciated at Rs 27.68 lakhs. The current assets aggregate Rs. 18.18 lakhs, against which the current liabilities amount to only Rs. 11.66 lakhs.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 18 *ex-div.*, at which rate the dividend for the year works out to a yield of 9 per cent. per annum.

Points From The Chair

Indonesian Economy

"YOU will remember that a year ago I pointed out how closely our fortunes were linked with those of the Indonesian economy. Since then, the Republic's difficulties have become even more acute, mainly as a result of the military and other measures taken to deal with the political strife which broke out last February in Sumatra and other parts of the archipelago. Despite severe restrictions on imports, the country's holdings of gold and foreign exchange are still at a dangerously low level, the cover at present being only a little over 7 per cent.: this is, of course, the reason why the Indonesian authorities have been most reluctant to sanction any remittances abroad, and why our sterling resources, even after the receipt of dividends and with considerably increased trading in London in 1958, remain so meagre."

C. JACKSON,
Anglo-Indonesian Plantations Ltd., London.

Mounting Production Costs

"In a business such as yours in which the finished product is processed from numerous raw materials obtained from many sources, the inflationary effect of present Government policies tends to multiply itself, and makes expansion in terms of real value more and more difficult. The cost of Indian sugar and glucose, the two main ingredients of high grade confectionery, are now twice the level of world prices, and with the addition of multiple sales and other taxes, and mounting costs of labour and distribution, your Company's products have become something of a luxury that only the better off consumer can afford to buy. The reassuring factor in this context is the expansion which can be looked for as a result of a continuing rise in the standard of living which will progressively enlarge the market for our products."

C. R. SRINIVASAN,
Parry's Confectionery Ltd.

State Trading in Cement

"The cement industry has been facing a new problem of accumulating stocks and consequent slowing down of production. In your own factory in recent months we have to carry over huge stocks at times and we do not know how the needs of the nation can be duly met under present arrangement of distribution and pricing. As you know, the State Trading Corporation which has taken over the responsibility of distributing the entire production of cement in the country, was originally instituted mainly with a view to equalise the prices of imported cement and indigenous cement by a process of unified control and price pool. Now that Indian cement has proved its ability to meet the entire demand of the country at present and in the foreseeable future, the justification for continuance of State trading in the commodity has to be reviewed and I may be pardoned if I take this opportunity to invite the attention of the authorities to the same. The days of selling cement on telephone instructions while sitting in comfort in air-conditioned chamber are almost over and in the near future a high order of salesmanship, publicity and organisation for storage and distribution throughout the country and possibly in some neighbouring countries will have to be called for."

ANANDILALL PODDAR,
Sone Valley Portland Cement Co., Ltd.

Replacing Obsolete Plants

"In the present competitive conditions, continued reluctance or inability to replace obsolescent plant can only lead to a worsening of this country's position in world markets and it would seem to me to be essential that the maximum possible encouragement should be given to industry to pursue a policy of early replacement with the latest types of productive machinery. On the export side, the American recession and the fall in prices of basic commodities have made selling in many markets more difficult. British exporters are, moreover, placed at a great disadvantage against increasingly strong foreign competition by the difficulty of meeting the requirements of many of our most promising export markets for extended payment terms. Government action aimed at providing long-term credits is urgently necessary to enable us to compete on an equal footing...."

J. FRYE,
B. Elliott & Co. Ltd., London.

Russian Tin Exports

"The rise in exports of Russian tin to the free world from 450 tons in 1956 to about 9.000 tons in 1957 and nearly double that rate in 1958 is significant. Imports of Russian tin into the United Kingdom in the second quarter of this year amounted to 2.090 tons compared with 629 tons for the corresponding period of last year. The average three months tin price for the second quarter of 1957 was £767 per ton; the price for the second quarter of the current year was £730 per ton. It seems strange that at the higher tin price only 629 tons were exported compared with 2.090 tons at the lower price. The only explanation to be assumed is that Russia intended to do her utmost to wreck the tin control scheme. Seeing that the major producers of tin are what are known as underdeveloped countries, it is hard to reconcile Russia's attitude with her much vaunted policies of helping underdeveloped countries. This furnishes another instance of how little reliance can be placed on her declared intentions."

J. H. RICH,
Tronoh Mines, Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: Re. 1.00 per share (includes interim dividend of Re. 0.40 per share). Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive

BARNAGORE JUTE FACTORY CO., LTD. Annual General Meeting, London, 5th November 1958. Dividend: *Nil*. Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive.

BARAREE COKE CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: Re. 0.50 per share. Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive.

ANGLO-INDIA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: Rs. 10.00 per share. Transfer books remain closed from 24th October to 5th November 1958, both days inclusive.

NUDDEA MILLS CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: 5 per cent. or Rs. 2.50 per share. Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive.

GOUREPORE CO., LTD. Annual General Meeting, Calcutta, 5th November 1958. Dividend: 20 per cent. or Rs. 20.00 per share. Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive.

INDIAN GALVANIZING CO. (1926) LTD. Annual General Meeting, Calcutta, 6th November 1958. Dividend: *Nil*. Transfer books will remain closed from 27th October to 6th November 1958, both days inclusive.

MACHINERY MANUFACTURERS CORPORATION LTD. Annual General Meeting, Bombay, 7th November 1958. Dividend: *Nil*. Transfer books remain closed from 24th October to 7th November 1958, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 8th November 1958. Dividend: Rs. 15.00 per share, payable from 17th November 1958. Transfer books remain closed from 20th October to 15th November 1958, both days inclusive.

HULDIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 14th November 1958. Dividend: Re. 1.25 per share. Transfer books will remain closed from 1st to 14th November 1958, both days inclusive.

GANNON DUNKERLEY & CO., LTD. Annual General Meeting, Bombay, 10th December 1958. Dividend: Rs. 6.00 per share. Transfer books remain closed from 8th to 23rd December 1958, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Annual General Meeting, London, 18th December 1958. Dividend: 2½ per cent. free of tax. Transfer books will remain closed from 5th to 18th December 1958, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Dividend of Re. 0.45 per share, for the year ended 30th November 1957.

WESTERN INDIA PLYWOODS LTD. Dividend of Rs. 10.00 per ordinary share, i.e., 10 per cent. for the year ended 31st March 1958. Transfer books will remain closed from 1st to 8th November 1958, both days inclusive.

MYSORE LAMP WORKS LTD. Dividend of 9 per cent. or Re. 0.90 per share, for the year ended 31st March 1958. Transfer books remain closed from 18th to 30th October 1958, both days inclusive.

AMALGAMATED COFFEE ESTATES LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 31st March 1958. Transfer books will remain closed from 7th to 14th November 1958, both days inclusive.

RADIO AND ELECTRICALS MANUFACTURING CO., LTD. Dividend of 11 per cent. (final) subject to Government sanction, for the year ended 31st March 1958. Transfer books will remain closed from 16th to 29th December 1958, both days inclusive.

NATIONAL ELECTRICAL INDUSTRIES LTD. Dividend of Rs. 4.50 per ordinary share, for the year ended 31st March 1958. Transfer books will remain closed from 31st October to 7th November 1958, both days inclusive.

KIRLOSKAR OIL ENGINES LTD. Dividend of Re. 1.00 per share, for the year ended 31st March 1958, payable on 21st December 1958. Transfer books will remain closed from 31st October to 21st November 1958, both days inclusive.

INDIA PAPER PULP CO., LTD. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st March 1958.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Dividend of Rs. 2.00 per share, for the year ended 30th June 1958.

COMPANY REGISTRATIONS

WARANGAL INDUSTRIES PRIVATE LTD. (First Director: Mr. S. K. Nevatia) Business: Extraction of oil from copra, cotton seeds, etc. Authorised capital: Rs. 5,00,000. Private Company. Address: Jehangir Wadia Buildings; 51, Mahatma Gandhi Road, Fort, Bombay.

ADILABAD COTTON CO. PRIVATE LTD. (First Director: Mr. Fatehchand Jhunjhunwala) Business: Ginning, pressing and cleaning cotton, wool, jute, etc. Authorised capital: Rs. 5,00,000. Private Company. Address: Jehangir Wadia Buildings; 51, Mahatma Gandhi Road, Fort, Bombay.

ANGLO-INDIA JUTE RAISES DIVIDEND

PROFIT OF BARAREE COKE DECLINES

Anglo-India Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts disclose a net revenue profit of Rs. 26,53,984 (Rs. 6,18,751) which is increased by sundry credits to Rs. 27,55,497 (Rs. 12,74,606). After providing for depreciation Rs. 12,00,000 (Rs. 10,00,000), wealth tax for assessment years 1957-58 and 1958-59 Rs. 1,24,715 and other taxation Rs. 78,791 (Rs. 2,528), there stands the sum of Rs. 15,29,812 (Rs. 8,02,270) on profit and loss account. After placing Rs. 5,00,000 (*nil*) to machinery replacement reserve and Rs. 21,000 (*nil*) to development reserve there remains the sum of Rs. 10,08,812 (Rs. 8,02,270) which the directors recommend should be dealt with as follows:—

In payment of dividend on preference share capital at the rate of 7 per cent. per annum (Rs. 7 per share) without any deduction for income-tax paid by the Company absorbing Rs. 2,80,000 (Rs. 2,80,000), in payment of dividend on ordinary share capital at the rate of 10 (7) per cent. per annum [Rs. 10 (Rs. 7) per share] without any deduction for income-tax paid by the Company absorbing Rs. 4,92,070 (Rs. 3,44,449) and leaving to be carried forward Rs. 2,36,742 (Rs. 1,77,821).

In accordance with the working time agreement of the Indian Jute Mills Association, the mills continued to work with 12½ per cent. of the looms sealed. More opportunities for profitable business were found in the year under review, but a decline in the price of manufactured goods to an unrealistic level became apparent towards the end of the period and resulted in the fixation of minimum prices by the members of the I.J.M.A. below which sales are not transacted.

In continuance of the policy of concentrating production in the modernised mills, Upper Mill was closed from 6th January, 1958 and the working transferred into Middle Mill. Arrangements have been made to dispose of the Upper Mill property. In order to achieve the most economical use of machinery, loom hours were purchased and some sealed looms were opened in the last quarter of the year. It is proposed to complete the modernisation of the preparing and spinning machinery of Middle Mill and an application has been made to the National Industrial Development Corporation for a loan for this purpose.

Considerable economies have been made in the working of the subsidiary, Messrs. Landale & Clark Ltd., and these should now lead to profitable operation whilst the Pakistan subsidiary has not traded since July 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	89,20,700	Gross block	3,09,93,668
Reserves ...	72,21,000	*Less*—Depreciation ...	2,15,04,087

		Debts, deposits and advances ...	44,78,096
		Investments	41,27,651
		Cash	3,31,359
Rs.	3,31,73,048	Rs.	3,31,73,048

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account, after charging depreciation of Rs. 34,500 and after crediting adjustments in respect of the previous year totalling Rs. 1,56,412 shows a balance of profit of Rs. 2,22,354 (Rs. 2,60,765) to which has to be added provision for taxation no longer required Rs. 14,706 (*nil*), dividends forfeited, less paid Rs. 2,519 (*nil*), transfer from provision for doubtful debts Rs. 121 and the balance brought forward from the previous year of Rs. 70,917 (Rs. 20,136) making a total of Rs. 3,10,617 (Rs. 3,41,263 including Rs. 14,963 being adjustment in respect of material in process). Out of this sum there has been provided for taxation Rs. 1,25,000 (Rs. 1,60,000), written off renovation account Rs. 46,979 (*nil*), provided for doubtful debts Rs. 21,173 (*nil*) and written off for claims considered irrecoverable Rs. 121 (Rs. 865) leaving a balance available for disposal of Rs. 1,17,344 (Rs. 1,75,917 excluding dividends forfeited amounting to (Rs. 4,480). Out of this amount the directors recommend there should be paid a dividend on the share capital of 5 (8½) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 60,000 (Rs. 1,05,000) leaving a balance of Rs. 57,344 (Rs. 70,917) to be carried forward to the next account.

Manufacture and despatches during the year were as follows:—

	Manufactured	*Despatched*
	Tons	Tons
Coke	43,249	41,741
Tar and pitch	2,142	1,978
Sulphate of ammonia	347	357
	Gallons	Gallons
Benzol	5,008	5,121

The Award of the Industrial Tribunal, Bihar, to which a joint reference had been made with the Company's workers in respect of the dispute arising from the Award of the All India Industrial Tribunal (Colliery Disputes), published on 12th February, 1958, went beyond that of the Labour Appellate Tribunal in the case of the Coal Industry by not only adopting the latter's rate of wages but also continuing foodgrain supplies to the Company's labour at concessional prices, the cash equivalent of which concessions had a ready in effect been merged in these rates. This is a concession enjoyed by no other workers in this Industry and by reason of the continuance of the policy of Government-controlled selling prices for coke, the Company has now to bear the full additional cost without any compensation in the price realised for its product. Further, in expectation that a fair price increase would be allowed, the Company agreed to pay enhanced dearness allowance to its workers with effect from 1st April 1958, as provided in the Labour Appellate Tribunal Award; but in the event the increase permitted took account only of the revised price of coal, leaving the burden of increased labour costs to be absorbed entirely by the Company. While a working profit for the year ended 31st March last is disclosed in the accounts, it will be observed that to a substantial extent this is due to credit adjustments from the previous year and the position since that date has steadily deteriorated with the result that regular monthly losses are now being incurred.

Reference has been made in recent reports to an extensive repair programme to the Company's coke oven battery. The execution of this programme is now in progress and three rebuilt ovens are at present under heating preparatory to their going into production within the course of the next few weeks. Import licences for the full quantity of semi-silica coke oven blocks required have been granted and as materials come to hand, repairs are proceeding although, as yet, not at a sufficient pace to compensate for production losses involved through ovens going out of commission. It will be observed that the quantity of coke manufactured during the year ended 31st March last fell to 43,249 tons as compared with the figure of 54,782 tons in the previous year and 63,171 tons for the year ended 31st March 1956. It will be noted that such substantial falls in production must inevitably have a serious effect on the earnings of the Company's current working and it is not expected that production will reach a satisfactory economic level until the oven repair programme has been completed in approximately eighteen months' time. In the circumstances, it continues to be necessary to conserve the Company's liquid resources and the directors have therefore found it possible to recommend a dividend of only 5 (8½) per cent. on this occasion.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Gross block ...	35,13,891
Reserves ...	8,49,890	*Less*—Depreciation ...	33,46,842

Profit and loss account ...	57,344	Stores, etc. ...	6,55,431
		Debts, deposits and advances ...	10,70,769
		Investments	6,147
		Cash ...	5,00,852
Rs.	29,07,805	Rs.	29,07,805

Gourepore Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year before charging depreciation amounts to Rs. 19,24,481 (Rs. 5,52,924) adding thereto:—Dividends forfeited Rs. 2,661 (Rs. 1,558), refund of income-tax for previous period Rs. 2,322 (Rs. 51,869) and provision for doubtful debts no longer required Rs. 4,212 (Rs. 35) making a total of Rs. 19,53,676 (Rs. 6,84,483 including Rs. 78,102 being amount written back in respect of Municipal tax). From this amount is deducted depreciation for the year of Rs. 4,81,151 (Rs. 4,40,436), dividends previously forfeited now paid Rs. 938 (Rs. 126), Pakistan taxation in respect of a previous period of Oil Mill Trading Rs. 25,556 (Rs. 1,35,923), wealth tax for the assessment year 1957-58 Rs. 16,036, development rebate reserve Rs. 20,030 (*nil*), provision for doubtful debts Rs. 15,337 (*nil*) and provision for major overhauls of machinery Rs. 43,607 (*nil*) leaving a credit balance of Rs. 13,31,021 (debit of Rs. 2,40,947). Adding to this the amount brought forward of Rs. 45,248 (Rs. 25,195) there is available for disposal a sum of Rs. 13,76,269 (Rs. 2,64,248 after transferring Rs. 2,50,000 from general reserve and Rs. 2,30,000 from general and dividend equalisation reserve). The directors propose that this sum be dealt with as follows:—

By payment of a dividend on preference shares of Rs. 6 per share or 6 per cent. per annum absorbing Rs. 1,59,000 (1,59,000) payment of a dividend on ordinary shares of Rs. 20 (Rs. 2,50) per share or 20 (2½) per cent. per annum Rs. 4,80,000 (Rs. 60,000), transfer to general reserve Rs. 4,50,000 (*nil*) and transfer to general and dividend equalisation reserve Rs. 2,40,000 (*nil*) leaving a credit balance of Rs. 47,269 (Rs. 45,248) to be carried forward.

No provision has been made for liability to wealth tax for assessment year 1958-59 as it is the opinion of the Board that this liability does not arise until 1st April 1958, after the period of the accounts under review.

Modernisation of the Mills' Spinning Departments is now virtually completed with beneficial results throughout the entire Mill economy.

The total cost of modernisation during the last two years has been Rs. 37,54 lakhs of which Rs. 15 lakhs was financed by the loan received from the National Industrial Development Corporation, the remaining Rs. 22,54 lakhs having been met from the Company's own resources. The directors consider that the reserve of Rs. 19 lakhs for machinery renewals and replacements has been fully utilised and have, therefore, considered it prudent now to transfer the Rs. 19 lakhs to general reserve. It will be noted from the accounts that effect has been given to this transfer.

In September of last year the new Carpet Backing unit of the Factory commenced production. This unit comprises 20 looms. In the early stages business was slow to build up and the unit contributed little to the profits of the year under review. The directors are pleased to be able to report, however, **that this section is now working to capacity and contributing its full share to the Mill's present prosperity.**

Trading for the current year has to date enabled reasonable profits to be earned, and prospects up to the end of 1959 are encouraging.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Nuddea Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year before charging depreciation amounts to Rs. 14,50,709 (loss of Rs. 4,24,886) to which is added dividends forfeited of Rs. 1,099 (Rs. 852) and refund of income-tax for previous period Rs. 6,884 (Municipal tax Rs. 24,952) making a total of Rs. 14,58,692 (debit of Rs. 3,92,082 excluding a credit adjustment of Rs. 7,000 in respect of post de-requisitioning expenses). After deducting depreciation for the year of Rs. 5,59,257 (Rs. 4,71,616), dividends previously forfeited now paid Rs. 69 (*nil*), transfer to development rebate reserve of Rs. 59,685 (*nil*) and provision for major overhauls of machinery Rs. 46,750 (*nil*) there is a credit balance of Rs. 7,92,931 (debit of Rs. 9,46,805 including Rs. 83,107 being retiring benefits paid to ex-employees). With the amount brought forward from the previous year of Rs. 20,195 (Rs. 17,000) there is available for disposal a sum of Rs. 8,13,126 (debit of Rs. 9,29,805). The directors propose that this sum be dealt with as follows:—

By payment of a dividend of Rs. 2.50 (*nil*) per share or 5 (*nil*) per cent. per annum, absorbing Rs. 3,33,975 (*nil*), by transfer to general reserve of Rs. 4,00,000 (*nil*) and leaving a credit balance of Rs. 79,151 (Rs. 20,195 after transferring a sum of Rs. 9,50,000 from general reserve) which the directors recommend should be carried forward.

No provision has been made for liability to wealth tax for assessment year 1958-59 as it is the opinion of the Board that this liability does not arise until 1st April 1958, after the period of the accounts under review.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 48 hours a week throughout the period under review with 12½ per cent. of their registered complement of looms sealed.

Trading conditions throughout the year were more favourable than those that have been experienced for some considerable time past. This was particularly the case in heavy goods where the prices for sacking quality jute were for the most part at economic levels—particularly cuttings. The mills took full advantage of these conditions.

Modernisation of the Mills' preparing and spinning departments proceeded according to plan and the greatly improved working of the past year is largely the result of improved efficiencies and other economies made possible by the installation of this new equipment. While re-equipment of the light yarn section of the mill is virtually completed, 50 per cent. of the sacking weft until still remains to be converted to sliver spinning. It is hoped that this section will be completely modernised during 1959.

This modernisation during the last two years has been completed at a total cost of Rs. 43,92

That was the beginning of exports by the Indian White Sugar Industry to earn foreign exchange. Geographically, India is within easy reach of sugar importing countries in the Middle, Near and Far East. In quality too, Indian Sugar compares favourably with that produced in other countries. With a better understanding of the industry's structure and problems and co-operation from the Government and consumer, the Industry can consolidate the position it has secured in the world market and improve it further to earn more foreign exchange: so vital for the progress of the Second Five Year Plan.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; **it provides employment to** over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Notice

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Sixty-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on Friday, 14th November, 1958, at 12 noon, for the following purposes:—

(1) To consider the Profit and Loss Account for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.

(2) To elect a Director in a place of a Director retiring by rotation.

(3) To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

"That Mr. J. H. Jamieson be and is hereby appointed a Director of the Company."

Special Notice dated 30th September, 1958, of the intention to propose the foregoing as a Special Resolution has been received by the Company wherein it is stated that a Special Notice is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956 as Mr. Jamieson is an employee of the Managing Agents and whose appointment at this Meeting will require a Special Resolution.

(4) To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider, and, if thought fit, to pass with or without modification the following resolutions:

(5) (*As a special resolution.*) "That the Company do hereby approve of a contract or contracts, as the case may be, being entered into between the Company (hereinafter called "the Buyers") of the one part and James Finlay & Co., Limited, the Managing Agents of the Company (hereinafter called "the Sellers") of the other part, the material terms of which shall be—

1. The Sellers will sell and/or supply and the Buyers will buy and/or receive goods and services as set forth in the Schedule hereto at the price mentioned therein.

2. Delivery of the goods or the rendering of the services shall be made in accordance with the requirements of the Buyers.

3. The Buyers shall give notice to the Sellers of their requirements by an Advice Note.

4. Unless otherwise mutually agreed, the usual terms and conditions published by the Sellers and those commonly used in the trade or business carried on by the Sellers shall be applicable to any contract made in pursuance of this Resolution in so far as such terms and conditions or any of them relate to the Goods and Services.

5. Any dispute or difference between the Sellers and the Buyers relating to the terms of any contract shall be referred to arbitration in accordance with the Arbitration Act, 1940.

6. Any contract made in conformity with the foregoing shall be valid for a maximum period of five years from the 1st day of March, 1958, unless previously terminated by either party giving to the other one month's notice in writing.

7. It is hereby expressly declared that any sum received by the Sellers from the Buyers whether directly or indirectly by way of remuneration, rebate, commission, expenses or otherwise under the provisions of the foregoing shall not be or be deemed to be remuneration paid by the Buyers to Sellers as the Managing Agents of the Company within the meaning of Sections 198, 348 and 363 of the Companies Act, 1956."

SCHEDULE

Description	Quality	Quantity Annual, Maximum, Minimum	Price
1. Raw jute (including cuttings), machinery and mill stores, and all such other goods and products as are or may be set forth in any current catalogue, price list or other publication for the time being in force as may be issued from time to time by the Sellers in the ordinary course of their trade or business.	Such as may be prescribed by the Buyers.	Such as may be prescribed by the Buyers and which are sufficient for their reasonable requirements.	Fair market price realisable by the Sellers at the date of the order for the delivery specified or the current price for the time being in force or a price which is otherwise reasonable.
2. Sale and/or renting, hiring, leasing of land, buildings, premises (or part thereof), godowns and accommodation, clearing and forwarding and transport services.	Do.	Do.	Do.

(6) (*As a special resolution.*) "That the Company do hereby approve of a contract or contracts, as the case may be, being entered into between the Company (hereinafter called "the Sellers") of the one part and James Finlay & Co., Limited, the Managing Agents of the Company (hereinafter called "the Buyers") of the other part the material terms of which shall be—

1. The Sellers will sell and/or supply and the Buyers will buy and/or receive goods and services as set forth in the Schedule hereto at the price mentioned therein.

2. Delivery of the goods or the rendering of the services shall be made in accordance with the requirements of the Buyers.

3. The Buyers shall give notice to the Sellers of their requirements by an Advice Note.

4. Unless otherwise mutually agreed the usual terms and conditions published by the Sellers and those commonly used in the trade or business carried on by the Sellers shall be applicable to any contract made in pursuance of this Resolution in so far as such terms and conditions or any of them relate to the Goods and Services.

5. The price of the Goods and Services shall be paid to the Sellers within one month from the date of the actual delivery of the Goods or rendering of Services to the Buyers.

6. Any dispute or difference between the Sellers and the Buyers relating to the terms of any contract shall be referred to arbitration in accordance with the Arbitration Act, 1940.

7. Any contract made in conformity with the foregoing shall be valid for a maximum period of five years from the 1st day of March, 1958, unless previously terminated by either party giving to the other one month's notice in writing.

8. It is hereby expressly declared that any sum received by the Buyers from the Sellers whether directly or indirectly by way of remuneration, rebate, commission, expenses or otherwise under the provisions of the foregoing shall not be or be deemed to be remuneration paid by the Sellers to Buyers as the Managing Agents of the Company within the meaning of Sections 198, 348 and 363 of the Companies Act, 1956."

SCHEDULE

Description	Quality	Quantity Annual, Maximum, Minimum	Price
Hessian Cloth, Gunny Bags, Twine.	Such as may be prescribed by the Buyers.	Such as may be prescribed by the Buyers and which are sufficient for their reasonable requirements.	Fair market price realisable by the Sellers at the date of the order for the delivery specified.

The Share Register of the Company will be closed from 6th November to 14th November, 1958, both days inclusive.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

CALCUTTA, 16*th October*, 1958.

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

EXPLANATORY STATEMENTS

Resolutions Nos. 5 and 6

Section 360 of the Companies Act, 1956, prescribes, *inter alia*, that a company may by special resolution approve of any contract being entered into with its managing agent or any associate of the managing agent for the sale, purchase or supply of any property or rendering of service. Contracts of the nature referred to in force at the commencement of the Act, i.e., **the 1st April, 1956, in the matters referred to in Section 360 are deemed to terminate on the 1st March, 1958, unless previously determined and this is the effect of Section 361 of the Act.**

Contracts of the nature referred to existed between your Company and James Finlay & Co., Limited (the Managing Agents) relating to the purchase, sale or supply of goods and services. Such arrangements have been found convenient and in the interests and for the benefit of your Company. As these contracts expired by virtue of Section 361 of the Act on the 1st March, 1958, your Board of Directors considers it desirable that the same be renewed to have effect from that date. The special resolution sets out particulars of the transactions envisaged which may be affected by the provisions of Section 360 of the Act. The formal contracts in relation to the matters authorised by the special resolution will be dealt with by your Board of Directors as and when the occasion requires.

Interest of Directors and Managing Agents. The Directors and the Managing Agents of the Company are interested to the extent of their shareholdings of the Company as set out below.

AND

IN THE MATTER OF RICHARDSON & CRUDDAS LTD.

BY AN ORDER OF THE CALCUTTA HIGH Court in the above matter, dated the 23rd April 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the shareholding in the above company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the Company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars. Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:—

"The Special Officer, Richardson & Cruddas Limited,

Hindusthan Buildings, 4, Chittaranjan Avenue,

Post Box No. 965, Calcutta-13,"

and superscribed "SHARES".

D. N. MITRA,
Special Officer.

Dated this 26th day of August, 1958.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of The Karanpura Development Company Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 28th November, 1958 at 11 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957 and to receive the Directors' and Auditors' Reports thereon.
2. To appoint a Director in place of a retiring Director.
3. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th November to 28th November, 1958, both days inclusive.

ROHTAS INDUSTRIES LIMITED
DALMIANAGAR, BIHAR

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the Company have decided to capitalise Rs. 16,20,209 from the Share Premium Account and Rs. 6,59,791 out of the General Reserve and to issue the same in the form of fully paid ordinary bonus shares of Rs. 10 each in the proportion of one fully paid ordinary bonus share of Rs. 10 each to the holders of every 10 existing ordinary shares of Rs. 10 each, whose names stand registered in the Register of Members of the Company on 31st October, 1958.

The ordinary bonus shares shall rank *pari passu* in all respects with the existing ordinary shares save and except that they will not be entitled to dividend declared in respect of the financial period of the Company ended 31st March, 1958.

Requisite consent from the Controller of Capital Issues and the Industrial Finance Corporation of India has been obtained.

By Order of the Board,

For SAHU JAIN LTD.,

A. P. JAIN,
Director,
Managing Agents.

15*th October*, 1958.

ROLE OF SOCIAL SCIENTIST IN POLICY-MAKING

(*Concluded from page* 688)

stance. He does not suffer from the limitations of the bureaucratic intellectual. He is not compelled to take up a particular type of problem nor is the direction of solution suggested to him by the politicians. Being independent, his values can clash with those of the man in power. Although, because of this freedom from restrictions, the unattached intellectual has greater freedom and objectivity in following up a problem and suggesting the solution, he himself is under some drawbacks. First of all, being outside the administration, he cannot fully size up a problem, since even such a small adjustmental problem of a quantitative character as raising the bank rate or increasing the export duties, has its own administrative and other implications, which only an insider in government can understand. In this respect, it is worth comparing, say, the American economists at Harvard and Columbia with their counterparts in India. Practically all the American economists have at one time or another been connected with the Administration. Naturally, therefore, the intellectual in India would tend to be theoretical, unrealistic, and even utopian. There is, secondly, the disadvantage that hibernation for a long time, especially in an environment where intellectual conflict and opportunities for adequate information are absent, would develop prejudices with regard to policies, and the intellectual might hug on to shibboleths and outworn policies, in spite of changing circumstances. Independence of judgment might become rigidity in views. There is, finally, the disadvantage that the unattached intellectual, being himself human, might find opposing the man in power not worthwhile. In other words, the intellectual, whether he is attached or unattached, may become, as Mr. A. D. Gorwala observes in his *Report on Public Administration*, "a courtier." This change in the social scientist's approach would further weaken his position, both in assessing a proposed policy and in offering an alternative to it.

The effectiveness of the scientist's role depends on three sets of conditions. First, it depends on the category of policy he deals with. The *foundational type* is multifaced and, therefore, cannot be effectively dealt with by a single social scientist or a group belonging to the same discipline, e.g., economists by themselves. Policy-making in this category becomes the function of a cross section of social sciences co-operating and, perhaps, others coming in too. The *structural type* of policies is the one where the social scientists of a particular hue can operate most effectively. For instance, changes in tax policy are largely the field of the economist or tax expert. The *adjustmental type* of policy (e.g., bank rate changes) is easily the field of a central banking expert. Very broadly, in the first type, social scientists can act only as a group, and even then, their effective contribution is limited; secondly, each type of social scientists can effectively operate on his own; and thirdly an individual intellectual can function.

The second set relates to the specificity of the problem. The scope to formulate a policy depends on the specificity of the policy-maker's aim, i.e., how vague or general is the aim? In a way, low specificity, i.e., greater vagueness, means large scope to the intellectual. Again, if the problem is merely a continuance of a decision, the scientist's role is limited. But even here, the intellectual can focus attention on alternative lines of action or designs of policy. Often the way in which data are presented may alter policy.

Policy-maker

The third set of factors influencing the role of the intellectual is in the intellectual himself. The scientist represents the tradition of precise knowledge, comprehensive outlook, intellectual freedom and objective judgment. The politician policy-maker is not always after truth and reality. The intellectual, particularly the bureaucratised one, is likely to follow this path, neglecting the purely scientific sphere for a subordinate and secondary position, and converting himself from a scientist to a 'research-worker.' "Whenever the scientist intervenes in contemporary issues," observes Prof. Apery, "he must bring with him the special qualities which attach to the calling: intellectual probity and the faculty of critical evaluation." This facet of the scientist is hardly appreciated by the policy-maker and often found inconvenient by the intellectual himself. Another 'internal' factor is largely technical. Successful policy-advice demands the ability to get quickly on a truth. This ability can be cultivated but needs comprehensive vision and the outlook and values of a mature man, and real familiarity with the main tools of analysis. A half-educated economist, it is said, is the source of erroneous judgments. One way of overcoming this limitation is to create a co-operative atmosphere by trying to learn from others. Recognise resistances in the policy-maker, and time and pace the communication of data and results in a way acceptable to him. Present the results in a positive manner, first emphasising the favourable aspects of current policy since concentration on weaknesses produces an avoidance reaction. Avoid insisting arbitrarily that the data are accurate and the design, foolproof. Give the policy-maker opportunity to "save his face."—*All Rights Reserved.*

COMPANY REPORTS

(*Concluded from page* 696)

lakhs of which Rs. 24.50 lakhs was financed by the loan received from the National Industrial Development Corporation, the remaining Rs. 19.42 lakhs having been met from the Company's own resources. The directors consider that the reserve of Rs. 12½ lakhs for machinery renewals and replacements has been fully utilised and have, therefore, considered it prudent now to transfer the Rs. 12½ lakhs to general reserve.

Trading for the current year has to date enabled reasonable profits to be earned, and prospects for the immediate future are not discouraging.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	66,79,500	Gross block	2,26,00,780
Reserves ...	17,31,396	*Less*—Depreciation	1,19,72,061

		Stores ...	12,02,316
		Debts, deposits and advances ...	14,98,687
		Investments	4,38,839
		Cash ...	1,68,760
	Rs. 1,81,78,556		Rs. 1,81,78,556

MONEY VERY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 22*nd October*

Activity in the short-term money market was extremely dull during the week under review. The seasonal demand for bank credit had not set in and, with a surfeit of funds in their tills, banks were all lenders in the inter-bank call money section. As a result, the interest rate in this section tended to decline further, with no borrowers at even 1½ per cent. Renewals were, however, said to have been done at 1½ per cent. The corresponding rate among the smaller Indian banks was 2 to 2½ per cent. House money at seven days' notice, however, continued to be quoted at 3½ to 3¾ per cent., with most of the business passing at the latter rate. The rates for short-term deposits were also unchanged at 3½ to 4 per cent.

For reasons stated in this column last week, there was no sale of Government of India 91-day Treasury Bills this week. Tenders for the auction to be held on the 28th inst., have been invited for Rs. 3 crores.

Minor variations in notes in circulation and notes held in the Banking Department are disclosed by the Reserve Bank of India statement for the week ended 17th October 1958. For the first time, after a lapse of five weeks, there has been a drop of Rs. 5 crores in foreign securities. A corresponding rise is noted in rupee securities. Balances held abroad (in the Banking Department) have gone up by Rs. 2.47 crores, so that the net decline in total foreign assets is Rs. 2.53 crores. These now stand at Rs. 179.74 crores. Deposits of the Central Government are lower by Rs. 1.46 crores, while those of other Governments show a rise of Rs. 17.29 crores. Deposits of banks too have gone up appreciably by Rs. 25.08 crores to stand at nearly Rs. 113 crores. Loans and advances to Government have declined by Rs. 4.18 crores, while other loans and advances show an increase of Rs. 92 lakhs. Investments disclose a substantial increase of Rs. 71.91 crores.

For the second week in succession, there has been a notable shift in the funds of banks from demand deposits to time deposits. The Scheduled banks' statement for the week ended 10th October 1958 shows a further drop of Rs. 10.97 crores in demand deposits (on top of a decline of Rs. 22.61 crores in the previous week) and a rise of Rs. 10.56 crores in time deposits, which had increased in the previous week by Rs. 18.34 crores. In contrast to the rise of Rs. 5.60 crores in the previous week, inter-bank borrowings have declined by Rs. 5.31 crores in the week under review. Advances are unchanged, while there has been a decline of Rs. 86 lakhs in bills purchased and discounted. Investments have been enlarged by Rs. 3.05 crores, while cash balances and money at call have dwindled by Rs. 10.48 crores and Rs. 6.23 crores, respectively.

The Gilt-edged market continued to be listless, with very little enquiries from institutional investors. Support from banks was conspicuous by its absence, despite the easy money conditions and the consequent surfeit of funds with them. Presumably, they are expecting the busy season to set in at any moment and, therefore, do not wish to lock up their surplus funds in Government securities. There was a further marking down in prices of some loans, while in other counters prices were more nominal in the absence of any business.

3 per cent. Conversion Loan continued to be on offer and declined by a further 35 nP to Rs. 73.25. 3 per cent. 1970-75 was dull at Rs. 90 *ex*-voucher. 3 per cent. 1966-68 had sellers at Rs. 94 and 3 per cent. 1963-65 5 nP lower at Rs. 96.55. 3 per cent. 1959-61 was also on offer at Rs. 99.75. Small buying enquiry was noted in 3½ per cent. 1962, but the quotation was unchanged at Rs. 99.15. 3½ per cent. 1961 was in demand at Rs. 100.05. 3½ per cent. 1963 shed 5 nP to Rs. 100 and 3½ per cent. 1964 was placed at Rs. 99.85 *ex*-voucher, as against Rs. 99.95 *cum*-voucher a week ago. 3½ per cent. 1965 showed no change at Rs. 99.65. 3½ per cent. 1967 at Rs. 98.85 and 3½ per cent. 1968 at Rs. 98.60. 3¾ per cent. 1967 was stagnant at Rs. 100.30 and 3¾ per cent. 1968 at Rs. 100.25. Among the 4 per cent. loans, 4 per cent. 1973 was in demand and rose by 5 nP to Rs. 100.35, following the Reserve Banks action in stopping sales of this loan. Activity was at a low ebb in State loans also.

There was a slight weakening of the rupee in terms of the U.S. dollar during the week under review, but towards the close a recovery set in. The trend was mainly influenced by the fluctuations in sterling abroad. Banks' selling rate for ready dollars rose from Rs. 476.75 to Rs. 477 per $100, before declining to Rs. 476.75 per $100. Likewise, banks' buying rate, after moving up from Rs. 473.25 to Rs. 473.75, closed lower at Rs. 473.50 per $100. In New York, spot sterling declined from $2.80-25/32-2.80-27/32 to $2.80-11/16-2.80⅜ before closing at $2.80-23/32-2.80-25/32. Three months' forward closed ¼c. lower on balance at $2.80-5/32-2.80-7/32. Transferable sterling was marked down from 279.15-279.20 to 279.10-279.15 cents.

TEA PRICES HARDEN

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 16*th October*

There were 1,387,819 lbs. on offer in sale No. 30, which was held on Tuesday, 14th October. Once again teas from the Nilgiri district showed improvement in quality. At the other end of the scale, low medium and mediums were a little disappointing both in leaf and liquor. In spite of this, the market was very strong for all teas up to Re. 1.55. Medium teas met rather less enquiry and were considerably lower. There was keen competition for the good medium and best liquoring broken grades and these advanced in price. Similar fannings were firm and occasionally dearer. There was a useful enquiry for whole leaf grades and at times these sold at dearer rates. The strong demand for all tippy teas was maintained. The following are the quotations:—

Low medium Re. 1.55 to Re. 1.65; medium Re. 1.70 to Rs. 1.85; good medium Rs. 2.05 to Rs. 2.30 and quality Rs. 2.90 to Rs. 4.45.

London Market: *Sale of 13th October* 1958:—Buying selective. Assams irregular, but mostly lower. Others unchanged.

Sale of 14th October 1958:—Irregular and mostly easier.

Colombo Market: *Sale of 13th October* 1958:—Strong general demand. UVA quality declined, prices again substantially lower. Dimbula Dickoya brokens irregularly dearer, following quality. Corresponding fannings firm. All mediums 10 cents to 15 cents dearer. Low growns up 5 cents, Gulf types up 10 cents.

Sale of 14th October 1958:—Strong demand. Better liquoring sorts firm to dearer. Others steady.

Calcutta Market: *Export*:—73,658 packages. Strong general demand, especially for commonest.

Internal:—21,600 packages dust. Good general demand. Orthodox irregular up to 4 nP easier. Strong liquoring powdery firm to dearer. Darjeelings well supported at slightly dearer rates. Exportable C.T.Cs. steady. Poorer liquoring C.T.Cs. 10 to 20 nP easier.

Export Quota:—The market has remained steady throughout the week with a fair quantity of business going through at 3½ nP. The latest quotation shows a slightly dearer tendency with business being transacted at 3¾ nP.

Forthcoming Auctions:—Sale No. 31 will be held on Tuesday, 28th October 1958.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 22*nd October*

After a setback early in the week under review, bullion prices staged a marked recovery and closed today around the highest levels for the week. The earlier decline was more marked in silver than in gold, due to bull liquidation on rumours that a former Princely State was in the market to sell a sizable quantity of the white metal. This affected gold also to some extent, but the undertone in the yellow metal still remained firm. From Monday onwards, there was a rally in both silver and gold on reports of good demand. Arrivals of Tibetan silver coins were scarce, while those of gold were a little higher. The good offtake of ready gold, however, kept the morale intact. Reports that China had revoked its cease-fire order gave an impetus to speculative activity pushing prices further up. The undertone at the close was firm.

Forward silver (27th October settlement) declined from Rs. 189 to Rs. 187-8, but soon staged a rally to touch Rs. 189-6 today. The closing was done at Rs. 189-3. The next settlement closed at Rs. 190-1, after a setback from Rs. 189-14 to Rs. 188-6.

Ready silver finished at Rs. 188-9, as against Rs. 188-4 a week ago, the week's lowest level being Rs. 186-12. The floating stocks of silver are placed at 1,200 bars. The daily average arrivals were about 40 bars (including unrefined metal), while the offtake was 10 bars on an average.

Gold for forward delivery (28th October settlement) improved from Rs. 109-7 to Rs. 109-14 early in the week, but the decline in silver brought the yellow metal also down to Rs. 109. This loss was made good in the subsequent recovery and forward gold (current settlement) closed at Rs. 109-14. The next settlement finished today at Rs. 110, as against Rs. 109-11 a week ago.

Ready gold improved from Rs. 109-7 to Rs. 110-3, at which level it commanded a premium over both the settlements. A week ago, ready was on par with the current settlement, but was quoted at a discount of As. 4 below the next settlement. The floating stocks of gold are estimated at 40,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 3,000 tolas on an average.

There was no change in the New York price of silver at 90⅛c., while the London prices were raised again from 78¼d. to 78½d. for spot and from 78¼d. to 78⅝d. for forward. Gold declined from 250*s.* 2½*d.* to 250*s.*

The following comparative table shows at a glance the trend of the market during the week under review:

	22-10-58	Highest	Lowest	15-10-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON FUTURES RECOVER TOWARDS CLOSE

(From Our Own Correspondent)

BOMBAY, 22*nd October*

After a sharp fall during the first half of the week, the cotton futures market picked up strength on Monday and staged a modest recovery. The recovery gathered momentum today. Most of the earlier losses were made up and the market closed at rates only slightly below last week-end quotations. The early reaction was due mainly to the onslaught of heavy liquidation by upcountry operators, following favourable weather news from the Punjab and Gujerat. The prospect of the new crop movement starting shortly gave fresh impetus to selling. Moreover, the categorical statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that there was no possibility of any further reduction in excise duty on cloth imparted further weakness to the market. Under pressure of selling, cotton futures prices sharply declined. The Jarilla March contract touched the lowest level of its career of Rs. 611.50 on Saturday. Some quarters were wondering whether the downward trend in cotton prices would not affect cotton production in the next season. They strongly felt that, in order to prevent a steep fall in prices, the Forward Markets Commission should impose a margin if prices fell below a certain level.

The Indian Central Cotton Committee was also reported to have made a similar suggestion and recommended to the E.I.C.A. that, just as the provision had been made in the by-laws of the E.I.C.A. to check an inflationary rise in price, provision shou'd also be made to prevent a steep fall in prices. This suggestion was considered by the E.I.C.A. at its weekly meeting on Friday. The news that the Board had decided at this meeting to maintain the *status quo* in this respect came as a disappointment to bulls. The recovery of the market on Monday and in subsequent sessions was due to the emergence of support induced by reports that the announcement regarding the export incentive scheme for textiles was imminent. Nothing so far materialised. But the expectation persists. The firmness of the side markets also imparted strength to cotton.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 613.50, as against the previous close of Rs. 621.25 and, after improving to Rs. 619.50 the next day, declined to Rs. 611.50 on Saturday. It recovered to Rs. 615 on Monday. The market was closed yesterday due to *Dassera*. Opening at Rs. 620.50 today, the contract improved to Rs. 621.25 before finishing at Rs. 618.75. The net loss over the week was Rs. 2.50.

The trend of prices of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	22-10-58	*High*	*Low*	15-10-58
I.C.C. Moglai Jarilla (March 1959) ...	618.75	621.25	611.50	621.25

In the spot section, values suffered a further sharp break. Stray lots of quality cotton such as Laxmi-Jaydhar, Co2, 0394, and Berar received the attention of mills. Good enquiry was noted for new crop Khandesh Punjab 320F, Khamgaon, etc. But mills were hesitant to enter into firm commitments as they anticipated a further fall in prices when the crop started moving.

The export section was fairly active. Prices, however, looked down. Demand was noted for fine and superfine Bengals, Jarilla, 320F, Kala and Wagad. A sizable quantity of 320F was booked by shippers against sales to Hong Kong and the Continent.

In the foreign section, following the sharp fall in East African prices, mills evinced keen interest in these growths. Good business was reported in B.P. 52. Transactions were also put through in certain varieties of Sudanese cottons.

Importers are eagerly awaiting New Delhi's import quota announcement for cotton.

The Government of India has extended upto 30th November, the shipment period for importing 30,000 bales of cotton stapling 1.3/16" and above and 40,000 bales of cotton stapling 1.1/6" and above from soft currency areas against the quota announced on 6th August last. This was due to expire at the end of this month.

The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are given below, the figures in brackets being last week-end rates. Bengal *Deshi* 560 (590), Berar Jarilla 600 (615), Khandesh 640 (665), Vijay 800 (800), Hubli Laxmi 840 (860), Jaydhar 765 (790). *Delivery contracts*: Bengal 565 (575), Mathia 558 (570).

The downward trend of cotton prices noted in the Karachi market during the last two weeks continued during the week under review also. Fears of the adverse effects of the prevailing political situation in Pakistan on cotton exports persisted. Overseas enquiries were few and far between. Weaker advices from upcountry centres and the anticipation that the new crop would start moving shortly imparted weakness to the market. N.T.R.G. January, which closed at Rs. 69-7 last week-end, receded to Rs. 68-5 while the March position shed over the week Re. 1-5 to Rs. 68-6. The spot section ruled easy. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 64; Punjab *Deshi* 61; 4F Punjab Roller 67-5; S.G. 71-5; L.S.S. Punjab Roller 68-5; S.G. 72-5; N.T. Roller 71-5: New 74-5; S.G. 87-5.

The Alexandria cotton futures market ruled steady during the week. Export enquiries, especially from East European countries, imparted strength to the market which offset the downward pressure on prices exerted by new crop movements. The market, consequently, managed to maintain steady undertone. Nevertheless, the medium staple *Ashmouni* contracts met with profit-taking and its quotation declined. The following are the latest available quotations—in tallaris per lb.—from Alexandria: *Karnak*: November 72; January 72.10; *Ashmouni*: October 64.55; December 63.70.

The Karnak crop this season is reported to be about the same in quality and style as that of the previous season. Top grades are said to be scarce and command fancy premiums. However, high grades and medium ones are plentiful and relatively cheap while the lower grades are priced very attractively. On the whole, the Menoufi crop is considered to be disappointing and has produced very little of top grades. High grades are also scarce and dear. The Ashmouni crop has produced cotton the style and staple of which are better than that of last season. However, here also the high grades are scarce and their premiums have been advancing sharply. Giza has been described by a prominent shipper as "the most successful crop of this season. In grade style, and staple it is far better than any of the preceding crops." Ruling prices are considerably lower than those of last season.

Cotton values in Liverpool declined on increased hedge pressure and Commission House sellings. The distant delivery months of both the American and the American type contracts, in particular, met with sizable selling which reflected the prospect of large carryover stocks at the end of the current season and a bigger crop in the U.S. following the new cotton legislation. Sudan contracts were influenced by lower advices from Khartoum and rates receded. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 24.30; December-January 24.30; March-April 23.85; May-June 23.55. *American cotton mixed growth contract*: October-November 24.82; December-January 24.50; March-April 24.20; May-June 23.95. *Sudan*: November-December 28.75; January-February 28.75; May-June 28.75.

Listless conditions prevailed on the New York Cotton Exchange during the week. Price fluctuations were narrow and turnover limited. Hedge selling against new crop movement was mostly absorbed in short-covering and scattered mill fixation. Weather reports were favourable but they exerted little influence on the market. Over the week, prices showed a slight improvement. The October contract went off the board on the 14th inst. at 35.74 cents.

The Agriculture Department announced on the 15th inst. the export sale, against bids received on the 13th, of 304,198 bales of U.S. Government-owned cotton at 28.85 cents per lb. basis middling inch cotton. At the previous sale of this cotton on 1st October, the Department sold 6,221 bales at 28.86 cents per lb. Net sales of this short-staple cotton since the 1958-59 disposal programme began on 12th May last aggregated 1,094,817 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	21-10-58	14-10-58	7-10-58
Spot	36.20	36.25	36.20
October	—	35.74	35.76
December	36.11	36.09	36.20
March	36.58	36.57	36.67
May	36.31	—	—

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 22*nd October*

A notable development in the yarn market during the week under review was the announcement of a new scheme for the equitable distribution of indigenous viscose yarn to art silk mills in the country. According to this scheme, the distribution of indigenous yarn will be made on a uniform basis to all powerlooms in the country at the rate of one pound per loom per shift during the *October-March* period. It is learned further that no preferential treatment will be allowed to old customers of art silk yarn manufacturers in regard to the quantity of yarn supplies. Supplies to units operating more than nine looms will be made at the rate of one pound per loom per shift actually worked between October 1957 and March 1958. Other units which operate nine looms or less will get supplies of yarn at the rate of 1.25 lb. per loom per day. These will be the maximum quantities which can be availed of by a mill from any one or all yarn producers in the country. Manufacturers of yarn will make distribution on the basis of 70 per cent. of their output directly to mills and the remaining 30 per cent. through the dealers.

Easy conditions prevailed in the yarn market during the week under review. Prices for both spot and forward deliveries staged a further decline. Despite this, turnover was at a low ebb due to apprehensions that there will be a further decline in prices. Staple fibre yarns forward deliveries fluctuated heavily and made a sizable drop from the previous week's levels. The fall was due to selling pressure from stockists, weak holders and upcountry buyers. Spot prices also declined. Demand for rayon yarn was also poor in view of the fact that the new scheme of distribution of indigenous yarn assured all powerloom factories of a uniform supply. There were also heavy arrivals against previous orders placed by actual users against their import licences. Buyers were, therefore, prone to insist on still lower prices. Trading in cotton yarns continued to remain depressed, thanks to absence of satisfactory offtake from consuming centres.

Staple fibre varns (40x2) October delivery was subjected to selling and declined by Rs. 9 to Rs. 610. December delivery dropped a like amount to Rs. 618. In the spot section, 40x2 Centurys receded by 5 nP to Rs. 3.23. Kohinoors shed 2 nP to Rs. 3.28. Citys were dull at Rs. 3.24. Among foreign yarns, Paramounts retreated by 6 nP to Rs. 9.75. Fujis were neglected at Rs. 9.61.

In the art silk yarn section, 120 Japan declined by 6 nP to Rs. 5.31. 150 Japan climbed down by 19 nP to Rs. 5.62. 120 Italy shed 25 nP to Rs. 5.75 and 150 Italy a like amount to Rs. 5.75. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 9 nP to Rs. 4.41. 120 bright cones first grade were quoted 12 nP lower at Rs. 5.41.

Cotton yarns, eighty counts Mahendras were neglected at Rs. 69, as also Moderns at Rs. 72 and Finlays at Rs. 78. Among sixty counts, Finlays changed hands at Rs. 59, same as for last week. Forty counts Moderns were stagnant at Rs. 25. Minaxis, however, gathered 12 nP to Rs. 25.06. Among thirty counts Hinds were dull at Rs. 19.75. Twenty counts Moderns, however, gained 25 nP to Rs. 16.75. Among ten counts Moderns were quiet at Rs. 13.25. But Podars rose by 75 nP to Rs. 13.

The following table gives the prices of rayon staple fibre and cotton yarns quoted today, as compared with those a week ago:

	22-10-1958	15-10-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.31	5.37
150 Japan (per lb.)	5.62	5.81
120 Italy (per lb.)	5.75	6.00
150 Italy (per lb.)	5.75	6.00
Staple fibre yarn (per case of 200 lbs.)—		
40 s 2 October	610.00	619.00
40 s 2 December	618.00	627.00
40 s 2 Kohinoor (per lb.)	3.28	3.30
40 s 2 City (per lb.)	3.24	3.24
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.00	12.25
20s Modern	16.75	16.50
30s Hind	19.75	19.75
40s Minaxi	25.06	24.94
60s Finlay	59.00	59.00
80s Mahendra	69.00	69.00

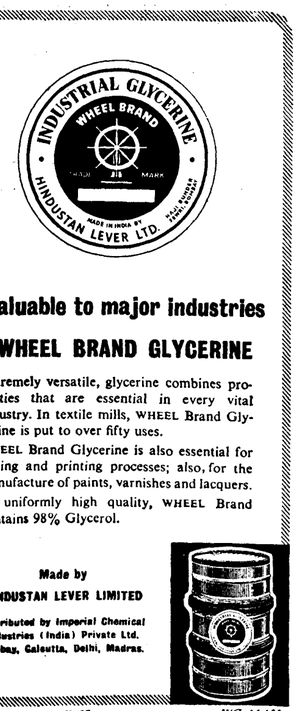
CASTOR WEAK

(From Our Own Correspondent)

BOMBAY, 22*nd October*

A mixed trend was witnessed in the local seeds market during the week under review. Groundnut was quiet for the major part of the week, thanks to heavy arrivals, though it tended to look up towards the close of the week. Linseed was steady. Castorseed, on the other hand, gave way on lack of support.

Groundnut February 1959 contract which stood at Rs. 163.75 last week-end came down to Rs. 161.87 on Saturday. It again moved up to Rs. 163.75 today. Bold ready fell from Rs. 39.50 to Rs. 38.00 over the week. Coromandel variety dropped in sympathy from Rs. 40 to Rs. 38.75. Khandesh quality likewise slumped by Re. 1 to Rs. 38.50. Groundnut oil ex-mill remained steady at the last week-end's closing rate of Rs. 21.50 until it fell to Rs. 21.37 on Monday; today's closing remains unchanged at this level. Railway receipts, after improving from Rs. 21.25 last Wednesday to Rs. 21.31 the next day, fell back to Rs. 21.25 on Friday. It again rose to Rs. 21.37 on Saturday and fell to Rs. 21.25 today.



Castorseed May 1959 contract retreated from Rs. 146.87 to Rs. 145.37. Ready Madras, which stood at Rs. 29.37 last week-end, sagged to Rs. 29, after having fallen to Rs. 28.87 on Monday. Kanpur quality fluctuated between Rs. 28.25 and Rs. 27.50 and finished at Rs. 28. Castor oil B.S.S. fell by 27 nP to Rs. 16.50 and commercial quality by 19 nP to Rs. 15.

Linseed May 1959 contract receded by 19 nP to Rs. 30.87. Remaining dull during the week, linseed oil fell to Rs. 17.32, a drop of 7 nP over the week. Cottonseed May 1959 contract fell from Rs. 102 to Rs. 101 on Friday. Having received some buying support, it rose to Rs. 104. Among other seeds, kardiseed bold ready continued to be steady at Rs. 22.50. It, however, fell to Rs. 22 today. Nigerseed Madras quality, which stood at Rs. 34 last week-end, declined to Rs. 33.75 today.

The following table shows the closing prices of oilseeds and oils today as compared with those of the two previous weeks:

	22-10-1958	15-10-1958	8-10-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	163 75	163 75	164 25

† Rates exclude both excise duty and sales tax.

PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, 22*nd October*

Prices for Malabar black pepper, after fluctuating during the earlier part of the week, rallied in sympathy with the Cochin market where garbled for December delivery improved under pressure of short-covering, induced by the rumours that the U.S.S.R. was inquiring for a sizable quantity for shipment by steamers carrying machinery for the steel works on their return voyage.

Spot pepper in New York remained steady at $0.25 with buyers and sellers both awaiting new developments. Dealers there are often sending enquiries to feel the pulse of the Indian market as they seem to be anxious to buy both nearby and long delivery in view of reserved offerings both from Singapore and Djakarta. They are, however, reluctant to buy; they expect lower prices at the beginning of the harvesting season.

The Indonesian Government is reported to have revised higher its check price for Lampong. Disquieting news from the Far East, heavy rains in the coast and labour unrest in Kerala proved supporting factors.

Ungarbled at Cochin is nominally quoted at Rs. 562½ and ready garbled at Rs. 97.50. Forward market at Cochin is closed since 20th inst., and will reopen on the 23rd inst. Business for garbled in kerb at improved price is reported as shorts are covering December and January. The lowest and the highest for December and January delivery are Rs. 92½ and Rs. 91 and Rs. 96½ and Rs. 95 respectively. Calicut is steady at Rs. 590.

Singapore is reported steady at Str. $71 with sellers more reserved; they are unwilling to compete with Malabar which they think may naturally remain subdued, pending a clearer assessment of the new crop and its price trend.

The future of the market is uncertain but the undertone is better as sellers are reserved. Growers are reported to have only small holdings of old crop. The present lower price for ready garble is the result of liquidation by speculators and that for ungarbled is due to the fact that holders often come out to sell in anticipation of replenishing at lower price later on when the new crop arrives in the market. This is a normal feature of trading in transitional months.

Today's nominal quotations are: Ready delivery Rs. 73 per Bengal maund; October delivery Rs. 515-525; December Rs. 520-530; February Rs. 528-538 per candy of 5¼ cwts.

SUGAR STEADY

(From Our Own Correspondents)

BOMBAY, 22*nd October*

Thanks to the customary festival demand and the delay in the normal monthly release (this is expected to be announced next week), the sugar market presented a fully steady trend. Prices in the spot section were well sustained at the levels quoted a week ago. Arrivals during the week under review were also smaller, having been 6,000 bags, as compared with 10,200 bags in the previous week. There was no change in the ex-mill quotations.

The following are the closing rates (per bag) for the week:

Small grains: Rs. 105.50; medium grains: Rs. 108 to Rs. 111; large grains: Rs. 112 to Rs. 116.

* * * * *

HAPUR, 20*th October*

Sugar prices ruled quiet during the week, due to good supply position and poor outside demand. Prices of inferior quality were depressed. The old quota is nearly finished and the new is expected to be released soon. Crushing for the new season

has not yet begun in west U.P., but is expected in some factories by the end of the month.

While bold grain crystal sugar prices maintained its level in the Muzaffarnagar market, small grain prices continued depressed. The delay in the release of fresh quota resulted in a further fall in small grain crystal sugar prices. Bijnore E29 at Rs. 35.06 is still 75 nP per maund below the controlled price. Crushing operation with the factories will begin shortly. Some of the factories were not quoted as their stocks of the last released quota have exhausted and the latest mill delivery prices were: Iqba'pur (B29) Rs. 36-15, Khatauli (D28) Rs. 35-9, Lhaskar (B29) Rs. 37-2, Modinagar (B29) Rs. 37-2, Saharanpur (D28) Rs. 35-11, Raja (E29) Rs. 35-10.

Sugar prices ruled weak in the Kanpur market, due to selling pressure and the prevailing prices were: *Ex*-mill controlled Rs. 36-12 per maund, spot (per bag) C29 Basti Rs. 105, Gola and Burhwal Rs. 101-8, Wa'tergunj Tulsipur and Balrampur Rs. 101, Lakhimpur and Haragaon Rs. 100-12.

Khandsari prices ruled quiet during the week and production of *khandsari* has not yet begun. The Union Government has warned persons desirous of setting up *khandsari* units to refrain from setting up such units in or near the vacuum pan sugar factories, as that would adversely affect cane supplies and ultimately the production of refined sugar as well. *Khandsari* prices ranged between Rs. 32 and Rs. 34.50 per maund.

New *gur* arrivals have mounted to an average of 1,500 maunds per day and prices declined by Rs. 2 to Rs. 2.50 per maund during the week. New *gur* arrivals have substantially gone up in other smaller producing areas, but entire arriva's are being lifted by consumers due to good festive demand. Old *gur* stocks have exhausted and new *gur* arrivals will soon multiply. Prevailing prices were Rs. 21 to Rs. 22.50 per maund according to quality. New *gur* and *shakker* arrivals have also begun in the Muzaffarnagar market.

Latest advices from the producing areas of the South indicate that prices of *gur* there also registered some fall and were now quoted at Shrirampur Rs. 15 to Rs. 19.75, wet Rs. 11.75, Malunja Rs. 15.25, Koppergaon Rs. 15 to Rs. 21.50, new Rs. 18.50 to Rs. 23, Baramati Rs. 15 to Rs. 21, new Rs. 19 to Rs. 23, Ankapalli Rs. 16 to Rs. 19.50, Kolahpur Rs. 16 to Rs. 21 per maund.

Quietly easy conditions were witnessed in the *gur* future market during the week on continued bear pressure influenced by prospects of increased *gur* production. Opening at Rs. 14 last Monday, *gur fagun* declined in successive sessions to touch the lowest of the week at Rs. 13.34 and is today quoted at Rs. 13.43.

ARRIVALS OF HIDES SMALL

(From Our Own Correspondent)

MADRAS, 20th October

Arrivals of tanned hides and skins have been small, due to rainy weather conditions. U.K. trading has been small, because shippers and tanners have not been keen to book orders at lower levels. There were good enquiries for cow calf lower se'ections and buff calf all grades, but arrivals have been short and business booked was small. Tanned buff hides met with ready clearance from shippers to the U.S.

In the tanned skins section, the market was unchanged. In the October London public sales, prices of goat skins declined 3d. to 9d. on August levels, and 40 per cent. remained unsold. There was a fair attendance of the Home trade, but Continental buyers were smaller.

Sales of sheep skins commence today and the results are awaited with interest.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 20th October

During the week under review, market was fair. New arriva's in the hides and skin market were considerable. However, thanks to widespread floods and their aftermath, goods from western Uttar Pradesh were practically absent. The main transactions were done by the local tanners headed by Cooper Allens. The Madras dealers were active in goat and sheep. The latest quotations are as follows:—

Wet salted cow 1st grade Rs. 360 to Rs. 385 and 2nd grade Rs. 260 per score; wet salted buff 1st grade 1 lb. 11 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 250 to Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 250 to Rs. 300 and 2nd grade Rs. 150 to Rs. 200 per 100 pieces.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 20th October

Foodgrain prices continued steady during the week, barring maize the prices of which eased fractionally due to heavy arrivals from outside the State. Wheat prices continued steady, to be quoted at Rs. 24 per maund for average quality and up to Rs. 25 per maund for farm produce. Daily arrivals from the rural areas have slightly improved to an average of 50 maunds, but arrivals from outside were almost nil. The supply position of wheat, therefore, continues tight, but the consumers' demand has now shifted to maize which is comparatively cheaper. Preparation of land for *rabi* sowings is in full swing and it is now hoped that if it does not rain now, time'y sowings of *rabi* crops would be possible in most of the areas. Sowings of gram and peas has already begun.

Prices of rice eased by Re. 1 per maund during the week, thanks to increased arrivals of new rice in the market in larger quantities. In some of the water'ogged areas, standing rice crop has been adversely affected and latest prevailing prices are: *Basmati* sela Rs. 32 to Rs. 33, *mainpuri* Rs. 24.75, coarse quality Rs. 21 per maund. Gram prices registered an improvement of about Re. 1 per maund during the week, due to restricted supply position, as fresh gram stocks from Punjab are not available due to advance in gram prices there also and local stocks were seized by the State Government some time back. There is no open trading in gram. Bar'ey and *bejhar* prices also improved, as stocks were tight and fresh demand for seed purposes has begun. Maize is reaching here in heavy quantities and, despite good consumer demand, prices eased fractionally during the week. Last week-end prices were (in rupees per maund): Gram punjabi 18.50, barley 16.87, *bejhar* 16.75, maize 14.75 to 15, *jowar* 14.75, *guwar* 14.50.

Fast deteriorating stocks due to good export prospects from ports and demand for *dal* from Bombay and Madras accounted for grains in the prices of peas during the week. *Arhar* prices also improved and local stock is concentrated in one hand. Prices of other pulses also registered some gains during the week and week-end prices (in rupees per maund) were: Peas *dara* 17, peas farm quality up to 19, *khatti* 16, peas *dal* 19.25, *arhar* 21, *arhar dal* 26, *urd* 19 to 20, *moong* 27, *massor* 17.50. Stocks: Peas 20, *arhar* 80 *khatties*.

BANKING

(Concluded from page 678)

Another new development in the banking field is the scheme of personal loans introduced by some banks. Mr. Cobbold was of the view that it would be a long time before personal banks became a significant proportion of total bank advances. Yet another change in the British banking mechanics is the scheme for controlling bank credit, under which banks will be called upon by the Bank of England to maintain special deposits with it. This, in turn, will reduce the capacity of banks to create credit. Commenting on this scheme, Mr. Cobbold said:

"It has seemed to us that it would not be desirable to have recourse again, if we ran into a new inflationary period, to the system of requests to the banks to limit advances. That system has admittedly been effective in recent years, but as a lasting or recurring system it is open to objections to which several bank chairmen and I myself have often drawn attention.

"We felt, therefore, that pending the report of the Radcliffe Committee, some alternative means should be at hand to reinforce existing techniques, in case it again became necessary to restrict bank lending. Of the various possible devices, the special deposits scheme commended itself to us as being the most flexible, the most obviously monetary in form and the least open to possible abuse as a method of inflationary borrowing by Government from the banking system."

Mr. Cobbold agreed with the critics that none of these technical devices went to the main root of the problem or would of itself prevent inflation. The main purpose of this scheme, like that of any method of control over the assets of the banking system, he added, would be to help in preventing excess liquidity from having its secondary effects in blowing up the credit balloon. A large volume of special deposits maintained for long periods would ring a warning bell, precisely as abnormally high liquidity ratios had done in the recent past. Nor was this scheme in any sense an alternative to the policy of funding the floating debt, a policy which had met with considerable success in the past year and was being pursued with vigour.

FRENCH BANK RATE CUT

The Bank of France has reduced its Bank rate by ½ per cent. to 4½ per cent. with effect from the 16th inst. The 5 per cent. rate, which had been in effect since 12th August 1957, was the highest in the post-war period, having been raised by 1 per cent. immediately after the partial devaluation by 20 per cent. of the franc. It had been stepped up earlier in April 1957 from 3 per cent. The Government Bill rate, however, remains unchanged at 3 per cent. and the rate for advances against securities at 7 per cent. The rate for bank loans of amounts up to 10 per cent. in excess of the ceiling imposed on rediscounting operations by the Government last year is lowered from 8 to 7 per cent., while interest on loans in excess of 10 per cent. above the rediscount ceiling is unchanged at 10 per cent.

These moves are considered as the first steps to ease France's credit squeeze, which has been effective for 18 months and which is feared in some quarters as in danger of driving the economy of the country into recession. While money has been made slightly cheaper, there is no relaxation of the credit squeeze as such. For the restrictions on consumer credit and the ceiling on bank loans are still retained.

It will be recalled that, between July and November 1957, the rediscount ceiling was lowered by 35 per cent. and, in February 1958, banks were asked to limit their credit to the mean of those outstanding at the end of September and December 1957. It is, however, not up to the Bank of France either to relax consumer restrictions or to raise the rediscount ceiling. This must be done by the National Credit Council. This Council is due to meet at the end of the month. While it is expected by industries in general that the Council may relax the squeeze, it is more likely that the Council will adopt a cautious policy.

STATE BANK OF INDIA TO TAKE OVER JAIPUR BANK

Close on the heels of the decision of the Bank of Mysore Ltd. and the Travancore Bank Ltd. to become subsidiaries of the State Bank of India—this decision has been endorsed by the shareholders of the respective banks—the Directors of the Bank of Jaipur Ltd. have also accepted the advice of the Chairman of the State Bank of India to become the latter's subsidiary. Their decision is to be placed before the shareholders for consideration at a meeting to be held on 15th November 1958.

The State Bank Chairman had suggested that, with a view to putting an end to the uncertainty regarding the future of the State-associated banks in an integrated set-up and with a view also to subserving the interests of the public better, the State-associated banks might come to a voluntary arrangement with the State Bank of India consenting to work as subsidiaries of the State Bank.

The Bank of Jaipur has a paid-up capital of Rs. 50 lakhs (made up of 100,000 shares of Rs. 100 each, with Rs. 50 paid-up) as on 31st December 1957. Its reserves aggregate Rs. 25 lakhs and deposits amount to Rs. 9.37 crores. The Bank's advances and bill's stand, as on that date, at Rs. 5.42 crores, investments (at book value) at Rs. 2.98 crores and cash (including money at call) at Rs. 2.09 crores. The Rs. 50 paid-up shares are being quoted at Rs. 42.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. F.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund. reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.
